continued to follow this calling for a number of years in the same district. In 1904 he again turned his attention to agriculture and purchased his present holding, a portion of the "Stirling" Estate, which comprises 45 acres of good red loamy soil, and is watered by the Capel River, which flows through the property. Mr. Dilley has adopted the most up-to-date scientific methods of treating the soil, and has met with great success in his mixed farming operations, but especially in the cultivation of potatoes, which has received his particular attention. He is recognized as one of the most successful growers in the neighbourhood, and has about 30 acres devoted to this department of his industry, his crop averaging about six tons to the acre, though some of the rich flats produce nearly 15 tons to the acre. The varieties chiefly favoured by Mr. Dilley are the well-known and popular Delaware and Bismarck, both of which find a ready sale. He has been a successful exhibitor at agricultural shows, being awarded second prize in the special class in connection with the Wellington Agricultural and Pastoral Society's Show in 1911. Mr. Dilley married Elizabeth Ann, daughter of the late Mr. Lewis Calder, of Scotland, an old Western Australian pioneer, and has three sons and three daughters.

FREDERICK ROWLAND THOMAS HENRY TUCKER, farmer, "Rosedale," Capel, is a son of Mr. William Tucker, of Cornwall, England, who was one of the early pioneers of New South Wales. He was born at Marrickville, near Sydney, on November 1, 1887, and coming to Western Australia as a lad of fourteen completed his education at Midland Junction, in this State. He first became engaged in business pursuits at Fremantle with the firm of F. Macdonald & Co., grocers of that port, but after two years relinquished this connection in order to join his brother-in-law in farming operations. In course of time Mr. Tucker took up a holding on his own account, which in the first instance consisted of about 80 acres. This he has considerably enlarged by the purchase of additional areas from time to time, and he now owns about 430 acres of good agricultural land with three-quarters of a mile of river frontage. The soil

is chiefly red loam, with a subsoil of limestone, and has proved remarkably well adapted to the purposes of mixed farming, which Mr. Tucker has found to yield excellent results.

C. E. Farr, Perth.  
MR. F. R. T. H. TUCKER.

Potato crops and cereals have thriven well on the land, and in the past dairy produce has been a very profitable department of the industry. It is, however, Mr. Tucker's intention in the future to devote his attention more exclusively to the breeding of high-class cattle and other stock. A follower of most healthy outdoor sports, he finds his chief recreation in cricket and football, and is a member of the various local clubs. In 1909 he married Ethel Rosina, daughter of the late Mr. George Robert Payne, one of the early settlers in the Capel district, and has two sons.

JAMES NORTON, farmer, of "Glen Albyn," Capel, is a son of Mr. Patrick Norton, of Ireland, latterly of Maryborough, Queensland, where the subject of this sketch was born on July 16, 1869. He was educated locally, and upon leaving school was associated with station life and mining pursuits in the north of Queensland for about four years. In 1890 he left for Western Australia, and proceeding to the Roebourne district engaged in work on the Pitbourne and Ashburton goldfields, meeting with considerable success in his efforts. He was among the first

to arrive at Coolgardie at the time of the rush thither, and after eight months' successful prospecting returned to Perth, subsequently spending about two years in prospecting in the Peak Hill district, and being among the early arrivals at Lawlers. He next turned his attention to contracting, and followed this line of business at Day Dawn for about eight years. At the end of this period he came to the southwestern district and purchased his present holding from the "Stirling" Estate, and while still carrying on a contracting business began the development of his land. Ultimately he relinquished other interests in order to give up the whole of his time to farming, and has now a nice little property of 520 acres, which he utilizes chiefly for grazing and sheep and cattle raising. In dairy produce and other departments of his industry he has attained good results, and has made a very payable

W. J. Ford, Bussburg.  
MR. JAMES NORTON.

proposition out of mixed farming operations. He has taken some interest in public affairs, and while at Day Dawn was a member of the Council for three years, being also connected with the Roads Board and was appointed a member of the Water Supply Board at its inception. In 1911 he was appointed to a seat on the new Drainage Board on the "Stirling" Estate. Mr. Norton married Jane Ann, daughter of Mr. W. A. Brody, of Victoria, and has three sons and a daughter.

The CAPEL INN, Capel. (Proprietor, Aubrey Edmund Moore.) The Capel Inn has a charm all its own, being a quiet, old-fashioned house, where the maximum of comfort may be obtained with the minimum of noise and bustle, every want of man and beast being attended to in the best possible manner. The catering is in capable hands, and the same care is manifest in all other departments of the business, the bedrooms being comfortable and scrupulously clean, and the living-rooms well appointed in every respect. Mr. A. E. Moore, the proprietor, is a son of Mr. Edmund Moore, of Balingup, and cousin of Sir Newton Moore, Agent-General for Western Australia. He was born at Bunbury on June 1, 1883, and received his education at a local school, subsequently joining the clerical staff of the Railways Department, where he remained for six years. He then turned his attention to farming occupations on his father's property at Balingup, in the south-western district of the State, five years later relinquishing his connection in order to take over the management of the Waroona Hotel and store on behalf of Mr. H. McNicol. In 1909 he secured the lease of the Capel Inn, and has since developed the present business. Adjoining the hotel, Mr. Moore owns a 12-acre block of land which he has cropped with oats and potatoes, and in addition to this he has a holding of 20 acres in the neighbourhood which it is his intention to clear and develop in the near future. He is a member of the Sussex Agricultural

Society, and identifies himself with those forms of outdoor sport in favour among the athletes of the district, being a playing member of the football and cricket clubs and secretary to the latter body. He married Mabel, daughter of the late Mr. Chapman, sometime Government Forest Ranger of Gippsland, Victoria.

GEORGE LAYMAN, J.P., farmer, Wonnerup, is a son of Mr. George Layman, one of the earliest arrivals in the south-western district and a settler at Augusta, whence he came to Wonnerup and subsequently met his death at the hands of the natives on February 22, 1841. The gentleman under review was born on his father's homestead on May 9, 1838, and since the days of childhood has followed agricultural pursuits in this district. He owns a nice little property of 900 acres, and of late years has devoted the greater portion of his time to horse-breeding, the fine grazing lands on his estate making it peculiarly adapted for this purpose, while a few acres are devoted to crops and fruit cultivation. Mr. Layman has met with considerable success in his industry, and has produced some fine stock which has carried off various awards at the local shows. He has taken a keen interest in public affairs, and in 1886 was elected a member of the Legislative Council, retaining his seat for three years. For many years he has occupied the position of chairman of the roads board, and he takes a leading part

in the affairs of the agricultural society. He received his Commission of Justice of the Peace for the whole of the State during the period of office of Governor Broome. Mr. Layman married Amelia Harriette, daughter of Mr. Anthony Curtis, of Western Australia, and has four sons and seven daughters.

PERCY SMITH BIGNELL, Mayor of Busselton, is a stepson of Mr. William Bignell, of Melbourne, and was born at Deniliquin, in the Riverina district of Victoria, on April 2, 1875. He received his education at the Sheraton College in Melbourne, and subsequently served his articles to the profession of chemistry with Mr. J. Lacey, Bourke Street, Melbourne. After four years' study he graduated at the Pharmacy College, Melbourne, and took his degree of Ph.Ch. in March, 1898. In May of the same year he came to Western Australia, and after practising as a pharmaceutical chemist for some little time at Perth and on the goldfields he accepted an appointment as manager of the Busselton Branch of Messrs. Kirton and Co. In February, 1899, he opened on his own account in the same town and built up for himself a very prosperous business, and in the following year launched out into a new enterprise by instituting a coach service between Busselton and the famous Yallingup Caves. Always keeping pace with the times, in 1907 he brought the motor into requisition, and during the visitors' season several trips are made each week to

Photo by C. E. Farr.

MR. A. E. MOORE'S CAPEL INN, CAPEL.

this popular resort. He has considerable landed interests in the Yallingup district, owning "Woodlands" Estate of about 2,000 acres, a large portion of which has been brought under cultivation of potatoes and other crops, the remainder being

*Bartletto.* *Perth.*  
MR. PERCY SMITH BIGNELL.

devoted to pasture lands. Mr. Bignell has always identified himself with local public affairs, and was first returned as a councillor in 1902. After serving three years he was elected to the mayoral chair in 1909, and has held this office ever since. During his term of service the alterations to the jetty, which is now a mile and a furlong in length, were completed, and fine new baths enclosing an area of four acres of water have added greatly to the attractions of the place, besides which a new water reticulation scheme has been inaugurated. Mr. Bignell is president of the South-western District Agricultural Society, of which for seven years he acted as secretary, and takes a great interest in most of the local clubs and institutions, in the Masonic fraternity holding rank as Past Master. His name is well known in the sporting circles of the place, and he has been cycling champion of the district for one and five miles and champion of the bowling club, of which he is now handicapper and team selector. He is married to Henrietta, daughter of the late Mr. William Alexander McDaniel, of Busselton, and has two sons and a daughter.

Councillor CHARLES BEAUMONT ANDREWS, storekeeper, Busselton, is a son of Mr. Edgar Andrews, of Victoria, and was born at South Melbourne on September 10, 1875. He received his education at a local school, and subsequently, with a view of taking up architecture as a profession, entered upon its study for three years. Relinquishing this intention he became engaged in the bakery business at Diamond Creek, Victoria, where he spent four years, and eventually left his native State for Western Australia in 1897. After spending a short time in Perth Mr. Andrews commenced business at Northam, and having continued eight years at this centre disposed of his interests and came to Busselton, where he opened his present business of baker, pastrycook, and general

*C. E. Farr.* *Perth.*  
MR. CHARLES BEAUMONT ANDREWS.

storekeeper, and has carried on successfully ever since. In 1909 he was elected a member of the local municipal council, and upon the completion of his first term was returned unopposed in 1911. He is a member of the local agricultural society and takes a prominent interest in the affairs of the bowling and croquet clubs, also holding membership in the football and cricket clubs. In 1904 Mr. Andrews married Ada, daughter of Mr. Robert Campbell, of New South Wales, and has a son.

Councillor CAREY EDWARD ERNEST HENRY BERRY, familiarly known as EDWARD BERRY, is the proprietor of the

Freemasons' Hotel at Busselton, and was born at Dry Sandford, near Abingdon, in County Berkshire, England, on November 27, 1859. He is a descendant of the Berrys who for many years past have identified themselves with farming and agricultural pursuits in that country. At the conclusion of his education at the Abingdon Grammar School he went to London and eventually was apprenticed to the tailoring trade, serving indentures until he was twenty-one. After following his trade in various parts of England, in 1884 he took passage with his wife and two sons for Western Australia, and on arrival at Perth established a business, which he conducted very successfully for many years, early in his career by special appointment being made viceregal tailor of the State. Mr. Berry retired in 1908, leaving his two elder sons to carry on the business, and, coming to Busselton, took over the lease of the Freemasons' Hotel, which he has conducted with excellent results ever since. At the present time (1911) the hotel is undergoing structural alterations and additions, and when completed will compare favourably with any in the district. It is most conveniently situated, being only a minute's walk from the railway

*Bartletto.* *Perth.*  
MR. EDWARD BERRY.

station, and five minutes from the beach and bathing-houses. The cuisine is under the management and superintendence of Mrs. Berry, who gives every attention to the comfort and well-being of the many guests who during the summer

season and at other times seek the comforts of home at the pretty watering-place of Busselton. Mr. Berry has always taken a considerable amount of interest in the trend of public affairs, and while in business at Perth resided at Cottesloe, where he occupied a seat on the health board prior to its conversion

for four years with Mr. J. H. Carr, of Bunbury. Subsequently he established himself in practice at Bunbury, and at various times was identified with Perth, Fremantle, and the goldfields. In 1907 he came to Busselton and took over the lease of the Vasse Hotel, called after the name by which the district originally

shipping and general commission agent, at Busselton, where he has continued ever since. In 1898 he was appointed auditor to the Busselton Municipal Council, which position he resigned upon his election as councillor in 1904. He has actively interested himself in all matters that have come under consideration of the council since he entered its ranks, and every scheme for the advancement of the town has found in him an earnest and practical sympathizer. He is a member of the South-Western District Agricultural Society, and for three years acted as secretary to this organization. He is a member of the local cricket, tennis, and bowling clubs, being a keen follower of all outdoor sports.

Photo by W. J. Ford. THE FREEMASONS' HOTEL, BUSSELTON.

into a municipality. Since coming to Busselton he has been identified with the various public institutions of the place, and in 1909 was elected to a seat on the local council. He is also a member of the South-Western District Agricultural Society, and was a successful exhibitor at the last November Show, taking first and second prizes for his Sussex-bred buggy pair, which he uses for conveying visitors to and from the famous Yallingup Caves. Mr. Berry is a patron of all outdoor sports, and is a vice-president of most of the clubs, being also a member of the committee of the Busselton Bowling Club. Of strong musical proclivities, he is himself a performer of no mean merit. In 1881 at Brentford, in the County of Middlesex, he married Mary Woodall Blackman, of Hammersmith, in the same county, and has three sons and five daughters surviving.

Councillor DAVID McARTHUR STONE, of Busselton, is a son of the late David Blair Stone, of Canada, latterly of Victoria, and was born in the south-western district of that State. At the conclusion of his education he decided to follow the profession of a chemist, and in 1894 left his native soil for Western Australia, serving as an apprentice

was known. Mr. Stone continued as proprietor of the hotel until early in 1912, when he disposed of the lease, having decided to give the whole of his time to mixed farming pursuits on land which he had acquired in the vicinity of Busselton. Mr. Stone takes an active interest in local affairs and, in the year 1909, was returned as a member of the local municipal council, and has since held the seat. He has filled the office of secretary of the local race club, and is a member of the South-Western District Agricultural Society, besides being connected with the bowling and cricket clubs. He married Emily, daughter of Mr. F. H. Watts, of Collie, Western Australia, and has one son and one daughter.

Councillor ALEXANDER ROBERT BOVELL, general agent and auctioneer, Busselton, was born at Perth in 1873, and is a son of the late Mr. Joseph Bovell, of Belfast, who came to Western Australia in 1859 and was one of the early settlers in the south-western district. The subject of this review upon leaving school obtained a good insight into his present line of business under his brother, and in 1903 established himself on his own account as stock and land auctioneer,

C. E. Farr, Perth.  
MR. ALEXANDER ROBERT BOVELL.

In 1901 he married Ethel, daughter of Mr. R. E. Williams, of Waibi, who was formerly associated with the mining industry of Western Australia, and is now connected with the famous Waihi Mine of New Zealand, and has a son and two daughters.

Councillor EDWARD McDANIELL, agent for the Millars' Karri and Jarrah Company, Busselton, is a son of the late Mr. William Alexander McDaniell, of London, one of the pioneer settlers in the south-western district, and was born at Busselton on July 3, 1873. His father was contractor for the mails between Busselton and the outlying centres of Warner, Quindalup,

Margaret, and Lower Blackwood, and until 1902, from the time that he left school, Mr. McDaniel was associated with his parent in the carrying out of the contracts. In the above-mentioned year, while still retaining charge of the mails between Margaret and Karridale, he

C. E. Farr, Perth.  
MR. EDWARD MCDANIELL.

accepted the agency in Busselton for the Millars' Karri and Jarrah Company, and subsequently, in conjunction with these other interests, opened a fancy-goods and tobacconist business in the town. His connection with public life dates back to 1908, when he was returned to a seat in the local municipal council, since which time he has taken an active part in the deliberations of this body. Mr. McDaniel is a member of the South-Western District Agricultural Society and takes an ardent interest in all forms of healthy, outdoor sport, being connected with the cricket, football, tennis, croquet, golf, and bowling clubs of the district, besides giving a share of his attention to swimming and other aquatic pursuits.

GEORGE BROWN MILNE, J.P., Town Clerk of Busselton, is a son of the late Mr. W. H. Milne, of Aberdeen, Scotland, and latterly of Busselton, Western Australia, where the subject of this notice was born in 1869. He received his scholastic training in his native town, and at the termination of his studies joined the Education Department as

assistant master in the local public school. Subsequently he was transferred to Quindalup, and from there to Denmark, remaining in the latter place until 1898, when he resigned from the service in order to enter upon the duties of town clerk at Busselton, which office he has held ever since. During the lengthy period he has occupied this position Mr. Milne has witnessed many changes in the municipality and in the personnel of the council, no fewer than ten different mayors having been elected since his appointment. The population of the town has increased from 500 to 800, and very many improvements have been brought about, notable among which are the jetty extension and lighting the public streets and buildings

C. E. Farr, Perth.  
MR. GEORGE BROWN MILNE.

with acetylene gas. Mr. Milne has accepted office in the various local institutions, being chairman of District School Board of Education, secretary of the roads board, and a member of the committee of the Southern Districts Agricultural Society. He has also been the recipient of honours in connection with the Masonic Lodge at Busselton, and is a member of the Commercial Travelers' Association. The popular game of bowls claims him as a devotee, and he is known on the cricketing field as a staunch advocate of the national sport. In October, 1910, Mr. Milne married Maude, daughter of Mr. Patrick Hurley, of Hurleyville, New Zealand.

LIONEL JOSEPH ROBERTSON, B.A. (Adel.), M.B., Ch.B. (Syd.), Medical Officer of Health to the Sussex district, is a son of the Rev. Joseph Robertson, M.A., of Adelaide, South Australia. He was born at Hawthorn, Victoria, in 1876, and attended schools in Adelaide, afterwards becoming a student at the University of that city. Subsequent to taking his Bachelor of Arts degree at Adelaide he proceeded to New South Wales and pursued his medical studies at the University of Sydney, obtaining the diplomas of M.B. and Ch.B. from that institution in 1903. At the conclusion of his course he was for some time resident physician at the Sydney Public Hospital, prior to leaving for Western Australia in 1907. Upon arrival in this State Dr. Robertson filled an appointment as *locum tenens* for Dr. Trethowan, of Perth, and eventually came to Busselton, where he established himself in the practice of his profession. He received the appointment of medical officer of health to the Sussex district in 1908, and was also appointed medical officer for the port to the local board of health.

C. E. Farr, Perth.  
DR. LIONEL JOSEPH ROBERTSON.

He is a keen sportsman, and finds recreation in cricket, golf, and tennis, taking an active interest in the respective clubs of the district. Dr. Robertson married Muriel, daughter of Mr. H. G. Lomax, of New South Wales, and has one son.

RICHARD GALE, J.P., grazier and farmer, "Fairlawn," Busselton, is a son of the late Mr. John Gale, of Dorsetshire, England, where the gentleman under review was born in 1834. During early life he was engaged on his father's farm, and in 1856 left his native land for Western Australia, where he engaged in agricultural pursuits under Mr. W. L. Brockman, of Gingin. After four years with this well-known pioneer he came to Busselton as manager of the "Fairlawn" property, then owned by the late Lieutenant-Colonel Molloy, a Waterloo veteran and one of the earliest settlers in the Vasse district, where he was Resident Magistrate, having previously been identified with Augusta. After managing this property for a couple of years Mr. Gale leased it until the death of Lieutenant-Colonel Molloy occurring, he purchased it

and has carried it on ever since. Originally the estate consisted of

C. E. Farr, Perth.  
MR. RICHARD GALE.

about 12,000 acres, through which the River Vasse flowed, but in recent years it has been cut up into blocks, which have found their way into other hands, and at the present time Mr. Gale retains about 4,000 acres, which he uses chiefly for dairying and stock-raising purposes. He has identified himself with the local public organizations, and was for many years a member of the roads board, also occupying the position of president of the agricultural society of the district for several terms. He received his Commission of Justice of the Peace for the whole State under Governor Ord, and during the regimes of Governors Wells and Robinson sat as a Member of the Legislative Council for three years. Mr. Gale married Rebecca, daughter of the late Mr. W. Spencer, of Bunbury.

### THE CAVES OF WESTERN AUSTRALIA.

In an article on the Yallingup and Margaret River Caves appearing some time since in the Government Year Book, the writer deals in a somewhat exhaustive manner with the general formation of the caves country from the geological standpoint. As much has been written concerning the scenic value of these truly marvellous productions of Nature, it may be of interest to outline the history of some of those hidden processes by which such beauty and wonder were made possible, and in attempting this task we are able, by the kind courtesy of the publishers of the work above referred to, to make detailed reference to their valued pages.

These caves, which during recent years have attracted so large an amount of attention, both on account of their exquisite beauty and their situation in the heart of a district which provides many diverse avenues of gratification to the seekers of health and pleasure, lie on the fringe of a tract of country in which natural features of interest abound. The coastline is ramparted with a formidable line of cliffs at the head of which Cape Naturaliste juts out like a fortress, and beyond is the generous sweep of Geographe Bay, with waters deeply blue in the sunshine. Behind is what has been termed "the magnificent forest of the hinterland," with its stately giants of karri, jarrah, and other eucalypts, its picturesque hills and valleys and winding streams, hinting at the busy industries of the future when man shall enter upon his heritage in this portion of the State.

Between the town of Busselton (which is one of the oldest in the State, having been first formed by a band

of settlers some seventy years ago; now the terminal railway station for visitors to the caves) and Yallingup or the Margaret River the geological structure does not immediately reveal its nature, owing to a covering of sand and ironstone on the surface. It is, however, extremely simple, consisting of a wide stretch of sandy plain many miles in length, beneath which may be detected at a shallow depth the limestone present in the beds of creeks and swamps, and which is succeeded by a low range of granitic rocks. These are masked by a thin coating of sand and ironstone, which in turn give place to limestone as the west coast is approached. "The oldest rock in the country," writes our authority, "lying between the two capes (Naturaliste and Leeuwin) is the foliated granite or gneiss forming the range running parallel with the coast and at a distance never exceeding five miles from it. The same rock appears at numerous points along the seashore, and on the coast it is seen to pass under the series of sand-dunes, calcareous sandstones, and limestones forming the so-called 'coastal limestone series,' in which the famous caves are situated." This granite has influenced to some extent the formation of the caves, and in fact has played a somewhat important part by directing the underground flow of water into well-defined channels. "Within comparatively recent geological ages the trade winds have piled up on the top of the granite of the west coast huge quantities of drift sand, composed of fragments of quartz derived from the granite itself, of sea-shells left on the beaches by the tides, and of myriads of the beautiful microscopic shells of the minute marine

animals known to scientists as foraminifera. The proportions in which these different constituents collected have varied considerably in different places, and this has been of considerable influence in the subsequent cave-forming, for quartz sand is composed of silica, a substance practically insoluble in rain water, whilst the shells of molluscs and foraminifera are formed of carbonate of lime, a substance comparatively readily soluble in it."

This sand drift by degrees encroached "on the beds of streams flowing down from the granite ranges into the sea, and was most pronounced in the summer months under the influence of the south-west trade wind, when the creeks were either dry or else so low as to possess no volume to wash away the sand. In this way, one by one,

limestone, starting generally at or close to the inland junction of the latter with the granite and terminating on the seaward slope of the limestone hills. By the solution of the floors and side walls in the running water and the breaking down of loose portions of the roof and walls and subsequent solution and removal of these fragments these tunnels became enlarged, and by this caving in of the roofs the formation of the large chambers took place while, where ledges project from the walls, the old floor-levels are indicated—as in the case of the 'suspended table,' which is a stalagmite or floor formation from beneath which the rock has been dissolved. The quartz granules in the limestone, being insoluble in the running water, have either been carried away mechanically by it or left as a deposit on the lowest floors of the caves, as

Photos supplied by Tourist Department.

the smaller watercourses were filled in, and as the sand was cemented into solid rock the stream water had to force its way down to the sea by tortuous ways through the most porous parts of it. The stream water, charged with some of the carbonic acid—by which the rain falling on the sand-dunes during the wet season had dissolved part of the carbonate of lime out of the shell fragments at the surface—flowing down the granite slopes, further dissolved a portion of the lime from the sands first met with and carried this further into the bowels of the earth, whence the greater part was conveyed right through the limestone and the sand-dunes into the sea. Irregular tunnels were thus formed in the lower beds of the

DD

in the chamber of the 'crystal floor' in the Yallingup Cave, while, more or less intermixed with boulders from the roof, it sometimes closes up the underground channels altogether, as at the intake end of the Lake Cave. The rain water, soaking downwards through the porous rock and charged with carbonic acid, becomes saturated with lime, and also dissolves varying small quantities of iron oxide, and filtering through into the caves this highly-charged solution deposits its lime, tinged more or less with the iron, in the shape of different stalactites and stalagmites."

The story of the stalactite, fascinating as it is, may only be outlined in an article of this description. "Each

drop of water charged with lime as it hangs from the roof evaporates somewhat before it falls to the floor, and during that evaporation it deposits a thin ring of lime, through which the succeeding drop passes, increasing it slightly in length and thickness ere it, too, in its turn falls to the ground. In time this results in the formation of a more or less long hollow tube of lime of uniform diameter equal to that of a drop of water. The water dripping down this tube continually lengthens it, and at the same time keeps on depositing lime also on the inside until the tube is completely filled. Meanwhile the thickening of the stalactite from the outside by the water trickling over it and leaving a deposit takes place, and in this way the thick butts of the older stalactites and also the knobbed and otherwise irregularly-shaped ends of the older formations are formed. The surplus water dripping from the stalactites falls to the floor and there deposits most of the balance of the lime in the form of a stalagmite or floor-growth, which reaches upward as the stalactite extends downwards, the final result being a column which stretches from ceiling to floor." So long as the water charged with lime continues to trickle over them they maintain a fresh, glistening appearance; but as soon as this fails from any cause they become dull on the surface, and the terms "live" and "dead" are applied to them to describe these respective conditions.

"Shawls" invariably form on overhanging sloping walls, the reason being that the water, soaking through from above, does not drop direct to the floor, but trickles down the wall by the nearest route to the lowest level, leaving a thin deposit of lime in its wake, which eventually results in the formation of a thin sheet of lime projecting from the wall at right angles to it and banded in a beautiful succession of tints according as the proportion of iron in the water varies at different stages in the growth of the shawl. "Crystal floors" or "walls" are confined to more or less gently sloping surfaces over which a considerable and evenly-distributed flow of lime-charged water has taken place, and evaporation and loss of carbonic acid experienced by the water in its flow, causing the deposition of the lime in beautiful crystalline sheets over large areas of rock.

On the walls of some caves, where the evaporation has been too rapid for the deposit to assume definite crystalline form, large quantities of a soft and spongy mass of milk-white calcite have formed, for which "rock snow" is an appropriate name. This substance occurs in the Wallcliffe and Mammoth Caves in Western Australia, and is also found in the Jenolan Caves of New South Wales.

The rate of growth of the various formations is supposed to be dependent upon three factors, *viz.*, the quantity of water penetrating into the cavern, the quantity of lime dissolved in that water, and the rate of its evaporation. It is a fact that the rate of growth

varies very considerably, but the conditions prevailing in the south-west of Western Australia would appear to favour for the most part a rapid process of formation.

The caves area of the south-west extends over a strip of country approximately sixty miles long by from one-half to three miles wide, and each cave has been formed by a separate watercourse. They are situated in a comparatively soft foraminiferal limestone of recent age which has suffered no great disturbance since its formation. The distinctive features of the south-west caves—dealt with in earlier pages of this work—are too well known to call for further detailed description. They include the "jewel case" and wonderful shawl formations of Yallingup Cave, where also are found many examples of the curious deposits known by the name of "mysteries"; the "suspended dome" and "meteoric shower" of Calgardup; the far-famed "eagle's wings," "beanstalk," and "frozen niagara" of the Mammoth Cave; the "broken column," "organ pipes," and "queen's crown" of Blackboy Hollow; and the "suspended table" of Lake Cave.

With regard to the "mysteries" a word may be added. These are formations which take a more or less horizontal direction at some point of their progress from which they may undulate in various sinuous curves—as in the case of the "serpents," several examples of which are to be seen in the different caves—sometimes assuming the perpendicular direction towards the roof, at others stretching into the cavern's space at any angle, forming fantastic shapes like the "boat-hook"—one at Yallingup has apparently tied itself into a perfect knot. The theories respecting the formation of these mysteries have still to receive confirmation, but the most usually accepted explanation is that where the deposit occurred currents of air through the cave caused it to deviate ever so slightly with drop by drop from the perpendicular, so that in course of time a form took shape apparently defying the laws of gravitation and presenting a fascinating variety in contrast to the great majority of the stalactites which hang pendent in accordance with the ordinary laws of physical nature.

The immense amount of stalagmite "statuary" in many of the caves, and notably at Calgardup and the Mammoth and Lake Caves, is a striking feature, the "Egyptian chamber" in the Mammoth Cave being specially worthy of remark. Here the distinctive characteristics of the features of the ancient "dwellers of the Nile" appear in startling relief against the dark background, and a "mummy" bound to a pillar heightens the illusion. In the Mammoth Cave also the "fallen wall" is pointed out as a curiosity, the stalactites formed before and since its subsidence jutting out at distinct angles and producing a very quaint effect. In one of the huge chambers of this cave a very weird effect is produced, sunlight reflected from water 500 ft. away being thrown on

to the roof through some unobstructed channel. This has all the appearance of pale moonlight, and gives a strong impression that it is night-time and that moonbeams are flooding in through some aperture in the roof.

The Coronation Cave, another cavern which is just being opened up for public inspection, is one of great beauty, surpassing in whiteness, if that be possible, even the famous Lake Cave. Its floor is of veritable crystal, and in one of these less-known caves are found pillars so lightly opaque that newspaper print may be read through them by the light of a candle held at the further side.

From year to year the work of exploration of the caves regions proceeds, both in the south-west and at Lake Yanchep, another district where some notable caves have been opened up lying about 35 miles to the north of Perth. The country in the latter vicinity consists of a series of hills running parallel with the coast, four miles distant, and formed of limestone of the Pleistocene age,

and here numerous openings of varied forms occur, sometimes as rounded or fissure-like clefts in the rock faces, in other places as shafts or wells on the higher ground.

Every facility is offered by the Government of Western Australia to those desirous of inspecting these beauty spots, and upon application to the Tourists' Bureau all particulars in respect to cheap coupons, accommodation, etc., may be obtained.

The fame of the Western Australian Caves is spreading all over the world, and it is estimated that considerably over 47,000 persons have inspected the Yallingup Cave since it was first opened up. There is little doubt that for holiday attractions the caves districts offer more inducements than any other parts of the State, and the work of development is being rapidly carried forward, so that in the near future all the known caves containing any special features of interest will be made readily accessible to the general public.

### DONNYBROOK, GREENBUSHES, AND BRIDGETOWN.

Donnybrook, one of the main towns on the Bridgetown railway line, is situated 25 miles from Bunbury, in the midst of an agricultural district. It is the key to the Upper Preston River country, where there is a fair amount of land under cultivation. Close to the town are several very fine orchards and nurseries, the principal being "Cherrydale" (the property of Sir Winthrop Hackett), where, after many trials and in the face of a good deal of discouragement, the problem of cherry-growing in Western Australia has been solved. The town, which has a population of about 800, can boast of an agricultural hall, Government school, three churches, and other public buildings; and the presence of two banks is evidence of the commercial activity of the place. Close at hand are the Donnybrook quarries, from which an excellent freestone much in favour for important buildings throughout the State is secured. In addition, like so many places in the south-west, it is the centre of a timber industry. From Donnybrook a spur line runs out to Boyup Brook and thence to Katanning, thus affording farmers good facilities for the transport of their produce to market.

About 16 miles further along the Bridgetown railway line is the town of Greenbushes, which differs from most of the other south-western towns in that its interests are mainly devoted to mining. As far back as 1888 stream tin was found in the river-bed, but the superabundance of water in the winter time and the lack of it during the summer formed a considerable drawback to the development of the industry. This, however, has gradually been remedied, and if only capital were available to thoroughly develop the field there is every prospect that it would become a large producer of tin. The output for 1912 was 430 tons,

DD2

valued at £50,166; this, however, does not represent the possibilities, as the miners do not take kindly to the work of sluicing the alluvial deposits, and prefer to devote themselves to other pursuits from which they can easily gain a living. Timber is represented in the locality by the Greenbushes Timber Corporation, which has for many years been in active operation, mainly devoting itself to the supply of jarrah paving-blocks for the English market. The town stands on the very summit of the Darling Ranges over 1,000 ft. above the level of the sea, and although the rainfall is somewhat heavy in winter the climate as a whole is very delightful and bracing. The population of the district is about 2,000, and the public and other buildings in the town give it the appearance of a prosperous and progressive settlement.

Bridgetown, until recently the terminal-point of the railway from Bunbury, is picturesquely situated in the Darling Ranges on the banks of the Blackwood River, and is one of the oldest centres of trade in the south-west portion of the State. As the centre of the rich Blackwood district Bridgetown is a place of considerable importance from a fruit-growing and agricultural standpoint. In the surrounding country fruit reaches the greatest perfection attained in the State, and now that there is an assured home market and arrangements made for export the district is likely to go ahead by leaps and bounds. The town is within the boundaries of the Nelson Roads Board, and is the headquarters of the various public officers for the district. The Nelson Agricultural Society holds its annual show there. The Western Australian, Commercial and National Banks have branches in the town, while there are several excellent hotels.

FRANK EVANS VENN, J.P., "Dardanup Park," is a son of the late Mr. Robert Edward Venn, of Kingston, South Australia, and nephew of the Honourable H. W. Venn, J.P., Commissioner for Railways and Public Works in the Forrest Administration upon the inauguration of responsible government, prior to which he was first returned in 1880 to represent the old Wellington district in the Legislative Council of the day. The gentleman under review was born at Kingston in 1875, and received his education in South Australia. Upon leaving school he joined the staff of the Union Bank of Australia, for four years being connected with a branch of this institution at Robe, in the same State. In 1895 he was transferred to Perth, Western Australia, continuing in the service of the Bank for about six months, when he resigned and became associated with his uncle in his landed interests at Dardanup. For a number of years he was manager of the estates, and ultimately purchased the homestead of "Prinsep Park." In 1905 the Western Australian Estate and Timber Company, Limited, was floated by the Honourable H. W. Venn, and upon the death of the latter

Greenham & Evans, Perth.  
MR. FRANK EVANS VENN.

gentleman the "Dardanup Park" Estate was purchased from his widow by the subject of this review, who has since carried on operations, personally supervising the work of development. The property has been extended by 500 acres since Mr. Venn entered into possession, and now comprises 2,000 acres, the soil throughout being of the rich black character

which prevails in this district, and descending to a depth of 6 ft. from the surface. About 1,200 acres are cleared, 200 acres being under crop, which yield excellent returns, the potato crop averaging seven tons to the acre. The flats where the potatoes are grown are watered by the Ferguson River, which runs through the property for about two miles. Another advantage is the vicinity of the railway, which facilitates the handling of the products of the station. Sheep and cattle dealing forms an important department of the industry, the Jersey type of cattle being bred upon the station. Formerly Mr. Venn was a very successful exhibitor at the local agricultural shows, but of recent years has confined himself to the duties of adjudicator at these functions, acting as judge of nearly every class of stock. He is a member of the committee of the Wellington Agricultural Society, and for nine years has been identified with the local roads board. In 1909 Mr. Venn married Jean Knox, daughter of Mr. James Inglis, of "Bondfield," Boyup Brook, and has a son and a daughter.

WILLIAM JAMES ECCLESTONE, farmer and orchardist, "The Acacias," Boyanup, is a son of the late Mr. William Ecclestone, of England, an early arrival in Western Australia, where he landed about the year 1853. The gentleman under review was born at Fremantle in 1854, and at the close of his schooldays spent some years on a station at Wilgarup, owned by the late Mr. C. Rose, subsequently leaving there for the Preston district, where he took up 156 acres of land between Donnybrook and Boyanup. About 56 acres of this area have been utilized for orchard purposes, the remainder being devoted to the cultivation of wheat and other crops and to grazing pastures. Mr. Ecclestone was concerned in the organization of the first roads board in the Preston district, of which he has been a member ever since its inception, with the exception of one break extending over a period of two years. He has been chairman of the Boyanup Farmers' Association for fifteen years, and is a member of the Wellington and Donnybrook agricultural societies, being a successful exhibitor at the local shows, where he has taken many premier

awards for the fine apples produced in his orchard at "The Acacias." He received his Commission of Justice of the Peace for Wellington district in 1905. A patron of all outdoor sports indulged in by the athletes of the district, his favourite

W. J. Ford, Bunbury.  
MR. WILLIAM JAMES ECCLESTONE.

pastime is found in the time-honoured game of cricket. Mr. Ecclestone married Susan, daughter of the late Mr. J. T. Stinton, of Picton, and has five sons and two daughters.

JOHN SMYTHE YULE, M.B., B.S. (Melb.), District Medical Officer, Wellington Mills, is a son of Mr. William Yule, of Richmond, Victoria, where he was born on April 22, 1881. He received his primary education at the Richmond State School, the Melbourne Educational Institute, and the Scotch College, and subsequently became a student in the Faculty of Medicine, University of Melbourne, having matriculated in 1896. He obtained his degrees of M.B. and B.S. from this institution in 1909, and almost immediately afterwards left Victoria for Western Australia with the object of taking up mission work in connection with the Aborigines' Mission under the auspices of the Presbyterian Church. This intention was relinquished by Dr. Yule, who established himself in professional practice at Peak Hill, and continued there for some time. He afterwards acted as *locum tenens* in Perth and

Meekatharra, and in 1911 was appointed *locum tenens* in the Nelson district during the absence of Dr. Dean, where he discharged the duties of medical officer to the local board of health and also those of medical inspector of schools. He is a member of the cricket and tennis clubs, being specially enthusiastic in regard to the former sport. He has many interests of a religious and philanthropic character, and has

Bartletto, Perth.

DR. JOHN SMYTHE YULE.

been since his arrival in the State an active member of the Y.M.C.A., Perth.

HENRY WILLIAM BRANCH BROOKE, proprietor of the Railway Hotel, Boyanup, is a son of the late James Brooke, of England, and was born on October 18, 1862. At the close of his studies he was engaged in the teaching profession until 1882, and afterwards was identified with auctioneering and hotel keeping in North Wales. In 1888 he left his native country for Australia, landing first at Melbourne, where he spent about a couple of years, coming to Western Australia in 1890. He became one of the pioneers on the Murchison goldfields, and for some time was engaged in storekeeping and hotel management on these fields. He went for a trip to England in 1896, and, upon his return, took over the management of the National Hotel at Fremantle. In October, 1897, Mr. Brooke entered into partnership

with Mr. Fred. Carlisle in the proprietorship of the Pier and Gordon's Hotels, at Bunbury, and two years

W. J. Ford, Bunbury.

MR. H. W. B. BROOKE.

later removed to Collie, where he leased the Victoria Hotel and carried it on for a time. Relinquishing this venture, he was for a time

Progress Association, treasurer of the Royal Oak Lodge, Boyanup I.O.O.F., and is a member of the Masonic fraternity. In 1898 he married Jessie Maud, daughter of Mr. John Forrest, of Horsham, Victoria, and has three daughters.

FREDERICK JOHN ELLIOT, M.R.C.S. (Eng.), District Medical Officer for Donnybrook and Chairman of the Preston Roads Board, is a son of the late Mr. James Henry Elliot, of the North of Scotland, where the gentleman under review was born on April 14, 1855. At an early age he left the place of his birth for London, where he pursued his scholastic studies, matriculating at the University of London. He entered Guy's Hospital in 1872, where he passed through his curriculum, filling all the minor and other important appointments, including the coveted position of house surgeon. After qualifying for the medical profession Surgeon Elliot practised in various parts of England, and in 1885 came to Australia, where he travelled over the different

Photo by C. E. Farr.

MR. H. W. B. BROOKE'S RAILWAY HOTEL, BOYANUP.

licensee of the Federal Hotel at Bunbury, and subsequently accepted the offer of the position of executor and manager of the late J. J. Tuxford's estate in that district. In May, 1909, he took over the Railway Hotel and railway station refreshment rooms at Boyanup, and has since carried on this business. Mr. Brooke is treasurer of the Boyanup Farmers'

States as medical referee for the A.M.P. Society. In 1888 he received the appointment of medical superintendent to the Townsville Hospital, North Queensland, containing 200 beds. Two years later he was appointed Government medical and health officer for Geraldton, on the Johnston River, North Queensland, where he had charge of the hospital

and over 1,000 kanakas working on the sugar plantations in the district. In 1891 he received the appointment of medical officer, anthropologist, and ethnologist to the Elder Scientific Exploration Expedition starting from Oodnadatta, South Australia, and concluding its researches in Western Australia. This appointment was succeeded by that of medical officer to the Happy Valley Waterworks, in the Central State, and the ensuing years, 1896 and 1897, were spent as surgeon on board the China Steamship Company's steamer "Tiayuan," running between Melbourne and Yokohama and calling at Hong-Kong, Chee-foo, Shanghai, Japan, and all the northern ports. In 1898 Surgeon Elliot came to Western Australia and established himself at Canning Mills as medical practitioner and surgeon. In the following year, upon the discovery of gold at Donnybrook, he removed to this district

W. J. Ford, *Bunbury.*  
DR. FREDERICK JOHN ELLIOT.

and has since built up his present extensive practice. In 1892 he received his Commission of Justice of the Peace for the Wellington district, and during the early days of his residence in Donnybrook was prominent in the movements for sanitary and hygienic conditions and the establishment of a local board of health, with the result that no epidemic has occurred. He has always taken a keen interest in local progress and is largely responsible for the beautifying of the place by the planting of pines and other

ornamental trees along the chief thoroughfares. He was first returned as a member of the roads board in 1900, and two years later was elected to the chair, which position he has filled successfully ever since. A great lover of horses and dogs, Surgeon Elliot is generally recognized as an excellent judge of stock.

FRY BROTHERS, farmers and graziers, "Crendon," Donnybrook. JOHN GURNEY FRY and HENRY PHILIP FRY are sons of the late Henry Partridge Fry, of Shenfield, Essex, England, in which county they were born. Coming to Western Australia in the year 1894 with their mother, sister, and brother, the family settled on a farm at Bengier, where they remained for ten years. In 1904 Messrs. Fry Brothers purchased their present fine property from Mr. J. L. Bentley, comprising about 2,000 acres of good hilly grazing land, and have since devoted their energies to mixed farming and sheep-raising operations, the flock consisting of a fine class of Lincoln-merino crossbreds.

THOMAS MILLER, farmer and orchardist, "Wildmere," Thomson's Brook, is a son of the late Alexander Miller, of Victoria, and was born at Horsham, in that State, on October 18, 1864. He was apprenticed to the blacksmithing trade at the close of his schooldays, and continued in this calling until his departure for Western Australia in 1892. Here he became engaged in contracting work in connection with road-making and bridge-building in the south-western district, and eventually turned his attention to farming pursuits in the vicinity of Thomson's Brook, where he has made a payable proposition of his snug little property of 480 acres, of which 320 acres are freehold and the remainder leased from the Crown. The main portion of this area he applies to grazing purposes, about 30 acres are cropped for hay, and a very healthy-looking 6-acre fruit orchard has been found a profitable enterprise. Mr. Miller was one of the first settlers in the Thomson's Brook district, and has promoted its development by association with the various movements organized for that end. For thirteen years he has been a member

of the local roads board, being elected to that body in 1900, since when he has sat continuously with a break of one term only. He is a member of the committee of the South-Western Central Agricultural Society, chairman of Thomson's Brook Progress Association, of the hall committee, and of the local library committee. He is also chairman of the sports committee and of the recreation reserve. In early life Mr. Miller was a keen cricketer, and still takes considerable interest in this form of sport. He

W. J. Ford, *Bunbury.*  
MR. THOMAS MILLER.

married Charlotte Ann, daughter of Mr. James Barker, of Penshurst, Victoria, and has four sons and four daughters.

JAMES EGAN, butcher and grazier, Donnybrook, is a son of Mr. Constantine Egan, of Narrabri, New South Wales. He was born in the north-western district of that State on April 27, 1867, and was first associated with commercial life in Narrabri, where he remained for a few years. Afterwards he became connected with droving and station pursuits, which he followed there and in Queensland until his departure for Western Australia in 1894. Upon arrival in this State he was for a time prospecting on the goldfields in the East Murchison and Lake Darlot districts, but abandoned this uncertain life in favour of dairy-farming in the south-west, where he took up 345 acres of land

at Donnybrook and utilized it for dairying purposes, which did not prove a success. At a subsequent period he purchased an estate of 3,000 acres in the Upper Blackwood district, and here carries on sheep-farming, with which industry he combines a butchering business. He favours the merino type of sheep and has a handsome flock of this ever-popular breed. Mr. Egan is a member of the roads board, which seat he has held since 1904, and since 1902 has been a member of the local board of health, of which

W. J. Ford, Bunbury.  
MR. JAMES EGAN.

he has been chairman since 1904. He is a member of the committee of the South-West Central Agricultural Society and chairman of the Donnybrook Traders' Association. In 1905 he was appointed a Justice of the Peace for the Wellington and Blackwood districts. He takes an interest in the local Anglican Church, in which he holds office as rector's warden and synodsmen; and is Worshipful Master of the Donnybrook Masonic Lodge. In racing circles he has been elected president of the Sporting Carnival Association and vice-president of the local race club. Mr. Egan married in 1904 Ethel, widow of the late Mr. G. S. Anderson, inspecting surveyor of Western Australia, and daughter of the late Mr. Charles Bright, for many years on the literary staff of *The Argus* and, later, *The Age* newspapers of Melbourne. His family consists of one daughter.

FRANK OSBORNE NELSON, orchardist and farmer, "Wandene," Balingup, is a son of Mr. Charles Nelson, of New South Wales, in which State he was born on January 30, 1876. From an early age he was associated with farming and agricultural life in his native place, and at a later date entered upon stock and station pursuits in the Bourke district of New South Wales. In 1902 he came to Western Australia, and was first identified with the Wyndham district, but for the sake of his health was obliged to abandon his intention to settle in the northern areas, and, coming to the south-western district, purchased his present holding in 1903. The property consists of 300 acres of good freehold land, which has been augmented by a large area of conditional purchase, the whole estate now covering 1,200 acres, and has proved admirably adapted for mixed farming purposes. The soil throughout the property consists of a rich red loam with a clay subsoil, and 13 acres have been applied to orchard operations, while 60 acres are under cultivation of

one time was a performer of more than average merit on the cricket field.

ERNEST FREDERICK ROBERT HANCOCK, farmer, Balingup, and proprietor of the Balingup Hotel, is a son of the late Mr. E. F. Hancock, of Wilts, England, where he was born on September 4, 1864. He commenced work in the New Swindon Engineering Works, and in 1885 left the Old Country for New Zealand, where he was associated with the mining industry for about two years. At the end of that period, crossing to Victoria, he entered upon hotel-keeping, and was engaged in this line of life there and in Tasmania for some considerable time. At a later date he became interested in coal-mining in the Kourantarra and Outram districts of New Zealand, and while so engaged did a good deal of prospecting in the surrounding country. In 1903 he left for Western Australia, and after spending a couple of years in the metropolis

MR. E. F. R. HANCOCK'S HOTEL, BALINGUP.

cereals and other crops. Stock-breeding forms an important department of the industry, the dairy herd and other cattle proving a source of considerable profit, while Mr. Nelson has met with success in sheep-raising, his cross of Border Leicesters with merino ewes producing a valuable flock. He has given a share of attention to public matters of importance in the district, and for six years served as a member of the local roads board, being also connected with the farmers' association. He is interested in athletic sports, and at

came to the south-western district, and for two years occupied the position of manager of the Greenbushes Club. Subsequently he directed his attention to horse-breeding and agricultural life at Balingup, and in 1905 purchased the Balingup Hotel with the land adjoining, comprising about 40 acres of freehold, part of which is devoted to an orchard and vegetables, the remainder being cropped with wheat and other cereals. Mr. Hancock also owns about 108 acres 18 miles distant from the town, which he uses

as grazing pastures, and has met with considerable success in horse-breeding, being owner of the imported blood stallion "George." He is a member of the farmers' association, and interests himself in sports and athletics, being connected with the racing and cricket clubs of the district. He married Lucy, daughter of Mr. George Muckridge, of Launceston, Tasmania, and has a daughter.

**HERBERT GEORGE KEYSER, J.P.**, Chairman of the Greenbushes Roads Board, Greenbushes, is a son of the late Mr. Charles Keyser, of the United States of America, one of the earliest settlers of the Vasse district, who built the pioneer timber mill there and sent away the first shipment of timber from that neighbourhood. The subject under review

MR. HERBERT GEORGE KEYSER.

was born at Busselton on September 12, 1867, and received his education at the same place and at Albany. He learnt the painting and decorating trade, and for a number of years was prospecting in the districts between Dundas Hills and Mount Leonora. After spending a period at Busselton he came to Greenbushes in 1899 and commenced prospecting for tin, in which venture he met with considerable success, scoring a record in results in that district and securing about nine tons of tin from forty-two loads. Subsequently after visiting Derby he returned to Greenbushes and purchased the business of Mr. G.

Pringle, newsagent and bookseller of that town, with the conduct of which he combined operations as auctioneer and commission and insurance agent. In 1904 he was returned as member of the local roads board, and has retained this seat ever since, having occupied the position of chairman for three terms. He is chairman of the local board of health, a member of the hospital board, and ranks as Past Master in the Masonic Lodge. Athletics command his cordial support, and he acts as patron of the various clubs of the district. Mr. Keyser married Rosina, daughter of Mr. William Thorpe, late of Fremantle.

**CHARLES ROBERT SCOTT**, member of the Greenbushes Roads Board, is a son of the late Mr. James Scott, of South Australia, who carried out many important building contracts in Adelaide. He was born at Clare, in the Central State, on May 3, 1867, and pursued his scholastic studies at a local school, with a finishing course at Adelaide. Upon the close of his schooldays he was apprenticed to the wheelwright and carpentering trade, and for a number of years followed

C. E. Farr, Perth.  
MR. CHARLES ROBERT SCOTT.

this calling all over the northern districts of South Australia, ultimately leaving for the Western State in 1896. Upon arrival he proceeded to the goldfields, where he worked at his trade for a considerable period,

in 1905 leaving the fields and settling at Greenbushes, where he established himself as carpenter, builder, and contractor. In 1909 he was returned as a member of the local roads board, and has since occupied a seat on that body. He occupies the post of acting secretary of the Greenbushes Hospital Board, and is a prominent member of the United Ancient Order of Druids, having passed through all the chairs of this order. He is also patron of the various athletic clubs of the district. In 1893 Mr. Scott married Mary, daughter of Mr. G. Pawlson, a veteran of the Crimean War, and has one son.

**WILLIAM HORNER NELSON, B.A., M.B., B.S.**, District Medical

C. E. Farr, Perth.  
DR. WILLIAM HORNER NELSON.

Officer and Medical Officer for Health, Greenbushes, is a son of the late Colonel Albert Edward Nelson, of the Volunteer Horse Artillery, Grahamstown, South Africa, who commanded the Town Guard during the Boer war and for several years occupied the office of mayor of that place. The subject of this sketch was born in South Africa on November 28, 1878, and after a preliminary course of education became a student at St. Andrew's College in his native town. He took his B.A. degree in 1899 and then proceeded to Edinburgh to pursue his medical studies, but upon the outbreak of the war abandoned this intention

and sailed for South Africa, where he was attached to the 70th Company Imperial Yeomanry Corps of Sharpshooters, and saw active service in the Orange Free State, Cape Colony, and Rhodesia. From South Africa he came to Australia and received his medical training at the University of Melbourne, obtaining the diplomas of M.B. and B.S. in 1907. Dr. Nelson then came to Western Australia to fill the appointment of resident medical officer at the Perth Public Hospital, which he retained for about a year. Subsequently he acted as *locum tenens* in Perth and Fremantle for a time, and next accepted the post of district medical officer at Kookynie on the goldfields, which he continued to hold until his appointment in 1910 to Greenbushes, where he has now established himself in practice as consulting physician and surgeon, in addition to his duties in connection with the local board of health. Dr. Nelson advocates indulgence in outdoor athletics, and is a patron of the various local clubs. In Melbourne he married Eva, daughter of the late Major Priesley, of Tasmania, a veteran of the Crimea and of the Indian Mutiny.

DAVID ELLERTON BROWN, formerly Manager of the Greenbushes Timber Corporation, is a son of the late Mr. David Brown, of Southampton, England, where he was born in 1863. Upon leaving school he proceeded to Glasgow to take up more advanced studies, and went through a course of mineralogy and kindred subjects at a technical college in that city. In 1887 he came to Australia, and until 1900 was identified with the gold, copper, and timber industries in the Croydon and Cloncurry districts of Queensland. Returning to the Old Country he was engaged in the iron trade in Hampshire, England, and continued until 1908, when he sailed for Western Australia to enter upon the duties of manager of the Western Australian Jarrah Forrest Company, Limited, at Greenbushes. In 1902, when the Timber Corporation took over control of this enterprise, Mr. Brown was appointed senior manager at that centre, which post he resigned in 1912 in order to accept a position in Tasmania. Mr. Brown interested himself in the various organizations of a public nature at Greenbushes, and was a member of

the original roads board, the board of health, and of the Greenbushes Hospital Committee, being chairman of all three bodies. He was gazetted a Justice of the Peace in 1902 and is a member of the Masonic craft and of the Weld Club.

JOSEPH CHARLES JAMES, retired storekeeper, of Greenbushes, is a son of Captain Edwin James, of Cornwall, England, where the gentleman under review was born on April 22, 1857. In early life he was identified with seafaring pursuits, at a later date serving his apprenticeship to the grocery trade in the West of England. In 1879 he arrived at Port Adelaide and followed his calling in the South Australian capital for a few months.

Bartletto,

Perth.

MR. JOSEPH CHARLES JAMES.

He then proceeded northwards and established himself in business on his own account at a centre about 200 miles distant from the metropolis. Here he continued until 1890, when he left for a trip to the Old Country, returning in the following year. He went into business at Balaklava, where he opened a general store, which he conducted successfully until 1905, and in that year came to Western Australia. Settling at Greenbushes he began operations at that place and rapidly worked up a flourishing business under the title of "James, The Big Cash Store," Greenbushes, which has become one of the best-known

emporiums in the district and the leading drapery store in the town. The premises are large, well lighted, and convenient, and the splendidly assorted stock of goods, both in the general and drapery departments, testifies to the ability of the buyer to cater for the popular taste. Recently Mr. James retired from active commercial pursuits, and the business was bought and the premises taken over on lease by Messrs. Cargeeg Brothers, the present proprietors. While in South Australia he was appointed a Justice of the Peace for the whole State in 1900, and in 1910 received his Commission for the Blackwood magisterial district of Western Australia. He was also a district councillor for some years in the former State, but since his arrival in the West has directed all his energies toward the building up of his mercantile connection. Like most Cornishmen, Mr. James revels in aquatic pursuits, but his chief recreation is found in the game of billiards, in which he has won considerable repute in the district. He is a Master Mason of the South Australian Lodge of Freemasons. In 1883 Mr. James married Emily, daughter of the late Mr. Lawrence Reynolds, of South Australia, and has a son and two daughters.

WILLIAM JOHNSTON, Greenbushes, was born in Victoria on October 16, 1869. He was associated with the timber trade for a number of years on his native soil, and in 1893 left Victoria for Western Australia, where he continued in the timber trade until 1899. He then proceeded to Greenbushes and engaged in tin-mining for seven or eight years, in 1907 building the Exchange Hotel, which he has since leased to Mr. Huitson, who carries it on at the present time. In 1909 Mr. Johnston established the Broadwalk Boot Company in Perth, and has since opened branches in Wellington Street and Bridgetown. His commercial interests also extend to Manjimupp, where he is connected with the Manjimupp Trading Company. Mr. Johnston was identified with the original co-operative society for the handling of tin ores at Greenbushes, and was a member of the first progress association in that district. He was a candidate in the Labour interest for the electorate of Nelson in 1910, but suffered defeat.

COURT-HOUSE HOTEL, Greenbushes. (Proprietor, Percival Kinninmont.) Since the impetus given to the tin-mining industry in the

C. E. Farr, Perth.  
MR. PERCIVAL KINNINMONT.

neighbourhood of Greenbushes at the close of last century the importance of this centre has greatly increased, and the population has been augmented by many scores of families. The delightful and bracing climate makes it a very desirable place of residence, and since the early years of the twentieth century the whole appearance of the place has undergone considerable changes. Among the various fine buildings which are

gradually taking the place of the primitive erections of those pioneer days may be included the Court-House Hotel, which occupies perhaps the finest situation in the town. It was erected in 1907, its site being on the highest peak in the south-west, 1,080 ft. above sea-level, whence a splendid outlook over the town is commanded. From the imposing

cleanliness and comfort reign supreme), drawing-room and dining-room (with beautifully upholstered furnishings), a cardroom, smoke lounge, saloon and lounge bars. It is the only C.T.A. and Masonic house in the town, and there are three sample-rooms for the use of commercial travellers. All modern conveniences have been introduced,

tower a birdseye view of many miles of country may be obtained, and various objects of interest attract the attention of the frequent visitor. The hotel is a brick building comprising twenty bedrooms (where

the bathrooms being fitted with heating appliances, and the lighting arrangements have been made by means of acetylene gas. On the western side of the hotel is a spacious balcony, covered in and running the full length of the house, where lounges and easy chairs offer allurements for whiling away leisure hours. The stable accommodation is good, and there is a garage, providing shelter for two motor-cars. Mr. Kinninmont recently purchased a powerful car, which visitors are able to hire at moderate rates. The cuisine is under the supervision of skilled hands, and leaves little to be desired, while the wines and other liquors are of best quality. The hotel is generally acknowledged to be one of the leading country houses in the State. PERCIVAL KINNINMONT is a son of Mr. James Kinninmont, of Stirling, Scotland. He was born at Adelaide, South Australia, in 1883, and received his education at Melbourne, where he was taken at an early age. He gained some insight into the principles of chemistry while still in his teens, but abandoned

MR. P. KINNINMONT'S COURT-HOUSE HOTEL, GREENBUSHES.

the idea of following that profession, and became connected with the softgoods trade, continuing in this line after his arrival in Western Australia, in 1897. After some years at Perth and on the goldfields, in 1904 Mr. Kinnimont came to Greenbushes, subsequently taking over the control of the Court-House Hotel, which he has conducted ever since. He identifies himself with the public and social life of the district, and has taken a very active part in the various local organizations for its advancement. In 1909 he was appointed a member of the roads board and of the board of health, but recently, owing to pressure of business claims, has been forced to relinquish his activities in these directions. He is a member of the hall committee, and gives cordial encouragement to all forms of outdoor sport, being president of the Greenbushes Cricket Club, and a member of the local race club.

**DUKE OF YORK HOTEL,** Greenbushes. (Proprietor, Harry Wanderley Nutt.) This hotel has been carried on by Mr. Nutt since

Mr. Edmund Nutt, chemist, of Canterbury, Kent, England, and was born in Queensland on August 24, 1873. His early education was

Bartletto,

Perth.

MR. HARRY WANDERLEY NUTT.

library at Panbula, in the Mother State, which he continued to conduct until 1892, when his migration to Western Australia took place. After carrying on refreshment rooms in Perth for a few months he went

to the goldfields, and was prospecting at Coolgardie, Kalgoorlie, Hampton Plains, Leonora, Broad Arrow, and other places for some considerable time. Eventually he started a newsagency business on the great southern line, which he relinquished in 1910 in order to open the Duke of York Hotel at Greenbushes. Indifferent health precludes him from taking any active part in public affairs, but he accords his sympathy and practical support to all movements for the advancement of the district. He is a member of the Masonic fraternity, and for recreation purposes finds considerable enjoyment in cricket. He married in Western Australia Lucy Christina, daughter of Mr. W. Orr, of Ireland.

**JOHN MAY**, of May & Morgans' Livery and Bait Stables, Greenbushes, is a son of Mr. John May, of Cornwall, who came to Western Australia in the year 1879, and was one of the early settlers in the southwestern district of this State. The gentleman under review was born at Bridgetown on April 1, 1882, and upon the close of his education at a

*C. E. Farr,* *Perth.*  
MR. JOHN MAY.

local school became associated with his father, who was employed as a mail contractor, being the first to open up a service between Bridgetown and Upper Blackwood. The mails in those days were carried on horseback and delivered once a week, this method having since been

superseded by a four-horse team. He continued in this way for twelve years, and in 1907 came to Greenbushes as manager for the livery stables then carried on by Mr. Alfred Blechyrden, and ultimately took over the proprietorship in partnership with Mr. Morgans, in conjunction with his business operations, carrying on mail contracting under the Government. In 1909 Mr. May was elected a member of the local roads board, and also serves the community by filling a seat on the board of health, also being connected with the hospital board and the cemetery board. He is president of the football club and a playing member of the local cricket club. In December, 1909, Mr. May married Ethel, daughter of Captain C. Evans, of Melbourne, and has two sons.

**ALFRED WADDINGTON**, Chairman of the Nelson Roads Board and general merchant, of Bridgetown, is a son of Mr. Joshua Waddington, of Yorkshire, England. He was born at Bradford on June 22, 1868, and was primarily educated at a boarding school in that town, concluding his scholastic career at Carlton, Victoria, where he came with his parents in 1879. Upon leaving school he became associated with his father in a contracting business in Melbourne and continued in this calling for eight years. At the end of this period he went to New South Wales and engaged in storekeeping pursuits, following the same line of business after his return to Melbourne in 1896. In the same year he left Victoria for Western Australia, where he joined the Public Works Department at Perth, relinquishing his position after four years in order to proceed to Kalgoorlie as department manager to Messrs. J. W. Fimister & Co. He spent five years in this connection, and in 1906 came to Bridgetown and commenced business as general merchants and agents in partnership with Mr. P. H. Awcock. In 1909 Mr. Waddington was returned as a member of the roads board and served for two years on the finance committee, which seat he resigned on his appointment to the chair in 1911. He is chairman of the hospital committee and president of the children's sports committee, a member of the agricultural society, and in friendly societies holds

honours as Grand Master of the I.O.O.F. of Western Australia, in which he has held membership for ten years. He is vice-president of the local cricket club and vice-president of the Nelson Cricketing Association. In 1895 Mr. Waddington married Ada, daughter of Mr.

*Bartletto,* *Perth.*  
MR. ALFRED WADDINGTON.

H. S. Glenic, late stock inspector of South Australia, and has three sons and a daughter.

**ROLAND GANNAWAY**, Secretary of the Nelson Roads Board, Bridgetown, is a son of the Rev. James Gannaway, of Hampshire, England, and was born at Blackheath, London, on November 27, 1867. He received his scholastic tuition at Christ's Hospital (the celebrated Blue Coat School), and when eighteen years of age left London for Australia. He entered upon commercial life in the office of the Royal Insurance Company at Melbourne, Victoria, but resigned this connection in favour of agricultural pursuits some two years later. For a number of years he was identified with the farming industry in the Victorian State, but eventually removed to Tasmania, where he opened a private school and conducted it for three years. He afterwards continued scholastic work as a private tutor for seven or eight years in Victoria, subsequent to which he became a stipendiary lay-reader in the Church of England, being stationed at

Kaniva, near the South Australian border. In 1895 Mr. Gannaway left for Western Australia and entered the customs service at Fremantle. Here he continued for three years, at the end of which period he accepted the post of temporary headmaster of the Guildford Grammar

W. J. Ford, *Bunbury.*  
MR. ROLAND GANNAWAY.

School, proceeding from there to Kalgoorlie, where he filled a similar position. Upon the introduction of free education by the Government of the State in 1899 he resigned this appointment and for some time acted as secretary of the Reform League, holding this position at the time of the goldfields struggle for federation and the separation movement. He was identified with the Murchison district for a time, and in 1908 came to the south-western district, where he has since continued. Mr. Gannaway held an appointment under the Bunbury Municipal Council which he resigned in order to accept his present post of secretary to the Nelson Roads Board. He is also secretary to the Nelson Agricultural Society, the Bridgetown Hospital, the local mechanics' institute, and the traders' association. In 1895 he married Nellie, daughter of Mr. Alexander Smith, of the Wimmera district, Victoria, and has four sons and two daughters.

JOHN RUSSELL WALTER, J.P., farmer, orchardist, and grazier, "Peninsula," Bridgetown, is a son

of Mr. Octavius Gardiner Walter, of Somerset, England, where he was born in 1863. At the close of his scholastic education, which was acquired at local schools, he spent two years at the Guelph Agricultural College in Canada under Professor William Brown, and was successful in winning prize medals for knowledge of live stock and veterinary science. In 1887 he came to Western Australia, and after a few months in the Vasse district selected his present holding near Bridgetown, an excellent property of 2,300 acres, consisting chiefly of grazing land, which he uses for sheep-raising purposes. The main flock is comprised of merinoes, which thrive well in this locality, but there are also some fine Leicester on the property which Mr. Walter has bred from imported stock. In addition to his pastoral operations he has 120 acres under cultivation of various crops and 20 acres of orchard, where different kinds of fruit-trees yield good returns. For many years he has been closely identified with local public affairs, and has been a member since its inception of the council of the agricultural society, of which body he was secretary for three years and president for a lengthy period. On the roads board he has rendered good service, and was constantly called upon to fill the chair of this institution, from which he resigned only in 1909, upon the occasion of his taking a trip to the Old Country. He was chairman of the health board, in the formation of which he played a leading part, and received his Commission of Justice of the Peace in the year 1900. For a short period he represented the Nelson district in the House of Assembly, previous to the death of the late Sir James Steere. Mr. Walter married Lousina, daughter of Mr. James Guy Thurston, one of the early settlers of the Preston district, and has two sons and three daughters.

The late Captain THOMAS EDWARD HESTER, one of the very early pioneers of the Western Australian State, came to Australia from Warwick, England, by the sailing vessel "Lotus," landing at Fremantle on October 13, 1829, in company with his wife, four sons, daughter, and a lady companion. The voyage occupied a few days over six months, and subsequent to arrival in the

colony the family resided at Fremantle, where Captain Hester was attached to a small detachment of Imperial troops stationed at the seaport for the purpose of guarding settlers against molestation by the natives. Upon the disbanding of this detachment he resided in Perth for four or five years, being in receipt of a small pension from the English Government, and afterwards received a grant of a large tract of land at Canning, where he carried on farming operations for many years. Tilling the soil with hoe and spade he was able to grow sufficient wheat for the use of the family, this being ground into flour by means of a hand steel mill. He also raised a few sheep and was the purchaser, at the figure of £50, of one of the first Timor ponies ever brought to the State. At a later date Captain Hester imported a pair of greyhound dogs from England for the purpose of kangaroo hunting, the flesh of the marsupial at that time commanding a ready sale in Perth at 1s. 6d. per lb. Being in straitened circumstances Captain Hester (who had fought at the Battle of Waterloo and on the Indian frontier), through

*Hermus & Hall, Perth.*  
MR. EDWARD GODFREY HESTER.

the good offices of Sir James Stirling (Governor of Western Australia), upon the return of the latter to England, brought his claims before the Home authorities, and he was granted the sum of £1,000 by the British Government for his past services on the Continent, in India,

and in Australia. He was also appointed one of the very first stipendiary magistrates, with a salary of £50 per annum, and for many years exercised this Commission at Canning. Captain Hester died on May 6, 1862, and his remains were accorded a military funeral by the Administration of the day. The late EDWARD GODFREY HESTER, second son of the foregoing gentleman, was born in England in 1820, and was in his tenth year when the family landed in Western Australia. Upon the conclusion of his scholastic studies, which he pursued under the supervision of a private tutor, he began to assist in the duties of the home farm and became his father's right hand until his twenty-sixth year. About this time he accepted the appointment by the Government of Protector of Natives, his duties also including the protection of settlers—a post which carried an emolument of £60 per annum. During a trip on horseback to Shark Bay with the first party to open up this country Mr. Hester had a misunderstanding with his superior officer, Mr. George Eliot (for many years resident magistrate at Bunbury), and leaving his companions returned alone to Perth, a proceeding which elicited congratulations on his courage from Governor Hutt, who was out riding and was the first person Mr. Hester met on reaching Perth. Subsequently Mr. Hester married Theodosia Sophia, daughter of Dr. Henry Hall, of Woongong, Perth, formerly of England, who came to Western Australia by the "Parmelia" in 1831. He next terminated his service with the Government and opened in business at Bunbury as general storekeeper and timber merchant. Meeting with success he largely increased his operations, and after ten or twelve years sold out and selected 60,000 acres of land in the Nelson district, 3,000 of which were freehold, the balance being on a 28-years' lease from the Government. Upon this property, to which he gave the name of "Blackwood Park," eventually he built a homestead and took his family to reside there, being the pioneer settler of this part of the country. He erected the first steam flourmill in the south-west in 1865, the building, which is still standing, now being used as an apple store. Sheep-raising, principally merinoes, formed the chief branch of Mr. Hester's enterprise, and he also went in fairly extensively for cattle and

horses, and carried on dairying operations with satisfactory results. For many years he served as a member of the Nelson Roads Board, acting as secretary, and also filling the chair for a lengthy period. A staunch Anglican, he frequently officiated as lay reader in Bridgetown, the present site of this picturesque town being on a part of the old "Blackwood Park" property. Mr. Hester—who was for many years a Justice of the Peace—died in November, 1898. There were five sons and eight daughters of the marriage, nine of whom still survive. GODFREY WILLIAM HESTER was born at Bunbury on October 12, 1857, being the third son of the late E. G. Hester. He was educated by private tuition at "Blackwood Park"

Lafayette, Perth.  
MR. GODFREY WILLIAM HESTER.

and at Bridgetown, and afterwards assisted his father on the farm until 1878, when he obtained the post of manager for "Winnegup" Station, the property of Mr. J. F. T. Hassell, of Kendenup, which then carried 7,000 sheep and 500 head of wild cattle. After two years he relinquished this connection and spent a year at Bassendean, near Guildford. He then launched out for himself, and proceeding to the north-west purchased a flock of 1,500 merino ewes from Mr. E. T. Hooley, agent for Mr. Tom Murray, of South Australia, and drove them a distance of 230 miles towards the head of the Fortescue River. Here, in partnership with his brother, Mr. Edward Hester, he formed the "Mulga Downs" and the "Curdiaderry"

stations, comprising together some 600,000 acres, and for three or four years considerable success attended the venture. A like period of severe drought followed, with such serious results that the partners were forced to dispose of their interests, purchasers being found in the firm of Messrs. Lockyer Brothers, and returning to the Blackwood Mr. Hester was offered a seven-years' lease of Sir James Steere's "Jaye's" property, in partnership with his son, Mr. Edward John Steere. At the close of this period he selected a property adjoining "Blackwood Park," the development of which he proceeded with until 1907, when he leased the estate to Mr. Cecil Keall and took up his residence in Perth. Mr. Hester in that year opened in business as a commission and land agent, under the style of Hyem, Hester, & Co., Limited, and has since carried on successfully at Forrest Chambers, St. George's Terrace. He was gazetted a Justice of the Peace for Nelson district in 1898 by the Forrester Administration, and upon his resignation was re-appointed for Perth district in 1909. He was a member of the Nelson Roads Board for many years, and also occupied the position of people's churchwarden in the Anglican church at Bridgetown. He is a member of the Western Australian Trotting Association, and finds recreation in motoring and golf, being a member of the Cottesloe Golf Club. In 1890 Mr. Hester married Mary Evangelina, daughter of Canon George H. Sweeting, formerly rector of Guildford, and has four sons and three daughters. His eldest son, Lancelot H. S., a student at Roseworthy Agricultural College, South Australia, in 1912 won a diploma in agriculture. Mr. Hester resides at "Dalgarnup Hall," Claremont.

GERALD EDMUND HESTER, "Blackwood Park," Bridgetown, is a son of Mr. Edmund Godfrey Hester, of Warwickshire, England, who came to Western Australia in 1829 and was among the pioneer settlers of the south-western district, after an early residence at Canning, ultimately taking up land in the Blackwood area, which he developed as a sheep station. The subject of this review was born at "Blackwood Park," and received his education at the same place. From his boyhood he has been associated with farming

pursuits, the property which he has worked for many years being that originally owned by his father and situated about four miles north-west of Bridgetown. It is watered by Hester's Brook and comprises 1,400 acres of country, the soil consisting for the most part of a red loam 3 ft. deep, which produces excellent pasturage and is well suited to purposes of agriculture. About 60 acres are devoted to a fine orchard, which forms one of the principal departments of the industry, and 200 acres have been brought under cultivation of hay crops, 50 acres being sown with other classes of crops. An interesting feature is an ancient vine, the largest in the State, which was planted in 1860, and is still of vigorous growth, the trunk measuring 4 ft. in circumference. Mr. Hester engages in sheep-raising on a considerable scale, and has obtained excellent results in his Lincoln-Merino flock, which has been developed from original imported stock. He takes some part in the affairs of the district and has been a member of the local roads board for about four years. He has also been connected with the Royal Agricultural Society for a lengthy period, and is a member of the West Australian Club, Perth. He married Isobel Selina, daughter of the late Lieutenant Frogley, and has three sons and a daughter.

**RANDALE EGERTON-WARBURTON**, orchardist and grazier, "Brackenhurst," Bridgetown, is a son of Lieutenant Egerton-Warburton, of the 51st Regiment of Western Australia, who came to this State in 1840 and married a daughter of Sir Richard Spencer, first resident magistrate at Albany. The gentleman under review was born at Albany on September 11, 1860, and pursued his scholastic studies in the same town. From boyhood he has been connected with agricultural pursuits, and coming to the Nelson district in 1889 selected a portion of his present holding, which in the interval of time that has elapsed from that date has increased from 400 to 3,000 acres. Mr. Egerton-Warburton goes in for the breeding of a high-class type of horses and other stock, sheep-raising in especial forming an important department of his operations. He has found the Lincoln breed of sheep well suited to the locality, and his Lincoln

wethers on many occasions have scored successes in the agricultural show rings. He grazes in all about 2,000 sheep, besides which the estate carries in the vicinity of forty horses, and he has been a very successful exhibitor in the latter class of stock. At the Royal Agricultural Show held at Perth in 1911 he was awarded second prize for his Western Australian bred draught stallion, the progeny of which at the Bridgetown Show secured all the prizes for yearlings and two-year-olds, the sire himself winning two first prizes and the championship. At the Nelson Show of 1911 his various exhibits totalled the sum of £23 10s. in prize money. Mr. Warburton has about 100 acres of land under crop, and his 40-acre orchard is a feature of beauty in what is one of the loveliest estates in the district. For three years in succession Mr. Warburton won a challenge cup presented by the late Sir James Steere for the best-kept orchard in the Nelson district, besides three first-prize silver cups. He is a member of the local fruitgrowers' association. In 1890 he married Eva, daughter of the late Mr. E. G. Hester, of "Blackwood Park," and has two sons and four daughters.

**CLARENCE SHEPHERD**, orchardist and grazier, is a son of Mr. Hyett Shepherd, who was born in South Australia in the year 1844. His grandfather, one of the very early pioneers of that State, belonged to an old Yorkshire family with shipping interests at Whitby, and sailed from England in the ship "Francis Speight," of the line of Messrs. Shepherd & Lidgett, of which firm his uncle was senior partner. He arrived at Port Adelaide on November 20, 1843, and having sold to advantage a cargo of iron, steel, and coal which he had brought with him he subsequently took up land in the Aldinga portion of the Willunga district, adjoining the block where was afterwards erected the White's Valley Flourmills, from which was exported the bulk of the flour sent from South Australia to the early Victorian gold diggings during the fifties. The gentleman under review was born in March, 1881, in the brick house built by his grandfather where his father before him had first seen the light, and after a preliminary course of education in his native town finished his scholastic

studies at Adelaide. He spent his early manhood in agricultural pursuits on his father's farm and in 1901 joined the fifth South Australian contingent proceeding for service in South Africa. Here he went to the front and was wounded in the engagement at Reitz, on which occasion the forces were led into action by Colonel de Lisle. After his return to South Australia, eventually he left for the Western State in 1904 and took up 1,600 acres in the Blackwood district for grazing and stock-raising purposes. In 1910 he took over "Blackwood Park" on lease from Mr. G. Hester, this estate, comprising 1,200 acres, being situated in one of the most picturesque parts of a beautiful district. In the last-mentioned year Mr. Shepherd was responsible for the

Bartletto, Perth.  
MR. CLARENCE SHEPHERD.

initial shipment of fruit to South Africa from Bunbury. He is very fond of rifle-shooting and takes his recreation chiefly on the range where he has attained considerable success as a marksman. His spare moments are devoted to mechanics, and in conjunction with an engineer he is perfecting a farmer's weighbridge, the chief features of which are accuracy, portability, and cheapness. All parts of the machine are interchangeable, and it will record the weight of light and heavy loads with the greatest accuracy. The mechanism is very simple and easily manipulated, and it is estimated that the cost will be about one-tenth of the price of the ordinary weighbridge.

The FREEMASONS' HOTEL, Bridgetown. (Proprietor, Mr. R. A. J. Crawford.) This well-known hotel is a substantial two-storied building situated at the northern end of the town, within a minute's walk of the railway station.

MR. ROBERT ARTHUR JOHN CRAWFORD.

It has a fine street frontage, and its attractions are greatly enhanced by an 11 ft.-wide verandah running the full length of the house. The accommodation consists of fifteen bedrooms (well-ventilated and comfortably furnished), two well-appointed dining-rooms, drawing-room, and smoke- and reading-rooms. Installations for the lighting of the whole building with acetylene

gas have been made, hot and cold water is laid on, and the plunge bath and other luxuries are always obtainable. In every respect the hotel ranks among the best in the south-western district and is conducted on the most up-to-date lines. The liquors are of the best quality, and the cuisine, under the superintendence of Mrs. Crawford, is of a

Mr. W. A. Crawford, of Bendigo, and was born at Windsor, Victoria, on June 5, 1877, also receiving his education there. With the exception of a few intervals he spent some fourteen years as steward on the Huddart-Parker line of vessels, trading on the Australian coast, and in the A.U.S.N. Company's service. In 1900 he settled in Western

CORNER OF DRAWING-ROOM FREEMASONS, HOTEL, BRIDGETOWN.

character to satisfy the most fastidious taste. The stabling accommodation is good, and shelter is provided for motor-cars. Mr. Robert Arthur John Crawford is a son of

Australia, and coming to Bridgetown took over control of the Freemasons' Hotel, which at that time was situated at the southern end of the town. After two and a half years the business was removed to the present premises, which had been in course of erection and were now completed. At this juncture Mr. Crawford transferred his services to the Bridgetown Hotel and continued to act as boniface in that establishment for a similar period. He then took a three months' holiday, and upon his return to Bridgetown became proprietor of the Freemasons' Hotel, which he has carried on ever since. Mr. Crawford owns 29 acres of land about a mile from the hotel, and has planted a fine orchard covering 15 acres, which yields a plentiful fruit supply. He also has a station property at Pierup, comprising 1,400 acres, and intends ultimately to develop this as a sheep and cattle breeding station. He takes a very keen interest in local affairs, and for two and a half years, as a member of the roads board,

MR. R. A. J. CRAWFORD'S FREEMASONS' HOTEL, BRIDGETOWN.

has done useful service, recently being reappointed to this body. He is an active member of the mechanics' institute, and has occupied the office of vice-president for some considerable time. He is patron to the Bridgetown Race Club and takes a prominent part in aquatic sports, having successfully organized three local carnivals. A member of the Nelson Football Association for seven years and president for five years, he is well known on the field. Perhaps his chief interest, however, is centred in the children of the neighbourhood, and he is never happier than when devoting either time or money to their interests. He married Kathleen, daughter of Mr. Edmund Fleming, of Woodend, Victoria.

JACK SMITH, proprietor of the Terminus Hotel, Bridgetown, is a son of Mr. Joseph Smith, of Yorkshire, England, who was the first settler in the Bridgetown district,

W. J. Ford,

Bunbury.

MR. JACK SMITH.

where he took a very active part in public affairs and served as a member of the roads board for over thirty years. The subject of this notice was born at Bridgetown on June 15, 1881, and was educated at local schools. At the termination of his studies he was engaged in the tinning industry at Greenbushes and followed this occupation for over eight years, subsequently pursuing various avocations in the south-western

EE

district until he took over the lease of the Terminus Hotel in 1906. This hotel is centrally situated, about a minute's walk from the railway station, and obtains its fair share of patronage from the travelling and resident public. Mr. Smith takes an active interest in local affairs, and was a member of the roads board for a term, at the

whom he remained for about five years. At the end of that period Mr. Lake relinquished this service in order to open in business on his own account at Bridgetown, and met with such success in his operations that in 1911 he was obliged to secure more commodious premises to cope with his increasing expansion of trade. He was elected president of the local

MR. JACK SMITH'S TERMINUS HOTEL, BRIDGETOWN.

present time occupying a seat on the board of health. He is president of the Labour movement in the district. In athletics he is prominent, and fills the office of president of the football and cricket clubs, holding trophies for his prowess in the latter sport and captaining the cricket club in local matches. His record on the football field is also good, and he is looked upon as a sure supporter of all healthy outdoor diversion. Mr. Smith married Mary, daughter of Mr. E. Murnane, of Victoria, and has two daughters.

traders' association in 1910. Mr. Lake finds congenial recreation for his leisure hours in the cultivation of his orchard property, which lies

C. E. Farr,

Perth.

MR. HERBERT LAKE.

HERBERT LAKE, general merchant, of Bridgetown, is a native of Ballarat, Victoria, where he was born on June 20, 1876, being a son of Mr. John Lake, of that city. At the conclusion of his education, which was imparted at local schools, he started active business pursuits in the hardware and ironmongery trade, and has continued in this line of business ever since. After a period in the employ of Messrs. Eyres Brothers, of Victoria, he left for Western Australia in 1902 and became connected with the staff of Baird's Company, of Kalgoorlie, with

adjacent to the town, and has about 15 acres of apple-trees which bid fair to be a considerable source of profit in the near future.

### AUGUSTA AND KARRIDALE.

When, as a result of Captain Stirling's report on the Swan River, the British Government decided to establish the colony of Western Australia, it conferred upon him the Lieutenant-Governorship of the new settlement and at the same time gave him priority of choice of 100,000 acres in the territory. Portion of this land he selected near Cape Leeuwin, and within a few months of assuming the reins of government inspected the south coast with a view of establishing a settlement. The site chosen was on Flinders Bay, at the mouth of the Blackwood River, where the land seemed to possess agricultural qualities and the bay to provide good harbourage. Here the settlement of Augusta was established in 1830, with Captain J. Molloy as Government Resident and about thirty settlers. The difficulties in the way of clearing were many, and the cattle showed a tendency to stray; consequently when the more suitable Vasse plains were discovered some two or three years later the settlement moved to that place, leaving

very few people at Augusta. Its existence continued in a desultory fashion until the establishment by M. C. Davies & Co. of karri timber mills about 11 miles away, at what afterwards came to be known as Karridale. The two places were connected by a private railway, and Augusta (or Flinders Bay) became the port of shipment for karri timber. Later Karridale became connected by rail with Port Hamelin, on the west coast, and timber was shipped from there also.

Karridale, the timber centre, is situated right in the heart of the karri country, and is surrounded by giant trees, equalled only by the gums of Victoria and Tasmania.

Fifteen miles from Karridale is the Leeuwin Lighthouse, one of the great shipping beacons of the world, and between Augusta and Karridale are some marvellous limestone caves, the principal, the Coronation Cave, being probably the peer of anything yet discovered.

## Midland Junction to Toodyay.

Midland Junction, which may be regarded as the outer boundary of the suburban system, owes its importance to the fact that it is the junction from which the eastern, southern, and northern railways diverge, and is also the site of the railway workshops of both the Government and the midland railway systems. In addition to the trunk lines, there is a short railway from Midland Junction to Canning Mills, situated in the Darling Ranges. Built originally by the Canning Timber Company as a means of transporting cut timber from the mills to the city, it has for some years been the property of the Government. It is familiarly known as the "zig-zag railway," owing to the fact that it ascends the face of the hills by a series of zig-zags, from the highest point of which there is a view probably unequalled in the State. On a clear day the whole intervening country, across Perth and Fremantle and right away to Rottnest Island, lies spread out in a vast panorama. The salubrity of the atmosphere, due to its high position — 1,000 ft. above the sea level — has of

recent years marked the district as one of the health resorts of the city, while its soil and climate have combined to make it a progressive district from a fruit-growing standpoint. The township of Kalamunda, the centre of population on the ranges, is situated upon almost the highest point, and if the number of summer residences built in and around by prominent city folk are any criterion, has a future before it almost equal to that of the Mount Lofty district in South Australia.

Before the goldfields railway was constructed the line from Midland Junction to the eastern districts ascended the ranges by way of Greenmount, Darlington,

and Smith's Mill, but when the heavier goldfields traffic had to be considered a new route was laid down by way of Swanview and Parkerville. Both routes are in constant use, and tap agricultural country that is fast being cultivated. Greenmount is also the centre of a stone-quarrying area worked by the Perth City Council, from which most of the stone used for road-making is secured, while for many years past extensive vineyards have been a feature of the Darlington district.

Another site of interest on the older line is Mundaring, looked upon as an ideal sanatorium for consumptive patients. From there a spur runs down to Mundaring Weir, some five miles away, where is situated

the huge dam from which the goldfields and far east agricultural towns are supplied with water. This, a work of deep interest to all visitors, has already been described. At Parkerville, on the goldfields' deviation, there is situated the Waifs' Home, that excellent institution for the care of orphan and destitute children so well conducted by the Sisters of the

Photo by W. A. Hutchinson.

VIEW OF TOODYAY.

Church of England. The two lines join at Lion Mill, a timber centre worked by Messrs. Bunning Brothers, and a double line continues through Chidlow Well (the highest point), Woorooloo, Baker Hill, and Clackline to Spencer's Brook, from which point the eastern goldfields and great southern railways start. From Clackline a spur runs off to Toodyay and Bolgart, thus serving another large section of that vast agricultural area which Western Australia has at last recognized that it possesses.

Toodyay, the centre of an old-established district, is one of the earliest surveyed town sites in the State, dating back to 1833, when a settlement was made on a

site some three miles away from the town. The present location was fixed in 1860, in order to be closer to the main road to the metropolis, and the name of Newcastle was conferred upon it. The old Toodyay settlement was abandoned and became little more than a memory. A few years ago, however, a desire was shown to revert to the earlier title, and the name Toodyay was revived in place of Newcastle. Situated on the left bank of the Avon River and nestling amid the hills, Toodyay is undoubtedly one of the most charming inland towns of Western Australia, and affords to the visitor ample proof of the wisdom of the early pioneers who determined to make their homes in such beautiful surroundings. As befits the centre of a rich district, the town is a place of considerable commercial importance, and its buildings are evidence of the general prosperity of its people. It has three churches, schools, post office, town hall, and mechanics' institute, as well as three good hotels for the convenience of visitors. Water is supplied from a large reservoir capable of conserving 4,000,000 gallons, Toodyay being in that respect much more fortunate than many other Western Australian towns. The surrounding

district contains some of the finest agricultural land in the State, and here, if anywhere, wheat-growing, dairying, fruit-growing, and viticulture are to be found in full swing. In fact, it is doubtful whether finer farming land could be secured anywhere in Australia. Within easy reach of the town, as distances go in the country, are several very fine homesteads. One of the oldest of these is "Culham," so called after the homestead in Oxfordshire where its original owner, Mr. S. P. Phillips, was born. Established back in the thirties, the property has been in the hands of the Phillips family since 1840, and is one of the finest farms in Western Australia. Nearer the town is "Avondale," the property of Messrs. Bull & Stevens, who have about 100 acres under vines, most of the fruit being used for wine-making. This industry is also carried on at "Coorinja," a fine vineyard some five miles out of Toodyay, and in a less degree at several other homesteads. The railway from Toodyay to Bolgart has brought many of these properties within easy reach of the market, and has consequently given a great impetus to settlement and the development of the land.

BERTRAM FOWLER HUSSEY, J.P., M.B. (London.), M.R.C.S. (Eng.), L.R.C.P. (Lond.), is a son of the late Mr. Francis Leitch Hussey, of Perth, Chief Accountant in the Treasury Department of the State, and was born at the above city on June 13, 1873. He received his education at the Perth High School, and in 1891 was successful in winning a University Exhibition, entitling him to entrance to the Universities of Australia, England, Ireland, and Scotland. Making choice of England, he entered St. Mary's Hospital, London, and in connection with this institution gained the prize for forensic medicine, public health, hygiene, and clinical medicine. Upon returning to Australia Dr. Hussey settled at Fremantle, and for six months acted as *locum tenens* for Dr. J. W. Hope, then principal medical officer for the port. Subsequently he was engaged in private practice at Claremont for three years, leaving there for Menzies, where after twelve months he received appointment as Government medical officer for the district. In 1911 he removed to Toodyay, since when he has acquired a most extensive and successful connection in the town and surrounding district. Dr. Hussey in earlier years was foremost in general athletics, and has achieved the rare feat of covering 120 yards in even time, while he won most of the open events

during his college course. He still maintains his keen interest in sport of all description, and is popular not only with the devotees of outdoor diversion, but with all classes of the community among whom he resides.

W. A. Hutchinson, Toodyay.  
DR. BERTRAM FOWLER HUSSEY.

He was appointed a Justice of the Peace by the Moore Administration in 1906. In 1895 he married May, daughter of the late Mr. Francis Wesché, of London, and has a son and two daughters.

OSWALD LOUIS DE MAMIEL, auctioneer and general agent, Toodyay, is a son of Mr. Henry Hoener de Mamiel, of Barnawartha, Victoria, and grandson of Baron Hoener de Mamiel, of the Garde du Corps of Louis XVIII., of France, who, as commander of the 6th Regiment of the King's "Old Guards," distinguished himself at the Battle of Antwerp. The late Baron married Anna Maria Caroline Swift, of County Meath, Ireland, in 1833, and his death occurred in 1866. The subject of this memoir was born at Barnawartha, Victoria, on April 2, 1872, and after attending the local State school for some time finished his education at a private academy. At the age of seventeen he became associated with the winemaking industry and two years later turned his attention to grazing and agriculture. Tiring of this kind of life he entered the employ of Messrs. Martin & Co., of Barnawartha and Rutherglen, as a stockman, and continued with this firm for about three years. In December, 1905, he left for Western Australia, and upon arrival took train to Woolgangie, walking from there to Coolgardie, and finally finding his way to Black Flag, where he engaged in mining pursuits with indifferent success. Starting in the auctioneering and produce business, he continued in this line until the outbreak of the White Feather field, now known as Kanowna, where he

again became interested in mining, and at a later date resumed auctioneering at Paddington, which venture proved successful. Whilst here he was appointed president of the Australian Workers' Association, and became deeply interested in the great strike connected with the Paddington Consols. Suffering considerable financial loss through taking upon himself the support of certain indigent members of the Association, Mr. de Mamiel sold his business, and coming to Perth established

W. A. Hutchinson, Toodyay.  
MR. OSWALD LOUIS DE MAMIEL.

himself as an auctioneer and general agent in that city. After carrying on successfully for twelve months he left for the Murchison district, and operated in the same line of business at Day Dawn and Cue for about four years, his efforts commanding good results. Again settling at Perth he joined the Producers' Markets, Limited, as chief auctioneer and sub-manager, two years later being compelled to resign on account of ill-health. Being advised to try country life Mr. de Mamiel removed to Toodyay and opened an auctioneering and agency business in this progressive district. He rapidly established his claim to be considered the most able man in his line in the town and has pursued a most successful career, representing among other large firms Messrs. George Wills and Co., Henry Wills & Co., John Darling & Son (wheat merchants), Daniel White & Co. (carriage builders), and the South British Insurance Company. In addition to his mercantile interests he holds 1,500 acres of land,

which is completely fenced, and 250 acres cleared, and here mixed farming operations are carried on, wheat and sheep being the principal industries. Mr. de Mamiel in 1906-7 was president of the Paddington Progress Association and served as a member of the Broad Arrow District Roads Board, being instrumental with others in having Paddington declared a municipality. During his residence at Murchison he was a member of the Day Dawn Municipal Council for three years, and for eighteen months occupied a seat on the Day Dawn Water Board. In 1909 he was elected a member of the Newcastle Municipal Council and served in this capacity until the municipality was merged in the Toodyay Roads Board, when, on account of the pressure of business claims, he retired from public office. He married in 1900 Isabella Grace, daughter of Robert and Catherine Mansfield, of Hay Street, West Perth, well-known and successful colonists of about fifty years' standing, and has a family of four sons and two daughters.

CHARLES MAXWELL LUKIN, J.P., auctioneer and commission agent, Toodyay, was born at Perth on December 24, 1881, and is the third son of Mr. Lionel Boyd Lukin, a native of Toodyay in the early forties. Educated at the Perth High School, in his seventeenth year Mr. C. M. Lukin became connected with a land agent's office at the capital, where he continued for a year. He then turned his attention to the pearling industry in the northwest in conjunction with the late Captain Knight, and passed another twelve months in this way. Returning to the south, he joined Mr. T. J. Donegan at Toodyay, filling the position of accountant in a general merchant's business carried on by that gentleman at that centre. Four years later, upon the disposal of this concern to a purchaser, he became chief salesman in connection with the Producers' Union, Limited, at Perth, and acted in this capacity for about eighteen months. He then proceeded to Toodyay, and after carrying on as an auctioneer and general agent for two years accepted the management of Mr. W. Padbury's business there, which he conducted most successfully for a year and a half. Desiring an independent career, he then returned to the auctioneering business,

starting on his own account in 1910, since when he has formed a highly satisfactory connection. He is representative in the district for various well-known companies, including Messrs. Elder, Shenton, and Co., the Sunshine Harvester Co., Millars' Timber & Trading Co., Ltd., Stewart & Lloyds, the Cyclone Fence Co., W. Sandover & Co., the Commercial Union Insurance Co., etc., and generally conducts a most flourishing business. Mr. Lukin has since established branches of his business at Northam, Goomalling, and Wongan Hills, and thus operates throughout a very wide radius. He is also interested in the pastoral industry, owning a fourth share in a property of 7,000 acres, a portion of the "Deepdale" Estate originally taken up by Governor Stirling in 1838, from whom it was purchased by Mr. Lukin's grandfather about two years later. He also owns 1,000 acres at Wyening, near Bolgart, which he intends to apply to mixed farming, 200 acres already being cleared, as well as

W. A. Hutchinson, Toodyay.  
MR. CHARLES MAXWELL LUKIN.

several small holdings in the township and surrounding district, in regard to which he is very optimistic. He is the youngest Justice of the Peace in the State, having been gazetted in 1910, and represents the district on the Licensing Bench. He was a member of the Toodyay Municipal Council for five years, having previously held the position of town clerk, and upon the merging of this body in the roads board he was elected to a seat on the latter, which

he still retains. He is secretary to the Toodyay Agricultural Society, inaugurated in 1852, the oldest organization in the State holding a periodical show, which celebrated its sixtieth anniversary in 1912. A foundation member of the Toodyay Club, he acts on its committee, is a member of the Toodyay Racing Club, of which he has been treasurer for five years, for three years has been connected with the local M.U., I.O.O.F., and is a patron of all local sporting organizations. He married in August, 1912, Beatrice, daughter of the late Charles Crossland, surveyor, of Perth.

**JOHN AUBREY JAMES SINCLAIR**, general merchant, Toodyay, is a son of Mr. W. R. Sinclair, manager for the Hon. T. F. Quinlan, and was born in the town where he now resides on May 21, 1885. Until fourteen years of age he attended the local State school, proceeding from there to the Scotch College, Perth,

W. A. Hutchinson, Toodyay.  
MR. JOHN AUBREY JAMES SINCLAIR.

where he spent another two years. Upon leaving college he was apprenticed to the firm of Messrs. Splatt, Wall, & Co., electrical engineers, but this business not appealing to him he returned home and entered the firm of Messrs. Donegan & Connor, general merchants, with whom he acquired a useful knowledge of business methods. Upon the disbanding of this firm he joined the Newcastle Trading Company, and after eighteen months in this connection in 1907

started operations on his own account at Toodyay. He has since made good his reputation to be included among the most successful general merchants of that centre, the scope of his business extending with each succeeding year. Mr. Sinclair takes an interest in the progress of the district and served as a member of the Municipal Council of Toodyay for three years. He is an enthusiast in military matters, and has been intimately associated with the military movement for the past ten years, during which period he has filled every position from private to lieutenant, and at the present time holds rank as lieutenant of the 18th Australian Light Horse. He is a member of the Toodyay Agricultural Society, and acts on the committee of the local racing club, in connection with which institution he is the present official timekeeper. Sport in its various forms finds a ready advocate in Mr. Sinclair, equestrian and pedestrian exercise commanding his strong support. He is a member of the M.U., I.O.O.F., in which he has filled the office of Noble Grand and Grand Master, being now a Past Grand of that institution.

**WILLIAM ALLAN HUTCHINSON**, Ph.Ch., M.P.S., chemist, Toodyay, son of Mr. Edelbert Hutchinson, J.P., of Yorkrakine, was born at Richmond, New South Wales, on June 21, 1883. Being brought to Western Australia by his parents at an early age, he received his education at the James Street Public School, Perth, until fourteen years of age, when he became a student at the Perth School of Mines for a further four years. Here he took a course of assaying, chemistry, botany, and pharmacy, and having obtained his degree, was admitted as a member of the Pharmaceutical Society of Western Australia. He was then offered a position with the W.A. Apothecaries' Company at Perth, and after six years with this company left the metropolis for Toodyay in 1908, opening on his own account at this centre, where he has continued ever since. He has made considerable extensions to his business, including departments in stationery and photography, a cycle agency, etc., and conducts the whole with the success which a thorough grasp of the best commercial methods commands. Mr. Hutchinson takes considerable interest in sport, and is

a life member of the Perth Lacrosse Club, with which he has been prominently connected for a lengthy period. He was one of the Western Australian representatives chosen to sustain the prowess of this State against the Canadian lacrosse players in 1907. At the present time he finds

MR. WILLIAM ALLAN HUTCHINSON.

his chief recreation in tennis. He is a member of the Masonic craft, being connected with the local Lodge, No. 37, W.A.C. He was married in May, 1909, to Annie Louise, daughter of George Sands, of Brighton, England, and has one son and one daughter.

**JONATHAN SOMERS, J.P.**, Toodyay, is a son of the late Daniel Somers, of Wallsend, New South Wales, and was born at Maitland, in that State, on August 23, 1862. He received his education at the Wallsend Public School, and at the age of 17 years becoming a general dealer travelled over the whole of the northern portion of New South Wales. Tiring of this occupation after three years, he became apprenticed to Mr. J. Garaty, coachbuilder, of Wallsend, with whom he continued for five years. At the end of this period he launched out on his own account, and successfully conducted operations as a coachbuilder for a further two years. In 1891 he left Sydney for Western Australia, and proceeding to Toodyay—then known as Newcastle—he immediately accepted a position with Messrs. Best and Kingston, of that town. Twelve months later he bought out the firm,

and ever since has successfully carried on the business, during the earlier years of his connection with the district being responsible for the manufacture of three-fourths of the materials used in waggons built for conveyance to the goldfields. Mr. Somers holds 2,500 acres of land in the district, 450 acres being cleared and principally devoted to wheat-growing and sheep-raising. He has held various public offices, being elected mayor of the town in 1909 and filling the chair for the ensuing two years, at the end of which period Toodyay ceased to be a municipality, its administration being merged in

Webb & Webb. Perth.  
MR. JONATHAN SOMERS.

the roads board of the district. Upon retiring from the mayoralty he was the recipient of a valuable gold repeater and a handsome marble clock, as tokens of the appreciation in which his services were held. He was gazetted Justice of the Peace by the Moore Government in 1907, is chairman of the Toodyay Hospital Committee, and is connected with almost all public and sporting institutions. As patron and life member of the local football club he has been presented with a beautiful piece of plate in recognition of the interest and practical support he has extended towards that body. He is a member of the Toodyay Racing Club, of which he was for some time steward, and at present occupies the post of adjudicator in connection with this club. In the Masonic Lodge, Toodyay, No. 37, W. A. C., he holds office as Worshipful Master for

the third time, his former terms of office occurring in 1903 and 1906, and he is a P. D. G. P. in the Grand Lodge of Western Australia. Mr. Somers is a member of the Toodyay branch of the M. U., I. O. O. F., and a committeeman of the Toodyay Club, of which he is a foundation member. He married in 1890 Catherine Drummond, daughter of the late Mr. William Thomas, of Hamilton, New South Wales, and has three sons and three daughters.

The late RUDOLPH CAMERER, "Lichtenthal," Toodyay, was a son of the late Johann Gottfried Camerer, Chief Justice of the Grand Duchy of Baden, and was descended from an old patrician family, dating its direct lineage back to the fourteenth century. Joachim Camerarius was a friend of Melancthon, and assisted him, together with Luther, in formulating the "Augsburg Confession" (1530). In 1590 the German Emperor, Maximilian II., conferred a new coat of arms upon Alexander Camerarius (subsequently Germanized "Camerer") and his descendants for all time. He was born at Rastadt, Germany, on May 24, 1838. He received his education at the grammar school at Bruchsal, afterwards at the College of Wertheim, and after completing his nine years' course attended the Heidelberg University for a year, subsequently proceeding to the agricultural college at Wiesbaden. Having acquired a thorough theoretical knowledge he served an apprenticeship on a model farm for twelve months, and further added

to his experience by accepting employment, for a time, without pay, on another farm. He then obtained the position of superintendent of the large estate owned by Earl Erf, adjoining the Duke of Coburg's estate, consisting of 800 acres of cultivated land besides a considerable tract of

Bartletto. Perth.  
MR. RUDOLPH CAMERER.

forest. In 1863 he left for Australia and settled at Dandenong, Victoria, where he undertook the management of a large tobacco farm. This proved unsuccessful, and Mr. Camerer next purchased a small holding of land near Geelong, which he worked with good results for four years. Selling out, he selected 320 acres in the Wimmera

Photo by C. E. Farr. "LICHTENTHAL" HOMESTEAD, TOODYAY.

district, where he made his home for twenty-four years, during that time adding about 2,000 acres to his property. He instituted a large and most modern dairy and private butter factory at this place, the output from which averaged four tons of butter per week. The whole of these large buildings, including byre, chaffhouse, butter factory, etc., were connected by rail for the conveyance of milk, chaff, and cows' feed. *The Australasian* and *The Leader*, in giving minute descriptions, especially in regard to the automatic arrangements in byre and factory, pronounced the whole plan and construction "unequaled in Australia," a great compliment to Mr. Camerer, who designed the plans and was his own sole architect and clerk of works. Three successive years of drought compelled him to resign this industry, and leaving his northern

conditions unsuitable for his purpose. A flock of 500 sheep is run on the property, which is well fenced and subdivided into five paddocks, and horses and cattle are bred both for use on the farm and for the local market. A plentiful supply of good water for stock purposes is found on the estate, and rain water is conserved for domestic use. Mr. Camerer for about twenty-two years held a Commission of the Peace for the north-western district of Victoria, and for six years was a member of the St. Arnaud Shire Council, and president of the waterworks board of that place until the works were vested in the Crown. For twenty-six years he served as lay preacher in the Methodist denomination, and subsequently for ten years in the Presbyterian Church, being called almost weekly to fill appointments throughout Victoria. Mr. Camerer, whose death

for about three years, when with his cousin he decided to visit the Western Australian territory. Arriving at Fremantle in 1897, he proceeded to Chidlow's Well and started operations as a building contractor, shortly afterwards removing to Toodyay, where he took up 62 acres of land and turned his attention to farming pursuits. He has since added a further 209 acres to the original holding, and has cleared over 170 acres for wheat-growing and orchard purposes, the area under fruit being fifteen acres, and many varieties are found in its well-tended rows, of which Mr. Cook is justly proud. A healthy-looking flock of sheep grazes on the property, and Mr. Cook also engages extensively in the breeding of saddle and carriage horses, being owner of the beautiful grey stallion "Sir Richard," who, with his progeny, has often proved successful in the

Photo by C. E. Farr.

HARVESTING SCENE AT MR. CAMERER'S FARM, TOODYAY.

estate he went to Melbourne with his sons, who took over a farm-produce business in that city, together with a small butter factory. After ten years of metropolitan life he seized the advantages offered by land investment in Western Australia, where immunity from drought proved a great inducement to intending settlers. Arriving in this State in 1906 he brought with him a travelling express waggon, and having made a general tour of inspection round the farming districts took up a holding of 1,100 acres of excellent soil near Bolgart. With a view to entering upon the dairying industry again, he had shipped a small herd of pedigreed Ayrshire cattle upon his departure from Victoria, but after experimenting with these on his new farm found the food

occurred in 1913, was married in 1866 to Marie, daughter of the late Mr. A. Hering, ironmonger, of Prussia, and had three sons and three daughters.

ARTHUR COOK, farmer, and owner of "Coondle Apiary," Toodyay, son of Mr. Alfred Cook, of Smithfield, New South Wales, at which town the gentleman under review was born on March 23, 1875. He pursued his studies at the State school, and at the age of fifteen years began road contracting in partnership with his brother, and continued in this connection for two years. For some time he worked in his father's orchard and apiary, afterwards carrying on fencing contracts in various parts of the State

prize ring. He is a constant exhibitor of poultry and fruit at the local agricultural shows, and has carried off many awards for these products. As a beekeeper he is also widely known, having three distinct apiaries in the district, and the products of his hives meet with a ready sale at the local markets. The property is beautifully situated on a hillside, and is considered one of the show places in the Toodyay district, especially possessing a great advantage in its water supply, which is derived from practically inexhaustible springs. Mr. Cook is a member of the Toodyay Agricultural Society, and is connected with various sporting bodies, being an enthusiast in cricket. He is very fond of music, of which he makes a hobby, and is the fortunate possessor of a fine tenor voice.

CHARLES JAMES COOK, J.P., farmer, "Normanhurst," Toodyay, is a son of the late Mr. William Cook, of Bridgewater, Somersetshire, England, and was born on March 3, 1857, at the above town. He pursued his scholastic studies at the Bridgewater Grammar School until the age of fifteen years, and thence proceeded to London, where for two years he occupied himself in obtaining an insight into the various sides of life presented by the world's metropolis. After spending three years in the building trade he returned to Somerset and apprenticed himself to a bricklayer, which calling he followed until 1880, when leaving for New South Wales he arrived at Sydney in March of that year, and commenced building operations on his own account. After five years in the mother State he returned on a

W. A. Hutchinson, Toodyay.  
MR. CHARLES JAMES COOK.

holiday trip to England, and subsequently settled in Victoria, where he pursued his calling for a further five years. Another half-decade followed at Strathfield, in New South Wales, and whilst here his attention was directed to Western Australia. Crossing the water to the Western coast, he took up his residence at Perth in 1904, still engaging in his former occupation until the closing year of the nineteenth century. The advantages offered to settlers on the land by the Government of the day attracted his attention, and leaving the metropolitan area he proceeded to the Toodyay district, where after carrying out a few contracts he selected 627 acres of land, to which

he has since added by selection and purchase a further 4,300 acres. Of this area 600 acres have been cleared and a large portion cultivated, whilst grazing and mixed-farming pursuits generally are carried on with considerable success. Upon the abolition of Toodyay as a municipality in February, 1912, the administration of the town was merged in the local roads board, of which Mr. Cook was appointed the first chairman under the new amalgamation and still retains this office. He was gazetted a Justice of the Peace by the Moore Government. A member of the Masonic craft he hitherto has occupied the position of District Grand Secretary, Scottish Constitution of Western Australia, First District Senior Warden, S.C., W.A., and Past Grand Senior Warden of the Grand Lodge of Western Australia, and is now connected with the Toodyay Lodge. He married Rosina Marion, daughter of Mr. John Willis, of Bridgewater, Somerset, England, and has five sons and three daughters.

ALEXANDER JAMES FERGUSON, farmer, Toodyay, is a son of the late Thomas Ferguson, of Guildford, and was born on May 27, 1848, in the latter town. At the age of nine years he commenced farming occupations, and in 1860 left Guildford for the Toodyay district, where he has been identified with the agricultural and pastoral industry ever since. He is the possessor of nearly 3,000 acres of land, 560 acres being cleared and devoted to the cultivation of wheat and oats for the market. The balance of the property is well stocked with sheep, Mr. Ferguson having relinquished cattle grazing, to which formerly he gave some attention. He cultivates a small orchard, where fruit for home consumption is produced, and finds the supervision of his various industries sufficient to fill up the greater portion of his time. He was a member of the Toodyay Roads Board for six years, but owing to the pressure of his private claims, was obliged to resign the seat, though still retaining a lively interest in the progress of the district, for which he predicts a great future. He holds the opinion that here the best agricultural areas in the State are to be found, and considers the community most progressive, and ready to avail itself of every opportunity of advancement. Mr. Ferguson was married in 1869 to Sarah

Elizabeth, daughter of the late Robert Waters, of England, one of Western Australia's earliest pioneers, and has a family of nine sons and four daughters.

AUGUSTINE JOHN LEE, farmer, who owns the "Glenrowe" property in the Toodyay district, was born at Helensbrook on June 13, 1884, and is a son of Mr. Frederick Augustine Lee, of Mount Leek, Toodyay. He received his education at the Wicklow Hills State School, and when fourteen years of age joined his father in agricultural pursuits, continuing in this connection until he reached his twenty-third year. He then launched out on his own account, commencing the development of a property taken up some time previously on his behalf by his father and situated among the hills surrounding the township. Of the 226 acres comprising the holding, 134 acres have been cleared and cropped with cereals, very satisfactory harvests rewarding the efforts of the tillers of the soil. The breeding of horses and cattle for use on the farm is also carried on by Mr. Lee, who gives a fair share of his attention to this side of his industry. He interests himself in public affairs to some extent, and during his period of office as secretary of the Nunyle Agricultural Hall has been instrumental with his committee in freeing the hall from almost the whole of the debt resting upon it. He is a member of the Toodyay Rifle Club and acted as secretary to this body for three years, while many of his leisure hours are devoted to hunting, a sport of which he is very fond. He married in 1907 Alice Ruby, daughter of the late Mr. Alexander Ferguson, of Culham, and has three sons.

CHARLES JAMES LLOYD, farmer, "Culbaline," Toodyay, is a son of the late Charles Lloyd, of the same district, where also he was born on January 13, 1866. In his earlier days he attended a private school conducted by his grandfather at Dumbarton, completing his education at the State school at Toodyay. At fourteen years of age he joined his father in farming pursuits, and continued in this connection until 1900, when, upon his marriage, he took over the farm from his parent and commenced operations on his

own account. The property consists of 800 acres prettily situated in a well-watered valley; about 100 acres are devoted to the cultivation of cereals, while a flock of about 400 sheep grazes on the adjoining pasture land. A vineyard, eight acres in extent, is a noticeable feature, and two acres of fruit-trees have been planted, it being Mr. Lloyd's intention to add to this area in the near future. A few horses and cattle are bred for use on the farm. The gentleman under review has been a member of the Toodyay Agricultural Society for a number of years, and has met with much success as an exhibitor of farm produce at the annual shows held by this organization. He was an enthusiastic supporter of

W. A. Hutchinson, Toodyay.  
MR. CHARLES JAMES LLOYD.

the sixtieth anniversary of the society, which was celebrated on October 16, 1912. A member of the M.U., I.O.O.F., for twenty years he has passed through all the chairs of the Order during that period, and holds rank as Past Grand. He was also a member of the Toodyay Masonic Lodge, No. 37, for about eight years, and is a committeeman of the local race club. In 1900 Mr. Lloyd married Lottie Elizabeth, daughter of the late Henry Thomas Chitty, of Toodyay, and has three sons and three daughters.

C. D. McDERMOTT, farmer and grazier, "Nengin" Farm, Toodyay, is a son of the late James McDermott,

who was born at Fremantle, Western Australia, in 1834. Mr. McDermott owns about 3,500 acres of land, which is devoted to mixed farming, about

W. A. Hutchinson, Toodyay.  
MR. C. D. McDERMOTT.

2,000 sheep and other stock being run on the property.

AUGUSTUS WILLIAM SINCLAIR, farmer, of "Dumbarton," Toodyay, is a son of Mr. W. R. Sinclair, a resident of the same district, where also the gentleman under review was born on April 8, 1883. He received his education at the Government school at Toodyay, at fourteen years of age proceeding to the Scotch College, Perth, where he completed his scholastic course. Leaving this institution he entered business life in the office of Mr. John Farrant, land agent, of Perth, with whom he continued for six months. He then joined his father in the development of the holding where he now resides, and seven years later acquired the property for himself. "Dumbarton" consists of 1,300 acres of land occupying an ideal situation on the sloping banks of the Avon River, about five miles east of Toodyay, along the Northam Road. It is all freehold, and 500 acres are cleared, of which area 220 acres this season (1912) are under cultivation of wheat and oats. The property is fenced throughout, and division into fourteen paddocks has been made, while an adequate water supply is obtained from ten wells which have been sunk on different portions of the holding.

"Dumbarton" is stocked with 600 sheep, intended both for the wool and mutton markets, while cattle and horses are bred for use on the farm only. The homestead is a striking feature as viewed from the adjacent Northam Road, and the outbuildings and machinery upon inspection leave nothing to be desired as adjuncts to a thoroughly modern and progressive proposition. Mr. Sinclair is a member of the Farmers and Settlers' Association, and acts on the committee both of this body and of that of the Toodyay Agricultural Society. He has been a most successful exhibitor at the local shows, and is a member of the Royal Agricultural Society. He has been a member of the M.U., I.O.O.F., for ten years, during which period he has passed through all the chairs of office, and now holds rank as Past Grand in this Order. He is a committeeman and

W. A. Hutchinson, Toodyay.  
MR. AUGUSTUS WILLIAM SINCLAIR.

steward of the Toodyay Racing Club, and being a keen patron of sport generally is connected with the various organizations in the district having for their object the promotion of outdoor recreation. In 1909 he married Ethel, daughter of Mr. W. A. Demasson, of Toodyay, and has one daughter.

SAMUEL HENRY SYRED, "Stonybrook," Toodyay, was born at Bejoording, in the same district, on September 11, 1860. He received his education at the local school, and when fourteen years of age became

associated with his father in agricultural life until he reached the age of twenty, when he left the parental roof-tree and found employment on farms in various parts of the State. After ten years of varied experience, desiring to settle down, he purchased a portion of the property where he

W. A. Hutchinson, Toodyay.  
MR. SAMUEL HENRY SYRED.

now resides and entered upon farming pursuits on his own account. He has extended his holding by a further 960 acres, and now owns a well-developed property, situated upon rising country, and adequately supplied with water from three large wells. It is substantially fenced and subdivided into eight paddocks of convenient size, 600 acres being cleared and 250 acres devoted to agricultural purposes, the principal crops raised being wheat, oats, and barley, to the production of which the soil and climate are splendidly suited. Mr. Syred carries on mixed-farming operations and has a flock of 400 head of sheep; cattle and horses are bred for the requirements of the farm, while a fair-sized pigery also forms an important feature of the industry. The homestead is substantial and comfortable and in the vicinity may be found well-built outhouses, while the machinery requisite for an up-to-date farm is not wanting. For some years Mr. Syred has been a member of the Toodyay Agricultural Society. He married in 1891 Eliza, daughter of the late Mr. James Ferguson, of Toodyay, and has two sons and three daughters.

WILLIAM CHARLES SYRED, farmer, "Stonybrook," Toodyay, is a son of the late William Edward Syred, and was born at Bunbury in the year 1858. He pursued his scholastic studies at Bejoording, in the Toodyay district, until twelve years of age, when he joined his father in farming pursuits and continued in this connection until the time of his marriage, in 1890. He then purchased his present property, originally consisting of 40 acres, to which he has since added 300 acres, and now has a snug little farm of 340 acres freehold, with a further 645 acres on conditional purchase. The whole is substantially fenced and favourably situated as regards the water supply, a never-failing brook running right through the property, which serves during the summer for the stock, while for domestic use a supply is obtained from two large wells, augmented by a good rain catchment. About 470 acres are cleared, of which 225 acres have been brought under cultivation, the chief crops being wheat and oats, which do well in this district. The place is stocked with 400 head of sheep, which Mr. Syred breeds for market, and a few cattle and horses for use

W. A. Hutchinson, Toodyay.  
MR. WILLIAM CHARLES SYRED.

on the farm. A commodious residence is surrounded with the usual outbuildings, where an excellent equipment of all kinds of machinery necessary for farm requirements is found. Mr. Syred is a member of the Toodyay Agricultural Society, and takes a great

interest in every movement tending to its advancement. He married Catherine, daughter of the late William Beard, farmer, of Toodyay, and has six daughters and two sons.

ERNEST EDWARD TWINE, "Mourambie," Toodyay, is a son of Mr. Henry Hames Twine, a native of Crawley, on the Swan River, and was born at "Newgayne," Toodyay, on April 8, 1871. After three years of private tuition he attended the Dumbarton School, subsequently again passing into the hands of private tutors, under whom he completed his education. At the age of sixteen he joined his father in farming pursuits

W. A. Hutchinson, Toodyay.  
MR. ERNEST EDWARD TWINE.

in the Toodyay district, where he continued until his twenty-first birthday, when he left home and for twelve months was engaged in contracting on the Eastern Road. The end of this period found him back on the home farm, but shortly afterwards he started on a prospecting tour in the Mount Jackson district, which proved barren of good results on account of the scarcity of water. Accordingly, he returned to "Newgayne" and took over the lease of the farm from his father, working it successfully for about fourteen years, when he entered into possession of his present holding. This property consists of about 800 acres of beautiful country situated on one of the most-elevated parts of the Toodyay district, and is cleared, well fenced, and subdivided into twelve paddocks.

The land is devoted to wheat-growing, sheep-breeding, and general mixed-farming operations, prominence being given to agriculture, while the breeding of horses for use on the farm is carried on—Mr. Twine owning the well-known stallion "Lion," which has produced some good progeny. The homestead is a substantial ten-roomed residence built of brick, and the property is well-equipped in the way of outbuildings and machinery necessary to the proper carrying on of an up-to-date farm. Mr. Twine's long acquaintance with the district has enabled him to render considerable assistance to the Government when in quest of information on various occasions. He is a member of both the Royal and Toodyay agricultural societies, and has been a most successful exhibitor of sheep, cattle, horses, and wheat. For many years connected with the M.U., I.O.O.F., he has held every office up to that of Past Grand in that body, and he is very active in outdoor sport, until recently taking a prominent part in the Toodyay Racing Club, of which he is still a member. He is also a member of the Toodyay Club. Hunting is his favourite pastime, and he has accounted for many head of kangaroos, wild duck, and brush turkey in the bush and rivers surrounding his property. In 1903 Mr. Twine married Bertha Jane, daughter of the late Mr. Henry Atwell, a well-known resident of Fremantle, and has two sons and three daughters.

**FRANK REGINALD TWINE,** of "Newgayne," Toodyay, is a son of Mr. Henry Twine, and was born on the property on January 23, 1889. He received his education at the local public school, which he left at the age of sixteen in order to join his brother in agricultural pursuits, and with his sister entered into possession of "Newgayne" upon the departure of his brother to another part of the district. This was in 1909, and Mr. Twine since that period has given the

whole of his attention to the development of the farm, which consists of 1,700 acres of country, finely situated, 600 of which have been cleared and cultivated, wheat and oats being the chief crops produced. A flock of 600 merino sheep finds pasture on the property, while a few horses and

*W. A. Hutchinson, Toodyay.*

**MR. FRANK REGINALD TWINE.**

cattle are bred for farm requirements. A small area has been devoted to a vineyard, and the several varieties of vines planted have made excellent progress. Mr. Twine is a patron of outdoor sport generally, and is a member of the Toodyay Football Club. He has had some military experience, and is a member of No. 4 Squadron of the 18th Australian Light Horse Regiment.

**ROBERT NICHOLAS WILKERSON,** of "Glenavon," in the Northam district, was born at Cos-sack, in the north-west, on November 15, 1886, and is a son of the late Charles H. Wilkerson, of the above-mentioned estate, which he inherited from his father, who was one of the pioneers of the district. He received his education at the Toodyay State

School, and when quite a lad just entering on his teens, went to work on the home farm, which is situated about midway between Northam and Toodyay, and here he has continued to reside ever since. In 1910, upon the death of his father through accident, the gentleman under review took over the management of the place, which he still continues to administer, holding the property on lease from his mother. He is a member of the Toodyay Agricultural Society, and has served on the committee of that body. He is also connected with the Toodyay Race Club, being a lover of the equine race, and owning some good horses, with which he competes both on the turf and in the show ring, trotting events being his chief recreation. Mr. Wilkerson takes an interest in the friendly societies' movement, and is a member of the local lodge in connection with the Independent Order of Oddfellows. He was married in

*C. M. Nixon, Northam.*

**MR. ROBERT NICHOLAS WILKERSON.**

1908 to Claudina Maud, daughter of the late James Barrows, of Sydney, New South Wales, and has a family of two sons and two daughters. His postal address is "Glenavon," Toodyay.

## The Eastern Districts.

The areas which the early pioneers were entitled to select in return for money and property brought to the colony were so large that the available land of satisfactory nature within easy reach of the settlement was quickly exhausted. It therefore became necessary to look further afield, and with that object in view Ensign Dale, who had previously made short excursions in an easterly direction, struck out still further across the ranges, towards the end of 1830, and brought back glowing reports of the country explored. This opinion was confirmed by Lieutenant Erskine, sent out to examine the same country, and the Governor consequently determined to view it for himself. So impressed was he that arrangements were quickly made to throw the land open for selection, and sites were marked out for the towns of Northam, York, and Beverley. Many locations were taken up, but settlement did not actually commence until the spring of the year 1831, when a party,

amongst whom were Messrs. Hardey, Clarkson, Bland, and Moore, was taken over the ranges by Lieutenant Dale and left to form the beginning of what is now recognized as one of the greatest wheat-bearing areas in Australia. Almost from the first the district, worked by settlers of the best type, made good headway, and quickly became the most important portion of the State outside the capital. In fact, throughout the early period of the history of Western Australia, the opinions of the settlers around York and Northam expressed through the York Agricultural Society, had no little influence in determining the policy of the Governor and his advisers. When the question of railway construction was raised

in 1870, it was admitted on all hands that the most pressing need was rapid communication with the eastern districts. To-day the York-Northam area forms only a small part of the great eastern belt of agricultural land which stretches eastwards beyond Merredin, and is itself but a part of that enormous area, which, starting from Ajana in the north runs southward to within a few miles of the coast. It is, however, a particularly favoured section. As the "Official Handbook" says: "The rainfall varies from 12 in. to 20 in., and the abundance of well-grown jam wood, and of York, salmon, and gimlet gums, is the outward and visible sign of the soil's high quality. The soils range from heavy loams and strong clays to light scrub plains which, though not prepos-

sessing in appearance, hold the rain well and give excellent crops when fertilized. For hay, wheat, fodder crops, sheep, and all other kinds of stock the area is exceptionally well adapted, and as it is excellent fruit country each farmer may,

if he chooses, have his own little orchard attached to his homestead." Along the northern and far eastern edges of the belt the rainfall is smaller in quantity, and the possibilities of drought more apparent, but farming may be considered reasonably safe as far east as Bodallin. Beyond that locality, though the soil does not deteriorate, the question of rainfall becomes serious. During the past two or three years there has not been sufficient rainfall throughout most of the area, and consequently the district has received a setback, but faith is strong and droughts infrequent, and the settlers look forward with confidence to a successful future.

YORK FROM MOUNT BROWN.

## YORK.

York, named after the faraway home of some of the sturdy pioneers of 1830, was declared a town site in 1831 and the first town lot was sold in 1835. Nestling picturesquely in the valley through which the Avon River finds its way, the town gives to the visitor every impression of stability. Its streets are wide and well made, and its public buildings, many of which are of stone, are of a character befitting so important a centre. Like

Photo by C. E. Farr.

AVON TERRACE, YORK.

many other Western Australian towns, its buildings are evidence of its progress. Side by side with the old-fashioned structures of the pre-goldfields days are modern buildings of handsome design. The Government buildings, which include the post office, courthouse, hospital, and State school, are all up-to-date, and the town hall, erected (with municipal offices) at a cost of over £8,000, is one of the largest and most comfortably furnished in the State. A portion of the building has been set apart as a municipal library and free reading-room, affording evidence of the fact that the municipal council is alive to the intellectual as well as to the material needs of the community. The leading religious denominations—Anglican, Roman Catholic, Methodist, and Presbyterian—have all handsome places of worship, and the convent schools of the Roman Catholic faith occupy a prominent position in the heart of the town. Many of the business premises are, like the trade carried on, of a substantial character, and the banks and hotels afford ample proof of the important position held by the town. The Western Australian, Union, New South Wales, National, and Australasia Banks all have branches, and the number of well-constructed and well-appointed hotels shows that York is a favoured resting-place. As a health resort its appreciation rests upon its comparatively high altitude, dry climate, interesting surroundings, and general charm. Being some 60 miles inland

from the sea, high up on the Western Australian plateau, it is perhaps one of the best situated towns in the State for convalescents, and though somewhat hot in the summer time has an almost ideal winter climate. For the enjoyment of visitors, and of those residents addicted to the ancient Scottish pastime, there are excellent golf links just out of the town, while more strenuous and less expensive amusements are also fostered. The town itself runs along both sides of the Avon River, and the connecting bridges, some four in number, add to the general picturesqueness of the place.

Commercially, York is a town of considerable importance. It is connected by rail with Perth and Albany and is the starting-point of the railway through Green Hills, Quairading, and Nunajin, which it is intended to continue to meet the eastern goldfields line at Merredin. Further, as we have seen, it is the centre of the oldest agricultural district in the State. Dairying, wheat-growing, sheep-farming, and horticulture are extensively carried on in the surrounding country, and the stock sales held regularly in the municipal saleyards adjoining the railway station are of sufficient importance to attract buyers from all the south-western portion of the State. York is also a centre of the sandalwood trade, the timber being obtained from the neighbouring forest ranges. So far as manufacturing establishments in the town are concerned, they are practically confined to flour mills, tanneries, and kindred trades generally

TOWN HALL, YORK.

found in large agricultural centres. The population of the town and district is about 4,000. It has been a municipality for many years, and has generally been fortunate in possessing mayors who have been fully alive to its possibilities. The present occupant of the mayoral chair, Mr. T. C. Evans, "mine host" of the Castle Inn, the leading hotel, has had several terms in the position,

and is ever an enthusiastic advocate of the claims of York.

In 1899 York was connected by rail with Greenhills, a district of uniformly good agricultural value, which was settled as far back as 1855, among the pioneers being the late Edward Parker, whose name is well remembered by all the older inhabitants of York. The

THOMAS CHARLES EVANS, J.P., Mayor of York, who has resided for nearly a quarter of a century in the town of which he is now chief magistrate, was born on the "Mole" Pastoral Station, in New South Wales, on August 6, 1864, and is the eldest son of the late Matthew Evans, of Tasmania, in the sixties and seventies one of the best-known mine managers in New South Wales. Young Evans pursued his scholastic studies in Mudgee and Wellington, subsequently completing his educational career at a more advanced school at Stanmore, near Sydney. Leaving school at seventeen years of age, and being desirous to enlarge his experience of the great Island Continent, he shortly afterwards turned his footsteps towards the neighbouring State of Queensland, where for a couple of years he followed the avocation of a stockman, being engaged in droving and other work incidental to pastoral life. At the end of that period he left the north in order to enter into commercial pursuits at Orange, New South Wales, and here he gained a splendid insight into the general conduct of mercantile affairs during the seven or eight years that he spent in this important country centre. Receiving a good offer to dispose of the large business which he had worked up in so efficient a manner, he closed with the proposals made, and, leaving the town and State, spent a short time in Melbourne and Adelaide, where he made excellent use of his time, closely observing the latest methods in vogue in these mercantile centres. At the end of the year 1889 he came to Western Australia, and, landing at Albany, proceeded to York, his object being to gain an impression of the standing of one of the oldest towns in the State. Following closely on his arrival he was offered and accepted a position on the staff of Messrs. C. & K. Edwards as manager of the grocery, hardware, and fancy-goods departments of their business, which post he held for fifteen years. Resigning from

this connection about 1904, he secured the lease of the Castle Hotel, which is looked upon as the leading and most popular hostelry in the town, and further reference to which is made elsewhere in this volume. During his long residence in the town of York Mr. Evans has made himself a personality in the community, and for close on eighteen years has been prominent in the public affairs of the municipality. He served as a member of the council for over twelve years, at the close of which period he was honoured with election to the mayoral office, and is

Bartletto.

Perth.

MR. THOMAS CHARLES EVANS.

now in his fifth year as chief magistrate of the town. To say that he "magnifies his office" would be to state very inadequately Mr. Evans' unselfish and energetic concern for the welfare and advancement of his adopted State, and the thorough and business-like way in which he advocates every measure which he considers worthy of his support has won for him the unstinted esteem of his fellow townsmen. The greater part of his time is spent in the furtherance of the public weal, and many and varied are the duties which

line has now been extended to Quairading, some 30 miles, and Nunajin, about 80 miles further on, the object being to continue it to Merredin, and thus form a loop with the eastern goldfields line and serve another of those large agricultural areas which give promise of great prosperity in the future.

devolve upon him in his capacity of representative of the citizens of York. Visitors to the town, both interstate and international, experience the utmost courtesy at his hands, and nothing gives him greater pleasure than to conduct such parties on a tour of inspection, when no feature of interest is allowed to escape their notice. At an earlier period he occupied the post of honorary secretary to the York Mechanics' Institute—a useful institution, now merged in the municipal library—and by his energy and ability kept alive the interest of the townspeople in the institute during its time of depression. For these good offices, at the period of the transfer of interests to the municipal library, he was publicly thanked by the citizens, and was made the recipient of a diamond jewel as a token of their appreciation. Although a sound Liberal in politics, he is far from being narrow-minded, and in his capacity of mayor holds himself ever ready to accede to requests made to him to preside at public meetings, etc., regardless of all shades of political opinion there represented. In November, 1909, the Moore Administration, which was then in power, recognized his long and worthy record of useful public services by granting him the Commission of the Peace for York magisterial district—an almost unique distinction for the holder of an hotel licence. He is a Freemason of long standing, being P.M. of the York Lodge, No. 5, W.A.C. in which he at one time occupied the post of secretary, and he has also taken a prominent part in the affairs of the local branch of the M.U., I.O.O.F., being a Past Grand of that body. A genuine lover of all forms of clean, manly sport, his patronage is freely given to everything of this nature in the district, and for nearly five years he has been captain of the York Golf Club. Golf is his favourite pastime, but his name is recorded as one of the founders of the local bowling club, of which he has been president

since its inception. A true lover of a good horse, his stable always shelters a thoroughbred or two, and nothing gives Mr. Evans keener enjoyment than a rousing gallop past field and glade in this picturesque rural district. It is generally conceded that to Mr. Evans is due great credit for the prominent position York holds to-day in the public mind, and his experience is such that, when any new scheme or project is afoot, his advice and co-operation is eagerly sought after to bring about its successful culmination. He is married, and has two children—a son and a daughter.

Councillor JOHN THOMAS PARKER, J.P., of the municipality of York, and President of the York Agricultural Society, was born at "Marley," situated about eight miles from York, in the Green Hills district, on March 14, 1850, his father being the late John Wyborn Parker, a son of the late Stephen Stanley Parker, who came to the State with his parents in February, 1830, being then thirteen

C. E. Farr,

Perth.

MR. JOHN THOMAS PARKER.

years of age. The latter gentleman became a settler in the York district, where he owned various properties at the time of his death which descended to his sons, and Mr. John Wyborn Parker from an early age was identified with the management of these estates at a period when considerable difficulty and danger attended the path of the farmer and

pastoralist. The subject of this notice was educated under private tuition and at the public schools of the district, at the conclusion of his studies assisting on his father's farm for some years. At a later date he entered upon farming pursuits on his own behalf on a property which he acquired in the Green Hills district, where he continued in the same industry for over forty years. Eventually Mr. Parker disposed of his landed interests and, settling in York, has since lived in retirement. Practically all his life he has been identified with public affairs, and this interest increased as he became more deeply immersed in the deliberations of the various bodies to which he gave his support. For a lengthy period he occupied the post of chairman of the Green Hills Roads Board, and served for some years on the similar body in connection with the York district prior to the separation of the Green Hills Board from its parent. For over forty years he has been a member of the York Agricultural Society, serving as a committeeman for the greater part of that time, and for some years past has presided over that society; while, as a councillor of the municipality, his term of service extends over a decade. He received his Commission of the Peace from the Forrest Administration in pre-Federal days, and has exercised his justiciary powers ever since. He manifests an earnest concern in the welfare of the local Church of England, occupying the office of vestryman and for a considerable time that of churchwarden. His hobby is a small poultry farm, and he has been a successful exhibitor at the various shows of the district; while, for needful recreation, he has recourse to bowls, having been one of the founders of the York Bowling Club. Mr. Parker married in 1900 Amy, daughter of the late Robert Readhead, of Geraldton, Western Australia, and has one adopted son.

Councillor ALFRED HAROLD MERCER, who represents South Ward in the York Municipal Council, was born at Burnside, South Australia, on January 4, 1878, being a son of Mr. Alfred Tanner Mercer, a native of the Central State, and one of the early pioneers of Yorke Peninsula. He was educated at Weetulta, and upon the completion of his studies came to

Western Australia, where he entered the government service in the clerical branch of the Railway Department. In 1899 he resigned his position in order to engage in storekeeping pursuits in the employ of Mr. Harris, of York, with whom he remained for three years. At the close of this period Mr. Mercer launched out on his own account, opening in business in York, and for the past decade has been a well-known figure in the commercial life of the town and district.

C. E. Farr,

Perth.

MR. ALFRED HAROLD MERCER.

Mindful of his duties as a member of the community, some years ago he offered himself as a candidate for municipal election and was duly returned by the ratepayers of South Ward, retaining his seat at the following election. He was an active member of the mechanics' institute for some time prior to the taking over of control of that institution by the municipal council, and acted as committeeman for a considerable period. He has taken a very prominent part in friendly society work, being connected with the Independent Order of Rechabites, and for three years filled the position of treasurer of the local lodge of the Ancient Order of Druids, in which he now holds office as Vice-Arch; besides which he has been the elected representative of these bodies at the various conferences held from time to time in different parts of the State. Mr. Mercer is very fond of music and spends a good deal of his leisure in pursuit of this engrossing hobby, being choirmaster of the local Methodist Church, of which body he

is also a trustee and member of the board of management. He married in 1905 Susie, daughter of the late Thomas Dunstan, of Kapunda, South Australia, and has one daughter.

Councillor **MATTHEW RYAN**, representing North Ward in the York Municipal Council, was born in Ballykinlalee, near the village of Newport, County Tipperary, Ireland, on September 11, 1864, being a son of the late John Ryan, a farmer, of that place. He received his primary education at the National School at Ballynahinch, and at the conclusion of his studies, at fifteen years of age, began to assist his father on the farming property worked by the latter, and continued there until the wider scope offered by the distant lands under the Southern Cross tempted him to emigrate to Victoria, where he arrived in the year 1887. After spending two years in the Eastern State, where he obtained his first acquaintance with the methods of colonial agriculture, he came to Western Australia, with the object in view of starting on his own account in the agricultural industry. Upon arrival he took up a small farm of something over 300 acres of good arable land in the York district, which he proceeded to develop, and as time went on extended his borders until in 1903, in which year he disposed of this property, it comprised some 10,000 acres, more than a third of which in course of time was to become freehold, the balance being held on pastoral lease from the

Crown. At the time of selling Mr. Ryan's intention was to return to the land of his birth and settle in the Old Country, but instead of carrying out this plan he reinvested his capital in Western Australian property, purchasing the block of land in York township where the Palace Hotel now stands and acquiring other financial interests in the same place, in addition to which he also became the owner of a nice little

whilst the whole is fenced and under cultivation. In 1909 Mr. Ryan erected the Palace Hotel in York, which may be classed among the finest hostelrys not only in the country districts of Western Australia but also among those of the metropolitan area. Situated in the centre of the town, it presents an imposing appearance, being constructed after the most modern architectural design, with elaborate ornamentation and thoroughly up-to-date fittings, etc. A two-storeyed structure, it contains forty-three rooms, including offices, bars, billiard-room, and all the eteteras necessary to comfort and convenience. The entrance to the hotel is through a tiled vestibule, richly embellished with polished cedar and jarrah fittings; the furnishings throughout are luxurious, and the luxury of hot- and cold-water baths is provided for the use of patrons. The lavatories are arranged on the latest and most sanitary lines, and an innovation in the shape of a septic tank has been installed on the premises, this being a rarity in the country districts. The hotel originally was opened by Mr. Ryan, who continued the personal conduct of the business for a time, but eventually let it on lease, and it is at present under the management of Mr. H. W. Smith. Mr. Ryan, since his arrival in the York district, has identified himself to a considerable extent in the life of the town, and sat for a decade as a member of the York Roads Board. For some years past he has served as a member of the local agricultural society, and in 1909 was elected to a seat on the York Municipal Council. He is a committeeman of the York Racing Club, and was one of the foundation members of the local bowling club. A prominent member of the Roman Catholic communion, he takes an active part in the committee work of the body in this district. Mr. Ryan was married in 1911 to Mary, daughter of Mr. William Browder, who came to Australia half a century ago and settled in the Deloraine district of Tasmania, where he was engaged in the agricultural industry for many years, and has one son.

FF

Councillor **JAMES PERCIVAL CLAIRS**, representative of North Ward in the York municipality, was born at Huddersfield, Yorkshire, England, on October 30, 1878, and

came to Western Australia in 1887 with his father, the Rev. Canon Clairs, now rector of the Anglican Church at East Fremantle. He received his education chiefly at the public schools of Busselton and Northam, where his father was associated with the work of the church, and upon the termination of his studies entered upon farming pursuits in the Goomalling district, almost before the era of agriculture as one of the industries of the State. At the age of twenty he joined the traffic department of the railway service at Northam, and was identified with various offices in different

*Bartletto,* *Perth.*  
MR. JAMES PERCIVAL CLAIRS.

parts of the State, serving in the eastern goldfields, the south-western and great southern districts, and rising to the position of stationmaster, which he filled for seven years. In 1909 he was offered a position of trust with the firm of Messrs. J. M. Drummond & Co., of Perth, and resigning his connection with the railway service a few months later, he established himself in business on his own account at York as a general agent, holding his chief agency on behalf of the firm abovementioned, and has continued in this line of mercantile life ever since. Mr. Clairs, almost immediately upon settling in York, commenced to interest himself in the public life of the place, and during the year after his arrival was returned by the ratepayers of North Ward to represent them at the municipal board, his fellow-councillors shortly afterwards electing him to the position of town treasurer. His

favourite sport is rifle-shooting, in which he has scored successes above the average, holding various trophies to mark his prowess in this direction; and he is a committeeman of the York Rifle Club. He is also a keen chess-player. In 1900 Mr. Clairs married Hilda Ethel, daughter of the late Frederick Morrell, of Northam, and has four daughters.

GEORGE HENRY SMITH, who formerly represented South Ward in the municipality of York, is a son of the late George Smith, one of the early settlers of Western Australia, who, after residing for about two years in this State in the early seventies, proceeded to South Australia with his family and was engaged for a lengthy period on the copper mines at Kadina. The gentleman under review was born at Redruth, Cornwall, England, on October 28, 1858, and received his education in his native town, subsequently accompanying his mother to Australia in 1876. Upon arrival he

*Bartletto,* *Perth.*  
MR. GEORGE HENRY SMITH.

joined the boiler-making department at the Wallaroo Mines, and at a later period became apprenticed to the firm of Messrs. Brown & Sons, agricultural machinery manufacturers, at Kadina, with which firm he was associated for over three years. He gained considerable experience with the Union Engineering Company, Adelaide, and was employed in various enterprises of a similar kind in different parts of the State. When

the firm of Messrs. Allen & Co. started business in Western Australia, where it pioneered the use of the stump-jump plough and other agricultural implements, Mr. Smith came over in its employ, and for fifteen years filled the position of foreman and manager of the works at York. Ultimately the firm went out of business, when the subject of this notice joined the York Engineering and Agricultural Implement Company in the capacity of manager, a post he retained until 1913. He interested himself in the public affairs of the town, and for eighteen years, with a break of three years only, served as a member of the local municipal council, being connected with various sub-committees of that body. He was also a member of the health board of the town. Mr. Smith resigned his several public offices on his departure from York in June, 1913. The Masonic fraternity, both here and in the Central State, has claimed his adherence, and he is a Past Master of the craft in connection with which he was a foundation member of the Grand Lodge of Western Australia. Of musical gifts, he was identified with the York Town Brass Band from the inception of that body. Mr. Smith married in 1881 Catherine Jane, daughter of the late Josiah Jeffery, who was connected with the mining and agricultural industries of South Australia, and has a surviving family of one son and four daughters.

KENNETH EDWARDS, J.P., "Fernleigh," York, Chairman of the York Roads Board, was born at "Sandgate," situated ten miles distant from the above town, on January 18, 1856, and is a son of the late William Edwards, who came to that district in his childhood and did pioneering work among those who blazed the tracks of progress in Western Australia. His education, received in the first instance by private tuition, was supplemented by a course at Bishops' College, Perth, and subsequently he spent some years in his father's business at York, until, having gained a thorough knowledge of its operations, he undertook the conduct of the concern in conjunction with his brother, Mr. Charles Edwards, with whom he carried it on for many years. Retiring from business in 1893, he built a pretty villa on a

property of nearly 500 acres which he owned on the Perth Road, about two miles from the town, and has since devoted his energies to the development of the land and mixed farming pursuits generally. About half of the whole area is under cultivation, and 21 acres are applied to orchard purposes, apples, apricots, peaches, and all kinds of stone fruits

MR. KENNETH EDWARDS.

coming to perfection. Cereals have been found well suited to the soil and sheep are grazed on the pastures. Worthy of further notice is the homestead, which is situated on the crown of a hill and approached by a winding avenue through the orchard. Pines, cypresses, and other ornamental and shade trees surround the house, which is fronted by a charming garden, where the floral beauties of each season are displayed, roses especially being present in great profusion. A pretty idea has been carried out in the formation of a miniature lake, fed from the surrounding hill springs, in which English perch is acclimatized and bred with a view to stocking the rivers of the district. Mr. Edwards was appointed a Justice of the Peace for the whole of Western Australia about a quarter of a century ago and is a member of the York Licensing Board. He has taken a prominent part in the life of the district almost since his boyhood—when he was a leader in youthful sporting circles—and after serving as councillor for a short time was honoured with election to the mayoral chair. He has been a member of the roads board for a lengthy period, and filled the

FR2

office of chairman of that body for about sixteen years, and is the father of the Roads Board Association of Western Australia, having inaugurated its first meeting, and for some years served on the central executive. He also actively concerned himself in the up-building of the local agricultural society, of which he was a committeeman, and was associated with various other organizations having as their object the advancement of the district. A loyal adherent of the Anglican Church, he has filled various offices of trust in the local church. For recreation he indulges in golf, having had links laid down on his private property. Mr. Edwards has been twice married, his first wife being Edith, daughter of the late Charles Andrews, after whose death he married in 1908 May, sister of the above, by whom he has a son and a daughter.

The CASTLE HOTEL, York. Proprietor, T. C. Evans. Had a magician been appointed to the task, he could not possibly have chosen a more picturesque spot in the Western Australian State than the one whereon have been constructed the broad thoroughfares and handsome edifices of the town of York. One of the first settlements of the new Crown colony, gazetted in 1829, York has gathered to itself the flavour of an antiquity which is on all sides willingly conceded. Nestling in the rich valley of the Avon, with its billowy expanses of wheatfields stretching in every direction as far as the eye can see, the town is an ideal centre in which to spend vacation or recuperate from the various demands of the strenuous life of the present day. At

the northern end of Avon Terrace—the main thoroughfare, of which the municipal fathers have ample reason to be proud—Mount Bakewell mounts guard with sombre mien, while near by the waters of the River Avon gently linger on their way ultimately to join the wider volume of the great Swan waterway. The Castle Hotel is situated in the heart of the Terrace, and easily holds its place as the most important and favourite hostelry of the town. Built of brick the structure possesses two storeys and a spacious balcony runs along the entire front, and upon entering the hospitable portals of the hotel one is immediately impressed with the air of comfort and cleanliness which dominates the whole place, an impression which is confirmed by a tour through the residential part of the house. Inviting peeps of drawing, writing, and smoking-rooms are to be had through half-open doors, and the charm of the lounge, with its comfortable armchairs, is hard to resist. The bedrooms, numbering some thirty-two in all, are nicely furnished and are kept spotlessly clean by an efficient staff of servants. The dining-room, situated on the ground floor in the northern wing, provides seating accommodation for a very large number of guests, and the cutlery, napery, etc., are all that could be desired by the most fastidious. Special attention is paid to the cuisine and the food provided is excellent, while the service is rapid and courteous to a degree. York may be reached either by rail or road, the journey by the latter being most enjoyable, and if performed in a motor-car can be easily and comfortably compassed in two and a half hours. With York as a centre many

Photo by C. E. Farr. THE CASTLE HOTEL, AVON TERRACE, YORK.

capital rides may be indulged in, and specially worthy of mention is the trip to Northam about a score of miles distant. The genial proprietor of the Castle Hotel, Mr. Tom C. Evans, is a prominent townsman, and at the present time is in his fifth year of office as chief magistrate of York. Extended reference to his life will be found elsewhere in these pages. Both in his public and private capacity Mr. Evans exerts himself in his efforts to provide for the comfort of visitors and patrons, and nothing is left undone to assure to all an enjoyable sojourn in this delightful centre.

**HEWITT MORRIS EDWARDS**, general merchant, York. The well-known business carried on under his own name by Mr. H. M. Edwards was originally established over a quarter of a century ago by Mr. Charles Edwards, father of the gentleman under review, in conjunction with his brother, Mr. Kenneth Edwards. The partners conducted operations successfully for some years, during which period the connection expanded rapidly and various branches were established. Ultimately Mr. Kenneth Edwards retired from the firm, when the sole proprietorship fell into the hands of the remaining principal, and in 1905 the latter admitted into partnership his son, Mr. Hewitt Morris Edwards, who took over the management and practically controlled affairs until 1910, when he acquired the business on his own account, retaining the branch at Green Hills in addition to the parent establishment at York, while the Beverley branch was retained by his father, who has placed a manager in charge of his interests there. The business at York is the largest in the district, a very wide area being served by the excellent arrangements made from the distributing centre, and "H. M. Edwards" may be said to be the banking-house of many of the settlers in the surrounding localities. The stock is a large and comprehensive one, including drapery, grocery, hardware, ironmongery, and many other lines of goods, and the requirements of the townspeople and farmers are catered for in every possible way. Many varieties of agricultural implements and machinery may be inspected at the store, which is a rendezvous for those interested in the tilling of the soil and the development of the land generally, while in

the homesteads the business has become a household word, almost every necessity of the domestic *ménage* being procurable from its well-stocked shelves and storage cellars at prices which compare favourably with those of the metropolitan stores. Periodical sales are held, and the

*Bartletta.* *Perth.*  
MR. HEWITT MORRIS EDWARDS.

stocks of draperies are continually renewed by heavy consignments of the newest season's goods. The firm is also interested in the milling and farming industries, being large purchasers of wheat and other products from the settlers. In connection with the Green Hills branch of the

management the branch has continued to prosper. Born at York on January 7, 1884, the subject of this notice was sent to Adelaide to receive his education, entering at St. Peter's College, where he remained until sixteen years of age. Subsequent to his return to the western metropolis, he joined the staff of Foy and Gibson Proprietary, Limited, and passing through the different departments of the firm obtained a splendid commercial training, which he has since found invaluable in prosecuting the development of his own large and varied interests. Eventually he returned to York and became connected with his father's business, being admitted as a partner upon the attainment of his majority, since when he has carried on operations as above. In addition to his commercial interests, Mr. Edwards is the proprietor of a large amount of pastoral and agricultural property in the eastern districts. He devotes the major portion of his time and energies to his mercantile interests, but he takes considerable interest in athletic sport, and during his college career was highly successful as a single testant in various games, having in his possession some valuable trophies which testify to his prowess in this regard. Racing as a sport commands his interest, and he is an advocate for all that is straight and clean on the turf. He occasionally races his own horses, and it is an understood thing that when his colours are on the course the best horse must win. Mr.

Photo by C. E. Farr. MR. H. M. EDWARDS' PREMISES, YORK.

business Mr. Edwards has admitted into partnership Mr. W. W. Chipper (for many years in business at Beverley), under whose capable

Edwards married in 1911 Emily, daughter of the late T. Morris, of New South Wales, a well-known contractor, and has one daughter.

"EASTERN DISTRICTS CHRONICLE," York. This journal is the oldest newspaper in Western Australia outside of those published in the capital, the first issue appearing in 1877—thirty-six years ago. It was founded by George Inkpen, father of the present proprietor and

MR. GEORGE EDWARDS INKPEN.

editor, George Edwards Inkpen, who has had sole control for over a quarter of a century. For many years *The Chronicle* was the recognized mouthpiece of the whole of the eastern districts, representing the important farming districts of Northam and Toodyay on the one side, and extending south to Beverley and into many of the great southern districts towards Albany. Following the gold discoveries at and beyond Southern Cross, other newspaper enterprises were launched at many of the centres served for so long a period by *The Chronicle*, and with the increased population and the extensive land settlement taking place in the Avon Valley and eastward the operations of *The Chronicle* were principally directed to the district responsible for its birth, with the result that to-day it enjoys a wide circulation and liberal public support. From the little sheet issued in 1877—when newspaper enterprise was fraught with much anxiety and difficulties innumerable were encountered—*The Chronicle* has been enlarged at various intervals, its present size amply indicating the prosperity of the York district, and demonstrating the proprietor's faith and confidence in its future.

ARTHUR MASON LILLEYMAN, of the King's Head Hotel, York, is a son of the late Mr. James Lilleyman, who for a considerable time carried on pastoral pursuits in the Narribri district of New South Wales, where the subject of this memoir was born on January 31, 1877. He received his education at various public schools in his native State, and also by private tuition, but before he entered his teens family reverses compelled his father to apprentice him to the boot trade in Victoria. Here he remained until 1896, when he came to Western Australia, and after following his former occupation for a time relinquished it to join the railway service of the State. For nearly two years Mr. Lilleyman remained in this employ, at the end of that period resigning in order to take over the management of a grocery, wine, and spirit store in Lake Street, Perth, which he carried on on behalf

Bartletto.

Perth.

MR. ARTHUR MASON LILLEYMAN.

of his mother for about four years. He then took over the business and conducted it on his own account until 1909, when a vacancy occurred in the firm of Dalton & Co. (better known as the Farmers' Supply Agency), of York, for which he applied and filled for a couple of years. He next undertook the management of the York Hotel, and subsequently of the Royal Exchange Hotel at Katanning. In 1912 he returned to York and took over the King's Head Hotel, which he has conducted ever since. Mr. Lilleyman is well known in sporting circles,

gaining his laurels on the cricket and football fields of Victoria and Western Australia, in the former State playing senior cricket when he was only nineteen years of age. He married in 1902 Florence, daughter of the late Mr. Richard Douglas Scott, of Victoria, a well-known identity connected with the historical firm of Cobb & Co. He has one daughter surviving.

EDWARD HAMERSLEY, J.P., proprietor of "Wilberforce" and "Woodside," in the district of York, was born at Paris, France, in 1835, and was brought to Western Australia by his parents in 1837. Mr. Hamersley's father was educated at Harrow and Trinity College, Cambridge, and landed in the colony in the early part of 1837. He invested a large amount of capital in land in the different districts of the colony before leaving for Home some five years later. The subject of our review was educated in France and England, whither he had returned with his father, and in 1850 once more set sail for Western shores. Following his arrival he went to reside at one of his father's estates, "Pyrton," and had control of the horse station on the Williams River, also engaging in farming on the Swan. Finally he settled at "Wilberforce," and thenceforward turned his attention to mixed farming, at the same time paying frequent visits to his other properties. In past years Mr. Hamersley represented York and Toodyay in the House of Assembly and also held a seat in the Legislative Council. He was a strong supporter of Sir John Forrest's forward policy for the carrying out of public works, and voted for the construction of the harbour works at Fremantle. He drew up a petition presented to Lord Kimberley, then Secretary for State for the Colonies advocating the construction of a railway to the eastern districts, which was thrown out by an adverse vote of the Legislative Council in favour of a railway to the Geraldton mines. "Wilberforce" and "Woodside" are situated about 11 miles east of Northam, and comprise in all about 35,000 acres of land. The property was purchased by the late Mr. Edward Hamersley in 1837, and carried on by him until the time of his death in 1874, when it descended to the present owner, who has spent a considerable sum of money in

ridding the estate of the heavy timber with which it was covered. Several thousand acres have been cleared and the remainder ring-barked, fences have been erected, and twenty-four paddocks formed. The flock, founded by the importation of several highly-bred merino rams secured from the best-known studs of the Eastern States, has steadily increased each year and now numbers 16,000. A stud of 600 choice ewes has been formed, and in time it is intended to raise sheep for disposal to breeders. Shearing takes place in October and is performed by hand, while the lambing season extends over June and July, the average being about 90 per cent. The annual wool clip makes about 200 bales, and fleeces cut from the rams on the estate have turned the scale at 28 lb. About 100 horses, chiefly of the Clydesdale type, are kept, and there is also a herd of milking cattle some thirty in number. The present homestead, built in 1860, is noted for the lavish hospitality extended to visitors by its owner, Mr. Hamersley, whose courteous and genial disposition has won for him a warm place in the esteem of a wide circle of friends.

**VICTOR DACRE BARRETT-LENNARD**, "Mobedine," York. The subject of this notice was born at "St. Leonards," in the picturesque district of Guildford, about seven miles distant from the Western Australian capital, on June 22, 1874.

This estate was originally taken up by the first member of the family to land on these shores, *viz.*, the late Edward Pomeroy Barrett-Lennard,

fifth son of the first baronet of the line, created by King George III. of England in 1801, Sir Thomas Barrett-Lennard, of Balhus, Essex.

MR. V. D. BARRETT-LENNARD'S RESIDENCE, YORK.

After arrival in the new colony the late Mr. Barrett-Lennard, who was numbered among the earliest of the pioneers of the thirties, entered upon the career of a pastoralist on the banks of the Swan River, where he took up a holding, to which was given the name of "St. Leonards." This estate was inherited by the father of the gentleman under review, and upon the division of property at his decease was purchased by Mr. V. D. Barrett-Lennard's elder brother, Mr. George Hardey Barrett-Lennard, who is now in possession of the old home. The name of Barrett-Lennard must always be closely linked with the history of

industry and enterprise of the late settler, who, by founding a home and seriously, with determination to succeed, establishing a flourishing

farming proposition in face of the most primitive reigning conditions, set a valuable example to many of his contemporaries, who needed just such an object lesson to give them impetus to go forward and do likewise. Mr. V. D. Barrett-Lennard

Bartletto, Perth.  
MR. VICTOR DACRE BARRETT-LENNARD.

was left an orphan at an early age, his brothers and sisters also all being minors. During his childhood he pursued his educational studies at Guildford, subsequently proceeding to Melbourne, becoming a student at Toorak College, where he completed his scholastic career. At eighteen years of age he returned to his native State, and turned his

attention to farming pursuits in conjunction with his elder brother on the "St. Leonards" Estate at Guildford. After obtaining a good insight into the details of the industry he invested in his present property, "Mobedine," in the York district, and started upon an independent career when about twenty-one years

conditional-purchase system, working them in conjunction with the other, the whole forming a handsome property of 7,000 acres. Since taking up his residence on the place in 1896 he has been strenuously engaged in turning every acre to the best account, and during the few years that have since elapsed has

requirements, and the country is well watered by natural soaks, in addition to permanent pools which are found in the Avon River and one of its tributaries, these being conveniently situated at either end of the estate. To conserve the supply dams have been constructed and wells sunk on different parts of the

Photo by C. E. Farr.

VIEW OF OUTBUILDINGS AT "MOBEDINE."

of age. The "Mobedine" territory in the original instance was taken up by a member of the well-known Muir family, who in the early days of settlement came into possession of many of the choice areas of the country and concerning whom mention is made in various other parts of this work, chiefly in connection with the southern portion of the State. At that time it comprised some 5,000 acres—of which only 30 acres were cleared—and shortly after completing the purchase of the

proved eminently successful in bringing "Mobedine" into the proud position of being the best-improved and most highly-developed block in the Avon location. The country is undulating in character, and timbered chiefly with jam and York-gum, though there are patches of salmon-gum country freely spread through the holding. Besides the cleared portions, however, the balance has been ringbarked, with the exception of a few clusters of trees, which have been spared the

property, and by this means ample provision has been made for all seasons of the year and to meet any emergencies in the way of drought, which, however, up to the present time, has been unknown in this district. The entire property is fenced and subdivided into numerous paddocks, ranging in size from 500 acres to the 20-acre enclosures, convenient for the handling of the stock. The system of fencing adopted is that of six plain wires for the outer boundaries, with jam-posts cut from

Photo by C. E. Farr.

HORSES WATERING AT "MOBEDINE."

freehold portion of the estate Mr. Barrett-Lennard enlarged the holding by adding to the original block nearly 2,000 acres under the

woodman's axe on account of the necessary shelter which they afford to the stock. The annual rainfall of the district is adequate to its

the natural timber, while three wires have been found sufficient for the subdivision fences, and wire-netting is carried over a considerable

portion both of the outer and inner lines. This fencing has cost on an average £30 per mile. At the present time the area cleared extends over more than 3,000 acres, and tillage operations have been carried on over more than half this portion

most of his farm stock from picked lots from the Eastern States, a few only being bred upon the property. The condition and appearance of these animals—which number in the vicinity of half a hundred—bespeak the care and attention bestowed

appearance, the interior, containing six rooms, being finished artistically and with a view to the greatest possible comfort, the true meaning of the word "home" being subtly suggested throughout. The rooms are large, well lighted, and properly ventilated, and the furnishing is in keeping with the superior style of the structure. A verandah, running round two sides of the house, pleasantly shades the windows and softens the glare of light in the summer time, making a welcome lounging-place for the family when the work of the day is over. The usual appurtenances to a well-planned building, bathroom, dairy, etc., have been included in the homestead; and the same regard for the improvements of the present day is evident in the design of the out-buildings, which are replete with all modern conveniences. Excellent stabling is provided for about thirty horses, the grain and chaff sheds are commodious and substantial, while, in the machinery sheds are found a large variety of harvesters, seeders, etc., everything being kept in good order. In this group of buildings there is also a cottage for men's quarters, containing four rooms, where the comfort of the farm employes has been carefully catered for. Mr. Barrett-Lennard has very little leisure for anything beyond the management of the property, which

Photo by C. E. Farr.

FLOCK OF SHEEP.

of the estate. The popular crops of the district, cereals and hay, are cultivated with signal success, and form the principal products of the agricultural side of the industry, though field peas are also grown to a considerable extent for the purpose of fattening the sheep. The average wheat returns are about 17 bushels, and for hay  $1\frac{1}{2}$  ton to the acre. After the busy harvesting time all hands are kept employed in the business of despatching the grain to the markets, whither most of the annual crop finds its way with excellent profit to the proprietor of the fertile fields. A good deal of attention has been paid to pastoral interests, as the locality is a very favourable one for sheep and lends itself well to fattening purposes, the animals putting on weight in a surprisingly short space of time after having been introduced into the rich pastures. Mr. Barrett-Lennard, therefore, has found it a paying proposition to buy and fatten for the market, while, at the same time, he grazes a standing flock of about 2,000 big-framed crossbreds, principally for the production of wool, the yearly clip being sent to London, where satisfactory prices are obtained. Lambs are bred for the early market, the annual drop averaging about 85 per cent. A large number of horses are required to work the extensive areas under cultivation, and Mr. Barrett-Lennard, who is a lover of a good piece of horseflesh, has imported

upon them by their owner, who from time to time culls out those upon which the strenuous labour demanded of them becomes too great a strain and replaces them with fresh, young blood, well able to bear the burden and heat of the day. A herd of dairy cattle is bred for domestic requirements, about twenty being found sufficient for this purpose, but apart from these no attention has

Photo by C. E. Farr.

TYPICAL VIEW OF "MOBEDINE" COUNTRY.

been given to this class of stock with a view to the markets. The "Mobeidine" homestead was built in 1905, the material used being stone taken from the property. It is substantial and up-to-date in design, the exterior presenting an attractive

has rewarded so richly his efforts to place it in the premier position which it occupies at the present time. He takes, however, a live interest in the affairs of the local branch of the Farmers and Settlers' Association and occupies a seat in the York

Agricultural Society, both of which bodies regard him as a valued member. He occasionally displays a disposition to place himself more in touch with the racing circles of the district than he has found possible hitherto, and has entered horses for local events which have carried the silk to success. Mr. Barrett-Lennard married in 1906 Blanche Isabell, youngest daughter of Mr. Robert Allen, of "South View," Adelaide, South Australia, and has a family of three sons and one daughter.

**ARTHUR BRETtingham LODGE**, of "Marley," York, was born at Horncastle, Lincolnshire, England, on March 1, 1866, and is the youngest son of the late Rev. Samuel Lodge, canon of Lincoln Cathedral and first cousin to the notable Sir Oliver Lodge, whose name is well known as one of the greatest

REV. SAMUEL LODGE.

scientists of the present era. He received his education at the Newark Grammar School, and upon the completion of his scholastic career joined the Imperial Army, serving for seven years in the 12th Lancers in England and India. Subsequently Mr. Lodge devoted his attention to commercial pursuits for twelve months, during which period he resided in London, and in 1893 left the old country for the scenes of a younger civilization, coming to Western Australia, where his brother, the late F. W. Lodge, held the position of Chief Inspector of Police for some years. Upon

arrival in the State he found himself enveloped in the atmosphere of excitement attendant upon the wild rush to the newly discovered gold-fields in the eastern districts, and contracting the gold fever, he joined the eager throng of prospectors and

MR. ARTHUR BRETtingham LODGE.

for some considerable time was engaged in mining pursuits in the neighbourhood of the present town of Kanowna. This experience, although it gave him a varied and first-hand knowledge of the conditions prevailing in a locality when the search for gold is the consuming passion of the hour, left him with but little more in the way of worldly wealth than when he entered upon the quest, and in 1898 he decided to abandon what had proved but a mere will o' the wisp as an allurement to fortune and direct his energies to the less romantic but frequently more remunerative industries connected

with land settlement. Making choice of his present holding in the York district, Mr. Lodge secured the right of purchase, which he exercised some nine years later, in the meanwhile occupying the place as a tenant and carrying on its development. "Marley" is well known as one of the original Crown grants of land made to the Parker family in those early days when the first settlers opened up the country and displayed their excellent judgment of the quality of the land by selecting all the "eyes" of the agricultural areas in different parts of the State as the due reward for their services in pioneering the various localities and for pushing forward to what was then regarded as the "edge of the beyond." The estate comprises 1,860 acres, almost every foot of which is capable of growing something, and of this fine agricultural area more than two-thirds are under cultivation, principally of cereals, the soil richly compensating the labour of the husbandman. Pastoral operations are also receiving a share of attention, a flock of some 700 crossbred sheep being grazed on the pastures, and other stock includes a dozen or more good, staunch farm horses, which present every appearance of fitness for the arduous toil which is demanded of them. Mr. Lodge, since his advent to the district, has manifested considerable interest in the public life of the community and in the institutions which have arisen from time to time as an evidence of the spirit of progress abroad. He served for several years as a member of the Green Hills Roads Board, and for a lengthy period filled the office of chairman, while he is also associated with the local agricultural society.

Photo by C. E. Farr.

MR. A. B. LODGE'S RESIDENCE, YORK.

He actively concerns himself in the affairs of the Anglican Church communion, and holds office as secretary of the committee in connection with the local church. In 1898 Mr. Lodge married Sarah, second daughter of the late James Fleay, of Gilgering, whose portrait appears elsewhere in this work, and has two sons and one daughter.

"YANGEDINE" AND "MORT-LOCK" ESTATES, the property of Messrs. Webster, William, and Warren Marwick, are situated in the Avon Valley, one of the finest stretches of agricultural country in the Western State. The contour of the land is of an undulating nature,

removal of the timber and undergrowth. The Messrs. Marwick have developed the property with great skill, and the model and scientific conditions which are to-day in force on the farm reflect great credit on their resourcefulness and enterprise. In the year 1910 4,100 acres were put under crop and in the early part of the season a magnificent return seemed probable, but a superabundance of rain had the effect of reducing the harvest to ordinary proportions. The area under cultivation during 1911 decreased to 3,200 acres owing to shortage of labour. To efficiently carry on the extensive operations incidental to the working of the property the firm has had installed the most modern

were purchased from Mr. F. Ward, a noted breeder, who has a fine stud at Quarrington, Lincolnshire, all of these animals being entered in the British studbook. About 1906 ten rams were purchased from noted breeders in Lincolnshire, and the introduction of these well-bred animals has led to an all-round improvement in the flock which is now conspicuous for robustness, large frames, length, and quality of wool. The progeny of these rams are available to purchasers and the opportunity thus presented is likely to be largely availed of by breeders anxious to raise the standard of their flocks. In 1910 100 ewes were purchased in Victoria and several good rams obtained in the Old

Photo by C. E. Fair.

2-TOOTH ENGLISH LEICESTERS.

the soil being mostly chocolate loam, rich in the essentials required for the production of cereals. The area of the combined estates equals some 15,000 acres, two-thirds of which have been cleared of timber, while the remaining 5,000 acres have already experienced the ringman's axe, and in the near future will be made available for general farming purposes. The locality is noted for its abundant and regular rainfall, and at no period within the memory of the present generation has the district been stricken by a period of drought. In addition to the ordinary rainfall, the property contains a number of soaks, which appeared subsequent to the

appliances known to the agricultural world, including chaffcutters, corn-crushers, engine, and a hay press for preparing fodder for the north-west trade. Operations have not been confined solely to agriculture, as much time and attention have been paid to the breeding of a fine strain of Lincoln sheep. The stud was founded in the eighties when a number of rams and ewes were purchased from the Angas Estate in South Australia, and to these at frequent intervals have been added a number of well-bred Leicesters, Shropshires, Romney Marsh, and Roscommon sheep, imported from England by Mr. Marwick, sen. Twenty Lincoln rams and five ewes

Country. The present healthy condition of the flock is a source of satisfaction to the Messrs. Marwick, who have not stopped to consider the expense when a really first-class sire has been placed under offer. During the year 1910 Messrs. Marwick were very successful with their exhibits at the various shows, and with their Lincolns and Leicesters carried off no fewer than seventy championships, first and second prizes. At a more recent date the stud of Lincoln sheep owned by Mr. H. J. Lukin was acquired, and this included some of the highest-class Lincolns in Western Australia, many of the rams and ewes having cost as much as fifty guineas each.

In 1910 the foundation of the Leicester flock was laid by the importation of a number of tip-top rams and ewes. Leicesters are

rams available to purchasers. Horses are also bred on the estates, the sires in use being a hackney stallion, "Suffolk King" (imp.) by

on the estate, and these give great promise of developing into a fine stamp of farm horse. The handsome residence occupied by

LINCOLN RAMS CARRYING 10 MONTHS' WOOL.

CALVYN WYBORN SEABROOK, of "Seabourne," Marley Pool, York, was born at Roebourne, in the north-west of Western Australia, on October 25, 1883. He is a descendant of the old English family bearing the name of Seabrook, who for many generations

C. E. Farr, Perth.  
MR. JOHN SEABROOK, SEN.

have dwelt in the County of Shropshire, a scion of which—Mr. C. W. Seabrook's grandfather—came to this State in the thirties and became one of the pioneer sheepfarmers of the new country. His son, the late John Seabrook, was a native of Western Australia, and was brought up in the pastoral

industry, later on taking his place, not only as one of the leading pioneer agriculturists in the Pingelly and York districts, and a station owner of the north-west, but distinguishing himself for many years as a leading spirit in all movements for the advancement of the districts in which his interests lay. He spent twelve years at Moorambine, near Pingelly, and in 1876, proceeded to Roebourne, where, in partnership with his step-brother, the late Edward Robinson, of "Bellevue," he took up "Croydon" Station, which they developed as a sheep proposition, remaining there for about a decade. Returning to the south in 1886 he lived in retirement for a few years, and in 1900 acquired the "Seabourne" Estate—then virgin country comprising some 2,500 acres—and devoted the remainder of his life to the building up of this fine property, which upon his decease was inherited by his only son, the subject of this review. The boundaries of his inheritance have been extended since that date by Mr. Seabrook, and he is leasing on a long term, with the option of purchase, which he intends to exercise in due course, an adjoining block of 2,800 acres, which will complete a very handsome estate. The possession last mentioned has been worked in conjunction with the older proposition for some years past, and

practically the whole area consists of first-class country which, while highly suitable for grazing purposes, has also proved itself responsive to cultivation in a very marked degree. Clearing operations have been carried on with no slack hand, with the result that at the present time

C. E. Farr, Perth.  
MR. JOHN SEABROOK.

2,700 acres have been prepared for tillage, and every year about 1,000 acres are sown, principally with cereals and hay, the remainder lying fallow until the round of the seasons has been completed, when a fresh area is ploughed up and brought under cultivation, while the past year's harvest fields are allowed to rest for a season or two. The

Photo by C. E. Farr.

MR. C. W. SEABROOK'S RESIDENCE, MARLEY POOL, YORK.

country has the advantage of producing good water almost anywhere at a shallow depth, and water conservation has been an important part of the operations carried on by the present owner and his father before him, wells having been sunk and dams constructed, while the erection of windmills on various parts of the estate where necessary has rendered the utilization of the precious fluid direct and easy. The soil is of mixed variety, sharing in the richness for which the Avon Valley has become famous, and is eminently suited to purposes of mixed farming. The whole of the property is fenced and subdivided into thirty-nine paddocks, a great deal of wire-netting having been used in this work, though the general system followed is that of six plain wires threaded through posts, which for the most part have been cut from jam timber. On the pastoral side of the industry the estate carries a flock averaging from 2,000 to 2,500 sheep of the crossbred type, these being kept with a view to general-utility purposes, both wool and mutton being considered in the breeding of the sheep. The wool is disposed of locally, satisfactory prices being obtained, and there is always a ready market for those representatives of the flock

large number of horses of all kinds suited to the different classes of labour. These number in the vicinity of fifty, and among them are included a goodly proportion of Clydesdales, from which, as well as from the lighter sorts, breeding is carried on with a view to supplying

a few for sale at the local markets after the requirements of the estate have been met. In addition to these useful servants of the farm, Mr. Seabrook — who takes a certain amount of interest in the "sport of

than one occasion being carried first past the winning-post. He is a member of the agricultural society of the district, and has been a successful competitor with his horses at the local shows, many prizes having fallen to his share. Mr. Seabrook manifests a disposition to interest himself in the general advancement of the neighbourhood, and has served for a couple of years as a member of the Green Hills Roads Board. He was one of the pioneers of motoring in the York district, and possesses two motor cars, which have proved of great service on the estate as well as being a source of considerable pleasure and recreation. His residence, erected in recent years, is of modern architecture and roomy interior, containing eight rooms and a handsome entrance hall. It is built of stone and brick, and has a spacious verandah running round three sides of the entire building. In the rear are necessary offices, etc., while adjacent are the outbuildings, which are very extensive, including stabling for thirty horses, barns, granary, and hay and machinery sheds, in addition to cottages for the men employed on the farm. Mr. Seabrook is a married man, having been united in the year 1908 to

Photo by C. E. Farr. GENERAL VIEW OF MR. C. W. SEABROOK'S HOMESTEAD AND OUTBUILDINGS.

which are destined for the supply of the provision trade. The work on the farm is of an arduous nature, and its great extent also is responsible for the necessity of keeping a

Ruby Florence, second daughter of Mr. Charles Edwards, a well-known resident of the York district, the issue being one son and one daughter.

THOMAS SMITH, of "Tuto-money Park," York, is a native of England, having been born at the village of Sutton Veny, near Warminster, Wiltshire, on January 23, 1855. He is a descendant of the old yeomanry and staunch farming stock which have formed the backbone of the British nation, and of which his father, the late Thomas Smith, was a worthy representative.

MR. THOMAS SMITH, SEN.

While still quite a lad before reaching his teens, as soon as he was old enough to carry a hoe, his services were enlisted in the tilling of the soil on the home farm, and here he continued until eighteen years of age, when he proceeded to Wales and for three years was engaged in the coal-mining industry. Upon attaining his majority he emigrated to South Africa, where he obtained a

construction work on the lines. At the end of this period Mr. Smith returned to England and revisited his family in Wiltshire, but the free colonial life had cast its charm over him, and realizing that the Old Country was not offering the same chances of success to her sons of the soil as her dependencies over the seas he once more left his native shores and emigrated to Australia. Landing at Adelaide, South Australia, instead of turning his attention to farming pursuits he found that his knowledge of railway construction, gained in South Africa, was a useful asset; and accepting work from the Government he spent about two years on the construction works of the Port Augusta railway line in the middle north of the Central State. He was then offered an appointment by the firm of Messrs. Morgan & Co., of Adelaide, in connection with the copper mines of New Caledonia, the duties of which he efficiently discharged for a couple of years. Upon the close of his contract with this company he returned to the mainland of Australia and enlarged his knowledge of the island-continent by paying short visits to the capitals of the Eastern States. He was then engaged by the firm of Messrs. Wright & Keane, railway contractors, to fill a position on the Government railway then being built between Guildford and Beverley in Western Australia, and after arrival in this State spent the ensuing decade on the construction and earthworks of that line and other enterprises of a similar nature. He worked on the line from Spencer Brook to Northam, and from Clackline to Newcastle, also being engaged

time of the principal railway works, he decided to resume the calling of his youth and to settle on the land. Casting round for a suitable locality in which to commence operations, eventually Mr. Smith secured a nice little block of 700 acres, situated about 13 miles to the eastward of York, and approached by what is generally conceded to be the best road in the State. The holding at that time was thickly timbered with York-gum, salmon-gum, and jam, and the virgin bush flourished in its pristine condition, awaiting the hand of man which should till and work the soil and cause it to bring forth bountiful harvests. Mr. Smith began forthwith to clear the land by

C. E. Farr.

MR. THOMAS SMITH.

Perth.

ringing the trees and burning operations, and in a surprisingly short space of time had sown and reaped his first crop. Water was found in abundance on the estate, and after the removal of the timber this became even more plentiful, good soaks being present while a number of wells have been sunk. Fencing was steadily proceeded with, by degrees the subdivision of the estate into twelve paddocks being effected, the system carried out being seven strands of wire through posts cut from the timber indigenous to the locality. As his proposition prospered Mr. Smith seized every opportunity of enlarging his holding, taking up adjacent territory in small blocks, which in turn were cleared and cultivated. The entire holding at the present time covers 2,500 acres of undulating country, well

position in the State Railway Department, which he filled for three years, having control of various gangs of Kaffirs employed in

on a portion of the midland railway as well as the line in the south-west from Bunbury to Boyanup; and in 1893, upon the completion for the

sited both to agriculture and pastoral pursuits, and of this property close on 1,600 acres have been prepared for tillage, about 700 acres annually being placed under crop. Wheat and hay are produced in large quantities, the average returns

in 1907. A verandah runs round the whole of the building, and a small front garden, where various flowers and shrubs have been cultivated with success, makes the surroundings attractive. Modern conveniences have been considered in

considerable time, and is connected both with the Royal Agricultural Society and with the similar local body. He is also a member of the Farmers and Settlers' Association, and takes a keen interest in everything that pertains to the welfare of

Photo by C. E. Farr.

VIEW OVER "TUTOMONEY PARK."

being of a highly satisfactory nature, due in a large measure to the excellent system of fallowing the land employed by Mr. Smith, who brings scientific methods into use in the management of his farm. Both the wool and mutton markets are catered for in the compact little flock of 800 sheep, which forms a pleasant feature in the landscape as they browse on the pastures or find their way to the drinking-places. Mr. Smith has

the up-to-date outhouses, where large sheds for the storage of grain have been placed, and stables capable of accommodating fifteen horses may be inspected. In every respect Mr. Smith has reason to be proud of the success of his enterprise, whereby he stands in the assured position of a respected and prosperous farmer and the owner of one of the premier properties of the neighbourhood. The wilderness under his

the community in which he resides. He has been twice married, his first wife—to whom he was united in 1882—having been a daughter of the late John Fields, of York, the issue being two sons and six daughters. In 1910, some years subsequent to the death of this lady, he wedded Edith, eldest daughter of the late Walter Scott, of Badgin, near York, by whom he has a family of two daughters.

HORSES IN THE HOME Paddock.

been successful in breeding a good type of animal, which grows a fine fleece, and for mutton-producing qualities is also esteemed by the provision dealers. Another touch which lends its own note to the place as a prosperous farm is the cluster of draught horses, about twenty in number, which look well fitted to the onerous duties which are required of them from day to day. The dwelling-house inhabited by the family is a large, roomy, comfortable farm homestead, substantially built of brick and stone, which was erected

hand has become a smiling garden, and wheatfields flourish where erstwhile the wild bush timber had everything its own way, all being an evidence of what may be accomplished by energy and determination backed up by right methods and steady perseverance. Whilst working out his own proposition, the gentleman under review gave his countenance and assistance to the various organizations formed having for their object the advancement of the district. He has been a member of the York Roads Board for some

JOHN SLADE DURLACHER, J.P., of "Auburn," York, is a son of the late Alfred Durlacher, for many years resident magistrate at Toodyay and Geraldton. He was educated in Geraldton, and subsequently learnt the management of stock at "Seabrook" and "Buckland," in the Northam district. Proceeding to Esperance Bay in 1874 he returned overland with a large flock of sheep, spending eight months on the trip and sustaining practically no loss. In 1876 he left Cheriton, where he had been spending

some time, and journeyed to the north-west in the interests of Mr. S. H. Viveash, on whose property he remained for three years. After a time Mr. Durlacher accepted from Messrs. W. D. Moore & Co., Fremantle, the management of the "Shark Bay" sheep and pearling station, which he held until after his marriage, when he purchased his present property in 1895.

**WILLIAM THOMAS DAVIES**, of "Garden Valley," York, was born at "Springdale," a farming property situated about two and a half miles

MR. THOMAS DAVIES.

distant from his present home in the York district, the date of his birth being October 25, 1858. He is a son of the late Thomas Davies, who came from Wales in the early days with his eldest brother, a well-known merchant of Fremantle, and settled at Guildford while still quite a lad. The gentleman under review was educated under private tuition in his father's home, chiefly during evening hours, even at the early age of nine his days being passed in the occupation of a shepherd. In due course he became initiated into all the details of the farming industry, and at the age of thirty launched out on his own account at "Garden Valley," this property having been purchased by him in the year 1880. In the first instance it consisted of a block of 100 acres, upon which a small cottage had been erected, to which has since been added a couple of rooms; but in his third year of

possession Mr. Davies began to add to his holding, and he now owns one of the largest farms in the district, embracing an area of over 5,000 acres, the whole of which is devoted to grazing and agriculture. Over 2,000 acres have been cleared, and of this about 800 acres are placed under crop each year, half the remainder lying fallow for next season until each portion in turn has been made to yield its harvest in return for the diligent labour of man and beast expended upon it. Cereals are chiefly grown, wheat being the principal product of the fields, and an average of 16 bushels to the acre is frequently obtained. More than two-thirds of the land consists of soil splendidly suited for agriculture, in this respect equalling any in the district, and the country is well watered by soaks and natural springs. The more hilly and rocky areas are very excellent for sheep, and a flock of 2,000 crossbreds are grazed, these being destined both for the wool and mutton markets. The wool is shipped to London, where top prices are obtained, and the sheep in limited numbers find their way to the local saleyards. The usual draught horses are kept for use on the farm, and breeding is resorted to on a restricted scale in order to keep up the supply of strong young stock. Orchard operations receive a share of attention, about 10 acres being planted with a fine variety of fruit-trees, all of which are in full bearing, and the success attained in this department has been quite phenomenal, excelling that of many of the older

orchards in the neighbourhood. In addition to "Garden Valley" Mr. Davies is also interested in real estate in the towns of York, Beverley, Pingelly, and Northam, owning buildings of various kinds in these centres, and he has recently erected in York the finest motor garage in Western Australia outside the metropolitan area. He has been closely

C. E. Farr,

Smith, of Northam, one of the pioneer farmers of that district, and has one son and two daughters.

RONALD MCKAY, who owns and occupies the "Green Valley Farm," situated about eight miles in a westerly direction from the township of York, was born at North Fremantle on December 31, 1860. He is a son of the late John McKay, sergeant-major in the Imperial Army service, who arrived in Western Australia in the ship "Phœbe Dunbar" in August, 1853, and retired on a pension, residing at Fremantle until the time of his death at seventy-five years of age. Mr. Ronald McKay's mother—who died at North Fremantle on January 27, 1909, at the advanced age of eighty-seven—had an interesting career. Her early days were spent in India, where she married and saw a great deal of military life before the Mutiny. When the Central Provinces were devastated with cholera she devoted herself to the work of tending the sufferers, natives and Europeans alike; and subsequently, taking a trip to England with her husband, accompanied his regiment when it was ordered to Ireland, where she witnessed the horrors of a famine and consequent plague. She landed in Western Australia in 1853, when such things as bridges, railways, and even telegraphic communication were non-existent between the port and the capital, and for ten years occupied the position of postmistress of the little hamlet of North Fremantle—now a Parliamentary borough—often conveying the mails across the river in a boat pulled by herself. Having made a study of nursing, her services in this respect were in continual request, and in days when medical men were scarce in the new country she frequently found herself saddled with the responsibility of having to act as doctor and nurse as well, besides giving due attention to her duties as postmistress. In the fifties and sixties several big floods were experienced on the lower reaches of the Swan and Mrs. McKay had some thrilling adventures, the water rising almost to the roof of her house, which she was compelled to leave at an early hour of the morning without the aid of lifebuoy or boat. Born at Dumfries, Scotland, in 1821, Mrs. McKay lived under four British monarchs and has left numerous descendants. The subject of this notice,

GG

Mr. Ronald McKay, was educated at Mr. Humble's school at Fremantle, and upon leaving this institution was apprenticed to the tannery trade with the firm of Messrs. Pearce Brothers. Upon the completion of his indentures he was employed for a short time as a journeyman, subsequently entering upon business in

C. E. Furr,

Perth.

MR. RONALD MCKAY.

York as tanner and leather-dresser, where he established a large and prosperous connection. He competed successfully at all the more important shows in Western Australia, at the Coolgardie International Exhibition securing six first prizes and a gold medal for leather made in the

State, and for three successive years, 1894-5-6, taking the champion prize in the same class. Eventually Mr. McKay let the tannery on a lease and in 1905 entered upon farming operations, purchasing "Springdale," a property of 1,800 acres, and afterwards taking over the old homestead of "Green Valley," where his wife was born. The latter property, which was founded by the late Thomas Davies, comprises about 6,000 acres, the "Springdale" Estate now being merged into "Green Valley" and the two farms worked as one proposition. About 2,400 acres are cleared, and the whole is fenced and subdivided into twenty paddocks, which are used as cultivation fields and grazing pastures. From seven to eight hundred acres are cropped annually, and a fine flock of crossbred sheep, numbering in the vicinity of 3,500, are shorn each season, the wool being shipped to London, where satisfactory prices are obtained. For many years Mr. McKay has manifested a very practical interest in the welfare of the town and district and served for fifteen years on the municipal council of York. At the present time he is a member of the York Roads Board, his connexion with this body having extended over a considerable period. He is a lover of home, and when his hours of busy oversight of farm affairs are over he seeks recreation in the bosom of his family. In 1891 Mr. McKay married Lily, youngest daughter of the late Thomas Davies, of "Green Valley," and has three sons and four daughters.

"GREEN VALLEY FARM," THE PROPERTY OF MR. RONALD MCKAY.

CLAUDE ROBERT HENRY CLIFTON, J.P., "Cave Hill," York, was born at Toodyay, Western Australia, on March 4, 1867, and is a son of the late William John Clifton, who came to this State from England in the year 1849 and was

MR. WILLIAM JOHN CLIFTON.

among the early pioneers of the pastoral industry in the Harvey River district of the south-west portion of the new colony. Subsequently Mr. Clifton renounced this career to accept a position in the Colonial Secretary's Department of the Civil Service, and at a later period was appointed to the office of resident magistrate at Newcastle, which he filled for about a decade. In 1875 he resigned, and afterwards lived in retirement at York until his demise, which occurred some ten years later. The subject of this notice received his education in his native place and concluded his scholastic course at the academy conducted by the late Mr.

George Letch—an institution attended in their boyhood by many of the best-known public men of Perth. At the termination of his studies Mr. Clifton spent a couple of years in mastering the first principles of mixed farming on the "Haisthorpe" Estate, and upon leaving there became identified with pastoral occupations on the station properties of Messrs. Dempster Brothers at Fraser Range and Esperance, where he obtained valuable experience in the handling and breeding of stock. Early in 1887 he proceeded to the north-west, where for eleven years he filled the position of manager of the "Woodbrook" Station—then the property of Messrs. W. Burges & Co. At the end of that period he accepted a transfer to "Cooyapooya" Station as manager of the run on behalf of Messrs. Burges and Wittenoom, and about the same time acquired an interest in the "Mulga Downs" Station, which he afterwards disposed of in 1901, in which year he resigned his connection with Messrs. Burges and Wittenoom in order to return to the south. Coming to the York district Mr. Clifton purchased a block of land comprising 1,000 acres of the Gwambygine area—from the estate of that name resumed by the Government and thrown open for selection; since that time he has also acquired an adjoining block, already improved, and has carried on mixed farming on the combined holdings. About 600 acres of the whole area has been cleared and half of this acreage is cropped annually, while from 750 to 1,000 crossbred sheep are grazed on the property, which is fenced and subdivided into ten paddocks of convenient size for cultivation purposes and the handling of the stock. Mr. Clifton has built a comfortable

homestead on the estate, situated on the road between York and Beverley, about six miles from the former town, and the appearance of this up-to-date residence is enhanced by a small flower garden, adjacent areas also being devoted to the cultivation of orchard trees and vegetables. Mr. Clifton (who was appointed a Justice of the Peace by the Wilson Administration in 1910) takes a deep interest in the general welfare of the community in which he resides, and for several years occupied a seat on the York Roads Board, previously having been a prominent member on the similar

MR. CLAUDE ROBERT HENRY CLIFTON.

body at Roebourne in the north-west, where he played a leading part in the advancement of the district. He was for many years a committeeman of the York Agricultural Society, is a member of the local branch of the Liberal League, and has actively concerned himself in the foundation of the Farmers and Settlers' Association at York, on behalf of which body he accepted the office of delegate to the Conference of 1913, which was responsible for the establishment of a political branch of the association. In his younger days Mr. Clifton was prominently connected with many forms of sport and held membership in various clubs and organizations, but of later years he has taken his recreation chiefly in the bosom of his family. He was married in 1899 at Roebourne to Florence, daughter of Mr. Joseph Hicks, of Gwambygine, near York, and has a family of two sons and two daughters.

MR. C. R. H. CLIFTON'S RESIDENCE, YORK.

WILLIAM SERMON, the original member of the Sermon family to leave England for Australia, arrived in the Western State in 1853, his native place being Cumpston in Berkshire. For some seven years he was engaged in the farming industry in the northern district of Western Australia, where he married Mary Ryan, formerly of County Tipperary, Ireland. Ultimately Mr. Sermon took up land for agricultural purposes in Grass Valley, near Northam, which he farmed for a considerable period until the property was taken over on lease by three of his sons, who rented it from their

MR. WILLIAM SERMON.

father for fifteen years and eventually purchased it, dividing the holding into three separate farms. Mr. Sermon may be regarded as one of those early pioneers whose industry and enterprise have won for the Avon Valley the excellent reputation it

holds among agriculturists and other members of the farming community to-day. JOHN SERMON, of "Water Kerry" Farm, is the eldest son of Mr. William Sermon, mentioned above, and was born at "Wilberforce," where his father was employed after his arrival in Western Australia. His education was received under private tuition, educational facilities in those early days being difficult to obtain, and spent a large portion of his time from ten to fourteen years of age in shepherding sheep, the margin that was left being devoted to study. General work on the farm came next for young Sermon until his eighteenth year, when his father apprenticed him to the wheelwright trade, and at the age of twenty-two, having completed his indentures, he removed to Perth to pursue his calling and further become familiar with the coachbuilding business. Eventually Mr. Sermon launched out on his own account, establishing himself as a saw-miller and supplier of wheelwrights' materials at West Northam, where he carried on a flourishing trade until 1891, when he disposed of his plant and connection and entered upon farming operations at "Water Kerry," which he had purchased from Messrs. William Chifney and Son. This property was taken up originally, in the very early days, by the late Major Dale, the district surveyor of that period, and until its acquisition by the gentleman under review was commonly known as "Dale's Grant." It comprises some 2,560 acres, the land being of first-class quality, and from 700 to 800 acres are brought under cultivation annually. On the pastoral side a flock of from 1,000 to 1,500 sheep represents the enterprise which assists in providing a supply of early lambs for the markets, the yearly

clip being disposed of locally. About thirty horses are kept for the work of the farm, and Mr. Sermon augments this department from time to time with young stock of his own breeding. The old homestead, erected close on thirty years ago, has continued to form the dwelling-place for

C. E. Farr,

Perth.

MR. JOHN SERMON.

the family, but a new and up-to-date residence is now (1913) in course of erection. Mr. Sermon was a member of the municipal council during the ten years of his residence at Northam. He has been connected since its inception with the Northam Agricultural Society, and has upheld the interests of a section of the rate-payers for a term in the York Roads Board, besides which he is a member of the Farmers and Settlers' Association of York. He was married in 1889 to Jane Ann, daughter of the late Joseph Myales, who came

to Western Australia in the early days of its settlement, and has a family of four sons and two daughters.

"ARNOLD PARK," the property of Mrs. Annie Maud Doncon, widow

generations those broad acres which have come into their possession by so little effort of their own. The late Henry Edwin Doncon was the third son of Edward Doncon, late owner of "Boydine," near Beverley—now the residence of Mr. Robert Charles Doncon—who repurchased

since carried on with very satisfactory results what is generally considered to be the work of a man. So admirably does Mrs. Doncon manage the affairs of the estate that it is generally conceded that "Arnold Park" holds second place to no other farm of its acreage in the district; whilst at the same time she discharges with equal efficiency the duties of house mother and looks after the interests of her children in every possible way. The extent of the property is 2,115 acres, this area being divided into nine paddocks of various sizes, the fencing being done with posts of jam timber and six or seven plain wires. Close upon 1,000 acres are cleared, the remainder being ringbarked, and the usual system of fallowing the land every second and third year is followed. Wheat and oats are the principal crops grown, and about 500 acres are placed under cultivation of these cereals, which bring good prices at the local markets. The country is undulating and excellently suited to sheep-grazing, splendid grass pastures having made

VIEW OF "ARNOLD PARK" ESTATE.

of the late H. E. Doncon, is one of the oldest estates in the near vicinity of York, from which town it lies distant about seven miles in a southerly direction. It was first taken up by the maternal great-grandfather of H. E. Doncon, the late Edwin Knott, who was the original settler in this district in those early days when the pioneers of the interior carried their lives in their hands in the act of opening up new territory. Mr. Knott became a martyr to the pioneering

"Arnold Park" after it had passed out of the family for a period, and carried on farming pursuits there for some considerable time. His son, after succeeding to the property, worked most energetically to restore the estate to its former condition of prosperity, and his efforts bade fair to be crowned with success beyond his hopes, when he was cut off at the age of thirty-six from the effects of a stroke of lightning, from which he never recovered, complications setting in, which caused his death on

MRS. A. M. DONCON'S RESIDENCE, YORK.

cause, being fatally speared by the natives whilst engaged in the development of this property, and was buried on the spot, a rough headstone standing to-day to recall to posterity the risks run by their progenitors in securing for future

June 9, 1910. His widow, Annie Maud, is the fourth daughter of Mr. James Wansbrough, a member of one of the pioneering agricultural families of the Avon district. Upon the death of her husband, she bravely faced the position, and has

MR. HENRY EDWIN DONCON.

the name of "Arnold Park" as a pastoral proposition. The flock consists of from 600 upwards of crossbreds, which are purchased and fattened for quick sale, such transactions having proved highly profitable. A comfortable stone house, built by the late H. E. Doncon, forms the residence of the family, and the modern design of this structure has been kept in mind in the erection of the outhouses, which are fully in keeping with the up-to-date

appearance of the homestead. Grain houses, stabling, machinery sheds, etc., are to be found in the cluster of buildings, which bespeak the well-ordered condition of everything on the property, and the strong, cared-for looking horses also give mute but eloquent testimony to the close personal supervision which considers no detail too trivial to be attended to. Upon the death of her husband Mrs. Doncon was left with a family of two sons and three daughters, one of whom has since followed her father beyond the "Great Divide."

SAMUEL SETCHEL  
FREDERIC GENTLE, "Vine Cottage," Quellington, may be termed an Australian of English descent, almost the whole of his life having been spent on this soil, where he landed with his father over half a century ago. He was born in the village of Barton, three miles from the ancient seat of classic learning—Cambridge—on January 15, 1850, and is a son of the late William Gentle, who sailed with his family for Western Australia in 1859, subsequently becoming one of the early pioneers of the Quellington district, where he died in 1889. The gentleman under review attended school in his native village prior to leaving with his father for Australia, and after arrival in this State assisted in the working of a farm taken up by his parents until his marriage at the age of twenty-four. He then selected 100 acres of land upon which area is the site of his present homestead, and settling on this holding commenced operations on his own account. Not content to continue in a small way, he watched his opportunity to extend this

acreage and gradually acquired by selection and purchase over 2,600 acres, forming a property of considerable value, which in course of time he divided, retaining about half and placing four of his sons on holdings cut out of the remainder. The greater proportion of these joint blocks have been cleared of all scrub and timber and made fit for cultivation, at the time of writing (1913) over 1,000 acres being placed under crop. Wheat, oats, and hay are

MR. S. S. F. GENTLE.

grown and satisfactory results are obtained, ready markets being found for the products of the fields. Mr. Gentle resides on the old homestead area, and has given some attention to sheep-raising, grazing a flock of crossbreds, with which he has had fair success, the wool commanding good prices in London. He lives a quiet life, after forty years of struggle, industry, perseverance, and in the end success, resting from the

heat and burden of the day, cared for by those of his family who still remain under the parental roof-tree, and finding sufficient to interest and employ his time in the supervision of the farm which he has built up through all his years of labour. Mr. Gentle may be looked upon as one of those worthy settlers who go to make the backbone of the State, with grit enough to start with little capital, and work their way practically without assistance, bringing up large families and helping to develop the resources of the country in very many ways. He has had little time to devote to outside matters, his whole time and attention being absorbed in providing for his family and carrying on the industry which, though suffering many throwbacks, in the long run was rewarded with results beyond his hopes. His marriage in 1874 to Susannah, daughter of the late Joseph Bailey, a Wiltshire man who settled at York some sixty years ago, was one of the most fortunate events of his life, his wife having proved a true helpmeet to him in all the vicissitudes of the two-score years that they have spent together. For over that period Mrs. Gentle has conducted the local post office in the old homestead, and though now in the late fifties of her age still continues those duties which have become part and parcel of her life, though with the increase of population these have grown decidedly more onerous. The Quellington schoolhouse, the grounds of which adjoin the garden area of "Vine Cottage," is built on a block of land presented to the Education Department for that purpose by Mr. Gentle. He has six sons and four daughters, several of whom, as before stated, are working the land in conjunction with their father.

Photo by C. E. Farr. GENERAL VIEW OF HOMESTEAD, MR. S. S. F. GENTLE'S ESTATE, QUELLINGTON.

EDWARD GIFFORD PARKER, J.P., owner of the "Boonmull" property, near Green Hills, and "Mount Stirling," situated about 16 miles south of Kellerberrin, is the fourth son of the late Edward Read Parker, who came from England as a child with his parents in 1830 and subsequently took up a large tract of country in the eastern agricultural district, now well known as "Dangin Park," and purchased after his retirement by Mr. J. S. W. Parker, J.P., the present occupier. Upon this estate the gentleman under review was born on December 11, 1872, and when old enough to receive instruction he was sent to the Fremantle Grammar School, where, under the able tuition of the Hon. Henry Briggs, he pursued his studies until fifteen years of age. Leaving school he came direct to "Boonmull," one of the several properties owned by his father, this having been selected in 1842 from the Government of the day on a freehold title and used as an out-station by Mr. E. R. Parker. Since its first selection in the above-mentioned year as virgin country, it had remained in Mr. Parker's sole possession, and such confidence had he in his young son's ability, even at that immature age, to manage the affairs of the holding that he placed him in charge of a staff of men, and with this assistance the youthful pioneer

accomplished up to this time, the forest timber still standing on the unfenced property, so that the initial years of strenuous toil had yet to be faced. Undaunted, however, Mr. Parker set to work, and ever since

MR. EDWARD READ PARKER.

has resided upon the estate, to which he succeeded upon the demise of his parent, subsequently acquiring "Mount Stirling" and two outside properties. The latter, situated some few miles apart on the York to Quairading Railway and jointly embracing an area of 4,000 acres, are worked in conjunction with the two principal holdings. "Boonmull," with an acreage of similar

undulating, with soil of chocolate loam, the natural timber being jam, York-gum, and manna-gum, and good stock water is obtained at a shallow depth on almost any part of the estate. Numerous wells have been sunk, and this forms the chief source of supply. About three-quarters of the whole area has been cleared, and close on a thousand acres annually is cropped with hay, the principal product of the cultivation fields. The excellent average of two and a half tons to the acre is usually harvested, and a large surplus is left for the market after the considerable quantities kept for the consumption of the stock upon the estate have been reserved. Cultivation on the three-year fallow system has been proved to yield the best results, and this is the method adhered to by Mr. Parker, who has made a careful study of the different systems in vogue and keeps himself in touch with scientific agriculture and farming operations generally by perusal of the approved up-to-date works on these and kindred subjects. "Mount Stirling" was founded by the late Edward Read Parker in 1860 upon the same conditions as "Boonmull," and was purchased from his late father's estate by the gentleman under review in 1904. It consists of 5,000 acres, of which area 1,500 acres are cleared and the remainder ringbarked ready for burning operations, which are proceeded with as

Photo by C. E. Furr.

"MOUNT STIRLING" HOMESTEAD.

started operations, working himself with his helpers and doing an equal day's labour with any one of them. Practically no development had been

extent contained in its own boundaries, lies in convenient proximity to the Green Hills Railway Station. The country is gently

soon as the winter season sets in. Like "Boonmull," it is adequately watered by wells which have been sunk at convenient distances, and is

in general highly improved, vermin-proof wire-netting being used for fencing purposes, in addition to the posts of jam timber and six plain wires, which are found sufficient to protect the boundaries and form subdivisions on the various other properties. Mr. Parker keeps the management of the two principal estates entirely in his own hands, and has experienced considerable success in the very important sheep department of his proposition. In this branch of operations he makes joint use of the two properties, no separate returns being made, and grazes a flock averaging 4,000 in number, which is divided into two parts, one consisting of pure merinoes and the other of Lincoln-merino crossbreds. He has a small stud of the finest quality of first-class merinoes, founded from representatives of various famous sheep stations on the River Murray in South Australia, and when the offspring from this select breed exceed the number required for his own enterprise sales are made, which are eagerly availed of by the smaller farmers in the neighbourhood, and by this means much has been done to improve the type of sheep carried in the district. The fleeces average 6½ lb. in weight, and a good quality of wool is

Western Australia with one or two exceptions only. Over fifty horses are found necessary to carry on the work of the farms, suitable types being selected for the different

C. E. Farr,

Perth.

MR. E. GIFFORD PARKER.

classes of labour. The draughts are Clydesdales, bred by Mr. Parker from horses of the best bone, the descendants of imported stock, while the lighter sorts, also raised on the "Boonmull" property, are almost

manager in charge at "Mount Stirling," but keeps a vigilant oversight of all details in connection with this part of the property. The distance of 45 miles intervening between the two places is easily covered by means of his motor-car, and it is his practice to motor across to "Mount Stirling" once a week in order to inspect and confer with his manager. The country differs slightly from "Boonmull," being hilly with frequent outcrops of granite, and the whole area is admirably adapted for sheep, though where fairly level patches are found it has proved first-class agricultural land. The original timber on the "Mount Stirling" Estate is salmon, Morrell, and gimlet, but the greater number of the trees have been sacrificed in order to provide better pastures for the flocks. The homestead here was built in 1865, and is still considered the best dwelling of its kind in the neighbourhood, the manager employed by Mr. Parker being the present occupant. At "Boonmull" a house was erected in 1890, which has made a comfortable though unpretentious abode for the family. At the present time, however, Mr. Parker is preparing plans for a new and thoroughly modern residence, the erection of which he hopes to

Photo by C. E. Farr.

produced, which, when offered for sale in the markets of the Old Country, commands prices equal to the figure obtained by any consignments from

pure bred. A small herd of Jersey cattle is kept for domestic purposes, these also being of perfectly pure pedigree. Mr. Parker has placed a

commence about the time this work goes to press, and by the carrying out of this intention the property will be graced by a residential

VIEWS OF "BOONMULL" ESTATE, THE PROPERTY OF MR. E. GIFFORD PARKER.

structure quite in keeping with the dignity and standing in the district to which it has attained. At both "Boonmull" and "Mount Stirling" the stabling accommodation is very extensive and up-to-date in design, wood and iron being the material chiefly used for its construction. The two smaller farms, of 2,000 acres each, on the York-Quairading line of railway, are conducted on the share system of farming, the subject of this notice and his brother, Mr. J. S. W. Parker, of "Dangin Park," having introduced this system into the State after a personal and exhaustive study of the share-farming question in the Eastern States, where very good results were found to have been accomplished. Mr. Parker in

is now a name to conjure with. A quarter of a century ago he became a member of the Beverley Agricultural Society, and in this capacity he was able forcibly to demonstrate to his fellow exhibitors at the annual shows that his methods of land development were worth close study. While still little more than a lad he competed with flying colours against the experienced and older farmers who held the creed that "what our fathers have told us" was a sufficient working principle for more modern times, and in the most practical manner proved that the progressive methods of an enlightened generation were prepared to stand the most searching tests. Membership in the Royal Agricultural Society was

march of progress in later days, he became connected with the Green Hills Roads Board, and served on this body for some considerable time. Though not an enthusiast in the "sport of kings," at one period he displayed some interest in racing matters, and is still a member of the York and Green Hills racing clubs. He is a lover of all forms of manly outdoor sport, and as opportunity offered in his younger days participated with considerable zest in the games of cricket and football. He now acts as patron to the various athletic organizations formed by the youth of the neighbourhood, who can always depend upon his support in any legitimate scheme of healthful diversion. Mr. Parker married in

Photo by C. E. Farr.

FOREST AND CLEARED COUNTRY; MOUNT STIRLING ON THE RIGHT.

the early days of his residence in the district had hardly more than reached years of discretion when he found men considerably his seniors in age inviting his co-operation in matters of public importance concerning the welfare of the community. This led to his taking a very active interest in many affairs outside his own domain tending to bring the district into prominence, and as he considered no detail too small to receive from him the attention necessary to promote the success of the whole scheme he soon began to realize that he had assumed the responsibilities of one of the leading settlers of that part of the country where the name of Parker

conferred upon him as far back as the time when this society had its headquarters at Guildford, and here also his reputation became established as a successful exhibitor. He was prominent in the foundation of the Green Hills Progress Association—a body which, though now defunct, did excellent service in the early advancement of the district. To this organization must be accredited the construction of the first road from Green Hills to York, and the successful farmers who used the highway for the conveyance of their harvest spoils to market owed much to the untiring energy displayed by Mr. Parker in the accomplishment of this piece of work. With the

August, 1896, Eveline Emily, eldest daughter of the late William Walter Bramwell—a descendant of the Bramwells of Wales, of ancient lineage, and closely related to the famous Judge Bramwell, the great legal luminary of the English Bar—who came to Western Australia in the early days and settled at Busselton. Of this union there is a family of four sons and one daughter.

EDWARD GOLDSMITH WHITFIELD, J.P., "Wonobbing," Green Hills, is a Western Australian by birth, having been born at Greenough, near Geraldton, on May 29, 1871. He is the second son of the

late Thomas Whitfield, who came to this State from England as a lad in the early days of settlement and was identified with the pastoral industry

MR. THOMAS WHITFIELD.

in the Victoria district, taking up the "Yandanooka" property on lease and carrying on its development for a considerable time. At a later period the late gentleman removed to Albany, where he lived in retirement with his family in the early eighties for some time before his decease, which occurred in 1883. The subject of this memoir received his primary education under private tuition, concluding his scholastic studies in the academy conducted by the Hon. Henry Briggs at Fremantle, known as the Fremantle Grammar School. At the termination of his schooldays, when fourteen years of age, he proceeded to his father's station, "Yandanooka," in order to obtain an insight into the management of stock under the tuition of his brother, with whom he remained for about seven years. Shortly after

attaining his majority he left the northern areas and came to the Green Hills district, where he purchased a partly-improved farm of 1,000 acres in extent, and taking up his residence on the property directed his energies to agricultural and pastoral pursuits on his own behalf. His enterprise prospering he acquired a tract of virgin country from the Government, in addition purchasing further properties in the vicinity of his original holding, and at the present time is the owner of a very compact and highly-developed estate comprising 1,700 acres, the whole of which is cleared, fenced, and subdivided. Cropping is carried on on the three-year fallow system, the chief products being wheat, oats, and hay; while an important department of the farm is the flock of from 800 to 1,000 crossbred sheep, the wool from which finds a ready sale in local markets. A special feature of the "Wonobbing" Estate is the champion English-bred Suffolk-Punch stallion, "Rendlesham George," imported by Mr. Whitfield at a big cost in 1911. This splendid sire inherits some of the best blood recorded in the English Stud Book, his ancestors having made their name at some of the most important show-rings of the Old Country, where very valuable awards from time to time have been placed to their credit. A beautifully-topped horse, in colour dark chestnut, "Rendlesham George" was bred by Mr. Alfred J. Smith, of Rendlesham, Woodbridge, Suffolk, from whom he was purchased as a two-year-old by Mr. Whitfield. He is by "Rendlesham Matchem" 3438 (Suffolk Stud Book), by "Rendlesham Goldsmith" 3095, his dam being "Princess Wedge" 3576, by Smith's "Wedgewood" 1749, and he bids fair to prove a most serviceable sire. The "Wonobbing" homestead is situated about two miles from the village of

Green Hills, and was built by Mr. Whitfield in 1904. Comfort and convenience have been made primary considerations in its design, the interior being well lighted and ventilated, and in addition to six rooms there is a large hall and well-appointed bathroom and cellars, everything being well arranged and up to date. The surroundings are very picturesque, ornamental trees having been planted in profusion

C. E. Farr, Perth.  
MR. EDWARD GOLDSMITH WHITFIELD.

around the dwelling, which yield a grateful shade from the hot rays of the summer sun. The outhouses cover an extensive area of ground and are in keeping with the general aspect of good order maintained upon the property; in the near vicinity of the homestead is an orchard where a large variety of fruits come to perfection. Mr. Whitfield identifies himself with the public institutions of the district, and for several years has served on the Green Hills Roads Board. He is a Justice of the Peace

Photo by C. E. Farr. "WONOBING," RESIDENCE OF MR. E. G. WHITFIELD, GREEN HILLS.

for York magisterial district and a member of the local agricultural society. He has acted as committee-man in connection with the York Jockey Club, and was one of the founders of the Green Hills Race Club, of which he was chairman for a considerable period. He has recently taken up horse-breeding as a hobby, and gives much of his leisure to perfecting his knowledge of this noble animal. In 1892 Mr. Whitfield married Amy, daughter of the late John Stephen Maley, of Greenough Flats, and has one son and two daughters.

**HENRY PENNY, senior**, of "Green Hills" Farm, from which the town of Green Hills takes its name, was born at Bower Chalk, near Salisbury, England, on June 22, 1833, and came to Australia in his twenty-first year by the sailing ship "Berkshire," the trip extending over 103 days. Upon arrival at Fremantle he proceeded to the Avon Valley district and became engaged in the farming industry on the holding of the late John Walker near Northam, where he gained his first colonial experience. Leaving there he spent

C. E. Farr, Perth.  
MR. HENRY PENNY, SEN.

two years in the employ of the late Samuel Burges at Tipperary at a weekly wage of £1 without board. This was in 1856-7, at which time flour was selling at 3½d. lb., sugar 6d. lb., and tea 3s. lb., all other provisions being correspondingly higher in price. Subsequently he launched out on his own account, leasing a small farm of 40 acres, for which he paid

rent of £1 per acre, or the alternative payment of 2½ bushels of wheat, which latter was the form of rent payment mostly in vogue at the time. During the intervals of tilling and developing his little farm he worked at the sandalwood industry, which was then in a flourishing state, and in 1867 found himself in a position to look out for a larger property. An opportunity occurring for him to take up a 200-acre block of the pastoral lease of the late Parker Brothers he seized the chance, and so formed the nucleus of his present fine estate in the Green Hills district, of which he may be justly termed the pioneer in the agricultural industry, now in such an advanced state in this neighbourhood. As he continued to prosper Mr. Penny added to his holding again and again, until today, surrounding the old homestead, he has acquired nearly 1,200 acres, making a splendid property, which is now chiefly under the management of his eldest son, about half of the above area being under cultivation. Mr. Penny was one of the founders and first chairman of the Green Hills Roads Board, and participated in all affairs of public concern which eventuated as the little settlement grew. He was prominent in the movement to erect an agricultural hall, which was the first institution of its kind in the State, and a church built in 1882, and he took a leading part in securing the extension of railway facilities to the district. Mr. Penny married in July, 1854, Matilda Hawkins, a native of the same part of England from which he sprang, the couple leaving for Australia four months after their marriage. His descendants include four sons, three daughters, thirty-nine grandchildren, and two great-grandchildren.

**WILLIAM WHIDBY CHIPPER, J.P.**, was born at York, Western Australia, on September 14, 1870, and is the eldest son of the late Richard Chipper, who was descended from one of the earliest of Western Australia's settlers, viz., Stephen Chipper, who came to the State in the early thirties and was amongst those whose sufferings in pioneering the State are recorded in blood—having, in conflict with the native savage tribes on one occasion, received no less than half a dozen spears in his body at the same time. The gentleman under review was

educated at the Fremantle Grammar School, under the Hon. H. Briggs, and in 1886 became articled to the firm of Messrs. Forrest & Angove, intending to follow the profession of surveyor. Being attracted, however, after six years of study, by the allurements of the newly-discovered Coolgardie goldfield, he abandoned the theodolite in favour of pick and shovel, and proceeding to the eastern goldfields almost immediately altered

Bartletto, Perth.  
MR. WILLIAM WHIDBY CHIPPER.

his intention of starting as a prospector, and settled down to business pursuits for ten years, during which time he became a well-known member of the commercial community of the fields. In 1903 he disposed of his interests in Coolgardie and opened a store at Beverley, where he carried on business for eight years, selling out again in 1911, when he went to the Eastern States on a prolonged holiday. Upon his return he purchased a partnership in the Green Hills branch of the business of Mr. H. M. Edwards, and now conducts the management of that branch, which is carried on under the style of Edwards and Chipper. He has also a stake in the agricultural industry, owning two farms of 1,000 acres each at Kuminin and East Beverley, in addition to other real estate at the latter centre. During his sojourn at Beverley he took a leading part in the advancement of the town and district, and for a considerable period occupied the office of mayor of the municipality, serving in

addition several years as a member of the council. He was for some time vice-president of the local agricultural society, and was prominent officially in the Beverley Race Club, where he filled the honorary position of judge. Mr. Chipper was appointed a Justice of the Peace by the Moore Administration. He is fond of motoring, and spends much of his leisure in this fascinating pursuit. In 1894 he married Florence Ethel, daughter of the late Frederick R. Stirling, long associated with newspaper publication in this State, and has one son and two daughters.

HERBERT PACEY COOK MORGAN, of "Balkuling" Estate, was born at Bishop Auckland,

MR. CHARLTON ELLIOT MORGAN.

County of Durham, England, on May 23, 1876, and is the youngest son of the late Charlton Elliot Morgan, a farmer of that district, where

records of the old historical family of that name extend back to a very early period. Mr. Morgan traces his descent to 1103, when a certain Tegan Morgan (the first member of the family of whom any record is extant) flourished; and during the former part of the fifteenth century Robert Morgan held a messuage called "Milnehaws" with other landed possessions at Frosterley Fields and Dryburn, and from that date onward references are frequently made to various representatives of the house. Subsequently a family seat was founded by the Morgans, to which was given the name of "Millhouses Manor," this being situated on the north bank of a burn near Low Bolihope House and Whitekirtle, and many of the old records of the Stanhope district and the surrounding country for hundreds of years back contain mention of this ancient family of land owners. The subject of our review continued his studies at the North-Eastern County School until seventeen years of age, and during this period had his attention continually turned to Western Australia by letters received from his friend, Mr. J. Deane Hammond, who had settled in this State some years previously. Mr. Hammond's reports of the freedom of the new country, its opportunities, and responsibilities, inspired young Morgan with a desire to try for himself the lottery of Fortune in a land with all its future before it, and deserting the old home with its ancient associations and traditions he set forth, a solitary wanderer, still hardly more than a lad in years, to place the expanse of two oceans between himself and all the scenes of his previous life. Upon arrival at Western Australia he joined Mr. Hammond, remaining with him a year in order to obtain

an insight into the conditions prevailing in connection with the farming industry under the Southern Cross. At the termination of that period he made a selection of virgin country for himself, in the first instance taking up about 460 acres, with which he commenced operations. These he pursued with energy

Bartletto,

Perth.

MR. HERBERT PACEY COOK MORGAN.

and untiring perseverance, leaving no stone unturned in the path of his progress, and as the first clearing was completed a portion of the land was tilled and in due course yielded its golden harvest. As time passed the original holding proved too limited for Mr. Morgan's enterprise, and as opportunity offered he acquired additional property in the vicinity of his first block; year by year he has continued this policy of clearing, cultivation, and further acquirement, until at the present period he owns a well-developed farm, comprising about 2,000 acres

Photo by C. E. Farr.

VIEW OF "BALKULING" HOMESTEAD.

of land, in quality equal to any in this noted agricultural district. The locality is well watered, good, fresh supplies for the stock being obtainable almost in all parts of the property and in abundance all the year round. There are good natural soaks, and many wells have been sunk which are supplied with the necessary troughing, etc., these being but a few among the many improvements made on the farm. Many miles of fencing have been put up, the whole of the boundary being enclosed, and subdivision has

reputation in the neighbourhood for his success in wheat-growing, his methods of tillage being rewarded with big results. These methods are based on scientific knowledge and observation, the poorer patches of soil being detected by testing, when they are treated with artificial manures and brought up to standard, the better class soils needing comparatively little attention. By this means splendidly even crops are produced, and in the recent season of 1912 the average of grain to the acre reached the excellent total of

time has about 700 sheep grazing on the pastures. These display a good frame, producing a 7-lb. fleece, the wool from which is destined for the London markets, where it usually commands about a shilling per lb. During working hours the farm horses may be observed to advantage in the different departments of industry, and when their "shift" is over they are well cared for and fed, the stabling arrangements at "Balkuling" being not among the least of its carefully-ordered scheme of things. All the outhouses are likewise up to date, and a stroll through the different sheds reveals everything in order. Mr. Morgan has taken his part in the public life of the district, and during the existence of the East Beverley Roads Board occupied the post of secretary to that body for a decade. He has served for several years on the Green Hills Roads Board, of which he is still a member, and takes a deep interest in everything pertaining to the welfare of the settlement and community of which he forms a part. He is a motorist, and when he can afford leisure from the everpressing duties connected with the management of the farm takes trips on his car to the remotest parts of the district, thus gaining a very thorough knowledge of the country. He is very fond of reading and obtains much quiet recreation in delving into literary works of an historical nature. In 1910 Mr. Morgan took a trip to the Old Country, when he revisited the home of his childhood and spent some time in reviving the associations of early youth and boyhood, also visiting the various centres of interest both in England and on the Continent.

STABLES AT "BALKULING."

been made into sixteen paddocks of convenient size for cultivation and the handling of the stock. Over 1,000 acres have been prepared for cultivation, and the land is tilled on the alternate crop and fallow system, which has proved highly successful in the district. Each season about half of the above-mentioned area is sown with cereals, chiefly wheat and with hay in smaller quantities, and the crops gathered in at harvest time are second to none in the district. Mr. Morgan has obtained quite a

27 bushels, demonstrating beyond argument that, given in the natural advantages of the locality and the suitable climatic conditions, the skilled knowledge of the experienced agriculturist here has had a large say. All the latest most approved machinery is in use on the property, and everything that can assist in causing the earth to yield her increase for the service of man has been brought into requisition. For his flock Mr. Morgan has chosen the crossbred strain, and at the present

GENERAL VIEW OF MR. H. P. C. MORGAN'S "BALKULING" PROPERTY.

"DANGIN PARK" ESTATE, the valuable property belonging to Mr. JONAH SMITH WELLS PARKER, J.P., is situated 40 miles distant in an easterly direction from

MR. EDWARD READ PARKER.

the town of York, and in close proximity to the rising town of Dangin, which bids fair to rank in the near future as one of the foremost agricultural centres in the State. The whole of this territory was taken up in the late fifties as a pastoral lease by the late Edward Read Parker (father of the present owner), who

MR. CECIL ALWYN READ PARKER.

came from England with his parents when only ten years of age, his father having been a farmer in Kent, England, prior to his advent to Western Australia in 1830—the year following

the foundation of the Swan River settlement by the Imperial Government. The late Mr. E. R. Parker's father was one of the first settlers in the new country, and his son, upon attaining to manhood's estate, turned his attention to the large tracts of undeveloped country in the eastern agricultural districts, finally selecting the area to which he gave the name of "Dangin," the aboriginal name for a spring near which the homestead was afterwards built. When the town site was surveyed by Mr. Parker, the name was adopted for the infant settlement, and to distinguish the one from the other Mr. Parker's property was called "Dangin Park." Here Mr. Edward Read Parker carried on operations as a pastoralist and grazier until the year 1888, when he retired from active life and lived privately at York until the time of his death, which occurred in 1905.

The subject of this notice, who was born at "Dangin Park" in 1863, purchased his father's interest in the property shortly after the retirement of the latter gentleman, and immediately began to take up blocks on the estate on the conditional purchase system, all but a very small area previously having been held under the pastoral lease. By this means he gradually acquired a large proportion of freehold, and at the present time "Dangin Park" comprises over 16,000 acres of combined freehold and conditional purchase lands, the latter in the near future merging into freehold. Practically the whole of the land, with the exception of a few rocky hills, is well suited to purposes of cultivation, and it is no exaggeration to say that we have here one of the largest farming propositions in the Western State, and, indeed, equalled by few in the whole of the Commonwealth. The entire boundary is fenced, jam timber having been brought into requisition for posts, while two plain wires and three-foot netting surmounted by a strand of barbed wire has proved an efficient barrier against the inroads of vermin or the escape of stock with a turn for wandering. Jam posts have also been used for the subdivision fences, threaded with six plain wires, and the estate has been divided into forty-one paddocks of varying size and conveniently arranged for the purposes of tillage and handling of the stock. From the first the work of improvement has been carried steadily forward, and

clearing operations have been completed over 8,000 acres, this in itself representing an immense expenditure of labour and capital. By the wholesale plying of the ringman's

Bartlett, Perth.  
MR. JONAH SMITH WELLS PARKER.

axe the character of the country has suffered considerable change, entire belts of heavy timber being sacrificed in the interests of cultivation; but this is little to be regretted when such views have been made possible as that accompanying the present article, where in the midst of a thousand-acre

MR. ALWYN ERNEST PARKER.

crop of hay a man of average height may stand upright and be well-nigh concealed by the waving crops which have taken the place of the natural growths of the country. The nature

of the soil covering the large expanses of level plain is of a good chocolate loam, correctly described as arable land and first-class country for either agriculture or grazing; while on the higher portions large outcrops of rock make the granite formation of the

water is pumped by means of a 9-h.p. Tangye oil-engine and a Tangye vertical three-throw pump through 2½-in. pipes, was installed about 9,600 ft. distant from the reservoir at an altitude of 140 ft. above the bed of the latter. From this tank

in distribution, this scheme is unequalled by any private enterprise of a similar nature in the Commonwealth. The new township of Dangin, which was surveyed as a town site in 1908, was sold in blocks for building purposes by Mr. Parker, to whom the land belonged, and the property of "Dangin Park" now surrounds the town on every side. Since that period has sprung into existence with the phenomenal rapidity which is a feature of the growth of many of Western Australia's country towns a compact little settlement, including a fine hotel, a couple of churches, three stores, post and telegraph and telephone office, the usual blacksmithing business, etc., etc., and the railway station, which is in close proximity to the centre, presents a very busy scene at harvest time. The hotel above-mentioned was built by Mr. Parker for the convenience of settlers and travellers, and may be classed among the finest of establishments of a similar character in any country town in the State. It is conducted absolutely on temperance lines, no licensed house nearer than Quairading—a distance of over five miles—being allowed to supply alcoholic liquor to the residents, and every arrangement is made and carried out for the comfort and convenience of guests. As a matter of fact, almost the whole town was built by the gentleman

WHEAT STACKS AT DANGIN RAILWAY STATION, 1911.

hills plainly evident. In referring to the presence of granite on the property, mention must be made of one of the most important of Mr. Parker's departments of enterprise, namely, the immense water scheme devised and carried out by him at "Dangin Park," whereby over thirty-five millions of gallons of water are conserved annually to be distributed as required over various parts of the estate, while the whole of Dangin township derives its supply of the precious fluid solely from the same source. Mr. Parker perceived the great natural advantages presented by a water catchment of solid granite rock, forming a basin extending over one hundred acres, sloping to one centre, and capable of receiving as its share of the annual rainfall upwards of thirty million gallons; and having secured the advice of experts in water conservation, placed the whole scheme under the direction of Mr. T. C. Hodgson, who was first officer in command in connection with the construction of the Mundaring Weir under the late C. Y. O'Connor, C.M.G. A concrete wall, 12 feet in thickness at its base, was constructed across the natural basin referred to at the outlet of this area of catchment, thus completing the necessary enclosure for the conservation of the water; and a storage tank with a holding capacity of nearly 150,000 gallons, into which

about eight miles of main and distributing pipes carry the water to the different points required, and in addition to supplying the needs of the estate and the township, the Dangin Park scheme also provides for the necessities of the local railway department. It may be safely asserted that, for the extent and method of its conservation and the area covered

STORAGE TANK, 140 FT. ABOVE BED OF WEIR, SHOWING PIPE TRACK THROUGH TIMBER.

cleared area on "Dangin Park," he leases a portion on the share system to farmers, who carry out all the work attendant on farming, cropping, and harvesting operations, providing their own horses and implements, and giving their labour, while Mr. Parker supplies, in addition to the cleared land, seeds, manures, and other necessary materials of a like nature, and the profits are equally divided. The share farming is worked on the fallow system only, and Mr. Parker advances 5s. per acre on the fallowed land to those tenants who require means to carry them over till the crop is harvested. About 4,000 acres are worked on this system, which has proved very satisfactory. In addition Mr. Parker and his two sons crop about 1,000 acres annually, about an equal area being kept in fallow in preparation for the ensuing season. This is devoted entirely to

hay, and a portion of the crop is fed to the stock upon the estate, automatic sheep-feeders being used for

CHAFFCUTTING PLANT AT WORK.

this purpose. The bulk of the harvest, however, is destined for the market, and chaffcutting operations

are an important branch of the industry, the steam chaffcutters being kept busily at work for many months, and it is no uncommon thing to witness a cluster of a dozen men, some engaged in feeding the machine from the rapidly-diminishing stock of hay close by, some superintending the filling of the sacks, and others loading the waggons by which the chaff is conveyed to the railway station for despatch to other parts of the State. The machinery on the "Dangin Park" property is all of up-to-date type, seeders being busy over the fields in the beginning of the season, to be followed in due course by the reapers and binders, ten of the latter being shown at work in our illustration. Mr. Parker owns a fine motor-car, which proves of considerable service in the economizing of time in the necessary inspection of remoter parts of the large estate. Besides the big

water scheme already referred to (the cost of which was considerably over £3,000), "Dangin Park" is supplied with numerous wells and soaks, and a substantial tank, with a capacity of over 1,150,000 gallons, has been constructed, also a large dam in another part of the property, which, with the aid of the five windmills which have been erected, would alone have caused the property to rank among the premier farms of the State with regard to watering facilities. The "Dangin Park" flock has been developed on the crossbred type, merino traits predominating rather than the coarser characteristics of other breeds. The wool, accordingly, is of excellent quality and realizes very high prices at the London markets, whither the yearly clip is sent; while frequent sales of sheep are made to the provision dealers of Western Australia, the mutton of this

Photo by C. E. Farr.

DAM: CAPACITY, 1,150,000 GALLONS.

estate having made its own reputation. A small herd of Jersey cattle is kept on the farm, by which the homestead is supplied with dairy produce in abundance, but breeding of this class of stock is not engaged in on any extensive scale. The horses in use on the property are chiefly of Western Australian breed, and include all sorts and conditions suited to the varied character of the work to which they are put. Including the youngsters which are coming on, and will at no distant date relieve the old stagers of duties which are becoming too onerous for their declining years, they number about forty, and the ranks are replenished each season by a limited supply of home-bred newcomers. Mr. Parker in 1911 imported from Victoria the fine Clydesdale sire "Lord

"Jewel," by "Fearnought," by "Dreadnought." His line of ancestry also runs through "Belle," by "Gleadow), and "Beauty," by "Orwell" (imported by Dr. Wilmore). The homestead at "Dangin Park"

was originally built in the early days, and is a one-storey structure which has been added to from time to time, as the growth of the family circle necessitated. Convenience, comfort, and healthy conditions of existence have been mainly considered in the plan of the building, which contains twelve rooms and a spacious entrance hall, besides the ordinary storerooms, offices, etc., while wide verandahs have been erected on those portions of the house most exposed to the hot rays of the sun in summer time. A flower garden has been cultivated, where a large variety of plants and shrubs make pleasant relief for the eye. Roses in particular are present in profusion, and shady, climbing growths have been trained over the verandahs, while on the outskirts of the garden enclosure is found the orchard, where mulberries, figs, apples, apricots, grapes, oranges, and many other kinds of fruits may be gathered in the season. the outhouses, as might be expected

on a farm like that under notice, are up to date and extensive, the stables providing accommodation for about thirty horses, while there are also a coach-house, machine-sheds, granary, etc. The woolshed is fitted with six stands of Wolseley shearing machinery, and attached to this building is a cement sheep-dipping tank of the most approved modern design. Mr. Parker has been closely identified with the advancement of the district in every possible way, and in 1910 was created a Justice of the Peace by the Wilson Administration. He has served as a member of the Roads Board of East Beverley for some years, also being associated with the similar organization at Beverley. He is a member of the Royal Agricultural Society, and one of the executive of the Farmers' and Settlers' Association of Western Australia. Mr. Parker was married in 1889 to a daughter of the late Arthur Bailey, pastoralist, of the Pingelly district, by whom he had issue two sons, who are connected with the management of the "Dangin Park" Estate at the present time. Some time after the demise of this lady he was united to Lillian, daughter of the late John Webster Morris, one of the pioneer bank managers of the Western Australian State, who came from England with the early settlers about the year 1860, and of this marriage there are seven daughters. "Dangin Park" is connected by telephone with the local exchange at Dangin township.

**JOHN ROBINS MACKIE.** "Riversdale," near York, is a son of the late John Conyngbam Mackie, who came to this State from the north of Ireland in the early days of the Swan River settlement, records showing that he made a home on the banks of the river as far back as 1831 and within two years grew wheat in the Swan district on the flats which now form part of the property of the Hon. H. J. Saunders. In the fifties he settled in the York district, and

here the subject of our notice was born on September 12, 1863, in course of time receiving his education at the local school. His studies completed he turned his attention to the work of the home farm and continued under his father's roof until the death of the latter in 1889, when he came into possession of the property. "Riversdale" is situated about six miles distant from York on the one side and about fifteen from Northam on the other, and embraces about 2,000 acres of the hilly country surrounding Mount Bakewell. It is excellent for pasturage and yields good results in response to tillage, but on account of the character of the country is somewhat expensive to bring

C. E. Farr, Perth.  
MR. JOHN ROBINS MACKIE.

under cultivation. About 700 acres have been cleared, however, and in the vicinity of 300 acres are annually sown with wheat and hay, while 1,000 merino sheep crop the succulent grasses of the pasture land. Mr. Mackie has served as a member of the York Roads Board for seventeen years, during which time he has used his influence for the advancement of the district in every possible way. He is a member of the local agricultural society, and for many years acted on the committee of that body. The office of honorary secretary of the committee of the Tipperary

Church of England is filled by him, and he takes a prominent part in the affairs of management in that Church. His favourite recreation is found in reading, and in the winter he takes exercise in the popular game of golf. Mr. Mackie married in 1896 Ruth, daughter of the late George Jobson, of Victoria, and has four sons and one daughter.

"CUBBINE" STATION, the property owned by Messrs. Forrest Brothers, is situated in the eastern agricultural district and lies about 40 miles to the east of York and 18 miles south of Cunderdin. Originally it was a "poison" lease (*i.e.*, the land was infested with the poison-weed so deadly to stock, and the eradication of this pest was included in the terms of the leasehold) which was taken up about half a century ago, and about a decade later fell into the hands of the late Alexander Forrest, who acquired it by purchase from the first owner and occupier, since which period it has remained in possession of the Forrest family. The late Alexander Forrest, of whom mention is made in the article on "Exploration in Western Australia" in the earlier portion of this work, was a notable figure in the history of the State. Fourth son of the late William Forrest, of Bunbury, he was born at that seaport in the year 1849, and after a preliminary course of education in his native town concluded his scholastic career at the capital, subsequent to which he entered upon the profession of civil engineer and land surveyor. Joining the Civil Service, for many years he was connected with the staff of the Lands and Surveys Department, and accompanied his brother on several exploring expeditions, being second in command on the trip undertaken by Sir John Forrest to explore the country round Eucla and proceed from there to Adelaide. In the following year (1871) Mr. Alexander Forrest led an expedition without

his brother, taking charge of a party to search for new pastoral country, and reached as far as 123° 37' east longitude, some little distance beyond Hunt and Lefroy's furthest point, a few miles east of the present mining town of Kalgoorlie. He then struck south-south-east towards the coast, and returned by way of Messrs. Dempster's station at Esperance Bay. Eight years later, in 1879, he led another expedition from the De Grey River to the overland telegraph line. Leaving Anderson Inlet, the explorers proceeded to Beagle Bay and thence along the coast to the Fitzroy River, which they followed up for a distance of 240 miles. They then struck north, with the object in view of discovering a pass through the Leopold Ranges, but following the range up reached the sea before finding any place where they could cross. Following the Margaret, a tributary of the Fitzroy, they rounded the southern end of the range, and reaching the tableland beyond discovered a wide tract of splendid country. On July 24 they arrived at the Ord and, leaving this, continued their journey to reach the

country were discovered, and reported a good site for a township at Beagle Bay, where the land was excellently adapted for settlement, also

the old Legislative Council as the representative of Kimberley, after 1890 representing that district in the Assembly without a break until the

suitable runs for sheep, horses, and cattle on the Fitzroy from 10 to 30 miles back from the river. During the next few years enormous areas of country were taken up in the Kimberley district, distinct impetus was given to settlement, and from this exploration the ensuing general advancement of the district may be

time of his death, being elected first Whip to his party—the supporters of his brother's Ministry—which office he held up to the time of the resignation of the Throssell Administration. Mr. Forrest acted as one of the delegates from Western Australia to the Australasian Federal Conference in 1891. He entered

"CUBBINE" HOMESTEAD AND OUTBUILDINGS.

in the city were brought about which had been inaugurated by him during his previous occupation. He married in 1880 Amy, daughter of the late E. Barrett-Lennard, of "Annandale," Beverley, a well-known settler of Western Australia, and besides a daughter, Sylvia, had four sons, one of whom, Lieutenant A. A. Forrest, was killed in action in South Africa in May, 1901. Mr. Forrest received his decoration of C.M.G. in connection with the visit of the Duke and

of undulating country which, in its virgin state, was timbered with York-gum, jam, salmon, manna, and white-gum. It is fairly plentifully endowed with growth of natural grasses, including silver-grass, dandelion, and trefoil, besides numerous varieties of herbage. The rainfall of the district averages 15 inches, and the estate is excellently watered by about twelve wells and three dams, good stock water being procurable almost anywhere on the property.

timber, form the dividing fences. The estate has been subdivided into twenty paddocks of convenient size for cultivation and the handling of the stock, and about 6,000 acres have been cleared, of which approximately a third has been brought under tillage. Cereals and hay are the principal crops produced, the average return of wheat being 20 bushels to the acre, while hay yields an average of two tons to the acre. Only a few dairy cattle are kept for domestic

SEED DRILLS AND ROLLERS.

Duchess of Cornwall and York, their present Majesties the King and Queen of England, to Western Australia, in 1901. "Cubbine" Station,

Windmills have been erected at the various wells, which are also supplied with up-to-date iron troughs. Over 60 miles of fencing

purposes, sheep forming the principal department on the pastoral side of the operations at "Cubbine," the flock consisting of a merino and

Lincoln cross, verging closely on the fine merino type, the aim being to produce a general-utility sheep, profitable both for wool and mutton. About 5,000 sheep are run on the pastures, the annual percentage of lambing running up to 90, and the country being well adapted for wool-growing a very clean type of wool is produced, the average weight of fleece being 7 lb. The annual clip is shipped to London, where good prices are obtained. The property is well provided with stockyards, which have been erected in convenient localities in the different paddocks, and near the homestead are stables, built of wood and iron and most up-to-date in character, providing accommodation for thirty horses. The outhouses generally are of a most extensive and elaborate description, taking a premier position among similar structures in the eastern district, the woolsheds, grainsheds, etc., being exceptionally fine. The horses, bred by Messrs. Forrest Brothers, consist of Clydesdales of good type, which are kept exclusively for the work of the property, and usually number in the vicinity of

modern design and contains twelve rooms, the whole being lofty, well lighted, and ventilated. Decorative work in the direction of planting shrubs and trees round the house is

Alexander Forrest, was born at Perth, on September 22, 1882, and received his education at the Perth High School. Upon the conclusion of his studies he took up his residence

from forty-five to fifty. The "Cubbine" homestead, erected in 1910 to the design and under the supervision of Mr. E. Summerhayes, the well-known architect of Perth, is of

agricultural interests Messrs. Forrest Brothers also carry on a land, stock, and station agency business in Perth. KIMBERLEY FITZROY FORREST, eldest son of the late

at "Cubbine," and as resident manager has continued to supervise its operations ever since, with a break of five years, during which he visited England and spent some time in the north-west of this State and in New South Wales. In 1909 he was married to Flora, eldest daughter of Mr. George Forrest, of Pieton Junction. JOHN FORREST, manager of the business of Messrs. Forrest Brothers in Perth, was born on January 27, 1887, and attended St. Peter's College, Adelaide, prior to proceeding to Oxford, where he was attached to Magdalen College. In 1910 he married Elsie, third daughter of Mr. E. Warmington, of Wallaroo, South Australia, and has one son. The youngest brother, WILLIAM GRANT FORREST, was born on January 1, 1890, and was educated at St. Peter's College, Adelaide, and Magdalen College, Oxford. Returning to Western Australia he settled at "Melville Park," Brunswick, in the south-west of the State, which property he purchased in 1912 and has since managed on his own account.

## NORTHAM.

Northam, the sister town to York, having been surveyed as a town site about the same time, is situated on the Avon and Mortlock Rivers, some 66 miles from the capital city. Good roads connect it with York, about 22 miles distant, and with Toodyay, about 18 miles away towards the north-west. Surrounded by excellent arable land, devoted principally to the growth of cereals and fodder crops and the raising of stock, it is the natural depôt for most of the produce sent to the eastern goldfields. Like most towns in the West, it slumbered quietly along until the gold discoveries galvanized it into action. Being the nearest settled town to the Yilgarn goldfields, and also the terminal point of the eastern railway at that time, it quickly became a busy centre. The extension of the railway to the newly discovered Southern Cross field

comprise, in addition to the large railway station, a commodious courthouse, a well-appointed hospital, post office, mechanics' institute and library, and several halls. All the associated banks have branches in the town, and the leading denominations are represented by handsome churches. It is admirably lighted by electricity, derived from an up-to-date plant controlled by the municipality, and derives its water from the goldfields scheme, a permanent storage of 250,000 gallons being provided for. The building of a weir across the Avon, erected, with subsidiary works, at a cost of £10,000, conserves a fine ornamental sheet of water. The town has telephone conveniences, and postal communication thrice daily with Perth. Industrial operations are confined chiefly to flour milling, bacon curing, and the manufacture and repair

Photo by C. M. Nixon.

VIEW OF NORTHAM FROM "LEAKE" ESTATE.

increased its importance, and when Coolgardie, Kalgoorlie, and fields further east were discovered and the railway continued to meet the needs of these immensely wealthy areas, Northam became a centre of great commercial importance. The discovery at a later date that the land eastwards and northwards for hundreds of square miles possessed high potential value from an agricultural standpoint also helped to make Northam one of the chief towns in Western Australia.

Possessed of a population quick to realize the value of the town's position as the centre of trade and industry of the eastern districts, it is now a thriving and prosperous municipality of modern appearance, with good roads and every convenience for the comforts of its citizens. It boasts one of the finest town halls in the State, built and furnished with theatre-room and stage at a cost of nearly £5,000. The other public buildings

of agricultural implements and machinery. Recreation is well provided for by an excellent racecourse controlled by the Northam Race Club, a well-established bowling green, and conveniences for all other outdoor sports. Over the whole town there is an air of stability and comfort, to which the large number of handsome private residences contributes not a little. As befits a town of such importance, Northam possesses two newspapers—*The Northam Advertiser* and *The Northam Courier*—each published twice weekly. The leading paper is controlled by the Hon. H. P. Colebatch, who represents the district in the Legislative Council. Mr. Oscar L. Bernard is mayor of the town, and there is every evidence that the mantle of authority in Northam, so long and worthily worn by the late Hon. George Throssell, has passed to its present chief citizen.

OSCAR L. BERNARD, Mayor of Northam, is a native of Russia and a member of a very old Jewish family famous for the scholars it has produced. As a mere youth, leaving the land of his birth in connection with a great national movement, he enjoyed the advantage of visiting many parts of the world and of meeting men of European renown during the course of his travels. In 1888 he landed in Melbourne and subsequently arrived in Western Australia some three years later, just at the time that the new constitution was proclaimed. Settling soon afterwards in Northam he formed a high opinion of the possibilities of the place as an agricultural centre and decided to throw in his own lot in the district. Starting in a small way of business, the continual rise in the value of town lands gave him his start, and having formed a friendship with the late Hon. G. Throssell he acted on the advice of that gentleman and invested largely in property at the eastern end of the town, where settlement had hardly begun. About 1894 he became a member of the firm of Messrs. Richard Honey & Co., of the Lion Timber Mills, and upon the death of the founder the management devolved upon Mr. Bernard, who was very successful in straightening out the finances, which proved an onerous task. The rapid development of the goldfields caused a strong demand for jarrah timber at enhanced prices, which soon placed the firm of R. Honey & Co. in the front rank of timber enterprises. Whilst carrying on his business in the Darling Ranges Mr. Bernard continued his efforts to build up East Northam, his expenditure at one time in this direction amounting to some £10,000; the incentive this gave to others and the effect it had in influencing the Government to provide railway facilities at the eastern point have combined to make this one of the three important wards of the town. About the year 1900 the forest round the timber mills having been considerably thinned out, Mr. Bernard decided to relinquish the industry, and the firm of R. Honey & Co. went into liquidation. For some twelve months Mr. Bernard then turned his attention to mining at Coolgardie in conjunction with the late Mr. Charles Crossland, but being, as he himself terms it, fortunately unsuccessful he left the fields and opened in business at Northam as timber and produce

merchant. Having resided for some twenty years in a farming district, and by this enterprise being brought into close touch with producers and their products, after narrowly watching the industry, he decided to embark upon it, should opportunity offer. This eventuated when the famous "Seabrook" Estate was cut up by the late Hon. George Throssell and placed on the market, when Mr. Bernard secured about 1,200 acres of land, including the noted Booramunn Valley, and thereafter disposed of his business and gradually parted with his town holdings in order to carry on the development of the land, in which he has succeeded to a marked degree, the farm "Booramunn" being entirely cleared and highly improved at the present

C. M. Nixon. Northam.  
MR. OSCAR L. BERNARD.

time. Mr. Bernard was instrumental in inducing the Government to extend the goldfields water supply to the farming properties of the Avon Valley and "Seabrook" on suitable terms, and this having been accomplished after considerable effort on his part, he turned his attention to obtaining telephonic communication between Northam and the farms above referred to. After two years this system was inaugurated, and Mr. Bernard affirms that to the best of his knowledge the Northam-Grass Valley telephonic service was the first purely rural system of its kind in the State, and possibly in the Commonwealth. Having met with success in his personal operations Mr. Bernard some five years ago induced the residents of Northam

to experiment in a co-operative farming scheme which was known at the time as the Bernard Land Scheme. His suggestion was that some 100 members should take up land at Wongan Hills (at that time a *terra incognita* some 30 or 40 miles from a railway) and work their holdings on a system of co-operation; but unexpected expense and delay in securing possession of the land damped the enthusiasm of most, and a few only proceeded with the matter. The scheme, however, served a useful purpose in drawing attention to the Wongan Hills district, where development is now proceeding apace, among the landholders being Mr. Bernard, who has 500 acres now ready for seeding. At about the same period Mr. Bernard accepted the mayoralty of Northam, which office he filled for four terms (1904 to 1909), these periods being very fruitful in respect to the important works brought to a successful issue. The excellent water supply, electric light and power system, and the reorganized sanitary system which has made the town of Northam one of the healthiest in the Commonwealth, together with the conversion of the Avon River from a few mud holes into a handsome lake where swimming and boating may be freely indulged in, are all evidences of the special efforts put forth by the council, at the instigation of their head, to obtain with some assistance from the Government what have already proved immense benefits to the place. A vacancy occurring in the mayoral chair at the end of 1912 Mr. Bernard yielded to the wish of the ratepayers and again took office. He is at present engaged on a comprehensive scheme of improvement in connection with the Avon River, his idea being to operate on the entire Valley of the Avon from its source at Wickopin to its outlet on the Swan River, and by a series of dams and locks to conserve the whole of the winter rains and form a permanent waterway over 100 miles in length connecting the agricultural districts with the city and the coast. He has secured a considerable volume of reliable engineering opinion, which is entirely favourable to the undertaking, and its commercial side is receiving careful consideration, particularly the extent to which the quality of the water may be relied upon for irrigation purposes. Mr. Bernard has succeeded in enlisting the support of the neighbouring communities of the Avon Valley to his

project, and he is now making preparations for a conference of leading men in the eastern districts to be held at Northam, with a view to setting on foot this great scheme. He married in 1897 Edith Esther, daughter of the late M. Frankenburg, of Adelaide, and niece of Rabbi Dr. Abrahams, of Melbourne, and of Dr. Israel Abrahams, Lecturer, of Cantab., England. By this union there are four daughters and one son.

The late Honourable GEORGE THROSSSELL was born at Fermoy, County Cork, Ireland, on May 23, 1840, and when ten years of age came to Western Australia with his father, the late George Michael Throssell, who was appointed to a police inspectorship in Perth. He received his education at a public school in the capital, and at the termination of his studies became connected with commercial life with the firm of Messrs. Padbury & Fermanar (afterwards Padbury, Loton, and Co.), merchants, of St. George's Terrace, Perth. Upon attaining his majority he commenced business on his own account at Northam, and in the face of initial difficulties built up the flourishing firm now merged into Throssell, Son, & Stewart, under which title it is still carried on, being one of the largest concerns of its kind outside the metropolitan area. From an early period he displayed a vigorous interest in public affairs, and upon offering himself as a candidate for municipal honours was duly elected, and for nine years filled the mayoral chair, being only out of office long enough to fulfil the provisions of the local Government Act. During this period Governor Broome signed the declaration promoting Northam to the dignity of a town and the corporation to a higher place in civic rank. In 1890, upon the introduction of responsible government in Western Australia, Mr. Throssell was returned, unopposed, as member for Northam in the Legislative Assembly, and held this seat for many years. In March, 1897, upon the retirement of Mr. A. R. Richardson, he accepted the portfolio of Commissioner of Crown Lands at the hands of the then Premier, Sir John Forrest; and when the resignation of the latter legislator occurred in February, 1901, Mr. Throssell succeeded to his office, thus becoming the second Premier of the State. This Government held office for only a little over two

months, resigning in May, 1901. The chief influence exerted by Mr. Throssell as a politician was in the direction of land settlement, and he was a popular and forceful advocate of the interests of the farmer. The passing of the Homesteads Act, under which a free farm of 160 acres was given to every *bona-fide* settler, and the establishment of the Agricultural Bank were brought about during his Parliamentary career, and were due in a large degree to the fostering care bestowed upon these measures by the gentleman under review and his colleague, Sir John Forrest. Mr. Throssell was also responsible for the first Land Purchase Bill and the Land Drainage Bill, and in respect to his constituency fought its cause in the

Bartlett,

Perth.

HON. GEORGE THROSSSELL.

matter of railway interests successfully, being instrumental in securing the route of the Yilgarn line by way of Northam instead of York, where the residents were striving to enforce their claim to preference. He also strenuously urged the claims of his district to a branch line from Northam, through Jennapullen to Goomalling, which became an accomplished fact in due course. The important subject of water conservation for irrigation purposes and mining requirements also received considerable attention from Mr. Throssell, who, in addition to his public advocacy of land development, had a hand in various private schemes for opening up the fertile Avon Valley and other places for

the production of cereals and hay. He was personally interested in several properties in different parts of the State, owning "Oakover" and "Bulong," with other farming stations, and holding interests in pastoral runs in the north-west. Mr. Throssell was the founder of the Northam Mechanics' Institute, in the advancement of which, as in all matters affecting the welfare of his constituents, he took a lively concern. Termed the "lion of Northam," the paternal regard he ever displayed towards the town and district where he spent the greater part of his life and which honoured him with its confidence as their representative in Parliament won for him also the affectionate titles of "father" and "patriarch." He was president of the athletic clubs, and held membership in various public and social organizations. Mr. Throssell was gazetted Honourable in 1901. He married on June 6, 1861, Annie, daughter of Mr. Richard Morrell, one of the earliest settlers in the Northam district, of which union there were twelve children.

WILLIAM DYER COWAN, Resident Magistrate for the Northam and York magisterial districts, was born at York, Western Australia, on June 9, 1854, and is a son of the late

MR. WALKINSHAW COWAN.

Walkinshaw Cowan, an early pioneer who came to this State in 1839 as private secretary to Governor Hutt. At the close of his education, which he received by private tuition and at

the Government school in Perth, Mr. W. D. Cowan entered the Public Service as Clerk of Courts to his father, who then occupied the post of resident magistrate at York. After filling this position for seven years, he was promoted to be treasurer and clerk of courts at Geraldton, remaining there for nine years, at the end of which period he was appointed resident magistrate at Newcastle, now Toodyay. Further promotion was accorded him to the Bunbury district, where he acted as relieving officer to Mr. R. Fairbairn, R.M., for about three years; and in 1889 he received appointment to the post of Government Resident at Wyndham. Three years later he was again transferred, this time to the more important centre of Roebourne, where he continued until 1896, in which year he was appointed resident magistrate at Northam. Subsequently the magisterial districts of Northam and York were merged into one, and Mr. Cowan has since discharged the duties of the combined offices. Mr. Cowan has taken great interest in the military movement in Western Australia, and received his commission of captain, with which rank he retired. He has long been associated with Freemasonry, his mother lodge being at Geraldton, and has filled many offices in the craft, in which he

*C. M. Nixon.* *Northam.*  
MR. WILLIAM DYER COWAN.

is now a Past Master. He married in 1896 Margaret, daughter of the late James Cable, of Wyndham, in the north-west, and has three sons and four daughters.

Councillor JOSEPH THOMAS MILNER, of the firm of Messrs. J. T. Milner & Co., family and wholesale butchers, of Northam, is a son of the late James Milner, grazier, a pioneer of Quirindi, New South Wales, in which district the gentleman under review was born on May 3, 1881. He received his education at the High School, West Maitland, in the same State, and at the conclusion of his studies obtained a valuable experience in all branches of the pastoral industry on the large sheep and cattle station, "Bullarora," New South Wales. At a later date, when volunteers were called for to form the "Bushmen's Contingent" for service in the Boer War, he responded to the demand of his country and held the distinction

*C. M. Nixon.* *Northam.*  
MR. JOSEPH THOMAS MILNER.

of being the youngest non-commissioned officer who left New South Wales for South Africa. He served in various engagements, receiving the Queen's Medal and Five Clasp, and was promoted through the non-commissioned ranks to regimental quartermaster-sergeant, with which rank he returned to Australia. After a few months' rest on his native soil he again sailed for South Africa, where he entered the Government service as record clerk in the Transvaal Prisons Department at Johannesburg and held this post for over three years. In 1904 he once more sought the scenes of his youth, but after a short sojourn in the Eastern State came to Western Australia and entered upon the butchering trade in the Murchison district. In 1907,

having been impressed with the solidarity of the Northam district, he decided to settle in this town, and has carried on successfully ever since, the firm of J. T. Milner & Co. being very favourably known throughout a wide area. Almost from his first advent to the town Mr. Milner has interested himself in public affairs, and having given some attention to municipal government, in 1908 was returned by the ratepayers of West Ward to represent their interests in the local council, which seat he has held ever since. For a considerable time he acted as chairman of the finance committee, and is now a member of the health and works committees. He is also prominent in all matters connected with the advancement of the town, being identified with the various progressive bodies and sporting clubs, and is a member of the Masonic craft. He holds rank as lieutenant in the Senior Cadets, and is O.C. of the local company. Mr. Milner married in 1910 May, daughter of Mr. Donald MacKenzie, of Northam, and has one daughter.

Councillor JAMES BYFIELD, J.P., representing Central Ward in the municipality of Northam, was born at Mahogany Creek, near Guildford, on April 22, 1849. His father, the late Edward Harold Byfield, was one of Western Australia's early pioneers, and his mother also arrived in the State at a very early period of its history, having accompanied the wife of the first Governor (Sir James Stirling) as children's nurse. Under the primitive conditions of the fifties educational facilities were difficult to obtain, and the gentleman under review, with the help of a little private tuition, was largely dependent on his own efforts in the direction of scholastic attainments. At fifteen years of age he was apprenticed to the wheelwright and machinist trade, under the late Solomon Cook, a name well known to early residents of the State; and on reaching man's estate, came to Northam, where his father had purchased for him, in 1850, the second block of land sold in the district, where he is now the oldest landholder, the property, which in the original instance cost three guineas, recently having been valued at over £2,000. On arriving in Northam he established himself in his trade, and was the manufacturer of the first buggy and most of the original

agricultural machinery in the district. He has also been responsible for the erection of nearly half the buildings in Northam, and has assisted many householders to build their own homes on the building society principle. During the sixteen years that he carried on business Mr. Byfield managed, in conjunction with his trade, what was then the largest flour mill in the State, which, built by the late Mr. T. Wilding, he purchased from Mr. Gregory. About 1888 he imported from America the first complete roller plant ever brought to Western Australia. As a result of the installation of this plant the wheat in the district rose in value by 20 per cent., and a fillip was given to local production. The flour produced at the mill gained a

*C. M. Nixon.* Northam.  
MR. JAMES BYFIELD.

special prize at the Coolgardie Exhibition (1899) in competition with all the Australian States, and won further distinction at the French Exhibition (1900) and Glasgow Exhibition (1901). Mr. Byfield was made the recipient of a handsome illustrated address by the agriculturists of the district, in recognition of his single-handed and spirited action in redeeming the State from the unprogressive condition in which, from an agricultural and milling standpoint, it had lain for so long a period. At the present time Mr. Byfield gives his attention chiefly to his landed interests in Northam, and to the management of his farm of 800 acres which adjoins the town site. He crops a third of this area per annum,

and during the present season (1912) averaged over 30 bushels of wheat to the acre, while he also has a nice orchard surrounding his pretty villa, where a variety of stone fruits and vines flourish, together with a few vegetables. Upon the creation of the Northam municipality about 1878 Mr. Byfield was elected second on the poll, and has sustained the distinction, unrivalled in the State, of holding this seat ever since; he has also filled the office of mayor for a term. Since 1899 he has exercised a Commission of the Peace granted him by the Forrester Administration. He has been a moving spirit in the Rechabite movement for forty years, and has filled all offices of honour in that body, in addition to the trusteeship which he has held ever since the founding of the first lodge in Northam. He is well known in religious and charitable circles, and takes a prominent part in the Wesleyan Church, of which he is a trustee. Mr. Byfield married in 1872 Elizabeth, daughter of the late W. Forward, of Salt River, Northam, and has surviving one son and two daughters, another son having been accidentally shot in 1910 while getting through a fence with a loaded gun.

Councillor NEIL KENNEDY, general merchant, Northam, was born in the Parish of Sleat, Inverness-shire, Scotland, and is a son of the late Donald Kennedy, a boat-builder of that place. He pursued his educational studies in his native town, and upon leaving school became apprenticed to the general storekeeping business at Fort William, where he spent three years before subsequently removing to Glasgow. With the intention of entering the ministry of the Church he studied at the University of Glasgow, but after a time, from conscientious reasons, resigned and became connected with the staff of a wholesale warehouse, where he gained valuable experience in various branches of the trade, which served him in good stead upon his proceeding to Victoria to identify himself with the wholesale trade in the famous Flinders Lane. Five years later, when the Western State was just coming into prominence on account of the mining boom, he left for those shores, and shortly after arrival joined his brother in opening the business of Kennedy Brothers

at Menzies, with a branch at Kookynie, which is still being carried on by the last-mentioned gentleman. In 1908 he came to Northam and purchased the business he now conducts from Messrs. Dyer and Hollett, which he has since continued as a thoroughly successful and paying proposition, worthy to be regarded as one of the leading concerns of its kind outside the metropolitan area. Soon after taking up his residence in the town he began to display an interest in public affairs, and in due course was elected by the ratepayers of Central Ward to a seat in the municipal council, which he still holds. He is a member of the local agricultural society, and for over a decade has been connected with the Masonic

*C. M. Nixon.* Northam.  
MR. NEIL KENNEDY.

craft, in which he has held office as Substitute District Grand Master, S.C. He is fond of reading, and gives his attention chiefly to authors dealing with matters of historical and scientific interest. In 1910 Mr. Kennedy married Beatrice Elizabeth, daughter of Mr. Hugh Bennett, agriculturist, of Cowcowing, and has one son and one daughter.

RICHARD HOOPER DUENCE, Town Clerk of Northam, was born at Callington, Cornwall, England, on February 27, 1869, and is a son of Mr. William Duence, builder and contractor, of Sydney, New South Wales. He was educated primarily in the north of England, completing

his studies in South Australia at Prince Alfred College and the University of Adelaide. Entering upon the profession of a teacher, Mr. Duence received his first appointment at Camden Grammar School, in New South Wales, and subsequently held positions in the Newcastle Grammar School and in the Geelong Grammar School, Victoria. He relinquished teaching in order to accept a post in the office of Messrs. Chaffey Brothers, of Mildura, where he remained for over six years, in 1896 disposing of his interests in the latter place and coming to Western Australia, where he took charge of the counting-house of Messrs. Bickford & Sons, wholesale druggists, of Perth. At the termination of four years he resigned from this service and established himself in

C. M. Nixon, Northam.  
MR. RICHARD HOOPER DUENCE.

business on his own account as hay and corn merchant at Victoria Park. He afterwards retired from this concern and devoted his attention to various investments for about three years, early in 1906 accepting a municipal post at Northam. Two years later he was appointed acting town clerk, and less than twelve months subsequently received the permanent appointment, which he has since retained. Mr. Duence is a member and Past Master of the Masonic craft, of which he has been an adherent for over a decade. He gives ready support to the charitable movements of the neighbourhood, and frequently acts in the capacity of honorary secretary to such organizations. Being a vocalist of some merit, he makes a hobby of

music, and promotes this art both publicly and privately in every possible way. He married in 1904 Leila, daughter of Mr. James Hartley, of Woollahra, Sydney, New South Wales, and has one daughter.

"THE NORTHAM ADVERTISER," the leading provincial newspaper in Western Australia, is now in its twentieth year, having been established in 1893. Its founder, Mr. J. T. Reilly, is one of the most interesting figures in Australian journalism. His "Fifty Years' Reminiscences of Western Australia," published about ten years ago, is a work of great value. Until eight years ago he retained the editorship and management of *The Northam Advertiser*, and now, well past the allotted three score years and ten, is enjoying a well-deserved rest. His successor, the Hon. H. P. Colebatch, took charge of the paper in June, 1905, and is still managing editor. He is a member of the Legislative Council, and a brief sketch of his career appears in the portion of this work devoted to Parliament. Before entering the Legislature, however, Mr. Colebatch was a very active public man. For three years he occupied the position of Mayor of Northam, and for some time represented

Bartletta, Perth.  
HON. H. P. COLEBATCH, M.L.C.

the Government on the Western Australian Fire Brigades' Board, as well as occupying a seat on the Licensing Bench. He has been a member of the District Board of Education for many years, and is either president,

vice-president, or committeeman of practically every local public institution. His pastimes are bowls and chess. He was at one time president of the Perth Bowling Club, and was the founder and has been for seven years president of the Northam Bowling Club. He won the chess championship of the State in 1898, and the championship of Perth again in 1901.

PEARSON LYON, B.A. (Syd. Univ.), barrister and solicitor, Northam, was born at Melbourne, Victoria, on March 23, 1869, and is a son of Mr. John Lamb Lyon, a well-known artist and designer, of Sydney, New South Wales. He attended the Sydney Grammar School

C. M. Nixon, Northam.  
MR. PEARSON LYON.

before entering the University of Sydney, where he obtained his B.A. degree from St. Andrew's College in 1890. Subsequently he was articled to Mr. Gilbert Murdock, solicitor, for three years, and at the end of that period opened in practice in Sydney, where he continued until the end of 1896. Mr. Lyon left for Western Australia in the last-mentioned year, and having qualified for practice by residence in this State for six months, purchased the connection of Mr. A. S. Roe at Roebourne. Finding the health of his family suffering on account of the climate, Mr. Lyon left that district towards the end of 1900, and, some time afterwards, joined the late F. A. Meeres in practice at Northam, which

partnership was afterwards dissolved in 1905, since which date he has been conducting a large practice on his own behalf, having been appointed notary public by the Supreme Court of Western Australia in September, 1903. Mr. Lyon is solicitor to the Northam Municipal Council. He is the most prominent Freemason in the district, being Third Grand Principal of the Supreme Grand Royal Arch Chapter of Western Australia, and Junior Grand Deacon of the Grand Lodge of Western Australia; while he also represents the Royal Arch Chapter of Kansas in this State. In 1899 Mr. Lyon married Jeanie Dunlop, daughter of the late Hugh McMaster, in his time one of New South Wales' foremost building contractors, and has three sons and two daughters.

ARTHUR AUGUSTUS MEERES, barrister and solicitor, Northam, was born at Ceylon on

C. M. Nixon. Northam.  
MR. ARTHUR AUGUSTUS MEERES.

May 1, 1874, being a son of the late Frederick Augustus Meeres, an English solicitor who practised for a considerable time in that island and in England, prior to his arrival in Northam, Western Australia, where he resided for a number of years. The gentleman under review was educated at Uckfield Grammar School, Sussex, England, and upon the completion of his studies came to Western Australia, where he followed a variety of pursuits before entering his father's office to serve his articles to

the legal profession. He was admitted to the Bar of Western Australia in 1904, and shortly afterwards, upon the severing of the connection between the late Mr. Meeres and Mr. P. Lyon, he entered into partnership with his father, with whom he was associated until the demise of that gentleman in 1907. Since that date Mr. Meeres has conducted the practice on his own behalf. In addition to his professional interests, he has a stake in the agricultural industry, being interested in a farming property in the Avon Valley. He is solicitor to the roads board of Northam and to the Northam Building Society, as well as to other local bodies, and takes his share of the public work of the town, being a councillor of East Ward in the municipality of Northam. He is a member of the Northam Club, and is a Freemason, being connected with Lodge Avon, W.A.C.; while in the world of sport he has acted as honorary secretary of the local bowling club—of which he was one of the founders—since its inception, and is a worthy disciple of Isaak Walton, besides being a general advocate of all clean outdoor sport. In 1901 Mr. Meeres married Ellen Barbara, youngest daughter of Mr. N. N. Blackmore, dental surgeon, of Adelaide and Perth, and has three daughters.

GUSTAVE THOMAS DONOVAN, L.D.S. (Vic.), B.D.S. (Melb.), D.D.S. (North-western Univ., Chicago), is a native of Melbourne, in which city he was born on January 12, 1887. He received his primary education at St. Patrick's College, Ballarat, continuing his studies at the University of Melbourne. Having qualified for the dental profession he practised for a short time in his native State prior to proceeding to Chicago, where he spent over a year at the North-western University, taking his degree of D.D.S. from this institution in June, 1910. Continuing his travels to Europe he attended clinical lectures and demonstrations at the various Continental centres, and returned to Australia early in the following year. Dr. Donovan, having decided to settle in the Western State, established himself in practice at Northam, and during the short time that has elapsed since his arrival has built up a satisfactory connexion. He keeps himself well up

to date in scientific matters, and those relating especially to his profession, by the perusal of the latest works of those writers most capable of handling the important subjects with which they are dealing; he also gives a portion of his leisure to historical literature, which he considers a valuable study. His chief recreation is found on the tennis court, but at college he was prominent in cricket and football, playing senior football in Melbourne for a couple

C. M. Nixon. Northam.  
MR. GUSTAVE THOMAS DONOVAN.

of years. In 1912 Dr. Donovan married Amy, daughter of Mr. Lee, of Perth, Western Australia.

DAVID THOMAS MORRELL, J.P., Northam, owner of "Karrawalla" Farm, Jennapullen, was born at the former place on November 1, 1851, and is a son of the late Frederick Morrell, his grandfather being the late John Morrell, the founder of Northam, where he died in 1843. By trade a builder Mr. John Morrell was employed to erect the first Government House in Perth, but almost from the advent of the family in Western Australia they have been connected with the agricultural and pastoral industry, the above-mentioned pioneer being the original settler to turn a sod for tillage in the Northam district. The subject of our memoir received his education in the town of his birth, and subsequently assisted his father on the farm, since which period he has maintained a consistent connexion with the farming and grazing

industries. He holds about 1,700 acres of freehold land at Jenna-pullen, with nearly 4,000 acres of grazing area, and has some 1,000 acres under cultivation annually. A small flock of sheep and some cattle and pigs comprise the pastoral side of his industry, and mixed-farming pursuits are carried on with satisfactory results. Since attaining to manhood Mr. Morrell has been connected with the public life of the district, serving over seventeen years on the Northam Roads Board, of which body he was chairman for the last eight years of his term of service. To him must be accorded more than to any other settler, or indeed any other local public man, the credit of opening up the agricultural areas towards and beyond Goomalling. He was the founder and president of the

*C. M. Nixon, Northam.*  
MR. DAVID THOMAS MORRELL.

league formed to agitate for the construction of the Goomalling railway, which held meetings of public protest against the backward policy of the political party then in power, and in course of time, mainly through Mr. Morrell's perseverance, the line of railway was granted which opened up one of the richest agricultural districts in the State. An active member of the local agricultural society, Mr. Morrell has held office as vice-president and committeeman for several years; and by virtue of his membership in the Farmers and Settlers' Association in the district he acted as local delegate to the historical conference of these bodies held in Perth in 1913, where his utterances in debate always

commanded the respectful attention of his fellow delegates. For four years, from 1906 onward, he held the position of inspector for the Agricultural Bank. His Commission of the Peace was granted by the Forrest Administration in pre-Federal days. Mr. Morrell is an ardent member of the Anglican Church, and has held office for twenty-four years as vestryman and for nearly a decade as warden. His father before him was recognized as the leading Anglican churchman in Northam, having been one of five who built the first church edifice there in 1851. On two occasions Mr. Morrell has offered himself as a candidate for the Legislative Council, but failed to secure election. He was married in 1874 to Julia Emma, third daughter of the late William Chidlow, whose name is well remembered among the records of the hardy pioneers who have assisted in building up the prosperity of the State, and has four sons and four daughters.

**JOHN HENRY GREGORY.** J.P., Northam, was born at Isle of Wight, England, on October 11, 1826, and when only two years of age was brought to Western Australia by his parents in the sailing vessel "Warrior," under command of Captain Stone, the voyage occupying about six months. Landing at South Beach, Fremantle, on March 12, 1830, the Gregorys pitched the tents there which formed for a while their dwelling-place, but subsequently left the coast (where food supplies often ran very short) to reside at Pineapple Bay, on the Swan River between Perth and Guildford. In 1836 young Gregory was sent to Mr. Spencer's school—the first educational institution established in Perth, and afterwards amalgamated with the school founded by the Rev. J. B. Wittenoom—and in course of time was apprenticed to the wheelwright and blacksmithing trade at Guildford. He was engaged on the construction of the pioneer flour mill and timber mill at Guildford, owned by Mr. Walkinshaw Cowan, R.M., and assisted in the erection of the engines and plant in the mill, which supplied some of its first cutting of timber from Greenmount, in the Darling Ranges, for the Anglican Church—now St. George's Cathedral. In those days a road mail used to leave Guildford for the eastern districts, taking some days on

the journey to York, Toodyay, and back to Perth, and Mr. Gregory upon occasion undertook the duty of mailman. Upon these trips he camped at the halfway house on the old York Road, and here enjoyed the distinction of spending an evening in the company of the murderer of Gordon, the basketmaker (which tragedy had taken place near the Causeway), who was afterwards arrested at Seabrook for the crime. It was in 1841 that he made his

*C. M. Nixon, Northam.*  
MR. JOHN HENRY GREGORY.

first journey across the ranges on the track which was blazed in 1833 by Lieutenant Dale, his mission being to convey, by means of a team and waggon, materials for the erection of Grindle's Hotel, the second public-house opened in York. In the following year he commenced work on Mr. Hewson's farm, in the Toodyay district, where he obtained a valuable knowledge of agriculture. Seven years later he left this district and took up a holding seven miles on the Northam side of York, remaining there until 1856, when he transferred to Thompson's Head, a then un-cleared grant in the Northam district. Whilst working this land he also found time to improve an adjoining grant, now held by the Dempster family and known as "Corra Lynn," which he gradually extended to 2,000 acres fee simple and 2,000 acres leasehold, in 1887 vacating the older place in order to devote his whole time to this newer property, situated at Burlong Pool. Here he continued until 1892, when, at the

age of sixty-six, he joined the Government service and filled a position as a State forest ranger on the great southern line until 1909, when he voluntarily retired on a pension. In 1865 Mr. Gregory became associated with the Good Templar movement and was prominent in the work of that body, the extension of which he has continued to promote. He was one of the founders of the Temperance Hotel erected in Northam by the I.O.G.T. in the seventies, and was present at the foundation of the York Lodge in 1870, and of the Newcastle Lodge in 1873. He has the whole history of the district at his finger-ends, and many interesting hours may be spent in listening to his tales of the early days. Mr. Gregory is a Justice of the Peace, having been gazetted by the Forrest Administration in 1894. He was married in 1851 to a daughter of the late J. Massingham, of Kent, England, and has four sons and four daughters. On January 19, 1911, Mr. and Mrs. Gregory celebrated their diamond wedding anniversary, a large gathering assembling in the Northam Town Hall to do honour to the occasion.

**WILLIAM FORWARD**, Northam, was born at Mount Hardy, near York, on January 24, 1847, and is a son of the late William Forward, who came from Kent, England, in 1830, and settled down to grazing and farming pursuits in the York districts, coming to Northam during the early days of its settlement and opening the first hotel in the neighbourhood in the early sixties. After conducting this business for some years the late Mr. Forward resumed farming occupations in the Seabrook district, where he died at the ripe age of ninety-two. The gentleman under review acquired the rudiments of learning at a night school carried on by the late Mr. Lloyd, also studying for a time under private tuition with the children of the late Frederick Morrell. At an early age he was apprenticed to the blacksmithing trade at Northam with the late Edward Wilding, and after completing his indentures opened in business for himself as wheelwright and blacksmith. For a quarter of a century Mr. Forward conducted the smithy and extensive general trade which was the nucleus of the large establishment and connection now managed so successfully by Messrs.

Withnell Brothers, of Northam. About the end of this period he turned his attention to farming pursuits and commenced in turn the development of three separate farms, which he afterwards passed on to his sons, himself retiring from active life and settling down quietly in his home at Northam where he still resides. In the early years of the history of the town as a municipality Mr. Forward played his part in the arena of local government, serving the ratepayers for some time as a member of the Council. He is a member of the agricultural society, and is looked upon as one of the pioneer settlers who in the early days of the land movement in the district bore the burden and heat of the day and shared the privations incident to the building up of the farming industry and the making of the place the prosperous provincial centre that it is to-day. He finds recreation in the society of old friends, with whom he lives over the days of the past, and in making frequent visits to the properties upon which his sons are settled. Mr. Forward married in July, 1873, Emily, daughter of the late Richard Morrell, also an early pioneer of the State, and has three sons and three daughters surviving.

**HENRY JOHN LEEDER**, Northam, is a native of this State, having been born at William Street, Perth, on March 14, 1849. He is a son of the late William Henry Leeder, who came to Western Australia in the earliest days of its settlement with his father, who was the original settler in the Leederville district, where he owned a farming property of 640 acres on the site of the suburb which now bears his name. The subject of this review received his education under the tuition of the late Rev. G. H. Sweeting at Bishop Hales' College, Perth, Sir John Forrest and Sir Henry Parker being among his schoolmates. Leaving college he proceeded to Northam, where he took up land and devoted his energies to mixed farming, leasing the "Mokine" property, as present owned by Mr. Wilding, for grazing purposes. After continuing in active pastoral and agricultural pursuits for about a quarter of a century, he let the holding to a tenant, and has since lived in retirement in the town. Mr. Leeder took a deep interest in the early development of Northam, and for a time occupied a seat on the

municipal council, subsequently being invested with mayoral honours. He was prominent in the Northam Agricultural Society, being considered one of the best judges of stock in the State and acting in that capacity not only at the local shows, but also at similar functions held in other important centres. For many years he held a Commission of Justice of the Peace, but retired from these duties a few years back. He was a committeeman of the local race club from its early days, and is well known on the turf, as, though not a backer of horses, he has kept some particularly good racing stock, which has brought him credit both here and in the Eastern States; among the best horses he has owned and raced being "Hinemoa," "Maori Land,"

MR. HENRY JOHN LEEDER.

"Maori Lad," "Springlock," "Cardinal," and "Vivian," all of which have earned repute in their time. Mr. Leeder takes recreation in driving and bowls, being a committeeman of the Northam Bowling Club; and, in his younger days, he was well known in cricketing circles. He has been twice married, his first wife having been a daughter of the late Richard Morrell, a pioneer of Northam, while the present Mrs. Leeder was Miss Clara Nettle, of Ballarat, Victoria. His family consists of two sons and four daughters.

**ELLIOTT AGETT LOCKYER**, J.P., of Northam, is a son of the late Thomas Lockyer, who as a boy of thirteen came from Somersetshire to Western Australia in 1830 with his

father, the late Paul Lockyer, a millwright by trade, who built the first mill in the infant colony. The mill was driven by wind-power, and it still stands as one of the old landmarks of the early days in the vicinity of "The Narrows," South Perth. The gentleman under review was born within three miles of Northam, on December 25, 1855, and after a course of private tuition was sent to the Government school conducted in St. George's Terrace on the site of the present technical school. At fourteen years of age he joined his father in mixed farming pursuits at "Oakfield," now in the possession of Mr. G. T. Wilkerson, and remained under the paternal roof-tree until upon attaining manhood he proceeded to the north-west, where

MR. THOMAS LOCKYER.

he spent seven years in association with his elder brother, who had been for some years engaged in the pastoral industry in the Roebourne district. The strenuous nature of the pioneering life, however, told on his health, and he was compelled to return to Perth, where he spent a couple of years in recruiting. In 1888, when the reported discovery of gold at Southern Cross brought an influx of population into the eastern portion of the State, he purchased the Avon Bridge Hotel, the oldest established house of its kind in the district, and entered upon the personal conduct of the business. For sixteen years Mr. Lockyer was well known as "mine host" of this popular and convenient hotel, and during this period he served in the municipal council of Northam for over thirteen

years. He always used his best efforts to forward every movement for the benefit of the community, and has served for a lengthy period as a member of the Northam Agricultural Society and similar bodies. In 1911

MR. ELLIOTT AGITT LOCKYER.

Mr. Lockyer was appointed a Justice of the Peace by the Wilson Administration, and his services in this regard are frequently availed of by the town authorities, who entrust to him the duty of relieving the press of business passing through the local court. His pet hobby is the breeding of prize poultry, and his success in this line has been sufficiently demonstrated by the list of prizes awarded to his exhibits at the Royal and other important shows; while he was one of the founders of the Northam Dog and Poultry Society, of which he occupies the presidential chair. Mr. Lockyer married in 1885 a daughter of the late Richard Henderson, of Fremantle, of which union there was issue three sons and a daughter. This lady died in 1890, and in 1904 he contracted a second marriage with Annie, daughter of the late William Jepson, of Talbot, Victoria, by whom he has one daughter.

JOHN PERCY CAMM, District Surveyor and Chief Land Officer, Northam, was born at Yeo, Victoria, on November 2, 1873, and is a son of Mr. John S. Camm, now retired, for many years a member of the Education Department of the Garden State. He pursued his scholastic studies at the Creswick Grammar

School, to which institution he graduated after obtaining a scholarship at the Newlyn State School, and at the close of his college course he attended the University of Melbourne for a year. Upon his choice of surveying as a profession Mr. Camm was articled to Mr. Robert Allan, the Government Surveyor of Ballarat, and obtained his licence in 1894 after passing the prescribed examination with honours. In March, 1895, he came to Western Australia, where he joined the Survey Department as computer, and two years later went into field work as a staff surveyor. Subsequently, in 1902, he was appointed inspecting surveyor, which post he retained until, upon the policy of decentralization inaugurated by the Lands Department

MR. JOHN PERCY CAMM.

at the end of 1910, he received his present appointment. Whilst on field work Mr. Camm made, amongst others, the surveys of many roads through the Midland Railway Company's concession, and subdivisional surveys in the Geraldton and Northampton districts. He also selected the route and surveyed the boundary for the rabbit-proof fence from the eastern goldfields railway to the south coast at Point Anne, and carried out the classification of a large portion of the country between the great southern railway and the rabbit-proof fence. He was similarly employed on the territory between Wongan Hills and Mullewa in connection with the railway in that district. A member of the local agricultural society and Northam Club, Mr. Camm is a patron and supporter of various organizations in the town,

and is a keen advocate of all forms of clean sport, finding his own recreation in golf and amateur photography, at which he is an adept. He married in 1897 May, daughter of the late William Chamberlain, building contractor, of Melbourne, and has two sons and two daughters.

JOSEPH O'HARA, who lives in retirement at Northam, is a native of the Isle of Wight, where he was born on July 27, 1853, his father, the late William O'Hara, a gentleman of Irish descent, being attached to the Imperial Army at that place. He received his educational training at the Chatham Military School, in England, and upon the conclusion of his scholastic career accompanied his stepfather to Australia, where he became engaged in the various avocations incidental to bush life in the Victoria district of the Western State. After continuing this existence for about a decade, in 1874 he became connected with the Police Force of Western Australia, then under Imperial authority, and after being stationed for some time at Geraldton was transferred at subsequent dates to York, Albany, Williams, Guildford, and Lakes. During the fifteen years that he spent in this connection he distinguished himself by efficient service in many directions, and, in particular, was instrumental in the capture of several

murderers in the days when law and order were maintained by the officials of the force only under conditions of great difficulty and danger, being

C. M. Nixon, Northam.  
MR. JOSEPH O'HARA.

considered more honoured in the breach than in the observance by many of the wild spirits whom love of adventure had brought to a little known territory. Mr. O'Hara, at the termination of the period referred to, tendered his resignation from the service on account of a somewhat indifferent state of health resultant upon the arduous life which he had been

leading and with the intention of entering a more congenial sphere. Coming to Northam he purchased the Farmers' Home Hotel (now known as the Shamrock) and took over the personal conduct of the business, which he carried on successfully for about ten years, proving himself as efficient in this line of business as formerly he had been in safeguarding the interests of the law-abiding section of the community. Disposing of his interests in the hotel-keeping business he turned his attention to promising investment, and having conceived great faith in the district where he had resided for so many years and the development of which he had watched with close interest, he displayed his confidence in the most practical manner by investing his capital chiefly in building properties in the town of Northam and the surrounding neighbourhood. To his enterprise has been due the erection of many of the finest and most up-to-date commercial premises within the municipal boundaries, and he still continues his progressive policy in this direction, by means of which the principal thoroughfares have been enlarged and beautified to no inconsiderable extent. Mr. O'Hara is also interested in the agricultural industry, being the owner of a farming property situated in the Nungarin district, about 25 miles north of Merri den, on the Merri den-Dowerin railway. He has played his part in

Photo by C. E. Farr.

MR. JOSEPH O'HARA'S RESIDENCE, NORTHAM.

the destinies of the place where he now resides, at an early period of its history serving his fellow-ratepayers as a member of the local municipal council. He is a member of the agricultural society, and in his younger days took a prominent part in the affairs of the Independent Order of Oddfellows and in the Hibernian Lodge. Though devoting most of his time and interest to the advancement of the Northam district Mr. O'Hara is far from cultivating a provincial spirit, and it is his custom to make periodical trips to the Eastern States, by means of which he is successful in keeping himself well abreast of the times. He spends his leisure hours chiefly in the company of chosen friends, in which congenial circle he is fond of reverting to the old pioneering days with their adventures and privations, and often alludes to the period prior to his joining the Police Force, when as a shearer he made a name for himself, his skill gaining for him the prestige of being regarded as "ringer" in the district where he plied the shears. With these and many other interesting reminiscences Mr. O'Hara might easily fill a volume, the space at command in a publication such as the present being all too inadequate to enter into particulars. He is a married man, having been united in 1875 to Margaret Ann, daughter of Mr. Richard McCorry, a native of County Antrim, Ireland, and a veteran who covered himself with glory at the Crimean War and the Indian Mutiny, subsequently coming to Western Australia in the year 1866.

**FREDERICK ALBERT GREGORY**, Electoral Registrar for Northam, is a son of Mr. John Henry Gregory, one of the pioneers of that district, where the gentleman under review was born on September 20, 1869. He received his education at the Commercial School, Perth, under the tuition of the head master, the late G. A. Letch, and, upon the completion of his scholastic course, went on to his father's farm at Corolin, 12 miles from Northam, where he continued in agricultural pursuits for about three years. He then entered business life in the firm of Messrs. Throssell, Son, & Stewart, at Northam, from which he resigned. In 1900 he received the appointment of electoral registrar at Northam, which post he has filled ever since. Mr. Gregory has taken a prominent

part in the fraternity of Freemasons, having passed through all the chairs of that body, and at the present time holds office as secretary of Lodge Avon, No. 12, W.A.C. He has always manifested a deep interest in the affairs of the Methodist Church, of which he is a member, and for several years past has acted as honorary organist to this church. He is very fond of music, and finds recreation chiefly in this hobby and in reading, general literature receiving his chief attention. In 1903 he

*C. M. Nixon, Northam.*  
MR. FREDERICK ALBERT GREGORY.

married Rosetta, daughter of the late Charles Taylor, agriculturist, of Northam, and one of the early settlers in the neighbourhood.

**WILLIAM HENRY MCGREGOR**, District Inspector of Post and Telegraphs, Northam, was born at East Maitland, New South Wales, on May 10, 1868, and is a son of the late John McGregor, agriculturist, of that district. He was educated at the Fort Street public school, Sydney, and at fourteen years of age joined the Post and Telegraphs Department of the New South Wales Civil Service, being stationed at Waverley, a suburb of the metropolis. From messenger he rose to telegraph operator, and having attained his majority was promoted and transferred to Mosmans Bay in charge of the post and telegraph offices of that place. Here he remained until 1896, when he resigned upon receiving an appointment to proceed to Western

Australia, where upon arrival he entered upon the duties of post and telegraph master at Lawlers, being the pioneer officer in that district. Without a single break Mr. McGregor held this post for a decade, at the end of which period promotion was accorded him to the more important office at Coolgardie, where he remained for three years. He was then transferred to Leonora, and in September, 1911, succeeded Mr. A. E. Pries as district inspector at Northam, continuing at this centre ever since. Mr. McGregor has been connected with the Masonic fraternity for the past thirteen years, as a member of Sir William Wallace Lodge, Kalgoorlie, and was one of the foundation members of Lodge Lawlers. In the latter lodge he passed through the various chairs of honour, and held office in the West Australian District Grand Lodge of Scottish Freemasonry. In earlier days

*C. M. Nixon, Northam.*  
MR. WILLIAM HENRY MCGREGOR.

he underwent a lengthy period of military training as a member of the Sydney Scottish Rifles, 5th Volunteer Regiment, which is affiliated to the famous Black Watch. He makes a hobby of amateur gardening, and when his duties — which are no sinecure — allow he spends many pleasant hours in the congenial pursuit of practical horticulture. He is also fond of golf, and is associated with the local golf club. Mr. McGregor married in 1891 Florence, daughter of Mr. Isidore Cohen, of Woollahra, New South Wales, and has three sons and two daughters.

Lieutenant **BENJAMIN ROBERT PRYNN BURCH**, Area Officer for the Military District including Northam, Toodyay, York, Narrogin, and the surrounding districts, was born at the Semaphore, South Australia, on December 29, 1877, and is a son of Mr. Isaac John Burch, of that place. He was educated in his native State, and at the close of his studies, at fifteen years of age, joined the firm of Messrs. W. R. Cave and Co., general merchants. After spending several years on the clerical staff of that business, he had charge of the outside shipping department of the firm at Port Adelaide. Resigning from this service, he spent the three following years in the joint service of several firms, being employed chiefly in looking after their shipping interests. In 1903 he came

*C. M. Nixon, Northam.*  
LIEUTENANT B. R. P. BURCH.

on a holiday trip to Western Australia, and being impressed with the place and its possibilities decided to remain. He accepted a post as accountant for Messrs. Thomas and Co. at Northam, where he continued in that capacity at the firm's machinery branch, "The State Machinery and Produce Company, Limited," for six years. In 1910 he opened in business in Northam on his own behalf as accountant and general agent, also establishing a branch at Dowerin. He subsequently relinquished the latter, but has retained the Northam business up to the present time. His first military experience was obtained in connection with the 18th Regiment, Australian Light Horse, at Northam. After serving

in the ranks through the various stages, he was appointed second lieutenant in 1910, and a few months later received his commission as lieutenant, being appointed to the position of area officer at about the same time. Lieutenant Burch has been prominent in the Masonic fraternity, and for some years filled the post of honorary secretary of Lodge Northam, S.C. He has also performed the secretarial duties in connection with the M.U., I.O.O.F., for a considerable time—to which lodge he has been attached since he was ten years of age—and has acted in a like capacity to the Dowerin Race Club, in which form of sport he takes a mild interest. He has made a hobby of amateur theatricals, and has given his aid to various charitable movements through the medium of "The Thespians," an amateur operatic and dramatic society for which he has also discharged the secretarial office. He is fond of horses, and enjoys an afternoon in the saddle or with the gun, being considered a fair shot. In 1908 he married Alice Elizabeth, daughter of the late Andrew Ardagh, and sister of the Hon. R. G. Ardagh, M.L.C., of Western Australia.

**ALFRED JAMES WELLS**, Contract Surveyor, Western Australia was born at Melbourne, Victoria, on May 27, 1860, and is a son of the late Rev. W. P. Wells, a Methodist minister who in the early fifties was among the pioneers of that Church in the Victorian State. After attending various primary schools young Wells was sent to Wesley College, Melbourne, and concluded his scholastic career at Prince Alfred College, Adelaide. He then entered the office of the Surveyor-General of South Australia, and upon the removal of his father to Melbourne accompanied him and became connected with the corresponding branch of the Civil Service in Victoria. After two years in the head office, he spent a similar period on field work, and passed a term in the Melbourne Observatory at the conclusion of this service, successfully securing by examination his licensed surveyor's certificate. He next joined an exploration party financed by a Melbourne syndicate to report on a large tract of pastoral country which had been taken up on the Ord River in the north-west of Western Australia. This trip extended over a year, and

in March, 1884, upon his return to Perth, he entered the Survey Department of the Western Australian Government and was appointed to fulfil the duties of contract surveyor. After fourteen years, in 1897, he was appointed staff surveyor, but six years later resigned from this position again to take on contract work, which he has continued ever since. He is one of the oldest contract surveyors in the service, having been continuously employed in this branch

*J. J. Dwyer, Kalgoorlie.*  
MR. ALFRED JAMES WELLS.

for over thirty years, and during this lengthy period has devoted all his best energies to his work. In pursuance of his duties while holding a position on the staff, he travelled and surveyed the country from Kimberley to Perth, and is conversant with all survey work within that area. Mr. Wells is a member of the Commercial Travellers' Club of Perth. He has always been a consistent supporter of clean sport, and for many years was well known on the cricket field and tennis court. He is a lover of music and has used his gifts in this direction for the assistance of any deserving project. In 1886 Mr. Wells married Emma, daughter of the late John Mills, pastoralist, of Geraldton, and has one daughter.

**JOSEPH ALBERT LOADER**, branch manager at Northam for the firm of Messrs. Elder, Shenton, and Co., Limited, was born at Payneham, South Australia, on April 10, 1876, and is a son of the late Jacob

Loader, a very early settler of that State. He received his education at Prince Alfred College, and upon entering commercial life, joined the staff of Messrs. James Marshall and Co., where he obtained his first three years' business experience. He next took a position with Messrs. Harold, Colton, & Co., Limited, wholesale ironmongers, of Adelaide, and spent five years in their employ, coming in June, 1904, to Western Australia, where he immediately secured a post

C. M. Nixon, Northam.  
MR. JOSEPH ALBERT LOADER.

in the head office of the firm of Messrs. Elder, Shenton, & Co., Limited, at that time situated in Fremantle. Mr. Loader has remained in the service of this firm ever since, being promoted to his present position in 1908. Since coming to Northam he has interested himself in the various organizations of the place, and is a member of the Northam Agricultural Society and of the local race club. He is a cordial patron of good, clean sport, and in former years was a champion in more than one branch of strenuous athletics, such as cycling, lacrosse, and football. He married in 1902 Dora Jane, daughter of the late William Andrew Trevenen, of Payneham, South Australia, and has one son and one daughter.

WILLIAM JAMES STEWART, J.P., general merchant and importer, principal of the firm of Messrs. Throssell, Son, & Stewart, Northam, was born in Dublin, Ireland, on March 20, 1855, and at the age of two years was brought by his

parents to Western Australia. Two years later the family settled in South Australia, and Mr. Stewart received his education at the Rev. W. S. Moore's school in Adelaide. Upon the close of his scholastic career he joined the clerical staff of the Hon. H. B. T. Strangways, then Attorney-General of South Australia, and continued in this connection for three years, resigning to accept a more lucrative position in the drapery establishment of Messrs. John Martin & Co., drapers, of Adelaide, where he learnt the retail trade in all its branches. In 1887 he came for a trip to Western Australia, and shortly after arrival was offered the management of the business of Messrs. Dempster Brothers, Toodyay, but less than two years later returned to the sister State, where he joined the staff of Messrs. G. & R. Wills & Co., and represented that house as commercial traveller for several years in South Australia. He was then entrusted by the firm to open a branch establishment in Perth, and inaugurated the earliest operations from the old Church of England schoolroom in that city, importing stock from the Old Country, and with this forming the nucleus of the now flourishing Western Australian business. In 1889 he severed his connection with this house and joined the late Hon. George Throssell in business at Northam, and the firm, under the style of Throssell, Son, & Stewart, has since become a household word in the eastern agricultural districts and throughout the Avon Valley. A branch business at Toodyay was managed by Mr. Stewart for some nine years, and when Mr. Throssell entered the political arena he took control of the whole operations, and in 1902 purchased Mr. Throssell's interests in the concern, which he has since conducted solely on his own behalf. It is interesting to state that this was the first business house in Northam, its establishment by the late Hon. George Throssell dating back to 1862, and the development of the present thriving business from its modest beginning in that year is a piece of history which makes profitable study. During the nine years that Mr. Stewart spent in Toodyay he was prominently associated with the public life of the town, and for five years filled the mayoral chair. He was also invested with mayoral honours in Northam for a term, and has sat continuously

for twenty-seven years as a member of the school board of the district, twenty-six years of which he acted as chairman. He resigned from the board early in 1913. Mr. Stewart, who is a Justice of the Peace for the whole State, is a member of the Licensing Bench, and for a period acted as resident magistrate of Northam. He takes a prominent interest in the work of the Methodist Church, being a trustee for the whole of that body in Western Australia and holding office as treasurer to the Board of Foreign Missions. He is a foundation member of the Northam Bowling Club and an ardent advocate of manly sport, himself finding diversion in the pursuit of fishing. He married in 1880 Annie E. J., daughter of the late Edward Clark, builder, of

C. M. Nixon, Northam.  
MR. WILLIAM JAMES STEWART.

Walkerville, South Australia, and of a family of ten children four sons and three daughters survive.

GEORGE LIONEL THROSSSELL, J.P., merchant and general agent, Northam, is a son of the well-known pioneer, the late George Throssell, whose name figures in the history of Western Australia and who founded the business which still bears his name as far back as 1862. The gentleman under review was born at Northam on December 23, 1863, and after a primary course of education in his native place concluded his scholastic studies at the Perth High School. At sixteen years of age he

became associated with his father in business pursuits at Northam, and has continued to reside in this town ever since. From a very early period Mr. Throssell began to interest himself in the public affairs of the town, and after several years' service as councillor was elected mayor for three successive years, and during his term of office he enjoyed the distinction of seeing both the electric lighting and the telephonic system installed as the result in a large measure of his personal efforts to secure these advantages for the town. He was one of the founders of the Northam Agricultural Society, in which he has always continued to take a prominent interest, doing strenuous work as a

*C. M. Nixon, Northam.*  
MR. GEORGE LIONEL THROSSELL.

committeeman, and for many years has occupied the office of vice-president. The Mechanics' Institute also has commanded his warm support, and upon the decease of the Hon. George Throssell, who was the founder of the institution, the gentleman under review was elected to the position of president, which he still retains, much of the progressive spirit manifested being due to his influence and encouragement. He is a member of the Liberal League, and gives his support to this form of government, though prevented by his manifold business and farming interests from actively following in the footsteps of his father as a politician. He has been a member of the Good Templars' Lodge for nearly forty years, and takes a deep interest in the Anglican Church, having held many offices of trust in that body. He is

a supporter of all clean forms of sport, and in his younger days was devoted to cricket, but now finds recreation chiefly in motoring, while for indoor diversion he has recourse to reading works of a historical nature especially appealing to him. He married in 1887 Eliza Jane, daughter of the late C. S. Monger, of Newcastle, and some years after the death of this lady was united, in 1896, to Isabel, daughter of the late Robert Cottrill, of Perth, and has one son and three daughters.

THOMAS ALLAN HARRISON, general storekeeper and ironmonger, Northam, was born in London on September 20, 1859, and is a son of the late James Harrison, pianoforte maker, of that city. He was educated at Croydon, and, upon completing his scholastic course, entered commercial life in the softgoods trade in London, continuing in the same establishment for four years, until he attained the age of seventeen. This period was followed by seven and a half years in the building supply trade, subsequent to which, in 1887, he came to Western Australia on the ship "Helena Mena," and gained experience in a variety of occupations all over the State. After engaging in labourer's work at Northam, in 1891 he secured an engagement with Mr. F. R. Elwell, the pioneer storekeeper of Coolgardie, who had established a branch in the town on the Avon; and when the death of Mr. Elwell terminated his employ in this firm, he took the appointment of orderly in charge of the Northam Hospital in 1895, his wife becoming matron of the same institution. Upon Mr. Harrison's retirement he received suitable recognition of his services from the people of Northam in the presentation of a gold watch "as a mark of appreciation of his self-denying devotion to duty while in charge of the hospital," and on a previous occasion he had been the recipient of a purse of sovereigns and an illuminated address. He next entered into partnership with Mr. C. Molyneux in a general storekeeping business at Northam, within a couple of years buying out his partner's interest, and has continued to conduct operations on his own account ever since. Few residents in the district have been more prominent in works of a charitable nature than has Mr. Harrison, and he has for

many years occupied the post of honorary secretary of the local benevolent committee, an institution which is undenominational, and has proved a great boon to those in need of its aid. Temperance work has claimed much of his time and interest, and, believing that the methods of the Salvation Army are better adapted to this class of philanthropy than any other, he connected himself with this organization some twenty-one years ago, and has been associated with it ever since. Mr. Harrison makes a hobby of the cultivation of fruit and vegetables, and what leisure he has apart from this occupation he spends in reading of a general nature. He was married in

*C. M. Nixon, Northam.*  
MR. THOMAS ALLAN HARRISON.

1894 to Hester, daughter of the late Richard Bray, of Broken Hill, New South Wales, and has two sons and one daughter.

CHARLES ANTHONY HERBERT MILLS, general agent, Northam, principally representing the Massey-Harris Company, agricultural implement manufacturers, and district agent for the A.M.P. Society, was born in Colchester, England, on January 21, 1875, and is a son of Mr. William Mills, who came to South Australia in the early eighties and is now living in retirement in Adelaide. He pursued his scholastic studies at various schools, and at the close of his education became associated with Messrs. William Haughton & Co., wool, hide, and skin brokers and general agents,

with whom he served in the clerical and wool export branches of the Adelaide office for nine years. In 1897 he was offered a position with Messrs. Connor, Doherty, & Durack, Limited, and continued in the head office of that firm for some considerable time, also being identified with the management of the Wyndham branch of the business. He resigned from this firm in order to take over control at Northam for the then well-known house of Messrs. E. W. Carter & Co., and remained in this connection until, upon the demise of the principal, the business was closed. Early in 1910 he established himself in business on his own account, and in addition to holding the general district agency for the two companies referred to above, represents the Queensland Fire Insurance Co., Ockerby, Lehmann, and

*Huskin Studios, Perth.*  
MR. CHARLES ANTHONY HERBERT MILLS.

Co., Limited, and other firms, and acts as auditor to several local bodies.

**JAMES JOSEPH KEATING**, auctioneer, land and estate agent, Northam, was born at Lake Coorong—now Hopetoun—Victoria, on June 21, 1872, his father, the late Bernard Keating, at that time being manager of the "Lake Coorong" Station. He was educated at Horsham, and subsequently joined the mechanical staff of *The Horsham Times*, afterwards spending some time on the literary staff of the same journal. Before attaining his majority he became

connected with the office of *The Great Southern Mail*, the first newspaper published at Korumburra, Gippsland, but resigned after a short period of service in order to accept an offer from the proprietors of *The Nhill and Tatiara Mail*, on which staff he remained for three years. Mr. Keating then entered a commercial house in Melbourne, but returned to journalistic work on *The*

*Bortolotto, Perth.*  
MR. JAMES JOSEPH KEATING.

*Romsey Examiner* until the alluring reports of the "Golden West" brought him to this State, where upon arrival he took a position as manager and sub-editor of *The Northam Advertiser*, which he held for nine years. In 1907, upon his retirement, Messrs. Reilly & Reilly, the proprietors of the newspaper, tendered him a public banquet, at which the leading residents of the district testified to the respect and esteem in which Mr. Keating was held, while he was the recipient of a presentation by the staff to mark the cordiality of the relations which had existed between them during his period of service. Next, in 1912, Mr. Keating opened his present business, which he has conducted ever since, being appointed sworn valuator under the Transfer of Land Act. During the years of his residence in Northam he has made his influence felt in many ways, and is regarded as quite one of the best-known identities of the place. He is a patron of all branches of clean sport, having been himself an athlete, and is a member of all the local organizations

in connection with racing, agriculture, etc., while at the present time the game of bowls provides him with pleasant and healthful recreation. In 1908 he married Lily, daughter of the late Sub-Inspector Carroll, of the Victorian Police Department, and has a surviving family of one son and three daughters.

**CARTER & BARR**, mercantile agents, etc., Northam, with branches at Cunderdin, Kellerberrin, Toodyay, and Doodlakine (F. J. Carter and J. E. Barr). This business was established under the present style in 1907, Mr. Carter previously having conducted operations in Northam on his own account. The firm represents the well-known mercantile houses of Dalgety & Co., Limited; W. Sandover & Co.; H. V. McKay;

*C. M. Nixon, Northam.*  
MR. FREDERICK JOHN CARTER.

Stewarts & Lloyds (Aust.), Limited; the Woodbridge Nursery Co., Limited; and is also local agent for the Mutual Life and Citizens' Assurance Co., Limited, and the Phoenix Assurance Co., Limited. **FREDERICK JOHN CARTER** was born at Stawell, Victoria, on December 29, 1872, and is a son of the late Nathan Carter, one of the earliest settlers of the Victorian State. He was educated in his native town, and upon the termination of his studies served his apprenticeship to the firm of W. and J. Neal, coachbuilders, of the same place. After the completion of his articles he continued in the trade, and having obtained in all about ten years' experience in Victoria, in

1893 he came to Western Australia, where he carried on in the same line of business for about five years. In 1898 the firm of E. W. Carter & Co., the principal of which was a brother of the gentleman under review, offered him a position as its representative on the eastern goldfields, and subsequently he joined the staff as accountant, which post he retained until he opened on his own account in Northam as commercial agent. At a later date he was joined in partnership by Mr. Barr, when the firm was appointed agent for Dalgety & Co., Limited, and the business has since been carried on under the style of Carter & Barr. Mr. Carter is a member of the local agricultural society and of the mechanics'

J. J. Dwyer,

Kalgoorlie.

MR. JOHN ENGLISH BARR.

institute of Northam, while for recreation he plays bowls, being associated with the local club. In October, 1902, he was married to Charlotte Jane, daughter of Mr. James Wansborough, of Northam, and has two sons and one daughter. JOHN ENGLISH BARR was born at Craig, County Donegal, Ireland, on November 16, 1872, and is a son of Mr. Edward Barr, a large landowner in Ireland. He was educated at the Belfast Mercantile Academy, and emigrated to Australia in 1889, subsequent to his arrival being employed for twelve years on the staff of the National Bank of Australasia, Limited, in Victoria and Western Australia. At a later date he became connected with the business house of Dalgety and

Co., Limited, as salesman at the goldfields branch of their business, and continued with this company for five years. In 1907 he resigned his position in order to enter into partnership with Mr. Carter in the present business of estate and machinery agents, Northam, and produce merchants, Kellerberrin, and has since resided at the latter centre as manager of this branch. In July, 1901, Mr. Barr married Ellen Florence, daughter of the late Nathan Carter and sister of his present partner, the issue being two sons.

ISAAC RICHARD OLDHAM, general agent, Northam, was born at Horsham, Victoria, on April 13, 1874, and is a son of the late David Oldham, farmer, of that place. He pursued his studies in the Natimuk State School, and at the close of his schooldays, upon entering his teens, took up duties on his father's farm. When about nineteen years of age he struck out for himself, being attracted by the possibilities offering in Western Australia, then being widely advertised by the marvellous gold discoveries of the Coolgardie field. Settling down at Northam he found employment in an aerated waters factory for a time, and subsequently entered the locomotive branch of the railway service. Returning to mercantile pursuits Mr. Oldham spent sixteen years in the employ of the well-known firm of Messrs. Throssell, Son, & Stewart, nearly the whole of this time occupying the post of manager of the hardware department of that firm. In 1910 he relinquished the connection in order to open in business on his own account, and has made good headway during the interval that has elapsed since the above date. Among the various influential firms which he represents are those of Messrs. Harris, Scarfe, and Co., the South British Fire Insurance Company, the Colonial Mutual Fire Insurance Company, Messrs. Paterson & Co., etc., while he has an increasing connection as a general land and estate agent. In 1912 he admitted into partnership Mr. Alfred Beazley, who for twenty-six years was associated with the firm of Messrs. Throssell, Son, & Stewart. Mr. Oldham has taken keen interest in military affairs, and has had twelve years' experience in the movement at Northam, for four years past having held a commission and now serving as lieutenant in command of

No. 4 Squadron, 25th Australian Light Horse. He is an ardent lover of horses, and has been very successful in the show-ring with his blood stock, during the past six years winning several hundred prizes, one horse alone ("Gardiner") securing 233 awards. He is a member of the Northam Agricultural Society and of the local racing club, and was the founder of the Northam Gala, an annual event which has become a feature of the district. Mr. Oldham married in 1903 Annie, daughter of the late John Beazley, of Northam, one of the pioneers of the Avon Valley, and has one daughter.

CHARLES HARTLEY WILLIAMS, accountant and general agent, Northam, is a son of the Rev. Hartley Williams, a South Australian pioneer now living in retirement at Adelaide. He was born at Brighton, in that State, on March 31, 1874, and at the close of his education at St. Peter's College became associated with journalism on the staff of the South Australian

Hartley,

Perth.

MR. CHARLES HARTLEY WILLIAMS.

Advertiser. After three years of newspaper experience he resigned this connection and took a more lucrative post in the office of Messrs. Elder, Shenton, & Co., Limited, of Western Australia, and from his arrival in 1901 until 1911 filled the responsible position of chief accountant for that firm. In the latter year Mr. Williams decided to launch out on his own account, and opening offices in Northam has since built

up a large and successful business in that town. He takes a keen interest in politics, being a live spirit in the Liberal movement, and occupies the office of secretary of the East Council of the Liberal League of Western Australia. Mr. Williams has been an Associate of the Institute of Accountants in South Australia since 1899. He is a patron of all clean, outdoor sport, and finds his chief recreation on the lawn tennis court.

ARTHUR BELL, accountant and land agent, Northam, was born at Sandridge, now Port Melbourne, Victoria, on June 17, 1873, and is a son of the late John Bell, for many years connected with the mining industry of the sister State and an old Crimean veteran who was awarded several medals with clasps for his service in the field of war on behalf of Queen and country. After a preliminary course of education at Carlton College Mr. Bell was sent to that famous Australian institution, the Scotch College, Melbourne, and upon the completion of his collegiate course spent twelve and a half years in the legal profession, during the greater part of that period being employed as managing clerk for a firm of solicitors at Korumbidra. In 1899 he came to Western Australia, and upon arrival proceeded to the eastern goldfields, where he was engaged in mining pursuits, meeting, however, with but little success. Eventually he joined the Water Supply Department of the Civil Service on the Coolgardie Water Scheme, where he remained until the early part of 1911, and during this period acted for some years as Government auditor whilst filling the post of accountant to the Water Supply Department. In 1911 he launched out on his own account, taking over an accountancy and land agency business at Northam, and has personally conducted this concern with considerable success ever since. Mr. Bell is a member of the agricultural societies of Northam and Jennapullen, and was one of the promoters of the Eastern Districts Dog and Poultry Society, of which he has filled the office of secretary for over two years. His chief hobby is the raising of pure-bred poultry, and he has been a large prizetaker for his fowls at the various agricultural shows, etc. He is also an amateur gardener of considerable skill, and his home is enhanced by the orchard growth surrounding it, the

result of many hours of leisure profitably spent. He also finds diversion in bowls, being a member of the Northam Bowling Club. In 1904 Mr. Bell married Mary, daughter of the late Patrick Quinliven, of Lubeck, Wimmera district of Victoria, and has one son and three daughters.

A. A. SMITH & HAINING, auctioneers, land, commission and general agents, wheatbuyers, etc., representatives for R. Purser & Co.'s machinery (made in Western Australia) and W. Padbury's general agency, Northam. (Albert Archie Smith and Harold Roy Haining.) ALBERT ARCHIE SMITH, the senior partner of the above firm, was born at Bethungra, New South Wales, on May 21, 1868, his father, Mr. Charles Sydney Smith, general merchant, also being a native of the Mother State. He received his education in the place of his birth, and upon leaving school proceeded to Victoria, where he spent several years in Gippsland in avocations incidental

C. M. Nixon. Northam.

MR. ALBERT ARCHIE SMITH.

to bush life. He then joined his father in New South Wales, and continued in business pursuits with him for several years, subsequently, at the time of the gold rush to Western Australia, making his entry to this State in company with the thousands who were thronging to the scene of the new discoveries. Upon arrival he was the first to drive a vehicle through from Perth to Mount Leonora, which he reached with the

original party of three prospectors of the Forrest Leases, by whom considerable success was attained in the early gold-mining industry at that centre, as much as fourteen ounces of gold to the ton being secured from that property. After four or five years, during which he prospected much of the gold-bearing country in the more northern localities, in 1900 Mr. Smith came to Northam, where he was engaged in the butchering business for about a decade, and upon disposing of his interests to his brother he opened in the same town as auctioneer and general agent. In 1912 he took into the business his present partner, Mr. H. R. Haining, since when the firm has carried on under the above style. Mr. Smith is

C. M. Nixon. Northam.

MR. HAROLD ROY HAINING.

a member of the local agricultural society, and for some time has served as a member of the committee of that body. He is also a member of the Northam Bowling Club. In 1905 he married Jane Theresa, daughter of Mr. Peter Reynolds, of Kapunda, South Australia, and has one son. HAROLD ROY HAINING is a son of Mr. Robert Haining, bank manager, of Moonta, South Australia, and was born at Port Augusta on January 13, 1886. He pursued his scholastic studies at the Moonta Grammar School, and subsequently, until his seventeenth year, was a student at the local school of mines. He then sailed for Western Australia, where he accepted a position on the clerical staff of Messrs. Goode, Durrant, & Co., of Perth, with which house he was connected for three and

a half years. A desire to study for the Church led to his entering St. John Clergy College, in the same city, but before completing his course he relinquished this intention, and for nearly three years filled a post in the firm of Messrs. Elder, Shenton, and Co. He then went into business on his own account as general commission agent, at the same time acting as accountant on behalf of Mr. Fred Rowell, and in 1912 joined Mr. A. A. Smith, as above stated. Mr. Haining takes a prominent part in the affairs of the local Church of England, being lay reader in the Northam Parish, where he does much to further the interests of his fellow parishioners. His favourite form of recreation is tennis, and he is treasurer of St. John's Tennis Club. A great reader, his choice falls chiefly on works of an historical character. In 1910 he married Rose Vittoria, daughter of the late Mr. Burges, of the Irwin district.

**ROBERT JOHN STEWART**, chemist and veterinary practitioner, Northam, was born at Blackwood, Victoria, on May 7, 1874, and is a son of the late Robert John Alexander Stewart, who for some time carried on pastoral pursuits in the Esperance district of Western Australia. He was educated chiefly at Brighton in Victoria, qualifying for his profession at the College of Pharmacy, Melbourne, where he graduated in 1890. Four years later he came to Western Australia as chief assistant to Messrs. E. Dean and Co., with whom he continued for a year. At a later period Mr. Stewart was connected with the firm of Messrs. Martin & Co., and subsequently, at the founding of a settlement at Esperance, carried on practice on his own account at that centre for some years. Upon leaving Esperance he proceeded to Fremantle, where he managed the chemistry business of Mr. A. E. Webster for a couple of years, at the termination of this time purchasing the apothecaries' business at the corner of Wellington and Barrack Streets, Perth. After conducting this connection in partnership with Mr. Freeman until 1906, Mr. Stewart disposed of his interest and entered upon the pastoral industry, purchasing "Mount Celia" Station, on the Northern Coolgardie goldfield. In 1907 he purchased from Mr. A. Buxton the chemistry business carried on by that

gentleman at Northam, and for four years he maintained his interests in the station, making frequent visits to "Mount Celia" whilst residing at Northam and attending to the demands of the business. In his younger days, whilst reading for his profession in Victoria, Mr. Stewart made a study of veterinary science also, and after arrival in Western Australia he qualified by practice and was admitted as a duly-accredited surgeon under the Veterinary Act of 1912. He has always identified himself with the public questions affecting the community at large, and upon coming to Northam was returned unopposed to represent East Ward in

MR. ROBERT JOHN STEWART.

the local municipal council, which seat he still retains. He is a member of the agricultural society, and interests himself in the fruit industry as a hobby, owning a small orchard and vineyard about a mile distant from the town. While an honorary officer of the local race club, and a general supporter of all forms of clean outdoor sport, he is a playing member of the Northam Polo Club and a keen angler. In 1898 Mr. Stewart married Mary, daughter of the late Henry Arnold, an early resident of Perth, and has five sons and one daughter.

**ERNEST OLIVER TRESISE**, M.P.S. (Pharmaceutical Course, Univ. of Adelaide), registered chemist in Western Australia and South Australia, now carrying on business in Northam, is a son of the late Rev. Charles Tresise, of the

Methodist Church, and was born at Balaklava in the Central State on April 28, 1880. He was educated at Mr. Coles' Grammar School, and subsequently at Way College, South Australia. Leaving the latter institution at seventeen years of age, he became apprenticed to the late Charles Woodman, chemist, of Kensington near Adelaide. During the four years that he spent with the latter gentleman he attended the University of Adelaide, and after gaining several certificates in chemistry and botany finally qualified for his profession in 1901. Upon being offered an appointment by Mr. A. E. Tilly, chemist, of Perth, he decided to come to Western Australia, and upon arrival was placed in charge of one of the branch establishments owned by Mr. Tilly; subsequently, in 1903, being transferred to Northam to open a pharmacy there, which in 1907 he purchased from his principal and has

MR. ERNEST OLIVER TRESISE.

since carried on on his own account, making it one of the leading connections of its kind outside the metropolitan area. Although the demands of his large clientele absorb the greater share of his time and attention, Mr. Tresise finds leisure for a considerable amount of reading, works of science with a bearing on his profession taking premier place in his library, while descriptive writing of different countries of the world and the manners and customs of foreign people also command his interest. He was married in 1907 to Ida May, daughter of the late Captain Chapman, of Devonport, Tasmania, and has one daughter.

ROBERT HENRY THACKRAH, one of the best-known residents of Northam, is a native of the district, having been born on October 26, 1858, at the Dale Bridge, where his father, the late Joseph Henry Thackrah, who came to Western Australia in his teens, had settled down to pioneering work. He was educated in Northam, and served an apprenticeship to the trade of blacksmith and wheelwright, upon the close of his indentures proceeding to the Arthur River, where for two years he carried on a business on his own account. Returning to his native place, in order to look after some landed interests he owned there and

*C. M. Nixon.* Northam.  
MR. ROBERT HENRY THACKRAH.

which had been locked up by the Government of the day, he worked as a journeyman for a couple of years in the employ of Mr. W. F. Forward, with whom he had served as an apprentice, and subsequently joined Mr. John Byfield in business. After four years with the latter gentleman the partnership was dissolved by mutual consent to allow Mr. Thackrah to open for himself. This he did in a small way in the beginning as blacksmith and wheelwright in rented premises, but the concern prospering he purchased a site and extended his premises in order to cope with the growing demands of the trade, since which period his connection has continued to increase until now even the eastern goldfields are embraced in the area from which his business is drawn. A native of the district, he spared no labours to promote its interests in every possible way, being

ambitious that Northam might attain a position in the State second only to the metropolis. He was one of the founders of the Northam Benefit Building, Investment, and Loan Society, which has proved so advantageous to settlers in the town, and has also taken a lively interest in the local agricultural society. He has taken his part in municipal government, having served the ratepayers at the council table; and for thirty-five years has been a prominent member in the Rechabite movement, filling various offices from time to time and for seven years serving as Chief Ruler in that Order. He was also one of the foundation members of the Druids' Lodge at Northam, and has received all the official honours in connection with that body. A supporter of all forms of clean sport he still plays a good game of cricket, maintaining a record far above the average. In 1879 Mr. Thackrah married Susannah, daughter of the late John Henry Johnson, an early pioneer of the State, and has one son and five daughters.

H. & H. WITHNELL, general blacksmiths, iron and brass founders, wheelwrights, undertakers, etc. (Horace Willmott Withnell and Herbert George Withnell.) This business was taken over by the present proprietors from Mr. G. H. Smith on January 29, 1897, and since that time it has extended its operations in all branches of the trade. Vehicles of every description—ploughs, waggons, drays, wheels, etc.—are manufactured and supplied to Kalgoorlie, Albany, Wyndham, etc., and to all the districts lying between these centres; and some idea of the magnitude of the business may be gained from the fact that during 1910 and 1911 seventy-two table-top waggons alone (each costing about £60) were turned out of the workshops. Various ingenious inventions of the proprietors are exhibited, among which are a patent sinking platform for tiring wheels, a patent tire-shrinker, and another machine which saves hours of hand-labour is one for champering—chiefly used for lightening heavy woodwork in drays. Large quantities of karri and stringybark are used in the manufacture of vehicles, while York gum and morrell are also utilized to a considerable extent in the wood-working department. There are two furnaces—melting-pots for

the foundry—and in the up-to-date smithy at the front of the premises three large forges are kept continually at work, all blown by electric fans. A considerable area is devoted to metal machinery—lathes, milling, gear-cutting plants, etc.—and the incessant hum of a dozen busy motors, with the rattle and roar of the machinery they drive, indicates sufficiently the hive of busy industry which centres in these workshops. Messrs. H. & H. Withnell have taken over one hundred first prizes since they began exhibiting their manufactures, and three gold medals testify to the superior character of their work. HORACE WILMOTT WITHNELL, J.P., was

*C. M. Nixon.* Northam.  
MR. HORACE WILMOTT WITHNELL.

born at Roebourne on July 11, 1872, and is a son of the late John Withnell, a member of the family that chartered its own vessel and was among the pioneers of the north-west. He was educated privately, and after obtaining stock experience on his father's property in conjunction with his brothers purchased a station, and remained in the north-west for about twenty years. He then came to Northam and in partnership with Mr. H. G. Withnell invested in the present business, which he has carried on successfully ever since. Mr. Withnell was gazetted to a Commission of the Peace in 1907. He has been connected with the Masonic craft for about fifteen years, and is president of the Northam Polo Club. His chief interest, however, is found on the turf, and he is a leading spirit in the

Northam Race Club, having filled the office of secretary to that body and to the Eastern District Racing Association for several years, while his lengthy experience causes him to be regarded as an authority on matters of importance connected with racing. He married in 1907 Matilda, daughter of Mr. W. J. Morgan, J.P., of "Bardeen," near Northam. HERBERT GEORGE WITHNELL, born at Roebourne on February 21, 1876, and educated at the Fremantle Grammar School and Guildford College, was indentured to the engineering and blacksmithing trade, and after serving five years' apprenticeship, proceeded, on their discovery, to the eastern goldfields, and for a time turned his attention to prospecting. Reverting to his trade, he erected the Golden Cliffs battery and a plant for the City of London Corporation, but again succumbing to the excitement of gold-seeking, he prospected, with a team of camels, all over the North Coolgardie and Murchison goldfields with considerable success. Subsequently Mr. Withnell joined his brother in the blacksmithing business, etc., and has since continued in this connection. For many years he has been a committeeman of the Northam Agricultural Society, is a patron of clean outdoor sport, and has raced his own horses with favourable results. Married in 1903 to Lilla, daughter of Mr. H. J. Leeder of Northam, he has issue one son and two daughters.

MICHAEL WHITE, of "Iron Hill," Northam, was born at Noggojeering in the same district on December 29, 1862, and is a son of the late William White, who when quite a child came from India to Western Australia with his father, an Irishman, attached to one of the Imperial troops drafted to the Swan River settlement in the early days of its colonization. After attending the Northam public school for some time the gentleman under review went to work on a property acquired by his parent in the vicinity of the township, and continued there until he reached his twenty-fifth year. He then launched out on his own account in the farming industry, and for the past quarter of a century has conducted operations successfully on the "Iron Hill" Estate, a holding of over 900 acres, which with the exception of about 100 acres, is wholly

devoted to the growing of cereals and hay, while a small orchard is also a feature of the place. At the time of the outbreak of the Coolgardie goldfields Mr. White took advantage of the boom in trade and engaged in carting contracts between Northam and Southern Cross, and subsequently to Coolgardie, but as soon as the furore subsided he relinquished this enterprise and returned to the active development of the farm. He is a member of the local agricultural society and also of the Northam Race Club. Mr. White married in 1885 Ellen, daughter of the late

C. M. Nixon, Northam.  
MR. MICHAEL WHITE.

James Foley, one of the earliest Irish settlers in this district, and has three sons and two daughters.

The late EDWARD MARTIN, "Salt River" Farm, near Northam, was a native of Western Australia, having been born on the banks of the Swan River on September 8, 1845, and was a son of the late William Martin, who came to the State in 1830, a year after its first settlement. From the age of four years to the time of his death on May 21, 1913, he lived in the Northam district, and was one of the oldest pioneers of the place. "Salt River" Farm was first purchased by his father in 1872, and Mr. Edward Martin inherited the farm on his parent's demise. To Mr. Martin chiefly fell the development of the property, but in later years he was assisted by his only son, Eric. He married in 1885

Lucy, daughter of the late Jacob Delmage, a pioneer settler originally from Ireland. ERIC VALENTINE MARTIN was born on February 14,

C. M. Nixon, Northam.  
MR. EDWARD MARTIN.

1889, and educated at Northam. Leaving school at the age of thirteen he assisted his father in the development of "Salt River" Farm, where

C. M. Nixon, Northam.  
MR. ERIC VALENTINE MARTIN.

he has continued ever since. Five hundred acres have been devoted to tillage, cereals and hay being the principal crops grown, and sheep and cattle are bred for the local markets. Mr. E. V. Martin is a member of the agricultural society at Northam.

JOHN MICHAEL CARROLL, owner of the "Noggojeering" property, situated about three miles from the town of Northam, is a son of Mr. John Carroll (who was accidentally killed near York on January 6, 1868), a native of County Kerry, Ireland, whence he came to Western Australia in the early fifties of the nineteenth century, where he engaged in the agricultural industry. Born at Seabrook, between Northam and York, on September 5, 1866, the subject of this memoir received his scholastic tuition at the Roman Catholic school in the latter town, and at the termination of his studies accepted employment on the "Seabrook" Estate, owned by the late E. R. Brockman, where he followed agricultural occupations until 1880. In the following year he rented a farm adjacent to the spot where he now resides, and after working this holding for three years took up 200 acres of land adjoining, which formed the nucleus of his present valuable property. He applied himself with great energy to the development of the place, and as time went by, added considerably to the area of his possessions in this locality. Subsequently (in 1892) he took up 1,800 acres at Southern Brook, which he has utilized as a cereal-producing

and sheep-raising proposition. In 1911 he purchased 100 acres in the vicinity of the old homestead built in 1882, and which is still standing,

MR. JOHN MICHAEL CARROLL.

though in 1897 a modern structure of brick and stone, comprising eight rooms and verandahs, with all up-to-date conveniences, was built. Mr. Carroll has met with success in the conduct of his operations, and

has always been foremost in agricultural competitions, having placed a grand total of upwards of 500 prizes to his credit, chiefly for field and garden produce, at the annual shows of the Royal Agricultural Society and at functions of a similar character in the leading centres of the State. He was one of the founders of the agricultural society of Northam, serving on the committee of that body for twelve years; and, in conjunction with Mr. J. McManus, was prominent in the formation of the Irishtown Farmers' Club. He is one of the founders and a member of the committee of the Jennapullen Agricultural Society, and for over sixteen years, without a break, he has served as a member of the Northam Roads Board. A prominent member of the Roman Catholic Church in Northam, he has upheld its interests both there and at Irishtown, and has done everything in his power towards the support and propagation of the faith of his forefathers in the district. Mr. Carroll was married in 1897 to Johanna, daughter of the late James Foley, a pioneer of the early fifties, and for a generation well known to the settlers surrounding Northam. His family consists of three daughters.

Photo by C. E. Farr.

MR. J. M. CARROLL'S RESIDENCE, NORTHAM.

JOHN FRENCH, "Gold Gully" Farm, Northam, is a native of Scotland, in which country his birth occurred on November 1, 1848. His father, the late James French, sailed from the Home Land for Australia in 1852, arriving at Fremantle on January 3 of the following year. The late colonist became engaged in agricultural work at Bardeen, in the employ of the late Abraham Morgan, who owned the property adjoining "Gold Gully," now in possession of his son, the present occupier. Having obtained thus a first-hand acquaintance with the conditions on which farming was carried on in the new country, and feeling his way towards an independent career, Mr. French launched out on his own account by purchasing a small allotment of land from the Government, only ten acres in extent, upon which spot the farm homestead now stands. He lost no time in commencing upon the development of this tiny holding, and, success crowning his initial efforts, after no very long period he was able to add to his farm another 40 acres of Crown property adjoining the first block. As his operations continued to prosper his ambition further to enlarge his boundaries received satisfactory fulfilment, and by the time

the gentleman under review had completed his fifteenth year his father was the owner of a snug little property of 400 acres, which was proving a payable proposition. Mr.

MR. JAMES FRENCH.

John French was brought up on the farm and being an only son never left the paternal roof-tree, from an early age becoming general factotum

in all the affairs connected with the industry. For some years before the demise of his parent he had virtually taken over the reins of management, and shortly after that event, when he became sole proprietor, with the object of extending his enterprise he purchased over 2,600 acres of additional land, a part of which adjoined the holding he had inherited, while 1,200 acres were situated at Goomalling. These two estates combined cover an acreage of 3,000, and for some time past have been worked by Mr. French in conjunction with his sons, the process of development having been carried on apace. The position of the farms is favourable, the parent property being conveniently situated about seven miles north-west of Northam and two and a half miles from Bourke's Siding on the Goomalling line, both this siding and the Northam Railway Station being used as depôts for the transport of grain, etc. The annual rainfall round Northam is about 15 in., and water is plentiful on the home estate, where various soaks are present, and wells have been sunk which are fitted with troughs for the watering of the stock. On the Goomalling farm, where the natural facilities are not so good, a copious supply is obtained through the agency of the

Photo by C. M. Nixon.

MR. JOHN FRENCH'S RESIDENCE, NORTHAM.

goldfields water scheme, pipes being laid down from the main to the different paddocks and buildings. The "Gold Gully" property is divided into numerous paddocks, those in the outlying portions averaging about 70 acres each, while in the vicinity of the homesteads smaller subdivisions have been made. Practically the whole territory is cleared and cropped with wheat and hay, oats also being sown in considerable quantities for stock-feeding purposes and to supply the local markets. An efficient system of fallowing is carried out, no area of ground being cropped more than two seasons in succession, but frequently being allowed to lie fallow for two years; by this means satisfactory returns are assured, 18 bushels to the acre being the average yield. The pastures have proved suitable for sheep, and a flock of over 800 is grazed chiefly on the Northam side of the property. By careful cross-breeding a useful big-framed animal has been produced, and the type has been persevered with on account of its proved utility for the Northam and Perth markets, which are glad to draw their supplies from so convenient a source, while the wool also finds a ready sale locally. Horses up to the number of thirty are kept for agricultural and other work, these being replenished year by year by a few home-bred successors. Of

homesteads there are three on the two properties, the original dwelling-house at "Gold Gully" having been built by the late Mr. French thirty-seven years ago. This is still in use,

C. M. Nixon, Northam.  
MR. JOHN FRENCH.

being semi-detached from the newer portion, but very considerable additions have been made, and the whole, though following no particular design, forms a comfortable home of nine rooms, where many modern appointments have been introduced.

Adjoining the homestead area a vineyard, four acres in extent, has been planted, and an additional acre has been devoted to the cultivation of vegetables, the homestead being supplied all through the winter seasons with the necessary garden products for domestic purposes. The original outbuildings built by Mr. French's father still do duty here, these having been carefully kept in a state of preservation. A second homestead stands on the Irishtown Road, about a mile nearer to Northam, while the third is situated at Goomalling, these two houses being occupied by Mr. French's sons, all of whom are married. In connection with the latter homesteads, extensive outhouses have been erected, including stables, granaries, and all the sheds and offices usual on properties of this kind. As a member of the local roads board he has served his fellow settlers with acceptance, his experience and commonsense often standing that body in good stead; and ever since the inception of the Northam Agricultural Society he has occupied a seat upon one or more of its committees. Mr. French was married to Fanny (now deceased), eldest daughter of the late Charles Wisbey, a member of the Police Service in the early days of the State, and of this union there are four sons and two daughters surviving.

HORSE TEAMS AT "GOLD GULLY" FARM.

GEORGE CLARENCE SPENCER, J.P., of "Calcamine," was born at Bunbury on March 4, 1866. He is the second son of the late Hon.

HON. WILLIAM SPENCER.

William Spencer, a merchant of that town, who came from Bristol, England, and was among the early settlers of the above district, spending sixty years of his life in the country of his adoption. The late Mr. Spencer played his part in the public life of the infant State, figuring in the political arena as a member of the Legislative Council for several

years, while he was an influential factor in local municipal government, serving for fifteen years as councillor for Bunbury and administering the office of mayor for a lengthy period. His name, which is closely interlinked with the history of the district, is well remembered by the residents among whom his memory will live for many years. Mr. George Clarence Spencer received his education at the Perth High School, subsequently attending the Commercial College in Norwood, South Australia. Upon his return from the Central State he became engaged on a dairy farm at Fussellton. Leaving this neighbourhood in 1888 he proceeded to the north-west and accepted a position on "Boothana" Station, whence he afterwards transferred to "Mardi" Station. In 1894 he worked as a prospector on the Coolgardie goldfields, where he remained for eighteen months, with very little return for his enterprise. Disheartened with the failure of his efforts in connection with the mining industry Mr. Spencer decided to settle on the land, and after inspecting various properties eventually purchased his present holding in the valley of the Avon. Consisting of 1,700 acres of land, undulating in character, and comprising wide stretches of good chocolate loam, the "Calcamine" Estate has proved itself splendidly

suited to mixed farming operations. The whole of the property has been cleared and subdivided into twenty-six paddocks, one-third of the whole

C. M. Nixon, Perth.  
MR. GEORGE CLARENCE SPENCER.

being brought under crop every year. Hay is cultivated in large quantities, while the locality has proved most favourable for the production of cereals. The stock on the farm consists of 1,000 sheep of the crossbred type, and there are also thirty horses, comprising both draughts and thoroughbreds. Mr.

Photo by C. E. Farr.

GENERAL VIEW OF "CALCAMINE" ESTATE.

Spencer has been in the habit of breeding draught horses for a considerable number of years, but it is only lately that he has turned his attention to the raising of racing stock, of which he is making a hobby. He has owned several horses of excellent pedigree which have achieved successes of no mean order in different parts of the State, among those worthy of special mention being "Kestrel," which won no less than fifty-three out of a total of 114 races for which he was entered by Mr. Spencer, and the mare "Calcamine," winner of thirty-three events, and now used for stud purposes on the estate. He breeds only from the best blood, and confidently looks forward to producing racchorses which shall hold their own on the turf against all comers. Among the improvements which Mr. Spencer has made on the property are the provisions for watering the stock by means of wells and windmills, with an up-to-date system of troughing. The homestead was built in 1897, since when, from time to time, alterations have been made and modern innovations introduced. The necessary sheds and stables are always kept in splendid order, and the outbuildings include a neat cottage for the use of the men at work on the farm. The

visitor, after a tour of inspection round the "Calcamine" Estate, will the handsome silver cups presented by *The Northam Advertiser* in

CUP AND SILVER WON BY MR. G. C. SPENCER FOR BEST MANAGED FARM IN DISTRICT.

certainly confirm the verdict of the judges who awarded to Mr. Spencer

1911-12 for the best-managed farm in the eastern districts of Western Australia. The gentleman under review has not been unmindful of his public duties, and has exercised a Commission of the Peace granted to him by the English Administration. For three years he served as a member of the Northam Roads Board, and he is associated with the local agricultural society, having acted as a committeeman of that body. He is a member of the Northam Race Club, and prior to his personal indulgence in this sport was identified with the committee of that organization. Freemasonry claims him as an adherent, his connection with the craft having extended over a decade. He is also a cordial supporter of all forms of manly outdoor sport, and rowed stroke oar for his college in the winning team in South Australia in the year 1881. Mr. Spencer keeps himself in touch with the doings of the world in general by the perusal of a wide range of up-to-date literature. He owns a motor-car and derives considerable pleasure from trips over the country by this modern mode of transit. In 1887 he was married to Clara Edith, daughter of the late Charles Morgan, agriculturist, of the Bunbury district, and has a family of two sons and three daughters.

"KESTREL," WINNER OF FIFTY-THREE RACES.

HERBERT WILLIAM HANCOCK, J.P., of "Roccliffe," near Northam, was born at Boyadine, near Beverley, on June 24, 1852. He is a son of the late George Hancock, who came to Australia from Devonshire, England, by the sailing vessel "Warrior" in 1830, about a year after the founding of the Swan River settlement, and who was numbered among the band of sturdy pioneers who played a worthy part in the early development of the country. When only fourteen years of age the subject of this notice left the parental roof-tree in order to accompany the first party overland with stock from the Beverley district, with the end in view of forming a pastoral station in the then little known north-west. Proceeding from the southern settlement with 2,000 sheep and two teams of horses, in addition to the necessary equipment for exploration work and all the paraphernalia required for an extended period of camp life, the party, travelling *via* the Murchison district, soon touched unexplored territory, and after thirteen months' journeyings, arrived at the Sherlock River, about 35 miles in an easterly direction from the port of Roebourne. Here they decided to divide forces, and the party, consisting of the two Fisher brothers, Mr. Hicks, and young Hancock, with an elder brother of the latter, broke up in order to begin independent operations. The Messrs. Hancock, taking up a tract of country on the Sherlock, formed there the

"Woodbrook" Station, stocking it with 200 sheep—their share of the original flock brought from Beverley; but owing to the death of their

C. M. Nixon,

Northam.

MR. HERBERT WILLIAM HANCOCK.

father some four years later, the gentleman under review returned to the Beverley homestead, and remained there for about three years in the active administration of the estate. Affairs having been straightened out, he again set out for the north-west in company with his brother and Mr. Donald MacLeod, and on this occasion they took with them a mob of cattle and some horses. The trip, however, proved

most disastrous on account of the drought, and the cattle had to be abandoned owing to the scarcity of water, a few being recovered some six months later after the rains had fallen. For four years Mr. Hancock continued the development of the "Woodbrook" Station, at the end of which period he again returned to manage the estate at Beverley, in which he subsequently purchased his mother's interest, after disposing of the property in the north-west. Mr. Hancock resided there for about twelve years, during which time he married Alice Jane, daughter of the late Thomas Wilding, of "Mokine," and had a family of one son and four daughters. He then sold out, and coming to the valley of the Avon, acquired the property at Spencer's Brook known as "Roselyn" (now in the possession of his only son, Mr. F. G. Hancock). For over twenty years Mr. Hancock devoted his principal energies to making this beautiful estate one of the show places of the district, and whilst still resident there seized an opportunity of purchasing from Mr. W. T. Loton 1,600 acres of land at the figure of £4 10s. per acre. This was practically unimproved at the time of purchase about ten years ago, and subsequent to the death of Mrs. Hancock he transferred "Roselyn" to his son, and having remarried, determined to take up his residence on the new property, which lies about a mile from the town of Northam, and with the assistance of his wife forthwith proceeded upon its development.

Photo by C. M. Nixon,

MR. H. W. HANCOCK'S RESIDENCE, NORTHAM.

The homestead which was built by them about this time possessed all the features of a thoroughly up-to-date modern dwellinghouse, being of brick and stone on the bungalow design, with wide verandahs, and containing ten rooms. Water is laid on all over the house, which is surrounded by the garden and orchard, well laid out and thoroughly irrigated by means of the district water supply scheme. Roses, too, are a feature—the soil and climate being well suited to the production of these exquisite growths, and many other choice blooms flourish, each in its season. Further afield are the cultivation paddocks, and browsing in the pastures may be seen the Shropshire stud sheep, in the breeding of which Mr. Hancock specializes. He has been very successful as a sheep farmer, and has carried off many prizes and awards at the Royal Agricultural Society's Show at Perth and at similar functions throughout the country districts, for his high-class crossbred stock, which is well and favourably known throughout pastoral circles in Western Australia. Mr. Hancock has given a portion of his attention to the public affairs of the district, and was one of the founders of the local agricultural society, in which for a lengthy period he has acted as committeeman, and

has also held office as president for a couple of years. He is considered one of the best judges of sheep in Western Australia, and was specially selected by the Government to proceed to the Eastern States for the purpose of selecting breeding ewes

the "sport of kings," he acts as handicapper to the Eastern Districts Racing Association, and is concerned with all the leading events of the neighbourhood. For seventeen years Mr. Hancock has occupied a seat on the Northam Roads Board,

Photo by C. M. Nixon.

GROUP OF SHROPSHIRE SHEEP.

to supply the settlers on the newer areas of the West with a thoroughly reliable stock with which to found their flocks. He was also concerned in the foundation of the Northam Race Club, and has served on the committee of this organization, besides filling the office of judge almost since its inception. A great lover of

during seven of which he has served as chairman, which office he now holds. He was appointed to a Commission of the Peace by the Wilson Administration. He is a Freemason of long and honourable standing, being connected with Lodge Avon, W.A.C., and is a member of the Northam Club.

CHAFFCUTTING PLANT AT WORK.

ALBERT EDWARD LOCKYER, of "Hampton" Farm, is the eldest son of the late Joseph Lockyer, of whom an interesting review appears hereunder. Born on his present property on February 3, 1867, Mr. A. E. Lockyer was educated privately and at the State School at Northam, and in his sixteenth year proceeded to Perth, where he entered the office of Messrs. Wright and Patterson, architects, with whom he remained for some eighteen months, at the end of which time he proceeded to his father's farm at Roleystone. After a few months he once more became engaged in commercial life by joining the staff of the Equitable Life Assurance Society, but a year and a half later threw down the pen in order to journey to Roebourne, where he was first a guest of Mr. Robert Clarkson on "Karratha" Station. His taste inclining to outdoor life he became a paid station hand, and during two years in that district acquired useful knowledge of pastoral affairs, such as the handling of sheep, cattle, etc. He then returned to his father's property and farming occupied his time for a further two years, at the end of which time his roving disposition again asserted itself, and taking passage to Roebourne he entered the employ of Messrs. Lockyer Brothers on "Cooyapooya" Station, with whom he remained for five years. He next entered into partnership with his cousin, the late A. B. Lockyer, and acquired a lease of 100,000 acres some 30 miles east of Roebourne, on the Harding River, to which the name of "The Springs" was given. The property was stocked with sheep, cattle, etc., and during the ensuing three years many improvements were brought about. Mr. Lockyer then sold his interests to his cousin and returned to the home farm, where he has centred his interests ever since. In addition to his work on "Hampton" Farm, he owned "Mortlock," a property of some 600 acres, which he worked and improved in his own interest, when, finding the demands on his time to be over heavy, he sold the estate in 1910, by which time two-thirds of the property

had been cleared and subdivided and a considerable length of fencing erected. Mr. Lockyer now gave his attention to developing "Hampton"

Bartletto, Perth.  
MR. ALBERT EDWARD LOCKYER.

Farm, and so continued until the death of his father, when the last-named property and the adjoining estate, "Blackboy Hill," were equally divided, the home farm falling to the lot of our subject and

"Blackboy Hill" to Mr. E. S. Lockyer, his brother. "Hampton" Farm embraces about 1,500 acres, all of which are highly suitable to cereal growing and sheep pastures. The country is heavily timbered, and clearing is effected first by ring-barking, after which the firestick is brought into play, some 500 acres having been cleared at a cost of £2 per acre. There is a good average rainfall, and flowing through the property for from two to three miles is the Avon River, this valuable water supply being augmented by soaks and some half-dozen wells from which water is drawn by means of syphons. Ten paddocks have been formed, and the boundary is almost completely fenced. The soil varies over the estate, and in some parts is very heavy and difficult to work, but the average returns are very satisfactory, that for wheat being about 13 bushels to the acre. The grain has splendid milling qualities, the popular "Federation" being mostly sown. Superphosphates are introduced in quantities of about 75 lb. to the acre, and with the system of fallowing adopted excellent results have been obtained. The flock contains about 500 merinoes, and in the past the splendid average of 6 lb. to 7 lb. per

Photo by C. E. Farr.

"POULTON," RESIDENCE OF MR. A. E. LOCKYER.

fleece has been cut, while the wool is of good quality and sells at top prices. No particular strain stands out in the flock, but a good class of ram has always been used and the sheep have displayed sturdy traits. The annual drop is satisfactory, 85 per cent. having been maintained in the past. A few horses are bred every year, about a score being kept principally for the work of the farm, but a few thoroughbreds of a lighter class are in evidence for saddle work and harness. The old homestead, which was erected in 1857, still stands, and here Mrs. Lockyer, sen., resides with one of her daughters. Though in her eighty-third year Mrs. Lockyer still retains her full faculties, is healthy and strong, and can take her share in the active duties of the farm. Surrounding the homestead are the outbuildings, including stabling for ten horses, cart-sheds, etc., and a shearing-shed, measuring 60 by 20 ft., and containing some half-dozen stands. Mr. A. E. Lockyer, like his father, is a great lover of horses, and since his sixteenth year has done much riding. In 1884, riding as an amateur for Dr. Scott, he won the Queen's Plate (afterwards to become the Perth Cup) on "Flemington," and for the same owner captured the Forrest Cup, presented by the late

Alex. Forrest, and the Hordern Cup, presented by Mr. Anthony Hordern, on "Young Banker," besides numerous other leading events on the

"Kronor," by "Gerard" by "Trenton," and "Briza," by "Carbineer" by "Carbine"—and winning brackets are expected from these two at no

MR. A. E. LOCKYER'S OLD HOMESTEAD.

metropolitan courses. At twenty-five years of age he became an owner of racehorses, and since that time has never been without a thoroughbred or two. He has raced in his own interests at Perth, York, Bunbury, Roebourne, Derby, and many other centres, and numerous important races have been captured by horses owned and trained by him. At the present time (1913) he has two six-year-olds at "Hampton" Farm—

distant date. The Northam Race Club claims him as a member, and he is also a member of Tattersall's, Perth. At Roebourne he sat on the Table Lands Roads Board for twelve months, and while not actively connected with any of the institutions at Northam he is, nevertheless, a keen supporter of all movements for the advancement of the locality wherein his home is situated. Mr. A. E. Lockyer married in 1898

BLOOD STOCK AND CLYDESDALES, "HAMPTON" FARM.

Maude, daughter of the late A. B. Lockyer, of Goomalling, and has four sons. He resides on "Hampton" Farm in a new house erected in 1904, to which he has given the name "Poulton," in memory of his father's birthplace in England. The late JOSEPH LOCKYER, one of the many intrepid spirits to brave the dangers and discomforts of the new world, was born at Poulton, Somersetshire, England, in 1813, and spent by far the greater part of his life in the Western State. He took passage by the "Hooghly," commanded by Captain Reeves, and in February, 1830, landed at Clarence, near Fremantle. The immediate Lockyer party voyaging by the "Hooghly" was a large one, consisting of Mr. and Mrs. Paul Lockyer, their eldest son James with his wife and young children, four other sons (Paul, John, Joseph, and Thomas), and two daughters. One of the daughters married a Mr. Lawson, an English barrister, who subsequently succeeded to a baronetcy and returned to England, and the other, who also married, left with her husband for South Australia in the early forties, while Messrs. John and Paul Lockyer the younger also settled in the Eastern States. Mr. Paul Lockyer, senior, was a millwright by trade, and with his son James built the old wind flour-mill at Mill Point, South Perth

—the first flour-mill erected in the State—and also acquired large landed interests in that part of the metropolitan area. Soon after the

MR. JOSEPH LOCKYER.

arrival of the family in the State Mr. Joseph Lockyer became celebrated as an amateur horseman, and being passionately fond of the sport, at a time when good horsemen were scarce, his services were much in demand, and he soon established a name for being the finest horseman

of his time. He took part in the first race meeting ever held in Western Australia, at Hamilton Hill, situated at the back of Woodman's Point, this important event occurring in the early thirties, and from that time onward for over half a century his connection with the turf continued, either as a rider, owner, or trainer of horses. He never rode for money, but always for the love of racing, and even up to the age of seventy continued to ride in races, his companions and competitors frequently being the present Chief Justice (Sir Henry Parker) and Mr. A. O'Grady Lefroy (father of Mr. H. B. Lefroy, M.L.A.). Among the horses that he owned and rode were "Southern," "Beeswing," "Erin-go-Bragh," "Sophie," "Jennie," "Waverley," "Selim," "Margot," and "Young Stirling," and with these he won innumerable races, his successes including two Queen's Plates with "Southern" and "Erin-go-Bragh." The Queen's Plate—the forerunner of the Perth Cup—even in those days was an event of no small importance, the prize being provided by the Imperial Government with the object of encouraging the breeding of horses suitable for remounts for the Indian Army. On one occasion Mr. Lockyer was seriously injured by an accident while racing, and *The Perth Gazette* of the time recorded the fact that because of his advanced years much anxiety was felt as to his recovery—a paragraph which the subject was shown and laughed over forty years later! In the early forties Mr. Lockyer sailed for South Australia, but upon landing conceived a prejudice against the place and determined to come back by the very next boat. This decision he carried out, but so infrequent was communication in those days that he had to wait eighteen months before an opportunity occurred by which he could make good his word, and this trip ended his wanderings, as he never again left the country of his adoption. Upon his return, in partnership with his brother Thomas, Mr. Lockyer acquired the fine grazing property on the north bank of

ORIGINAL HOMESTEAD ON "HAMPTON" FARM.

the Avon River known as "Hampton" Farm, where he spent the remainder of his days, and in 1855, under the direction of his elder brother James, who came down from Perth for that purpose, the brothers commenced to build the flour-mill which still stands on the property. This was the first mill erected in those districts, and carved on the brickwork on the

mail contract from Guildford to York, and it is related of him that on more than one occasion he left his horse at the halfway house and walked to York and back merely to rest the animal. He married in 1859 Lydia, daughter of the late Mr. Simmons, of Essex, England. Mr. Lockyer died at "Hampton" Farm towards the end of 1912, having attained the ripe old

above referred to, was born at "Hampton" Farm on January 19, 1874. He was educated principally at the Northam College, a private

Photo by C. E. Farr. A TEAM ON THE "BLACKBOY HILL" ESTATE.

front of the mill is the inscription "T and J.L., A.D., 1857." The driving-power was provided by horses, and the mill was so substantially constructed that to-day the whole of the structure and equipment are still in a good state of preservation.

Like all the early settlers, Mr. Lockyer had to put up with a great many hardships, but his industry, good health, and abstemious manner of living stood him in good stead, and in course of time prosperity crowned his efforts, and he became a landed proprietor of considerable importance. Other properties acquired by Mr. Lockyer were "Roleystone," near Armadale, now in possession of his son, Mr. Lionel Lockyer, of "Blackboy Hill," near Northam, where Mr. E. S. Lockyer now resides. In addition to his farming properties he also owned the South Perth Racecourse. Apart from racing he was a great lover of horses. At one time he had

age of ninety-nine years and five months. He left three sons, two daughters, and seventeen grandchildren. For many years he was a regular worshipper at the old church of St. James, which was demolished some years ago.

C. M. Nixon, Northam.  
MR. ERNEST SIMMONS LOCKYER.

institution under control of the Rev. T. Kemm, having previously attended the Government school at St. George's Terrace, Perth, under the late William Bell. At sixteen years of age he went to work on the home farm, and in the absence of the other two sons became his father's right hand in the management of the estate. He remained at "Hampton" Farm until a division of property was made by the late Mr. Lockyer, when that portion situated on the

Goomalling Road, about two and a half miles from Northam, and known as "Blackboy" Hill," fell to his

share, and he commenced operations on his own account. The estate, comprising 1,761 acres of land, is undulating in character, and nine-tenths of the whole is well suited to purposes of agriculture, while as a grazing farm it is hardly to be surpassed. About 500 acres are cleared at the present time, almost the whole of this work having been accomplished in the ten years of the present owner's occupancy, as prior to his entering into possession the land was not used for tillage. He is now clearing yet more rapidly, about 100 acres a year being a good average, and other improvements are being carried on in the same progressive spirit. The property is substantially fenced with seven wires and droppers and posts of jam planted 12 feet apart; eight paddocks have been formed, of convenient size for cultivation purposes and handling of the stock. Water is easily obtainable within 10 feet from the surface, and numerous wells have been sunk, from which an adequate supply is secured. The homestead is situated about half a mile from the Goomalling Road, and commands a beautiful view of the surrounding country. The rooms are large and comfortable, and in the vicinity of the house outbuildings have been erected to suit the present requirements of the farm. Close to the homestead is a small orchard, which provides sufficient fresh fruit for the necessities of the household. A flock of sheep, numbering about eight hundred, is grazed on the estate, and these, consisting chiefly of crossbred merinoes, are grown principally for the mutton markets, while early lambs for local consumption are also raised in fair numbers. A few horses only are kept for the use of the farm, but these comprise fine specimens of the best Clydesdale blood, Mr. Lockyer being a firm believer in breed. For many years he has been a member of the local racing body, and gives his patronage and support to all movements having as their object the general advancement of the Northam district. He is a member of the agricultural society, but apart from this and a few public functions has little time to devote to outside matters, the development of his farm absorbing the whole of his time and attention. He married in 1901 Helena, eldest daughter of Mr. Alfred Twine, a resident and native of Toodyay district, and has two sons and five daughters.

JOB BEARD, who resides at "One Tree Hill," about eight miles distant from Northam, is the second son of the late Cornelius Beard, a

MR. CORNELIUS BEARD.

colonist of over half a century's standing at the time of his death. The gentleman under review was born in the Northam district on May 9, 1862, and at an early age went to work on his father's farm, which at a later date was divided, Mr. Job Beard receiving as his share

C. M. Nixon, Northam.  
MR. JOB BEARD.

one-third of the whole, an area comprising 600 acres. He has since acquired on his own account over 2,000 acres in the Meckering district, and has carried on operations with energy and success. About 800

acres are under cultivation, the land being tilled and fallowed alternately, and wheat, oats, and hay are the principal crops produced. The estate carries a flock of 1,000 merino sheep, which are grown for the wool and mutton markets, and about twenty horses, which are replaced from time to time by younger stock bred on the property. Mr. Beard is a member of the committee of the Jennapullen Agricultural Society, and he makes a hobby of the breeding of prize sheep, having been most successful in this regard in the show ring. He married in 1885 Esther, daughter of the late J. Biddle, an early English arrival at Northam, and has four sons and three daughters surviving.

EDWARD WITHERAGE COTTON, of "Muresk," one of the fine old properties founded by the early Western Australian settlers in the valley of the Avon prior to the influx of population brought about by the gold discoveries in the eastern districts, is a native of South Australia, where his birth occurred on March 1, 1870. He is a son of the late Hon. George Witherage Cotton, a member of the Upper House of the Legislature of that State at the time of his death, whose name was closely interlinked with the public life of South Australia for a number of years. He was instrumental in settling much of the land with a large industrial population, and was the originator of the "Working Men's Block" system, which has proved such a marked success. As a noted "high finance" advocate he strongly approved of the institution of State banks. Upon his demise many honours were paid to his memory, and he was said by the leading spirits of the time to have lived half a century in advance of his era. Mr. E. W. Cotton received his education at Prince Alfred College in Kent Town, near Adelaide (where he gained the Malpas Scholarship for Science), of which institution his father was one of the founders and honorary secretary for a quarter of a century. Upon the conclusion of his scholastic career he decided to enter upon a pastoral life, and with this end in view became one of the students at Roseworthy Agricultural College upon the opening of its earliest session. Here he distinguished himself by securing one of the first diplomas for practical agriculture, agricultural

chemistry, and geology ever granted by the institution, and upon leaving there embraced a good opportunity of obtaining practical experience by accepting the offer of a position in Western Australia with the late Mr. Andrew Dempster, the founder of "Muresk." After spending a couple of years in pastoral pursuits at

MR. ANDREW DEMPSTER.

Esperance Bay he returned to South Australia and proceeded to the fruit-growing settlement at Renmark to learn the science of surveying in connection with irrigation. This knowledge he was able to put to practical use in the settlement and development of "Muresk" when he again joined Mr. Dempster in the Western

State, that gentleman meanwhile having turned his attention to his property in the Avon Valley, which he had owned for some years previously. In 1894 Mr. Cotton married Mary Catherine, the late Mr. Dempster's eldest daughter, and having previously purchased a portion of the property continued to reside thereon until the death of his father-in-law, when he was left sole executor and trustee of the estate. In accordance with the terms of the will, "Muresk" was put up to auction, and his wife purchasing it thus came into possession of a portion of the old homestead lands, which now embrace "Hope" Farm, the property bought by Mr. Cotton prior to the decease of the late Mr. Dempster and worked by him as an independent enterprise. The estate now comprises nearly 2,500 acres, over 1,000 acres of which clearing operations have been completed, while about a quarter of the whole area is cropped annually, the yield being far above the average of the district both for wheat and hay. A flock numbering in the vicinity of 2,000 sheep and some horses and cattle are grazed on the property, the latter classes of stock being chiefly for use on the farm, although a few find their way to the market. The homestead, erected in 1890, is a substantial brick structure of one storey, with a wide verandah running all round the building. It contains thirteen large rooms and a fine hall, where light and ventilation have been made matters of the first importance, the thick and lofty walls preserving interiorly a coolness of atmosphere

very welcome in the hot summer season. In every particular "Muresk" may hold its own as one of the most delightful country homes

MR. EDWARD WITHERAGE COTTON.

in Western Australia. The out-houses are on a par with the residence for commodious accommodation and suitable appointments, according to the use for which each is designed, while the whole equipment of the farm is of very modern character. Orchards and vineyards cover an area of 20 acres, and a six-acre garden supplies the household with vegetables. Mr. Cotton makes a study of scientific fruit-growing, and keeps himself thoroughly conversant with all matters connected with up-to-date farming. He has two daughters.

HOMESTEAD AND OUTBUILDINGS AT "MURESK."

WILLIAM JOHN MORGAN, J.P., owner of the "Bardeen" property in the Northam district, was born on the estate where he now resides on January 18, 1845. His father, the late Abraham William Morgan, came originally from Somersetshire, England, in the year 1831, and after residing for a period in Perth, subsequently found his way to the then remote regions "beyond the ranges," where a Government grant of land (T. 1 and T. 2), which had been made to his father, was awaiting development. Upon arrival at the locality the property was taken up and called "Bardeen," and operations were begun for the working of the land, which comprised 2,000 acres. At a later date another 1,000-acre block was added to the original grant, forming in all a nice little property of 3,000 acres, which has remained intact up to the present time. After the death of the late Mr. Morgan in 1871 it reverted to his only son, who forms the subject of this memoir. Mr. William John Morgan was educated at Bishop's College, Perth. Upon the termination of his scholastic career he returned to "Bardeen," where he directed his energies to mastering the

fenced, and subdivided, and about 600 acres of this area placed annually under crop. Wheat is grown in large quantities and harvests are reaped yielding from fifteen to twenty

MR. WILLIAM JOHN MORGAN.

bushels to the acre. Oats have also proved a very profitable proposition, and considerable attention has been given to the raising of this cereal. In fruit-growing, too, Mr. Morgan has met with conspicuous success; and

fruits, etc., and has proved a source of profit, besides providing ample fresh fruit for use in the household. Mr. Morgan, as one of the oldest residents of the district, has watched the growth of the place with interest, and has always played a worthy part in advancing all movements having as their object the improvement of the district and the welfare of the community. For the long period of thirty years he served continuously as a member of the Northam Roads Board, and at various times filled the office of acting-chairman of that body; while he was actively concerned in the foundation of the local agricultural society, and did worthy work as a member of its first committee. He also was a moving spirit in the early days of the Northam Race Club, and for many years followed this sport with unabated enthusiasm, owning several racehorses, and supporting the various clubs of the district. He is a Freemason of long standing, having been associated with the craft since 1877 and taken a Master's honours therein. Mr. Morgan is one of the oldest Justices of the Peace in the district, having received his commission from the Imperial authorities in

Photo by C. M. Nixon.

"BARDEEN," THE PROPERTY OF MR. W. J. MORGAN, NORTHAM.

details of the agricultural industry, and where he has continued in these pursuits ever since. About 1,600 acres of the property are cleared,

the vineyard, where a fine variety of grapes ripens in the season, covers about 14 acres of ground. The orchard contains apple-trees, stone

the days preceding responsible government in Western Australia. He was married in 1873, and has a family of two sons and six daughters.

JAMES McMANUS, farmer, of "Minathorpe," was born at Irish-town, about six miles from Northam, on September 30, 1863, and is a son of the late James McManus, who came from the Emerald Isle to Western Australia in 1855, two years later settling in the above-mentioned district, where he was engaged in the agricultural industry for a number of years. He received his education in his native place, and upon entering his teens was perfectly at home in the management of the plough and other work on the farm. Having attained his majority, he proceeded to the north-west, where he was employed on stations for a couple of years. Returning to Northam, he began farming on his own account, in the first place on a rented property; but he subsequently purchased a holding of 600 acres at Irishtown, and at a still later date took up land from the Government, which he afterwards disposed of. In 1891 he imported and worked the first steam-travelling chaffcutter in the Northam district; and in 1899, whilst in Melbourne, he purchased a "Sunshine" harvester, which he shipped to Western Australia, this machine also being the first of its kind to find its way to the eastern agricultural belt. In 1908 he purchased over 2,000 acres situated about three miles from Northam, and has since devoted his energies to the cultivation of cereals and hay and the raising of crossbred sheep. He is also a breeder of Clydesdale horses, having purchased the station stallion "Laurence Drew," which is from one of the best strains in New Zealand. Mr. McManus

in 1912 had 1,500 acres under crop and 1,200 acres fallowed. In the previous year he purchased an additional 1,250 acres at Wongamine, about 12 miles from Northam, which he also proposed to use as a cereal-growing proposition; and, as an illustration of the progress made in the agricultural industry during the past few years, it may

MR. JAMES McMANUS.

be of interest to remark that, whereas in the season of 1887, with two horses and a single-furrow plough he cultivated 45 acres, at the present time (1913) he has about 3,000 acres prepared for cropping. In 1912 he started the bulk handling of wheat from the farm to the mill, delivering the first load of wheat in bulk at W. Thomas & Co.'s mill on January 17, 1913, this being the pioneer enterprise of its kind in the

State. For nearly ten years Mr. McManus served as a member of the Northam Roads Board, and he also held office as a member of the land board for the district during a couple of years. He has been honoured with the vice-presidency of the agricultural society, of which he has been a committeeman for a lengthy period, doing much to advance the cause of the agriculturist in the neighbourhood by his painstaking labours in connection with this body. For about twelve years he held the position of secretary of the Irishtown Farmers' Club and, in conjunction with Mr. John French, was instrumental in the erection of the Irishtown Agricultural Hall, which was opened by Sir John Forrest in 1894, and has the distinction of being the first institution of its kind in the eastern agricultural districts. Mr. McManus is the present chairman of directors of the Northam Brewing and Refrigerating Company. In his younger days he took a prominent part in the movement of the Ancient Order of Foresters, and served for many years as one of the trustees of that order. For recreation he has recourse to bowls, and has had an up-to-date bowling green laid down in the grounds surrounding his private residence. He is a general reader of wide range, and keeps himself well versed in the news of the day from all quarters of the civilized world. A member of the Northam Club he has been connected with this body almost from its inception. In 1887 he married Honora, daughter of the late James Foley, of Wongamine, and has five sons and one daughter.

RESIDENCE OF MR. J. McMANUS, NORTHAM.

GEORGE THOMAS WILKERSON, of "Oakfields," Northam, is a son of Mr. James Wilkerson, who came from England to Western Australia among the earliest of the settlers in this State, and who now lives in retirement at Northam. The gentleman under review is a native of the district, having been born at Katrine on March 20, 1857, and pursued his studies at the local Government school under the tuition of one of the first teachers to fill a public appointment of the kind in that neighbourhood. At fourteen years of age he went to work on his father's "Glen Avon" property,

MR. JAMES WILKERSON.

situated about midway between Toodyay and Northam, and one of the oldest farms in the district. Some years later, at the time of his marriage, Mr. Wilkerson launched out on his own account, taking over the old homestead at "Oakfields," with the surrounding land, on lease from his father, and here he has continued in farming and pastoral pursuits ever since. In 1905 a modern dwellinghouse was erected, which presents a very substantial appearance, being built of brick with stone foundations, and containing eight rooms, with hall and kitchen, the whole being well lighted and ventilated. This is favourably situated on rising ground lying back a short distance from the Toodyay-Northam Road and about four miles west of Northam. It is surrounded by fruit-trees, Mr. Wilkerson possessing great skill as an orchardist and making a hobby of horticulture. The property

comprises over 5,000 acres of mixed land surrounding the homestead, and of this over 1,200 acres have been cleared and cultivated on the approved system of cropping and fallowing in alternate seasons. From four to five hundred acres are cropped annually with wheat and hay, and excellent harvests are the rule, the soil and climate being specially suited to the production of these crops. About half of the entire area of the property is applied to grazing purposes, and the pastures carry some 3,000 merino sheep, the quality of the flock being continually renewed by the introduction of representatives from Mr. Loton's "Springhill" property, and occasionally varied by South Australian stock, which have been found to produce good results. All the horses necessary for the work of the farm, chiefly of the Clydesdale type, are bred on the estate, and a few are sent to the market, where they command satisfactory prices. The "Oakfields" property has a frontage of three and a half miles to the Avon River, and is well watered by permanent springs and soaks, a few wells having been sunk to augment the supply. The whole is surrounded by fences constructed with posts of jam and white gum, strung with six wires, and subdivision has been made into close on twenty paddocks, the entire length of fencing running into from 40 to 50 miles. Mr. Wilkerson has occupied a seat on the local roads board for the past sixteen years; and in this connection it is interesting to note that his father before him was identified with the same board for the lengthy period of twenty-seven years, during which time he frequently filled the position of chairman. He has been

a member of the Toodyay Agricultural Society ever since the inception of that body, and is also associated with the similar organization at

C. M. Nixon, Northam.

MR. GEORGE THOMAS WILKERSON.

Northam, for several years having served as a committeeman of the latter body. He takes a warm interest in the welfare of the Anglican Church at Katrine, where he serves as a member of the vestry. Among the other societies to which he has given loyal support are the Masonic fraternity, with which he has been connected for a decade, and the local lodge of the Ancient Order of Druids, the roll of which has registered his name for over a quarter of a century. Mr. Wilkerson married in 1878 Eliza Ann, daughter of the late Charles Betts, and of a family of fifteen children nine sons and three daughters survive.

MR. G. T. WILKERSON'S RESIDENCE, NORTHAM.

HARRY FERMANAR THROSSSELL, of "Oakover," Northam, is the second son of the late Hon. George Throssell, and was born at Northam on October 9, 1872. He received his education at the local State school, concluding his scholastic career at Prince Alfred College, Adelaide, where he spent three years. At nineteen years of age he returned to Western Australia and entered upon commercial pursuits in the business carried on by his father at Northam (now known as Throssell, Son, & Stewart), where he continued for about six years. In 1900 he retired from mercantile life and turned his attention to the agricultural and pastoral industry on "Oakover" Farm, purchased by the late Mr. Throssell some thirty years previously. The estate embraces about 1,800 acres of rich chocolate soil, and is situated three miles from Northam, on the York Road. An avenue two miles in length winds through the rich pastures lying between the main road and the house, which is built of brick and contains nine rooms, a wide verandah encircling the whole building. The stables are substantially constructed, while a barn and machinery shed have also been erected, and close by stands a comfortable little cottage for the use of the married

couple employed upon the estate. About 1,400 acres of the estate are cleared—the remainder being ringbarked — and fine crops of

C. M. Nixon. Northam.  
MR. HARRY FERMANAR THROSSSELL.

wheat and hay are annually reaped from a large area of this prepared land. The pastures are dotted with sheep of the crossbred type, in the season each woolly mother being followed by her offspring, many of which are destined for the early

spring lamb markets. The farm horses number over thirty representatives of the Clydesdale strain, and breeding within strict limits is carried on to keep up the supply of young blood. Three pedigree mares of lighter type are also kept, and these, mated with the most fashionable sires in the district, produce valuable stock. Mr. Throssell, since his tenth year, has been associated with the Lodge of Good Templars, in which he has taken a prominent part, never failing to advocate the principles of total abstinence from alcoholic liquor in which he was brought up. He has had some military experience, holding commission for six years as lieutenant in the local company of mounted infantry. A deep reader, he peruses works of travel and history with keen interest and spends many hours in this fascinating pursuit. Mrs. Throssell is a keen floriculturist and a large exhibitor at the local and other agricultural shows, where she has been the successful winner of many prizes. Mr. Throssell married in 1894 Laura, daughter of the late W. L. Smeed, of Bayswater, who, with his two sons, daughter, and three grandchildren, lost his life by a boating accident on Wilson's Inlet. There is issue by this union one son and four daughters.

MR. H. F. THROSSSELL'S RESIDENCE, NORTHAM.

STANLEY FREDERICK ANDREW PARKER, of "Stackallan," near Northam, is a native of this State, having been born at Perth on July 3, 1872, his father being the late

MR. FREDERICK PARKER.

Frederick Parker, also a son of Western Australian soil, the date of whose birth was January 6, 1845. The latter gentleman was a son of the late Stephen Stanley Parker, M.L.C., one of the early pioneers and brother to Sir Stephen Henry Parker, Chief Justice of Western Australia and the first native-born citizen to hold this important and dignified post. The subject of this brief review pursued his studies at the High School, Perth, and upon the completion of his educational course proceeded to Busselton to gain an

insight into the operations of mixed farming on the property owned by Mr. Gale, where he remained three years. He next purchased a property at Seabrook, in the Northam district, and launched out on his own account, meeting with considerable success. In 1906 he disposed of his Seabrook estate, and coming nearer the town of Northam he acquired from Mr. Byfield nearly a thousand acres of land. Here he erected one of the most substantial and well-appointed residences in the district—a twelve-roomed villa built of stone after the latest design, with wide handsome hall and particularly lofty well-ventilated rooms. Practically the whole of the "Stackallan" property is cleared and devoted to mixed-farming operations, a specialty being made of hay-growing, the harvest averaging up to 3½ tons of hay to the acre. The area brought under cultivation varies in different seasons, but is generally in the vicinity of 300 acres. A fine flock of pure-bred Dorset horned sheep, in the original instance imported from England, graze on the pastures, and are regarded as a general-utility product, their lambs maturing very early and finding a ready sale in the local markets, where they are invariably first in the field. Light harness and draught horses for use on the farm are bred in small numbers, and Mr. Parker makes something of a hobby of the breeding of ponies. He has been an exhibitor of cattle, sheep, and horses both at the local and Royal Agricultural Society's shows, and has met with considerable success in his ventures along this line,

being a winner of various trophies for his different classes of stock exhibits. He gives a good deal of time and attention to the affairs of the Northam Agricultural Society, of which he is a member and committeeman. He is associated with the local race club, taking a certain amount of interest in "the sport of kings" on his own account, while he is keen on

C. M. Nixon, Northam.  
MR. S. F. A. PARKER.

polo, in which strenuous game he takes his recreation, and acts as honorary secretary to the Northam Polo Club. He is also a member of the Northam Club. Mr. Parker married in 1908 Nellie, daughter of Mr. H. Forward, of Grass Valley, Western Australia, and has one son and two daughters.

MR. S. F. A. PARKER'S RESIDENCE, NORTHAM.

RICHARD HENRY MIDDLETON, of "Broomfields," near Northam, is a Western Australian by birth, having been born in the Middle Swan district on November 13, 1873. He is a son of the late Richard Middleton, one of the pioneers of that part of the State who came originally from Shropshire and entered upon pastoral pursuits in his

MR. RICHARD MIDDLETON.

adopted country, dying in the prime of life, when his son, the subject of this memoir, was only two years of age. Mr. R. H. Middleton's mother was among the earliest of the white children born in Western Australia. He received his education at Guildford under the late Canon Sweeting and continued his studies until the

age of sixteen, at which early period he launched out on his own account, taking up a pastoral lease in the Jennapullen district. From small beginnings he advanced step by step until in 1908 he purchased his present holding of nearly 4,000 acres of freehold property, three years later erecting the modern homestead where he now resides. It is built of brick and contains eight large rooms and a spacious hall, the comfortable and tasteful furnishings giving to the interior the unmistakable atmosphere of home. In keeping with the residence are the various outbuildings, which have been carefully planned to meet the requirements for which they are designed, while a flower garden adds the finishing grace to the home. Since Mr. Middleton entered into possession of the estate he has pushed forward agricultural operations, and close on 1,000 acres are now under cultivation of hay and cereals, about 20 bushels of wheat to the acre being the average yield. A flock of 2,000 sheep is grazed on the property, which is kept for market purposes solely, a number of early lambs finding their way to the saleyards, while sheep are despatched in large numbers direct from the pastures to supply the local demand for mutton. Purchase from other flocks is made from time to time, and the sheep fatten rapidly in this favourable locality, the natural grasses and climatic conditions combining to produce a healthy animal, whilst a further advantage is that no long and condition-destroying journey need be taken before a market is

found for the stock. There are usually about twenty-four horses on the farm, and a few are bred each season in order to replenish the supply with young stock

MR. RICHARD HENRY MIDDLETON.

as occasion demands. Mr. Middleton interests himself to some extent in the public organizations of the district and is a member of the Northam Agricultural Society. He also serves as a member of the vestry of the Anglican Church at Katrine. His chief recreation is found in reading, literature of a general character receiving a fair share of his attention. He was married in the year 1909 to Laura, daughter of the late Simeon William Viveash, of Katrine, and has one son and one daughter.

Photo by C. E. Farr.

RESIDENCE OF MR. R. H. MIDDLETON, NORTHAM.

"KATRINE," the property owned by Mr. Lionel Waterman Viveash, near Northam, was established amongst the earliest of the

MR. SIMEON WILLIAM VIVEASH.

homes of the eastern agricultural districts, at the time when the land in that part of the country was used for pastoral purposes only. About the year 1838 Mr. Viveash's grandfather purchased the property from the late T. Lyttleton, its first owner, who had taken up 2,660 acres of the undulating land which is a feature of the district, and which, timbered lightly with jam, had proved to be first-rate country for grazing purposes. Subsequently, its value as a wheat-producing proposition was also tested, when very fair crops were obtained. Hay was also grown with satisfactory results, and since the first experimental cultivation was done the agricultural department of the industry has assumed large

proportions. At present time about 1,700 acres are devoted to cropping, the system favoured by Mr. Viveash being to cultivate about 600 acres annually with wheat and hay, the remainder, after lying fallow for a season, being prepared for its turn of seeding. Peas are also grown in large quantities for the fattening of the stock, which have been found to thrive well with the aid of this class of fodder. The estate has about a mile and a half of frontage to the Avon River, which provides easy facilities for watering purposes, and in other respects it is easily worked as a pastoral station, both sheep and horses being run on the property. The flock consists mainly of merinoes and crossbreds, bred chiefly for the mutton market; and a good trade is done in early lambs. "Katrine" carries from 800 to 1,000 sheep, but this number is largely augmented on the leased property held by Mr. Viveash in the neighbourhood, comprising about 8,500 acres. Altogether the flock may be said to total nearly 5,000. About sixty horses are kept on different parts of the estate, and every season a few are bred to replenish this department, Mr. Viveash breeding for his own use only. In addition to the properties mentioned, he owns a freehold farm at Jennapullen, about fifteen miles distant from Northam, and this he works in conjunction with the homestead estate, carrying on mixed farming operations, but giving the premier place to the production of cereals. The residence—one of the most substantial and comfortable houses in the Northam district—contains sixteen large rooms, being two storeys in height and built of stone, and though erected in the early days, compares most favourably with the

up-to-date country homes of the present day. LIONEL WATERMAN VIVEASH was born on the "Katrine" property, where he now resides, on May 19, 1882, and is a son of the late Simeon William Viveash, also a native of Western Australia, his father having come from Kent, England, by the "Britomarte" in June, 1838, and taken up a tract of country in the Avon district, in which are now comprised the "Langedine" and "Haisthorpe" estates.

MR. LIONEL WATERMAN VIVEASH.

The gentleman under review was educated under private tuition at home, subsequently becoming a student at the Guildford Grammar School. At seventeen years of age he returned to "Katrine," where he has continued ever since. Upon the death of his father in 1902 the estate was purchased by his two sons, the late Oriel Simeon Viveash and Lionel Waterman Viveash, to the latter of whom fell the task of controlling the operations of the property until his brother's decease when he took over the sole proprietorship by purchase, and has since conducted affairs on his own behalf. Mr. Viveash is a member of the Northam Agricultural Society, and also of the local race club. Naturally a great home lover, he is never happier than when spending his time in simple avocations around the old homestead. He married in 1911 May Louisa, daughter of Mr. Francis William Stokes, well known in commercial circles in Western Australia, and has one daughter.

MR. L. W. VIVEASH'S RESIDENCE, NORTHAM.

JOHN MARTIN, of "Sandgate" Farm, Seabrook, near Northam, is a native of Western Australia, having been born on the farm where he now resides, which was the property of his father and his grandfather before him. The land was first taken up at the foundation of the colony in 1829 by Messrs. Jenkins and Tomkins and afterwards passed into other hands, being leased at an early date by the first representative of the Martin family in this country and his son, the late John Martin, father of the gentleman under review. Mr. Martin received his education at the Government School at Northam, and at the termination of his studies became engaged in agricultural pursuits on the paternal property, where he has continued to reside ever since. When he was about twenty-six years of age he purchased the farm from the late J. G. Drake-Brockman, by this purchase becoming the proprietor of 1,000 acres of the fine agricultural land which by its excellent arable qualities has brought the district of the Avon Valley into such enviable repute among farmers and pastoralists. In addition to this valuable estate Mr. Martin has acquired further property in the neighbourhood, some ten years ago purchasing 250 acres, which formed part of the

old "Seabrook" holding, and this he works in conjunction with "Sandgate." The necessary clearing operations have been completed over

C. M. Nixon, Northam.  
MR. JOHN MARTIN.

almost the whole of the property, which is also fenced securely, subdivision having been made into eighteen paddocks of varying size, and the greater number of these are

used as cultivation fields. Mr. Martin follows the custom approved and practised by many of the most successful agriculturists, both in this district and elsewhere, of cropping about half of his cultivable area annually, while the remainder lies fallow in preparation for the ensuing season. He has in all about 900 acres of ground devoted to tillage and reaps an annual harvest unsurpassed by any in the neighbourhood, the returns from which may be regarded as eminently satisfactory. He has made a study of mixed farming, which he regards as highly profitable if carried on in accordance with scientific principles, and brings his skilled knowledge to bear in the management of his pastoral operations in conjunction with the agricultural side of the industry. The flock consists of 400 sheep of the Lincoln type, which have been proved to thrive well and bring good prices at the local markets, while horses are bred for use on the farm, about twenty head of draughts and lighter strains being found sufficient to cope with the demands of the different seasons. Mr. Martin has interested himself in the public organizations founded for advancing the welfare of the farming community and the neighbourhood generally, and for a lengthy period has

Photo by C. E. Farr.

MR. JOHN MARTIN'S RESIDENCE, SEABROOK.

KK

held membership in the Northam Agricultural Society, having been a committeeman for a dozen or more years. He has been a member of the Northam Roads Board for about eight years. Motoring is the form of recreation he prefers, and he indulges in this diversion when the pressure of his many claims slackens sufficiently to allow him a leisure hour. Mr. Martin married in 1889 Margaret, daughter of Mr. William Sermon, of Grass Valley, and has two sons and one daughter.

**JOHN HENRY HUNTER**, of "The Pines," Seabrook, was born at "Muresk," in the same district, on October 18, 1864, and is a son of the late Joseph Hunter, who came from England among the earliest of the settlers in Western Australia, and after spending some years in the service of the Hamersley family, entered upon farming pursuits on his own account. He was educated principally at the Government school at York, and upon entering his teens was apprenticed to the farming industry—a very unusual thing—under Mr. John H. Gregory, now the oldest settler in the neighbourhood. After leaving Mr. Gregory he spent a

property at Jennapullen from the late Hon. George Throssell, which he worked for seven years, and finally sold when he purchased "The Pines," where he now resides. This holding comprises about 800 acres of first-class land, which can hold its own with the best in the district, and with the assistance of his son Mr. Hunter is making a thoroughly payable proposition of the enterprise. Nearly 600 acres have been cleared for purposes of mixed farming, cropping on the fallow system being the chief department of the operations carried on, and in both the agricultural and pastoral side of the industry marked success has been attained. Mr. Hunter is a member of the Farmers' Mercantile Union of Western Australia. He married in 1892 Rose Bertha, daughter of Mr. John Beard, farmer, of Malabine, Northam, and has three sons and five daughters.

**LLEWELLYN SPENCER**, of "Ilma," Seabrook, near Northam, was born at Bunbury, on April 11, 1875, and is a son of the late Hon. William Spencer, merchant, of that town, who is mentioned elsewhere in this volume. His primary education

resigned and then returned to Bunbury, where he opened business on his own account as general commission agent, also holding the local agency for Dalgety & Co. After ten years in this line of business, in December, 1907, he relinquished operations in order to engage in the farming industry, for this purpose purchasing "Ilma," an estate of some 630 acres in the Northam district, from the late John Heal. The property is entirely cleared, and nearly the whole of it has been brought under cultivation, while mixed farming is also carried on, a small flock of crossbred sheep being grazed upon the pastures. The comfortable homestead is a feature of interest, as being built within the past decade everything is well up to date, and the stabling accommodation also deserves a word of notice for its convenience and well-designed appointments. Mr. Spencer is a member of the committee of the Northam Agricultural Society. His favourite sport is racing, and he has owned some good horses, which have been winners of various events at country meetings. He is a member of the Western Australian Turf Club. In 1901 he married Mary, daughter of Mr. George Johnson, of Bunbury, and has one son and two daughters.

Photo by C. E. Farr.

MR. J. H. HUNTER'S HOMESTEAD, SEABROOK.

lengthy period with the late Mr. Wilding, and eventually left this employ to join the Civil Service in the Railway Department, where he remained for seven years. Later Mr. Hunter again turned his attention to farming pursuits, purchasing a

was received at Bunbury, and subsequently he attended the school conducted by the Hon. Henry Briggs at Fremantle, at eighteen years of age entering commercial life by joining the staff of Dalgety & Co. at the latter port. Three years later he

**JAMES SERMON**, owner and occupier of the homestead estate of "Horse Hill" at Grass Valley, is the fourth son of Mr. William Sermon, the founder of the family in Western Australia. He pursued his scholastic studies at the local school in the

place of his birth and subsequently joined his brothers in farm duties on the paternal property. In course of time Mr. William Sermon leased the farm to three of his sons, the gentleman under review being one of the partners, and ultimately the whole estate was purchased by them, the original homestead with the land surrounding it being taken over by Mr. James Sermon. His holding of 1,070 acres is among the best in the district, and the greater part of this area is brought under cultivation, the approved method of cropping and fallowing in alternate seasons being carried out with eminently satisfactory results. Hay, wheat, and oats are grown, about 400 acres being sown every year, and excellent harvests are gathered in. Several hundred crossbred sheep graze on the pasture land, providing early lambs, wool, and mutton for the local markets, whilst twenty horses are kept for farm purposes, the healthy appearance and good condition of which manifest the care taken of them by their owner. A well-built comfortable stone house, which forms the homestead where the family resides, is flanked with outbuildings of a particularly commodious and substantial character, the stables being deserving of special mention for their excellent appointments, and shearing-shed

and granaries also being very complete and convenient. Mr. Sermon is a member of the agricultural society, and despite the fact of his

MR. JAMES SERMON.

forty-five years is an enthusiast in cricketing matters, taking his place in the field at local matches with as keen a pleasure in the sport as many of his younger compeers. He married in 1889 Bridget, daughter of Mr. Nicholas Casey, and has one son and four daughters.

JUSTUS HEINRICH BEHN, "Barenstein," Seabrook, was born in the City of Bremen, Germany, on June 1, 1878, and is the second son of the late Justus Heinrich Behn, who was connected with the commercial life of that city. At the close of his education, when fifteen years of age, he was apprenticed to the trade of purveyor, and four years later joined the navy of the Fatherland, in which he served for two and a half years. Gaining the permission of the Government he left for Australia in 1900 and settled in Bunbury, where he was engaged in the butchering trade for ten years on his own account. At the end of this period he disposed of his business interests and subsequently purchased his present property from Mr. G. Dempster. This holding consists of 1,100 acres, the whole of which has been cleared, and wheat, oats, and hay are grown in large quantities. A flock of about 500 crossbred sheep is grazed on the pastures, and draught horses are kept for the uses of the farm. Mr. Behn, whilst in Bunbury, participated in the various mercantile and social functions of the town and was one of the founders of the Bunbury Commercial Club, of which he is still a member. He was married in April, 1904, to Olga, daughter of the late August Kohler, well known in Saxony, and has one daughter.

"HORSE HILL," THE PROPERTY OF MR. JAMES SERMON.

ANDREW MARTIN, who owns the "Spring Gully" Farm at Grass Valley, some few miles distant from Northam, is a son of the late John

MR. JOHN MARTIN.

Martin, who was born at Perth in the year 1836, his father having come to Western Australia from Sussex in 1830. Mr. John Martin eventually

*C. M. Nixon, Northam.*  
MR. ANDREW MARTIN.

became one of the pioneer settlers of the Northam district, and here his son Andrew, the subject of this memoir, was born on July 1, 1858. At fifteen years of age Mr. Andrew

Martin, having completed his education at the local public school, began his initiation into agricultural pursuits on his father's property, and continued in the ordinary round of duties involved in this calling until he reached man's estate. About this time he married and launched out on his own account, leasing a farm at Seabrook, which he worked for eighteen years, gaining much valuable experience during this period. Eventually, in 1899, he relinquished the lease of this property and purchased the "Spring Gully" farm, where he now resides, this holding having been part of the estate resumed by the Government of the day and formerly in the possession of the late Edward Keane. In the same year Mr. Martin erected a portion of his present homestead and commenced farming operations, as time went on adding considerably to the dwelling-house, which to-day is a very comfortable six-roomed structure with various up-to-date appointments and all conveniences and comforts. The land comprises some 1,000 acres of undulating country, carrying soils of chocolate, clay, and sandy loam, admirably suited to purposes of mixed farming, and is especially adapted to the production of wheat and hay, which are the principal industries carried on. Clearing the land for cropping and pastoral uses has been vigorously proceeded with from the first, and year by year has seen a larger portion ready for the plough. At the present time about 400 acres are cultivated every season, the same area lying fallow in alternate years, so that in all there are 800 acres—almost the full extent of the farm—devoted to cultivation. Good, substantial fences have been put up, dividing the property into paddocks of serviceable size, the entire fencing running into the vicinity of 13 miles; many other improvements come under the notice of the visitor, whose appreciative eye takes in the whole appearance of prosperity and well-being which is a feature of the well-kept farms of the

Grass Valley district. Grazing in the pastures are twelve staunch Clydesdale horses, most of which have been bred on the farm, and during working

*C. M. Nixon, Northam.*  
MR. T. S. MARTIN.

hours these fine animals may be seen in their different avocations displaying those excellent traits of the breed which has made it so popular

*C. M. Nixon, Northam.*  
MR. R. J. MARTIN.

among the settlers on Australian soil. Mr. Martin is deservedly proud of his teams and breeds for his own use from season to season, by this means being able to dispense with any horse

that begins to fall below par, the average standard at which he aims being of a high level. His horses have a good name, and he has little difficulty in disposing of any superfluous stock, whilst among those on the farm which he exhibits with especial pride are the Clydesdale mares which recently won the premier award at the Northam Agricultural Show. His flock of crossbred sheep is also worth a visit of inspection, representatives from which

of the horses and other stock having been fully considered in matters of ventilation, drainage, and other important respects. Various machines of modern design attract attention, the presence of which makes it plainly evident that the proprietor is a man of progressive spirit and far from being wedded to the old-time methods by which his fathers tilled the soil has kept himself well in touch with the inventions in labour-saving machinery which have come into

much more profitable a calling. Though taking a prominent place in various public movements, in nothing has he been more to the fore than in the agricultural society of Northam, which he first joined at its inception. As a committeeman for twelve or fifteen years he accomplished much useful work, and he also filled the office of vice-president, while for the last two years he has been honoured by his fellow-members by election to the presidential chair

Photo by C. E. Farr.

MR. A. MARTIN'S HOMESTEAD, GRASS VALLEY. PRIZE SHEEP IN FOREGROUND.

have been successful in securing three first prizes at Northam for "the best flock of 100 crossbred ewes." The lambing season occurs somewhat in advance of some other localities, and Mr. Martin makes a payable proposition of early lambs for the local markets, while the yearly clip is disposed of in Perth. The usual drafting-yards, etc., are found in convenient places, and a stroll through the outbuildings reveals all in order, the comfort and well-being

vogue all over the civilized world. The district, indeed, owes much to Mr. Martin, as he has made a hobby of advancing its interests from the agricultural standpoint, never missing an opportunity of advocating reforms and continually bringing before his brother settlers the necessity for joining in the march of progress, especially by the introduction of the machines which have simplified the labour problem in such a marked degree and made of agriculture so

of the society. The management of his farm and attention to whatever public duties he may happen to be concerned with occupy the whole of his time, and he has little inclination for sport of any kind, preferring to spend his leisure hours in simple pleasures with his family. Mr. Martin married on January 22, 1880, Sarah, sixth daughter of the late James Coles, of York, Western Australia, and has a surviving family of two sons and seven daughters.

FREDERICK WILLIAM ROE, owner of "Mannalea," Grass Valley, is the second son of the late Frederick Mackie Roe, of "Roseland,"

MR. JOHN SEPTIMUS ROE.

Toodyay, where the gentleman under review was born on August 6, 1874. He can claim descent from the earliest of Western Australian colonists, his grandfather (the late John Septimus Roe, R.N.), after having previously accompanied the navigator King in his exploration along

MR. FREDERICK MACKIE ROE.

this coast, making a honeymoon trip with his bride to the new settlement by the "Parmelia," the vessel which brought the first Governor (Sir James Stirling) to the colony in 1829. Captain Roe was appointed

first Surveyor-General, and took a foremost place in the early endeavours made by the settlers to extend their knowledge in regard to the land of their adoption. In 1830 he was the leader of an expedition to explore the vicinity of Cape Naturaliste, Point Leschenault, and the territory between the Collie and Preston rivers; and some six years later he made an attempt to discover the nature of the country lying east of Perth, on this trip penetrating as far as Lake Brown, near the western boundary of the present Yilgarn goldfield, and discovering many of the salt lakes which form a feature of the tableland of the interior. Captain Roe occupied the post of Surveyor-General of the colony for forty-two years, and it is interesting to note that the town of Roebourne was named after him by the then Governor (the late Sir Frederick Weld), while one of his sons (the late James Broun Roe) was a member of the exploration party conducted by the well-known explorer, F. T. Gregory, over a portion of the north-west in 1858, and another (Mr. Augustus Sanford Roe) is the present police magistrate at Perth. His daughter, the late Sophia Roe—the first white woman to be born in Western Australia—married Mr. Samuel Pole Phillips, of "Culham," Toodyay, where she died. By a curious coincidence Mr. F. W. Roe's maternal grandmother, then Miss Jane Drummond, was also a passenger by the "Parmelia," while his mother, Sarah, second daughter of the late Michael Clarkson, who came to the State two years later, was born at "Nunyle," Toodyay, on September 1, 1847. The Clarkson family participated in much of the pioneering work of Western Australia, the property now owned by the Hamersleys, and known as "Wilberforce," previously having been taken up by them, and in view of the present land values it is worthy of record that the price at which Mr. Clarkson sold was 1s. 6d. per acre. Miss Clarkson was married on June 1, 1871, to the late Frederick Mackie Roe, fifth son of the late Captain Roe (born in Perth in 1844), by whom she had two sons—Mr. J. A. Roe, manager of "Minderoo" Station, Onslow, and the subject of this memoir. Mr. F. M. Roe died in 1877 at the age of thirty-three as the result of an accident at his station "Dumbo," Wongan Hills, and after fourteen years of widowhood

Mrs. Roe married the late Andrew Dempster, of "Muresk," where she resided until her husband's death in 1909, when she removed to

Bartletto. MR. J. A. ROE. Perth.

Northam, and died there three years later. Mr. Frederick William Roe received his education at Toodyay, and upon leaving school at the age of fifteen became engaged in farming pursuits on the "Muresk"

C. M. Nixon. MR. FREDERICK WILLIAM ROE. Northam.

Station for five years. In partnership with his brother he then purchased "Hawkhurst," the well-known stud farm in the York district, and carried it on for two years, at the end

of which period the property was disposed of and the partnership dissolved. Mr. F. W. Roe next leased a farm in the district for a short time, and when the old Grass Valley Estate was thrown open for selection he took up his present holding, comprising over eight hundred acres of what was then practically virgin country and entered upon its development. This he continued with such whole-hearted energy and vigorous determination to bring his property into line with the best in the State that in 1909 he was awarded the silver challenge cup offered by the Northam Agricultural Society

paddocks, these being grown for the local markets, but with this exception Mr. Roe gives but little attention to pastoral enterprise, his agricultural interests absorbing the whole of his time and energies. The homestead, though not conspicuous for its size, is one of the most comfortable in the neighbourhood, and surrounded as it is by a garden enclosure where roses and many other varieties of beautiful flowers blossom, each according to its season, presents a pleasing appearance, while a small orchard in the vicinity of the house is a very popular resort in fruitage time. The outhouses have all been

that are put upon the market from time to time and the different methods of cropping, etc., is very valuable to his fellow-settlers. He is a thorough "sport," and all forms of athletics, cricket, tennis, boxing, riding, and driving are followed with keen enjoyment by him, while he is also a member of the local race club. Mr. F. W. Roe was married in the year 1901 to Edith Mary, eldest daughter of Mr. William Forward, one of Northam's early pioneers (who is referred to elsewhere in this volume), and has a family of four sons.

MR. F. W. ROE'S HOMESTEAD, GRASS VALLEY.

for the best-managed farm in the eastern districts. Its position in the heart of the famous Grass Valley neighbourhood is sufficient criterion for the excellence of its soil and rare productive qualities, and Mr. Roe has taken full advantage of the possibilities of the place, every acre being cleared and the whole brought under cultivation every two years, half the area being sown and half lying fallow each season. The "Mannalea" Estate has the reputation of producing the best hay in Western Australia, and to this industry the whole of the property is devoted, to the exclusion of all cereal crops or other products common to the district. A small flock of sheep finds pasture in the

carefully planned with special regard to the purpose for which each is designed, and in proportion to their size may be said, for convenience and up-to-date appointments, to be second to none in the State. Mr. Roe has interested himself to some extent in the organizations of the district, and is a member of the local agricultural society, serving as a committeeman of that body for some considerable time. All movements for the betterment of existing conditions command his cordial support, while his example as a representative of the agricultural community, combining industry and expert knowledge with careful consideration of the various labour-saving inventions

FRANK GEORGE THOMAS HANCOCK, owner and occupier of "Roselyn" Estate, at Spencer's Brook, is a son of Mr. H. W. Hancock, of "Rocliffe," near Northam, mentioned elsewhere in this work, and was born at Beverley on December 14, 1885. He received his scholastic training at the Scotch College, Perth, where he spent some three or four years, leaving this institution at the age of fifteen to begin his initiation into the agricultural industry on his father's farm, "Roselyn." From this time forth he threw himself heart and soul into the conduct of affairs on the estate, and soon became his father's right-hand man. In 1910, upon the decision of

Mr. Hancock, sen., to make a home for himself nearer Northam; this gentleman entrusted his son with the control of the old homestead property at Spencer Brook. This arrangement continued until 1912, when the deeds of the "Roselyn" property were handed over to him by his father, and he became possessor of what may justly be regarded as the

cereals. The harvesting returns give an average yield of 18 bushels to the acre, and hay is also grown producing

from the Spencer Brook Railway Station, and is a commodious brick house of most up-to-date appearance

MR. FRANK GEORGE THOMAS HANCOCK.

model farm of the eastern agricultural district. The "Roselyn" Estate comprises 1,600 acres of undulating country, well suited to the production of wheat and other grain, and of the 1,300 acres that have been cleared 400 to 500 are annually placed under the cultivation of

TROTTING MARES "RUBY" (WITH FOAL) AND "MISS VENN."

2½ tons to the acre. An orchard and vineyard, six acres in extent, lie immediately outside the garden enclosure surrounding the house, and all varieties of fruit suited to the soil and climate here come to perfection. Water is laid on all over the property from the goldfields water supply reservoir, which provides for all the necessities of irrigation and stock as well as for the requirements of the household. The "Roselyn" residence is most conveniently situated on a site lying from 300 yards to 400 yards

and architecture containing ten large, well-ventilated rooms with a wide verandah encircling the whole building. Underneath lie cool cellars, and the structure in every respect is built to suit the Australian climate, with its hot summers and rapidly - changing temperatures. Climbing roses and other creepers with bright-coloured blooms twine round the verandah with picturesque effect, and in the pretty garden beyond trellises and shade trees fill large spaces where the gardener's

hand has not been busy in cultivating the choice and beautiful blooms which are found in profusion in the

trotters, hacks, and hunters are his particular hobby, and he has bred a few of these which have taken their

Among these may be mentioned "Star," the champion hunter of Western Australia, who has won innumerable prizes, including many "firsts" at the Royal Show; "Ruby" by "Satellite," an imported animal considered to possess many valuable traits, and "Miss Venn" who, with other stud mares, is the product of the best blood obtaining and forms one of a picture gallery of typified grace and beauty and fine breeding combined with the suggestion of strength and effective action. Equally noticeable in their way are the cluster of draught mares for farm work and breeding purposes, the heavy farming stock produced on "Roselyn" being of good repute throughout the neighbourhood. Mr. Hancock has enjoyed an honourable connection with the local racing body for many years, having been received as a member when only sixteen years of age, and his principles tending to true and clean sport his influence has always been exerted in favour of all that tends in that direction, and he has done much good work for the organization. Since he was fourteen years old he has been associated with the agricultural society of Northam, and has served for several years on the committee of management of that body, being at the present time a member of the council.

Photo by C. E. Farr.

DRAUGHT MARES AT "ROSELYN."

different seasons of the year. The soil throughout the estate is characteristic of the valley of the Avon, possessing as it does about two miles of river frontage, and has responded generously to the diligent efforts of those who have sought to bring the property into the premier position which it now occupies among similar estates. A vegetable garden has been successfully cultivated, from which the household is supplied all the year round with fresh vegetables; and in the vicinity of the homestead the out-offices are found with stabling accommodation of the most approved and hygienic design, coachhouse, harness-room, etc. In addition to agriculture the property has been utilized as a pastoral station, and a stud flock of English Leicesters may be said to take pride of place among the sheep. "Roselyn" is also well known for its pure-bred English Cotswolds, and a flock of crossbred ewes for the breeding of lambs for export purposes and local supplies is an important department of this branch of its operations. A genuine admirer of a thoroughbred horse, Mr. Hancock has met with conspicuous success both in the arena of sport and in the show ring, with his numerous representatives of equine blood stock, while he has also owned and produced some splendid specimens of draught horses. Jumpers,

place as champions of the district, several trophies having fallen to his share in these classes not only in connection with the local shows but also at the similar functions held by the Royal Agricultural Society at Perth.

"BELMONT STAR."

Like his father, who has been recognized for many years as one of the leading spirits in local progressive movements, he takes considerable interest in the affairs of the district and is concerned in most of the efforts towards improvement or advancement set afoot by the residents. He was a foundation member of the Northam Polo Club, and is still a playing member of the team. Mr. Hancock spends a good deal of time in the perusal of works dealing with the subjects in which he is particularly interested, up-to-date treatises on farming and horse-breeding claiming his special attention.

**RICHARD CORNELIUS SERMON**, of "Tank" Farm, Grass Valley, is a native of Western Australia, having been born at "Horse Hill" Farm in the same district on September 6, 1873. He is the eighth and youngest surviving son of Mr. William Sermon, a pioneer of the fifties, who was the original owner of the above-mentioned property, which has remained in the family ever since. He received his education at the Tipperary public school, near York, Western Australia, and went to work on his father's farm, a portion of which is now in his possession. Subsequently, in conjunction with two of his brothers, he

purchased the whole property, which was then divided into three separate holdings, Mr. R. C. Sermon's share comprising 1,260 acres. To this he has since added nearly 300 acres of

*C. M. Nixon,* *Northam.*  
MR. RICHARD CORNELIUS SERMON.

adjoining property, the "Tank" Farm, which was acquired in combination by the brothers before their purchase of "Horse Hill." Throughout the valley of the Avon agriculture takes pride of place among the various industries carried on, the

soil all over the district possessing splendid arable qualities, and yielding handsome returns in response to the expenditure of a moderate amount of capital and skilled attention. Various kinds of cereals are raised and a great deal of hay is produced, a couple of tons to the acre being realized on some of the farms. Mr. Sermon divides the 1,200 acres which he devotes to purposes of tillage into two parts, cropping about 600 acres annually with oats, wheat, and hay, and his harvests are among the most successful in the neighbourhood. His pastoral operations include the development of a flock of between 400 and 500 crossbred sheep, from which early lambs for the local markets are obtained, proving a very profitable department of the industry, while wool and mutton are also disposed of at good prices. Another feature of the farm is the excellent type of utility horses which are kept for field work and other purposes, the average number standing at about twenty. Many improvements have been made on the farm, which is well fenced and subdivided into twenty paddocks, and the work of development is continually going on. Mr. Sermon gives the major share of his time and industry to the demands of his property, but he participates in the deliberations of the Northam Agricultural Society, of which body he has been a member since 1900.

*Photo by C. E. Farr.*

"TANK FARM" HOMESTEAD, OWNED BY MR. R. C. SERMON.

He is fond of athletic sport, being an enthusiastic cricketer and a member of two of the local cricketing clubs, while he also makes a hobby of shooting, his skill as a marksman being beyond question, and no labour or trouble is counted by him as too great which enables him to indulge in the pleasure of securing a good bag as the result of a day's sport. Mr. Sermon married in 1899 Catherine, daughter of the late Jeremiah O'Driscoll, one of the pioneers of the Avon Valley, and has three sons and two daughters.

JOHN LESLIE MANNING, of "Sundridge," Spencer Brook, is a native of this State, having been

MR. JOHN LESLIE MANNING.

born at Perth on September 4, 1891, and is a son of Mr. Henry Ernest Manning, a colonist of about forty

years' standing. At the close of his education he proceeded to Narrogin, where he spent two years in the study of agriculture at the State farm in that district. At the end of that period he removed to Toodyay and obtained a year's valuable experience of practical farming at "Haseley,"

upon the death of the late Mr. Dempster was divided and a large portion sold, most of the property being retained by members of the Dempster family. "Sundridge" comprises 4,100 acres, 1,100 acres being cleared and devoted to mixed-farming operations, and Mr. Manning has expended

Photo by C. E. Farr.

MR. J. L. MANNING'S RESIDENCE, SPENCER BROOK.

the property of the Hon. V. Hamersley, which was supplemented by a short term of residence on a farm at Mingenew on the midland line. In 1911 he came to the valley of the Avon, and in September of the following year married Mrs. Heath, widow of the late Gladstone Heath and second daughter of the late Andrew Dempster, of "Muresk," and settled down to farming operations on "Sundridge," near Spencer Brook—a property inherited by his wife as her portion of the parental estate. This was part of the original well-known "Muresk" Estate, which

a considerable amount of capital in bringing these up to a high state of efficiency. The land is cropped every third year, and allowed to lie fallow in the intervening seasons, different areas being brought under cultivation annually. From 1,500 to 2,000 sheep of the merino and crossbred types are run on the estate, and about thirty horses are kept for the work of the farm. Many improvements have been made on the property, which is well fenced and divided into about twenty paddocks, while watering facilities are provided by numerous wells and soaks.

Photo by C. E. Farr.

GENERAL VIEW OF "SUNDRIDGE" ESTATE.

SIMON REGINALD DEMPSTER, of "Corolin," Mokine, was born at Esperance, Western Australia, on February 3, 1875, at which period the pastoral property of that name was in course of development by his father, the late Andrew Dempster, part owner and manager of the run, which he founded in conjunction with his three brothers who accompanied him in one of the first exploration trips ever made with the object of opening up that part of the Western State. The subject of the present article spent his childhood in this district, receiving his primary education under private tuition from tutors at the old homestead at Esperance, and subsequently completed his studies at "Muresk," in the valley of the Avon, where his late father had purchased a property upon which he resided for many years prior to his death in 1909. Having arrived at an age to take his part in the routine work of the farm, Mr. S. R. Dempster left schoolroom pursuits to receive his initiation into the agricultural and pastoral industries on his father's farm, and proving to have considerable adaptation for the work afterwards undertook the management of the "Muresk" property, which he carried on for eight years with considerable success. In 1904 the late Mr. Dempster purchased "Corolin" from Mr. J. G. Hancock,

to reside there ever since. The estate is a good grazing property, comprising nearly 2,800 acres of land, more than a third of which is

MR. SIMON REGINALD DEMPSTER.

well suited to purposes of agriculture. The whole has been fenced and subdivided into eight large paddocks, and over 550 acres have been cleared and cropped with wheat and hay, good average harvests being obtained. The pastures carry a flock of

substantial homestead, built of stone and containing six rooms, was erected more than sixty years ago, and has stood the wear and tear of time in a way that might put many a more modern dwelling to the blush, comfort and durability having been made of premier consideration in its design, according to the early settlers' fashion. In addition to "Corolin," Mr. Dempster, in conjunction with his brother, Mr. George Dempster, of "Dowerin," is also interested in a pastoral property on the Murchison, known as "Billabalong," which is used as a breeding station and grazing run for sheep, cattle, and horses. He takes no very active part in the public affairs of the neighbourhood in which he resides, but is a member of the Royal Agricultural Society of Western Australia. Sport of almost any kind commands his cordial interest, particularly cricket and golf, and he is one of the champion players on the local golf links, having won some valuable trophies in connection with this favourite pastime. He owns a motor car, and spends a great deal of his leisure in motoring. Mr. Dempster married in June, 1906, Aline, daughter of the late Frank Richardson, a well-known figure in mercantile circles in North Queensland, and has a family of two sons and two daughters.

Photo by C. E. Farr.

MR. S. R. DEMPSTER'S HOMESTEAD, MOKINE.

this holding originally having been taken up by Mr. J. H. Gregory in the fifties and developed by him as one of the earliest settlements in the district. In the same year it was acquired on lease with right of purchase from his father by the gentleman under review, who has continued

2,000 sheep, of the merino type, founded with rams from Messrs. Murray Brothers' South Australian station. These have been mated with a good class of ewes with the best results. The annual clip is forwarded direct to London, where the very highest prices are obtained. The

"RIVERSIDE," owned and occupied by Mr. Herbert Roy Forward, and situated on the Goomalling Road, three miles from the town of Northam, was among the earliest of agrarian properties to be taken up in the district over half a century ago. In extent it covers about 1,100

acres, and in its native state was heavily timbered with York gum and jam trees, which have now been almost entirely removed by means of ringing and burning. As soon as the land could be prepared for tillage wheat was sown, rich harvests subsequently being reaped, and

turning the furrows, the green blade sprouting through the soil, and in due course the "full corn in the ear"

power of the soil is conserved to a marked degree. The country is undulating in character and well

C. M. Nixon,

Northam.

MR. HERBERT ROY FORWARD.

from then right up to the present time cultivation has been continued. It speaks volumes for the quality of the land that upon the same areas where wheatfields waved over fifty years ago, and season by season have yielded bountiful returns, the plough may still be seen busily

which calls for the harvesters to come and gather in spoils abundantly worth the labour that has been bestowed. Splendid records are the order of the day at "Riverside," from 20 to 25 bushels of grain to the acre being the average yield of wheat and of hay about 2 tons to the acre. Special attention has been given to the best methods of securing satisfactory results, and of the entire acreage from 400 to 500 acres are annually cropped, oats being grown in addition to the wheat and hay already mentioned. The remainder is fallowed for two seasons and thus the fertilizing

watered, chiefly by means of soaks and wells, good water being easily found at a shallow depth all over the property, and dams of considerable holding capacity have also been constructed. On the pastoral side of the industry a flock of crossbred sheep, numbering from 400 to 500, are grazed on the pastures, which, on account of former cultivation, are well suited to this purpose. About twenty-five horses are usually run on the place, the breeding of Clydesdales being carried on for the replenishing of the working stock of the farm as well as for the market. The homestead, erected by Mr. Roy

TEAMS OF HEAVY DRAUGHT HORSES FOR FARM WORK.

Photo by C. M. Nixon.

RESIDENCE OF MR. H. R. FORWARD, NORTHAM.

Forward in the year 1909, is built of brick, and from the slight eminence on which it stands commands a fine view of most picturesque country in a radius of many miles. It contains six rooms, with hall and bathroom, etc., and in the vicinity is an orchard over an acre in extent. The outhouses are well situated, and are up to date and provide stabling for twelve horses. HERBERT ROY FORWARD is a son of Mr. William Forward, of whom mention is made elsewhere in this work, and was born on March 25, 1880, at "Glenroy" Homestead, near Northam, now the property of his elder brother. At fourteen he joined the Civil Service in the postal department, where he continued until his eighteenth year, when he resigned in order to enter upon farming pursuits in conjunction with his father on the "Riverside" property, where he still continues. He is a member and committeeman of the Northam Agricultural Society, and is considered one of the best judges of stock in the neighbourhood. A supporter of all forms of manly, outdoor sport, in which he freely participated when the claims on his time were fewer, he is also interested in the racing events of the district, and is a member of the Northam Racing Club. Mr. Forward married in 1905 Hannah, fifth daughter of Mr. Richard Bourke, one of the old pioneers of the Avon Valley agricultural area, and has one son and two daughters.

JEREMIAH O'DRISCOLL, "Shamrock Villa," Grass Valley, was born in the old homestead, where he now resides on June 18, 1879, and is a son of the late Jeremiah O'Driscoll, who came from Ireland in the year 1869 and a couple of years later settled as an agriculturist at Grass Valley. The subject of this notice received his education by private tuition in his father's house and at the public school at Quellington, in the York district, at fourteen years of age beginning active life on the paternal estate, where he has ever since been engaged in agricultural and kindred pursuits. Some years prior to the decease of the late Mr. O'Driscoll the original holding taken up by him was divided into two parts, one of which fell to his eldest son and the other to the gentleman

under review, who subsequently added to his property, which now comprises about 850 acres. About 550 acres of this area have been brought under cultivation, something over 300 acres being cropped annually with wheat, hay, and a few oats, Mr. O'Driscoll favouring the fallow system, by which he has attained results eminently satisfactory. A few cattle and sheep are run on the pastures and about fifteen head of mixed horses for use on the farm. Mr. O'Driscoll finds ample employment for his time in the improvement of his land, but occasionally takes recreation on the cricket field. He married in 1907 Emily, daughter of the late Thomas McBreen, of North Fitzroy, Melbourne, who came from Ireland to Victoria in the early seventies, and has two sons.

PATRICK O'DRISCOLL, of "Baltimore," Grass Valley, is a son of the late Jeremiah O'Driscoll, a settler of the early seventies, who came from Ireland to Australia in 1869 and took up land in the Grass Valley district. Born at "Booramoon" Farm, Grass Valley, on June 17, 1871, Mr. Patrick O'Driscoll was educated privately and at the local public school, subsequently receiving his initiation into the farming industry on his father's property, where he continued until twenty-one years of age. He then took up some of the Crown land adjoining a small holding made over to him by his parent, and has since purchased an adjacent farm, making in all a snug little property of over 900 acres. Of this area 600 acres have been cleared and cultivated, wheat and hay being the principal products, the harvesting returns being equal to any in the neighbourhood. A flock of crossbred sheep—a type suited to the district—are grazed on the farm principally for mutton and early lambs, and a few Clydesdale horses are bred for the work of the place together with some lighter types for family use. Mr. O'Driscoll has been a member of the agricultural society for some considerable time, and has played his part in the development of the district by his association for eight years with the Northam Roads Board, in both of these bodies occupying the chair on different occasions, and by lending his influence to the movements for obtaining water supplies from the main eastern goldfields scheme and

telephonic communication for the town. A keen student of politics he is well to the fore at the general elections, giving his support to the candidate for the Liberal side. Mr. O'Driscoll in his younger days was noted as an athlete, and carried off many coveted trophies in the arena of competitive sport, but of recent years has confined his attention chiefly to gun and rifle shooting, and is regarded as a first-class pigeon shot, gaining equal honours upon the one occasion that he met the champion of the State. He married in 1902 Mary, daughter of Mr. James Morris, of Jennapullen, and has two sons and one daughter.

NICHOLAS THOMAS HANNAGAN, "Passmore" Farm, Quell Quelling, on the Goomalling Road, Northam, was born in South Australia on May 3, 1877, and is a son of the late John Logue Hannagan, a well-known figure in agricultural and commercial circles in the Central State, whose demise occurred in 1912, shortly after his removal to Western Australia. The gentleman under review was educated at Laura, South Australia, and upon entering

C. M. Nixon, Northam.

MR. NICHOLAS THOMAS HANNAGAN.

his teens proceeded to the northern areas, where he was engaged in pastoral pursuits on the "Carriewerloo" Station, the property of Messrs. Hawker Brothers. During the thirteen years that he remained on this property he filled various positions, occupying the post of sheep overseer

when he left the station in 1901 to enter upon the appointment of secretary and supervisor of the Wartaka Vermin Board, which administered an area of country surrounding several of the large stations with a radius of 800 square miles. This position he filled for two years, at the end of which time the vermin-proof fence for the protection of those areas was completed, and Mr. Hannagan then set his face for the "Golden West," arriving at Perth in August, 1903. Upon arrival he was offered the post of manager of the "Barnong" and "Gullewa" Station properties on behalf of Mr. Charles Mitchell, but after a short period of residence in that part of the county failing eyesight compelled him to resign his duties. When this trouble was successfully overcome he was engaged for a considerable time with Mr. Fred. Rewell, stockdealer, of Northam. Eventually, after purchasing some horses and taking carting contracts for some eighteen months, Mr. Hannagan became a tenant on his present holding, which, after renting for a couple of years, he purchased outright in 1910. The property consists of nearly 2,200 acres, about 1,850 acres being cleared and ready for cultivation, fully half of this area having been prepared since Mr. Hannagan entered into possession. Hay and wheat are grown, a successful system of fallowing the land being carried out which allows of about 900 acres being cropped annually; a flock of over 600 crossbred and merino sheep is grazed on the farm, while about thirty draught horses of the best type are kept. Mr. Hannagan has successfully completed a scheme for providing an adequate water supply for the farm, house, and garden, etc., nearly two miles of piping having been laid from a well on the highest level of the property, by means of which the precious fluid is conveyed to different points as required. He is a member of the Northam Agricultural Society, and occupies the office of president of the similar body at Jennapullen. In 1910 he was married to Alice Maud, daughter of Mr. James Watson, of the last-named district, and has two daughters.

RICHARD LAWRENCE, "Rock Vale" Farm, Yarramony, *via* Northam, is a son of the late Henry Lawrence, one of the old pioneers of the Western Australian State, who

landed at Fremantle by the sailing vessel "Wild Wave" in 1853, and upon arrival was placed in charge of the convict station at Rottneest,

MR. HENRY LAWRENCE.

afterwards filling the post of warden at the old Fremantle Asylum for a short period before giving up the Civil Service to engage in farming pursuits. No settler in the eastern agricultural district was better known or respected than the late Henry Lawrence, who continued in the agricultural industry for over thirty years, in 1898 purchasing

*C. M. Nixon.* Northam.  
MR. RICHARD LAWRENCE.

"Rock Vale" Farm, where he resided until his demise, which occurred in 1910, when his son, the present owner, inherited the

property. Mr. Richard Lawrence was born in the district, receiving his education entirely under the tuition of his parents, there being no schools established during his childhood. In his early years he worked with his father on the farm, and has since continued the development of the land on his own account. The estate, comprising 750 acres, is practically all cleared and cultivated with wheat and hay, while general mixed farming operations are carried on, sheep and pigs being bred in numbers suited to the capacities of the place. Mr. Lawrence is a member of the committee of the Jennapullen Agricultural Society, of which organization he was one of the earliest members. He married in 1911 Louisa Elinor, daughter of the late John Hitchcock, of Malabine, one of the early settlers who came to the district in the early seventies, and of this union there is one daughter.

JOHN EDWARD EATON, "Quell Quelling" Farm, Goomalling Road, Northam, was born in the County of Kent, England, on July 24, 1848, and came to Western Australia when only four years of age with his father, the late Richard Eaton, who was engaged in the agricultural industry in various parts of the State. He received his education at the local school at Irishtown, and while still quite a lad began to assist in the duties of the farm in the days when the tilling of the soil was carried on in the most primitive style, much of the work being done by moonlight, daylight hours not proving sufficient in which to prepare for and gather in the harvests. Upon reaching man's estate Mr. Eaton took up farming on his own account, purchasing that portion of his father's holding upon which the homestead now stands, and subsequently adding to it until at the present time his property covers upwards of 2,300 acres. About 1,000 acres are applied to purposes of cultivation, 600 acres being cropped annually with hay, wheat, and oats; another important department of the industry is the breeding of thoroughbred horses for use on the farm and hacks of a lighter class. Mr. Eaton has attained considerable success with his thoroughbreds, which are chiefly intended for the market, although, as he is fond of racing as a pastime, many of the representatives of "Quell Quelling"

Farm have been raced with success at the local meetings, his colours (green and red) frequently being carried first past the winning-post. A few of his racehorses, bred by the most stylish sires in the district, include "Flintlock," "Barbarossa," "Gauze," "Try Again," and "Green Mountain," all well-known performers on

*C. M. Nixon, Northam.*  
MR. JOHN EDWARD EATON.

the turf. Mr. Eaton has acted on the committee of the local agricultural society, and was one of the delegates chosen to represent his district at the big wheat conference held in Perth in the early days of the present century. He married in 1879 Elizabeth, daughter of the late David Pettitt, one of the pioneer squatters of Western Australia, and has six sons and five daughters.

JOHN HENRY LARSEN, J.P., of "Brookside" Farm, Jennacubbine, was born at Albany, Western Australia, on February 8, 1874, and is a son of Mr. Henry Larsen, agriculturist, of Kojonup, where he partly received his education, also attending a school in Albany. At the close of his studies he gained a thorough insight into the agricultural industry under his father, with whom he continued until the discovery of gold in the eastern districts attracted him to the scene of the find, where for five years he pursued a quest after the elusive metal. Very indifferent success, however, rewarded his efforts. Ultimately he abandoned the mining industry, and in 1898 settled down to

farming on his own account in the Jennacubbine district. Mr. Larsen has acquired about 700 acres of first-class land which is all cleared and thoroughly improved, and a large portion of this area is cropped annually, the growing of cereals and hay forming the most important branch of his operations. He takes a leading interest in the advancement of the district, and is prominent in all local movements for the promotion of the public good. As a committeeman of the Jennapullen Agricultural Society for some considerable time, he has been enabled to improve the conditions under which his fellow agriculturists pursue

*C. M. Nixon, Northam.*  
MR. JOHN HENRY LARSEN.

their calling. He also takes a warm interest in Church affairs, and assisted in a practical manner in the building and administration of the local Roman Catholic Church. Mr. Larsen occupies the office of president of the racing club of the district. He married in 1897 Margaret, daughter of the late Michael Ryan, of Rossmore, Jennacubbine, and has three sons surviving.

JOHN WHITE, of "San Isadore," Jennacubbine, is a son of the late William White, one of the early settlers of the Northam district, who owned the "Noggojeering" Farm, where the subject of this notice was born on January 1, 1865. He continued on the old homestead until he reached manhood, and subsequently took up his residence on "San

Isadore," a property he had previously acquired, comprising 800 acres, to which he afterwards added by purchase from his mother's estate a further 600 acres, making in all a nice little estate of about 1,400 acres. The soil is of good constituents, and the land when cleared for cropping yields returns equal to any in the neighbourhood. About 600 acres are placed under cultivation annually, half of the area of the farm being allowed to lie fallow every alternate year, and the principal crops produced are wheat and hay. Early lambs for the local markets are a feature of the pastoral department, and a standing flock of crossbred sheep are grazed on the property, their services in clearing the land for fallowing being found of considerable value. Mr. White interests himself in the public affairs of the neighbourhood, and is one of the members of the Jennapullen and Northam agricultural societies. He takes a prominent part in the work

*C. M. Nixon, Northam.*  
MR. JOHN WHITE.

of the local Roman Catholic Church and occupies various offices in that body, among which is that of trustee on behalf of the church at Jennacubbine. A patron of all clean outdoor sport, in his younger days he made his reputation on the cricket field, and is an expert with the gun and rifle. He married in 1904 Cecelia, daughter of the late Herman Joseph Van Eyck-Moll, of Perth, who was well known for many years in commercial circles in this State. There are three sons and one daughter by the marriage.

JAMES HENRY BOWEN, J.P., of "Patricia," Wongamine, is a son of the late Michael Bowen, who came from the Emerald Isle and settled in Western Australia in the year 1853. The late colonist during the early years after his arrival in the new country rented a property and carried on agricultural pursuits, subsequently taking up the holding to

property passed into the possession of the present owner, who continued the active development of the place with

tillage on the alternative crop and fallow system. Much time and attention have been given to improving the

MR. MICHAEL BOWEN.

which he gave the name of "Patricia," where his son now resides. This was in the sixties, and the farm was successfully worked by Mr. Bowen until the time of his death, when the homestead and

satisfactory results. Mr. J. H. Bowen received his education at the Wongamine public school, and upon the termination of his studies at fifteen years of age became his father's right hand in the management of the farm, gaining an adequate knowledge of the industry in this association before taking over the property on his own account. The full extent of the holding covers over 1,500 acres, the whole of which is well suited for both agriculture and grazing, and close on 1,000 acres have been cleared and brought under

standard of the merino flock run on the estate, and a good class of wool is raised. A number of draughts are

MR. J. H. BOWEN'S RESIDENCE, WONGAMINE.

C. M. Nixon, Northam.

MR. JAMES HENRY BOWEN.

kept, and a certain amount of breeding is done annually. The property, which is in an advanced state of improvement, is adequately watered by a number of wells which have been sunk in different parts of the estate. During the whole of his life Mr. Bowen has actively concerned himself in the welfare of the district and has faithfully discharged his responsibilities towards his fellow members of the general community. For seventeen

LL

years he has occupied a seat on the Goomalling Roads Board, filling the position of chairman for no less than a decade, and he is also a member of the Northam Agricultural Society. He was granted a Commission of Justice of the Peace by the James Administration in January, 1904. He participates to some extent in the "sport of kings," and served on the committee of the local racing club for a number of years, while for some considerable time he has acted as judge in connection with the race meetings of the district.

**JOHN McPHERSON**, "Bellmuggin" Farm, Jennapullen, Northam, is of Scottish descent, having been born at Garmouth, Elginshire, Scotland, on July 29, 1868, his father, the late Captain John McPherson, being engaged in the mercantile marine service. He received his education in his native village and left school at an early age to enter upon commercial pursuits. Four years later, in 1887, he came to Western Australia, and for several years participated in the various kinds of employment open to a young colonist. On the establishment of the eastern

goldfields he undertook carting contracts to the scene of the mining activity, and eventually disposed of

*C. M. Nixon.* . . . . . *Northam.*  
MR. JOHN McPHERSON.

his interests in this line of business in order to give his attention to the agricultural industry on his present holding at Jennapullen. In this is comprised some 1,300 acres of land,

which is well up to the average in quality of soil, etc., and being cleared and cultivated has yielded excellent returns during the past few years. The system of cropping every third year has been adopted by Mr. McPherson with successful results. On the pastoral side of his operations he has met with special success in the raising of early lambs for the local markets, his flock consisting of about 500 crossbred sheep. He was one of the founders of the Jennapullen Agricultural Society, and for many years has acted as a committeeman of that body, in connection with which he has also filled the secretarial and presidential offices. He is secretary of the local branch of the Liberal League, and takes a prominent part in its deliberations, and is widely known by his active interest in the Farmers and Settlers' Association, of which he is also secretary. Mr. McPherson revisited Scotland in 1906, when he renewed his associations with the scenes of his youth and saw various places of interest. He married in 1888 Emma, daughter of the late John Bonser, a very early settler and the original owner of "Bellmuggin" Farm, and has two daughters.

### GOOMALLING AND WONGAN HILLS.

When the available land around Northam had been alienated and the demand still continued the Government began to test the value of the supposed poorer lands to the north and east, with the result that, as in the case of the mallee country in Victoria, avenues of settlement hitherto unknown were opened up. Meckering and other areas further east were first thrown open, and the success that followed led to the opening up of the lands to the north. From this movement there has been established that immense tract of agricultural land which is served by railway lines extending as far north as Wongan Hills and then running eastward through Dowerin, Korrelocking, and Kununoppin to form a large loop with the eastern line which it meets again at Merredin. Townships have quickly sprung up over this large area, and though for the past couple of years the district has suffered from partial drought, there is every indication that it is destined to become one of the great

wheatfields of Australia. The land is mostly of first-class quality, and the rainfall in normal years quite sufficient for the purpose.

Goomalling, the earliest settled of these areas, is the point whence the railway branches off in a northerly direction to Wongan Hills and easterly to Dowerin and other centres on the line to Merredin. It is rapidly assuming the aspect of a town, having an excellent post office building, hotels, and branch banks. At Wongan Hills there is no township at present, but with the advent of the railway one will no doubt quickly spring up, as the place will be the depôt for transport for the whole of that large and rapidly extending agricultural area.

Dowerin lies to the east of Goomalling, and still further eastward along the line are the townships of Wyalcatchem and Korrelocking, which, with many other stations, give every prospect of being in the future important agricultural towns.

**CECIL BERTRAM EDWARDS**, formerly manager of the Goomalling Branch of the National Bank of Australasia, Limited, but now a partner of the firm of Royal & Edwards,

land, estate, and general commission agents, Goomalling, is a son of the late Mr. George Edwards, of Fremantle, Western Australia, and was born at Fremantle on July 24, 1878.

He received his education at the Fremantle Grammar School, and at the conclusion of his studies was connected with the Public Works Department for nine months. He

then joined the staff of Dalgety and Company, Limited, with whom he remained for four years, and in 1900 entered the service of the National Bank of Australasia Limited. A year later he resigned and proceeded to South Africa to take part in the struggle between the British and the Boers, which was then in course of progress, and joining the South African Light Horse served with this regiment during the latter stages of the war. Returning to Western Australia he rejoined the service of the bank, and after being stationed in various towns throughout the State in 1907 received the appointment of manager of the Goomalling Branch of that institution, where he continued the control for about six years, when he resigned in

*Bartletto, Perth.*  
MR. CECIL BERTRAM EDWARDS.

order to join Mr. Ivon H. Royal in establishing the firm of Royal and Edwards. The new firm has made rapid progress, and besides the land agency business acts as agents for Geo. Wills & Co., W. Thomas & Co., and the Royal Insurance Company. Mr. Edwards devotes his spare time to the development of a property which he owns in the district, consisting of 2,200 acres, fenced and fairly well improved. He has watched the growth of the district from a very early stage of its existence and has witnessed the erection of the mechanics' institute, the new club buildings, and many important business and residential structures. He is president of the Goomalling Farmers' Club, a committeeman of

LL2

the local progress association, and a member of the local race club. He married Marion, daughter of the late Mr. William Dempster, of Grass Valley, and has a son and a daughter.

IVON HERBERT CHARLES ROYAL, general storekeeper and farmer, Goomalling, is a son of Mr. William Royal, of Mount Pleasant, South Australia, and was born at Caltowie, South Australia, on September, 1, 1878. He received his education at Prince Alfred College, and upon leaving that institution, for seven and a half years was associated with the staff of the National Bank of Australasia Limited. In 1903 he left for Western Australia and joined the Perth Branch of the Western Australian Bank, remaining at the head office for about eighteen months. At the end of that period he came to Goomalling and opened his present storekeeping business, which he conducted with such success that it now occupies a leading position among similar establishments in the agricultural area. Among the stock is included a large assortment of provisions, groceries, drapery, boots and shoes, etc., and Mr. Royal is the holder of various important agencies for machinery manufacturers and other firms, among which may be mentioned Messrs. George Wills & Co., Messrs. James Bell & Co. (wheat-buyers), the Norwich Union Fire

land, of which he has cleared 400 acres, which are now under cultivation of wheat, the whole of the estate

*C. E. Farr, Perth.*  
MR. IVON HERBERT CHARLES ROYAL.

being fenced, subdivided, and improved. Mr. Royal has given a portion of his time to the consideration of the public weal, and in 1907 was appointed Justice of the Peace for Northam magisterial district. He is chairman of the progress association, of the mechanics' institute, and a member of the local board of health. Tennis is his favourite outdoor recreation, and he is very fond of music, to which he gives a portion of his leisure time. He married

MR. I. H. C. ROYAL'S PREMISES, GOOMALLING.

Insurance Society, Limited, and the Royal Insurance Company, Limited. In addition to his trading interests, in 1905 he took up 1,000 acres of

Florence, daughter of Mr. John Rock, of Quorn, South Australia, and has a family of three children—a son and two daughters.

EDWARD B. LOCKYER, J.P., farmer and coachbuilder, Goomalling, is the eldest son of the late Mr. Alfred Brook Lockyer, of Roebourne, and latterly of Goomalling, where the gentleman under review was born on August 24, 1872. He left this district at the age of five years with his parents, who settled in the north-west, and received his preparatory schooling in that district. Upon entering his teens he came to the capital to continue his education at Mr. H. Briggs' Grammar School at Fremantle, and subsequently served indentures for five years to the engineering trade in the Government workshops at that seaport. From there he went to Kalgoorlie and at a later date was

Bartlett, Perth.  
MR. EDWARD B. LOCKYER.

appointed engineer on the White Feather Main Reef Mine at Kanowna under Mr. Harper, and after holding this position for nine months he returned to Goomalling. Taking up his residence in his father's home he devoted a couple of years to assisting in the working of the farm and in the development of his own holding. In October, 1905, Mr. Lockyer opened his present coachbuilding, blacksmithing, and farm implement workshops in the town. He holds the agencies for the Massey-Harris Implement Company; Messrs. J. Darling and Son, wheatbuyers; the Guardian Insurance Company; and Messrs. J. M. Drummond & Co., produce merchants. Mr. Lockyer is the resident trustee for his late father's estate, and has also acquired two properties

on his own account, situated at Goomalling and Kununoppin respectively. He has always displayed considerable interest in public matters, and was chairman of the Goomalling Progress Association for eighteen months, having had to retire from this position on account of pressure of business. During his period of service, mainly through his instrumentality, many public conveniences were obtained for the town, and he was responsible for the discovery of a fine well of fresh water, now known as Lockyer's Well, which was put down by the local roads board. He now holds office as vice-president of the association, is a member of the local board of health, and a member of the Goomalling Farmers' Club. He has taken an active part in sport, being treasurer and delegate for the Goomalling Football Club, and latterly a member of the appeal board to the association. Shooting is his favourite recreation, and he will cover many miles in pursuit of wild duck. Mr. Lockyer married Martha, daughter of the late Mr. W. H. Perrin, schoolmaster, of Wongamine, and has a son and three daughters.

WILLIAM GEORGE EATON, J.P., farmer, Goomalling, is a son of the late Mr. Richard Eaton, of Maidstone, Kent, England, one of the early arrivals in the Northam district of Western Australia. He was born at Maidstone on June 2, 1847, and when five years of age was brought by his parents to this State, where he subsequently pursued his educational studies. From his earliest days he has been associated with farming pursuits, first assisting on his father's farm at Northam, but after the discovery of the eastern goldfields he began carting goods from Northam to the fields, there being no railway at that time. He continued carting for some years, still retaining his farm at Goomalling, and among other things when a main of seven miles was laid from the lake to Boulder City he carted the first load of pipes to the town. He also carted the first piano and first bank safe to Southern Cross. Mr. Eaton held several farming leases before acquiring his present holding in 1890, to the development of which he has since solely devoted himself. The property is situated about three and a half miles from the railway

station and consists of 3,500 acres. Of this 1,500 acres have been cleared and cultivated, the chief cereal produced being wheat, which yields under normal conditions an average of 15 bushels to the acre. Sheep also form an important department of the industry, but at the present time, on account of the dry season, the flock has been reduced. Mr. Eaton has taken an active part in local affairs, and for nearly sixteen years has been a member of the local roads board. He is a member and steward of the Northam, Mumberkine-Jurakine, and Goomalling race clubs, and acts as committeeman to the trio of clubs. It was chiefly owing to his display of public spirit that the present Goomalling Farmers' Club building became an accomplished fact, Mr. Eaton making himself responsible for the whole of the original expense of erection. He has also been a member of the Northam Club since its inception, and lends his ready support to all sporting events in the district. He married Honora (now deceased), a daughter of the late Mr. M. Lynch, of Ireland, and has four sons and a daughter.

RICHARD MICHAEL EATON, farmer, "Rocklands," Goomalling, was born in the district where he now resides on July 23, 1876, and is a son of Mr. W. G. Eaton, a well-known settler in the same place. He received his education at a local school, and upon concluding his studies remained under the paternal roof, assisting on the farm, and in the early days of the goldfields was employed in carting provisions to the mining centres. In 1904 he launched out on his own account, taking up the property which he now owns, consisting of 1,290 acres lying about nine miles from the Goomalling railway station. An area of 700 acres has been brought under cultivation, and with the exception of the dry season of 1911 results have been most satisfactory, the average yield of wheat being 15 bushels to the acre. Sheep-raising has also been successfully carried on, crossbred merinoes composing the flock, and horses are bred, Mr. Eaton having produced both blood and draught stock of excellent quality. He has a few breeding sows and generally engages in mixed farming pursuits both at "Rocklands" and on his second property, "Urarty," a holding of 520 acres,

situated about 20 miles from Goomalling. Mr. Eaton identifies himself in various ways with local movements, and has held the post of secretary of the progress association for a number of years. He is also a patron of all the local sporting clubs. In 1904 he married Helen Mary, daughter of Mr. W. H. Leeson, of Dandalin, near Northam, and has three daughters.

**WILLIAM WOOLHOUSE**, "Osmond" Farm, Goomalling, is a son of the late Mr. George Woolhouse, who came from England to Western Australia by the sailing ship "Trusty" in 1844, and eventually became one of the pioneers of the Northam district.

C. E. FARR, Perth.  
MR. WILLIAM WOOLHOUSE.

The subject of our notice was born at Northam on March 17, 1843, and received his education at a local school. He began active life on his father's farm at Geraldton, where he continued until twenty-four years of age, when in company with his brother he penetrated into the interior of the north-west, there establishing the "Robe River" Station, one of the pioneer enterprises of that district. In this venture Mr. Woolhouse displayed all those qualities of grit and endurance which marked most of the early settlers. Leaving Geraldton with a party of thirteen and stock consisting of 380 head of cattle and 120 horses, they reached the Lyons River, but owing to the great drought which set in were compelled to leave the cattle at Mount Thomson. Mr. Woolhouse, with his

brother and one native, returned to Champion Bay, meeting *en route* on the Upper Murchison the ill-fated Clarkson Party, the leader of which—Henry Clarkson—had been killed by the natives some few months earlier. Returning in the following December to collect the cattle, they found that the natives had disturbed and killed a large proportion of the herd, and only 122 were brought in at the muster. These they took to Champion Bay, and in the following year (1876) again started with 2,400 sheep, which they successively overlanded to the station, being favoured by a good season and a plentiful supply of water. A succession of good seasons followed, and the station prospered until 1892, when the north-west was visited by a severe drought, and they were forced to dispose of their interests in the district, the station now being held by the Murray Pastoral Company. Messrs. Woolhouse Brothers were successful breeders of thoroughbred horses, and with "Gratitude" won the Queen's Plate, for which event the mare was trained by Mr. Woolhouse, who also rode her to victory in the race. Leaving the north Mr. Woolhouse returned to Northam, and was droving stock for a number of years, until in 1909 he joined his partner, Mr. Gibbs, on their present holding. This is situated about nine miles from the Goomalling Railway Station, and consists of 850 acres. About 300 acres of this area are under cultivation, and the remainder is fenced and partly improved. The soil is of a light loamy nature, and requires only a moderate rainfall to respond generously to the efforts of the tiller, the crop averaging about 15 bushels to the acre. A flock of 250 strong wool merinoes graze upon the uncultivated portion of the property, and the firm owns an imported ram from South Australia, bred on Mr. Angus' "Hill River" Estate. In early life Mr. Woolhouse gave considerable attention to sport, and was an amateur jockey of some repute, bringing more than one horse successfully to the winning-post. He married Mary, daughter of the late Mr. William Waldeck, of Greenough Flats, and has a son and a daughter.

**MICHAEL JOHN BOWEN**, farmer, "Hollydean," Wongan Hills, is a son of Mr. P. Bowen, of this State, and was born at Wongamine, in the Newcastle district, on

July 29, 1886. At the conclusion of his scholastic studies he followed farming occupations on the property owned by his father, and remained under the paternal roof until he acquired his present holding in 1907. Situated 21 miles from Goomalling and 15 miles from Wongan Hills, "Hollydean" comprises 2,750 acres of good mixed land, which in the original instance has been fairly heavily timbered with jam, York gum, salmon gum, gimlet, etc. This area is partially cleared, 1,050 acres having been brought under cultivation, while the whole is fenced, subdivided, and improved. The farm is worked on the three-year system of graze, fallow, and crop, and wheat, which is the chief product, yields harvesting returns of 17 bushels to the acre, while a large area is sown with field peas, which are fed to the swine. Pigs of the Berkshire and large black breeds are an important factor in the prosperity of the farm, and cattle of the milking strain are largely bred, a cross between the Ayrshire and the short-horn being found to produce satisfactory results. Strong wool merino sheep have been raised from valuable rams imported from Victoria, the flock at the present time numbering about 500; and Mr. Bowen owns a fine draught stallion, from which he breeds horses for farm use and for sale in the district. The gentleman under review is a member of the Goomalling Club and of the Wongan Hills Progress Association.

**GEORGE WILLIAM BRITNELL SMITH**, farmer, of "Rockland," Goomalling, is a son of Mr. Alfred Charles Smith, of Guildford, and was born at Wongamine, Western Australia, on August 3, 1874. Upon leaving school he obtained his early insight into farming operations on the home property at Guildford, where he remained until after the attainment of his majority when he launched out for himself. His first venture was the taking over of one of his father's farms at Wongamine, which he carried on successfully from 1895 to 1908, in which latter year he purchased his present holding, situated about six miles from Goomalling, where he has continued ever since. This consists of 1,844 acres of good arable land, the whole of which has been fenced and partly improved, about 1,200 acres being devoted to wheat-growing.

With the average rainfall, in good seasons returns show an average of 17 bushels to the acre, and wheat is the principal asset of the farm. Merino sheep, however, form another department of considerable importance, the flock consisting of 700 head bred from imported stock raised in South Australia. A good class of draught horse is also produced on the property, which has proved well suited to the requirements of the

*Bartlett,* *Perth.*  
MR. GEORGE WILLIAM BRITNELL SMITH.

country. A good supply of fresh well water is one of the boons enjoyed by the holding, which has experienced less inconvenience in this respect through the recent drought than other less favoured properties in the district. Mr. Smith has devoted a

MR. G. W. B. SMITH'S RESIDENCE, GOOMALLING.

portion of his leisure to public affairs, and was secretary of the Goomalling Roads Board for a short period. At the present time he holds the post of secretary to the farmers' club at Wongamine, and has been secretary to the Mumberkine and Jurakine race clubs for six years, also holding the position of steward in the Goomalling Race Club. He is keen on outdoor sport, tennis, cricket, and football all coming in for a share of his attention, while he lends his support to most of the local clubs. He married Bertha, daughter of Mr. James Rawlings of Toodyay, and has two sons and two daughters.

CHARLES CHITTY, farmer, of "Batlatting," Goomalling, is a son of the late Mr. George Chitty, who was one of the early pioneers of the Western Australian country. He was born in England in 1839, and came to this State with his father in 1844, subsequently, at the close of his education, entering upon farming pursuits in the Northam and Toodyay districts, where he continued for a number of years. In these early days, before the construction of railways to the country districts, he was engaged in stock-raising on a fairly extensive scale, a large number of the horses bred by him finding their way to the Indian market. In 1882 he acquired the holding where he now resides, taking up 3,000 acres of virgin land about 15 miles from Goomalling, on the Wongan Hills Road, and at the time that he commenced the development of this property was

preceded in the district by only two other settlers, *viz.*, Messrs. Slater and Lockyer. Mr. Chitty gradually

MR. CHARLES CHITTY.

acquired further holdings adjoining his primary estate, which by degrees was increased to the size of 12,000 acres, the greater proportion of which is good arable land. About 1,000 acres have been cleared and fine wheat crops raised, the average returns being 15 bushels to the acre. A few acres are devoted to oats and hay for the use

MR. MICHAEL CHITTY.

of the stock on the farm, and there is a fair-sized orchard, and also a vineyard, where fruit and grapes do well. A good supply of fresh water is provided by several wells on the property. Mr. Chitty has always been a very active worker on the

farm, the onerous duties connected with which have precluded him from taking any prominent part in outside affairs. He married Hannah, daughter of Mr. Michael Lynch, of Ireland, and has three sons and six daughters. MICHAEL CHITTY, manager of the farm, is a son of the foregoing, and was born at Toodyay on April 7, 1884. He received his education locally, subsequently attending the Christian Brothers' College, Perth, where he concluded his scholastic career. Since boyhood he has been connected with agricultural pursuits on the farm, and has now taken over the management of the property on behalf of his father. He is identified with most forms of manly outdoor sport, and is a member of the local race club.

CHARLES GEORGE CHITTY, farmer, Goomalling, was born in the district where he now resides in the year 1881, being a son of Mr. Charles Chitty, who came from England to Western Australia and was one of the early settlers in Goomalling. The subject of our notice was educated locally, finishing his studies at Pinjarra, and upon leaving school became identified with farming pursuits on his father's property, continuing there until 1907, when he purchased his present estate. At that time virgin country, covering 2,800 acres of beautiful flat land, the holding has abundantly justified Mr.

Chitty's selection, the good chocolate soil having proved exceptionally suited to wheat-growing. With an average rainfall of 15 in., it gives 15 bushels to the acre, but in some

MR. CHARLES GEORGE CHITTY.

especially favoured portions the average has risen as high as 34 bushels. The estate is situated 17 miles from Goomalling, on the Wongan Hills Road, and has the great advantage of a plentiful supply of well water for stock purposes. A small flock of sheep of the merino type is run on the property, but a more important branch of operations is found in the breeding of pigs,

which is carried on on a fairly extensive scale, the large black type being preferred by Mr. Chitty to the Berkshire breed. Horses are also bred for use on the farm and for sale, a useful class of draught being produced, besides a lighter strain of blood stock. Mr. Chitty is identified with the general affairs of the district and is a member of the Goomalling Race and Social clubs. His time is mainly occupied with the onerous duties of the farm, but he is interested in and spares a little attention to outdoor sport. He married Lily, daughter of Mr. T. Eaton, of Northam.

OTTO WILLIAM GANZER, proprietor of the "Valley" Farm, Wongan Hills, was born in Germany on December 29, 1872, being a son of Mr. William Ganzer, of that country, and latterly of South Australia. He was brought to Australia by his parents at the age of five, and subsequently became a naturalized subject of the Central State, where he received his education and passed his early manhood.

C. E. Farr, Perth.  
MR. OTTO WILLIAM GANZER.

During his youth he secured some experience in farming, and for a time worked a property of his own in South Australia, subsequently being associated with a firm of auctioneers and commission agents for some four years. In 1899 he came to Western Australia, and after his arrival followed the trade of carpenter and wheelwright for ten years. Turning his attention to

MR. C. G. CHITTY'S RESIDENCE, GOOMALLING.

agricultural pursuits once more he selected the holding which he now owns, situated three and a half miles from Wongan Hills and consisting of 1,600 acres. At the present time Mr. Ganzer has 500 acres under cultivation of wheat, the general average being 16 bushels to the acre. The property is well watered and eminently suited to tillage operations, and his main efforts have been in this direction, but he is now beginning pastoral operations, having the nucleus of a herd of dairy cattle and breeding horses on a small scale. Mr. Ganzer has been chairman of the local progress association for two years, and latterly has accepted the secretaryship of the Liberal League at Wongan Hills. He is a member of the building committee for public hall accommodation, and always tenders his hearty support to all movements of advancement in the district. He married Frances, daughter of Mr. Edward Stickland, of Wongan Hills, and has three sons and a daughter.

**LEWIS BERTRAND CHESTER**, farmer, Goomalling, is a son of the late Mr. Sydney Chester, one of the earliest English pioneers of Western Australia. He was born at Guildford on February 7, 1881, and pursued his scholastic studies under private tuition locally and at Perth. For four years he received a valuable initial training in the farming industry on his father's property on the River Swan, and subsequently enlarged his knowledge and experience by association with other similar properties, also giving up some time

to the study of surveying. After two years in the Beverley district, in 1906 he entered into possession of his present holding, lying about nine miles distant from the railway station at Goomalling, and has since successfully conducted operations on his own behalf. A good class of soil

*C. E. Farr.*

*Perth.*

MR. LEWIS BERTRAND CHESTER.

is found in this district, and Mr. Chester's property of 1,773 acres embraces a fair share of arable country, his harvesting results of 15 bushels of wheat to the acre from an area of 450 acres which he has under cultivation being equal to those of neighbouring farms. A small orchard produces apples, peaches, nectarines, and grapes of excellent quality, and on the grazing pastures 150 sheep of merino and Shropshire-crossbred

type give satisfactory evidence of the nourishing quality of the natural grasses. The homestead is situated on an elevated position, and at a convenient distance apart stands the sheds, barns, and other outbuildings. Mr. Chester is a member of the Goomalling Club. He finds his chief recreation in football. He married Helen, daughter of Mr. Neil McKay, of Goomalling, and has a family of two sons.

**JOHN CRAIG**, farmer, of Wongan Hills, was born at London in 1852, and is a son of the late James Craig. Shortly after leaving school he came to South Australia, after a few months proceeding to Melbourne, where he was engaged in business until 1893, in which year he arrived in Western Australia and settled at Fremantle. In 1907 he retired from mercantile pursuits in order to take up a farming property at Wongan Hills, to the development of which he has since devoted himself. The farm is situated 14 miles from the township and embraces 5,000 acres of good mixed land, an excellent water supply being provided from two fresh-water wells. About 500 acres of the finest soil have been prepared for wheat cultivation, and it is Mr. Craig's intention shortly to enter upon pastoral operations, including the raising of sheep and pigs on a fairly large scale. While at Fremantle Mr. Craig served one term as councillor in the municipal chamber. In 1876 he married a daughter of the late Mr. Alfred Edward Gladstone Reid, of England, and has three sons and three daughters.

*Photo by C. E. Farr.*

MR. L. B. CHESTER'S RESIDENCE, GOOMALLING.

MICHAEL COOMER, J.P., farmer, of "Ninan," Wongan Hills, is a son of the late Mr. Matthew Coomer, of Ireland, who came out to Australia as a member of the Imperial Forces in 1859. The gentleman under review was born at Fremantle on January 22, 1863, and received his education at the same place under the tutorship of Mr. Humble. Upon leaving school he proceeded to Northampton and followed mining occupations in that district for four and a half years, subsequently passing a period of eighteen months on a sheep station in the Geraldton district. Mr. Coomer then commenced business as a bootmaker at Northam, and continued at this centre for about seven years in the same line of trade, afterwards taking over the conduct of Tattersall's Hotel, which he carried on for two years. Relinquishing this business he turned his attention to farming in the neighbourhood of Goomalling, where he owned a property which eventually he sold to Mr. Henry Slater, and purchased his present holding, about five and a half miles from Wongan Hills. The 5,000 acres of good mixed soil, comprising a large proportion of first-class arable land, has been turned by Mr. Coomer to the best account since it came into his hands, 1,000 acres being cleared and placed under wheat cultivation, with results averaging 15 or 16 bushels to the acre. In addition to this property he also holds a pastoral lease of 8,000 acres, where horses and cattle are bred for the local markets. An imported stallion from Victoria is used as sire, and has produced some valuable draught progeny; while among the cattle the Jersey breed predominates. Pigs of the Berkshire breed and large black type are raised in numbers and are found very profitable. Mr. Coomer interests himself in the affairs of the district, and is president of the progress association. He has been a keen advocate for up-to-date means of communication, and held the office of president of the Wongan Hills Railway Committee.

His Commission of Justice of the Peace was granted for Northam in 1908, and subsequently was transferred to the Victoria magisterial district. He is president of the Goomalling Race Club, having filled this post since the inception of that body; and as a Freemason has been the recipient of honours in the local lodge. In early life Mr. Coomer was an enthusiast in

Burdett. Perth.  
MR. MICHAEL COOMER.

aquatics, and was one of the first members of the Swan River Rowing Club. He was also captain of the West Perth Football Club at one period of its history, and was associated with many recreation clubs in Perth. He married Helen, daughter of the late Mr. John Stokes, of Belfast, an early arrival in Western Australia, and has four sons and five daughters.

GEORGE MARSDEN DEMPSTER, farmer, of Nambling, near Dowerin, is a son of the late Mr. Andrew Dempster, M.L.C., a native of this State, who was identified with agricultural pursuits in the northern district for many years.

The gentleman under review was born at Toodyay on October 3, 1876, and received his education at Esperance. Upon the conclusion of his scholastic studies he became engaged in work on his father's farm at Northam, and subsequently took over the management of this property, which he retained for many years. In 1908 he purchased the holding where he now resides, lying north-west of Dowerin, on the Goomalling Road, embracing 1,078 acres of rich land, particularly adapted to wheat-growing. There is a large proportion of forest country, varied by patches of scrub, and clearing operations have been vigorously carried on, 925 acres now being devoted to purposes of tillage. With a normal rainfall the harvest gives very satisfactory returns, 15 bushels of wheat to the acre being the average ingathering. The estate is cut up into fourteen paddocks, strongly fenced with wire, and the work of improvement is going rapidly forward. In addition to this holding Mr. Dempster owns, in partnership with his brother (Mr. S. R. Dempster), a station property in the Murchison district, consisting of 800,000 acres, where 2,000 to 3,000 head of cattle are run, together with seventy horses and a flock of from 16,000 to 18,000 sheep. His chief recreation is found in motoring, and he is the possessor of a Darracq car and a Triumph motor cycle, and has successfully carried out an experiment, previously supposed to be impracticable, of attaching a marine engine to his harvester, which does the work of two horses, and has been found to work in the most satisfactory manner. He is a member of the automobile club of Western Australia and a member of the Northam and Goomalling clubs. Mr. Dempster is keenly interested in outdoor sport, and plays cricket, football, and tennis, and was successful in winning first prize for the best bowling average at Dowerin. He is also fond of golf, and held the championship of Northam for four years.

### MECKERING TO KELLERBERRIN.

After leaving Northam and proceeding along the eastern goldfields line the traveller passes through several small towns, each of which is the centre of a rapidly growing wheat area. The first of these, the Meckering area, consists of a loam surface with clay subsoil, and is

covered with York gum, salmon gum, and jam wood, none of which present any great obstacles to the onward march of the settler. The district is chiefly settled by farmers from the Eastern States, most of whom seem to be more than satisfied with their choice of a new country.

The town, which has a population of about 600 people, has the appearance of prosperity. In addition to private residences of a substantial character, there are the usual government buildings, such as post office, police station, and State school, a fine agricultural hall, hotels, and various small industrial establishments for chaff-cutting, grading, and other farming trades. There are also extensive quarries in the neighbourhood, from which most of the granite used in building operations throughout the State is secured.

At Cunderdin, another rising township some 15 miles further along the line, there is a large pumping station which forms part of the goldfield's water supply scheme, and which serves to carry the water forward for another 60 miles.

Tammin, about 15 miles from Cunderdin, is the centre of another large agricultural area where the soil is good, but being in places rather heavily timbered is somewhat costly to clear. At Tammin is situated the military manœuvring area extending over some 43,000 acres. Every Easter the Western Australian section of the Commonwealth Military Forces, to the number of about 1,000, go into training there for eight days, during which the little township wears an air of unwonted activity.

The principal town along this section of the line is Kellerberrin, situated about 133 miles from Perth, in the heart of the wheat-growing area of Western Australia. To quote from the "Year Book," "It has made greater progress than any town in the State of recent years. Six years ago it was difficult to secure the necessary fifteen

children to found a school; to-day there are over 130 in attendance. The annual rateable value of the town is £6,875, while the unimproved value of the district for rating purposes is £349,542. With an average rainfall of 12 in. and good soil the district possesses those conditions necessary for wheat production. Wheat and chaff are the principal products of the district, and in 1911 the total tonnage sent away from Kellerberrin station amounted to 8,868 tons. A large flour-mill has been erected in the town, and during the 1911-12 season, 3,000 tons of locally-grown wheat passed through it. This season it is expected that at least 6,000 tons will be handled. The town itself, which has a population of 800 and serves a district containing four times that number, is rapidly assuming a permanent aspect. A large post office has been erected by the Commonwealth at a cost of £3,000, four leading religious denominations have built churches for their adherents, and the stores and hotel are commodious structures, giving evidence of considerable prosperity. There is no water difficulty, as the goldfields water supply runs through the town, the reticulation service from the main extending for 20 miles around. Three banks—the National, Commercial, and New South Wales—have branches at Kellerberrin, which has also achieved the dignity of a local weekly newspaper. The town has not yet to seek to be constituted a municipality, being content for the time to have its local government controlled by the less formal methods of the roads board, which has done admirable work in opening up and maintaining good roads throughout the district."

ROBERT WILLIAM DOWNING, J.P., Secretary of the Moecking Roads Board, is a son of Mr. George Downing, of Talbot, Victoria, and was born at that town on April 10, 1876. He attended Prince Alfred School until sixteen years of age, when he entered a private academy for a year, and having completed his education served his articles to the legal profession in the office of Mr. E. S. Herring, solicitor. After eight years' training he was appointed to the sole control of this gentleman's practice at Talbot, but not being satisfied with the prospects offering in his native place sailed for Western Australia in 1901. Proceeding to Paddington he engaged in clerical work on the mines, and for a time was associated with the Star Lead, which ultimately proved unsuccessful. He next spent several months in gaining experience in prospecting and general mining pursuits, including the cyaniding and filter-pressing processes, and eventually took a position as bracceman on the Star of Western Australian Gold

Mine. Some months afterwards he accepted the post of secretary to the

MR. ROBERT WILLIAM DOWNING.

Broad Arrow Hospital, and during his term of office brought the affairs

of that institution, financially and otherwise, to a highly satisfactory state of efficiency. Four years later, when he resigned his secretarial duties, he was the recipient of a handsome testimonial and gold medal in recognition of his valuable services to the institution. The position of town clerk to the municipality of Broad Arrow and Paddington having become vacant Mr. Downing was the successful applicant, and filled this appointment for five years. In July, 1910, he entered upon the duties of his present post, which he has held ever since. Whilst at Broad Arrow he also carried on as an auctioneer and combined journalism with his other duties, being local correspondent to *The Kalgoorlie Miner*. At the present time he represents in the district the firm of Messrs. Duncan Paterson & Co., Limited, of Fremantle; he also acts as local wheatbuyer for Messrs. James Bell & Co., and is agent for the Royal Insurance Company. He received his Commission of Justice of the Peace, which he now exercises

over the Northam magisterial district, in the first instance at Broad Arrow in 1905. He was a member of all the local sporting bodies, and combined the offices of captain and secretary of the Paddington Cricket and Football Club. Whilst secretary for about twelve months of the Broad Arrow - Paddington Jockey Club, during that period he successfully organized a meeting in aid of the local hospital, which proved very profitable. He takes a keen interest in all matters connected with the Masonic craft, is a Past Master of the Order at Broad Arrow, and the present Worshipful Master of Lodge 91, W.A.C., at Cunderdin. Outdoor sport still forms his chief means of recreation, and, besides being connected with most of the sporting bodies of the district, he is secretary to the Meckering Rifle Club and Tennis Club. He is also a keen billiardist. His musical gifts have led to his appointment as conductor of the choir in connection with the Anglican Church at Meckering. Mr. Downing married in April, 1906, Martha, daughter of the late Mr. James Hawkes, of Adelaide, and has a son and a daughter.

**PATRICK CULLINANE**, farmer, "Fairfield," near Meckering, is a son of the late Michael Cullinane, of County Cork, Ireland, and was born at the town of Camberd, Cornwall, England, in August, 1859. At the age of seven years he began work in the tin mines of Cornwall, and after following that occupation for twelve years left his native land for Australia in 1879. He arrived at Adelaide in the following year, and subsequently was engaged in farming pursuits in various parts of South Australia. Immediately prior to his departure for the Western State he was interested in a property at Belalie which was conducted very successfully on the share system, but he relinquished farming for a time after arrival in Western Australia in 1894. Carrying out a decision to look into the mining industry he proceeded to Coolgardie, but not finding sufficient inducement to remain returned to Perth and opened in the produce line of business. The chief department of his enterprise—the importation of chaff from South Australia—proving only an indifferent success, in September of the above year Mr. Cullinane came to

Meckering and took up 990 acres in that district. This proved the nucleus of the fine estate, comprising 3,700 acres, of which he is now proprietor and which has resulted as a very payable proposition. The "Fairfield" property is situated within six miles of the town, and the whole is fenced and subdivided into eighteen paddocks. About 2,300 acres are cleared, and of this area 700 acres have been brought under cultivation, wheat being the principal product of the farm. Between 500 and 600 sheep are pastured on the run, and Mr. Cullinane is active in his dealing operations with this class of stock. He also raises both cattle and horses, the former being

MR. PATRICK CULLINANE.

destined for the local markets and the latter for the requirements of the farm. Since the advent of the goldfields water supply scheme the property has derived its entire supply from this source, and pipes are laid on to every paddock, so that watering the stock is greatly facilitated. The homestead is a substantial stone building, and all conveniences in the way of machinery, outbuildings, etc., have received special attention. Mr. Cullinane, who is one of the oldest settlers in the district, was for years a member of the Northam Agricultural Society and also of the Meckering Roads Board. He is most optimistic concerning the possibilities of this portion of the country, and considers it the ideal locality for young settlers to carve out a prosperous future for themselves. He is connected with various local organizations, and has been a member of the

A.O.F. since its inception in Meckering. In 1893 he married Annie, daughter of the late Michael Green, of Tipperary, and has four sons and six daughters.

**WILLIAM ALEXANDER DRAFFIN**, farmer, "Glenfyne," Meckering, is a son of the late John Draffin, of Horsham, Victoria, and was born at Wail in that State on March 1, 1882. He received his education at the Boort State school, and at fourteen years of age entered upon active life, being engaged in the farming industry for two years in Victoria. The advantages offered to settlers by the Lands Department of Western Australia proved sufficient allurements to draw him to her shores, and in 1898 he arrived at Fremantle. Proceeding to Coolup he followed farming occupations in that district for a couple of years, at the end of which period he left for Meckering, where he continued in the same line of industry for four years. Following this, for about the same length of time, he was engaged in contract work, chiefly chaffcutting, and subsequently took up 500 acres of land and entered upon pastoral and agricultural pursuits on his own account. He has since extended his acreage, his total holding now extending over 1,800 acres. It is situated three miles from Meckering, and reaps the advantage of the goldfields water scheme, a good supply of water thus being assured. Practically the whole of the holding is cleared, and about 1,000 acres have been brought under cultivation of wheat and hay, while the remainder is stocked with a few hundreds of sheep intended for the wool and mutton markets. Mr. Draffin leases an additional 700 acres, and has 1,200 acres of fallow land preparing for next season's crop. He is a patron of all outdoor sport, and has achieved success in pedestrian feats. In 1909 he married Florence, daughter of Mr. G. J. W. Freeman, of South Australia, and has one daughter.

**THOMAS REYNOLDS**, "Mount Pleasant," Meckering, was born on the high seas, three days out from Fremantle, his parents being passengers on board the sailing ship "Success," in 1843. His father, who hailed from Oxfordshire, upon

arrival in the new colony embarked on agricultural pursuits in connection with some of the settlers who had started operations in the Toodyay district a few years previously. Within about three years,

MR. REYNOLDS, SEN.

having gained a fair knowledge of the conditions of the country, he saw his way clear to renting a property about eight miles out of York, in the Avon Valley, and launched out on his own account in the farming industry. Subsequently the late Mr. Reynolds leased the "Woodside" property from Mr. Hamersley, together with a small flock of sheep, and continued there for about ten years. He then took up as a pastoral lease the present holding of "Mount Pleasant," then known by the native title of "Boodabyn," situated 20 miles to the north-east of York and ten miles from Meckering, the nearest railway town. The first block of land taken up by Mr. Reynolds in 1862 consisted of 100 acres, which he secured on the conditional-purchase system, afterwards increasing the area by adding 120 acres of homestead pastoral land purchased for 5s. per acre, and later converted into freehold. His son, the subject of this memoir, having grown up in the district and received his education by means of private tuition, assisted his father on the home property until he attained the age of twenty-seven years, when he purchased 80 acres of land at Skeleton Pool, but this not proving profitable eventually he sold out, and returning to "Mount Pleasant" took over the property from his father in

August, 1877, and has since worked it on his own account. Not content with the opportunities afforded by the then existing acreage, Mr. Reynolds almost immediately began to acquire adjoining territory, purchasing small blocks as opportunity occurred and taking up other portions on lease as his enterprise prospered. In 1897 he brought the estate up to its present size, 5,000 acres now being included under the name of "Mount Pleasant," and, of this, over 2,000 acres possess a most valuable quality of soil, while the whole of the property is improving year by year with the skilled attention which is bestowed upon it. When Mr. Reynolds first entered upon the management of the holding only 45 acres were cleared, and in order to make a payable proposition of the industry he was obliged to work very strenuously, carting sandalwood some 80 to 90 miles, for which wood at that time there was a very ready sale. Water for domestic purposes had to be carted a distance of 13 miles, the stock also being dependent upon this means of supply. The young colonist had abundant opportunity for proving himself a representative of "the bulldog breed" which sticks tenaciously to its purpose in spite of much to discourage, and displayed true British pluck in the manner by which, in face of many hardships and privations, starvation sometimes staring him in the face, he won through and established himself as a prosperous farmer upon Australian soil. Most of the work in those early days he did with his own hands, hardly allowing himself sufficient time for needful rest and food, while recreation was a thing unthought of. Gradually, however, as his family grew up and he was able to receive assistance from his sons the strain was lessened, and the land began

bounteously to repay him for the labour and toil which he had expended upon it. About 1901 he was suddenly stricken with the affliction of total blindness, brought on as a result of his laborious life, and since that period he has been forced to leave a great deal of the practical management of the place to his sons. Of the 5,000 acres comprised in the property the greater portion is now freehold, and by effluxion of time the whole will become so at no very distant date. The whole of the property is fenced, jam timber being used for posts, which are threaded

C. E. Farr.

Perth.

MR. THOMAS REYNOLDS.

with six or seven plain wires round the boundary, fewer strands being found sufficient for the subdivision fences. The water supply is derived from various wells, dams, and soaks, the great expense to be incurred on account of the heavy grade of country having prevented the connection of the estate by a pipe line

MR. T. REYNOLDS' RESIDENCE, MECKERING.

from the Coolgardie water scheme. Some difficulty has been experienced on account of the tendency displayed by the wells to become salt, but an ample provision of good stock water has now been obtained by the above

being bred for his own uses by Mr. Reynolds, who, however, does not produce a superfluous number with a view to selling. A few cattle and pigs are raised to provide dairy produce and bacon and pork for

present, as well as shelter for machinery, the farm being equipped in a thorough fashion with various labour-saving machines, including a 7-h.p. gasoline engine. In 1900 Mr. Reynolds purchased from

HOMESTEAD AND OUTBUILDINGS AT "MOUNT PLEASANT."

means, while rain water for domestic use is conserved in a couple of tanks of 10,000-gallon holding capacity and an underground tank of about 8,000 gallons. About 1,500 acres have been placed under crop, half of that area being sown every alternate year. A system of fallowing is employed, which produces very good results, wheat averaging 20 bushels to the acre, while oats and hay are also grown in considerable quantities. Sheep to the number of about 1,000 are carried on the estate, these consisting of a good specimen of the Lincoln-merino cross, which yields a profitable quality of wool—the principal feature of this department of the farm industry, though their value for the mutton markets is also

domestic requirements, and the usual poultry yard is in evidence. A striking feature of the property is the well-built homestead of modern design which forms the dwelling-place of the family. Great good sense has been displayed in the erection of this structure, the rooms, ten in number, being for the most part large and lofty, and proper consideration has been given to ventilation, while a wide verandah encircles the whole building. A commodious cellar, invaluable for purposes of cool storage, has been included in the premises, and all the appointments of an up-to-date superior residence catered for. The farmyard buildings are of wood and iron, and, though not new, having been in use

Messrs. Sermon Brothers the "Mordinany" Estate, comprising 1,700 acres, of which 800 acres are cleared and now (1913) under crop, and the balance rung. The property is fenced, and situated within two miles of Meckering township. Though seventy-one years of age, Mr. Reynolds still enjoys good health, and though the working of the place is mainly carried on by his sons, Messrs. Mark Andrew and David Thomas Reynolds, he takes a keen concern in its management, and may often be seen riding about the property accompanied by one of his children or grandchildren. He claims to be the oldest surviving settler in the Meckering district, and has watched its rise and progress with

Photo by C. E. Farr.

STABLES AND HORSES AT "MOUNT PLEASANT."

a consideration. The clip is sent to London, where it invariably commands satisfactory prices. Over twenty horses of a type eminently suited to agricultural work are kept on the farm, a useful class of animal

for many years, answer all the requirements of more modern times. Stabling for thirteen horses is provided, and a motor-house indicates up-to-date means of transit. Grain-sheds and shearing-shed are also

great interest, after his many years of hard pioneering work having the gratification of seeing his faith in its possibilities justified and his own enterprise crowned with success beyond his hopes. Mr. Reynolds

married in 1869 Isabella, daughter of the late Nelson Wilkins, one of the early English emigrants to Western Australia, and his family consists of five sons (several of whom are engaged in the agricultural industry on their own account in the same district) and four daughters.

**WALTER ERNEST REYNOLDS**, farmer, "Mordinany," Meckering, was born in the York district on February 14, 1881, and is a son of Mr. Thomas Reynolds, of Meckering. He was educated privately, and at fourteen years of age entered upon farming occupations on the parental property. He continued in this connection for over ten years, and having reached the age of twenty-five took over his present holding on lease from his father and has worked it successfully ever since. Of the 2,100 acres comprising the property 1,100 acres have been cleared, and during the present season Mr. Reynolds is devoting 525 acres to the cultivation of wheat and 40 acres to oats. He has a flock of 320 sheep, and breeds lambs for the local markets on a fairly extensive scale. Horses and cattle-breeding also come in for a share of attention, the stock produced in these classes being mainly for use on the property, and the piggery is a profitable branch of the industry carried on. Year by year sees fresh improvements made on the farm, which is substantially fenced and subdivided into twenty paddocks of convenient size. The homestead, which stands in the vicinity of a small orchard, is a well-built brick building containing seven rooms, and adjacent are the outhouses, machinery sheds, engine shed, and men's quarters. The stabling accommodation is unsurpassed in the district for its convenience and up-to-date appointments, its sixteen stalls being arranged on a roomy and commodious plan, and every provision made for the well-being of the equine occupier. The Coolgardie water scheme is depended upon entirely for supplying the property, although a few wells have been sunk which yield good water. Mr. Reynolds is a member of the Farmers and Settlers' Association, and takes a great interest in the doings of this body. He is a member of the local football and cricket clubs, and is also connected with the Meckering Race Club. In 1904 he

married Rebecca, daughter of the late John Endersby, of Quellington, and has two sons.

**WILLIAM SHANNON**, agriculturist, "Munkoorra," Meckering, was born at Towitta, South Australia, on September 26, 1875, and is the eldest son of Mr. William Shannon of the same place. He attended public schools in the district until fourteen years of age, when he proceeded to Whinham College, North Adelaide, where he continued his studies for two years. Leaving college, he returned home and became associated with the operations of the property

MR. WILLIAM SHANNON.

owned by his father, with whom he remained for ten years. He then launched out on his own account in the neighbourhood of Kapunda, South Australia, where he carried on farming pursuits very successfully for about seven years. Disposing of this farm, Mr. Shannon purchased 10,000 acres in the south-east of the same State, near Bordertown, but subsequently being convinced of the brighter prospects offering in Western Australia parted in turn with this property and sailed for Fremantle in March, 1911. Shortly afterwards he took up his present holding at Meckering, which was then in possession of Mr. Osborne Wilson, from whom he obtained it by purchase. It embraces 2,000 acres of land, occupying the choicest situation in the district, and is practically all cleared, fenced, and subdivided into sixteen paddocks. An excellent

and adequate water supply is obtained from various wells, besides which dams have been constructed, and the Coolgardie water supply scheme is also available. At the present time Mr. Shannon has 1,000 acres devoted to the tillage of wheat and also produces sufficient barley and oats for the necessities of the stock. The flock consists of 1,400 sheep and lambs are raised on an extensive scale for the local trade, while a few horses are also bred each year. The homestead, which is a particularly handsome structure, is situated on a gently-sloping hill, and in its vicinity are the spacious out-buildings, machinery sheds, etc., where everything requisite to the working of the farm on the most approved methods may be found. A small orchard gives promise of excellent fruitage, and the property is generally recognized as one of the show places of the district. Mr. Shannon is a member of the various local sporting bodies, and is an active participant in outdoor athletics. In his youth he distinguished himself by winning the championship of all the South Australian colleges for high jumping, and his record of 5 ft. 7 in. has not yet been beaten. He married, in 1905, Constance, daughter of Mr. William Birt of New South Wales, and has one son.

**RICHARD CHERITON**, farmer, "Homerest," Meckering, is a son of the late Richard Haydon Cheriton, of Devonshire, England, and was born at Casterton, Victoria, on September 14, 1869. For his educational training he was placed in the hands of private tutors, under whom he pursued his studies until seventeen years of age. He then became associated with his father in the management of "Polygnum" Station, in the Riverina district, and spent the following ten years in this connection. The Western Australian gold discoveries then attracted his attention, and in 1896 he sailed for this State. Not being satisfied with the prospects held out by the mining industry Mr. Cheriton, in conjunction with his three brothers, took up 20,000 acres of land in the Meckering district, with the intention of forming a large pastoral run. Subsequent consideration of the many difficulties in the way of obtaining sufficient sheep to stock so large an area of country induced the partners to surrender nearly three-quarters of the holding,

when 2,700 acres were retained by the gentleman under review, who desired to carry on mixed-farming operations. The development of the farm has proceeded steadily, 1,800 acres now being cleared and the whole fenced and subdivided into fourteen paddocks. Mr. Cheriton deals somewhat extensively in sheep, which are the only stock bred on the place, his opinion being that the district is not well suited to horse and cattle breeding. He has about 700 acres under cultivation, wheat being the principal product, though about 30 acres are devoted to the growing of oats, and a small orchard, three acres in extent, has been planted to provide food for home consumption. The water supply is abundant, numerous dams and wells having been constructed on different parts of the property. The homestead, a substantially built structure of brick, contains six rooms, and outbuildings have been erected, while considerable

MR. RICHARD CHERITON.

capital has been expended on up-to-date machinery for the working of the farm. Mr. Cheriton has been a member of the Meckering Roads Board for the past twelve years, and for a term filled the position of chairman of that body. He is a member of the Farmers and Settlers' Association. In 1904 he married Beatrice, daughter of the late E. R. Priest, of Norfolk, England, and has two sons and one daughter.

DUNCAN LENNAN CHERITON, "Alpha," Meckering, was born at Casterton, Victoria, on August 5,

1872. After a course of education under private tutors, he completed his studies at the public school at Deniliquin, New South Wales, and subsequently joined his father on "Polygnum Park" Station, in the Riverina district, where he continued for ten years. In 1897 he came to Western Australia and engaged in twelve months' prospecting on the goldfields with indifferent results. His attention being turned to farming he took up a large property in the Meckering district, which he afterwards reduced to 1,300 acres, and has since devoted his energies to the development of this property. Improvements have been carried on from year to year and numerous wells sunk, the homestead, with outbuildings for machinery, fodder, and stabling accommodation, etc., being built in 1908. Mr. Cheriton was for about eight years a member of the Meckering Roads Board.

EDWIN BEAUMONT WHITE, farmer, of Beaumont, Waeel, is a son of Mr. Thomas White, a resident of the Central State, and was born at Laura, South Australia, on November 27, 1880. He received his education primarily at the public schools of White Cliffs and Melrose, and subsequently followed farming pursuits in various parts of the latter district for about three years. At the end of that period he joined the firm of Messrs. Spencer & Sons, coachbuilders, of Adelaide, but after nine months in this employ was tempted by the liberal land laws of Western Australia to try his fortune in this State. Arriving at Fremantle in August, 1902, Mr. White proceeded to Waeel, and was engaged in farming occupations for about two years, ultimately taking up 360 acres of land in the district. This he afterwards sold, and accepted a position as traveller for the State Machinery Company, with which firm he remained for twelve months. Resigning from this connection he returned to the Meckering district, and was appointed manager of a farm on behalf of Mr. D. Collins. During the two years that he spent thus he took up 678 acres of land, and ultimately entered upon the development of the property, which has since absorbed the whole of his time and energies. He has considerably enlarged his borders during ensuing years, which, with rented and C.P. holdings, now enclose an area of 2,578 acres. The

whole of this is well fenced, and thirteen paddocks have been formed, while 1,000 acres are now cleared and the work of cultivation begun. About 420 acres are cropped with wheat, and at the present time the farm is stocked with 250 sheep, breeding being carried on for market purposes. Cattle and horses are also bred for sale and for the requirements of the property, while the raising of pigs constitutes an important feature of the general enterprise. Mr. White depends for his water supply upon the Coolgardie scheme. He interests himself in public affairs, and for two years occupied the post of chairman of the

MR. EDWIN BEAUMONT WHITE.

Waeel Progress Association, while for a period he acted as delegate on behalf of the Farmers and Settlers' Association. In the past he has been connected with the I.O.O.F., and he is actively connected with the local football and cricket clubs, being secretary of the Waeel Cricket Club. In 1908 he married Lily Gertrude, daughter of Mr. John Ashbolt, of York, and has two sons and one daughter.

DUDLEY DAVID GOODMAN HONEY, "Castlerock Farm," Meckering, is a son of the late Richard Honey, timber merchant, of Port Adelaide, and was born at Woodville, South Australia, on February 8, 1890. After attending various public schools until seventeen years of age he completed his scholastic career at St. Peter's College in 1908, and subsequently went on a two

years' tour to England. Returning, Mr. Honey landed at Western Australia and spent twelve months in gaining experience on a farm at Grass Valley near Northam. At the expiration of this period he purchased his present holding, which is situated about four miles from the town of Meckering, and consists of 1,220 acres lying on one of the highest parts of the district. Clearing operations have been completed over 600 acres, and all of this area is devoted entirely to the production of wheat. About 200 sheep are grazed on the property, and in the near future it is Mr. Honey's intention to engage in pastoral operations on a fairly extended scale. Various improvements have

MR. DUDLEY DAVID GOODMAN HONEY.

enhanced the value of the place, which is well fenced and subdivided into nine paddocks, and served by the goldfields water supply scheme, in addition to several wells which have been sunk in different parts of the holding. The comfortable homestead, outbuildings, and necessary plant for carrying on the work of the farm are of a modern and up-to-date character, and the property under review ranks well in the forefront of model farms of the State. Mr. Honey takes an active interest in the various public organizations of the district, and is a member of the Farmers and Settlers' Association. He is an advocate of healthy outdoor diversion, and is a playing member of the sports associations which have been formed in the neighbourhood.

THOMAS GRAHAM HALBERT, Meckering, was born in South Australia, and at the age of eighteen years joined the Education Department. He came to Western Australia in 1896, and obtained a position in the Education Department, being deputed to open the first public school at Meckering. In 1899 he opened as a general merchant in conjunction with his brother, the business being carried on until 1904, when the brothers turned their attention to farming pursuits and took up 5,000 acres of pastoral and agricultural land. This partnership was ultimately dissolved, and Mr. T. G. Halbert next acquired 2,000 acres on his own account, situated within convenient distance of the town of Meckering, and has since directed his energies to its development. In conjunction with these interests, Mr. Halbert carries on as a general merchant, auctioneer, and general commission agent. He interests himself in the affairs of the district, was a member of the first Meckering Progress Committee, and at the present time is secretary to the Farmers and Settlers' Association. He is also connected with the local board of health.

ALFRED JOHN BRYANT, mercantile agent, Meckering, is a son of Mr. John Bryant, of Richmond River, New South Wales, in which district he was born on November 9, 1878. He received his education at the local public school, leaving that institution at fifteen years of age to join his father in farming pursuits and in sugar milling, Mr. Bryant, sen., being the owner of a sugar mill. In 1898 he relinquished this connection, and shortly afterwards, upon the outbreak of the Boer War, joined the first Australian Bushmen's Contingent, and left for South Africa in January, 1900. After arriving at the scene of action he travelled over the greater part of the troubled area, and participated in the relief of Mafeking and many minor engagements. Upon the return of the contingent to Australia Mr. Bryant accepted a transfer to the Canadian Scouts, and concluded his term with that body as acting regimental orderly sergeant. Having completed his term with the Scouts, he joined the Transport Stock Riders, with which he remained until the proclamation of peace, when the force

was disbanded. Remaining in South Africa, he then opened a restaurant and billiard saloon, which he conducted successfully for twelve months, when he sold out and proceeded to Lorenzo Marques on a prospecting tour. This project, however, being productive of no good results, Mr. Bryant decided to return to Australia, and arrived at Fremantle in 1905. Subsequently he established his present business at Meckering, and has met with success in this enterprise, being the local agent for the Massey-Harris' farm implements; Ockerby, Lehmann, and Co., produce merchants; Malloch Brothers, hardware merchants; Saunders & Stuart, engineers; and many other firms. In addition to his commercial interests he has taken up 800 acres of land within seven miles from Meckering, of which 100 acres are cleared, and in course of time it is Mr. Bryant's intention to extend his operations in the direction of mixed farming. He was one of

MR. ALFRED JOHN BRYANT.

the founders of the Meckering Race Club and was the first secretary, at the present time filling the post of vice-president. He is a patron of the turf, and races his own horses, being represented at most of the country meetings. Mr. Bryant is also a member of the Masonic craft, Avon Lodge, No. 12, W.A.C., and is connected with the Ancient Order of Foresters, in which he held the rank of Chief for two successive terms. In 1907 he married Violet, daughter of the late John Seaman, of Port Pirie, South Australia.

**GORDON THOMAS STAPLES**, proprietor of the Railway Hotel, Meckering, is a son of the late George Edgar Staples, of Surrey, England, and was born at Stratham, in that county, on June 7, 1879. He was educated at a public school in Stratham, which he attended for five years, and at the end of that period, with the rest of his family, he left England for New South Wales and settled at Hurstville, nine miles distant from Sydney. The late Mr. Staples took up land in this district, a proposition which afforded scope for the energies of his son for four years. Young Staples then, desiring to enlarge his experience, became identified with station life, and was employed on various pastoral properties in the mother State before coming to Western Australia in 1896. Arriving at Fremantle in June of that year he joined the Railway Department at Perth, and for fourteen years was connected with the service, in which he made himself invaluable. Resigning, he proceeded to Geraldton, where he acquired the lease of the Queen's Hotel, which he conducted for fifteen months. At the end of this period he sold out and took over the Norwood Hotel in Lord Street, Perth, and after a successful year at that centre secured his present business, which is looked upon as one of the most thriving concerns of its kind in the agricultural districts. Mr. Staples during his residence at Geraldton was a member and committeeman of the local race club, and since coming to Meckering has identified himself with all similar organizations. He is fond of active outdoor sport, and is a keen cricketer. In January, 1900, he married Alice, daughter of Mr. Michael McBride, of South Australia, and has two sons and two daughters.

**THOMAS CHARLES BURROWS**, baker, Meckering, is a son of the late Alfred Burrows, of Uxbridge, England, and was born at that town on February 14, 1864. He pursued his scholastic studies at the local academy until the age of sixteen, when he was apprenticed to a confectioner for four years. After acquiring a thorough knowledge of the business he left Uxbridge for Kettering, in Northamptonshire, where he followed the same calling until 1886, and in that year sailed

MM

for Australia, arriving at Sydney in the month of April. Here he joined his brother, who conducted a grocery business, and having continued in this connection for some time opened on his own behalf in the same line at Wallendbeen, adding a bakery branch to his trade. Twelve months later he relinquished this enterprise, and purchasing a turnout became a commercial traveller in the Lachlan River district. From this he turned his attention to the mining industry, but after five years of inadequately rewarded toil determined to quit his adopted State and begin anew in Western Australia. Accordingly, he arrived at Fremantle in February, 1896, and continued his travels to Broad Arrow, where he acquired a

MR. THOMAS CHARLES BURROWS.

share in the North Credo Gold Mine. This again proving a disappointment, he accepted a commercial position with Mr. Vetter, of Bulong, and for a time successfully conducted different branches of that gentleman's business. Subsequently he joined Messrs. McAppin and Waylen in partnership as brewers at Laverton, but not being satisfied with the results of this venture proceeded to Mount Weld, where he worked the Golden Orbit Gold Mine for a term of four years. Indifferent success finally led him to return to his original calling, and since settling down to the bakery trade at Meckering he has achieved prosperity and an excellent reputation in his line of business. Mr. Burrows was a well-known cyclist in England, and has traversed many miles on the wheel.

His chief recreation is found in music, and he is a cornet player of no mean ability.

**WALTER JOHN MCGARRY**, butcher, Meckering, is a son of the late Michael McGarry, of Lancashire, England, and was born at Inverell, New South Wales, on April 24, 1876. He received his education at the State school at Tingah until fourteen years of age, when he began a two years' course at the public school at Lismore. Leaving school he became associated with his father, a well-known cattle-dealer on the Richmond River, and during a period of four years had charge of most of the overlanding of the stock from Queensland. Tiring of country life, he took over the duties of accountant in a large butchering business established by his parent in Sydney, and subsequently, in 1898, sailed for Fremantle. Proceeding to Mount Magnet, he joined Messrs. Hoskins & Co., general merchants, of that town, in the capacity of accountant, and continued in this employ for about eighteen months. At the end of that time he left for Mertondale, and for some time was engaged in prospecting with indifferent success. Continuing his travels to Kalgoorlie, Mr. McGarry there became connected with the business of Messrs. Moher & Smith, wholesale butchers, and two years later successfully launched out on his own account at Fimiston, generally known as the Boulder Block. Four years later he sold out and accepted the position of accountant for Messrs. Holmes Brothers, at Northam, with whom he spent two years. He then purchased his present business at Meckering, and has since built up a very extensive connection. During his migrations from place to place Mr. McGarry has kept closely in touch with sporting organizations, and in pedestrian tests has won many honours, among which may specially be recorded the Helensburg Club's Blue Sash for 10 yards' distance. He is a member by affiliation of the Masonic Lodge, Avon, No. 12, his mother lodge being the Balmoral, No. 896, Kalgoorlie. In addition to his Meckering interests he is the holder of 1,600 acres on the midland railway line, which it is his intention to devote to sheep-raising purposes. He is a member of the Meckering Race Club and a committeeman of that body, takes a

keen interest in yachting, and is a member of the Perth Flying Squadron. In July, 1898, Mr. McGarry married May, daughter of the late William Hutton, grazier, of Charters Towers, Queensland, and has two sons and one daughter.

**THOMAS JOHN PEMBERTON**, J.P., Secretary of the Cunderdin Local Board of Health, is a son of Mr. Matthew Pemberton, of Sydney, New South Wales, and was born in the Hawkesbury River district in that State on August 19, 1871. He received his education at the local public schools, and at the age of fourteen years became associated with his father in farming pursuits. After ten years in this connection, in 1896 he came to Western Australia, and immediately took up 2,000 acres of land in the Cunderdin district, which he worked successfully for about fifteen years. Eventually, becoming tired of farming, he disposed of his interests at a profit and purchased various town properties in Cunderdin, where he has made his home. Mr. Pemberton, who is one of the earliest settlers of the district, was elected a member of the local Roads Board in 1907, and during the year 1911-1912 occupied the chair of that body. He is the present chairman of the progress association, and received his Commission of the Peace from the Scaddan Administration in 1912. He has had a lengthy association with the Masonic craft, having been a member of the Lodge Australia for twelve years, and is now connected with the Cunderdin Lodge. Mr. Pemberton is a member of the Cunderdin Race Club and of all the outdoor sporting organizations of the district, and is himself an active participant in the time-honoured game of cricket. He has great faith in the district in which he resides, and predicts for it a bright and prosperous future.

**ROBERT TONKIN**, Engineer for the Goldfields Water Supply, Western Australia, is a son of the late Alfred Tonkin, of Quorn, South Australia, in which town he was born on July 6, 1880, being the first "white" child native to the district. He continued his education at public schools until the age of fourteen, when he became connected with the business

of Mr. (now Representative) R. W. Foster, a general merchant carrying on an extensive trading connection in the above-mentioned town. After four years spent in storekeeping pursuits, Mr. Tonkin was apprenticed to the South Australian Government Railway Department, and after serving his time in the fitting shops visited Melbourne and Sydney, and finally decided to settle in Western Australia. Upon arrival he immediately obtained a position as second engineer for the goldfields water supply in connection with the Cunderdin pumping-station, and for the past eight years has acted as relieving engineer upon practically every pumping-station connected with the line. Mr. Tonkin is a member of the local race club and other sporting bodies, and was the founder of the

MR. ROBERT TONKIN.

first cricket club formed at Merredin, outdoor athletics constituting his chief means of recreation.

**FREDERICK WILLIAM HOLLETT**, general merchant, Cunderdin, is a son of the late Mr. Charles Hollett, of Bedfordshire, England, and was born at Westoning on June 29, 1867. He received his scholastic training at a national school in England, and after arrival in South Australia concluded his studies at the Martin Luther College in Adelaide. At nineteen years of age he joined the Education Department, and for two years held a position as teacher at Port Broughton. This he relinquished to join Mr. Charles

Dyer as general storekeeper at Booleroo Centre, and after four years' experience in this connection started on his own account in the same line of business at Normanville. After conducting this store successfully for ten months he sold out and took over the management of the Co-operative Society Stores at Gawler, which he retained for two years. Upon the outbreak of the gold-mining boom in Western Australia Mr. Hollett turned his attention to this State, and, proceeding to Norseman, with

MR. FREDERICK WILLIAM HOLLETT.

three partners he erected a gold-crushing plant. The field, however, was not at that time sufficiently developed to make this a paying proposition, and withdrawing from the enterprise Mr. Hollett returned to South Australia. He next spent fourteen months as travelling representative of the firm of Messrs. James Robin & Co., wholesale grocers, of Adelaide, subsequent to which he carried on a successful business on his own account at Wirrabara for eight years. Disposing of his interests at that centre he returned to Western Australia and joined his brother-in-law, Mr. Dyer, in general storekeeping pursuits at Northam, and at a later date, while retaining an interest in the freehold of the premises, sold out and came to Cunderdin, where he established a store and has conducted it with satisfactory results ever since. In addition he has landed interests in the neighbourhood, owning 1,087 acres about six miles from the township, where agricultural operations are carried on,

600 acres being cleared, of which 100 acres are cultivated, the balance being fallowed for the following season. The place is fenced and subdivided into six paddocks, and various improvements have been carried out, including the construction of dams for water supply purposes. For two years Mr. Hollett served as a member of the Northam Municipal Council, and he is now associated with the local progress association. He is a member of the Masonic craft, being connected with Cunderdin and Avon Lodges, at present (1912) occupying the office of Junior Warden of the former body. In 1891 he married Annie, the youngest daughter of the late Mr. William Dyer, of Kapunda, South Australia, and has four sons and two daughters.

STEPHEN BEDE DONOVAN, of "Kenmore" Farm, in the Cunderdin district, is a son of the late Captain John Donovan, of Hawkesbury River, New South Wales, and was born at Mangrove, on the Hawkesbury, on April 19, 1880. At the close of his education, which was conducted locally, he entered upon agricultural and fruit-growing pursuits on his father's farm and orchard, and for eight years continued in this industry. At the end of this period, his attention being drawn to the progressive land policy pursued by the Government of the Western State, he determined to avail himself of the advantages thus offered to the agriculturist, and in 1904 landed at Fremantle, whence he proceeded direct to the Cunderdin district. Even at that date this locality had proved to be the centre of the great wheat belt which is providing the means of splendid prosperity to the settlers, and Mr. Donovan lost no time in purchasing an improved property, rather than awaiting the opportunity of getting a sufficiently large grant in a good situation in the usual way. This he has continued to develop, his previous experience proving of the utmost value in the pursuance of his operations, and in the growing of cereals he has already met with distinct success, the crops of several successive years having yielded excellent results. At the present time he has considerably over three-quarters of the farm under cultivation, and "Kenmore" is regarded as likely to become one

MM2

of the most profitable propositions of the district. Mr. Donovan, while giving his first attention to the various industries connected with his property, allows his interest in the general affairs of the community to take precedence over all less important claims upon his time and powers. He follows the trend of the political situation with the keenness born of an intelligent apprehension of the various issues at stake, and was the first hon. secretary of the Cunderdin district branch of the Australian Labour Federation, also holding the office of president. He was appointed delegate to the Kalgoorlie Convention of 1907, and the third plank of the present Labour

Bartletto.

Perth.

MR. STEPHEN BEDE DONOVAN.

platform for the State, which was passed at that Convention, stands in his name. He is hon. secretary of the Cunderdin Agricultural Society, and is one of the leading lights in the Australian Natives' Association, in which he has held many offices, including the presidency. A warm advocate of all amateur forms of sport, he is president of the Avon Football Association and patron of the Cunderdin Football Club. He is also fond of a good horse, and has taken trophies in amateur events at the local shows. In the game of tennis he unites pleasure with needful exercise, but spends the greater portion of his leisure in the study of historical literature and works touching on political reform, in especial being an apt scholar in the doctrines of Henry George.

THOMAS COWLEY HODGSON, farmer, "St. Ronan's," Cunderdin, is a son of the late John Hodgson, of Swanwater, Victoria, and was born at Dunolly, on June 6, 1858. He pursued his primary studies at public schools in that district, continuing his education at the Grenville College and the School of Mines at Ballarat. Matriculating from Grenville College he entered the University of Melbourne and took the full civil engineering course, passing examinations for practical land surveying, mining, surveying, and municipal engineering, combined with hydraulic engineering, and gaining his degree as Master of Civil Engineering. His course completed he accepted a position as consulting engineer to the shires of Numurkah and Shepparton, and filled this post with credit for a period of four years. In conjunction with Mr. B. A. Smith—then a lecturer in connection with the University of Melbourne—whom he joined in partnership, Mr. Hodgson practised for seven years as consulting engineer to fourteen water and irrigation trusts in Victoria and Tasmania. The prospects and possibilities of the Western State then lured him from his native soil, and landing at Albany in March, 1905, he came to Perth and joined the Government Engineering Department as assistant engineer-in-charge of the Perth Sewage Survey. His wide experience and expert knowledge caused him to be nominated for selecting suitable sites for reservoir purposes in connection with the Coolgardie Water Scheme, and after a subsequent term of service as engineer of the Roads and Bridges Branch he received the appointment of Engineer for Harbours and Rivers under the Western Australian Government. Mr. Hodgson ultimately was appointed Engineer-in-Charge of the Coolgardie water scheme, and when the service was extended to Cunderdin he decided to enter upon the development of a property in that district which he had taken up some six years previously. This originally consisted of 40,000 acres, but Mr. Hodgson has since surrendered the greater part of the territory, his present holding embracing about 2,500 acres, of which nearly half is cleared. During the season (1912) 500 acres of land were placed under crop, and the fallowing of another 500 acres had been completed in preparation for the following year. Wheat and sheep raising are the principal departments of the

enterprise, the horses and cattle are also bred for use on the farm, while an orchard of six acres has been planted to supply the homestead with an abundance of fresh fruit. Mr. Hodgson's special experience in water conservation has served him in good stead in his private enterprise, and the way in which he has seized the opportunities offered by the formation of the country for the construction of reservoirs is an excellent object-lesson. His residence is of the bungalow type, and the surrounding outbuildings and necessary equipment in the way of machinery, etc., are all up to date and in keeping with the other arrangements of the farm. Mr. Hodgson is president of the Cunderdin Farmers and Settlers' Association. For twenty-six years he has been connected with the Masonic craft, being a member of Rupertswood Lodge, Victoria. He takes a keen interest in all forms of sport, and for some time was president of the Cunderdin Racing Club. He married in 1880 Millicent, daughter of the late C. W. Gibson, stock and station agent, of Ballarat, and has one son and one daughter.

**WILLIAM BROWN BIRCH**, Manager of the branch at Kellerberrin of Messrs. Millars' Timber and Trading Company Limited, is a son of the late Richard Birch, of Fremantle, and was born at Perth on August 17, 1871. He received his primary education at the Government school at the seaport, and subsequently attended private schools in the same place until seventeen years of age. He then joined the late Richard Honey's timber business, and during a seven years' term of service worked his way up until, eventually, he was appointed manager of the Perth branch, which post he held until the decease of the late Mr. Honey, when the business was purchased by Messrs. J. M. Ferguson and W. C. Forsyth. Subsequently Mr. Birch, in conjunction with Messrs. C. V. and A. S. Birch, purchased the concern, and continued to control operations for a couple of years, when the keen competition of several large firms engaged in the industry led him to relinquish his connection with the trade. He next became identified with the insurance department of Messrs. Frank Cadd and Co., of Fremantle, and rose to chief officer in his department before

eighteen months had elapsed. At the end of this period he again launched out, starting as a land, estate, and insurance agent, but not meeting with success commensurate to his efforts he removed to Perth, and carried on a similar business in the metropolis until 1905, when he decided to visit the eastern goldfields. Joining the Great Ophir Gold Corporation as accountant, Mr. Birch attended to the finance department for about three years, and upon the closing down of that company turned his attention to prospecting on his own behalf. A year and a half spent at this work not yielding very satisfactory results, he accepted a position with Messrs. Millars' Karri and Jarrah Company at the Kalgoorlie branch of their business, and after a few months at that centre was transferred to Kellerberrin, being appointed to open a branch for the

Mr. WILLIAM BROWN BIRCH.

company in this district. As manager of the business he enjoys a well-deserved popularity, and since taking up his residence in the town has identified himself in various ways for the benefit of the community. In 1895 Mr. Birch married Frances, daughter of the late Thomas Bray, of Belmont, King's County, Ireland, and he has three sons and three daughters.

**HARRY ARTHUR STANES**, Director of the Union Flour-milling Company, Limited, Kellerberrin, is a son of Mr. Henry James Stanes, Government Inspector of Public

Buildings, Beverley, and was born at Norwood, South Australia, on October 13, 1880. He received his education at the Norwood and Sturt Street public schools, and concluding his studies at twelve years of age became connected with the house of Messrs. McLean Brothers & Rigg, hardware

Mr. HARRY ARTHUR STANES.

merchants, of Adelaide. After a brief period he was offered a position with Messrs. G. & R. Wills & Co., with whom he remained for nine years at the Adelaide branch of the business, subsequently travelling in Western Australia on behalf of the same firm for three years. At the end of this period he decided to open on his own account at Beverley, and, entering into partnership with Mr. F. B. Chapman, traded successfully at that centre for two and a half years. He then sold his share of the business to Mr. Chapman and opened a general store at Kellerberrin, which he carried on with profitable results for a little less than two years. Inducements were then held out by the Union Flour-milling Company, Limited, which led to his connection with this well-known business, and in 1910 he was appointed to the position of manager, which he has held ever since. In virtue of this office Mr. Stanes also represents various important firms, including Messrs. Ockerby, Lehmann, & Co., Massey-Harris Company, Limited, Henry Wills & Co., and the Yorkshire Insurance Company, and is agent for the "Overland" motor car. In addition to his mercantile interests he owns about 1,500 acres of land,

situated 24 miles from Kellerberrin. Mr. Stanes is a member of the local cemetery board. He is connected with the Masonic craft, and is a member of the Kellerberrin Lodge, W.A.C. In the past he has taken an active part in most forms of field sport, and at the present time tennis constitutes his chief means of recreation. In 1910 he married Estella, daughter of the late Mr. S. J. Skipper, of South Australia, and has one son.

**SAMUEL FINDLAY, J.P.**, general merchant, Kellerberrin, is a son of the late Samuel Wilson Findlay, of Scotland. He was born at Hamburg, in Germany, on April 8, 1863, and received his education at a high school in that city, which he attended until seventeen years of age. He was then apprenticed to a large softgoods firm at Carlisle, in the North of England, and after serving his indentures for three years decided to come to Australia, and landed at Adelaide on May 15, 1883. Here he joined the staff of Messrs John Martin & Co., with whom he remained for four years, and with the object in view of enlarging his experience visited various country districts in the Central State, afterwards proceeding to Wentworth, New South Wales. Returning to Adelaide Mr. Findlay entered into business on his own account as general commission agent, and continued in this way for about six years, during which time he took a deep interest in political matters and conducted several electoral campaigns on behalf of aspirants to Parliamentary honours. He next took a trip through the northern districts of South Australia, the south-western part of Queensland, and the north-east of New South Wales, covering 5,000 miles in twelve months, and carrying on commission work in these remote regions. This, however, did not prove a very profitable venture, and eventually he again joined Messrs. John Martin and Co. as manager of their branch at Port Adelaide, where he remained until the business was sold in 1902. He then purchased a store at St. Peters, which he conducted successfully until 1906, when he sold out and came to Western Australia. After spending six months in acquainting himself with the possibilities of the country he took over his present business at Kellerberrin from Mr. T. S. Patterson, and from a very small concern has developed the prosperous trading connection

which he now enjoys. He is one of the oldest residents of the place, and recounts many matters of interest regarding its rise and progress. Upon his arrival there were no streets, the town then consisting of the railway station, post-office, blacksmith's shop, bakery, and about half a dozen dwelling-houses, with his store, which was the only business of the kind in the town. He has done his duty in the matter of filling public offices, and received his Commission of the Peace from the Moore Administration in 1908, while he is the present chairman of the cemetery board, a member of the local board of health, churchwarden of the Anglican body, and a committeeman of the Eastern District Club.

MR. SAMUEL FINDLAY.

He is also connected with the U.A.O. Druids, being a member of the Duke of Leinster Lodge of South Australia, and he is one of the founders of the Kellerberrin Lodge of Freemasons. He is associated with the Masonic and Commercial Travellers' clubs, and is a cordial patron of all outdoor sporting organizations. Mr. Findlay married in 1901 Elizabeth, daughter of the late Daniel Baker, of South Australia, who came to that State with Governor Hindmarsh in 1836, and has one son and two daughters. The Findlay motto is "Fortis in arduis."

**PERCY BARLOW RICHARDSON**, Kellerberrin, was born at Adelaide, South Australia, on January 16, 1871, and is a son of the

late Joseph Richardson, of that city. He was educated at various public schools in the metropolis until twelve years of age, when he entered mercantile life in the office of Mr. J. H. Fry, a well-known accountant, of Adelaide. Having completed five years in this connection he joined the staff of Messrs. Donaldson, Andrews, & Sharland, wholesale drapers, and remained as book-keeper with this firm for seven years. Upon the discovery of the Coolgardie goldfields he left his native place for Western Australia, and arriving at Fremantle in August, 1894, proceeded direct to Kalgoorlie, where he engaged in prospecting for a brief period. Being dissatisfied with his prospects here Mr. Richardson returned to South Australia and joined the Adelaide Stock Exchange, and after eighteen months' satisfactory connection with that institution again decided to visit the Western Australian fields. Making Coolgardie his objective, he once more directed his attention to prospecting, and during the ensuing four years followed the rushes to all the best-known gold-bearing localities. Eventually he arrived at Laverton, where he became associated with Mr. D. L. Doolette, of "Bullfinch" fame, and remained in that district for about fourteen months. Returning to Kalgoorlie he established himself in the hotel-keeping trade for two years, later removing to Bulong, where he opened the well-known Shamrock Hotel. Whilst carrying on this business he expended a great deal of capital in mining interests, and was responsible to a great extent for the development of the district. Subsequently Mr. Richardson accepted the position of manager to the Crown Cordial Factory, of Kalgoorlie, for two years, and then took over the Junction Hotel, on the Golden Ridge and Bulong Roads. Disposing of his property on the goldfields, he selected land in the Kwollynn district, near Kellerberrin, and became one of the pioneers of that place, having to cut all the tracks to his holding, which he developed successfully and afterwards sold to advantage. Mr. Richardson is now engaged in managing a property owned by his wife, consisting of 1,512 acres, and conveniently situated near the Quairading Extension Railway, his intention being to devote this to the production of wheat and sheep. Mrs. Richardson, in addition to her landed interests, also conducts a

greengrocery and confectionery business near Kellerberrin Railway Station, which is very popular in the neighbourhood. The gentleman under review was for two years a member of the Bulong Municipal Council and was treasurer of the hospital. He was connected with the first Kellerberrin Roads Board, and is a trustee and chairman of the local agricultural hall, taking a lively interest in everything pertaining to the advancement of the town. He is a keen patron of outdoor sport, and is associated with all the sporting bodies of the district.

**HORACE JOHN ADAMS**, builder and contractor, Kellerberrin, is a son of the late John Adams, of Bedfordshire, England, in which county the gentleman under review was born on January 27, 1878. He attended the public schools of the district until thirteen years of age, when he joined his father in the work of building and contracting, and followed this calling successfully until his departure from England for Australia in 1907. The advantages to settlers offered by the Western State by the medium of advertisements in the Old Country drew him to these shores, and upon arrival at Fremantle Mr. Adams took up 1,500 acres at Kwollynn, in the Kellerberrin district. As a result of subsequent development he has now 400 acres of this property cleared and 160 acres under cultivation for wheat, to which the soil and climate is well suited. The water supply adds to the value of the place as an agricultural proposition, and at the present time this is by means of the goldfields' water scheme, which is being carried out in the vicinity of his holding. After spending twelve months on the farm Mr. Adams opened in business as a builder and contractor, and has continued his trade whilst engaged on the improvement of his land. He has interested himself in the public affairs of the district, and for some time acted as secretary of the Farmers and Settlers' Association, all movements for the advancement of industry and enterprise commanding his ready support. He is a committeeman of the Eastern District Club, and acts as patron to the various local sporting bodies. In 1905 Mr. Adams married Lucy, daughter of Mr. Pook, of Devonshire, England, and has one son and one daughter.

**WILLIAM FREDERICK NOACK**, produce merchant, livery stables proprietor, and manufacturers' agent, Kellerberrin, is a son of Mr. Henry Noack, of Buninyong, Victoria, in which town he was born on July 13, 1875. He attended the State school of that district until fourteen years of age, when he joined his father in mixed farming pursuits, and continued in this connection for eight years. In conjunction with a brother he then started a market-gardening venture, which was carried on for seven years with profitable results. The advantages offered to settlers by the Western Australian Government attracted him to this State, and upon arrival at Fremantle in 1904 he purchased 800 acres of land at Brookton, which, after farming successfully

MR. WILLIAM FREDERICK NOACK.

for a space of four years, he sold at a profit. His health requiring a drier climate Mr. Noack removed to Kellerberrin and opened on a modest scale as a produce merchant and livery stables proprietor. As time advanced various important agencies were added to his business, and the scope of his operations has increased until to-day he is regarded as one of the foremost commercial men of the place. Among these agencies may be mentioned those of Messrs. Malloch Brothers' fencing material and engines, and Messrs. Duncan, Paterson, & Co., wholesale produce merchants, etc., of Fremantle. Mr. Noack, who is deeply interested in land development, recently purchased 1,000 acres adjoining the Quairading Extension Railway land,

practically all virgin country, and to bring this into thorough working order within the next few years is one of the designs of his enterprising mind. He is a keen agriculturist, and his advice upon matters pertaining to field and garden is freely sought and given in the district. He was a member of the select committee appointed to consider the ways and means necessary to the formation of a local agricultural society, occupies a seat on the committee of the Farmers and Settlers' Association, and has been chairman of the Kellerberrin Board of Health for the past three years, to which office he has been reappointed. He is a member of all outdoor sporting organizations in the district. In 1906 Mr. Noack married a daughter of the late Mr. Bartlett, of Melbourne.

**THOMAS WALKER DONALDSON**, proprietor of a boot and mercery emporium at Kellerberrin, is a son of Mr. John Donaldson, of Dunedin, New Zealand. He was born at Cockenzie, in the parish of Trenant, Scotland, on February 15, 1876, and at an early age was brought to the Dominion by his parents, subsequently receiving his education at the public schools of Dunedin. When about fourteen years of age he joined a firm of auctioneers, but relinquished this occupation in favour of the confectionery trade, in which he spent fifteen months. Tiring in turn of this business he was apprenticed to the boot trade, and after spending three and a half years in mastering the details of this calling turned his attention to farming pursuits in conjunction with his father, with whom he continued for over a year. Sailing for New South Wales in 1897, he joined his brother in Sydney and worked at the boot trade in that city for some two years, at the end of which period he determined to try his fortune on the Western Australian goldfields. At Kalgoorlie he became associated first with Mr. T. O. Gaze, and shortly afterwards with Messrs. Lamp & Co., bootmen, of that city, whose workshop he leased for fifteen months. Eventually a fire occurred and the premises were burnt down, upon which Mr. Donaldson accepted a position with the well-known John Hunter Boot Company, and remained in this company for five years, during which time he took over the management of the

firm's branch at Menzies. After conducting this business for three and a half years he acquired the whole interest on his own account, and continued to carry it on successfully for over seven years, when, desiring a

MR. THOMAS WALKER DONALDSON.

change to the agricultural districts, he came to Kellerberrin and established his present thriving boot and mercery store, which enjoys a well-deserved popularity among the inhabitants of the place. Mr. Donaldson is greatly impressed with the possibilities of the district, considering that with the adoption of proper methods its prosperity is assured, and in every matter of public moment he is a warm sympathizer and well to the fore. He is a member of the local board of health, and occupies the position of captain of the Kellerberrin Brigade, having previously held a similar office for five years at Menzies. He is connected with the local race club, and is a playing member of the Kellerberrin Cricket Club. In 1905 he married Martha Ann, daughter of Mr. John Rushworth, of Yorkshire, England, and has two sons and one daughter.

**JAMES McCULLOCH**, forwarding agent, carrier, and proprietor of livery stables, Kellerberrin, and one of the old pioneers of the district, is a son of the late Alexander McCulloch, of Inverness, Scotland, and was born at that town on August 6, 1862. At an early age he went with his parents to reside at Belfast, Ireland, and subsequently the family

removed to Newcastle-on-Tyne, in the north of England, where he pursued his educational studies until fourteen years of age. He was then apprenticed to Sir William Armstrong's gun works in the same city, and after spending a few years in this trade came to Queensland, where for some time he assisted his father in the dairy farming industry. About three years after his arrival in Australia he turned his attention to contracting, and did a good deal of telephone construction work on behalf of the Government. Subsequently Mr. McCulloch purchased a complete carrying plant, and spent three years in this business at Cooktown in North Queensland. Selling out at a profit he returned to Brisbane, and after filling various positions for about

MR. JAMES McCULLOCH.

eighteen months entered upon contracting in timber for wharf and pile work at Cooktown, where he continued for another twelve months. Again visiting Brisbane for a brief period, his attention was directed to the goldfields of Western Australia, and in 1892 he sailed for Fremantle. Upon arrival Mr. McCulloch purchased some horses, and for three years was engaged in carrying out contracts, chiefly on behalf of the Government, in which work he proved very successful. Removing his team to Coolgardie, he found a profitable source of industry in contracting for timber for the mines and for firewood, and continued in this line of business until 1906, when he disposed of his plant to the Kurrawang Firewood Company with the object of settling on the land.

Deciding to become a freeholder, he bought 603 acres within half a mile of Kellerberrin, and took up his residence in this district, where he has continued ever since, and shortly afterwards he established himself in business as a forwarding agent and carrier and opened the livery stables which he still carries on. Recently Mr. McCulloch advantageously disposed of the property above-mentioned, and in conjunction with his son is now developing 1,000 acres of land in the Wickopin district. He is a thorough-going optimist in regard to the suitability of the country for wheatgrowing, and indulges in rosy prophecies as to its ultimate prosperity. Mr. McCulloch is a member of the Farmers and Settlers' Association at Kellerberrin. A member of the M.U., I.O.O.F., before coming to this State he passed through all the chairs of office in the order. He was for some time a member of the committee of the local race club, and is a patron of various sporting bodies. In 1885 he married Annie, daughter of the late Mr. Rochford, of Ireland, and has one son and three daughters.

**GEORGE ROUSE GARDNER**, butcher, Kellerberrin, is a son of Mr. Jesse James Rouse Gardner, of

MR. GEORGE ROUSE GARDNER.

Bendigo, Victoria, and was born at South Elmore, in that State, on October 16, 1884. He was educated at the public schools of Dingee, and leaving school at the age of fifteen years joined Mr. W. H. Reid, of

California Gully, Bendigo. During a term of three and a half years with this gentleman he gained considerable commercial experience, and subsequently became connected with the grocery trade for eighteen months. Not finding this calling congenial, he entered the employ of Mr. James Peatling, a butcher, of Bagshot, with whom he spent a further two years. At the end of that period Mr. Gardner decided to visit Western Australia, upon representations made to him by Mrs. James Scott, one of the pioneers of the Kellerberrin district, and arriving in 1906 he proceeded

direct to that centre, and within four days of his arrival in the town opened his present thriving butchering business. He has also interested himself in agricultural pursuits, taking up 650 acres of land, a property which he intends to enlarge in the near future. This is fenced and subdivided into six paddocks, and about 200 acres are applied to purposes of cultivation. Being situated within easy distance from the township it is in touch with the goldfields water supply main, which adds considerably to its value. Mr. Gardner does not consider the country suitable for

cattle breeding, but he trades on a fairly extensive scale in sheep and pigs, apart from his requirements in the butchering business. He has great faith in the district as an agricultural centre, and in common with other of the residents predicts for it an important future among wheat-growing areas. He is a member of the Rechabite Lodge at Northam, and takes an interest in outdoor sporting organizations, in the past having been a footballer of some merit. He married in 1910 Amy, daughter of the late Mr. Thackrah, Northam, and has a son and a daughter.

### DOODLAKINE, MERREDIN, AND BODALLIN.

The area from Doodlakine to Bodallin contains the extreme eastern section of the wheat belt. The rainfall over the district is smaller than is generally considered safe under ordinary circumstances, but with the improved methods of scientific agriculture and the operation of dry farming excellent crops are being raised. The normal rainfall is under 14 in., but seasons occur when the total fall is little over 5 in., and only good cultivation will mitigate the effects of drought. The advantages of the district lie in its proximity to the goldfields market.

Merredin, though at present little more than a station on the railway line, has every prospect of becoming an important town. It is already the eastern terminal of the loop-line traversing the wheat areas north of the

goldfields' railway, and is to be the end of a series of loop-lines starting from York, Brookton, and Narrogin, and forming a network of agricultural railways serving the whole district south of the goldfields' line. Ultimately as the junction where three important railways meet, Merredin must increase in size and constitute an inland centre of no mean size.

Seven miles east of Merredin is Nangeenan, where some years ago a State farm was established in country then considered too far east for the profitable cultivation of wheat. The farm has proved the fallacy of this idea, and its success has greatly encouraged settlement. The chief work of the farm is the cultivation of seed wheat, so that farmers may be supplied with a wheat true to name.

## Great Southern District.

The long stretch of country from Beverley to Albany, known as the Great Southern District, was the first of the newer portions of the State to attract the attention of agriculturists. This was no doubt due to the fact that it was connected with the capital by that line of railway which served to connect Perth with the then mail steamer port of Albany. When at the end of the seventies and beginning of the eighties Western Australia turned her attention to land-grant railways as the only possible means of connecting her scattered townships with one another, it was generally felt that the line most likely to give immediate return as well as open up a district known to possess agricultural value was one which should connect the Government line to Beverley with the port at King George Sound. Conditions were arranged with Mr. Anthony Hordern, and the syndicate formed by that gentleman constructed the railway and worked it until 1896, when the Government purchased the whole interest. Under the company's regime a certain amount of development took place, but the real prosperity of the whole district dates from the time of Government assumption of the line, which, of course, practically coincided with the enormous general expansion caused by the discovery of the goldfields. Travellers along the line to-day would scarcely recognize in the prosperous townships and extensive cultivated areas the endless miles of virgin country that met their gaze twenty years ago. Not alone has development taken place along the railway line. Gradually it has been found that equally good land exists to the right and left, and settlers have gone out in both directions, so that now the whole country west to the Bunbury line has been honeycombed with settlement, and cultivated areas

are found over 100 miles to the eastward. The Government policy of building agricultural spur lines to meet the needs of the daring settler has been responsible for the rapidity with which these areas have been taken up, and there is no doubt that that policy, initiated by the Hon. Sir Newton Moore when Premier in 1906, has been one of the chief factors in bringing Western Australia into her own as an agricultural centre.

The area comprised in this enormous tract, which stretches north and south for a distance of 280 miles and almost as far east and west, is very great, and most of it is suitable for agricultural development of one kind or another. The best wheat area is considered to be the part east of the line. Here, of course, as we get further out the rainfall diminishes though the soil remains good, but there is ample country before reaching the dry belts to carry a large and thriving population of farmers. The timber on the land consists chiefly of salmon gum, York gum, gimlet wood, and mallet, but it is not so heavy as to make clearing a matter of great expense. West of the line the rainfall is larger, and consequently the timber becomes heavier and thicker in growth until the commercial timber forests are reached. In this portion mixed farming and sheep-raising take the place of wheat, and fruit-growing finds more congenial conditions. Southwards towards Albany the fruit areas become larger, and here is to be found the apple country of the State. Cereals, fruit, root crops, and pastoral pursuits all find a place throughout this extensive area, and those acquainted with its possibilities smile when they remember the jibe of prominent newspapers in the Eastern States that Western Australia possesses little or no good land.

### BEVERLEY.

Beverley, formerly the terminal point of the Western Australian Land Company's great southern railway, is beautifully situated on the Avon River, about 100 miles from Perth. It is surrounded by rich and undulating country, broken here and there by granite hills which add to its picturesqueness. Though still but a small town of less than 700 inhabitants, its position is such that it must eventually become a place of considerable importance. Though it was surveyed as a town site as far back as 1830, it can scarcely be said to have made any progress until recent years. Being the head of the great southern railway gave it a slight impetus, but even then it was only a station on the

complete line to Perth. Its progress, therefore, may be said to be practically due to the extension of agriculture, which has made it a depôt for a large and continually increasing farming area.

For some years the affairs of the town were controlled by a mayor and councillors, but recently the municipality has passed out of existence and the local government transferred to the Beverley Roads Board, which has authority over the whole district, the population of which is about 2,500. Though small the town is modern in construction and very active. Four of the associated banks have branches there, and the Church of England, Roman Catholic, and Methodists

possess churches. Other religious bodies make use of the various meeting-places in the town. In addition to the council chambers there are roads board offices, masonic hall, and good hotel accommodation. The Beverley Agricultural Society, with headquarters in the town, has a particularly strong membership. As may often be found in country towns where the people are thrown upon each other for entertainment, recreative

societies flourish. An excellent golf course has been laid out close to the town, and provision has been made for racing, tennis, football, and other outdoor sports. These things, assisted by a charming climate, make Beverley a very desirable place for rest and recuperation. *The Beverley Times*, a weekly newspaper published in the town, supplies the citizens with up-to-date news concerning the district.

EDMUND GEORGE BARRETT-LENNARD, J.P., "Belhus," Beverley, is the only son of the late Edmund Thomas Henry Barrett-

very hard contest, considered one of the most remarkable that ever took place in that district, costing the successful candidate £1,200, and at a later date transferred his connection to Malden, Essex, which district he represented for the rest of his life. A history of "The Families of Lennard and Barrett" was published in 1908, and Lord Dacre in his account of the Lennards states:—"This family, which for a long time held rank amongst those of the first note in Kent, was, as appears by the books in the Herald's office and other authentic evidences, settled in Chevening in that county as early as Henry the Sixth's time, when George Lennard was then living there." This George was succeeded by his son John, the first of three John Lennards in succession, and his great-grandson, the third John, is the first Lennard of whom any particulars are extant beyond those of their descents, marriages, pedigrees, or settlement of estates. He may be regarded as the founder of the Lennard family which, for the next 200 years, was to hold a somewhat prominent position from its alliances and possessions, and also from the fact that it represented the ancient barony of Dacre, which was held by the Lennards from 1612 until 1786.

This John, the "History" relates, was ambitious and not content to remain inactive until such time as he should inherit his father's property

MR. E. T. H. BARRETT-LENNARD.

Lennard, who came to Australia with his uncle, the late Edward Pomeroy Barrett-Lennard, fifth son of the first baronet of the line, Sir Thomas Barrett-Lennard, of Belhus, Essex, who in April, 1820, was elected M.P. for Ipswich after a

and to spend his life in the obscure position of a country squire. He possessed great shrewdness and tact; and these qualities, combined with perseverance, caused him not merely to attain distinction in his profession

"BELHUS," RESIDENCE OF MR. E. G. BARRETT-LENNARD, BEVERLEY.

(he was a barrister) and considerable riches, but also put him on terms of friendship with some of the leading men of the day. He was born in 1508 at Chevening, in Kent, and married in 1542 Elizabeth, daughter of William Harman, Crayford, of the same county, by whom he had three sons and five daughters. By his "painfull and vertuous courses he was the Authour of his owne advancement," to quote his eldest son, Samson, who owed no doubt to the substantial position occupied by his father the brilliant alliance with the Hon. Margaret Fynes, sister and heir-presumptive to Gregory, Lord Dacre, who, after her brother's death, succeeded not only to his entailed estates but also to the Barony of Dacre, which title was one of those capable of being inherited in the female line. Among these estates was the Manor of Herstmonceux, where the fine old castle of that name was erected by Sir Roger Fynes in 1440 at a cost of £3,800 — a huge sum in the fifteenth century. Fine ruins still remain of this castle, which was pulled down more than 300 years later, when, through the extravagance of the Earl of Sussex it came into possession of Mr. Robert Hare, who, to gratify a whim of his wife, and by the advice of the then

celebrated architect, Wyatt, demolished it and used a portion of the materials for building the modern house, now known as Herstmonceux Place. This Roger Fynes

appointed a Trier of Petitions in commissions composed of eminent persons, such as the Archbishop of Canterbury and other bishops as colleagues, besides occupying other

"WOONDERLIN" HOMESTEAD AND MR. E. T. D. BARRETT-LENNARD.

was succeeded by his son, Sir Richard, who married a daughter of Sir Thomas Dacre, and when her sister died without issue was accepted by Henry VI. as Baron by the title of Lord Dacre, and was summoned to Parliament in her right by writ dated October 9, 1459. Richard, Lord Dacre, took a considerable part in the public affairs of his time, and in the reigns of Henry VI. and Edward IV. was on several occasions

prominent offices, and Edward IV. esteemed him so highly that, in more than one act of "Resumption" in the time of that king, it was specially provided that nothing in these acts should be "prejudiciall or hurtyng" to Richard, Lord Dacre, his wife, or his heirs. Lord Dacre's eldest son died before his father and the title and estates were inherited by his son, Thomas, Lord Dacre, who, like his grandfather, took a prominent part in public affairs. His successor, the third Thomas, was also high in favour at Court, but was executed on a charge of having been party to the murder of a keeper whilst engaged on a poaching expedition, and the title descended to his son, Gregory, brother of the Margaret Fynes, who married Samson Lennard. The last-named gentleman displayed the same public spirit as his ancestors, and took part in the patriotic movements of the time for the defence of the country against the aggressions of Philip of Spain, and in 1588, when the Spanish Armada was launched against England, he was more than ready to take his part in repelling the invader. During the reign of Charles II.,

"SEATON ROSS" HOMESTEAD AND MR. FRANCES BARRETT-LENNARD.

Thomas Dacre, Baron Lennard, married Lady Ann Fitzroy, a natural daughter of the King by the Duchess of Cleveland, and was subsequently created Earl of Sussex in October, 1864. In tracing the lineage of the ancient family of Barrett, whose name and arms were assumed by Richard, Lord Dacre, and have ever since been borne by his descendants, we find that they came originally from Hawkhurst, in Kent, where Robert Barrett was living in the twenty-third year of the reign of Edward III. Robert of Hawkhurst had a son, John, and from his time down to that of Lord Newburgh we have a record of the entire descent of the Barretts and their alliances. Lord Dacre says "John Barrett, marrying Alicia Belhouse, transplanted himself to Aveley," and it may be mentioned here that the family of de Belhus, or Belhous, appears to have been one of considerable importance. As early as 1240 a branch of them owned estates in Norfolk in half a dozen parishes, and in 1290 Richard de Belhus was Sheriff of both Norfolk and Suffolk. Thomas de Belhus, alive in 1390, married Elizabeth, heiress to her father, Richard de Norton, of Aveley, who died before 1390, and was the ancestor of Sir Edward Barrett (Lord Newburgh—died in 1644), who bequeathed "Belhus" to the Hon. Richard Lennard upon condition that he assumed the name of Barrett. There are many interesting references to this old country seat in Sir Thomas Barrett-Lennard's book, by which we learn that it was once called "Barrett's Hall," that it was rebuilt before 1526, and that Queen Elizabeth was entertained there on one occasion. The Richard who inherited from Lord Newburgh was a man of "great Choler," who, after many disputes with his son,

Dacre, left various of the family estates away from him. Dacre's son, Richard, incurred his father's extreme displeasure by marrying his cousin, Anne Lennard, who was a Roman Catholic, but in consequence of his premature death his posthumous son, Thomas Barrett, became heir to the estates. Early in life this representative of the family appears to have been styled "Lennard - Barrett," taking the former name from his mother's family, but in 1755 he transposed the order of these names into Barrett - Lennard, the probable reason being suggested that upon succeeding to the title of Dacre he preferred to be the sixth Lennard bearing that title instead of the first Barrett to do so. This Lord Dacre had great taste for art, literature, and genealogies, formed a fine library largely composed of county histories and heraldic works, furnished "Belhus" afresh, and got together an extremely fine collection of family portraits. He took a very great interest in the old house, and wrote the "History" of the family before referred to, which occupied him for several years. He married Anne Maria Pratt, daughter of Sir John Pratt, Lord Chief Justice, of

large portion of which, including "Belhus," was given up to him while she lived, together with an annuity of £2,000. He was called Thomas Barrett-Lennard, and became a figure of considerable activity, in 1789 being put into the Commission of the Peace, and taking a prominent part in the local defences when England was threatened with invasion by France, in this respect following the example of his ancestor, Samson, over 200 years before. Probably as a reward for his patriotic exertions in respect of this Yeomanry Cavalry, he was created a baronet in June, 1807, an honour which cost him £336 9s. 6d. for fees to the Attorney - General, the Heralds' College, and other public offices. Sir Thomas had thirteen children, and was succeeded in the title and estates by his grandson, Thomas, the present baronet, who was born on December 29, 1826, and educated at Peterhouse College, Cambridge. The late Mr. Edmund Thomas Henry Barrett-Lennard was only fifteen years of age when he arrived in Western Australia in the early thirties. He lived for a time with his uncle on his farm at St. Leonards, at the Swan River Settlement, and upon reaching maturity

took over control of the "St. Aubyn's" Estate at Beverley on behalf of this relative. This was a grazing property where sheep-raising was carried on and remounts bred for the Indian Military Service. Subsequently he selected a Government block, originally of 1,000 acres, on Dale River, West Beverley, and giving up his position

at "St. Aubyn's" in 1854 began the development of his own property, which afterwards he enlarged to 5,000 acres. Mr. Barrett-Lennard continued here until his death in 1895, when the estate, which he called "Annandale" was sold, the

"BEAMING HILL" HOMESTEAD AND MR. H. BARRETT-LENNARD.

the Wilderness, Kent, and by her had a daughter, their only child, who died at an early age. After Lady Dacre's death, a natural son of her husband, whom she had adopted during the lifetime of the latter, became heir to the estates, a

greater portion being repurchased at a later period by the subject of this notice. Mr. Edmund George Barrett-Lennard, the gentleman under review, was born at Beverley on September 6, 1856, and was educated first by a private tutor in his father's home. When fourteen years of age he was sent for a year to Bishop Hale's school in Perth—now the Perth High School—and afterwards proceeded to England, where he completed his scholastic career at Middleton Lodge College, Bognor, Sussex, also undergoing a special training for nearly a year under a private coach in Upper Norwood, Surrey. Returning to Western Australia, he remained with his father for upwards of three years, gaining experience of a general nature in farming pursuits, and eventually took up his original holding at "Woonderlin," consisting of 900 acres, where he proceeded to initiate operations on his own account. This property was increased to 2,000 acres as time went on, 1,500 acres of the "Annandale" Estate being added thereto, and in course of time Mr. Barrett-Lennard purchased "Seaton Ross," one of the oldest farms in this portion of the State, and also another property "Dubelling."

"Belhus" was one of two taken up from the Government adjoining the old homestead "Woonderlin," and the whole of the properties combined consist of about 8,000 acres. He has transferred to his sons in approximately equal shares the chief part of his possessions, and lives in retirement with his wife sometimes at "Belhus," the home of his youngest son, and sometimes at his own house in the town of Beverley. By this division, in conjunction with other properties independently acquired, his eldest son, Edmund Thomas Dacre Barrett-Lennard,

owns 2,500 acres in "Woonderlin"; the second, Francis, is in possession of "Seaton Ross" (1,700 acres); "Beaming Hill" (1,750 acres) has fallen to the lot of Henry; and "Belhus" (2,000 acres) is occupied by Alexander Forrest, the youngest son; in addition to which a block of 800 acres is settled on his only daughter. Mr. Barrett-Lennard, worthily following the tradition of his forefathers, has exerted himself for the welfare of the district, and even while yet in his teens displayed a marked interest in the proceedings of the local organizations, especially in the agricultural society, of which his father was a promoter and first president. For over forty years he has been an active member of this body, and is a committeeman of long and honoured standing. For a decade he has served on the local roads board and filled the office of mayor of Beverley during a term of five years with great acceptance to the townspeople, whose well-being he advanced by his active participation in the scheme for the extension of the goldfields water supply to Beverley, and also for the vesting in the people as an endowment for all time of the "Commonage." The new Avon Bridge is one landmark

scheme, while the councillors made him the recipient of an illuminated photographic presentation as a mark of their esteem. He was created a Justice of the Peace for the whole State by the Forrest Administration in 1892. For thirty years Mr. Barrett-Lennard has been connected with the local race club and has filled every position open to members with considerable éclat. In appreciation of his many and valuable services to that club he was honoured with election as its first honorary life member, while one of the events has been called after him the "Lennard" Handicap in further recognition of his thorough and high-principled support of clean racing. In his youth Mr. Barrett-Lennard was a leader in all forms of athletics, winning valuable trophies which witness to his prowess. He played cricket with considerable success for his college in England, and for thirty years has been a member of the Beverley Cricket Club, also winning renown in running, shooting, and kangaroo-hunting, which sport he still enjoys. He was the first president of the Beverley Rifle Club, in connection with which he presented valuable trophies for competition for three years in succession; and was the first

president of the Beverley Golf Club, and the first honorary life member elected to this body. During a heavy flood in Beverley many years ago Mr. Barrett-Lennard rode into the rushing torrent and rescued two men who were being carried away by its force, for which service he was offered, but refused, the medal of the

"BELHUS" HOMESTEAD AND MR. A. F. BARRETT-LENNARD.

Royal Humane Society and was highly eulogized by the Press of the day. He married on May 13, 1879, Frances Ann Emily, eldest daughter of the late James William Broun, of "Avondale Park," near Beverley, and has four sons and one daughter.

distinguishing his useful record of service as chief magistrate of the town, and before the close of his mayoralty he was presented publicly by Sir John Forrest with a silver water tap in special recognition of his advancement of the water

JENKIN LEWIS THOMAS, "Spring Dell," Beverley. The subject of this notice is the third son of the late Lewis Thomas and was born at "Maescadlor," an ancient farm homestead, near Bridgend, in Glamorganshire, Wales, on June 22, 1863, his ancestors, both on his

MR. JENKIN THOMAS.

father and mother's side, having made their home in that district for many hundreds of years. Both belonged to the representative families of the place, their class being that known in the Old Country as "gentlemen farmers" or members of the highly-respected yeoman class, to whom must be accorded the credit of having materially assisted in the building up of the prosperity of Old England. At the time of his father's

death Mr. Thomas was only ten years of age, and from that period onward he continued at a boarding-school at Bridgend, until his fifteenth year. He then joined his elder brothers in the work and general conduct of the home farm and gained a good insight into the agricultural industry during the four years that he remained in this connection. When within a couple of years of his majority he decided to launch out on his own account, and having heard a good deal in favour of the Dominion of New Zealand, then a popular colony with those seeking their fortune under the Southern Cross, he set sail on the long voyage, which finally landed him at that destination. Upon arrival the young Englishman adapted himself with considerable rapidity to the changed condition of things obtaining in a new country, and in spite of his comparatively easy boyhood threw himself with energy and determination into the strenuous life, which was all his fresh sphere offered at the outset. He shirked nothing that came to his hand, but was chiefly engaged in agricultural work, this being varied by shearing, saw-milling, and the various avocations incidental to bush life. After spending three and a half years in New Zealand he decided still further to enlarge his knowledge of the lands of the Southern Hemisphere, and with this end in view took passage for New South Wales, the rich pastoral industry of that State providing him with ample interest and occupation. Whilst here the gold-rush to

Tetulpa in South Australia occurred, and willing to pursue his adventures in an untried direction Mr. Thomas joined the eager throng of seekers after the precious metal on the new field, arriving there among the earliest of the prospectors. His experience was more exciting than profitable in a pecuniary sense, and the smile of fortune being resolutely withheld he at length bade good-bye to mining, and in 1888 was induced

C. E. Farr, Perth.  
MR. JENKIN LEWIS THOMAS.

by family reasons to revisit his native place. During the twelve months that he remained at home he married, and in the beginning of 1890, having received his portion of the paternal estate, he again heard and answered the call of the bush from the Antipodes. Having studied the relative advantages offered by the different States, this time he selected Western Australia as the sphere for his future enterprise, intending to invest his capital in landed interests and form a home for himself and future generations on the soil which he had been given to understand was very rich in possibilities. Upon inspection of the country, however, he was considerably disappointed in the appearance of the land, and was on the point of relinquishing his project and leaving the State. At this juncture the late Mr. Wilding, of "Mokine," stepping in, advised him not to be too hasty in his decision, and offered him a position whereby he might have an opportunity of obtaining a more comprehensive knowledge of

RESIDENCE OF MR. JENKIN L. THOMAS, BEVERLEY.

the country and its conditions than had been possible in the short period of his residence in the State. This kindly offer was accepted by Mr. Thomas, who made the most of the opportunities thus afforded of acquainting himself with the different districts, and after remaining with Mr. Wilding six months he relinquished the connection in order to

same soil. After a careful and thorough inspection of the land available for selection in the southern part of the State—his object being to engage in sheep-farming—Mr. Thomas' attention

leaschold, and in course of time selected other suitable territory, until his entire block extended over 7,000 acres, the whole of which will at no very distant date become freehold property. In addition to this

was arrested by the country lying to the west of Beverley, which was of a promising character, but as yet had not attracted many settlers. About 13 miles out from the town a small freehold property of 140 acres was offered for sale, which, being only nine miles distant from Dale Bridge, a station on the newly-appointed main great southern railway line, was approved by the new colonist as suitable to his purpose. About 60 acres of this holding had been cleared and a small stone house erected to serve as a homestead, and here Mr. Thomas took up his abode, proceeding with arrangements for acquiring

large area, during later years he has held on lease from the Hamersley family an adjoining property comprising another 7,000 acres, which he utilizes as a sheep-run. The soil is mixed in character, the conformation of the land being undulating, with very rich agricultural areas, and there are wide, sandy plains, which have proved specially adapted for sheep pastures. In its natural state the country is heavily timbered with white-gum, sheaok, jam, York-gum, and wattles, but at the present time ringbarking operations have been completed over the whole of Mr. Thomas' freehold, and also over 2,000 acres of the leased land. With the same energy and enterprise that had characterized his movements in previous years, Mr. Thomas at once set to work to improve his holding, and became the pioneer of fencing work in that district, prior to his advent the sheep having been shepherded on the few scattered farms which represented settlement in that district. During the ensuing years up to the present 60 miles of fencing have been completed, a different system being carried out, according to the exigencies of the country, on various parts of the boundary. In some places six plain wires have been considered sufficient to provide adequate protection; in others this has been made vermin- and sheep-proof by the addition of 2½-ft. wire-netting, and again a variation has been made with four plain and two barbed wires. The subdivision

CLEARED AND TIMBER COUNTRY ON THE "SPRING DELL" ESTATE.

troughing have recently been installed. The property is well provided with many natural grasses and different herbs of most nutritious value for stock, and carries a flock

well up to the average, usually working out at about 85 per cent. Shearing is done by hand, and the shearing-shed is a substantial building containing six stands. Though

secondary to the pastoral side of the enterprise, and is carried on chiefly with the object in view of improving the carrying value of the land for sheep. About 1,000 acres of the

freehold area have been cleared and prepared for tillage, which is conducted in accordance with the latest ideas and principles of fallowing, wheat and oats being the chief crops produced. The oats are fed to the stock, and the wheat, which averages about 12 bushels to the acre, is disposed of at the local markets. The present homestead, which was erected by Mr. Thomas in 1905, is substantially built of brick and stone and contains ten rooms, the whole interior being lofty and well ventilated and fitted up with all appointments necessary for comfort and convenience. Surrounding the house and adding greatly to the attractiveness of its appearance is a pretty flower garden, where, in the well-kept plots and borders, an infinite variety of the most beautiful

provided stabling for fourteen horses, with a good-sized granary and sheds for the machinery, all being up-to-date and in good order. Mr.

the study of stock, continually augmenting his knowledge on this subject by the perusal of works by modern and well-authenticated writers dealing with the different departments of the pastoral industry. Though the attention he gives to the estate leaves him little leisure either for public life or recreation, he keeps in touch with his fellow settlers at the periodical meetings of the Beverley Agricultural Society, of which he is a member, and occasionally indulges in the pastime of a kangaroo hunt. In 1904 he took a trip to the Old Country, and again in 1910 with his wife and children he spent eighteen months very pleasantly in renewing his youth and visiting various places of acquaintance with the scenes of his interest in England, Wales, and Ireland. By his marriage in 1890 to Elizabeth Ann, daughter of the late Thomas Evans, of Monckton East, near Bridgend, in Wales, he has issue one son and three daughters, a daughter having died in infancy.

THE HORSES AT "SPRING DELL"

and popular blooms are found, varying according to the season. This is tended with skilful care by Mrs. Thomas, who considers it her special department and makes it nothing less than a labour of love, her "gardener's touch" bringing beauty out of the remotest corners to delight the eye, their decorative value being keenly appreciated within as without the walls of the dwelling. A small orchard has also been in full bearing for a considerable period, where various kinds of fruit come to perfection, and particular mention must be made of the vines and almond-trees. In the winter time a vegetable garden is cultivated with successful results, by this means the domestic menage being continually supplied with ample provision of fresh kitchen stuffs. Mention must also be made of the large and commodious outhouses, where is

NN

Thomas makes a hobby of the management of his valuable property and gives a great deal of time to

WELL, FITTED WITH WINDMILL AND TROUGHING FOR WATERING SHEEP.

JAMES WILLIAM BROUN, of "Southbourne," Beverley, was born at "Avondale," the property of his father, the late J. W. Broun (mentioned elsewhere in this work), on May 25, 1871. He received his education at the academy conducted by Mr. (now the Hon.) H. Briggs at Fremantle, and upon the conclusion of his studies was associated with his father in farming pursuits until he attained his majority. He then launched out on his own account, taking over the lease of his present estate, "Southbourne," for ten years with right of purchase, which he exercised at the end of that period. The original property was a part of the well-known "Haisthorpe" Estate, in the Beverley district, and was sold to Mr. Broun by Mr. William Smith, who had acquired it from the late H. Lukin, the first owner. The extent of the block at the time of its purchase by Mr. Broun was 1,536 acres, which was subsequently increased by the addition of a portion of the "Addington" Estate, 1,000 acres adjoining "Southbourne" being incorporated into the latter property. From the first Mr. Broun entered energetically upon the work of improvement, clearing operations being set in full swing, and this policy of development was continued on the "Addington" territory until of the whole block of 2,500 acres practically the entire area is now denuded of the original jam, manna, and York gum timber, a few belts having been left to provide shelter for the stock. Posts for fencing purposes were split from the jam logs, and before long the boundary was enclosed with six or seven wires and netting, while the subdivision fences, which cut the estate up into thirty-one paddocks, were carried out on the same system. The country is undulating and remarkably free from stone. In quality it has been classified as first-class land and well suited to the cultivation of cereals, to which the whole of the estate is in turn devoted by Mr. Broun on the four-year

fallow system, which allows for two years grass, one year fallow, and the fourth year crop. Wheat, oats, and rape are the principal products, the latter being used to feed to the stock which flourish on its fattening qualities. The pride of "Southbourne" may be said to lie in its flock, which has been described as "easily the pick of the district." Mr. Broun is acknowledged to have experienced phenomenal success with his sheep, and as he has made the breeding of this class of stock his special hobby, the results of his efforts are distinctly gratifying. He imports freely from the leading flocks of the Commonwealth, selecting his merinoes from the famous "Canowie" stud in South Australia and Lincolns from the premier prize-taking flocks of the Dominion of New Zealand, and with these he has built up his own industry, at the present time grazing 1,000 sheep on the "Southbourne" Estate. Representatives from this flock have been shown in open competition with the best in the State at the annual functions held by the Royal Agricultural Society and other similar organizations throughout the country districts, and for several years have been prominent in the winning

circles of sheep exhibits at headquarters in Perth. Mr. Broun's successes in this line were crowned in 1912, when against all-comers he carried off money prizes running well into three figures and the "President's Silver Cup" for the highest

*Dease Studio.* Perth.  
MR. JAMES WILLIAM BROUN.

number of points in the sheep section. The wool produced by these sheep is of exceptional length and staple, and its fine quality commands top figures in the markets of the Old Country, to which the annual clip is

sent. Excellent watering facilities have been provided for the stock by means of numerous wells, which are fitted with windmills, from which two miles of piping is carried to iron troughing on different parts of the property. The water thus supplied to the stock is covered from the hot rays of the sun by well-built, open sheds, and by means of this shelter the precious fluid is kept cool and wholesome, this being the best system in vogue for providing in an efficient way for the necessities of the flocks. More than a passing mention must be made of the homestead, which is situated six miles to the north of Beverley and which may

the hottest days of summer, and underground tanks have been provided which conserve a plentiful supply of rain water at a low temperature all the year round. Every comfort and convenience has been considered in the general appointments and furnishing of the home, where modern luxuries do not, however, detract from the pleasant homely atmosphere which characterizes the rural homesteads of Western Australia, so noted for their hospitality and the kindly welcome extended to all who come to their doors. At the front and side of the house a flower garden has been laid out and decorative wattle-trees

connected with the telephone service at the Beverley Exchange, prompt communication with Perth thus being made possible. The extensive outhouses are a picture of neatness and up-to-date enterprise, the stables and sheds being built of brick, iron, and timber, presenting a very substantial and complete appearance, and a tour of inspection through the interior only confirms the favourable impression formed by a view of the exterior. Mr. Broun is regarded as one of the leading residents of the district, and as such has taken his share of public office in the prevailing organizations for the welfare and advancement of the place. Besides being a member of the Royal Agricultural Society and a committee-man of that body he holds the position of president of the Beverley Agricultural Society and takes a deep interest in the proceedings and deliberations at the periodical meetings. He is also president of the local branch of the Farmers and Settlers' Association. Mr. Broun was married in 1903 to Elinor Elizabeth, daughter of the late William John Clifton, and sister of Mr. Claude R. H. Clifton, whose biography appears elsewhere in these pages, the issue of the union being one son and two daughters.

be described as one of the most comfortable country residences in Western Australia. Built of brick and designed after modern plans the house was erected by Mr. Broun in 1903, and is most roomy and commodious, containing thirteen rooms, many of them of large size and all well lighted and ventilated. An attractive feature is a very extensive open room or deep verandah on the shady side of the dwelling, where a cool retreat may be found even in

NN2

growing in profusion in the vicinity add their quota to the general sum of beauty, and in the flowering season produce their golden tassels of blossom, which scatter fragrance on the air round a wide radius. A small orchard is also cultivated, skilled care and attention being manifest in the healthful appearance of the trees, which present a sufficient variety to provide for all the necessities of the household. The residence has the advantage of being

GEORGE LEAKE BROUN, J.P., "Avondale Park," Beverley district, was born on the property where he now resides on February 6, 1873, and is the fourth son of the late James William Broun, who was born in Perth shortly after arrival of his parents, a distinction being claimed for him that he was the first male child of European parentage born in Western Australia. Mr. G. L. Broun's grandfather, the late Peter Nicholas Broun, was the first Colonial Secretary of the Swan River settlement, having been a passenger by the "Parmelia" in 1829, when he accompanied the first Governor of the State, Captain Stirling, to whom was entrusted the founding of the new

colony. Originally the Broun family is of French extraction, the founder of the Scottish branch having been one of the leaders of the auxiliary troops which crossed the Channel in 1073 in order to assist Malcolm

MR. JAMES WILLIAM BROUN.

Canmore against William the Conqueror, since which date the family lineage can be distinctly traced down to the present day, the present head of the family being Sir William Broun, the tenth baronet of the line, who resides at "Dalblair," Winton, New South Wales. The late Colonial Secretary was the second son of the seventh baronet and an officer of the Royal Navy. His death

after filling a position as jackeroo on a pastoral property near York for a couple of years entered upon farming pursuits on his own account. He acquired the "Jelcobine" Estate, situated forty miles distant from York in a southerly direction, and at a later date—in the early fifties—became the owner of "Avondale Park" and "Water Hatch," freehold properties comprising some 10,000 acres of land. This area has since been divided into two portions, the "Avondale Park" property falling to the share of Mr. G. L. Broun, while his brother inherited "Water Hatch," each estate consisting of 5,000 acres. "Avondale Park" lies about eight miles from Beverley, on the great southern trunk railway to Albany, and 90 miles from Perth. Of the whole acreage about 3,000 acres are suitable for cultivation, the soil being a good friable loam and the country well timbered with York gum, jam, manna, and white gum. The River Avon runs through the property, and as one of the lowest levels of the river is to be found in this locality there is always a good supply of water all the year round, and even in the hottest summer the pools on the "Avondale Park" Estate have proved to be permanent. Agriculture, the chief industry of the district, is carried on on a fairly large scale at "Avondale," upwards of 1,200 acres having been brought under cultivation on the three-year fallowing system. Hay, wheat, and oats are produced, excellent harvests

during all the seasons of the year. The flock is a good-sized one for the neighbourhood, averaging 2,600 strong-wool sheep of the merino type, which always holds its own in any part of the State. Lambs for the

Greenham & Evans, Perth.  
MR. GEORGE LEAKE BROUN.

local markets are produced, together with a good class of mutton, and the annual clip which takes place on the property is shipped to London, where a satisfactory figure is realized. The homestead stands as a type of one of those substantial, comfortable homes which the early settlers so well understood the secret of designing and building, and which have been

held annually, the grounds being kindly thrown open on this occasion by Mr. Broun, who is a great golf enthusiast. The subject of this memoir has spent practically his

he was born. For eight years past he has served as a member of the Beverley Roads Board, and is connected with all the agricultural societies and race clubs of the

Coombe, formerly of South Australia, who settled at Tammin, Western Australia, some few years ago. His family consists of four daughters.

FRANK LODGE, "East Yangedine," *via* Beverley, was born at Helford, Cornwall, England, on January 6, 1876, and is the eldest son of the late Captain Francis Wilkins Lodge, of the mercantile marine service, who in the original instance came to Australia in 1847 as skipper of the barque "Eleanor Lancaster" and traded in Australian waters for some years. Subsequently he became one of the early settlers of the Newcastle district of New South Wales, where he married his first wife, the eldest daughter of the late Major Crummer, who was associated with the Civil Service of the Mother State in the early forties, holding among other positions the office of resident magistrate of Newcastle. Captain Lodge returned to England to take over the duties of salver to the Marine Insurance Company, and in this capacity was instrumental in rescuing treasure from many well-known vessels which had suffered shipwreck, among them being the "Golden Gate," the "Hamilla Mitchel," the "Schiller," and others. After about twenty years of treasure-hunting in the depths of the sea, he settled in the County of Cornwall, having previously contracted a second marriage with Miss Burch of Woodbridge, Suffolk, of which there was issue two sons, the gentleman under review and his brother, Mr. G. H. Lodge, who is engaged in the agricultural industry at Cuballing and Kurrenkutten, in Western Australia. Mr. Frank Lodge received his education at the Kimberley Grammar School, Falmouth, England, and in 1891 sailed for this State, upon arrival serving for a short time at "Tipperary," the pastoral property of the Burges family, and subsequently at "Yangedine," then owned by Messrs. Darlot Brothers, where he gained the necessary "colonial experience." In 1899 he purchased the eastern portion of the "Yangedine" Estate, and settled down to pastoral and agricultural

pursuits on his own account, his property comprising 2,000 acres of good farming land. Originally this was regarded as a poor proposition, owing to the prevalence of poison weed, but this pest was attacked with such energy and perseverance by Mr. Lodge that it has now been completely eradicated. About 1,700 acres have been cleared and prepared for cultivation, the whole area being cropped on the three-year fallow system with cereals, hay, and rape, which are the principal products of the district. On the pastoral side of the industry Mr. Lodge has attained excellent results, a fine flock

CAPTAIN FRANCIS WILKINS LODGE.

of grade ewes having been built up by careful methods of breeding and culling. The returns from this flock, both in wool and mutton, have been of the most satisfactory character, the climatic conditions being very favourable for sheep-raising. The offspring comes early to maturity, the first early fat lambs sent to the spring markets from this district usually being the product of the "East Yangedine" flock. Horses are also bred in limited numbers, the strong, young stock raised every season being kept for the work of the farm, while those which already have expended a fair share of their years in the labour of the field are

sold to purchasers whose requirements involve less arduous toil on the part of their equine assistants. Many improvements have been carried out from time to time on the property, the fencing of the boundary and subdivision into ten paddocks being completed and convenient arrangements made for the watering of the stock, and in every respect the "East Yangedine" property may be regarded as among the leading estates of the district. Mr. Lodge finds plenty to occupy him in the management of his various interests, but his love of literature secures a portion of his leisure for its indulgence, historical and other classical works being perused by him with much enjoyment. He was married in the year 1901 to Julia, second daughter of the late Henry Lukin, of "Haisthorpe," Beverley, and has a family of one son and two daughters.

FRANCIS WALPOLE LEAKE, barrister and solicitor, Beverley, was born at Perth, Western Australia, on February 11, 1886, and is a son of the late Hon. George Leake, K.C., C.M.G., Attorney-General of Western Australia, and grandson of the late George Walpole Leake, Q.C., who on more than one occasion was Acting Attorney-General and Acting Chief Justice for the colony, and was a member of the Legislative Council under the old constitution as well as the newer one under responsible government. The late George Leake sat successively as member for Roebourne and Albany, and became seventh Premier of the State in May, 1901, giving place to the Morgans Ministry some six months later. Upon December 23, 1901, he was called to form his second Ministry, and his Administration continued from then onward to the time of his death on May 24, 1902. The gentleman under review was educated at the High School, Perth, in 1899 proceeding to England, where he attended the Locker's Park Preparatory

School at Hemel Hempstead, and completed his scholastic course at Uppingham School in Rutland. At eighteen years of age he returned to his native land, and almost immediately afterwards was articled first to Sir Walter James, and subsequently to Mr. R. R. Pilkington, barristers and solicitors, of Perth, with whom he studied law for a term of five years, being admitted to the Western

Lafayette, Perth.  
MR. FRANCIS WALPOLE LEAKE.

Australian Bar on March 15, 1910. Subsequently Mr. Leake took up his residence at Beverley, where he established himself in the practice of his profession, and has since built up a considerable connection, becoming widely known not only in the town but also in the surrounding districts. Shortly after his advent to the place, in the days when Beverley boasted a municipality, Mr. Leake filled the office of councillor at the municipal table, and he takes a general interest in the progress and welfare of the district. From his schooldays he has been very keen on all forms of clean manly sport, and as an amateur took a very creditable place in the various diversions with which he filled his leisure hours. His favourite form of recreation at the present time is found in the popular pastime of golf, and he is a member of the committee of the Beverley Golf Club.

EDWARD REUBEN DONCON, of East Beverley, owner of part of the old "Timaru" Estate, is a son of the late Edward Doncon, who came to Western Australia with his father

while still quite a lad, and subsequently purchased the "Arnold Park" and "Boyadine" properties, where he was engaged in farming pursuits for a number of years. Born at York on November 27, 1880, the gentleman under review received his education at Prince Alfred College, Adelaide, and subsequently followed a commercial career, holding various positions in the Union and National Banks for about a decade. At the end of that period he decided to enter upon farming pursuits, and in 1903 purchased 2,000 acres of the well-known "Timaru" property, afterwards adding a further 2,500 acres, bringing the whole estate up to an acreage of 4,500. In 1912 he sold 2,000 acres to his brother, Mr. Robert Charles Doncon, of "Boyadine," and has since conducted

Bartletto, Perth.  
MR. EDWARD REUBEN DONCON.

operations on the remaining area. He has 1,500 acres prepared for cultivation and crops annually about 500 acres, the balance lying in fallow and grass for a couple of years, when it in turn is tilled, the principal crop being wheat, which yields the good average of 20 bushels to the acre. A flock of 1,200 crossbred sheep is grazed on the pastures, and with these considerable success has been attained. An abundant supply of water is present on the property, which is well fenced, and the whole of the uncultivated portion is ringbarked ready for the further processes of clearing. Windmills have been erected where necessary and wells sunk, and in every way the estate is in an

advanced state of improvement, while every year further development is taking place. Mr. Doncon is a member of the Beverley Agricultural Society and of the local race club. A general supporter of all forms of outdoor athletics, he is chiefly addicted to cricket as a means of recreation. In 1906 he married Elsie Helena Ida, daughter of Mr. John Fleay, of the well-known pioneering family of that name founded at Gilgering in the early days, and has three sons and one daughter.

KENNETH McLEAN, J.P., of "County Peak," Beverley, is the eldest son of Mr. Donald McLean—now living in retirement at Beverley—who came to Western Australia from Victoria in 1905, in order to spend his declining years near his sons, who had preceded him by some eight years and had taken up a large area of land in this district. Mr. Donald McLean left England for Australia in 1851 and eventually settled in the Sheep Hills district, in the sister State of Victoria, where he remained for thirty-two years, earning the respect and esteem of all his fellow-settlers. As one of the pioneers of the place Mr. McLean took a leading part in securing railway communication to that district and gave his cordial and practical support to every movement for the welfare of the community, and upon his departure for Western Australia was accorded a public social and presentation of a purse of sovereigns as a mark of the high regard in which he and his wife and family were held. The subject of this notice was born in South Australia, but while still quite a child accompanied his parents to Victoria, settling with the family near Ballarat for a few years. He became engaged in commercial pursuits, and being the eldest of a family of twelve children, knew the meaning of strenuous labour at a very early age. In 1895 Mr. Kenneth McLean sailed for the Western State, and upon arrival proceeded to the eastern goldfields, where for a time he found employment in a survey camp. Subsequently he turned his attention to prospecting, and took up and worked some leases for a time without any success. After three years on the fields he decided to test his fortune on the land in a different direction, and selecting Beverley as a promising agricultural district, joined his three brothers,

who previous to this had been farming in the mallee district of Victoria and had thus gained a good general knowledge of pioneer farming in all its stages. Being totally without capital, the four brothers

MR. DONALD McLEAN.

took a contract of clearing in the Beverley district, and whilst engaged in this way each one selected a free homestead and about 100 acres of Crown land, which was gradually increased until at the present time they jointly own and farm 7,000 acres, which they have brought to an advanced state of development. This property, which at that time was all virgin bush, is situated about 18 miles east of Beverley, and in its natural state was covered with York gum, jam, salmon, and Morrell forests. Very little light land was

invariably give the best returns; this made the work of clearing, which during the first five years they did with their own hands, anything but child's play. About 1,800 acres are cultivated, two crops in succession being taken off new land when first broken up, but the greater part of the crop is on fallow land, and about  $1\frac{1}{4}$  bushels of seed is used up to 90 lb. of fertilizer. Some interesting statistics regarding their wheat returns are given by the Messrs. McLean:— In 1898, 43 acres yielded 80 bags, at an average of 7 bushels to the acre; in the following year on an area of 70 acres 350 bags were reaped, the average being 20 bushels to the acre; in 1903, when the drill and manure were used for the first time, 2,100 bags were taken from 300 acres, at the splendid average of 28 bushels to the acre; and in 1910 1,000 acres yielded 6,000 3-bushel bags, at an average of 18 bushels to the acre. Since then the work of cultivation has gone on by leaps and bounds, while the pastoral side of the industry is coming into considerable prominence. The flock, which consists of 1,500 sheep, was bred in the first instance from 200 rented ewes, and gives a return of about 10s. per head per annum. The bulk of the wether lambs are sold, the best of the ewes being kept to increase the flock, and the general type favoured is a utility sheep of crossbred strain, bred with a view both to its mutton and wool-producing qualities. Upon "County Peak" is found some of the finest heavy-draught stock in the great southern district, mostly bred by the brothers out of imported Clydesdale blood. The brood mares

work demanded of them. Mr. Kenneth McLean is a member of the committee of the Beverley Agricultural Society, with which body he has been connected for over a decade, and for a considerable time has been one of the largest exhibitors of draught stock in the neighbourhood, carrying off most of the awards in this section; while in combination with his brothers he has also exhibited at the Royal Show with much success. The "County Peak" property is divided between the gentleman under review, his two brothers (Messrs. Thomas and John McLean), and the widow and children of the late Donald McLean, for whom Mr.

C. E. Farr.

Perth.

MR. KENNETH McLEAN.

Kenneth McLean is administrator of the estate. Though the farms are worked individually there is a good deal of mutual enterprise among the brothers, and they are all concerned in the various movements of public interest in the neighbourhood. Mr. K. McLean was appointed to a Commission of the Peace by the James Government in 1903, and he has been a member of the Beverley Roads Board since the amalgamation of that body with the East Beverley Board. He is vice-president of the local branch of the Farmers and Settlers' Association, and is a patron of all forms of manly outdoor sport. He took a leading part as chairman of directors of the Mount Kokeby Farmers' Grain Shed Association—a body formed with the object of facilitating the grain traffic, etc., of the district, and in many other ways has displayed a true public spirit.

CLYDESDALES AND YOUNG STOCK BRED ON THE "COUNTY PEAK" ESTATE.

included in their selection, experience having taught them that the forest lands upon being fallowed

are of exceptional quality, and the 70 horses of all ages on the farm appear well fitted for the strenuous

ROBERT CHARLES DONCON, "Boyadine," Beverley. The subject of our notice was born at his present home at Beverley on July 8, 1872, and is the eldest surviving son of the late Edward Doncon, who came to

MR. EDWARD DONCON.

Western Australia from Cornwall, England, among the early settlers of the State. Being but a child at the time of his arrival Mr. Edward Doncon passed his boyhood days at the old King's Head Hotel, of which his father was mine host in the old coaching days, and upon reaching maturer years took over this hostelry, which he managed on his own account for a couple of years. Having a distaste for the business, he

Knott, his father-in-law. At the end of five years, when the lease expired, he transferred the scene of his enterprise to "Boyadine," the lease of which he obtained from the late Henry de Burgh with the option of purchase, which he exercised some time later. The late Edward Doncon died at York in 1898. The gentleman under review received his education at a public school at York, and subsequently attended the academy in Perth conducted by the late G. A. Letch, completing his scholastic career at the Fremantle Grammar School under the tuition of the Hon. H. Briggs. Leaving school at eighteen years of age, after four years in the metropolis and its seaport, he returned to the parental roof-tree and became engaged in farming pursuits in conjunction with his father and younger brother, who was assisting in the working of the property. Upon attaining his majority he took over the estate from his father, who settled in York, where he lived in retirement until the time of his death. During the few years that have since elapsed Mr. Doncon has had his time well filled and all his best energies employed in the improvement and development work which has been the means of so greatly increasing the value of the property, which ranks among the foremost farming propositions of the district. "Boyadine" is situated 15 miles in a westerly direction from Beverley, and covers an area of 8,500 acres of undulating country, originally

nature. The soil varies over different parts of the estate, a large portion being splendidly suited to agriculture, while there are good natural pastures for stock. The place is plentifully supplied with water obtained at a very easy depth, no deep well-sinking being necessary, and the precious fluid is readily obtained anywhere and everywhere over the property. There are 1,000 acres of land cleared for cultivation, the soil

VIEW OF MR. R. C. DONCON'S "BOYADINE" ESTATE.

of hay being grown for selling purposes besides the ample supply necessary for the requirements of the stock upon the farm, and in all the crops failure is almost an unknown experience. The homestead of "Boyadine," old-fashioned and picturesque in appearance, was built by the original holder of the property, Mr. de Burgh, in the thirties, and the style of architecture prevailing in England at that time is plainly manifest in its design. A certain severity, characteristic of the period, however, does not in any degree interfere with the air of comfort and

being decidedly better than that obtained from similar pools in the Avon River, with which the River Dale junctions at a point some 14 miles away. The outhouses are very extensive, and being built of stone and, in some cases, of wood and iron are as sound and substantial as when first erected half a century ago. The machinery sheds shelter many valuable machines used in various departments of the industry, and for the products of the harvest fields hay sheds and chaff and grain sheds of generous dimensions have been added as necessity has arisen. There

bearing supplies the necessities of the household. Lying about 12 miles east of Beverley and in close vicinity to the Quairading railway line — Balkuling Siding being situated within five miles from the homestead—is Mr. Doncon's second property, known as "Timaru," which he manages in conjunction with "Boyadine." Like the latter estate, "Timaru" is in an advanced state of improvement, all the boundaries being fenced with posts of jam timber and six or seven wires, while the subdivision fences are carried out on a general system of four wires

Photo by C. E. Farr.

HOMESTEAD ON THE "TIMARU" PROPERTY.

prosperity which pervades the very roomy and convenient structure, which affording space for eleven rooms and offices looks substantial enough to withstand the ravages of

is stabling for fourteen horses, coach-house, and other buildings, and in addition to the stockyards at the homestead area much work of this description has been carried out

and netting, the whole averaging a cost of about £30 per mile. Altogether the two properties are divided into twenty-eight paddocks ranging in size from eight to ten

acres, eighteen of these being included in the "Boyadine" Estate. Where the timber has not already been cleared ringbarking operations have paved the way for the firestick, and agricultural and pastoral areas

is also above the average, 90 per cent. being the usual record at "Boyadine" and "Timaru," and in every respect this department of Mr. Doncon's mixed-farming operations may be regarded as one of the most

nor so roomy as "Boyadine," is a well-appointed residence replete with all the conveniences demanded in this age of luxury. The homestead is occupied by the manager employed by Mr. Doncon to supervise affairs

Photo by C. E. Farr.

MR. R. C. DONCON'S "TIMARU" ESTATE.

have been opened up all over "Timaru," where about the same extent of country is cultivated as on the older property, similar crops being produced on the system obtaining at "Boyadine." On the pastoral side of the industry the flock of crossbred merino-Lincolns take pride of place, the two farms being stocked up to the extent of 4,000. Of big frame and robust build these sheep yield valuable fleeces averaging about 6 lb. in weight, and splendid prices are obtained at the London markets for the wool, this

satisfactory. A large number of farm horses are required to work the double proposition, and these are mostly bred by the owner on the homestead estate, a useful type of animal being raised suitable to the different classes of labour to which they are put. At "Timaru" the stabling arrangements are worthy of note, accommodation being allowed for as many as twenty-five horses, and the whole of the cluster of out-buildings here have been designed on the latest and most approved plans, the material used being

at "Timaru," under his own direction, and frequent visits are made by the proprietor to this portion of his property, which, although it has only been in his possession since 1909, already is proving a good investment. The welfare of the district in which he passed practically the whole of his life has not been neglected by Mr. Doncon, who displays a deep interest in the various organizations that have been formed to advance its progress and well-being in every possible way. For several years he has occupied a seat on the Beverley Roads Board, representing the West Ward of the area under control of that body. He is a member of the agricultural society of Beverley, and has taken an active part as a committeeman for a considerable period. He is also connected with the local branch of the Farmers and Settlers' Association, in which he acts on the committee, and fills a similar office in connection with the Beverley Hospital Board. His services are claimed and willingly rendered for every scheme having as its object the good of the community, and every public movement with a worthy aim may safely reckon on his sympathetic support. He is a wide reader of current literature, by this means keeping himself well up in the affairs of the day both in his own and other countries. Mr. Doncon married in 1897 Sarah Jane Cruickshank, daughter of the late James William Broun, of "Avondale" Park, near Beverley, and has a family of three sons and four daughters.

MR. JAMES FLEAY.

and entered upon farming pursuits in the York district, where members of his family have continued ever since. The gentleman under review was born at "Gilgering" House on January 22, 1861, and received his primary education by private tuition

in his father's home, subsequently attending the only Government school then in existence at Perth, which has since been converted into the modern technical school on St. George's Terrace. At fifteen years of age he concluded his scholastic career and returned to his birthplace, where he began his training in agricultural pursuits by assisting in the work of the farm. Upon attaining his twenty-third year in 1884 he struck out on his own account, renting from his father the "Talbot" property, which had been purchased for the late James Fleay by the present owner's grandfather. These lands were chiefly taken up on pastoral leasehold, though there were several blocks on the property of freehold Government grants, which the original settler had acquired by purchase and transferred to his son James. The land taken over from his father by the subject of this notice, including the pastoral lease, comprised about 25,000 acres, and in addition he leased the "Goonderding" Estate from Sir John Forrest, a property of over 7,000 acres in extent. These leases he carried on as a sheep run for about twelve years, at the end of which period the death of his father brought about a change in the condition of things generally as regarded his family, and Mr. J. E. J. Fleay succeeded to the freehold portion of the property surrounding "Talbot" House, where he now resides. To the 2,200 acres then inherited by him there has since been

added from time to time about 7,500 acres, which Mr. Fleay holds in his own name; but his three sons have further augmented this area by taking up adjacent blocks, which brings the whole acreage up to about 10,000. The estate is situated 11 miles west of Beverley and eight miles from the nearest railway siding, Dale Bridge.

The country is mostly undulating in character, the soil consisting of mixed chocolate and sandy loam, while the low hills are topped with granite rock. Surface water has been plentiful all over the property since the killing off of the greater part of

C. E. Farr. Perth.  
MR. JOHN EDWARD JAMES FLEAY.

the natural growth of timber, which consisted chiefly of York gum, white gum, jam, and sheaok, by means of ring-barking operations. Besides the running brooks there are innumerable soaks and wells, in addition to a water scheme, by means of which the supply from natural springs is

to attain this desirable result he has bred from strains capable of producing sheep of robust build and big frame, the flock being a strong-wool

and utility. The outhouses consist of stables, barns, and sheds—among them the shearing-shed—which, being constructed of brick,

thirty to forty cases of fruit annually. A few horses for general use are bred upon the estate, and for this purpose a well-bred stallion has been imported from South Australia. Mr. Fleay has always displayed considerable interest in the public affairs of the district, and for several years has served as a member of the

Photo by A. F. J. Fleay. REAPER AT WORK.

merino founded with representatives from the best South Australian stations and continually improved by fresh importations from the same State. At the present time there are about 5,000 sheep on the property, and the wool from the annual clip is shipped for London, where it has recorded the biggest prices ever obtained for wool from the Western State. The work of cultivation has been conducted with the same excellent judgment that has characterized the building up of the pastoral side of the industry, and over 2,000 acres have been tilled on the fallow system, the chief crops produced being cereals and hay. In all departments of the enterprise operations are carried on by the father and sons as a joint proposition, an arrangement which has been worked with admirable results. The traveller, upon approaching the "Talbot" homestead for a mile or two before reaching the near vicinity of the house, is apt to imagine from the number of buildings and outhouses clustered together that he is nearing the site of a village. The main portion of the dwelling-house, which was erected about half a century ago, has been added to and improved from time to time to provide accommodation for an increasing family, a very commodious and comfortable interior being the result. Large spacious verandahs are a feature of the building, the whole evidencing that the plan has been carefully thought out with regard to convenience

wood, and iron with a view to durability, present a very substantial appearance. Stockyards have also been erected on various parts of the property, posts and wire-netting being used for this purpose. The house is surrounded on three sides by a flower garden, where also grapevines and fruit-trees of different varieties flourish, and besides yielding acceptably of their riches in fruitage time, are a picturesque feature of the place. educated privately and also followed in his footsteps in choosing the calling of a farmer and pastoralist on his native soil. He has acquired his own holding in the vicinity of "Talbot" House, and continues with his father and brothers in working the

sporting life of the district. They have especially distinguished themselves on the cricket field, and in their own family circle are able to produce a cricketing team which can conduct with credit a contest with any other club in the neighbourhood.

JAMES HENRY FLEAY is the second son of the late James Fleay, and was born at "Talbot" House, near "Oakover," in the York district, on November 9, 1863. His early education was conducted under private tuition, and after a finishing

early eighties to Fanny, second daughter of the late Edward Doncon, one of the pioneer graziers of the Beverley district. This lady died in 1900, leaving issue a son and a daughter.

eventuated in 1907, and since that date the brothers have conducted operations separately, Mr. James Fleay leasing half of the estate from his brother. Of the "Gilgering House" area about 1,500 acres are cleared, the cultivation of

MR. JAMES HENRY FLEAY.

course at the Perth High School he proceeded to the north-west, where he obtained a valuable experience in pastoral pursuits in the Ashburton district, continuing there for a couple of years. Returning home he became interested in the farming industry in conjunction with his brother, Mr. F. W. Fleay, on the "Gilgering House" Estate, formerly the property of their father. Eventually, upon the purchase of the whole property by his partner, he

FRANCIS WILLIAM FLEAY, "Gilgering" House, Gilgering, was born at "Talbot" House, the one-time residence of his father, on August 30, 1865, and is the third son of the late James Fleay, a native of the same district, who was identified with the farming industry during the whole of his life at "Oakover," which he inherited from his father, an early pioneer, and now in possession of three of his sons, brothers of the gentleman under review. Educated under private tuition in his own home, Mr. F. W. Fleay concluded his scholastic career at the High School, Perth, and at the close of his schooldays joined his father in farming pursuits on the old homestead property of "Oakover," where he continued until he was twenty-eight years of age. At this period he took over from his parent the "Gilgering House" Estate, which was founded at an earlier date than any other property in the neighbourhood, and which has given its name to the whole ensuing settlement. Originally taken up by the late G. F. Moore, the estate was leased by the late James Fleay for over fifty years, being used by him as a stock-run. Eventually he transferred the lease to his sons, Messrs. F. W. and James Fleay, by whom it was carried on on terms of

MR. FRANCIS WILLIAM FLEAY.

cereals and hay being carried on on the system of first year crop, second and third years fallow, by which the land thoroughly recuperates its energy and yields most bountiful harvests. Crossbred sheep of the general-utility class are grazed on the estate up to the number of 4,000, the wool being despatched to the London markets, while mutton and early lambs are raised for local requirements. The property is in a highly improved state, many miles

"GILGERING" HOUSE, RESIDENCE OF MR. F. W. FLEAY.

has leased a portion of the same area, and has carried on agricultural and grazing operations on his own account. He was married in the

partnership for nearly a decade, when the subject of this notice decided to purchase the freehold of the property outright. This transaction

of fencing having been completed enclosing the boundary and subdividing the whole area into twenty-four paddocks. When the clearing

process is terminated, it is estimated that two-thirds will prove suitable for agriculture, while the remainder will be utilized for grazing purposes. Mr. Fleay interests himself in the affairs of the district, and is a member of the York Agricultural Society. For nearly twenty years he has occupied the office of honorary secretary and treasurer of the Gilgering Church of England, an institution of considerable historic interest, inasmuch as it was erected over sixty years ago, since which date Divine service has been continually held within its walls. The first clergyman to officiate in this church was the Rev. Frederick Lynch, who came from England and continued to minister to the inhabitants of the parish up to the time of his death, a period extending over thirty years. Mr. Fleay's chief recreation is found in motoring, although his love of the modern means of flying over the ground has not by any means supplanted a strong affection for his equine friends, and he is frequently to be seen in the saddle. He was married in 1893 to Annie, daughter of the late Rev. F. Lynch, above-mentioned, and has a family of three sons and one daughter.

supplies had to be carted some seventy miles to and from the capital. The founder of the family was an Englishman, and must be numbered among the plucky band of early pioneers who, leaving all the comforts of a civilized country, gave their lives to opening up the remoter districts of a yet untried agricultural area. From him it passed into the hands of his son, the late James Fleay, who was born on the property and subsequently

part being divided into three areas, each of which is cropped once in three years, the remainder being fallowed preparatory to seeding in its

MR. WILLIAM WALTER FLEAY.

**FLEAY BROTHERS,** "Oakover," Gilgering, York. "Oakover" Farm is situated on the York-Beverley Road, about halfway between the two towns, and lies about a mile distant from the Gilgering railway station, Gilgering being the postal centre for the district. The land originally was taken up by the grandfather of the present owners, in the early days of land settlement in this district, when Perth was the nearest market town and all produce and

undertook the management of its operations, which he carried on until the time of his death in the late nineties. "Oakover" was then purchased from the estate by its present owners, the three brothers joining in partnership, by whom its development has since been pushed forward. The farm comprises 2,060 acres of good, mixed land, about 1,600 acres of which have been cleared and is being cultivated, the cultivable

00

conjunctly by the partners, and carry a flock numbering between 2,000 and 3,000 merino and crossbred sheep, the annual clip usually being disposed of locally, although on some occasions it has been sent to London. Upwards of thirty horses are employed in the work of the fields, sufficient of this class being bred each season to keep up the supply; in addition the brothers have given some attention to the breeding of blood stock, the success attendant upon their enterprise in this regard being evidenced by the good results attained by "Oakover" and "Orontes," both well-known performers on the turf. Their horses have been exhibited at various times in the show ring, where "Oakover" representatives of both draught and blood stock have shown a good record. WILLIAM WALTER FLEAY, the eldest of the three brothers, was born at "Talbot" House, about seven miles distant from "Oakover," on December 27, 1872. He received his education at the York Grammar School, and at the close of his schooldays took his place as assistant to his father on the home farm, where he has remained ever since. He acts as director of operations generally, and is closely identified with the active development of the farm. ERNEST HERBERT FLEAY was born on June 15, 1875, and attended the York Grammar School, subsequently following in his brother's footsteps in regard to the selection of a calling in life, and in due course becoming joint owner of "Oakover" as above-mentioned. EDWIN WALLACE FLEAY was born on March 28, 1877, and resided with his family on the original home at "Talbot," the birthplace of all the brothers, and their home prior to the death of their grandfather. All the brothers are married, the two elder having families of three and six children respectively. They are members of the agricultural society and the race club, and of most of the local public organizations.

WILLIAM VOULES BROWN, J.P., was born at Campbelltown, South Australia, on November 24, 1860, and is a son of Mr. W. V. Brown, one of the pioneers of that State, of which he was also a native. Educated at the Glenelg Grammar School the subject of our memoir in his fifteenth year was apprenticed

to Mr. Charles Downer (brother of Sir John Downer, of South Australia), a well-known chemist and druggist. Having completed his articles, he was engaged in his profession at Port Adelaide for three years, and at the end of this period took a trip to the Northern Territory, where he became connected with the mining industry for nearly a similar space of time. Relinquishing this form of enterprise he returned to Adelaide to take a position eventually in the employ of Messrs. Millar Brothers on the construction of the great southern railway line in Western Australia. Two years later he resigned from this connection in order to follow agricultural pursuits in the Beverley district, where he purchased a block of 1,160

C. E. Farr.

Perth.

MR. WILLIAM VOULES BROWN.

acres, eight miles from Beverley on the great southern line, and continued there for a decade, ultimately selling out to take a lease of the "Avondale" Estate from the late owner. Later on he gave up the lease and took over the management of the place on behalf of the owner, carrying it on for some years, and subsequent to this leased his original property, "Manna Dale," for a time. During the latter period he selected an adjoining block of land, the development of which he supervised for seven years, at the same time conducting business as agent and auctioneer in the town of Beverley. Disposing of these interests in 1909 he purchased his present holding, "Zamia," situated a

couple of miles from Mount Kokeby, and has since devoted the whole of his time and attention to the working of this property. In extent it covers over 2,000 acres, the greater part of it consisting of a wide sand plain, a class of country which had generally been considered useless. Mr. Brown, however, by bringing scientific methods to his aid has been successful in demonstrating that a very successful proposition may be conducted on such territory, and has reaped as high an average as 20 bushels of wheat to the acre from the formerly despised soil. The saving of expenditure usually incurred by settlers in clearing the land of timber ready for tillage is an advantageous feature in working land of this kind, as the sand plain requires practically no preparation, this in question having cost only a shilling an acre to clear. Mr. Brown takes a keen interest in the advancement of the district in which he has spent a quarter of a century, and acted as first town clerk, first secretary of the roads board, while for many years he was secretary and organizer to every movement having as its object the welfare of the community. He has been very prominent in the Beverley Agricultural Society, in which he served as committeeman and is now vice-president. He also officiated as judge in connection with the various country shows, and is considered one of the best judges of horseflesh in the State. He received his Commission of Justice of the Peace from the Wilson Administration in 1908. Mr. Brown was also one of the founders of the Farmers and Settlers' Association of Western Australia, and is invariably selected as one of the delegates to represent the district at the general conferences of that body. He married in 1888 a daughter of Mr. C. F. Brown, of Mourambine.

DAVID KILPATRICK, J.P., "Bally - Bally," Beverley, and ARTHUR KILPATRICK, "Rose-dene," Beverley. The Kilpatrick family was founded in this State in 1864, when the late Daniel Rose Kilpatrick came to Western Australia as a member of the military guard in the days of convict transportation from Great Britain to these shores. For a quarter of a century he was a soldier in the 92nd Gordon Highlanders, during the greater part of

that period holding rank as a non-commissioned officer, and after his retirement from the army on a pension turned his steps to the Crown colony across the broad expanses of

MR. DANIEL ROSE KILPATRICK.

the Atlantic and Indian Oceans. The late gentleman was a tailor by trade, and for some time carried on business at Fremantle until failure of health compelled him to abandon his connection, when he took up his residence with his eldest son, Mr. David Kilpatrick, who had purchased the "Bally-Bally" territory, and here his death occurred in his sixty-sixth year. Mr. David Kilpatrick was born at Corfu in the Ionian Isles on October 11, 1852, where his father was

stationed on military service, and at the time of his arrival in Western Australia had completed his twelfth year. During his early boyhood he received instruction at various military schools, and subsequently attended the Fremantle State school for a couple of years. At fourteen he went to the north-west, where he filled various positions on the different sheep and cattle stations, and during the twelve years that he spent in this part of the State he gained an intimate and valuable acquaintance with all the details of the wool and mutton industries which have assumed such large proportions in Western Australia. In 1880 he left the north-west, and coming to the Beverley district invested the capital which he had been able to save in the original homestead of "Bally-Bally," then a pastoral lease of about 40,000 acres, the homestead freehold occupying sixty acres. After stocking the place principally with sheep he took up his residence thereon and carried on pastoral pursuits until the land was thrown open for selection by the Government of the day. Mr. Kilpatrick immediately seized the opportunity to take up 3,000 acres of territory surrounding his homestead, and at the same time selected nearly 1,000 acres of adjoining country for his young stepbrother, Mr. Arthur Kilpatrick, the son of a second marriage

formed by his father somewhat late in life. The latter gentleman resided with his brother from early boyhood, and as he advanced towards maturity a partnership was formed between the

MR. DAVID KILPATRICK.

two which existed until 1912, when the younger launched out on his own account on the property above-mentioned, which is known as "Rose-dene," and has since worked this farm with very satisfactory results. Meanwhile Mr. David Kilpatrick had taken his only son, Mr. David Fraser Kilpatrick, into partnership, and a close connection is maintained between the three homesteads, which are situated in close proximity to

002

"BALLY-BALLY" HOMESTEAD AND SOME OF THE STOCK.

each other, the senior member of the family residing in a dwelling-house erected by him to replace the original home shortly after he took possession of the holding. This structure is now between thirty and forty years old, and like most of the old homesteads of that era is a comfortable, rambling place built with a view to healthy conditions and well suited to the climate. It has been added to as occasion demanded and comprises seven large rooms with the necessary additional accommodation for kitchen purposes, etc., while annexed is a very convenient little office which a sister of Mr. Kilpatrick uses as a distributing office for the mails of the district. The material used for building is stone obtained from off the property, and the whole is substantial and well fitted to stand the test to which it has been put by the wear and tear of the years. The two properties of "Bally-Bally" and "Rosedene," which, as has been mentioned, are now conducted as separate propositions, consist of 4,000 acres, of which 1,600 acres have been cleared, while the whole is fenced with six-wire sheep-proof fencing and subdivided into fifteen paddocks, posts of the jam timber indigenous to the district being used for this work. The natural watering facilities have been augmented by the construction of dams and well-sinking on an extended scale, and windmills have been erected in various places for pumping up the water and serving it to the stock. The system of fallowing the land for two

years, generally followed in the district, has been adopted with good results on these properties, and about 1,000 acres on the two farms are cropped annually, the harvesting returns being of an eminently satisfactory character. To the pastoral side of the industry considerable

MR. DAVID FRASER KILPATRICK.

attention has been given, and as a result of close observation and careful experiment, combined with exhaustive study of the important question of sheep-breeding in its different aspects, Mr. Kilpatrick has proved that for his purposes a cross between the Leicester and merino produces the best results, the robust, big-framed animals yielding a good average fleece and also finding acceptance in the mutton markets of the State. A flock of about 1,000 is

grazed on the sunny pastures of "Bally-Bally" and "Rosedene," and forms one of the many pleasant features of the landscape as it gathers for drinking purposes at the pools or troughs or rest at midday, sheltering from the rays of the hot summer sun under the clumps of white or salmon gums, which have been spared by the ringmen's axes for that purpose. A few domestic cattle and some good farm horses also have their place in the picture of rural prosperity, while in season the wheat and hayfields add their rich contribution to the scene. Mr. Kilpatrick has only to cast his mind back some few years and recall the country which he took up in its pristine condition—uncleared, unfenced, with hardly any stockyards or outbuildings, and only a dwelling-place of the most primitive character—to realize what strides he has made during each decade. The property now, thanks to his enterprise and ability, with the hearty co-operation of his stepbrother and son, has been brought to the forefront of similar propositions in the district and presents an appearance of which any farming community might be proud, and the sister holding of "Rosedene" is following worthily the example set by the adjacent property. The gentleman under review is recognized as a very earnest and conscientious citizen of the State, and in 1904 he was appointed to the Commission of the Peace by the Government of the day. It is always his aim to keep his district well in the van of

Photo by C. E. Farr.

"ROCKLYNE," RESIDENCE OF MR. D. F. KILPATRICK.

progress, and to this end he gives his cordial support to every movement having as its object the advancement not only of the farming and pastoral interests of the neighbourhood, but also of every department of industry conducive to the well-being of the community at large. For ten years he served as a member of the East Beverley and Beverley Roads Boards, occupying the chair of the former body for a time prior to its amalgamation with the Beverley Board. He was also particularly prominent in his connection with the affairs of the Beverley Agricultural Society, having been one of the founders of this institution and filling the office of honorary secretary to the society for nine years, while at the present time he is honoured with the vice-presidency. He is chairman of the Bally-Bally Agricultural Hall Committee, and has also a record of service to his credit as a committeeman of the local hospital board. His offices as vice-president and trustee to the Beverley Race Club—of which he was also a founder—testify to his interest in the "sport of kings," and there are few organizations in the district which have not his name enrolled in their present or past records of membership. Mr. Kilpatrick in the early eighties rendered yeoman service to the Government by assisting to capture the outlaws who murdered Police-constable Hackett and had become a terror to the Beverley district. His voluntary offer of service was accepted, and as a result of the combined efforts of the valiant band of pursuers two of the three

outlaws were eventually shot, while the third was captured and executed. For his action in this emergency Mr. Kilpatrick was the recipient of a valuable gold watch, on which is engraved the following inscription:

C. E. Farr,

Perth.

MR. ARTHUR KILPATRICK.

—"Presented to David Kilpatrick by the Government of Western Australia in recognition of his gallant conduct on September 16, 1884." He was married in 1880 to Fanny Louisa, daughter of the late George Hancock of Beverley, a member of one of the best-known and most widely-respected pioneer families of Western Australia, and has one son and a daughter. Mrs. Kilpatrick is a sister of Mrs. Withnell (widow of the late John Withnell), who was the first

white woman to proceed to the north-west, with the development of which district her name and her husband's are indissolubly linked. Mrs. Kilpatrick, who was then only a girl of thirteen, accompanied her sister in this pioneer enterprise and remained for over twelve years in that remote territory, sharing the privations and misfortunes which frequently overtook the family and participating in the varied experiences which were the lot of those who undertook the opening up of new country in the yet undeveloped State. DAVID FRASER KILPATRICK, who manages the "Bally-Bally" Estate in conjunction with his father, was born on the property where he now resides on February 20, 1883. He received his education at Beverley, and at the close of his schooldays immediately became connected with the industry on the home farm, with which he has been associated ever since. He married in 1908 Amy, daughter of Mr. Robert Dunconsin, then engaged in agricultural pursuits in the neighbourhood, and has one son and two daughters. ARTHUR KILPATRICK is a native of the Western Australian State, having been born at the seaport of Fremantle in the early seventies. He was brought up by his stepbrother, Mr. David Kilpatrick, in whose home he remained until 1905, when he married Lucy Florence, daughter of the late John Frederick Hancock, of "Ashburton Downs" Station, and took up his residence at his own property of "Rosdene." Of this marriage there are three sons.

MR. A. KILPATRICK'S HOMESTEAD, BEVERLEY.

ROBERT SAMUEL POTTS, "Hill Head," Beverley, was born at Wonderling, near the latter town, on January 21, 1866, and is the third son of Mr. Richard Potts, a native of Ireland, who came to Western

C. E. Farr, Perth.  
MR. RICHARD POTTS.

Australia in 1857, in the twenty-fourth year of his age, sailing by the "City of Bristol," which arrived at Fremantle on August 8 of that year. Shortly afterwards Mr. Potts entered upon farming pursuits in the employ of the late Mr. Edwards and others near Beverley, but he soon saw his opportunity of embarking on independent enterprise, and within three years started on his own account by leasing the property of the late James Bartram, near Beverley, where he carried on mixed farming operations for nine years. He then selected a block of 100 acres, where the "Hill Head" homestead now stands, and from year to year, while continuing the development of this place, added further acres to his holding, until at the time that he handed it over to his son, the subject of this memoir, who is now in possession of the old home, it had reached an acreage of 5,100, which is the extent of its present boundaries. Other sons of Mr. Richard Potts, *vis.*, Messrs. William James and David Henry Potts, also have holdings in close proximity to the "Hill Head" Estate, and yet another, Mr. John Richard Potts, is interested in the agricultural industry at Narrogin. The gentleman under review received his education under private tuition in his own home, in those early days it having been

necessary for his father to provide a tutor to give instruction to his sons. As soon as he was old enough to take a part in the duties of the farm his services were enlisted both in the fields and among the stock, labour being difficult and expensive to obtain. He thus acquired at a comparatively early age an intimate and first-hand acquaintance with all the many details which are involved in the successful management of a property, and having continued in the same calling all his life may now be considered one of the experts of the district in mixed-farming pursuits. From his boyhood days until the year 1905, when his marriage took place, Mr. Potts worked the "Hill Head" property in conjunction with his father, who, upon that event, retired from active participation in the control of the place, though he still resides upon the farm and takes a quiet interest in the progress of the various industries engaged in by his son. The old settler—now in his eighty-first year—may often be seen in the autumn of his years viewing the lands round the old homestead which have been converted through his industry and enterprise from virgin bush to smiling cornfields and rich pastures, while all the evidences of a prosperous farm are present, convincing him that his early efforts have borne good fruit, benefiting not only himself and his children, but the whole community among which he cast in his lot. The country originally was heavily timbered with York gum, white gum, manna, and jam trees, and though generally undulating in character has the advantage of the presence of three high hills, where great outcrops of granite make a picturesque feature in the landscape. These hills, besides proving excellent for the depasturage of sheep, are also responsible for the

splendid water supply found upon the estate, the precious fluid being obtainable in almost any locality from such a fine watershed. Of the 5,000 odd acres contained within the boundaries of "Hill Head" over 1,500 acres have been cleared of timber

C. E. Farr, Perth.  
MR. ROBERT SAMUEL POTTS.

and prepared for cultivation, which is carried on on an approved system of alternate tillage and fallowing. About 600 acres are annually placed under crop, wheat, oats, and hay being the principal products of the place, and good returns are obtained at the annual harvesting. Of the yet uncleared portion the whole has been subjected to the ringman's axe, with the exception of a few places where clusters of trees have been allowed to remain as needful shelter for the stock. The entire property is fenced with posts of jam timber and six plain wires, and more than half the boundary is also enclosed with vermin-proof

Photo by C. E. Farr. MR. R. S. POTTS' RESIDENCE, BEVERLEY.

wire-netting. There are ten paddocks of convenient size for cultivation purposes and the handling of the stock, and in those devoted to grazing may be found the flock of nearly 2,000 sheep which are bred from pure merino stock with an eye to the wool market. The district of Beverley is well known for the excellence of its merino sheep, some of the wool produced on its farms having obtained a reputation second to none in the State. It is mostly sent to London, and this practice is followed by Mr. Potts, who has had the satisfaction of obtaining uniformly good prices for his clip at the markets of the Old Country. At the annual shearing a fleece of an average weight of from 6 lb. to 7 lb. is cut of good lustre and quality. Mr. Potts pays considerable attention to the improvement of his type, and his flock is among the best in the neighbourhood. Peas are used

property, and young lusty blood replaces the veteran beginning to fail in the discharge of the strenuous

seventeen horses is provided, and the outhouses are all up to date and well appointed in every respect.

HORSES BREED BY MR. R. S. POTTS.

labour demanded of him, he being told off for duties of a lighter character. Stabling accommodation for

Nearly two acres of orchard adjoin the homestead area, where apples, peaches, plums, and grapes ripen in season. Mr. Potts spends a considerable portion of his time in studying the latest works on scientific methods of farming and in working out to his own satisfaction the various problems connected with stock management and agriculture which present themselves from time to time to his notice. He spares time, however, to take an intelligent interest in the public affairs of the district, and as a member of the Beverley Agricultural Society and of the Farmers and Settlers' Association of the neighbourhood has placed his stores of experience and expert knowledge at the service of his fellow-settlers. He was also prominent in the movement for the erection of the local public hall and is a thorough supporter of every organization tending to the advancement of the district. Mr. Potts was married in 1905 to Mabel, daughter of Mr. Nathan Rumble, of Mount Kokeby, a member of one of the old pioneering families of Western Australia, and has a son and a daughter.

GENERAL VIEW OF MR. R. S. POTTS' "HILL HEAD" PROPERTY.

in large quantities for feeding to the stock, a large paddock being devoted every year to the cultivation of the field variety, and the nourishing qualities of this fodder are abundantly demonstrated in the good condition of the sheep. From twenty-five to thirty horses are found necessary for the manifold departments of work upon the farm, and these are mostly of Mr. Potts' own breeding, some of the same excellent stock finding their way to the local saleyards from time to time, where they command good prices. Preference is always given, however, to the needs of the home

HOMESTEAD AND OUTBUILDINGS.

ANDREW STRANGE, "Hillside," West Dale, *via* Beverley, was born about 12 miles from York on September 5, 1844, and is the eldest son of the late Richard Strange, one

MR. RICHARD STRANGE.

of the old agrarian pioneers of the early days of Western Australia. The late colonist took a prominent place among the original settlers who came "over the hills" to carve out their destinies and make homes for themselves and the future generation out of the stretches of primeval bush or forest in the remoter parts of the State. Sailing originally from Wiltshire, England, he arrived at Fremantle in the late thirties, and became engaged in the agricultural and grazing industries on his own account in the York district, where the subject of our notice, at the close of his schooldays, joined him in the working of his different enterprises. When only fifteen years of age, Mr. Andrew Strange was entrusted by his father with the management of a team of horses engaged in the sandalwood industry on the property, and he also at that early period participated freely in the strenuous labour demanded on the farm. For over

half a century he has been resident on the old homestead at "Hillside," purchased by his parent from the late Mr. Withnell, of north-west fame, at the time of his departure to start the pastoral pursuits at Roebourne, which afterwards assumed such important dimensions. At the period of purchase the whole extent of the place comprised only 300 acres, but the value of the small property was augmented by the obtaining of a grazing lease from the

C. E. Farr. MR. ANDREW STRANGE. Perth.

Government, which permitted sheep to be run on the surrounding country. After his father's death, which occurred in the early eighties, Mr. Andrew Strange bought in "Hillside" from the estate, and at once began to select adjoining blocks of land on the conditional-purchase and grazing-lease systems — the greater part of which has since become freehold, while the remainder also, by the effluxion of time, will be secured to the owner and his heirs by freehold rights. Of the 3,100 acres comprised in the property, over 1,000 acres are cleared and cropped on the fallow system. The country

is admirably adapted to mixed-farming operations, and about 2,000 crossbred sheep are grazed on the pastures. Mr. Strange is now practically living in retirement on the farm after rendering to the State a good account of his stewardship as a settler for many years, and the estate is leased and worked by his fourth son. It is a matter of interest that the old homestead inhabited by the family has been standing for over forty years, while a portion of it was erected sixty years ago. To Mr. Strange must be given the credit of being the pioneer farmer of the Dale district, where the results of his labour and enterprise have been such that, even at a much earlier period, other settlers were induced by the force of

C. E. Farr. MR. R. J. STRANGE. Perth.

example to prove for themselves the possibilities that lay hidden in the soil. He married in 1870 Elizabeth, daughter of the late James Whittington, of West Dale, and has a family of five sons and four daughters. His sons are all following in their father's footsteps and are working holdings in the same district.

"HILLSIDE" HOMESTEAD AND CULTIVATED LANDS.

ALFRED WILLIAM DRAPER, of "Blackburn," East Beverley, is a native of the York district, having been born at one of the oldest homesteads in that portion of the State on July 31, 1857. He is the second son of the late James Draper who in his fifth year was brought by his parents to Western Australia in the sailing ship "Rockingham," which vessel was on her initial trip and was

MR. JAMES DRAPER.

wrecked near Fremantle shortly after landing her passengers. Mr. A. W. Draper's grandfather came originally from Blackburn, Lancashire, England, and was identified with the building trade, being one of the earliest builders in the infant capital of Western Australia. The late James Draper was engaged with his brother-in-law, the late George Clyde, and Mr. John Bateman, in unloading vessels which came to the State with provisions, etc., and in whaling, an enterprise which was somewhat risky in those days, as the boats in use were not as well fitted

for the work as the modern whaler, and the whaling grounds were in the dangerous locality surrounding Cape Leeuwin. James Draper married in 1850 Mary Ann, daughter of the late William Edwards, who was awarded three medals for his services to his country under the Duke of Wellington. The subject of this memoir at an early age turned his hand to all kinds of work on his father's holding, and continued in this connection until two years after attaining his majority, when he decided to launch out on his own account, and for this purpose took over on lease from his father a holding in the East Beverley district, conducting operations there successfully for more than a decade. In 1893 he turned his attention to agriculture, purchasing a block of 300 acres, to which he has added from time to time, and to-day has a very well-developed and excellently-managed farm, comprising 1,400 acres. The estate has proved highly suitable for tillage, and as high a return as 30 bushels to the acre has been garnered from this land in some seasons, while the average harvest is of a very satisfactory character. The property draws its water supply from natural soaks and wells, the homestead being supplied from one of the latter, where very excellent water is obtained and conducted through piping by means of gravitation to the house. The flock grazed on "Blackburn" consists of from 800 to 1,000 sheep, chiefly of the cross-bred strain, the wool from which is shipped annually to London. About twelve Clydesdale horses are kept, and other stock consists of a few dairy cattle. The house, which is substantially built of stone, contains six rooms, while the outhouses comprise stables, chaffhouse, hay shed, etc. Mr. Draper has given some attention to the demands made upon

him as a settler by his fellow members of the farming community, and for nine years served on the East Beverley Roads Board during the existence of that body. Mr. Draper has some interesting incidents to relate regarding the earlier history of the district. He recalls the heavy floods of 1872, when he had occasion to ride into York on important

C. E. Farr.

Perth.

MR. ALFRED WILLIAM DRAPER.

business, and finding the old bridge covered even above the hand-rails with the rushing stream of water put his horse—a good swimmer—to the torrent and successfully struggled to the other side, while others with drays had been waiting to cross for some days. Mr. Draper was married on April 27, 1892, to Anna Rebecca, daughter of the late William Woodley, of Green Hills, who came to Western Australia in 1857. By a former marriage with a daughter of the late George Blakiston Mr. Draper had issue two sons and one daughter.

Photo by C. E. Farr.

MR. A. W. DRAPER'S PROPERTY, EAST BEVERLEY.

HENRY WILLIAM DANIEL WHITTINGTON, "Rosedale," Beverley, is a native of this State, having been born at "Sandalford," on the Swan River, the property of the late James Roe, on March 1, 1862. He is the third son of the late

MR. JAMES WHITTINGTON.

James Whittington, who came from England when only five years of age, in the first year of settlement of the new colony, and who devoted the whole of his mature life to the founding and promotion of the agricultural industry in Western Australia. In the early and prosperous days of the sandalwood trade, which assumed considerable proportions in this State at one period, he was early in the field, and at a time when there was no market for produce and little enterprise outside of the wool-growing propositions of the south and north-west did fairly well by his dealings in this valuable wood. He took up his first 100 acres of land

in 1862, and later, when the discovery of the different goldfields put things on a better footing and the demand for all kinds of produce became insistent, he entered wholeheartedly upon the business of farming on the site at present occupied by his son, the subject of this memoir. By dint of patience, perseverance, and industry, the late Mr. Whittington made a home for himself and his family and established one of those successful farming ventures which are making the name of Western Australia as a producing country. Subsequently he increased his holding to 350 acres and, relinquishing his interests in this district in favour of his son, proceeded to Murrumbidgee, where he worked a property of 640 acres almost up to the time of his death, which occurred after he had attained the ripe age of eighty-five years. The late Mr. James Whittington died respected and esteemed throughout the whole district. Shortly after the gentleman under review entered into possession of his holding he perceived the advisableness of enlarging his boundaries while land in the district remained vacant, and added block by block until he owned a compact holding of over 2,500 acres. "Rosedale" is one of the best properties in the district for the depasturage of sheep, and a flock to the number of 1,500, or over, is usually carried on the estate. Taking advantage of the experience gained by other sheep farmers he has been content to stock a type proved suitable to the neighbourhood, *viz.*, the Lincoln-merino crossbred, a strong-framed animal which has thriven well and produces good wool. Mr. Whittington has proceeded with clearing work over the whole of the property, doing so chiefly in the interests of the flock,

only a matter of a hundred acres being cropped to provide feed for the stock. The property has been divided into about twenty paddocks, and about 40 miles of fencing have been completed. The homestead, built by Mr. Whittington about a quarter of a century ago, though small is very comfortable, and the necessary outbuildings are present, being conveniently situated on the banks of the Dale River. Mr. Whittington is a member of the Beverley Agricultural Society, and is also connected with

MR. H. W. D. WHITTINGTON.

the Farmers and Settlers' Association and the local branch of the Australian Liberal League. He was married in 1890 to Julia Margaret, third daughter of the late Edgar Bisdee, another representative of the good old English stock, who came from Bristol in the early days, and gave the best of his life to pioneering work in Western Australia.

Photo by C. E. Farr.

MR. H. W. D. WHITTINGTON'S ESTATE, BEVERLEY.

AUBREY JOHN HANCOCK and GEORGE EVRITT HANCOCK, Beverley. The gentlemen under review are sons of the late George Hancock, who came from Devonshire, England, by the sailing vessel "Sulphur," shortly after the foundation of the Western Australian colony. Their mother, the late Mrs. Sophia Hancock, who died at Aubrey Hill, Beverley, at the advanced age of eighty-three years, was also born in England, and came to this State with her parents in the ship "Warrior," which arrived at

C. E. Farr, Perth.  
MR. GEORGE EVRITT HANCOCK.

Fremantle on January 6, 1830, Mrs. Hancock then being seven years of age. She passed the remainder of her life in this State, and at the time of her death was the oldest resident of Beverley, having survived

all those sturdy early pioneer settlers who first made their homes in this now flourishing district. Mr. and Mrs. Hancock, with their three young children, came to the neighbourhood in 1848, Beverley being then but little more than a wilderness, where only a few scattered residents had begun to conquer the wilds and form an agricultural centre. Joining this little band the worthy couple did their part towards the development of the place, and during the long period of fifty-nine years spent by Mrs. Hancock in Beverley she set a bright example of true and loyal womanhood and endeared herself to all with whom she came in contact. The Messrs. A. J. and G. E. Hancock are both natives of the Boyadine district, the elder brother having been born on June 10, 1863, and the younger on September 27, two years later; at the close of their studies, which they pursued at the local school, each in turn became connected with farming pursuits on the home property, then managed by their mother, the late George Hancock having died in 1871. At the age of fourteen Mr. Aubrey J. Hancock left the Beverley district to join his eldest brother, the late John Frederick Hancock—father of Messrs. Hancock Brothers, of Ashburton Downs, in the north-west—in pastoral occupations on the "Hill" Station at Broome, which association continued for some years. Upon disposing of this property the partnership was dissolved, and Mr. A. J. Hancock returned to his native place near Beverley, where he was laid aside from active pursuits for several years through a severe illness. Upon regaining his health

he became connected with Mr. George Evritt in farming operations on the old homestead holding, and remained in partnership with him for about ten years. Ultimately the elder of the two brothers launched out on an independent career, taking up a farm of 1,400 acres of land

C. E. Farr, Perth.  
MR. AUBREY JOHN HANCOCK.

at West Dale, to the clearing and development of which he has since devoted his energies. He has at the present time over 300 acres under cultivation, while a flock of 500 crossbred sheep forms a profitable department of industry. The homestead property—which is still carried on by the younger brother—comprises about 1,000 acres of very fine sheep country, well watered by running brooks and in every respect suited to grazing and stock-raising purposes. The general-utility type is favoured by Mr. Hancock in the building up of his flock, which is also composed of crossbreds; and the 300 acres of land devoted to tillage yield him good returns. Both the brothers are members of the Beverley Agricultural Society, and Mr. G. E. Hancock is associated with the Masonic fraternity, his lodge being the Beverley, W.A.C. They are loyal supporters of the Anglican Church communion, and for some years past church services have been held twice monthly in the old homestead, lent by the owner for that purpose. Of quiet temperament and habits and unassuming manner, they take but little part in the public life of the district, preferring to devote the

MESSRS. A. AND E. HANCOCK'S PROPERTY, BEVERLEY.

whole of their time and attention to the management of their landed interests. Mr. A. J. Hancock, however, is distinguished for his love of horses, and is recognized as one of the most fearless horsemen in the district, particularly in the chase, kangaroo-hunting being his favourite pastime.

**WILLIAM HENRY BATEMAN**, of "Gumbanks," East Beverley, is a South Australian by birth, Mount Gambier in that State being his native place. He was born on August 12, 1868, and is the third surviving son of the late Simeon Bateman, an agriculturist by calling, who came from Oxford, England, in 1855, and settled in South Australia, where he was engaged in that industry until his death in the early nineties. The gentleman under review was educated at Millicent, near his birthplace, and upon leaving school at fifteen years of age became his father's assistant on the home farm, where he remained until his twenty-first year. About this date he came to Western Australia, having been inspired with the confidence that better opportunities and a larger sphere were open to young men of industry and enterprise in the less developed country. For some time after his arrival he was engaged in the sandalwood trade—one of the few avenues of work open to newcomers, prior to the days of gold discovery and agricultural impetus, which gave the needed fillip to the State—and accepted the post of manager for Mr. W. Craig at Mile Pool, near York. This afforded him the opportunity he desired to observe the conditions prevailing in the different industries, and subsequently

in 1900 he selected a block of Government land, comprising 251 acres, upon which area his homestead now stands. To this holding he afterwards added acres sufficient to bring the total to over 2,000, and, straightway, beginning upon its development, has now brought the whole block into a high state of improvement. More than two-thirds of the entire property is cleared of

generously to tillage, about 500 acres being cropped every year, an approved fallowing system being followed. Mr. Bateman is a thorough believer in new and scientific methods of agriculture, by which the very best results are assured in return for the labour spent upon the land, and his crops of wheat and oats are a highly profitable department of his enterprise, bringing good prices at the local markets. Over 700 sheep are grazed upon the property, a fine-wool merino being the favoured strain, and the yearly clip is sent to London, where excellent prices are commanded. The situation of the estate is favourable for the transport of its products, Rickey's Railway Siding, on the Green Hills-Quairading line, being only a mile and a half distant. It is fenced, and its subdivision into fourteen paddocks of varying sizes renders convenient the handling of the stock and cultivation of the various crops, besides which many other improvements have been made and are still being carried on. Mr. Bateman takes a prominent part in the public affairs of the district, having served for five years on the East Beverley Roads Board, and when that body was merged into the Beverley Roads Board he received re-election, his combined term of service on the two Boards extending over twelve years. He is a member of the local agricultural society and of the Farmers and Settlers' Association, and acts on the local committee of the latter organization. Mr. Bateman married in 1893 Harriett Elizabeth, daughter of Mr. Priestley Pearson, also a South Australian, and one of the early settlers who introduced up-to-date methods of farming into Western Australia. His family consists of three sons and one daughter.

*Bartletto, Perth.*  
**MR. WILLIAM HENRY BATEMAN.**

the natural growth of timber, York, salmon and white gums, and jam trees having covered the land when Mr. Bateman first entered into possession, and the natural copious water supply has been turned to the best account by the erection of windmills by which the water is pumped up into metal troughing of the most up-to-date character, the stock by this means being served in a very efficient manner. The country is comparatively flat, and responds

*Photo by C. E. Farr.*

**HOMESTEAD AND OUTBUILDINGS AT "GUMBANKS."**

CHARLES PRANGLE WANSBROUGH, "Morrell Dale," Beverley, was born at Perth, on October 6, 1875, his father, Mr. Joseph Wansbrough, also a native of this State, being the youngest son of the late Daniel Wansbrough, who came from Wiltshire, England, to Western Australia as an emigrant by the ship "Drummore" in the year 1830. This sturdy pioneer, after engaging in various occupations in and around the capital for some years, eventually took up land in the York district under what was then known as tillage leasehold, and continued in the farming industry for a number of years, his latter days being spent in retirement at Perth. His family consisted of seven sons and one daughter, all of whom married and settled in various occupations in Western Australia. Mr. Joseph Wansbrough still following his trade of carpenter and wheelwright in close proximity to his son in the town of Beverley. The gentleman under review received his education at the Beverley and York public schools, and upon the termination of his schooldays was employed in the agricultural industry by an uncle at Kellerberrin, with whom he continued for six years. Upon the discovery of gold on the eastern fields he joined in the early rush to the locality attracting attention, connecting himself with a well-equipped party, consisting of the late Walter Williams, Mr. C. W. Massingham (his cousin), and himself. This party worked together

were forced temporarily to abandon the claim, suffering much hardship and privation in their retreat on account of the water supply giving out, as a consequence of which their ill-fated comrade, Walter Williams,

C. E. Farr, Perth.  
MR. CHARLES PRANGLE WANSBROUGH.

perished from thirst. The two remaining prospectors arrived at Southern Cross with their horses in an exhausted condition after a four-days' trip without water, and having recruited for a while furnished themselves with a fresh supply of provisions and set out once more for Mount Ida. They worked the claim for a further term, but the tide of fortune was not in their favour, and

obtaining a position in the traffic department of the Government Railways, which he filled for four years. In 1898, in partnership with his two brothers, Messrs. Sydney and Arthur Wansbrough, he took up the block of Government land upon which his homestead now stands, and while two of the partners continued in the railway service the third commenced the development of the holding upon the capital provided by the others. In 1904 Mr. Arthur Wansbrough's interest was purchased by his brothers, and six years later Mr. Sydney Wansbrough went out of the firm, leaving the subject of our notice sole proprietor. During the whole of this time, the improvement of the place was being carried on, and at the present period the entire block, consisting of 1,600 acres, is in a very forward state of development. A flock of about 400 crossbred sheep, bred with a view to both the wool and mutton markets, flourish in a most satisfactory manner, and the horses number about twenty all told. Mr. Wansbrough has served for nearly ten years as a member of the Beverley Roads Board, having been chairman for a term subsequent to its amalgamation with the East Beverley Board, and was also a member of the latter during its independent existence. He is a member of the Beverley Agricultural Society, acting on the committee of that body, and is also a director of the Mount Kokeby Farmers' Grain Shed Association, Limited. For some time he has been connected with the

MR. C. P. WANSBROUGH'S ESTATE, BEVERLEY.

for the Glimmer of Hope Syndicate, and succeeded in finding payable gold at Mount Ida, for which they obtained a reward claim from the Government of the day. Owing to lack of proper facilities for treating the ore, however, the batteries, etc., being 80 miles distant, they

in the event, chiefly owing to their inability to comply with the labour conditions on which they held the block, they relinquished their right and returned to the more settled districts. At this time Mr. Wansbrough turned his hand to all kinds of work in the bush, subsequently

local branch of the Farmers and Settlers' Association, and was appointed a delegate to the first general conference of this organization. In 1904 he married Ada, daughter of the late John Longhurst, of Melrose, South Australia, and has two sons and two daughters.

JOHN WILLIAM McGRATH, J.P., Beverley, owner of "Stock Hill" Farm, Youraling Siding, on the great southern railway, five miles distant from Brookton, is a native of the district, having been born at York on October 30, 1858. He is a son of the late Terence McGrath, a Londoner of Irish parents, who came to Western Australia in 1842 when only seventeen years of age, at which period the young colony had only just entered its teens. For many years in the early days of the pastoral industry the late colonist followed the avocation of shepherd in the employ of

MR. TERENCE McGRATH.

various well-known pastoralists of the early days, including the de Burgh, Burges, Monger, and Brockman families. Subsequently he rented a farm in the Beverley district, and in 1866 took up 100 acres of land with the idea of making a

home for his family, whilst he was engaged in the then flourishing sandalwood industry. At the time of his death in 1890 he had acquired 250 acres, which at that time was considered a farm of fair size for the growing of cereals, but as soon as it came into possession of his son, the gentleman under review, who was his heir-at-law, the latter directed his attention to the enlargement of the property by the purchase of adjoining land, and increased the holding so considerably that to-day it comprises 3,300 acres of mixed grazing and agricultural country, over 1,500 acres of which are cleared and under cultivation on the approved three-year fallow system of tillage. It is well fenced with seven wires on the boundary fences and subdivided into seventeen paddocks, for this purpose six wires having been found sufficient protection, and under the capable management of Mr. McGrath's eldest son, Mr. John William McGrath, who leases the place from his father, its development is being carried forward in an eminently satisfactory manner. A flock of crossbred sheep, numbering in the vicinity of 1,000, are grazed on the pastures, the "Stock Hill" country comprising, in addition to its 2,000 acres of red loam and sandy soil highly suitable for agriculture, hilly portions which constitute admirable runs for the sheep. These are bred chiefly with a view to the wool industry, and the annual clip is regularly shipped to London, where it commands good prices. The railway siding of Youraling is situated on the property, which extends along both sides of the line for some distance, and the land for the purpose of forming the siding was presented to the Government by Mr. McGrath. In 1911 Mr. McGrath retired from

farming pursuits and now resides at "Alfracombe," in the township of Beverley, while the old homestead at "Stock Hill" is occupied by his eldest son and family. He has always taken a prominent part in

MR. JOHN WILLIAM McGRATH.

local affairs, and for many years occupied a seat on the Beverley and Brookton Roads Boards, and also sat as a councillor for the municipality when the latter town was under municipal government. For nearly a quarter of a century he has been connected by membership with the Beverley Agricultural Society, and during the greater portion of that time has acted as a committeeman of that body. He was one of the founders of the Brookton Agricultural Hall, and filled the offices of chairman and committeeman for some years. He is a member of the local hospital board, and in 1907 was appointed to the Commission of the Peace by the Moore Administration upon the recommendation of the Brookton Progress Association, which organization in earlier days did so much for the advancement of the district. He has also been a prominent supporter of the local branch of the Church of England, taking an active interest in the affairs of the church at Brookton prior to his advent to Beverley, since when he has been elected a vestryman and has held various other offices. He was married in the year 1880 to Mary Ann, daughter of Mr. Richard S. Potts, of Beverley district, and has a family of two sons and five daughters.

Photo by C. E. Furr. MR. J. W. McGRATH'S RESIDENCE, BEVERLEY.

THOMAS TWITCHEN RIDGWAY, "Jurakine," Mount Kokeby, is a Victorian by birth, his native place being Baringhup in that State, where he was born on February 26, 1864. His father, the late Philip Ridgway, was a pioneer of the farming industry both in Victoria and South Australia, having emigrated from Buckinghamshire to the latter State in 1849; and at the close of his education the subject of this notice, before reaching his teens, was initiated into the duties of the farm, where he continued until about eighteen years of age. At this period he became

MR. PHILIP RIDGWAY.

apprenticed to the building trade under very competent masters, and by the time he attained his majority had acquired a very good knowledge

wealth. Eventually, however, he returned to the Eastern States and remained there for a few years before finally settling down in 1891 in Western Australia. Upon the discovery of gold in the eastern districts Mr. Ridgway was among the earliest of the prospectors to reach the scene of the find, and for a considerable time was engaged in the mining industry on the Coolgardie field. A year later he established himself as contractor and builder, and subsequently joined in a business arrangement with Mr. J. D. Connolly, Colonial Secretary during the Wilson Administration, which eventually developed into a partnership. Commencing as builders and contractors the business of the firm was considerably augmented and its scope of operations enlarged by the inclusion of a brick-manufacturing business, which had been successfully started by Mr. Ridgway prior to the period of his connection with Mr. Connolly. He continued to conduct affairs on the eastern goldfields for about eight years, during which his efforts commanded the smile of fortune, and leaving that district in 1901 he was engaged for a couple of years in the same line of trade in the capital. For some time, however, Mr. Ridgway had been turning his attention to the agricultural industry in Western Australia, with the result that early in 1903 he purchased his present property, "Jurakine," then in a totally unimproved condition. Shortly after making this investment he came to reside in the district, and immediately erected a very comfortable homestead on the property for himself and his family, and began to set things in train for the

remaining 2,000 acres the ringman's axe is still busy, while part of the uncleared portions are in use as pasture land. The fencing of the boundary was accomplished, and by degrees the subdivision of the land into thirty

C. E. Farr. Perth.

of the trade. In order to extend the experience already gained, he visited many of the principal towns in the different States, and as early as 1885 was working at Perth and Geraldton, in this part of the Common-

development of the place on the most approved up-to-date lines. Clearing was commenced with vigour and continued until 2,000 acres of the virgin soil had been prepared and placed under cultivation, and over the

is carried on the estate. Mr. Ridgway married in 1888 Mary Ann, daughter of the late John Patten, a well-known identity for many years in the mining industry of Victoria, and has four sons and two daughters.

### BROOKTON AND PINGELLY.

Leaving Beverley by the great southern railway one passes through several stations which are little more than railway depôts established for the convenience of settlers in the districts stretching east and west of the line. The principal of these, which may in a measure justify the use of the term "town," are Brookton and Pingelly.

Brookton, which is delightfully situated as regards climate, has the advantage of being the projected terminus of a spur line running out eastward to Kunjinn, where it will meet another line running from Wickepin to Merredin. When these lines are completed the town

will become the distributing centre for a large tract of eastern country, most of which is rapidly being brought into cultivation by experienced and progressive farmers.

The Pingelly district is one of the older districts of the State, though the town site was not proclaimed until 1898. Since that time it has made considerable progress, and can now boast of many permanent structures. All around it are large holdings which are being energetically cultivated, and towards harvest time a view of the undulating country for miles around gladdens the heart of those who foresee for Western Australia a great future as an agricultural State.

**WILLIAM MILROY CRAWFORD**, general agent, Brookton, was born at Streaky Bay, on the west coast of South Australia, on August 14, 1878, and is a son of Mr. John Crawford, a well-known identity in pastoral circles in the early days of that State. He was educated at Glenelg, South Australia, and at eighteen years of age joined his father in station pursuits, gaining a

MR. WILLIAM MILROY CRAWFORD.

good general knowledge of matters concerning the wool industry and the management of stock. At the conclusion of six years he entered upon agricultural life at Normanville, still in association with his parent, but in 1903 severed the connection and decided to throw in his fate with those thronging to the Western State. After arrival he spent two years with an uncle on the old "Brookton" homestead property, then under lease to Mr. R. L. S. Crawford, of

"Milroy," and eventually, perceiving an opening for a good business man in the township, which was beginning to make strides in the matter of progress, he established himself as a general agent in Brookton, and has since operated from this centre. Mr. Crawford holds agencies on behalf of Messrs. George Wills & Co., the Royal Insurance Company, the West Australian Wool & Skin Co., and many other business firms. Apart from his mercantile interests he holds a share in some farming propositions in the neighbourhood, and has identified himself with the general life of the district in various directions. He is a member of the health board of Brookton, having served on that body for some years past, and is a supporter of all forms of manly athletic pastime, being captain of the local cricket club. Mr. Crawford married in 1905 Elizabeth Sarah Jane, daughter of Mr. A. R. Martin, of Normanville, South Australia, and has one son and one daughter.

**JOHN MONTGOMERY**, general storekeeper, of Brookton, was born at Dry Creek, South Australia, on August 9, 1851, and is a son of Mr. Sampson Montgomery, now over ninety years of age, who came to the sister State from Cornwall, England, in 1836, and now lives in retirement at the Burra, having spent the major portion of his life in the farming industry at Upper Wakefield, South Australia. The subject of this memoir, after acquiring the rudiments of education at various schools, before completing his thirteenth year was assisting his father in the duties of the farm, continuing his studies as opportunity occurred, and when he arrived at the age of twenty his parent started him on a farm, which

he conducted on his own account until 1886. On account of drought he was compelled to dispose of his holding and turned his attention to the butchering business at Saltia, near Port Augusta, where he carried on successfully for fifteen years, also

MR. JOHN MONTGOMERY.

taking charge of the postal department and railway affairs at the siding at that place. Selling his connection at Saltia he again held agricultural interests for three or four years, and in 1904 decided to throw in his lot with the many who had departed to seek fresh fields for their enterprise in Western Australia. After arrival in that year he took up a promising farm property in the Brookton district, and in addition opened a general store in the township, besides which he has various investments in real estate. Mr. Montgomery is a member of the Brookton Roads Board and also occupies a seat on the local health board, and fills the office

of trustee to the Methodist Church of Brookton, of which he is a member. He married in 1875 Jane, daughter of the late William Treleggan, of the Burra, South Australia, and has three sons and three daughters.

**WILLIAM BENJAMIN HARRIS WHITE**, "Merkine Valley," *via* Brookton, was born on the "Gwambygine" Estate, near York, on January 17, 1867, and is a son of the late John White, a well-known pioneer farmer of Western Australia, who came from England in the early days of colonization. The rudiments of education were imparted to him by his mother, as in those primitive days no schools had been established, and his father dying while he was still quite a lad, at a tender age he had to turn out to work with his brothers for his daily bread. When about eighteen years of age the spirit of independence prompted him to consider the possibility of launching out on his own account, and with determination he set his hand to all kinds of work incidental to farming enterprise, until he had amassed sufficient capital to purchase 100 acres of freehold land. In the middle of this holding he erected the homestead which has since served him as a dwelling-place, and straightway proceeded to develop the place as an agricultural proposition, about eighty acres of the block having already been cleared and prepared for cultivation. As prosperity rewarded his efforts he cast a covetous eye on the surrounding country, and by degrees selected other adjoining blocks until his boundary-line enclosed some 1,600 acres, which is the size of the property at the present time. The soil readily responded to his skilful

methods of tilling, and of the cleared area—which consists of about 800 acres—from 300 acres upwards are cropped annually, the three-year fallow system being that adopted by Mr. White in his operations. In ordinary seasons 18 bushels of wheat to the acre are realized, but in exceptionally good years as much as 30 bushels to the acre have been reaped. The contour of the country is undulating, while the soil predominating

MR. W. B. H. WHITE.

over the whole property is of fair average quality and excellently suited for grazing purposes, though up to 1,200 or 1,300 acres are capable of giving good returns in wheat-growing or other cereals. A good class of crossbred sheep has been raised by Mr. White, who has aimed at producing an animal which should be profitable both for wool and for mutton, and now runs a flock of about 500 on the "Merkine Valley"

pastures. The wool, though frequently disposed of locally, is occasionally sent to the London markets. Among the many improvements completed by the proprietor may be mentioned the six-wire sheep-proof fencing which securely encloses the holding and renders it safe from the inroads of dogs and other vermin, netting being used in some places to make the protection doubly secure. The homestead is a six-roomed building, the materials used in construction being mainly stone, timber, and iron, and though unpretentious in plan and design, comfort has been secured throughout, while the close proximity of a small orchard gives a pleasant aspect of greenery to the place. Grazing in the pastures near by, when their work for the day is over, may be seen close on a dozen horses of the Clydesdale type, most of which have been bred by Mr. White on the farm and which appear well suited for the strenuous toil demanded of them. The gentleman under review has given some attention to the public life of the district, and for some considerable time has served as a member of the Beverley Agricultural Society. He was prominent in the early days of Brookton, playing his part in the promotion of the various movements for the public welfare, and assisted in the building of the first local hall—since replaced by one of greater size and dignity. He has taken a live interest in all matters connected with the Church of England in the district, and was a leading spirit in the movement to build the local church, in which he is a committeeman. In 1899 Mr. White married Elizabeth Mary Ann, daughter of Mr. George Newman, of Beverley, and has four sons and one daughter.

MR. W. B. H. WHITE'S HOMESTEAD AND FLOCK OF SHEEP.

PP

SAMUEL WILLIAMS, J.P., owner of the "Woodbine" property, in the vicinity of Brookton, is a native of this State, having been born at Guildford on November 25, 1850. He is a son of the late George Henty Williams, who when quite a lad came from Wales to Western

at work, assisting upon his step-father's farm for several years. At eighteen he struck out for himself, taking over the lease of "Seaton Ross," now in possession of the Barrett-Lennard family, and for three years he devoted his activities to the development of that property.

built, and when at last the growing of wheat and hay became more popular the grain was carted to York for milling purposes. This was done by means of the old stones, and wheat - growing along the great southern line did not receive much encouragement until modern methods were introduced into Katanning by the Piesse family, after which the industry became more active—and even then local flour was worth £3 10s. less than the imported article. Practically there was little settlement until the great southern railway was constructed and opened in 1889, after which the areas opened up by the line made considerable strides. Mr. Williams—who is regarded as the oldest settler in the district—upon acquiring his modest holding immediately set operations in train, starting vigorously upon all the initial improvements, and whilst engaged in clearing and cultivating this area watched his opportunity to select further territory in the vicinity. Gradually his borders widened until in course of time hundreds of acres gave place to thousands, and at the present period the property known as "Woodbine," including the original homestead block, covers an area of 3,700 acres. In addition to this, Mr. Williams also purchased a couple of farms for his two elder sons which jointly embraced another 2,000 acres, and which are carried on by the gentlemen referred to. As a result of his industry and perseverance the home property, "Woodbine," rapidly assumed a flourishing appearance, and it is now in a highly-developed condition. Nearly

RESIDENCE OF MR. S. WILLIAMS, BROOKTON.

Australia at the beginning of settlement in the new Crown colony. Subsequently the late Mr. Williams held pastoral interests in the Beverley district in partnership with the late E. T. Barrett-Lennard, father of Mr. E. G. Barrett-Lennard, of "Belhus," and at a later date was engaged in the pastoral and agricultural industry in the West Dale district. The subject of this memoir received his education principally at the public school at Gilgerring, but consequent upon the premature decease of his father relinquished his studies at an early age and had hardly entered his teens when he was

Upon attaining his majority he selected a small farm, comprising about 100 acres, on what was then known as tillage leasehold, which afterwards, upon the amendment of the Land Act, was transferred under the new regulations. In those days farming in Western Australia was not taken very seriously, and the scattered residents of the great southern bush country were chiefly engaged in the sandalwood trade, which was then in its zenith, the wood being carted to the port of Fremantle, where it commanded £9 per ton. At that period the great southern railway had not been

HARVESTING SCENE LOOKING TOWARDS REAR OF HOMESTEAD.

30 miles of excellent fencing have been erected, the major portion of which is finished with dog-proof wire-netting, while the balance—the subdivisinal fences chiefly—is constructed on the ordinary plan of timber posts and six or seven plain wires. Nearly 1,700 acres have been brought under cultivation, and splendid results have been obtained from working on the three-year system—cropping, fallowing, and grassing—the returns from "Woodbine" during the past few years being unrivalled in the district. By this system about 700 acres are annually placed under crop, while every season further virgin territory is reclaimed for cultivation purposes. From 800 to 1,000 sheep are grazed on the property, the wool from which fetches top prices at the London markets; and horses up to the number of thirty are kept, a few being bred each season to keep up the supply for the working of the farm. On account of his long standing in the district, in addition to the keen interest he manifested in its advancement, Mr. Williams has always been regarded as one of the leading spirits in every movement or organization having for its object the progress of the place. Prior to the days of Federation he received appointment to the Commission of the Peace by the Forrest Administration, and ever since has exercised this office. For seventeen years he served as a

to the similar office in the then newly-formed board of Brookton, which he retained during the whole of his four and a half years of membership. The board was formed to

W. E. Elston,

Wagin.

MR. SAMUEL WILLIAMS.

keep pace with the rapid progress being made by the district, and the long experience of the gentleman under review made him a valuable acquisition to its ranks. In point of fact, he had a prominent part in the formation of the board, as he considered that the district was too far

twenty-two years of service, during the whole of which he had kept studiously before him the best interests of the place which he had made his home for forty years. Nearly a quarter of a century has elapsed since Mr. Williams' name was first entered upon the roll of the Beverley Agricultural Society, of which he was president for eight consecutive years, and upon his severing his connection with the society his fellow members did him the honour of electing him to honorary life membership. It may be of interest to mention here that he was one of the earliest growers of wheat in Western Australia, and took a prize for the same at the first National Agricultural Show ever held in Perth. In politics Mr. Williams is a strong Liberal and an advanced freetrader, but though approached on various occasions with a view to parliamentary election he has always declined nomination for the district. He is a prominent member of the Anglican Church, and occupies the office of local churchwarden as well as those of honorary secretary and treasurer. He is also a member of the local cemetery board and trustee of the recreation ground and agricultural hall. In his younger days he was keen on all the cleaner forms of sport, and now finds recreation in quieter ways, especially enjoying the perusal of works of an historical nature and other literary

HARVESTING SCENE ON THE "WOODBINE" ESTATE.

member of the Beverley Roads Board, and registered a good record of nine years as chairman; and upon his retirement from this body in 1906 he was honoured with election

PP2

removed from Beverley to be properly administered by the governing body there. His retirement from the Brookton Roads Board in 1911 marked the completion of over

matter. Mr. Williams married in 1879 Agnes, daughter of the late George Martin, one of the early pioneers of Western Australia, and has four sons and five daughters.

ROBERT LINDSAY SAMUEL CRAWFORD, J.P., "Milroy," Brookton, is a native of South Australia, having been born at Milang, on the Murray River, in that State, on June 15, 1860. His father, the late William Milroy Crawford, came

MR. WILLIAM MILROY CRAWFORD.

originally from Ayrshire, Scotland, in the very early days of settlement, and for some years subsequently was identified with the flour-milling industry in South Australia. At a later period he embarked upon agricultural and pastoral enterprise in the Murray River district, and for some years prior to his death owned and conducted a sheep station in the Gawler Ranges. The gentleman under review was educated in the town of his birth, concluding his studies at the Model School, Grote

Street, Adelaide. Leaving this institution at sixteen years of age, he proceeded direct to his father's pastoral property, "Paney Bluff," in the Gawler Ranges, and was there initiated into all the details of the mutton and wool industry from the point of view of the producer. For over a decade Mr. Crawford continued in this region, until the golden lure of the newly-discovered Kimberley field drew him with the crowds of treasure-seekers to the shores of Western Australia, where, continuing his journey to the north-west portion of the State, he spent twelve months in prospecting over the scene of the find. Success failing to reward his efforts, he turned his face southwards with the intention of devoting his energies once more to the less romantic but more stable enterprise of the agriculturist, and for this purpose selected the Brookton district, where he took over the lease of "Brookton" Farm, then the property of the late John Seabrook, J.P., a pioneer of the place, from whom the town received its name. Mr. Crawford worked this lease for about ten years, carrying on mixed farming pursuits there, while at the same time he was improving and developing his present property, "Milroy," which he acquired in separate blocks from time to time. In conjunction with these holdings he also held a pastoral lease of some 20,000 acres of land surrounding Brookton, almost the whole of the district at that time being unoccupied. The

first block, which he took up on conditional purchase terms, consisted of 240 acres, and it was upon this piece of land that the homestead of "Milroy" was erected and still stands, though now the broad acres which it represents and which are controlled from its precincts have been increased in number to about 6,000. Conducted with experienced knowledge and skill by Mr. Crawford and his two elder sons, the proposition has proved a marked success, "Milroy"

W. E. Elston, Wagon.

being regarded as among the best homestead farms in the Golden West. In the harvest season large areas are golden with grain, about a thousand acres being cropped annually, and the three-year fallow system employed with the best results. In all

Photo by W. E. Elston.

"MILROY," THE PROPERTY OF MR. R. L. S. CRAWFORD, BROOKTON.

over 3,000 acres are cleared and under cultivation and the remainder of the estate is used as a sheep run, where a flock of about 3,000 cross-breeds pasture and grow fine fleeces, the destiny of which is the London market, where excellent prices are obtained. The whole of the property is fenced and subdivided into about thirty paddocks, varying in size from 1,000 acres to a small field of ten acres, and the entire boundary is surrounded with sheep-proof wire netting. A fine supply of excellent fresh water is to be obtained all over the estate from soaks and natural

represent. The homestead is a modern structure built of brick, and containing eight rooms, with various additional offices and conveniences. It is connected by telephone with the Beverley Exchange, and many up-to-date arrangements have been included in its plan and general appointments. Its appearance is greatly enhanced by the cultivation of a tasteful flower garden in the area of ground surrounding the building, and many bright bouquets find their way from the well-tended plots into the interior of the house, which gains in attractiveness thereby. Full in

pre-federal days was given the Commission of the Peace by the Forrest Administration. He has served as a member of the Brookton Roads Board since the earliest days of its existence, and on account of his experience and good judgment has proved a valuable participator in the deliberations of this assembly. The Pingelly Agricultural Society claims him as a member, and he occupies a seat on the Brookton School Board. A very staunch Liberal in politics, he has taken a prominent part in the local branch of the Australasian Liberal League, and has filled the

Photo by W. E. Elston.

creeks, which in some localities are running all the year round, and these have been augmented by a considerable catchment in dams which have been constructed in favourable places. Some attention has been given by Mr. Crawford to the breeding of horses, but he confines his efforts in this direction chiefly to the producing of a useful type of animal for the work of his own property. He breeds from good stock and has about forty horses on the farm at the present time, all of which do credit to their owner and the estate, the resources of which to some extent they

view of the front portion of the residence is a fine orchard, three or four acres in extent, where a great number of fruit-trees, representing every variety of fruit suited to the soil and climate, are grown. The out-houses are in the vicinity of the homestead, and are in every way worthy of the reputation enjoyed by "Milroy," being substantial and commodious and well suited to the purposes for which they are designed. As a public-spirited citizen Mr. Crawford has given due attention to the welfare of the community with which he has thrown in his lot, and in

office of president of this league ever since its inception. He is one of the leading supporters of the Methodist Church in the district, with which he has been connected for a lengthy period. In matters of sport his patronage may be counted on for any class of manly diversion of a clean and healthful nature, and in his younger days he was a cricketer of some merit. Mr. Crawford was married in 1890 to Clara Theresa, daughter of the late John Seabrook, of Brookton, before-mentioned, and he has a family of three sons and one daughter.

GEORGE ALBERT THOMPSON, J.P., "Brookton" House, Brookton, is a South Australian by birth, his native place being the town of Balaklava, where he was born on October 27, 1872. His father, Mr. John William Thompson, came from Norfolk, England, to Australia over sixty years ago, and was well known among the early farming community of that State,

MR. JOHN WILLIAM THOMPSON.

where he carried on agricultural pursuits for a lengthy period. Educated at Virginia, near Adelaide, young Thompson's schooldays were cut short by the necessity for him to be out earning his living, and as there was not sufficient scope upon his

father's farm to keep the large family of boys and girls all employed, he worked on neighbouring properties until he was about twenty years of age. At this period he struck out for himself, leaving the shelter of the paternal roof-tree and with only 15s. in his pocket directed his steps towards the more northerly areas of the State, where he was for some time engaged as general hand on one of the large sheep stations there. Returning to the capital he took a position embracing duties of a varied character with Messrs. Norman and Co., of Adelaide, having charge of horses and trollies and also being employed in agricultural labour and work on the mills on behalf of the same firm at Salisbury and elsewhere. Upon leaving this service in 1894 Messrs. Norman & Co. presented him with a testimonial of a highly eulogistic nature, and shortly afterwards he received an offer from Messrs. Clutterbuck Brothers, of Adelaide, to take charge of a consignment of horses shipped to Western Australia. This offer he accepted, and reaching these shores about the middle of 1894 safely landed his equine charges, subsequent to which he consented to assume control of the produce and forwarding business established by the last-mentioned firm at the head of the railway line to Mullewa, then in course of construction. After continuing in this connection for about twelve months Mr. Thompson purchased a small carrying business in

the town, and with characteristic energy worked up a thriving connection, subsequently disposing of the concern at a satisfactory figure.

MR. GEORGE ALBERT THOMPSON.

He then proceeded to the larger centres of the eastern goldfields, where he became well known in various capacities both in Coolgardie and Kalgoorlie, being concerned in some of the largest contracts on these fields and assisting to lay down the first streets in the latter town. About the end of 1899 his interest began to revive in the calling that had occupied his early youth, and he decided to direct his attention to the agricultural enterprise of this State. In the course of a tour of

Photo by W. E. Elston.

DISTANT VIEW OF "BROOKTON," THE PROPERTY OF MR. G. A. THOMPSON.

inspection he visited, among other places, the Beverley district, with the result that he purchased "Jelcobine," an old out-station formerly belonging to the late James Broun and at that time in the hands of his son, Mr. F. R. Broun. During the nine years that operations were conducted on this property by Mr. Thompson he added to the original 1,000 acres by degrees, until eventually its boundary line enclosed over 6,000 acres, and conjointly with this proposition he rented a pastoral lease of 20,000 acres in the same district. The "Jelcobine" Station ultimately was sold to a Mr. Hutton, and has

the possessor of a holding of 3,000 acres, with a four-mile frontage to the Hotham River, and situated east of Pingelly. The contour of "Brookton" Estate is gently undulating, and a branch of the River Avon provides a short but valuable water frontage. The chocolate and black loam soils which predominate are rich in essential constituents and particularly well adapted to agricultural purposes, while the indigenous timbers embrace manna-gum, York-gum, jam, white-gum, and sheaoak. Over half of the property has been cleared and cultivated on the three-year system of alternate cropping,

"Hotham" estates are divided into thirty and fifteen paddocks respectively, and many improvements have been made upon each, wells being sunk in various parts of the properties and windmills erected for the purpose of serving the stock in the most convenient manner. Wheat is the principal agricultural product, although oats and peas are also grown in considerable quantities, and the average returns for this department are eminently satisfactory. Predominant in the flock, which maintains a high standard of quality, will be found the Lincoln type, but Mr. Thompson also has a

ORIGINAL HOMESTEAD ON THE "JELCOBINE" PROPERTY.

since been repurchased by the Government for purposes of closer settlement. Mr. Thompson, after disposing of "Jelcobine," acquired the original "Brookton" Estate (first taken up by the late John Seabrook, from whom the town of Brookton takes its name), then a well-developed holding of over 550 acres. He next purchased three adjoining farms and another property situated about a mile distant, which brought his landed interests up to about 6,000 acres, all the holdings being conveniently adjacent the one to the other. In addition to these, in course of time, he further became

following, and grassing, each year about 1,000 acres being placed under crop. On the "Hotham" property from 400 to 500 acres have been used for tillage, and the remainder is utilized as a grazing proposition in conjunction with the home pastures. A large amount of fencing has been completed on both holdings, and both the boundary and subdivisional fences have been erected on a thoroughly approved system, being rendered dog-proof by the addition of wire-netting, which, supplementing the ordinary six plain wires, makes a close and substantial barrier. The "Brookton" and

stud flock of merinoes founded from the famous South Australian "Koonoona" strain. He has been a very successful exhibitor of sheep at the Royal Agricultural Show, where on several occasions he has carried off prizes, and he has also achieved similar distinction at various functions of the same nature in the country districts. Of special importance among these may be mentioned the Challenge Cup, known as the "Monger Trophy," awarded for the largest number of points in the sheep section at the annual Pingelly Show, which was won by Mr. Thompson during the three successive years

of 1907-8-9. The wool, which is sent to London markets, earned most favourable commendation in the reports from the 1913 sales, these setting forth that the "clip showed a

small domestic herd for dairy purposes is also grazed on the pastures, some nice-looking Jersey cows being included in this department. Out-houses of a large and substantial

underground tanks, which conserve the rain catchment, and in addition pipes have been laid down, which serve the house and garden with water pumped up by windmills from

TEAMS AT WORK ON THE PROPERTY.

highly-bred stamp of wool, well grown and excellent in staple, and generally in a good, marketable condition," while, referring to prices obtained, the report stated that the "wool brought within a half-penny per lb. of the record price for Western Australian wool." About thirty head of horses, principally of the Clydesdale breed, are found

character were built in the original instance by the late Mr. Seabrook, stone being the material chiefly used, and these have been kept in first-rate repair so that they remain as thoroughly suitable for their purpose to-day as when they were first erected. At "Brookton" there is stabling accommodation for several horses, chaff-sheds, and barns, and

wells or tanks in the vicinity. The homestead on the "Brookton" property was erected by Mr. Thompson in 1908 and ranks first among similar structures in the neighbourhood. It is built of brick throughout and there are twelve rooms—many of them particularly large and lofty—with the additional necessary offices, etc. A verandah encircles the whole

Photo by W. E. Elston.

FLOCK OF MERINO RAMS.

sufficient to work the holdings, and from these two excellent teams are formed, which though not heavy are specially suited to the class of labour for which they are required. A

on the other farms various out-buildings have been utilized by Mr. Thompson for his own requirements. About the homestead area there is an efficient water supply provided by

building, and the entrance hall is so arranged that access may be gained from any one of the four sides of the house. Surrounding the homestead lies a beautiful garden where, under

the special attention of Mrs. Thompson, many radiant blooms come to perfection at the different seasons of the year. Paramount in variety and brilliance among these are the roses, to which the lady referred to gives the best of her care and skill, and in this department there are no less than eighty different varieties of the choicest examples of this favourite flower. Mrs. Thompson is a frequent exhibitor of roses at the periodical shows, and has carried off many prizes for the products of her parterres. It may be here mentioned

and as many as fifty sheep were known to be killed by these pests in a single night, and while Mr. Thompson was absent carting his wheat to a depôt 30 miles distant his wife was ever and anon in the saddle mustering the sheep and looking after things generally in the most capable manner. An orchard covering an area of two or three acres faces the south front of the house, and here a choice selection of fruits is grown for home consumption. Besides his various properties in the Brookton district, Mr. Thompson

has been a member for some years, and in this connection the skilled knowledge and practical experience which are his by right of his many years' association with the farming industry are willingly placed at the service of his fellow settlers and other members of the community, to the great advantage of the ratepayers. He is also a member of the Pingelly Agricultural Society and a committeeman of that body, in the past having served for a couple of years as president; and is chairman of the

Photo by W. E. Elston.

"BROOKTON HOUSE," RESIDENCE OF MR. G. A. THOMPSON.

that in early days this intrepid settler's wife set herself to far sterner duties than the tending of flowers, as she shared with her husband all the strenuous exertions called for in the building up of the family fortune through bright and darker times alike, and to her must be accorded a portion of the credit due for the successful carving out of a home in the new colony at a time when conditions were all of the most primitive nature and hardship and privation were the general order of the day. At one period wild dogs were very prevalent at "Jelcobine"

owns large pastoral interests in the Carnarvon division of the north-west which are now in course of development. Since his advent to the locality where he now resides he has been very active in all matters affecting the advancement of Beverley and Brookton, with the surrounding areas, in especial everything touching the agricultural industry being made by him a particular study, and by all means in his power he keeps the interests of these places well in the foreground of public notice. He is the present chairman of the Brookton Roads Board, of which he

Brookton branch of the Farmers and Settlers' Association of Western Australia. A Freemason of lengthy standing he is a member of the Pingelly Lodge, No. 72, W.A.C., in which he occupies the office of honorary treasurer. Mr. Thompson was married in 1899 to Edith Gertrude, daughter of Mr. William Henry Wasley, of "Fairfield," in the Lower Light district of South Australia—a member of one of the best known and oldest families connected with the agricultural industry in that State. Of this union there are two sons and three daughters.

WALTER BODEY, owner and occupier of "Loam Hill," Brookton, was born in the Wimmera district of Victoria on August 8, 1874, and is the third son of Mr. James Bodey, well known in agricultural circles in that State as a breeder of champion stock. Mr. Walter Bodey's grandfather, who lives in retirement at Camperdown, Victoria, is now over one hundred and three years of age, and has lived under the successive reigns of six British sovereigns. A native of County Wicklow, Ireland, the venerable pioneer came to the sister State at the time when the now magnificent city of Melbourne was only a village of tents, and was concerned in the earliest gold rushes to the auriferous centres, taking his place in the van of those excited processions. The subject of our memoir received his education at the State school at Longerenong, near Horsham, in Victoria, and concluding his scholastic studies at the age of fourteen, became engaged in agricultural pursuits on his father's farm, where he remained until the year 1900, by which time he had completed his twenty-sixth year. At the beginning of the war between the British and the Boers in South Africa about that period young Bodey was prompted by the spirit of loyalty, seconded by the love of adventure, to join the ranks of those who went forth from Australia to supplement the forces of the Mother Country in the struggle in which so many brave soldiers were

sacrificed. Joining the Imperial Bushmen—the Fourth Victorian Contingent—he spent a year and a half in service at the front in the Transvaal, Rhodesia, Cape Colony, and what was then known as the Orange Free State, and upon his retirement was presented with the Queen's Medal and Four Clasps. Upon his departure from South Africa he turned his steps once more towards his paternal home in Victoria, but shortly after arriving there determined to branch out in a new direction and start life on his own account in the Western State of the great island continent. Mr. Bodey first set foot upon Western Australian soil in 1902, and his initial sphere of operations was at Bunbury, where he was engaged in agricultural avocations for a time. His attention, however, being attracted by the importance of the mining industry in this State he relinquished his holding on the sea coast and proceeded to the Mount Margaret goldfields, where he accepted a contract in connection with a cyanide plant and was associated with this enterprise for about a couple of years. Subsequent to this he tried his luck at prospecting all round the Red Flag district, but was not successful in winning the favour of fortune in this venture, and in 1905 assisted in the formation of a syndicate the object of which was to purchase Augusta Mine, situated at Laver-ton, and work it for the mutual

benefit of the shareholders. Mr. Bodey personally made one of the party to set forth in the attempt to wrest from the bowels of the earth the shining treasure that for long eluded all efforts of the seekers. Just as the patience of the miners was all but exhausted after long and strenuous toil the reward of their labour was given, and at the expiration of two years Mr. Bodey disposed of his share in the mine, and having amassed sufficient capital to purchase a farm, he directed his efforts to the search for a suitable locality. Coming to the Brookton district, he was favourably impressed with the possibilities of his present estate, "Loam

W. E. Elston, Wagin.  
MR. WALTER BODEY.

MR. W. BODEY'S RESIDENCE, BROOKTON.

Hill" Farm, a property comprising 812 acres, to which he afterwards added 700 acres by purchase, making a total of some 1,512 acres, and having agreed to the terms of purchase, took up residence on the property and lost no time in proceeding with its development. At that period there were only 200 acres of cleared land on the entire holding, and operations were immediately set in train to prepare a large area for tillage, additional area every year being made to pay toll for the benefit of the energetic new owner. This preparatory work was pursued with such vigour that at the present time 1,100 acres have been brought under cultivation on the two-year fallow system, between three and four hundred acres being cropped annually.

"Loam Hill" holds its own in the matter of harvest returns with almost any farm in the neighbourhood, from 19 to 20 bushels of wheat to the acre being garnered, and two tons of hay to the acre, and for these products satisfactory prices are always obtainable at the local markets. In addition to agriculture Mr. Bodey gives much time and attention to the breeding of horses, of which he makes a very profitable hobby, and he has done much to improve the class of horses used by the farming community not only in his own immediate neighbourhood, but also in many other parts of the State. To him must be accorded the credit of having imported some of the best pedigree heavy type of stallions, etc., foremost among which may be mentioned "Bonnie Charlie," brought to Western Australia as a two-year-old, who has made a great reputation for himself, winning first and champion prizes at the Royal Show, Perth, and all leading country shows, having maintained an unbeaten record in the State. Mr. Bodey also owns some of the best mares to be found in the country, and the 1912 parade championship was won by representatives from this estate; while he is also credited with having the best four-horse waggon team in the State. For many years he has been

fine specimens of trotting horses, and usually carries off the palm from the smartest trotters in the surrounding districts, his choice of recreation leading him to participate freely in this form of exercise. In addition to

stables and other outhouses are also of modern design, and all in keeping with the reputation of the place as one of the model farms of the district. Mr. Bodey has taken his place in public office, and has identified

Photo by W. E. Elston. TEAMS AT WORK IN THE FIELD.

horses he has frequently been a successful exhibitor of other classes of stock, receiving awards for cattle, pigs, fowls, etc., at many of the annual functions referred to; and another department of industry at "Loam Hill" is the flock of from 300 to 500 sheep. Over two acres of orchard are cultivated, and the soil and climate have proved particularly adaptable to this enterprise. A branch of the River Avon flows through the property, which is also well supplied with soaks and

himself freely with all organizations for the advancement of the place. For a lengthy period he has held membership in the surrounding agricultural societies as well as in the Royal, and his services have frequently been in requisition as a judge of horses at the various shows in different parts of the State, while in the Pingelly Society he has filled the post of vice-president. He has served as a member of the Brookton Roads Board for some considerable time, and was a founder of the local race

HORSES BRED BY MR. W. BODEY.

a noted judge of horses, and in 1911 at the Royal Agricultural Show in Perth carried off the silver medal awarded by the society for the judging of Clydesdales and heavy draught horses on points—an open competitive event. He has bred some very

creeks, and is considered the best-watered farm in the district. Water is laid on by pipes to all parts of the stockyards, garden, and homestead, the latter being a pretty up-to-date concrete house, with brick facings, which was erected in 1910. The

club, taking a very prominent part in the launching of this institution. He was married in the year 1906 to Wynnifred, second daughter of the late Henry Jones, of Perth, Western Australia, and has a family of three sons.

GEORGE TILLER, J.P., "Boya-gin," Brookton. The subject of this notice, like many other of Western Australia's successful settlers, is a native of South Australia, where his birth occurred at the country town of Mallala on January 8, 1875. His father, the late Richard Tiller, was a well-known agriculturist of the Central State, where he arrived as a child with his parents, and spent seventy years in the land of his adoption, during which period he did a considerable amount of pioneer work in connection with the farming industry. Mr. George Tiller received a State-school education, principally in the district where he was born, and at fifteen years of age began to turn his hand to the strenuous work demanded in the working of his father's farm, where he continued until he reached the age of eighteen. About this period a desire to see more of the world than the restrictions of his calling allowed caused him to relinquish agricultural life, and proceeding to Broken Hill, then in the zenith of its prosperity, he became engaged in mining occupations. After persevering in these pursuits for some twelve months, before he had mastered all the details in connection with the industry, Mr. Tiller began to suffer from the effects of lead-poisoning, which forced him to abandon his intention of remaining

for about three years. Owing to severe drought, however, he met with discouraging reverses, and eventually decided to return to his native place, where he leased a farm and carried on operations for five years. In 1903,

W. E. Elston,

Wagin.

MR. GEORGE TILLER.

owing to the glowing reports circulating regarding the bright prospects for settlers in the agricultural districts of Western Australia, and the excellent advantages offered by the

with the object in view of selecting a suitable holding for his future operations. A short search was sufficient to bring him within touch of what he required, his experienced judgment perceiving in the block of land from which his present farm has been developed a property which would amply repay the efforts which he was prepared to expend upon it, and without further delay he took up about 1,600 acres, which formed the original extent of the place. To this he has since added at intervals, with the result that to-day the property covers over 5,300 acres, the bulk of which is good agricultural land, while a fair portion may be classed as very superior soil, unequalled by the best in the district. The timber predominating on the estate is white gum, York gum, and jam, and the country is plentifully watered, good stock water being found almost anywhere on this favoured area. Soaks occur at frequent intervals, and there has been no need to sink wells, a flock of from 1,200 to 1,500 sheep being watered on the property without any artificial means having been brought into requisition. After taking up the land clearing and fencing were speedily commenced, and of the latter Mr. Tiller has now erected about 40 miles of six plain-wire fencing and ten miles of dog-proof barbed-wire fencing finished with wire-netting,

Photo by W. E. Elston.

MR. G. TILLER'S RESIDENCE, BROOKTON.

in the Silver City, and going from there to the Port Lincoln district he entered upon farming avocations on his own account, which occupied him

liberal land laws of this State, Mr. Tiller left South Australia for the Golden West, and upon arrival commenced an inspection of the country

while 1,600 acres of the best of the land is cleared and under cultivation on the three-year fallow system. Over 600 acres are cropped annually,

wheat and oats being grown in about equal proportions, and the harvesting returns show an average of fifteen bushels of wheat and twenty-five bushels of oats to the acre. Considerable attention is given to the

replenishing of the farm stock, and about fourteen or fifteen useful animals of varying types may usually be seen at work on different parts of the property. Since the advent of Mr. Tiller to the district he has not

the Public Hall Committee of West Brookton and is a member of the Brookton branch of the Farmers and Settlers' Association of Western Australia, on which he also serves as a committeeman. He has been associated with the local branch of the Liberal League, and is a prominent supporter of the Methodist Church, holding office as Church steward at the West Brookton branch of that communion. Mr. Tiller's standing and varied services to his fellow-settlers and other members of the community were recognized by the Wilson Administration, from whom he received his Commission of the Peace in the year 1909. His chief hobby is found in reading, and he spends a considerable portion of his leisure time in the perusal of historical works and literature of a scientific character, especially that dealing with up-to-date ideas in regard to the management of stock and land development and mixed farming generally. In 1898 Mr. Tiller was married to Mary Margaret, daughter of Mr. James Bateup, a resident of Gawler, South Australia, who has been well known as one of the identities of that district for upwards of half a century. His family consists of four sons and three daughters.

Photo by W. E. Elston. DISTANT VIEW OF "BOYAGIN" HOMESTEAD.

pastoral side of the industry, which has proved in a modest way a very profitable department, and nearly the whole of the uncultivated portion of the estate is ring-barked, with the result that excellent feed for the stock prevails over all the pasture land. The flock consists of a crossbred

failed to interest himself in the various movements organized for the advancement of the place, but has taken a prominent part in all matters tending to that end. When the increasing importance of the district led to the formation of a roads board at Brookton Mr. Tiller was returned

ONE OF THE "BOYAGIN" FIELD TEAMS.

merino-Lincoln type, proved by Mr. Tiller to produce a very good utility sheep, and the wool, which is of excellent quality, is despatched to England. The breeding of horses is carried on on a small scale for the

as a member, and he has served continuously on that body ever since, besides which he has been honoured by his fellow-members by election to the office of chairman on more than one occasion. He is also chairman of

JOHN WHITTINGTON, proprietor of the "Glen Dale" Estate in the neighbourhood of Brookton, was born on the old Swan settlement of the early days near Guildford on March 14, 1857, and is a son of the

late James Whittington, who came to Western Australia from England in the first year of the foundation of the new colony, and was afterwards identified with the sandalwood and agricultural industries in the Brookton district. The subject of our notice acquired the rudiments of learning by attendance at one of the small private schools before the era of State education, and at an early age became associated with his father and brothers in the work of the farm at "Rosedale" now in possession of Mr. H. W. D. Whittington. He continued in this connection until thirty years old, when he launched out on his own account in a sheepfarming proposition, taking over a pastoral lease some fifty miles south-east of Brookton. For three years he carried on operations there, but at the end of that period, on account of scarcity of water, was compelled to dispose of his stock and return to a more favoured locality. Settling down in the town of Beverley, for a time he directed his attention to storekeeping pursuits, and was engaged in the bakery trade at that centre; but eventually he found his way back to Brookton, and here selected 100 acres of the holding which proved the nucleus of his present valuable property known as "Glen Dale." Being well satisfied with his selection, Mr. Whittington proceeded to increase his landed interests, and as opportunity occurred added block to block, until the whole formed a compact and arable holding comprising over 1,500 acres, nearly the whole of which is now in a well-developed state. Upwards of 1,000 acres have been cleared and subdivided with six-wire fences into eight paddocks, while the balance is already ringbarked as a preliminary to burning off, the growth of the

natural grasses on the area used for pastures being much improved thereby. About 350 to 400 acres are brought under cultivation annually on the approved fallow system, and the crops obtained are well above the

W. E. Elston,

Wagin.

MR. JOHN WHITTINGTON.

average for the district. The estate is up to date in the matter of farm implements and machinery, Mr. Whittington being a believer in progressive methods, and in all minor details as well as those more important the arrangements for working the place leave little to be desired. Besides the cultivation fields, seven acres of first-class orchard land have been planted with a carefully-chosen selection of fruit-trees, and this has proved a very profitable branch of the operations carried on, excellent returns coming in from the marketing of these products. "Glen Dale" carries a flock numbering from four

hundred to five hundred sheep of the crossbred type, bred with a view to contributing wool and mutton to the local markets, and this also is a successful department, good prices almost invariably being obtained for representatives from these pastures. The horses are worthy of mention, though breeding is carried on with a view to keeping the stock on the farm young and fresh rather than for sale or exhibition at the local shows. A few find their way to the markets, however, and as a rule purchasers are not wanting when a fine young draught bred by Mr. Whittington is offered. Great changes have taken place in the face of the country since the now-prosperous settler came to Brookton with the slender capital of thirty shillings in his pocket, to wrest from the virgin soil, by means of industry and perseverance, the treasure which may be found by those who bring these qualities into play in the enterprise to which they have pledged their best energies, and Mr. Whittington must feel abundantly rewarded for all his efforts when he views his smiling cornfields and orchards covering the areas where erstwhile the native timber waved its foliage, and realizes the value of his farm and plant, etc. In addition he owns real estate in Brookton, where a few business premises know him as landlord. Mr. Whittington has never taken any part in public affairs, preferring to give the whole of his time and attention to the development of his industry. He was married in 1890 to Isabelle, daughter of the late Richard Strange, one of Western Australia's early pioneers (mentioned in the biography of his son, Mr. Andrew Strange, included in these pages), and has seven sons and one daughter.

Photo by W. E. Elston.

VIEW OF MR. JOHN WHITTINGTON'S "GLEN DALE" ESTATE, BROOKTON.

THOMAS JAMES WHITTINGTON, of "Oaklands," near Brookton, is a son of the late James Whittington, one of the very early pioneers both of the sandalwood trade and the farming industry in Western Australia. He is a native of this State, having been born at Guildford on March 17, 1859, and even before entering his teens became engaged in the task of earning his living in the sandalwood forests at the time that that industry was in the zenith of its prosperity. It was not an infrequent thing for him to cart the valuable timber from the district where he now resides all the way to Perth—a distance of a hundred miles. For fifteen years young Whittington continued his connection with this trade, relinquishing it at the end of that period in order to take up a pastoral lease in the Pingelly district, which he used as a sheep run for a few years, conjointly with this enterprise assisting his brothers in the conduct of the old homestead property of "Rosedale," in the Beverley district, before the demise of their father. In 1890 he permanently severed his interests from those of other members of his family, and leaving the paternal roof-tree, selected a holding of over 100 acres at Kelmscott, with the purpose in view of planting an orchard. This he cleared and developed successfully, and for fifteen years carried on the calling of an orchardist; but ultimately deeming it in the best interests of his growing family to engage once more in the agricultural industry, he returned to the Brookton district, where some time previously he had selected a property of over 2,200 acres. This he at once

began to clear and fence, and with the assistance of his sons, who have now reached maturity, a well-developed farm-holding has been carved out of the virgin bush during the seven years which have elapsed

W. E. Elston, *Wagin.*  
MR. THOMAS JAMES WHITTINGTON.

since operations were first inaugurated. One of the characteristic features of the Brookton district is the excellent water supply derived from perfectly natural sources, and "Oaklands" is by no means lacking in this general advantage, the precious fluid being easily obtainable all over the estate. Cropping on the three-year fallow system has been productive of highly satisfactory results, and in all 1,000 acres have been made tributary to the harvesters; while the horticultural industry has also

flourished, an orchard of from two to three acres in extent producing all kinds of fruits suitable to the soil and climate. On the pastoral side a flock of about 700 merino sheep gives evidence of care and judgment in the selection of types from which to breed, and fleeces are shorn from these animals averaging about 6 lb. in weight. The 1912 clip was shipped to London, where the price obtained was 1s. 2d. per lb. A few horses are bred for the work of the farm, and for this purpose a medium draught has proved to be the most serviceable type. About fifteen workers are found necessary for the various demands of the different departments, and sufficient young stock is bred to keep up the supply without resorting to outside markets. Many improvements of a substantial kind may be noted by the observant eye, prominent among which may be mentioned the up-to-date stabling and outbuildings generally, while the excellent fences constructed with jam timber posts and the usual six wires may also come in for a glance of approval. The homestead is an unpretentious, comfortable dwelling, where Mr. Whittington, who is a man of quiet tastes, spends his leisure hours in the bosom of his family, taking his recreation at home in the intervals he can spare from the work of managing the property. He married in 1891 Alice, daughter of the late Jesse Martin, of Kelmscott, who came to Western Australia nearly half a century ago, and was well known in that locality for about twenty years prior to his death. Of this union there are three sons, all of whom are engaged with their father in the conduct of the estate.

Photo by W. E. Elston.

MR. T. J. WHITTINGTON'S HOMESTEAD, BROOKTON.

SAMUEL WHITTINGTON, who owns the "Spring Hill" property, situated in the vicinity of Brookton, the homestead being about seven miles distant from the town, was born at "Rosedale," near Beverley, on March 14, 1866. The "Rosedale" Estate, now occupied by Mr. H. W. D. Whittington, elder brother of the gentleman under review, was originally a holding taken up by his father, the late James Whittington, an outline of whose career is given in the biography of the gentleman above referred to, which appears elsewhere in this volume. Like many other youthful colonists of those early days, Mr. Samuel Whittington's schooldays were cut short by the urgent necessity for every available pair of hands to assist on the farm, labour being scarce, and the primitive conditions making the work of tillage much more exacting and strenuous than is the case to-day. He continued at "Rosedale" for a very lengthy period, having completed his thirty-sixth year before deciding to launch out on his own account, and when eventually he made the break he came direct to "Spring Hill," where his first selection consisted of a block of a little over 300 acres, previously taken up by him in 1897. To this was attached a 10,000-acre pastoral lease, and

after coming to reside on the property Mr. Whittington at once began to add to his farm by selection, whilst carrying on the development of the territory already secured. In course

MR. SAMUEL WHITTINGTON.

of time he acquired a considerable area of land, and to-day the "Spring Hill" Estate embraces 2,700 acres of country, undulating in character, the soil of which is red, chocolate, and sandy loam of a nature eminently

suited both for agricultural purposes and sheep-raising. The property is excellently watered, splendid supplies for the stock being present on the surface in every paddock, while beautiful fresh water abounds in many places, Nature's provision in this respect being so bountiful that no artificial methods whatever have to be resorted to in order to secure what is so indispensable where pastoral operations are carried on. The average rainfall is about 17 in., and agriculture receives every encouragement, about eighteen bushels of wheat and one and a half tons to the acre of hay being the usual harvesting returns. The whole of the land not under cultivation is ring-barked, with a view to improving the feed for the stock, while 1,700 acres are cleared and cultivated on the three-year system—cropping, grassing, and fallowing in turn—from 500 to 600 acres being cropped annually. Close on 40 miles of substantial fencing have been completed on the property, six plain wires and posts of jam timber being the general system followed both for the boundary and subdivisive fences, the latter dividing the whole area into thirteen paddocks of convenient size for cultivation and the management of the stock. The flock consists of 1,000

Photo by W. E. Elston.

"SPRING HILL" HOMESTEAD AND OUTBUILDINGS.

merino-Lincoln crossbred sheep, a type which has been found by Mr. Whittington best suited to the district, and these produce a good class of wool which commands good prices at the London markets, whither the annual clip is despatched, the average weight of fleeces during recent years being estimated at from 6 lb. to 7 lb. Lambing takes place in June, and the satisfactory average of 85 per cent. has been obtained for some time past. A few dairy cattle are kept for domestic purposes, while fifteen horses, chiefly of the heavier type, are found sufficient for the work of the farm, these, with a few of lighter build, being bred by Mr. Whittington, who makes it his aim to keep a fresh young lot of workers coming on to relieve the old stagers who show signs of flagging. In 1909 Mr. Whittington turned his attention to the erection of a homestead, with the result that the property is now graced by a structure comprising five rooms and built of sun-dried bricks with concrete fronting. A verandah encircles the whole of the building, and the interior is very homely and comfortable, while surrounding the homestead is a pretty garden, where many favourite flowers make bright patches of colour

as the different seasons come round. In addition there are two and a half acres of orchard in the vicinity of the house, and here oranges, apples, and grapes, with various other kinds of

containing a modern plant and accessories. Mr. Whittington for many years has served as a member of the Beverley Agricultural Society, and he interests himself generally

MR. S. WHITTINGTON'S RESIDENCE, BROOKTON.

fruits, come to perfection. The out-houses are well up to date, comprising ample stabling for the horses, hayshed, and other buildings, besides which there is a shearing-shed

in various local organizations, and is associated with the local branch of the Farmers and Settlers' Association, of which he is a staunch supporter.

THE STABLES AND HORSES AT "SPRING HILL."

QQ

**WILLIAM EDWARD ROBINSON**, of "Sunning Hill," Brookton, was born at Corbading, in the vicinity of Brookton, on March 1, 1858, and is a son of the late William Albert

MR. WILLIAM ALBERT ROBINSON.

Robinson, who at the age of nine came from England to Western Australia with his parents, his father's decease occurring during the course of the voyage. The late W. A. Robinson in subsequent years became one of the earliest of the farming and pastoral pioneers of this State, having taken up the present "Sunning Hill" property considerably over half a century ago. He made a successful venture in securing pastoral interests in the great north-west, then comparatively little known, where he laid the foundation of the properties now held by some of his sons in the Roebourne district. His demise took place at York in the early years of the present century, just before he reached the allotted span of threescore years and ten.

The gentleman under review was educated at a private school at Brookton, concluding his studies before entering his teens in order to take over the shepherding of his father's flock, which employment he followed for the subsequent five years. He was next engaged for a period in the sandalwood industry, and upon attaining the age of seventeen years proceeded to the north-west, where he filled a position on a station property owned by his uncle, the late Edward Robinson, in conjunction with the late John Seabrook. During the half-decade that he spent on this station he gained an intimate and very useful acquaintance with all the details of the wool industry and the general management of stock which stood him in good stead in his next enterprise, which was the founding, in partnership with his father, of the "Mount Florence" Station, a well-known pastoral property which has since passed out of the hands of the Robinson family, but which was developed and worked by father and son for upwards of twenty-one years. Owing to a serious setback occasioned by the big drought of the early nineties, Mr. Robinson about that time left the north-west, and coming to the great southern district rented his present holding for some years. In 1901 he took up a selection of 2,000 acres, situated near Pingelly, which, after he had conducted it for eleven years, he sold and returned to "Sunning Hill," which he again took over on lease, but shortly afterwards, upon the death of his uncle, the late Edward Robinson, in 1913, found himself the heir to the property. "Sunning Hill" is an estate of over 2,000 acres, of which about 500 to 600 acres have been cleared and cropped, while the entire area is ringbarked, fenced, and subdivided with good

six-wire sheep-proof fences. The homestead is an old-fashioned most comfortable building, and commodious outhouses have been erected. Mr. Robinson has interested himself in the public life of the district, and for three years filled the position of chairman of the Mourambine Roads Board, of which he has been a member for a lengthy period. He is associated with the Pingelly Agricultural Society, and has served for many years as a committeeman of that body. His name may be found on the roll of almost

MR. WILLIAM EDWARD ROBINSON.

every organization having for its object the welfare of the community among which he resides. He occupies the office of people's warden and vestryman in the local Church of England, and is a hearty advocate of all forms of manly recreation. Mr. Robinson married in 1884 Mary Frances, daughter of the late Edward Read Parker, of "Dangin," and has four sons and four daughters.

Photo by W. E. Elston.

MR. W. E. ROBINSON'S HOMESTEAD, BROOKTON.

CHARLES FREDERICK BROUN, "Bassendene," Pingelly, was born at Perth, Western Australia, on June 19, 1839, his father, the late Peter Nicholas Broun, having accompanied Captain Stirling, first Governor of the State, by the transport steamer "Parmelia," which arrived at Fremantle in 1829, and for some years subsequently filled the office of Colonial Secretary in connection with the new settlement. The gentleman under review received his scholastic training at the above-mentioned seaport, where a Government school had been established, and leaving this institution at the age of fourteen, he joined his brother, the late James Broun, in farming pursuits at "Jelcobine." Here he remained for several years, during which period he acquired considerable experience in the different branches of agriculture, etc., and in 1860 launched out on his own account at Mourambine, in which district he leased a holding from the late L. J. Bayley—then resident magistrate at York. For five years Mr. Broun carried on farming operations in this locality, in 1866 removing to the Beverley district, where he continued in the same line of enterprise until 1895. In the latter year he disposed of his interests at Beverley and purchased his present estate, "Bassendene," where he has since followed farming occupations in a small

way as a hobby, practically living in retirement, while his sons, who reside in the vicinity, have taken over the active management of the land surrounding the old "Bassendene"

MR. CHARLES FREDERICK BROUN.

homestead. Mr. Broun may be correctly described as one of those quiet-natured men who in many cases have proved themselves the best settlers, taking the inevitable rough side of pioneering life philosophically, and battling through all the hardships and privations without complaint, while doing their duty to the State

by the development of the land and the bringing up, in many cases, of a large family of children—the best contribution that can be added to the assets of any country. Ten sons and daughters were born to Mr. Broun and eight of these are still living, all of whom are settled in the district where their father resides. Mr. Broun has served for many years as a member of the Beverley Roads Board, where his unostentatious but wise and well-considered business methods have been invaluable to his fellow-members of that body, who have frequently been glad to profit by his advice to the material advantage of the ratepayers of the district. In his younger days, prior to his retirement, he was a member of most of the local organizations for the promotion of progress, and still retains membership in the Pingelly Agricultural Society. Mr. Broun was twice married. In 1862 he wedded Amelia, daughter of the late Charles Smith, of "Roseland," Beverley, this lady being the mother of the ten children—four sons and six daughters—before referred to. Her decease took place in 1904, and two years later Mr. Broun contracted a second union with Emily Maria, sixth daughter of the late John Seabrook, well known as the founder of the town of Brookton, and mentioned elsewhere in these pages.

MR. C. F. BROUN'S RESIDENCE, PINGELLY.

G. M. SEWELL, J.P., of "Hadleigh," Pingelly, owner of the "Maplestead" Estate, at present leased to his son, Mr. W. O. Sewell, was born at "Seaton Ross," Beverley district (now in possession of the

MR. JOHN SEWELL.

Barrett-Lennard family), on September 8, 1855. His father, the late John Sewell, who was born in England in 1813, came from Essex to Western Australia in the early days of the colonization of this State,

sailing in 1834 by the ship "Adam," of 300 tons burden. The voyage extended over nearly six months, and after touching at the Cape of Good Hope and Tasmania the boat finally reached her destination towards the end of the year. Almost immediately after arrival the late Mr. Sewell leased a block of land from the late Captain J. S. Roe on the Swan River settlement, a portion of which he cropped in conjunction with the late Mr. S. A. Barker, reaping the first harvest in the season of 1835. Subsequent to this he received an offer from the late Edward Pomeroy Barrett-Lennard, then residing on his farm, "St. Leonards," in the same locality, to occupy the grant of land known as "St. Aubyns" at Beverley, and relinquishing the Swan holding Mr. Sewell proceeded eastwards to take up his residence on this property. During the first year of occupation much difficulty was experienced on account of the natives, who were very hostile and troublesome, and needed continual watching, making the matter of securing provisions, etc., one of considerable risk. Some soldiers were quartered on the late Mr. Sewell's farm at "St. Aubyns," one of whom was fatally

spearred within a few yards of the homestead, and on the same occasion a brother of Mr. Sewell received a spear wound in the arm. The sheep and other stock were frequently driven away and killed if the shepherds relaxed in the least degree

Perth.

their vigilant watch, and in many ways the aboriginal element in the place made conditions much more trying than otherwise would have

Photo by W. E. Elston.

"HADLEIGH," RESIDENCE OF MR. G. M. SEWELL, PINGELLY.

been the case. After leaving "St. Aubyns" Mr. Sewell leased a property at Spencer Brook (so called after Spencer Trimmer, one of the original settlers of the district) and built a homestead on a portion of the "Mokine" Estate, now the property of the Hon. Thomas Wilding,

the late Stephen Parker, who landed in the new colony in February, 1830. Mrs. Sewell thus is aunt to the present Chief Justice of Western Australia. She resided with her father at "Northbourne," near York, until her marriage with the late Mr. Sewell in 1840, and subsequently

years, bravely enduring the hardships incident to the struggle for existence which was their lot during this period of their career, and ultimately settled down with him at "Maplestead," where she resided

Photo by W. E. Elston. "MAPLESTEAD" HOMESTEAD.

Talma, Melbourn.  
MR. WILLIAM ORLANDO SEWELL.

M.L.C., where he took up his abode and began operations on his own account. His experiences here, however, were not of a very happy nature, and he had a strenuous time fighting adverse fate for a few years. Eventually he gave up the attempt to form a home for himself in this locality, and moved to "Seaton Ross," while there taking up on lease an area of land in Pingelly, where he settled with his family at "Maplestead," in the vicinity of the Wandering Road, about two miles distant in a westerly direction from the township of Pingelly. In this haven the staunch old pioneer ended his days, and subsequent to his demise the estate passed into the hands of his son, the subject of this memoir. Mr. G. M. Sewell's mother—who resides with him at "Hadleigh"—has lived in the reigns of no less than six English monarchs, having been born in 1819, during the reign of George III. She is a member of the well-known Parker family, and came to Western Australia with her parents from the county of Kent in England as a child of ten, her father being

shared with her husband all the pioneering privations at "St. Aubyns," where for a time she was under the protection of the two soldiers already referred to, who were sent by the Government for the purpose of protecting new settlers and their goods from the depredations of the blacks. She accompanied Mr. Sewell to Spencer Brook and lived in the homestead there for some

until her removal with her son to "Hadleigh." The "Maplestead" homestead is now one of the old landmarks of the place, being distinguished for the comfort and conveniences found in the interior, where many up-to-date improvements have been introduced since

ORIGINAL HOMESTEAD AT "MAPLESTEAD."

the early days of its erection. It has also been considerably added to from time to time to meet the necessities of the large family of twelve children (of whom four sons and five daughters are still living) brought up by Mr. and Mrs. Sewell on the farm. Outhouses of considerable size and substantial appearance have also their place in the homestead area, and nothing is lacking to express the prosperity and success which in the course of years has attended the enterprise. Mr. George Malakoff Sewell has spent almost the whole of his life in that portion of the Western Australian State where

he further enlarged his boundaries by purchasing from the Western Australian Land Company, then at work on the great southern railway line which was in course of erection, sufficient land on conditional purchase terms to establish himself on a sound basis from the agriculturist's point of view, and at present the property comprises almost 5,000 acres, the greater part of which is equal in quality to the best average land on the line referred to. The property is in a forward state of development, the entire area being fenced with seven wires supported by posts of jam timber and divided into

fresh, and soaks are discovered everywhere, running water from the same being a common condition. A few wells have been sunk on the higher parts of the property, where water is generally obtained, excellent in quantity and quality, at from 8 ft. to 10 ft. from the surface. A good deal of attention is given to agriculture, a three-year rotation of cropping, grassing, and fallowing being the system followed with very satisfactory results. From 500 acres upwards is placed under cultivation every year, the principal cereals grown being wheat and oats, both of which are well suited to the soil and

Photo by W. E. Elston.

FLOCK OF CROSSBREDS AND CULTIVATED AREAS AT "MAPLESTEAD."

he now resides. He received his education at the local Government school at York, where he continued his studies until about fourteen years of age, and subsequently was employed in the routine work of the farm, his chief duties as a lad being shepherding and mustering the mobs of horses which roamed at will over the unfenced areas which composed the leasehold pastures of "Maplestead" prior to the time when the late Mr. Sewell was able to purchase a few hundred acres, block by block, which formed the nucleus of the freehold land acquired. When the present owner came into possession

about twenty paddocks, the smallest of which is less than ten acres in size while the largest comprises close on 1,000 acres. About 1,500 acres are cleared, and the whole of the remainder has been subjected to the ringing axe, this portion supplying excellent feed for the stock, which grow fat and flourishing on the indigenous grasses which spring up plentifully when the drain on the soil made by the timber is removed and the sunlight and air allowed to work their magic effect on the areas hitherto too much sheltered by the foliage of trees. The natural water supply on "Maplestead" is good and

climate, and in addition a considerable quantity of peas are sown for the purpose of providing a nourishing fodder for the stock, which fatten rapidly on this class of food. The pastures are utilized for the grazing of some 2,000 crossbred sheep of the Lincoln-merino type, a general utility animal of big frame and fair class of wool having been proved a profitable proposition. The annual clip is despatched to the Old Country and offered for sale at the London markets, where the prices obtained are well up to the average figure realized on the product from the best crossbred flocks in Western

Australia. A few horses are bred on the "Maplestead" property for the general work of the farm, these being of types suited to the different classes of labour demanded in the various departments, although draughts predominate, and a good specimen of Clydesdale is the popular worker produced. Mr. Sewell has been one of the most prominent members of the community resident in the district surrounding the rural township of Pingelly, and no movement for the welfare of the place has been considered complete without his approval and support. Upon

of several years. A founder of the first racing club ever established in Pingelly he is the present president of the race club now in existence, and fills an honoured position as patron and president of all the athletic organizations in the neighbourhood, being a warm and staunch supporter of all forms of clean and manly outdoor diversion. His own special form of recreation is found in the popular game of golf, and he is a member of the committee of the Pingelly Golf Club. He has always taken a leading part in church affairs, and among other offices in

estate to his only son, above-mentioned, and came to reside at "Hadleigh," where he had erected a second homestead on a portion of the old property. WILLIAM ORLANDO SEWELL, who now conducts the management of the farm, was born on March 27, 1885, and pursued his scholastic studies at the Guildford Grammar School. Having completed his education at sixteen years of age, he became associated with his father in the operations of the "Maplestead" property, and at a later date was one of the trio selected by the Western

Photo by W. E. Elston.

GENERAL VIEW OF "MAPLESTEAD."

the inauguration of the Pingelly Roads Board he was elected to represent the ratepayers on that body in the initial instance, and at the present time occupies the position of chairman, having held membership continuously ever since the inception of the board, with the exception of a few years when his private affairs compelled him temporarily to relinquish an office which he was so well equipped to fill. He is vice-president of the Pingelly Agricultural Society, of which he has been a committeeman for many years, and was first elected to the presidential chair in 1894, subsequently filling the office for a period

connection with the Church of England has served as vestryman in the Pingelly district for some considerable time. He is also chairman of the local cemetery board. In 1896 the Forrest Administration, during the Governorship of Lieutenant-Colonel Sir Gerard Smith, created him Justice of the Peace for the district in which he resides, an office he has since exercised. He married in 1881 Alice, daughter of the late John Taylor, of "Yangedine," the old homestead property now in possession of Mr. W. Marwick, and has one son and two daughters. Mr. Sewell continued at "Maplestead" until 1910, when he handed over the

Australian Publishing Company to travel over the globe for the purpose of gaining information for the benefit of the settlers engaged in agricultural and horticultural, etc., enterprise in this State. He took over the "Maplestead" Estate on lease from Mr. G. M. Sewell in 1910, and is now engaged in the conduct of the same. Mr. W. O. Sewell is a member of the local agricultural society, and gives his support to the race club, golf club, and other organizations. He was married in 1908 to Elinor Josephine, daughter of Mr. Thomas Arthur Lawrance, of Pingelly, and has two sons and one daughter.

GEORGE HENRY BOSTOCK, J.P., of "Staunton Springs," Pingelly, is a Western Australian by birth, having been born at Fremantle on November 15, 1862, and is a son of the late Rev. George James Bostock, who was rector of the Church of England at that seaport for many years. In 1874 ill-health compelled his father to return to England, of which country he was a native, and the family took up residence at the vicarage of Kirkby Wharfe in Yorkshire until the death of the late Mr. Bostock in 1881. The gentleman under review pursued his scholastic studies at St. Peter's, in York, and having completed his education at that well-known seat of learning, at eighteen years of age returned to the land of his birth, when he entered the office of Messrs. W. D. Moore & Co., at Fremantle, where he remained for nearly a year. At the end of this period he relinquished mercantile life in favour of the pastoral industry, to which he turned his attention in association with his two maternal uncles, Messrs. H. and W. Lukin—names closely interlinked with early pastoral enterprise in the State of Western Australia. Subsequently Mr. W. Lukin formed a partnership with the late Henry Monger of York, and at the end of November, 1882, Mr. Bostock joined Messrs. Lukin and Monger's party, which under the leadership of Mr. W. Lukin

shipped 4,000 sheep at Rockingham in the "Burmah" for Beagle Bay, the firm having large pastoral leases in West Kimberley which it was their intention to develop. After a somewhat unpropitious voyage the party in charge of the stock landed 1,600 sheep at Beagle

REV. GEORGE JAMES BOSTOCK.

Bay on December 10, which were all that were left of the 4,000 shipped the previous month, and proceeded to drive the flock as far as the Fitzroy River, which was reached in January, 1883, after the party had endured many hardships and privations, on one occasion living for eighteen days on bread and water. Here they camped

until after the rainy season, the heavy rainfall making it impossible for them to travel any further, and continuing their journey as soon as conditions were sufficiently favourable struck out for the Lennard River, which they reached late in April, 1883. For about twelve months Mr. Bostock and the party camped at "Balmaningarra" (then the property of the late George Julius Brockman, and afterwards purchased by the firm of Messrs. M. C. Davies and Sons), and in the middle of the following year established what is now known as the "Lennard" Station, where he continued until the beginning of 1886. Receiving an offer from the King Sound Pastoral Company to take the position of overseer of the "Barrier" Station, at the foot of the Napier Ranges, he accepted the same, and was associated with this company until the end of 1888, when a more lucrative post of a similar nature was offered him by the firm of S. E. Emanuel & Co. on their "Lower Liveringa" Station in the Kimberley district. Relinquishing his former connection he took up his new duties and continued with this firm until September, 1889, when on account of severe attacks of malarial fever he deemed it advisable to leave Kimberley and try the effects of a change of climate. In January, 1890, the firm of Messrs. Dempster Brothers offered Mr. Bostock the

Photo by W. E. Elston.

MR. G. H. BOSTOCK'S RESIDENCE, PINGELLY.

management of its pastoral station at Esperance Bay, and this post he filled for over eight years. Resigning his position at the end of eight years he launched out on his own account, purchasing his present homestead, "Staunton Springs," from the late Stephen Monger, the property then being a freehold one of 1,430 acres, which he has since increased to over 4,000 by the selection of land upon all sides of the original block. Mr. Monger had inherited the place from his father, who had acquired the site of the present homestead by purchase from the first selector, a Mr. David Grainger, and when Mr. Bostock entered into possession there was already on the property an old-fashioned stone house, built, as was the manner of the early settlers, more with regard to convenience and comfort than to appearance. This the present owner has added to and improved, and the homestead is now a substantial-looking structure of seven rooms and various subsidiary apartments and offices. A curious and interesting feature of the house is the presence of a skull showing from the exterior over one of the doors, which is accounted for by the quaint bit of history that the late Mr. Monger in building the house, knowing the superstitious nature of the natives, had this skull built into the outer wall of the storeroom, the sight of which proved quite sufficient to prevent the pilfering of stores or any other robbery on the part of the blacks.

The "Staunton Springs" property lies in the midst of well-watered country, and has the great advantage of a permanent creek flowing through it, *viz.*, the Beeberkine Brook. It is good agricultural and pastoral land, and under the skilled care and attention of Mr. Bostock has been developed into a

Bartletto,

Perth.

MR. GEORGE HENRY BOSTOCK.

very valuable estate. About 1,250 acres are cleared and the remainder ring-barked, while good substantial fences enclose the whole boundary line and subdivide the territory into paddocks of convenient size. Cultivation is carried on over about 500 acres, and although the usual crops of wheat and oats are those most largely grown considerable quanti-

ties of peas and rape are also sown, Mr. Bostock being the pioneer producer of these last-named crops in the neighbourhood. A small orchard has also been planted and has come to maturity, where an excellent variety of fruits ripen in season, these being intended chiefly for home consumption. The flock, consisting of merinoes, averages about 1,600 from year to year, and a great deal of attention is devoted to a small flock of stud sheep also present on the estate, which is being improved from time to time by the introduction of the best strains from well-known South Australian flocks. The wool is of good quality and commands satisfactory prices in London, whither it is despatched. Mr. Bostock is a well-known exhibitor at the local shows, and has been particularly successful with his sheep, winning prizes on very many occasions. He is a member of various public organizations, and is a committeeman of the Pingelly Agricultural Society. He was first original chairman of the roads board formed at Dundas and was associated with the similar body at Esperance, and for many years has been a member of the Pingelly School Board. In 1890 the Forrest Administration gazetted him to the Commission of the Peace for the whole of the State. Mr. Bostock married in August, 1890, Emma, daughter of the late S. P. Phillips, of "Culham," Toodyay, and has two sons and five daughters.

VIEW ADJACENT TO "STAUNTON SPRINGS" HOMESTEAD.

EDWARD LEWIS SMITH, J.P., who owns and occupies the fine old homestead property of "Beambine," in the Pingelly district, was born at "Nalyering," a portion of the "Beambine" Estate, on March 31, 1865. He is the only son of the

MR. CHARLES CHAPMAN SMITH.

late Charles Chapman Smith, also a native of Western Australia, whose father arrived in the colony in 1831 and was one of the earliest settlers of the State in the initial days of colonization, receiving from the Imperial Government a grant of land in the Beverley district now known as "Mount Kokeby," this grant being awarded according to the custom of the time, by which the size was regulated in accordance

with the amount of value brought into the country by the intending settler. Mr. Charles Chapman Smith left the paternal roof-tree in the years of his young manhood, and coming to the Pingelly district took over the lease of "Nalyering"—afterwards merged in the "Beambine" property—in conjunction with which he secured a pastoral lease some 30 miles to the south-east of the township and carried on operations conjointly on the two properties. Subsequently he turned his attention to the acquirement of land, taking up the first block, where the "Beambine" homestead now stands, in the year 1871; and at the time of his death in 1904 he held the whole present acreage of the estate, *viz.*, 6,200 acres, which in course of time will revert to the gentleman under review, by whom it is now held in trust. Mr. E. L. Smith, in addition to this territory, has taken up on his own account a block comprising over 5,000 acres in the Narrogin district, to which he has given the name of "Marring," stocking it with sheep and proceeding with its development while at the same time conducting the home estate at "Beambine." Many improvements have been made on both properties, the boundary fencing on each being completed and subdivision made into numerous paddocks ranging in size from 10 to 1,000 acres. At "Beambine" there are about 1,500 acres cleared and about the same amount at "Marring," while the whole of the timber on both properties has been rung,

with the exception of the necessary patches left here and there as shelter for the stock. From 600 to 700 acres are cropped annually, principally with wheat, and the entire area of cultivable land is fallowed and grassed tri-yearly, close on 2,000 acres having been devoted to purposes of tillage. A considerable amount of attention is given to pastoral operations, from 3,000 to 3,500 sheep being run on the pastures of both properties, and Mr. Smith makes a study

MR. EDWARD LEWIS SMITH.

of improvement in the type produced, renewing the strain from time to time by the introduction of fresh blood from some of the noted South Australian flocks. Among the thirty upwards of horses of all kinds present

Photo by W. E. Elston.

MR. E. L. SMITH'S RESIDENCE, PINGELLY.

on the farms he has some fine saddle hacks which have been exhibited with conspicuous success at the local shows. Horse-breeding, however, can hardly be said to be a feature of his operations, as he is usually content to raise sufficient staunch colts

contained in the interior, and in addition there are the usual passages, kitchen premises, pantries, etc., all being arranged on a very convenient plan. The material used throughout is stone, and even the division-walls are 15 in. in thickness, while the

any future descendant to become imbued with modern ideas of architecture and the passion for bringing things up-to-date, remaining intact for the next century and presenting much the same front to the world at the beginning of the twenty-first century as it does at the present time. The outhouses are also built of stone and in spite of the comparatively remote date of their erection it would be hard to rival them in the whole State for convenience and durability. In front of the homestead a flower garden has been laid out and cultivated which is of considerable decorative value in the general aspect of the place, while some attention has been paid to orchard work, a number of fruit trees yielding abundance of apples, pears, stone fruits, etc., for home consumption, and a small vineyard contributing in season to the luxuries of the table. Mr. Smith has taken an intelligent interest in all matters affecting the welfare and advancement of the district and has served his turn in connection with local government as a member for many years of the Narrogin Roads Board while resident at "Marring." He is also a member of the agricultural societies of Pingelly and Narrogin and is associated in addition with the Royal Agricultural Society. He is a member of the local branch of the Liberal League of Western Australia, and in the days prior to Federation of the Australian States, was created by the Forrest Administration a

"MINDALONG," RESIDENCE OF MR. C. C. SMITH.

and fillies to replace the old blood among the workers, and representatives from "Beambine" are seldom in the market. Worthy of somewhat extended mention is the fine substantial homestead which was erected during the lifetime of Mr. Smith's father, and which is one of the most spacious, comfortable, and picturesque homes in the district. Nine large, bright, and airy rooms are

outside walls are considerably thicker, this conducing to keeping the temperature cooler during the summer heat. The house has all the appearance of having been built to shelter many generations of the family who first founded the estate, and may be described as one of those places upon which time seems unable to make any mark. It is easy to imagine the "Beambine" home, in the absence of

Photo by W. E. Elston.

Justice of the Peace for the district in which he resides. He married in 1892, Martha Louise, daughter of the late James Drummond, who arrived in the "Parmelia" in 1829 and was one of the old farming pioneers of the Toodyay district, and has a surviving family of two sons and three daughters.

FREDERICK WILLIAM HUNT NICHOLSON, "Rose Hill" Farm, Mourambine, was born at Western

Bartlett, Perth.  
MR. JAMES NICHOLSON.

Australia's capital city on July 7, 1871, and is a son of the late James Nicholson, who came to the infant Crown colony from Edinburgh, Scotland, among the earliest of the pioneers of this State, after some considerable time returning to England,

where he remained for a few years, ultimately sailing once more for Australia and settling down to permanent residence in the land of his adoption. James Nicholson was a brickmaker by trade, and to this day may be seen in all parts of the valley of the Avon specimens of his handiwork in many of the buildings, which plainly evidence that he was a master in his calling. As the colony became more advanced he directed his attention to other industries, such as the sandalwood trade and the barter of kangaroo skins, of which products he became a large exporter, conjointly with these interests carrying on the development of the "Rose Hill" farming lands, a portion of which had been first taken up by him in 1882. He also figured as a pioneer of the first Coolgardie gold rush, and opened the earliest storekeeping business on that now historical field, some few years later (when he left the goldfields) establishing himself as a storekeeper at Pingelly, then a small struggling township, and was engaged in commercial pursuits there until the time of his death, which occurred in June, 1903. After his demise the "Rose Hill" Estate was administered by his wife, who continued in possession until her decease in 1912. The gentleman under review received his education at Mourambine in the first instance, and when eight years of age proceeded with his parents to England, where he continued his studies in the county of Kent for four years. At the end of that period he returned to Western Australia, and having completed his scholastic training at Mourambine and Beverley became associated with his father in the various interests held by the latter

gentleman. In this way he gained valuable experience in the sandalwood industry and the less important enterprise connected with kangaroo hides, and at a later date acted as

MR. F. W. H. NICHOLSON.

assistant in the Pingelly store, becoming highly proficient in the handling of produce, etc., and an expert judge of the value of hides, skins, etc., which in those days were used as articles of barter by the settlers of the district. Being of an enterprising and progressive turn of mind, Mr. Nicholson also acquired during his father's lifetime various town properties and farm holdings, and is still interested in real estate in Pingelly and Cuballing, although he disposed of the greater portion of his landed possessions after inheriting "Rose Hill" upon the death of his mother, and took up his residence on the

Photo by W. E. Elston.

MR. F. W. H. NICHOLSON'S HOMESTEAD, MOURAMBINE.

farm, where he has continued ever since. The "Rose Hill" property is situated six miles east of Pingelly, and is approached by an excellent main road from that town. The land is well watered by soaks and springs, permanent water being present on the estate, from which the stock may be supplied all the year round without recourse to artificial means of any kind. Close on 1,000 acres of the entire area is cleared, and of this about 800 acres have been brought under cultivation on the two-year fallow system, from 400 to 500 acres being annually devoted to the purposes of tillage. Mixed farming operations are carried on with a good measure of success, and various kinds of stock are met with on the farm, each department, though not perhaps extensive, being an integral and important factor in the whole scheme of the enterprise. The small flock of sheep is composed of the popular merino breed, which is as predominant in this district as in many other portions of the State, and in addition there are some good crossbreds, which have been proved to be very marketable, the wool and mutton both selling at good prices. Sufficient horses are kept to cope with the requirements of the different branches of farm work, and a few are bred from time to time in order to keep up the supply of fresh, young stock, so necessary to the successful development of the agricultural side of the industry; while a few dairy cattle for domestic purposes are grazed on the pastures, and a good class of swine has its place on the homestead area. Even a cursory glance is enough to assure the beholder that he sees before him

a well-conducted farm, where time and thought have been given to the arrangement of everything vital to the success of the proposition, and where no detail has been considered too insignificant to take into consideration in the general ordering of things to the best advantage. The homestead is upwards of thirty years old, having been built by the late Mr. James Nicholson during the boyhood

the part of the builder which has been thoroughly appreciated by his successors. In the vicinity of the homestead is an orchard and vineyard ten acres in extent, which produce a variety of fruits that find a ready sale at the local markets. The out-buildings are numerous and include comfortable stabling accommodation for a number of horses, and there are present the various sheds

8-HORSE TEAM TRANSPORTING 105 BAGS WHEAT INTO PINGELLY.

of the present occupant. Bricks were the material used in its construction, and it contains eight rooms with additional conveniences, while a verandah at back and front adds considerably to the comfort and appearance of the building. A splendid underground tank for the reception of the rain catchment was built into the house, which provides an ample supply of cool fresh water for all domestic purposes during the whole of the year—a piece of foresight on

indispensable for the storage of produce and shelter for vehicles, machinery, harness, etc. Mr. Nicholson, since entering upon the management of "Rose Hill," has found plenty to occupy his attention, and finds sufficient recreation in devoting himself to its proper development without seeking diversion in the sporting organizations of the neighbourhood. He married Jessie, daughter of the late Mr. Gawley, of Armagh, Ireland.

HAYMAKING ON THE "ROSE HILL" PROPERTY.

"AVONDALE," the property of Messrs. Schorer Brothers. (John Thomas Schorer and Joseph Schorer). This property is situated about halfway between the towns of Pingelly and Wandering and consists of some 2,500 acres, originally taken up to add to a 40-acre block purchased by the present owners in 1900. As prosperity attended their operations they acquired an additional block, comprising nearly 1,500 acres, in the Williams district, lying

MR. JOHN SCHORER.

about nine miles west of Popanyinning, and another of between 500 and 600 acres in the Wandering district, the three properties being now conducted as one farming proposition, with the headquarters at

"Avondale." All the holdings are well watered, and one has a frontage to the Hotham River a mile in extent. Soaks abound, and dams have been constructed in various localities, while the whole of the homestead supply is obtained from a single well, 25 ft. in depth, which yields excellent water and is fitted with a wind-mill for convenient service to the house. Many miles of fencing have been completed on the different properties, and for this purpose posts of jam timber indigenous to the locality have been used, while six or seven plain or barbed wires have been found amply sufficient to keep the sheep within their own domain. The clearing work incidental to the development of the farms has proceeded apace, about 100 acres being cleared annually, and the land is cultivated on a fallow system which allows for between 500 and 600 acres being sown each season out of the 1,500 acres which are devoted to tillage. The principal crops produced are wheat and oats, and in addition to these a fair quantity of peas are grown chiefly for fattening up prime stock for the market, a profitable method being to turn the animals into the crop, when they crunch the succulent pea at will with the best possible results. The farm operations require the constant services of about twenty horses of the serviceable Clydesdale breed, and these are raised upon the estates, a limited number being bred every year. Some good blood stock is also produced for sale, and for this purpose Messrs. Schorer Brothers

possess the stallion "Zeechimo," by "Musketry" out of "Sequin," imported in 1910 at a big cost from the Dominion of New Zealand. "Zeechimo" is descended from the famous

W. E. Elston, Wagon.  
MR. JOHN THOMAS SCHORER.

"Carbine," and is a very fine upstanding horse of good bone, brown in colour, well topped, and constitutionally sound, and at the Narrogin Show of 1912—the only occasion that he has been exhibited by the firm—he carried off the first and champion prizes. Messrs. Schorer Brothers allow the use of this sire to the farmers of the district, who gladly avail themselves of the opportunity of improving their

Photo by W. E. Elston. MESSRS. SCHORER BROTHERS' "AVONDALE ESTATE," WEST PINGELLY.

stock. The average flock carried on the "Avondale" Farm verges on a 1,000 crossbreds of the merino-Lincoln type, which has been found the most profitable breed for the district, and the annual clip is shipped to London, where excellent prices are registered to the credit of the firm. A small herd of dairy cows for domestic use is grazed upon the property, and various other classes of farm stock are kept. The homestead was built by the present proprietors

stabling is most up-to-date, providing for sixteen horses with a couple of extra loose boxes, and the machinery shed, chaffhouse, barn,

MR. JOSEPH SCHORER.

in 1910, and in its design comfort and convenience have been studied, the material used being brick with iron for roofing purposes. It is surrounded by a small orchard, where all kinds of fruit are grown successfully for home consumption. The

fowlhouses, etc., all embody the latest ideas; while the working plant, including the various machines, is most complete. Messrs. Joseph and John Thomas Schorer were both born at Wandering, in Western Australia, the former on June 16, 1878, and the latter on November 25, 1875. They are the senior members of a large family, their father being Mr. John Schorer, a

"ZEECHIMO," "MUSKETRY"—"SEQUIN."

agricultural industry in various parts of the country. He settled in the Wandering district in the early eighties, and entered upon farming pursuits on a small holding which he took up from the Government and subsequently increased from time to time as opportunity offered under the conditions of land settlement at that period. He conducted his farms successfully until the year 1909, when he disposed of his properties and went to live in retirement with his sons at "Avondale," where he still resides. Mr. John Schorer has been very prominent in public matters in the district during the lengthy period of his residence there, and was one of the early members of the Wandering Roads Board, while he was always ready to give his support to any movement having as its object the advancement of the place. His sons, the gentlemen under review, upon the conclusion of their education at the local State school at an early age turned their attention to work on their father's farm, where they continued, thus laying the first foundation of the knowledge which has stood them in good stead in their subsequent career. Before entering

RECORD LOAD OF 115 BAGS OF WHEAT DELIVERED AT PINGELLY BY MESSRS. SCHORER BROS.

upon man's estate, however, they launched out on their own account in partnership in farming enterprise, taking up the properties referred to, the last of which—that in the Williams district—was purchased in 1910; and have made a thoroughly successful proposition of their venture, being regarded as among the prosperous farmers of the district.

TAYLOR BROTHERS, "Walwalling," Pingelly. (Hubert James

MR. JOHN NORRIS TAYLOR.

Taylor and Victor Sewell Taylor.) This well-known and important property was founded by the late John Taylor, grandfather of the present proprietors, who in the original instance took up a homestead block of 100 acres situated in the midst of an area of many square miles of country extending from Wagin to the near vicinity of York, which he held on lease for pastoral purposes close on half a century ago—the first wheat grown on the holding having been taken off a paddock adjoining the homestead as far back as the early seventies. Prior to taking up "Walwalling" Mr. John Taylor (who came from England in the early days of settlement in Western Australia) owned and developed that now historical property in the York district, "Yangedine," in present possession of the Marwick family. From him the estate under notice passed during his lifetime into the hands of his

son, the late John Norris Taylor, who shortly after assuming the conduct of the place directed his attention to the acquirement of further territory upon which to build up a home for himself and future generations. By degrees the boundary line was extended until the original 100 acres formed only a portion of a property comprising 627 acres, which represented the whole of the land obtainable in the vicinity at that period from the Government on account of the advent of the Western Australian Land Company. As his operations prospered and Mr. J. N. Taylor saw his way clear to purchasing and working a further area of country, he approached the above-mentioned company with a view to taking over some of the blocks of land adjacent to his holding and owned by them, and before his demise had brought the area of the estate up to 6,000 acres, its present acreage. Both John Taylor and John Norris Taylor were pioneers of the worthy and enterprising type representing the class to whom so much credit is due for facing the great difficulties of developing agricultural properties at a time when the industry presented far greater obstacles to a successful outcome of the labourers' toil than at the present day. Working with primitive implements and machinery in a country the conditions of which were but partially understood, handicapped by the lack of means of

transit and of conveyance for provisions and produce to and from their holdings, their operations kept back by the scarcity and expensive nature of labour, they fought a

MR. HUBERT JAMES TAYLOR.

brave fight and won through, bequeathing to their successors the results of their years of endeavour and in many cases of successful achievement. John Norris Taylor, especially, was recognized in every pastoral and farming district in the State as an authority in matters agricultural, and he attained quite a reputation for himself as a judge of horses, for some years prior to his death in 1908 filling the office of judge of heavy draughts at the Royal

Photo by W. E. Elston.

"WALWALLING" HOMESTEAD.

Agricultural Show at Perth. He also earned distinction as an exhibitor in the sheep section, where he was on many occasions a successful winner of prizes, and for several years held the position of inspector on behalf of the State Agricultural Bank. Upon the decease of their father Messrs. Taylor Brothers, the present owners, inherited the property, and have since carried on, on their own account, the farming proposition which they had previously been assisting to develop. "Walwalling" is situated in undulating country, with outcrops of granite here and there forming a feature of the landscape, and is classified as jam and York-gum territory, the soils being of mixed quality. It is an excellently watered estate, springs, creeks, and soaks abounding all over the property, and although the indispensable moisture may be obtained anywhere by sinking a few feet from the surface no need to resort to artificial methods of procuring water has ever yet occurred. Of the whole area 2,000 acres are cleared, close on half of this work having been accomplished by Messrs. Taylor Brothers since they took over the administration of affairs; and the ringers have been busy with their axes over that portion where clearing is not completed, preparing the way for the freestick, by means of subsequent burning operations excellent feed being produced for the stock. In ordinary seasons the pastures are well grassed with various natural growths, and the property

has the great advantage of being absolutely free from any trace of the noxious "poison" weed. A great deal of fencing has been done, and it is interesting to note in some of

MR. VICTOR SEWELL TAYLOR.

the paddocks portions enclosed by the old Harper fence of post and rails, denoting an era growing more and more remote in the history of the farming properties of the Western Australian State. Here, for instance, nine-tenths of the fencing—in the vicinity of 40 miles—is erected with plain and barbed wires run through timber posts, the wires running from six to nine in number. "Walwalling" is noted in the district for the excellence of its fences, no property in a very wide radius being

able to compete with it in this respect, and it is hardly going too far to say that it is considered by various authorities to be the best in the State. The operations carried on comprise mixed-farming pursuits, agriculture taking its place beside the pastoral side of the industry, and both proving satisfactory as regards the profits realized. The Messrs. Taylor Brothers crop about 600 acres annually with wheat, oats, barley, and peas, a speciality being made of the latter for the purpose of fattening sheep, the flock being turned in on the growing crop, which has proved a most profitable method of increasing the bulk of the mutton-producers in the least possible space of time as well as improving the weight of the fleeces. The system of cultivation pursued is that known as the three-year fallow system, which has been thoroughly tried and tested in the district and has been proved to give the best results. By this method the land is allowed ample opportunity to recuperate after cropping and its exhausted energies revitalized by the grassing and fallowing which follow the one season's producing efforts. The sheep are of the Lincoln-merino crossbred type, and the estate usually carries a flock of from 2,500 to 2,600, the wool from which is shipped to London, where the price obtained for it in 1912 was only a half-penny per lb. below the top price for Western Australian wool. The average weight of fleece is about 6 lb. From the lambing the excellent

CULTIVATED FIELDS SURROUNDING THE HOMESTEAD.

RR

total of 90 per cent. is usually averaged, evidencing a very healthy condition of things in this department. The horses at work on the farm number about twenty, and are chiefly Clydesdales, with a few of a lighter class for buggy use, etc. Most of them have been bred on the estate, but apart from attending to the replenishing of their own stock and keeping these indispensable

than for any pretensions to architectural style. It contains seven rooms, pantries, etc., all on one floor, and presents a very solid and substantial appearance, being built entirely of stone in a manner suggesting that it was meant to outlast the centuries. A small flower garden adorns the front of the house, and an orchard about three acres in extent is situated in the near vicinity, where

comparison with any other structure used for similar purposes in the district. HUBERT JAMES TAYLOR, the elder of the brothers, is a Western Australian by birth, having been born at "Walwalling" on August 8, 1881, while the younger, VICTOR SEWELL TAYLOR, was born on April 22, 1887, the same property also being his native place. Their scholastic training was received under private tutors in their father's house, and as they reached maturity they fell naturally into the work of the farm which they now conjointly control. The Messrs. Taylor Brothers follow in the footsteps of their father as regards the exhibition of their sheep and horses at the local shows, and have been most successful in securing awards in connection with these functions. Both are members of the Royal Agricultural and Mourambine agricultural societies, and take considerable interest in all movements having as their object the advancement and welfare of the neighbourhood in which they have resided during the whole of their lives. They are members of the Liberal League, and give their cordial support to the various athletic bodies formed in the district for the promotion of clean forms of manly outdoor sport. Mr. H. J. Taylor was married in 1903 to Vera, daughter of the late Thomas M. Dann, well known for many years in the Civil Service Department of Western Australia, who came from Kent, England, with his large family in 1886.

Photo by W. E. Elston. STABLES AT "WALWALLING."

workers young and fresh, Messrs. Taylor Brothers do not make the breeding of horses a feature of the farm. The cattle likewise are few in number, a small dairy herd for supplying requirements of the homestead being the only representatives of this class of stock at present grazed on the estate. The dwelling-house at "Walwalling" was built by

apples, pears, and various kinds of stone fruits are grown for the use of the family. The outhouses were erected at a much later period than the homestead, and are particularly modern and up to date in design. The stabling attracts admiration for its orderly and commodious arrangement providing accommodation for about twelve horses, and a chaffhouse

Of this union there are two sons and two daughters. Mr. V. S. Taylor is unmarried.

JOHN SHADDICK, "Warrambine," Pingelly. The subject of this notice was born near Torrington, Devonshire, on March 12, 1850, and is a son of the late William Shaddick, who came from the old country in the late fifties to essay the making of a home for himself and his family in the new country, which was regarded as a veritable "land of promise," three years later being joined in Western Australia by his wife and five children, of whom Mr. John Shaddick was one. The late gentleman interested himself in the affairs of the community wherein he had

MR. WILLIAM SHADDICK.

made his home, and with Messrs. Robinson and Seabrook was responsible for the erection of the first and only church at Mourambine. Shortly after arrival young Shaddick was set to shepherding sheep in the Mourambine district on behalf of Mr. Charles F. Brown, a member of one of the oldest families founded in this State, who was then engaged in sheepfarming pursuits in the Pingelly district. After a short period Mr. Shaddick was employed by the late Mr. C. C. Smith, of "Beambine," and at fifteen years of age relinquished this employment to commence work on his father's farm, "Warrambine," where he now resides—a property which was taken up by the late Mr. Shaddick in 1862. Originally the holding consisted of a block of 100 acres, held under the old homestead conditions, but additional land was afterwards acquired, until at the decease of the original owner the area had been increased to 1,100 acres. Since that period still further selections have

RR2

been taken up by Mr. Shaddick and his sons, and at the present time "Warrambine" exceeds 2,000 acres in extent. Of this about 1,200 acres have been cleared and are being cultivated on the approved system of alternately cropping and fallowing, from five to six hundred acres being cropped annually. Some attention has also been given to pastoral operations, a nice little flock of 400 merino sheep pasturing on the property at the present time, and in the past sheepfarming on a large scale was carried on by Mr. Shaddick, who devoted himself almost entirely to this line of industry, and had upwards of 3,000 sheep grazing over several pastoral leases which he held in the surrounding districts. On account of his wide experience he has earned a reputation in the neighbourhood of being an excellent judge of sheep, both for mutton and wool, and his advice on this subject is regarded as valuable. Many improvements have been made from time to time on the "Warrambine" Estate, the whole of which is securely fenced and the uncleared portion ringbarked in preparation for the burning operations which are an indispensable part of the process of clearing, which is continued year by year, and will be persevered with until the whole of the property is ready for development. Mr. Shaddick has spared a portion of his leisure time to take his fair share

general welfare of the district. A Liberal in politics, he is active in the promotion of the interests of that party when opportunity occurs, and in every way he has proved himself one of those worthy and useful

W. F. Elston,

Wagin.

MR. JOHN SHADDICK.

settlers who have played so important a part in the development of the State's resources. Mr. Shaddick was married in 1874 to Elizabeth Ann, daughter of the late Henry Walton, one of the pioneer settlers of the

MR. JOHN SHADDICK'S RESIDENCE, PINGELLY.

of responsibility in connection with local government, and for several years served as a member of the Mourambine Roads Board; while he has always been distinguished for the warm interest which he has displayed in all movements and organizations having for their object the

Avon Valley, who came from Birmingham, England, to Western Australia about twelve months subsequent to the gazetting of the Swan River settlement as a Crown colony. He has a family of nine surviving—five sons and four daughters.

ALFRED SNOW, "Grass Valley," Pingelly, is a son of the late John Snow, who came from Essex, England, to Western Australia in the early part of 1852, bringing with him his wife and children, and settling in the York district, where he carried on farming pursuits for a number of years. The subject of this notice was only four years of age upon his arrival in the colony, having been born in Essex on November 25, 1848, and coming to a country where schools, especially in the rural districts, were few and far between, he was unable to benefit by any regular means of instruction. In passing, it may be mentioned that this was not the least of the sacrifices made by the early pioneers in the opening up of the State, the fact that their children were compelled to forego all the advantages of a good education being a severe trial to many of those who came to carve out a home for future generations on the virgin soil of a new and untried territory. Not only were there few opportunities of obtaining teachers, but so scarce was labour and so strenuous the demands of farming life that every available lad was pressed into service as soon as he grew old enough to assist in any way in the manifold duties in connection with the industry. At a very early age young Snow was put to shepherding work, which he followed until he was sufficiently strong to take up the more laborious side of pastoral and agricultural enterprise. After working as an employé for some time he launched out on his own account in the sandalwood trade, and put in a very strenuous twenty years in

of the railway between York and the capital. Much of the sandalwood was obtained some forty to fifty miles east of the great southern railway line, and each load, from the point of loading to the point of delivery in Perth, would make a fifteen to twenty days' trip. In this way he was able to maintain his family, and

W. E. Elston,

Wagin.

MR. ALFRED SNOW.

in the short intervals obtainable between his trips Mr. Snow devoted himself to the working of his little farm, which he had taken up as a block of 100 acres homestead area in the year 1874. This was the beginning of the "Grass Valley" Estate, which was gradually increased in dimensions at first by selection and

acres of good undulating country, which will bear comparison with any other farming property in the neighbourhood. His last purchase was of "Wynarlin," one of the old original homes of the district, possessing the historic value which is imparted by antiquity, and present on this estate is a good seven-roomed stone dwelling-house, with substantial out-houses, good stabling, etc. The general character of the country composing "Grass Valley" is a rich chocolate soil, mixed with stretches of sandy loam, and equally suitable for agriculture and grazing. The whole place is well fenced and efficiently watered, and 1,200 acres have been cleared and cropped on the two-year fallow system, yielding returns equal to any in the district. The principal product of the cultivation fields is wheat, and in this department the satisfactory average of 16 bushels to the acre is obtained. A flock of about 400 crossbreds are grazed on the property, and fourteen horses of the best mixed sorts for use on the farm are kept, a few being bred every season to keep up the supply. The homestead, which was built by Mr. Snow some twenty years ago to replace the old slab hut of the pioneer which existed up to that date, is substantial and comfortable, convenience having been made the prime consideration in its erection. Mr. Snow recently has passed the "Grass Valley" farm over to his two younger sons, with whom he now resides in partial retirement, while his elder sons, Messrs. Robert and Henry Snow, are farming on their own account in the Wickepin area. Mr.

cutting the valuable timber and afterwards carting it to Perth, before the days of the construction

latterly by the purchase of small adjoining farms, until it is now a highly-developed farm of over 1,600

Snow was one of the first members of the Pingelly Roads Board at its inception, which seat he occupied for

some years. He also took an active part in church matters in the district, and has held office as churchwarden in connection with the Mourambine Anglican Church. In 1871 he married Mary Ann, daughter of the late Henry Thomas Walton, of York district, and has four sons and five daughters. Mrs. Snow's decease occurred in 1889.

LARS EMIIL LANGE, owner of "Grass Hollow" Farm, Pingelly, is a native of Nattra-Soug, Tausberg, where he was born on September 19, 1849, his father, the late Christian Lange, being a sea captain of the port of Tausberg. He received his education in the place of his birth and subsequently at Tausberg until the age of fourteen, when he was apprenticed to a seafaring life. Upon return from his first trip he was sent to a marine college to be trained for the position of officer, thenceforth spending his time in studying the theoretical side of his profession alternately with periods in which he was engaged in the practical work at sea necessary to complete his apprenticeship. In the course of one of his voyages he visited Australia, and becoming enamoured with the possibilities of the country he decided to settle in the Central State, where he arrived in 1867. His first experience in colonial life was obtained as a station hand, and after he had acquired a better knowledge of the English language—which he had previously studied at school—and become accustomed to the altered condition of things incident to a new country, he took contracts in fencing and dam-sinking from the pastoralists and the Government of South Australia, also turning his hand to other developmental work then proceeding in the province. In the late seventies he took up a block of scrub land at Cunningham, Yorke Peninsula, for farming purposes, and worked this block successfully for about eight years. At the end of this period he disposed of that property and purchased another farm near Arthurton, which was only partially improved, and for sixteen years continued the development of this property, which he considerably enlarged by the purchase of additional holdings. In 1906 he sold out all his interests in South Australia, having decided to come to the Western State, which was promising good things for the farmer and pastoralist, especially those with large families

to settle advantageously. Almost immediately he purchased the farm of 1,100 acres where his homestead now stands in the Pingelly neighbourhood, and subsequently was able

W. E. Elston, Wagin.  
MR. LARS EMIIL LANGE.

to secure some small adjoining blocks which were partly improved, until the present "Grass Hollow" Farm, which is conducted by Mr. Lange and his two younger sons, comprised 2,200

cultivation is carried on on a fairly extensive scale, wheat being the principal crop produced. The estate is well fenced, and many improvements have been made from time to time, all the appointments of a well-ordered farm being found within its boundaries. It has among other natural advantages the important one of being adequately watered without artificial means, and has in every respect rewarded the efforts which have been lavished upon it by the owners. A small flock of about 500 sheep is grazed on the pastures, but apart from these not much attention is given to pastoral interests, agriculture absorbing the greater part of the time and attention of the owners. In addition to "Grass Hollow" properties have been taken up by Mr. Lange's three other sons embracing some 3,000 or 4,000 acres in the same district, and here they have settled down with their families to farming occupations with every encouragement to continue. Mr. Lange is a member of the local branch of the Liberal League of Western Australia, and occupies a seat on the committee of that influential body. He is associated with the local agricultural society, and was one of the founders of the Pingelly branch of the Farmers and Settlers' Association. In 1875 he married Emily Sarah, daughter of the late Joseph

MR. L. E. LANGE'S RESIDENCE, PINGELLY.

acres of land in quality equal to any in the district. Of this nearly 1,200 acres are cleared, the property being in a high state of development, and

Allen, one of the earliest English emigrants to South Australia, and has a family of five sons and six daughters.

**BODEY BROTHERS, Pingelly.** (Oliver Evan Bodey and Matthew George Bodey.) The gentlemen under review are both natives of Horsham, Victoria, being fourth and fifth sons respectively of Mr. James Bodey, a well-known farmer and breeder of prize stock in that district. Mr. Oliver Evan Bodey was born on January 27, 1876, and his brother on January 14, 1881, and both were educated at schools in their

MR. OLIVER EVAN BODEY.

native place. From a very early age, even whilst still at their studies, they made themselves of considerable value in the duties of the home farm, and so laid the foundation of the expert knowledge of the farming industry and stock generally which has stood them in such good stead during subsequent years. Several members of the Bodey family have been

distinguished breeders and judges of horses and other stock in the Eastern States, an elder brother of the subjects of this article, and also their paternal uncle, in addition to Mr. James Bodey, being recognized in pastoral circles as men whose opinion upon such subjects is worthy of careful attention. Accordingly, after the advent of Messrs. Bodey Brothers to Western Australia in 1908, when they established themselves as importers of live stock from the older portions of the Commonwealth, they found themselves in a most favourable position, being able to rely with every confidence not only upon their own experienced judgment, but also upon the wider knowledge of their relatives to guide them in their choice of importations to suit the somewhat altered conditions which they found in the Western State. That conspicuous success has attended the operations of the partners is evidenced beyond doubt by the fact that, since their arrival they have imported more draught horses—principally stallions—than almost any other importer or firm of importers in the State. It is their custom to hold parades and auction sales at various centres, by means of which they obtain purchasers over a wide radius of country, and in this way the Western Australian farmers receive the benefit of being brought into touch with those who have made a study of their requirements, and are able to supply them with reliable stock to suit the different departments of industry in which they may be engaged. Though devoting their time principally to this line of business, Messrs. Bodey Brothers also own a farm of about 6,000 acres in extent

called "Yeanilling," and situated about eight miles east of Pingelly. This property is in a highly-developed state, over 2,600 acres having been cleared and cultivated. It

MR. MATTHEW GEORGE BODEY.

is well watered by soaks and wells, and windmills have been erected in various localities for the convenient serving of the water to the stock—five of the latter being present on the property. A large amount of fencing has been completed, and the estate is subdivided into about thirty paddocks. As might be expected ample provision has been made for the accommodation of equine stock, and among the outbuildings may be found excellent stabling, loose boxes being provided for forty horses. Mr. Oliver Evan Bodey is a member of the Pingelly - Mourambine Roads Board, and serves as vice-president of the local agricultural society, and with his brother is connected with all the sporting clubs and general organizations of the district. He married in 1913 Augusta Emily, daughter of the late J. Schmidt, of Mount Gambier, South Australia (where his father now lives in retirement). Mr. Matthew George Bodey in former times spent between two and three years as a member of the 4th Victorian Contingent, Australian Infantry Regiment, and whilst on active service in the war in South Africa between the Dutch and the British transferred to the Canadian Scouts Corps, in which force he held rank as sergeant-major. He served in several engagements, being frequently under fire, and upon his retirement from the service received

Photo by W. E. Eaton. MR. BODEY'S RESIDENCE, PINGELLY.

the King and Queen's medals respectively and four clasps. Since coming to Western Australia he has stood for parliamentary honours, contesting the Pingelly seat at the elections of 1912, but without success. He was a foundation member of the Veterinary Board, being one of the two farmers occupying seats on that body, to which he was re-elected at the expiry of his first term of office. Mr. M. G. Bodey married in 1908 Mary Ellen, daughter of the late William Nield, a descendant of one of the heroes of the Peninsula War.

**SAMUEL HARRISON EDWARDS**, "Talga," *via* Pingelly, was born at the "Speldhurst" property, near Beverley, on February 24, 1863, and is the eldest son of the late Thomas Edwards, who was also a native of this State, having been born near Guildford in the late thirties. The founder of the family in Western Australia—the late William Edwards, grandfather of the gentleman under review—came from England by the ship "Rockingham"

MR. THOMAS EDWARDS.

in the year 1829, this being the first vessel to leave England with settlers for the new Swan River settlement. On the journey out the vessel sustained damage in a storm and had to put into the Cape of Good Hope for repairs. During the following year he settled at Guildford, and whilst engaged in farming with the assistance of his wife he opened and carried on the conduct of the first general store at that centre. Some few years later he took over the lease of the

"Sandgate" property, near York (now in possession of Lady Forrest), from the late Mr. Hamersley, and continued farming operations there for a lengthy period, subsequently purchasing the "Speldhurst" Estate. Here Mr. S. H. Edwards' father was brought up and spent the years of his early manhood in working upon the farm, until at the decease of his parent he co-inherited the property with his brother, the late Charles

Bartleto, Perth.

MR. SAMUEL HARRISON EDWARDS.

Edwards, and residing at "Mount Pleasant," a part of the "Speldhurst" Estate, spent the remainder of his life in developing the land on his own account. The subject of this notice received his education primarily at a Government school, and also studied under private tuition in Perth for a limited period. He obtained useful experience on his father's farm until, reaching man's estate, he accepted a position as overseer on "Globe Hill" Station in the Ashburton district, the property of Messrs. McRae & Harper. This he retained for three and a half years, when an opportunity occurred to obtain a more lucrative post of the same nature on "Ballijong" Station, which, however, he relinquished after a short time in order to start the "Ulawarra" Station in conjunction with Mr. Patrick Montague, which partnership existed for some five years. After Mr. Patrick Montague's withdrawal Mr. Edwards continued to work the property with another partner and subsequently purchased the whole interest, carrying on on his own

account until 1904 when he disposed of all his property in the north-west and came to the East Pingelly district, where he selected his present holding of over 5,000 acres, to the development of which he has since devoted his attention. For two years Mr. Edwards filled the office of president of the Pingelly-Mourambine Agricultural Society, and he was a member of the Mourambine Roads Board for three years, having previously served in the same capacity on the Ashburton Roads Board for some time. He is a Past Master of the Masonic fraternity, being connected with the Pingelly Lodge, No. 75, W.A.C. In sport he is very fond of cricket but his long acquaintance with bush life has made of him a crack shot with the gun and rifle and he finds his chief recreation in hunting, the wild game of the district paying toll to his skill.

**JOSEPH FRANCIS BELT**, of "Waranga" Farm, Pingelly, was born at Runnymede, Victoria, on

W. E. Elston, Wagin.

MR. JOSEPH FRANCIS BELT.

April 23, 1870, and is a son of the late William Belt, who came to Australia at the time of the first great gold rush to Bendigo in the early fifties and was associated with the gold-mining industry for some considerable time, subsequently becoming an agricultural settler at Runnymede, where he followed farming pursuits until his decease in 1882. The gentleman under review was educated at the Runnymede State

school, and shortly after entering his teens began to assist his father on the home farm, where he remained until he left for Western Australia in 1903. His intention being to settle on the land in this State, he immediately purchased the holding upon which his home is now situated, which was then a partially-improved farm of 1,200 acres, and ever since has given the whole of his time and attention to the development of this property, which is now regarded as one of the most valuable farms in the district. Mr. Belt, notwithstanding his devotion to his farming interests, has shouldered his share of public responsibility and fills the office of president of the Pingelly-Mourambine Agricultural Society, while he manifests a general interest in all affairs affecting the progress of the place. A member of the Roman Catholic communion, during the whole of his life he has been prominent in that body, both in his native State of Victoria and on his adopted soil. Since his advent to Pingelly he has furthered the progress of the Church in every possible way, as also has his wife, who is heart and soul with him in such matters. For a score of years he has been a member of the Australian Natives' Association, and among the various offices he has held in the local branch are those of trustee, vice-president, etc. He has been twice married, his present wife being Mary, daughter of the late James Meany, of Blackwater, County Clare, Ireland.

**JOSEPH STONE**, "Mount Royal," Pingelly, was born at York, Western Australia, on September 27, 1855, and is a son of the late Martin Stone, one of the English emigrants of the early days who was engaged in the farming industry in this State from his arrival until the time of his death. Facilities for education being few in the boyhood days of the gentleman under review, at the age of ten he began work as a shepherd, and at fourteen was employed as a teamster in the sandalwood industry, in conjunction with which he carted produce, wool, etc., to the coast from the York district. These avocations occupied him until his twenty-sixth year, when he turned his attention to farming pursuits, which he has followed ever since. For some time he managed the "Staunton Springs" Estate—now the property of Mr. G. H. Bostock—on behalf of the late

Stephen Monger, and subsequently rented the place on his own account and carried on operations as a farmer until it was purchased by the present owner. In 1899 Mr. Stone selected 800 acres of Government land adjacent to 250 acres which he had previously purchased from the Western Australian Land Company in

W. E. Elston,

Wagin.

MR. JOSEPH STONE.

the Pingelly district, and coming to live on the holding at once began initial operations on what has since become one of the prosperous farms of the district. He has at the present time about 800 acres of cleared land out of a combined area of 2,000 acres held by him and his sons, and of this from 300 to 400 acres are cropped yearly, while on the pastoral side a small flock of between 300 and 400 sheep is grazed on the property, and pigs, cows, etc., are kept for domestic purposes. For about eighteen years Mr. Stone has been a member of the Mourambine Roads Board, and he was one of the founders of the Pingelly-Mourambine Agricultural Society, of which he has been a committeeman for several years. He takes an interest in Friendly Society work, and has been connected with the M.U., I.O.O.F., for over thirty-six years continuously. In 1880 he married Agnes, daughter of Mr. William Thacker, one of the very early settlers of this State, and has seven sons and three daughters.

**JAMES MCGINTY**, of "Elderslie" Farm, Pingelly, was born at Paisley,

Scotland, on September 13, 1856, and is a son of the late James McGinty, well known for over half a century as one of the most clever cotton-spinners of the great manufacturing city. He received his education at Joseph Muir's private academy at the same town, and subsequently was apprenticed to the paper-staining trade, in course of time removing to London, where he entered the prominent printing establishment of Charles Goodall & Sons, with which firm he continued for eight years, considerably enlarging his knowledge of all branches of the trade. In 1888, as a result of the firm of Messrs. Sands & McDougall launching out into new channels of business, they required the services of an expert, and Mr. McGinty was chosen to come to Australia, where

W. E. Elston,

Wagin.

MR. JAMES MCGINTY.

he remained under contract to the firm referred to for three years. At the end of that period he decided to start on his own account, and for fifteen years carried on business in Melbourne with pronounced success. His son, having a leaning towards settling on the land, Mr. McGinty cast round for information regarding the relative advantages offered in this direction by the different States, and finally selecting Western Australia as the venue of his operations arrived in this State in 1904. Almost immediately he selected 880 acres of land, where he has since made his home, and regardless of the fact that he had no previous knowledge of agriculture or pastoral pursuits proceeded to

work the virgin country with very marked success. Eventually he acquired further blocks and continued to enlarge his possessions until his property extended over 1,560 acres, 1,000 of which at the present time are cleared, enclosed, and subdivided with about 20 miles of fencing. The farm is well watered with good fresh soaks and springs all over its area, while a permanent creek runs through the centre of the property. About 500 acres have been brought under cultivation and a flock of from 200 to 300 merino sheep is grazed on the pastures, both departments of industry having proved very profitable. Mr. McGinty is a member of the Pingelly Agricultural Society and is a member of the local branch of the Liberal League of Western Australia. Before coming to this State he was for many years prominently identified with rifle-shooting in Victoria, and has filled the honourable position of being one of those chosen to represent the sister State in interstate shooting contests—having been a most consistent shot and the winner of many trophies, prizes, challenge cups, etc. In 1878 Mr. McGinty married Jane, daughter of the late George Jamieson, of Kilbarchan, Scotland, and he has a grown-up family of one son and two daughters.

**ROBERT JOHN PEARSON**, J.P., merchant, of Pingelly, was born at Perth, Western Australia, on May 1, 1875, and is a son of Mr. Charles Pearson, now living in retirement at Albany, and for many years a well-known Customs agent at that port. He was educated at the Government school at Albany, and at an early age entered upon commercial pursuits in connection with the late firm of John Moir & Co., a name familiar in the pioneering days of the south coast. Having passed through all the departments of the house, Mr. Pearson resigned from this employ in 1904 in order to take a position in Mr. Nicholson's store at Pingelly, of which subsequently he took over control and conducted on behalf of the proprietor until 1909, when he purchased the business and has since carried on on his own account. Mr. Pearson's connection has increased steadily with the growth of the district, and he has now one of the most progressive general storekeeping concerns along the great southern railway line.

He has always been distinguished for the active interest he displayed in the public affairs of the district, and in 1908 was appointed by the Moore Administration to the Commission of the Peace, since when his duties on the local Bench have absorbed the greater portion of his time not given up to the demands of his business.

W. E. Elston, Wagin.  
**MR. ROBERT JOHN PEARSON.**

It is interesting to note that Mr. Pearson is a member of one of the oldest families in Western Australia, his paternal grandfather having arrived among the earliest of the pioneers and settled on the Greenough Flats near Geraldton; while his mother belonged to the well-known family of Green, established for over half a century around the metropolis. He was married in 1900 to Harriett, fourth daughter of Mr. George Moir, the eldest survivor of that old and highly-respected family who played a leading part in the pioneering of Albany and the surrounding district. His family consists of one son and one daughter.

**BENJAMIN HUGHES**, wheelwright, carriage-builder, and implement maker, Pingelly (trading as Tregurtha & Hughes), is a Victorian, having been born at Bendigo on April 18, 1868. His father, the late Richard Hughes, emigrated from Liverpool, England, in the early fifties, and carried on farming pursuits for many years at Elmore, in the sister State, where the gentleman under review attended school until

fifteen years of age. Having completed his studies, he learnt the trade of coachbuilder in the same town, subsequently finishing his apprenticeship in some of the leading factories of the Victorian metropolis. In 1892 he came to Western Australia and followed his trade in Perth for twelve years, during the greater part of this time occupying the position of foreman in the well-known business of Daniel White & Co. In 1904 he formed a partnership with Mr. J. E. Tregurtha, and purchased the business in Pingelly formerly conducted by the late James Lobban, since which period he has been engaged in successfully working up this business from a very small concern to a proposition of considerable magnitude. About fourteen men are employed on the works, where all departments of the trade are carried on, and a large connection all over the great southern district has been built up by Mr. Hughes, who in April, 1912, bought out his partner's interests and is now sole proprietor. Since his advent to the district he has taken a prominent part in local affairs and for four years was associated with Mourambine Roads Board, during half of that period filling the chair of that body. He was one of the founders of the local board of health, in

W. E. Elston, Wagin.  
**MR. BENJAMIN HUGHES.**

which he occupied office for some years. He has taken a keen interest in the progress of the mechanics' institute, with which he has been connected from a very early period of his residence in the town. He married in 1891 Frances Harriett,

daughter of the late James Bryant Tregurtha, of Elmore, Victoria, and has one son and one daughter.

**GEORGE NOBLE MURDOCH**, proprietor of the Pingelly Hotel, Pingelly, was born at Nowra, in the Shoalhaven district of New South Wales, on June 10, 1866, and is a son of the late David Murdoch, a well-known contractor and builder of the Mother State, of which he was also a native. The gentleman under review received his education partly in New South Wales and later on in Victoria, whither he accompanied his family during his boyhood. Upon leaving school he became engaged in station pursuits on the "Red Hill" Station property in Gippsland, acting as stockman, etc., for a couple of years. Subsequently he returned to New South Wales and established himself as a contractor for road-building, carrying, and so forth, and spent several years, chiefly in the latter business, between the sister States. In 1891 he came to Western Australia, and was first employed on the building of the midland railway line, afterwards assisting in the construction of the Geraldton wharf. At the period of the great mining boom in the nineties he proceeded to the Murchison goldfield, and for about twelve months followed the usual programme of prospecting, dry-blowing, etc., with varying results. Not meeting with any pronounced reward for his labour he returned to the Geraldton district and worked on the Geraldton - Mullewa railway construction for some time until, receiving the offer of a position with the firm of Messrs. Atkins & Law, he accepted the charge of the firm's

horses on the construction of the telegraph line from Mullewa to Nannine and continued in this employ until the contract was completed. Subsequently he was engaged for a couple of years as coachdriver on behalf of the firm of Gascard & Co., mail contractors in the Murchison district, becoming very well known on this line, and at the close of this period the advent of the railway into Cue tempted him to take advantage of this being the terminal station and to start from this centre as carrier on his own account. Having carried on

Bartlett, Perth.

MR. GEORGE NOBLE MURDOCH.

successfully in this line of business for some time Mr. Murdoch at length relinquished operations in order to enter the licensed victualler's trade in the same town, and a year later, disposing of this connection, he

purchased a combined hotel, store, and butchering business at Abbots, a mining camp, now numbered among the non-existent of such settlements. After two years there he spent another two years at Minderoo, and eventually selling out his interests he came to Perth, where he established himself as "mine host" of the Newcastle Club Hotel in Newcastle Street. For twelve months he carried on this business, after which he disposed of the goodwill and shortly afterwards took over the licence of the Cannington Hotel, which he conducted for some three years. The freehold and goodwill of the Pingelly Hotel being at this time in the market Mr. Murdoch became the purchaser, and since 1907 has conducted this well-known hostelry, which during the period of his occupation has well earned its title to rank among the first-class houses of its kind in the State. In the first instance he thoroughly renovated the hotel, rebuilding the major part and freshly appointing the whole premises with new fittings, furniture, etc., until everything had been brought up to date, and both in the matter of accommodation and cuisine the house is now not to be surpassed by any other of a similar nature outside of the metropolis. The Pingelly Hotel has the ticket of the Commercial Travellers' Association, which assures its popularity in the mercantile world, and every class of visitor may be confident that his interests will be well looked after and courteous attention paid to his requirements. During Mr. Murdoch's term at Cannington he occupied the position of chairman of the local roads board, which position he retained after an unopposed election until the creation of the municipality. He was also chairman of the Cannington Agricultural Society for three years. He is a member of the Pingelly Roads Board and of the local health board and agricultural society, and is a supporter of all clean forms of sport in the district, personally devoting his hours of leisure to the pastime of golf. In his youth he was one of the crack amateur horsemen of New South Wales country districts, and with the ribbons, either single or four-in-hand, there are few even yet to rival him. He was married at Cue in 1896 to Charlotte, daughter of Mr. Frederick Cornell, of Port Adelaide, and has a family of three sons and two daughters.

MR. G. N. MURDOCH'S HOTEL, PINGELLY.

**RICHARD HENRY THOMPSON**, who has been a resident of Western Australia for the past eighteen years, was born at Gosberton, Lincolnshire, England, on August 20, 1866, and is a son of the late Joseph Thompson, a farmer of that country. He was educated in his native village, and leaving school at a very early age went to work on a farm, where he remained for four years. He was then apprenticed to the butchering trade at Boston, Lincolnshire, and after completing his indentures followed this business for some years, eventually opening a small butchering establishment on his own account in London. Tiring of the drudgery involved in small retail trade in the great city he decided to throw up his connection and see something of the world, and with this object in view proceeded to America, where he gained valuable experience in several different branches of his trade in the biggest butchering firm in the world, *viz.*, Swift & Co., whose business extends all over the globe. After five years in this connection in Chicago and California he continued his travels to Portland, Oregon, and after a year at this centre found employment in various parts of the United States before leaving for Sydney in the early nineties. Upon arrival in Australia he was engaged for some time in the Sydney Meat Preserving Works, and subsequently was identified with the Ross River Works in Queensland. In 1895 he came to Western Australia, his first four years in this State being spent in Perth with the firm of Messrs. Albert & Co., from which he severed his connection in order to accept a position as manager of the meat department of the Western Fresh Food & Ice Company, under the control of Messrs. Forrest, Emanuel, & Company. At a later date Mr. Thompson occupied the post of wholesale grader for three large firms then controlling the meat trade of Western Australia, and in 1906, relinquishing business interests for the time being, took a trip with his family to his native land, where he spent the better part of a year visiting various places in England and on the Continent. Prior to his

departure upon this journey Mr. Thompson was made the recipient of a handsome presentation from those who had been connected with him in the wholesale meat trade; and

W. E. Elston, Wagin.  
MR. RICHARD HENRY THOMPSON.

upon his return resumed his association with the trade, spending a short time with the firm of Forrest, Emanuel, & Co. as buyer and inspector. In the year 1907 he decided to relinquish his position with the last-named firm and commence in business on his own account, and

since. The premises, situated in the main thoroughfare of the town, were rebuilt and fitted up by Mr. Thompson on the most up-to-date lines, the shop being splendidly ventilated and designed with a view to the expansion of business expected with the development of the district. The front is tiled in dull-green, the scheme also being carried out on the inner walls, ensuring perfect cleanliness; a cold chamber and wire safes have been installed for the protection of the meat from flies and heat; and a large roomy office has been added, with spacious outhouses and shelters, the whole being kept spotless and free from the slightest suspicion of anything unwholesome. Mr. Thompson's wide experience of the trade in various parts of the world renders him peculiarly fitted to succeed in the enterprise which he has embarked upon, and which is now well established under the most favourable of auspices. In addition to his trading interests he also has a stake in the agricultural industry, owning a farm of 650 acres adjoining the town boundary, the conduct of which he personally supervises. He is a patron of all clean forms of sport and one of the founders of the Pingelly Trotting Club. Mr. Thompson was married in the year 1901 to Dorothy Jane, daughter of Mr.

Photo by W. E. Elston. MR. R. H. THOMPSON'S PREMISES, PINGELLY.

accordingly he purchased the connection built up by Mr. Windsor in the town of Pingelly, and has conducted a thriving trade there ever

Clement Beecroft, one of the very early pioneers of Western Australia, and has a family of two sons and two daughters.

**STANLEY SHEPHARD**, general merchant, Brookton, was born at Marion, South Australia, on February 21, 1873, his father, the late James Shephard, being a farmer who came from Gloucestershire, England, in the year 1836 and was afterwards engaged in the agricultural industry in the northern part of the sister State for many years. The gentleman under review received his education at Gladstone, and continued his studies until his later teens, having two years' experience as monitor in the South Australian State schools. Before completing his nineteenth year he relinquished scholastic duties in order to enter a mercantile house, and for a short time was engaged as junior assistant in Mr. A. C. Catt's store in the town before referred to. Here he passed through the grocery and hardware departments of the general business, and after continuing in this connection for some four years, subsequently became acquainted with other branches of the trade in association with Mr. B. Manson at Craddock in the same State. Here he spent another four years, and at the breaking out of the war in South Africa between the British and the Boers he volunteered for service, and

was sent to the front in the Sixth South Australian Bushmen's Contingent. In connection with this corps he was present at engagements

W. E. Elston, Wagin.  
MR. STANLEY SHEPHARD.

in the Orange River Colony, the Transvaal, and Natal, receiving for his services the King's Medal and Three Clasps. After his return from

South Africa he again joined the firm of B. Manson at Craddock, and managed the business at that centre for about four years. Being impressed with what he had heard of the great possibilities of the Western State he came hither in 1905, and upon arrival accepted a position with the firm of Messrs. Cameron & Goldsmith at Wagin. After remaining there for twelve months, he was offered a junior partnership by Mr. F. H. Button in his store at Brookton, and having continued in this business for four years ultimately purchased the interest of his principal, and since 1910 has controlled operations on his own account, this being the leading business of the place. Mr. Shephard holds the position of honorary secretary of the Brookton Agricultural Hall, and takes a cordial interest in all matters dealing with the welfare of the district. He displays a deep concern in the political situation of the moment, and is a member of the Liberal League. In the matter of recreation he finds his chief pastime in the game of tennis. He married in 1911 Bertha, daughter of Mr. John Wearne, of Subiaco, Western Australia, and has one son, Stanley Maxwell.

### NARROGIN AND WILLIAMS.

Narrogin is situated on the great southern railway line nearly midway between Perth and Albany, and as the centre of a rapidly rising district is a thriving and prosperous town of about a thousand inhabitants. "The country, which lies high, is undulating, the highest point on the railway line in this direction being 1,100 ft. above sea level. The soil is variable, some very good loamy soil being obtainable, while the tops of the hills are usually an ironstone gravel. The land is well adapted for wheat-growing, sheep-breeding, and general mixed farming, as well as dairying. Although the 'York Road' and 'Box' poison grow on this area, if they are carefully and systematically hoed out, stock can be depastured with very little risk." The rainfall varies from 13 in. to 14 in. annually, and is well distributed, so that the district is particularly adapted for wheat-growing. Narrogin was the first town on the great southern extension to become a municipality, and since that time has made considerable progress. It possesses a town hall and municipal offices which have cost about £3,500, courthouse, lands agency, and district surveyor's office, and hotels and public halls. Several of the associated banks have branches in the town, and these, combined with substantial business premises and an increasing

number of handsome private residences, give an air of stability and permanence. Since the completion of the railway from Brunswick on the south-western line through Collie to Narrogin the town has grown considerably, and when the line from Narrogin to Merredin, already built as far as Wickiepin, is completed, it will have practically direct communication with the eastern goldfields. In addition the survey of the Narrogin-Armadale line, which it is anticipated will reduce the distance from Fremantle by 57 miles, has been authorized, so that it is confidently expected that Narrogin will in time become an important railway centre. About four miles out of the town there is the Narrogin State Farm, which has accommodation for forty-four students, being the only State farm in Western Australia to which students are admitted. Most of the work on the farm is done by the students, who are thus enabled to gain that practical knowledge and experience so necessary to those who look to farming as a living. Occasional lectures are given to the students, but these are only secondary to the practical work. The farm, which was established in 1903, consists of about 3,000 acres, most of it under wheat, though sheep-breeding, dairying, and mixed farming generally also find a place.

Students are admitted from the age of sixteen at a fee of £10 per year, but are not compelled to remain for any particular period. Most of them remain there only so long as they think necessary to learn sufficient to work profitably on their own selections. *The Great Southern Leader*, published on Fridays, and *The Narrogin Observer*, issued on Saturdays, are two progressive country newspapers, which not only give an extensive *résumé* of general news, but pay particular attention to the various events and occurrences of interest taking place throughout the whole district.

WILLIAM LE FEVRE GRAHAM, M.R.A.C., farmer, "Minabbie," an estate situated eight miles west of Narrogin, is a son of Mr. William Graham, who came to Western Australia in the late seventies. He was born at Green Plains, near Kadina, South Australia, and received his primary education chiefly by private tuition, subsequently concluding his scholastic career at Whinham College, North Adelaide. Subsequently he took the full course at the Roseworthy Agricultural College, taking his diploma from that institution in 1895. With the object of gaining further experience he became engaged in the wine-making industry with the firm of Hardy Brothers, the celebrated vigneron at McLaren Vale, in the Central State. Having remained with this firm for some time Mr. Graham came to Western Australia and undertook the charge of a party of men engaged on the construction of the Eucla to Norseman telegraph line. Having witnessed the completion of the line he turned his attention to the scientific side of agriculture, and accepting an appointment from the Government as inspector under the Insect Pest Act carried out the duties attached to that position for a considerable period. In 1897 he selected a portion of his present property in the Narrogin district, and has since extended his boundaries, making a snug little farm of about 3,000 acres, where his operations in cereal-growing and sheep-raising have been signally successful. His flock consists of 1,000 sheep, a cross between the merino and Lincoln having given good results, and a general air of prosperity pervades the fields and folds. Mr. Graham, since his advent to the district, has shown himself keenly interested in its progress, and becoming dissatisfied with the

trend of the Liberal Administration in its operation at the rural centres he eventually embraced the politics of the Labour Party, and is now a member of the Australian Labour Federation. In 1912 he was the candidate selected to represent the interests of Labour in the south-east province at the general elections for the Legislative Council. In public affairs, more strictly local, he

W. E. Elston,

Wagin.

MR. WILLIAM LE FEVRE GRAHAM.

plays his part, being a valued member of the roads board, to which he was first elected in 1898, and in addition holds the honorary position of chairman of the Roads Board Association of Western Australia. He is connected with the Narrogin Agricultural Society, in which body he has held office on several occasions, at one time acting as secretary; and for some time he has held the post of inspector on behalf of the Agricultural Bank. All forms of clean, manly sport appeal to him,

Eighteen miles west of Narrogin is the township of Williams, through which the Collie-Narrogin railway now passes. Situated on the Perth-Albany main road it was a mail coaching centre in the early days of the State, and as such was a place of some importance. After the great southern railway was completed its position dwindled, but since it has become a station on the railway from Collie it has shown a tendency to increase again. It is surrounded by land of excellent quality, and has a good and well-distributed rainfall—the two requirements of an agricultural district.

and he upholds free participation in the same, himself setting the example by joining in the various diversions of this kind in the district. In 1908 he married Thekla Emma, daughter of the late Mr. Ernest Wilhelm Theodor Pustkuchen, late of Adelaide, and has two sons.

MICHAEL BROWN, Mayor of Narrogin, was born at Tullarone, County Kilkenny, Ireland, on August 15, 1850, and is a son of the late Thomas Brown, who came to Western Australia in 1857 and settled in the Toodyay district, where he remained for a number of years. Later on, in the sixties, he became one of the pioneer farmers of the Hotham River district, near Wandering, and the gentleman under review, at the conclusion of his education gained his first initiation into farming pursuits on the home property, "Noombling," which, taken up in the early days of colonization as a tillage lease of 100 acres by Sergeant Kelly (father of Bishop Kelly, of Geraldton) was subsequently purchased from that gentleman by Mr. Thomas Brown. While yet in his teens, young Brown joined his brother in a farming venture at Wandering—which may be said for many years to have belonged *in toto* to the Browns, father and sons. Two years later the partnership was dissolved, Mr. Michael Brown taking out his share in stock on the "Noombling" property, which he purchased from his father while still under twenty-one years of age. Mr. Brown having acquired his 100-acre freehold block applied himself to the study of the land laws of the State with a view to selecting further area, and as a result he is considered to possess a better acquaintance with the history of the original regulations and the changes which have since taken

place not only than the average layman but than many a member of the Civil Service. As a result, today, Mr. Brown's landed property amounts to something over 30,000 acres, of which over 20,000 have become freehold, while the balance under fulfilled conditions will become so in due course. Of the many

indeed, accommodation of any kind than that of the metropolis. Though in those early days he had the pick of the best land in the district, in order to enlarge and make compact his holding he contented himself

settled in close proximity to the line at Narrogin, where he took up 3,000 acres of land. Subsequently, when the town site was surveyed, he erected the Hordern Hotel, the first and still one of the finest licensed houses on

W. E. Elston,

MR. MICHAEL BROWN.

thousands of acres which he took up from the Government he has only sold one block of 100 acres; and to gain an idea of the extent of his property it is only necessary to state that the fencing alone of boundaries and subdivisions runs into something like 200 miles. The "Noombling" Estate is situated some 83 miles distant from Perth, and at the time Mr. Brown entered into possession there was no nearer post office nor,

with a good deal of second-class land, which, however, may be considered above the average, while a large portion is very superior in quality. "Noombling," which comprises some 23,000 acres, lies about seven miles east of Wandering, and has a four-mile frontage to the old York Road, while the Hotham River also runs through the property for six miles. There are also two large creeks and various soaks and springs, so that surface water is not lacking in any part of the property. In consequence of the advent of the great southern railway Mr. Brown relinquished residence at "Noombling" in 1890, and

the great southern, and the first brick structure of any kind built along the line. Whilst retaining his farming interests, with the capable co-operation of his wife, he personally conducted the latter hostelry for upwards of twenty years, during which Mrs. Brown achieved a wide reputation as a notable hostess, and the house maintained an enviable popularity not only among the farming community, but with commercial men from the city whose interests brought them into the neighbourhood. The farm at Narrogin is almost entirely cleared, and is cultivated by Mr. Brown with the

Photo by W. E. Elston,

HORDERN HOTEL, NARROGIN.

MR. M. BROWN'S OLD HOMESTEAD (1903), NARROGIN.

assistance of two of his sons in conjunction with "Noombling," and a third property of 4,000 acres, known as "Boondine," which is in the same state of development. The proposition includes 3,000 sheep—pure merinoes of the famous Murray breed, a small stud flock being kept by Mr. Brown, who breeds very fine class stud rams from pure-bred ewes selected from the best South Australian flocks. The horses include about fifty of both blood and draught types, very choice specimens of blood stock being present on the estates, descended from such dependable sires as "Strike," an English horse of quality and great turf successes, while the draught workers also are of marked quality. Much success has attended Mr. Brown's ventures as an exhibitor of livestock at the local and other country shows, and he is the possessor of many

returned to his farming occupations near Narrogin. He has always interested himself in the public life of

with the municipal fathers, and for the past two years has been invested with mayoral honours. He is a

OUTBUILDINGS AT "NOOMBLING."

trophies and cups in token of such triumphs, not least among which is a champion cup presented to the winner of the greatest number of prizes for three years in succession at Narrogin by the president of the local agricultural society. In addition to his landed possessions Mr. Brown holds big interests in town property at Narrogin, besides the Hordern Hotel owning *The Observer* newspaper office, various shops and offices, and about twenty other blocks of greater or less value. At one period of his career he spent some five years on the eastern goldfields, where he owned one of the largest carrying plants on the fields, comprising over a hundred horses, etc., and conducted a large business successfully until the railway was carried through to Menzies, when he

the district, and as far back as the early seventies held membership in the Wandering Roads Board at the

formation of that body, since which period up to the present he has served continuously as a member of one or another of similar organizations. For many years he filled the office of chairman of the board referred to, subsequently transferring his services to the Williams Roads Board for some time, and upon the founding of the Narrogin Roads

Board was elected first chairman, which post he occupied for several years, and is still a member of that body. He also held a seat in council

member of the Farmers and Settlers' Association, and being a strong Liberal in politics is a keen supporter of the local branch of the Liberal League. He has taken his part in various movements for the advancement of the district, and was prominent in the effort to make Narrogin the junction of the Collie railway, instead of Pingelly or Wagin, the supporters of which towns were striving to secure that advantage for their own centres. Mr. Brown is a member of the Roman Catholic communion, and takes a prominent interest in the welfare of that cause in the district. He is the possessor of a motor-car, and his chief recreation is found in motoring through the district and between his home at Narrogin and the "Noombling" Estate. He was married in the year 1882 to Elizabeth, daughter of Mr. Joseph White, a well-known farmer now living in retirement at Guildford, and has a family of three sons and five daughters.

HARVESTER AT WORK ON THE FARM.

GEORGE STANYFORD FRANCIS COWCHER, J.P., owner of the "Dookening" Estate, Williams, is a grandson of the first settler to take up land in the district to very ancient stock. A member of the medical profession, after his arrival in Western Australia he was in attendance on the first Governor of the State, Captain Stirling, and year. Eventually he embarked on the occupation of agriculturist and pastoralist in a modest way, having various interests around Pinjarra in the Murray district, and eventually

Photo by W. E. Elston.

MR. G. S. F. COWCHER'S RESIDENCE, WILLIAMS.

of Guildford. This early pioneer, who bore the name afterwards given to the gentleman under review—George Stanyford Francis Cowcher—came from Hampshire, England, where his family could trace their ancestry back for hundreds of years

his staff, and continued in practice here until the time of his death. His son, the late George Stanyford Cowcher, father of the subject of this article, accompanied the family to Western Australia in June, 1830, at which time he was in his fifteenth

retired to Murradong, where he spent his declining years in companionship with members of his family. His death occurred in 1903 at the advanced age of eighty-seven. Mr. G. S. F. Cowcher was born at Pinjarra, in the south-western portion

VIEW OF "DOOKENING" ESTATE.

of the State, on December 31, 1854, and was educated under private tuition in his father's house and at Marrinup. In 1875 he launched out on his own account, taking up a 100-acre block of land at Marradong. At

MR. GEORGE STANFORD COWCHER.

a later date he removed to the Williams district, and settling down to the career of a farmer and pastoralist made the acquirement of further holdings a matter of first importance. As a result he has an estate to-day of 13,000 acres, the homestead

block alone extending over an area of 10,000 acres. The country, undulating in general character, is hilly in parts, outcrops of granite being of frequent occurrence and patches of rising ground with gravelly surface vary the red loam and lighter soils which predominate over the estate. The district surrounding the Williams River is well-grassed, and splendid pastures have been produced on "Dookening" merely by means of ring-barking the trees, the natural grasses flourishing on these areas fully as well as on cleared land. It is a noticeable feature in the development of his property that Mr. Cowcher does not touch the flooded gums, etc., which have sprung up in or near the various watercourses. Many years ago he discovered by personal observation that where the trees were left in their natural state near the creeks and brooks, the country was prevented from becoming salt, as is frequently the case when a clean sweep is made of the timber; and latterly he has had the satisfaction of finding that modern science is declaring in favour of this method. With the exception of these localities ring-barking has been completed over the whole of the estate, and 2,500 acres are entirely cleared, while further work of this nature is steadily being proceeded with. The chief watercourse

is the Williams River, but the whole of the country on "Dookening" is well watered, surface moisture being present in abundance in the shape of soaks and good springs, while wells have been sunk to ensure

W. E. Elston,

MR. G. S. F. COWCHER.

Wagin.

a never-failing supply of fresh, clear water for the use of the stock, etc. About 60 miles of fencing, both plain and netted, have been erected on the estate, dividing it into many paddocks; and other improvements

Photo by W. E. Elston.

DISTANT VIEW OF "DOOKENING" HOMESTEAD.

have been made from time to time, bringing the property into the front rank among others of its kind in the district. Mr. Cowcher devotes his attention chiefly to sheep-farming, though on an average about 500 acres are cropped yearly with wheat and oats. From 5,000 to 6,000 sheep are put to shears annually, the breed selected by Mr. Cowcher as most suitable to his purpose being a crossbred Lincoln-merino of big frame with good weight of carcase and a clip of seven pounds average. A small flock of Shropshires is also kept on a separate property chiefly for the purpose of raising early lambs for the local markets. Horse-breeding is resorted to on a small scale, the number being kept up to about twenty, among which are largely represented the steady strong worker, with a few of lighter class suitable for saddle and buggy use. A herd of about thirty dairy cattle is grazed; and a somewhat unusual feature of the farm industry is the particularly large number of turkeys and other feathered denizens of the farmyard. Some fifty or sixty swine have also their place in the proposition, the Berkshire and large black breeds being raised for the pork and bacon markets. The homestead, which was built in 1903, is a substantial structure of brick and stone containing seven rooms of large size and part of the back and front is

enclosed to form verandahs. A very attractive feature of the homestead area is the pretty flower

W. E. Elston.

Wagin.

MR. R. G. S. COWCHER.

garden claimed by Mr. Cowcher's wife and daughter as their own special domain, and upon which much care and tendance is spent by them. Here all the favourite blooms of the season find a place, and in addition ornamental shrubs and cypress-trees, etc., have been planted which give their touch of picturesqueness to the surroundings.

An orchard covering six acres of ground is a popular resort in the fruit season, as apples, pears, peaches, quinces, and plums here come to perfection, and grape vines also yield their luscious harvest. The stables and outhouses provide boxes for twelve horses, and all the shelter places necessary, such as machinery shed, chaffhouses, shearing shed, etc., and everything in connection with the agricultural department, labour-saving implements and machinery, manures, etc., are all made use of for ensuring a greater measure of success. Since his early manhood Mr. Cowcher has taken a keen interest in affairs outside of his own particular enterprise, and at twenty-four entered the arena of local government, being elected a member of the Wandering Roads Board. At a later date, upon taking up his residence in the Williams district, he was returned to represent the ratepayers on the Williams Roads Board, and ever since, during a period representing thirty-five years (with the exception of a term spent by him in the north-west) his services in this capacity have been at the disposal of his fellow members of the community, while for twelve years he has filled the office of chairman of the board. He was one of the founders of the Williams Agricultural Society, in which he has occupied many offices,

OUTBUILDINGS AT "DOCKENING."

including those of patron and vice-president; and has associated himself prominently with every other organization, taking a foremost place in all movements for the advancement of the district and winning a well-earned reputation as the

W. E. Elston, Wagin.  
MR. JOHN SPURLING COWCHER.

most progressive citizen of the neighbourhood. He received his Commission as Justice of the Peace from the Forrest Administration in the

days preceding Federation, and figured in the State Parliament as representative in the House of Assembly for the district of Williams for over seven years. His experience as a practical farmer made his utterances in the House of considerable value, and his reputation as a man of unquestioned integrity inspired with confidence even his opponents, to whom he always strove to be fair and just and to assist when the opportunity to do so occasionally was thrown in his way. It is due to Mr. Cowcher to remark that, being very conscientious in the discharge of his duties as a statesman, he spent much time that might with greater profit to himself have been devoted to his farming interests in attending to the requirements of his electorate, and not to those of his own special division only but also to all matters that came under his notice with regard to the betterment of the whole State. His religious interests are centred in the Church of England, and he is a member of the local branch of that communion. A supporter and cordial advocate of all forms of clean and legitimate sport, he is most strongly opposed to gambling and everything that tends to demoralize the nation in the direction of corrupt practices in connection with what is looked upon as healthy recreation. Mr. Cowcher was married in January, 1882,

to Emma Sophia, daughter of the late Thomas Farmer, an early pioneer of Western Australia. This

CULTIVATED AREAS ON MR. G. S. F. COWCHER'S PROPERTY.

JOHN EDWARD CLAYTON, J.P., proprietor of the "Ferndale" Estate, Narrogin, was born near Horncastle in Lincolnshire, England, on January 29, 1861, and is the eldest son of Mr. Henry Clayton, who has been associated with farming pursuits in England, Victoria, Queensland, and Western Australia respectively since the early eighties, having come to the Island-Continent from the Home Land three years after the arrival of Mr. J. E. Clayton, then just entering upon his manhood. Mr. John Edward Clayton is a self-educated man, in early days from dawn to dark his services being in requisition for the laborious work of farming. In the few spare hours that he could glean, however, he devoted himself to study, and gained an elementary knowledge of various branches of learning. Upon his advent to Australia he first landed in Queensland in August, 1883, where he was employed in general farming occupations and orchard work at Roma, at which place and "Ambie Downs" Station, near Mitchell, he spent some five years. Leaving there he proceeded to the northern goldfields, Idesvold, Burnett River, where he remained only a short time, going thence to Victoria and following the farming industry on his own account for about eight years. With this he combined dairying operations with considerable success, and was identified with the Gippsland, Lilydale, and Dandenong districts during his sojourn in the sister State. In 1895 the commercial crash occurred in Victoria which involved so many in disaster and ruin, and from this Mr. Clayton was not fortunate

enough to escape unscathed. With the little left to him after the disposal of his property he left the scene of disappointment, and with his family took passage for the Western State, which was proving a veritable "land of promise" to many who had

MR. HENRY CLAYTON.

lost their all in the crash and were compelled to begin life over again. Upon arrival in Western Australia Mr. Clayton turned his attention to the mining industry, and going straight to the goldfields found employment on the Hannan's Proprietary Mine for over two years. In 1897 he purchased a condensing plant and, taking into partnership the Messrs. Rintoul Brothers, carried on a big general business agency, etc., which, under the trading title of Clayton & Rintoul Brothers, established its claim to be recognized

as the best and most widely known concern of its kind on the goldfields—a priority which it retains at the present time. Upon the completion of the goldfields water scheme the business of condensing died a natural death, and Mr. Clayton, as senior partner of the firm, conceived the idea of devoting his energies to landed interests in the Narrogin-Williams district, where he took up nearly 10,000 acres of country in the locality halfway between the two towns. Almost immediately he entered upon the development of this tract upon extensive lines, and carried on mixed-farming operations there with considerable success until 1907, when the estate (well known as "Rosedale" and fully described elsewhere in this work) was sold to Messrs. Hardie Brothers for nearly £17,000 cash. To illustrate the ability of Mr. Clayton as displayed in his enterprise in connection with "Rosedale," it may be mentioned that at the period of the sale he had on exhibition at the National Show at Narrogin, in 1906, an exhibit including 229 varieties of the different classes of farm produce and fifty varieties of grasses and fodder plants which at the time was considered exceptional, not only as a Western Australian exhibit, but as of considerable value as an object-lesson to visitors from the older centres, not excepting the go-ahead American. A special prize of £35 was awarded to him on this occasion from the agricultural society, and the Government, which considered the exhibit a splendid advertisement, paid all his expenses to display a similar exhibit for three years in succession at the Royal Show in Perth and at Bunbury

Photo by W. E. Elston.

GENERAL VIEW OF "FERNDALE" ESTATE.

and various other places, it being considered of special value from an educational point of view, as demonstrating the wealth that could be produced on one farm by a proprietor who was willing to take the trouble and had sufficient enterprise to make the venture. After disposing of "Rosedale" Mr. Clayton purchased several smaller holdings in the vicinity of Narrogin, the nearest being about three miles from the latter town, and combining these into one property formed the "Ferndale" Estate, comprising upwards of 4,000 acres. Here he has continued operations on the same lines as at the former place, but solely on his own account, "Ferndale" being his personal property, whereas the previous farm was a joint concern belonging to the partnership with which he was connected. He has proved equally successful in mixed-farming pursuits on the new holding, having cleared over 1,600 acres, which area has been brought under cultivation on the fallow system, in 1913 500 acres being put under crop; and on the grazing pastures is run a flock of 1,600 sheep, chiefly of the merino breed, and a valuable herd of dairy cows, in which the popular Jersey and Ayrshire predominate. A large amount of fencing has been completed, and the natural water supply, which is very plentiful, consisting of good fresh-water soaks and springs, has been utilized to the best advantage. Of the twenty horses that are kept upon the farm a fine class of Clydesdale is the predominating feature, and in this connection it may be mentioned that Mr. Clayton is credited with being one of the best judges of heavy draughts in the State, and at various times has filled the office of adjudicator in this section as well as in those of dairy cattle, pigs, produce, etc., both at the Royal Show, Perth, and at various of the leading country centres, being one of the oldest judges officially appointed by the council of the Royal Agricultural Society. He has been very successful himself in the past as an exhibitor at these functions, and is the holder of several valuable trophies, cups, etc., for different classes of stock. Mr. Clayton has a fine orchard of some 20 acres, where apples, pears, peaches, etc., are grown for purposes of export. This orchard is looked upon as a model of its kind, and new settlers are glad to pay a visit

to "Ferndale" to observe the methods in horticulture adopted by the proprietor who has achieved such successful results. The homestead is a modern ten-roomed structure of picturesque aspect, with stone walls and iron roofing, and in

W. E. Elston, Wagin.  
MR. JOHN EDWARD CLAYTON.

the interior are found all the comforts and luxuries of the city home, water being laid on throughout and various other appointments are present usually to be met with only in the metropolitan areas. A flower garden and trimmed hedges give a neat finish to the enclosure, while leading from the road to the homestead is an

avenue of decorative trees, sugar-gums, pines, etc., which forms a very pleasant approach. In addition to the farm Mr. Clayton conducts in Narrogin the stock agency for the firm of Dalgety & Co., and he also carries on business as Government and sworn valuator, and is valuer for the Commonwealth Bank. He is a member of the Government Land Board—the first member of that board appointed in the country districts; and takes great interest in the various organizations for the proper government of the locality in which he resides. He held for several years the office of president of the Narrogin Agricultural Society, and is the present vice-president of this body, in connection with which the honour of life membership has been conferred upon him in recognition of the producer's exhibit at the National Show above referred to. He served on the first Narrogin Municipal Council, and is one of the oldest members of the local roads board, of which he has been chairman for six years in succession, still holding that office. He is a foundation member of the Farmers and Settlers' Association as represented in the branch at Narrogin, and a local committeeman of the Liberal League of Western Australia. He has exercised the Commission of the Peace for a lengthy period, and he is also a member of the Williams Licensing Court for the Williams district. Mr. Clayton is a married man, his wife being a daughter of the late Mr. Charles Park, of Dublin,

Photo by W. E. Elston. MR. J. E. CLAYTON'S RESIDENCE, NARROGIN.

Ireland, and his family consists of a son and a daughter, now both grown up and assisting in the working of the estate.

HENRY JAMES RINTOUL, of "Auburn Vale," Williams, was born at Sale, Victoria, on April 9, 1869, and is a son of Mr. Peter Thomas Stuart Rintoul, of "Rosedale," Gippsland, who came from the Tweed River, Scotland, among the earliest of the Scottish settlers in Australia and resided for some time in Tasmania before finally settling down to farming pursuits in

States, where he remained until the late nineties, about which period he decided to join his brother, Mr. Thomas S. Rintoul, who some years previously had been carried by the trend of the time to throw in his lot in Western Australia. Some time after the arrival of Mr. H. J. Rintoul in this State the brothers formed a partnership with Mr. J. E. Clayton, the proprietor of a condensing plant on the goldfields (whose biography appears elsewhere in this work), and under the title of Clayton & Rintoul Brothers a large general business was carried on which has maintained a premier position

share of the profits to the purchase of "Auburn Vale," at that time in possession of Mr. R. Hamersley and comprising only 400 acres. After acquiring this holding Mr. Rintoul secured several adjoining properties from Messrs. J. Mitchell, Thomas Martin, and Whitehorn respectively, and the combination of these blocks brought his homestead area up to 2,400 acres. In addition to this he selected a block of 1,500 acres in the Fourteen - Mile Brook district, situated about 14 miles distant from the homestead, and proceeded to work the whole as a joint proposition. The contour of the country

Photo by W. E. Elston.

"AUBURN VALE" HOMESTEAD ; ORCHARD IN FOREGROUND.

Gippsland, where he was known as a successful agriculturist for many years. The subject of this memoir was educated at the State school at Sale, and upon entering his teens became his father's assistant on the farm. In this connection he gained a good grounding in the industry which he has since followed, and showed special aptitude in the handling of horses, at a later date also becoming well versed in matters concerning wool- and mutton-raising on various pastoral properties in Victoria and New South Wales. He spent a considerable time in gaining station experience in the sister

on the fields ever since. For nearly a decade this partnership remained in existence. After the completion of the goldfields water scheme, when the condensing plant was sold, Mr. Clayton proceeded to Narrogin, where he took up a large area of country about midway between that town and Williams, and successfully developed the well-known "Rose-dale" Estate, which afterwards was purchased by Messrs. Hardie Brothers. Subsequent to the sale of this property the partnership between Mr. Clayton and the Rintoul Brothers was dissolved, and the gentleman under review devoted his

here is undulating and the prevailing soil is a heavy chocolate, though sandy loam is also found in considerable evidence. The native timber comprises jam, York-gum, white-gum, manna-gum, red-gum, and salmon, but the greater part of this has been removed from a large portion of the estate, 1,000 acres being completely cleared and the remainder ringbarked. Where the latter operation has been concluded and the dry trees are still standing the native grasses spring up very luxuriantly, making splendid feed for the stock, which fatten well on these pastures. The property also

possesses excellent watering facilities in the Miningin Brook, which pursues its way for a couple of miles through "Auburn Vale," besides which there are numerous soaks and wells, and surface water is present everywhere. Windmills have been

MR. PETER THOMAS STUART RINTOUL.

erected for the greater convenience of utilizing the supply for the various requirements of the farm, although no artificial means are necessary for watering the stock. The improvement work has included upwards of 40 miles of fencing, costing on an average about £32 per mile. Different styles of fencing have been adopted, 14 miles of wire-netting being employed to make some of the paddocks dog-proof, while in parts may be seen the use of two plain and two barbed wires together, and yet again six plain wires and one barbed, the whole of the fourteen paddocks being efficiently secured against the escape of the sheep. Mr. Rintoul gives the major portion of his attention to sheep-farming operations, although it is his design to develop a considerable area for agriculture as the years go on, and he is already cropping some 300 acres annually with wheat and oats on the three-year fallow system. The sheep are pure merinoes bred from a strain introduced from the the principal South Australian flocks

and the famous "Boonoke" stud in New South Wales, and a good clip is obtained, the wool commanding top prices at the London markets. A small mob of the necessary farm horses is augmented by the addition of hacks and harness stock of useful type for ordinary use; and the usual dairy herd is found in its place upon the farm. The homestead is built of timber with iron roofing, and forms a very comfortable if unpretentious abode containing six rooms; and the same idea of making essentials the chief consideration and leaving elaboration until the farm industries are in a more forward state of development has been carried out in the erection of outhouses, where everything requisite to the outdoor work of the farm has been considered without expending capital on mere externals. An orchard two acres in extent has been planted, where fresh fruit is obtained in season for home use. Mr. Rintoul is of a somewhat retiring disposition, and is inclined to shun the responsibility of public office, making a notable exception in favour of the Narrogin and Williams agricultural societies, in the deliberations of which he takes prominent part, and serves as a committeeman of the latter body. He takes a keen interest in horses, which leads to his support of racing events in the neighbourhood, and he is a member of both the local race clubs, in which

he holds office as committeeman and steward. He has been twice married, his first wife, to whom he was united in 1900, being a daughter of the late Mr. Winnin, of Bendigo, Victoria, by whom he had one son and one daughter. This lady died

W. E. Elston,

Wagin,

MR. HENRY JAMES RINTOUL.

in 1904, and three years later Mr. Rintoul espoused Mary Ellen, eldest daughter of Mr. Thomas Augustus Whitford, of "Congeling," Fourteen-Mile Brook, Western Australia, the issue being two sons.

MR. H. J. RINTOUL'S RESIDENCE, WILLIAMS.

JOHN BARRON, J.P., owner and occupant of the "Miningin" property, near Narrogin, was born in the homestead where he now resides on October 22, 1874. He is the

MR. EDWARD GEORGE BARRON.

youngest son of the late Edward George Barron, who claimed the distinction of being the first white male child born on Western Australian soil, which event occurred on September 17, 1829, in a regimental marquee pitched on the spot where the present town hall of Perth now stands. The late Mr. E. G. Barron's father was a colour-sergeant in the old 63rd Regiment, and came to Western Australia with the first English soldiers drafted to this State. He was of Irish descent, and could trace his ancestry back for hundreds of years. It is also claimed

for his wife that she was the first white woman to land at the new colony, the couple being accompanied by their three young children. Mr. E. G. Barron, on reaching man's estate, joined the Police Force of Western Australia, in which he served for nearly fifteen years. At the end of this period he resigned to settle on the land, and received a gratuity from the Imperial Government of 50 acres of freehold in whatever portion of the State he might choose. His selection fell upon the present "Miningin" homestead block, upon which he erected a dwelling, and as time passed he increased his freehold to 175 acres. He also secured the lease of a large area of land surrounding the "Miningin" property, and for many years he was looked upon as the leading pastoralist in the district. When the hunger for land brought new settlers to encroach upon his pastoral run Mr. Barron took further advantage of the land laws and extended his original holding until it embraced in the vicinity of 2,500 acres. To this area the gentleman under review subsequently added a further 1,000 acres, and "Miningin" Farm now comprises 3,475 acres of land, the whole being freehold. In addition to this, Mr. John Barron also owns a block comprising some hundreds of acres situated a few miles distant from the parent property. Mr. Barron's mother—a native of Tipperary, Ireland—though now well on in the eighties, still enjoys good health, and is spending her declining years with her son at "Miningin." The subject of this memoir was the youngest of his

parents' eleven children, and received his education by private tuition on the old homestead since his childhood, with the exception of holiday trips to the Eastern States, having spent the whole of his life in farming pursuits in the place of his birth. In his early teens he became familiar with all the different methods connected with sheep-raising, and made such good use of his opportunities then and later that he has long been in possession of an expert knowledge concerning every department of the industry, and is regarded as second to none in the

W. E. Elston, Wagin.  
MR. JOHN BARRON.

State as a judge of merino sheep. In recognition of his abilities in this direction he has been officially appointed by the council of the Royal Agricultural Society one of the adjudicators in this section at the various country district shows. Great industry and enterprise have been displayed by Mr. Barron in the development of his holding — to which he succeeded upon the demise of his father in 1901—and to-day a better-improved property hardly exists on the great southern line. The whole of it is fenced with six wires, and a quantity of wire-netting has also been used in rendering the paddocks dog-proof. Judicious subdivision has also been made, cutting up the estate into fifteen paddocks of size convenient for stock-handling and cultivation and varying from 1,000 acres to a "small" enclosure of 50 acres. Over 1,500 acres are cleared on "Miningin" and approaching 200 acres on the other block,

MR. JOHN BARRON'S RESIDENCE, NEAR NARROGIN.

while further operations in this direction are proceeding apace, each season witnessing decided changes in the aspect of the country, as timber

water in every part, and no scarcity of the precious moisture has ever been known. To utilize Nature's provision in this respect to the best

year (1912) commanding the highest figure obtained for the local product. A few dairy cattle are grazed, the herd being kept for domestic

SHEEP READY FOR SHEARS.

and scrub land give place to open spaces of pasture and cultivated areas. A pleasant undulation is the natural characteristic of the locality, and indigenous grasses are abundant, even where clearing has not been completed, the ringbarked patches producing excellent feed for stock. The estate, being one of the first taken up in the neighbourhood, and

advantage, windmills have been placed over various wells where water has been struck at a very shallow depth, and by means of these with the tanks and troughing attached every facility is provided for service to the stock. A flock of merino and crossbred sheep are carried on the property numbering from 1,500 to 1,700, the wool from which

requirements and usually averaging about twenty in number from season to season, young stock being bred to keep up the supply of good milch cows. The horses, comprising about twenty, are of mixed sorts of the highest quality, and in this department special mention must be made of "Dan Donald," the Clydesdale stallion used with such great success

"MININGIN" HOMESTEAD FROM REAR, AND DAIRY CATTLE.

chosen with a careful eye to the natural advantages which render it in many respects the pick of the district, is blessed with good surface

is sold locally or exported to London according to the state of the respective markets. Good prices are the rule, the clip from "Miningin" last

in the district for the production of draught stock of a type splendidly suited to the diversified needs of the settlers. "Dan Donald" was imported

from Victoria by Mr. Barron at a cost of between £200 and £300. He is a beautiful bay horse, bred by Messrs. Mitchell Brothers, his description being "a bay horse, with

with which about 600 acres are sown annually with wheat and oats and barley. He uses up-to-date machinery in connection with his agricultural operations, his harvesters

outhouses are substantial and well arranged, including stabling for ten horses, loose boxes, etc., barn, machinery sheds, and woolshed furnished with five stands of Wolseley shearing machines, driven by a Ruston and Proctor 5-h.p. steam engine. In addition to his farming interests Mr. Barron is also a director of the Great Southern Flour Milling Co. of Narrogin, with which he has been connected in the above capacity for some years past. He has given some attention to public affairs in the district, and is a member of the Royal Agricultural Society, in addition to his association with the local organization of this nature, in connection with which he has been a very successful exhibitor of sheep and draught horses from time to time. He received his appointment of Justice of the Peace from the Scaddan Administration in 1912. A prominent Roman Catholic in matters of religion, he gives his support to the local church of this communion; and has been a member of the H.A.C.B.S. since the inception of the Narrogin branch of the society. A keen sportsman, he is a ready patron of all forms of athletic outdoor diversion, and devotes his hours of leisure to recreation in the football and cricket fields. Mr. Barron was married on February 11, 1896, to Elizabeth, daughter of the late George Dyson, one of the old farming pioneers of the Williams district, and he has a family of three sons and three daughters.

CLYDESDALE STALLION "DAN DONALD," BY "VICTOR."

a good constitution, and full of life and dash, standing on short legs and proportionately built, showing good depth of chest, good back, and loins, with broad quarters, strong in the gaskins, splendid flat bone, with size, and hair of good quality." Foaled in 1906, "Dan Donald" had for sire "Victor" by "Young Clydesdale Hero" by "Clydesdale Hero" (champion of Australia) from "Jinny" by "Pride of Clyde" (imported). "Victor's" dam, "Mag" by "Purvis," was by the celebrated sire "Carmyle Mag" from "Gipsy" by "Surprise" (imported); and the colt's dam by "Young Champion" by "Champion of North" by "Torsman," g. dam by "Blue Ribbon" (imported), g.g. dam by "Conqueror" (imported). As a two-year-old "Dan Donald" took first and champion prizes at Narrogin and Williams, beating aged horses in the open class; two firsts at Wagin, and first at Katanning; first at Narrogin and Williams as a three-year-old, and also as a four-year-old and five-year-old. In all, as a six-year-old horse he had taken sixteen first prizes and seven champion ribbons, a record hard to beat, while his stock took eleven prizes at local shows in 1911-12. Mr. Barron cultivates his land on the approved fallow system, in accordance

and ploughs being of the very latest design, while the chaff-cutting plant in use on the property is one of the finest on the great southern line. The old homestead is a large, roomy, comfortable dwelling of picturesque aspect, built in the style of the station homestead of 1870—the year of its erection; and all the

SHEARING AT "MININGIN."

**FREDERICK WILLIAM ROSE**, J.P., of "Comadyne," Narrogin East, was born at Warwick, Queensland, on March 15, 1865, and is a son of the late Frederick Rose, for many years a well-known farmer of Picola, Victoria. He received his education at Leonard's Hill, near Daylesford, and early began to assist his father in the duties of the farm. At twenty-five he struck out for himself, leasing a farm at Yalca, in the Golden Valley district of Victoria, where he carried on agricultural pursuits for five years. He also worked a property at Yarra-yeah for a short period, but in 1903 disposed of all his interests in Victoria and sailed for Western Australia. Landing at Albany with a couple of horses he immediately set out on the quest for land, and visiting the Wickpin area quickly perceived that the possibilities of the land for agriculture were distinctly promising, the result being his selection of a block of 1,000 acres. As time went on this initial holding was enlarged until, to-day, his landed possessions cover an area of 3,500 acres, the whole of which has been highly improved. Rabbit- and dog-proof fencing encloses the whole boundary, and, with the dividing fences which cut the estate up into several paddocks of convenient size, about 25 miles of fencing have been erected. One-half of the holding is cleared, and cropping on the fallow system is carried on, about 800 acres being sown

every season. A flock of 1,000 crossbred merino - Shropshires is grazed on the estate, and the wool is disposed of locally at satisfactory

W. E. Elston, Wagin.  
MR. FREDERICK WILLIAM ROSE.

prices. The farm is well watered by soaks, springs, and wells, and three windmills have been erected, by means of which a good service to the stock is ensured. Mr. Rose has proved a useful member of the community, giving much time and attention to matters tending to the welfare of the place. He received his Commission of the Peace from the James Government, and is now senior magistrate in the Cuballing district. For many years he has

maintained a close connection with the local roads boards, serving for seven years as a member of the Narrogin body, at the close of which period the Cuballing Board was created, when, relinquishing membership in the former, he was returned at the head of the poll by the ratepayers of the Cuballing district, and has been associated with this board ever since, filling the office of chairman for three successive years. He has been a vice-president of the Narrogin Agricultural Society since its inception, and was one of the founders of this institution, while as a judge of cattle at the local shows he is a well-known figure, and is also one of the officially-appointed judges on the Royal Show list. A foremost member of the Methodist Church, he has been a loyal supporter of that body at Cuballing, and has been honoured by having his name recommended for inscription on the merit tablet of the church. On the occasion of the building of this church in Cuballing Mr. Rose was presented with a suitably-inscribed souvenir of the occasion; and another token of the esteem of his fellow citizens which he holds is a gold presentation medal tendered him by the past and present members of the Cuballing Roads Board. He takes a keen interest in all clean forms of sport, and is one of the leading honorary officials of the Narrogin Race Club. Mr. Rose married in 1890 Rubina, daughter of the late John Caird, of Picola, Victoria, and has a son and two daughters.

VIEW OF MR. F. W. ROSE'S "COMADYNE" ESTATE.

**WILLIAM FREDERICK WIESE, J.P., "Balaling,"** Narrogin, is a native of South Australia, where he was born on May 3, 1869, in the little settlement of Milang, in the south-eastern district of the State. His father, the late August Godfrey Frederick Wiese, who came from the Fatherland as a boy of five, was numbered among the German settlers in the Central State who made so big a success of the agricultural industry in the early days, and for many years was a resident of the Bordertown district, where he occupied all the important honorary offices for which he was in any way eligible. The gentleman under review was educated at the Government school at Bordertown, and upon completing his studies before reaching his teens was engaged in the duties of his father's farm. Being the eldest of the family he was found very useful as an assistant with the stock and agricultural operations, and picked up a great deal of valuable knowledge from his parent, with whom he was closely associated. Before leaving the farm, at twenty-seven years of age, Mr. Wiese had acquired a comprehensive practical experience in the methods then in vogue in farming and pastoral propositions, but being impressed with the reports of the mining industry as a royal road to fortune with his two brothers he decided to come to Western Australia and try his luck on the goldfields.

For three years the party prospected over various localities, but meeting with scant reward for their labours eventually abandoned the scene of disappointment with the intention

MR. A. G. F. WIESE.

of returning to their old love—agricultural enterprise. With this object in view they came to Narrogin, and being satisfied with the prospects of the district took up land in the vicinity of the town, where they settled down to farming pursuits. In the first instance Mr. W. F. Wiese selected on his own behalf about 1,100 acres in the locality where his homestead is now situated,

and with this as a nucleus he began operations. Subsequently, as success attended his efforts, surrounding country was absorbed into the "Balaling" Estate, and to-day Mr. Wiese may be said to own one of the model farms of the district, its area embracing some 3,236 acres of what is considered first-class land highly suitable for both sheep and cropping. Undulating in character the country in its natural state was timbered with jam and York gum, and another feature not without picturesque value is the granite outcrops which occur at intervals. At the present period the whole of the estate is ringbarked, with the exception of a few patches of timber left here and there to provide shelter for the stock; and over 1,400 acres are completely cleared. This area is cultivated on the two- and three-year fallow system, Mr. Wiese devoting his attention principally to the cultivation of oats, at the date of writing being a larger producer of this cereal than any other farmer in the district. His method of harvesting the crop is believed to be unique among properties in this State with any pretension of size, every field being cut with the reaper and binder, when the grain is threshed by the usual machinery. By this system Mr. Wiese considers that he has obtained better results without having to risk the ripening or over-ripening of the grain so that it can be garnered by the stripper method.

Photo by W. E. Elston.

FLOCK OF LINCOLN-MERINO CROSSBREDS AT "BALALING."

He owns one of the finest machinery plants for a farm of equal standing in Western Australia, having all the latest and most up-to-date machines, including a threshing and pressing plant and a portable Ruston and Proctor 8-h.p. engine of the most modern design. The crown of the "Balaling" industry is the flock, the expert knowledge acquired by Mr. Wiese in his early connection with pastoral enterprise having enabled him to place this department on a sound foundation. The estate usually carries over 1,500 sheep, chiefly crossbreds of the Lincoln-merino type, and the lambing averages about 80 per cent. A good class of wool is produced, which is disposed of locally at a satisfactory figure. Some strong draught horses may be seen at the heavier work of the fields, and these are mostly of the proprietor's own breeding, about twenty being found necessary to cope with the demands of the busy seasons, and for these stabling has been provided in different parts of the property. A five-roomed stone house, built by Mr. Wiese in 1902, makes a cosy, comfortable homestead, and in the vicinity is a fine orchard and vineyard, covering 11 acres. The property possesses a great advantage in its water supply, not a bucket of water having to be drawn for any purpose whatsoever all the year round. Good surface water prevails all over the estate, running streams occurring at intervals, which

have their source in permanent springs. Mr. Wiese, on account of his marked success in his own proposition, acts as guide, philosopher, and friend to many of the farmers of

W. E. Elston, *Wagin.*  
MR. WILLIAM FREDERICK WIESE.

the district, who are glad to profit by his experience as an expert in farming machinery and methods; and his advice is frequently sought, not only by new settlers, but also by some of the older-established farmers who have become dissatisfied with their results from working on the old-time system. He takes an active interest in the welfare of the

community at large, was appointed a Justice of the Peace for the district by the James Administration, and is a member of the Licensing Bench of the Williams district. Mr. Wiese was the founder of the Narrogin Agricultural Society, in connection with which he filled the post of honorary secretary for the first three years of its existence, subsequently being elected president for two successive years. He has made almost a hobby of the progress and advancement of this body, and is never happier than when busying himself in its interests. He has also taken a prominent part in the formation of the Farmers and Settlers' Association, and has occupied the office of president of the local branch during its first term. A Liberal in politics, his influence is of considerable service to this Party, and he is a member of the Liberal League of Western Australia. For over a century he has been connected with the Ancient Order of Foresters, and has passed through all the chairs of the Order. His special form of recreation is rifle shooting, and he was the moving spirit in the founding of the Narrogin Rifle Club, of which he is the president, his skill in the past as a trophy-winner giving him a premier claim to recognition. Mr. Wiese married in 1903 Maude, daughter of Mr. Richard Penny, of Bordertown, South Australia, by whom he has issue a son and a daughter.

HAY CROPS ON MR. W. F. WIESE'S ESTATE.

WILLIAM HENRY INGRAM, of "Maylands," Narrogin, was born at Willunga, South Australia, on November 30, 1862. His father, the late William Ingram, came originally from Southampton, England, among the early settlers of the colony, and subsequently became well known as a successful agriculturist of the above-mentioned district. Educated at St. Mary's School, Adelaide, the subject of this memoir began active life at an early age, being engaged for a time in agricultural pursuits before proceeding to Broken Hill where he followed the calling of a carrier for a

decided to leave the mining districts and settle on the land, and with that object in view inspected the country round about Narrogin, coming overland with his horses to this neighbourhood. Being favourably impressed with the possibilities of the soil he selected a block of 340 acres upon which he afterwards erected his present homestead, and starting farming operations on this modest area awaited his opportunity to enlarge his borders. As such occurred from time to time he was able to make judicious selection of additional area, and to-day has a

about 3,000 acres are completely cleared. The whole property is fenced with three wires and netting on the boundary, and subdivision fences of six plain wires have been made, posts of jam timber being used throughout. Dams have been constructed to conserve the water supply, and there is enough permanent surface water on the property to supply the stock all the year round. Of the 3,000 acres which are cleared and cultivated it is Mr. Ingram's custom to crop annually about 1,000 acres with wheat and oats and peas are also grown as fodder for the

MR. W. H. INGRAM'S "MAYLANDS" ESTATE. FIELD TEAMS AND DAIRY CATTLE IN FOREGROUND.

number of years. At a later date he removed to Reynella, and there, whilst continuing in the carrying business, worked an agricultural holding on his own account for a considerable period. In 1894, at the time of the rich gold discoveries, Mr. Ingram sailed for Fremantle and was early on the scene of activity, where he gave himself over to the precarious occupation of prospecting. Not meeting with the desired success he availed himself of an opening to launch out in the carrying business on the fields, and was engaged in this line for rather less than two years. In 1895 he

very fine and well-developed property comprising some 8,000 acres. The soil on the major portion of the estate is a mixed chocolate loam, and is classified as among the best of these well-endowed areas, while even the second-class patches have proved to be excellent sheep country. An abundance of natural nutritious grasses make splendid feed for stock, and these are especially prolific where ringbarking operations have been completed, while even the untouched portions carry really good feed. Altogether about 4,000 acres have been brought under the ringman's axe, and of this

stock. A flock of about 2,000 sheep of the merino type are carried on the "Maylands" Estate which produce a good class of wool, which is sold to advantage at the local markets. The horses in use on the estate are of mixed classes, useful draughts of good quality predominating, and a small herd of dairy cows is also depastured on the homestead area. The orchard has proved a very profitable proposition, the apples commanding good prices locally, and as seven acres are devoted to the cultivation of fruit and grapes the annual harvest is usually very abundant.

The homestead was erected by Mr. Ingram in 1905, being a red brick structure containing six rooms, all large in size and well ventilated. Verandahs give the usual pleasant shady effect to the front and back of the house, and in their place are

MR. WILLIAM INGRAM.

found the kitchen premises, etc., all being quite up to date in every essential. Everything in keeping with the character of a model

and well-managed farm is found in the outhouses, where, in addition to the stabling, machinery sheds, etc., is situated the shearing shed, containing three stands of Wolseley machinery, driven by a steam engine. Mr. Ingram, in the midst of the various claims of his farming industry, has recognized his responsibility as a landholder in the district, and he was among the founders of the Narrogin Agricultural Society, which has played a useful part in the history of the development of the resources of the surrounding country. He has also taken a prominent interest in matters coming under the special jurisdiction of the roads boards, and for many years was associated with the local body, filling the office of chairman of the Narrogin Roads Board for some years. In the past he also occupied a seat on the board of health for the district. A member of the Baptist Church, he has concerned himself in the advancement of this organization as represented by the local branch, and is one of its leading members. He is a cordial patron of all clean forms of sport, and exerts his influence to provide healthful legitimate recreation for the youth of the neighbourhood. Mr. Ingram married in 1887 Florence May, daughter of Mr.

Samuel Pearce—now living in retirement in South Australia—the well-known prospector of the richest mile of mines in the world—the "Golden Mile" of Boulder. His family consists of six sons and five daughters. The two eldest sons—

HOMESTEAD AND ORCHARD AT "MAYLANDS."

"CONGELING," the property of Messrs. Whitford & Sons, Fourteen-mile Brook, Narrogin. (Thomas

MR. JOHN JOSEPH WHITFORD.

Augustus Whitford, Harold Thomas Whitford, and Roy Victor Whitford.) THOMAS AUGUSTUS WHITFORD, the senior partner of this firm, was born at Alberton, Victoria, on September 22, 1857, and is a son of the late John Joseph Whitford, for many years connected with the Civil Service of that State. While still a lad he worked as a station hand and obtained a good insight into the breeding and management of cattle and other stock, before attaining his majority taking up a block of land at Wonwron, in Gippsland, where he

launched out on his own account in the farming industry. For a number of years Mr. Whitford carried on operations on this property, and in conjunction with this enterprise he also became well known as a general contractor, taking over contracts both of a private nature and on behalf of the Government. In 1894 he disposed of all his interests in Victoria, and

MR. HAROLD THOMAS WHITFORD.

coming to Western Australia turned his attention to the timber industry at Denmark, where he continued for the next eight years. During this period, in conjunction with his two sons, Messrs. H. T. and R. V. Whitford, he selected over 1,500 acres of land in the Williams district, upon which locality the "Congeling" homestead is now situated, and in 1902 the

partners entered upon the active development of this property. Coincident with working the area already taken up they made the acquirement of further territory a feature of their enterprise, gradually increasing their possessions to about 6,000 acres. Their scheme included mixed farming in its various branches, and in the first instance, spite of the fact that after settling at the homestead, when the rents and fees were paid their entire cash capital consisted of 10s., and notwithstanding a very serious drawback in the presence of the noxious poison-weed over the

MR. ROY VICTOR WHITFORD.

whole of the original and later holdings, they laid their plans for a combined agricultural and pastoral proposition. This was of an onerous character, the clearing of the poison-plant being in itself a contract of no small difficulty, but industry and perseverance have had their due reward, and at the present time no trace of the pest can be found. With the exception of 500 acres of freehold surrounding the homestead the whole of the land was taken up on conditional-purchase terms, and half of this liability has already been discharged, while improvements to the value of £5,000, including stock, plant, and general etceteras, have been made on the property. At the present time all the departments of a well-managed farm are to be found in good working order at "Congeling," where the crops reaped yearly equal the good averages of the district, and the flocks, well pastured, yield profits in wool and mutton in due course. The horses

WHEAT CROP AT "CONGELING."

alone are a valuable asset, consisting of thirty of the best farm workers, chiefly of the Clydesdale type, but with a few good roadsters intermixed. It may here be mentioned that it is the intention of the proprietors in the near future to erect new and substantial homesteads on the property to take the place of those which have done duty hitherto, but which have been regarded as only temporary shelters. Mr. Whitford has always taken his share of public responsibility, and for seven or eight years has served as a member of the Williams Roads Board, in which body he has held office as chairman. He was appointed a Justice of the Peace by the Moore Administration. With his two sons, who are associated with their father in all movements for the advancement of the district, he was prominent in the founding of the local agricultural hall at Fourteen-mile Brook, and among the benefits conferred upon the neighbourhood by the gentleman under review was the

he assisted his father on the home farm, subsequently accompanying him to Western Australia, where he became a member of the partnership

formed between Mr. Whitford and his sons, and has continued in this association ever since. He married on March 6, 1912, Constance

HARVESTING SCENE.

AUGUST HEINRICH TREFORT, owner and occupant of the "Hillside" property, Narrogin, was born at Hawker, South Australia, on June 28, 1885, and is the only

MR. AUGUST HEINRICH TREFORT, SEN.

son of the late August Heinrich Trefort, who came to South Australia among the early settlers from the Fatherland and established himself in the farming industry in the Hawker district, where he followed agricultural pursuits until the

He was fortunate in his first selection of land, choosing a block of about 600 acres in the Narrogin district, which he was able to increase by purchase of adjoining properties from time to time until he had built up a valuable farm comprising about 1,200 acres of land of choice quality. The late Mr. Trefort belonged to that highly desirable class of settlers whose industry, determination, and thrift triumphed over the many obstacles strewn along their uphill path in the days when privation and suffering were the order of the day and who won through in spite of all, founding their homes and their enterprises on solid foundations and laying up for their children heritages of honour as well as of broad acres and flocks and herds. The qualities referred to made him a most useful citizen, and in the early settlement of the Narrogin district he filled a very prominent place, occupying all the honorary positions in the district. He was a member of the Narrogin Roads Board and of the agricultural society, and, in fact, no organization was considered complete without his support or approval. It should be mentioned that all his

homestead. The "Hillside" Estate—which may now almost be said to have passed the development stage, only a few acres remaining uncleared—at the demise of the late Mr. Trefort was inherited by his son, the subject of this notice, who, since the close of his education had been associated very closely with his father in the work of the farm and had rendered most valuable assistance in its management. In addition to his efforts in this direction he also did a large amount of contracting work, chaffcutting and threshing throughout the district for settlers who had not acquired the necessary plant for such work. Cereal growing is one of the special departments of industry

MR. AUGUST HEINRICH TREFORT.

liberal conditions in regard to land settlement prevailing in the "Golden West" tempted him hither in 1892.

early struggles were loyally shared by his wife, Mr. A. H. Trefort's mother, who now resides in the old

carried on at "Hillside," and the farm is widely noted for the excellence of its grain crops. On many occasions the late Mr. Trefort was awarded valuable trophies against keen competition both at local and Royal shows for exhibits in this section, and much of his success he attributed to the two-year method of fallowing which he employed in the cultivation of wheat and oats. In this connection it is fitting to state that whilst her husband was reaping triumphs for his successes in the field his wife was exercising equal skill in her management of the dairy, and from the small herd of

milch kine kept for domestic purposes she manufactured with her own hands butter which on more than one occasion carried off prizes

paddocks of varying size with fences of five or six plain wires, and the erection of up-to-date outhouses where stabling for eighteen horses is

occupants and suited to every purpose for which it was designed. The rooms are lofty and properly ventilated, and the furnishings have been

and is not only comfortable but commodious, and is well finished in a style indicating the taste of the

1907 to Annie May, daughter of Mr. John Ashby, farmer, of Narrogin, and has a son and a daughter.

ELI HUGHES HART, J.P., "Brookside," Cuballing, was born at Willunga, South Australia, on June 25, 1861, and is a son of the late Matthew Harrison Hart, an agriculturist, of that district, where he was very well known. The gentleman under review was educated at Eudunda in the same State, and shortly after entering his teens left school in order to join his father on the home farm. Being the eldest son he remained so employed until he reached his twenty-fifth year, after which he spent a considerable time in farming pursuits at Orreroo, in the northern areas of South Australia. Later, when the Silverton and Broken Hill mining boom was at its commencement, he proceeded thither and was engaged in carrying and contract work on the fields for three years. At the end of this period he left the Barrier and entered upon the timber industry at Kangaroo Island, which he relinquished after a couple of years in order to return to farming enterprise at Eudunda. Allured by the promise of the Western Australian goldfields Mr. Hart decided to try his fortune in a State where better prospects seemed offering, and landing at Esperance Bay in the early part of 1895 he took over carrying contracts between this settlement and the Norseman goldfields, and conveyed to the scene of activity the first battery

selected a block of land—where his homestead now stands—and has since enlarged it by the acquisition of adjacent country, and now holds 1,200 acres of what is considered the

W. E. Elston, Wagin.  
MR. ELI HUGHES HART.

best land in the district, which he has brought into a very forward state of development. The property is securely fenced and subdivided with posts of jam timber and six plain wires, a system which is varied by

thoroughly cleared and cropped on the fallow system, between 300 and 400 acres being placed under cultivation annually. The estate is splendidly watered, the Fourteen Mile Brook running right through the paddocks and providing fresh running water all the year round, besides which there are numerous soaks and springs in various parts of the holding. The pastures are good and a healthy-looking flock of sheep is carried, which varies in number from 300 to 500 according to the season. The homestead is of recent erection, and is built of stone and bricks, forming a most comfortable seven-roomed dwelling, which, surrounded as it is by a small flower garden, ornamental trees, and two-acre orchard, presents a pleasant picture in the landscape. The outhouses and stabling are also up to date, providing for all the requirements of the farm plant and stock, and in every respect "Brookside" may be looked upon as a well-managed property and a credit to its owner. Since coming to Western Australia Mr. Hart has manifested a deep interest in public affairs, which has suffered no diminution since he took up his residence at Cuballing. His name appears in connection with every movement having as its object the betterment of the district, and all the more important organizations have claimed his membership. For the past eleven years he has occupied a seat on the Cuballing Roads Board, and is now in his third term of office as chairman of that body; and for the past decade has been the presiding member of the recreation ground committee in connection with the local agricultural hall. He received his Commission of the Peace from the James Administration in the year 1902. All straight, manly forms of outdoor sport appeal to him, and he has filled the position of judge on behalf of the Cuballing Race Club for a number of years. Mr. Hart married at Broken Hill, in 1892, Cecilia, daughter of Mr. William Staker, one of the earliest born Europeans in South Australia. Of this marriage there are four sons and two daughters.

Photo by W. E. Elston.

ever erected on the latter field. Three years later, having been impressed with the possibilities of land settlement in the Western State, he

the use of three wires and netting round about half of the area enclosures. The whole has been ring-barked and over 700 acres are

the earliest born Europeans in South Australia. Of this marriage there are four sons and two daughters.

BERTRAM HERIOT DODS, architect, quantity surveyor, and sworn valuator, "Wattle Grove" Farm, Fourteen-mile Brook, Narrogin, was born at Melbourne on December 27, 1871, his father being the late Benjamin Hawkins Dods, C.E., of that city. The latter gentleman was one of the leading engineers of his day, and designed and contracted for many of the big engineering works of the Victorian State. He was also a prominent figure in political and mining circles. Young Dods was educated at Brunswick College, Melbourne, and at eighteen years of age was articled to Messrs. Lawson and Grey, architects, of Melbourne and New Zealand. After four years with this firm Mr. Dods proceeded to Queensland for some twelve months, whence he returned to Melbourne, where he spent another term in his former office as assistant. In 1895 he came to Western Australia, where he entered the office of Mr. J. W. Wright in the capacity of chief draughtsman. At a later date he was offered a Government position in the Mines Department, with the right of private practice, and whilst occupying this post designed and carried out most of the hotel buildings on the North Coolgardie goldfields. Resigning from the Mines Department in 1897, Mr. Dods came to Narrogin and took up some land three miles distant from the township—a portion of which was subsequently resumed by the Government for the Western Australian State farm. Finding himself unable to develop

his holding on a large scale Mr. Dods disposed of his interests in Narrogin and departed on a business trip to South Africa during the progress of the Boer War.

W. E. Elston,

Wagin.

MR. BERTRAM HERIOT DODS.

Here he remained for six years, after the close of the war being engaged in the private practice of his profession and also entering the Civil Service for a time. During his sojourn in that country he occupied the position of supervisor of Parker's Buildings at Capetown, the highest steel-constructed edifice in South Africa, and himself executed all detail drawings in connection with that important work. Subsequently, owing to the

depression in the building trade, he returned to Western Australia, and was engaged for a year in the Public Works Department at Perth. From this he resigned in order to take up his residence on "Wattle Grove" Farm, the development of which he has since carried on in conjunction with the practice of his profession in the town of Narrogin, where he has designed and erected some of the finest and most artistic structures by which the place is graced. Among these may be mentioned Cornwall's Buildings, Wedd's Buildings, the Duke of York Hotel, the Williams Hotel, the Cuballing Hotel, Johnston's Buildings, Wickepin; Cuballing Hall, King's Hall, and a number of the most prominent residences and workers' homes in the district, as well as the Baptist church at Narrogin. "Wattle Grove" Farm, formerly known as "Cudjimuckin," comprises over 3,000 acres, and is a well-watered property. It is now in a forward state of improvement, and about 300 acres are cropped every season, besides which several hundred sheep are grazed upon the pastures. Mr. Dods has been prominent in the movement to bring the railway to the Fourteen-mile Brook, acting as chairman for the past three years to the local railway league. He is president of Miningin Football Club, his own special leaning, however, being towards cricket. Mr. Dods married in 1895 Bessie, daughter of the late William Kenny, farmer, of Callan, County Kilkenny, Ireland, and has five sons and two daughters.

"WATTLE GROVE" ESTATE, THE PROPERTY OF MR. B. H. DODS, NARROGIN.

WILLIAM THOMAS RABBISH, J.P., "Kondening," Williams, was born in South Australia on January 30, 1855, and is a son of Mr. William Adrian Rabbish, now nearing his ninetieth year, who was a pioneer in the early Victorian gold diggings, and subsequently became well known in farming and commercial circles at the Burra in the Central State. At the close of his education Mr. Rabbish became an engine-driver in the Burra Copper Mine, subsequently establishing himself in the same district as a roads and bridges contractor. At thirty-five years of age he entered upon farming pursuits at the Burra, in conjunction with which he carried on commercial pursuits in association with his father, and continued in this connection until 1896, in which year he settled on the eastern goldfields of the Western State, residing with his family for some considerable time under canvas and suffering various hardships and privations. Soon after the first survey of Boulder he purchased land at the initial land sale held at that town, and erecting a building there conducted a general grocery and spirit trade for some time. At a later date he built and carried on the Goldfields Group Hotel, and also erected the Court Hotel, which he personally conducted for a limited period, but eventually, finding the business somewhat distasteful, leased the last-named house—which is still his property—and lived in retirement at Perth for some time. In 1906 Mr. Rabbish purchased his present farm, "Kondening," then a freehold property comprising 2,000 acres. He has since considerably enlarged his boundaries, and at the present time owns in the vicinity of 7,000 acres. The estate has a frontage of five miles to the

Williams River, the homestead being situated on the Narrogin-Williams Road. The property is fenced and subdivided into fifteen paddocks and 1,200 acres have been cleared. Some 300 to 400 acres are sown annually, and a flock of from 1,500 to 2,000

J. J. Dwyer, Kalgoorlie.  
MR. WILLIAM THOMAS RABBISH.

merino sheep is carried on the estate. The homestead, built in the early days as a parsonage by the Rev. Mr. Withers, an Anglican clergyman, has since been thoroughly renovated and enlarged, until now it is one of the most cosy homes in the district. Mr. Rabbish while resident in South Australia held a Commission of the Peace for the whole province, and was councillor and mayor of Burra for many years. On leaving the Burra he was made the recipient of two addresses respectively from members of the municipal council,

with which he was connected for many years, and from the citizens of the town, both expressing in strong terms of appreciation the respect and esteem in which he was held and the value which had been placed upon his various public services. Soon after his advent to Western Australia he was elected a member of the first municipal council at Boulder, and after several years' service in this capacity was honoured by election to the mayoral chair, which he occupied for three successive years at a period when the place was in the zenith of its prosperity and the office no sinecure. He was appointed a Justice of the Peace for the Boulder district by the Forrest Administration, and took a prominent part in the effort to secure for Boulder City a tram service between that place and Kalgoorlie. Upon his departure from the place his services were recognized by the presentation of a gold repeater watch, chain, and locket, by the mayor, councillors, and citizens of Boulder. Since coming to the Williams district he has occupied a seat for a number of years on the local roads board, and has frequently served as chairman. He is Justice of the Peace for the Williams district, having been gazetted to the office by the Moore Government. Mr. Rabbish was married in September, 1877, at the Burra, South Australia, to Elizabeth Jane, daughter of the late Richard Boundy, one of the original settlers of the State, and well known in the mining industry for many years. Mr. Rabbish attributes much of the success he has had in life to the untiring and intelligent assistance which his wife has accorded all his efforts, both in business and social life. He has a family of three sons and two daughters.

MR. W. T. RABBISH'S "KONDENING" ESTATE, WILLIAMS.

GEORGE BRICE, proprietor of the Williams Hotel, Williams, is a native of Sussex, England, where he was born on January 27, 1870, his father being the late Charles Brice of that county. He received his education in Yorkshire, and subsequently was engaged in personal service with several of the aristocratic families of England, including that of a one-time Governor of Western Australia, *viz.*, Sir Arthur Lawley. Upon reaching twenty years of age he crossed the seas to the land of the Southern Cross and spent some time in the Victorian metropolis, where he turned his hand to various kinds of work. Coming to Western Australia he accepted employment as assistant in a mineral water factory in Perth, and having acquired a knowledge of this line of manufacture at a later date opened a business on his own account, which he finally disposed of. He then took a position as sole bottling agent for the Stanley Brewery Company of Perth, and continued in this line of business for five years, when he sold out his interests in order to purchase a similar concern at Northam, which he conducted until the opportunity occurred for him to take over the freehold and goodwill, etc., of his present hotel. This house—which was then known as the Williams Inn—was established over half a century ago, and is recognized as one of the historical coaching houses on the Albany to Perth route. It had,

however, outlived its palmy days at the time of purchase by Mr. Brice, who wisely expended a large sum of money in rebuilding the place, and

W. E. Elston, Wagon.  
MR. GEORGE BRICE.

upon its completion renamed it the Williams Hotel—a name well in keeping with the dignity of the palatial structure which has reared its head well above all the other buildings in the hamlet. The hotel is a two-storey brick building of modern design, containing large halls and spacious dining-room, the rooms

(thirty-two in number) being in every respect comfortably furnished and appointed. A special electric lighting plant has been installed by means of which the whole house is efficiently illuminated, and every convenience both inside and out has been provided for the travelling public. In addition to the well-arranged stabling accommodation which is available for horsemen and those arriving in buggies, a motor garage has been built to cater for the interests of those with whom the 100-mile run from Perth is a favourite trip. In addition to his hotel interests Mr. Brice also engages in sheep-farming in the same district, holding on lease a run of 5,000 acres, on which he grazes from 1,000 to 1,200 merinoes. He is the owner of real estate apart from the hotel premises, the local hall in which meetings, entertainments, etc., are held in Williams being his property. Mr. Brice is chairman of the Williams Roads Board, this being his second term of office, prior to which he served as a member of the board for a term. He is a committeeman of the Williams Agricultural Society, having been connected with this body in the same capacity since its inception, and has also held sustained membership in the local board of health, in the formation of which he displayed an active interest. A member of the Masonic craft, he is associated with Lodges 70 Commercial and 48 Victoria Park, W.A.C.

Photo by W. E. Elston.

MR. G. BRICE'S WILLIAMS HOTEL, WILLIAMS.

Mr. Brice was married in 1901 to Jessie, daughter of Mr. Andrew Templeton, of North Perth, and has one son and one daughter.

NICHOLAS BUSHALLA, proprietor of the Duke of York Hotel, Narrogin, was born at Mount Lebanon, Assyria, on June 24, 1869, being a son of the late Abraham Bushalla, a merchant of that place. He received his education in his native country, leaving school upon reaching his teens to go to work in a tannery, where he learnt the tanning trade in all its branches, and being a very apt pupil became thoroughly proficient before attaining to man's estate. Mr. Bushalla continued in the trade until 1887, when he came to Australia on a pleasure trip, and upon arrival in Victoria, being greatly impressed with the prosperity of the place and its abounding possibilities, he decided to resign his interests in the country of his birth and to take as his adopted home the land of the Southern Cross. Upon landing in Melbourne he was utterly ignorant of the English language, but upon obtaining a business position soon managed to make himself understood, and in a short time succeeded in getting a grip of the new conditions under which his life

henceforth was to be spent. Early in 1888 he decided to visit Western Australia, and embarking on an itinerant mercantile enterprise he travelled through all the inhabited portions of the State, vending his wares with considerable success. In

interests of the town. As proprietor of the Duke of York Hotel he became a well-known identity of the district, and in addition has established a general store and a cordial and mineral waters factory in the town which gives employment to a considerable number of hands. Mr. Bushalla is also largely interested in agricultural and pastoral pursuits, and owns in all over 6,000 acres of land in the Williams, Narrogin, and Wickepin districts, which he devotes to mixed-farming and sheep-raising purposes. The whole of these several blocks are ringbarked, and from 800 to 1,000 acres are cleared, 300 acres being now under cultivation. Mr. Bushalla's success is wholly due to the application, energy, industry, and good judgment which he has brought to bear upon the working out of his proposition, the fact that he came to Western Australia without capital and has since climbed the ladder of prosperity and attained a sound standing among his fellow citizens redounding greatly to his credit and proving an object-lesson which should inspire and encourage others similarly situated. He is a member of the Roman Catholic communion and is a prominent supporter of that body. In the year 1897 Mr. Bushalla married Elizabeth, daughter of the late Samuel Dowsett, of Wandering.

MR. NICHOLAS BUSHALLA.

1897 Mr. Bushalla settled at Narrogin at a period when the whole settlement was composed of four residents only, and ever since that date he has been closely identified with the commercial and general

MR. N. BUSHALLA'S DUKE OF YORK HOTEL, NARROGIN.

## WAGIN.

Wagin was proclaimed a municipality in 1906, and since then the town has neither rested nor looked back. There is no mark-time policy about the Waginites. Each year has seen an advance in population and in house building, and during 1912 some £30,000 was spent in new structures. East and west of the great southern line all the land within a radius of 50 miles has been taken up, and additional areas are yearly being brought under cultivation. It is anticipated that in the near future the land for a stretch of 100 miles will be an unbroken cultivated field. With excellent soil and a very satisfactory rainfall there is scarcely any phase of agricultural development that will not do well. Wheat, oats, sheep, and fruit have all given profitable returns. In wheat the average yield is about 11 bushels to the acre, but in places as much as 26 bushels have been secured. In the words of the town clerk, "it is almost as hard to gauge the future of the district as to count the stars in the heavens."

In the town there are five banks—a sure sign of stability—three hotels, and handsome business premises,

as well as a town hall, post office, roads board office, several churches, and a Salvation Army barracks. There is a recreation ground of 10 acres, as well as 20 acres reserved for the agricultural society for show purposes. Trees have been planted throughout the principal streets, and the Wagin Lake, about a mile and a half from the town, is being cleared of snags for boating and swimming. Wagin is supplied with water from the Badgarny water scheme, completed at a cost of £11,000, the dam of which is estimated to impound 17,000,000 gallons. There is rail communication with Perth twice daily, and an agricultural spur line about 50 miles in length runs eastward to Kukerin and serves to bring Wagin within reach of the outlying district. A westerly loop from the town to join the Collie-Narrogin line at Darkan is also projected.

In *The Southern Argus*, published every Saturday, Wagin can boast of possessing one of the best provincial papers in Western Australia, the aim of the proprietary being to keep it up to date and make it of real service to the people of the district.

**CHARLES JOHN MORAN**, J.P., is a native of Queensland, having been born in the Darling Downs district in 1868. In early life he was associated with the Education Department of that State, and also studied mechanics, passing an examination in this subject with honours before proceeding to St. Killian's College, Brisbane, and Central Collegiate School, Toowoomba, where he matriculated. Mr. Moran came to Western Australia in the pioneer days of the gold-mining industry before the discovery of Coolgardie, and upon arrival in this State entered upon commercial life, also interesting himself in a marked degree in social and political affairs. A member of the Roman Catholic faith he became closely identified with the Catholic Young Men's Society, where his gifts as a debater were fully recognized in his initial attempts at public speaking. Upon the discovery of the goldfields of Coolgardie he followed the rush to that district, and soon won distinction as a notable figure in social, political, and business circles on the newly-opened-up field. As a result, when he turned his attention seriously to the arena of politics and contested the Coolgardie seat in the House of Assembly against the late Mr. De Hamel he was returned as member for that district, and in the House became rapidly popular. As

a keen debater and forceful speaker his opinions carried great weight, and in his speeches he ranked with Mr. W. De Hamel and the late

Bartletto.

Perth.

MR. CHARLES JOHN MORAN.

G. T. Simpson, both leading lights in the Western Australian House of Assembly. When Sir John Forrest handed over the reins of authority to the late Hon. G. Throssell in 1901 Mr. Moran was offered and accepted the portfolio of Minister for Lands, and whilst holding this

office introduced various regulations of considerable advantage to settlers and miners and assisted in laying down the basic principles which have influenced the general land settlement of the State. In 1907, for family reasons, he decided to enter upon pastoral pursuits, and selecting an area of some 6,000 acres about 20 miles from Wagin commenced upon an extensive scheme of improvement. The work included a large amount of sheep-proof fencing, clearing, ringbarking, and finally cultivation. Recognizing the great possibilities of the district as a sheep-raising and high-class wool-producing district and with the thoroughness and enterprise which characterize his actions in every department of life he imported a number of pure-bred merinoes from the best breeders of South Australia and New South Wales, the wisdom of which procedure is now manifest in the splendid flocks grazed upon his property, which are the progeny of these first importations. The production of wheat and oats has also proved a source of considerable profit, and his fine station "Tamacurring," which has been carved out of what was virgin country only a very few years ago, is now one of the best estates lying along the great southern line. Repeatedly Mr. Moran has been urged again to take upon himself the responsibilities of statesmanship

in either the Western Australian or the Federal Parliament, but has declined such requests, no matter from what quarter, preferring to serve his country for the present as a painstaking and enterprising settler rather than in the rôle of politician, despite his undoubted qualifications for the latter office.

GEORGE DRAPER TAYLOR, proprietor of the "Kechauling" Estate, in the district of Wagin, is a native of Western Australia,

rural districts where employment might be found on some of the properties in process of development until such period as he should find himself able to take up land and launch out on his own account. For some time he worked on the "Grassdale" Estate, near York, for the late Thomas Brown (father of the late Maitland Brown, one-time Government Resident of Geraldton, and well known in magisterial and official circles in Western Australia), and as his prosperity advanced he leased

Perth, now well known as the Technical College. Upon leaving this institution at the completion of his education, he returned to his father's home, and there continued until he was close on seventeen years of age. He was then sent by his parent to assist in the conduct of the pastoral property known as "Condining Hill" Station in the Williams district, and was identified with station pursuits on this estate in the employ of his father until, upon attaining his majority, he joined his

Photo by W. E. Elston.

CROP OF PEAS ON THE "KECHAULING" ESTATE.

having been born at Yangedine, near York, on February 28, 1858, and is the fourth son of the late John Taylor, an early pioneer, who arrived in this State from England on February 17, 1840. With slender capital—he had only eighteen pence in his pocket—but a brave heart the late John Taylor set out to carve a destiny for himself in the new country, and having been brought up to the agricultural industry naturally turned his attention to the

the "Yangedine" Estate, which he afterwards purchased and eventually sold to Messrs. Darlot Brothers as a highly improved property. "Yangedine" is now in possession of the Marwick family. The late John Taylor spent his later days in retirement in the town of York, where his death occurred in 1890. The subject of this memoir was educated under private tuition at "Yangedine," and subsequently attended the Government school at St. George's Terrace,

elder brother, Mr. James F. Taylor, in leasing the station, and for some years the brothers carried on operations in partnership on their own account. At the period of the discovery of gold on the Kimberley field Mr. James F. Taylor joined the stream of prospectors flowing steadily to that locality, and, the partnership having been dissolved by mutual consent, the gentleman under review continued to work the property on independent lines.

Ultimately the Western Australian Land Company, upon receiving its large land grant from the Government of the day for the construction

*Stump & Co., Adelaide.*

MR. VIVIAN G. TAYLOR.

of the great southern railway line undertaken by it on the land-grant system, became proprietor of

this territory and offered the land for sale. Mr. Taylor seized this opportunity to purchase 1,200 acres from the company, and at a later date, when the railway was taken over by the Government, he continued to enlarge his holding, and at the present time the area of the estate stands at 4,500 acres; in addition to which he owns a further 6,000 acres, which are leased and worked by his four sons who have reached the age of manhood; this area being divided into farms, each of which is in an advanced state of development. Mr. Taylor's property is known as "Kechauling," and besides the homestead area of 3,800 acres, where mixed-farming operations are carried on, he has a 700-acre block situated on the Arthur River, some 12 miles distant, which he leases for pastoral and farming purposes. His flock consists of 2,000 sheep, partly merinoes and partly a Lincoln-merino cross, and this department is a most successful feature of the farm's industry, a thoroughly

useful general utility animal being produced with good frame and well suited for supplying both the wool and mutton markets. According

*Stump & Co., Adelaide.*

MR. WILLIAM JOHN TAYLOR.

to the state of the markets the wool is either sent to London or sold locally, satisfactory prices being

*Photo by W. E. Elston.*

MR. G. D. TAYLOR'S RESIDENCE, WAGIN.

commanded. About 700 acres are cropped annually with wheat and oats, some barley and peas also being grown, the latter being found most excellent as a fodder for the stock, which fatten rapidly when turned into the growing crop. The following system of cultivation is followed on the 1,800 acres of land which are cleared for tillage operations; and every season further acreage is subjected to the ringman's axe and prepared for the firestick, ultimately to be used for agriculture or as pastures for the sheep. Various natural

sources of supply have been augmented by the construction of dams, which conserve large quantities of the precious moisture in the rainy season ready for the drier months. The fencing will stand the criticism of an expert eye, the boundary being protected all round with sheep-proof barriers constructed of six plain and barbed wires and timber posts. Among the many improvements which have been made on the estate, special mention must be made of the homestead and out-buildings. The former, built by Mr.

front, where flowers and ornamental shrubs display their beautiful blooms, meeting the casual visitor with the welcome of bright hues and sweet odours so seductive to the senses; a little farther afield the five acres of orchard exhibit neat rows of fruit-trees promising a rich harvest of many kinds of fruit when the appointed season shall come round. In connection with the outhouses a word may be said anent the horses, stabling for fourteen animals being provided. This is about half the number usually kept on the farm.

Photo by W. E. Eldon.

TYPICAL VIEW ON THE PROPERTY.

advantages have simplified Mr. Taylor's enterprise, among these being the absence of the noxious poison plant on the property and the efficient water supply provided by the surface water which in the shape of copious springs and creeks is present on various parts of the estate, permanent running water being found in the Wageecarrup Brook, to which stream "Kechauling" has a half-mile of frontage. To make the water question practically secure these

Taylor in 1892, is a substantial stone house containing nine large well-ventilated rooms, well finished within and without as to architecture, comfort being made a prime consideration. The whole place has that air of permanence and stability frequently met with in such structures, and all the interior appointments are in keeping with the ideal suggested by the general aspect of the place upon approach. A small garden has been laid out in the

where representatives of various classes find a place, premier attention being given to the breeding of Clydesdales. For this purpose Mr. Taylor has his own stallion, which he purchased from Messrs. Henry Wills & Co., who imported him from the Eastern States, *viz.*, "Here-again," by "Real McKay," stock which has earned an excellent reputation on the other side of the Bight. Besides the stables there have been erected grain and shearing

sheds, earthouse and machinery shed, and men's quarters, with the usual fowl-run and other accessories of the Western Australian farm. In

*Greenham & Evans, Perth.*  
MR. ACREY TAYLOR.

Mr. Taylor's earlier days, when every progressive pioneer was required to take upon himself the

responsibility of public office when required, he served as a member of the roads boards of Arthur River and Wagin for some twelve or fourteen years, being chairman of the latter body for a portion of that time. He was one of the founders of the Wagin Agricultural Society, of which he was nominated a trustee, and has taken a keen interest in the advancement of this organization, at present holding the office of vice-president. He is president of the local branch of the Farmers and Settlers' Association of Western Australia, and occupies the same position in regard to the meetings of the Liberal League at Wageecarrup—by which name the district immediately surrounding the "Kechauling" homestead is known, the latter being situated about 11 miles in a westerly direction from Wagin. In 1912 Mr. Taylor took a trip to Ceylon, and on various occasions he has visited the Eastern States, by this means keeping himself in touch with a wider sphere than that provided by the

bounds of his habitation in Western Australia. He was married in the year 1885 to Mary Ann, daughter of the late John Barron, of

"KECHAULING" HOMESTEAD AND SURROUNDINGS.

THOMAS JOSEPH CORNWALL, J.P., who owns and resides on the "Lake Park" property, Queerarrup, West Wagin, was born at "Beaufort" Station, in the same district, on March 21, 1863. His father, the late William Walter Cornwall, was one of the earliest of Western Australian settlers, and came to the State with his relative, the late Lewis John Bailey—a pioneer land selector—by the ship "Stirling" in the days when the future of the country could only be dimly guessed at, and the rosy outlook of the present was but as the faintest ray of dawn on the horizon. At the time of his arrival the late Mr. Cornwall had only just entered his teens, and before attaining his majority he became engaged in sheep-farming on his own account in partnership with the late William Andrews in the vicinity of the township of York. Subsequently he selected a pastoral lease in the West Wagin district on the Beaufort River, where he founded the station to which he gave the name of "Beaufort" and conducted operations on this property with such success that at the time of his decease in 1908 the area of his estate ran into six figures. With his sons he deserved every smile that Fortune vouchsafed, for not only did they suffer hardship and privation of many kinds, being forced to forego all the luxuries of

modern life, but passed their lives in continual jeopardy through the hostility of the natives, who at that time were a source of danger to the white settlers everywhere, taking

MR. WILLIAM WALTER CORNWALL.

their lives and robbing their property as occasions arose. In those primitive times all the provisions and supplies for the upkeep of the station were procured from Perth, a distance of 140 miles, which had to be covered by means of the ordinary conveyances such as waggons, carts, or drays, and the way led through the bush, where good tracks were at a premium, and often there

was no track at all. What small crops of wheat were grown in the district were conveyed by cart to York, over 100 miles distant, and all other forms of enterprise had the same or equal difficulties to contend with. Mr. Thomas Joseph Cornwall was brought up on the station, where he pursued his elementary studies under private tuition at the homestead and later on was sent to Fremantle for a finishing course at the well-known grammar school at that seaport conducted by Mr. (now the Hon.) Henry Briggs, the present President of the Legislative Council of this State. Upon the completion of his studies he returned to "Beaufort," and before he had attained his nineteenth year took over the management of the station on behalf of his father. In 1892 the late Mr. Cornwall transferred to the gentleman under review, who was his eldest son, the 700 acres of freehold which comprised the "Beaufort" homestead area, together with the large tract of pastoral leasehold consisting of between 50,000 and 60,000 acres. Under the new Land Settlement Act, by which the land could be taken up on conditional purchase terms, the young settler proceeded to secure certain blocks on the old station area which he considered especially suited to mixed-farming purposes, and in so doing took into earnest consideration the question of forming a suitable home for the

Photo by W. E. Elston.

MR. T. J. CORNWALL'S RESIDENCE, WEST WAGIN.

generations to follow. From his favourable situation at the "Beaufort" Station homestead eventually he cast an approving eye over the unselected territory in the Queerear-rup district, and upon this virgin soil founded the present "Lake Park" Estate, where he built the fine homestead which graces the locality and brought his family to reside there in 1913. This new homestead is situated ten miles distant from the old home at "Beaufort," the whole of the intervening country, which is comprised in the one block, being the property of Mr. Cornwall. Upwards of 16,000 acres in extent, in quality it is equal to any of the rich lands of the great southern district, and is admirably suited both for sheep-raising and agriculture. A pleasant undulation is a characteristic of the country, and at frequent intervals outcroppings of granite rock give picturesque relief to the smooth surface of the soil. Various species of gum, notably York-gum and white-gum, are indigenous to the locality, together with patches of morrell and the useful jam, which is used for fencing and other purposes. Springs and soaks abound, while the Beaufort River and a few

fair-sized creeks provide running water all the year round; and it is a generally acknowledged fact that this property is one of the best watered propositions in Western

W. E. Elston.

Wagin.

MR. THOMAS JOSEPH CORNWALL.

Australia. While 6,000 acres are entirely cleared and development begun thereon, ringbarking operations have been completed over all but 1,000 acres, and very many

improvements already made. Over 100 miles of fencing represent an immense amount of labour and capital expended in this direction alone, the system followed being that of seven or eight wires run through wooden posts planted some 10 ft. apart. The cost per mile of this class of fencing on such country as "Lake Park" runs into about £28. Splendid pastures are being developed where axe and firebrand have rid the land of superfluous timber and scrub, and even that portion of the land that is not cleared affords plenty of feed, Mr. Cornwall having exercised his expert judgment in selecting the best areas for pastoral purposes in the district. Here is depastured a flock of 6,000 pure-bred merinoes, which at times is increased to as many as 8,000 or over. Experts upon inspecting this flock may detect the renowned "Boonoke" strain from New South Wales dominating a large portion of the sheep, and the Murray type from the best South Australian pastoral properties is also in unmistakable evidence, the pedigreed merino rams imported by Mr. Cornwall from the leading flocks of the Eastern States having "hall-marked" his own in a

HOMESTEAD ON "BEAUFORT" STATION.

very satisfactory manner. The lambing averages over 90 per cent. and fleeces clip something over an average of 6 lb., the wool being shipped to London, where it invariably commands the leading prices for the district. On the agricultural side the land is followed according to the approved two- or three-year system, in compliance with which 600 acres are put under crop annually, wheat being the principal cereal produced. With regard to the homesteads on "Beaufort" and "Lake Park" there is much to be said. The old dwelling-house on the former property, where Mr. Cornwall was born, presents a very picturesque aspect, standing as it does in the midst of surroundings typical of an old-established country home of a superior class. The house contains ten rooms, built as was the custom in those early days with an eye to the greatest possible comfort and fitted up and furnished with the same end in view, with the result that in the home-like graces there are few to equal it in all the countryside. The outbuildings—woolshed, machinery shelters, stabling, etc.—have also been constructed on a scale that causes them

to compare favourably with those erected in countries as many hundreds of years old as Western Australia has decades to its credit.

W. E. Elston, *Wagin*,  
MR. BEAUFORT CORNWALL.

"Lake Park" is still in the making, and when the intended programme of building is carried out on the whole homestead area there will scarcely be a place in the State more elegant or complete. The situation

of the house is one of great beauty, lying in a valley within a few hundred yards of two large permanent fresh-water lakes, suggestive of some of the picked beauty-spots of the Eastern States, and hardly to be equalled in the country districts of Western Australia. Charming views are commanded from almost any of the windows of the homestead, and peeps are obtained which make one imagine for the moment that a veritable "lakes district" has been encountered. The house itself is a square-built structure, which has been entirely designed and planned by Mrs. Cornwall, the talented wife of the proprietor, and it would be a difficult matter to suggest any improvement anywhere. Everything, to the smallest detail, has been most carefully thought out, and thorough utility combined with artistic effect has been the ideal aimed at and completely realized from beginning to end. Verandahs surround the house on three sides, which is built of stone and contains fifteen large and lofty rooms perfectly ventilated and fitted up with all appointments necessary for convenience and comfort. An electric bell service has been installed all over the house,

"LAKE PARK" HOMESTEAD, SHOWING LAKE IN BACKGROUND.

organizations formed in the district where he resides, and has always held it incumbent upon him to spare from his own private business

Various agricultural societies have enjoyed his support and patronage; and he was appointed to the Commission of the Peace by the Wilson

Victoria district, who in after years moved to Albany, where he lived until his death. Mr. Cornwall has a son and five daughters.

CHARLES WILLIAM DAVEY, J.P., of "Koongie-Koongowa" in the Arthur River district, *via* Wagin, was born at Ballarat, Victoria, on September 26, 1869, and is the eldest son of the late James Davey, who, with his wife, was among the early makers of history in Australia, having been concerned in the famous Eureka Stockade riots in 1854 when five soldiers and twenty-five miners lost their lives. While the gentleman under review was still quite a youth his father died, as a result of which he was called upon to support through his own exertions his mother and other members of the family. Up to this time he had been making a special study of telegraphy with the intention of pursuing it as a calling in life, but was compelled to resign this ambition and return home, where he assisted in the conduct of a storekeeping business at Scott Creek near Camperdown in the western district of Victoria. Here he continued until he was about twenty-eight years of age, when, upon his marriage, he turned his attention to the agricultural industry, his connection with which he relinquished in order to devote himself to dairying pursuits at Yarragon in the Gippsland district. About five years later he was attracted to Western Australia by the favourable land conditions existing in this State and the opportunities open to settlers with young growing families, and finding upon a

preliminary trip that reports he had heard were justified he selected some 4,000 acres in the Arthur River district and returning to Victoria disposed of his dairy farm and brought

W. E. Elston,

Wagin.

MR. CHARLES WILLIAM DAVEY.

his family back with him to the land of promise. Mr. Davey at once proceeded to develop his holding and in course of time, as small freehold farms of about a hundred acres in extent in the same neighbourhood came into the market—some of the eyes of the district from an agricultural point of view, he was fortunate

enough to secure several valuable additions to his original holding, bringing its acreage up to 5,600, in which was embraced some further selected territory. The general contour of the land is undulating with the outcrops of granite so frequently met with in this part of the country appearing here and there and the jam and York gum timber which predominate to so large an extent. The natural watering facilities are good, permanent soaks being augmented by the construction of dams and well-sinking, and Mr. Davey's improvement work in this direction has proved that good water may be obtained at a reasonable depth on almost any portion of the property. Fencing on a sheep-proof system of six plain wires was early taken in hand, and the hard steel wires used by preference for this work, with jam posts and droppers, have made a very substantial barrier for the protection of the stock. The seventeen paddocks vary in size from 1,000 to 20 acres, the latter being used as convenient enclosures for the handling of sheep, etc.; and every paddock is now quite free from the dangerous poison weed, the eradication of this pest having been made an important feature of Mr. Davey's early operations. Various native grasses and herbs flourish, especially over the ringbarked country, where the stock are depastured and find plenty of natural feed, and nearly 800 acres have been completely

Photo by W. E. Elston.

"KOONGIE-KOONGOWA" HOMESTEAD AND SURROUNDINGS.

denuded of timber and scrub while this work is continually going on, the average area cleared every year running into about 150 acres. A fine flock of from 2,000 to 3,000 Lincoln-merino crossbred sheep is an important department of the enterprise, and it is Mr. Davey's ultimate aim to develop his flock solely on these lines, being a general-utility sheep, which would be profitable both for the wool and mutton markets. The wool is sent to London, where it is offered for sale with satisfactory results, and on such occasions as it has been sold locally the prices obtained have equalled or excelled those commanded by other wool-producers in the district. Sufficient horses of a medium-draught type are kept for the work of the property, in addition to which buggy horses and hacks find their place on the farm and a small herd of dairy cattle is kept for the requirements of the household. Mr. Davey has great faith in the future of the Arthur River district, which with its regular rainfall and genial climate seems particularly well adapted to all branches of mixed farming. The present homestead has been adapted from a structure built in the early days to serve several purposes. It is situated just half-way between Perth and Albany, and in the early days was known as the "one hundred and thirty-one mile," even to the present day old residents still referring to it as "The Thirty-one." The building was used as a police station and as a stopping-place on the main road from Albany to Perth, also being utilized as a barracks at the time that the road was constructed by means of convict

labour. Stirring tales are yet related of the fierce affrays between police and convicts, and charred window-sills and doorstep still remain to bear mute evidence of the desperate efforts of the latter to

erected in those primitive times, and owing to the great thickness of the walls—20 inches—the interior is kept warm in winter and cool in summer time. A verandah encircles the whole building, and the lined

CLEARED AND CULTIVATED LANDS ON MR. C. W. DAVEY'S PROPERTY.

remove bolts and bars and so regain their lost freedom. After the construction of the great southern railway, when His Majesty's mails were conveyed over the iron rails, the place fell into disuse and was purchased outright, together with some 20 acres of land surrounding it, by Mr. Davey from the Government, since when it has been thoroughly renovated, and to-day not only presents a picturesque appearance, but has been made into a most comfortable, lofty, and well-ventilated home, 85 by 30 ft. in extent. The building itself is of a most substantial character, like most of those

weatherboard ceiling has a roof of shingles above it which again is surmounted by an iron roof. Mr. Davey takes a deep interest in local affairs, and for some years was a member of the West Arthur Roads Board, of which he was chairman for some time. He is an active member of the local branch of the Farmers and Settlers' Association, and was a founder of the original farmers' club from which the later organization has developed. He received the Commission of the Peace from the Moore Administration in 1909. Prior to his advent to this State he took a leading part in military affairs

Photo by W. E. Elston.

MR. C. W. DAVEY'S HOMESTEAD, ARTHUR RIVER.

and for eight years was a member of the Victorian Mounted Rifles, afterwards being connected with the 10th Australian Light Horse, in which regiment he attained the highest rank open to a non-commissioned officer, that of squadron sergeant-major. He has also been prominent in debating societies, and acted as president of the Yarragon Debating Club; whilst his musical gifts led to his frequent participation in orchestral and other functions of a like nature. Upon leaving Victoria he was honoured by presentations from the various organizations with which he had been connected, his military regiment and the Presbyterian Church at Gippsland both doing him honour in this respect. Upon coming to this State he founded the Arthur Rifle Club and captained the same, and with his wife gives cordial assistance to all social functions, charitable and musical movements, etc., in the neighbourhood. His favourite recreation is found in tennis, and he has laid down courts on his own property. Mr. Davey married in 1898 Maude Marie Taillebois, daughter of the late John Davidson Burnie, one of the pioneer journalists of Victoria, promoter and first proprietor of *The Warrnambool Sentinel* in the early sixties, and has one son and three daughters.

Councillor JULIUS CARL HERMANN NENKE, J.P., member of the municipal governing body of Wagin, and acting-mayor of the town, was born at Waterloo, South Australia, on June 4, 1874, and is a son of Mr. Berthold Nenke—now living in retirement with his son—one of the early members of the first German settlement in the Central State, established over sixty years ago. Mr. Berthold Nenke, who came originally from Steiman, a town in Germany, for many years was well known in commercial circles in the Waterloo, Laura, and Port Pirie districts of South Australia; and the gentleman under review received his education at various public schools, subsequently being apprenticed to the saddlery trade in the place of his birth. After completing his indentures he occupied for some years the position of manager for the well-known importing saddlery house of Messrs. Preston Brothers, and he conducted business on his own account for some

considerable time at the country centres of Wirrabara and Blyth. Perceiving brighter prospects for a man of enterprise in the State of Western Australia, then awaking from a long period of lethargy in consequence of the influx of population from all quarters occasioned by the rush to the eastern goldfields, Mr. Nenke came hither and for a period settled at Mount Barker, where he was engaged in agricultural pursuits. In 1899 he came to Wagin and opened in business in the saddlery trade, since when he has continued successfully, building up a large connection and adding a general agency business to his other operations. In conjunction with his commercial interests he is also

W. E. Elston.

MR. J. C. H. NENKE.

Wagin.

occupied in the development of a farming property of 2,500 acres, which he has built up from a nucleus of 1,800 acres selected soon after his arrival in the district, to which he has added by purchase as occasion offered. This holding is situated about 14 miles distant from Wagin, and is devoted to mixed farming, 800 acres being cleared and the whole ringbarked, while many improvements have been made all over the property, which is under the personal supervision of the proprietor. Adjoining the town site he has also a 30-acre orchard in full bearing, and finds plenty to occupy his hours of business in his various enterprises. Apart from his personal interests he is full of energy in the cause of his fellow townsmen, and is prominent in all movements for the betterment

of the district he lives in. He took a leading part in the agitation to secure municipal government for Wagin, and has been a member of the council since its inception, while he was the second to be elected to the mayoral office, which he filled for three years, and is now acting-mayor. For the first six years of its existence he served as secretary of the local agricultural society, and was the organizer of the first show in connection with this organization, which was a great success. He has been a member of the Wagin Roads Board for seven years, for two years filling the office of chairman of that body; and was one of the founders of the Wagin Co-operative Mill, of which he was for a time chairman of directors. He received his Commission of Justice of the Peace from the Moore Administration in 1907. Mr. Nenke is a supporter of the present State Ministry (1913), and contested the Wagin seat without success in 1911 against the sitting member, Mr. Stubbs; he had previously made a bid for political honours in the same district some eight years ago. He holds the position of chairman of the Great Southern Districts Racing Association, and is chairman of the local race club. A prominent supporter and patron of all clean forms of sport, he holds office as president of the leading local football club; and among his many public services was the founder of the Wagin Fire Brigade, of which he is the present captain. Mr. Nenke was married in 1885 to Clara Ann, daughter of Mr. Edward Holland, now retired, formerly engaged in agricultural pursuits in South Australia, and has a surviving family of four daughters and three sons. His eldest son occupies the post of lieutenant of the local cadet military forces for the Katanning and Wagin district.

JOHN EDWARD COWCHER, of "Puntapin," Wagin, was born at Pinjarra, on August 31, 1856, and is a son of the late George Stanyford Cowcher, who came to Western Australia as a lad of fifteen with his parents in June, 1830, and died at Murradong at the advanced age of eighty-seven, having spent his life in pastoral and agricultural enterprise in the Pinjarra district. His father, the late George Stanyford Francis Cowcher, was one of the first medical practitioners to enter the new Crown colony, where he carried on practice

at Fremantle and Guildford until the time of his demise. Mr. J. E. Cowcher was educated at the Marrinup Government School, near Pinjarra, and upon the completion of his studies became engaged in farming and grazing pursuits and in contracting and agency work in the Williams district, where he continued for about ten years. In 1889 he took up a large holding of Government land near Wagin in a district well watered from natural sources, soaks and creeks being present in abundance, and whilst proceeding to develop this area as a mixed-farming proposition he availed himself of every opportunity that occurred to make suitable addition to his property. To-day the complete holding extends over about 4,500 acres, the whole of which is protected with sheep-proof fencing, while subdivision has been made into a number of paddocks of convenient size for the various departments of industry carried on. The greater proportion of the estate is ring-barked and 1,000 acres are cleared, about 450 acres being put under crop annually on well-fallowed land, from which good results are usually obtained. The improvements include the construction of dams, by which means the water supply is rendered practically secure; and some of the most important development work

All kinds of fruits are here produced and considerable consignments are sent to the local markets, where good prices are commanded. The flock carried upon the property consists of only about 500 sheep, a large

W. E. Elston. Wagin.  
MR. JOHN EDWARD COWCHER.

number being leased out to surrounding settlers—some 3,000 in all; one farm of 1,900 acres being leased with stock and farming implements. Horses to the number of thirty and

surplus cattle raised by Mr. Cowcher. The homestead is a comfortable stone building, the rooms, nine in all, being of particularly large size and well lighted and ventilated. A verandah and the ordinary accessories of a modern dwelling complete the necessary accommodation, and at the rear will be found the up-to-date outhouses, comprising two sheds, stabling for six horses, chaff-house, hayshed, and quarters for married and single men—in a word, everything required in the upkeep of a well-managed farm. Mr. Cowcher carries out the duties of inspector in the Wagin district on behalf of the Agricultural Bank. He takes a keen interest in the public affairs of the place, and for the past eleven years successively has occupied the office of president of the Wagin-Arthur Agricultural, Horticultural, and Industrial Society, in the administration of which he manifests an active concern. He has also filled the office of trustee to the society just mentioned, and was one of the first trustees of the Wagin Agricultural Hall, acting in this capacity also to the Wagin Turf Club and the Wagin Masonic Hall. He was a member of the Wagin District School Board for many years, and acted as chairman for a time. Whilst in the Williams district for many years Mr. Cowcher served as chairman of the local roads board, and since arrival at Wagin has occupied the same office in connection with the roads board of this centre, known as the Wagin-Arthur Roads Board, with which he has been connected as member and chairman for a very lengthy period. He exercises the Commission of Justice of the Peace, to which he was appointed in 1895 by the Forrest Government. A prominent member of the Anglican Church, he has filled various honorary offices in the local branch of that communion, among which were warden, synodsmen, etc. At the age of sixteen Mr. Cowcher joined the Pinjarra Mounted Volunteers, of which corps he continued a member for many years. He is a supporter and patron of all forms of clean sport in the district, and for many years acted as honorary judge in connection with the Wagin Race Club. Mr. Cowcher married in March, 1887, Louisa, daughter of the late John Pollard, farmer and grazier, of Marradong, one of the very old pioneers of Western Australia, and has five daughters.

"PUNTAPIN," RESIDENCE OF MR. J. E. COWCHER, WAGIN.

has been expended on the laying-out of a large orchard, 11 acres in extent, which is now in full bearing and is regarded by Mr. Cowcher as a valuable asset in his operations.

including mixed sorts for every class of work are bred upon the farm, those not needed for home requirements being sold privately or at the local saleyards, together with the

EDWARD HORROCK HILL, "Flat Rock" Farm, West Wagin. The subject of this notice is a South Australian native, having been born at Horrock Pass, near Port Augusta, on May 10, 1872. His father, the late Frederick Matthew Hill, was one of the early pioneers of the State, and came originally from Hull, Yorkshire, England, taking up his residence in the northern areas of the yet undeveloped country. Educated at the Government school at Port Pirie, while still of tender years Mr. Edward Horrock Hill began work in the agricultural industry among the different farmers in that district, and as time advanced in turn filled the positions of station hand, boundary rider, drover, teamster—in fact, became thoroughly familiar with all classes of employment incidental to bush or station life, and met with very varied experiences. In 1895, tempted by the lure of gold discovery in Western Australia, he left his native soil and upon arrival at these shores for a time forsook the avocations connected with settlement of the land, and soon was in the thick of the mining industry. Not content with following the general lead to the eastern fields Mr. Hill pushed forward with other enterprising spirits to the "edge o' the beyond," prospecting at Linden and other remote places, often taking his life in his hand and hazarding possessions and health in order to exploit some region where the golden gleam was reported to have been seen. Varied success attended his

efforts at dry-blowing, etc., some little return for his labour being afforded to buoy up his hopes from time to time, but after three years of this precarious existence the "call of the land" again exerted its

W. E. Elston,

Wagin.

MR. EDWARD HORROCK HILL.

power, and deserting the mineral region he came to the Wagin district and set himself to the task of selecting a suitable holding upon which to begin operations. His first selection consisted of a block of 300 acres, which he enlarged as he could gather the necessary capital, and by degrees so increased his acreage that to-day the area of country known under the name of "Flat Rock"

Farm runs into 1,300 acres, forming a well-developed holding devoted to mixed-farming operations. A tour of inspection reveals many natural advantages possessed by this property, not the least of these being the fine natural water supply which has been augmented by the construction of dams and well-sinking in various localities. The soil is fertile and gives good results for the labour expended upon it, and there are excellent pastures for sheep, this being the principal department of industry carried on. The whole of the property is protected with sheep-proof fencing, and the flock, which numbers in the vicinity of 600, is bred with a view to both the wool and mutton markets. A comfortable though small four-roomed cottage built of stone serves as a homestead, which will lend itself to additions as necessity demands, and an orchard has been planted with all kinds of fruit-trees, giving promise of plentiful harvests when the time of maturity shall arrive. Mr. Hill is a member of the local agricultural society, of which body he has been a committeeman for some considerable time, and he takes a deep interest in the welfare of all movements having as their object the advancement of the district. He is prominent in matters of sport, and is a member of the committee of the race club, in connection with which he has acted on various occasions in the capacity of steward. He is also an advocate for all forms of athletic exercise, and in the past took a creditable place

Photo by W. E. Elston.

"FLAT ROCK" FARM, THE PROPERTY OF MR. E. H. HILL, WAGIN.

as a player of football and cricket. Mr. Hill was married in 1908 to Adah, daughter of the late William Darrington, an Englishman who resided at Gordons, Victoria, for many years prior to his death, and was well known in commercial circles in that place. His family consists of a son and a daughter.

**PIESSE BROTHERS,** Arthur River. (Gerald Austin William Piesse, Vernon Frederick Piesse, and Charles Oxley Piesse.) "The Arthur" is the name by which is known the property owned by Messrs. Piesse Brothers on the Arthur River, where, many years since, under the personal supervision of the Hon. C. A. Piesse, J.P., M.L.C., one of the founders of the old-established firm of F. & C. Piesse, were erected premises for a combined store and dwelling-house, which now forms the homestead occupied by the present proprietors. At that time "The Arthur" was the district township, and the homestead is situated 18 miles in a westerly direction from Wagin on the Perth to Albany Road and about 124 miles from the metropolis. The property owned by Messrs. Piesse Brothers consists of 20,000 acres in all, that

is situated on the Beaufort River, being about 16 miles south-west of "The Arthur" homestead. The country undulates pleasantly, and at intervals occur the outcrops of granitic rock which are a feature

MR. GERALD AUSTIN WILLIAM PIESSE.

of the district, where also are indigenous numerous varieties of useful timber trees, including jam, York-gum, white-gum, red-gum, sheaoak, etc. Both propositions are

watercourses having large permanent pools of excellent fresh water. In addition eleven dams have been constructed in suitable spots, thereby completing an excellent water supply. Originally the whole territory was infested with the noxious poison weed so fatal to stock, but by the unremitting labours of the Hon. C. A. Piesse this pest has been entirely stamped out and little attention is now necessary to keep the properties free from what has proved so serious a drawback to many an enterprising settler in these regions. Natural herbage flourishes in great abundance on both the properties, affording excellent feed even on those portions which have only been ringbarked, while the areas which have been cropped compare most favourably with any in the State as grazing pastures. A portion of the country that has been cleared and cultivated is capable of carrying a sheep to the acre, and the Messrs. Piesse Brothers anticipate a great extension in the stock-carrying power of the estate as clearing operations progress. Of the 20,000 acres fully three-quarters are well adapted to agriculture, and it is probable that with the proper amount of attention the remainder would give good results as a cereal-growing proposition. About 1,500

Photo by W. E. Elston.

TYPICAL VIEW OF "THE ARTHUR" COUNTRY. DAM IN BACKGROUND.

in the Arthur River district containing 12,000 acres, while a separate holding known as "Riverslea" of about 8,000 acres

equally well watered and possess about nine miles of frontage to the respective rivers upon which they are situated, both of these

acres are devoted annually to this purpose, and in especial a large amount of oats are cropped, the district being particularly favourable

to the production of this cereal. The entire area is ring-barked and over 6,000 acres, chiefly on the home property, are completely cleared, thus

*Bartletto,* *Perth,*  
MR. VERNON FREDERICK PIESSE.

giving scope for cultivation on a fairly large scale on the fallow system which is adopted by the gentlemen under review. Both of the holdings—which are conducted under one management—are protected chiefly with vermin-proof fencing constructed with three

barbed wires and netting, while subdivision has been made into numerous paddocks, varying in size from 3,000 acres down to several ten-acre enclosures, made small for the more convenient handling of the sheep. The fencing costs from £28 to £32 for plain and £38 to £42 for netting per mile, the posts used being cut from the jam timber on the property, and precautions are taken against fire by making it a practice to clear the timber and scrub away for 12 ft. on either side of the fence. Pride of place is given by Messrs. Piesse Brothers to pastoral operations, sheep-raising being the chief branch of this department of their enterprise. About 12,000 sheep are put to shears annually, and with a lambing average which, taking a fair range of good and bad seasons, is estimated at not less than 85 per cent., this number, notwithstanding heavy drafts which are sent away every year, is easily maintained. The merino breed predominates in a marked degree, it being the aim of the present firm to continue to build up a first-class type from the flock which was taken over with the property some three or four years back. All but the best stock is now being

weeded out, and stud sheep are being imported from the Eastern States, by means of which introduction of superior blood manifest improvement

MR. CHARLES OXLEY PIESSE.

in the flock has taken place. In 1910 1,000 stud ewes were obtained from the famous "Boo-oorowie" flock of South Australia, and pedigreed rams from the same source have been introduced from time to time, while the renowned "Boonoke" strain has also been levied upon from New South Wales.

*Photo by W. E. Elston.*

"THE ARTHUR" HOMESTEAD AND CUTBUILDINGS.

In addition, representatives from local flocks, the reputation of which stands high in the pastoral circles of the State, have been purchased, and there is little doubt that in the near future the "Arthur" sheep will be able to hold their own among any other flocks in Western Australia. The wool is despatched to London, and for some time past has commanded top prices for the State, the 1912 clip bringing 1s. 2d. per lb. for over 100 bales, while the lambs' wool brought over 1s. per lb. The shearing shed commands the best position in the district, and is one of the most prominent landmarks of the pastoral industry on the Perth to Albany route. It is furnished with eight Wolseley shearing machines, recently installed, the driving power for which is provided by a 6½-h.p. Tangye oil engine, and the general outfit and appointments are equal to any shearing shed in Western Australia. It may be mentioned in this connection that besides shearing its own flock the firm of Messrs. Piesse

In addition to the shearing shed there are other outbuildings, including excellent shearers' quarters,

chaff, a good machinery shed shelters the various costly machines in use on the property, and all the etceteras

Brothers undertakes this work on contract terms for many of the larger sheepowners in the district.

provided for 18 horses, the chaff-shed has accommodation for the storage of from 30 to 40 tons of

the town of Wagin was laid out, is in the centre of the large pastoral and sandalwood area extending from

the Williams River to Kojonup. It has been altered and renovated in more recent times, and is a comfortable ten-roomed house, with the usual extra offices, etc., into which many modern luxuries have found their way. The three brothers now owning and managing the station all first saw the light in the old homestead, and are therefore natives of the district, the eldest, Mr. G. A. W. Piesse, having been born on September 3, 1885. He was educated at the High School, Perth, and at the conclusion of his studies returned to his father's property, "Tillellan," near Wagin, where he assisted in the duties of the estate until 1910, when "The Arthur" was transferred to him and his brothers by their parent, since when he has devoted his time and attention to the development of this valuable holding, in which he has been ably assisted by his brothers. He is a member of the West Arthur Roads Board, and gives his support to all organizations for the promotion of clean forms of sport and outdoor athletic exercises. He married in 1909 Ruby Alice, daughter of Mr. George Watson, J.P., a Scotchman who was settled in South Australia for over half a century and for the past decade has been identified with the agricultural industry at Yornanning in this State. The second son of the Hon. C. A. Piesse, Mr. Vernon Frederick Piesse, was born on August 23, 1889, and pursued his scholastic studies at the Guildford Grammar School, afterwards serving a few years in his father's mercantile office, where, under the able tuition of the manager, Mr. R. Sinclair, he acquired practical clerical knowledge. Subsequently he followed in the footsteps of his elder brother in his decision to carve out for himself a career in connection with pastoral and agricultural enterprise. He interests himself in military affairs, and holds rank as second lieutenant in C Squadron, 25th Light Horse. The third and youngest member of the firm, Mr. Charles Oxley Piesse, was born on April 8, 1891, and since the conclusion of his scholastic course at the Perth High School has been

associated with his brothers in the building up of "The Arthur" Estate. He is at present managing the "Tillellan" property on behalf of his firm, they having leased the same from their father.

**WILLIAM EDWARD CLARK, J.P.**, general agent and auctioneer, Wagin, was born at Bendigo, Victoria, on July 31, 1871, and is a son of the late William Clark, a well-known farmer and grazier of that State who followed these industries at Pyramid Hill for over twenty years. He received his education in his native city, and upon entering

W. E. Elston, Wagin.  
Mr. WILLIAM EDWARD CLARK.

his teens became associated with his father in agricultural and pastoral enterprise, continuing in this connection for a considerable period. Upon attaining the age of twenty-seven he was attracted by the possibilities offered by Western Australia to young men of energy and ambition, and upon arrival in this State in 1898 proceeded direct to the gold-fields, where he was engaged for four years on the commercial side of the mining industry at Kalgoorlie and Menzies. At the end of this period he decided to devote his energies to land development, and coming to the Wagin district selected some 3,000

acres situated about five miles from the town, where he commenced operations, a few months later establishing a general agency and auctioneering business in Wagin, which he has carried on ever since. Mr. Clark has met with success in both of these ventures, having worked up a good connection in his mercantile scheme, while the property is now in a well-advanced condition. The fencing is completed, and about 600 acres cleared, 300 acres of which are cropped annually, the remainder of the estate being utilized as a sheep run. The flock at present consists of between 700 and 800 sheep, and general mixed-farming pursuits are followed by Mr. Clark, who runs the usual dairy herd and horses for the requirements of the farm. His career in the neighbourhood has been marked by active interest in all affairs affecting the community at large, and shortly after arrival he was elected first as a member and almost immediately afterwards as chairman of the local roads board, a position he retained for seven consecutive years, when he tendered his resignation. He was one of the first members elected upon the inception of the municipal council, and occupied a seat on this body for several years before being invested with mayoral honours in 1910, from which office he resigned in the following year. Mr. Clark is secretary to the Wagin Agricultural Society, which, mainly owing to his efforts during the past five years, has become one of the most successful of such organizations established in the country districts. He is a Justice of the Peace, having received his Commission from the James Administration; and is member, patron, or leader of most of the movements set afoot for the advancement of the district in which he resides. He has been identified with Freemasonry for a lengthy period, and has occupied honourable office in the local Lodge, No. 74, W.A.C. In the year 1900 Mr. Clark was married to Ellen Ann, daughter of the late James Dripps, agriculturist, of the Kerang district of Victoria.

ANTHONY MADDEN, J.P., "The Mount," Arthur River, *via* Wagin, was born at Dublin, Ireland, on May 10, 1864, and came to Victoria with his parents, who were among the early settlers of that State, the gentleman under review being still quite a child at the time of arrival. Upon the conclusion of his education at the South Melbourne Grammar School Mr. Anthony Madden became connected with banking in the service of the National Bank at the head office in Melbourne, where he remained for some time, subsequently filling more responsible positions in various agricultural and mining centres throughout the Garden State. Eventually he was transferred to Albany in Western Australia, where he continued as accountant for about two years, thence receiving transfer in the same capacity to the Perth office, and after three years at the capital was promoted to the post of manager, being sent to open the first branch of the bank at Northam. Having controlled operations there for a decade he received an offer from the Government of the day to take the appointment of Resident Magistrate at Newcastle—now Toodyay—and resigning from the bank's service commenced his official duties at the latter town in 1898. Two years later he was transferred to the more important and responsible town of Roebourne, and after filling the same office there for three years retired from the service upon a decision being made by the Government of the day that in the far northern districts the offices of resident magistrate and district medical officer should be combined. Ultimately Mr. Madden decided to devote himself to agricultural and pastoral pursuits, and with this end in view turned his attention to the Arthur River district, which he foresaw would be one of the localities to be served with a railway at no very distant date. Accordingly he took up a block of land situated some 20 miles west of Wagin on the Perth-Albany Road and some 125 miles from the metropolis, and has since resided in an old-established homestead, originally the property of the Taylor family, so well known in the

pioneering records of that district. In the old coaching days this house was one of the stopping-places on the well-nigh 300-mile trip from Perth to Albany which formed the mail route of that day, and the

Bartolto.

Perth.

MR. ANTHONY MADDEN.

police station of the district was established here some half a century back. Besides this 700-acre block Mr. Madden has some 3,000 acres in its vicinity, and being a strong believer in mixed farming he, of

course, combines grazing with cropping on this area. He has always been distinguished for the active interest he displayed in public affairs, and whilst still an officer of the bank occupied some of the most prominent positions in the various communities of which he formed a member, over twenty years ago being appointed a Justice of the Peace for whole State. He is the present chairman of the West Arthur Roads Board, and fills the same position in regard to the Arthur River branch of the Farmers and Settlers' Association of Western Australia, in the deliberations of which body he manifests a practical concern. A Liberal in politics he is president of the local branch of the Liberal League, and is a power at the periodical elections; and always takes a very keen interest in all that concerns the Arthur River district. He is a Master Mason, and is Past Grand Junior Deacon of the old English Constitution in Western Australia, besides at various times filling other honorary offices in the craft. He is a keen advocate of all clean sport, being president of the Arthur River Race Club and the football and cricket clubs. He married a daughter of the late John Wall Hardy, a pioneer of the State, and has a son and two daughters.

MR. A. MADDEN'S RESIDENCE, ARTHUR RIVER.

### KATANNING.

Travelling along the great southern line from Wagin through Woodanilling and Moojebing, we come to Katanning, the most important town between Beverley and Albany. Situated about 225 miles from Perth, it is the chief agricultural centre along the southern railway line. The first settlement along that line took place here, and consequently the surrounding country is more extensively developed than at other centres, and the farms have larger areas under cultivation. "The land is undulating, and the soil varies considerably—from a rich chocolate loam and black sand in some parts, to a

F. and C. Piesse, who were among the pioneers of the district, being first interested in business at the Williams and Arthur Rivers, and who since the great southern line was completed have been the principal advocates of the advantages of Katanning as a fine centre for agriculture. In addition to cereals, there is a large area under fruit-trees and vines, and a fine winery, capable of turning out nearly 18,000 gallons per annum, has been constructed. Again, the high prices obtained for the wool from the district show that as a suitable locality for the raising of sheep it can scarcely

SCRUB ROLLING, KATANNING DISTRICT.

CLIVE STREET, KATANNING.

AUSTRAL TERRACE, KATANNING.

POST OFFICE, KATANNING.

light sandy and gravelly soil in others. The timber consists of white, red, and flooded gum, with jarrah, she-oak, and stinkwood in small quantities in some localities. Timber for building and fencing purposes is easy to obtain. The rainfall is good, the average being between 16 in. and 17 in. per annum. The country is admirably adapted for mixed farming, stock-raising, and fruit-growing, as well as for the production of grapes and for wine-making." With all these advantages it is not surprising to find that settlement has proceeded apace, and that progress is the keynote of the district. The fertility of the soil for cereal crops is proved by the erection of a large flour mill capable of turning out 8,000 tons annually. This mill is due to the initiative of Messrs.

be surpassed. The town itself, much of the progress of which is due to the faith and business capabilities of the various members of the Piesse family, contains a population of about 2,000 people. Its local government is in the hands of the Katanning Roads Board, which, with the assistance of a health board, carries out the municipal functions with comparatively little administrative expense. As befits a commercial centre of such importance four of the associated banks have branches in the town, and the business premises give evidence on every hand of stability and progress. Among the buildings of a public nature may be mentioned an up-to-date Government hospital for the district, courthouse, mechanics' institute, and six churches. Travellers are

catered for by six excellent hotels. Being lighted by electricity the town presents a modern appearance, and the great development going on all around makes it a hive of industry. *The Great Southern Herald* published twice weekly is a staunch supporter of the district, and ever ready to urge its claims on every occasion.

Kojonup, situated some 26 miles to the south-west of Katanning and about 160 miles from the capital, was originally one of the old coaching stations on the main Perth-Albany road, and is therefore one of the oldest settlements in the State. When the great southern railway took away the road traffic the town fell behind, and very little headway was made until the construction of the line from Boyanup Junction across country to

Katanning. Since that time, being situated in a good agricultural area and having facilities for transport, it has made better progress. It now contains about 800 people, and stores and other buildings are gradually being erected.

A spur line of railway also runs out from Katanning to Nyabing, and serves to open up and give facilities for the carriage of produce to another large area of wheat-growing country.

From this description of Katanning and its surroundings it may easily be seen that there are very few districts in the Commonwealth with better qualities to support them, and still fewer where greater evidences of a prosperous future are available.

JOHN JOSEPH HOLLAND, J.P., M.B. (Syd.), medical practitioner, of Katanning, is a son of Mr. Daniel Holland, a merchant of Goulburn, New South Wales, and was born in the Mother State on February 11, 1876. He received his preliminary education at St. Joseph's College, Hunter's Hill, Sydney, and upon matriculating at the University of Sydney was awarded the Norbert-Quirk Scholarship at St. John's College for classics. He entered upon the study of medicine and surgery, qualifying at that institution in 1904, and upon gaining his diplomas was first identified with St. Vincent's Hospital, Sydney, where he obtained valuable experience as house surgeon. This position was succeeded by that of resident medical officer at the Coast Hospital, Sydney, and he subsequently entered in the same capacity the Lewisham Hospital for women and children. In 1907 he came to Western Australia, and after filling a temporary post at Mulwarrie Hospital Dr. Holland was transferred to the Government hospital at Kanowna, where he continued in charge for three years. Resigning this appointment he came to Katanning in 1910 in order to establish himself in private practice, and has since become widely and popularly known throughout the district, his connection extending over 50 miles of country. Dr. Holland is a member and committeeman of the Great Southern Pastoral and Agricultural Society, and also serves on the committee of the local mechanics' institute. He is a practical sympathizer with the various charitable movements inaugurated in the town, and what little leisure he can spare from his professional duties is wholly devoted to the betterment

of local conditions. He is prominent in matters of sport and fills the office of hon. secretary of the Great Southern Polo Association, which embraces all the polo clubs on the great southern railway line. He is president of the Katanning Tennis Club, one of the committee of the Katanning Racing Club, and still retains

H. C. Biltott, Katanning.  
DR. JOHN JOSEPH HOLLAND.

membership in the Sydney University Club. In 1906 Dr. Holland married Alicia, daughter of the late Mr. James Simmons, of Meniwa, New South Wales, and has a son and two daughters.

CHARLES EDWARD SEWELL, LL.B., barrister and solicitor, Katanning, is a son of the late John Sewell, of Surrey, England, where the gentleman under review was

born on September 1, 1859. When about seven years old he accompanied his father to Australia, and was educated chiefly by a tutor in his own home until he reached the standard necessary to qualify him for admission to the University of Adelaide, where he matriculated and subsequently graduated in law. He was articled to Mr. (now Sir John) Gordon, of South Australia, and having completed his indentures was called to the Bar of South Australia in 1886. Eventually he was taken into partnership by his former principal, and shortly afterwards purchased the practice, which he carried on for five years. At the end of this period he was induced to go to Victoria, and having been admitted to practice there in 1891 proceeded to Mildura, whence he removed to Bendigo, and at a later date was identified with the mining district of Eaglehawk. Owing to the bursting of the now notorious land boom in Victoria and the consequent depression of trade Mr. Sewell decided to accept an invitation to come to the virile Western State, where the prosperity resultant upon the outbreak of the eastern goldfields had attracted experts in every profession. His extensive knowledge of mining law endowed him with special fitness for practice on the fields, and he spent his six months of probation after arrival in managing the business of Messrs. Mann & Sinclair at Menzies, receiving admission to the Western Australian Bar in 1897. An attack of fever, however, compelled him to relinquish his connection with the mining centre, and proceeding to Albany he established a practice which he carried on for five years. When the mail steamers ceased to

call at that port Mr. Sewell removed to Fremantle, where he formed a good connection, but becoming a sufferer from severe muscular rheumatism found it necessary to take up his residence at some inland district. For this purpose he made choice of Katanning, and settling in this town in January, 1911, has continued here ever since. Mr. Sewell is a member of the Masonic craft, in which he has held various principal offices. He has been twice married, and has issue one son by the first marriage.

**JOHN COLLIN COOK**, of Katanning, is a son of the late John Cook, of Suffolk, England, and was born in that county on January 8, 1864. He received his education at a private school at Wickham Brook, in Suffolk, and upon the conclusion of his studies at sixteen years of age began business life in the green-grocery trade at Liverpool, with which he was connected for about three years. He then obtained a position on the north-eastern railway, and, having gone through the preliminary training, undertook the responsible duties of enginedriver, continuing in this post until his departure for Western Australia in 1887. Upon arrival Mr. Cook found employment on the railway line then in course of construction between Albany and Beverley, subsequently transferring his services to the Western Australian Land Company, which took over the line upon its completion, and he was chosen to drive the first through train from Albany to Beverley. Leaving the railway service in 1894, he purchased the lease of the Katanning Hotel, Katanning, and conducted that house for nearly five years, afterwards becoming proprietor of the Exchange Hotel in the same place, which he carried on for almost a similar period. Upon relinquishing this enterprise he entered upon the development of a farm of 600 acres which he had taken up some time previously in the district of Katanning, and for several years continued to work this property successfully, an orchard of 20 acres in extent and mixed farming operations generally absorbing the whole of his time and attention. At the beginning of 1911 Mr. Cook sold his farm and orchard and took his family for an extended trip, during which they travelled throughout Great Britain, Ireland,

and the Continent. He still holds interests in real estate at Katanning, and has his residence in that town. In 1884 he married Mary Ann, daughter of Mr. Thomas Rowlands, of West Hartlepool, County Durham, England, and has two sons and one daughter.

**PATRICK STUART, J.P.**, Secretary and Engineer to the Katanning Roads Board, was born at Coulfetrim, near Ballycastle, County Antrim, Ireland, on March 18, 1861, being a son of the late Mr. Andrew Stuart, a farmer of that place. He was educated at the National School in his native town, subsequently completing his education at St. Patrick's, Dublin. This institution he left at

H. C. Bittoft, Katanning.

Mr. PATRICK STUART.

the age of eighteen in order to emigrate to New Zealand, where he became engaged in the teaching profession, filling the position of head master of the Roman Catholic school at Ross, on the west coast of the South Island. After ten years in that locality, in 1891, the reports of gold discoveries in Western Australia drew him to this State, and upon arrival at Perth he obtained an appointment in the office of the late Mr. C. Y. O'Connor, then Engineer-in-Chief for the State. For six years Mr. Stuart worked under this master of engineering, at the end of which period he was offered the position of town clerk and engineer of Menzies, which he accepted and continued to fill this office for about seven

years, resigning in 1903 to take up similar duties at Leederville. A call from the Murchison district next led him to accept the appointment of town clerk at Day Dawn, in which he continued until he entered upon his present post in 1908. Mr. Stuart has the distinction of being the oldest officer in the State still in harness appointed under the Local Government Act. Outside his official duties he has found time to support various public movements, and took a deep interest in the Fresh-air League, that admirable institution on the gold-fields to protect and promote the health and physical welfare of children. He acted as secretary to the Menzies Hospital for some time, and occupies a similar post in connection with the Katanning Public Hospital. He has been one of the leading rifle shots of the State, and was a founder of one of the first rifle clubs in Western Australia, being closely identified with the movement since its inception. He was winner of the first gold medal for 1,000 yards in Association Competition, and is the possessor of several other trophies, in addition to handsome presentations from the various clubs in which he has been interested. Mr. Stuart was secretary of the Day Dawn Turf Club and chairman of the Menzies Racing Club. His appointment of Justice of the Peace was made by the Forrest Administration in the early nineties. In 1894 he married Mary, daughter of the late Mr. Patrick Healy, of the West Coast of New Zealand, and has two sons and three daughters.

**NICHOLAS JOHN COLE TRELEAVEN**, Manager of the Katanning Branch of the Union Bank of Australia, Limited, was born at Port Adelaide, South Australia, on January 7, 1870, and is a son of the late Mr. Nicholas Treleaven, a well-known pioneer of the Central State. He received his education at Prince Alfred College, and at eighteen years of age joined the staff of the Bank of South Australia at the head office at Adelaide. In 1892 he resigned from the service in order to transfer to that of the Union Bank of Australia, Limited, and after four years' connection with the Adelaide Branch of this institution received promotion to the General Manager's Department in Melbourne. Shortly afterwards Mr. Treleaven was transferred to the

Inspectors' Division for Victoria, South Australia, and Tasmania, and subsequently for six years filled the position of relieving manager in South Australia and Victoria. About the end of 1904 he received appointment to the permanent position of manager, and came to Western Australia to open a branch of the Union Bank at Katanning, which he has continued to control uninterruptedly ever since. Apart from his official duties Mr. Treleaven is largely interested in landed property near Broome Hill, where he

H. C. Biltoft, Katanning.  
MR. N. J. C. TRELEAVEN.

owns an estate of 2,500 acres, highly improved, where mixed farming operations are carried on with considerable success. Upon this property there are 1,000 acres under tillage, and a fine flock of sheep, in numbers running well into four figures. Mr. Treleaven finds outdoor recreation chiefly in the game of tennis, but if opportunity offers he drives to his estate, where wide scope for healthy exercise is always available. He was married in 1904 to Muriel, daughter of Mr. Thomas Curson, works manager of the Central Mine, Broken Hill, New South Wales, and has one daughter.

ARTHUR JOSEPH WATTS, D.D.S., Royal College of Surgeons, Ireland (1881); member of the Dental Society of Western Australia; member of the Dental Board, Western Australia (1905); Examiner Dental Surgery and Pathology

and Dental Mechanics, Dental Board, Western Australia (1906-8); late Curator of Dental Laboratory, Dental Hospital, London. The gentleman under review was born at Deanston, Perthshire, Scotland, on May 26, 1856, and is a son of the late Martin Watts, well known in the cotton industry, Scotland. He was educated at the Model Free Grammar School, Macclesfield, Cheshire, England, and pursued his professional studies under several masters, being articled to the prominent dental practitioner, the late Mr. Sydney Wormald, of Stockport, England. After gaining considerable experience he accepted the position of dental assistant to Mr. W. B. Pearshall, F.R.C.S.I., in 1881, and upon arrival at Dublin was admitted to the L.D.S. degree. In 1890 he went to London, where he received the appointment of Curator of the Dental Laboratory and Demonstrator in Dental Mechanics, which he held until 1896, when he resigned in

H. C. Biltoft, Katanning.  
MR. ARTHUR JOSEPH WATTS.

order to commence practice on his own account in London. In 1902 for health reasons he came to Western Australia, and during his seven years' residence in the capital carried on his profession for respective periods at Hay Street, Wellington Street, and St. George's Terrace, Perth. In 1909 Dr. Watts came to Katanning, and with the assistance of his son, Mr. Martin H. Watts, has established himself in practice there and at the neighbouring town of Wagin. Being of a highly scientific turn of mind he devotes his

leisure to the invention of aeromarine vessels, of which he has constructed a large workable model, one quarter the size of the intended machine, the working of which has been most satisfactory, and which has been brought under the notice of the Federal Government. Dr. Watts finds recreation in the performance of instrumental music, being a 'cellist of considerable gifts, and in his younger days played in the famous quartette party of which Sir Edward Elgar was a member. In 1883 he married Martha, daughter of Mr. S.

H. C. Biltoft, Katanning.  
MR. MARTIN H. WATTS.

Bradfield, of Bristol, England, and of Dublin, and has one son and four daughters.

FRANK MARSHALL GARE, J.P., of the Katanning Stock and Trading Company, Limited, is a native of South Australia, having been born at Kanmantoo, near Mount Barker, on April 2, 1866, his father, the late Mr. Edward B. Gare, being well known in that State. He pursued his studies in various places, eventually completing his scholastic education at the Burra, South Australia, and when sixteen years of age chose scope for his commercial ambition in store-keeping pursuits in the establishment carried on by his uncle at Lucindale. Mr. Gare gained a comprehensive acquaintance with the different branches of the trade during the eight years that he continued in this connection, and in 1892 joined his eldest brother in partnership in the

opening of a general storekeeping business at Port Pirie. Seven years later, after a successful business career in the northern seaport, Mr. Gare decided to accept an offer from the firm of A. E. Piesse & Co., of Katanning, Western Australia, of the post of assistant manager of their large mercantile trading concern, under Mr. Arnold E. Piesse, M.L.A. The partnership with his brother was dissolved and the business sold and the present connection entered into by Mr. Gare, which has continued through various vicissitudes from 1900 up to the present time. The gentleman under review has actively identified himself with

H. C. Biltoft, Katanning.  
MR. FRANK MARSHALL GARE.

movements of local importance, and is a member of the committee of the mechanics' institute, with the management of which he has been associated for some considerable time, and a member of the agricultural society of the district. He is a prominent worker in the Church of England at Katanning, and holds in that community the office of lay reader, in which capacity he has served here and in South Australia for the past twenty-five years. He has attained the rank of Past Grand Master in the Independent Order of Oddfellows, and as a committeeman of the local rifle club since its inception has done much to promote the interests of this movement, himself being a good shot and the possessor of many valuable trophies. He was gazetted a Justice of the Peace by the Moore Government in 1910, and in the following year was

appointed a member of the Licensing Bench for the district of Katanning. Mr. Gare has been twice married. His first wife, Maggie, daughter of the late Mr. Steadman Crear, of Port Pirie, died in 1899; and in 1902 he married Nora, daughter of the late Mr. Thomas Norrish, J.P., of "Sunnyside," near Broome Hill, by whom he has issue three sons.

**WILLIAM JOHN ROGERS, J.P.**, general merchant, Katanning, is a son of the late Mr. John Rogers, of Colchester, Essex, England, where the subject of this review was born on June 4, 1862. He received his education at the public school in his native town, and when fourteen years of age became apprenticed to the hardware trade for five years. At the conclusion of his indentures he left Colchester for London, and during ten years spent in the world's metropolis he passed through every department of the trade, gaining much valuable experience. In 1890 Mr. Rogers came to Australia with

H. C. Biltoft, Katanning.  
MR. WILLIAM JOHN ROGERS.

the intention of settling in Victoria, but at Adelaide he was offered a position in the firm of McLean Brothers & Rigg. He continued his voyage to Melbourne, however, only to find on arrival a considerable depression in commercial circles owing to a maritime strike, so he returned to South Australia, and for the next twelve months was in the service of

the above-mentioned firm. He then accepted an offer from the firm of Barnett & Company, of Albany, Western Australia, with whom he remained for a number of years. In the year 1901 he decided to launch out for himself, and purchased the business formerly carried on by Mr. C. A. Harris at Katanning, which he has since conducted with considerable success. In order to supply his clients with the best class of goods Mr. Rogers imports largely from the Old Country, and his stock is always being replenished with fresh consignments of up-to-date and seasonable goods. In 1911 the business was formed into a limited company, the shareholders consisting of the gentleman under review, his two sons, and Mr. W. Hessen, who for some years previously had filled the office of accountant. Mr. Rogers has devoted a portion of his time to the public interest, and in 1910 was gazetted a Justice of the Peace by the Moore Government. For some time he occupied a seat on the committee of the local agricultural society. He has ever taken a deep interest in the advancement of the Baptist Church and was treasurer of that body for some years. He is a member of the Masonic craft and has held office in the Grand Lodge of Western Australia. Before his departure from England he married Hannah Mary, daughter of the late Mr. John Pinkerton, of Edinburgh, Scotland, and has two sons and five daughters.

**JOHN GERRANS, Postmaster, Katanning**, is a son of the late Mr. Richard Gerrans, of Jamieson, Victoria, where the gentleman under review was born on December 7, 1873. He was educated in his native village, pursuing his scholastic studies chiefly in the evening at a night school conducted by a Mr. Ullrich, and at fourteen years of age joined the Civil Service as messenger in the Postal Department at Jamieson. After remaining here for nearly six years, during which period he became a proficient operator, he was transferred to Yarraville, near Melbourne, and shortly afterwards resigned from the service in order to come to Western Australia. He immediately obtained a position as operator in the head office of the State Postal Department at Perth, and, rapidly receiving

promotion, was sent to Coolgardie, where he spent six months. From there he was further promoted to the charge of Niagara Post Office, and held this position for six years, being the first officer appointed at that centre, and, indeed, the first Civil Servant in Western Australia to hold an appointment north of Menzies. At the outbreak of the Kookynie gold-field he was sent to open an office there and remained in charge for five years, leaving in 1906 to enter upon the duties of the more important position which he now occupies at Katanning. In all places where he has resided Mr. Gerrans has cordially identified himself with all public movements for the welfare of the community when unrestricted by the regulations of his office. In his younger days he was a keen sportsman, all forms of clean sport claiming him as a hearty advocate, and at the present time he is keenly interested in rifle-shooting, and acts as hon. treasurer of the local club, a position he has held for some years. A member of the Masonic fraternity, he has attained to various honours in the craft, and for two years past has been Master of Lodge No. 30, Katanning, W.A.C. In 1902 Mr. Gerrans married Selma, daughter of the late Mr. Henry Bliss, of Williamstown, Victoria, and has two sons and a daughter.

**JOHN FERDINAND WANKE**, general storekeeper, Katanning, is the eldest son of Mr. C. F. Wanke, of the same place, and was born at Mannum, on the River Murray, South Australia, on July 4, 1884. At fifteen years of age he left the State school, where he finished his education after seven years at a German academy, and learnt the blacksmithing trade. This he abandoned after two years, and in 1900 came with his parents to Western Australia, where land was taken up by the family in the Katanning district and its development proceeded with. Tiring of work on the farm Mr. Wanke turned his attention to business pursuits, taking a position in the firm of W. J. Rogers, storekeeper, in the adjacent town of Katanning. After seven years with the firm Mr. Wanke purchased a decadent business and applied his energies to the task of bringing it into line with the most successful commercial concerns

vv

in the district. These efforts have been rewarded with most satisfactory results, and in the years which have passed since his taking over of the store the turnover has increased greatly, and a very healthy condition of things exists. At the commencement the assistance of a younger

H. C. Billoft, Katanning.  
Mr. JOHN FERDINAND WANKE.

brother was sufficient to meet the demands of the business, but at the present time six hands are kept busily employed in the rapidly-growing trade, and his delivery extends over a radius of 40 miles from Katanning. Mr. Wanke has identified himself with the various institutions of the town, and is conductor of the choir in connection with the Baptist Church, of which he is also a deacon. He is a member of the Masonic fraternity, and has acted as organist of the local lodge. He takes an active interest in the affairs of the Independent Order of Rechabites, and has held the office of District Levite of the Order. In 1908 he married Florence Emily, daughter of Mr. G. H. Todd, now of Katanning, who came originally from York, England, and for a time settled in Victoria. He has one daughter.

**F. & C. PIESSE**, Katanning. This well-known trading firm, controlling during the course of its career the varied interests of merchants, millers, vigneron, aerated-water manufacturers, electric light supply, orchardists, graziers, and farmers, is one of the oldest

commercial enterprises established in the districts lying along the great southern railway line. It was founded as early as the year 1880 by the late Hon. F. H. Piesse in conjunction with his brother, the Hon. C. A. Piesse, and the first centre from which the firm operated was a spot on the Williams River where the Perth-Albany Road crosses the stream, distant from Perth about 100 miles. Here had sprung into being the nucleus of the present township of Williams, then a small settlement of about half a dozen houses, the inhabitants of which engaged chiefly in farming and the sandalwood industry. At no very lengthy period extension was made to the Arthur River, 25 miles south of the Williams, where a branch business was successfully carried on by Mr. C. A. Piesse. The undertaking was enlarged considerably by an impetus which was given to the trade in kangaroo skins about this time, and it is stated that within a period of four years over 500,000 skins were exported by the firm, which continued to inaugurate improvements at both their depôts until the construction of the great southern railway was put in hand by the Western Australian Land Company. The business of providing supplies to the workers engaged on the construction of the line was carried out by them until its completion in 1899, when permanent business houses were opened by Messrs. F. & C. Piesse at Katanning, Wagin, and Narrogin. The Narrogin business subsequently was sold to Mr. J. T. Chipper, and in 1900 the existing partnership was dissolved, Mr. C. A. Piesse becoming sole proprietor of the Wagin branch and Mr. F. H. Piesse taking over the interests at Katanning, while the Williams branch was disposed of and the business at Arthur River closed. Before these changes took place, however, the firm had enormously increased its scope of operations, adding agricultural, horticultural, and pastoral interests to the other branches of their enterprise, which included milling, viticulture and winemaking, the manufacture of aerated waters, electric light supply, and various other branches of industry and commerce. The milling business was inaugurated in 1891 by the erection of the Premier Flour Mill at Katanning at a period when the number of bags of wheat produced in the immediate district

would hardly have totalled more than 600. The original plant was of only small capacity, the output being two and a half sacks, or 500 lb. per hour. In 1909 the plant was increased to a capacity capable of dealing with five sacks, or 1,000 lb., per hour, and, subsequently, further alterations were carried out which made possible an output of eighteen sacks, or 3,600 lb., per hour. The present plant is in every respect up to date, and cannot be surpassed by the very best examples of its kind in the Australian States. The installation was entrusted to Messrs. Thomas Robinson & Sons, the well-known milling engineers of Rochdale, England, and of Sydney, New South Wales, the virtues of whose milling machinery are of such world-wide repute. This firm having been given a free hand by F. & C. Piesse to carry out the work according to the latest ideas, further comment is needless other than that the plant was handed over in perfect running order, and has maintained its efficiency ever since. The quality of the flour turned out under the "Premier" brand is recognized everywhere throughout the Western Australian State—even in the north-west, where the climate makes a severe test on flour—as having succeeded in the attainment of a very high standard which is able to hold its own against any other in Australia. This is especially satisfactory

the number of prizes and medals won in competition, not only in this State but also at the Franco-British Exhibition, triumphantly demonstrate

secured a concession for the lighting of the town of Katanning by electric power, the firm of F. & C. Piesse had erected a plant complete with

MR. F. T. R. PIESSE'S RESIDENCE, KATANNING.

the superiority of the local product. Any further testimony that may be needed is forthcoming by a very pleasing feature in the history of the firm, *viz.*, that its business is increasing rapidly, year by year, beyond all expectation, in this important department. Adequate storage sheds are situated at the rear of the mill in Austral Terrace, which are fitted up with automatic hoists and connected to the mill by conveyers for the handling of the

accumulators of the very latest design. It was in connection with the mill that in 1891 the first complete electric-lighting plant was installed in the State, whilst in later days Katanning had the distinction of

ORCHARD AND VINEYARD AT "KOBELYA." KATANNING IN BACKGROUND.

to the public at large, inasmuch as it is convincing evidence that the one-time prejudice that existed with regard to Western Australian flour has been completely overcome; while

raw material and the milled product. The steam power for driving the mill is generated in two 200-h.p. Babcock & Wilcox boilers attached to a large Reader Coreiss engine. Having

MR. F. T. R. PIESSE.

being the first town in Western Australia to have electric light, and at the present time is considered one of the best lighted country towns in the State. At the period of its first installation in connection with the mill the light was extended to the firm's store, warehouses, aerated-water factory, and hotel, and to-day the firm utilizes electric power for all

outside purposes such as driving, hoists, pumps, tool-shop, etc. Messrs. F. & C. Piesse have recently purchased the business lately

business under the old name, and upon the demise of the late F. H. Piesse in 1912 took over the various other branches to which reference

Gawler, South Australia—at that time largely engaged in the manufacture of locomotives—where he remained for two and a half years. Desiring to gain knowledge in a wider field of engineering he served a year at the Western Australian Government Workshops at Fremantle, and afterwards left for Scotland, where he joined the well-known firm of Messrs. Dubs & Co., of Glasgow, with whom he continued for nearly a year. When Messrs. James Simpson & Co., of Grosvenor Road, London, secured the contract from the Western Australian Government for the pumping machinery for the Coolgardie water scheme, Mr. Piesse was successful in securing a position with that firm, and was engaged by them on several large works in England, among which was the Cheltenham water supply and the Grand Junction and New River waterworks supply for the City of London. After finishing his engineering course Mr. Piesse returned to Western Australia in 1902 to join his father in his many undertakings at Katanning, and has been connected with the business ever since. He was made an associate member of the Institute of Mechanical Engineers, London, and is a member of the Western Australian Institute of Engineers. Mr. Piesse has always been fond of athletic sports, particularly lacrosse and tennis; and he is a very keen

MESSRS. F. & C. PIESSE'S "PREMIER" ROLLER FLOUR MILLS.

carried on by Messrs. C. Piesse & Co., the manufacturers of the well-known "Piesse's Dry Ginger Ale," which for quality boldly challenges importations, and is now obtainable practically all over Western Australia. Its excellent quality is due to the use of pure water and its manufacture by an up-to-date plant imported specially for the purpose, combined with the thorough methods employed by the manager of this particular branch of the firm's industry. The factory is complete with the latest machinery in use in the Old World, by the aid of which the firm is not only manufacturing the famous dry ginger ale, but is also turning out successfully all varieties of carbonated waters and cordials. Messrs. F. & C. Piesse are also interested in the supply of water, which is conserved in a large reservoir situated half a mile from the centre of the town. Having secured the agency of Messrs. William Sandover & Co., the Western Australian representatives for Messrs. H. V. McKay, of Sunshine fame, the firm is catering for the farmers' needs in this direction, and in addition is agent for all classes of fertilizers and farm requisites. The head office is at Katanning, where a fine suite of modern offices has been erected in Argent Street. The firm also has branches in Perth and Kalgoorlie. In October, 1911, the flour-milling and electric supply were taken over by Mr. F. T. R. Piesse, who continued to carry on

has been made. **FREDERICK THOMAS ROPER PIESSE** was born at the Williams River on October 2, 1878, and is the eldest son of the late Hon. F. H. Piesse, C.M.G. Until eleven years of age he attended the local State school, passing from there to the Albany Grammar School, and after two subsequent years of private tuition at home completed his education at the High School, Perth. Having always

DAWN ON MESSRS. F. & C. PIESSE'S PROPERTY.

displayed a decided bent for mechanics, after leaving school at sixteen he entered the engineering firm of James Martin & Co., of

horticulturist. In 1905 he married May, daughter of Mr. W. H. Jackson, of Balmain, Sydney, and has one daughter.

vv2

RICHARDSON & CO., universal providers, Austral Terrace, Katanning. ROBERT LAWSON RICHARDSON, J.P., Managing Director of the firm of Richardson

H. C. Biltolt, Katanning.  
MR. ROBERT LAWSON RICHARDSON.

and Co., is a son of the late Mr. William Richardson, of Dalveen, South Australia, where the gentleman under review was born on December 30, 1862. Concluding his education at the local State school, when fifteen years of age he became identified with storekeeping pursuits at Georgetown, in the same State, and started on his own account at Clarendon in 1897. After five years he disposed

of his connection and came to Western Australia, turning his steps to Katanning after a few months on the goldfields. In the year 1904 Mr. Richardson purchased an interest in the storekeeping business of F. and C. Piesse, which has since been carried on under the style of Richardson & Co., merchants and general importers, the late Honourable F. H. Piesse, C.M.G., being associated in partnership with Mr. Richardson. The firm trades in all lines of general merchandise, but confines itself to storekeeping, the supervision of the numerous departments carrying with it considerable responsibility. These include drapery and millinery of the most up-to-date character, provision and grocery department, hardware and furnishing department, boots and shoes, farmers' requisites, oils, paints, glassware, clocks, electroplate, and every conceivable class of goods that may be inquired for in a country district. Since Mr. Richardson was included in the partnership branches have been established at Woodanilling, Kojonup, Ngowangerupp, Tambellup, Nampup, and Badgebup, which partake of the general character of the parent business, and are aiding in the development of the districts above-mentioned. Mr. Richardson gives the major portion of his time to the demands of his business, but serves as a member of the hospital board and of the local board of health. He takes a deep interest

in the advancement of the Baptist Church at Katanning, of which he is a member. In 1885 he married Eliza, daughter of the late Mr. C. E. King, of Georgetown, South Australia, and has seven daughters and a son.

CHARLES ARTHUR HARRIS, farmers' agent, Katanning, was born at Loughton, Essex, England, on September 1, 1868, and is a son of Mr. Martin Harris, of that place.

MR. CHARLES ARTHUR HARRIS.

He was educated in his native town, and when fourteen years of age began his apprenticeship to the bakery and confectionery trade under Mr. George Mills, Royal baker, of Chelmsford, with whom he remained for eight years. After a subsequent period at Bourne-mouth, where he occupied a position as cashier in a store, in 1890 Mr. Harris came to Western Australia, and "carrying his swag" from Perth to Albany was successful in securing a position as confectioner in the latter town. Shortly afterwards, however, he gave this up to come to Katanning, where for a year he was in the employ of Messrs. F. and C. Piesse, taking charge of the bakehouse in connection with their business. He next established a bakery business on his own account and conducted it successfully for about twelve years, adding various other departments as opportunity occurred. These included the purveying of dairy produce and groceries, and as

MESSRS. R. L. RICHARDSON & CO.'S PREMISES, KATANNING.

his operations expanded, demanding more commodious premises, he erected a large building, which had the distinction of being the first two-storied store in the district. Mr. Harris subsequently disposed of his business and entered upon farming pursuits, having taken up land in the district, but eventually was compelled to part with this property on account of failing health. He then established himself at Katanning in his present business, and has continued successfully ever since. In 1909 Mr. Harris was elected a member of the roads board of the district, succeeding Mr. Arnold E. Piesse, who had resigned owing to pressing parliamentary claims. He is a member of the Masonic craft and has held office in this Order. He married in 1891 Catherine Jackson, daughter of the late Mr. William Leggat, of Glasgow, Scotland, who died in 1902, leaving him with three sons and two daughters. His present wife, whom he married in 1903, is a sister of the late Mrs. Harris.

SCOTT & SCOTT, Katanning. (William J. Scott and Arthur Scott.) The firm of Scott & Scott, carrying on business as auctioneers, accountants and auditors, land, machinery, and general agents, was first established in Katanning in 1903, when the town was yet in its infancy, and by the energy and push of the promoters has kept pace with the rapid development of the district. It has made its influence felt over a wide area, and at the present time the name is a household word among settlers in a radius of many miles of the town. Mr. William J. Scott, to whom is due the credit of having built up the business in the first instance, is a native of Tasmania, where he was born on July 29, 1875, and at the close of his scholastic education he had some banking experience which has proved of great value in his subsequent career. Attracted from the island by glowing reports of commercial activity in Western Australia, in 1903 he set sail for this State, and coming direct to Katanning immediately secured business premises at the new settlement. His brother, Mr. Arthur Scott, being joint proprietor in the enterprise, the firm opened up operations under the style of Scott & Scott, and beginning as commission agents has gradually

extended its scope, the various departments of the business developing in accordance with the demands of the growing population. The land-agency branch is carried on in conjunction with the similar class of business conducted by Mr. A. Scott, at Northam, Kellerberrin, and Meckering, and by this arrangement capital opportunities are presented to those desirous of purchasing or disposing of properties. The firm represents a large number of important companies, including George Wills and Co.; the International Harvester

H. C. Biltoft, Katanning.  
MR. JOHN AUGUSTINE CARR.

Company, agricultural machinery; Buffalo Pitts Company, traction and portable engines and "Niagara" threshers; Clarence H. Smith (Ardrossan, South Australia), ploughs, cultivators, scoops, etc.; English superphosphates and English Thomas' phosphates ("Globe" brand); and all farmers' requisites. Having worked up the business to a high standard of efficiency and established it on a sound financial basis, Mr. W. J. Scott in 1908 accepted an excellent appointment in the firm of Messrs. George Wills & Co. For the management of the Katanning business he secured the services of Mr. J. A. Carr (who prior to the above date had been identified with the Northam branch of Scott & Scott for about three years), who has carried it on ever since. Mr. Scott has been always distinguished for his interest in the affairs of the neighbourhood where he has spent so many successful

years. Especially he ranks foremost among the riflemen of the district, and has won the championship and other trophies in connection with the Katanning Rifle Club, of which he is a foundation member. Mr. John Augustine Carr was born at Christchurch, New Zealand, on October 25, 1877, and received his education at the Marist Brothers' College in that city. He has had a long connection with commercial life, and rapidly obtained a grip of Mr. Scott's methods in the conduct of the business at Katanning. Following in the footsteps of his principal and adopting his progressive policy, he has proved his ability to cope with the growing trade, and under his control the forward movement inaugurated at the foundation of the business has continued without any setbacks.

ALEXANDER THOMSON, contractor, Katanning, was born of Scotch parents at South Shields, England, on March 9, 1872. Coming with his family to Victoria during his early boyhood he attended the Essendon State school until attaining the age of fourteen, when he was apprenticed to the carpentering trade under

H. C. Biltoft, Katanning.  
MR. ALEXANDER THOMSON.

his father. Upon the completion of his indentures he journeyed through the State, working at his trade in most of the large towns, and in 1895 decided to try his fortune in the West. Arriving at Fremantle, for two years he was identified with journeyman work at that port, and

in 1897, in partnership with Mr. Thorpe, established a business there, which he carried on for two years. At the end of this period the partnership was dissolved, and Mr. Thomson went to Queensland, only to return and re-establish his connection with Mr. Thorpe for another year. Subsequently for several years he carried on an independent business at Perth and Fremantle, being engaged in the building of villas, hotels, and other classes of work, and, upon removing to Katanning in 1905, achieved conspicuous success in the erection of the Royal Exchange Hotel in that town. This work was followed by much of an equally important character, including the mechanics' institute, the railway station buildings, churches, and private residences, in addition to three large hotels and other buildings in Albany and the surrounding districts. Mr. Thomson has various investments in building properties in the district, and in many ways has identified himself with the neighbourhood and town where he has made his home. He has always taken a deep interest in municipal reform and government, and has served as councillor in various places, among others being a member of the Cottesloe Beach Roads Board for several years. He is a member of the Masonic craft, and holds office in this body. The bowling green offers attraction for his leisure hours, and he holds membership in the Albany Bowling Club. In 1897 he married Edith Maud, daughter of the late Andrew Jenkinson, of Ballarat, Victoria, and has four sons.

**MICHAEL FRANCIS SKELTON**, general draper, Katanning, was born at Dublin, Ireland, on September 4, 1888, and is a son of the late Henry Thomas Skelton, of that place. Coming to Australia with his mother while still quite a child, he received his education at the Christian Brothers' College, in Perth, and, concluding his scholastic career at the age of sixteen, became engaged in the drapery business with the firm of Robertson & Moffat, of the same city, where he obtained a good general insight into the trade. Leaving this establishment, for a short time he turned his attention to other pursuits, but, returning to his former line of life, became connected with the wholesale trade in the warehouse of Messrs. Beath, Schiess, & Co., of

Murray Street, Perth. He remained with this firm for some considerable time, during which he gained valuable experience in wholesale dealing, and subsequently augmented his knowledge of the retail business, first in Charles Moore & Co.'s establishment in Hay Street, and at a later date joining the staff of the Economic Stores, with which house he was identified for two years, during the greater part of that time being the only country representative of the firm. In 1911 Mr. Skelton launched out on his own account by opening a business on Austral Terrace, Katanning, where he has since carried on, commanding a large share of the patronage of the district. Mr. Skelton is prominent in the H.A.C.B.S., being honorary secretary of the Katanning branch of that organization. He also takes a live interest in the Young Australian League, and worked with energy for the promotion of the ends and aims of this

H. C. Billoft, Katanning.  
Mr. MICHAEL FRANCIS SKELTON.

worthy cause. He is a keen advocate for all that is clean and healthy in the world of sport, and occupied leading official positions in several of the local clubs, football perhaps having the premier place in his interest.

**WILLIAM EARNEST BEVILAQUA**, commission agent, Katanning, is a son of Mr. Louis Bevilaqua, of Adelaide, South Australia. He is a native of the Central State, having been born at Lyndoch Valley on July 27, 1871, and received his education

at Prince Alfred College, in the capital. Upon the completion of his scholastic career he entered the Adelaide Branch of the Commercial Bank of Australia, Limited, and continued in this service until the institution was closed. In 1898 he visited Western Australia, and being attracted by bush life spent several years in trapping kangaroos and wild dogs,

H. C. Billoft, Katanning.  
Mr. WILLIAM EARNEST BEVILAQUA.

meeting with considerable success in these and kindred pursuits. In 1903 he returned to South Australia, but after a year on his native soil the "call of the West" brought him back to the younger country. Directing his attention to the farming industry he took up 1,700 acres of land in the district of Gnowangerup, but retained this property for a couple of years only, at the end of that period selling out to Mr. G. House after making various improvements and generally developing the estate. Mr. Bevilaqua next opened a general storekeeping business at Katanning, which eventually he disposed of, and established himself in the town as a general commission agent. In addition to this business he is also largely interested in land and other investments in the district and town of Katanning, and superintends the working of a farming property lying close to that centre, which he purchased in 1909. In 1908 Mr. Bevilaqua married Lilian, daughter of Mr. W. Porteous, pastoralist, of Gnowangerup, Western Australia, and has two daughters.

**CHRISTIAN FREDERICK MITTER**, authorized newsagent and stationer, Katanning, was born at Bendigo, Victoria, on November 21, 1876, his father, the late Mr. Christian Frederick Mitter, coach-builder, being a resident of that town. Having concluded his education at the Bendigo Grammar School Mr. Mitter, at the age of seventeen, was apprenticed to the engineering branch of Messrs. J. Horwood & Sons, of the Bendigo Ironworks. He continued with this firm for nine years, during which period he passed through all branches of practical engineering, giving due attention also to the theoretical side of the profession. From there he entered the service

H. C. Bilstoft, Katanning.  
Mr. CHRISTIAN FREDERICK MITTER.

of Messrs. Roberts & Co., the well-known Bendigo engineering firm, and after two years in this employ came to Western Australia, where the prospects of the trade were reported to be very good. Upon arrival he proceeded to the East Murchison United Gold Mine at Lawlers, where he entered upon the duties of mine engineer, a position he retained for five years. Being desirous of opening in business on his own behalf he resigned his connection with the mine, and after carefully considering the various districts where his initial effort would have every opportunity of thriving, he purchased the business he is conducting at the present time in the flourishing town of Katanning. This was in 1907, and since that date a considerable increase of trade has

been witnessed in the town and district owing to the enlarged population, and the enterprise of Mr. Mitter has kept pace with the times. He is identified with various public movements, having been a prominent member of the Australian Natives' Association for many years and an office-holder in the local branch of the fraternity of Freemasons. As the president of the South Katanning Football Club and vice-president of the cricket association and other clubs of the district he displays his warm sympathy with those forms of sport which tend to develop many of the finest qualities of manhood. In 1901 Mr. Mitter married Emma Lilian, daughter of the late Mr. Josiah Rodda, of Golden Square, Bendigo, Victoria, and has a son and a daughter.

**HANS CHRISTIAN BILTOFT**, photographer, Katanning, is a native of Denmark, having been born at Varde, in that country, on February 12, 1864. He commenced his education at a public school in his native town, subsequently attending a private college for two years, and at the conclusion of his studies became engaged in seafaring pursuits for six years. Relinquishing marine life in the early eighties, he learned the art and business of photography in Denmark, and in 1886 came to Australia, landing at Sydney, New South Wales. He then took up orchard work in the fruit-growing districts of that State, and having spent several years in this calling went to the Peak Hill gold diggings, where he met with varied success in alluvial mining. Three years later, in 1893, he formed one of the party which discovered payable gold at Fifield, New South Wales, and was granted a reward claim by the Government. A fair measure of success having attended his endeavours in this locality Mr. Bilstoft was authorized by a Sydney syndicate to proceed to Western Australia to prospect in the vicinity of the newly-discovered eastern gold-fields. Here, however, he was not so fortunate, and having worked for some time without much result directed his steps to the alluvial field at Clermont, in Queensland, and spent three successful years in this district. In 1899 he abandoned the precarious search for the precious metal and again turned his

attention to his former art of photography as a means of livelihood. Returning to Kalgoorlie in the following year he established himself as a photographer in that town, and both in outdoor photography for the Press and in studio work has achieved distinct success. In 1910 Mr. Bilstoft removed to Katanning, and has since carried on in the same line in this town. In addition to his photographic business he owns a farm at Badgeup comprising 1,000 acres, which is now in course

MR. HANS CHRISTIAN BILTOFT.

of development. He interests himself in the rifle club movement in the district, and occupies a seat on the committee of this body. He is also well known in church matters, being a vestryman of the Church of England in Katanning. In 1894 Mr. Bilstoft married Amy Sophia, daughter of the late Mr. Frederick Alexander Martyn, of Moonan Brook, New South Wales, and has two sons and two daughters.

**WALTER PANGBOURNE BIRD**, tailor and mercer, Katanning, opened in business on his own account in this town in 1909, and has personally conducted operations ever since, in March, 1911, establishing a branch business at Wagin. Mr. Bird was born at Wangaratta, Victoria, on May 11, 1878, and is the fourth son of the late Frederick Augustus Bird, of Benalla, in that State. Leaving school in his early teens, he became apprenticed to the

tailoring trade at the latter town, and having completed his indentures, in 1897 migrated to Albany, Western Australia, where he took a junior position, a year later continuing his travels to Kalgoorlie. After being employed in several establishments he joined Mr. P. S. Jane in a business partnership which extended over a couple of years, but was dissolved on account of a depression in trade which settled on the goldfields. Subsequently Mr. Bird determined to launch out for himself, and coming to Katanning, established himself in business as above mentioned. During the short period of his residence in the town he has met with considerable success, and in addition to his business pursuits has taken keen interest in the various organizations of the place. Music, both vocal and instrumental, is his forte, and his fine bass voice makes him an acquisition in all social gatherings, while as conductor of the choir in connection with the local Methodist Church he renders valuable service to the community. He is a member of the Masonic craft, in which he has held various offices, and in earlier days he was well known in the realms of cricket and football. In 1905 Mr. Bird married Alice Emma, daughter of Mr. W. Gunter, of Katanning, late of Kalgoorlie, Western Australia, and prior to that of Quorn, South Australia, and has two sons and one daughter.

**JAMES FAIRCLOUGH**, proprietor of the Federal Hotel, Katanning, is a son of the late Mr. Mervin Fairclough, of Adelaide, South Australia, where the gentleman under review was born on June 7, 1862. He received his education at Mount Barker under the late Rev. Jenkins, at fifteen years of age being apprenticed to the butchering trade at the establishment conducted by Mr. Tonkin, of Adelaide. Having completed his indentures he proceeded to Broken Hill in the early days of the mining industry at that place, and gained an intimate acquaintance with the processes of silver-mining during his connection with the South and South Extended mines, eventually attaining to a position as mine manager, which he held for six years. In 1892 he arrived in Western Australia, and proceeding from Albany to Narrogin walked to Kalgoorlie, *via* Southern Cross, being for some time

connected with the development of the famous Bayley's Reward claim. At Coolgardie he was employed on the Ivanhoe Mine, Boulder, and in course of time was promoted to the post of shift manager under the late Captain Kitto. After two years he was offered the position of underground manager of Fraser's South Extended at Southern Cross, and subsequently found further scope for his abilities in the management of the Richmond Gem Mine at Mount Malcolm in 1905-6. In 1907 he relinquished connection with the mining industry, and purchasing the lease of the Federal Hotel, Katanning, has since carried on the personal conduct of this house, which is popular throughout the district. Mr. Fairclough, since his advent to Western Australia, has always been a supporter and patron of the turf, and has served as committeeman of the various racing clubs in the towns where he has resided, during the past three years acting as president of the Katanning Racing Club. He makes the love of horses his hobby, and has owned many successful performers, among which "Ranji" and "Mainsheet" have distinguished themselves in the ring with especial brilliance. Mr. Fairclough is also a keen supporter of athletics and is president of the local football association and other clubs of the district. He is a member of the Masonic fraternity and has held office in the craft. Married in 1898 to Susan Jane, daughter of the late Mr. John Bennett, of Bendigo, Victoria, he has two sons.

**CHARLES FERDINAND WANKE, J.P.**, of Katanning, is a son of the late Mr. Albin Ferdinand Wanke, one of the first German colonists of South Australia, and was born at Lobethal, in that State, on September 25, 1857. He received his education at a private school in his native town, and subsequently was identified with the machinery trade for five years. At the termination of that period he opened in business on his own account at Quorn in 1878, afterwards removing to Mannum, on the River Murray, where he continued for twenty years, retiring on account of ill-health. In 1900 he came to Western Australia and purchased a property formerly owned by the late Mr. Andrew, and situated about five

miles from Katanning, the development of which he has since continued. It comprises 2,000 acres, and carries good crops of wheat and oats, while special attention is being given to the breeding of merino sheep, the flock numbering about 1,200. Mr. Wanke received his Commission of Justice of the Peace in South Australia about fifteen years ago, and a similar honour was conferred upon him by the Western Australian Government in 1902. He has always taken a deep interest in local government and was chairman of the municipal council at Mannum, South Australia, for ten years. Upon settling at Katanning he received election to the local roads board, and shortly afterwards was appointed to the chair, which he

H. C. Billoft, Katanning.  
MR. CHARLES FERDINAND WANKE.

has now occupied for many years. He is president of the local branch of the Farmers and Producers' Political Union, in the formation of which he assisted in 1908, and he has filled the office of director of the Perth Producers' Union for some time. Mr. Wanke is a member of the local hospital board and takes an interest in friendly society work, being a member of the Masonic craft and of the Foresters' Lodge, in which he has passed through all the chairs, being seven times Past Chief Ranger of that body. He married in 1883 Caroline Amanda, daughter of the late Mr. Nicholas Matulich, of Mannum, South Australia, and has five sons and two daughters.

**WILLIAM MILSOM BAKER**, of Katanning, is a son of the late George Edward Baker, of Kaniva, Victoria. He was born at Modbury, South Australia, on November 13, 1867, and at the close of his education at the local school served his apprenticeship to the butchering trade in Yongala. Having completed his indentures he went to Victoria, and became engaged in farming pursuits in conjunction with his father in the Wimmera district. In 1896 he left the eastern State, and upon arrival in Western Australia returned to his former calling, taking a position as journeyman in the establishment of Mr. E. L. Holley, at Katanning. This business he purchased within two years of his first connection with it, and has since conducted operations on his own account. In addition he has landed interests in the neighbourhood, having taken up a holding within three miles of Katanning, which he is using at present for grazing purposes. Mr. Baker is a member of the Katanning branch of the Independent Order of Oddfellows, and takes considerable interest in the proceedings of that body. He is also prominent in the local cricket association, of which he has occupied the position of captain and committeeman for a number of years. In 1903 he married Laura, daughter of the Rev. W. Hicks, of Nhill, Victoria, and has one son and one daughter.

**WILLIAM PEMBLE, J.P.**, grazier, Katanning, is a son of the late Mr. Henry Pemble, of Sussex, England, latterly of Ballan, Victoria, where the subject of this review was born in September, 1860. His education, begun in his native place, was concluded at Watervale Grammar School, South Australia, and at twenty-three years of age he became a wheat agent in the latter State on behalf of the firm of W. R. Cave & Co., of Adelaide, which position he filled for three years. Beckoned by the bright prospects held out by the gold discoveries at Kimberley, Western Australia, Mr. Pemble "followed the gleam" as far as Albany, where his intention to proceed was frustrated by the offer of an appointment of under-manager on the stations owned by Messrs. Hassell Brothers, which he decided to accept. This occurred in March, 1885, and for five years he carried

out the duties of this office, finally determining to launch out for himself in the land of his adoption. Coming to Katanning, he purchased from the Great Southern Land Company the property on which he now resides, and opened in business as general commission agent and auctioneer. After five years he joined a prospecting party, and was one of the pioneers of the Mount Margaret district, where, however, he met with but scant success. Returning to Katanning, he took up land in the vicinity of the town, to which considerable additions have since been made, and directed his attention to grazing and agriculture, the former being the principal department of the industry. Always interested in public affairs, Mr.

H. C. Biltoft, Katanning.  
MR. WILLIAM PEMBLE.

Pemble was one of the founders of the farmers' association of the district, and was president of this body for three successive terms. During his period of office, by his persistent advocacy, he secured for the use of the townspeople the town commonage, a grant of land 1,000 acres in extent within three miles of Katanning. He also selected the first agricultural showground for the agricultural society, of which he was one of the founders, and through his instrumentality the societies of Katanning and Broome Hill joined issues, the result of which has been a most successful combination, the shows held annually at Katanning being among the best in the southern district. The

Katanning Water Reserve was granted as a direct result of his influence, and the construction of many of the best roads in the neighbourhood was carried on under his supervision. He was one of the original trustees of the local institute, of which he is a life member, and at its inauguration was the people's representative on that board. He has been a member of the Licensing Bench for several years, and was granted his Commission of Justice of the Peace by the James Government in 1903. Mr. Pemble finds healthy recreation in personal attention to his garden and orchard, where his cherry-trees, specially selected, have rewarded his efforts with splendid results. In the year 1889, at St. Werburgh's, in the vicinity of Mount Barker, he was married to Emily Annie, daughter of Mr. W. H. Dickinson, of Melbourne, Victoria, and has a family of one son.

**ISAAC MILLS, J.P.**, of Katanning, was born at Nairne, South Australia, on August 4, 1850. Receiving some primary instruction in his native town, he continued his education at a later date at Charleston, under the late Mr. Disher. Upon leaving school he was first identified with work on the home farm, his father, the late Mr. George Mills, being one of South Australia's pioneers, who landed at Port Adelaide by the ship "Somersetshire" in the year 1839. Subsequently Mr. Mills joined the old Kamantoo Copper Mine, and in conjunction with fifteen partners became personally engaged in its development, but finding the life uncongenial he once more turned his attention to agriculture. Taking up 779 acres of Crown land in the Hawker district, 300 miles north of Adelaide, for nine years he endeavoured to win a fair return for his capital and labour, but finally abandoned this enterprise on account of the uncertainty of the rainfall, and purchased a farm near Kadina, on Yorke Peninsula. Mr. Mills, during the fifteen years that he continued in this district, became a well-known personage, and was identified with many public and charitable movements. He held various offices, among which was that of chairman of the Ninnes District Council, which he resigned on the eve of his departure for Western Australia in 1904. In February of that

year he arrived in this State and came direct to the Katanning district, which he had visited in the previous year, and on that occasion had selected four properties for himself and his sons at Yellanup, in the aggregate embracing nearly 4,000 acres of land. In addition to these farms, which are devoted chiefly to the growing of cereals, Mr. Mills also owns a holding of 800 acres at Lake Ewlyamartup, 9 miles east of Katanning. He was soon pressed into public service, and for seven years has been a member of the Katanning Roads Board, and for six a committeeman of the Great Southern Agricultural Society. He is also a committeeman of the Katanning Cemetery Board and chairman of the Katanning-Nampup Railway League, now having the satisfaction of seeing that line an accomplished fact. Especially is credit due to Mr. Mills for the part he played in bringing about the construction of this

H. C. Billoft, *Katanning.*  
MR. ISAAC MILLS.

railway, which has been much needed in the district. He is trustee of the Methodist Church in Katanning, and on four occasions has represented this Church at the Methodist Annual Conference held in Perth. He is a member of the Oddfellows' Order, for forty-two years having been connected with the Manchester Unity, and also holds membership in the Orange organization. In 1870 Mr. Mills married Catherine, daughter of the late Edward Gartrell, of Nairne, South Australia, and has five sons and five daughters.

TOM GARSTONE, J.P., "Martling" Farm, district of Katanning, is a son of the late Thomas Garstone, of Haywood Forest, Herefordshire, England, and was born near the city of Hereford, on March 16, 1866. He pursued his scholastic education at Clehonger, in his native county, and until eighteen years of age assisted in looking after the game preserves of the Belmont Estate in Herefordshire. Forsaking the scenes of his youth he emigrated to Queensland, and upon arrival became engaged in the agricultural industry near Brisbane for a brief period. Subsequently he followed similar employment in South Australia, and at a later date

H. C. Billoft, *Katanning.*  
MR. TOM GARSTONE.

was identified with the Wimmera district of Victoria. In 1890 he came to Western Australia and purchased a farm from the Western Australian Land Company, on the great southern railway line, in the vicinity of Katanning. After two years he sold this property and took up his present holding of 1,250 acres of virgin country, henceforward devoting the whole of his time and energies to bringing it into line with the best agricultural and pastoral properties in the district. The work of development and improvement has been steadily proceeded with, and at the present time four-fifths of the land is cleared and cultivated, chiefly with cereals, while flocks of sheep graze on the pastures and horses are bred for the work of the farm. Mr. Garstone has not been unmindful of his duties in respect to the community at large,

and for nine years occupied a seat on the Katanning Roads Board. He has been president for three years of the Great Southern Agricultural and Pastoral Society, and in 1902 received his Commission of the Peace. He is fond of reading, and finds his recreation in this way, favouring works of a historical character. In 1892 he married Ellen, daughter of the late Richard Wilcox, of Tungkillo, South Australia, and has three sons and two daughters.

THOMAS WILLIAM LANGLEY, agriculturist and grazier, of "Minnawarra," Katanning, is a son of the late Mr. Joseph W. Langley, of Loddon, Norfolk, England, and was born in London on December 19, 1872. He was educated at a private school attached to the Church of England at Brixton, and at sixteen years of age, having completed his scholastic course, joined his

H. C. Billoft, *Katanning.*  
MR. THOMAS WILLIAM LANGLEY.

brother in farming pursuits in the Mittagong district of New South Wales. During the four years here spent he gained an intimate acquaintance with the conditions of the new country bearing on the agricultural industry, but upon reaching man's estate abandoned that calling, and coming to Western Australia turned his attention to the aerated mineral waters manufacture in Perth, in partnership with Mr. T. Tracy. He afterwards sold his interests to his brother-in-law, Mr. J. J. Wallis, who still conducts

the business, and spent four years at Katanning, where he purchased a similar concern established in the first place by Messrs. F. & C. Piesse, adding to it a general commission agency business. Upon his receiving an offer from the

the Kalgoorlie branch of the business of Piesse, Lowe, & Co., of which he is still managing director. Returning to Katanning in 1907 Mr. Langley floated the business of A. E. Piesse & Co. into a limited company, which as the Katanning Stock

have proved very profitable. Mr. Langley's wide experience has been invaluable to new settlers, and he is always ready with the timely word of counsel to such. There are few public positions of prominence in the district which he has not filled

HAYSTACKS AND THRESHING PLANT AT "MINNOWARRA."

interested himself in the formation of the Producers' Markets, Limited, which embraced the business of Piesse, Lowe, & Co., Perth, and the Producers' Union Salerooms, retaining separately as his own interest

under crop, this being the largest area by hundreds of acres tilled by any one owner in the district. In addition to this extensive cultivation of wheat and oats the estate carries about 2,500 sheep, which

president of the Katanning District Polo Association. For a lengthy period he has served on the committee of the local mechanics' institute. The homestead, built in bungalow style, contains eleven rooms with

French doors opening on to the wide verandahs which encircle the house, and is surrounded by a fine garden and orchard, the latter being four acres in extent. The outhouses include two cottages for employes and an engine-house, a 6-horse-power Marshall steam engine providing power for chaffcutting, threshing, sawing timber, etc. Mr. Langley married in 1900 Henrietta Maude, daughter of the late Mr. John Rogers, of Northcote, Victoria, and has two sons.

MICHAEL CRONIN, J.P., "Glen Cove" Farm, situated 17 miles north-east of Katanning, is a son of Mr. Patrick Cronin, of Youghal, County Cork, Ireland, where the gentleman under review was born on September 4, 1842. He was educated at the National School in his native country, and when twelve years of age sailed by the ship "Berkshire" for Australia with his parents, brothers, and sisters. The boat left Southampton on December 3, 1854, and arrived at Fremantle in March, 1855. Young Cronin was sent to Bishop's School at Perth, and upon leaving this institution became engaged in the bakery trade, continuing

H. C. Billoft, Katanning.  
MR. MICHAEL CRONIN.

until the removal of the family to Pinjarra. He spent three years in occupations incidental to bush life, and in 1861 set out to carve a career for himself. Leaving the parental roof-tree he came to Kojonup, where he worked on a farm for over two years,

subsequently returning to the district after a year at Toodyay. He then took over the lease of a farm at Mallitup—now Pallinup—where he remained for seven years; and in 1875 went into occupation of the "Glen Cove" Farm, which he had taken up from the Government a couple of years previously. Since that time Mr. Cronin has found ample scope for his energies in the development of this and other properties, covering an extent of 1,400 acres. At one period he took over a pastoral lease from the Government, comprising 20,000 acres, which he used for grazing sheep, and did considerable trade in sandalwood, which at the time was one of the chief industries in the neighbourhood. Another of his ventures took place at the time of the Coolgardie gold rush, when Mr. Cronin was among the first to find his way across country to the scene of the find, with the object of opening up a route to the field from the southern line. This, however, was not used, as the Government hastened the construction of the railway line to the district. These were earlier enterprises, and latterly mixed farming operations have absorbed his attention, together with his public duties, which have included those of Justice of the Peace for the Katanning district, to which office he was gazetted by the Daglish Government. For ten years he served as a member of the Katanning Roads Board, having been the first mover in the petition to secure this organization for the district. He has filled the office of local treasurer to the Roman Catholic Church, is a member of the agricultural society and of the Katanning Racing Club, of which he was one of the founders. Mr. Cronin married in 1866 Elinor Bridget Noonan, whose father was a Civil Servant of Western Australia when the State was under Imperial control. This lady died in 1885, leaving a family of five sons and five daughters.

REINHOLD GUTTHOLD WILHELM, farmer, of Oxley Road, near Katanning, is a son of the late Mr. August Wilhelm, who came originally from Germany, and died in Western Australia, having spent fifty years of his life in the Central State. He was born at Blumberg, South Australia, a German settlement 20 miles north-east of Adelaide, on

September 18, 1872, and attended the German school in that place. Concluding his studies at the age of fourteen he spent several years in assisting his father and neighbouring farmers on their properties, and road-making in the district. In 1891 he decided to launch out on his own account, and coming to Western Australia, after working for twelve months on a farm, took over some clearing contracts, which occupied his time for about a year. He next

H. C. Billoft, Katanning.  
MR. R. G. WILHELM.

paid a visit to his native State, and returning to the West made a trip to the goldfields, where he gained some useful experience. Finally, he again found his way to the Katanning district, and resumed contracting for about five years. During the shearing seasons Mr. Wilhelm, who is an expert in this class of work, found plenty of employment on the pastoral properties, and ultimately he took up nearly 1,000 acres of good farming land in the Katanning district, and gradually has increased this area until at the present time his holding comprises about 3,000 acres. The agricultural operations include the cultivation of wheat, oats, barley, etc., while stock-breeding is carried on, attention being given to the production of both heavy draughts and lighter types of horses. Mr. Wilhelm is a member of the local agricultural society, and is an advocate of all forms of healthy outdoor sport. In 1904 he married Ethel Maud, daughter of Mr. H. Trye, of South Australia, and has a daughter and two sons.

WILLIAM HENRY FORBES, of "Cleve" Farm, Katanning, is a South Australian by birth, and a son of Mr. W. Forbes, of Port Lincoln, in that State. He was born at the Burra, a prominent mining town of the Central State, on November 17, 1864, and received his education at the local State school. When only eighteen years of age he secured the contract for the carriage of mails from Cleve to Cowell, and, for seventeen years was a well-known figure on

Edgar, to take charge of his "Strathalbyn" property, near Gingen, on the Perth to Geraldton railway line. This responsible position was held by Mr. Forbes for about twelve months, when he resigned,

developing the territory on his own behalf. Subsequently he purchased an additional 600 acres, and has now a very nice property of sufficient acreage to make it a thoroughly payable proposition. The major portion

H. C. Billoft, Katanning.  
MR. WILLIAM HENRY FORBES.

the road, being regarded by the rising generation as one of the landmarks of the district. In 1900 he severed his connection not only with the neighbourhood where he was well known, but also with his native State, and sailed for Western Australia under engagement to the prominent pastoralist, Mr. A. W.

and was afterwards identified in a similar capacity with the property owned by Mr. George Gooch, at "Cheriton," in which connection he continued for another year. While discharging the duties of these appointments, Mr. Forbes became impressed with the possibilities of the country districts of Western Australia for purposes of agricultural enterprise as well as for extensive pastoral operations. Judging the soil and climate of the southwestern division more favourable for mixed farming pursuits than the northern areas, his choice of a locality finally rested on the Katanning district, where he selected 1,000 acres and then commenced

of the estate is devoted to grazing lands for sheep, the flock consisting of merinoes, this type having been well tested and approved in the district. Considerable attention is also given to the production of pure Jersey cattle, which have been successful in carrying off many prizes and trophies in connection with the agricultural shows held annually in the neighbourhood. Besides this prize stock, the horses bred on the estate are worthy of inspection, most of the draughts and hacks for use on the farm being of Mr. Forbes' own breeding. An area of 600 acres has been brought under cultivation, the principal crop being of cereals, which has given satisfactory returns. A

MR. W. H. FORBES' RESIDENCE, KATANNING.

fine vineyard planted with different varieties of grape vines covers several acres, and the orchard contains stone fruits, apples, oranges, and, indeed, every species of fruit which has been found to come to perfection in the district. Mr. Forbes finds that the proper working of his estate absorbs the whole of his time and energies, and has taken up no outside responsibilities. He was married in 1891 to Matilda, daughter of Mr. John Mildwaters, of Cherry Gardens, near Adelaide, and has one son.

**BERTRAM JAMES FORBES** is a son of Mr. William Forbes, of North Shields, Port Lincoln, South Australia, who has been engaged in the farming and grazing industry at that place for many years. The gentleman under review was born near Cowell, at Franklin Harbour, in the same State, on September 26, 1876, and having completed his

*H. C. Biltoft, Katanning.*  
MR. BERTRAM JAMES FORBES.

education at Cleve, at twelve years of age began to assist in the duties of his father's farm. After four years spent in this way he engaged himself to a neighbouring farmer, and subsequently obtained employment as a shearer, in the intervals between the shearing seasons taking small contracts in road-making. In 1895 Mr. Mildwater, who had taken up land for farming purposes in the Denmark district, offered him employment in bringing some horses from South Australia to the Western

State, and having successfully accomplished this trust Mr. Forbes came to Perth, and was connected for a time with the Fremantle Harbour Works, afterwards undertaking the duties of warder at the Fremantle Prison. From here he proceeded to the goldfields, and acted in the capacity of dryblower for a period, ultimately offering himself as a candidate in response to a call for recruits by the Police Department. Being of splendid physique and of sufficient educational acquirements to pass the necessary test, Mr. Forbes was drafted into the force, and at the time of the departure of the third Western Australian Contingent for the scene of the war in South Africa, he obtained leave of absence from the department, and, joining that body, served some eighteen months in the Transvaal, being awarded the Queen's Medal and five clasps, and returning with the rank of corporal. Taking up his duties in the Police Department once more, he was sent to take charge of the Isdell Police Station in the West Kimberley district, on the farther side of the Leopold Ranges, and has continued at this station for over seven years. During this period Mr. Forbes has had several exciting experiences with aboriginals. On one occasion, while in the act of arresting some natives for killing cattle, he was twice speared—in the arm and chest—and had to be removed to Perth for surgical treatment. In 1906 he purchased 1,000 acres in the Dumbleyung district, 26 miles from Katanning and six miles from Dumbleyung township and railway station, and this holding he placed under the management of his brother, Mr. W. H. Forbes, who resides in the district. He has already enlarged it by the purchase of an additional block of over 600 acres, the whole to be devoted to purposes of mixed farming, and it is Mr. Forbes' intention in the near future personally to take control of operations and to make his home on the property. Mr. Forbes is a member of several sporting clubs, and is generally recognized as a prominent athlete, having been a member of the police tug-of-war team on many occasions when that body has successfully demonstrated its prowess.

**PATRICK GARRITY**, farmer, Katanning, is a son of the late Patrick Garrity, who came to

Western Australia from Ireland in the early sixties and selected a holding near Broome Hill, where the gentleman under review was born on April 14, 1869. In those days there were no schools in the district, and what book-knowledge the lad could obtain was acquired in his father's home. As soon as he was able to make himself useful, as early as ten years of age, he began to help in the

*H. C. Biltoft, Katanning.*  
MR. PATRICK GARRITY.

duties of the farm, and for nearly thirty years was associated with his father in the management of the home property. Upon the death of his parent, Mr. Patrick Garrity rented the farm from his mother and worked it in conjunction with a holding which he had previously selected and developed on his own account, in addition to another property adjoining his own block, formerly owned by Mr. W. Murphy and sold by him to Mr. Garrity in 1909. These combined properties, comprising nearly 7,000 acres, he has let on leasehold terms to Messrs. McAuliffe & Sons, and has himself temporarily retired from farming pursuits. In order to occupy his time he has turned his attention to carting and contracting in the Katanning district, having little inclination to spend his days in idleness. In 1889 Mr. Garrity married Mary Jane, daughter of the late Thomas Haddleton, one of the oldest settlers in the district, and, indeed, in the Western Australian State. He has a family of one son and three daughters.

HEINRICH OTTO BEECK, "Capemont," Katanning district, is a son of Mr. E. R. Beeck, of the same place, and was born in South Australia on June 23, 1875, his native town being Monarto, where also he received his scholastic training. Leaving school at an early age, he made himself of considerable use on his father's farm, paying especial attention to the sheep-raising industry, and gaining experience which has proved of great value to him in

H. C. Billoft, Katanning.  
MR. HEINRICH OTTO BEECK.

his subsequent career. In 1892 he came to Western Australia, and upon arrival accompanied his father to the Katanning district, where the original holding of "Capemont" was selected as suitable to mixed farming operations. Upon the subsequent retirement of Mr. Beeck, senior, in 1903, the estate was divided among the brothers, nearly 1,500 acres falling to the share of the gentleman under review. Mr. Beeck makes a study of the different methods of working the land, and of carrying on the various industries connected with properties similar to his own, and has been very successful in applying the knowledge thus gained to the special conditions of his own property. He has some fine stock imported from South Australia, but has averaged his greatest successes in the show ring with sheep bred by himself at "Capemont." In 1911 he gained the gold medal presented by Messrs. Henry Wills & Co. in connection with the Great Southern Pastoral and Agricultural Society's Show for the highest number of points gained in

the merino sheep section. A portion of the estate is devoted to orchard operations, where various kinds of fruits are grown for home use and for the local markets. Mr. Beeck married in 1902 Adah, second daughter of Mr. E. B. Mackie, of Albany, and has two sons and one daughter.

WILLIAM WHARTON OGDEN, of "Grange" Farm, Badgebup Road, Katanning, is a son of the late Samuel Ogden, of Oldham, England, and was born at that town on August 20, 1856. He pursued his educational studies at Lancaster, and at Owen's College, Manchester, and subsequently became engaged in the cotton industry for a number of

H. C. Billoft, Katanning.  
MR. WILLIAM WHARTON OGDEN.

years. At the age of forty he abandoned the calling in which he had spent so large a part of his life, and for the sake of his health sought the sunny skies and healthy climate of Australia. Settling at Sydney, he entered upon business pursuits in New South Wales, where he continued for some considerable time, eventually coming to Western Australia in 1905. Being desirous to settle on the land, his choice was directed to the Katanning district, where he took up 400 acres in the first instance, and has gradually added to this area, until at the present time he has increased his holding to 3,600 acres. His two sons have joined him in the working of the property, and recently have been taken into

partnership. Although in the past mixed-farming operations have been carried on with good results it is the intention of the Messrs. Ogden to specialize more exclusively in sheep-raising in the near future. Mr. Ogden was married in 1886 to Elizabeth Henrietta, daughter of the late Dr. Henry Dunkley, of *The Manchester Examiner and Times*, Didsbury, Manchester. In 1911 Mrs. Ogden died, leaving a family of two sons and three daughters.

MARTIN O'DONNELL, of "Maribin" Farm, Katanning, is a son of Mr. Patrick O'Donnell, of Kyneton, Victoria, where the gentleman under review was born on July 9, 1874. He received his education at the Roman Catholic School, Kyneton, and when fourteen years of age became engaged for a short time on his father's farm, relinquishing this industry in order to learn the blacksmithing trade, for which purpose he proceeded to Melbourne. Induced by the spirit of travel and adventure to move further afield he engaged in shearing and other work on various

H. C. Billoft, Katanning.  
MR. MARTIN O'DONNELL.

stations in New South Wales for some time. In 1896 he came to Western Australia and, within a year of his arrival, entered upon pioneering work in the Katanning district. In the first instance Mr. O'Donnell selected about 600 acres of land, which he found well suited to the agricultural and pastoral operations which he had in view, and in course of time added

to this holding 1,200 acres, combining the whole in a fine property of 1,800 acres, which has been highly improved and brought into line with the foremost estates in the neighbourhood. Oats form the principal crop produced, although upwards of 200 acres are under cultivation of wheat and a large territory is reserved as pasture land for the 500 head of merino sheep, which form a profitable branch of the industry. The land is held under freehold conditions, and was taken up as first-class country at 10s. per acre. It has also proved very suitable for fruitgrowing purposes, apples, pears, and a variety of stone fruits flourishing in the carefully-cultivated orchard. Mr. O'Donnell was married in 1903 to Elizabeth, daughter of Mr. Eli Quartermaine, of "Mean Mahn," Katanning, and has three sons and three daughters. He takes his recreation with his family, and has but little time for outside interests or public offices.

WILLIAM FREDERICK QUARTERMAINE, "Spring Hill" Farm, member of the Katanning

H. C. Billoft, Katanning.  
MR. WILLIAM F. QUARTERMAINE.

Roads Board, is a son of Mr. Alfred Quartermaine, of Katanning, who was born in the York district of this State over seventy years ago. The gentleman under review is also a native of the same place, and when eight years of age accompanied his parents to Katanning, where he received his education by private tuition. Before entering his teens he

was actively at work in the sandalwood industry on his father's farm, engaging also in shepherding and other kindred pursuits. Having passed his majority, he left the paternal homestead on the occasion of his marriage, and was associated with a relative in the working of a farm for a couple of years. In 1891 he purchased a small block of land on which to build a homestead from the Western Australian Land Company, and in the following year took up a holding comprising 379 acres and entered upon its development. Subsequently, leaving his wife in her new home he followed the rush to the eastern gold-fields and became engaged in the business of carrier on his own account at Hannans. For three years he continued contracting on the road between the great southern railway and the fields, and in 1895, having accumulated sufficient capital, returned home to give his personal attention to clearing and cropping the property. From time to time Mr. Quartermaine increased his holding in the district until at the present period he owns in the vicinity of 3,000 acres of land, the greater proportion of which is devoted to the growing of cereals, although there are also several hundreds of sheep grazed on the pastures. Upon one of his holdings, situated near Nampup, Mr. Quartermaine has done pioneer work in well-sinking, and has proved that fresh water is obtainable, a good flow having been struck at a depth of 35 ft., through 25 ft. of blue granite. In 1911 he began his connection with public life, being elected without contest to a seat on the Katanning Roads Board. In 1887 he married Sarah, daughter of the late Mr. William Hawkins, in earlier days a well-known identity of the Darling Ranges, near Perth, and has six sons and six daughters.

RICHARD JOHN GULLEY, Katanning, is a son of the late Philip Gulley, of Wales, England, and an early pioneer of Victoria. He was born in that State on September 28, 1863, his native town being Tarnagulla, where his mother, now the oldest inhabitant, still resides. Having attended the village school until eleven or twelve years of age, his services were requisitioned to assist in the support of the family by the performance of duties in connection with rural life, and ultimately he became his father's right hand in the working

of a small farm. Seven years were spent by Mr. Gulley in assisting to clear the liability on this holding, and this object having been attained, in 1887 he launched out on his own account. Taking up a selection at Glenalbyn, he was engaged for a further seven years in the development of the farm, eventually having to abandon operations on account of the depredations of rabbits. Mr. Gulley next removed to Boort, and found employment in contract work in connection with various Shire Councils,

H. C. Billoft, Katanning.  
MR. RICHARD JOHN GULLEY.

which he continued for about three years. In 1898 he came to Western Australia, and settling in the Katanning district, again took up public contracts until 1899, when he selected a homestead block situated about six miles from Katanning, and began farming operations. The original area soon proved insufficient, and adjoining property was secured, until at length his acres numbered 2,000, and on this estate he erected a very comfortable homestead, where he resided for some years with his family. In 1911 Mr. Gulley disposed of the estate to Mr. F. McRae, and is at present living in retirement at Katanning. For three years he was a member of the Katanning Roads Board, and has always taken a deep interest in all matters affecting the welfare of the general community. At the time of the Royal Commission on Agricultural Enquiry, which sat at Katanning in 1906, Mr. Gulley was one of those chosen to give evidence, which proved of great value both to the producers, the general

public, and the Government of the day. He married in 1892 Ada Gertrude, daughter of the late John Frederick Newman, Tarnagulla, Victoria, and has two sons and four daughters.

**GEORGE McLEOD, JUN.**, farmer and investor, Katanning, is a son of Mr. George McLeod, who came from Scotland to this State in the early fifties, and eventually settled at Katanning, where he now resides. Born at York, Western Australia, the subject of our notice

RESIDENCE OF MR. GEORGE McLEOD, JUN., KATANNING.

was educated in his native town, and at a very early age left school to engage with his father in the sandalwood industry in the Williams district. For several years he continued to follow this and kindred pursuits, and in 1892 found his way to the eastern goldfields, where for seven years he was employed in the business of a carrier and contractor between Northam and Coolgardie, at a later date extending his operations to Kalgoorlie and Boulder. Selling out in 1898 Mr. McLeod came to Katanning and purchased the goodwill and freehold of the Katanning Hotel, at the present time the principal house of its kind in the district, and at that period the only one. For twelve years he personally conducted the management, and in 1911, in order to be free to attend to his other interests, let the hotel on lease; a similar business which he owns at Tambellup being also in the hands of a lessee. Mr. McLeod is the owner of real estate in the neighbourhood of Katanning, and recently has purchased a farm within five miles of

ww

the town, of which he makes a hobby, devoting considerable attention to the growing of cereals, etc. For the past five years he has occupied a seat on the local roads board, being twice returned unopposed, and at the last election defeating his opponent. He is a member of the hospital committee and of the agricultural society, of which latter body he has been vice-president for twelve years. He is prominently connected with the Australian Natives' Association, and has acted on the committee of this organization for some considerable time. He

continued under the parental roof-tree until his twenty-fourth year, when he took up virgin land from the Government of South Australia in the neighbourhood of Mannum, on the River Murray, and was engaged in working this property for twenty-three years. In 1901 he decided to come to the Western State, and disposing of his interests in South Australia sailed for Fremantle, and upon arrival purchased his present holding, comprising over 1,700 acres, at West Katanning. The estate was already in an improved condition, having been in course of development by the former owner, Mr. George Taylor, for some twelve years. Since entering into possession Mr. Kowald has acquired additional territory to the extent of nearly 3,000 acres at Marraconda, where he carries on mixed farming operations, wheat and oats being the principal crops cultivated, while he also supplies the Katanning markets with a great variety of fresh vegetables grown on his own property. The estate carries something over 1,000 sheep permanently, and at periods this number is considerably

H. C. Biltoft,

Katanning.

MR. FREDERICK WILHELM KOWALD.

**FREDERICK WILHELM KOWALD**, "The Grange," West Katanning, is a son of the late Mr. J. C. Kowald, of Blumberg, South Australia, in which town the subject of this memoir was born on November 30, 1855. He received his scholastic training in the place of his birth, and leaving school at an early age became assistant to his father on the home farm, where he acquired an intimate knowledge of all phases of Australian agriculture. He

augmented. Before his departure from South Australia he was a member of the Mannum District Council for some years. In 1878 he married Emily, daughter of Mr. L. Zadow, of Palmer, South Australia, who died in 1894, leaving five sons and three daughters. In 1901 he was united to his late wife's sister, Susanah, by whom he has four sons.

CECIL ERNEST CHARLES PIESSE, Katanning, was born on August 12, 1882, at the Williams River, and is the second son of the late Hon. F. H. Piesse, C.M.G. After a course of elementary study under private tuition in his father's home he completed his scholastic education at the High School, Perth, and upon leaving this institution entered commercial life in the house of Messrs. G. & R. Wills & Co. After filling a clerical position in this firm for some time he became associated with the business carried on by his father and uncle, Messrs.

PLUGHING AND SEEDING AT "WALLACUP."

Photo by H. C. Billoft. FLOCK OF SHEEP.

F. & C. Piesse, of Katanning, as their representative at the Perth Branch. To extend his experience in mercantile procedure he spent varying periods in the service of Messrs. Sargood Brothers, Messrs.

Gordon & Gotch, and other leading Western Australian firms. Ultimately Mr. Piesse came to Katanning, where he took over the management of the cordial factory connected with the business of Messrs. F. & C. Piesse, and at a later date became proprietor of the factory, which reverted to him from his father. He is the originator of the beverage known as Messrs. F. & C. Piesse's dry ginger ale, which has commanded a large sale throughout the State. After personally conducting this establishment for over six years, in 1911 he took over from his father landed property to the extent of over 4,600 acres, and has

H. C. Billoft, Katanning.  
MR. CECIL ERNEST CHARLES PIESSE.

MR. C. E. C. PIESSE'S RESIDENCE, KATANNING.

since directed his energies to mixed farming pursuits on this and a second holding of 2,000 acres at Wallacup, some distance east of Katanning. The estates carry nearly 3,000 sheep, Mr. Piesse favouring a

cross between Leicesters and merinoes as specially suited to the locality. Over 1,000 acres are already under cultivation, besides which a

5,000 acres at Kojonup, and while still engaged in the management of the parental estate gave a portion of his time to the development of

of success. The country has proved suitable for agricultural purposes and a very large portion has been applied to tillage, 1,300 acres having been placed under crop with different sorts of cereals and hay. Mr. Piesse is a large supplier of dairy produce to the town of Katanning, and for this purpose he has a milch herd, three-fourths of which is composed of the milking strain of shorthorns, and the remaining fourth of pure Jerseys, the latter type being introduced with the object of keeping up the rich quality of the milk so much appreciated by the numerous consumers. Pastoral operations are already in full swing, and the flock of 4,000 merinoes, bred from the South Australian "Koonoona" strain, shows evidence of care and skill in the selection of types. A very useful type of draught horse is produced, while the hacks bred by Mr. Piesse—who is a very great lover of horses—are among the best-looking animals in the district. In his schooldays Mr. Piesse made his mark as an oarsman, and while still a lad was a large trophy winner in open amateur events, even against some of the crack adult performers. In the intercollegiate races in Western Australia he was always selected

Photo by H. C. Billoft. MR. H. V. PIESSE'S RESIDENCE, KATANNING.

considerable area has been cleared and made ready for tillage. Mr. Piesse is well known in rifle-shooting circles, having been connected with this pursuit for defence purposes as well as for sport during a period extending over many years. He is captain of the Katanning Rifle Club and is considered to be one of the best shots in the district, many trophies having been placed to his credit. In the year 1904 Mr. Piesse married Florence, daughter of the Honourable Frank Wilson, Ex-Premier of the State, and has a daughter and a son.

HAROLD VIVIAN PIESSE, pastoralist, Katanning, is a son of the late Honourable F. H. Piesse, C.M.G., of the same place. He is a native of this State, having been born at the Williams River on July 12, 1884, and he received his early scholastic training at the High School, Perth, subsequently attending the Hawkesbury College, New South Wales, until he was eighteen years of age. He then returned to Western Australia and became engaged in farming pursuits on one of his father's properties in the Katanning district, where he obtained considerable experience in sheep-raising and agricultural operations. In 1908 he purchased a property comprising

ww2

his newly acquired holding. In 1911 he further launched out on his own account by taking over from his father a tract of 3,500 acres of land

Photo by H. C. Billoft. SHEARERS AT WORK.

in the vicinity of Katanning township, and since that period has carried on mixed farming operations on his own behalf with a fair measure

as a member of the fours for his school, and invariably acquitted himself with credit. Mr. Piesse, who is a member of the Defence

Forces of Western Australia, is also referred to in the military section of this publication. He is a member of the Western Australian Club and of the Commercial Travellers' Association Club of Perth. In 1911 he married Elizabeth, daughter of Mr. Richard Verney, of Balmain, Sydney, and has a daughter.

GEORGE SIMPER, "Moss Vale," Farm, Rockwell, district of East Katanning, is a son of Mr. Thomas John Simper, of "Wernup" Farm, in the same district. He is a South Australian native, having been born at Mount Barker, in that State, on April 28, 1878, and was educated at Baroota. Upon leaving school he went to work on his father's farm, and accompanied his parents to Western Australia with the object of settling on a property, the land having been secured by the family prior to their arrival. "Moss Vale" comprises 1,160 acres of light-chocolate and sandy soil well suited to the production of cereals, and by dint of industry and perseverance about half of this area has been brought under cultivation, yielding satisfactory returns in reward for the labour spent upon it. A flock of merino sheep is run on the property and has proved a valuable proposition. Mr. Simper identifies himself with the various local movements, being a member of the Katanning

H. C. Biltoft, Katanning.  
MR. GEORGE SEMPER.

branch of the Farmers and Producers' Political Union and a member of the local agricultural hall.

He is a committeeman of the Presbyterian Church of the district; and is an advocate of all healthy outdoor sport, taking considerable interest in the Rockwell Cricket Club, of which he is a playing member. In 1910 he married Isabella, daughter of the late William Killner, of Oldham, England, and has one daughter.

FREDERICK WILLIAM BALDOCK, "Herne Hill" Farm, East Katanning, was born at Appila-Yarrowie, South Australia, on October 15, 1879, and is a son of Mr.

H. C. Biltoft, Katanning.  
MR. FREDERICK WILLIAM BALDOCK.

Harry Baldock, of Booleroo Centre, in which town he received his education. At thirteen years of age he went to work on a farm, and continued to follow this occupation in various districts of the State for a considerable period. In 1903 he came to Western Australia with the object in view of taking up land under freehold conditions for agricultural purposes. Mr. Baldock was successful in securing his present property of 620 acres in the East Katanning district, and during the years that have elapsed since his arrival has brought under cultivation about half the area, the principal crops being wheat and oats. Commencing operations with a considerable amount of practical experience he has been able to adapt his knowledge gained in the Central State to the slightly altered conditions of Western Australia, and has had the satisfaction of obtaining from his

holding returns equal to any in the district. He is a member of the Rockwell Agricultural Hall.

WILLIAM SELBY DOUGLAS, "Badgebup" Farm, in the district of that name, is the second son of the late W. S. Douglas, a well-known

H. C. Biltoft, Katanning.  
MR. WILLIAM SELBY DOUGLAS.

accountant of South Australia and one of the founders of the Institute of Accountants in that State, who for five years was manager in Adelaide of the Bank of South Australia and occupied a seat on the Board of Directors of the National Bank of Australasia, Adelaide. The gentleman under review was born at Payneham, South Australia, on June 17, 1865, and received his education at St. Peter's College, Adelaide. Leaving school at eighteen years of age, he was employed in the Church Office, Leigh Street, for twelve months, at the close of which period he entered upon pastoral life, being identified with Messrs. W. B. Sells & Co.'s station, "Oakden Hills," Port Augusta, retaining his connection with this firm for thirteen years. On leaving "Oakden Hills" he took a trip to Scotland, and returning to Australia spent three years in the North Gregory district of Queensland, which he was forced to leave in 1890 on account of having contracted severe malarial fever. In 1892 he rejoined Messrs. W. B. Sells & Co., and in 1893 he was promoted to the position of manager at "Monte Colina" Station, from which he resigned in

1896 in order to come to Western Australia. Upon arrival he joined the clerical division in the office of existing lines in the Railway Department of the Civil Service, and continued in this connection until 1899, when he turned his attention to pastoral pursuits once more, taking up 2,000 acres of good agricultural country at Badgebup. His first operations were in the direction of wheat cultivation—at the present time 300 acres are under crop—but more recently he has begun the development of a flock of merino sheep which displays considerable promise, and this department will be extended in course of time. He takes considerable interest in the development of the district, and was personally responsible for the cutting of the road from Badgebup for 13 miles on the way to Katanning. Mr. Douglas is a prominent member of the Anglican Church, the interests of which he promotes in every possible way, making his residence a centre where gatherings for Divine worship are held every month. He married in 1904 Violet, daughter of the late James Crommelin, late of Albury, New South Wales, and has three daughters.

**HOBART BROTHERS**, "Fairview" Farm, district of East Katanning. This property, which is under

H. C. Biltoft, Katanning.  
Mr. BRUCE HENRY HOBART.

the management of the proprietors, Messrs. Bruce Henry Hobart and Albert Richard Hobart, is situated

about 16 miles east of Katanning, and comprises in all about 1,280 acres, half of which area has been cleared and prepared for the cultivation of cereals, for which it is well suited. The partnership was formed in 1905, when a block of land was secured north-east of Woodanilling, the development of which was carried on for some time prior to the taking up of the holding upon which their

H. C. Biltoft, Katanning.  
Mr. ALBERT RICHARD HOBART.

efforts are now concentrated with promise of excellent results. Both the brothers are natives of South Australia, the elder being born on August 4, 1884, at Alma Plains, and the younger on September 20, 1886, at the same place. They were educated at various public schools in the Central State, and followed farming occupations from their early teens exclusively, with the exception of a short time spent by each in the foundry of Messrs. May Brothers, of Gawler, South Australia. Prior to coming to the West in 1905, Mr. B. H. Hobart was three years in the employ of John Darling & Son at their forage mill, Gawler, South Australia. From childhood the brothers have been members of the Independent Order of Rechabites, but since coming to Western Australia they have devoted the whole of their time and attention to the working of their property and have taken no part in social or public life.

**ROBERT GRIFFITHS TREE**, "Trewellup" Farm, Carrolup, in the Katanning district, was born at

Adelaide on June 5, 1856, receiving his scholastic training at Happy Valley, and at sixteen was apprenticed to the grocery trade, eventually purchasing the business, which he carried on for sixteen years. In 1892 he sold his interests at Edwardstown, and for a time was identified with agricultural pursuits in the Wimmera district of Victoria. In 1898 he came to Western Australia and took up country in the Katanning district, where he has since made his home. Since his advent to the district Mr. Tree has been very prominent in public affairs, and has been a member of the Katanning Roads Board for over nine years. For eleven years he has been a member of the local School Board, and it has been mainly owing to his instrumentality that roads grants have been secured, the agricultural hall erected, and other public benefits obtained. He is also a member of the committee of the local Farmers' and Producers' Union.

**JOHN GOTTHOLD WINNECKE**, of "Appila" Farm, Badgebup district, East Katanning, is a son of Mr. Adolph Winnecke, of Appila-Yarrowie, South Australia, in which place the gentleman under review was born on February 11, 1879. He received his education at the Pine Creek School in the same State, and in his early teens obtained a good insight into the farming industry on his father's property. In 1904 he came to Western Australia, and taking up his present holding put matters in train for its steady development. At a later date he made additions to the property by purchasing from his brother the adjoining block of land, and the whole property now comprises nearly 1,100 acres, where mixed farming operations have been carried on with great success. Wheat and oats are grown, the soil having proved particularly suited to the production of cereals, and a fair amount of attention is given to sheep-raising. Mr. Winnecke breeds all his own horses for work on the farm, the surplus finding a ready sale, his Clydesdale stallion "Noble" by "Lowland Chief" having produced some good progeny and established an excellent name for himself in the district. Mr. Winnecke is a member of the local branch of the Farmers and Producers' Political Union, and interests himself in all that concerns the advancement of the district,

especially in the affairs of the Rockwell Agricultural Hall, of which he is a member. He is a committeeman of the Rockwell Cricket Club, and recreates in this pastime in the intervals of leisure allowed by the many pressing duties of the farm. In 1910 he married Nellie Joy, daughter of Mr. Otto Klem, of Corney Point, South Australia.

**GOODCHILD BROTHERS**, proprietors of "Grove" Farm, Badgebup (George Salmon Goodchild and Edmund Frank Goodchild). The owners of the fine property under review are natives of Suffolk, England, the elder brother having been born on August 8, 1880, and the younger on May 23, 1888. They are sons of Mr. John Goodchild, of "The Grove" Farm, at Little Wenham, in that county, and received their education at the National Board School in the town of their birth, both lads subsequently engaging in farm duties on their father's property. In 1904 Mr. G. S. Goodchild emigrated to Western Australia, and was followed by his brother two years later, when the land taken up by the elder was added to and the present estate formed, to

H. C. Biltoft, *Katanning.*  
MR. GEORGE SALMON GOODCHILD.

which was given the name of "Grove" Farm after the old homestead in England. The application and industry brought to bear upon the development of their land by Messrs. Goodchild Brothers is already bearing fruit, and their 600 acres of waving wheatfields alone give rich promise of tangible prosperity, while

they testify to the skill and management which have brought about such good results in a comparatively short space of time. The remainder of the land is being cleared for purposes of extended cultivation, and the proprietors have also given a good deal of attention to the mallet bark industry, which has proved a profitable

H. C. Biltoft, *Katanning.*  
MR. EDMUND FRANK GOODCHILD.

branch of their operations. Large reservoirs for the conservation of water have been excavated, and by this means a plentiful supply for stock purposes is always obtainable. In the Old Country the Messrs. Goodchild were members of the Ancient Order of Foresters, but their present isolated position has made it impossible for them to keep in touch with the Order, this being one of the many social deprivations that must be faced by those who take up the arduous pioneering work on "the edge of the beyond."

**HERBERT JOHN CHARLSLEY**, farmer, of Nampup, is a son of the late Edward Charlsley, of the firm of Klingender, Charlsley, and Dickson, solicitors, of Melbourne, Victoria, in which city the subject of our memoir was born on April 5, 1856. He received his education at the Church of England Grammar School, and subsequently at the Scotch College, Melbourne, at eighteen years of age becoming one of the pioneer farmers of the district. Until 1879 he continued the development of his holding, relinquishing it upon his

departure for Ceylon, where he accepted a position as superintendent of a coffee plantation, which he held for some considerable time. In 1896 he purchased a partnership in "Pussetenne," a tea and rubber estate in the Central Province of the Island, 17 miles distant from Kandy, and twelve years later, while still retaining his interest in this enterprise, left Ceylon after thirty years of residence and returned to Australia. Having satisfied himself in regard to the pastoral possibilities of the Western State, and having formed a favourable opinion of the prevailing climate, Mr. Charlsley selected nearly 3,000 acres of land at Nampup for

H. C. Biltoft, *Katanning.*  
MR. HERBERT JOHN CHARLSLEY.

mixed farming purposes, his intention being to unite wheat-growing and wool-producing with the major industry of breeding horses of the medium draught type specially suitable to the Western Australian country and climatic conditions. Since he entered into possession the Government has resumed 60 acres of the property for railway purposes, and has built a railway station on a portion of the estate. Mr. Charlsley is a member of the Ceylon Planters' Association, and takes a keen interest in the affairs of that body.

**OLIVER ANDREW CALDWELL**, of "Gidgelbarrup" Farm, in the Badgebup district, Katanning, is a son of the late Mr. Robert Caldwell, who was a member of the South Australian Parliament for

twenty-one years. He was educated at the Woodside State School, South Australia, and at sixteen years of age proceeded to Mount Gambier, where he became engaged on Hon. George Riddoch's pastoral estate and continued there for several years. In 1898 Mr. Caldwell came to Western Australia in company

in the first instance a joint venture with his brother, who some years later sold his interest in the property, Mr. Caldwell retaining 1,180

results is a small apiary, established by Mr. Caldwell in 1903. Upon the property stands the comfortable farmhouse built of burnt and

*Bartlett.* *Perth.*  
MR. OLIVER ANDREW CALDWELL.

with Mr. John Warren, of "Dyilabing," whom he assisted in the early development of his property, two years later launching out on his own account. His selection of 2,000 acres of land in the Badgebup district was

applied chiefly to agricultural purposes, and has now 600 acres under cultivation of cereals which yield satisfactory returns, while on the grazing pastures some 200 or 300 merino sheep grow sleek for the local markets. Nearly twenty horses, the greater number showing their Clydesdale descent, are kept at work in the fields, and breeding on a small scale is carried on. Yet another department of the operations which has given satisfactory

sundried bricks, and adjacent are the outbuildings, including stabling accommodation and power-houses. All the latest and most improved machinery has been called into requisition for the various departments, and a 4 horse-power petrol engine for cutting chaff and crushing grain is kept busily at work. He is a member of the Farmers and Producers' Political Union, which has exerted a marked influence in the neighbourhood, and was elected to a seat on

*Photo by H. C. Billoft.* 5-FURROW PLOUGH AND TEAM.

*Photo by H. C. Billoft.*

MR. O. A. CALDWELL'S HOMESTEAD, BADGEBUP.

the committee in connection with the movement to erect an agricultural hall at Rockwell. He is in sympathy with the effort to maintain Divine worship in the district, and to this end has united himself with the fellowship of the Presbyterian Church. In 1907 Mr. Caldwell was married to Florence, daughter of Mr. Otto Klem, of Corney Point, South Australia, and has issue two sons.

**CARLTON WISBEY, J.P.**, agriculturist, of "Fairfield," Nampup district, is a son of Mr. William Wisbey, of Mudgee, New South Wales, and was born at North Richmond, Hawkesbury River, New South Wales, on January 1, 1869. He was

*H. C. Billoft, Katanning.*  
MR. CARLTON WISBEY.

educated privately at Richmond and Mudgee, and having reached the age of sixteen followed farming pursuits on his father's property in the Mother State, remaining under the parental roof-tree until he reached man's estate. He then took up a selection at Wingello, in the Goulburn district, which he developed and then sold, in 1891 joining the Police Department of the Civil Service, with the mounted troop of which body he was connected for nearly twelve years. Resigning this position in order to come to Western Australia, he arrived at Fremantle in 1902, and took up a block of land at Mount Hardie. Finding this holding too small for the purposes he had in view, after working it for a time he

disposed of it, taking up a property at Balkuling, since called "Wisbey's Well," and carried on operations for five years, eventually selling out to Mr. S. Anderson. After taking a trip to his birthplace in New South Wales, he returned to Western Australia in 1911, and, proceeding to Katanning, selected 1,200 acres at Nampup, which he is at present preparing for mixed-farming operations. Mr. Wisbey takes a warm interest in all public affairs, and occupies the position of honorary secretary to the Nampup Progress Association, of which he was one of the founders. Prior to coming to this district he assisted to found a similar organization at Balkuling, in which he acted as committeeman and vice-president. In 1912 he was granted a Commission of the Peace for the Katanning district by the Scaddan Cabinet. For over twenty years he has held membership in the Masonic fraternity. Mr. Wisbey married in 1896 Ada, daughter of Mr. Joseph Charlton, of Narandera, New South Wales, and has one son and one daughter.

**EDWARD HERMANN WILHELM**, farmer, "Willing Vale" Farm, Woodanilling district, is a son of the late August Wilhelm, who came to South Australia from the Fatherland when only fourteen years of age and survived to the ripe age of seventy-five, the latter ten years of his life being spent in this State. The subject of our notice was born at Blumberg, South Australia, on January 29, 1867, and received his education in his native place. Leaving school at the age of fourteen, he worked on his father's farm for some time, subsequently taking up work as a shearer, which occupation he followed for fifteen years, in slack seasons turning his hand to various occupations incidental to bush life. He then turned his attention to farming on his own account in Victoria, where he continued for about eighteen months, at the end of that period migrating to Western Australia. Here he formed so favourable an impression of the possibilities of the country that he lost no time in communicating with his German friends in the Central State, with the result that within a year about thirty followed his example, and are now prosperous settlers in the same district. Mr. Wilhelm selected his own farm

of 400 acres in the year 1891, and this holding he has increased from time to time until he has now over 2,000 acres of freehold property, where mixed farming operations on a fairly large scale are successfully carried on. He is the owner of the prize Clydesdale stallion of the district, a distinction he has held for several years with different horses, and breeds both for sale and for the work of the farm, his object being to produce a type specially suited to the needs of the district

*H. C. Billoft, Katanning.*  
MR. EDWARD HERMANN WILHELM.

where he resides. For some time Mr. Wilhelm has served as a member of the Woodanilling Roads Board, and he is connected with various public organizations in the district. In past years he has held office in the local branch of the Independent Order of Oddfellows. In 1898 he married Emma, daughter of the late Thomas Richardson, of Tenterden, in the great southern district of Western Australia, and has three sons and three daughters.

**ELIJAH RICHARD BELL**, J.P., "Bellview" Farm, near Woodanilling, is the eldest son of Mr. Richard Bell, of the same place—one of the earliest settlers of the district. He was born at Boyup Brook on June 9, 1867, and pursued his scholastic studies in the Williams district, a Government school being opened there during his boyhood. At an early age he became connected with the sandalwood industry, and

subsequently was engaged contracting for building public roads. In 1892, in conjunction with Mr. R. S. Bell, he took up land for farming purposes, a younger brother afterwards being received into the firm, which carried on successfully until 1905. In that year the connection was discontinued, and subsequently the gentleman under review and Mr. Luke Bell joined in partnership and have since co-operated in the development of their 3,000-acre farm, the various departments of the industry yielding good results under their joint management. The brothers are the largest property-owners in the Woodanilling district, and built the first and up to the present date the only hotel in the township. Mr. Bell takes a very live interest in all public matters, and was for nine years a member of the Katanning Roads Board. It was chiefly owing to his efforts that the present roads board of Woodanilling was formed, and he has since been a prominent member of that body. He has attended many conferences all over the State, as well as at the capital, dealing with affairs connected with roads

H. C. Billoft, Katanning.  
MR. ELIJAH RICHARD BELL.

boards and agricultural societies, and has represented his district on many public occasions. Being one of the few settlers native to the State, he is regarded as an authority on numerous details connected with the development of the rural districts, having travelled extensively throughout the country and exercised keen observation during his journeyings. He is a strong supporter of the

present Labour Administration in Australia, and was created a Justice of the Peace by the Scaddan Government in 1912. Mr. Bell is a member of the Great Southern Agricultural and Pastoral Society. His chief recreation is found in the perusal of works of a literary character, the study of political economy being especially fascinating to his particular bent of mind.

ROBERT SAUNDERS BELL, "Westbury" Farm, *via* Woodanilling, is the second son of Mr. Richard Bell, of "Bellview," who came to Western Australia in 1849 and settled on the above property in 1852. The gentleman under review was born in the Blackwood

H. C. Billoft, Katanning.  
MR. RICHARD BELL.

district on January 21, 1869, his native place being Boyup Brook. He received his primary education at Williams under Mr. Ashby, and later in the Government school which was opened there about that period. When eleven or twelve years of age he became his father's assistant in the transport of sandalwood, and as that industry increased in importance he gave up the whole of his time and attention to its development. After twelve years spent in this occupation, in 1892 he joined his brother, Mr. E. R. Bell, in farming pursuits, and having selected his present homestead block at a later date admitted a younger brother into partnership.

The firm continued operations until 1905, in which year the partnership was dissolved, and Mr. R. S. Bell retained as his share an area of over 1,300 acres, to which he has since added by the selection of another holding of about equal size, lying about five miles distant from the homestead property and

H. C. Billoft, Katanning.  
MR. ROBERT SAUNDERS BELL.

eight miles from Woodanilling. Among the mixed farming operations which comprise the scope of the industry, wheat-growing takes pride of place, and considerable success has been attained in this department, a large area being brought under cultivation, the yield for 1911 being fourteen bushels to the acre. Mr. Bell takes a great interest in public affairs, and has occupied a seat on the Roads Board of Woodanilling for several years. Cricket is his favourite recreation, and he has followed this game with keen zest for upwards of a quarter of a century, being a member of the Woodanilling Club. In 1897 he married Wilhelmina, daughter of the late Carl Severin, one of the early settlers of that district, and has three daughters.

GUSTAV ADOLPH BEECK, of "Summerfield" Farm, in the Marraconda district, west of Katanning, was born at Lobethal, South Australia, on February 10, 1859, and is the eldest son of Mr. E. R. Beeck, who came to South Australia from the Fatherland over sixty-five years

ago, finally settling at Katanning, with his family, in 1892. At the close of his schooldays the subject of this notice, from twelve years of age, was engaged in duties on his father's South Australian farm, and in his twenty-fourth year launched out on his own account, taking up land in the district of Mobilong, eight miles south of Murray Bridge, where he carried on farming pursuits until 1892. Desiring larger scope, he directed his attention to Western Australia, and upon arrival in the above year selected over 4,000 acres of land, to which he gave the name of "Summerfield" Farm. Great energy and industry were brought to bear upon the development of this property by Mr. Beeck, as a result of which it has become one of the most successful farms in the neighbourhood. Over 1,000 acres are under tillage, the other principal source of profit being found in the healthy-looking flock of merino sheep which browse on the

H. C. Billoft, Katanning.  
MR. GUSTAV ADOLPH BEECK.

grass of the pasture lands. The horses bred on the farm are mostly heavy stock, but recently Mr. Beeck has been introducing a lighter strain which should produce a type more useful for the varied duties of the season's round. The gentleman under review takes a prominent interest in the welfare of the district, and is a member of the local school board, a position he has filled with credit for twelve years continuously. He is a committeeman of the Great Southern Pastoral and Agricultural

Society, having held this seat for a similar period, and is a member of the Baptist Church, in which he acts as district local preacher and Sunday-school teacher. On March 29, 1883, Mr. Beeck married Matilda, daughter of Mr. J. A. Strauss, of Summerfield, South Australia, and has three sons and six daughters. The sons are all identified with the management of the property under their father's supervision.

ALEXANDER PROSSER, farmer, "Happy Valley" Farm, Marracoonda, is a son of Mr. Aaron Prosser, of the Foster district of South

H. C. Billoft, Katanning.  
MR. ALEXANDER PROSSER.

Australia, and was born at Mount Barker, in that State, on February 17, 1869. He was educated in his native place and at the Gum Gully State School, where at fifteen years of age he became engaged in duties on his father's farm. Having gained considerable experience in agriculture, he came to Western Australia in 1892, and upon arrival came direct to Marracoonda, where he selected from the Government the land on which his homestead now stands. He has on various occasions acquired additional property and now holds nearly 4,000 acres, where he carries on mixed farming pursuits, nearly 1,000 acres being cleared for cultivation purposes. About 1,000 sheep are run on the "Happy Valley" Farm, all of the favourite merino type, and Mr. Prosser breeds his own horses, in

addition raising a few for the market. For over fourteen years he has served as a member of the local roads board and always displays an active interest in all matters affecting the welfare of the district, every movement for its advancement receiving his cordial support. He is a member of the Great Southern Agricultural and Pastoral Society, and among Friendly Societies is connected with the Rechabite Order, in the proceedings of which he takes a keen interest. In his younger days Mr. Prosser was a keen participant in the game of cricket, but latterly has spent his leisure in diversions among the members of his family. He married in 1895 Anna Christina, daughter of Mr. E. R. Beeck, of Katanning, and has two sons and four daughters.

STUART RAMSDEN, partner in the firm of Ramsden & Crossley, farmers and graziers, of "Clifton," Cartmecip, Katanning, is a son of the

H. C. Billoft, Katanning.  
MR. STUART RAMSDEN.

late George Ramsden, of Melbourne, Victoria, for many years well known in the paper- and flour-milling trade in that State. He was born at Melbourne on February 21, 1884, and received his scholastic training in the Church of England Grammar School on the St. Kilda Road. Leaving college, he entered an accountant's office, subsequently spending three years on "Warranook" Station, at Stawell, where he gained valuable pastoral experience. He left there to take charge of a grazing property owned

by his mother at Bulla Bulla, and three years later, in 1906, landed in Western Australia, having become aware of good openings in the pastoral industry in this State. He made his first acquaintance with local conditions on "De Grey" Station in the north-west, and, returning to Perth about 1909, entered into partnership with Mr. Crossley in the purchase of "Clifton," a property of over 2,000 acres in an advanced state of development. "Clifton," which originally was taken up by Mr. Thomas Kealy and afterwards owned by Messrs. Wilson and McDonald, lies about 17 miles distant from Katanning and contains some splendid agricultural country where mixed-farming operations are carried on, nearly 500 acres being under cultivation at the present time. The present partners have been very successful in their methods, and have reaped the reward of their enterprise in very satisfactory returns in the short period during which they have held possession. Prior to his advent in Western Australia Mr. Ramsden was a well-known figure in sporting circles in Victoria, being especially at home on the hunting field and in amateur racing, in both of which forms of sport he was successful and popular. Since coming to this State he has been warmly welcomed by the local racing community, and the honorary offices of committeeman and steward of the Katanning Racing Club have benefited greatly by his consent to discharge the duties thereof, his wide experience in the older State proving very valuable to the more newly-formed organizations in the district where he now resides. He is also a keen golfer and a member of the committee of the Katanning-Broome Hill Polo Club, this being with him a very favourite form of recreation. Mr. Ramsden is a member of the local agricultural society.

PHILIP HENRY CROSSLEY, part proprietor of the "Clifton" Estate, Cartmesticup, in partnership with Mr. Stuart Ramsden, was born at "Kenilworth," Hamilton, Victoria, on June 17, 1888, and is a son of the late Edward Crossley, of that place. Educated by a private tutor in his parental home, at seventeen years of age he became engaged in various avocations on his father's property, taking especial interest in the agricultural methods of the farm and

also giving a portion of his attention to the sheep-raising industry. After attaining his majority he joined an elder brother in partnership, purchase being made of "Kout Norien," a pastoral property in the western district of Victoria, now carried on by his brother, and in which he still retains an interest. In 1909, being desirous of extending his operations and enlarging his experience, Mr. Crossley came to Western Australia and joined his old friend, Mr. Ramsden, in the purchase of their present holding, "Clifton," near Cartmesticup, which is proving a very profitable investment under the skilful management of the present proprietors. As a member of the local agricultural society he is using his influence for promotion of the best

H. C. Billoft, Katanning.  
MR. PHILIP HENRY CROSSLEY.

methods of land development in the district, and in matters of sport takes considerable interest in the local racing and polo clubs.

REGINALD CHARLES JOHN DELAMARE MARE, "Nevena," Cartmesticup, Katanning district, is as son of the late Mr. John Thomas Matthew Mare, late manager of the Western Australian branch of the P. & O. Steamship Navigation Company, and grandson of the late Major-General Welman, of "Araih," "Barwang," and "Douglas" stations in the Wagga district of New South Wales. Born at East St. Kilda on January 2, 1889, he pursued his

primary studies at "Cumloden," in the same place, and being brought to Western Australia by his parents while still quite a lad concluded his education at the Scotch College, Perth. He was then apprenticed to the engineering profession, taking his first course at the Midland Junction Workshops in the State Railways Department, where he continued for

H. C. Billoft, Katanning.  
MR. R. C. J. D. MARE.

two years. To enlarge his experience he next joined the firm of Hudson & Ritchie, of North Fremantle, and remained in this connection until defective eyesight compelled him to abandon the profession. Turning his attention to pastoral life he proceeded to the north-west and secured a position on "Yanrey" Station, the property of Mr. T. F. de Pledge. From here a year later he went to "Brick House" Station, in the Carnarvon district, where he spent some time. Coming south Mr. Mare in 1910 purchased his present property of "Nevena," in the Katanning district, and has since devoted himself to its development, being largely interested in the agricultural industry. In addition to his farming operations he has various mining investments in this State, and has also interests in the rubber industry of the East Indies. Mr. Mare is a member of the agricultural society of the district. He is a keen supporter of the various forms of sport, is a member of the polo club and of the local racing club, and also displays considerable interest in cricket, football, and golf.

WESLEY MALEY, "Hounsome," Moojebing. The subject of this notice is a South Australian by birth, his native place being Torrens Road, near Adelaide, where he was born on July 5, 1857. He is a son of the late John Maley, a well-known agriculturist of the Central State and one of the early pioneers of the mining industry in Victoria, who came to the mainland of Australia from Tasmania in the year 1843, having previously been associated in business pursuits with Messrs. Lassiter and Silcot (gentlemen of repute in the Apple Island), and with the late Mr. Samuel Winch, with whom he carried on a general contracting business on terms of partnership. Mr. John Maley was a Londoner, although his family hailed originally from the west of Ireland, where its members were recognized as among the old aristocratic Irish stock, several of the well-to-do landowners of Connaught in the Western Province of Ireland, bearing the same name. After the arrival of the late John Maley in South Australia he made various investments in town lands in the Torrens Road district—now a portion of the town of Hindmarsh—and the first of these became the birthplace

of the gentleman under review, whose mother, a lady of English descent, came with her parents from

MR. JOHN MALEY.

Hampshire to South Australia by the ship "Buckinghamshire" in the year 1838. Mr. Wesley Maley received his education at the well-known scholastic institution, Prince Alfred College, at Kent Town, near Adelaide, and at the conclusion of

his studies at sixteen years of age became connected with mercantile life in the office of Messrs. Robin and Le Messurier, timber merchants, of that city, with whom he commenced his training in commerce, this being the sphere of life for which he was destined in the original instance of his father. Three years later, however, he relinquished this connection in order to take over the management of a farming property purchased by the late John Maley at Yorke Peninsula, and carried on in the agricultural industry there for a short time with conspicuous success. Subsequently he sold out, and joining the Civil Service of South Australia served in a clerical capacity in the Railways Department for some considerable time. Office life again becoming distasteful to him he resigned from the Department and acquired a property near Adelaide, which he worked until 1882, in which year, the "call of the West" appealing to his love of adventure and promising a more satisfying outlet for his energies, obtained his response, and in due course he arrived at Fremantle, being then twenty-five years of age. Upon arrival he went into business as auctioneer and estate agent at the

Photo by H. C. Biltoft.

FLOCK OF SHEEP. HOMESTEAD IN BACKGROUND.

metropolis and at Albany, where he established a branch connection, and continued in this line of enterprise for over a decade. Mr. Maley's first selection of land in Western Australia was in the neighbourhood of Albany, and a part of the property then acquired is still in his possession. The commencement of the marked success of his operations in this State, however, dated from purchases made by him in the year 1884 of vacant city blocks in William and Wellington Streets, which he improved and disposed of twenty years later at a profit of over £40,000 sterling. These transactions alone prove that, even in those early days of his residence in the new country, he had an eye to the opportunity, and was able to exercise sound judgment as to the profitable nature of an investment, and they also serve to show the confidence he possessed in the future of the city of Perth, then very different from the prosperous and handsome city of to-day. At the time that the Katanning area was thrown open for selection and settlement Mr. Maley was among the first applicants for a block of land in that district, and although he did not immediately take up residence there he applied himself assiduously to developing

the property whilst also attending to the demands of his numerous other interests. As a result, to-day,

H. C. Biltoft, Katanning.  
MR. WESLEY MALEY.

"Hounsome" takes its place among the most highly improved, most picturesque, and up-to-date homesteads, not only on the great southern line, but even in the whole State of Western Australia. The

property, which comprises 3,000 acres, is one of the three pastoral and agricultural holdings owned by Mr. Maley in the great southern districts, which together cover an area of 10,000 acres. "The Levels," a block of about 2,000 acres, being situated 20 miles due west from "Hounsome," and "Mokup Hills" Estate, 5,000 acres in extent, lying 40 miles west of "The Levels," the three properties being worked as a joint proposition of Mr. Maley and his second son, Mr. W. Bellingham Maley. "Hounsome," the parent estate, is favourably situated on rising ground, from portions of which may be obtained a complete panoramic view of the many undulations which distinguish this, the head of the watershed of the Beaufort, Arthur, and Blackwood Rivers. It possesses a genial climate in addition to many natural advantages, its fertile soils making it an ideal spot for stock-raising, and soaks and running streams provide a water supply which has been made practically secure by the construction of dams, which conserve an immense quantity of water every season. The other two properties are equally well watered, and over all of them the ringman's axe has been busily plied with its work of devastation, paving

Photo by H. C. Biltoft.

MR. WESLEY MALEY'S RESIDENCE, MOOJEBING.

the way for 2,000 acres of cultivable or cultivated area. Over 50 miles of fencing have been erected at a cost of about £20 per mile, the boundary and subdivision enclosures alike being made with six plain wires. The homestead is a model of its kind, and would be hard to surpass in beauty and elegance in the whole of the rural districts of the State. It was built by Mr. Maley in 1903, and is of the modern bungalow type of architecture, the architect, Mr. W. A. Nelson, of Perth, in carrying out his work having succeeded in producing an ideal country home, combining art with comfort

homestead with a liberal quantity of oranges, apples, cherries, etc., in season, and various other vegetation may be observed in the vicinity of the house. The outhouses are among the finest and most modern in the great southern district, Mr. Maley having given special attention to the erection of buildings which would stand the ravages of time and be in thorough keeping with the character of the homestead and the standing of the estate in the neighbourhood. Stabling is provided for twenty-eight horses, loose boxes, etc., and near by are the shearing shed and machinery shed, while a workman's cottage and

"Barton," winner of the champion prize and first blue ribbon given at any show in the great southern districts, is typical of fifteen pedigree stud rams purchased from the late Mr. Angas and mated with ewes from Mr. Hassell's "Kendenup" Estate, Western Australia, Mr. Maley's aim to build the "Hounsesome" merino stud to a distinct type being attained largely by a judicious selection of the best available rams and ewes from stations where the soil and climate are similar to the conditions obtaining on his own holdings. Considerable efforts have also been expended upon the Romney Marsh

COACH HOUSE AND MACHINERY SHED.

in a most admirable manner and suggesting in its quiet dignity the Australian adaptation of the "stately homes of England" renowned in song and story. The rooms, ten in number, are large and lofty, the halls and kitchen offices are fitted up in a superior manner, and wide verandahs shade the dwelling from the fierce rays of the sun in summer, while garden plots have been laid out with pleasing effect on the surrounding area, and ornamental trees and shrubs attract the eye by their wealth of foliage or brilliant blooms. The two small orchards at "Hounsesome" supply the

gate lodge are neat buildings which add to the air of habitation about the place. Premier attention is given to sheep-raising, and over 3,000 sheep are carried on the three properties, the merino type being favoured. Mr. Maley has the distinction of having been one of the first on the great southern line to import a strain of superior blood from the best flocks outside the State, chiefly from South Australia, where the reputation of the late Hon. J. H. Angas as a sheep-breeder led to the introduction of representatives from his flocks to the pastures of "Hounsesome." The ram,

flock, in the formation of which Mr. Maley, who is an experienced stud-master, began by the purchase of "Wonder," the champion ram of New South Wales, with which he founded a small flock which went by the name of "Wonder Romneys." He also imported a registered flock of ewes and rams, including several winners of prizes at the Melbourne Show. This flock is registered No. 16, Australian Flock Book for Long-wooled Sheep, and is the only flock registered in the first volume of the flock book as owned by a Western Australian flockmaster. The following extract is taken from the

above-named publication, and may be of interest to our readers:— "Flock No. 16. This flock was established in October, 1908, by the purchase of thirty ewes from Flock No. 117, N.Z.F.B., and two ewes from Mr. H. V. Yelland, of Newlyn, Victoria, who purchased them from Flock No. 1, Vol. I, N.Z.F.B. The sires purchased were 'Wonder,' bred by Mr. S. S. Hunt, of 'Huntleigh,' Evans Plains, N.S.W., and 'Admiral Sperry,' and nine other rams, bred by Mr. A. E. T. Payne, of 'Yarra View,' Victoria. 'Admiral Sperry' was by 'Frederick the Great' out of 'Eve' No. 12." From this Romney Marsh flock sheep have been picked repeatedly by the Government

hackney stallion, "Matchless Matthias," having sired some of his most promising stock, while other splendid strains, such as "The Danegelt," "The Shales," "Messenger," and "Lord Derby II." are also represented in the mob. Mr. Maley made his first entry into public life soon after his arrival in Western Australia, being elected a member of the Albany Municipal Council in 1883; and subsequently he played a prominent part in the agitation for responsible government. He was the first president of the Australian Natives' Association in the State, and whilst holding that office he convened a meeting which was held in the Perth Town Hall for the purpose of

the late Mr. F. T. Crowder—an opponent of Federation—for the Legislative Council in the State Parliament. He defeated Mr. Crowder after a strenuous contest, and held the seat for over nine years, when he resigned in order to contest the Albany electorate in the Legislative Assembly at the request of the Liberal electors of that constituency. On this occasion he failed to secure a majority of votes, and has not since made the attempt to re-enter the political arena. He is a man of wide interests, and in addition to his landed property in the great southern districts has large interests in metropolitan real estate, and at Albany, Geraldton, and elsewhere.

Photo by H. C. Billaft.

VIEW OF "HOUSCOME" ESTATE, SHEARERS' QUARTERS IN BACKGROUND.

of Java for the improvement of the strain bred in that Island. The wools from both the merino and Romney Marsh flocks are sent to London, where high prices are realized, "Hounscome" being always in the van in this respect; and rams from the "Hounscome" stud are available for purchase at the present time. About a hundred horses are run on the estate, principally of the heavy hackney type, considered by Mr. Maley to be the best suited for light farm work. For years Mr. Maley has made a careful study of horse - breeding, and among his hackneys may be found descendants of the purest blood of the class in England, the imported champion

invoking the assistance of the Eastern States to take federal action and through their respective Agents-General to force the hand of the Imperial authorities to grant responsible government to Western Australia. Considerable influence was exerted by means of this great gathering, which was regarded as one of the historical meetings of the period and played an important part towards the attainment of the desired end. At the time that the Federation of the Australian States hung in the balance, Mr. Maley was a strong supporter for the movement in Western Australia, and was selected by the advocates for an Australian Commonwealth to oppose

He is a life member of the Hackney Horse Society of London, and a member of the Australian Long-wool Sheep Breeders' Association, the Pastoralists' Association of Western Australia, and the Royal Agricultural Society. Mr. Maley was married in 1879 to Carolina Henrietta Addison, daughter of the late Henry Bellingham, the first president of the Adelaide Stock Exchange, and a notable figure in commercial circles in Adelaide in earlier days. Mrs. Maley is a sister of Mr. George Bellingham, for many years a member of the Legislative Council of Western Australia. Of this marriage there is issue three sons and two daughters.

WILLIAM THOMAS JONES, "Gracemere" House, Kojonup. The gentleman under review, who is one

followed the same calling at "Jarramongup" and "Kendenup," where he was employed by the late Captain

Avon Valley remaining untouched by the settler, and on the mail route only small villages occurred at intervals over the 300-mile odd track. In these, however, the usual little community gathered itself together, and a livelihood could be made by those who had learnt a trade necessary to the general working of the various industries represented in these rural settlements. The late Mr. Jones, therefore, followed his occupation of village blacksmith at Kojonup, respected by all who knew him, and continued to reside in the same place until his demise, which occurred in 1905. His son, the subject of this notice, attended the local public school until thirteen years of age, when he took his first position as telegraph messenger and post boy in the same township. After two years he relinquished the position, no increase being allowed on the meagre salary of £12 per year which was supposed to cover the cost of living, etc., and when it is considered that he has worked up from this very modest beginning to the position of leading citizen in the district some idea may be gained of the grit and enterprise which have characterized his operations. After severing his connection with the postal department he turned his attention to the farming industry, and for some three years was employed on holdings owned by various settlers in the same neighbourhood. Meanwhile a small

SHEEP PASTURES.

of the prominent residents of the district, was born in the town where he now resides on June 4, 1865, and is the only child of the late William Jones, who came from London at the age of sixteen, arriving at Albany, where he worked as blacksmith with the old P. & O. Company for a time. Subsequently he

Hassell, with whom he remained for a decade, at the end of which period he decided to open business on his own account at Kojonup, then one of the stopping-places on the mail route from Perth to Albany. In those early days the only towns in Western Australia were Albany, Perth, and Fremantle, even the

flock of sixteen sheep which he had owned since entering upon his teens had multiplied to nearly a hundred, and before completing his twentieth year he began to rent a small pastoral lease, which he stocked with

MR. WILLIAM JONES.

this little beginning to greater things. Thenceforward he pursued his career as a small pastoralist, shepherding his own flock while turning his hand to smithy work for

any of the residents of the district who desired his services in that direction and shoeing horses which were being used by the Government in the public works then in course of construction in the locality. Several years later, when the lands locked up by the construction of the great southern railway were released, Mr. Jones became the first successful settler on a large scale, acquiring the initial block offered for selection on January 1, 1893. This was a "poison lease" of 1,000 acres, and immediately he set to work to find an efficacious method of eradicating the noxious weed which was proving such a serious drawback to the settlement of the area over which it flourished. Complete success attended his efforts in this direction, and he had the distinction of being the first settler to solve the problem satisfactorily, his example being speedily followed by others who were labouring under like disabilities on their estates. His services to the community in this department were recognized by the Administration of the day, the thanks of which were tendered him for his important pioneer work in a field where others had tried and met with but indifferent results; and those who had looked askance at his venture in the first instance and

adjudged him particularly foolish to undertake without any assistance whatever and with very little money an enterprise which had worsted those more experienced and with capital to back them up, were among

"GRACEMERE" HOUSE, RESIDENCE OF MR. W. T. JONES, KDJONUP.

but who grappled with the biggest "lion in the way" and achieved a signal victory. Mr. Jones' action in taking up and proving the value of this poison-weed ridden district also did much for the neighbourhood in the way of bringing other settlers there who had shunned it previously for the reason above-mentioned; thus from the very beginning of his career on the land he gave an impetus to pastoral pursuits in this part of the country which has been much indebted to him in consequence. Five years after making his first selection he took up an additional 3,000 acres adjoining his

the Blackwood Road, the holdings being known respectively as "Mandlup" and "Ongerup." The original "Ongerup," a property of 230 acres, was owned in the first instance as a freehold by Mr. Jones' maternal grandfather, Sergeant William Elvard (the first resident of the district), who retired from military service when he settled at Kojonup, and it is an interesting coincidence that it should have thus returned into the possession of his descendants. The joint properties are conducted by Mr. Jones and his two elder sons, all of whom reside in the village of Kojonup, from

farm. The flock of from 3,500 to 4,000 sheep consists mainly of mixed crossbreds and merinoes, a big-framed good-utility animal being bred for both wool and mutton markets. The lambing percentage is good, averaging 90 per cent, and the wool is sent to London, where prices are obtained equal to the highest figure commanded by the Western Australian product. Success has been attained in the breeding of horses, principally of the medium draught type, for the local markets, and sixty head of mixed sorts are kept for the various departments of work upon the farms. From forty

SHEEP ON THE "MANDLUP" FARM.

original block, which he proceeded to fence and develop generally; and in 1901 he acquired by purchase from Mr. Samuel Hordern, of Sydney, a 5,000-acre block of freehold property which originally had been taken up by the Leake family and sold by them to Mr. Hordern. To this block he added another 1,200 acres selected under conditional purchase conditions, and at the present time is the possessor of over 10,000 acres of land, the major portion of which is equal in quality to the best average country in Western Australia. This large area is divided into two separate blocks or farms by

which the farthest point of the holdings is distant about six miles. Over 60 miles of sheep-proof fencing with three wires and netting have been erected, by means of which the entire property is well protected and subdivided into many paddocks, jam posts being used for this purpose. Nine-tenths of the whole is ring-barked, patches of scrub and timber being left as shelter for the stock, and 1,500 acres are cleared and cropped on a system of fallowing which has produced good results, in the vicinity of 300 acres being placed under crop annually, chiefly with hay and oats, as fodder for the stock upon the

to fifty head of shorthorn and Jersey cattle are also grazed upon the estate in addition to a few which are kept for the dairy requirements of the household. The homestead is situated right in the centre of the township—in High Street—and is a brick villa residence of eight rooms thoroughly comfortable and fitted up with various up-to-date appointments. The small flower garden which surrounds it owes its attractive aspect to the gardening skill and care of Mrs. Jones, whose special domain it is, and who spends many pleasant hours in attending to its cultivation. An orchard covering

an area of four acres has also been laid out within a mile of the town, where a variety of fruit-trees have come into bearing; while, also in

W. E. Elston, Wagin.  
MR. JAMES ELWORTHY JONES.

close proximity to the settlement. Mr. Jones has acquired a number of blocks of land, comprising in all about 400 acres, much of the township property being in his possession. The usual outhouses have been erected in connection with the homestead, where most of the stabling accommodation may be found; but,

where necessary, shelters and sheds, etc., for the necessities of the stock and storage of grain or hay have been built on different parts of the farms. Mr. Jones has always manifested a public spirit, and has thrown himself into the work of advancing the interests of the district with all the energy and capability that he displays in the working of his private proposition. He is the oldest sitting member on the Kojonup Roads Board, having sat continuously with a break of one year only for the lengthy period of over twenty years. A founder of the local agricultural society, since the inception of this body he has served as a member of the committee; and he has been enrolled as a member of the progress association, recently founded, which embraces Liberalism as its creed in politics. He is practically concerned in every movement and organization in the town, and is always approached among the first of the townspeople when any new scheme for the welfare of any section of the community is afoot, nothing being considered properly launched without his support and patronage. He is an advocate for all forms of clean and legitimate sport, and, a keen follower of the turf, has scored many successes with his horses at the local and other country race meetings. Racing is, as a matter of fact, his chief recreation, and he makes a

point of keeping a few good horses with which to indulge his leaning in this direction. Mr. Jones was married in 1885 to Matilda Mary,

W. E. Elston, Wagin.  
MR. HENRY WILLIAM JONES.

daughter of the late Edward Treasure, of Kojonup, one of the oldest pioneers of the district, and has a surviving family of four sons and three daughters. His two elder sons, James Elworthy Jones and Henry William Jones, assist him in the work and management of the farm.

OUTBUILDINGS AND SHEEP ON "ONGERUP" FARM.

**AUGUSTUS EGERTON-WARBURTON**, of "Balgarrup," Kojonup, is a native of Western Australia, having been born at Strawberry Hill, Albany, on March 26, 1850. His father, the late George Edward Egerton-Warburton, was an officer of the 51st Regiment in the Imperial Army who settled in this State in the early forties, having previously been resident in Tasmania, whence he came with troops to Albany, and subsequently took up the holding of "St. Werburgh's," about 30 miles distant from the seaport. The subject of this memoir received instruction in the rudiments of learning up to his ninth year, at which age he was found old enough to undertake the charge of culinary matters on behalf of his father and brothers, who were putting all their energies into the development of the land at "St. Werburgh's"—now one of the oldest and most interesting homes, from the historical standpoint, in the southern districts of Western Australia. He continued at "St. Werburgh's" until he was fifteen, when he joined his eldest brother at "Yeriminup," a pastoral property on the Franklin River owned by his father and still in possession of the Egerton-Warburton family. Here he remained until he reached man's estate, when he took over the management of the property for a year, resigning eventually to join the late Robert Spencer, a son of the late Sir Richard Spencer, in partnership in the "Langton" Estate situated near Mount Barker, the present home of Mr. W. W. Mitchell. This connection extended over two years only, and upon its dissolution Mr.

Egerton-Warburton made a prolonged tour of exploration through the country embracing the Hampton Plains, the eastern goldfields area, as

Mr. Egerton-Warburton rented these properties from the latter gentleman for a few years, and upon relinquishing this enterprise took up a pastoral

FIRST PRIZE AYRSHIRE BULL THE PROPERTY OF MR. A. EGERTON-WARBURTON.

far eastward as the South Australian border, and south to Eucla, his object being to discover good pastoral country. His youth and inexperience, however, caused him to travel over tracts of really good sheep country without recognizing its possibilities, and returning to Albany he undertook the management of "Langton" (the estate of which he was formerly part-owner) and of another property on the Gordon River on behalf of the late Sir Thomas Cockburn - Campbell, Bart., then resident at Albany. Subsequently

lease in the Lake Muir district, where he carried on a cattle-raising and sheep-farming proposition for about twelve years, giving up cattle in favour of sheep when about half that period had elapsed. Most of his sons and daughters were born in the old homestead near Lake Muir, where the usual privations of early pioneering life were endured, the place being so remote from even the outposts of civilization that only occasionally—once or twice in the year, perhaps—would a chance outsider put in appearance to vary the

Photo by W. E. Elston.

"BALGARRUP" HOMESTEAD AND ORCHARD.

monotony. A few natives were there to tend the stock, but apart from these Mr. Egerton-Warburton's exile was shared only by his wife

5,000 acres are included under the old title. Of this nearly 1,000 acres have been cleared, while the whole is fenced and subdivided

flower garden fronts the house, which also gains in beauty of aspect by the plantation of ornamental trees surrounding it. A 30-acre orchard contributes towards supplying the eastern goldfields markets with apples, while many other varieties of fruit are grown. For seven years Mr. Egerton-Warburton was a member of the Kojonup Roads Board, and has always manifested interest in the

CHAMPION AYRSHIRE COW AND CALF AT "BALGARRUP."

and family, and much could be said in praise of the brave woman who so strenuously toiled and patiently assisted her husband in building up his enterprise, uncomplainingly doing without the many little luxuries which are regarded as necessities by the average house-mother within whose reach they are and resigning the pleasures of society for the sake of those dear to her. The extent of this lady's sacrifice will be realized when it is stated that she remained at Lake Muir for four years at a stretch without seeing a single white woman. During the residence of the family here Mr. Egerton-Warburton took a trip to the north-west, visiting the Ashburton, Roebourne, Gascoyne, and Murchison districts, and returning from Roebourne all the way overland to his southern home. In 1894 he purchased his present holding "Balgarrup" from the executors of the late Joseph Spencer (a son of the late Sir Richard Spencer), and took up his residence here whilst still carrying on "Bokarup," the Lake Muir property, which he disposed of in 1911. "Balgarrup" was originally owned by the late Captain Seymers, and passed from him into the Spencer family. At the time of purchase by the present proprietor it consisted of 700 acres, but extensive selections have since been made of the surrounding country, and to-day

into paddocks. Over 4,000 acres are ringbarked and partially cleared, and from 350 to 400 acres are put under crop each season. There is a flock of about 2,000 sheep of the merino strain, and the lambing average is in the vicinity of 85 per cent. There are 100 horses on the estate, and for many years Mr. Egerton-Warburton has made a specialty of the breeding of Ayrshire cattle. "Balgarrup" homestead is a picturesque structure containing twelve rooms. A pretty

Bartletto.

advancement of the district. He married in 1800 Fanny Augusta, daughter of the late Edward Godfrey Hester, and has a surviving family of three sons and four daughters.

MR. A. EGERTON-WARBURTON'S RESIDENCE, KOJONUP.

**RICHARD LEWIS SPENCER**, "Black Forest," Kojonup, was born at Strawberry Hill, Albany, on June 14, 1868, and is the eldest son of the late Joseph Spencer, whose father, the late Sir Richard Spencer (first Government Resident of Albany), came to Western Australia with Governor Stirling after his retirement from the Navy, where he held

MR. JOSEPH SPENCER.

the rank of captain under Nelson and received from Royal hands many honours for his valuable services under the great commander at Copenhagen. An interesting report has been copied from a document "recorded in the College of Arms, London," setting forth how "the late Sir Richard Spencer, commanding the sloop 'Samarang' of eighteen

guns and 120 men, assisted in the capture of the Island of Amboyna on February 16, 1810, and later, on March 22 following, unassisted by any other vessel, he attacked and captured the island of Pulo Ay—though said island was defended by a regular fortification called 'Fort Revenge.'" The late Joseph Spencer accompanied Sir Richard to this State, and upon arrival became engaged in sheep-farming and horse-breeding pursuits, in which enterprise he met with considerable success for a few years. For eleven years (1879-90) he was chairman of the Kojonup Roads Board and he displayed an active interest in the welfare of the district. When the route of the great southern railway was fixed the land taken up by the late gentleman during his lifetime proved to be 30 miles distant from the line, and at his death his three sons decided to strike out for themselves. The gentleman under review accordingly accepted employment with various settlers in the surrounding agricultural districts, and by the time he was twenty-six years of age he had made sufficient headway to contemplate the idea of launching out on his own account. In 1894 he selected the first block of land where the "Black Forest" homestead now stands, the original holding comprising 100 acres. Gradually he acquired further holdings until, to-day, his property covers 4,000 acres, the whole of which is fenced and subdivided into several paddocks. Between 400 and 500 acres are cleared and cultivated on the fallow system, but the chief attention is given to

sheep which are bred both for mutton and wool. The flock, which comprises from 1,000 to 1,500 sheep, is an almost exclusively merino one.

Bartletto,

Perth.

MR. RICHARD LEWIS SPENCER.

Mr. Spencer is a member and committeeman of the Kojonup Agricultural Society, and takes part in the different movements for the betterment of the district. His time for recreation is scant, but he makes a hobby of the development of his proposition and takes special interest in the breeding of horses. In August, 1891, he married Isabelle, daughter of the late Thomas Cook, of "Oakland," Toodyay, and has a son and a daughter, the former assisting in the working of the property.

MR. R. L. SPENCER'S HOMESTEAD, KOJONUP.

CHARLES KNOX ROSS, J.P., owner and occupant of "Glenlossie," Kojonup, was born in Aberdeen, Scotland, on December 26, 1865, and is a son of the late John Ross, a merchant of the Granite City. He received his education at the well-known Silver Street Academy in his native place under the late William Rattray, a schoolmaster of repute, and at the age of seventeen entered upon clerical and mercantile work in connection with a shipowners' office, where he continued for some years. In 1887 he came to Australia with his brother, a civil engineer, who perceived in the new country a sphere where his energy and talents might have due scope; and shortly after arrival, with the idea of gaining experience, took a position as jackeroo on a pastoral property known as "Mootwingie" Station, situated between Broken Hill and Wilcannia. During the two years spent by Mr. Ross on the station he gained considerable acquaintance with the methods of dealing with stock, principally sheep, which has stood him in good stead since he settled on the land. Upon leaving "Mootwingie" he joined Messrs. Bloomfield Brothers, railway contractors, in connection with which firm his brother held an official position on the building of the Terang to Warrnambool and Terang to Mortlake lines. After four years with this firm, upon the completion of the work in hand, he was associated with the firm of Messrs. McDonald & Urquhart, stock and station agents, of the western

district of Victoria, where he took charge of the sales department of the firm for a couple of years. In 1893, attracted by the possibilities offering in the Western State then in the height of the mining boom days, he sailed for Geraldton, and having landed at that port proceeded direct to the Murchison goldfields, where in the vicinity of Cue he was

W. E. Elston,

Wagon.

MR. CHARLES KNOX ROSS.

engaged in prospecting for some time with varied success. Subsequently he travelled overland to Kimberley, prospecting the surrounding fields, and at the end of the year 1895 found his way to Kalgoorlie, where he was connected with the Hainault and Kalgurli mines for some years,

during which period he occupied the position of secretary to the companies working these mines. In 1909 he left the fields and purchased "Glenlossie," an estate comprising 3,700 acres, 1,900 acres of which are now freehold property, while the balance will become freehold within the next decade. Mr. Ross took up his residence with his family on the farm, and immediately turned all his energies to the task of making the best of the proposition, in which he has succeeded in a very marked degree. "Glenlossie" is situated a mile from Kojonup on the Perth-Albany Road, having a frontage to both sides of this highway. It is well watered with springs and soaks, and dams have been constructed to conserve the natural supply. Practically all the initial work of improvement has been completed, the whole of the property being fenced, while 500 acres are cleared and a house of modern villa design built out of stone and brick. This residence contains nine rooms, with verandahs and accessory offices, and in front is a pretty garden area where flowers and decorative trees make a picturesque setting to the dwelling. A four-acre orchard in the rear of the homestead produces all kinds of fruit of magnificent quality, the peaches in particular being equal to any grown in the State. The outhouses include stabling for eight horses, a splendid woolshed, and machinery shed, where up-to-date machines are sheltered. Mr. Ross devotes the major share of his attention to sheep-farming, and has a handsome flock of 1,500 sheep, which find good pasture on the large areas of ringbarked country comprising the greater portion of the estate. He takes an active interest in the public and social life of any place in which he resides, and was one of the earliest members of the well-known "Hannan's Club," Kalgoorlie, while since his advent to Kojonup he has served as a member of the local roads board; is a foundation member of the progress committee formed in June, 1913, and in 1911 was gazetted a Justice of the Peace by the Wilson Administration. He also occupies the post of president of the Kojonup Agricultural Society. He married in 1889 Nellie, daughter of Mr. Edward Wigglesworth, well known for many years as founder and manager, etc., in connection with the Perth Gas Company, and has a son and a daughter.

"GLENLOSSIE," RESIDENCE OF MR. C. K. ROSS, KOJONUP.

CHARLES ALBERT SIMMS, proprietor of the Commonwealth Hotel, Kojonup, was born in Adelaide, South Australia, on December 13, 1882, and is a son of the late Charles Simms, one of the best

MR. CHARLES SIMMS.

known identities in the hotelkeeping trade in Western Australia for the lengthy period of nearly twenty years, during which time he conducted licensed houses in seven different parts of the State, including the metropolitan, goldfields, and agricultural areas, previously having been associated with the same class of business in the Mother State and South Australia. Like his son, the

late Mr. Simms was a native of the Central State, which he left to follow the rush to the mining fields of Western Australia in the early nineties; and during his residence in this part of the Island-Continent he took a prominent interest in many matters affecting the welfare of the community at large. As a pastoralist he attained a standing among horse and cattle breeders, being among the most successful exhibitors of these classes of stock at the various agricultural shows, chiefly along the great southern line. He was also one of the leading men in Masonic circles, holding many offices of honour in the craft. His death occurred in 1912. The gentleman under review received his education at Way College, Adelaide, and upon the completion of his studies entered upon commercial life, having first spent a brief period in the study of electrical science. At the age of eighteen he began to assist his father in the affairs of his metropolitan hotel, and to the wide experience and expert knowledge in various directions possessed by the late Mr. Simms the younger man owed much of his after success in life. Since launching out on his own account, he has proved the advice tendered to him by his father to be of the soundest character and many a homeless itinerant and weary traveller has had reason to be grateful to the source whence Mr. Simms derived those principles of excellent management which have

won his houses so enviable a reputation. For nearly five years he conducted the Federal Hotel at Wagin as licensee, disposing of his interest there in 1908 in order to purchase the goodwill of the old Royal Hotel at Kojonup, one of the ancient landmarks of the Perth to Albany route in the days of the mail coach service. After carrying this on for a couple of years he decided that not only was the accommodation of the house insufficient for the rapidly-rising

MR. CHARLES ALBERT SIMMS.

district, but also that the old buildings were hardly of a nature to command the better class of trade for which he desired to cater, and accordingly he took the earliest opportunity to purchase the lease of the Commonwealth Hotel, a more modern structure and the only other hotel within a radius of 26 miles, Katanning being the nearest populated centre. Subsequently, in 1912, he purchased the freehold of the hotel outright after disposing of his interest in the Royal, and has since devoted his attention to building up his proposition on first-class lines. In this he has attained conspicuous success, the general management and cuisine equalling many of the agricultural district hotels, while in cleanliness and comfort it surpasses most of such houses. The building is of stone, and, apart from a commodious bar and well-equipped billiard-room, comprises twenty-three rooms in all, including sitting- and dining-rooms, double and single bedrooms, etc., which with the catering department are all under

MR. C. A. SIMMS'S COMMONWEALTH HOTEL, KOJONUP.

the management of Mrs. Simms, who is assisted by a capable staff. Mr. Simms is captain of the local rifle club, in which he takes a great interest, and concerns himself generally in the advancement of the district. He was married in the year 1909 to Edith, daughter of Mr. Thomas Cusdin, of Victoria, formerly of New Zealand, well known in the sawmilling, smithy, and agricultural industries.

**JAMES JEFFERY**, who owns the "Yarranup" property, *via* Kojonup, is a son of the late Mr. William George Jeffery, of Jamestown, South Australia, and was born at Victor Harbour, in that State, on July 13, 1865. He was educated at Laura, a

W. E. Elston,

Wagon.

MR. JAMES JEFFERY.

northern town, and leaving school at an early age became a teamster in the northern areas, which occupation he followed for fourteen years. In 1893, just prior to the Norseman gold rush, Mr. Jeffery came to Western Australia, bringing with him a team of horses, waggon, etc., with which he disembarked at Esperance Bay, and immediately took up carrying contracts in connection with the Dundas fields, and subsequently at Norseman. Here he remained for about four years, and at that time decided to settle on the land in the country of his adoption. Starting with his team from Esperance for five weeks he "trekked" in a westerly direction, and coming to Tambellup halted to

explore for suitable country on which to make his home. Eventually he took up the block on which his present homestead now stands, and immediately began to clear and improve the property with such success that the "Yarranup" Estate — which covers over 2,000 acres—is well known as one of the best developed in the district. The country is undulating and timbered with jam, white- and red-gum, and here and there with patches of jarrah. The soil is mixed sandy and red loam, and there are a number of natural soaks and pools, the supply from which has been augmented by the construction of six dams, scarcity of water being known only during one season since the place was first taken up. The boundary is fenced substantially with three wires and netting, put up at a cost of £32 per mile, while the subdivisional fences are of six wires and sheep-proof. About 300 acres are cleared and cultivated, while the whole area has been rung, preparatory to further clearing operations. Among the cereals oats form the principal crop, as Mr. Jeffery is a strong believer in plenty of fodder to carry his stock over the dry season, and every year sees an increase in the numbers of his flocks and herds. His merino sheep produce wool of good quality, which he sells locally, always receiving the highest prices; a few dairy cattle are run for the convenience of the homestead. His specialty, however, is horsebreeding, and for this purpose he has obtained good results with the Clydesdale stallion "Ben Bolt," by "Ben More," specially chosen in Victoria by Henry Wills & Co. for the improvement of the local stock. He breeds a large number every year, and rarely has to send any to market, the "Yarranup" reputation being so good that they are usually bought privately at the best figures. Mr. Jeffery married in 1896, Lena, daughter of Mr. G. Marchetti, farmer, of Greenock Flats, near Geraldton.

The late **JOHN NORRISH**, of "Warkulup," Kojonup, was a son of the late Richard Norrish, a native of Devonshire, England, who served in the 96th Regiment of Foot in Tasmania and was transferred with the regiment to Western Australia in the forties of the last century. After his retirement on a pension he settled at Kojonup and devoted his attention to the breeding of horses

and other pastoral enterprises with success until the time of his death in the early sixties. The property subsequently was carried on by his

MR. JOHN NORRISH.

sons, eventually falling into the hands of the youngest, the subject of this memoir, who took over and occupied the original homestead until 1892, in which year his death occurred. Operations on the farm were then continued by his widow, Mrs. Margaret Elizabeth Norrish, and when the lands in the great southern districts were thrown open for selection by the Government she selected additional areas, and in course of time became the owner of close on 6,000 acres. Mrs. Norrish is a daughter of the late William Noonan, who came to the State in the Imperial Service in 1852, being identified with the Prisons Department. Great credit is due to her for the manner in which, after her husband's death, she assumed the responsibility of management of the proposition at "Warkulup," not shirking even strenuous labour, but with marked patience and industry pursuing her aim alike through periods of prosperity and discouragement, until she saw her endeavours crowned with success. Mrs. Norrish has attained a reputation as a judge of stock, and has been very successful as an exhibitor of cattle and horses at the local shows, while her sons are also recognized as being skilful in matters pertaining to the pastoral industry and capable judges of stock. Mrs. Margaret Norrish

now lives in retirement at Kojonup. The late John Norrish was well known in the district as an active participant in all that tended in any way to its advancement, and was one of the first councillors of the Albany municipality, where he assisted in the pioneer work of local government.

**JAMES MICHAEL FLANAGAN, J.P.**, "Fern Hill," Kojonup, is a son of the late Mr. Richard Flanagan, of Ireland, who was sent to Western Australia by the Imperial Government in 1856 in charge of a band of convicts. He was born at Perth on April 15, 1859, and received his scholastic training at the Roman Catholic school in that city. Completing his studies at the age of fourteen he went to the Victoria plains, near New Norcia, in order to learn sheep-farming, being identified with the "Walebing" and "Berkshire Valley" Stations for nearly three years. He then returned to Perth and entered the service of Sir John Forrest, with whom he remained for

MR. JAMES MICHAEL FLANAGAN.

some time, subsequently filling various positions. From coach-driving he entered the police force at Albany, and resigned from the latter service to engage in hotel-keeping at Kojonup for three years. Selling out, Mr. Flanagan returned to the southern seaport and took over the lease of the Weld Arms Hotel, which he conducted until the discovery of the Dundas goldfield, when he

became one of the pioneers to the Norseman district. He spent some considerable time in prospecting and pegged out St. Agnes Mine, which afterwards was floated by a London syndicate, and was also one of the prospectors of the Princess Royal, from which a large quantity of ore has been taken. While in this district Mr. Flanagan took a keen interest in its advancement, and was one of the founders of the Norseman Progress Association. He was also responsible for the establishment of the first newspaper in the Norseman, and played a leading part in the founding of the first hospital. One of his early business ventures was made in connection with the Norseman Brewing Company, but eventually he relinquished all his interests in the goldfield, and coming to Kojonup selected 4,000 acres of land, upon which he built a homestead and commenced farming operations. He has since disposed of 3,000 acres, and on the remaining portion continues the various industries connected with mixed farming, with very satisfactory results. Since his advent to the district he has taken a prominent part in all public affairs, and started the movement for the establishment of the agricultural society in the neighbourhood, acting as secretary for a lengthy period, as well as filling the office of president at a later date. He holds a Commission of Justice of the Peace, and for many years was a member of the local roads board. In 1886 Mr. Flanagan married Elizabeth, daughter of the late Mr. Edward Treasure, of Martiupp, and has six sons and two daughters.

**JOHN JAMES TREASURE**, of "Glen Burn," Kojonup, is a son of the late Edward Treasure, of Martinup, a farmer and grazier who came from Somersetshire, England, in the forties, and was well known among the early pioneers of the pastoral and agricultural industries in the southern districts of Western Australia. Born at Warkulup, near Kojonup, on May 22, 1865, the gentleman under review was sent to Adelaide to receive his education at the Christian Brothers' College, and upon leaving school joined his father in farming pursuits until the outbreak of the Norseman goldfield when he proceeded thither and became engaged in mining, carrying, and hotel business. During the four

years that he spent on the goldfields he drove the first waggon team through from Esperance to the Dundas field, his passengers on this occasion being the members of the first Wardens' Court which officiated on the area referred to. Ultimately Mr. Treasure tired of the precarious life, and returning to the Kojonup

MR. JOHN JAMES TREASURE.

district commenced farming on his own account, acquiring his present farm, a property of 1,500 acres now in a forward state of development. About a half of this is cleared and devoted to mixed farming, and Mr. Treasure has made a specialty of the breeding of draught horses, it being in this connection that his name is widely known throughout the State. He has firmly established his reputation as an exhibitor of this class of stock at the country shows, where he has been successful in carrying off over 200 prizes; and the years of careful attention and study which he has given to the production of a superior type of Clydesdale have been fraught with all the interest pertaining to the pursuit of a hobby. Mr. Treasure has been for twenty-one years a member of various roads boards, and has served as chairman of such bodies for a lengthy period. He is one of the founders of the Katanning Agricultural Society, and also took a prominent part in the establishment of the similar organization at Kojonup. In 1887 he married Emma Jane, daughter of the late Charles Carpenter, a farmer of the Williams district, and has six sons and two daughters.

### BROOME HILL TO MOUNT BARKER.

Broome Hill forms one of the stations on the great southern railway, and is situated a little over a hundred miles to the north of Albany in country that is admirably suited for wheat-growing and sheep-farming. The contour of the country roundabout is undulating, and the soil good chocolate ground interspersed with patches of gravel and white sand. The progress of the district was for a time somewhat retarded owing to the fact that many of the large areas taken up were not sold subject to any improvement conditions. Of recent years, however, there has been a considerable impetus, and the district is rapidly being brought under cultivation. At Broome Hill and a little to the south of it are the well-known estates of "Goblup" and "Kendenup," the former having been for many years the property of Lord Brassey. The town of Broome Hill is but small, numbering only about 300 persons, but the surrounding district has about five times that population, with every prospect of continued growth.

Further down the line towards Albany are the townships of Cranbrook, Teunterden, and Tambellup, all of them centres of rising agricultural communities. From Tambellup there is a spur line of railway running in an easterly direction to Ongerup, thus bringing a further large area within cheap and easy reach of a market.

The Mount Barker district may roughly be described as a block of country about 15 miles long by 30 miles wide, through the centre of which the great southern

railway runs. Mount Barker, from which the district takes its name, is a prominent hill about 35 miles from the magnificent harbour of Albany. Long before the southern railway had been projected this district had been found to be admirably adapted to the production of fruit, more especially of the apple. The cool breezes and occasional showers of summer seem to produce such a remarkable effect on the fruit that in the opinion of many judges it is unsurpassed. As the apple is a fruit for which the demand is unlimited, and as the produce from this district can be placed on the English and German markets some two or three weeks earlier than that of the Eastern States, there is every indication that the cultivation of this fruit alone offers exceptional advantages to the orchardist. All varieties of fruit, particularly pears and peaches as well as apples, flourish abundantly in this locality, and with the increased area that is being every year brought under cultivation an important industry is being built up with every prospect of the development of a large export trade. In addition to its prominence as a fruit country, the district holds the championship within the western half of the Continent for the highest priced merino wool, while on the swamp lands potatoes are being produced in large quantities. Mount Barker has been described as "the fruit-grower's paradise," and if its altitude, climate, soil, and rainfall are taken into consideration, there is very little doubt that the title is well applied.

FREDERIC THOMAS ALEXANDER LOVEGROVE, M.B., Ch.B. (Victoria and Liverpool), M.R.C.S. (Eng.) and L.R.C.P. (Lond.), Government Medical Officer for Tambellup district, was born at Bootle, near Liverpool, on July 27, 1875. He is the second son of the late Rev. Edwin Lovegrove, for some time British chaplain at Barcelona, Spain, and as a lad attended the Merchant Tailors' School at Great Crosby, near Liverpool. At seventeen years of age he entered the Liverpool University College, where he studied medicine, qualifying for his M.B. degree at that institution in 1900, having taken his London diploma two years previously. Dr. Lovegrove accepted various appointments in England, including a post in the Children's Hospital at Liverpool, and for a year he held the Robert Gee Fellowship in Anatomy in connection with the University College, during which period he interested himself largely in research work. In 1900 he came to Western Australia, and for some time was

engaged in *locum tenens* work, subsequently receiving the appointment of

W. E. Elston.

Wagin.

Dr. F. T. A. LOVEGROVE.

medical officer for Millars' Karri and Jarrah Company after having acted

as Government medical officer at York and Carnarvon. In 1902 he took a trip abroad and spent a considerable time in America and England, visiting the principal hospitals of both the Old and New World, and acquainting himself with the most up-to-date methods of treatment at the medical schools. Returning in 1904, he filled Government appointments at Kookynie and Marble Bar, and at the end of the following year again revisited his native land. His appointment as medical officer at Yarloop followed his return to Western Australia, this being in connection with his former firm of Messrs. Millar, from which he resigned in order to accept an appointment from the Government to proceed to Bernier Island, where he pioneered the Lock Hospital, in which the aborigines of the north-west are segregated for treatment. Dr. Lovegrove's work on behalf of the Aborigines Department and his tact and skill in dealing with the natives have earned for him the gratitude not only of those most closely concerned,

but of all interested in the cause of humanity and the preservation of the aboriginal races. In 1909 he was appointed Protector of Aborigines and still holds that office. After two years spent on the Island he accepted the appointment to his present office and entered upon its duties in 1911. Dr. Lovegrove is a member of the British Medical Association, a life member of the Liverpool Geographical Society, and a member of the Natural History and Science Society of Western Australia. He has displayed an active interest in the local organizations and is president of the agricultural society, while his enthusiasm in the Boy Scout movement led to his election as scout-master of the local corps. He joins in the different pastimes inaugurated in the district, especially in swimming and rowing on the Gordon River, and is a cordial supporter of every movement having for its object the welfare of the community. He married in 1906 Edith, daughter of Mr. D. A. W. Baile, shipowner, of Liverpool, England.

CHARLES WILLIAM HOWARD BIRT, Secretary of the Tambellup Roads Board, is a son of Mr. George Howard Birt, who came originally from Biggleswade, Bedfordshire, England, where he was born, and landing at South Australia spent a short period in Adelaide, afterwards settling on the Murray River, New South Wales, in the fifties. He spent about forty years in the Mother State, being connected with the Civil Service during a large portion of that time, and was also interested in the pastoral industry. In 1904 he came to Western Australia with his five sons, and has since lived in retirement in the Tambellup district. Upon the conclusion of his scholastic career at sixteen years of age he entered the employ of Mr. Malcolm Reid, timber merchant, of Adelaide, with whom he remained for seven years. He resigned from this connection in order to accept the appointment of accountant of Messrs. W. & A. McArthur, wheatbuyers, and continued in this service for some years. In 1904 Mr. Birt came to Western Australia and took up a block of land in the Tambellup district, in partnership with other members of his father's family, where he has since devoted his energies to the development of his portion of the property. Mr. Birt was appointed

secretary to the local roads board in 1907, and has filled that post ever since. He takes a very keen interest in the affairs of the district altogether apart from his official capacity, and no movement for the public good is set on foot without his active co-operation. In matters of sport he is also well to the fore, and is honorary secretary of the local rowing club, which owes its existence to his zealous organizing powers.

HAROLD ROBERT BLAKE, Manager of the Tambellup and Cranbrook branches of the Western Australian Bank, is the youngest son of the late Mr. Edward Blake, timber merchant and owner of sawmills in Ballan and Blakeville, Victoria. He

W. E. Elston, *Wagin.*  
Mr. HAROLD ROBERT BLAKE.

was born at the former town on August 1, 1879, and received his education in his native place, completing his scholastic course in his nineteenth year. Entering mercantile life, he joined the staff of the Commercial Bank of Australia at the head office at Melbourne, and after being connected with this institution in various branches throughout the State, he was ultimately transferred to the Perth staff. Resigning from this service in 1902 he entered that of the Western Australian Bank, and after spending seven years at the head and branch offices, in 1911 he received his present appointment to the management of the Tambellup and Cranbrook

branches. Mr. Blake has since made himself very popular with the commercial and farming communities of these thriving districts, and concerns himself in every effort put forth for the advancement of their interests. The agricultural society is the object of his special patronage, and he is a valued member of the first committee of this organization. He is always willing to take office for the good of his fellow-townsmen, and is frequently chosen as honorary treasurer of newly-formed societies. His tastes in the matter of recreation lead him in the direction of aquatic pursuits on the fine waters of the Gordon River. He is fond of boating and swimming, and his efforts toward promoting the success of the pioneer regatta, which took place in 1911, were highly appreciated. He is also a good shot, and with his setter dog "Shot" wiles away an hour in the bush as opportunity occurs. A prolific reader, Scott, Dickens, Thackeray, and Ruskin are to be found among his favourite authors, and his bookshelves also contain many well-handled works of an historical nature.

NATHANIEL PHILLIPS, general storekeeper, Tambellup, is a son of the late Mr. Joseph Phillips, of Liskeard, Cornwall, who came to South Australia in the early sixties. He was born at Magill, in the Central State, on November 27, 1867, and pursued his scholastic studies at the Hindmarsh Public School. Before his thirteenth year he began his commercial career in the general store of F. Hunwick & Sons, Hindmarsh, where he obtained an excellent acquaintance with the general details of the business in all its branches, during the seven years of his connection with this old-established firm. At the end of that period he resigned to take a more responsible position in Mr. Peter McRostie's store in Adelaide, and in 1889 undertook the appointment of charge hand in the grocery department of Messrs. Edward Barnett and Co., of Albany, which post he held for nearly four years. He then returned to Adelaide and settled there for eight years, being engaged as city travelling representative for the firm of R. H. Crawford & Co., of King William Street. At the end of 1901 the firm of Edward Barnett & Co. again established communication with him, and returning to Albany he accepted his old position, to which

was added the management of the wine and spirit department. Three and a half years later, in 1905, his present business, then owned by Mr. Cowen, was in the market, and he became the successful tenderer, resigning his position with Mr. Barnett in order to start at Tambellup on his own account. Since his advent he has witnessed the steady progress of

boots and shoes, etc., and in addition is agent for H. J. Wigmore, the Liverpool, London, & Globe Insurance Company, Henry Wills & Co., Malloch Brothers, and other firms.

toward that end. He is a member of the Methodist Church and one of the trustees of the local body, a member of the Rechabite Order, and a Freemason, his present Lodge being the

W. E. Elston, Wagin.  
MR. NATHANIEL PHILLIPS.

the district, and has extended his operations to keep pace with the growing population, until now it is one of the most representative businesses in a wide radius. He carries all the goods necessary to a country store, large and complete stocks of drapery, groceries, ironmongery,

Mr. Phillips is recognized as one of the leading spirits of the place, and has taken an active part in the establishment of the agricultural society, of which he is a committeeman, besides being one of the founders of the agricultural hall and its first hon. secretary, which post he still holds. He has been prominent in the movement for railway extension to the eastern areas, and the present line of 25 miles now running, with further construction under way, is largely a result of his persistent agitation

Plantagenet Lodge, E.C. He makes a hobby of music, and has acted as organist to the Brompton Methodist Church, South Australia, and the Albany and Tambellup Churches of the same communion, also taking part in operatic and other musical societies at Hindmarsh for many years. In 1892 he married Mary Sophia, daughter of the late Mr. Daniel Davis, of Bowden, South Australia, who came from Cornwall among the earliest of South Australia's pioneers, and has two daughters.

ALBERT LEVITZKE, auctioneer, land and estate agent, Tambellup, was born at Natimuk, Victoria, on November 10, 1878, and is a son of the late Mr. Christian Levitzke, of that place. He was educated at public and private schools in his native town, and at fifteen years of age became attached to a surveyor's camp with the object of following that profession. After a couple of years he relinquished this intention and returned home to join his father and brothers in the work and management of the farms, where he continued for three years. In 1895 he came to Western Australia and obtained his first position as clerk in the employ of Mr. J. C. Port, timber merchant, Bunbury,

from which he resigned to join his brother-in-law, Mr. Butt, in business in Perth. This connection extended over some nine or ten years, when the prospects of land settlement on the great southern line allured him

W. E. Klato, Wagin.  
MR. ALBERT LEVITZKE.

from the capital, and he settled at Tambellup, where he had taken up a holding. Conjointly with the development of this property he established an auctioneering, land, and estate agency business in the township, and holds agencies for all agricultural requirements, this connection taking up the major portion of his time and attention. He comes prominently before his fellow-townsmen by the interest he takes in local public affairs, and the personal assistance he gives to the various organizations and movements having for their object the advancement of the district. He is secretary of the local agricultural society, and has given much consideration to the subject of the eradication of the poison plants, which have done so much harm to the stock. For some years he has occupied a seat on the Tambellup Roads Board, and he has filled the highest position of honour in the Australian Natives' Association. In politics he is a strong supporter of the Liberal Party and a warm advocate of its policy, acting as secretary of the local Liberal club. He is a member of the race club, and has filled the office of president of that body. Mr. Levitzke has musical gifts and was a well-known performer in brass bands and

orchestras in Perth and suburbs. He married in 1906 Mabel, third daughter of the late Mr. James Lawrence, of the South Australian Civil Service, and better known latterly as a single-tax lecturer, and has two daughters.

HAROLD APPLETON, proprietor of the Tambellup Hotel, was born near Hamilton, in the western district of Victoria, on May 6, 1877, and is the eldest son of Mr. A. W.

by joining the Bank of Australasia at Wycheproof as junior clerk. In less than two years he was transferred to Bendigo, and remained on the staff in that town for over two years, when he received promotion and was transferred to Western Australia in 1897. Mr. Appleton was stationed for some considerable time at Cue, being subsequently sent to Peak Hill to open a branch of the same institution at that centre. At a later date, resigning from the bank, he accepted the position of accountant to the Peak

PONY AND SULKY, OWNED BY MR. H. APPLETON.

Appleton, of Gippsland. He was educated at various schools in Victoria, being sent to complete his scholastic course in Melbourne. Leaving college at fifteen years of age he entered upon a commercial career

Hill Goldfields Company, Limited, with which he continued until he went into the hotel business, purchasing the lease of the Cunderdin Hotel. After conducting this house for a period he sold his interest to become

MR. H. APPLETON'S RESIDENCE, TAMBELLUP.

licensee of the Freemasons' Hotel at Fremantle, which he carried on for over two years. Receiving a tempting offer from the firm of J. & W. Bateman, of Fremantle, Mr. Appleton relinquished hotelkeeping for a time and became representative in the State of Western Australia for the wine and spirit department of this well-known firm. This connection

MR. HAROLD APPLETON.

lasted until April, 1911, when he took over the Tambellup Hotel, which had just been erected, and is one of the most up-to-date and commodious houses on the great southern line. With the assistance of his wife Mr. Appleton has established the conduct of the hotel on first-class lines, great appreciation

MR. H. APPLETON'S TAMBELLUP HOTEL, TAMBELLUP.

being expressed by those who partake of the hospitality of the place. He is a well-known patron of sport in almost all its branches, and occupies the position of president of the Tambellup Racing and Football Clubs respectively. He is also vice-president of the East Fremantle Football Club. A keen lover of horses he takes recreation in driving, and always manages to possess the finest blood roadsters procurable. At his private home at East Fremantle, he is known as a breeder of the best St. Bernard dogs in the State, and is a most appreciative friend of the canine race. In 1905 he married Ethel, daughter of the late Mr. Morley, a well-known personality of the South Sea Islands.

**ARTHUR JOSEPH BACKHOUSE**, building contractor and agent for Messrs. Millars' Timber and Trading Company at Tambellup, was born at Ipswich, Queensland, on August 11, 1866, and is a son of the late Joseph Backhouse, architect, who came from Ipswich, England, in the early forties. Educated at Albury, New South Wales, in a Church of England Grammar School, he completed his scholastic career at Sydney, and at the age of fifteen commenced to study under his father for the profession of architect and draughtsman. After three years under this tuition, during which he gained valuable theoretical knowledge, he entered upon the building trade, and made himself acquainted with every branch of practical work.

In 1890 he launched out on his own account, and has since been identified with this calling in various parts of Australia, his first connection with the Western State occurring in 1892, when he took building contracts on the goldfields and became financially interested in the mining industry. Mr. Backhouse spent a couple of years on the fields, after which he returned to the East, and in 1894 again sailed for Western Australia, where he has made his home ever since. Ten years later he opened up business connections at Kojonup, where he remained for about four years, when perceiving an opening at Tambellup, which he looked upon as a rising town, he removed to this centre. Most of the up-to-date buildings in the locality during the past five years may be

H. E. Elston, Wagin.  
MR. ARTHUR JOSEPH BACKHOUSE.

placed to his credit, many homesteads having been erected by him, and in the township various structures for commercial purposes which reflect considerable credit upon his knowledge of his craft. He has been prominent in all matters affecting the progress of the district, having made a hobby of the study of local government, and represents the town or Central Ward on the Roads Board, being the first member elected by an almost unanimous vote of the ratepayers to represent this ward. He also acts on the committee of the agricultural society and of other bodies. He has been associated with the A.N.A. ever since his arrival in Tambellup, and takes an active part as a member and committeeman of

the local Church of England. Some years back Mr. Backhouse made a prolonged visit to the Old Country, during which he toured through most places of interest, returning to Australia in 1898. He married in 1901 Prudence, eldest daughter of the late John Noon, of Maryborough, Queensland, an early settler of that State, and has two sons and three daughters.

THOMAS GARDINER GOODE, "Philomena," near Tambellup, is a South Australian by birth, being a

MR. THOMAS GARDINER GOODE.

son of Mr. C. R. Goode, of Port Pirie, who served in the South Australian Parliament as member for the Burra district for some considerable time.

He was born at Saddleworth on March 25, 1871, and received his education at the Stanley Grammar School, Watervale. At the close of his scholastic career he proceeded to

managing shareholder. After selling his interest in this property Mr. Goode founded the "Ida Valley" Station, west of Leonora, which he supervised personally for four years

Photo by W. E. Elston. MR. T. G. GOODE'S RESIDENCE, TAMBELLUP.

the "Canowie" Station, and having completed seven years on this well-known run he came to Western Australia in 1897, and in the first instance directed his attention to the mining industry, proceeding to the eastern goldfields, where he was connected with various claims. After a short time on the fields, he relinquished mining pursuits to return to station life, and took a position on "Mundabullangana" pastoral run on behalf of Mr. S. Mackay, and subsequently became identified with the "Roy Hill" Station, after a time being appointed manager and later

and ultimately sold to Mr. J. Sharman. He then came to the Tambellup district, and purchased a homestead block of 1,100 acres, where he built his present residence, which he has successfully developed chiefly as a pastoral proposition. The property has been enlarged by the addition of neighbouring territory, and now includes nearly 3,500 acres of country timbered with white-gum, jam, yate, pepperbark, and sheoak. Situated two and a half miles west of Tingerup Siding, with Tambellup as its postal town, the property possesses the advantage of over two miles

Photo by W. E. Elston.

GENERAL VIEW OF "PHILOMENA" HOMESTEAD.

of frontage to the Gordon River, and there is a large dam in one of the outlying paddocks. A wire fence, fitted with sheep-proof netting, has been put up on the boundary at a cost of £30 per mile, and the whole of the property has been ringbarked. It is Mr. Goode's intention to engage in sheep-raising on a large scale, and his flock, founded from the "Pallinup" strain, is realizing the best expectations. The homestead is situated on the Gordon River (where boating is carried on all the year round), and is a very pretty, up-to-date villa containing eight rooms and the usual offices. Mr. Goode has achieved repute as a breeder of blood stock, and is the owner of "Subiaco" by "Light Artillery" out of "Rosedale," bred in South Australia, a well-known performer on the turf and winner of various events at country meetings. He makes a point of attending all the leading race meetings in the vicinity of Tambellup, and has raced with considerable success on various occasions. He is also keen on football and follows this game with much interest. Mr. Goode married in 1908 Alice, daughter of the late Mr. Patrick Gillespie, of Terowie, South Australia. This lady died in 1910.

**GEORGE CHEYNE MOIR,** "Bininup," *via* Tambellup, was born at Leslie, Scotland, on June 14, 1852, and came to Australia in the early part of 1859 with his father, the late Mr. John Moir, who was engaged in farming pursuits here and in the Central State. The gentleman under review, upon attaining an age when he was able to work, served a short apprenticeship to the blacksmith's trade, but relinquished this calling in favour of agriculture, and for three years assisted on his father's farm in South Australia. In 1870 he came to the Western State and aided in the construction of a road through the densely-timbered bush from Forrest Hill to Deep River, where his brother had taken up land. This road, traversing a distance of over 60 miles, took a considerable time to complete, and at the conclusion of the work Mr. Moir became engaged in farming pursuits on the Frankland River, after three years taking up a block of land on his own account at Pinaganup—a grazing lease of 10,000 acres—which he held for three years. This proposition he abandoned in order to join his brother,

Mr. William Moir, in sheepfarming at Fanny Cove, and this partnership was maintained for over twenty years with considerable success. In 1902 the connection was dissolved, and Mr. G. C. Moir came to the district of Tambellup, where he purchased the "Bininup" property from Mr. Devine, and has since carried on mixed farming operations with good results. He has enlarged the original area of the estate by the purchase of adjoining property, and has now 3,400 acres, fenced with three wires and sheep-proof netting,

W. E. Elston, Wagin.  
MR. GEORGE CHEYNE MOIR.

and subdivided into paddocks of convenient size. There are nearly 400 acres cleared, about 100 acres being placed annually under crop with cereals, which are chiefly grown for hay, and the merino wool industry forms an important feature of the farm. Mr. Moir is a member of the local progress association and takes an interest in the various movements having for their object the benefit of the neighbourhood.

"GURLEEN," the property of Messrs. McArthur Brothers, is situated upon the Gordon River, eight miles south-west of Tambellup, and contains over 2,500 acres of good mixed grazing and cropping country, timbered chiefly with jam and whitegum. The original homestead block was taken up in 1903 by Mr. J. W. Thompson, from whom it was purchased by Messrs. McArthur Brothers in 1911. This consisted of 780

acres, but the present proprietors had already at various times selected a considerable amount of adjoining property, which brought the area of the whole estate up to its present extent. The land has a frontage of three and a half miles to the Gordon River, which is a permanent water-course, and is bordered by picturesque and fertile river flats. Securely fenced with three wires and netting on the boundary, nine subdivisions have been made and 300 acres are cleared, nearly half of this area being cropped annually. The wool and mutton industries are catered for by a sturdy flock of cross-bred sheep, which are run on the uncultivated portions of the estate, and horses are bred in small numbers for use on the farm. **WILLIAM HENRY McARTHUR, J.P.** (who is assisting his two sons to manage the estate), is a son of Mr. Benjamin McArthur, now of Adelaide, and was born at Rapid Bay, South Australia, on September 14, 1855. He received

W. E. Elston, Wagin.  
MR. WILLIAM HENRY McARTHUR.

his education at the local State school, and until the age of twenty-one was identified with farming pursuits. Subsequently for eight years he was attached to the Glenelg Railway Company, holding various positions, and finally being promoted to the post of traffic inspector, from which he resigned in 1885. He then opened a store in Glenelg and organized a most successful business, which he sold in 1904. In the latter year Mr. McArthur came to Western Australia, and built and opened a store at Tambellup, seven years later

selling out to Messrs. Richardson and Co. in order to settle on the land with his two sons. He received his Commission of Justice of the Peace from the Wilson Administration in 1910. Mr. McArthur married in 1881 Martha, daughter of the late David Miller, one of the original settlers of Glenelg, South Australia, and has a surviving family of two sons and two daughters, the latter being married to Mr. J. A. McDonald, of Tambellup, and Mr. E. P. Gmeiner, of the same place, respectively. It is interesting to note that Mr. McArthur's late son, D. W. S. McArthur, who died recently in West Africa, was one of the most brilliant graduates of the University of Adelaide, taking his B.Sc. degree at nineteen years of age, and being regarded as an expert in all branches of mining. FREDERICK ROY McARTHUR, the eldest surviving son, was born at Glenelg, South Australia, on July 18, 1890, and after a preliminary course at the local State school completed his education at Prince Alfred College, Adelaide. He came from school to Western Australia, where he first spent some time on the commercial staff of *The West Australian* newspaper, subsequently being connected with the office of the Mutual Life and Citizens' Insurance Company. He afterwards was engaged in the mining industry at Meekatharra, which he relinquished in order to join his brother in the working of the "Gurleen" Estate. NORMAN ARNOLD McARTHUR is also a native of Glenelg, and attended the State school at that place, afterwards becoming a student at the Scotch College, Perth. He had a year's pastoral experience on the "Gabyon" Station, on the Murchison, where he obtained a knowledge of sheep-raising, which has proved useful since he began his association with his brother in the present property.

WILLIAM HODBY, "Fairview," near Tambellup, is a son of the late John Hodby, of Huntingdonshire, England, who came to South Australia in 1848, and settled at East Payneham, near Adelaide, where he carried on farming pursuits until his demise in 1863. Born at Kensington, near Adelaide, South Australia, on October 16, 1848, Mr. Hodby received his education at Magill and at a private school at East Payneham,

which he left in his early teens to assist in the duties of his father's farm, where he remained for many years, taking the management for his mother upon the decease of the late Mr. Hodby. Subsequently he went to the Northern Territory and engaged as a teamster in the Port Darwin Company, which occupation he relinquished in order to take a partnership in a blacksmithing business on the Sandy Creek diggings, of which district he was one of the pioneers. From here he went to Pine Creek and took a position of feeder in a crushing mill, and eventually he settled at Cavanagh, in the northern part of South Australia; but on account of the climatic conditions was obliged to leave this locality. Prospects being bright in

W. E. Elston,

Wagin.

MR. WILLIAM HODBY.

Western Australia, in 1899 he sailed for her shores, and coming to the Tambellup district selected the land upon which his present home is situated. The original block was 1,800 acres in extent, and as he was the pioneer settler in the place he was able to secure the pick land of the district, which has amply rewarded his selection and the subsequent work of development. The holding is free from all noxious growths, no trace of poison shrubs being found, and the flock of merinos — founded from the noted "Kendenu" strain — thrive well on the natural grasses with which the estate is plentifully endowed. All the fences are sheep-proof, constructed with 3-ft. wire-netting in addition

to the ordinary wires, and subdivisions have been made, about 260 acres being cleared and devoted to tillage. Mr. Hodby is a well-known advocate of all forms of clean sport, and has acted as adjudicator in connection with the local race meetings. He has been twice married, his first wife being a daughter of the late George Allington, of South Australia, and his second Mrs. Fanny Kuch (widow), daughter of the late Daniel Cox, one of South Australia's early pioneers. His family consists of three sons and two daughters.

"THE SPRINGS," one of the most representative properties of Tambellup, owned by Messrs. Balston and Cowen, comprises 3,700 acres of good undulating country, timbered with jam and York gum. A good metal road leads directly east from Tambellup, from which town the nearest portion of the property lies four miles distant, while the Tambellup-Ongerup railway line skirts the north-eastern boundary. Dartnell Siding being less than a mile distant. The property, which consists of good loam, well mixed with red soil, originally was taken up in small areas by different selectors, Messrs. Balston and Cowen acquiring portions of it at various times, as opportunity occurred. Since their advent to the district, when the partnership was first established in 1907, they have combined all these small holdings in one estate, to which the name of "The Springs" has been given, and the development of which has absorbed the whole of their time and attention. Fencing has been carried out on a substantial system, jam timber being used for posts, and 2,000 acres have been made sheep-proof by the addition of 3-ft. wire-netting, the remainder being constructed with three wires, barbed and plain. The property is watered by dams and soaks, one noted soak having provided 800 sheep and a number of horses and cattle with a plentiful supply of water during the driest season on record. The flock, which is a pure merino one, was founded by the partners upon their taking up the property, rams being imported from the famous South Australian Murray-Dawson flock, and from Messrs. Falkiner & Son's "Boonoke" stud in the Riverina district of New South Wales, so popular among pastoralists all over Australia. These were mated with ewes bred

from imported stock from the Central State, and the result has been the establishment of a flock second to none in the district. The lambing average reaches about 80 per cent., and the wool holds its own with all

W. E. Elston, Wagin.  
MR. HERBERT BALSTON.

the flocks of the surrounding estates, a ready market at top prices being obtained locally. Among the stock, pride of place is given to the now famous shire stallion "Long Lawford Forester," which has secured great

repute in the neighbourhood, and is used by the partners for stud purposes in connection with a number of pure-bred Clydesdale mares. "Long Lawford Forester" was foaled on July 10, 1909, his immediate pedigree in sires including "Dunchurch Forester," "Lockinge Forest King," "Lockinge Manners," and "Prince Harold," while his dam is "Lawford Janette" by "Dunsmore Masterman," and his granddam "Swinford Nun" by "Market Day." His grandsire, "Lockinge Forest King," especially has a long record of honours to his credit, among which may be mentioned:—In 1901, Fourth London S.H.S.; First and Reserve for Champion, Peterboro'; First and Champion at Oxfordshire Show, and Champion (mare or stallion); First, Bath and West of England; First and Champion, Royal Counties; First, R.A.S.E. at Cardiff, Leicestershire, and Peterboro' Summer Show. In 1902, First in class of 120, S.H.S. London and Reserve for the Champion Cup. "Lockinge Forest King's" sire, "Lockinge Manners," and grandsire, "Prince Harold," have also had equally distinguished careers at the stud and in the showing, while the sire of "Lawford Janette," "Dunsmore Masterman," won First Great Yorkshire and Ashbourne in 1890, Fourth, S.H.S., London, 1892, and First and Champion, Oxfordshire, and First,

Northampton, in the same year. The stock of the last-named horse has won over 200 prizes, and he was sire of the largest number of winners of any living stallion at the London Show of 1902. "Long Lawford Forester" was bred near Rugby by Mr. John Crawley, and was imported from England as a yearling. He stands 17 hands, and is of a beautiful bay colour, and in his class would be difficult to beat. Messrs. Balston & Cowen are importing some pure Shire mares from England, in order to make the breeding of this class of blood stock

W. E. Elston, Wagin.  
MR. HENRY CHARLES EDWARD COWEN.

"LONG LAWFORD FORESTER" BY "DUNCHURCH FORESTER."

YY2

a special feature of their enterprise. "Long Lawford Forester" is also used in the district by owners of well-bred mares desirous of obtaining first-class stock for their farms and pastoral properties. HERBERT BALSTON was born in London on June 5, 1886, and is a son of Mr. W. E. Balston, of Barvin, Potter's Bar, Herts, England. Educated at Stoke Poges and Eton College, upon the conclusion of his studies he came to Western Australia, where his father had acquired landed interests some years previously. Upon arrival he entered into partnership with Mr. Cowen in "The Springs," and has since resided there, taking occasional trips to England, where he makes a point of interviewing stock experts, and uses his time to the best advantage for his Australian enterprise. HENRY CHARLES EDWARD COWEN is a son of the late Mr. James Cowen, who came to Victoria from the North of Ireland at twenty-three years of

age, and died recently at the age of eighty-one. He was born at Elphinstone, Victoria, on September 26, 1870, and received his education in his native town. Subsequently he entered upon commercial pursuits, joining the staff of the Colonial Mutual Life Association at the head office at Melbourne, where he remained for a decade, passing through various stages of promotion. Upon resigning this connection he went to the west coast of Tasmania, and joined his brother in storekeeping pursuits at Gormanston and Crotty. In 1902 he came to Western Australia and opened a store at Tambellup, which he carried on for two years, when he met Mr. Balston and joined forces with him in the development of their present proposition.

HENRY TRATHAN, J.P., of "Newlands," Tambellup, was born near Truro, Cornwall, England, on

W. E. Elston,

MR. HENRY TRATHAN.

Wagin.

November 11, 1844, and is a son of the late Mr. Henry Trathan, who came to South Australia with his family in 1851. He received his education by private tuition and in the State school at Kapunda, in which town he was apprenticed to the saddlery trade, serving a seven years' apprenticeship and subsequently following that calling. He opened a business on his own account at Stockport, whence he proceeded to the sister colony of Victoria in 1868, and was engaged in the trade in Melbourne for about a year. Returning

to Adelaide Mr. Trathan accepted the appointment of foreman in the saddlery factory of Messrs. Holden and Frost, which position he held for over twenty years, during almost the whole of the time discharging the duties of general manager of the factory. In 1899 he resigned from this connection and came to Western Australia with the object in view of opening a business for himself. Proceeding to Tambellup, on the great southern line, he established a successful concern which, after a few years, he transferred to his sons, turning his attention to a farming property which he had previously taken up, and in which the latter gentlemen are also interested. The extent of this estate is 2,000 acres, and mixed farming operations are carried on with considerable success, sheep-raising and the growing of cereals forming the chief departments of the industry. While in South Australia Mr. Trathan took a prominent part in local government, and for several years was a member of the Unley Town Corporation. The public institute and library were also the objects of his special interest, and he was a member of the school board of advice for the Sturt district. He also took a very prominent part in matters connected with the Church of England, and was for many years people's warden in the Church of St. Augustine, Unley. Since coming to Western Australia he has interested himself in the foundation of various organizations for the advancement of the district, and besides assisting in the inauguration of the first progress association was instrumental in obtaining for the residents the post office and agricultural hall. Through his representation the junction of the Ongerup railway was fixed at Tambellup, which has proved a great benefit to the district. He received his Commission of Justice of the Peace from the Moore Government in 1906. He is a member of the M.U., I.O.O.F., and has been connected with this body for nearly half a century, also being a Forester for about forty years. In 1872 he married Sarah, daughter of the late Mr. Henry Sanders, of Riverton, South Australia, and has three sons and four daughters. His two sons, Messrs. Henry Harold and Gilbert William Trathan, who carry on the business at Tambellup as general farmers' supply agents, are also engaged in farming pursuits. With their brother, Mr. John Edwin

Trathan, now engaged in commercial life in New Zealand, they served with honour in the Boer War in South Africa, and have followed in the footsteps of their father in the interest they display in the welfare of the district where they reside.

STEPHEN MASLEM, owner of "Devon Park," Tambellup, and proprietor of the Railway Coffee Palace in that town, was born at North Newton, Wilts, England, on November 17, 1866, and is a son of the late Mr. Jesse Maslem of that place. He received his education in the same county, and at the termination of his scholastic course before entering his teens was employed as signal-cabin boy on the North London Railway. In due time he became signalman, and upon his retirement after some

W. E. Elston,

MR. STEPHEN MASLEM.

Wagin.

years from that position had completed twelve years in the service of the company. In 1890 he came to Australia, and spent four years in the Railway Department of New South Wales, at the end of this period proceeding to Queensland. Here he carried on business in the softgoods line at The Valley, one of the suburbs of Brisbane, eventually selling out in order to go to Tasmania, his object being to inspect the country with the ultimate aim of settling on the land. After a year in the "Apple State" and a similar period spent in Victoria and South Australia, without attaining the object of his search, Mr. Maslem continued his travels, and in

the early part of 1897 arrived in Western Australia. He settled at Claremont, joining the services of the Western Australian Railway Department while still continuing his quest. Finally he secured a block of land near Tambellup in 1905, and while still holding his post in the Railway Department commenced preparations for entering upon pastoral and horticultural operations. The whole of the property—which now embraces 1,600 acres—has been fenced and subdivided into seven paddocks and dams have been constructed, while much of the yate, white-gum, and jam timber has been cleared away to make cultivation paddocks for cereal-growing and pastures for cattle. The orchard also is an important feature, and the whole farm is highly developed and productive. In addition to this industry Mr. Maslem also carries on the Railway Coffee Palace at Tambellup, prior to his resignation from the Government service having occupied the post of stationmaster here. He takes part in all movements for the betterment of the town and district, and is one of the trustees of the local agricultural hall. In 1888 he married Elizabeth, daughter of the late Mr. John Lagal, of Plymouth, England.

"HEATHVILLE," a property lying three miles east of Tambellup,

W. E. Elston, Wagin.  
MR. ERNEST WILLIAM HEATH BUNCE.

was first taken up in 1897 by the late William Henry Bunce, an Englishman by birth, and a colonist of South

Australia for eighteen years prior to his arrival in this State in the above year. The original homestead property comprised 260 acres, but some years subsequent to its selection Mr. Bunce's two sons, Messrs. Ernest William Heath Bunce and Frederick John Bunce, joined their father and took up land on their own account in the vicinity of the paternal property, combining the whole in one estate. At the present time these gentlemen, who are joint owners of the place, have over 1,530 acres of good mixed jam and whitegum country, highly adapted both to grazing and agriculture. The whole area has been

W. E. Elston, Wagin.  
MR. FREDERICK JOHN BUNCE.

well developed, about 400 acres being cleared and cultivated, and fine crops of wheat and oats are harvested annually. A valuable flock of merino sheep is raised for the wool and mutton industries, and general mixed farming operations are carried on with very satisfactory results. Mr. E. W. H. Bunce was born in Adelaide on August 20, 1882, and received his education at the Glenelg State School. Completing his studies at fourteen years of age he entered commercial life, spending a couple of years in a general store at Brighton, South Australia. Relinquishing this occupation, with an eye to the future he took a position on a dairy farm at the same place and remained there for some time prior to joining his father in Western Australia a year after the advent of the latter gentleman to this State. The younger member of the firm, Mr. F. J.

Bunce, is also a native of South Australia, having been born at Glenelg, the favourite watering-place, on April 13, 1884. He was educated locally, and at the close of his scholastic career immediately became identified with farming pursuits in Western Australia, in conjunction with his father and other members of the family. In the past the Messrs. Bunce varied their occupation by taking contracts in the district, and by this means were enabled to finance themselves in order to the more rapid development of their holding. Both brothers are members of the local agricultural society.

JAMES SHANNON CRAWFORD, of "Watergarrup," near Tambellup, was born at Blayney, New South Wales, on December 27, 1863. He received his education under his father, Mr. William Crawford, J.P., for nearly forty years connected with the Education Departments of New South Wales and Victoria, and after four years spent in farming pursuits entered the survey camp of Mr. J. M. Coane, one of the adjudicators on the prize designs of the Federal City. Another four years were passed in this connection, and in 1885 Mr. Crawford sat for his examination in survey work in New South Wales, being successful in both this and a subsequent test in Victoria in the

W. E. Elston, Wagin.  
MR. JAMES SHANNON CRAWFORD.

following year. He then became the pioneer in the surveying of the water channels for the Western Wimmera

Irrigation Trust, which occupied him for some years, and in 1890 qualified in Victoria as a civil engineer. For seven years he practised his profession in the capacity of municipal engineer in addition to his survey work, and at the end of that period came to Western Australia, where he continued in the same manner until 1903, when he joined the Lands Department as contract surveyor. He was appointed to the Tambellup district on the great southern line, and shortly after arrival took up a block of 3,000 acres, which he proceeded to develop as a pastoral holding, and has now a flock of merinos and crossbreds, which he raises for both wool and mutton with very good results. About 200 acres have been cleared, two-thirds of which is cultivated chiefly for fodder, and the estate is completely fenced with sheep-proof wire-netting. Mr. Crawford has made a special feature of a small orchard with a view to testing the value of sandy loam for fruit-trees, and has proved to his satisfaction that such soil is excellent for the production of apples, pears, and peaches, which reach a perfection of flavour and are very prolific in bearing. A comfortable house has been erected on the property and is fitted with all modern conveniences, many luxuries being found in its well-furnished apartments. Mr. Crawford takes a prominent part in local affairs, and is connected with most of the local organizations, including the agricultural society, being a cordial supporter of all movements for the advancement of the district. For many years he has been a member of the Australian Natives' Association, and has held honourable office in that body. In his younger days he was a crack cricketer and footballer, but tennis is now his favourite form of recreation, a fine court gracing the homestead area. In 1887 he married Florence Annie, daughter of the late Mr. T. A. Creaton, of East St. Kilda, Victoria, and has three daughters.

**WILLIAM FOWLER CROSBY**, proprietor of "Brooklands," Tambellup, is a son of Mr. B. Crosby, of "Black Oak" Farm, Kadina, South Australia, where the gentleman under review was born on May 14, 1878. He pursued his scholastic studies at the local school, and from his early teens to twenty-two years of age worked upon the parental

farm, where he gained a good insight into the agricultural industry. He then proceeded to Melbourne, and shortly after arrival in that State joined the 5th Victorian Contingent, which, under command of Colonel Otter, sailed for South Africa to take part in the Boer War. After twelve months' experience at the front, during which he was under fire on various occasions, he was awarded the King's Medal and returned home. Whilst continuing to assist on his father's property, Mr. Crosby kept his eyes open for a holding on which to begin independent operations, but owing to most of the good arable land in suitable localities

W. E. Elston, Wagin.  
MR. WILLIAM FOWLER CROSBY.

being already taken up he turned his attention to Western Australia. The liberal land laws existent in this State had already attracted many farmers and pastoralists from other quarters, and in July, 1903, Mr. Crosby, accompanied by his father, came to the Tambellup district and settled on the land, where his homestead now stands. The original block of 1,300 acres has since been added to, and the development of the place, once begun, was vigorously pushed forward. To-day, 400 acres have been cleared, half of which is cropped annually, and a flock of merino sheep finds excellent pasturage on the timbered part of the holding. In the early days of the enterprise Mr. Crosby undertook various carting and dam-sinking contracts, by which means he was enabled to expend more capital on his own property, and so accomplish

greater results in less time than otherwise would have been possible. He is a great lover of horses and a successful breeder of medium draughts suitable to the class of country, his stud having been started by imported stock. His lively interest in the welfare of the district was recognized in 1907 by his election to a seat on the Tambellup Roads Board, in which he represented the north-west ward for three years, when he was re-elected and filled the chairman's office for a term. During this period the medical needs of the district were considered, and his board was responsible for securing for Tambellup a Government medical officer. Mr. Crosby is a keen supporter of all healthy and clean forms of outdoor recreation, and holds membership in all local sporting and progressive bodies. In March, 1913, he married Alice, daughter of the late William Dix, of Kadina, South Australia.

**CARL OSKA BESSEN**, of "Oak Park," Moonies Hills, Tambellup, is a son of the late Mr. Frederick Carl Bessen, well known in South Australia for many years before his advent to this State, where he died in 1907. The subject of our memoir

W. E. Elston, Wagin.  
MR. FREDERICK CARL BESSEN.

was born at Baroota, South Australia, on January 7, 1881, and received his education at the Baroota Whim School. Subsequently he followed farming pursuits on the home property for upwards of seven years,

and in 1903 came to Western Australia. The liberal land conditions and general good prospects of this State were then being widely discussed and led to much immigration from other parts of Australia, the settlers dispersing themselves over a large area of country and opening up many new districts. Mr. Bessen selected a block of land at Tambellup of 1,000 acres and began operations, his father and other members of the family joining him within the year. Further land was taken up by the late Mr. Bessen and his sons, and at the present time the aggregate holdings of the family extend over 4,000 acres. Nearly the whole of this is fenced, and the work of improvement is rapidly going forward, 1,500 acres being cleared and about 400 acres cultivated. Sheep-raising has been started, and a healthy-looking flock of merinoes and Leicester crossbreds grazes on pasture land of the farm. The enterprise is carried on successfully by Mr. Bessen and his brothers on terms of partnership, the gentleman under review being the senior member of the firm. They are all

W. E. Elston, Wagin.  
MR. CARL OESKA BESSEN.

keen patrons of outdoor sport, and are well known on the cricket fields of the district. Mr. Bessen married in 1910 Nellie, daughter of Mr. Bird Speed, now of Geelong, Victoria, who for a considerable time was resident in this State, and has one son.

HEINRICH ADOLPH BESSEN, "Monica" Farm, Tambellup, is a son of the late Mr. F. C. Bessen,

of Madgeburg, Prussia, where the gentleman under review was born on August 2, 1858. At the close of his scholastic course, which was received at a local school, he came to South Australia at fourteen years of age to join his brother, the late F. C. Bessen, of "Oak Park," Tambellup, then a resident of the Central State. Upon arrival he was apprenticed to the trade of blacksmith for three years, and after a further three years' experience purchased a business at Port Germein, which he carried on for ten years. He then sold out and purchased another connection in Elliston, and eight years later (in

W. E. Elston, Wagin.  
MR. HEINRICH ADOLPH BESSEN.

1900) came to Western Australia, where the liberal land laws had led many to turn their attention to pastoral and agricultural pursuits. Almost immediately he took up a block of land at Tambellup, but for about a year and a half worked at his trade in the Midland Junction workshops before proceeding to the district where his holding lay. Subsequent to his advent he opened a blacksmith's business at the settlement—the first to be established there—and conjointly with the conduct of his trade started the development of his land, in which he received the assistance of his sons. The original holding of 160 acres has been increased by additional property taken up in the names of himself and his family, and at the present time the estate consists of about 4,000 acres. Of this 500 acres have been cleared and over 200 acres of crop are

averaged annually, wheat and oats being cultivated with very good results. A healthy flock of merino sheep owes its foundation to importations from reliable studs in South Australia, which under altered conditions still maintain the good traits of their descent. Special attention has been given to the conservation of water, and the work of improving the property—which is substantially fenced and subdivided into paddocks—is steadily going forward, each year a fresh area being brought under the ringbarking axe. Mr. Bessen passes his leisure hours in reading—Ruskin, Thackeray, and Dickens being among his favourite authors, while writes on astronomical subjects also command his attention. In 1884 he married Mary Emma, daughter of the late Mr. Andrew Flugge, of Port Germein, South Australia, and has four sons and four daughters.

WILLIAM GEORGE HAMS, of "Gum Flat," Toolbrunup, via Tambellup, is a son of Mr. E. Hams, of

W. E. Elston, Wagin.  
MR. WILLIAM GEORGE HAMS.

Terowie, South Australia, and was born at Lyndoch Valley on November 10, 1854. His education was of an elementary character, but he took every opportunity of improving his mind whilst a youth working on his father's farm, where he continued until he reached man's estate. He took up a block of land from the Government at Yongala, which he worked successfully for ten years and then disposed of in order to purchase

a holding at Terowie. For fifteen years he carried on pastoral pursuits in the latter district, at the end of which period the conditions of land settlement in Western Australia attracted his attention. Selling out, he sailed for the Western State with his wife and family of ten children and upon arrival, after inspecting various properties, took up the block of land upon which his homestead now stands. His first selection consisted of 500 acres, but he has since increased that area by over 2,000 acres, his present property embracing 2,700 acres of good agricultural country, timbered with York-gum, white-gum, and yate, and well covered with natural grasses. It is well fenced with plain wire and netting to make it sheep-proof, and 600 acres have been cleared and cultivated besides 1,800 acres where the ringman's axe has completed its preparatory work. Success above the average has been obtained with the merino flock, which is sound and healthy, the wool commanding good prices both at the local and London markets. Mr. Hams has devoted a considerable amount of time to the study of local government and has served as a member of the roads board for four years, besides taking an interest in all matters affecting the welfare of the district. A member of the Baptist communion he concerns himself actively in the support of the local church. He is fond of reading and spends his leisure hours at home with his favourite authors. In 1876 Mr. Hams married Fanny, daughter of the late H. Steggall, of Terowie, South Australia, and has six sons and four daughters.

**CHARLES WESLEY PARKER**, managing partner of "Glenallan," Tingerup, the property of Messrs. Parker Brothers, was born at Kempsey, Macleay River, New South Wales, on March 6, 1880, and is the youngest son of Mr. David Parker, of that place. Upon the conclusion of his education at the local State school he became associated with his father in farming pursuits, and continued in this connection until 1904. In that year he came to Western Australia to join his brother in the development of a farm which had been selected at Tingerup, in the neighbourhood of Tambellup, and on arrival entered upon the management of this property, which has

absorbed the whole of his time and attention ever since. The original holding of 400 acres has been added to from time to time, and the brothers now hold 2,800 acres, of which 300 acres have been cleared, and about half of the latter area cropped annually. A flock of merino sheep thrives exceedingly well, the

W. E. Elston, Wagon.  
Mr. CHARLES WESLEY PARKER.

clip, which is sold in London, realizing top prices, while the lambing average ranges between 75 to 80 per cent. On the agricultural side of the industry equal success has been maintained, cereals and hay being raised, and the wheat harvest in especial is very satisfactory, the average ranging from 12 to 20 bushels per acre. The whole property is fenced on the boundary and subdivided into paddocks by means of sheep- and dog-proof wire-netting fences. Mr. Parker has always taken a deep interest in local affairs, and for a considerable time he was a member of the roads board of the district, while he still retains a seat on the committee of the Tambellup Agricultural Society. He is a staunch adherent of the Methodist Church, and holds office as steward in the Tingerup congregation of that body. His chief recreation is found in the perusal of works of philosophy and fiction, Carlyle being one of his favourite authors, while the poets also command his attention. **DAVID JONATHAN PARKER**, partner of the above firm, is a member of the Education Department of the State, having charge of the East Cannington State School. He was

born at Kempsey, New South Wales, in 1873, and was connected with the Queensland and New South Wales Education Departments before coming to Western Australia in 1898. He is a sleeping partner in the farm at Tingerup, the entire management of which devolves upon his brother, Mr. C. W. Parker.

The late **PATRICK O'NEILL** was born at Six Mile Bridge, County Clare, Ireland, and came to South Australia in the seventies, where for thirty years he was engaged in the agricultural industry. In 1899 he sailed for the Western State, and, upon arrival, selected the "Willow" Farm property, situated about nine miles in a westerly direction from Tambellup, which he carried on with considerable success until his decease ten years later. The estate has been enlarged from time to time, and now embraces about 1,000 acres, lending itself to the pursuit of mixed farming operations with highly satisfactory results. Merino sheep, horses, and cattle comprise the pastoral side of the industry, and considerable attention is given to the growing of cereals, to which the soil is well adapted. The widow of the late Mr. O'Neill, herself a native of Ireland and a daughter of the late Patrick

Mr. PATRICK O'NEILL.

Quirk, farmer, of Whitegate, County Galway, resides on the farm with her daughters and her youngest son, Mr. Daniel O'Neill, who manages the property. Two other sons, Messrs. Patrick Thomas and William Joseph O'Neill, have taken up land on their own account within a few miles of the old homestead, and are both engaged

in farming pursuits, while the remaining members of the family, Messrs. John Peter and James Matthias O'Neill, follow the mining industry.

**MURPHY BROTHERS,** "Cashel Rock," Tambellup. (Patrick Murphy and William P. Murphy.) This well-known farming property lies to the east of Tambellup and embraces over 3,000 acres of good land, a fair proportion of which consists of really first-class soil. It is undulating country timbered with yate, York-gum, white-gum, jam, and sheoak, and 500 acres have been cleared, 300 acres of this area being devoted to the

W. E. Eaton, Wagon.  
MR. WILLIAM P. MURPHY.

cultivation of wheat and oats. The remainder of the estate is devoted to grazing purposes, merino sheep and crossbred Shropshires being the classes to which special attention is given, the wool and mutton industries both being considered in the foundation of the flock. The Messrs. Murphy have been particularly successful in the merino-Shropshire cross, and the wool, which is disposed of at the local markets, commands good prices. Both brothers were born at Mayfield, under the shadow of Cashel, in County Tipperary, Ireland, and are the sons of the late Mr. Thomas Murphy of that place. They received their education at the National School and Christian Brothers' College, and at the termination of their studies became their father's assistants in the work of the homo-

farm. The elder, Mr. Patrick Murphy, upon emigrating to Australia, settled at Queensland for a time, and also spent varying periods in New South Wales and Victoria before coming to Western Australia at the time of the gold discoveries on the eastern areas of the State. He has had and continues to hold many interests in addition to his farming enterprise, in which he is associated with his brother, Mr. William P. Murphy, who came from Ireland in 1907 to join his brother and take the management of "Mount Erin" Farm, Kokeby. Upon disposing of that property he came to the Tambellup district and took up some blocks of land on his own account, subsequently entering into partnership with his brother, and is now manager at "Cashel Rock." The Messrs. Murphy are very fervid Irishmen and prominent members of the Roman Catholic Church, to which body they render all the personal and financial support in their power. Prior to his advent in Western Australia, Mr. William Murphy was a leading member in the Irish National Forestry Movement. He was married in Cashel, Ireland, to Catherine, daughter of the late Mr. Lawrence Meagher, of Rose Green, Tipperary, Ireland, and has one son and four daughters.

**ANDREW MACDONALD,** "Miners' Rest" Farm, near Tambellup, was born at Myrtleford, Victoria, on April 11, 1868, and is a son of the late Mr. Hector MacDonald, one of the earliest pioneers of the Victorian gold diggings. After leaving school he followed farming pursuits for several years and gained considerable experience as a shearer, at a later date turning his attention to the mining industry and spending seven years in prospecting and mining at Broken Hill. In 1895 the glowing reports from the Western Australian goldfields attracted him to this part of the island-continent, and proceeding to Norseman he met with considerable success. Joining a party he assisted in the development of The Three Colonies Extended and The Four Jolly Smiths' gold mines, the former proving a richly-paying proposition. After a few years on the goldfields in 1898 he relinquished mining pursuits, and taking up a block of land in the Tambellup district, settled on it and has since directed his energies to mixed-farming operations. Consisting in

the first place of 800 acres this holding has been enlarged by the addition of adjoining territory, and now extends over 1,100 acres, the cleared portion of 300 acres being in a forward state of development. The whole property is fenced, partly with plain wire and partly with barbed wire, while 800 acres are made sheep-proof by the addition of wire-netting. About 160 acres have been brought under crop, while horse-breeding is also carried on, and with his two brothers Mr. MacDonald gives a considerable amount of attention to the merino flock, which is developed on terms of partnership. He married in 1898 Alice, daughter of Mr. Duncan McLellan, of Hammond, South Australia, and has one son and four daughters.

**JOSIAH NORRISH,** farmer, "Glen Idyll," near Tambellup, in the great southern district, is a son

H. C. Biltoft, Katanning.  
MR. JOSIAH NORRISH.

of the late Mr. George Norrish, who came to Western Australia in 1847 from his native State of Tasmania. The gentleman under review was born on June 20, 1884, and received his education chiefly by private tuition in his father's home. At an early age he began to make himself useful on the property, and has continued to reside under the parental roof-tree during the whole of his life, the major portion of his time being given up to the development of the home farm. In addition to this he has interests of his own in the

Tambellup district, having taken up a selection of nearly 800 acres, where operations have already been begun. In 1912 Mr. Norrish went abroad, visiting New Zealand and other places outside the Commonwealth.

**ALPHONSO HORNE STANFORD**, of Gnowangerup, was born in Hindley Street, Adelaide, South Australia, on November 9, 1861. He received his scholastic training at academies conducted respectively by Messrs. Mitton and Caterer in that city, and upon leaving school entered upon a commercial career with the firm of G. & R. Wills & Co., with whom he remained for twelve years.

*H. C. Biltoft, Katanning.*  
MR. ALPHONSO HORNE STANFORD.

This connection he severed in order to proceed to the Teetulpa goldfields, where he prospected with a party for a short time without much success, and eventually went to Victoria, where he obtained a position with Messrs. Muir & Robertson at Nathalia, having charge of the drapery department of the firm. A dissolution of partnership having taken place the gentleman under review was offered by Mr. Robertson the management of a business at Pakenham, and Mr. Stanford spent three years at that town. Returning to Adelaide he remained for seven years in his native State, enlarging his experience in different departments of mercantile life. During the Russian war scare he joined the Norwood Volunteers under

Captain Bassé, General Owen being in command of the forces, and composed one of the guard of honour at the laying of the foundation-stone of the Adelaide Jubilee Exhibition Building. Mr. Stanford, who is also of an artistic turn, was for three years manager of Messrs. Montgomery & Grimbly's stained-glass and leadlight works in Peel Street, Adelaide. In 1900 he came to Western Australia under engagement to Messrs. Montgomery Brothers, then of Menzies and Kookynie, with which firm he continued for six years, with the exception of a short interval in another softgoods house. At the end of this period he entered into partnership with Mr. Johnston in the purchase of a general merchant's business at Broome Hill. In 1912 the business was sold, and Mr. Stanford proceeded to Gnowangerup, where he is now engaged in farming pursuits. At Broome Hill he was a member of the progress association, and also occupied a seat on the board of health. He acted as secretary to the Anglican Church and is a member of the Broome Hill Rifle Club.

**GEORGE ALEXANDER JOHNSTON**, of Gnowangerup, is a native of the New England district of New

*H. C. Biltoft, Katanning.*  
MR. GEORGE ALEXANDER JOHNSTON.

South Wales, where he was born September 22, 1880. Educated at Elsmore, in that State, he left school at fifteen and entered a general store at the same place, where he became

initiated into all the details of the storekeeping trade. After six years in this line he determined to emigrate to Western Australia, being moved to this decision by reports of the rapid advancement of the "Cinderella" State. Arriving in 1901 he proceeded to the eastern goldfields, eventually settling at Kookynie, where he obtained a position in control of the bookkeeping department of the principal store in the town. In 1906, in conjunction with Mr. Stanford, Mr. Johnston purchased a business at Broome Hill, one of those which had been established in the early days of the town, which they carried on until 1912, when the concern was disposed of to Messrs. Clunes Bros. The partners have an area of land about 35 miles distant from Broome Hill and comprising 3,000 acres, which is now in course of development for pastoral purposes, the intention being to devote the area to sheep- and cattle-raising. Mr. Johnston displays an active interest in public affairs and is chairman of the local progress association, of which body he was one of the founders. For some time he filled the position of secretary of the Oddfellows' Lodge, the duties of which he formerly discharged in an honorary capacity. His favourite forms of recreation are found on the tennis court and the cricket field. In 1904 Mr. Johnston married Helen, daughter of Mr. Edward Cherry, of Warburton, Victoria, and has two daughters.

**SAMUEL WILLIAM TAYLOR**, of "Belleville," Tambellup, was born on February 10, 1862, at Oldham, Lancashire, England, and came to Victoria when only a year old with his late father, Mr. Charles Taylor, who during the whole of his life both in the Old Country and Victoria was connected with the brickmaking industry. The gentleman under review attended school in Ballarat and Eaglehawk, at the latter place being a student at the scholastic academy conducted by the late Mr. Slade. His studies completed he went to Kerang, where he joined his father in the brickmaking business and worked at intervals on a farm belonging to his parent in that district. After his marriage he took up land on his own account, and conjointly with the working of this property continued his connection with the brick trade.

In 1894, after the disastrous financial crisis in Victoria had crippled the industrial enterprise of the State for the time being, Mr. Taylor lost both his own farm and that of his late father, which he had acquired by purchase a short time subsequent to the demise of the latter. Husbanding his small capital he determined to invest it in Western Australian property, the land laws of this State being instrumental in attracting many settlers from the eastern portion of the continent. Some time after the banks suspended payment in Victoria Mr. Taylor carried out this resolution, and for a considerable period was engaged at Albany in his former occupation, that of the manufacture of bricks. He subsequently came to the Tambellup district, and took up in the first instance 260 acres of land, upon which he settled with his family. At a later date he added further blocks to his holding, and at the present time has a valuable property of 1,500 acres, in quality of soil, etc., second to none in the district. Fencing operations have been completed and a tract of over 300 acres cleared and cultivated, the work of clearing going rapidly forward from year to year. Pastoral interests are also made a prominent feature, sheep, cattle, and horses all finding a place on the estate, which is being

W. E. Elston, Wagin.  
MR. SAMUEL WILLIAM TAYLOR.

worked on mixed-farming principles. Mr. Taylor is a member of the local agricultural society and takes a live interest in every movement for the benefit of the district. He married

in 1888 May Belle, daughter of the late Mr. George Guy, of Kerang, Victoria, and has a family of four sons and nine daughters.

**WILLIAM FREDERICK DIPROSE**, owner of the "Greenwood" property, near Tambellup, was born at Mount Barker, South Australia, on April 6, 1849. He is a son of the late Mr. William Diprose, who came to Tasmania from Kent, England, at fourteen years of age, and was identified with the early Victorian gold diggings, being a citizen of Melbourne when Victoria was still a part of the Mother State. Subsequently he visited Western Australia, and during his term of residence here took the contract for the erection of Sir Richard Spencer's house at Albany, this being prior to his settling in the Central State. Mr. W. F. Diprose, upon leaving school, became his father's assistant in the work of a farm on Eyre Peninsula, subsequently working with his parent on terms of partnership. At twenty-two years of age he began operations on his own account on Yorke Peninsula, where he took up a block of land from the Government and farmed there until 1904, when he sold out in order to come to Western Australia, perceiving that this State offered greater prospects for settling his grown-up family. Prior to leaving South Australia, for nine years conjointly with his farm he had been largely interested in the salt industry, having two salt lakes on his property—one freehold and the other leasehold—from which he obtained supplies. His second son having preceded him to the West, land was already secured for the family upon its arrival at Tambellup, and mixed farming operations were soon in full swing. The homestead block consists of 1,100 acres, and the whole has been fenced and subdivided, while 650 acres have been cleared, and further improvements are being carried on from year to year. Mr. Diprose takes an interest in public affairs, and since coming to this State has continued his activities as a member of the community, and was one of the founders of the Tambellup Roads Board, upon which he has served for three years, and gives his cordial support to all movements having for their object the advancement of the district. He married Ann, daughter of the late Mr. Joseph Hill, of Yorke Peninsula, an old colonist of South Australia,

and has five sons and two daughters surviving. **ARCHIBALD ERNEST DIPROSE**, who works the "Greenwood" Estate in conjunction with his father, was born at Yorketown, South Australia, on March 12,

W. E. Elston, Wagin.  
MR. WILLIAM FREDERICK DIPROSE.

1886, and received his education at the public school in his native town. From early youth he has been his father's right hand in matters of farm management, and accompanying him to Western Australia has continued that co-operation in the present enterprise. In addition to the original selection he has taken up nearly 500 acres of adjoining property on his own account, and the whole is being developed as one estate. He makes a study of scientific principles in farming, and has met with gratifying success in his application of the same to the industry under his hand.

**RICHARD HILL DIPROSE**, owner of the "Hazeldene" Estate, near Tambellup, is a son of Mr. W. F. Diprose, of "Greenwood," in the same district. He was born at Yorke Peninsula, South Australia, on January 10, 1888, and received his scholastic training at Yorketown, soon after leaving school accompanying his brother to Western Australia, where land had been taken up by their father. For six years he worked on this property, and in 1909 launched out on his own account,

taking contracts for the construction of dams, etc., on behalf of the farming community in the district. He continued in this way for two years, meanwhile taking up the block of land on which his homestead now stands, the development of which he began by planting an orchard. Having invested a certain amount of capital in getting things under way he abandoned his contracting work and in 1911 went to live on the property and undertook the personal conduct of the enterprise. His comfortable little cottage is in keeping with the general appearance of the holding, which presents evidences of careful management and a good grasp of the possibilities of the place. Mr. Diprose has let the contract for the clearing of four-fifths of the place to be ready for cropping in 1913, and the preparation of this area—400 acres—is going rapidly forward, 150 acres already being cleared. Jam, sheoak, and white-gum timber are found all over the block, and the soil is of mixed character, both light and heavy sandy loams being found in different localities. The farm is fenced with sheep-proof netting, and already 100 acres have been cropped, while a small orchard of mixed fruits is in bearing. Mr. Diprose for some years has been an active member of the Australian Natives' Association. He has always taken a deep interest in the local work of the Baptist Church, of which communion he is a member, and holds the office of honorary secretary in Tambellup. In the year 1911 he was married to Harriett, daughter of Mr. Edward King, an agriculturist of the same district.

**JULIUS GMEINER**, farmer, of "Parramatta," on the Gordon River, near Tambellup, is a native of Bendigo, Victoria, removing from there to South Australia with his parents, and spending most of his boyhood in Kapunda, in the latter State. He followed the trade of cabinetmaker at Port Pirie, and in 1869 settled down in Adelaide. After residing there for fifteen years he came to Western Australia in 1904, with the object in view of taking up land for himself and his two sons. Selecting a property in the Tambellup district, he founded his homestead on the Gordon River, and has since carried on farming more as a hobby than for the sake of the financial return. Mr.

Gmeiner was married in the late seventies to Christina, daughter of the late Alexander Jack, building contractor, of Kapunda, South Australia, and has two surviving sons. **ALBERT EDGAR GMEINER**, who owns the "Invermay" Estate, embracing between 1,350 and 1,400 acres on the east side of Tambellup, was born at Port Pirie on July 15, 1881, and received his education in Adelaide. At the termination of his scholastic career he entered upon commercial life in the office of the Singer Sewing Machine Company in that city, and received rapid promotion in this service. He relinquished his further prospects in mercantile interest in order to respond to the "call of the land," for that purpose joining his parent in Western Australia. After remaining for a time on the parental homestead, he returned to his own holding, which he has been steadily developing ever since, with an ever-increasing promise of prosperity in his undertaking. The country is undulating, with mixed soils and timbered with York-gum, white-gum, and jam, and 250 acres have been cleared, the whole of which area has been tilled, cereal-growing being the single industry to which Mr. Gmeiner has devoted his energies. He is a member of the local agricultural society, and takes a lively interest in all matters affecting the welfare of the district. In the year 1908 he was married to Constance, daughter of Mr. James Lean, of Mount Gambier, South Australia, and has a family of two sons.

**LINTORN BROOKS GODBY WESTON**, "Westlands," near Tambellup, is a son of the late Major Charles Samuel Weston, of the 36th Indian Native Light Infantry Regiment, who served for many years in India and went to the front at the time of the Indian Mutiny. The gentleman under review was born at Rogart, Sutherlandshire, Scotland, on May 7, 1870, and received his education at Loretto, near Edinburgh. Upon the completion of his scholastic career he entered the wool trade, being attached to the house of H. Dawson & Co., where he learnt at the Yorkshire mills the different branches of woolclassing, etc. In 1890 he came to New South Wales and followed pastoral pursuits for two years, at the end of that period

returning to England and resuming his former connection with the wool trade. At the end of 1894 he came out to the firm's branch at Melbourne and after a couple of years of office life proceeded to Queensland, where he again engaged in pastoral life until 1901. Upon the outbreak of hostilities between the British and the Dutch in South Africa he accompanied the New South Wales 2nd Mounted Rifles under Colonel Lassiter to the scene of action, and during the campaign he served at the front in the Transvaal and Orange River Colony, being awarded the King's Medal. Upon his return from the war Mr. Weston came to Western Australia and took up land on the midland line which he spent some time in developing. Eventually he disposed of this property and moved to the Great Southern district, where he purchased a block of 1,200 acres from Mr. J. J. Green, which he has since extended to 3,000 acres. It consists of good grazing and agricultural country, and provides excellent pastures for the flock of merino sheep, which is an important department of the industry carried on by Mr. Weston. It is fenced and subdivided into paddocks, the whole of which are protected by sheep-proof wire-netting, which also serves as a barrier against the invasions of dogs and other pests. About 300 acres are cleared and cultivated with cereals—chiefly oats—and fodder crops. Mr. Weston is a member of the local agricultural society and a committeeman of that body; and is a supporter of all clean forms of recreation, being a participant in the various sports held in the district and a member of the rowing club. He married in the year 1906 Grace, daughter of the late Mr. J. T. Hobbs, one-time police magistrate of Port Macquarie, New South Wales, and has a family of one son.

**ALEXANDER McLAREN MOIR**, J.P., "Balmoral," Cranbrook, is a son of the late Mr. John Moir, who settled in Western Australia in the early part of 1859. He was born at Leslie, in Fifeshire, Scotland, on March 8, 1854, and received his education at Albany, in this State, upon leaving school accompanying his father to South Australia, where he became engaged in farming pursuits. Four years later he returned to the West and

conjointly with his brothers carried on various farming propositions in different parts of the southern portion of the State, where they did much pioneer work. In 1879 the partnership was dissolved by mutual consent, and Mr. Moir commenced operations on his own account on the Frankland River, where he farmed a property leased from his uncle. Subsequently, from 1895 to 1897, he was engaged as an hotelkeeper in the north-west, but for climatic reasons relinquished this calling, and returned to his original occupation on the Frankland River. After further farming experience in that district he sold out and came to Cranbrook, where he took up a block of 160 acres, to which he has since

W. E. Elston, Wagin.  
MR. ALEXANDER MCLAREN MOIR.

devoted the whole of his time and attention. Since 1905 he has continued the work of development with a view to the production of cereals and fruit, and has now 120 acres tilled and applied to this purpose, with every prospect of highly satisfactory results. Mr. Moir has interested himself in public life and has been a member of various roads boards in the localities where he has resided. He is president of the Gordon River Settlers' Association, and in 1910 received a Commission of Justice of the Peace from the Wilson Government. For many years he was a prominent member of the M.U., I.O.O.F. He married in 1880 Jane Christina, daughter of the late Mr. John Wellstead, of Bremmer

Bay. The lady died in 1906, leaving a family of three sons and two daughters.

HUGH CLIMIE, J.P., owner of "Ballochmyle" Estate, Cranbrook, is a son of the late Mr. James Climie, of Ayr, Scotland, and was born in the village of Catrine, Ayrshire, on September 9, 1847. At sixteen years of age, having concluded his education, he entered upon agricultural and grazing pursuits on his father's farms, and continued under the parental roof-tree until his marriage in 1872, having previously been admitted by the late Mr. Climie into partnership. In addition to sheep-farming operations the firm also carried on as general stock traders, and this connection continued until 1880, when arrangements were made for a younger brother to take his place, while the gentleman under review received his portion of the estate and started an independent career. When the great financial crisis of 1884-5 occurred trade became so slack that he decided to try his fortune in a new country, and in 1887 came to Western Australia, arriving on Christmas Day of that year. Subsequently he took a brief trip to Victoria, but after a few weeks returned to this State and opened a store at Tenterden, on the great southern railway line, which was then in course of construction. He further extended operations by the establishment of similar businesses at Broome Hill, Katanning, and Mount Barker, the Katanning store later passing by purchase to Mr. F. C. Piesse. Shortly after the outbreak of the eastern goldfields Mr. Climie started a carrying and forwarding enterprise on the fields, and did very well financially by this venture. It is worthy of record that at Woolgangie, 40 miles west of Coolgardie, for many weeks it cost him £350 a week to water his horses, while his charge for cartage in this locality was £16 per ton for a distance of 40 miles. Returning to the great southern district, he took up his residence on "Ballochmyle," acquired by him some time previously, and since that period he has been actively engaged in improving the property with such satisfactory results that it is now regarded as one of the show places of the neighbourhood. "Ballochmyle" comprises nearly 4,000 acres of freehold country, timbered with iron-bark and yate and is undulating in

character. It has an average rainfall of 20 in. and good natural drainage, the estate being plentifully watered by means of wells and dams. About 500 acres have been cleared and sown with oats and other crops, Mr. Climie being the pioneer grower of peas and rape in this district. Fifty acres of orchard are in course of preparation, apples, pears, and stone fruits being planted in large quantities. The property runs 1,200 crossbred and merino sheep, and draught horses are bred from a stallion by "Hero's Lad," while dairy cattle, chiefly Jerseys and Ayrshires, are also raised on the estate. Mr. Climie for some years was a member

W. E. Elston, Wagin.  
MR. HUGH CLIMIE.

of the Plantagenet Roads Board, and at the present time is a member of the Tambellup Agricultural Society. He was granted his Commission of Justice of the Peace by the Wilson Government in 1910. In the year 1872 he was married to Eliza, daughter of the late Dr. Thompson, of Glasgow, and has a family of one son and four daughters.

HUGH STRATHDEE CLIMIE, owner of the "Strathmore" property, Cranbrook, is a son of Mr. Hugh Climie, J.P., of "Ballochmyle," in the same district, and was born at Ayr, Scotland, on January 12, 1883. In his childhood he was brought to Western Australia by his parents, and received his scholastic tuition in Albany, subsequently entering upon

active work in connection with his father's "Ballochmyle" Estate, where he continued until his eighteenth year. He then launched out on his own account, taking up a block of land from the Government on the Gordon River, and here applied his energies to such good purpose that after a couple of years the holding attracted the notice of a purchaser, to whom he sold his interests. In 1905 Mr. Climie came to the Cranbrook district and in the first instance selected 460 acres adjoining his father's property, upon which to commence operations. As time advanced and his enterprise prospered he made additions to this area, and at the present time has 1,400 acres of well-improved land, mostly white-gum and yate country, with mixed red loam and sandy soil, over 500 acres of which are eminently suited for cropping. Even where uncleared

W. E. Elston, Wagin.  
MR. HUGH STRATHDEE CLIMIE.

the land is excellent for grazing pastures, a fine flock of merino and Leicester crossbreds being carried, and in this connection both mutton and wool are considered in the type produced, the wool being of such quality as to command 11½d. per lb. in the London markets of 1911. The cultivated portion of the estate covers about 150 acres, oats being the principal crop raised, and in addition to the "Strathmore" Farm Mr. Climie works on lease adjoining properties, where he has 130 acres under cultivation. Horsebreeding is carried on on a small scale, draughts of medium weight being favoured, and Mr. Climie has been a prize-winner

with a buggy pair at the Mount Barker agricultural show. He makes a hobby of his love of horses and spends most of his leisure time with his equine friends.

HENRY WILLIAMS, of "Cynfal" Farm, Cranbrook, was born at Festiniog, North Wales, on January 5, 1866, and is a son of the

W. E. Elston, Wagin.  
MR. HENRY WILLIAMS.

late Mr. Evan Williams, of that place, where also he received his education at the National School. At eleven years of age he became engaged in work in a slate quarry, where he spent twenty-seven years as boy and man in the same position, and conjointly with this occupation he worked a small farm on his own account. Owing to a failure in health Mr. Williams was advised by his physician to come to Western Australia, and in 1906 he arrived in this State. After spending eight months on the goldfields at Kalgoorlie he determined to settle on the land, and on January 1, 1907, entered into possession of his present block, which at that time was confined to the homestead holding. With the co-operation of his sons he has since taken up additional property, bringing the estate up to about 1,600 acres, nearly 240 of which have been cleared and cultivated, while the building of a homestead and the providing of stabling accommodation and outhouses are all evidences of the splendid effort put forth during five years' occupation

to form a home and place the industry on a good foundation. To carry on mixed farming pursuits is the ultimate object of Mr. Williams, but at the present time his operations are confined mainly to the growing of cereals and the cultivation of an orchard, which it is his intention further to extend and develop. He is a member of the local progress association. Mr. Williams married in 1888 Mary, daughter of the late Mr. David Richards, of Festiniog, Wales, and has two sons.

RICHARD HILL, who farms the "Yarralena" property at Cranbrook, is a native of South Australia, having been born at Willunga, in that State, on February 12, 1850, and is a son of the late Mr. Richard Hill, who became a settler of that district in

W. E. Elston, Wagin.  
MR. RICHARD HILL, SEN.

1839. He received his education in his native town, and upon leaving school was engaged in farming pursuits on his father's property until he started on his own account in 1876. For a further quarter of a century Mr. Hill continued in the same calling in the vicinity of Willunga and in the south-eastern portion of South Australia, and not until 1904 did he relinquish his connection with his native soil. In that year, attracted by the favourable land conditions of the Western State and the opportunities offered to the rising generation, he crossed the Great Australian Bight, and on arrival at Albany took up the block

of land at Cranbrook, upon which his homestead now stands. His sons, for whose sake mainly the removal was made, have since increased the acreage, which now comprises nearly 1,000, and the block is rapidly being developed. 100 acres being cropped and the uncleared portion used for the grazing of stock. A partnership has been formed between Mr. Hill and his two sons, Messrs. R. H. and A. G. Hill, who are both personally engaged with their father in the work and management of the property and keenly interested in its development. Mr. Hill is one of the pioneer members of the local progress association. For twenty years he was prominently connected as an

W. E. Elston, Wagin.  
MR. RICHARD HILL.

office-holder with the M. U., I. O. O. F., in South Australia. In 1875 he married Elizabeth Keenor, daughter of the late Mr. Edward Loud, of "Thornaville," Willunga, South Australia, one of the earliest settlers of the province, and has four sons and three daughters.

SAMUEL GALLIE PHILLIPS, of "Gunwarrie," Cranbrook, is a native of New South Wales. He was educated in South Australia, and at the age of nineteen became connected with the mining industry, occupying various positions on the Baker's Creek and Arltunga goldfields, at the former place filling the joint posts of assayer, purser, and assistant manager. After eighteen months at Broken Hill on the British Mine he

came to Western Australia in 1909, and immediately turned his attention to pastoral pursuits, taking up 2,500 acres of homestead property in the Hay district, to which he has since added another 1,500 acres. The breeding of sheep has constituted the chief department of his industry, and at the present time the flock consists of about 600 sheep, that part of the property not utilized for pasturage being applied to general mixed farming operations. About 35 acres have been brought under cultivation, principally of fodder for the stock, and three acres have been planted with fruit-trees, it being Mr. Phillips' intention later to considerably enlarge the orchard area. In 1911 he married Bessie Williams, fourth daughter of the late Rev. Thomas Field, of North Adelaide.

THOMAS GEORGE MONCK-MASON, who owns the farming property of "Masonbrook," Cranbrook, is a son of the late Mr. Thomas Monck-Mason, who was connected with the Bombay Civil Service. He was born at Cheltenham, England, on September 30, 1872, and received his scholastic training at Bath College, and subsequently at Emanuel College, Cantab. Upon the completion of his studies he went to

W. E. Elston, Wagin.  
MR. THOMAS GEORGE MONCK-MASON.

Ceylon, where he spent four years in tea planting, and at the time of the Diamond Jubilee celebrations was a member of the military body chosen

from the Ceylon Mounted Infantry to represent that colony in London. He remained in England for a year, not returning to Ceylon, and in 1898 came to settle in Western Australia, attracted by the liberal land conditions obtaining in this State. Almost immediately Mr. Monck-Mason made his home on the property where he now resides, taking up a block of 420 acres, to which he has since from time to time added by selection. He has now nearly 1,600 acres, a large portion of which is under cultivation, while the remainder is in course of development. A small orchard is a feature of the industry, and for a considerable time Mr. Monck-Mason carried on dairy-farming, but has relinquished cattle in favour of sheep, experience having taught him that the latter are better suited to the class of country. He takes an interest in local public affairs, but is too far distant from the centres of settlement to concern himself practically with local organizations. In 1905 Mr. Monck-Mason took a trip to the Old Country, and revisited the place of his birth, renewing old associations, and was absent five months. In 1902 he married Jean, daughter of Mr. Hugh Clinie, of "Ballochmyle," Cranbrook, and has two daughters.

PARKER BROOM, who owns and works the "Broomleigh" property at Cranbrook, was born at Exeter, Devon, England, on October 3, 1876, and is the youngest son of the late Mr. W. W. Broom, of that city. He received his elementary education at Exeter and Oakhampton, with a finishing course at Sidmouth College. In 1896 he went to South Africa, proceeding to the diamond fields at Gong Gong, and spent three and a half years at these diggings without proving himself one of the few to win Dame Fortune's smile. Returning to England he revisited the place of his birth and many other towns of importance in the Old Land, and thence went to Canada, the farming conditions of which country had been painted in bright colours before the British public. The severity of the Canadian winter, however, compelled him to seek a more genial climate in which to make a home, and after carefully studying the conditions of life in Western Australia he sailed for Fremantle in 1907. Upon arriving Mr. Broom

purchased his present homestead and the surrounding property of 600 acres from a Mr. Baines, and has since added to his holding by selection until the estate now covers 1,300 to 1,400 acres. About 300 acres of this territory have been cleared and tilled, and have proved highly favourable to the cultivation of cereals, while attention is now being given to the building up of a flock for the production of mutton and wool. Mr. Broom has had some military experience, having served in the Boer War in South Africa as a member of the Queenstown Mounted Rifles, and he holds the Queen's Medal in recognition of his services. In 1907 he married Ethel Mary, daughter of the late Mr. Patrick Frost, of Castlebank, County Clare, Ireland, and has two daughters.

GEORGE NAYLER, "Warrnambool" Farm, Cranbrook, is a son of the late Mr. William Nayler, of Warrnambool, Victoria, and was born at the latter place on March 23, 1872. Leaving school at fourteen

W. E. Elston, Wagin.  
MR. GEORGE NAYLER.

years of age he served his apprenticeship to the building trade at Koroit, in the same State, and for nearly four years followed the calling of contractor and builder in Victoria. In 1895 he came to Western Australia, and upon arrival was offered a position with the firm of Messrs. Coombe, Wood, & Co., in Perth, and continued in this connection for five years. Subsequently

Mr. Nayler spent some time on the eastern goldfields and elsewhere in contracting on his own behalf, and at a later date settled at Subiaco, where he carried on a successful furniture business for five years. In 1906, being desirous to make a home in the country, he took up the block of land near Cranbrook where he now resides, and in the following year entered personally upon its development. The property consists of nearly 1,500 acres of good mixed land, embracing yate, mallet, and white-gum country. About eight miles of sheep-proof fencing have been erected, and other improvements are rapidly being pushed forward. At the present time agricultural operations take pride of place in the industry, 100 acres being under cultivation of cereals, which are the chief product of the tilled area; but it is Mr. Nayler's intention in the near future to inaugurate a flock and make sheep a prominent feature of the estate. He takes part in the movement for the advancement of the district, being a member of the Cranbrook Progress Association, and also is an adherent of the fraternity of Freemasons. He is fond of literature, favouring especially the present-day school of writers, with whose works he spends many leisure hours. In 1896 Mr. Nayler married Harriet, daughter of Mr. George Matters, printer and stationer, of Koroit, Victoria, and has two sons and a daughter.

ARTHUR HUGH LYONS, of "Inverdon," Cranbrook, was born at Sligo, Ireland, on October 1, 1881, and is a son of Mr. Henry Lyons, J.P., of that place. He was educated in the Coleraine Academic Institution, and upon the completion of his studies emigrated to Canada, where he followed farming pursuits for a year. Returning to the Old Country he spent another year in different parts of Scotland and England, and in 1903 came to Western Australia. Here he added to his experience a year of station life in the Ashburton district of the north-west portion of the State, and from there went to South Africa, where he took part in the Zulu War of 1906-7 as a member of the Natal Mounted Rifles, and holds the King's Medal for services rendered during that campaign. At the conclusion of hostilities he returned to Western Australia and entered into partnership

with Mr. Andrew Currie in the development of the "Inverdon" Farm, a connection which was terminated by Mr. Lyons taking over the property on his own account. The area of the farm covers over 2,500 acres, with the additional territory acquired since its purchase by the gentleman under review, and 200 acres are under cultivation, the raising of cereals being a special

W. E. Elston, Wagin.  
MR. ARTHUR HUGH LYONS.

feature of the industry. Mr. Lyons has met with gratifying success in his mixed farming operations, and has worked the place in every way to the best advantage, among other paying propositions deserving of mention being the orchard, where apples are grown for the local markets. He is a member of the Tenterden Progress Association, and takes his part in the conduct of general local affairs. He spends his leisure in duck-shooting, having formerly for many years been prominent in hunting circles in Ireland and Scotland.

GEORGE KERCHAW BROWN, "Boyacup," Cranbrook, is a son of the late Mr. George Brown, who arrived in this State in the early fifties. He was born at Perth on July 12, 1860, and received his scholastic education at the Government school, which he left at twelve years of age. He was then apprenticed to the farming industry, and having served a term of three years continued to follow like avocations

between Perth and Albany for a lengthy period. In 1890 he purchased his present property "Boyacup" from the executors of the late Sir Thomas Campbell, and has since enlarged its area, which then covered only 40 acres, to the handsome total of 3,600 acres. The property is situated 18 miles from Cranbrook, which lies to the eastward, and is approached by a good road. The River

A fine flock of sheep is run on the estate, the merino breed being predominant, and while a few head

are devoted, Mr. Brown possessing two excellent sires, a Clydesdale and a blood stallion, named after the

W. E. Elston, Wagin.  
MR. GEORGE KERCHAW BROWN.

Gordon runs through it for a distance of two and a half miles on the one side and one and a half miles on the other, providing a fine water frontage. The estate is fenced all round the boundary with three wires and dog-proof netting and subdivided into a number of paddocks, while a 14-acre orchard has also proved a successful proposition.

Photo by W. E. Elston. "BOYACUP" HOMESTEAD.

of cattle are kept this branch of industry is not pursued to any considerable extent, on account of the presence of the Zamia palm, which

estate "Boyacup" by "Langar" out of "Needle," representing imported stock out of an Arab mare. This horse has been a successful performer

Photo by W. E. Elston. BARN ON THE PROPERTY.

produces the disease known as rickets. Horses are bred for market and for use on the farm, and to this department much time and attention

on the turf, and his services are largely in requisition by the owners of brood mares in the district for the production of good upstanding saddle and buggy horses. The homestead block was taken up originally about sixty years ago, and has been greatly improved by the present proprietor. The dwelling is built in the "colonial" style of one story, and contains six cosy and comfortable rooms, and from its eastern aspect commands a particularly fine view of the orchard stretching to the river, a distance of 40 chains. The outhouses are roomy and up-to-date and consist of a fruit-shed, stables, barn, and pigsties, with all necessary adjuncts. Mr. Brown is a committeeman of the Gordon River Settlers' Association, and takes a keen interest in anything conducive to the welfare of the district. He is a keen patron of racing, being a member of both the Frankland and Cranbrook Racing Clubs

MR. G. K. BROWN'S RESIDENCE, CRANBROOK.

ZZ

and on the committee of the former. In May, 1892, he married Lillie, youngest daughter of the late Mr. Lomas Toovey, of Tenterden (then known as the Round Swamp), one of the earliest settlers of the State.

Gardiner, who was the owner of a farm in that district, and his elementary education was conducted by private tuition in his own home.

of over 42,000 kangaroos, and besides marsupials added many hundreds of dingoes and other native pests to his credit. In this calling he had

ALFRED CHARLES GARDINER, storekeeper, of Cranbrook, on the great southern railway line,

Imperial Studio, Albany.  
MR. ALFRED CHARLES GARDINER.

is a native of Western Australia, having been born at the settlement of Brunswick, near the seaport of Bunbury, on December 29, 1868. He is a son of the late Mr. Alfred

CRANBROOK HOTEL, THE PROPERTY OF MR. A. C. GARDINER.

This teaching he augmented during subsequent years by a course of self-imposed study as opportunity allowed, the facilities for obtaining instruction at that period being of a very limited order in the country districts. Being fond of open-air life and a good marksman, for fourteen years he made a livelihood by hunting in the Frankland River district. During this period he covered a very wide area of country, travelling over 80,000 miles, 10,000 of which were traversed on foot, and while engaged in this way accounted for the slaying

abundant opportunity to make himself acquainted with the character of the country, and formed so favourable an opinion of the pastoral possibilities of the property known as "Kybalup," 25 miles west of Cranbrook, that he turned his attention to grazing pursuits, stocking the run with cattle, horses, and sheep, and supervising its operations while still pursuing the chase. The estate he afterwards disposed of to Mr. Watson-Williams, of Claremont, but subsequently acquired further property, and at the present time holds possession of some 2,300 acres of freehold and C.P. land in the same district, undulating in character and timbered with yate and white-gum, forming good farming country, which he leases in holdings to different tenants for agricultural purposes. In 1905 Mr. Gardiner directed his enterprise to commercial pursuits, and established a store-keeping business on the Frankland River, which he conducted for some considerable time. He relinquished operations at this centre upon the purchase of a store at Cranbrook, which he has since had rebuilt, enlarged, and very considerably improved. This concern he has placed under the control of an efficient manager, but retains the personal supervision of the business by means of frequent visits, driving over from Albany two or three times a week. The term "general store" is most appropriately applied to this

MR. A. C. GARDINER'S STORE, CRANBROOK.

business, all lines of goods being stocked, besides a variety of articles not in everyday use, but inquired for at intervals by the residents of the district. As agent between the local producers and Messrs. Henry Wills and Co., of Perth and Fremantle, Mr. Gardiner purchases fully 50 per cent. of the wool produced in the district, and he is also a large buyer of local produce, which in turn finds a ready sale in the produce department of the store. He also stocks all descriptions of farming machinery, being the local representative for the Sunshine Harvester Works of Victoria and the Massey-Harris Implement Company. A branch store has been established at Tenterden, which is carried on under separate management, with similar supervision by the proprietor; and the hotel at Cranbrook is owned by Mr. Gardiner, who is also interested in real estate in the town of Albany. Rifle and shotgun provide him with means of recreation, and he is known as the best shot in the district, securing the biggest recorded bag in Western Australia for the year 1911. He is also somewhat keen on cricket, and is a playing member of the local club. In 1888 Mr. Gardiner married Mary, daughter of Mr. James Herbert, of Cambellup, and has five sons and six daughters surviving.

**FREDERICK HENRY MOYLE**, proprietor of the Cranbrook Hotel, is a son of the late Mr. Edward John Moyle, of Portsmouth, England, and was born at Deptford, Kent, on March 27, 1858. His first lucrative occupation was in the mechanical branch of the Telegraph Construction and Maintenance Company at Greenwich, from which he was promoted to a post in the steamer "Siene," which laid the cable from Suez to Bombay. Returning to his native land he again entered the Greenwich workshops, but after a brief period the spirit of travel once more prompted a flight, this time across the Atlantic, where he took the oath of allegiance and became a member of the United States Navy after some months' employment on the elevated railroad in New York City. For a couple of years Mr. Moyle served under the Stars and Stripes, and eventually found himself in the Southern Continent of America. Here he again entered upon railway construction, and afterwards joined the running staff of the great southern railway, the Ferrol

zz2

Carril Andino, and other lines in the Argentine Republic, in which he continued for about six years. Returning to England, he gained a useful experience of business in the wholesale firm of Wisby & Sons, of Maidstone, and in the late eighties laid his fate in the balance of chance, spinning a coin to decide whether he should emigrate to Australia or South America. Australia winning the day he duly became a citizen of the Western State, and turned his hand to one and all of the numerous avocations which await the pioneer in

W. E. Elston, Wagin.  
MR. FREDERICK HENRY MOYLE.

an undeveloped country. At length he took a position on the pumping engines of the great southern railway line, which he filled for five years, and in 1895 opened a store in Wellington Street, Perth, which he conducted personally for two years, at the end of that period selling out and for a time going into retirement. The Ravensthorpe gold rush tempted him to the exciting life of the prospector, and he was sufficiently fortunate to strike a claim, which was afterwards purchased by Mr. A. E. Morgans. Whilst in this district he also interested himself in local affairs, and was the first member for the Kundip Division of the Ravenssthorpe Roads Board. From Ravenssthorpe he visited London to witness the coronation ceremony of the late King Edward VII., and spent a considerable time in touring through the various places of interest in his native land. Returning to his adopted country he purchased the old Mount Barker Hotel, and conducted

it for some time before disposing of it to enter again upon business pursuits in the vicinity of the capital. In 1910 he took over the Cranbrook Hotel, and has since devoted all his energies to its successful conduct, being an attentive and painstaking host. In all Mr. Moyle's wanderings in Western Australia he has been accompanied by his wife, to whom he was married in 1890; she is a daughter of Mr. John Herbert, of Mount Barker, one of the oldest settlers of this State, where he arrived in the late thirties.

**HENRY JAMES TOWNSEND**, J.P., "Dovedale," Tenterden, is a son of the late Mr. Henry Townsend, of Honiton, Devon, England, who became a settler of Western Australia in the early thirties. The gentleman under review was born at Albany on February 13, 1848, and attended school in that town until ten years of age, when he proceeded to England to complete his education and remained there until his

MR. HENRY JAMES TOWNSEND.

seventeenth year. Returning to the land of his birth he joined his father at the home farm on King River, near Albany, and after a couple of years in this connection gained additional experience in sheep-farming on the "Fairfields" Estate, near Broome Hill, where he spent six years. Eventually Mr. Townsend entered upon storekeeping pursuits at Albany in the employ of Mr. Hassell, but relinquished this life to

engage in farming on his own account on an estate in the Cranbrook district, now owned by Mr. H. Climie. For over twenty-three years he continued on this property, until at a time of financial crisis he was compelled, like many others, to dispose of the acres to the development of which he had given so many years of his life. He next took a position on the staff of the permanent-way in connection with the railways, and during a period of eight years spent in this department purchased his present holding, and in 1898 returned to the district to take up his residence on a spot only about two miles distant from the old home where he had lived so long. The property is a homestead block of 170 acres, the conduct of which he personally superintends, having 16 acres under cultivation of fruit-trees, which area he is continually extending. He is a member of the local progress association, and for some years occupied a seat on the Plantagenet Roads Board. In 1906 he received his Commission of Justice of the Peace from the Rason Government. For over thirty years he has been connected with the Masonic fraternity, and has passed two decades in the fellowship of the Odd-fellows' Lodge. In 1875 Mr. Townsend married Mary, daughter of the late Mr. Thomas Gillam, of Albany, and has three sons and two daughters. His sons are following in the footsteps of their father, and have taken up additional blocks of land in the same district.

**HENRY HOWARD TOOVEY**, proprietor of the "Orchard View" Estate, Tenterden, is a son of the late Mr. Lomas Toovey, who came to this State in the early fifties, and was well known to early Western Australian pioneers as the genial host of the old Shamrock Hotel at Perth. Subsequently the late Mr. Toovey drove the overland mail between Perth and Albany for a number of years, and eventually settled in the Tenterden district, where his death occurred. The gentleman under review was born at Balgarrup on August 1, 1864, and received an elementary education at Albany, but before reaching his teens was already at work as a teamster in the halcyon days of the sandalwood industry. He passed through varied experiences in the battle waged with Nature by the

early pioneers to establish civilized conditions, and continued in the avocations of the bush until the gold discoveries of the eastern fields turned all eyes in that direction.

MR. LOMAS TOOVEY.

Dazzled by the glamour he followed the train of eager seekers after the precious metal, but upon arrival, instead of prospecting for the virgin ore, took a position in the carrying trade, which he held for a year. At

W. E. Elston, *Wagin.*  
MR. HENRY HOWARD TOOVEY.

the end of this period, returning to his old haunts, he entered upon timber contracting in connection with the railways, and spent a considerable time in this and other work of a similar nature, eventually joining the permanent-ways branch of the

railway service. In 1897 Mr. Toovey acquired by purchase his present holding in the Tenterden district, which then comprised 80 acres, but has since been extended by the addition of 260 acres. With the assistance of his family he here successfully carries on mixed farming pursuits, the orchard being the chief feature of the industry. It is interesting to note that this property originally was held by Mr. Toovey's father, who selected it in 1866, and from whom it passed into other hands, only to be again acquired by his son. Mr. Toovey is a member of the Tenterden Progress Association. He is a great lover of horses and is never happier than when trying a youngster or handling some well-known favourite. He married in 1889 Catherine, daughter of the late Mr. William Weir, of Albany, and has six sons and three daughters.

**JOSEPH LUNT**, who owns the well-known farming property of "Wongelleup," Tenterden, is a son of the late Mr. John Lunt, of Audlem, Cheshire, England, and was born at Audley, in Staffordshire, on May 23, 1853. After attending the local school for several years, at an early age he went to work in the coal-mines, but had not been long engaged in this industry when a fearful explosion occurred (December 31, 1866) in the Talk o' the Hill Mine in Staffordshire, by which ninety-one men and boys lost their lives. This appalling event caused him to relinquish the career of a miner and to seek other channels of industry, and he became apprenticed to the building trade. Mr. Lunt followed this calling for many years in England, first acquainting himself thoroughly with every detail in all branches of the trade and ultimately carrying on business as a building contractor. In 1882 he sailed for Australia, and landing at Sydney continued in the same line of work for some considerable time before changing his centre of operations to Victoria, in which State he remained for fourteen years. When the report of gold discoveries in Western Australia was noised abroad he responded to the lure, and upon arrival here became attached to a survey party which retained his services for some length of time. Eventually Mr. Lunt established himself as a builder and contractor at Fremantle, and after eight years

spent in the seaport selected the block of land at Tenterden upon which he now resides, and entered upon its development. He first owned 500 acres, upon which he began operations, and as time went on purchased additional property until the area of his estate embraced over 2,500 acres of excellent farming land, timbered with jarrah, yate, and the red and white gum. Of this 200 acres have been cleared, and mixed farming is carried on under the management of Mr. Lunt, who is assisted in the work of the estate by some of his sons. Sheep-raising forms an important department of the industry, and cereals

W. E. Elston, Wagin.  
MR. JOSEPH LUNT.

are successfully produced, while considerable attention is given to orchard work with satisfactory results. From the very inception of the settlement Mr. Lunt has been prominently concerned with matters affecting its general advancement, and no movement has been set on foot in which he has not played a leading part. He was the founder of the agricultural society and of the progress association, and shortly after his arrival was instrumental in securing the first postal service for the district. He is hon. secretary of the local agricultural hall committee, and holds a similar position in connection with the railway league. He is a member of the Masonic fraternity, and finds occupation for his leisure hours in the perusal of historical and political literary works. Mr. Lunt has been

twice married, his first wife, a daughter of the late Mr. Roger Whittaker, dying in 1889, subsequent to which he was united to Clara, daughter of Mr. William Varcoe, of Ballarat, Victoria. His family consists of six sons and four daughters surviving.

WILLIAM TUFNELL, orchardist, proprietor of "Swaton," Tenterden, is a son of the late Mr. Joseph Tufnell, of Heckington, Lincolnshire, England, and was born at Sleaford, in that county, on October 16, 1863. He received his education at Swaton, in Lincolnshire, and at twelve years of age began to follow farming pursuits, while continuing his studies at night classes and Sunday-school for some years. In 1886 he emigrated to Queensland and engaged in various occupations, having a good deal to do with the handling and management of horses, subsequent to which he was identified with the Fairfield gold rush, where, however, he laboured without very satisfactory results. While in the northern State he also filled in a large portion of his time in the railway service, but eventually came south to New South Wales and settled down to the study of orchard work, having the management of "Falconbridge," the property of Messrs. Hardman Brothers. Here he had the great benefit of tuition in horticulture by the then Government botanist of New South Wales, and gained valuable experience in all the details of fruit-growing. He resigned his position in 1893 to come to Western Australia with the intention of proceeding to the goldfields, but altered his plans, and for a time was settled on the block of land which has since been purchased by Mr. H. J. Townsend, at Tenterden. At the inception of the Agricultural Bank he took up a block of land to which he gave the name of "Swaton," and borrowing a small sum of money for fencing began the development of the holding. To find further capital he went to the goldfields and followed mining occupations, leaving the property in the care of his wife, who planted the first hundred fruit-trees in what has since become a very flourishing orchard. Having filled the position of foreman of the roasting plant at the Great Boulder Mine for some time Mr. Tufnell finally settled down on the "Swaton" property, and has conducted operations very

successfully ever since. He interests himself in the affairs of the district, and is a member of the local progress association and of the original hall committee at Tenterden, also being connected with the Farmers and Settlers' Political Union. In 1892

W. E. Elston, Wagin.  
MR. WILLIAM TUFNELL.

he married Hannah, daughter of the late Mr. James Clarke, of Street Lane, Derbyshire, England, and has two sons and a daughter.

WILLIAM THOMAS BETTS, owner of "Ronaldshaw," Tenterden, is a son of Mr. John Betts, a native of Western Australia, now living in retirement at Guildford, where the subject of this notice was born on January 27, 1868. Having concluded his education at the Guildford State school, he became engaged in the saw-milling industry for a time, but relinquished this in favour of farming pursuits, and after working on his father's property enlarged his experience on various farms throughout the central, great southern, and southwestern districts. In 1890 he entered the railway service of the Western Australian Land Company in the ways and works branch, and was employed on the great southern line for eight years. He retired from the work of railway construction to engage on his own account in farming, and having an excellent knowledge of the fine workable qualities of the soil in the Tenterden district, purchased his present holding from Mr. J. A. Roberts, its area then

being about 300 acres. Since that period Mr. Betts has extended his acres both by purchase and selection, and holds 1,000 acres at the present time, about a third of which area is under cultivation, cereals being grown for the market on a fairly large scale and considerable attention given to orchard culture. Sheep, horses, and cattle are also grazed on the property and general mixed-farming operations carried on. Always to the fore in matters affecting the welfare of the district, Mr. Betts is a member of the Plantagenet Roads Board, and for a number of years was chairman of the local

W. E. Elston,

Wagin.

MR. WILLIAM THOMAS BETTS.

agricultural association, of which he is still a member. He is also prominent in church affairs, and is a member of the local committee of the Church of England. He takes his full share in promoting healthy outdoor sport and is president of the Tenterden Cricket Club. In 1889 he married Hannah, daughter of Mr. William Turton, of Wandering, and has two sons and four daughters.

"LILLYDALE," the property of Messrs. Gustav and Hermann Mengler, is situated about four or five miles in an easterly direction from Tenterden, and consists of 5,000 acres of white-gum and yate country, where natural grasses abound and summer herbage is plentiful. The estate was first taken up by the present proprietors in 1908, and within three months from the time of entering into possession this enterprising

firm had accomplished the ringbarking of the entire area of the property, since when the work of development has proceeded rapidly. Sheep-proof fencing was put up at a cost of £34 per mile, and five dams constructed on different parts of the estate, which in addition to three natural soaks render watering facilities plentiful and convenient. The homestead is situated on rising ground about half a mile distant from the public road, and is a very comfortable abode. Nearly 300 acres have been prepared for cultivation, and the greater portion of this area has been cropped with wheat and oats, while fields sown with clover have yielded splendid results. The flock was founded with ewes from "Kendenu" Estate, the rams, imported from South Australia, being the progeny of the noted "Fane II." out of "Bungaree" stud ewes. This well-known sire is a pure "Warrenock" ram, and was used with great success in the "Mannanarie" stud. HERMANN MENGLER was born at Eudunda, South Australia, in 1884. Coming to Western Australia he was employed at Fremantle for a time, afterwards proceeding to Kalgoorlie, where he joined his brother in trading pursuits, which he subsequently relinquished to devote the whole of his attention to the development of the "Lillydale" property. Mr. Mengler, who is chairman of the Tenterden Progress Association, married in 1910 a daughter of the late Mr. Otto Rodda, of Broken Hill, New South Wales, and has one son. Mr. G. Mengler is referred to elsewhere in this volume.

WILLIAM DUNN, "Woodburn," the Porongarup Ranges, Mount Barker district, is the eldest son of the late Mr. James Richard Dunn, who came to this State over seventy years ago from Kent, England, and was one of the early pioneers of this neighbourhood. He was a member of the Civil Service for a considerable time, and in the course of his bush experience turned his hand to almost every kind of work that confronted the new settler, finally taking up "Woodburn" in 1860 upon his retirement from the Government Service. The subject of this memoir was born at Albany on December 18, 1847, and received his education at various schools in that seaport, and by private tuition in his own home. After the completion of his studies he followed various pursuits before

joining his father on the Porongarups in 1863, and since that period has devoted the whole of his time and energies to carrying on the industry so ably inaugurated by his parent. The original block owned by Mr. Dunn was only 40 acres in extent, but has been extensively added to by the present proprietor, whose holding now extends over 940 acres immediately surrounding the homestead, while he also owns several blocks in other localities, which are held and worked by his sons. Nearly 100 acres have been cleared, and the scope of operations includes general farming, the raising of cereals and fruit, and the breeding of live stock, all of which is carried on with considerable success. For many years Mr. Dunn has actively concerned himself in local government, and has served as a member of both the Albany and Plantagenet Roads

Imperial Studio,

Albany.

MR. WILLIAM DUNN.

Boards. He married in 1878 Alice, daughter of the late Mr. Charles Keyser, who came from America in 1836 and settled at Busselton, where Mrs. Dunn was born. The family consists of five sons and four daughters.

ANDREW MUIR, J.P., "Forest Hill," Mount Barker, was born at Albany, Western Australia, on November 24, 1855, and is descended from one of the notable pioneering families of the southern district. His grandfather, the late Mr. Andrew Muir, arrived in this State by the

sailing vessel "Ganges" on January 18, 1844, having left his native Fife-shire to join his cousin, Mr. George Cheyne, in station pursuits at Cape Riche, where he continued for a few years. After relinquishing this connection he came to the Mount Barker district, and for a time rented a property called "Ongarup," on the Hay River. While there he made some explorations to the westward, and discovering the locality on which "Forest Hill" Estate is situated, took over this country from the Crown and entered upon its development. In these early pioneer days, when the nearest market was Albany, 46 miles distant, whence all necessaries had to be carted by horse teams with wag-gons of home manufacture, much of the flour used on the place was ground by hand in an old steel mill, which still exists, and later, until 1875, the same work was done by means of horse-power, for which purpose a mill was erected, this being one of the old landmarks yet standing. In the course of his expeditions the late Mr. Andrew Muir also took up the properties of "Deeside," "Lake Muir," and "Nabagup," the latter, freehold and Crown property, comprising 3,250 acres in the Nelson district, now being in possession of the gentleman under review. He settled his sons on these properties, which

also the pioneers of the Eucla district, to which they shipped stock from "Forest Hill," via Albany, and met with considerable success, subsequently selling out their interests to an Adelaide Company. The late Mr. John R. Muir, who worthily established his claim to be considered the first pastoralist of the district, died a few years after its establishment. In 1866 the late Mr. Andrew Muir

appears elsewhere in this work. Mr. Andrew Muir, the present occupant of "Forest Hill," is a son of the late Mr. Robert Muir, and received his

MR. ROBERT MUIR.

MR. ANDREW MUIR.

education at Albany. Leaving school in 1872 he entered upon pastoral pursuits on the estate where he now resides, of which he became sole proprietor by purchase in 1902, having previously filled the position of manager for a number of years. "Forest Hill" comprises about 4,000 acres, a portion of which has been cleared and cultivated, fodder for the stock being grown in considerable quantities. Grazing is carried on on a large scale, 4,000 sheep being shorn annually here and at "Nabagup," in which the merino breed predominates,

opened a general merchant's business at Albany, which in 1884 was taken over by the late Mr. Robert Muir and carried on by him under the old title of A. Muir & Sons, remaining in the estate until 1902, when the sole interests were taken over by Mr. Robert Trail Muir, whose biography

MR. ANDREW MUIR, SEN.

were then on the "edge of the beyond," even the roads having to be cut by the settlers, who endured many privations and hardships in their heroic endeavours to open up the country. The Muir family were

HOMESTEAD AND OUTBUILDINGS AT "FOREST HILL."

fresh blood having been introduced at intervals from the famous "Boonoke" strain in the Riverina district, New South Wales, and from Messrs. Angas and Murray Dawson's flocks in South Australia. Mr. Muir is a breeder of horses, both draught and blood stock being present on the estate and numbering about 100 head in all. He owns a fine Clydesdale stallion, "Young Donald" by "Sir Donald" from "Jipp" by "St. Kilda," and the blood sire is "Thor," by "Port Admiral" out of "Thunder Queen," imported from South Australia. There are 16 acres of orchard in full bearing, and a fine variety of apples is grown for export purposes, including Rome Beauty, Jonathan, Baldwin, and others, which find a ready market and obtain good prices in Germany, while large consignments also find their way to the Western Australian goldfields. In the orchard flourished a pear-tree, planted in the early fifties by the late Mr. Robert Muir, which during last season (1911) produced 2,197 lb. of fruit, and in a previous year (1906) realized returns of £15 for the one year's harvest. Mr. Muir has always taken an active interest in the progress of the district in which he resides, and has filled at one time or another every position of honour on the various local organizations. He has been chairman of the Plantagenet Roads Board, of which he is still a member, has been associated with the fraternity of Freemasons for nearly forty years, and for half that period with the Manchester Unity of Oddfellows. He received his Commission of Justice of the Peace from the Forrest Administration in 1900. His favourite recreation is motoring, and he takes pleasure in assuming full responsibility for his car, attending personally to the duty of keeping it in working order, and acting as his own chauffeur with confidence and skill. In 1884 he married Sophie Elizabeth Lowe, daughter of the late Mr. Andrew Muir, of "Lake Muir," and has three sons and five daughters.

JOHN LARTER WALL, orchardist, of "Avoca" Farm, Mount Barker, is a son of the late Mr. George Wall, of York, Western Australia, and was born at the latter town on April 4, 1854. At the close of his studies, which he pursued in his native place, he was shepherding for a time in the employ of his uncle, the late Mr. Charles Massingham,

over the Kellerberrin, Milcanning, and Minterbuckle districts. Subsequently he learnt the wheelwright and blacksmithing trade under his father at York, and continued in this connection until he was twenty-five years of age. In January, 1880, he presented himself at the Police Department in Perth as a candidate for the mounted police, and being accepted was placed on duty in the metropolitan area and Fremantle to enable him to gain the necessary experience which would fit him for the responsibilities which would fall to his share away from headquarters. His first station in the mounted force was at Albany, where he continued until July, 1887,

W. E. Elston,

Wagin.

MR. JOHN LARTER WALL.

when he was transferred to the Mount Barker Station to take charge of that district, and was retained there until the outbreak of the Phillips River copper mines. Mr. Wall was then sent to open the police station at this centre, and for nearly eight years—until the early part of 1908—held control of that station with the rank of corporal. In April, 1908, having concluded a faithful and creditable term of over twenty-eight years in the service of his native State, he tendered his resignation, and retired to his farm at Mount Barker, which he had taken up about ten years previously. Since that time he has devoted himself to the working of this property, which consists of 260 acres of land which ranks in quality equal to the best in the district, and especially worthy of

mention is the orchard, which, under his careful attention, produces good harvests and shows promise of yet more excellent results in the near future. Mr. Wall is a member of the local fruit-growers' association. While in the police force he received recognition of the esteem in which he was held by the residents of Ravens-thorpe—the present name of Phillips River—by the presentation of an illuminated address and other tokens of respect. His name is a very old one in Western Australia, his father having come to the State at the early age of seven with his parents, who were passengers by the barque "Marquis of Anglesea" in the year 1829. Mr. Wall married in 1879 Julia, daughter of Mr. Richard Newport, late of York, Western Australia, and has three sons and three daughters. His eldest son is engaged in commercial pursuits at Mount Barker, and the second fills the position of post-master of that town.

HORACE EGERTON-WARBURTON, J.P., "St. Werburgh's," Mount Barker, is the third son of the late Mr. George Edward Egerton-Warburton, who founded the Egerton-Warburton family in Western Australia in the early forties of the nineteenth century. The late gentleman came from England to Tasmania as lieutenant in the 51st Regiment, and subsequently sold his commission and settled on location No. 20, now known as "St. Werburgh's." The original holding comprised 320 acres, but this area was soon extended by the late Mr. Egerton-Warburton, and at the time of his death he had acquired a further 360 acres, the whole property then consisting of 680 acres freehold and a quantity of pastoral leasehold. The subject of this notice, two years after his father's death, entered into possession as the tenant of the deceased gentleman's widow, and subsequent to her demise purchased the estate from those members of the family interested therein. After this event he converted the greater portion of the pastoral leasehold into conditional purchase, the total area now being 3,300 acres. The land is of a very mixed character. Other parts of the estate are fairly heavily timbered and suitable for fruit-growing, the area available for profitable mixed farming being rather restricted owing to the natural conformation of the land. The estate

is subdivided into convenient paddocks, the largest being 1,100 acres, and from 1,500 to 2,000 sheep are run on the property, formerly all

MR. G. E. EGERTON-WARBURTON.

crossbreds, but latterly merino rams have been used with a view to improving the wool-carrying capacity of the sheep, and considerable success has attended the introduction of local stud rams bred by Mr. Andrew Muir, of "Forest Hill" Estate. The soil and climate have proved highly adapted for fruit cultivation, and apples are grown for export to London and Germany, as well as for the local markets. The orchard covers an area of between 30 and 40 acres at an average of about seventy trees to the acre, the majority of which are apples, though pears and stone fruit are also grown to a limited extent. The homestead was built in

the late forties, but has since undergone considerable alteration, changes and enlargement taking place in 1860 consequent upon the destruction of a portion of the building by fire several years previously. Mr. Horace Egerton-Warburton was born at Strawberry Hill, Albany (the original home in Western Australia of the late Sir Richard Spencer), on November 9, 1848, and he was educated by means of private tuition in his father's homestead. He continued to reside on the estate of "St. Werburgh's" until he was twenty-three years of age, and later was engaged for a time in a milling business at Albany. The failure of that venture led to the founding of a water-power sawmill on a tributary of the King River, near Albany, where for a decade he conducted a timber-milling business. Relinquishing this industry, he leased the mill and directed his attention to pastoral pursuits at Torbay and the Porongarup Hills on leasehold property, where he continued for about six years, dealing chiefly with cattle. In 1889 he purchased from the trustees of the Trimmer Estate "Pootenup," a pastoral holding lying to the northward of Cranbrook. When land selection began in this neighbourhood Mr. Egerton-Warburton from time to time made selections from the best portion of his leasehold, and now holds about 8,000 acres freehold and conditional purchase land in this locality, which is devoted to sheep and horse-breeding and to cereal-farming, operations being under the direction of his eldest son, who has sole charge of the estate. In 1891 he took up his residence in the old

homestead of "St. Werburgh's," in the first instance as a tenant, but ultimately purchasing the property, as before stated. Mr. Egerton-Warburton has taken a prominent part in local affairs, and for many years filled the office of chairman of the Plantagenet Roads Board. He was also president of the Mount Barker Rural Association for a considerable period, and at the inauguration of the Farmers and Producers' Political Union in that

MR. HORACE EGERTON-WARBURTON.

neighbourhood he was elected first president. He received his Commission of Justice of the Peace for the whole State from the Forrest Administration in 1894. Mr. Egerton-Warburton was married in 1875 to Selina, daughter of the late Mr. McKail, of Albany, and has two sons and four daughters.

VIEW OF MR. H. EGERTON-WARBURTON'S "ST. WERBURG'S" ESTATE.

EDWARD EGERTON WARBURTON, J.P., who owns "Ongarup" Estate, Mount Barker, is a native of Western Australia, having been born at Albany on May 25, 1867. He is the eighth son of the late Mr. George Edward Egerton-Warburton, of "St. Werburgh's," a member of the 51st Regiment Imperial Army, who originally came to Albany with troops from Tasmania, and was one of the earliest settlers in the State. The subject of this

Werburgh's' Estate, directing his attention specially to the sheep-raising industry, which was then being carried on with considerable vigour in

for fruit-growing and pastoral operations, sheep-raising being the principal department of the industry. The whole of the estate is fenced and

W. E. Elston, Wagin.  
MR. EDWARD EGERTON-WARBURTON.

memoir received his education chiefly by private tuition in his own home, which was supplemented by a finishing course at a school in Albany, and having finished his scholastic career he became engaged on the "St.

Photo by W. E. Elston. APPLE TREES IN FULL BEARING.

that district. He continued to reside with his parents until the age of twenty-one, and having attained his majority left the paternal roof-tree and enlarged his experience in the various branches of farming in different localities until 1892, when the rich acres of "Ongarup" attracted his attention. Further inspection proving satisfactory, Mr. Egerton-Warburton decided to purchase the property, the extent of which was then only 400 acres, 50 of which were cleared. The "Ongarup" Estate now exceeds 2,000 acres of good mixed land, composed chiefly of jarrah and redgum country, and highly suitable

subdivided with wires, and dog-proof netting on the boundary forms an efficacious barrier to the enemies of the pastoralist—the dingo and sheep-killing dog. The flock is developed chiefly for its mutton-producing qualities, wool not being specially considered in the type striven after, which has been best attained to in the Shropshire crossbred, this finding favour in the Western Australian markets in the shape of mutton and lamb. Mr. Egerton-Warburton has a goodly acreage devoted to orchard purposes, and cultivates successfully all the popular varieties of fruits for local consumption. His family has been well known all over the district for the prominent part it has taken in its development, being recognized as pioneers of public spirit and keeping themselves in touch with the march of civilization at the older centres. The gentleman under review has displayed the same interest in local government, and has never regarded as beneath his notice any matter, however small, which was likely to prove beneficial to his neighbours and the community in general. For eleven years he has occupied a seat on the Plantagenet Roads Board, and in 1905 was elected to the position of chairman of that body, which office he has filled ever since. He has been a member of the Mount Barker Rural Association almost since its inception and acted as its president for several years. In 1901 his sphere of influence was still

MR. E. EGERTON-WARBURTON'S "ONGARUP" ESTATE, MOUNT BARKER.

further extended by his registration as a Justice of the Peace for the district, this Commission being granted by the Moore Government. Mr. Egerton-Warburton is fond of home life and finds considerable pleasure in his hours of relaxation from the cares of the estate in dipping into historical works by leading authors. He married in 1900 Mary Francis Edith, second daughter of the late Honourable C. E. Dempster, who served the State in the Legislative Council for upwards of twenty years, his residence being at "Springfield," Northam. There is one daughter of this union.

**WILLIAM WALLACE MITCHELL, J.P.**, who owns the picturesquely situated property of "Langton," on the south bank of the Hay River, seven and a half miles from Mount Barker, is a son of Mr. William Owen Mitchell, of Donnybrook, in the south-western district of this State, and was born at Belvidere, near Bunbury, on August 7, 1858. He was educated privately, schools being non-existent at that time, and upon reaching his teens entered upon farming occupations on his father's property. Upon attaining manhood he launched out for himself, first leaving home and working in the Mount Barker district for a couple of years in order to gather a

little capital with which to make a start. During this time he kept his eyes open for a suitably-situated block of land on which to commence operations, but finding that his present holding was to let agreed to rent

MR. WILLIAM WALLACE MITCHELL.

it from the late Sir Thomas Campbell, who had built a homestead and cleared a few acres of land, but apart from this had made practically no improvements on the place. Mr. Mitchell at once set to work to develop the holding, which comprises 440 acres, and met with such success

that within six years he was able to purchase on terms. He immediately began to extend his borders, and acquired sufficient additional land to bring his property up to 2,500 acres approximately. Of this 400 acres are cleared, and mixed-farming pursuits are carried on, 30 acres of orchard absorbing the major portion of Mr. Mitchell's attention. Horses and sheep are bred on the property, the flock consisting of about 1,000 sheep, and crops are raised successfully. The homestead lies on the Blackwood Road within easy driving distance from Mount Barker, and substantial outhouses have been erected which are up to date in every detail, as likewise is the machinery used on the farm, an 8-horse-power oil-engine providing power for chaff-cutting, timber-sawing, etc. For a number of years Mr. Mitchell was a member of the Plantagenet Roads Board, and has always taken his share of public duties, interesting himself in the various local organizations. He was at one time chairman of the agricultural society and is a Justice of the Peace for the district, besides which, on the social side, he is a member of the Masonic fraternity and of the Albany Club. Mr. Mitchell was married in the year 1884 to Ann, daughter of the late Mr. George Edward Egerton-Warburton, of "St. Werburgh's," Mount Barker.

"LANGTON," RESIDENCE OF MR. W. W. MITCHELL, MOUNT BARKER.

WILLIAM SOUNNESS, J.P., "Merryup," Mount Barker, is a son of the late Mr. William Sounness, who came from the village of West Salton, Haddingtonshire, Scotland, and arrived in Western Australia in the year 1840. He began his career in the new country as manager of the "Kandiup" Estate, the property of the late Mr. Stewart Symes, and subsequently took control of the "Kendenuip" Estate on behalf of the late

MR. WILLIAM SOUNNESS, SEN.

Captain Hassell for six years. Leaving there he went to Albany and turned his hand to various avocations, including those of market gardener and carrying contractor. The markets

not proving sufficiently remunerative for garden produce, in 1860 he came to the Mount Barker district and settled at "Merryup," taking up a 40-acre block of land in the early days of the introduction of small holdings by the Government. The country at this place was regarded as an almost impossible proposition from a farming point of view owing to the very heavy timber on the land, redgum and jarrah trees attaining in some cases a diameter of 10 to 12 ft. The late Mr. Sounness, however, undaunted, faced the problem, and on June 15, 1860 (Waterloo Day) started operations with the help of his son, the present owner of the property. The 40-acre block of 1860 is now but a tiny corner in a fine estate of 3,000 acres, the boundary-lines having been extended first on one side and then on another, and the first cleared patch of 4 acres—which it took the courageous pair several months to prepare for cropping, the wheat being sown between the big trees—is now a part of 500 acres devoted to tillage. This first crop was ground into flour by hand for use in the camp, two round stones picked up in the creek being utilized for the purpose. At times the privations endured by the settlers were very great, boiled wheat upon occasion being their only sustenance, spite of the fact that Mr. Sounness' heroic wife toiled in Albany in order to provide the wherewithal to keep the family while the pioneering work was accomplished. Subsequently arrangements

were made with Mr. McKail to stock the estate with a flock of 400 sheep, which they purchased at 10s. a head, on terms, and this proved so successful a venture that a profit of 50 per cent. was recorded within

W. E. ELSTON,

WAGIN.

MR. WILLIAM SOUNNESS.

twelve months after delivery. Following on this smile of Dame Fortune it was decided that the younger pioneer should devote his whole time to the charge of the flock, which was pastured on a pastoral lease of over 20,000 acres adjoining the present holding, and excellent results accrued, in nine years the flock increasing to nearly 2,000. About this time the late Mr. Sounness, whose decease occurred at "Merryup" at the age of ninety years, retired from the active management of the property and the present owner assumed the reins of control. The gentleman under review was born at Albany on November 3, 1848, and for two years attended the local State school, subsequently advancing himself by means of private study as circumstances allowed. He became his father's right hand in the development of the "Merryup" property, and finally took over the estate, as already described. At this period the orchard area covered only a quarter of an acre, but even then it had attracted the notice of the other settlers, and "Sounness' Orchard" was referred to as the show place of the district. Mr. Sounness accordingly decided to extend this promising branch of his industry, and year by year broke up more ground for

RESIDENCE OF MR. W. SOUNNESS, MOUNT BARKER.

the purpose of planting fruit-trees. The scheme so proceeded with prospered, and to-day the name of "Merryup" represents the largest orchard enterprise in Western Australia, over 200 acres being devoted to its operations. Many varieties of apples are grown, large quantities being regularly exported to London and Germany. For more than a quarter of a century Mr. Souness has been a member of the Plantagenet Roads Board, he received a Commission of Justice of the Peace from the Forrest Administration in 1900, and has taken his turn in presiding over every local organization that has been formed by the residents. He now lives in partial retirement on the property, the conduct and management of the place having been handed over to his sons. His marriage took place in 1876 with Charlotte, daughter of the late Mr. William John Gibbs, who left England in 1829 for Australian shores, and was among the hardy pioneers to whom the present generation of Western Australians owe so large a debt of gratitude. This lady, by whom he has seven sons and four daughters, has been of the greatest possible assistance to her husband, and by her energy and unremitting labours in the early days of their union played an important part in placing the family fortunes on the prosperous basis which has resulted in the success attained to at the present day.

**ANDREW FOSTER TREE MITCHELL**, who owns the "Narpin" property in partnership with Mr. Robert Henry Wright, is a native of Albany, where he was born on August 11, 1872, his father being the late Mr. Samuel Mitchell, for forty years connected with the Harbour and Lights Service of this State. He was educated at a private school in Albany, and for some time after the close of his scholastic career was engaged in office work at that seaport. Prompted by a strong desire to follow outdoor life, after six years of clerical work he resigned his position and began the pursuits of a farmer on the "Mount Barker" Estate, then the property of Messrs. Millar Brothers. Here he learnt a great deal about orchard culture, and after two years' work and study on this property he proceeded to Wagin, where he enlarged his knowledge in regard to sheep-raising and the

cultivation of cereals. The original homestead block of "Narpin" was at that time held by Mr. Mitchell's brother-in-law and present partner, Mr. R. H. Wright, and an arrangement was made by which the gentleman under review took over the management and lived on the property while Mr. Wright continued in his position of postmaster in the Government Service. Mr. Mitchell has devoted the whole of his time and energies to the development of this estate, which at the present time comprises 1,200 acres, and has over 80 acres under cultivation, fully half of which is included in the orchard area, while the remainder is used for growing cereals, tubers, etc. Large consignments of fruit are shipped to the Continental markets, where buyers give good prices, and the balance is disposed of to local purchasers. Mr. Mitchell is prominent

W. E. Elston, Wagin.  
MR. ANDREW FOSTER TREE MITCHELL.

in affairs connected with local government, and for many years has been a member of the Plantagenet Roads Board, to which he was recently appointed secretary, carrying out the duties of this office in conjunction with the farming industry. He is a member of the fruit-growers' and rural associations and a committeeman of the Farmers and Producers' Political Union, and takes his share in all movements toward the advancement of the district. Mr. Mitchell married in 1910 Fanny Elizabeth, daughter of the late Mr. William Milne, of Busselton, and has one daughter.

**JOSEPH EDWARD DRAGE**, "Effiedale," Mount Barker, is a son of the late Mr. William Drage, of Port Pirie, South Australia, and was born at Auburn, in that State, on February 22, 1870. He received his education at the local State school, and at the close of his studies entered commercial life in the office of Messrs. Treleaven & Brown, of

W. E. Elston, Wagin.  
MR. JOSEPH EDWARD DRAGE.

Laurea, a country town in South Australia. After three years with these gentlemen he turned his hand to various classes of work and eventually settled at Port Pirie, where he was engaged in the smelting works for nine years. In 1899 Mr. Drage came to Western Australia, and with the object of making a home took up his present property in its virgin state from the Crown, and proceeded at once with its development. The farm comprises nearly 1,000 acres, 100 of which are cleared and applied to purposes of cultivation, a flourishing orchard being in evidence and other farm products adding to the general appearance of prosperity. Mr. Drage gives a portion of his attention to the public affairs of the place, and is a committeeman of the Forest Hill Agricultural Hall. For many years he has been a member of the United Ancient Order of Druids. His hours of leisure are spent chiefly in the perusal of a wide range of literary works, his preference tending to those of an historical character. In 1894 he married Ethel Maud, daughter of Mr. Edward Holland, of Wagin, Western Australia, and has five sons and five daughters.

"TEDDINGTON" HOMESTEAD.

"TEDDINGTON" ESTATE, the property of Mr. George Moyses Roberts, is situated 15 miles west of Mount Barker, and comprises 8,500 acres of mixed swamp land and heavy yate, redgum, and jarrah country. Originally it was a part of the territory taken over by the Western Australian Land Company, and was purchased from it by the late Mr. J. A. Mullens, by whom it was transferred to his son, who carried it on for some twenty-five years. Subsequent to the decease of the latter the estate, which with the exception of about 600 acres consisted entirely of freehold property, was sold by his executors to the present owner in 1907. In the early days of its development gold was discovered in certain localities on the station,

FLOCK OF ANGORA GOATS.

but not in sufficient quantities to make the working of it a payable proposition. It has, however, proved

splendidly adapted to pastoral uses, and is excellent sheep country, fine, dry, healthy pastures being provided by the hilly portions, which are covered with a good chocolate soil, gravelly in parts and rich in the constituents necessary for producing fattening herbage for the flocks. On the flats the stretches of fertile black sandy loam invite the labours of the horticulturist and give him promise of successful issues to his enterprise which is abundantly fulfilled. Clearing operations have been pursued with steady vigour, and 200 acres have been brought under cultivation, the method adopted in preparing the

land for tillage being to ring the large timber several years before the soil is required, and when the trees are dead to burn these giants of the primeval forest, which now lie prone on mother earth, or stand stark and bare to the open sky. By this method the cost of clearing is reduced to about £7 per acre. At the present time there are about 2,000 acres ringbarked, and this work is being continued every year, plenty of timber still being left on the run ready for the ringman's axe. The entire property is protected by fences constructed with posts and three wires, dog-proof wire-netting, 3 ft. in height, having been carried round the whole fence as a safeguard against the too-numerous enemies of the flock. Subdivisional fences have been run up on the same system, the average cost being about £32 per mile. By this means the estate is divided into eighteen paddocks of varying size, the largest covering an area of 2,000 acres and the smallest of ten acres, those of lesser size being

Photo by W. E. Elston. OUTBUILDINGS AT "TEDDINGTON."

the scene of agricultural and orchard operations. The annual rainfall of this district averages 30 in., and the estate has a natural water supply of several pools on the lower-lying portions of the property. A couple of wells, which yield good water, have been sunk, and the construction of seven dams in different localities has assured an unfailing supply of the precious fluid. Windmills are erected at the wells, and these are provided with tanks for storage purposes, from which the water is run into troughs fitted with automatic action. A gracious sight on the estate is the homestead, erected in 1891, of granite native to the surrounding hills. It is a most comfortable structure, containing twelve rooms and the usual offices, and since its purchase by Mr. Roberts a large billiard-room has been added, measuring 28 ft. by 18 ft., and fitted with Alcock's well-known tables and all modern appointments. A flower garden, where flourish shrubs and blooms of every shape and hue, graces the approach to the dwelling, and is protected by a row of stunted pines in the background, while a croquet

found the fruit-house, where the products of the orchard are stored, the jam-factory and preserving works, with the engine sheds which shelter the boiler-engine and a steam-engine

APPLE TREE SHOWING HEAVY CROP OF FRUIT.

of 15 horse-power, used for driving machinery in connection with the saw-bench and other operations on the estate. There are a couple of four-roomed houses and two other cottages for the use of married men employed in work on the property

Station, and the "Adams" car kept by Mr. Roberts for his private use. A drive round the property brings the visitor within view of the 80-acre orchard, in the cultivation of which the latest methods are brought into requisition with the most satisfactory results. The chief varieties of fruits grown for commercial purposes are apples, plums, and pears, which are produced in large quantities, and much of which is destined for export, big consignments being shipped to England and Germany, where the markets are open to Australian products and good returns may be realized. A considerable amount of fruit is also disposed of locally, being sent to Perth and the goldfields, where such commodities are in constant demand, and to satisfy the requirements of the domestic *ménage* at "Teddington" parts of the orchard are set aside for the cultivation of those more perishable products which

can be enjoyed to the full only by immediate transport from the orchard to the table. In the cultivation field peas, oats, and a fair quantity of rape are grown as fodder for the stock, experience having proved that in the summer months

from a reliable Victorian flock, while every year fresh importations of rams are introduced on the "Teddington" property, displaying the best traits

are utilized chiefly for their valuable assistance in clearing the property of the low scrub which abounds on some parts of the estate.

Gold Mine, then at its zenith. Attracted by the possibilities of the mining industry, he became connected with the mines at Kalgoorlie, and within four years was promoted to the position of shift manager at Great Boulder. Four years later, owing to an attack of typhoid fever, he was compelled to throw up this work and leave the goldfields. Accordingly he entered into partnership with his brother, Mr. George M. Roberts, in a selection of land at Wagin, and arranged to take over the personal control of the property, while his brother remained in the management of the Associated and Associated Northern mines at Kalgoorlie. For three years he continued the development of the holding, at the end of which period the present "Mount Barker" property was purchased by Mr. George M. Roberts, who offered him the post of manager, which he accepted, and he still holds that position. In 1910 the

gentleman under review took up 1,460 acres of land at Narrikup, in the Mount Barker district, and in conjunction with his other duties he is kept busy in the development of this property, giving special attention to the reclaiming of the swamp country, where drainage and clearing operations are in full swing. Mr. Roberts has filled many public positions, having been associated with the Mount Barker and Wagin roads boards, the local progress associations, etc. At the present time he is president of the Mount Barker branch of the Farmers and Producers' Political Union, and is a member of the committee of the local fruit-growers' association. In matters of sport he is an enthusiastic cricketer and a strong playing member of the Mount Barker Cricket Club—the crack team of the great southern line—and has distinguished himself in its ranks as a most consistently successful bowler. He is also a member of the Masonic fraternity.

in this State he continued in the same line of life on Mr. Wilding's farm at Northam, leaving there two

Imperial Studio, Albany.  
MR. DAVID ELIAS JONES.

DAVID ELIAS JONES, "Gwalia Vale," Mount Barker, is a son of the late Mr. Thomas Jones, of "Bank Hall," Lampeter, Cardiganshire, Wales, and was born at that place on January 9, 1866. He received his education at the Llanybyther Grammar School, and at sixteen years of

years later in order to gain experience in different parts of the country, with the object of ultimately taking up land and making a home for himself. In due course he came to the Mount Barker district, where he worked for some of the older settlers while keeping his eyes open for a selection to suit his purpose. Mr.

now covers an area of 1,500 acres of valuable mixed soil, well suited to the various branches of industry to which it has been applied by the owner. Even after beginning the development of the property he continued for some years to spend a portion of his time in assisting the neighbouring settlers on their farms, and by this means not only was able to gather a little capital to apply to his own operations, but gained a comprehensive insight into the methods employed on the different orchard areas, and was thus enabled to avoid mistakes and take the shortest cut to success. Mr. Jones is quoted in the district as an example of what can be attained, even without capital, when energy and perseverance combine toward a given end, his merino flock, healthy crops, and 25 acres of flourishing fruit-trees giving indisputable evidence of prosperity. He is a member of the fruit-growers' association of the district. In 1908 he married Lily Christina, daughter of the late Mr. George Wells, of Oxford, England.

WILLIAM HENRY CRANE, J.P., "Yallambee," Mount Barker district, was born at Ballarat on January 3, 1867. Upon leaving school he entered the ironmongery business in his native town, subsequently continuing in the trade in various parts of Victoria until 1895, when he came to Western Australia. Proceeding to the Norseman district he opened a general business, which after a number of years he relinquished in favour of the pastoral industry and agricultural occupations, and with this end in view he took up his present property, consisting of 6,000 acres of grazing country in the Mount Barker district. Only a comparatively small portion is at present cleared and cultivated, but the pastoral side of the enterprise is already assuming considerable proportions, 1,200 merino sheep being grazed on the estate, and as ringbarking advances and the subdivision into paddocks is accomplished, Mr. Crane gradually increases the numbers of his flock. While at Norseman Mr. Crane served as councillor for eight years, and for two years occupied the mayoral office, and was gazetted a Justice of the Peace by the Forrest Administration. In 1890 he married a daughter of Mr. C. G. Hudson, of Camperdown, and has two sons and four daughters.

"GWALIA VALE" ORCHARD, THE PROPERTY OF MR. D. E. JONES, MOUNT BARKER.

age became engaged in farming pursuits on his father's property, where he remained until his departure for Australia in 1893. Upon his arrival

Jones finally decided on the "Gwalia Vale" Farm, a block of land then comprising 300 acres, but to which he added from time to time, and which

AAA

ISAAC WILLIAMS, J.P., "Rock's Hill," one of the principal farming and orchard properties in the Carbarup district, is a son of the late Mr. Isaac Williams, of "Dudley Fort," Staffordshire, England, where the subject of our review was born on April 25, 1853. Undeterred by the fact that his early opportunities of attaining scholastic proficiency were few, he augmented his education by private study, and gradually obtained an extensive knowledge over a wide range of works, dealing with scientific, political, and biographical subjects. At an early age he took his place among the ironworkers, and was engaged in chainmaking for a couple of years. Upon reaching mature years, however, Mr. Williams relinquished this industry and turned his attention to work on the canals, and by the end of two decades became known all over the English waterways as skipper in charge of boats conveying merchandise, etc. With the object of settling down in Canada he proceeded thither in 1883, and worked for some time on the Grand Trunk Railway, but liking neither the climate nor the customs of the place, in January, 1887, after having first returned to England, Mr. Williams landed in Western Australia. The prospects of the State were at the time considered to be in a very healthy condition, and, although a

line, and was identified with this class of work until 1907, during which period he was laying by capital with which to develop his present property, which he had taken up in 1894. At that early period he had settled his wife and family on the holding, and when not on duty he

W. E. Elston, Wagin.  
MR. ISAAC WILLIAMS.

spent every available hour in its improvement. He now took up his residence permanently on the place, and has since devoted all his energies

Government, and Mr. Williams now owns 1,400 acres of good mixed land, over 100 acres of which are cleared and under cultivation. The orchards extend over 40 to 45 acres, apples being the principal product, though pears, peaches, apricots, and other stone fruits are also grown. A large export trade is carried on with England and Germany, and the local markets are supplied with the more perishable fruits. The homestead is built of stone procured on the property, and all modern requirements have been observed in its erection and appointments, while particularly fine outbuildings mark the progress of the industry, including stables, trap-sheds, fruit-house, etc. Pastoral operations receive some attention, and a flock of merino sheep is run on the property. Mr. Williams has done his share in the necessary public work of the district, and is a member of the Plantagenet Roads Board. He received his Commission of Justice of the Peace from the Wilson Government in 1910. He was married in England to Jane, daughter of the late Mr. William Tolley, of Brierley Hill, Rock's Hill, Staffordshire, and subsequent to this lady's decease in 1906 was united to his present wife, Elizabeth, daughter of the late Mr. William Rodda, an old Victorian pioneer. His family consists of five daughters, and he has twenty-six grandchildren.

Photo by W. E. Elston.

"ROCK'S HILL," THE PROPERTY OF MR. I. WILLIAMS, MOUNT BARKER.

married man with five children, the worthy pioneer took the risks of again meeting with disappointment in making a home in a strange land. He was fortunate upon arrival in obtaining employment with the firm of Millar Brothers in the construction of the great southern railway

to bringing it into line with the leading farms of the district. The block, which adjoins the famous "Kendenu" Estate, was originally the property of the Western Australian Land Company, its former area being 100 acres. Since that time other holdings have been secured from the

JOHANN BENJAMIN STEICKE, J.P., owner of the "Wattle Hill" property, Mount Barker, is a son of the late Mr. Johann Gottlieb Steicke, of Greenock, South Australia, and was born at that village on January 15, 1869. He attended school in his

native place until thirteen years of age, and then turned his activities to practical account in the work of his father's farm. Being of a very independent disposition, however, and ambitious to do something on his own behalf he relinquished home interests after a brief period and spent

W. E. Elston,

Wagin.

MR. JOHANN BENJAMIN STEICKE.

the next few years in employment in various parts of South Australia and Victoria. At twenty-three years of age he married, and about this time directed his attention to a farming proposition on the share system in the Wimmera district of Victoria, which he worked on half profits for

a time. Results of his efforts from the point of view of production were very satisfactory, but at that period

came to this State in 1901, and after inspection of the Katanning district took up a block of land in that

"WATTLE HILL" HOMESTEAD, MOUNT BARKER. STIRLING RANGE IN DISTANCE.

prices were low, and the returns realized were not sufficient to compensate him for his labours. Finding himself only able to pay his way with a struggle, Mr. Steicke was compelled to seek fresh fields for his enterprise which offered a better prospect of more speedy success as a reward for his toil. This he found in a farm at Kerang, in the mallee country, where for five years he prospered, and at the end of that period sold out in order to come to Western Australia, which was offering golden guerdons to the man of pluck and industry. He

neighbourhood and worked it successfully for five years, adding to the property until he had 896 acres under development. In 1906 he purchased the freehold block of 200 acres, where he has formed his present home, and leasing the Katanning property to a tenant, has since devoted all his energies and attention to the "Wattle Hill" Estate. This is beautifully situated on the crest of the Porongarup Ranges, the soil being of exceptionally rich, volcanic nature, and possessing the necessary constituents for producing luxuriant harvests without the aid of manures of any kind. The view from the homestead is especially deserving of mention, commanding a wide sweep of country, including forest land dotted with settlements away to the Stirling Ranges on the north and to Albany on the south, with a broad belt of the Southern Ocean, fully 20 miles distant, gleaming with reflected sunlight. The industry carried on at "Wattle Hill" comprises the cultivation of 50 to 60 acres with fruit and potatoes, and sheep-raising for mutton - producing purposes, the strain in favour being a cross between the merino and Leicester. The products of the orchard are exported to London and Hamburg, while a quantity is also sent to the eastern goldfields, where such commodities are in constant demand and bring good prices. The soil has proved specially adapted to potato-growing, tubers up to 4 or 5 lb. in

MR. J. B. STEICKE'S RESIDENCE, MOUNT BARKER

AAA2

weight being grown without any fertilizers whatever. A sawmill has also been erected, worked by an 18-horse-power oil-engine, by means of which a large timber connection has been established with the local settlers, among whom there is a large request for dressed timber for building purposes and for fruit-cases, etc. "Wattle Hill" lies 1,700 ft. above sea-level, being at a distance of 17 miles from Mount Barker, and the homestead stands at the high altitude of 1,200 ft. The house is surrounded by a flower garden, where blooms may be found all the year round, roses in particular doing remarkably well, while violets, carnations, and many other choice favourites also find their place in its borders. Mr. Steicke has always displayed a keen interest in local government, and before his advent to this district was elected a member of the Katanning Roads Board, from which he resigned on his departure from the district. For the past two years he has occupied a seat on the Plantagenet Roads Board, and he serves as a committeeman of the Mount Barker Fruit-growers' Association, and also of the Mount Barker Rural Association. He is likewise a member of the committee of the local branch of the Liberal League of Western Australia, and he was created a Justice of the Peace by the Moore Government in 1909. Mr. Steicke was married in the year 1892 to Martha Louisa, daughter of

the late Mr. Muhl Nickel, of Lyndoch Valley, South Australia, and has a family of five sons and four daughters.

JAMES ENRIGHT, orchardist, and owner of "Fairview" property, Mount Barker, Western Australia,

W. E. Elston,

Wagin.

MR. JAMES ENRIGHT.

is a son of the late Mr. James Enright, who carried on farming pursuits in the Mount Barker district of South Australia, situated in the Mount Lofty Ranges, about 30 miles from Adelaide. Born in that State

on July 25, 1860, the subject of this memoir received his education at the Convent School at Wallaroo, on Yorke Peninsula, and having concluded his studies proceeded far north to the Gawler Ranges, where for eight years, in conjunction with his brother, he was engaged in farming pursuits. At Wallaroo he took an active part in boat-pulling, and was one of the champion four which notched six victories in succession. In 1888 he turned his attention to contracting work, taking tenders for fencing, building, etc., and continued at this business until 1901 in the Port Lincoln district of the Southern State. A year later he came to Western Australia in quest of land suitable for orchard purposes, where he intended to settle down and make a home for himself and family, his chief reason for leaving his native soil being his inability to increase the size of his holding, the Lands Board passing over his application on four occasions. "Fairview" being at that time in the market, slightly improved, Mr. Enright purchased it from Mr. D. Jones, and at once proceeded to prepare it for his purposes. To the original 200 acres he has added a further hundred, and has completed the clearing of a third of the entire property. An apple orchard nearly 40 acres in extent is one of the chief assets of his enterprise, a ready market for his carefully packed cases of fruit being found in Germany, where in 1912 he scored a record with Dunn's Seedlings, at 23s. per case. He also cultivates root crops on a fairly extensive scale, and has met with considerable success in this department of his industry. Mr. Enright is a member of the Mount Barker Fruit-growers' Association. He married in 1888 Catherine, daughter of Mr. Edwin Duck, of Bramfield, South Australia, and has two sons and a daughter surviving.

FRUIT PICKING ON MR. J. ENRIGHT'S "FAIRVIEW" ESTATE.

WILLIAM JAMES THOMAS, proprietor of the "Thomaston" Estate at Carbarup, in the Mount Barker district, was born on February 24, 1858, and arrived in Australia at twenty years of age. He spent several years in the Eastern States previous to his advent to Western Australia, during which period he was employed in the work of railway construction in the service of Messrs. Millar Brothers, and upon his arrival at Albany in 1886 continued with

this well-known firm of railway contractors in the building of the great southern railway line. Mr. Thomas subsequently was promoted to the position of manager at Albany of the mills at Torbay and Denmark, and continued his connection with Millar Brothers for a quarter of a century, during twenty years holding positions of control. When the mills owned by this firm were closed down he decided to take up his residence on the "Thomaston" Estate, which he had taken up fourteen years earlier, and which, under the care of a manager, had been undergoing development, which was continued by Mr. Thomas' son, who upon leaving school had assumed the reins of government. The property is over 2,000 acres in extent, and is gradually being cleared of scrub and timber to fit it for horticultural and pastoral purposes. This district has proved highly favourable to orchard operations, and some of the finest orchards in the State are found in its neighbourhood, where tons of splendid fruit are produced annually for local consumption and the export trade. More and more the settlers have been directing their energies to the advancement of this industry, and the acreage under cultivation is being extended annually by leaps and bounds. The opening up of the German markets especially has given a fillip to the fruit-growing community, besides which the immense field offered by the gold-mining areas where the product of the earth takes the form of ore and bullion is

recognizing the possibilities of fortune in rosy apple and golden orange, and already has 120 acres planted with fruit-trees, most of which are in full bearing, while every succeeding year witnesses new rows of well-set young

on which he resides. The dwelling-house is one of the comfortable old homes so frequently seen in this district, being a large one-story place, which has been added to from time to time, and to which a pervading air

ORCHARD AND FRUIT-PACKING SHED.

trees representing fresh varieties of the popular classes of fruits. The chief crop produced is the apple harvest, which continues for many weeks and entails a vast amount of labour, the fruit requiring the most careful handling and packing for the London and Continental markets, where it finds a ready sale and commands good prices, besides which a quantity is disposed of in Western Australia. Mr. Thomas attends personally to a large portion of the work entailed by the orchard, and has an

of quiet prosperity gives its own charm. Mr. Thomas is a true home-lover, and is quite content to spend his hours of leisure in recreation within its precincts; but he recognizes his duty as one of the members of a community, and with his son extends cordial support to all movements having as their object the advancement of the public interest, and is a member of the various organizations of the district. He married in 1886 Agnes, second daughter of the late Mr. John

GENERAL VIEW OF ORCHARD ON THE "THOMASTON" ESTATE.

sufficient stimulus to an orchardist of enterprise and energy. Mr. Thomas has not been behindhand in

efficient assistant in his son, Mr. Edward Thomas, who is associated with him in all the operations of the estate

Hamilton Smith, of Ballarat, Victoria, and has a family of one son and one daughter.

JOHN CLARK WARNOCK, farmer and orchardist, "East Vale," Mount Barker, is a son of the late Mr. John Warnock, of Paisley, Scotland, and was born at Hurlford, near Kilmarnock, Ayrshire, on October 11, 1866. Leaving the Kilmarnock Academy, where he received his educational training, Mr. Warnock at seventeen years of age became engaged in agricultural pursuits in his native county, and followed this occupation until 1887, in which year he came to Australia. Landing at Adelaide, he proceeded to the Roseworthy Agricultural College, where he pursued an extended course of study, and subsequently travelled through Victoria and New South Wales with the object of settling in the Eastern States if he could find a property to suit his purposes. After a fruitless search extending over three years, he came to Western Australia in 1892, and selected the nucleus of his present holding, comprising 100 acres of the 220 acres of prime orchard land which he now owns. Clearing operations have been

W. E. Elston, Wagin.  
MR. JOHN CLARK WARNOCK.

carried on vigorously over 130 acres, and 30 acres have been planted with fruit trees, mainly apples and pears, the products of which are exported primarily to the German and London markets. The remainder of the cleared area is devoted to mixed-farming pursuits, crops being raised successfully, and the breeding of sheep and cattle carried on. In 1906 the gentleman under review admitted into partnership his brother,

Mr. Andrew Warnock, who has assisted him in the management and working of the property ever since. He is a member of the Producers' Union of Western Australia, and also holds membership in the Mount Barker Rural Progress Association. In his younger days Mr. Warnock was an expert footballer, and was generally connected with field sports, in which he still maintains a cordial interest. He was married in the year 1897 to Emmeline, daughter of the late Mr. Edwin Duck, of Yorke Peninsula, South Australia, and has a family of two sons and four daughters.

FRANCIS COLLINS, of Mount Barker, in the great southern district, is a son of the late Mr. James Collins, of Ballymuttera, Ballyrounan, County Derry, Ireland. The subject of our notice was born on January 12 in the year 1864, and at the close of his education he went to work on his father's farm. At twenty-two years of age desiring a wider field for his energies he decided to emigrate to Western Australia, where he could strike out for himself. Landing at Albany in 1886 he turned his hand to the various avocations of the bush, being for several years employed by the well-known firm of Millar Brothers, and was among the first to work on the "Teddington" Estate when that property was owned by the late Mr. C. G. Mullens, for whom he undertook much development labour by contract. Subsequently he followed the mining industry of the Greenbushes tin mines for some time, but not finding this very profitable, after a short period of employment in the construction of the south-western railway line he returned to the great southern district and was identified with the early development of the "Mount Barker" Estate, and with that of "Fairfield," in the Broome Hill district. His attention was next claimed by the gold industry, and he formed one of a prospecting party which directed its efforts to the district east of Broome Hill, but without adequate results. Shortly after this he proceeded to the eastern goldfields, walking over and through very rough country, from Broome Hill to Coolgardie, in thirty-three days. He continued for five years on these fields, enduring the privations and hardships incidental to pioneering life on the mines, and

in conjunction with his party did a great deal of prospecting north and east of the Coolgardie find, camels being used for purposes of transit. Success attended their efforts in this district, and Mr. Collins, in conjunction with one James Brown, discovered the property called the Callion North, in the Menzies district, which they developed, and subsequently sold to the Gold Lands Corporation. Returning to the coast shortly afterwards Mr. Collins came to the Mount Barker district, where he made investments in real estate and purchased certain farming properties in the neighbourhood, and for a time personally conducted the Mount Barker Hotel—which he still owns—in addition to being contractor for the railway refreshment-rooms at that centre. He now lives in retirement at Mount Barker.

W. E. Elston, Wagin.  
MR. FRANCIS COLLINS.

Since his arrival in the district Mr. Collins has taken his share in the various movements for its advancement, and is a well-known figure in the public life of the town. He is an honorary member of the Hibernian Australasian Catholic Benefit Society of Albany, and for ten years was a member of the Plantagenet Roads Board. He has been connected with all local progress associations, the turf club, and many other similar organizations. He was married in the year 1898 to Mary Amelia, daughter of Mr. James Gorman, of Mount Barker, and has a surviving family of four sons and four daughters.

MARTIN BROTHERS, "Mount Barker" Estate, Mount Barker. (J. McN. Martin and A. U. Martin.) JAMES McNEIL MARTIN is the elder son of Mr. John Felix Martin, head of the late firm of James Martin and Company, Limited, Gawler, South Australia, in which town he was born on March 1, 1881. He received his education at Queen's School, North Adelaide, and subsequently was apprenticed to the engineering profession, in the establishment of which his father was chief, and passed through all the branches of the trade in these well-known works, which held a premier position among the iron foundries of the Commonwealth. In conjunction with his brother he then took a trip through the various manufacturing centres of Great Britain, America, and the Continent, during which as opportunity offered the young Australians mixed with the leading men in the engineering circles of the Old World, and made a study of the latest ideas and methods then in vogue. Returning to South Australia

MR. JAMES McNEIL MARTIN.

they re-entered their father's business and continued there until 1908, when turning their attention to pastoral pursuits they joined in partnership their uncle, Mr. Neil McNeil, in the property known as "Mount Barker" Estate, situated about four miles from Mount Barker, in Western Australia. This estate, which covers an area of over 4,000 acres, is one of the oldest and best developed in the State, and has 200 acres under fruit cultivation, forming one of the

two largest orchard areas in Western Australia. Mr. J. McN. Martin is president of the Mount Barker Fruit-growers' Association. With his brother he has strengthened the ranks of the Mount Barker Eleven, a cricketing club which has proved its prowess in numerous contests against visiting and other teams. He was formerly a very enthusiastic and successful amateur photographer, but since taking up orchard work has had little time to indulge in this hobby. ALEXANDER URQUHART MARTIN, the younger son of Mr. John Felix Martin, was born at Gawler, South Australia, on July 2, 1882, and at the close of his scholastic career at Queen's School, North Adelaide, entered the Gawler ironworks and gained a thorough

MR. ALEXANDER URQUHART MARTIN.

initiation into all departments of the trade. He accompanied his elder brother on his travels through England, America, and the Continent, returned with him to South Australia, and eventually embarked on his present enterprise in 1908. Mr. A. U. Martin is a strong believer in the policy of making every Australian a good rifle shot, and is a member of the local rifle club.

EDWIN WILLIAM WEBSTER PRICE, "Emu" Farm, Mount Barker, is a son of the late William Price, of Penrith, New South Wales, where the gentleman under review was born on September 21, 1889. He received his education at Newington

College, Sydney, and subsequently at the Brisbane Grammar School, Queensland, which institution he left at seventeen years of age. He entered commercial life in the offices of Messrs. Thomas Webster & Co., Brisbane, and for somewhat less than two years was engaged in clerical work in Queensland. Attracted by reports of the favourable conditions

MR. EDWIN WILLIAM WEBSTER PRICE.

of land settlement in Western Australia Mr. Price sailed for Albany and spent a couple of years gaining experience in the farming and fruit-growing industries at Denmark and in the Mount Barker district while looking for an improved holding on which to settle and begin operations on his own account. In 1909 he purchased his present property from Mr. Thomas Barnett, merchant, of Albany, and taking up his residence there at once proceeded further to clear and cultivate this holding. The block contains 525 acres, 70 of which are devoted to tillage, potatoes being the chief crop produced in addition to the grain harvests, although there are already 15 acres under cultivation of fruit-trees. A flock of merino crossbreds is run on the property, chiefly for the production of mutton. Mr. Price takes a prominent part in the rifle club movement in the district, and his abilities as a marksman are readily recognized. In his schooldays he was a good all-round athlete, football being his speciality, and at the present period he devotes a portion of his leisure to the time-honoured game of cricket.

ROBERT ERNEST SPENCER, "Hay River" Farm, Narrikup, is a son of the late Mr. Robert John Spencer, who came to Western Australia in 1829 with his father, the late Sir Richard Spencer, the first Government Resident at Albany. The founder of this family in Western Australia was the first importer of sheep and horses to the southern part of the State, importing in 1831 from England 250 sheep, which were depastured on location 13, where Mr. Spencer's homestead now stands, and which was the thirteenth block of land taken up in Western Australia. This was purchased by Sir Richard Spencer from Sir James Stirling, the first Governor of the State, to whom it was a grant by the Crown. The gentleman under review was educated at Mr. Sweeting's school at Guildford, and at the age of twelve and a half he relinquished his studies to assist in the duties of the farm, his father having died some time previously. Mr. Spencer has spent the whole of his life on this property, which he has very much enlarged, having added four more blocks to the original holding, and he now owns some 1,650 acres of land, which is chiefly devoted to sheep-raising. An orchard of 25 acres also absorbs a considerable amount of time and attention, where apples and stone fruits are cultivated, the latter finding a ready market on the goldfields. Crops are also raised on a small scale. Mr. Spencer was one of the founders of the Mount Barker Rural Association, and for eleven years filled a seat on the Plantagenet Roads Board. He is president of the Narrikup Progress Association, in the foundation of which he was a chief mover, and for a decade he has been connected with the Albany branch of the Australian Natives' Association. His leisure hours are spent mainly in reading, his preference leaning to works of science. Mr. Spencer married in 1901 Celia Alice, daughter of Mr. W. F. Stevens, East Perth.

ARCHIBALD TAYLOR BOOTH, Secretary of the Fruit-growers' Trading and Shipping Company of Western Australia, Limited, and proprietor of "Hillside" Estate, in the Mount Barker district, is a son of Mr. Charles Forbes Booth, commission agent and incorporated insurance broker, of King William Street, London, and was born at Finsbury Park, in that city, on July

9, 1876. He pursued his educational studies at St. John's College and the Grocers' Company School, and after two years of commercial life, at seventeen years of age, was offered and accepted a private secretaryship in London, which post he held for seventeen years. Casting his gaze forward into the future, Mr. Booth perceived that his opportunities in London for securing a competency for his advancing years were few, and being a great lover of horticulture, the idea of turning this hobby to account as a means of livelihood became a settled purpose. Accordingly he made extensive inquiries with regard to the prospects of the fruit-growing industry in different countries, and finding that the outlook for the Western Australian State was considered

W. E. Elston, Wagon.  
MR. ARCHIBALD TAYLOR BOOTH.

very promising he decided to make the venture and remove his family and pursue his fortune in the Antipodes. Arriving in April, 1910, Mr. Booth encountered many initial difficulties and hardships. In the depth of an extraordinarily severe and wet winter he was compelled to live under canvas for many months, separated from his wife and children, whom he had established at Albany. At the end of the year, however, he was successful in securing a small orchard within the town boundary of Mount Barker, upon which he began operations, and subsequently added to this holding, which now comprises about 40 acres of fertile soil, unexcelled in the district for its growing qualities. Already one-half of this

area has been planted with fruit-trees, and the remainder is in preparation for future orchard operations. Mr. Booth has identified himself with the public organizations of the district, and occupied the post of hon. secretary to the Mount Barker Fruit-growers' Association, toward the success of which body he has done much. Prior to his departure from the district to take up his present position he was very prominent in the movement to obtain further railway facilities for the settlers west of Mount Barker, and was hon. secretary of the Mount Barker Railway League, which has for its object the linking up of the great southern line with that of the south-east. He rendered invaluable assistance in the formation of the Fruitgrowers' Trading and Shipping Company of Western Australia, Limited, in July, 1912, and in the following month, in response to the wishes of a large section of the shareholders, he accepted the post of secretary to the new concern. Leaving a manager in charge of his orchard Mr. Booth came to Perth and successfully inaugurated the affairs of the company, which promises to play an important part in the fruit-growing industry of the Western State. To his unquestioned ability Mr. Booth adds the charm and zest of a spirit full of enthusiasm in everything that he takes up, and though making his work his chief hobby, he is always ready to interest himself in any effort for the good of the community. He is an adept at carpentry, and executed all the finishing work of his homestead, which was built to his design. All forms of clean and healthy outdoor sport appeal to him, and he indulges in swimming and tennis for recreation as opportunity offers. In 1902 Mr. Booth married Caroline McKinlay, daughter of the late Dr. J. A. Miller, who filled the post of medical officer to the London Police Force, and there are a son and a daughter of this union.

SQUIRE & YOUNG, general storekeepers, commission and news agents, Mount Barker, Western Australia. The principal store in this rising district, now conducted by Messrs. Squire & Young, originally was opened in the eighties as the first business of its kind to be established at Mount Barker. The founders of the business (Messrs. Scott & Wilson) sold their interests to Mr. J. West,

from whom in turn purchase was made by the present proprietors. These enterprising business men took over what was already a live concern, and concentrated their abilities on extending its avenues of usefulness in every direction, with the result

W. E. Elston, Wagin.  
MR. LEONARD STOCKER SQUIRE.

that in the ensuing years the trade has been doubled. Every effort is put forth by each partner to forestall the requirements of customers, and special lines of goods not usually kept in stock, but which may be asked for, are immediately ordered by wire from Perth, that the reputation for prompt and business-like methods established by the firm may suffer no diminution. All kinds of groceries, drapery, and boots and shoes are carried by the business,

with general ironmongery and a wide stock of saddlery and harness. Wire-netting and wires of every description are stocked, and a large trade is done in this line of goods, which is always in demand by settlers, new or old. Stationery may also be obtained at the store, and there being no registered chemist in the district, a large and representative selection of proprietary and patent medicines, perfumes, etc., forms one of the departments which is most liberally patronized. Messrs. Squire and Young act as local agents for the Massey - Harris farm implement manufactures, for the Commercial Union Fire and Marine Insurance Company, and for Messrs. Henry Wills & Co., wool and skin merchants, fruit exporters, and leading manufacturers for all classes of goods required in the district. They are buyers of all kinds of farm produce, skins, etc., and are continually extending the scope of their operations to include new lines of trade. LEONARD STOCKER SQUIRE is a son of Mr. John Riseley Squire, of Woodville, South Australia, and was born at that place on March 19, 1875. He received his education at the local school, and subsequently attended the Port Adelaide State School, at sixteen years of age being apprenticed to the hardware trade with the firm of W. & T. Rhodes, of Rundle Street, Adelaide. After completing his indentures he gained further experience in the establishment of H. L. Vosz, Limited, and eventually was engaged by the firm of Edward Barnett & Co., of Albany, to take control of their ironmongery department. This was in 1902, and at a later date Mr. Squire

transferred his services to the house of Messrs. Drew, Robinson, & Co., where he acted in the same capacity until his resignation, which he tendered in order to join Mr. Young in partnership in the purchase of the present business. Mr. Squire spends

MR. PHILIP HAROLD YOUNG.

most of his spare time in joinery and general wood work, of which he makes a hobby with profitable results, having manufactured most of his house furniture with his own hands. He supports the local organizations of athletic sport, and finds enjoyable exercise in the game of cricket. He married in 1899 Elizabeth, daughter of William Hutchins, of Queenstown, South Australia, and has four sons and a daughter. PHILIP HAROLD YOUNG, of the above firm, is a son of the late Mr. William Young, of Cooina, Geelong, Victoria, where the gentleman under review was born on March 11, 1877. He received his education at the Geelong Grammar School and left that institution at fifteen years of age to join his brother in commercial pursuits in the Wimmera district, where he gained a comprehensive acquaintance with all the details concomitant to country storekeeping. Owing to the continued droughts in Victoria Mr. Young decided to make a trial of a new country for trading operations, and coming to Western Australia at the end of 1897 he first accepted a position with the firm of Messrs. Millar Brothers, of Denmark, where he acted as accountant in the general store attached to the mill at that centre. For nearly six

MESSRS. SQUIRE & YOUNG'S PREMISES, MOUNT BARKER.

years he continued to fill this post, but eventually resigned upon receiving an offer from Messrs. Edward Barnett & Co. to take charge of their shipping and Customs department at Albany. While engaged in this

service he met Mr. Squire, and an intimacy ensued which later resulted in the present partnership and purchase of the storekeeping business at Mount Barker, which has been ably carried on by them ever since, Mr.

Young taking over as his special department the clerical and accountancy work. In 1899 he married Hetty, daughter of the late Mr. H. Ewels, Chiltern, Victoria, and has a son and four daughters.

### ALBANY.

Albany, a fortified town, is situated in latitude  $35^{\circ} 2'$  south and longitude  $117^{\circ} 54'$  east. As the land at this point, however, stretches out into the Indian Ocean the position is open to ocean breezes from the south,

NATURAL BRIDGE AT "THE CAVES."

east, and west, and the climate is thus rendered the coolest in Australia. The mean maximum temperature in summer time is about  $72^{\circ}$ . King George Sound is a stretch of water some seven miles from north to south and five miles from east to west. It faces south. Princess Royal Harbour opens out to the westward and measures about two miles by three. The town itself nestles between two hills, which rise from the verge of the harbour on the east and the west. The municipality extends to the ocean beach; and beyond, in that direction, the country is drained by two rivers. These are known respectively as the King and the Kalgan rivers. Both traverse extremely fertile country, which good roads intersect, and opportunities thus exist for the most delightful drives imaginable. One drive in particular may be specified. The route skirts the harbour, and then passes into the country, following an entirely different road back to the town—a distance of some 20 miles. A made road, in splendid order, exists the whole way. There are besides many variations of this drive, while by going further afield the virgin bush, with its unknown beauties and wonders, is reached. The summit of Mount Clarence may be attained in easy stages by means of a zig-zag footpath, while an easily graded road is available for vehicular traffic from the eastern side. The southern side of the harbour is likewise not without

its attractions. Here the land is as Nature left it, but the atmosphere is remarkable for its purity, the locality being sheltered from the ocean breezes and richly endowed with floral growth. Further over, on the ocean side, situated some 12 miles from the town, are what are known as "The Caves." These are really remarkable formations in granite, including a natural bridge and other wonders of volcanic origin. A road to the spot has lately been cleared. On the way thither the Little Grove forms possibly what is the most picturesque bush scene in the State. This spot is also reached by boat, and is provided with a jetty, being a favourite picnicking and sports ground. The beauties of the south, however, do not end here, for the Big Grove and Limeburners' Creek further round make equally attractive spots to visit. Middleton Beach, which skirts the Sound, is a brilliantly clean stretch of sand, where the ocean breezes may be enjoyed to the full, while, at the extremity of this, Emu Point, marking the entrance to the King and Kalgan rivers, is a revelation of water beauty. There are two jetties in the harbour running into deep water, the maximum draught for shipping being 33 ft. at dead low water. A choice selection of water trips is offered. Besides the Little Grove, on the

QUEEN'S PARK, ALBANY.

south side of the harbour, there is the Quarantine Station, and the journey there makes an enjoyable launch trip. In the Sound, Frenchman Bay forms a favourite picnicking resort, where Emu Point makes an attractive ending to a longer sea jaunt of two miles and a half. Middleton Beach is accessible by land or water. The

manner in which the harbour and the Sound are protected from sea weather renders both places ideal fishing grounds. In all directions exceptionally good and varied sport of this character is to be obtained, coupled with absolute safety for boating. Devotees of the gun can also find splendid sport in the surrounding districts. Wallaby may be obtained within five miles, while a small extension of that limit will penetrate kangaroo country. Ducks in particular are most plentiful, and no better shooting could be found than exists between the town and Denmark. For lovers of outdoor games it may be mentioned that bowling, croquet, cricket, tennis, golf, and rifle clubs flourish in Albany. Bathing facilities are provided at the municipal baths, at the town jetty, and at Middleton Beach. The two former are equipped with sea and fresh water (hot and cold), while a protected swimming-bath is attached in conjunction with fresh water showers.

Historically, Albany can claim the proud distinction of being the oldest settled portion of Western Australia. It can, indeed, claim three years' seniority of Perth. The development took place under circumstances worth noting. In June, 1825, the French vessels "Thetis" and "Esperance," commanded respectively by De Bougainville and Du Camper, were cruising about the southern coast, and it was at that time strongly suspected that France, recognizing the maritime strength derived from the possession of suitable colonies, desired to found a settlement in Australia, Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, sent Major Lockyer, of the 57th Regiment, to found a settlement at King George III. Sound, so named by Captain Vancouver in 1791. The party comprised all told about seventy-five persons, made up of officers and rank and file of the 39th Regiment and convicts. The expedition, consisting of H.M.S. "Fly" and the brigs "Amity" and "Dragon," sailed from Sydney on November 9, 1826, and landed at the Sound on the following Christmas Day. Only eighty-six years ago, and it took seven weeks to voyage from Sydney to Albany. To the town which was built was given the name of Frederick Town, but the name was subsequently changed to Albany. Having made all necessary arrangements, Major Lockyer left the charge to Captain Wakefield, who was relieved by Lieutenant Sleeman, and he by Captain Barker. The convict settlement remained there until the year 1831, when it was withdrawn and the settlement placed under the control of Captain Stirling as part of the new colony of Western Australia.

During the next ten years a road was opened up between Perth and Albany, and on June 23, 1841, an overland monthly mail was established. Meanwhile the back country had been opened up, and this and the whaling industry caused the town to progress. In July,

1852, the Royal Mail S. N. Company's s.s. "Australian" landed the first English mail at Albany. It took two horses six days and a half to carry the mail to Perth. The following month the "Chusan," the first P. & O. steamer to visit Australian waters, reached the harbour from Singapore. In October, 1856, a contract was entered into between the Home Government and the P. & O. Co. for a direct service with the Australian colonies, calling at Albany. Later on the Orient Company shared in the work to give a weekly mail service from England. The French and German mail steamers also used the port, and these connections were retained until 1900, when political influence secured the substitution of Fremantle for Albany as the port of call. To-day Albany is used by most vessels taking the Cape route, including those of the White Star line, the Peninsular and Oriental Company's Branch Service, and the Blue Funnel Line.

The Legislative Council in May, 1870, authorized the construction of a telegraph line from Perth to Albany. This was opened on December 26 of the following year, and on January 1, 1875, the first telegraph post in the extension to Eucla was erected by Governor Weld. An inscribed stone outside the post office marks the spot to this day. At the end of 1877 telegraphic communication was opened with South Australia. The contract for the construction of the Albany-Beverley railway, on the land-grant system, was let to Mr. Anthony Horden on October 25, 1884, the first sod was turned just two years later, and the line was opened for traffic on June 1, 1889. The railway and lands of the company were purchased by the Government in December, 1896, for the sum of £1,100,000.

As the gate of the colony up to the year 1900, Albany has from time to time been visited by all the distinguished visitors travelling to Australia. On May 16, 1881, their Royal Highnesses Prince Albert Victor and Prince George of Wales arrived in H.M.S. "Bacchante," which put into port after suffering a very stormy passage round Cape Leeuwin. The vessel left on June 10. Their Royal Highnesses were hospitably and pleasantly entertained here, and did not proceed to Perth. By a strange coincidence adverse weather induced King George, then Duke of York and Cornwall, to pay a second visit to Albany in 1901. His Royal Highness and the Duchess were at the time returning in H.M.S. "Ophir" from the East, whither they had gone to be present at the celebrations attending the establishment of the Commonwealth. On the way out the Royal yacht anchored for a night in the Sound, but returning she was bound for Fremantle. The prospect of bad weather, however, led to the vessel putting in at Albany. She berthed alongside the Deepwater Jetty on Saturday, July 20, and after spending a day here their Royal Highnesses and suite proceeded to Perth by special train.

Another notable event, this time of international importance, was the visit of the American battleship fleet in September, 1908. The fleet, commanded by Admiral Sperry, and consisting of sixteen vessels, arrived in King George Sound on September 12, and the ships were brought into Princess Royal Harbour to coal, as many as eight of them being inside at one time. H.M.S. "Gibraltar" was in port during the visit, and one morning there were, beside a White Star liner, two storeships and three oversea colliers attached to the fleet, in the harbour. The battleships required a depth of water exceeding 29 ft., and the whole of the operations were carried through without a mishap. The fleet remained exactly a week, and in that time upwards of 25,000 tons of coal were handled. The reception given the American visitors by the Government was on a lavish scale.

of the annual festivals in the State. Since 1912, however, the week has been discontinued in favour of an Albany season, commencing about the second week in February and lasting till towards the end of March. As this period is usually attended by the worst climatic conditions in other parts of the State, but by the best in Albany, there is every indication that the "season" will be even more popular than the "week."

Surrounding Albany are numerous rich-soil flats, formed on the edge of swamps, which retain their moisture during the whole of the summer months. These flats, when drained, are suitable for intense culture, potato and vegetable-growing. When the water recedes during the summer months, the receding water may be followed up and crops grown during the driest months of the year. The swamps are capable of producing heavy yields of potatoes, cabbage, cauliflower, turnips, and fodder

*Photo by Imperial Studio.*

ALBANY, FROM MOUNT MELVILLE.

Albany has been in possession of municipal government for upwards of half a century. At first the local body was known as the Town Trust, but in 1871 a Municipal Council was granted. The Imperial authorities defended the harbour some twenty years ago, and when the Commonwealth was established the forts were only handed over on the understanding that they were to be maintained in the same state of efficiency they were then.

As a health resort Albany is unequalled in Western Australia, and probably not surpassed by any seaside town in the Commonwealth. With this knowledge and with the desire to afford every possible inducement to visitors, the Municipal Council has strained every nerve to make the town attractive. For twenty years past it has been the custom to hold an "Albany week" during January, an event which came to be recognized as one

plants. Throughout the year a large quantity of vegetables are forwarded to the goldfields, where they are so much appreciated by the residents by reason of their exceptional quality. As summer gardening is general local producers have the market at that time much to themselves, and high prices are obtained.

About 38 miles to the westward of Albany is the "Denmark" Estate, recently purchased by the Government and divided into blocks of suitable size for intense culture. The timber has been ring-barked and partially cleared from these blocks and the scrub cut down, so as to enable the selector to get an early start, and thereby obtain a return from his land at an earlier date than if he had to start by clearing the virgin ground. In this district some of the best potatoes produced in the State are grown, and English grasses will grow to perfection. The country has a splendid rainfall of about 40 in. per

annum, and is well watered by numerous permanent streams, from which water can be obtained for irrigation purposes during the summer months. This country is

RESIDENCE OF THE HON. C. MCKENZIE, M.L.C., ALBANY

The Honourable JOHN ARTHUR WRIGHT, M.I.C.E., M.I.C.E.L., etc., now living in retirement at Albany, is a son of the late John Wright, M.I.C.E., of Rochester, England, and was born on November 25, 1841, at Dover, where his father was residing whilst filling the post of engineer of the south-eastern railway line, his name being one of the most eminent among his profession at that period. The gentleman under review received his early education by private tuition, subsequently attending the Queen Elizabeth School at Cranbrook and other scholastic institutions. He was articled to the late Mr. Joseph Cubitt, at that time vice-president of the Institute of Engineers, and, upon the completion of his indentures, embarked upon a wide engineering practice which, beginning in Wales, led him to Spain, Russia, and France, and eventually to Western Australia. Mr. Wright arrived in this State to take up the position of Engineer-in-Chief, Director of Public Works, and Commissioner of Railways, being selected to fill that post by Sir Charles Hutton Gregory, Consulting Engineer for the Colonies. He held these joint offices until his acceptance of the post of general manager to the great southern railway, when he was appointed consulting engineer-in-chief to the colony, with permission to retain the title of honourable for life. He remained in charge of the construction of the great southern railway from its inception until the

completion of the work, and when the railway was taken over by the Government in December of the year 1896 he received the appointment of Government Resident at Albany, which he held until his retirement in 1908. Mr. Wright is associated with various public organizations, being a life president of the Albany Club and first District Grand Master of Freemasons of the English Constitution in Western Australia, and upon the constitution of the Grand Lodge of Western Australia was honoured by being created Past Grand Master of that body. In the year 1870 he was married to Catherine, daughter of the late Peter Whittington, M.D., of Tuxford, England, and has a family of two sons and one daughter.

Councillor GEORGE JAMES HILL, representing North Ward in the Albany Municipal Council, is a son of the late Mr. Thomas Hill, of Adelaide, South Australia. Born at Freeling, in the Central State, on April 27, 1857, the subject of our review, at the close of his education went to work on his father's farm, and was engaged in this manner from his early teens until he reached the age of twenty-three, when he relinquished farming pursuits in favour of the butchering trade. In partnership with his brother, Mr. F. J. Hill, who is still in business at Hamley Bridge, South Australia, he carried on a butchering and bakery business for some six or

also admirably adapted for dairying purposes. Immense supplies of fodder suitable for dairy cattle can be grown all the year round, and it will not be long before the enterprising settlers who are now taking up land will be producing large quantities of butter, which will be known as Denmark butter, and will help to keep the imported article out of our local market. Once a start is made in the dairying industry, a butter factory built, and some well-bred cattle obtained, the industry will go forward by leaps and bounds.

In addition to the Denmark country there are large areas in the vicinity of Albany suitable for dairying purposes. On the hills to the north of Albany and on the banks of the King and Kalgan rivers are to be found some ideal spots for the growing of fruit-trees, especially apples, which, owing to the mildness of the climate, do remarkably well. The trees make rapid and strong growth, and in a very few years yield excellent crops of the primest fruits.

seven years, at the end of which period the connection was dissolved and the gentleman under review found his way to the capital, where he was engaged in the same line of trade in Pirie and Hindley Streets

Imperial Studio, Albany.  
MR. GEORGE JAMES HILL.

for about eight years. Selling out in 1897 he came to Western Australia, having been commissioned by Messrs. Clutterbuck Brothers, machinery merchants, of Adelaide, to look into their business at Esperance. This he closed, and subsequently became connected with the same class of business at Albany, with a partnership interest in the same firm, an arrangement which continued for over two

years. In 1900, upon the dissolution of partnership, Mr. Hill opened on his own account in York Street, and has since carried on a thriving business from that centre. Since his advent to the town he has always displayed an active interest in public affairs, and in 1910 was requested to allow himself to be nominated as a candidate for North Ward in the Municipal Council, since when he has represented this Ward continuously. For some years he has been a member of the Masonic craft. Most of his hours of recreation are spent on the waters of the harbour, where he has a motor launch and yacht, his three sons, who assist him in the conduct of the business, joining in this pastime. Mr. Hill married in 1881 Minnie, daughter of Mr. George Gitsham, of South Australia, for many years a railway station-master in that State. He has four sons, one of whom is an orchardist on the Kalgan River.

Councillor CHARLES WILLIAM REDDIN, who represents the rate-payers of West Ward in the Municipal Council of Albany, is the eldest son of the late Mr. Benjamin Reddin, a member of the pilot service at the time of its being under British authority. He was born at the southern seaport on September 23, 1868, and received his education at the Christian Brothers' School at that place, completing his scholastic studies at Adelaide, South Australia. When fifteen years of age he entered upon seafaring pursuits, and followed marine life for over twelve years, relinquishing this means of livelihood in 1889 in order to settle in Western Australia. Here for a time he "roughed it," turning his hand to various occupations, and during this period found himself in the whirl of the early rush to Coolgardie, where he met with some success in prospecting. After a visit to the Eastern States, in 1895 he again returned to his native place, where he built up a thriving carrying business, conducting the same for about seven years. At the end of this time the position was offered him of manager of the White Hart Hotel—now known as the White Star—which was then the property of the Southern Brewing Company, on whose behalf he carried on the house for four years. In 1906 he took over the interests of the business on his own account, and four years later pulled down the old

building and erected the present convenient premises, where he has continued ever since. Mr. Reddin has always taken considerable interest in the town of his birth, and has busied himself in affairs concerning the welfare of the community. In 1909 a vacancy occurring in the municipal chamber, he was requested to contest the election, and was returned as representative for West Ward, upon the following occasion being re-elected unopposed. He has been a warm supporter of the new water supply scheme and the fine new municipal baths, which have been the subject of high encomiums, owe much to his persistent advocacy. He is a member of the Albany branch of the Australian Natives' Association, and occupies the position of hon. secretary of the Princess Royal Sailing Club, of which he was one of the founders. In 1887 Mr. Reddin married Charlotte, youngest daughter of the late Mr. Patrick Garrity, of Mount Barker district, Western Australia, and has four daughters.

Councillor ERNEST GEORGE MCKENZIE, A.S.A.S.M., representing East Ward in the Albany

Imperial Studio, Albany.  
MR. ERNEST GEORGE MCKENZIE.

Municipal Council, is a son of Mr. John McKenzie, one of the best-known identities of the district, whose biography appears elsewhere in these pages. He was born at Albany on July 21, 1878, and received his education at the Albany Church of England Grammar

School. At seventeen years of age he was apprenticed to the engineering trade in the workshops of the great southern railway at Albany, and upon the completion of his articles proceeded to the Norseman and eastern goldfields, where he was engaged in engineering work in the mines for over three years. Tiring of the monotony of this occupation, and for the sake of enlarging his experience, he accepted the position of engineer on board the s.s. "Herbert," one of the Adelaide Steamship Company's vessels, and, upon leaving this service, entered the South Australian School of Mines at Adelaide. Having obtained his diploma as Associate in 1902, Mr. McKenzie returned to Western Australia, where he was offered the post of State battery manager at Sandstone and Menzies, which he filled for nine years, relinquishing it in order to return to his native place. He holds large vested interests in and around Albany, the supervision of which has occupied his attention since his return; and in addition he has actively concerned himself in the welfare of the town and district. In 1911 he was honoured by election to the Council. He is also a member of the Chamber of Commerce. As hon. secretary of the Albany Race Club he displays a great interest in sporting affairs, but for personal diversion favours aquatic, and is vice-president and handicapper of the Albany Amateur Swimming Club, and further acts as committeeman on most of the other athletic clubs. He is a prominent member of the Australian Natives' Association, and recently has been elected to the vice-presidency of that organization in Albany. Mr. McKenzie married Isabella, second daughter of the late Mr. Thomas Pearson, of Parkside, South Australia, and has a son and a daughter.

Councillor WILLIAM JOHN DAY, representing East Ward in the Municipal Council of Albany, was born at Mount Gambier, South Australia, on June 30, 1869. He is a son of the late Mr. Charles Day, a well-known resident of the Central State for many years, and attended a school in his native town, which he left at an early age to begin his apprenticeship to the bakery business in the same place. Upon the completion of his indentures he turned his attention

for a short time to agricultural pursuits on his father's farm, but after a couple of years relinquished this occupation in favour of his trade. After working as a journeyman in various towns of South Australia for some time, in 1888 he went to Victoria for the sake of acquiring further experience and to acquaint himself with the conditions

Bartletto, Perth.  
MR. WILLIAM JOHN DAY.

prevailing in other parts of the country of his birth. At the end of 1891 he left for Western Australia, calling *en route* at his native State, where he remained for a few weeks. July 20, 1892, witnessed his arrival at Albany, where he at once obtained the position of foreman in the establishment of Mr. F. C. Greeve, and for nearly five years the work of this factory was in his hands and under his supervision. Resigning this post, he threw himself into the project of building up a business on his own account in partnership with Mr. Phillips, who within five years was bought out by Mr. Day, by whom the business has since been carried on with conspicuous success, it being now one of the largest bakeries south of Perth. Mr. Day has always availed himself of every opportunity that presented itself to assist in the improvement of the social conditions of the community of which he formed a part, but the claims of his rapidly expanding business prevented him from taking an active part in public affairs until 1909, when for the first time he allowed himself to be nominated for a seat in the Municipal Council of Albany. Upon signifying

his consent he was elected as representative for East Ward, and has since proved himself well worthy of the confidence of his electors. He is a prominent member of the Masonic fraternity, and in connection with the Plantagenet Lodge has received all the honours at the disposal of the local body. He is also a Past First Principal of the Royal Arch Chapter. To Mr. Day reverts the sole credit of founding a local branch of the Ancient Order of Foresters in Albany, and his interest in this organization continues unabated. He has passed through the various chairs of the Order and is now the oldest Past Chief Ranger in the Court. An elder of the Presbyterian Church, he has been connected with the progress and management of its affairs for nearly twenty years, and is a valued member of this communion. He has distinguished himself in rifle-shooting, in which he is an enthusiast, and has occupied a seat on the committee of management of the local rifle club for a considerable period. He holds the marksman's badge of efficiency—the highest qualification in rifle-shooting obtainable in the State. Mr. Day married in 1896, and has three sons and two daughters.

Councillor ALFRED JOSEPH COLLINS, who represents North Ward in the Albany municipality, is a son of the late Mr. Christopher Collins, of Bendigo. Born at Melbourne on January 23, 1879, when quite young he was taken by his parents to Bendigo, where he pursued his scholastic studies. In his early teens he was apprenticed to the bootmaking trade in Bendigo, and until reaching man's estate was identified with that calling. Leaving Victoria in 1899 he came to Western Australia, and being smitten with the gold fever, plunged into work on the fields, by turns taking employment on the mines and prospecting on his own account. His efforts proving void of success he returned to his trade, and accepted a position as manager for the firm of Messrs. Long & Co., of Kanowna, which he held for three years. An opportunity presenting itself for him to enter business on his own behalf, he decided to avail himself of it, and purchasing the goodwill, interest, and stock-in-trade of Mr. Gray, of Kanowna, for three years carried on business with considerable success.

Perceiving signs of the decline of this field he disposed of his trading interests, and in 1907 came to Albany, where he established himself in the boot and shoe business on Stirling Terrace, and has since built up a very substantial connection. Since his advent to the Western Australian State Mr. Collins has taken an active interest in the welfare of the community, and was created a Justice of the Peace for the eastern goldfields by the Moore Government, which honour, however, he resigned upon his departure for the south coast. He was also a member of the Kanowna Municipal Council for a couple of years. In 1910 he was elected by the ratepayers of North Ward to represent their

Imperial Studio, Albany.  
MR. ALFRED JOSEPH COLLINS.

interests in the Albany Council, and has since proved himself well worthy of their confidence. Mr. Collins discharges the duties of postal vote officer for the State. In his younger days he was prominent in football clubs in Bendigo and the eastern goldfields of Western Australia, and has always been a cordial upholder of all forms of clean sport. In 1907 he married Nellie, daughter of Mr. Alfred Perris, of Korumburra, Victoria, and has two sons.

ERNEST BRAID PATON, Town Clerk and Engineer to the town of Albany, is a son of the late Mr. John Paton, of Sydney, and was born at East Maitland, New South Wales, on

October 26, 1865. He was educated primarily at the Church of England Grammar School in the town of his birth, concluding his studies at Royston College, Sydney, and subsequently was articled to the City Council of Sydney to be trained as an engineer in the department of the city surveyor. Upon the completion of his five years' articles he was appointed on the professional staff of the city council, and held the position of engineer and draughtsman in connection with that body for eight and a half years. Having received an offer of the post of municipal engineer to Broken Hill, he accepted it, and the five and a half succeeding years were spent in the Barrier city. In 1901 he was offered his present appointment in Albany, Western Australia, and has since applied the whole of his time and energy to the efficient discharge of the duties of this important office. He is now in his thirtieth year of municipal official service, forming an

*Imperial Studio, Albany.*  
MR. ERNEST BRAID PATON.

unbroken record, in itself a testimony to the value of the expert knowledge and experience he is able to bring to bear on the various enterprises that he takes in hand. His first important work in Western Australia was the construction of the storm-water drainage scheme at Albany, costing over £5,000, which has proved an inestimable boon to the community. The splendid condition of the roads surrounding Albany as well as the fine streets of the town testify to the skill and judgment that governed their

construction, while the tennis courts in Lawley Park are also a monument to the credit of Mr. Paton, over 10,000 cubic yards of earth and sand having been removed to bring the courts and their surroundings to their present state of perfection. The fine new city baths were designed by him, for which it is claimed that they are second to none in the State. Mr. Paton is an enthusiast in his profession, and gives almost the whole of his time and attention to the duties of his office. Even his leisure is spent in experimenting in mechanical engineering in its various branches, and his private workshop is fitted up with all kinds of elaborate and up-to-date appliances. He finds recreation in rifle-shooting, and for nine years in succession has been elected to the position of captain of the Albany Rifle Club, also holding the captaincy of the local fire brigade. A Freemason for a quarter of a century, in the local lodge he holds rank as Past Master, and has also attained the high distinction of First Principal in the Royal Arch Chapter. In 1901 he married Mabel, daughter of the late Mr. Lewis Noske, of Adelaide, and has two sons.

district clerk and engineer to the Terowie District Council in South Australia, and continued to fill this post until 1895, when he received the appointment of town clerk and engineer at Esperance Bay, Western Australia. After nine years at this post he retired from the office in order to enter into business on his own account as hotelkeeper at Albany, conducting the Middleton

*Imperial Studio, Albany.*  
MR. HENRY CHARLES SIMS.

HENRY CHARLES SIMS, J.P., ex-Mayor of Albany, is a son of the late James Sims, of Brynmawr, Monmouthshire, Wales, where he was born on July 6, 1860. His father died shortly after his advent into the world, and when four years of age he was brought to Australia by his mother, the party also including two sisters. The family took up their residence in South Australia, and here young Sims received his education under the guidance of the late Thomas Caterer. At the close of his scholastic career he entered the service of Messrs. Swan and Walker, builders, railway and road contractors, with whom he spent a considerable period, passing from this employ into that of Messrs. Tidswell Brothers, where also he gained valuable knowledge of the trade. In the early days of his apprenticeship the construction of the Adelaide deep-drainage scheme was being carried forward, and much of his initial experience was obtained in connection with these important works. At twenty-seven years of age Mr. Sims was offered and accepted the position of

Beach Hotel for nearly two years. In 1907 he took over the lease of the London, and has continued to carry on this hotel ever since. Mr. Sims has always taken a keen interest in public affairs, and was elected Mayor of Albany before his third year of residence in the town, an honour which was repeated in the following year, when he was re-elected unopposed. He is a member of the Chamber of Commerce, of which body he was president for a term; and holds Commissions of the Peace, not only for the State of Western Australia, but also for New South Wales and South Australia. He is a foremost worker in connection with the Albany Celebrations, and is recognized as one of the prime movers in all efforts for the advancement of the town and district, the harbour improvements, water supply scheme, and other prospects for Albany's advancement owing much of their success to his diligent advocacy. Mr. Sims is a lover of art, and delights in making collections of antique engravings and other works. Rose culture is his favourite recreation, but he is also

very fond of horses, and devotes a good deal of his leisure to driving. In 1887 he married Emily, daughter of the late Herbert Hunter, of Clare, South Australia, and has a surviving family of three daughters.

WILLIAM MAWSON, who occupied the mayoral chair of Albany in 1911, is a son of the late Mr.

MR. WILLIAM MAWSON.

Christopher Mawson, of Burghwallis, Yorkshire, England, and was born at that place on June 23, 1866. He received his education at the Methodist School at Castleford, in the same county, and at fifteen years of age was apprenticed to the carpentering and joinery trade. At the termination of his six years' indentures he left the Old Country for Western Australia in December, 1888, and settled at Albany. Here he has continued with only one break, when he took up the work of a home missionary on behalf of the Methodist Connexion, spending three years in this way at Beverley. Returning to the seaport, he followed his trade, and for the past twelve years has been successfully engaged in building and contracting work in Albany and the surrounding district. About 1902 Mr. Mawson, at the solicitation of the advocates of temperance in the community, contested and won the seat for North Ward in the Albany Municipal Council, and at the two ensuing elections was returned for this division unopposed. He was repeatedly requested to be nominated for the

BBB

mayoralty, but declined until 1911, when he acceded to the desire of a large section of the public and accordingly was returned. Having completed his term of office he refused to allow himself to be nominated afresh, and has not since resumed his connection with the council. During his year of office the chief project under consideration was that of a water scheme for the town of Albany, and under his initiative, and largely as a result of his unceasing efforts in that direction, the council decided unanimously in favour of the Two People Bay Scheme. Before retiring from the chair he saw the municipal governing body constituted a water board for the town, and the scheme is now being proceeded with, and will be completed in the near future. At the Legislative Assembly elections of 1911 Mr. Mawson was a candidate in the Liberal interest, but was defeated by the sitting member, Mr. W. Price. He is a member of the council of the Chamber of Commerce and president of the affiliated progress associations of the district. He holds the offices of circuit steward and local preacher in the Methodist Church, and gives the greater portion of his spare time to work in connection with that organization. In 1888 Mr. Mawson was married to Esther, daughter of Mr. George Milner, of Selby, Yorkshire, and has a family of three sons.

The late WILLIAM HENRY ANGOVE, J.P., was born in the village of Petertavy, Devonshire, England, on June 19, 1850. He was a son of the late Mr. Thomas Angove, who came to Victoria with his family and settled at Clunes, where he occupied the post of mining manager for a number of years, eventually following his sons to the Western State, where his death occurred. Mr. W. H. Angove was educated at the Government school at Clunes, subsequently studying under private tuition, and at the Ballarat School of Mines. He started life as mining and land surveyor under the late Mr. John Phillips, and in 1879 came to Western Australia, arriving at Perth on the day that the first railway contract for the State was signed. Mr. Angove joined the Lands Department of the Civil Service, where he remained for two years, at the end of that period being asked by the late

Mr. Alex. Forrest to join him in partnership. This connection extended over three years, being dissolved upon the appointment of the firm as surveyors to the Great Southern Land Company, when the partners considered it advisable to work independently at each end of the territory. Mr. Forrest remained at Perth and Mr. Angove took up his residence at Albany, where he engaged in the work of the Land Company, which absorbed the whole of his energies for a considerable time. Upon the opening of the Dundas and Norseman mining fields he proceeded to the scene of activity and undertook all the early surveys in connection with this country. Upon the taking over of the Western Australian Land Company's concessions by the Government he was appointed to the control of the land office, part of his duty being the classification of the lands surrounding the southerly portion of what is

Imperial Studio,

Albany.

MR. WILLIAM HENRY ANGOVE.

now the route of the great southern railway line. At the time of his death Mr. Angove occupied the position of Government contract surveyor for the southern district, and also carried on in private practice. During the course of his career he tutored several now noted surveyors in the elements of the profession, among whom may be mentioned Sir Newton Moore, present Agent-General for the State, and he disinterestedly aided with expert advice on geographical position, etc., many of the prominent

and successful settlers in the great southern district now holding the choicest localities. Mr. Angove in 1908 was elected to represent the rate-payers of West Ward in the Council Chamber of Albany. He rendered the town a lasting service by fathering the local water supply scheme, which has proved of such enormous benefit to the citizens, and his assistance in any movement for beautifying the town or advancing its interests was ever cordially given. He was appointed a Justice of the Peace by the Forrest Government at the time of the formation of the Norseman gold-field, and received his commission for the whole of the State from the Moore Administration; and for about fifteen years was a member of the local Licensing Bench. Mr. Angove married in 1876, in Bendigo, Emily, daughter of the late Mr. James Ripper, of Ballarat, Victoria, and had four sons and four daughters.

**JAMES GRIBBLE**, who has filled the post of municipal auditor of Albany continuously for over thirty years, was born at Mount Blackwood, Victoria, on July 4, 1855. He is the eldest son of the late Mr. Charles Gribble, of that place, an early Victorian settler, who came from Cambourne, Cornwall, England. At the close of his

MR. JAMES GRIBBLE.

education which he pursued in his native town the gentleman under review in November, 1878, left the eastern State for Western Australia, and upon arrival settled at

Albany, where he occupied the position of accountant to the firm of McKail & Co., prominent merchants of that time in the southern seaport. Two years later he transferred his services to the firm of Messrs. A. Muir & Sons, and has continued in this connection ever since. He is also the holder of various agencies for well-known firms and companies, being local representative on behalf of the National Mutual Life Association of Australia, and acting in a similar capacity for the London and Lancashire Fire Office. As far back as 1882 he was elected to the post of auditor to the Albany Municipal Council, the duties of which office he has discharged meritoriously and without any break up to the present time, and acts in a similar capacity to the local roads board, his term of service in this body having extended over six years. He is a member and auditor of the local mechanics' institute, and also of the horticultural society and of the Albany branch of the Independent Order of Odd-fellows, with which he has been connected for over twenty years. In his younger days Mr. Gribble was a participant in most forms of outdoor sport, and in cycling was much to the fore, being a winner of many trophies for his achievements in this line. He now makes a hobby of practical floriculture, and has been awarded numerous prizes for chrysanthemums, ferns, fuchsias, etc., of his own growing. In 1881 Mr. Gribble married Elizabeth, daughter of the late Mr. Robert Muir, of Albany, who came to Western Australia among the earliest of the settlers, and has two sons and three daughters.

**JOHN NORMAN, JUN.**, Chairman of the Albany Roads Board, is a son of Mr. John Norman, postmaster, of Albany, whose biography appears elsewhere in these pages. He was born in the southern seaport on November 1, 1884, and pursued his scholastic studies at the Albany Collegiate School until he reached the age of fifteen, when he became connected with the Postal Department under his father. Having continued in this service for nine years he retired upon attaining to the rank of relieving postmaster in 1909, and purchased a stationery business at Albany in conjunction with his younger brother, which he

has carried on successfully ever since. In 1911 Mr. Norman was returned as a member of the Albany Roads Board, and during his first term of office was honoured by election to the chair. He is a leading member of the Princess Royal Sailing Club, in which he discharged the duties of honorary secretary for two years, and is now a committeeman. He gives a considerable amount of time to church work and fills the offices of circuit steward and local preacher in the Methodist Connexion at Albany. In 1910 he married Kathleen, daughter of Mr. Walter Kemp, of Esperance, and has a son.

**FRANK RAWLING DYMES**, M.A. (St. John's College, Cantab.), Barrister-at-Law, Inner Temple,

MR. FRANK RAWLING DYMES.

London, and general practitioner of the Supreme Court of Western Australia, was born on October 22, 1849, at Madras, India, his father, the late Daniel David Dymes, being a merchant of that city. He was educated at Eton and Cambridge, and was called to the Bar in 1870, subsequently practising in England for some short time. After spending several years in travelling, during which he visited all parts of the world, Mr. Dymes in 1883 came to Western Australia, and settling at Albany established himself in professional practice, where he has continued ever since. His residence at this seaport has now extended over twenty-eight years, and few men are better known in the community.

which he has endeavoured to serve by every means in his power. He was one of the first to recognize the possibilities of the future for the beautiful little town, and actively advocated the erection of buildings worthy of the natural advantages of its position and fine harbour. He is keenly interested in the formation of a park on the King River, to which he has given the name of "Dymesbury Park," and where he is endeavouring to demonstrate the value of cultivated English grasses of different varieties. For many years he held the official position of consular agent in Albany for the United States of America, and acted in that capacity upon the advent of the American Fleet in 1910. He is commodore of the Princess Royal Sailing Club, and a patron of the local race club, being a cordial upholder of all forms of clean sport. He is fond of horseback exercise, and his love of our equine friends leads him to co-operate in those forms of recreation in which they play a leading part. In 1906 Mr. Dymes married Ellen Belinda, only daughter of the late John Hassell, of "Kendenup."

**ALGERNON CHARLES BRAHAM**, barrister and solicitor, Albany, is a son of the late Mr. David Braham, a member of the

MR. ALGERNON CHARLES BRAHAM.

same profession, then practising in Melbourne, Victoria, where the gentleman under review was born on November 12, 1877. He pursued his scholastic studies at Geelong

BBB2

College, subsequently becoming a student at the University of Melbourne, where he qualified for the Bar in 1904, previously having served articles for three years with the firm of Braham & Pirani, of that city. After leaving the University he established himself in practice at Bairnsdale for a few months, when the brighter prospects of the Western State drew him to its shores. Upon arrival at Perth in 1905 he fulfilled the necessary probationary service in a legal office, for this purpose accepting a position with the firm of Haynes & Robinson, of Albany, from which he was admitted to the Western Australian Bar. He was then identified for a short time with legal offices in Perth and Broome, and in 1909 received the offer of the management of the Albany practice above-mentioned, which he accepted, later being admitted as a partner in the firm, which is now carried on under the name of Haynes, Robinson, and Braham. He is a member of the Albany Club, and in affairs of sport is a genial advocate of all forms of clean and manly outdoor recreation. In his schooldays he was not only one of the most successful students, but won an enviable popularity among his fellows, and during his final year filled the position of captain of the school.

**HERBERT THOMAS OFFORD**, engineer, Albany, was born at Norfolk, England, on September 24, 1857, being a son of Mr. Thomas Offord, who followed the calling of nurseryman at Swaffham, in that county. Educated at Merry's Private School on London Road, in his native town of King's Lynn, at the age of sixteen he was apprenticed to the mechanical engineering trade in the same place, and served a term of five years under the management of Dodman's Engineering Works. Having completed his indentures, for a time he specialized in model-making, recuperating from the strain of such work by developing a small farm which he had acquired in the neighbourhood of Swaffham, where his father now resides. In 1886 he severed his home ties and came to Western Australia, arriving at Albany by the steamer "Elderslie" in the early part of 1887. Taking up his residence in the southern port he became engaged for a time in the construction of the great southern railway line, and in 1889 opened on

his own account, establishing the nucleus of his present engineering works in Albany. From a modest beginning Mr. Offord, by dint of unstinted energy and experienced knowledge of his work, has gradually ascended the ladder of success, and now commands not only all the shipping work of the port, in which his firm is markedly successful, but practically all the engineering trade of the south coast. To such large dimensions has his business attained that he has been unable to spare time for outside duties, though on frequent occasions he has been approached by his fellow-townsmen with requisitions to allow himself to be nominated for various public or semi-public offices. He is essentially a home-loving man, and finds his chief recreation in his family circle, giving a portion of his leisure to the

Imperial Studio, Albany.

MR. HERBERT THOMAS OFFORD.

perusal of works of a scientific character. In 1884 Mr. Offord married Charlotte Catherine, daughter of the late Mr. Thomas Ellis, naturalist, of Swaffham, who did a considerable amount of research for His Late Majesty King Edward VII. before he came to the throne. He has a family of two sons (who assist him in the business) and three daughters.

**JOHN ROBINSON**, senior partner of the firm of Drew, Robinson, and Co., of Albany, was born at Belfast, Ireland, in 1840 and educated privately in his native city. After six years spent in a commercial

house he joined the staff of the Northern Bank in a clerical capacity, and serving six years at the head office at Belfast received promotion to the post of manager at Ballybeg, County Monaghan, which he retained for five years. Ill-health forced Mr. Robinson to retire from the Bank's service and seek brighter climes, and with this end in view he turned his face towards the land of the Southern Cross. He reached Melbourne in 1873, and joined the staff of the National Bank, shortly afterwards being transferred to the management of the Blackwood branch of that institution. The continued unsatisfactory state of his

*Bartletto,* *Perth.*  
MR. JOHN ROBINSON.

health led to Mr. Robinson being appointed manager at Albany, where he took up his duties in June, 1878, and remained until 1883, when he resigned in order to enter into partnership with the firm of McKail and Co., general merchants. Five years later he relinquished this connection and entered into partnership with Mr. Charles Drew, now of South Australia. This gentleman retiring in 1897 Mr. Robinson purchased his interest in the business, and after two years admitted his son into partnership, the firm trading under the old title of Drew, Robinson, and Co. For thirty-four years Mr. Robinson has been a resident of Albany, during which period, though not coming publicly before the community, he has exerted a definite though unostentatious influence upon the life of the town. His delicate health has precluded him from

undertaking many prominent official positions, but he has filled the post of chairman of the education board for some years, and did valiant service for the local mechanics' institute while presiding over the affairs of this body. During the whole of his life he has been prominently connected with the Methodist Church, and has filled every position of trust and honour open to a layman not only in Albany, but in Victoria and Ireland. Although transplanted to Australian scenes so long ago, he still retains a strong affection for the land of his birth, and has twice revisited his native country, the first time in 1890 and again in 1912. In 1862 he married Margaret, daughter of the late Mr. Robert Thomson, linen merchant, of Belfast, and has two sons.

ROBERT TRAIL MUIR, of Albany, is the third son of the late Mr. Robert Muir, J.P., who came to Western Australia with his father, the late Mr. Andrew Muir, by the sailing vessel "Ganges" on January 18, 1844, and settled at Cape Riche. The late Mr. Andrew Muir was a native of Fifeshire, Scotland, and may be reckoned among the hardy band of pioneers of Scottish descent who left their native heath to carve out a destiny for themselves and their children in the Land of the Southern Cross. After a few years' residence at Cape Riche Mr. Andrew Muir rented a farm on the Hay River, and later made a home at Forest Hill, Mount Barker. In course of time other stations were taken up by the family at Lake Muir and Deeside, and in 1866 a general merchant's business was established at Albany, which in 1884 was taken over by the late Mr. Robert Muir and carried on by him under the old title of A. Muir & Sons. The latter gentleman was first employed by Mr. George Cheyne on his station at Cape Riche, and five years later took up land at Hungerup, whence he accompanied his father to Forest Hill. This estate is now in the possession of Mr. Andrew Muir, eldest son of the late Mr. Robert Muir. The Eucla country was also pioneered by the Muir family, and for many years the late gentleman paid regular visits to the property in this district. He held membership in the Albany Town Trust in 1868 and 1871, and was appointed first chairman of the Municipal Council at its inception,

an honour afterwards several times repeated. In 1891 he was elected Mayor of Albany, and for a time was a member of the Plantagenet Roads Board, also holding a Commission of Justice of the Peace. His death occurred in 1904. The subject under review was born at Albany on August 1, 1860, and received his education at the same place. Subsequently he became connected with the business house of Messrs. A. Muir & Sons, and during the long period of thirty-six years was engaged in commercial pursuits, in 1902 taking over the sole interests of the business. It may be mentioned that this was the first firm to supply the P. & O. liners when the port of call was Albany. In March, 1912, Mr. Muir relinquished mercantile operations and has since lived in retirement. For three years he served as a councillor of the municipality, and was vice-president of the agricultural society for some time. He has been connected with the Masonic fraternity for a quarter of a century, and became a member of

MR. ROBERT TRAIL MUIR.

the Oddfellows' Lodge at its inception in the town. He has an intimate knowledge of the district from a sportsman's point of view, being an adept with the rod and gun, but his absorbing hobby is gardening, and his name is known from Albany to Perth as an exhibitor of flowers and vegetables at the annual shows, and a prolific prizewinner for the same. He is a member of the horticultural society and has filled the office of committeeman and vice-president on that body. In 1902 Mr. Muir

married Eliza, daughter of the late Mr. Frederick Briggs, of Melrose, South Australia, and has a son and a daughter.

GEORGE MOIR, now living in retirement at Albany, is a son of the late Mr. John Moir, who came to Western Australia from Scotland in 1850, and arrived in the year following at Albany, being one of the earliest pioneers of that district. The gentleman under review was born at Fifeshire, Scotland, on March 19, 1834, and while still in his teens accompanied his father to the Antipodes. Proceeding to Cape Riche he

Imperial Studio, Albany.  
Mr. GEORGE MOIR.

was employed on the property of the late George Cheyne for five years, and then joined his brother in farming pursuits at York for a short time. Returning to Albany he purchased from the late Mr. Barrett a small freehold property, and also took over the grazing lease held by that gentleman, joining in partnership his brother, the late Mr. Andrew Moir, who died at Albany in March, 1912. For over forty years this partnership was maintained, the Messrs. Moir becoming well known in the pastoral industry all over the Cape Riche and Mongup districts. In 1900 Mr. George Moir retired from active business pursuits, and at the present time the property is under the management of his three sons. He was married in 1862, his wife being Elizabeth, daughter of the late Mr. Frederick

Hymns, of Cambridge, England, and his family consists of three sons and eight daughters, besides which he has twenty-five grandchildren.

JOHN MOIR, J.P., is a native of Albany, being a son of the late Mr. Alexander Moir, who arrived in Western Australia about the year 1852, and became one of the early settlers in this district. Born on July 29, 1856, Mr. John Moir was sent to Perth for his scholastic training, being educated at the collegiate school then known as Bishop's College. Upon the termination of his studies, when sixteen years of age, he became engaged in mercantile pursuits at Albany in association with his father, and after continuing in this way for a few years proceeded to South Australia in order to gain commercial experience in a wider field. After spending three years in the busy life of the capital he returned to his native town, and again became identified with his father's business establishment, since which date he has become a well-known figure in mercantile circles in Albany. Upon the retirement from business of the late Mr. Moir, sen., in 1879 the subject of this review took over the whole interest, continuing operations in his own name and on his own behalf. The business, formerly that of general merchants, has witnessed important changes in recent years. In 1908 Mr. Moir disposed of all branches except the auctioneering business, and has found sufficient scope for his energies in supervising activities in this direction alone. He has taken considerable part in semi-public life for very many years, and was a member of the Plantagenet Roads Board, of which body his late father was chairman. On four occasions he has filled the office of chief magistrate of the town, being elected Mayor of Albany for the first time over twenty years ago, and upon the inauguration of responsible government made an official visit to Perth in this capacity, accompanied by the members of the Albany Municipal Council. For many years he has held a Commission of Justice of the Peace for the whole State, this being granted him during the régime of Governor Broome. He was a foundation-member of the Albany Club, and is a trustee of that body at the present time. He has also been a member of the Albany

Lodge, W.A.C., in the fraternity of Freemasons since its inception. In 1884 Mr. Moir married Edith, daughter of the late Mr. Oscar Lynes, of Woodville, South Australia, and has had one son, who died in infancy.

RICHARD ROBERT BURRIDGE, Albany, was born at Yarmouth, Nova Scotia, British America, on August 29, 1849, and is a son of the late Mr. Ambrose Burridge, of that place. He was educated in his native town, and at an early age went to sea in a merchant vessel, and continued his connection with marine pursuits until 1868. He was at that period on board the ship "Uncle Joe," trading in coal from England to Australia, and in September of the above year arrived at Albany, where he left the boat and entered upon his first experience of bush life in the employ of Mr. A. Y. Hassell. While acting as general station hand at "Jarramongup" Station Mr. Burridge perceived the possibilities of the sandalwood industry, and after five years with Mr. Hassell he launched out on his own account in this direction, collecting the wood and shipping it to Albany, and continued this enterprise for some ten or twelve years. Upon the outbreak of the eastern goldfields he proceeded to the scene of activity and commenced business as a carrier and carrying contractor. After following this line of life for some time, with the capital amassed during sixteen years of strenuous work he was able to purchase a block of land from Mr. James Bridge at Beginup, and afterwards added to this property from time to time until at the period of his retirement from its active management it comprised nearly 4,500 acres, and was one of the best-known estates in the Broome Hill district. For about eighteen years Mr. Burridge continued the development of this property, on which for a time he held an hotel licence for the convenience of the travelling public, and ultimately sold the estate to Messrs. Murray Brothers, the well-known north-west pastoralists. He took an active interest in the general welfare of the community and represented both Broome Hill and Gnowangerup on their respective roads boards. He was one of the founders of the Great Southern Agricultural and Pastoral Society, and during

the first decade of its existence was prominently concerned in the management of this body. He is a member of the Masonic craft. His chief form of recreation is found in the game of bowls, and more recently he has taken to motoring, in this way frequently visiting the beauty spots of Albany and the district. In 1877 he married Mary, daughter of Mr. William Searle, for many years a well-known identity in the Broome Hill and Albany districts, and has six surviving sons and six daughters.

JOHN McKENZIE, J.P., is a son of the late Captain Hugh McKenzie, master mariner, and grandson of Captain Hugh McKenzie, late Seaforth Highlanders, who came to Western Australia in 1842. He was born at St. John's, New Brunswick, on April 15, 1840, and accompanied his parents on their voyage to the Antipodes, subsequently receiving his education at Albany, where his

MR. JOHN McKENZIE.

scholastic career terminated before he had hardly entered his teens. Upon leaving the school he joined a whaler at "Cheyne's Beach" Station, 40 miles east of Albany, and for twenty-two years followed this arduous and hazardous calling in the waters surrounding that coast, in the summer months engaging in sealing near Esperance. Eventually he met with a severe accident, a live whale striking and overturning the boat of which he was in charge, when three men were killed and Mr. McKenzie had his back injured and several ribs

fractured. As a result he gave up marine life, and coming to Albany purchased the Freemasons' Hotel, and entered upon the personal conduct of the house, which he continued for over ten years. He then sold the lease of the property, and since 1881 has spent his time in looking after the various investments which his years of toil had enabled him to secure. He now lives in retirement at Albany, at his residence "Tulach Ard," in York Street, in the seaport where his home has been located for over seventy years, and from which he has been absent only a few months at a time. During this period he has taken some share in public life, serving as a member of the Municipal Council for some seventeen years, and filled the office of mayor for a term of three years. He was honoured with a Commission of the Peace for the whole State in 1889. Kind-hearted to a fault, Mr. McKenzie has ever lent a ready ear to the call of distress from stranger and friend alike, and, himself having battled through the rough life of the early days, has never withheld practical aid from those whose destiny called them to the same struggle. McKenzie has ever lent a ready ear being the only surviving foundation member of Lodge Plantagenet 1454, E.C., in the Masonic craft. He married in 1861 Janet, daughter of the late John Moir, of Albany, by which union he had issue six sons and two daughters. Mrs. McKenzie died in 1881.

Captain SAMUEL GEORGE BUTCHER, J.P., retired Government pilot, who has been connected with the town of Albany since the year 1868, was born at Lowestoft, Suffolk, England, on January 15, 1853. He received his education at the Norwich Grammar School under the late Messrs. Paul & Kedge. His father, the late Captain George Trevor Butcher, came to Western Australia in 1860 as chief officer of the barque "Tientsien," which arrived about that date and occupied the position of pilot at Fremantle for some time. In 1867 he was appointed Harbourmaster at Albany, which office he held until his death in 1900. Upon leaving school the subject of our notice went to sea as cabin-boy in the barque "Bridgetown," and upon arrival at Albany spent some time there before embarking on the "Chrysolite," trading in merchandise

all over the known world. He remained for several years on this boat, and was afterwards identified with several other vessels, again visiting Western Australia as second officer of the ship "Magna Charta" in 1876. Receiving the offer of a position in the Western Australian Pilot Service he accepted it, and served as pilot for over twenty-eight years, retiring in 1904 on account of an accident while on duty which incapacitated him from further service. During

Imperial Studio, Albany.  
CAPTAIN S. G. BUTCHER.

this long period he spent twelve years in charge of the Rottnest Pilot Station, and for a considerable period filled the position of harbourmaster at Geraldton. He also saw a lengthy term of service on the north-west coast, and for thirteen years was stationed at Albany, where he now resides. Upon settling down after his retirement he was elected a member of the Albany Municipal Council, representing the ratepayers of West Ward for a couple of years, when he retired in order to accept the position of mayor of the town, being honoured by election without opposition. Owing to ill-health he resigned his public offices in 1907 and took a trip to England, where he remained for a considerable time. An ardent Liberal in politics, he has always displayed great intelligence in his grip of the political situation and has rendered valuable assistance to Liberal candidates at the time of the elections. Upon one occasion he was asked to stand for parliamentary honours in the Upper House, but did

not see his way clear to accede to this request. He was gazetted a Justice of the Peace by the Moore Government in 1906. Captain Butcher has been the recipient of many honours in Freemasonry, and was one of the founders of the Hiram Royal Arch Chapter, of which he was the original First Principal. He is also connected with the Order of Oddfellows and is a member of the Albany Club. He finds pleasant occupation in tending the flower garden surrounding his home and in the cultivation of vegetables for home consumption, also seeking frequent recreation in the use of the fishing rod, at which sport he is an adept. In 1879 he married Elizabeth, daughter of the late Mr. Alexander Moir and sister of Mr. John Moir, of Albany.

JOHN NORMAN, Postmaster, Albany, is a native of that town, having been born there on May 20,

Imperial Studio, Albany.  
MR. JOHN NORMAN.

1861. He is a son of the late Mr. James Norman, one of the very early arrivals in Western Australia, who landed at Albany in charge of stock for the Australian Pastoral Company in 1837. At the close of his scholastic studies Mr. John Norman, in January, 1877, joined the postal service, and since that period has resided continuously at Albany, never relinquishing his connection with the office he joined as a lad thirty-five years ago. Various appointments have been offered him from time to time, in larger and

more important centres, but the happy associations which cluster round the place of his birth—to which he is greatly attached—have been too strong to break, and no offer of promotion has ever tempted him to leave that picturesque spot. He is acquainted with every detail in the routine of official work, having begun as junior clerk, and served in every branch of the department until finally he attained the dignity of postmaster. Mr. Norman has willingly rendered all the time at his command to contribute toward the progress of the community, and for a great number of years has been connected with the mechanics' institute of Albany, serving as secretary of that institution for about ten years. Upon his retirement from this office the members of the institute honoured him by electing him a life honorary member. He has been very prominent in the work of the Methodist Church, and has given unsparingly of his time and strength to promote the ideals for which this organization stands, at the present time holding the offices of secretary and treasurer of the trust fund. He is well known in local Masonic circles, being a former Past Master in the craft, and during his term of service in this office the present home of the fraternity in Albany was built. He has also filled the post of Provincial Grand Master in the M.U., I.O.O.F., with which order he has been connected for over twenty-seven years. Fishing and shooting are his favourite recreations. In 1884 Mr. Norman married Eliza, third daughter of the late Mr. J. C. Mews, of Perth, and has three sons and two daughters.

WILLIAM JOHN RAE, Acting District Surveyor of Albany, is a son of Mr. W. A. Rae, of Orange, New South Wales. He was born at Mildura, Victoria, on June 11, 1872, and received his scholastic training at the Sydney High School, leaving this institution at the age of eighteen in order to begin his first experience in survey work in the survey camps of the Lands Department of the Mother State. In the following year he was articled, and continued his training in the profession until 1895, when he was appointed to the position of draughtsman in the New South Wales Land Tax Department. For over two years Mr. Rae continued to fill this

appointment, but upon the wholesale retrenchment practised by the Government following the long commercial depression of the nineties his services were dispensed with in 1897. Western Australia offering a likely field for members of his profession, he came to the State in the early part of that year, and soon after his arrival joined one of the Government survey camps. Here he continued until October, 1900, when he entered the Lands Department as a

Bartletto, Perth.  
MR. WILLIAM JOHN RAE.

computer, and a year later passed the necessary examination as licensed surveyor, since which date he has practised in the State Service. In 1903 he was promoted to the field service as staff surveyor, and for a decade has been well known all over the agricultural areas of the State. Upon the decentralization of the Survey Office in October, 1911, Mr. Rae was sent to take charge, in the capacity of relief officer, of his present district, where he has since remained. He is a member of the Western Australian and Albany Clubs. He finds his chief recreation in sailing, fishing, and in the perusal of historical and scientific literary works. In 1903 Mr. Rae married Nora, daughter of the late Mr. W. B. Mitchell, of Bunbury, and has two sons and a daughter surviving. It may be interesting to note that Mr. Rae's grandfather was the late Mr. John Rae, M.A., for many years Commissioner for Railways and Under-Secretary for Public Works in New South Wales.

THOMAS STEAD MERFIELD, M.A.C.D. (Melb.) was born at Stawell, Victoria, on September 19, 1878, and is a son of the late Mr. Thomas Merfield, mining attorney, of the same place. He received his education primarily at the Church of England Grammar School at Stawell, and at sixteen years of age became an articled student under Dr. George Tayler, a well-known dentist of that period. After three years he proceeded to Melbourne, where for a couple of years he was identified with the Australian College of Dentistry, finally graduating at the Melbourne Dental Hospital. In connection with this institution Mr Merfield had the honour to be one of the first students to whom its diploma was awarded. In 1899 he came to Western Australia and entered upon the management of a dental practice at Coolgardie, where he continued for over a year. At the end of this period, accepting an offer from Drs. Wright and Wilkinson, of Perth, to open a branch on their behalf at Albany he came to the southern seaport, and after conducting the practice for about twelve months eventually purchased it, and has since carried it on on his own account. Even in the short period referred to Mr. Merfield has been successful in establishing a large connection in the town and district, and at the present time his practice is of a very extensive nature, all the dental work of Albany being in his hands. He has always upheld the dignity of his profession, and adheres rigidly to the rules of etiquette by which its practice is safeguarded, deeming that these are necessary in order that the public may implicitly rely on commanding the services of qualified practitioners. Much of his time is spent in the perusal of up-to-date works in connection with his profession, by which means he keeps in touch with the latest methods in vogue in American and European dentistry. Mr. Merfield is a member of the Albany Club. He is a keen golfer and spends the greater part of his spare time in pursuit of this fascinating pastime. He is also connected with the Masonic craft. In 1906 he married Mabel, daughter of Mr. Augustus Egerton-Warburton, pastoralist, of "Balgarrup," Kojonup, and has a son and a daughter.

EDWARD CHARLES BARNETT, senior partner of the firm of Edward Barnett & Co., is a son of the late Mr. John Barnett, of Devonshire, England, and was born in London on December 3, 1854. He received his education in Victoria, having come to Australia with his parents at the age of four years, and in his early teens entered upon a commercial career by joining the firm of Catto & Roy, of Kingower, with whom he served for a period of six years. Upon relinquishing this connection he augmented his experience by several years in various lines of business in Victoria, and in 1881 came to Western Australia to take a position

Imperial Studio, Albany.  
MR. EDWARD CHARLES BARNETT.

with the Jarrahdale Timber Company, resigning the post after six years in order to come to Albany in 1888. Here he launched out on his own account, establishing his present business, which is well known throughout the whole district. In course of time he admitted into partnership his brother (Mr. Thomas Hinton Barnett) and Mr. John McWhirter, in conjunction with whom he carries on the business at the present time. Branches have been opened at Denmark and Hoptown, and the firm holds agencies for some of the leading wholesale firms of the world. Mr. Barnett served his fellow-ratepayers as a member of the Albany Municipal Council for upwards of twelve years, and for two years occupied the office of president of the Chamber of Commerce. He represented Albany in the Legislative

Assembly for four years, but at the end of that period found it necessary to resign his seat on account of the pressure of business claims. He is a member of the Princess Royal Sailing Club and acts as president of that body, being also associated with the Perth and Albany Clubs, also for many years he was president of the Albany Turf Club.

MICHAEL JAMES QUIRK, J.P., Manager of the Albany Branch of Millars' Timber and Trading Company Limited, was born at Chepstowe, near Ballarat, Victoria, on October 2, 1874, and is the eldest son of the late Mr. Michael Quirk, an officer of the Victorian Railways Department for many years. He received his scholastic training at the Roman Catholic school at St. Arnaud, Victoria, where he continued until sixteen years of age. About this time he joined the Department of the Engineer-in-Chief of Victoria on railway surveys, and remained in that department for three

Imperial Studio, Albany.  
MR. MICHAEL JAMES QUIRK.

years, resigning in 1894 in order to come to Western Australia, whither the most progressive of Victoria's young men were flocking. Upon arrival Mr. Quirk became connected with Millars' Karri and Jarrah Forests Limited—since that time reconstructed—and was sent in the capacity of survey hand to Yarloop, where, however, he remained only a short period. Returning to Perth, he joined the Railway Construction

Department and proceeded to Kalgoorlie to take up duties on the survey of the Coolgardie to Kalgoorlie railway, and upon the completion of this work was transferred to Eucla, on the South Australian border, in the service of the Department. Resigning his appointment in 1896 Mr. Quirk spent nearly three years in prospecting at Mount Margaret, and in 1899 returned to Perth, where he again became identified with the Harbours and Rivers Department—this time in a clerical capacity—on the Swan River Improvements Scheme. Less than two years later, when retrenchments were being made in that department, he was offered a position in his former company, and after a period spent at the Mornington Mills, on the south-western railway line, was transferred to his first station at Yarloop, where he received promotion to the position of timber inspector and was sent to Bridgetown. Subsequently Mr. Quirk accepted the post of traveller for the firm of J. Barre Johnston & Co., of Fremantle and Glasgow, which he represented for nearly a year, ultimately rejoining Millars' Company and taking the position of clerk at Denmark. When the mills ceased operating at this centre he proceeded in the same capacity to Wellington, shortly afterwards being promoted to the company's management at Narrogin, and at a later date holding a similar post for the joint branches at Hopetown and Ravensthorpe. In 1910 a managerial vacancy occurring in the Albany branch—the second in importance of local trading departments in the State—Mr. Quirk was appointed to the post, and has continued to control the operations of the company from this centre. Since his arrival in the State he has identified himself with the various movements affecting the progress of districts in which he has resided, and was a member of the Phillips River Roads Board for a considerable time, resigning on his removal from that place. He holds the position of vice-president of the Albany Chamber of Commerce, and is one of the vice-presidents of the Albany Liberal League. His Commission of Justice of the Peace for the Phillips magisterial district was granted by the Wilson Government in 1909, and has since been transferred to Albany. He is a member of the Australian Natives' Association, and in Victoria held offices in that order. He shows his approval of all clean forms of

manly sport by filling the office of committeeman in connection with the Albany Season celebrations. Mr. Quirk married Maria Elvira, daughter of the late Mr. David Blair-Stone, of Lyons, Victoria, and has a son and three daughters.

**WILLIAM ST. CLARE WHARTON WHITE**, Manager for the firm of Dalgety & Co. at Albany, is a son of the late Mr. Abraham White, of Kapunda, South Australia, in which mining and agricultural town the gentleman under review was born on October 15, 1862. He received his education at St. Peter's College, Adelaide, and at sixteen years of age entered the office of the late Mr. James White, his uncle who was largely interested in pastoral and agricultural pursuits in the district of Light and elsewhere in South Australia. In 1897 Mr. White came to Western Australia and spent a brief period on the eastern goldfields, the rush to that region still being in full force. Returning shortly afterwards to the coast he accepted the position of manager of the Canning Jarrah Timber Company at Fremantle, which he continued to hold until the amalgamation of that firm with Millars' Karri and Jarrah Company. Mr. White then became connected with the Fremantle Branch of Messrs. Dalgety & Co., and in 1904 was transferred to Albany, where he was promoted to the management, and has since carried out the duties of that office. For some years he has been a member of the Albany Chamber of Commerce, and at the present time serves as a committeeman of that organization. He holds the office of warden in the local Church of England, and devotes most of his spare time to the work of the Church, acting as superintendent of the Sunday-school, and furthering its interests in every possible way. Though a warm sympathizer in all forms of healthy outdoor sport his onerous duties preclude him from taking any active part in the local athletic clubs, and his hours of leisure are spent chiefly in recreation with his family. In 1886 Mr. White married Penelope Annie, daughter of the late Mr. Alexander Buchanan of Anlaby, South Australia, and has a son and two daughters.

**CONSTANTINE STEPHEN JOHN BAESJOU, J.P.**, Albany, is a son of the late Mr. John Anthony Baesjou, the first medical practitioner to engage in his profession at that seaport, also for many years holding the position of Western Australian Consul for the Netherlands, his commission bearing the date of 1864. The late Mr. Baesjou died at Albany in 1868. The subject of this review was born in the above town on January 27, 1861, and received his education at a State school. At the age of fourteen he entered upon commercial pursuits in connection with the firm of Messrs. John McKail & Co., who at that time carried on a merchandise business in Albany, and continued with them for a couple of years. At the end of this period, joining the State Civil Service, he was attached to the Customs Department for a similar space of time and relinquished this employ in order to accept an offer from the P. & O. Navigation Company to fill a clerical position in its office. The company shortly afterwards handed over its Albany connection to Mr. Hassell to act as its representative, and Mr. Baesjou continued his duties as junior clerk under the new management. For twenty-three years continuously he was identified with this office, rising through various positions to the post of manager and chief clerk, and for a short time prior to his retirement in 1900 holding a partnership in the business. Since severing his connection with this company in that year Mr. Baesjou has been conducting a land and estate and general commission agency on his own behalf in Albany. He was appointed to a Commission of Justice of the Peace by the Leake Administration in 1904, and about the same period received the appointment of clerk of courts of Albany, from which he retired when the claims of his private business became too pressing. At the present time he occupies a seat on the Licensing Board for the district. Mr. Baesjou married in 1886 Jessie, daughter of the late Mr. Alexander Moir, of Albany, a sister of Mr. John Moir, a prominent townsman of the same place. He has two daughters and a son, the latter being on the staff of the Western Australian Bank.

JOHN BUNTING, Perth Road, Albany, was born at Ballarat, Victoria, on November 24, 1877, and is a son of Mr. William John Bunting, of Glenferrie, near Melbourne. He received his education at the Clifton Hill State School in that State, and upon the conclusion of his studies was apprenticed to the trade of coach-smith, which he followed for six years in his native State. In 1896, coming to Western Australia, he joined the rush to the goldfields soon after the outbreak of the Kalgoorlie discoveries. Completing the journey to Kanowna, he spent in all two years in prospecting with fair results in the alluvial district surrounding these centres, at the end of this period returning to Perth. Here he became connected with the traffic branch of the Railways Department, and continued in this service for over twelve years. He next purchased a farm at Rocky Crossing, near Albany, which he disposed of after two years in order to open in business as a carrying contractor at the seaport town, where he still continues. For the whole period of his connection with the railway service Mr. Bunting was an active member of the Amalgamated Society of Railway Employés. In Victoria he was identified with various sporting circles, and was a well-known player of football at Fitzroy, and also, after his arrival in this State, upon the goldfields. He spends a good deal of his leisure time in fishing in the harbour waters, and also revels in taking periodical trips through the bush and along the coast for recreation. He is a poultry fancier on a large scale, and frequently exhibits at the Perth and Fremantle shows, where he has won many prizes. In 1899 Mr. Bunting married May, daughter of the late Mr. John Gallop, of Perth, Western Australia.

MARTIN BEAUMONT DOWNES, jeweller, Stirling Terrace, Albany, is a son of the late Mr. John Martin Downes, of Colchester, Essex, England, who spent the last few years of his life at Launceston, Tasmania. Born in the Apple State, at the town of Longford, on June 18, 1870, the subject of this memoir received his education at a State school in his native place, subsequently attending a scholastic academy at Perth, in Tasmania. When fourteen years of age he was apprenticed to the jewellery trade

with the firm of Messrs. F. & W. Stewart, of Launceston, and during the five years spent in this house obtained a thorough acquaintance with all branches of this class of work under the supervision of the most capable craftsmen under the Southern Cross. Leaving this firm, he proceeded to Melbourne in order to gain a wider knowledge and experience in the trade, and for this purpose joined the well-known firm of P. Falk & Co., in their Melbourne factory, where he spent a considerable period. He was also connected with other large wholesale and retail houses in the Victorian capital, and in 1892 an offer of employment from Mr. S. J. Eddy, of Charters Towers (now of Sydney), took him into the sub-tropics, where he remained for ten years, during which period he became one of the best-known citizens of that old Queensland mining town. Meanwhile Western Australia had been coming into prominence, and Mr. Downes, in common with many other Queenslanders, was not slow to perceive the growing prosperity of the "Cinderella" State and to realize that its prospects offered more opportunities of advancement than the older settlements could do. Accordingly, forsaking the eastern portion of the continent, he arrived in Western Australia in 1901, and making his way direct to Boulder City accepted a position on the staff of Mr. James Robinson, established in business there. In less than a year, however, he embraced an opportunity of launching out for himself, and in partnership with Mr. M. E. Mazzucchelli conducted a successful business for nearly eleven years. Eventually this developed into one of the foremost concerns of its kind outside the metropolis, and in 1912 Mr. Downes disposed of his interests to his partner and purchased from Messrs. Caris Brothers, of Perth, their branch establishment at Albany, which he now carries on. He has been identified with the Australian Natives' Association for some years. He finds diversion for leisure hours with his camera. In 1895 Mr. Downes married Clara, daughter of the late Mr. Charles McDonald, of Charters Towers, and youngest sister of the Hon. Charles McDonald, ex-Speaker in the House of Representatives and member for Kennedy in the Commonwealth Parliament. His family consists of two daughters.

FRANK WALTER BEVILAQUA, general draper, York Street, Albany, is the second son of Mr. F. L. Bevilaqua, of Adelaide, South Australia. He was born at Lyndoch, in that State, on September 12, 1864, and received his education at the local school. At sixteen years of age he entered commercial life in the firm of Messrs. W. & T. Rhodes, hardware merchants, of Adelaide, with whom he remained for four years. Relinquishing this connection he was for eight years identified with his father's general storekeeping business in Adelaide, and upon the retirement of the latter gentleman from mercantile pursuits went to Tasmania with a party prospecting for gold. Mr. Bevilaqua followed mining occupations in that island for about four years, and at the end of this period, being offered a position with Messrs. Robinson & Co. at Mount Lyell, he accepted it and continued with this firm for about a year. He then returned to South Australia, and two years later, in 1898, was encouraged by the glowing reports of the Western State, then in a very prosperous condition, to test her bright promises on his own behalf. Upon arrival he joined as assistant the firm of Drew, Robinson, and Co. at Albany, four years later transferring his services to the house of Messrs. E. Barnett & Co., in which he served for three years. In 1906 he opened in business on his own account at Broome Hill, conducting a general store at this centre for a couple of years, when he purchased his present drapery emporium at Albany, which he has carried on successfully ever since. His chief recreation is found in yachting, and he takes a live interest in the Princess Royal Sailing Club, of which he is vice-president, an office he has held for three terms. Mr. Bevilaqua married in February, 1898, Violet, only daughter of Mr. John Cowie, of Adelaide.

EDWARD GAMBLE EVERETT, grocery and provision merchant, of Albany, is a son of the late Mr. Charles Everett, who came to Adelaide from Ipswich, England, in 1839. He was born at Grote Street, in that city, on April 16, 1852, and pursued his scholastic studies at various private schools in South Australia. When fifteen years of age he entered the grocery

trade, and a year later took a trip to England in order to enlarge his knowledge of the world. After an absence of about twelve months he returned to the land of his birth and resumed his connection with his former trade, from 1869 to 1883 being associated chiefly with his father's business. In the latter year he launched out on his own account, opening a general store and post office at Windsor, and for thirteen years carried on business in that locality. During this period he also conducted a branch business at Dublin, in the same State, and discharged the postal official duties at both these places. Subsequently he established himself at Norwood, near Adelaide, for a short time, but owing to the

*Imperial Studio, Albany.*  
MR. ERIC SAMUEL EVERETT.

ill-health of one of his sons was advised to try another climate, and in 1897 came with his family to Western Australia. Mr. Everett decided to settle at Albany, and at once opened up business as a general grocer and draper, by dint of energy and strict adherence to sound commercial principles laying the foundation of the prosperous concern which has weathered all storms and is now one of the most thriving business-houses in the picturesque little seaport. Since taking up his residence in Albany he has given what time he could spare to furthering the interests of the place, and for a considerable period has been a member of the Albany Chamber of Commerce. He is also a committeeman of the agricultural and

horticultural society and has been connected with the Order of Odd-fellows for over forty years. In 1879 he married, and has two sons and a daughter surviving. ERIC SAMUEL EVERETT is a son of the foregoing, and was born at North Adelaide on May 5, 1895. Being brought to Western Australia by his parents in his infancy, he pursued his scholastic studies at the State school in Albany, which institution he left before reaching the age of fifteen to join the clerical branch of the railway service, in which department he remained for about two years. At the end of that period he resigned in order to join his father in business, and has since found abundant scope for his activities in assisting in the operations of the firm. He gives a fair amount of his leisure time to athletics and enjoys participation in most forms of sport, particularly in football, tennis, and swimming, holding a trophy for his achievements in the latter line of exercise. He is a member of the Oddfellows' Order and is a non-commissioned officer in the Cadet Forces, being also a marksman of some merit.

WILLIAM ROBERT SMITH, general storekeeper, York Street, Albany, is a son of the late Mr. William George Smith, of Liverpool,

*Imperial Studio, Albany.*  
MR. WILLIAM ROBERT SMITH.

England, and was born at Birkenhead on August 24, 1863. He received his education in the St. John's

Church of England School in his native town, and when fourteen years of age was apprenticed to the joinery trade at Clover's Shipyard, in the same place. After serving his six years' indentures he entered upon marine pursuits on board the S.S. "Sahara," trading with Bombay and the Far East, and continued in this service for nearly two years. He came to Australia by the "Lord Raglan" in 1886, and worked at his trade in Victoria for some considerable time, eventually coming to Western Australia in 1896. Settling at Albany, he was engaged on the coal hulk at his calling, and spent over four years as ship's carpenter with the firm of Mellwraith & McEachern, on the Western Australian coast. Subsequently, for eight years, he was identified with Millars' Karri and Jarrah Company, at the Albany branch, and finally, in 1902, set up in business for himself on a modest scale in that seaport. Owing to the steady increase of business it became necessary for him to seek larger premises, and he has now one of the most thriving storekeeping concerns in Albany, being ably assisted by his wife in the conduct of the business. He is a member of the Freemasons' craft, having been connected with that body for a lengthy period. In 1890 he married Rose, daughter of the late Mr. John Cornfield, of Birkenhead, England, and has a son and a daughter.

JOHN JOSEPH MURPHY, general grocer and provision merchant, York Street, Albany, is a son of Mr. Patrick Murphy, of Geelong, Victoria, in which town the gentleman under review was born on August 30, 1865. He was educated at St. Mary's School at Geelong under Mr. John Spring, now retired, and at eighteen years of age entered the world of commerce in the establishment of the Mutual Stores, Limited, Melbourne, where he remained for ten years. After filling the responsible position of manager of the grocery department of this important business for some time he resigned in order to take control of the grocery, wine, and spirits department of Messrs. George & George's large stores in Collins Street, and continued in this position for over twelve years. Eventually the firm decided to confine itself to the drapery and softgoods lines of merchandise, and Mr. Murphy retired from business

pursuits for a time. Tiring of the monotony of an idle life, he accepted an offer which he had received some time previously from the firm of Drew & Robinson, of Albany, to manage the grocery branch of their house. Upon further acquaintance with the town, however, he perceived an opening for independent business operations, and resigning his position with the above firm opened the present establishment in York Street, which has ever since engaged the whole of his time and attention, and is now one of the prominent trading concerns of Albany. Before coming to this State Mr. Murphy took an active interest in those movements most closely identified with Irish nationality, and since his arrival at Albany has taken a leading place among the laity of the Roman Catholic communion, furthering the interests of the local church in every way open to him. In matters relating to the general public he has also displayed considerable interest, and before he left Melbourne was a prominent worker in the cause of early closing, being one of the pioneers in this movement in Victoria, which was brought to a successful consummation before his departure. He has continued his labours in this direction since coming to Albany, strongly advocating that the measure should be brought into force everywhere. He has the sacred cause of charity at heart, and is a cordial supporter of all movements for the amelioration of human misery. In his youth he was well known in the hunting fields of Victoria, and at the present time finds his chief recreation in riding, being very fond of his equine companions and an excellent judge of horseflesh.

**JAMES SAMUEL DEYKIN**, proprietor of the Freemasons' Hotel, Albany, is a son of Mr. James Deykin, of Staffordshire, England, and was born on August 20, 1869. He pursued his scholastic studies at Shrewsbury School, and at eighteen years of age was articled to a firm of surveyors and engineers in Birmingham, with whom he spent three years. Having attained his majority he received the offer of an appointment from the Western Australian Land Company, which he accepted, arriving at Albany to take up the duties of the position in July, 1891. Mr. Deykin served three years as surveyor on the staff of this

company, at the end of which period the mining boom occasioned by the discovery of the eastern goldfields occurred, and in 1894 he became one of the pioneers on the Coolgardie field, being preceded by very few at this centre. For a year he carried on prospecting, but meeting with very little reward, relinquished the enterprise, and returning to more civilized regions joined the Civil Service at Perth as computing draughtsman, which post he held for nearly a year. Resigning from the service, he joined the late Robert Ironside in partnership, forming the firm known as Ironside & Deykin, mining surveyors, architects, and draughtsmen, which was in operation from 1896 until 1903, when the partnership was dissolved. During this period a large proportion of the work of the district fell into the hands of this firm, which established a good reputation during the eight years of its existence. In the fall of the latter year Mr. Deykin purchased the lease and goodwill of Albany's leading hotel—the Freemasons'—and for over nine years he has conducted that establishment in a manner beyond criticism. Every detail of the well-appointed *ménage* shows the master mind at work, controlling all the wheels within wheels, so that no friction may mar the smooth running of the complicated system by which such excellent results are attained, and the statement that the hotel is second to none in the State for the perfection of its management is far from being a mere platitude. Mr. Deykin, amid the numerous responsibilities of his business, has yet found time to devote to duties of a more public character, and soon after his arrival in Albany began to display an interest in those movements and organizations which make for the advancement of a town and community. In 1906 he was elected to a seat in the local municipal council, and during the six years that he was connected with this body never failed to command the attention of his brother-councillors when he gave voice to his opinions on the various matters brought before the council. He was a strong advocate of sanitary reform, and in this particular it may be said that Albany takes a high place among the towns of Western Australia. For some years Mr. Deykin has been a live member of the Chamber of Commerce, and at the present time holds the office of president of that

chamber. In the early days of Coolgardie he was well known in the Masonic fraternity, and is still prominent in the craft, being a Past Grand Lodge Officer. In 1899 he married May, daughter of Mr. James Edwards, of Albany, and has two sons.

**ALBERT WITHNELL**, proprietor of the York Hotel, York Street, Albany, is a son of Mr. William John Withnell, of Subiaco, Western Australia. He was born at East Bermondsey, London, England, on September 18, 1880, and after his arrival in this State with his parents in 1887 pursued his scholastic studies in Perth. While still a lad he entered upon his first position as telegraph messenger in the capital, and within two years

Imperial Studio, Albany.  
MR. ALBERT WITHNELL.

and a half received promotion to the post of telegraph operator at Busselton. After continuing two years in this appointment he was placed on the relieving staff, and in the discharge of his duties visited nearly all the principal telegraph stations of the State, travelling through the north-west and the eastern goldfields. He held appointments as telegraphist at Lawlers and postmaster at Mount Sir Samuel, Black Flag, Bannister, and Kojonup for varying periods, and in 1901 resigned in order to join the contingent of telegraph operators requisitioned from Australia for service in South Africa at the time of the Boer war. After four months in

South Africa he was placed on the fixed establishment list in the Cape Government Service, where he remained for a couple of years. On account of the depression which occurred after the war he decided to return to Western Australia, and found himself once more in Perth in December, 1904. Shortly after arrival Mr. Withnell took over the lease of the York Hotel at Albany and entered upon the personal management of the business, which he has since conducted with conspicuous success. Warm eulogy comes as a matter of course from those who have availed themselves of the hospitality afforded by this up-to-date and thoroughly well-appointed hotel, and its popularity increases as the years go by. Mr. Withnell has interested himself in Friendly Society work, being a Master Mason in the fraternity and also a member of the I.O.O.F. An athlete since his schooldays, he has been one of the most successful runners in the State, and as a bowler in cricket has won more than ordinary distinction. He is the holder of many trophies gained in various branches of sport, and after entering the professional arena invariably maintained the dignity of his side and supporters. In South Africa he was a member of the first cricket eleven formed entirely of Australians, which association is now recognized as one of the institutions of that country. Since coming to Albany he has continued his enthusiasm for all forms of sport, and has held honorary positions in the leading local clubs, besides which he is an officer of management in connection with the Albany Town Band. In 1908 he married Alice Gertrude, daughter of the late Mr. Francis Gonthier, of London, and has two daughters.

TOM CLARK, Albany Hotel, Albany, is a son of Mr. Tom Clark, of Halifax, Yorkshire, England, where the gentlemen under review was born on November 11, 1881. Educated in his native town, before he reached his teens he went to work in a woollen mill in Halifax, and continued at the frames in that establishment for six years. Before attaining man's estate, however, he relinquished this means of livelihood and became apprenticed to the trade of brassfounder and finisher. Upon the completion of his indentures he spent two more years in the factory

of Messrs. Foster & Sons, under whom he had learnt the trade, thus receiving a full seven years' training for the calling which he intended to make his lifework. After working for a short time as journeyman in the West of England he came to Australia, arriving at Perth in the early part of 1906. Keen disappointment awaited him here, when he found that no workmen in his trade were required in the State, but resigning himself to the pressure of circumstances he accepted what employment offered until he had acquainted himself to some extent with the conditions of the new country in which he had cast his lot. Eventually he came to Albany and occupied various positions in this seaport before finally taking over the lease of the Albany Hotel, which he has conducted successfully ever since. Mr. Clark gives close attention to the demands of his business, which occupies the major portion of his time, but he has established his reputation as a supporter of outdoor athletics, and the devotees of such diversions are always confident of finding him ready to further their interests in every possible way. He is himself especially fond of aquatic pursuits, and when he can snatch a few hours of leisure may usually be found on the harbour waters indulging in the pleasures of the piscator. Mr. Clark married in 1908 Annie, daughter of the late Mr. James King, of Gloucestershire, England.

JOHN CHARLES MEWS, of Albany, is a direct descendant of Mr. Peter Mews, who was Bishop of Bath and Wells in 1672 and occupied the See of Winchester in 1684—one of the foremost men of his time, a leader of the Royalist Party, and personal adviser of Charles I. The late Mr. Thomas W. Mews, grandfather of the subject of this notice, arrived in Western Australia by the ship "Rockingham" in 1830, an accident to the boat delaying her a few months after the arrival of the first settlers in 1829. His son, the late Mr. John Charles Mews, occupied many public positions in the earlier days of Perth, and was the father of Mr. J. C. Mews, of Albany, who was born at the capital on November 3, 1859. After attending the State school at Perth, and subsequently a grammar school conducted by the late Mr. George A. Leich, at fifteen years of age Mr.

Mews began his apprenticeship to the late Mr. John Summers, coach-builder, and five years later proceeded to South Australia for the sake of gaining more extensive experience. Having further augmented his knowledge by working at the same trade in Melbourne, he returned to the land of his birth and opened a business in Albany in 1882, which he has carried on successfully ever since, the firm boasting the oldest business connection in that town. To Mr. Mews is accorded the credit of having built the first spring vehicles for Albany, and in this department pioneering honours will be rendered him with good grace. He has filled various public positions, for several terms serving as a member of the Municipal Council of Albany, and acted as deputy-chairman of the Albany Roads Board

Imperial Studio, Albany.  
MR. JOHN CHARLES MEWS.

during the first year of its establishment. A member of the Australian Natives' Association, he has occupied the position of trustee in regard to this body at Albany, and was a founder of the Albany Dog and Poultry Association, of which he is also president. He is a member of the fresh-air league, and has done much for the children of the goldfields, who are enabled to make periodical visits to Albany under the auspices of that league. He is also an energetic supporter of the "Albany Season" movement, on the committee of which he has acted for a considerable time. Mr. Mews married in 1883 Agnes Catherine, daughter of the late Mr. Colin

Campbell Matheson, of Glengoric House, Glasgow, and has a family of four sons and three daughters.

ALEXANDER ARMSTRONG, of Albany, is a son of the late Mr. Alexander Armstrong, who came to Western Australia in 1861 in charge of the convict ship "Linsels," and afterwards filled a position as warden for fourteen years. The gentleman under review was born at Wick, Scotland, while his father was on active service in the Crimea with the 42nd Highlanders, in which regiment he held a sergeant's commission. Young Armstrong came to Western Australia with his parents at nine years of age, and for a time attended a school at Fremantle, subsequently receiving further tuition under the late Mr. Thomas Palmer at Albany, where he was a schoolmate of the Honourable Cuthbert McKenzie. Leaving school, he joined the Admiralty Marine Survey Service for a short time, afterwards engaging in seafaring pursuits on the "Rob Roy" for over a year. In 1883 his father, having secured the launch "Loch Lomond," Mr. Armstrong—who had previously been admitted into partnership in the firm of Armstrong and Son—took command of this vessel, and thereafter was closely identified with his father's fleet of launches, which included the "Jessie," the "Escort," the "Dunskey," the "Bruce," and the "Silver Star." Some two years subsequent to the

and "Silver Star," already mentioned. These boats ply on the harbour waters, and are used as tugs, also being in constant requisition for the use of pleasure excursionists. Mr. Armstrong has made a study of municipal government, and for eight years occupied a seat on the local council, in addition filling the mayoral chair for a term. During the period of his mayoralty in his official capacity he entertained,

MR. ALEXANDER ARMSTRONG.

among other notabilities, Lord Kitchener and the officers of the Japanese fleet, which visited Australia in 1910. He has been for some years a member of the Chamber of Commerce, and takes an interest in

S.S. "SILVER STAR."

death of his parent Mr. George Walters was admitted as a partner in the firm, which now controls the oil launches "Mary" and "Dorothy," in addition to the "Bruce," "Escort,"

all matters pertaining to the general welfare of the town. He is a Master Mason in the fraternity, and has filled the chair of Noble Grand in connection with the M.U., I.O.O.F.,

with which order he has been associated for over thirty-five years. In 1891 Mr. Armstrong married Mary Sarah, daughter of the late Mr. Richard Holder, of Hightington, Worcestershire, England, and has a son.

GEORGE HENRY GREEN, son of the late Mr. James Henry Green, of London, was born at Hammersmith, in the West End of that city, on August 29, 1863. He received his education at the Godolphin School at that place, and having attained the age of fifteen years was apprenticed to the mercantile marine service and entered upon a seafaring life. For a couple of years he served in the "Dunnottar Castle," a sailing vessel trading with the Far East. Arriving at Melbourne in the course of one of her voyages Mr. Green left this boat, and shortly afterwards sailed for Queensland, where for twelve years he was engaged in the varying occupations of prospector, station hand, and assistant on sugar plantations, and became very well known all over the State. He followed the first party of prospectors from Queensland to New Guinea, at the time of Sir Samuel McGregor's administration in that island, but though valuable pioneering work was done by these men, they were not successful in striking gold in payable quantities. In 1892 Mr. Green revisited the Old Country with the intention of settling in England, but the severity of the climate compelled him to return to Australia. In November, 1894, he landed in the Western State, and after spending a year on the goldfields came to the south and took up a block of land on the Hay River, near Albany. The original block comprises 200 acres, but this he has increased from time to time, and is now the proprietor of a farm covering 2,800 acres, which he uses for cultivation purposes and for sheep, confining his attention to a cross between the merino and Shropshire, which he has found well suited to the climate. For eight years Mr. Green was a member of the Albany Roads Board, of which he acted as chairman for a time. In his younger days he excelled as a cricketer, but now takes his recreation in the less strenuous game of bowls, and is a member of the Albany Bowling Club. In 1895 he married Mary Eliza, daughter of the late Mr. Robert Spencer, and granddaughter

of Sir Richard Spencer, so closely associated with the early history of Western Australia. He has four sons and two daughters, and in order to secure educational facilities for his family resides in Albany, periodically visiting the farm.

HENRY JAMES CHARLES LEISHMAN, of "Springmount,"

Imperial Studio, Albany.  
MR. HENRY JAMES CHARLES LEISHMAN.

Nanarup district, lying about 16 miles eastward of Albany, is a son of the late Mr. Henry Alexander Leishman, a native of Nova Scotia,

and for many years a planter in Mauritius, who for a time was in partnership with Sir James McCulloch, of Melbourne. The subject of our review was born at Mauritius on July 12, 1850, and educated in England at the Keir House School at Wimbledon, in Surrey. Leaving this institution at the age of nineteen he joined his father in Melbourne, and subsequently proceeded to the Murray district as jackeroo on "Yarrowonga" Station, the property of the noted sheepbreeder, Mr. John Rutherford. During the first few years of his connection with the pastoral industry he was identified in turn with nearly all the large stations in Victoria, Queensland, and New South Wales, in 1877 purchasing, in partnership with his father, the pastoral property of "Lorne," situated in the Blackall district of Western Queensland. After being closely concerned in the development of this station for twelve years ill-health compelled his retirement for a time, and he spent two years on a trip to Switzerland and England, returning to Australia in 1891. Settling at Albany for a year, at the end of this period Mr. Leishman took up his present block of land from the Western Australian Land Company, and in 1892 began the work of converting what was then virgin bush into a homestead property, with such success that "Springmount" may fairly be considered the prettiest among the settlers' homes, not only in that district, but for many miles beyond.

The dwelling is built after a quaint bungalow design, and the garden, picturesquely laid out, contains the finest rosary round Albany, exhibits from which have carried off numerous prizes at the local shows. Mr. Leishman married in 1879 Alice, daughter of the late Judge Bunny, of Melbourne, and has a son and two daughters. His son, Mr. Hugh Arthur Leishman, was educated at

Imperial Studio, Albany.  
MR. HUGH ARTHUR LEISHMAN.

the Church of England Grammar School, Geelong, Victoria, and ever since the conclusion of his studies has been associated with his father in the working of the property. At the present time potato-growing forms the chief department of industry, but in earlier days, when Albany was the port of call for the mail steamers, the ocean liners were supplied with fruit and vegetables of many varieties from "Springmount." The father and son also have an extensive oyster farm at Taylor's Inlet, leased from the Government, from which they supply the Albany markets.

MR. H. J. C. LEISHMAN'S RESIDENCE, NANARUP.

FREDERICK NORTH, J.P., "Keltersley," near Albany, was born at Bunbury, Western Australia, on January 9, 1861, and is a son of Mr. Daniel North, of that town, one of the earliest pioneers of the State. He received his education in his native place, and at the age of fourteen left school in order to assist his father in the various road contracts and other work upon which he was at that time employed. After four

years young North determined to battle for himself, and leaving home he obtained employment at the Lockville sawmills. The sailing ship "A. L. Palmer" calling there for timber he assisted in the loading and worked his passage in her to Port Augusta, where he was employed on the wharves for two months. Returning by the "Sydney Griffiths" he worked for a time in the jarrah forests at Jarrahdale, and subsequently signed on the sailing vessel "Rapido," bound from Rockingham to Port Adelaide with a cargo of timber. At the latter port the ship secured a cargo of wheat and bark and steered for New Zealand, Mr. North signing on for the extended voyage. He left the boat in New Zealand, where he remained for four

Imperial Studio, Albany.

MR. FREDERICK NORTH.

years, during which period he was employed in the kauri forests. He then returned to the mainland, landing in New South Wales, and took a contract on a sheep station near Young, eventually returning to Western Australia at the end of 1884. Settling in the district where he was born Mr. North found occupation in various forms of work incidental to bush life, and two years later purchased a bullock team and commenced carting contracts at Albany, chiefly in connection with the construction of the great southern railway. Subsequently he worked on the line, continuing in the district with the idea of taking up land for farming purposes, and in 1889 he secured 30 acres from the Western

Australian Land Company, where his pretty and substantial homestead now stands. This he added to at intervals, acquiring further holdings both from the Company and the Government, and at the present time his property covers an area of 150 acres, in addition to a grazing lease of over 350 acres. He has met with much success in his market garden, and raises very fine potatoes, for which he finds a ready market and obtains good prices. As the pioneer settler of the district Mr. North has played an important part in its development, and it was mainly through his influence that the Albany Roads Board came into being, this district formerly being a part of the Plantagenet district, under which board its interests had failed to receive adequate treatment. He was elected to a seat on the Albany Board in 1902. It was also largely owing to his enterprise that the value of the swamp lands in this locality became recognized, as he was the first to settle on them, which hitherto had been regarded as worthless; and to demonstrate their value as potato country he has since concerned himself prominently in the realization of a drainage scheme for the Grassmere swamp lands. He devotes a considerable amount of his leisure to matters affecting the general welfare of the district, and in 1912 was granted a Commission of Justice of the Peace by the Scaddan Administration. In 1884 Mr. North married Elizabeth, daughter of Mr. John Hayes, of Albany, and has two sons and two daughters.

HENRY FAULKNER, of Albany, is a native of Hersham, Surrey, England, where he was born on June 21, 1848. He was brought up to the building trade and carried on business as a building contractor in England prior to his departure for Australia in 1891. Since coming to this State he has been principally identified with the same trade, but has also held interests in the dairying and farming industries in conjunction with his sons, with whom he has always kept closely in touch. He married in 1874 Miss Louisa Tilley, of Surrey, England, by whom he has had ten children, eight of whom survive. GILBERT FAULKNER, the eldest living son of Mr. Henry Faulkner, was born at Walton-on-Thames, Surrey, England, on November 6, 1876, and

after a preliminary course of education in his native place concluded his scholastic studies at Bury St. Edmunds, in Suffolk. For a short time prior to coming to Australia with his

Imperial Studio, Albany.

MR. HENRY FAULKNER.

father he was engaged with him in the building trade in Surrey. Upon arrival in the Western State he took a position with the late W. H. Angove, of Albany, and for a few months worked on survey camps in the district. He then turned his

Imperial Studio, Albany.

MR. GILBERT FAULKNER.

attention to dairying in partnership with his brother and built up a large connection at Albany. In 1897 he went to the Norseman Goldfields,

but finally decided to devote himself to dairying and farming on land in the Porongarup Ranges near Albany. In order to serve the interests of the settlers, in 1909 he became a member of the Albany Roads Board, and has since been returned to that body unopposed. He is interested in politics, and is given to the perusal of works on political and social economy, also keeping himself versed in the public affairs of Great Britain, and being well abreast in the doings of the various parties in the British Houses of Parliament. In 1902 he married Lizzie, youngest daughter of Mr. John Pickles, of Mount Barker, formerly of Cowling, Yorkshire, and

Imperial Studio, Albany.

MR. HUGH FAULKNER.

has three sons and a daughter. HUGH FAULKNER, Middleton Road, Albany, is a son of Mr. Henry Faulkner, and was born at Walton-on-Thames on July 30, 1879. He attended a school in his native place, and finished his education at Albany after his arrival in Western Australia with his parents in 1891. Upon the conclusion of his studies he joined his father and brother in the dairying industry, and has continued in partnership with Mr. Gilbert Faulkner in Albany and the Porongarup district. Like his father, he takes a deep interest in the work of the local Methodist Church, and is a member of the governing committee of that body, quarterly meetings being held to discuss the general conduct and business matters connected with the Church. Mr. Faulkner spent a number of years in the study of carpentry, and is an excellent

ccc

craftsman, spending some of his leisure hours in work of this nature. He is very fond of reading, his choice falling chiefly on works of an historical and biographical nature. In 1906 he married Ellen, daughter of Mr. F. Turner, formerly of Macclesfield, Cheshire, England, now of Perth, Western Australia, and has three sons.

ABRAHAM HENRY SHANNON, "Ballymena," King River, is a son of the late Mr. Andrew Shannon, a member of the old aristocratic family of that name so well known in the North of Ireland. Born at Ballymena, in County Antrim, he was brought up under the care of his guardian (the late Sir James Haselett, for many years representative of one of the Irish counties in the Imperial Parliament), his parents having died during his infancy. After a preliminary course of education at Lurgan College he became a student at Campbell College, Belfast, and continuing at this institution until the close of his teens left there to begin a travelling tour which was extended all over the globe. During his travels he made a close study of the manners and customs of the different types of humanity which he encountered, and in some places stayed a sufficient length of time to interest himself in the general conditions of things there existing.

Having arrived at Australia during the course of his journeyings he spent nearly two years in the Central State, turning his attention to scientific poultry farming at Gawler, where he had relatives; and also

MR. ABRAHAM HENRY SHANNON.

became a student of agriculture and the allied sciences at Dookie College, Victoria, continuing his researches in New Zealand, Tasmania, and the whole of the Australasian States. A desire to look into the details of the pastoral industry and to gain general knowledge led him to spend a considerable time as jackeroo on "Moculta" Station, South Australia,

MR. A. H. SHANNON'S RESIDENCE, KING RIVER.

and on other pastoral runs, and finally, in 1909, after weighing the rival advantages of the different States, he decided to settle in Western Australia. In accordance with this decision Mr. Shannon came to the Albany district and purchased his present property, situated on the King River, about seven miles from Albany, where he has formed an ideal home, which is looked upon as one of the beauty spots of the district. A flourishing poultry farm is managed on the most approved methods, and an orchard, not yet fully developed, gives promise of excellent harvests in the near future. Boating and fishing are constantly indulged in, the river flowing just at the foot of the garden, where Mr. Shannon and his wife have been very successful in the cultivation of flowers of many varieties. Besides these quieter diversions he is devoted to sport of a more exciting nature, and while at college was one of the prominent players in the football and cricket teams, winning trophies galore for his prowess in this direction. Among other distinctions he played for the North of Ireland representative team, in itself sufficient evidence of his attainments in the world of football. Mr. Shannon married in 1910 Edith Evelyn, daughter of Mr. W. G. Tutton, of Perth, an old identity of Gawler, South Australia, and a descendant of one of the oldest settlers in that State.

SETON GIBB, farmer and orchardist, "Balgownie," King River, Albany, is a son of the late Mr. Robert Gibb, a well-known official of the Marischal College, Aberdeen, Scotland, in which "granite city" the gentleman under review was born on April 2, 1856. He attended the National School at Aberdeen until thirteen years of age, when he was apprenticed to the trade of painter and decorator. Having completed his apprenticeship he sailed for New Zealand, where he found employment in Dunedin for about two years. At the end of that time Mr. Gibb came to Australia, and after working at his trade about Sydney returned to England for a trip in 1878, and remained in Great Britain for three years. He then came out to Queensland, where he remained for a year, eventually finding his way back to Sydney, and finally

arrived in the Western State in the year 1891. Landing at Albany he was for some time identified with his trade in that town, but seeing good prospects in the agricultural industry took up a block of land in the vicinity of King River and settled down to farming pursuits. He has a well-developed little farm and orchard, and successfully cultivates all kinds of fruit, potatoes, and other vegetables. He supplies the local and goldfields markets and exports fruit to England and Germany. Mr. Gibb is the oldest settler in the

Imperial Studio, Albany.  
MR. SETON GIBB.

district, and is a member of the King River Settlers' Association, also holding office as trustee of the local agricultural hall. The beautiful King River runs through his property close by the homestead, and provides recreation in the way of boating, fishing, and bathing. Mr. Gibb married in the year 1881 Mary Ann, daughter of the late Mr. John Middler, of Ellon, Aberdeenshire, Scotland, and has three sons and five daughters.

N. W. McKAIL, "Windy Hill," Kalgan River, is a descendant of the family of Hugh McKail, Scottish Covenanter, who was martyred in the year 1666. His father, the late Mr. John McKail, who died in 1871 leaving a widow and seven children, arrived in Western Australia in company with Captain Sir James Stirling in the year 1828, and subsequently filled the office of postmaster

in Albany for a time. After some unprofitable experience as a sheep-farmer, when his stock was destroyed by blind grass, a fatal sheep poison at certain seasons of the year, Mr. John McKail founded the business in Albany which is now known as Drew, Robinson, & Co., and entered political life as the first member of Parliament for Albany, also acting as Consul for the German Empire. The subject of this memoir was born at Albany on August 31, 1850, and received his education at the Bishop's College, Perth. Upon leaving school he entered upon pastoral pursuits at "Woodlands," "Porongarup," and on "Fairfield" Station, where he spent some years, and left there to take part in the exploration of some of the little-known portions of his native State. Upon his return from this expedition he went to Victoria and joined the staff of the National Bank, where he obtained a good insight into financial life. In

Imperial Studio, Albany.  
MR. N. W. McKAIL.

1886 he resigned from this service and returned to Western Australia, shortly afterwards becoming the first settler on the Kalgan River under the Conditional Purchase Act. He now lives a semi-retired life on his estate, but still interests himself in the welfare of the district in which he has resided for so many years. For a very lengthy period he has served as a member of the Albany Roads Board, and for some years occupied a seat in the Albany Municipal Council. He is a member of the committee of the Kalgan River Settlers'

Association, and gives his cordial support to most of the organizations formed for the advancement of the public weal. A keen sportsman, in his younger days he was well known in aquatics and gun sports, and still keeps himself in sympathy with the interests of athletic circles. In 1881 he married Effie, daughter of the late Mr. Henry Howson, of Castlemaine, Victoria, and has five sons and a daughter.

**RICHARD EVELYN WRIGHT** is a son of the Honourable J. A. Wright, whose biography appears in another part of this work. He was born at St. Petersburg, Russia, on February 20, 1874, and received his preliminary education in England, finishing at St. Lawrence's Public School, an English institution at Belgium. Having pursued his studies for some time on the Continent, he came to Western Australia with his father, who had received the appointment of Commissioner of Railways and Director of Public Works in this State, and upon arrival, after attending the High School at Perth for a short time, joined the

*Imperial Studio, Albany.*  
MR. RICHARD EVELYN WRIGHT.

staff of the National Bank in order to gain experience in finance. Meanwhile his family removed to Albany, and Mr. Wright, upon receiving the offer of a position from the Western Australian Land Company in the clerical branch of its business at the southern seaport, accepted it, and remained in this service until the

outbreak of the Coolgardie goldfields. Joining the eager throng of seekers for the precious metal, he pursued the search without success, and contracting typhoid fever was compelled to return home. Upon recovery he was appointed to the position of acting-warden at Menzies, which office he filled for a couple of years, resigning it in order to take up the management of the Western Australian Venture Corporation, which post he retained until the operations of the syndicate ceased. He went to South Africa with the sixth Western Australian Imperial Contingent, holding the commission of lieutenant, and took part in several important actions under Generals Kitchener and Bruce Hamilton, and Colonel Benson, being awarded the Queen's Medal, with five clasps. Returning to Albany, Mr. Wright took up land on the Kalgan River and entered upon agricultural and pastoral pursuits, shortly afterwards adding another leasehold block, and he has since devoted his time and attention to the development of his property. He is closely associated with local affairs, being president of the Kalgan River Settlers' Association and Vice-president of the affiliated association of agricultural societies of the district. He is a foundation member of the Albany Club. He finds recreation in music, and spends many leisure hours at the piano, also giving a good deal of time to reading, being especially fond of works of an historical character. He also makes a hobby of photography, having obtained such mastery of the art that much of his work will compare favourably with that issuing from the professional studio.

**WILFRED GUY WARTH- WYKE**, of "Orping Crag," Lower Kalgan River, near Albany, is a son of the late Mr. Guy Warthwyke, a descendant of the well-known old Cumberland family, which dates back to the days prior to William the Conqueror. He was born at New Cross, near London, on September 28, 1866, and received his education at Aske's Hatcham School, a prominent scholastic establishment in the south-east of London, of which he was one of the foundation students. He was a most successful scholar of that school in the late seventies, and holds the Cambridge University honour certificate gained while attending that institution. When

about fifteen years of age he became identified with mercantile life in London, being engaged in various well-known commercial houses until 1887, when he left his native land for Western Australia. Landing at Fremantle in July of that year, he followed the lead of most new arrivals in the State by accepting the first work that offered to his hand. This involved him in bush life for a time, which gave him some insight into the conditions of the country, but was relinquished when work of a more congenial character presented itself in an offer to take over the

*Imperial Studio, Albany.*  
MR. WILFRED GUY WARTHWYKE.

books and general accountancy work with the late firm of Symon, Hammond, & Hubble, of Fremantle and Perth. Subsequently, being seized with the gold fever, Mr. Warthwyke joined the rush to the eastern goldfields in January, 1894, and there obtained a varied experience in prospecting, dry-blowing, and all ordinary occupations connected with mining, finally erecting a crushing battery at the head of the Gascoyne River. He returned to Fremantle in 1899 and purchased an estate agency business, and while carrying this on exercised supervision over a farming property at Jandakot which, in conjunction with his brother, he had acquired in 1888, the property afterwards being disposed of in 1905. He finally decided to devote himself to rural pursuits, and with this object in view took over a farm at Kelmscott, where he continued until 1904, when, owing to the ill-health of his wife, he was compelled to move

farther inland. For a time he settled at Northam, and in 1907 purchased his present property on the Kalgan River, near Albany, which he is developing as a dairying and fruit-growing proposition, with good prospects of success. He has also secured a block of land at Tackonarap, and keeps in touch with the working of this holding by means of periodical visits. Mr. Warthwyke for some years was a member of the Fremantle Roads Board, and while he held his Jandakot farm served as president of the local progress association, in the work of which he took an enthusiastic interest. He was connected with the Fremantle Orchestral Society for a considerable period, being a 'cellist of some repute, and still takes great delight in music. He has been a member of the Masonic fraternity for about twenty years. In 1899 Mr. Warthwyke married Aimée Constance Yeldham, daughter of the late Mr. James Manning, of Perth, and has a daughter.

JOHN KAVANAGH, farmer, "Avondale," Eastwood, near Albany, is a son of the late Mr. Patrick

Imperial Studio, Albany.  
MR. JOHN KAVANAGH.

Kavanagh, of Gory, County Wexford, Ireland, where he was born on June 26, 1862. He pursued his scholastic studies at the Christian Brothers' College in his native town, and about the age of fifteen left school to assist in the duties of his father's farm, where he continued for the next ten years. In 1887 Mr. Kavanagh sailed

for Western Australia, and landing at Fremantle became engaged in the work of railway construction for a lengthy period, during which he held positions of overseer on behalf of the Western Australian Land Company and also for the Government. In 1907 he took up a block of swamp land at Eastwood and commenced its development as a market garden, which lies in proximity to his freehold homestead property, "Avondale," the whole area of swamp and hilly country owned by him comprising about 250 acres. Vegetables of a large variety are produced, and they find their way to the eastern goldfields market, potatoes, cabbages, and turnips all coming to perfection under the skilled care they receive, added to the favourable natural conditions of the locality in which they are grown. Mr. Kavanagh married in 1894 Hannah, daughter of the late Mr. Thomas Horrigan, of Cork, Ireland, and subsequently of Otago, New Zealand, and has three sons and a daughter.

ALFRED BURVILL, Lakeside Farm, Grassmere, near Albany, is a son of Mr. Alfred Burvill, of Kent, England, who came to Victoria in the early days of the gold rushes to that State, and has continued there for over sixty years. The gentleman under review was born at East Bellerine, Victoria, on August 2, 1861, and received his education in his native place and at Ballarat. Leaving school at sixteen years of age, he renounced the calling of a teacher for which he was training to follow in the footsteps of his father, who was a bootmaker. During his apprenticeship, however, he spent some little time in agricultural pursuits, and after learning the boot-making trade relinquished it to accompany Mr. Burvill, sen., to Gippsland, where they settled on the land and devoted their energies to agriculture. Subsequently he worked in the saw-milling industry, and became very proficient in the various departments of work, becoming familiar with the whole of the wide timber belt of Victoria. In 1896 he was offered a position in the Millars' Karri and Jarrah Company at Denmark, and bringing his family to Western Australia he began a four years' connection with this firm, twelve months after his arrival taking up about 200 acres of land in the

rich swamp country, where his present home is situated. In 1900 he left the timber company and joined his family on the holding, where they had been settled for two years, and with the assistance of his eldest son proceeded to develop the land, at the same time taking up outside contracts to enable him to tide over the period until the farm began to be remunerative. In the following year he acquired an additional 200 acres of karri hill country, suitable for orchard and seed potato-growing purposes, and continued his labours on the homestead block, which has

Imperial Studio, Albany.  
MR. ALFRED BURVILL.

been devoted chiefly to the growing of potatoes and other vegetables, a speciality being made of seed potatoes. Much success has attended Mr. Burvill's operations, and his garden products are among the best in the district, always commanding good prices. He has given some attention to public affairs, and has served two terms as a member of the Albany Roads Board. He was one of the founders of the West Albany Settlers' Association, and has acted as hon. secretary of this body for about eight years, during which period the association has exerted a considerable influence in the district. It was mainly through the agency of this body that the Government took over the Denmark railway line and estate, reducing the freights between Albany and the goldfields for perishable goods, thus proving a great boon to the pioneer settlers. It is now known as the West Albany-Martiupp

Settlers' Association. Mr. Burvill was married in 1885 to Florence, daughter of the late Mr. George Pearson, of Peppermint Bay, Tasmania, and has a surviving family of five sons and five daughters.

HERBERT HORTIN, Torbay Junction, is a son of the late Mr. William Hortin, of Charwelton, Northamptonshire, England, and was born at the latter place on July 28, 1855. From the age of eight he began to assist in farm duties, and followed agricultural occupations until 1875, when he decided to emigrate to Australia. Landing at Adelaide in the following year Mr. Hortin immediately became engaged in the agricultural industry, and spent fifteen years in the Central State, during several of which, in

*Imperial Studio, Albany.*  
MR. HERBERT HORTIN.

partnership with his brother, he was identified with wheat-growing pursuits on a farm selected from the Government in the Northern areas. In 1890 he came to Western Australia and upon arrival at Albany filled a position for a year with the Sandalwood Distilling Company. Subsequently he purchased from the Western Australian Land Company a block of land at Torbay Junction, comprising 60 acres, for which he paid 30s. an acre, and set to work to convert a portion of this holding into a market garden. The rich swamp lands he reclaimed with much success, and very shortly found his efforts rewarded by most satisfactory

results, a ready market being obtained for his products on the gold-fields. Since that period Mr. Hortin has taken up other blocks which he has developed by means of intense culture, and at the present time his holding will compare favourably with any other of a similar kind in the district. Over 50 acres are under cultivation—the balance of 200 acres being in process of clearing—and an apple orchard of 25 acres has proved a profitable department, producing fruit suitable for export to London and Hamburg. The inhabitants of the district owe much to Mr. Hortin's push and enterprise, among other projects brought to a successful issue by him being the establishment of an hostelry in the heart of the settlement, directly opposite the railway station, where visitors and settlers alike are entertained in a manner surpassing most country hotels, and at a nominal charge. Mr. Hortin has always given considerable attention to the progress of the district, and has aided with his experienced advice the various boards and associations upon which the burden of administration falls. For some time he occupied the post of president of the local progress association, and is now vice-president of that body. In his younger days he took a prominent part in the volunteer movement in South Australia, and served as a non-commissioned officer for some time in that State. Although approaching sixty years of age he is the mainstay of the local cricket club, taking his place among the younger members and entering heartily into the game. In 1893 he married Mary Ann, daughter of Mr. John Hayes, of Albany, one of the pioneers of the district, and has a son and a daughter.

THOMAS ALBERT ATTWELL, market gardener, Eastwood, is a son of Mr. J. Attwell, of Albany, and was born at Tipton, Staffordshire, England, where also he received his education. Arriving in Western Australia with his father in his early teens, he became connected with the work of construction on the great southern railway line, and continued in this employment for a couple of years. Upon the completion of the line he was engaged in the brick-making industry for some time, and in 1897 took up a block of land on the Perth Road, near

Albany, which he worked with a fair measure of success. Subsequently he sold this holding with the object of securing a larger property, and shortly after acquired his present blocks, three in number, where he

*Imperial Studio, Albany.*  
MR. THOMAS ALBERT ATTWELL.

has cultivated a very large market garden, and for the past ten years has been supplying the Perth and Kalgoorlie markets with garden products, for which he obtains excellent returns. The work connected with his industry absorbs the major share of his time and attention, and what little leisure he has is spent in recreation with his family. Mr. Attwell married in 1897 Beatrice, daughter of Dr. J. Franklin, of Worthing, England, and sister to Mr. John Franklin, qualified chemist, of Deal, Kent, England. The family consists of four sons and three daughters.

EDMUND WOODGATE STRATFORD, Torbay Junction, was born at Boston, in the United States of America, on August 27, 1830, being a son of the late Dr. Samuel John Stratford, a surgeon in the British Army. He was educated at the Upper Canada College, Toronto, and before reaching man's estate came to Australia, landing at Adelaide when there were only a few buildings to mark the future city. After spending some time in various avocations in the Central State, at the outbreak of the early Victorian gold discoveries he made one of the pioneer

prospectors at Ballarat and Bendigo. Not meeting with any conspicuous success to compensate for the hardships endured in this life, in 1857 he continued his travels as far as New Zealand and spent two years in farming pursuits in that country. Leaving the Dominion, he next turned his attention to cotton and sugar planting at Fiji, being a pioneer in these industries in the Islands, most of which he visited during this period of his career. The Maori war proved a call to arms, and in 1863-4 he served as a soldier of the line, holding a non-commissioned post until the conclusion of the struggle. In the early seventies the spirit of travel again took possession of him, and he embarked for California, where he studied medicine; and having obtained a California diploma practised as assistant to a local practitioner at Oakland for some years. In 1887 Mr. Stratford arrived in Western Australia and became engaged in the mining industry, visiting the various scenes of the discovery of minerals of all classes. In 1904 he came to Torbay and erected a store—the first building in the place—where he has continued ever since. The gentleman under review has been twice married, and of a family of nine sons and five daughters six children now survive.

**HORACE BUCKERIDGE**, general storekeeper, Torbay Junction, was born at Staines, in the County of Middlesex, on January 26, 1869. He is a son of Mr. Albert Wilkinson Buckeridge, wine and spirit merchant, of Calne, in Wiltshire, and attended a grammar school in that town until fourteen years of age, when he was apprenticed to a drapery business at Chippenham. After completing his four-years' indentures he became identified with the trade in various leading houses in the southern part of England, and gained valuable experience during the fifteen years that he spent in these establishments. In 1903 he joined a younger brother in partnership at Wilton and carried on business on his own behalf until 1908, when he decided to relinquish his interests in this concern, and leaving the business in his brother's hands came to Western Australia. For a time he was engaged in agricultural pursuits with another brother at Torbay, and ultimately, in February, 1909, took over the Torbay

Junction store, and proceeded to enlarge the business, his training and experience enabling him to develop it by such methods as should benefit both himself and the settlers of the district. Since his arrival at Torbay he has not neglected to study the public good of the community,

W. E. Elston,

Wogin.

MR. HORACE BUCKERIDGE.

and has been connected with various organizations, at the present time holding the office of secretary to the Eastwood-Torbay District Progress Association. He is also prominent in sporting matters, being a member of the local athletic clubs, and for indoor recreation possesses a taste for good literature, Thackeray, Longfellow, Byron, and Shakespeare being among his favourite writers. Mr. Buckeridge married Ellen, daughter of the late Mr. F. Rood, of Southampton, England, and has a daughter.

**WILLIAM REILLY**, one of the original settlers of the Torbay district, is a son of the late Mr. Bernard Reilly, of Kilmore, Victoria, where the subject of this sketch was born in January, 1850. He began life by working for a short time on a farm in the vicinity of his home, but relinquished this occupation to enter upon employment as driver for a Melbourne carrier. After seven years in the capital he took a position as station hand on a run on the Goulburn River in the same State, and subsequently was connected with the mining industry on the Mansfield

diggings. Meeting with but little success in mining, Mr. Reilly next joined the well-known firm of Messrs. Millar Brothers & Co. in the early days of its history, when roadmaking was the principal work undertaken, and prior to the time of the successful railway contracts with which the name is now indissolubly linked. His connection with this firm lasted over a period of twenty years, during which he came to Western Australia in 1886 to take charge of the horses used in connection with the large contracts carried through by the company in this State. Upon the completion of the line from Albany to Beverley Mr. Reilly was transferred to the firm's mill at Torbay, and continued in this service until 1896, when he retired, having purchased his present holding in the same district. Since that

Imperial Studio,

Albany.

MR. WILLIAM REILLY.

period he has lived quietly, doing a little farming and dairying and enjoying the esteem and respect of all his fellow-settlers, who justly regard him as one of the pioneers in opening up the place. He is well known as a loyal member of the Hibernian Australasian Catholic Benefit Society, with which he has been connected for over a quarter of a century, but most of his interests are centred within his home, and he takes his recreation in the bosom of his family. Mr. Reilly married in 1885 Mary Ann, daughter of the late Mr. Louis Harrison, of Echuca, Victoria, and has three sons and three daughters surviving.

THOMAS KNAPP, farmer and orchardist, "Springfield," Torbay, is the second son of the late Mr. Thomas Knapp, of Southampton, England, who was among the earliest of Western Australia's pioneers. Born at Torbay on September 15, 1862, the gentleman under review received his education by private tuition in his father's home, no schools having been established in the district at that time. At the conclusion of his studies he was associated with the parental property for a number of years, and having arrived at the age of thirty launched out on his own account. Purchasing a block of land, consisting of 100 acres, from the Western Australian Land Company he commenced its development as a farm, and by degrees acquired additional acreage until the extent of the property had increased sevenfold. Attracted by the possibilities of intense culture he has applied 40 acres to this branch of industry, and has been successful in raising about seven tons of potatoes to the acre. Besides tubers, he grows all kinds of vegetables and fodder for his dairy herd, which is now assuming considerable dimensions. English grasses of different varieties are sown, and the experiments made in this direction have

Imperial Studio, Albany.  
MR. THOMAS KNAPP.

been highly successful. In conjunction with his two brothers, Mr. Knapp also holds a grazing property of 7,000 acres, where pastoral operations are carried on under the joint management of the three partners. He takes a deep and practical

interest in the welfare of the district of which he is a native, and has advanced its interests in every possible way. He is a live member of the producers' union and of the Eastwood-Torbay Settlers' Association, and has been connected with the M.U., I.O.O.F., for over a quarter of a century. In 1890 Mr. Knapp married Mary Drysdale, eldest daughter of the late Mr. David Young, a pioneer of Marblup, who spent in all seventy-five years in the southern district of this State. The late gentleman in 1881 entertained the present King and his brother at Marblup, upon the occasion of the Princes' visit to Australia in H.M.S. "Bacchante," and in an article contributed to *The English Illustrated Magazine* in 1884-5 the royal travellers wrote glowing accounts of the cordial welcome and lavish hospitality which they received at the hands of Mr. and Mrs. Young and their family. The kindly entertainment of strangers is one of the most delightful features of the home at "Springfield," and Mr. and Mrs. Knapp are deservedly noted for its observance. Their family consists of two sons and a daughter.

ROBERT KNAPP, farmer and orchardist, "Westwood," Torbay, was born in the district where he now resides on May 1, 1864, and received his education privately. He is a son of the late Mr. Thomas Knapp, one of the original settlers in this neighbourhood, and from his early teens became accustomed to the work of the farm, where with his brothers he received a good insight into the agricultural industry. At twenty-seven years of age, in conjunction with his youngest brother, Mr. Frank Knapp, he took up from the Western Australian Land Company a holding of 300 acres, and after working this on terms of partnership for three years, he purchased his brother's interest in the property and continued its development on his own account. Since that period he has more than doubled the area of the farm, which now embraces 760 acres, and a portion of this has been applied to orchard purposes, nearly 40 acres being under intense culture. Mr. Knapp has interested himself in the public affairs of the district, and has been a member of the Albany Roads Board for nine years. He was for six years president of the Albany Settlers' Progress Association, and

still holds the office of vice-president of that body, of which he was one of the founders and a prominent member from its inception. In April, 1910, he married Agnes Elizabeth, daughter of Mr. Charles Leonard

Imperial Studio, Albany.  
MR. ROBERT KNAPP.

Jaggers, of Barragett Farm, on the South Coast of New South Wales, and has a daughter.

JOHN WALKER PATERSON, "Glen Gilghi," Torbay, is a son of Mr. Robert S. Paterson, now of Kansas, United States of America, but some years ago a very well-known resident of Melbourne, Victoria, where he held an important position as administrator of the Yan-Yean water service scheme. The subject of this memoir was born at Liverpool, England, on August 9, 1863, and was brought to Victoria by his parents in the same year. He pursued his primary studies in that State, continuing his education in America upon the arrival of the family in that country in 1874, and in his early teens became engaged in the softgoods manufacturing industry. After seven years of this life, upon reaching man's estate, he entered upon agricultural pursuits in Kansas and continued the working of his property for about six years. In 1895 he decided to return to the land where he had spent his early boyhood, and landing in the first instance at Melbourne was soon attracted by the glowing reports from the "Golden West" to try his fortune in Western Australia.

Arriving at Fremantle in the following year he first joined the railway service, and spent thirteen years in the locomotive department, from which he resigned in 1908 in order once more to devote himself to farming. For this purpose he selected a block of land at Torbay, about two miles from the railway station, and immediately began the work of development, which he has continued up to the present time, bringing additional areas under crop as the labour of preparation advanced. The holding embraces in all over 300 acres of well-mixed hill and swamp country, and about 20 acres of the rich swamp land have been reclaimed at a cost of £20 per acre, and this is being applied to orchard purposes, for which it is splendidly suited. Mr. Paterson is a member of the local progress association, and he interests himself in all matters affecting the welfare of the district.

MR. JOHN WALKER PATERSON.

In 1890 he married Alice, daughter of the late Mr. Reuben Rhuland, of Nova Scotia, and has a son, who assists his father on the farm.

PAUL WILKINSON BUCKERIDGE, of "Euniup" Farm, Torbay, is a son of Mr. Albert Wilkinson Buckeridge, of Calne, Wiltshire, England, where the gentleman under review was born on December 13, 1876. At the close of his education at the Calne Grammar School, at fifteen years of age he became apprenticed to the grocery, wine, and spirit business under his father,

and continued for eight and a half years in the store conducted by Mr. Buckeridge, sen., at Calne, and at Trowbridge with a different firm, during which period he gained a thorough acquaintance with all the details of the trade. In 1900 he left England to seek his fortune in newer lands, and arriving at Fremantle at the end of the year spent a short time in this State, only to discover that owing to a drought

Imperial Studio, Albany.  
MR. PAUL WILKINSON BUCKERIDGE.

then prevailing there was a general depression in trade. Continuing his voyage to New Zealand Mr. Buckeridge there turned his attention to agricultural pursuits at Karere, in the Palmerston North district, and followed farming occupations for two years. Conjointly with his farming interests he engaged in carting and contracting in the same neighbourhood, and two years later, in partnership with Mr. O. Monrad, took over a large farm near Palmerston North, which they cut up into small holdings and sold for dairying purposes. After the completion of this venture Mr. Buckeridge went to England for a trip, and upon his return journey made a tour through the Argentine. In 1908 he landed in Western Australia, having decided, on account of the liberal land laws obtaining here, to settle in this State, and selecting his present holding of 320 acres in the Torbay district has met with considerable success in his enterprise, a profit being secured as early as the third year after beginning operations. Mr.

Buckeridge has been a member of the Eastwood-Torbay Progress Association for a considerable time, and has recently been elected to the committee of that body. He served as representative for West Ward on the Albany Roads Board for one term, but was obliged to retire from this office owing to the pressure of his farming interests. He is a member of the local rifle club, and for indoor recreation turns to chess, of which game he is a great lover. In 1910 he married Edith, daughter of the late Mr. Henry Bagnall, of "Manor Farm," Hampnett, Gloucestershire.

DAVID MORGAN, owner of "The View," a flourishing farm and orchard property at Martiupp, is a son of the late Mr. David Morgan, and was born at Black Lead, near Buninyong, Victoria, his father also being a native of that State. He

Imperial Studio, Albany.  
MR. DAVID MORGAN.

pursued his studies at the Ballarat State School, and at the close of his scholastic career became engaged in farming occupations in the Victorian State, where he continued for four years. At the end of that period he proceeded to St. Arnaud, where he filled a position in the business carried on by the Honourable P. McBride, Minister for Mines in Victoria, upon the attainment of manhood turning his eyes toward Western Australia. Mr. Morgan arrived in Perth upon the

day of the proclamation of responsible government, and in company with his brother immediately began the search for a suitable block of land for farming purposes, which he found at Wagin, and settled in that district for three years. For many years he had been a most earnest and active worker in the Methodist Church, and in 1894, owing to his zeal in the cause, the authorities of that body urged him to accept the post of home missionary at Greenough, where he laboured for some time, and was afterwards sent to Cue in charge of the mission there, resigning the post in 1895. In the same year he entered into partnership with Mr. Robert Allen, Cue being the centre chosen to erect premises and carry on operations. For a considerable time this partnership was continued, the firm undertaking contracts and doing a fairly brisk business, and in 1897 it was by mutual consent dissolved, Mr. Morgan removing to Melville, near Yalgoo, where he established a business on his own account. He remained in this district until the decline of the field, and then went to Kanowna and followed alluvial mining, with, however, only partial success. Eventually he arrived at Trafalgar, where he remained until 1905, being engaged in engineering for the Brown Hill Mining Company for a couple of years subsequently. In 1907 he received the appointment of manager of the Gentle Polly Mine, which paid over £30,000 in dividends during the term of his control. Two years later Mr. Morgan purchased from Mr. R. Knapp the block of land near Albany, where his homestead now stands, comprising 300 acres of very valuable property. He has brought scientific methods to bear on the working of this farm, and has met with unqualified success, his industry and enterprise being amply rewarded with most satisfactory results. A member of the Albany Roads Board he has also been connected with the West Albany-Martiupp Settlers' Association since his arrival in the district, and acts as hon. secretary to this body. He married in 1892 Emily, daughter of the late Mr. Josiah Avery, of St. Arnaud, Victoria.

GEORGE FAUSSON HILL, owner of the "Rockleigh" property at Kronkupp, situated about 19 miles from Albany, is a son of Mr. George

A. Hill, of Sale, Gippsland, where the subject of this sketch was born on May 1, 1879. He received his education in his native place, and upon leaving school at once became engaged in the farming industry in that district, where he continued for about eight years. At the time of the Boer War he joined the 5th Australian Commonwealth Horse and accompanied this contingent from Victoria to the scene of action. In 1908 he came to Western Australia, having previously for five years worked a property on his own account at Yarragon, Victoria. This

Imperial Studio, Albany.  
MR. GEORGE FAUSSON HILL.

proved a valuable experience, and upon arrival in this State Mr. Hill took up from the Government 114 acres of mixed hill and swamp country, to the development of which he has since applied himself. Since taking up his residence in this country he has thrown himself wholeheartedly into every scheme for the promotion of the public welfare and for the advancement and benefit of the district where he has made his home. Early in 1912 he was elected to a seat on the Albany Roads Board, and he is also a member of the administrative body of the West Albany Settlers' Association, with which he has been connected ever since his advent to the neighbourhood. A leading spirit in the rifle-shooting movement, he holds the position of captain of the Kronkupp Rifle Club, in his Victorian days having been connected with a similar organization at Yarragon.

He also holds office as chairman of the committee of the local agricultural Hall. Mr. Hill is a great reader, his choice falling chiefly on scientific works. He married in 1895 Elizabeth, daughter of the late Captain John Graydon, of Lindon, later of Yarragon, who saw active service with the 1st Infantry Regiment during the American Civil War under General Lee. He has one daughter.

ALFRED NORMAN PULS, "Happy Valley" Farm, Kronkupp, is a son of Mr. F. Puls, of the same place, and is a native of the Wimmera district, Victoria, where he was born on June 3, 1884. He received his education at the Doon State School, and in his early teens came to Western Australia with his family, his father having previously settled on a farm at Grassmere, in this State. Upon arrival his services were in demand on this property, but after a brief period he proceeded to Katanning and filled a position with the firm of F. & C. Piesse and others for two years, during which he turned his hand to various kinds of work. Returning

W. E. Elston, Wagin.  
MR. ALFRED NORMAN PULS.

to the parental roof-tree he joined his father and brothers in contracting and roadmaking, and some years later took up a block of Crown lands, comprising nearly 50 acres of swamp country, to which he has recently added 108 acres of hill land specially suited to fruit culture. Mr. Puls has brought great industry

and perseverance to bear on the carrying out of his designs, and has engaged in intense cultivation on the swampy portions of the holding, with very considerable success. He interests himself in the public organizations of the district, and is a member of the Eastwood-Torbay Association and hon. treasurer of the local rifle club. He also takes a keen interest in athletics, and is closely identified with the various sporting clubs, filling the post of captain of the local football club. His father and mother reside with him on the "Happy Valley" Farm.

THOMAS HORTIN, proprietor of "Spring Vale" Farm, Hortons, is a son of the late Mr. William Hortin, of Northamptonshire, England. From the time of his leaving school he was engaged in the agricultural industry in the Old Country until his departure for Australia in 1875 with his brother, Mr. Herbert Hortin, now of Torbay Junction, Western Australia. For thirteen years the brothers carried on farming pursuits in the northern areas of the Central State, and in 1898 the gentleman

Imperial Studio, Albany.  
MR. THOMAS HORTIN.

under review followed Mr. H. Hortin to Western Australia, the latter having preceded him by eight years. For a time he was connected with the repairing of the railway line from Torbay Junction to Denmark, on behalf of the Millars' Karri and Jarrah Company, which was responsible for the building of this

line. While thus engaged he selected a block of land from the Government and began to develop it in his spare time. At the closing down of the mills at Denmark Mr. Hortin devoted the whole of his time and energies to the working of this block, with such excellent results that his holding was specially pointed out by the Government to intending settlers to show what was possible to accomplish on the swamp lands of the district. Owing to this success others were induced to settle on adjoining blocks, and so prosperous did the little settlement become that railway communication with the more-established centres was recognized as a necessity, and Millars' disused line was purchased by the authorities and reopened for traffic. Much credit is gladly accorded Mr. Hortin for the plucky way in which he continued his venture during the pioneer period when discouragements were numerous and privation and discomforts the order of the day, as it is in a great measure due to him that the district has been opened up. He has added to his original holding, and now possesses over 250 acres of good mixed land, which is well advanced in the matter of improvement. He is treasurer of the West Albany-Martiupp Settlers' Association, with which body he has been associated for the past decade. Cricket is his favourite sport, and he is still an enthusiastic participant in this game, being one of the leading players in the district. He married in 1884 Eliza, daughter of the late Mr. C. Williams, of Snowtown, South Australia, and has five sons and four daughters.

WALTER JOSEPH SAMPSON, farmer and orchardist, "Ellendale" Farm, Hortons, near Albany, is a son of the late Mr. Philip Popplestone Sampson, who came to Victoria from Cornwall in his teens and spent a quarter of a century in the mining industry in Victoria. The subject of this memoir was born at Sebastopol, in that State, on July 16, 1876, and received his education in the public school at Ballarat. He left this institution at the age of fourteen with the intention of learning the trade of a monumental sculptor, but after less than three years he relinquished this calling in order to join his father, who was working the Last Chance Mine on tribute at Ballarat. In the early part of 1898 the

gold-mining boom in the Western State drew him to its shores, and proceeding direct to Boulder City he went to work at the famous Great Boulder Mine, shortly after being transferred to a position in the battery, where he began to learn amalgamating, and before he left this

Imperial Studio, Albany.  
MR. WALTER JOSEPH SAMPSON.

employ he had risen to the position of chief amalgamator. Mr. Sampson spent in all twelve years with the Great Boulder Company, at the end of which period, upon the advice of the medical fraternity of Boulder and Kalgoorlie, in addition to special advice in Victoria, he resigned his position and left the fields in order to regain his shattered health by the outdoor life provided by farming pursuits. A portion of his present holding being in the market, he purchased 50 acres of swamp flats from Mr. James, and has since added to this another selection, comprising over 400 acres of hill country for grazing and orchard purposes, and at the present time the "Ellendale" Farm bids fair to take its place among the foremost properties of its kind in the district. Mr. Sampson has displayed an active interest in the various movements having for their object the advancement of the district, and is a member and committeeman of the West Albany-Martiupp Settlers' association. He is a trustee of the local agricultural hall, and has taken a prominent part in connection with this institution, having acted as the pioneer organizing secretary of the movement. A member of the

Independent Order of Oddfellows for over twelve years, he has held high offices in that body; and he is a member of the committee of the Kronkupp Rifle Club. The cause of outdoor sport finds in Mr. Sampson a cordial advocate, and he fills the post of vice-president of the district football club. In 1897 he married Rose Amelia, daughter of Mr. James Harris, a pioneer since 1849 in the Victorian gold-mining industry, now of Hortons, Western Australia, and has a family of two sons and three daughters.

**GILBERT EDWARD STAKER**, member of the Denmark Roads Board, is a son of Mr. William R. Staker, of Kapunda, South Australia, where the gentleman under review was born on January 1, 1878. He attended schools at Sutherlands and Mount Mary, in the same State, and at the conclusion of his education followed agricultural pursuits for some years. In 1897 he came to Western Australia, and for six years was connected with the mining industry, developing a claim on his own account, prospecting in a general way, and working on the established mines. In 1902 he once more turned his attention to farming, and purchasing a property at Northam continued there for four years. Eventually he disposed of this holding in order to take a position in a battery at Kalgoorlie, and two years later left the eastern goldfields with the intention of again settling on the land. Coming to the Denmark district, he selected a block four miles north of the township, and at the present time has nearly 300 acres, upon which mixed farming operations are already in full swing. Fruit-growing, dairying, and potato culture are the chief departments of his industry, and his efforts have produced good results. Mr. Staker spends a portion of his leisure in the study of works dealing with the scientific side of mixed farming, which he finds helpful in the practical work. He was elected to a seat on the first Denmark Roads Board at the inception of that body. He is also a member of the local progress association. For years he was known on the goldfields as a devotee of football and cricket, and still retains his love for all forms of manly outdoor sport. In 1900 Mr. Staker married Evelyn, daughter of Mr. William McKenzie, a well-known Australian mine manager.

**YOUNG BROTHERS**, farmers, Marblup. (Henry Young, William Wallace Young, and Robert Muir Young.) The property now owned

*Imperial Studio, Albany.*  
Mr. HENRY YOUNG.

and worked conjointly by the Messrs Young Brothers, originally was purchased from a Mr. Tully by the late Mr. David Young, father of the gentlemen under review, who was the first settler in the district. Since

*Imperial Studio, Albany.*  
Mr. WILLIAM WALLACE YOUNG.

that period it has been considerably extended, and now embraces over 310 acres, the soil being of very superior quality and well adapted to the mixed farming operations to which

it is applied by the proprietors. The homestead has an historic interest in the fact that, upon the occasion of the present King, George V. of England, and his late brother visiting Australia by H.M.S. "Bacchante" in 1881 the young princes were entertained here, and gracefully acknowledged the hospitality they then received in subsequent contributions to the English Press. Messrs. Young Brothers have been associated with the farming industry all their lives in this district, being chiefly educated at home, with a supplementary course

*Imperial Studio, Albany.*  
Mr. ROBERT MUIR YOUNG.

of instruction at the Government School at Albany, from which they naturally fell into their place on the home farm. One only is married, Mr. R. M. Young, who espoused Ann, daughter of the late Mr. Samuel Piggott, of Hay River, Western Australia, and has three sons and four daughters.

**GEORGE ARTHUR FLAY**, Chairman of the Denmark Roads Board, was born at Brisbane, Queensland, on June 22, 1865, being a son of the late Mr. George Flay, of that place. He pursued his scholastic studies at Gympie, and on leaving school followed agricultural pursuits in the neighbourhood of the latter town. Upon reaching manhood he became identified with the mining industry for a brief period, and subsequently proceeded to Townsville, where he spent seven years as foreman in a general store owned by Mr.

P. F. Hanran. In 1905 he opened a cordial factory in the same place, which he carried on for a year and then sold out in order to come to Perth, where he established himself in the same line of business for two years. Being offered by Messrs. Sargeant & Light the position of

MR. GEORGE ARTHUR FLAY.

manager of a farm at Denmark, comprising over 1,800 acres, Mr. Flay came to this district, and has filled this post ever since. He has been closely associated with the public life of the neighbourhood, and was elected first chairman of the recently created roads board, being also a member of the health board and of the Denmark Progress Association. He supports all charitable movements, and being the possessor of musical gifts is in frequent request as a singer at the local concerts. He is fond of reading, finding especial charm in works of an historical character.

ARNOLD BARKER ADAMS, "Weedon Hill," Denmark, is a son of the late Mr. Thomas E. Adams, of Weedon, Northamptonshire, England, where the gentleman under review was born on September 6, 1880. He received his primary instruction at Montauban at the Grammar school, St. Annes-on-Sea, in Lancashire, and subsequently took a course of study in scientific agriculture at the Harris Institute, Preston. Having completed his studies he went to South Africa, and was farming in the Molteno and Queenstown

district for about four years, at the end of which period he returned to England. In 1907 he sailed for Western Australia, attracted by the liberal land laws existent in this State and the assured rainfall of the great southern district. After inspecting the various agricultural localities he took up his present holding near Denmark, consisting of 160 acres, which he has since extended to 420 acres, forming a snug little farm, embracing both hill and swamp country, which he is applying to purposes of mixed farming. Shortly after his arrival in the district he began to take a leading part in the various movements having as their object the progress of the place and the welfare of the settlers, and was one of the founders of the original settlers' association in this district. Upon the creation of the Denmark

MR. ARNOLD BARKER ADAMS.

Roads Board he was chosen by a section of the ratepayers to represent them on that body, and still retains this seat. He is a Liberal in politics, and takes a keen interest in the trend of public affairs, not only in his adopted country, but in Great Britain and foreign administrations. In 1909 Mr. Adams married Marcelle Kathleen, daughter of the late Mr. C. Gros, of Manchester, and has a daughter.

HAROLD VINCENT BUCKLEY, Secretary of the Denmark Roads Board, is a Victorian native, having been born at Rutherglen, in that State, on October 1, 1878, and is a son of Mr. Allan Knox Buckley,

of Wickopin, Western Australia. He pursued his scholastic studies at Flinders School, Geelong, and at the age of sixteen left the hands of his instructors to become assistant to his father, who was a shire secretary in Victoria. This position he held irregularly for some time, and in 1906 decided to come to Western Australia. With the object of entering upon farming pursuits Mr. Buckley took up a block of land in the Denmark district and established a worthy claim as the pioneer settler of the neighbourhood, nothing now remaining of the old Denmark but an

MR. HAROLD VINCENT BUCKLEY.

abandoned timber mill. His block of 260 acres he has steadily prepared for cultivation of potatoes and other vegetables, and each year witnesses an additional portion cleared and ready for tillage. Mr. Buckley has made himself active in the advancement of the district, and was instrumental in founding the Denmark Settlers' Association with a membership of six, which has increased so rapidly that, at the present time, there are over a hundred names on the roll and the organization is in a most healthy condition. Upon the creation of the Denmark Roads Board he was appointed secretary of that body, and for two years occupied the position of Government land guide, at the present time holding the office of Government agent at Denmark, his services in this regard being invaluable to new and intending settlers. In 1911 Mr. Buckley married Elsie, daughter of Mr. William J. Manning, of Denmark, and has a son.

WILLIAM JOHN BEVERIDGE, M.D., Fellow Royal Academy of Medicine, Ireland, Government Medical Officer at Denmark, is a son of the late Mr. John Francis Beveridge, L.L.B., who practised at the Irish Bar and for a lengthy period filled the post of town clerk of the City of Dublin. The gentleman under review was born at Dublin on October 4, 1874, and received his primary

DR. WILLIAM JOHN BEVERIDGE.

education at Clongowes Wood College. Subsequently he studied medicine at Dublin, and after qualifying L.R.C.P.S.I. & L.M. (Rotunda Hospital) in 1896 accepted the appointment of house surgeon at Jervis Street Hospital, where he continued for over a year. At the termination of this period he made an extended tour of the world, in due course arriving at Peru, where he was appointed medical officer of the Cayllona Silver Mines, which position he held for nearly five years, during which time he was made a member of the Provisional Council of Cayllona. Returning to the land of his birth, Dr. Beveridge took the post-graduate courses at Dublin University, London, and Brussels, gaining his M.D. degree at the latter institution. In 1906 he came to Western Australia, and shortly after arrival proceeded to Kalgoorlie, where for some years he had an extensive practice. His health suffering through overwork, Dr. Beveridge was offered and accepted the appointment of district medical officer at Denmark, and finding that the climate effected a complete restoration to his health has

continued here ever since. He holds a captain's commission in the A.A.M.C. Reserve, and is keenly interested in ambulance work. A crack shot with the rifle, he is the possessor of numerous trophies testifying to his skill as a marksman. His favourite amusements are found in motoring and yachting, and he spends many leisure hours sailing on Wilson's Inlet. Dr. Beveridge married in 1907 Beatrice Maud, daughter of Mr. H. F. M. Latham, of Ravensthorpe, a well-known figure in journalistic circles in Tasmania and Western Australia, and has a daughter. He resides at "Arborfield," Denmark.

ALFRED RUSHTON, farmer, "Whinfield," Denmark, is a son of the late Mr. Lawrence Rushton, of

Imperial Studio, Albany.  
MR. ALFRED RUSHTON.

North Lancashire, England. He was born at Dutton, in the same county, on February 1, 1858, and pursued his educational studies at Chipping and Ribchester. Leaving school at fifteen years of age, he studied privately for some years, and upon reaching maturity applied himself to the farming industry on his father's property, subsequently launching out on his own account in the same walk of life. Attracted by the bright prospects offering to farmers in the Western State of Australia, Mr. Rushton sailed for the Antipodes, and having satisfied himself that these reports were justified by the existing condition of things returned to England for his family. Purchasing a

homestead and block of land at Denmark overlooking the town he took up his abode in this dwelling—which is one of the most comfortable houses in the district—and proceeded to develop the holding, which consists of about 150 acres. It is his intention to devote his efforts principally to fruit-growing, for which the soil and locality is well suited, and already he has several acres under cultivation. Mr. Rushton was married in 1888 to Jane, daughter of Mr. John Fielding, of Balderstone, Lancashire, England, and has four sons and a daughter.

JOHN RICKETTS, farmer, of "Ealing Dean," on the Denmark River, was born at Ealing West, formerly known as Ealing Dean, London, on May 1, 1864, being a son of Mr. John Ricketts, of that place. He was educated at the National School in that suburb, and at the close of his scholastic career served a seven years' apprenticeship to the trade of carpenter and joiner. Upon the completion of his articles he came to Australia, following in the footsteps of his grandfather, the late Mr. John Allnutt, who arrived in this State in 1844 and died at

Imperial Studio, Albany.  
MR. JOHN RICKETTS.

Australind, after having played a worthy part in forwarding the development of a land which at that time was regarded as being on the "edge of the beyond." Mr. Ricketts landed at Fremantle in June, 1886, and after following his trade for

some time, during a period of commercial slackness turned his steps toward the north-west, and continuing his travels to Kimberley tried his hand at station work for a time. Returning to Derby he became engaged in building and general contracting in that town for five years, and having been financially successful took a trip to England, *via* the East, and spent some time at the various ports of call before arriving at the Old Country, where he remained for a considerable period. Returning to Western Australia he settled near Cue, on the Murchison goldfield, and gave his attention to market-gardening with the aid of an irrigation scheme which proved highly satisfactory. After fourteen years, however, the district declined rapidly, the population diminished, and Mr. Ricketts found himself at a considerable loss. Leaving the north he came to Denmark and took up his present block of land, and while attending to its development, which he has since continued, worked throughout the district at the trade which he had learned in his boyhood. He was always active in public life, and held various positions of honour and trust, having been a member of the Kimberley Roads Board and chairman of the similar organization at Cue. Since coming to Denmark he has been elected a member of the newly - formed Denmark Roads Board, and ever since his arrival in the district has been connected with the local settlers' association. He is also a keen student of political economy. Mr. Ricketts is an enthusiastic cricketer, a crack wicket-keeper, and a more than average player in other departments of the game. He married in 1896 Elizabeth Mary, daughter of Mr. Samuel Hope, one time superintendent of Fremantle Prison, now living in retirement at Perth, and has a son and three daughters.

**JOSEPH DAVID SMITH, J.P.**, "Hawthorn Hill," Denmark, is a son of the late Mr. Richard Smith, of Port Albert, South Gippsland, Victoria, and was born in that district on November 11, 1868. At the close of his education, which he received in his native town, he spent several years in the fishing industry, and in 1898 came to Western Australia, where he was engaged for a time in

the same calling prior to taking up farming pursuits. Subsequently he secured a homestead farm at Young Siding, not far from Denmark, and at a later date purchased a suburban block on the northern hill overlooking the town, where he built his present home. He has since devoted his energies to farming his property with satisfactory results. Since coming to the district Mr. Smith has made himself prominent in public affairs, and has served two terms as a councillor of the Municipal Board of Albany. For many years he has occupied a seat on the Albany Roads Board, and upon the creation of the Denmark governing body in 1912 was elected one of the original members. He is also chairman of the board of health and a member of the school board, and for four years filled the office of chairman of the parent settlers' association of Denmark. In

*Imperial Studio, Albany.*  
MR. JOSEPH DAVID SMITH.

1911 he was granted a Commission of Justice of the Peace for his district by the Wilson Administration. Mr. Smith married in 1892 Ada Harriet, daughter of Mr. Frederick George Winter, of Port Albert, Victoria, and has three surviving sons and a daughter.

**HENRY RODNEY ROBERT KINGDON**, "Wattlebrae," Denmark, is the eldest son of Mr. John Kingdon, of Lower Hutt, Wellington, New Zealand, and was born at Wellington on April 15, 1885. He was educated at the Lower Hutt State School and at Wellington

College, and upon leaving the last-named institution at sixteen years of age entered mercantile life in an office where he was engaged in accountancy work for a time before rejoining his father on the home farm. In 1908 he came to Western Australia and took up the block of

*W. E. Elston, Wagin.*  
MR. HENRY RODNEY ROBERT KINGDON.

land where he now resides, immediately beginning the work of clearing, and as soon as the land was prepared putting in the seed. The holding consists of 560 acres, and is chiefly hill country, containing a good proportion of fine mixed soil. When fully developed it is Mr. Kingdon's intention to devote the property primarily to dairy-farming, but at the present time he is going in for intense culture on a small scale. Since his arrival in the district he has been prominently associated with every movement for its advancement, and is one of the original members of the recently created roads board. He holds office as secretary of the William Bay Settlers' Association, of which body he was one of the founders. While at school Mr. Kingdon joined freely in all athletic sports, and is equally at home in swimming, footracing, tennis, and hockey events, being the winner of several trophies which record his prowess in the arena of sport.

**HERBERT EDWIN STAF-FORD**, "Belgravia," Denmark, is a son of the late Mr. Edwin H.

Stafford, of New South Wales, and was born at Leichhardt, Sydney, on December 12, 1883. He received his education at the Leichhardt School, and upon leaving that institution became engaged in station life on the pastoral properties of "Killaloolah" and "Eulandoolah," in New South Wales, until the outbreak of the struggle between the British and the Boers in South Africa. Joining the 3rd New South Wales Mounted Rifles Contingent he proceeded with his regiment to the scene of action, and spent two years with the troops in South Africa, being the recipient of the Queen's Medal for his services during that period. Upon his return to Australia he was again identified with pastoral life, and a year

later, with the idea of enlarging his knowledge of the world, sailed for Canada, where he spent about twelve months. The climate, however, proved uncongenial, and he left the Dominion for the United States of America, where he completed three years, and both here and in Canada, in the capacity of cowboy, met with some exciting experiences. Having convinced himself that Australia was the country of his preference he returned to the island continent, landing at the Western State in 1908, and almost immediately took up a block of Government land comprising 266 acres, which he has since been engaged in developing. Clearing operations are now being carried well forward, and it is Mr. Stafford's

intention in course of time to devote his energies chiefly to the dairying industry. As a member of the William Bay Settlers' Association he is involved in the various movements for the advancement of the district, which is rapidly taking its place among the different agricultural centres of the State. Mr. Stafford is an experienced marksman and finds frequent recreation in the pursuit of game. His quieter tastes lead him to the perusal of literary works of a biographical and historical nature, as well as lighter literature. In 1909 he married Elma, daughter of the late Mr. William Lichfield, of Tingah, New South Wales, and has a son and a daughter.

### THE SOUTH-EASTERN DISTRICTS.

This district comprises practically the whole of that large area stretching eastward from Albany to Eucla, and lying to the south of the goldfields' line. With the exception of the arid areas of the far interior it is the least developed portion of the State. In places there has been a certain amount of activity in some directions, as, for example, in the mining districts around Phillips River and Norseman, and in the agricultural development in the neighbourhood of Esperance; but on the whole the territory is still in its virgin state. Since the time, 70 years ago, when it was crossed by the explorer Eyre from Adelaide under memorable circumstances, several expeditions have examined portions of it, and telegraph lines have been carried through from Albany and from Dundas to Eucla; but in no case have the reports brought back been favourable enough to encourage agricultural or pastoral settlement on anything like a large scale. And yet there are extensive sections of grassy country well adapted for carrying stock, if only the water difficulty could be solved. In the northern areas boring has disclosed the existence of a large artesian basin which has greatly enhanced the value of the land. If only the same facilities could be secured throughout the south-eastern districts there is little doubt that the coming of the Trans-Australian Railway, which would solve the additional present difficulties of transport, would result in the rapid opening up of these at present neglected areas.

The pioneers of those who have established themselves in the district were the Messrs. Dempster, who many years ago took up nearly 1,000,000 acres in the vicinity of Esperance, and who, notwithstanding initial difficulties and remoteness, made their venture a success. Others followed and have in a measure succeeded also, but the fact that land equally good, with better water

facilities and within easier reach of a market, was easily available in other parts of the State, acted as a bar to any great development. Since the Trans-Australian Railway was started there has been another movement in the direction of taking up large areas of this country, with the intention, it is hoped, of working them, so that there is some prospect at least of the impression that this territory is "no man's land" being removed during the next few years.

The towns throughout the district are few and far between.

#### RAVENSTHORPE.

This town is the centre of the Phillips River goldfield and is situated about 34 miles north of Hopetoun, a small port on the coast, which is connected with it by rail, and forms the depôt to which supplies for the goldfield are brought from Albany. The population of Ravensthorpe is very small, but the town is the headquarters of the warden of the mining field, and the buildings in addition to his court consist of a hospital, mechanics' institute, post office, roads board hall, and several hotels. Both gold and copper are found in the district, and batteries have been erected at Ravensthorpe and Kundip, while there is also a smelter at the former place for the treatment of copper ore. Apart from the mineral resources there is a large area of agricultural land within comparatively easy reach. With an assured rainfall of 15 in., practically the whole of this land is easily capable of yielding 12 bushels to the acre.

#### ESPERANCE.

This town is situated on the coast some 237 miles east of Albany and about 125 miles south of Norseman. Ever since the establishment of the eastern goldfields it

has been looked upon by the people there as the natural port for those fields, and for years past there has been almost continuous agitation for a railway between Esperance and Coolgardie. Some years ago the first section—Coolgardie to Norseman—was completed, but the remaining portion is still a question for discussion, and notwithstanding several attempts on the part of various Governments, has not yet succeeded in reaching the stage of parliamentary authorization.

In the vicinity of the town are Mount Merivale, Frenchman Peak, Mount Le Grand, and other eminences, while a few miles inland there are the Wittenoom Hills, beyond which is the Hampton tableland. The port contains a large and safe natural harbour, completely sheltered by numerous small islands, and a substantial jetty nearly half a mile long, giving 18 ft. of water at low tide, has been erected.

For some years Esperance enjoyed the advantages—and expense—of municipal government, but secured relief when the trade with the goldfields diminished and the danger of depopulation began to make itself felt. When the Esperance railway is built it will probably forge ahead again, as it will not only be the nearest port of shipment for supplies for the fields, but will also be the nearest seaside resort where goldfields residents may go

to receive the benefits of the invigorating ocean breezes. The town contains the usual public buildings such as post office, courthouse, school, and hospital, as well as Customs office, and an enclosed goods shed area of nearly four acres. The present population of the district is about 400; this embraces the agricultural areas of Grass Patch, Myrup, Doombup, Corranup, and Dalyup, where a certain amount of settlement is taking place.

#### EUCLA.

Eucla is a small township about seven miles west of the eastern boundary of the State, and about 520 miles east of Albany. It is situated about half a mile from the shore, and is the connecting point of the electric telegraph system of Western Australia with that of South Australia. In fact the population, which consists of about a score of persons, is made up wholly of officials connected with the telegraph service. The roadstead off the settlement, which was surveyed by Captain Douglas in 1867, provides a good anchorage, being protected by a reef about six miles from the shore. The want of water is a drawback to development, but recent experiments in wheat-growing conducted in the surrounding country have met with satisfactory results. The chief buildings are, of course, the telegraph offices.

## Eastern Goldfields.

### SOUTHERN CROSS.

East from Perth some 250 miles stands a small town which has had a most interesting history, redolent of the earliest days of gold mining in this State, and familiar in the nineties through all Australia almost as a household word as "The Cross." Even its name and the manner in which it was gained has clinging to it the glamour of romance, and to many it contains the beginning and end of some of life's deepest tragedies. When the first prospectors set out in the middle of the year 1888 on their march through those trackless wastes of the interior of Western Australia in search of that "philosopher's stone" that through all ages has levied such a heavy toll on the best and most adventurous of men, they were dependent in no small measure on the aboriginal for their topographical information. To the uninitiated many of the native names of Western Australia possess peculiarities that are ever a source of wonder, which even outlives the discovery of their prosaic meaning. To no name more than "Yilgarn" is this feature so true, and the native name for white quartz in Western Australia is destined to be indelibly stamped on more than one mind and heart even to the present day. When these earlier prospectors set out on their voyage of discovery to unearth that "white quartz," or "yilgarn," they checked the course every evening by the Southern Cross, and eventually their search was successful, and in the miles of quartz country discovered the embryo town of Southern Cross sprung into being. In the near future it was destined to have a wider development, and to become familiar in all the gold-mining communities throughout the world.

The growth of the town was phenomenal, and four years after its discovery it was proclaimed a municipality, its progress being further accelerated by becoming the

DDD

"railhead" of the eastern goldfields railway then under construction. As the distributing centre to the further and more important goldfields, the phenomenal increase can easily be imagined. The earlier town was of necessity of mushroom growth, and congregated, as do many of those in Western Australia, around the distributing centre—the railway—but the later municipality is well laid out and worthy of praise. The town has been well planned, five wide streets have been provided, and everything done by the council for the convenience and comfort of the ratepayers. Even before the construction of the goldfields water scheme the town was well served by an immense tank having a capacity of 1,250,000 gallons and situated a mile and a quarter from the town.

Photo by L. Shapcott.

SOUTHERN CROSS.

Particular care was taken to keep the catchment area free from all pollution, and the sanitary details even in the earlier period of the town's existence were carefully considered. Very early in the history of the municipality the comfort and well-being of pedestrian and vehicular traffic was a feature of the administration, and, despite its genesis as a hurriedly constructed mining camp, Southern Cross could lay claim to many of those minor conveniences not usually seen apart from more settled communities. The town is situated on the western edge of a long, narrow salt lake, which extends for many miles north and south, and is at no point more than half a mile wide. The country is of but slight elevation, consisting of low, thickly timbered hills, flats, and claypans or lakes.

Almost the only industry of the place is that of gold mining, and the reefs are generally on the low ridges, but they are in some places also visible on the edges of the lakes. Within a mile of the town are several batteries and other extensive mechanical appliances for

the treatment of quartz. The public buildings of the town include a public hall, a mechanics' institute well supplied with technical works and scientific literature as well as that of a more general nature. Fine municipal chambers have been erected, and the travelling public are well catered for in the magnificent hotels in the town. Among other improvements carried out by the council in the earlier stages of the existence of the municipality was the embellishment of the main streets by the planting of trees and the construction of a fine reserve, and the present ratepayers reap the benefit of their care and forethought.

Though some of its ancient importance has departed in late years from the town, nevertheless it still is of more than ordinary importance, and the revival of its mining interests will go far to again place it in the forefront of the municipal life of the eastern goldfields.

Situated about 23 miles north-west of Southern Cross, and called after the famous Bullfinch mining lease, is the mining town site of Bullfinch. The interest

**JOHN EDWIN CHADWICK**, J.P., Mayor of Southern Cross, is a son of the late John Chadwick, and was born at Rutherglen, Victoria, on March 13, 1867. After attending a private scholastic academy for some time, he was sent to a public school to complete his education, and at the age of fifteen years elected to follow cattle-droving as a means of livelihood. After seven years, during which term he traversed almost the whole of New South Wales and Queensland, he decided to visit Western Australia, and landing at Fremantle in 1892 spent a few months in the Northam district. Not being impressed with his experience of the country he returned to the land of his birth, but six months later turned his steps again towards the Western State. Proceeding to Southern Cross he tried prospecting in the surrounding district and also opened a butchering business, but failed to satisfy his ambition of success by either venture. During the nineteen years that have elapsed since he first arrived on the goldfields, he has indulged in a variety of occupations with varying results, and at the present time, besides carrying on a tobacco and billiard saloon, is interested in 480 acres of agricultural land in close proximity to the town. This property has been very successfully farmed, and for the production of hay has proved second to none in the State. During his long residence in the district Mr. Chadwick has exerted himself in every possible way

for the benefit of his fellow townsmen, and has been elected to a seat on the municipal council no fewer than eight times, while on three occasions he has filled the office of chief magistrate of the town. He was convener of the first meeting for the formation of a branch of the Political Labour Party. A member of the Masonic Lodge at Southern Cross, he has passed through numerous chairs of office, has attained to the distinction of Arch Druid in the U.A.O.D., and is secretary to the Rovers' Football Club. He is a member and consistent patron of all the outdoor sporting bodies of the district, and has fulfilled the duties of clerk of the course for the Southern Cross Racing Club ever since its inception. In 1898 he married Annie Louisa, daughter of the late Samuel West, of Regent Park, London, and has four daughters.

Councillor **WILLIAM HENRY**, who represents the ratepayers in the municipality of Southern Cross, is a son of the late William Henry, of Castlemaine, Victoria, in which town he was born on May 28, 1876. He received his education at local public schools, and at fifteen years of age was apprenticed to the blacksmithing trade at Serviceton, where he served a term of about two years. Upon the report of gold discoveries in Western Australia he sailed for this State, arriving at Esperance

and attention that was paid to this town site in its earlier stages, owing to the fabulous wealth discovered at shallow depths on the field in 1910, has not yet entirely departed. The township is the centre of the Golden Valley and Mount Jackson goldfields, and is connected with Southern Cross by rail. Provision is made for supply of water from the goldfields water supply, and many conveniences of more settled centres are now to be found at this outlying mining centre.

But few points of interest are to be found between Southern Cross and the town of Coolgardie, though the country throughout is more or less auriferous, but only small value now attaches thereto. In the past, however, this tract of country teemed with unknown possibilities, and no stretch of Australian land, despite its unending monotony, is more redolent of that romance which is inseparable from the stories of the earlier struggles and conquests of that indefatigable pioneer in Australian discovery, the gold prospector.

Bay in 1895. Proceeding thence to Norseman Mr. Henry started in business as a water-condenser and carrier, and continuing in this occupation for twelve months disposed of his plant at a profit and turned his attention to mining pursuits. Having spent seven years in the Norseman district he determined to visit Southern Cross, where he had previously acquired an interest in the

MR. WILLIAM HENRY.

Leviathan Gold Mine at Kennyville. This venture proved most successful, and the mine afterwards was sold to advantage, Mr. Henry subsequently continuing in the mining industry

with varying results. More recently he has taken up a pastoral lease in the neighbourhood of Southern Cross, consisting of 40,000 acres, and holds the opinion that, though he has as yet given little attention to agriculture on his holding, the country is well suited to the raising of crops, and should eventually occupy a prominent place among agricultural districts. Mr. Henry—who is a member of the Farmers and Settlers' Association, and has acted as treasurer of that body—was elected to a seat on the local municipal council in 1909, and has since retained this office. He is a member of the local branch of the H.A.C.B.S., in which he occupies the position of president, and evinces the greatest interest in the sporting events of the district.

Councillor **ARTHUR ROGERS**, proprietor of the Commercial Hotel, Southern Cross, is a son of Mr. Albert Rogers, of Gilgandra, New

MR. ARTHUR ROGERS.

South Wales, and was born at Wail, in the Wimmera district of Victoria, on September 14, 1883. He received his education at local public schools, and at fifteen years of age came with his sister to Western Australia, landing at Fremantle and proceeding direct to the Norseman district, where he assisted his brother in the hotelkeeping business for about eighteen months. He then essayed to test his fortune in prospecting, but met with indifferent success, and subsequently found a more profitable occupation in fulfilling carrying  
DDD2

contracts. A year and a half later he left for Kalgoorlie, and again turned his hand to prospecting with similar results, afterwards journeying to Roebourne, where he had been led to understand that sluicing for alluvial gold was a paying proposition. Disappointment, however, again awaited him, and accepting a position as drover, he arrived at Leonora with stock, proceeding thence to Coolgardie, where he once more became a prospector and pursued the search for precious metal for a further eight months. Dame Fortune still proving obdurate in this direction, Mr. Rogers went to Davyhurst and spent a brief period in the employ of the Golden Pole Gold-mining Company, eventually joining his brother-in-law, Mr. Dick Roberts, in hotelkeeping pursuits at Southern Cross. At the present time, as boniface of the Commercial Hotel, he enjoys the widest popularity. In addition to his hotel business he has invested in 300 acres of C.P. property adjacent to the town, where he is experimenting in the cultivation of a 30-acre area, and is confident that, with the proper use of manures and by taking due advantage of the natural rainfall, the industry should prove a very flourishing one. During the year 1912 Mr. Rogers was elected to a seat on the local municipal council. He is a member of the Southern Cross Agricultural Society, a member and committee-man of the local racing club, and keen patron of all the sporting bodies of the district. He married in 1910 Barbara, daughter of Mr. John Hogg, of Coolgardie.

**GEORGE ANTHONY WILSON**, Town Clerk to the Municipality of Southern Cross, is a son of the late John Paul Wilson, of Kildare, Ireland, at which town he was born on February 29, 1860. He received his education at the public schools of the district, and at the age of fifteen years became connected with a firm of storekeepers, to whom he served an apprenticeship extending over four years. His attention having been directed to Australia he arrived in Melbourne in 1879 and purchased a grocery business at Fitzroy, which he conducted with fair success for about twelve years. At the bursting of the great land boom in Victoria he found it expedient to abandon trading pursuits, and selecting 320 acres of land near Beena, in South Gippsland,

devoted his efforts to the agricultural industry for two years. Upon the report of gold discoveries at Coolgardie, Western Australia, Mr. Wilson took passage to Albany, bringing with him a couple of teams, with which he proceeded overland to the scene of the recent find. This was the first attempt to traverse the track with waggons, and many hardships had to be endured, the recital of which makes very vivid the reminiscences of those early days of the gold-mining industry on the eastern fields. Upon arrival Mr. Wilson engaged in the carrying business between Southern

MR. GEORGE ANTHONY WILSON.

Cross and Coolgardie, and at a later date joined Mr. Thomas King in the grocery trade at the former settlement. This partnership, after existing for four years, was dissolved in 1904, when the gentleman under review was offered and accepted the position of town clerk, which he has filled in the most successful manner ever since. Mr. Wilson received his Commission of Justice of the Peace in 1900. He identifies himself with the public and social life of the place in a wholehearted manner, is a member of the agricultural society—having applied for an agricultural lease in the district—and for the past three years has filled the position of captain to the Southern Cross Rifle Club. He is a member of the Masonic craft, with which he has been connected since 1882, and has held rank as Worshipful Master of that body. As treasurer and steward of the local racing club, he takes a cordial interest in the sporting events that occur, and is a patron of all outdoor

athletic organizations. In the year 1888 Mr. Wilson married Kate, daughter of the late John McLean, of Melbourne, Victoria.

**EDMOND PATRICK MACKEY**, J.P., is a son of the late Mr. David Mackey, of Melbourne, and was born at Albert Park, Victoria, on October 2, 1874. He received his education at St. James' Grammar School, William Street, Melbourne, and left this

Bartletto, Perth.  
MR. EDMOND PATRICK MACKEY.

institution at fifteen years of age. He served articles to Mr. A. D. Pleydell, civil engineer, in the Western district of Victoria, with whom he continued for six years. With the mining town of Southern Cross as an objective, in 1896 he left his native State for Western Australia, and filled a position for two years as accountant to Fraser's Gold-mining Company. Resigning this appointment, Mr. Mackey acquired interests in the Fraser's, Central, Central Extended, Hope's Hill, Greenmount, and Transvaal Mines, and met with unqualified success in these ventures. He has since devoted the major portion of his time and attention to the mining industry, and speaks in glowing terms of the future of Southern Cross. He is the local representative of the Adelaide Bullfinch Company, which possesses about 4,000 acres of agricultural land in the same district. Mr. Mackey takes keen interest in public affairs, and fills the post of chairman of the Yilgarn Roads Board. He has been a councillor of

the municipal chamber of Southern Cross, and occupied the mayoral office for a term of one year. His Commission of Justice of the Peace was granted by the Scaddan Administration in 1912. An advocate of all forms of outdoor sport, he is a live member of the Southern Cross Racing Club, and finds recreation in following the affairs of all local sporting organizations.

**GEORGE WILSON**, general storekeeper, Southern Cross, is a son of the late William Loudon Wilson, of Kilmarnock, Scotland, and was born at Ballarat, Victoria, on November 21, 1874. He received his education at local State schools, and at an early age was apprenticed to Messrs. James McKay & Sons, grocers, of that city, where he remained for seven years. Leaving for Western Australia in 1896, upon

MR. GEORGE WILSON.

arrival at Fremantle he proceeded to Midland Junction and joined the firm of Messrs. James McHenry Clark & Co., general storekeepers. After a short period of service with this company Mr. Wilson purchased a branch business established by the firm at Southern Cross, which he carried on for about eight years. After engaging in other pursuits for a few months subsequent to giving up this concern, he again started trading operations, this time in conjunction with Mr. R. N. Moany. About three years later Mr. Wilson took over his partner's share of the business, and has since operated successfully on

his own account. He has great confidence in the future of the district, and has lately established a branch business at Marvel Loch, regarding which he is very optimistic. He has taken considerable interest in public affairs, and about 1905 was elected a member of the local municipal council, which seat he has filled with one or two breaks ever since. Upon the formation of the agricultural society of the district, he displayed a lively concern in its advancement, and is generally recognized as a leading spirit in all movements having for their object the welfare of the place. For some years he was a member of the Yilgarn Roads Board, and during his long sojourn in the neighbourhood has served as a member of most of the organizations formed for the promotion of industries or sport. Since 1897 he has been connected with the U.A.O.D., and during this period has passed through all the chairs of office, being the present treasurer and the Southern Cross representative in united gatherings of the order. He is also a member of the Southern Cross Masonic Lodge, No. 44. A consistent patron of all outdoor sport, he was one of the prime movers in the formation of the local racing club, of which he was president for some years, and in earlier days paid particular attention to rifle shooting. In 1897 Mr. Wilson married Margaret, daughter of the late Alexander Laing Robertson, of Perth, Scotland, and has a family of two sons and one daughter.

**FRANK HERBERT SNOOK**, proprietor of the Palace Hotel, Southern Cross, was born at Fremantle on December 21, 1866, being a son of the late John Snook, of that town. He received his education at public schools in his native place, and at sixteen years of age was apprenticed to the cabinetmaking trade. After serving a five-years' term he opened in business on his own account, and did a very successful trade for three or four years. Tiring of this occupation he sold out advantageously, and in 1893 started as a builder and contractor at Southern Cross. In this capacity he conducted a most flourishing trade until ten years later, when he again disposed of his business and became proprietor of the Southern Cross Hotel, which he carried on successfully for about seven years. In May,

1910, he sold this hotel and purchased the old Exchange Hotel at Southern Cross, shortly afterwards taking a trip to England, which extended over eight months. Upon his return to Western Australia, during the boom of the Bullfinch district, he built his present imposing premises at Southern Cross, to which he gave the name of the Palace Hotel—a most commodious building with handsome exterior

MR. FRANK HERBERT SNOOK.

and containing forty-seven rooms. Mr. Snook has unbounded confidence in the development of the place as a mining centre, and is the owner of many valuable town properties. He takes a keen interest in the progress of the

municipality in which he has so much at stake, having served in the council chamber and on four separate occasions been elected to the mayoral chair. He holds the position of Arch-Druid in the U.A.O.D., is connected with the M.U., I.O.O.F., and has filled the office of treasurer to the Masonic Lodge, of which he is a member. He has been associated with the local racing club almost since its inception, and has occupied the position of president of that body. The various athletic organizations also claim his support, and he displays especial interest in football, being the possessor of a cup presented to him in 1885 in his capacity of captain of the Union Football Club of Fremantle. Mr. Snook married in 1887 Catherine, daughter of Mr. David Murray, of Edinburgh, Scotland, and has one son and one daughter.

ARTHUR EDWARD PRETTY, is a son of the late Arthur Pretty, of Melbourne, in which city he was born on May 15, 1876. He was educated primarily at public schools in Ascot Vale, and subsequently completed his scholastic career at Carlton College. At sixteen years of age he made his first entry into active business life in the employ of Messrs. Dillon, Burrows, and Co., wholesale confectioners, with whom he served a term of three years. At the end of that period he accepted a position with Messrs. James Watson & Co., whisky distillers, and continued in this connection

for some eight years, during which he acquired a complete knowledge of the details of the liquor trade. Mr. Pretty was associated for a short time in liquor agency business with the late manager for Messrs. Watson & Co., before deciding to come to Western Australia in 1901. Upon arrival in this State he established himself in a similar business at Fremantle, but twelve months later relinquished operations in order to join the staff of Messrs. Burns, Philp, & Co., Limited. Sufficient inducement offering, eventually he took over the management of His Majesty's Hotel, Perth, and for three and a half years conducted this well-known house in the most efficient manner. The desire for travel again taking hold of him, Mr. Pretty became connected with the firm of Messrs. Lionel Samson and Son, of Fremantle, as country traveller. Four years later, upon the rise of the Bullfinch gold boom, he was induced to open on his own account at Southern Cross as a wine and spirit merchant, but upon the bursting of the bubble abandoned this enterprise, and in May, 1912, took over the Railway Hotel at Southern Cross. After continuing at this centre for some months he came to Cottesloe and assumed the direction of the Ocean Beach Hotel. Mr. Pretty has been connected with the Masonic craft for the past five years, his mother lodge being the Commercial Travellers' Lodge, No. 61. He takes an active interest in cricket and golf; and is held in high esteem for his histrionic skill.

### COOLGARDIE.

Towards the middle of the year 1892, two prospectors named Bayley and Ford, the former of whom had previously been very successful on the earlier gold-fields of the Murchison district, made a wonderful discovery of gold at a point 120 miles due east of Southern Cross on the site of the present town of Coolgardie. As was only to be expected, on the news of this rich find reaching the outside world a "rush" set in, and very soon a large population was on the site of the new field, then called Gnarlbine. The "rush" was extremely cosmopolitan in character, and many constituents were present, the absence of which would have been a distinct boon to the community. This formed the nucleus of the population of a township, which was variously known as Gnarlbine or Coolgardie, both of which titles were

derived from native sources, the former being called after a native soak in the neighbourhood of Bayley's find, whilst the latter was that of the immediate district. A new Eldorado had now been discovered, and as rich finds followed each other with a rapidity that can only be characterized as startling, the numbers on the new field increased by leaps and bounds. Many of the new arrivals were not content to stop at Coolgardie, but accepted the more adventurous possibilities of the country further afield, to which course we owe the discovery of the later and even more richly endowed fields.

The earlier members of the community had not taken that care of sanitary arrangements so essential in such an heterogeneous colony, but as the field progressed

the demands of health and public convenience were more and more impressed upon the population. Hence steps were taken to form the inevitable forerunner of municipal government in Western Australia—a progress committee. A Government survey of the township was now undertaken, and some semblance of order instilled into what had been a description of chaos. The name of the discoverer of the field (Bayley) was given to the main thoroughfare, for it was thought that the town should be indissolubly associated with the name of the man to whose pluck and endurance the field owed its discovery. Not alone had the find been a fortunate one for Bayley, but it changed forever the destiny of the State. To anyone standing in that handsome thoroughfare to-day it is difficult to conceive that a little over two decades ago the spot was a pathless wilderness untrodden by men (the *bête noire* of the explorer), except

infant town, and many crushing plants were erected, and Coolgardie became the trading centre of the eastern goldfields and found employment for many thousands. The rapid expansion in mining soon brought the place into greater prominence, and a migration set in from all quarters of the globe towards the new Eldorado. Boundless were the hopes of the new arrivals. With the ready optimism that accompanied the search for the elusive metal they foresaw visions of wealth, with its concomitant features of ease and comfort, as the outcome of a few years of strenuous labour. Many of these visions were to be fulfilled, but, alas, others were born only to be shattered. The utter lack of proper sanitary precautions in the earlier stages of the "rush" now bore terrible fruit, and the scourge of enteric fever ended many promising lives. The prosperity of Coolgardie declined considerably on the discovery of the larger

Photo by F. Martyn.

BAYLEY STREET, COOLGARDIE.

for the wanderings of the native tribes after sufficient sustenance to support an aimless existence. Rapid expansion soon entitled the new settlement to the distinction of local self-government, and it was proclaimed as a municipality on July 4, 1894, just about two years after its discovery by Bayley and Ford.

A large amount of prospecting had been carried out eastward of Southern Cross before the wonderful find of Bayley and Ford at Coolgardie, and 700 oz. of gold had been chopped out of an outcrop with a tomahawk; still to these indefatigable pioneers is due the discovery that was to change the outlook of a State and be the direct precursor of its expansion and position in the Australian Commonwealth of to-day. During the year 1895, following the foundation of the municipality, great progress was made in the mining industry of the

and richer fields at Kalgoorlie and Boulder, but the former glory of the town is only in abeyance, and the "Old Camp," as it is still affectionately designated, may still become of an importance equal to its earlier days.

During the infant stages of the municipality some fine buildings of a by no means insignificant architectural design were erected, and are even now a substantial acquisition to the town. Indeed, to the eye attuned to the endless monotony of the sand plains, Coolgardie at first sight strikes the traveller as something distinct and apart from any other place before met. The municipality when formed was up to date in every respect. The general illuminant was electricity, and the roads constructed would have done credit to a town in a far more settled community. Steps were taken to correct

the errors of sanitation whilst it was a mining camp, and everything to make life comfortable and enjoyable was carried out. The labour of gold mining is exhausting, and in every way the infant council sought to give compensating advantages to those compelled to toil in the bowels of the earth. Before the construction of the water supply to which the town gave its name the life-giving fluid was even more precious than that metal for which so many had left home and country to secure. Many times water reached the high price of 20s. per 100 gallons, and often had to be ordered a week before it was required. The owner of a reliable condensing plant had a perfect "gold mine" in his appliance, and even after the advent of the water scheme a shower-bath cost 1s.

The output of gold after the opening up of such famous mines as Bayley's, Londonderry, Burbanks, and Bonnie Vale, was greatly increased, and indifferent management is, in many cases, practically to blame for present condition of inactivity. Many of the small centres in the vicinity, such as Carbine and Siberia, suffer from want of water and the consequent proper mining treatment, but the outlook for the future is slightly more promising. Since the discovery of Coolgardie the total output of gold up to December 31, 1911, was 1,347,974 oz., certainly not an inconsiderable yield.

The town hall and municipal offices are handsome

structures, whilst the public library and reading-room vie in excellence with any to be found in the smaller towns of the State. The Government hospital is a standing monument to the executive ability of the State, and is well officered and splendidly equipped. The town is also very well served by the educational institutions it possesses. The religious life is vigorous and pronounced, all the denominations being well represented. The needs of the travelling public are well served, and the palatial nature of the hotels, with their excellent and up-to-date equipment, are a fine commentary on the importance of the town. The want of natural beauty features has been supplied by the municipal gardens, and since the arrival of the goldfields water scheme the domestic garden has reached a position of more than usual excellence. Agricultural settlement is not unknown in the vicinity of the town, and thousands of acres of rich cultivatable land have been taken up. The population of the town is about 2,000, and of the immediate neighbourhood 4,000.

Though Coolgardie has suffered a period of depression, being overshadowed by more imposing centres within a few miles, there is every hope of a revival of the mining industry, and a proper system of irrigation by means of an extension of the water scheme would prove that a wealth even more potential than gold is within measurable distance.

DONALD MACPHERSON, J.P., Mayor of Coolgardie, was born at Broadmeadows, Victoria, on January 19, 1864, and is a son of the late Malcolm Macpherson, one of Scotland's representatives in the early pioneering days of that State. He attended the Broadmeadows State school until fifteen years of age, removing two years later with his parents to the Yarrowonga district, on the River Murray, where he followed farming pursuits for ten years. He was next engaged in commercial life in Melbourne for about three years, and in 1895 came to Western Australia, in January of the following year joining the staff of the Mutual Stores Company—in those days a large trading concern in Coolgardie. After occupying a responsible position in this business for three years, Mr. Macpherson, upon the closing down of the firm, opened in business in the same town on his own account as general merchant and commission and indent agent, and has carried on successfully ever since. From the first he secured excellent agencies, representing firms in the Eastern States, etc., and, among other things,

is local agent for the Liverpool and London and Globe Insurance Company. He received his Commission

MR. DONALD MACPHERSON.

of the Peace from the Moore Administration in 1904, and is a member of the local Licensing Bench of Magistrates. His connection with municipal

life has extended over seven or eight years, during which time he has served as councillor and shown himself warmly devoted to public work; and, recently, he has been elected unopposed to mayoral honours. He has always taken a prominent part on the committee of the Fresh Air League, and is hon. treasurer of the Coolgardie branch. He is also a member of Lodge Scotia, S.C., in the Masonic fraternity, and has taken a leading part for many years in the work of the Presbyterian Church at Coolgardie. He has been chairman of the Coolgardie Racing Club, Limited, for two years, having also held the position of honorary judge with *éclat* for some years. His chief recreation is taken on the bowling green and golf links, and he is a member of the local clubs, while a large portion of his leisure time is spent in his favorite pursuit of gardening, the culture of roses and carnations receiving special attention at his hands. Mr. Macpherson married in 1897 Mary, daughter of the late James Hill, of Midhurst, Sussex, England, and has a family of three sons.

Councillor HENRY AUGUSTUS ELLIS, M.B., Ch.B., of the municipality of Coolgardie, was born at Omagh, County Tyrone, Ireland, on July 21, 1861, and is a son of the late Colonel Francis Ellis, of the Irish Militia Forces. He received his primary education at St. Columba's College, Dundrum, and in 1879 entered the famous ancient seat of learning, Trinity College, Dublin, where he pursued his professional studies, qualifying in medicine and surgery in 1884. Having received his diplomas he came to Australia and established himself in private practice in Sydney, where he continued for ten years, during portion of this period acting as honorary surgeon to the Sydney Public Hospital. In 1894, at a time of financial depression following the great bank failures, Dr. Ellis came to Western Australia, and upon the discovery of the eastern goldfields settled in Coolgardie, where he was soon fully engaged in professional work, and has

*J. J. Dwyer, Kalgoorlie.*  
DR. HENRY AUGUSTUS ELLIS.

continued there ever since. Dr. Ellis is one of the most widely known men of the district, having always taken a most prominent part in all movements for the advancement of the place and the uplifting of the community. He was the trusted friend and adviser of the pioneer goldseeker, and as the first health officer of the fields he drew up a code of by-laws in which he embodied his own ideas in regard to the best methods to cope with diseases arising

in the mining camps, new gold rushes, and the increasing number of town settlements, etc., a code which has since been copied almost in detail by the goldfields bodies of Western Australian organization. His name is well remembered in connection with the early days of the Pioneer Progress League of Coolgardie, in which his knowledge and experience proved invaluable to his fellow citizens, and he was prominent in the movement for the establishment of Australian Federation. Upon the refusal of Sir John Forrest, the then Premier of the State, to take a referendum of the people on the subject, Dr. Ellis was chief amongst the organizers of the league then formed on the goldfields with the motto "Separation for Federation," through the influence of which a petition was forwarded to Her late majesty, Queen Victoria, with over 27,000 signatures, the result being that the Referendum Bill was put to the people, and Western Australia fell into line as a federated State. Dr. Ellis was an unsuccessful candidate for the first Senate of the Commonwealth, declining a requisition to stand for Coolgardie in the election for the State Parliament in 1900. Four years later, however, he allowed himself to be nominated, and was returned to this seat, which he retained for a term of fifteen months. He is deeply interested in the future of agriculture in Western Australia and has a large holding in the Kunjinn district, where wheatgrowing pursuits are successfully carried on. He was one of the founders of the Coolgardie Club, and holds the distinction of being the only original member of the club whose name is still on the roll. A man of versatile interests he concerns himself in inventions, and is a good draughtsman, while as an amateur photographer he is excelled by few professionals in the execution of this art. As a reader his taste dictates a wide range of subjects, scientific works bearing on his profession gaining a large share of his attention, while he has attained considerable popularity as a lecturer, his favourite subject being "Democracy." Although he never enters the arena of sport, he holds the office of president of the Coolgardie Racing Club. Dr. Ellis is a widower, his late wife being a daughter of the late James Speer, of Sydney, New South Wales.

Councillor ALFRED MERCER, J.P., who represents the ratepayers in the Coolgardie Municipal Council, and who has on two occasions occupied the mayoral chair, was born at Nairne, South Australia, on November 15, 1853, and is a son of the late John Mercer, one of the early agricultural pioneers of the Central State. He was educated at the public grant school in his native town, and upon the close of his studies, followed pastoral pursuits for over a quarter of a century in the Cooper's Creek and Diamantina

*F. Martyn, Coolgardie.*  
MR. ALFRED MERCER.

districts, also being well known in the cattle- and horse-breeding stations around Hergott Springs. During this period he travelled many thousands of miles with stock, undertaking the work on contract, and thus obtained an intimate knowledge of the interior of the vast island-continent—a knowledge surpassed, perhaps, by that of no other man in Australia. Coming to Western Australia in 1892, he turned his attention to the mining industry, and was one of the pioneers of the eastern goldfields, where his name has since become very widely known. He was among the first to bring camels into Western Australia for general use and prospecting purposes, and at one time carried on a fairly large camel trade with India, his knowledge of these useful beasts of burden comparing favourably with that of many a native Indian. As a bushman also his record is second to none in Australia, and making Coolgardie his headquarters from a few days

after the discovery of the field, he prospected over the greater portion of the auriferous belt, and has been a consistent supporter of the mining industry ever since. For three years Mr. Mercer was engaged in mercantile pursuits as a butcher and storekeeper in Coolgardie, but eventually sold his interest in the firm with which he was identified, in order to give more time to the enterprise nearer his heart. One of Mr. Mercer's records in bush travelling was a trip from Mount Magnet to Tanami, a distance of 1,250 miles, which he undertook on behalf of a Perth syndicate. The distance was covered in eight weeks with camels, each of which carried over 500 lb. weight, and Mr. Mercer claims this as a record for cross-country travel in Australasia. In referring to this great journey Mr. Mercer speaks in eulogistic terms of his first officer, Mr. W. Benstead, without whose aid the journey could not have had such a successful issue. He has given a portion of his attention to municipal affairs, and was elected a member of the local council in 1896, since which date he has served continuously, with the exception of two brief periods when absent on mining business. He has been twice elected to the mayoral chair, is a member of the Licensing Bench, and received a Commission of the Peace from the Rason Administration in 1904. Mr. Mercer is a member of the Coolgardie Club. In 1887 he married Jessie, daughter of the late John Brown, of Springbrook, South Australia.

Councillor ROBERT NISBET, one of the representatives of Coolgardie in the local municipal council, was born at Grangemouth, Stirlingshire, Scotland, on March 9, 1862, and is a son of the late Mr. Robert Nisbet, mining manager and contractor, of that place. He was educated at the National School at Fasking, near Airdrie, and upon the close of his studies was identified with the mining industry in the old country until the time of his departure for Australia in 1883. Landing at Flat-top Island, Port Mackay, Queensland, he subsequently proceeded to New South Wales, and spent about six years in mining pursuits in the employ of Messrs. J. & A. Brown, of that State. Relinquishing this service, he entered that of the late James Fletcher, then

Minister for Mines in New South Wales, and following on this period occurred his connection with Messrs. Longworth Bros., for whom he opened up the Dulwich Mine, near Singleton, this firm having taken over the Cobar Mine. In 1888 he visited Melbourne at the time of the Exhibition held in that year, and deciding to remain there joined the staff of Mr. McKenzie in the construction of the Glenferrie tramline. Returning to the Mother State he was again engaged in mining at Newcastle when the reports of gold discoveries in Western Australia were noised abroad, and early in 1893 Mr. Nisbet arrived at Coolgardie. On account of the serious water famine that occurred shortly afterwards he left the country and went to New Zealand, where prospecting in the mineral districts engaged his attention until 1896, when he returned to the Golden West. He then accepted the management for Messrs. McKenzie, Grant, & Co. of their various leases, and remained in this connection for a considerable

F. Martyn,

Coolgardie.

MR. ROBERT NISBET.

time, subsequently working on Bayley's Reward claim prior to his appointment as underground manager on the Grand Junction Mine at Burbanks, under the general management of the late W. L. Daniels. In the absence of Mr. H. M. G. Cobb, Mr. Nisbet had full control of this mine and plant, and at a later date, when the property was given up by the company, he took over a portion of it in partnership with Mr. J. Park, and was very successful,

selling out at a profit after mining a considerable quantity of gold. He then spent some years in prospecting the district, and in 1909 took over the lease of the Australia Hotel, of which he is still holder. Mr. Nisbet is looked upon as a staunch supporter of the district, and was elected to a seat on the local municipal council in the beginning of 1912. He is a member of the Masonic Order, being a Past Master in the craft (S.C.), and has filled the office of District Grand Senior Warden of the goldfields of Western Australia. For over a quarter of a century he has been connected with the G.U.O.O.F. and the Free Gardeners' Societies, and is a foundation member of Royal Oak Lodge, No. 9, in the latter body. Mr. Nisbet is a Past Chief of the Caledonian Society and treasurer of the Prospectors and Leaseholders' Association and of the local amateur swimming club, these bodies having a large membership. He married in 1885 Agnes, daughter of the late Richard Sneddon, of Lanarkshire, Scotland, and has one son and two daughters surviving.

Councillor WILLIAM TINDAL, of Coolgardie, is a son of the late Robert Tindal, and was born at London in 1856. He received his education in Melbourne, and upon leaving school entered the mining industry, which he has followed in its various branches ever since. About the year 1887 he first set foot upon Western Australian soil, and had some experience in the mining resources of the State before the outbreak of the Coolgardie field, where he was among the first arrivals. He followed prospecting pursuits all round the newly-discovered gold-bearing locality, and was richly rewarded by the discovery of various payable propositions, among which Tindal's Mine in 1892 took pride of place. Mr. Tindal was elected a member of the Coolgardie Municipal Council in 1909, and takes a prominent interest in all matters connected with the advancement of the place. He is a member of the Prospectors' Association and of the Masonic craft. Mr. Tindal married in 1884 a daughter of the late John Heath, of Tipperary, Ireland, and his family consists of five sons and four daughters.

Councillor EDWARD LINKSON, of Coolgardie, was born at Burra Burra, South Australia, on October 2, 1869, and is a son of the late William George Linkson, of that place. Upon leaving school he joined the staff of the South Australian railways, with which he was connected for nine years. During one of his annual holidays he made a trip to Western Australia, and was so favorably impressed with local conditions that he resigned his position and became connected with the Western Australian railway service. In 1902 he resigned from the service in order to enter upon storekeeping, and purchased the business which he still carries on in the same premises at Coolgardie. Since his advent to the town Mr. Linkson has done all in his power to advance the interests of his fellow-citizens. In 1908 he was returned as a member of the local municipal council, and has retained his seat at each subsequent election. He is a member of the Coolgardie Racing Club, patron and president of the local football association, and delegate from Coolgardie to the parent body. In 1897 Mr. Linkson married a daughter of the late Simon Crowley, of Freeling, South Australia, and has a son and a daughter.

ALONZO POLYBLANK WYMOND, J.P., Coolgardie, secretary of the Coolgardie Roads Board, is a Victorian by birth, having been born at Melbourne on August 20, 1856, in which city and at Ballarat his father, the late John Herbert Wymond, was one of the first softgoods merchants. He received his scholastic tuition at Wesley College, which he entered upon its opening in 1866, and afterward at the model school. Upon leaving the latter institution he began his business career in a mining office, whence he advanced to practical mining and supervision of mining properties, and was from 1883 to 1886 on the Barrier Silver fields, when he proceeded to London, where he was connected with mining circles for nearly a decade. In 1895 he came to Western Australia, and as mining engineer and attorney took charge of several mining properties floated by English companies, continuing to discharge the duties incident to these appointments in conjunction with other work for about eight years. Always interested in public affairs Mr.

Wymond was chairman of the Coolgardie Roads Board for eight years in succession, and ultimately was appointed secretary, which office he still holds. He was elected to the chair of the municipal council in 1902 and the following two years, and was invested with mayoral honours for two successive terms, this being the first time in the history of the municipality that such a distinction had been conferred. During his term of office and chiefly through his influence the present beautiful gardens, which add so greatly to the appearance of the city, were laid out, and various other public works completed. He was appointed a Justice of the Peace in 1900 by the Forrest Administration, and is senior justice in the district, being also acting-coreroner and a member of the

J. J. Dwyer,

Kalgoorlie.

MR. ALONZO POLYBLANK WYMOND.

Licensing Bench. He has been a member of the chamber of mines ever since its inception in Coolgardie, and is secretary of the local committee in connection with that body. Mr. Wymond was one of the promoters of the Coolgardie Exhibition in 1899, and as a member of the executive took a leading part in this successful function. He was one of the founders of the Coolgardie Bowling Club, and takes his chief recreation on the green. In 1886 he married Emily Taylor, daughter of the late Gedde Pearse, chief inspector of the Victorian State Schools, and has four sons.

JOSEPH MONAGHAN, who occupied the office of mayor of Coolgardie for three consecutive terms, first being returned to the chair in 1909, was born at Ederney, County Fermanagh, Ireland, on January 19, 1869, and is a son of the late James Monaghan, a farmer of that place. He received his education at the National School in his native town, and at seventeen years of age, after the death of his father, accompanied his mother to Australia. Landing at

F. Martyn,

Coolgardie.

MR. JOSEPH MONAGHAN.

Sydney, New South Wales, he entered the employ of Messrs. Anthony Hordern & Sons, where he served his apprenticeship in the furniture department, and was identified with this famous emporium for the better part of a decade. In 1894 he was attracted by the glowing reports of gold discovery in Western Australia, and coming to this State became engaged in prospecting at Coolgardie for a time. At a subsequent date he again entered upon commercial life, joining the clerical staff of the Mutual Store, and six months later was placed in charge of the furnishing department of this business. After three years' service Mr. Monaghan relinquished his connection with the Mutual Store in order to devote his energies to the calling of licensed victualler, and for a few years carried on the Exchange Hotel at Coolgardie. In 1898 he purchased the Metropolitan Hotel in the same town, which he conducted until his departure from the goldfields in 1912, and which is still his property. At the same time he acquired

interests in some mining properties, in several of which he is a present shareholder, besides being interested in real estate in the town. While resident on the fields he was particularly prominent in everything which stood for the advancement of the place, and, upon entering business on his own account, identified himself wholeheartedly with all public affairs. He was first returned to the municipal council in 1893, and served on that body for eight years. In 1909 he was elected mayor of Coolgardie, and holds the distinction of being the only one who has filled that office for three years consecutively. Ultimately, when business calls compelled him to sever his connection with the fields and settle in Fremantle, he resigned the mayoralty, upon which occasion the council refused to accept his resignation, granting him leave of absence until the end of his unexpired term of office. Upon leaving the town Mr. Monaghan was accorded a public send-off, and was made the recipient of a public banquet, an illuminated address, and a purse of sovereigns by the citizens and various organizations, a similar honour being bestowed upon his wife. For five years he was Coolgardie delegate on all conferences of local bodies, and represented the goldfields on the health board under the old Health Act, prior to the days of Ministerial control. He has always displayed a deep interest in the hopes and aspirations of his native land, and is actively devoted to the cause of Home Rule. He was one of the first members, and for a considerable time secretary, of the Irish National League at Coolgardie, and was chairman of the committee which received the delegates from Ireland in 1894 and 1895. For many years Mr. Monaghan filled the office of committeeman of the Coolgardie Race Club, and he is a patron of all forms of clean sport. In 1899 he married Annie, daughter of the late John Kiely, of County Limerick, Ireland, and has three sons and one daughter.

ROBERT MACFARLANE MITCHELL, M.B., B.S., F.R.C.S. (Edin.), D.P.H.R.C.P.S. (Lond.), District Medical Officer, Coolgardie, and Medical Officer in Charge of Coolgardie Government General and Consumptive Hospital. The subject of this brief sketch was born at Edinburgh, Scotland, on June 19, 1876, being a

son of the late John Mitchell, of that city. He was educated privately at St. Bee's Grammar School in Cumberland, and subsequently studied medicine and surgery at Edinburgh, London, and Paris, obtaining his final diplomas in 1905. Returning to Edinburgh he received the appointment of assistant medical officer to the Edinburgh City Hospital, and in the absence of the superintendent acted for a considerable time as medical superintendent of that institution. He served for a term as senior house surgeon in Leith Hospital, and was also connected with the Royal Maternity and Simpson Memorial Hospital at Edinburgh, at a later date practising in London, while for something less than two years he served as medical officer in the P. & O. Steamship Company,

DR. ROBERT MACFARLANE MITCHELL.

during which period he visited India, China, Japan, the Phillipine Islands, and Australia. In 1906 Dr. Mitchell settled in Western Australia, and immediately was appointed acting district medical officer at Coolgardie, receiving the permanent appointment some time later. The special department for consumptives had just been inaugurated, and Dr. Mitchell had his hands very full upon assuming charge, as no proper provision had been made for open-air treatment, and the patients slept out of doors with little or no protection, the nurses having to attend to their wants while standing ankle deep in mud. Dr. Mitchell set himself the task of organizing, and had the original wards altered to meet the needs of the patients, and as far as

the finances would allow brought the hospital up to date, verandahs being added, jarrah floors replacing the former soft wood, and a sanitary service with septic tank installed, and hot and cold water laid on. An irrigation area was established for the cultivation of fresh vegetables, recreation rooms for the nurses, etc., were built, and entirely new quarters for the nursing staff, all of which improvements were carried out under Dr. Mitchell's initiative and direct supervision. As a result of his strong advocacy of the removal of the consumptives' hospital to a more equable climate and more congenial surroundings, the Government of the day has reserved an area of 3,500 acres at Beechina Hill, in the Darling Ranges, including a partially improved farm, 50 acres being reserved for building purposes, the plans being now in course of completion by the Government Architect, who has drawn them up in accordance with suggestions made by Dr. Mitchell. The doctor was the medical member of the Royal Commission on Miners' Lung Diseases in Western Australia (1911), in which he took a bold and consistent stand for compulsory national medical insurance as the best solution of the question of tubercular disease. He does a large amount of reading, by this means keeping himself abreast of the latest thought and methods in the different departments of his profession. He is a committeeman of the Coolgardie Club, a member of the Perth Club, and a member of Tattersall's Club; and was for some time vice-president of the Coolgardie Racing Club, of which he is honorary surgeon. He married in 1906 Helen Mary Hanfield, daughter of the late Septimus V. Pizey, of Adelaide, and has three daughters.

CHARLES VINCENT, managing director of the West Australian Lion Brewing and Ice Company, Limited, Coolgardie, is a son of the late Francis Vincent, and was born at Villa France, in the South of France, on August 1, 1852. He was brought up and educated at Sorrento, in Italy, and in 1868 came to South Australia, when Adelaide was little more than a village. Here he followed the calling of stevedore, subsequently amalgamating his business with that of the Australasian Stevedoring Company, of which he was appointed manager. In 1892 he

resigned his position and revisited his boyhood's home, as he had done from time to time all through his sojourn in the Central State. After making a tour to all the places of interest on the Continent and in England, in 1893, after the outbreak of the Coolgardie goldfields, he came to Western Australia, and turned his attention to hotelkeeping on the field. For about three years he conducted the Freemasons' Hotel at Coolgardie, at the end of which period he became interested in the Lion Brewery, from which he afterwards sold out in order to build the Grand Hotel in that town. It is interesting to note that Mr. Vincent installed in this hotel the first electric light plant used by any hotel in the State, having brought the plant from England with an engineer to put it in working order. The hotel prospered, and Mr. Vincent again purchased an interest in the Lion Brewery Company, of which eventually he became managing director, a position he still holds. At that time the enterprise was conducted on terms of partnership between the gentleman under review and the late Tudor Lipman, but before the decease of the latter it was floated into a limited liability company, the

*F. Martyn, Coolgardie.*  
MR. CHARLES VINCENT.

shareholders being Mr. Vincent and the executors of the late Mr. Lipman. The principal hotels in Coolgardie, and others in Burbanks and Kalgoorlie—eleven in all—are owned by the Lion Brewing Company, besides various important commercial buildings in the town, and Mr. Vincent is

also a private investor to a large extent in real estate, owning more property in Coolgardie than any other single individual. His mining investments are also considerable, and he has unbounded faith in the district, which owes much to the confidence with which he has staked his capital on its progress and resources. Mr. Vincent—who has travelled considerably in America as well as in Europe—is a member of various clubs, including the National Liberal Club, of London, and several Perth bodies. He takes a general interest in sport, and is a supporter of racing, being a life member and committeeman of the local club, of which he has also been president for several terms, and presented the Coolgardie Gold Cup to this institution in 1910. Mr. Vincent married a daughter of the late G. Parker, of Devon, England, and after the demise of this lady he espoused in 1909 Winnifred, daughter of the late J. Hodnett, of the same county. His family consists of two sons and one daughter.

**MORDAUNT LESLIE REID.** resident engineer and manager for the Electric Supply Company of Western Australia, Limited, Coolgardie, was born at Elmore, Victoria, on August 22, 1881, and is a son of the late Donald Reid, a well-known pastoral manager in New South Wales. The gentleman under review was brought up on "Puckawidgee" Station, in the latter State, and, in due course, was sent to Surrey College, Melbourne, afterwards training for his profession at the Melbourne Technical School, where he won the first diploma for electrical engineering ever awarded by this institution. Subsequently Mr. Reid became engaged in practical engineering with the British Insulated Wire Company, of Liverpool, which had taken the contract for the erection of an electrical plant for the municipality of Bendigo, and, at the completion of the work, he transferred his services to the company which took over the working of the plant, and continued in this connection for nearly four years. In October, 1905, the post which he now fills at Coolgardie became vacant, and Mr. Reid received the appointment, which he has retained ever since. During the seven years that have elapsed since his arrival on the field, he has carried out the duties of his post with credit to himself, and his administration has

given the greatest possible satisfaction to the municipal authorities and to those who avail themselves of the benefit of the electric light and power. Outside of his official duties Mr. Reid devotes a considerable amount of time to military matters, and holds rank as area officer for Coolgardie and the Southern Cross and Norseman districts, having been transferred from the 84th Infantry Regiment, in which he held rank as lieutenant. He is one of the best rifle shots in the district, and has been a winner of many trophies, while in earlier days he attained distinction in football and running events, and is now devoted to tennis as a recreation. He is a member of the local racing club, and for some time has occupied the post of honorary starter in

*F. Martyn, Coolgardie.*  
MR. MORDAUNT LESLIE REID.

connection with this organization. He is also a member of the Coolgardie Club. Mr. Reid married in 1905 Pauline, daughter of Mr. Frank Dowd, of Randwick, Sydney.

**FREDERICK WALTER BARWICK,** Postmaster at Coolgardie, was born in the Beaufort district of Victoria on November 26, 1875, and is the eldest son of the late Thomas Jackson Barwick, a farmer of that place. He received his education at State schools in Victoria and South Australia, and upon the close of his scholastic career pursued the trade of printing for a couple of years. On August 8, 1890, he joined the postal department of Victoria at Nhill, and after two years' service in that State sailed for

Western Australia, where on September 1, 1892, he was appointed telegraphist at the General Post Office, Perth. After a short period of service as operator in the capital Mr. Barwick was transferred to the country, and by degrees gained promotion, eventually becoming postmaster at Pingelly in 1894, and has since occupied a similar position at Israelite Bay, Leonora, Kookynie, and Coolgardie. Upon the appointment of Mr. Tepper to the position of acting-divisional inspector, Mr. Barwick took over the duties of acting-postmaster at Kalgoorlie, one of the largest and most important offices in the Commonwealth. It is interesting to note that in the early days of the gold-mining industry in Western Australia, when the traffic was beyond the scope of the lines, Mr. Barwick was one of the telegraphists at Eucla—the repeating station on the South Australian border—and in the days of the old

open-circuit system he was the operator who wrote down at that

J. J. Dwyer,

Kalgoorlie.

MR. FREDERICK WALTER BARWICK.

place the first message which conveyed from West to East the news of the discoveries of the Londonderry and Wealth of Nations, two mines which established the fame of Western Australia in the mining world. About the same time, also, he received the message which reported the wreck of the steamer "Rodondo" on Pollock Reef, with over 200 souls on board, of whom only four were lost. Mr. Barwick is well known in musical circles throughout a good portion of Western Australia, having devoted a great deal of time to pursuit of this art in its various branches, particularly to organ playing, this being his favourite instrument. He is of a literary and studious turn of mind, and is especially fond of the perusal of historical works by French authors. A student of political economy, he interests himself in debating, and was at one time a well-known frequenter of gatherings of this nature. He is a member of the Coolgardie Club.

### NORSEMAN.

Situated about 110 miles south of Coolgardie, and on the south-east of Lake Cowan, is the mining township of Norseman. The railway which connects the township with Coolgardie is the first link with Esperance in that much-desired rail communication with the south coast of the State. Norseman itself is the principal gold-producing centre of the Dundas goldfield, and is a pretty and well-built town in the heyday of prosperity. Every essential that makes for urban comfort and well-being the Norseman municipality has acquired. The town is well lighted, the sanitary system is up to date and efficient, whilst the protection afforded by the local fire brigade against fire is as satisfactory as that of the large centres of population in the State. The hospital is efficient and well equipped in the latest modern appliances to combat disease or remedy the effect of injury. Three public halls, with a seating capacity for 600, are used frequently for public entertainments. The town has a telephone exchange, and the postal arrangements are such as would

do credit to a larger centre. There is a fine recreation reserve provided with a first-class bicycle track, cricket pitch, tennis courts, golf links, and racecourse. The two principal streets are adorned with trees, and besides communication by railway with Coolgardie there is a weekly coach service to Esperance. The mining industry at this centre is in an extremely healthy condition, the State and two privately owned batteries being in constant operation. Norseman possesses its own water supply, there being a Government reservoir of 3,000,000 gallons capacity. The mines are supplied by two other dams having a capacity of 10,000,000 gallons. The reticulation of the town has been carried out on a thoroughly modern system, and the total length of reticulating mains is over ten miles. Thus in this little population of a little over half a thousand people, on the very outposts of civilization in the vast State of Western Australia, a municipal system exists that would do honor to far older and more established communities.

### KALGOORLIE.

On June 15, 1893, a prospector named Patrick Hannan applied for an alluvial claim on a spot about 380 miles east of Perth, and a "rush" set in to the scene of his discovery, which was named Hannan's Find. This was the genesis of, perhaps, the most famous gold-mining town in this world's history. When the original prospector discovered his claim and located himself on the spot no more desolate region could be described. Sand,

stunted scrub, and rocks—one of those stretches of country all too frequent in the desert portion of the interior of Western Australia—were the salient features of the landscape. But to-day on the same site is a modern city, and no creation of the fictionist brain, not even of an Oriental nature, has ever portrayed a story of nearer approach to the famed attributes of Aladdin's lamp than is to be found in the history of the modern

city of Kalgoorlie. The marvellous transformation from a dreary waste of spinifex and sand to a highly civilized centre, replete with every modern comfort and adorned with handsome and substantial edifices of no mean architectural design and beauty, would almost appear to be the creation of a fairy story, if the fact were not so self-evident. Only those familiar with the rapid growth of a gold-mining community can grasp the fact that within ten years from the date of Hannan's discovery Kalgoorlie was an accomplished fact. To those dwellers in older lands and more settled communities, familiar with the steady but almost imperceptible progress in urban populations decade by decade, the presence of this great city remote from all others of a like nature and size, will ever be a matter of astonishment.

The municipality was proclaimed in 1895 over a conglomeration of canvas tents, interspersed here and there with the more pretentious structure of hessian and galvanized iron, and it appeared that this great concourse would be soon moved to other and what was deemed more favourable pastures, for the wonderful alluvial wealth appeared to be nearly exhausted. The discovery of the "Golden Mile," however, at this opportune moment infused new life into the community. By this new discovery such an impetus was given to business that the dismal prognostications of the detractors was forever silenced, and as if at the waving of a wizard's wand canvas town began to disappear and its place to be taken by the more substantial edifices that bespeak the assurance of a community in a well-defined future. Thus between the years 1896 and 1898 not only did Kalgoorlie give definite assurance of its existence, but the distinct municipality of Boulder City had its birth. By taking due notice of the faults in older cities wisdom was exercised in laying out the earlier streets in Kalgoorlie. Winding narrow streets have been avoided, and unlike many of the streets in Ballarat, Victoria, despite the magnificence of its main street, Kalgoorlie for a gold-mining town can justly lay claim to being the most correctly designed gold-mining city in the Empire. On its gazettal as a municipality in 1895 the estimated population was very small and its area about 100 acres, and at the outset the principal of municipalization was adopted in the city services. These were the days of small beginnings. No one then dreamt of the future greatness of the "Golden Mile," that small patch of uninteresting country that has since yielded gold of no less value than £51,000,000 and paid dividends amounting to £18,000,000, and at the present day employs over 5,000 men, upon whose earning a population of nearly 28,000 mainly depend.

The visitor to Kalgoorlie to-day, viewing the town with its broad, well-paved streets, its substantial and handsome buildings, street trees, parks and gardens,

electric tramways, and its brilliantly-lighted thoroughfares at night, could not imagine that to be the Hannan's—as it was called—of 1895, when the unmade roads were pulverized to the fineness of flour several inches deep by the traffic of teams. These were the days when public conveniences were few, and even in many cases non-existent, and when every drop of drinking water had to be distilled from salt water, and that at such cost as to render the wasting of a pint a matter of serious moment.

To those great civilizing influences—the modern railway and an up-to-date water scheme—Kalgoorlie owes in some measure its present greatness as a city, and when in the year 1896 the railway was opened to this desert centre, the era of its larger prosperity could be said to have started. The opening of that gigantic undertaking—the goldfields water supply—the catchment area for which was nearly 400 miles away, set the coping-stone on Kalgoorlie's position as a city of no mean order. The catchment area of this scheme is 569 square miles in extent, and the capacity of the impounding reservoir 4,600,000,000 gallons. This great reservoir is 760 acres in extent, and the weir 100 ft. high and 755 ft. long. From the impounding reservoir the water is pumped through a steel main of 30 in. internal diameter by a series of pumping stations located at intervals along the main. The reticulation of Kalgoorlie is carried out by gravity from the main service reservoir.

But to return to the earlier struggles of the municipality. One of the first acts of the council was to buy out some squatters who had taken possession of what was then a part of Hannan Street, and had erected small business places thereon. Some difficulty was encountered when an attempt was made to remove them, and Sir John Forrest told the council that if they could be removed the land would be given to the municipality as an endowment. With that promptitude that is a characteristic of gold-mining communities, the council took the shortest way out of the difficulty and bought out the squatters. Subsequent events have proved the extreme wisdom of the step, for upwards of £20,000 has been received for ground rents by the municipality, while buildings, including two hotels, have been erected upon the land to the value of £10,000, which will ultimately become the property of the municipality. To a governing body of city fathers gifted with such farsightedness the present city of Kalgoorlie owes many of its present conveniences, and the adoption of the municipal trading system in the electric lighting scheme is another of the many features for which the ratepayers of to-day are in receipt of full value. The electric lighting of the town was begun by the council in a very small way in the year 1897. It consisted of eight arc lamps for lighting the corners of the principal streets, the engine of a local

timber merchant being utilized to generate the current. To-day the equivalent of 60,000 8-candle power lamps are in use in the municipality, being 85 per cent. of the possible lighting of the city. The infant undertaking waxed strong, and a small plant was erected in Brookman Street, an old plant from the Perth Gas Company being employed. The municipal venture continued to thrive, and finally a much larger plant had to be procured to carry out the work. From time to time this has been extended, and at the present day it has become a huge trading concern, and on the plant alone £62,000 of earnings, with an additional £22,500 of loan money, have been spent. The book value at present, allowing for a generous writing off for depreciation is £40,000, and on this a net profit of about 4 per cent.

be to render a swim prohibitive to the youthful members of the community, who extract a considerable amount of enjoyment out of the healthy pastime. In the year 1901 were established also municipal markets in the interests primarily of the householder who wished to buy produce in small quantities. At the time there was more than a suspicion that a strong fruit and vegetable ring was in existence. The markets were a pronounced success from the point of view of the small consumer, and protected the ratepayer from the actions of any combine. Fruit and vegetables have since been almost as cheap as in the capital city, and often of a superior quality, as the long rail journey precludes any but the best quality from being sent to the goldfields. In these markets £200,000 worth of produce has been moved over to date. The

VIEWS OF KALGOORLIE.

is made, while the ratepayers enjoy the inestimable benefit which comes from well-lighted thoroughfares at an almost nominal cost. In the year 1911 municipal baths were constructed at a cost of £3,000, and comprise swimming and shower baths. The swimming basin holds nearly 100,000 gallons, and has a depth of from 2 ft. to 8 ft., and is fitted with springboards and modern appliances. At the outset these baths were greatly appreciated, even though the water used in the initial stages was so salt that one was borne up, even though unable to swim. After the opening of the water scheme fresh water was available, and the baths became even more popular than before. No attempt is made to run these baths at a profit, as the effect of such an action would

council allowed a private company to establish an electric tramway system, and receives from it 3 per cent. on the gross earnings, amounting to about £500 per annum; up to the present time £4,000 has been received from this source. The sanitary services of the city are well equipped and efficient. The Health Amending Act in 1905 constituted the council a health board also, and since then the sanitary arrangements and services have been under direct municipal control, resulting in a profit of £1,000 being added to the city funds. Kalgoorlie affords an excellent example of municipal enterprise at its best, as all its undertakings pay, while the prices to the ratepayer are less than would be paid for similar services to private individuals.

The present town hall was opened in 1908. It is a very commodious place, and though its architecture is not striking it is built on a most convenient plan, all its offices being large and spacious and readily available to the public. An exceedingly well-appointed theatre is an adjunct to the building, and despite the fact that Kalgoorlie is so far inland some of the best companies in Australia perform there. The theatre pays a fair interest on the capital cost. In 1895 was established a miners' institute, and a commodious building was erected in Hannan Street on land granted by the Government. The land was vested in trustees, and the Government also gave two special monetary grants of £500, and the institute has received annual grants of varying amounts ever since. Some time later a special grant was made to the institute to allow it to cope with the special needs of the scientific problems exhibited on the fields. Though this institution is not directly the outcome of municipal enterprise, the subscribers behave with that liberality to the general public which has always been such a special feature of goldfields life. The institute contains fine public reading-rooms, liberally supplied with newspapers and periodicals, smoking- and lounge-rooms, and a library containing several thousand volumes, not entirely devoted to fiction. The institute is ably managed, and in point of utility and usefulness supplies a need on the eastern goldfields that would be hard to replace. The Chamber of Mines, Kalgoorlie, was established in the year 1901, and since its inauguration has done much to consolidate the scientific methods existing for the extraction of gold from the refractory ores that abound on this field. The scientific papers published under the auspices of the chamber have had a world-wide circulation and fame, for in many methods of gold extraction Kalgoorlie has been the pioneer. The main mineral belt of the district stretches a length of five miles north and south, and has been proved to be rich in gold for a length of one mile north and four miles south of the town by a quarter of a mile wide. The lodes are maintaining their richness as depth is attained, as proved at 2,900 ft. At such a depth and through the varying strata that exist the need of a proper scientific training to cope with this mineral problem was justly observed, and a school of mines was established for the eastern goldfields at Kalgoorlie. The value of this educational departure was speedily felt on the field, and the East Coolgardie goldfields district is now equipped to carry out that scientific training so absolutely necessary in the industry in Western Australia. The secondary school has not yet taken root in Kalgoorlie, but with the establishment of a university in the capital city no doubt this feature of educational life will receive attention. Primary education is carried on by means of the usual well-founded Government schools,

and in most essentials necessary for the training of the youth this centre of mining activity takes a deservedly high position. When the fact that Kalgoorlie possesses, perhaps, the most valuable and complicated plants for the recovery of gold, scarcely equalled throughout the Empire, the need of proper scientific training is so urgent and insistent that the high position reached by the educational establishment is but a concomitant of the necessities of the situation.

Kalgoorlie is the headquarters of the 84th Infantry Regiment, the outcome of the old Goldfields Infantry Regiment, which together with the other infantry units in this State played no inconsiderable part with the Australian contingents that during the Boer War (1899-1902) volunteered for service in South Africa. Mining communities have generally been composed of shifting and unstable elements, the eternal quest for the elusive metal being the one spring of the actions of its members, but even taking into consideration this fact the population of Kalgoorlie is, generally speaking, stable. The city is the headquarters of the social life on the eastern goldfields, and from it as a centre radiate many social actions; in fact, this district as a whole constitutes a community unto itself, widely separated on many points from the older-established communities on and near the coast. The religious life is strong and vigorous, all denominations being well represented. The question of an Anglican goldfields bishopric has frequently been mooted, and in all probability will be the next expansion of that sect in Western Australia.

As can well be imagined, the municipal life in a city abounding with such examples of municipal enterprise should contain on its roll of honour the names of many who have found the bounds of municipal thought too narrow for their soaring energies. Thus the council chamber of Kalgoorlie can boast of being the probationary period of men whose names have become well known in State and Federal Parliamentary Cabinets. Amongst these can be mentioned J. D. Connolly, a former Colonial Secretary of Western Australia; Norbert Keenan, K.C., who has held the high and honourable position of Attorney-General in a State Cabinet; and Mr. R. D. McKenzie, who also attained Ministerial rank in the State Cabinet. To these can be added the names of C. E. Fraser, M.P. (P.M.G. in the late Labour Ministry), and Miles Staniforth Smith, whose valuable work as Acting-Administrator of Federal Territory in Papua can hardly be overestimated.

Kalgoorlie has no natural beauty spots. Nature has been very niggardly in this respect, the natural surroundings being dull, drab, and monotonous. The racecourse and Victoria Park are the results of efforts to supply what Nature has denied, and the efforts have been crowned with perfect success. For the greater part

of the year ample lawns of velvety softness and depth afford a pleasing contrast to the natural surroundings, whilst the feast of colour in the profusion of flowers is extremely pleasing to the eye. Kalgoorlie is justly famed for its roses, and the gardens of the householders help to dissipate that monotony of the sand dunes and plains by which it is surrounded. The public

POST AND TELEGRAPH OFFICES AND PUBLIC BUILDINGS.

park and racecourse are the meeting ground of the community during its leisure hours, and these beauty spots, though small and perhaps all too few, serve to lighten the lives of those who are compelled to toil amidst the stunted scrub and arid red soil of the city's surroundings.

The principal buildings are substantial and useful, and are not entirely devoid of architectural beauty, but this latter essential does not seem to have been their first consideration. They are the expression of a practical people engaged in the most strenuous of industrial employments, utility being of necessity the primary principle of their erection. Though the architecture is mixed, nevertheless a few buildings, like the Town Hall, St. Mary's Church, Palace Chambers, and the Western Australian Bank, are not devoid of some expression of architectural design. Three newspapers are published in the town, the needs of the community being well catered for in this respect. Being the headquarters of the eastern goldfields railway system, Kalgoorlie naturally is the distributing centre for the commerce and productions of the coastal district throughout the eastern goldfields, and as such the main business arteries of the city abound in well-built and well-equipped and stocked commercial emporiums. In such measure has it also become the centre of all sport and athletics. The recreation reserve possesses all the requisite improvements and appointments, including an up-to-date grandstand and other buildings. Football, cricket, and various other sporting institutions abound, and the premiership of the goldfields district is as keenly contested as that in the metropolitan centres.

EEE

A description, however, of Kalgoorlie, would not be complete without some extended mention of the Kalgoorlie Racing Club, the grounds of which have a far greater interest than of racing alone. The racecourse is within easy walking distance of the town, being about one mile distant from the post office. The course is one of the best in Western Australia, and the necessary buildings have been constructed on the most up-to-date designs and possess every modern convenience and appliance. The grandstand, a commodious brick and stone structure, is capable of seating 3,000 persons. Luncheon-rooms, tea kiosks, and many other conveniences for the comfort and wellbeing of the patrons abound. There is an excellent brick stand, with a seating accommodation for 2,000 persons, provided for the Leger patrons, and in all that makes for the proper control of modern racing Kalgoorlie is not one whit behind the older-established racecourses of the other States. Following the example of Flemington in Victoria an electric chronograph for the accurate timing of races has been installed. However, perhaps, the crowning beauty of the course has been the design displayed in the landscape gardening of the enclosure. Several thousand trees have been planted, and there are four acres of lawns. So generous has been the course committee to the public of Kalgoorlie that what is really a proprietary concern has now come to be regarded as the public park of Kalgoorlie. The expense for water of this gardening project

TOWN HALL, KALGOORLIE.

has been something enormous, and between 7,000,000 and 8,000,000 gallons of water are obtained per annum from the goldfields water supply to construct and render this possible, and the total expenditure on the conveniences and improvements of the course will not fall much less than £80,000. The policy of the club is one of progress, and since its foundation the amount disbursed in prize-money has reached nearly £90,000.

The population of the municipality is 8,781 (4,642 males and 4,139 females), but of the East Coolgardie district the estimated population is over 95,000.

CHARLES AUGUSTUS CUTBUSH, Mayor of Kalgoorlie, was born in Sydney, New South Wales, on January 2, 1865, and is a son of Mr. William Montague Cutbush, pastoralist, of "Pillacawarrena" Station, New South Wales. He obtained his early scholastic training at public educational institutions, and subsequently received a finishing course at the Sydney Grammar School. At seventeen years of age he entered commercial life in the service of the firm of Messrs. Edward Dunlop & Co., with whom he remained for nine years, resigning his

J. J. Dwyer, Kalgoorlie.  
MR. CHARLES AUGUSTUS CUTBUSH.

position to come to Western Australia about the time of the inauguration of responsible government. For a time he carried on a sports depôt and tobacconist business in Perth, and in 1893, two years after his arrival, joined the first Kurnalpi alluvial gold rush, where, however, results failed to justify his expectations. In June, 1894, he came to Kalgoorlie, then known as Hannans, and joined Mr. J. W. Fimister, who about a year previously had established a general store in that vicinity and was in the full swing of trading pursuits. The store was constructed of hessian, but a comprehensive stock was protected within its frail walls, and almost from the first the business took a leading place in the infant settlement. Mr. Cutbush threw all his energies into its advancement, and as a result of both partners' unremitting efforts the trade has expanded, fine stone premises have been erected, and to-day

the business is one of the landmarks of Kalgoorlie history. With his partner Mr. Cutbush is also largely interested in the mining industry, particularly in the development of the Ora Banda field, and besides gaining valuable experience has reaped considerable financial rewards from his ventures. Since taking up his residence in Kalgoorlie he has made himself prominent in public affairs, and has given his support to all matters affecting the welfare not only of the town of Kalgoorlie but of the goldfields district generally. A founder of the first progress association in the place, he was placed at the top of the poll at the ensuing election of officers by the residents, and was appointed first secretary to that body, which was the forerunner of municipal government in Kalgoorlie. In 1895, when Kalgoorlie was created a municipality, the pressure of his many and devious interests prevented him from rendering immediate service, but later when this was relaxed he gave his time freely to the work of the council. After six years' connection with this body, in 1912, a vacancy in the mayoral office occurred and Mr. Cutbush was invested with the honours of chief magistrate of the town, which post he now holds.

He is a keen upholder of the sport of kings, and was one of the founders of the Kalgoorlie Racing Club, and its first honorary secretary. For his invaluable services to this body he was honoured by being elected the first life member in 1907, and still retains his seat on the committee. Among other excellent specimens of blood stock which he has owned pride of place may be given to "Fifeness" ("Bill of Portland"—"Melodese"), the champion of the Western Australian turf in 1907. In his younger days he was a keen athlete, and made the record against time on hard-tyred bicycles from Adelaide to Sydney, doing the 1,300 miles in less than thirteen days. He has been married twice, his first wife being a daughter of the late William English, of Perth, while his second marriage took place in 1905, when he was united to Adeline May, daughter of the late J. Smith, of Sydney. He has two sons.

Councillor HENRY WALTER DAVIDSON, J.P., of Kalgoorlie, who is also a member of the Kalgoorlie Roads Board, was born at Mount Clear, near Ballarat, on October 5, 1865, and is a son of Mr.

J. Davidson, of Footscray, Victoria. He was educated in the place of his birth, and upon the completion of his scholastic career became engaged in commercial life, joining a Footscray firm in the grocery line of business. He continued as assistant in this house until his twentieth year, in the course of which he entered the hardware trade on his own account, and also carried on as a contractor in house decoration work for several years. In 1895 he came to Western Australia and conducted a similar business in Coolgardie, where he remained for some four years, during which he gave a portion of his attention to the mining industry. In 1896, shortly after the Kanowna gold rush took place, he joined in the search for the precious metal, prospecting in the surrounding locality and had an interest in an alluvial claim on the cemetery lead, but, aside from this departure, he has spent the whole of his time in managing his commercial interests on the goldfields. In 1898, after some months spent in Perth, Mr. Davidson removed to Kalgoorlie and established a factory for sauces, jams, self-raising flour, etc., which still holds

J. J. Dwyer, Kalgoorlie.  
MR. HENRY WALTER DAVIDSON.

its unique position of being the only manufactory of foodstuffs on the goldfields. He also inaugurated the Goldfields Soap Company, Limited—in which he occupies the post of managing director—one of the most complete in arrangements for its size in the Commonwealth, with a plant which, though small, is considered

to be a model one. In January, 1903, he was elected a member of the Kalgoorlie Roads Board, and later in the same year was returned by the ratepayers of Kalgoorlie to represent them in the municipal council, heading the poll on both occasions. During the nine and a half years he has been on the roads board he has occupied the chair for four years, and holds a record in municipal elections, having been returned at the head of the poll on three occasions. In 1905 he was appointed to a Commission of the Peace by the Moore Administration, and among other offices he has represented the goldfields on the central board of health for twelve months. Mr. Davidson is a member of the executive of the Roads Boards Association of Western Australia, and has been a member of the conference of the goldfields local bodies since its inception. He is also a member of the Commercial Travelers' Association and of the Kalgoorlie Club. In 1885 he married Charlotte, daughter of the late William Pannell, contractor, Geelong, Victoria, and has four sons and one daughter.

Councillor PATRICK DUNNE, of the Kalgoorlie Municipal Council, was born at Ballycommon, near Tullamore, King's County, Ireland, on October 17, 1848, and is a son of the late Terence Dunne, a farmer and canal builder of that place. Having accompanied his father to Victoria in his early boyhood, he received his education at St. Patrick's College, Melbourne, and upon the termination of his scholastic career entered the commercial house of John McDonnell & Co., of Little Collins Street, where he remained for some years. Upon the attainment of his majority he was offered the post of assistant manager and accountant of the Mutual Store, soon after being appointed general manager of the Lyceum Stores, Limited, of Bendigo. Five years later he resigned in order to take over control of the Melbourne Bread and Flour Stores, in less than a year transferring his services to the firm of Messrs. Perkins & Co., Limited, brewers and wholesale wine and spirit merchants, of Brisbane and Toowoomba, Queensland, which business he managed for two years. In 1880 he relinquished this connection and became connected with the pastoral industry in the Herberton district, at the same time building

EEE2

and opening a brewery at Herberton. These dual interests absorbed his attention until the occurrence of the financial depression at the time of the big bank failures, when, selling out in Queensland, he returned to Victoria to attend to his various properties in that State. Whilst here he was returned as councillor of the Shire of Coburg, where he resided, and for some years served the ratepayers as a member of that council. He came to Western Australia in 1894 and spent a considerable period in the mining industry all over Western Australia, prospecting in many

*J. J. Dwyer, Kalgoorlie.*  
MR. PATRICK DUNNE.

fields, but principally in the Murchison district. About 1898 he settled at Kalgoorlie, and opening a bakery and flour business in the town has personally conducted this concern with considerable success. To Mr. Dunne must be accorded the credit of having established the first machine bakery in Western Australia, and he takes a leading place among similar businesses on the goldfields. During the whole of his career he has always interested himself in matters of public moment, and in 1909 offered his services officially to the people of the Kalgoorlie municipality, upon which occasion he was returned, and has since retained his seat in the council. He is a member of nearly all the clubs in the town, including the racing and other sporting organizations. He is also a member of the committee of the mechanics' institute, and spends many of his leisure hours in the perusal of scientific and historical works.

Mr. Dunne married Catherine, daughter of the late Patrick Hallion, one of Victoria's early pioneers, and has a family of five sons and four daughters.

Councillor ERNEST SMITH, of the Kalgoorlie Municipal Council, was born at Fitzroy, Victoria, on July 5, 1869, and is a son of the late Mr. Charles Robert Smith, general land and estate agent, of that State. At the termination of his scholastic course at a public school he entered commercial life in the firm of Messrs. Smith & Timms, railway contractors, with whom he remained for five years. In 1896 he came to Western Australia and proceeded to the north-west district on behalf of the same firm in the capacity of paymaster on the jetty construction works which had been undertaken by Messrs. Smith & Timms. Upon the completion of this work Mr. Smith resigned in order to accept a position as paymaster in the original firm of Messrs. Millar Bros. Two years later he retired from this service and entered upon the duties of assistant manager and paymaster at Kurrawang for the

*J. J. Dwyer, Kalgoorlie.*  
MR. ERNEST SMITH.

Western Australian Firewood Company, Limited. Retaining the position until 1903, in that year he joined the newly-formed Millars' Karri and Jarrah (1902) Company, Limited (now Millars' Timber and Trading Company Limited), as paymaster at the head office, and after twelve months was

promoted to the charge of the eastern goldfields branches, which appointment he has filled ever since. Since coming to Kalgoorlie he has taken considerable interest in local public affairs, and on two occasions was a candidate for municipal honours, ultimately being returned to represent the ratepayers in 1911. At the end of the same year the general elections for the council occurred, when he was again returned for the ensuing term of three years, and at present occupies a seat on the finance committee. He identifies himself with local organizations, being a member of the Masonic craft and of the Kalgoorlie and City Clubs. In 1892 he married Margaret Ann, daughter of Mr. James E. Smith, of Coburg, Victoria, and has four sons and one daughter.

Councillor THOMAS JAMES SULLIVAN, member of the Kalgoorlie Municipal Council, is a son of the late Daniel Sullivan, of Walaroo, South Australia, where he was born on September 6, 1871. He received his education at the State and Roman Catholic schools in Jamestown, in the same State, and when

J. J. Dwyer, Kalgoorlie.  
MR. THOMAS JAMES SULLIVAN.

thirteen years of age became engaged in the grocery trade. Three years later he left Jamestown for Broken Hill, and shortly afterwards went to work on the mines. He continued in the silver-mining industry for eight years, and at the end of that period came to Western Australia,

the Norseman goldfields first attracting his attention. He followed mining pursuits in this district for some time, until the better conditions prevailing on the Coolgardie fields drew him to the more northerly locality. From Coolgardie he went to Broad Arrow, and making this the centre of his operations, he prospected and worked all over the eastern goldfields with more or less success for about six years. In 1905 he came to reside at Kalgoorlie, and deciding to return to his former calling opened a grocery business at the west end of Hannan Street, which he has since continued to conduct. He has manifested considerable interest in municipal affairs, and in 1912 was returned to a seat in the local council chamber. He has always been very prominent in the political Labour movement on the goldfields, and among other offices has filled for some years that of president of the Paddington and Broad Arrow branch of the A.W.A. He was honorary treasurer of the Broad Arrow Hospital for three years, and is chairman of the West Kalgoorlie Progress Committee, of which he was one of the founders. He married in 1897 Johanna Louisa, daughter of the late Lawrence Egan, of Moss Vale, New South Wales, and has one son and two daughters.

Councillor EDWIN KERBY BEAUMONT, C.E., M.I.M.E., of the Kalgoorlie Municipal Council, was born at Castlemaine, Victoria, on October 30, 1869, and is a son of the late Amos Thomas Beaumont, a pioneer of the Forest Creek Diggings in Victoria in 1851. He received his primary education at the Castlemaine Grammar School, and subsequently continued his studies at the University of Melbourne, where he was one of the first twelve to join the University geodetic survey camp, under the direction of Mr. Thomas Walker Fowler, M.C.E. The formation of this camp, which met at Sorrento, Victoria, was the first attempt on the part of the University to train students for the higher forms of survey work. Subsequently Mr. Beaumont was connected with the Victorian Government's Lands and Mining and Survey Departments, and had opportunity of proving his proficiency in both surface and underground work. He was also employed by the Melbourne and Metropolitan Board of Works in the sewage

reticulation scheme and previously surveyed the whole of the construction work in connection with the underground sewerage scheme for the city of Carlton. He resigned from the Board of Works to enter upon seven and a half years' engineering and mining practice with the Sulphide Corporation, Limited, at the Central Mine, Broken Hill, and during this period, in 1904, received the appointment of underground manager, the duties of which responsible post he carried out in a very able and satisfactory manner. He rendered considerable service to the Engineering Association of New South Wales by putting forward in a popular, interesting, and instructive way an account of the systems of stoping and timbering adopted in the Broken Hill mines, taking up the evolution of the systems then in vogue from the time

J. J. Dwyer, Kalgoorlie.  
MR. EDWIN KERBY BEAUMONT.

when the square-set system was introduced. The value of this work was enhanced by a series of drawings, by means of which professional and practical men abroad could form an accurate idea as to the methods of work on the great Broken Hill Mine, which as a school for miners and mining engineers is second to none in Australia. After the passing of the Mines Inspection Act in 1901 Mr. Beaumont was the first candidate in Broken Hill to present himself for examination for the position of mine manager under the New South Wales law, and having satisfied the examiners received his certificate of competency. Upon his departure for Western Australia in 1904 he was

tendered a public send-off by the mayor and councillors and residents, at which he was the recipient of an address and presentation as a mark of the esteem in which he was held by the townspeople. Proceeding to the goldfields, he became engineer and surveyor to the group of mines controlled by the Oroya-Brown Hill Company, Limited, and was later employed on several other mines, where he obtained valuable experience of the Kalgoorlie ore deposits and mining methods. He designed and supervised the erection of several plants on the Western Australian goldfields, which are now in successful operation, and in 1907 was appointed Government Inspector of Mines in Western Australia. He has a comprehensive knowledge of a large number of mines, including the Mount Margaret, the Sons of Gwalia, the Cosmopolitan, Lancefield, Mount Morgan, and many others, the inspection of which demands a general and practical knowledge of mining administration. Mr. Beaumont has identified himself with the public life of the district, and in 1912 was returned as a member of the Kalgoorlie Municipal Council by a large majority. He takes special interest in matters of charity, particularly as regards the care of aboriginal children, and aided by his wife gives active support to the institution at Lamington Heights, where such little ones are cared for. He married in 1901 Frances, daughter of Mr. G. W. Greenhill, of Castlemaine, Victoria.

**CHARLES EDWARD ECCLES**, Town Clerk of Kalgoorlie, was born at Brisbane, Queensland, on July 18, 1874. At an early age he was brought to Victoria, where he received his education at a State school, subsequently matriculating at the University of Melbourne. In 1894, shortly after the report of gold discoveries at Coolgardie, he came to Western Australia, and, proceeding to the Murchison district, began the life of a prospector on that field. At a later date he worked in the mines at Day Dawn, and from there came to Kalgoorlie in 1896 and entered the office of Mr. R. M. Stow, barrister and solicitor. After two years he left this position and accepted an appointment in the Kalgoorlie office of Messrs. Connor, Doherty, and Durack, with whom he remained for six years. In 1905 he entered the

employ of the municipal council of Kalgoorlie in the electric lighting department, and having fulfilled five years' service, upon a vacancy occurring for the position of town clerk, he received his present appointment. Mr. Eccles is also interested in the agricultural industry and owns a

*J. J. Dwyer, Kalgoorlie.*  
MR. CHARLES EDWARD ECCLES.

farm near the Wongan Hills. He is a lover of home, and spends most of his leisure hours in gardening. In 1910 Mr. Eccles married Alice, daughter of the late Frederick Rose, of Nathalia, Victoria, and has two daughters.

**WILLIAM ARDAGH GARDNER WALTER**, Warden and Resident Magistrate of Kalgoorlie district, extending from Kalgoorlie, Boulder, Kanowna, and Coolgardie in the east to Southern Cross and Norseman in the west and south, and Broad Arrow in the north, is a son of Mr. Octavius Gardner Walter, J.P., of Ford House, Wellington, Somerset, England. He was born at Taunton, in that county, on August 13, 1860, and pursued his studies at the Taunton College School and Exeter College, Oxford. After leaving the University he came to Western Australia and turned his attention to agricultural and pastoral pursuits in the Lower Blackwood district. In 1891 he joined the Government service, being engaged in the compilation of the census under Mr. Gale, and in September of the same year he accepted the position of

warden on the Murchison goldfield, which had just been discovered. He administered mining affairs at that centre until the end of 1892, when he was appointed resident magistrate for the Blackwood district in succession to the late Mr. Richard Gibbons. These duties he relinquished in 1902 to take over the post of acting police magistrate at Perth, Mr. A. S. Roe, the former occupant, having been appointed acting judge of the Supreme Court. In 1905, upon the return of the latter gentleman to the Police Court, Mr. Walter was transferred to Geraldton as resident magistrate, which position he filled for three years. Four years later, after a furlough of a few months, he was appointed resident magistrate at Kalgoorlie, and upon the retirement of Mr. J. M. Finerty, the warden of the district, this office was added to his other duties, and he has acted in the dual capacity ever since. Mr. Walter is a member of the Weld Club (Perth), Hannans Club (Kalgoorlie), and of the Western Australian Turf Club. He is a keen supporter of all healthy outdoor recreation, and fills the post of president of the Eastern Goldfields Cricket Association, of which he is a playing member. Cricket has been his principal sport during the whole of his life, but he has also aquatic honours to his credit, having been a member of his college crew at Oxford which at that time held the head of the river for three years. He played Rugby as forward for Somerset for five years, and for two years in succession was chosen as representative for the West of England team. He varies his diversions at the present time by indulgence in tennis and golf. Mr. Walter married in 1887 Lucille, daughter of the late J. G. Thomson, of Brookhampton, near Bunbury, one of the early pioneers of the south-western district, and has one son and one daughter.

**ROBERT GILKINSON CREGOE SHAW**, Town Treasurer of Kalgoorlie, was born at Kaiapoi, Canterbury Plains, New Zealand, on March 30, 1869, and is a son of Mr. John Agnew Shaw, a well-known identity in the early pioneering days of the gold industry of Victoria, whence he came from the Dominion, to which he had emigrated in the early sixties. The gentleman under review received his education at various public and private schools in New

Zealand, and shortly after entering his teens joined the Civil Service of that country, being attached to the telegraph branch there for a few years. At nineteen years of age he went to Victoria and became connected with the Telegraph Department of the General Post Office at Melbourne, which he left to join the Railway Department in a similar capacity. Eventually Mr. Shaw resigned from the public service, and proceeding to the country districts entered upon the occupation of loading goods on pack saddles for transit to the various mines, and in this way traded through many new districts where road accommodation had yet to be provided. In 1893 he left Victoria for Western Australia, and for some years faced the vicissitudes common to early prospectors on the eastern goldfields, during which period he walked from Coolgardie to Perth on three occasions. In 1895 he was appointed secretary of the Kalgoorlie Hospital, and held that position until the institution was

*J. J. Dwyer, Kalgoorlie.*  
MR. ROBERT GILKINSON CREGOE SHAW.

taken over by the Government in the latter end of 1896. At that date he received the appointment of acting town clerk, having previously been connected with the municipal council almost from its inception and having held office continuously in various capacities. In 1900 he took over the duties of town treasurer, and has since continued to fill this post. Among his other offices is that of secretary of the cemetery board, which he has held ever since the foundation of the board, in which he

played a leading part. He is a man of hobbies, being an expert amateur carpenter and very fond of gardening. In 1895 Mr. Shaw married Eleanor, daughter of the late John Abbott, of Donnybrook, Victoria, and has four daughters and two sons.

**MATHIAS JAMES RICHARDSON**, Secretary of the Kalgoorlie Roads Board, was born at Clunes, Victoria, on April 14, 1867, and is a son of the late William Richardson, of that place. He was educated at the Clunes Grammar School and South Yarra College, and with a view to entering the legal profession

*J. J. Dwyer, Kalgoorlie.*  
MR. MATHIAS JAMES RICHARDSON.

studied at Ormond College in connection with the Melbourne University for two years. Altering his intention with regard to his career he served indentures to a licensed surveyor for a couple of years, relinquishing this connection to take a trip through New South Wales and Victoria. Eventually Mr. Richardson settled down to farming pursuits in the Gippsland district, near Leon-gatha, and carried on the development of his property until his departure for Western Australia at the time that the mining boom was in full swing. This was towards the end of 1895, and upon arrival he opened an office at Kalgoorlie and conducted business as a mining and land agent, at the same time being concerned in the different phases of mining enterprise when speculation was rife and many risks were taken. He

continued with varying success until 1896, when he was requested by the Government of the day to assist in the establishment of the Kalgoorlie Roads Board, to which he was appointed first secretary, a post he has held ever since. In 1899 Mr. Richardson was prominent in the movement for the formation of the Reform League, and served on the executive of that League at the time that strenuous work was being done in order to bring about the consummation of the federation of Western Australia with the rest of the States of the Commonwealth. For about eight years he was a member of the Kalgoorlie Municipal Council; and he was one of the two leading spirits in the establishment of the goldfields branch of the Australian Natives' Association, of which he was president for some considerable time. He has made a deep study of municipal and local government law, and is looked upon as an expert in this department, on various occasions having been called in by the authorities to advise on certain modes of procedure. A Liberal in politics, he has been consistent in his support of that party, and, in 1911, was a candidate in the Liberal interest for the Kalgoorlie seat in the House of Assembly, but without success. He is secretary of the conference of goldfields local bodies; and for a number of years has been connected with the Masonic craft. He has been twice married, his first wife being a daughter of Mr. R. Pine, of Victoria. The present Mrs. Richardson is a daughter of the late Père Lafontaine, of St. Kilda, Victoria, and he has a surviving family of one son and one daughter.

**ARTHUR RICHARDSON, M.D., M.R.C.S.E.**, medical practitioner at Kalgoorlie, was born at Tadmarten, Oxfordshire, England, on December 9, 1844, and is a son of the late Geoffrey Richardson, Government merchant contractor. He received his education at the Birmingham Grammar School, and subsequently qualified for the medical profession at the Victoria University, Manchester, where he took his diplomas of medicine and surgery in 1876. Dr. Richardson then established himself in practice in the same city, and in addition to his private connection obtained considerable hospital experience there. In 1880 he came to Australia, and practised for fifteen years

in the Central State, during the greater part of which period he exercised a Commission of Justice of the Peace. In the early nineties, upon the discovery of the eastern goldfields in Western Australia, Dr. Richardson joined the exodus from South Australia, and proceeding to Kalgoorlie has resided ever since on the fields. He keeps himself in touch with the advanced ideas and methods of the medical world by the perusal

*J. J. Dwyer,* Kalgoorlie.  
DR. ARTHUR RICHARDSON.

of up-to-date works on medicine and surgery, and follows the various progressive movements in the Old Country with considerable interest. Outside of his profession he has actively concerned himself in the public life of the town, and for a lengthy period has served as a member of the local municipal council, whilst the pressure of his calls as a physician alone has prevented him from acceding to the numerous requests he has received from different quarters to contest the mayoralty on various occasions. A Freemason of long standing, he was first Master of the original Lodge opened at Kalgoorlie, and has been trustee of this body ever since, besides holding other offices, at the present time being an officer of the Grand Lodge of Western Australia. Dr. Richardson married, in 1870, Isabella, daughter of the late Thomas Merrifield, of Wainfleet, Lincolnshire, England, and has a family of six daughters and four sons.

CHARLES WILLIAM CAMERON, stock- and share-broker, Kalgoorlie, was born at Angustown, Victoria, on October 31, 1885, and is a son of the late John William Cameron, a well-known figure in the pioneering days of that State. At the close of his schooldays the bright prospects of the gold-mining industry in Western Australia tempted him to this State, and proceeding to Coolgardie he became engaged on the clerical staff of Mr. Harold Barrett, the well-known sharebroker and one-time mayor of the "Old Camp." Mr. Cameron spent thirteen years in this business, during which period he obtained a thorough acquaintance with all the intricacies of share- and

*J. J. Dwyer,* Kalgoorlie.  
MR. CHARLES WILLIAM CAMERON.

stock-broking. In 1911, when Mr. Sydney J. Yeo decided to relinquish his connection with Kalgoorlie, Mr. Cameron acquired his business interests and established himself on his own account, and is now one of the leading stock- and share-brokers on the eastern fields. Mr. Cameron in earlier days was a fair exponent of the game of cricket, and since his arrival in Western Australia has acted as patron of all forms of clean outdoor sport. He is a member of the Kalgoorlie Racing Club and of the Kalgoorlie Club. In 1910 he married Alice E., daughter of the late William Bingley, formerly of Bordertown, South Australia, who for a decade was a well-known contractor on the goldfields. There is issue one daughter.

JOHN WILLIAM RHIND, one of the best-known identities of the eastern goldfields during the past two decades, was born at Preston in Lancashire on March 21, 1853, and is a son of the late P. S. Rhind, treasurer to the corporation of Liverpool. He received his education at Heversham Grammar School, and at the termination of his scholastic course became apprenticed to the engineering trade in the house of Messrs. David & William Henderson, of the Anchor Line, of Glasgow. In 1886 he came to Australia as agent for Messrs. James Pain and Sons, the well-known pyrotechnists, and after executing some special work in Sydney at the time of the celebration of the late Queen Victoria's Jubilee, took control of the fireworks and set pieces shown on behalf of this firm in the Friendly Societies' Gardens in Melbourne, and subsequently gave a series of similar displays in Adelaide. In 1896 he came to Western Australia as general manager of the West Australian Fresh Food,

MR. JOHN WILLIAM RHIND.

Ice, and Cold Storage Company, Limited, taking over the control of the company's works at Coolgardie, where he continued for six years. In 1903 the works were reconstructed and removed to Kalgoorlie, where they became known as the Kalgoorlie Ice Works and were carried on under the conduct of Mr. Rhind until 1912, when he disposed of his interest in the business, and retired. Mr. Rhind is a member of Hannan's Club.

ARTHUR FRANCIS, Kalgoorlie, was born at Ballarat, Victoria, on January 8, 1872, and is a son of the late Owen Francis, owner of "Killawarra" Station, in the north-eastern district of that State. After leaving school he joined the service of the London Chartered Bank, from which he resigned in 1895 in order to come to Western Australia. Upon arrival at Kalgoorlie he formed a very close friendship with the late Edward Graham Price, who was largely interested in Western Australian mining and finance companies, and for several years the gentleman under review acted as office manager for Mr. Graham Price's firm, as well as accountant to the Kalgoorlie Electric Tramways, Limited. In 1910 Mr. Francis entered into partnership with Mr. Graham Price, and upon the decease of his late partner in June, 1911, he became the head of the firm of Messrs. E. Graham Price and Co., one of the best known and longest established firms on the goldfields. The scope of his operations includes the general control of the Hampton Uruguay, Limited, the Kalgoorlie Electric Tramways, Limited, and the Westralia Timber and Firewood Company, Limited; while he is attorney to the Hampton

Properties Company, Limited, the Brown Hill Extended, Limited, the Star Explorations, Limited, and the Lady Miller Leases; and director of

Estate, Limited, but now included in the properties of the Hampton Uruguay, Limited, a large London syndicate owning considerable interests in different parts of America and Western Australia, is registered under the powers conferred by Section 57 of "The Mining on Private Property Act, 1898." It comprises 189,192 acres of freehold land with full mineral rights—the only landholding of the kind in Western Australia—and 292,932 acres of land held under pastoral leases from the Government of Western Australia. The freehold territory has displayed decided evidences of auriferous wealth, large quantities of alluvial gold having been taken from it at various times, and although the drought which prevailed in 1911 proved a serious setback to the efforts of prospectors, the splendid rains which have since fallen have stimulated the work of development, and there is every reason to hope that prospectors will proceed to work with fresh zeal, ultimately to reap a fair reward for their labours. It is considered highly probable that the Kalgoorlie gold belt traverses the estate, an hypothesis which makes the vista sufficiently rosy in view of the results obtained from deep-sinking on other

ROLLING STOCK AND CAR BARN OF THE KALGOORLIE ELECTRIC TRAMWAYS COMPANY.

parts of the belt; and another item of importance to intending investors is that it is practically certain that the Trans-Australian Railway connecting Port Augusta in South Australia with Kalgoorlie in the Western State will pass in the vicinity of some of the company's freehold blocks. A fair revenue has been derived for some years past from royalties payable to the company for the cutting and removal of mining timber and firewood from its properties, the income from this source alone for the year ending in June, 1912, amounting to £3,234. With regard to the Kalgoorlie Electric Tramways, Limited, for which Mr. Francis is general manager, a few remarks may not be without interest. Kalgoorlie, as heir to the municipal improvements of the ages, might naturally be expected to share in the benefits of the latest triumphs of science, but although it is generally known that modern methods are the order of the day on the Western Australian goldfields there is no doubt that, on a first visit, one could not but be impressed with the travelling facilities offered to the public by the

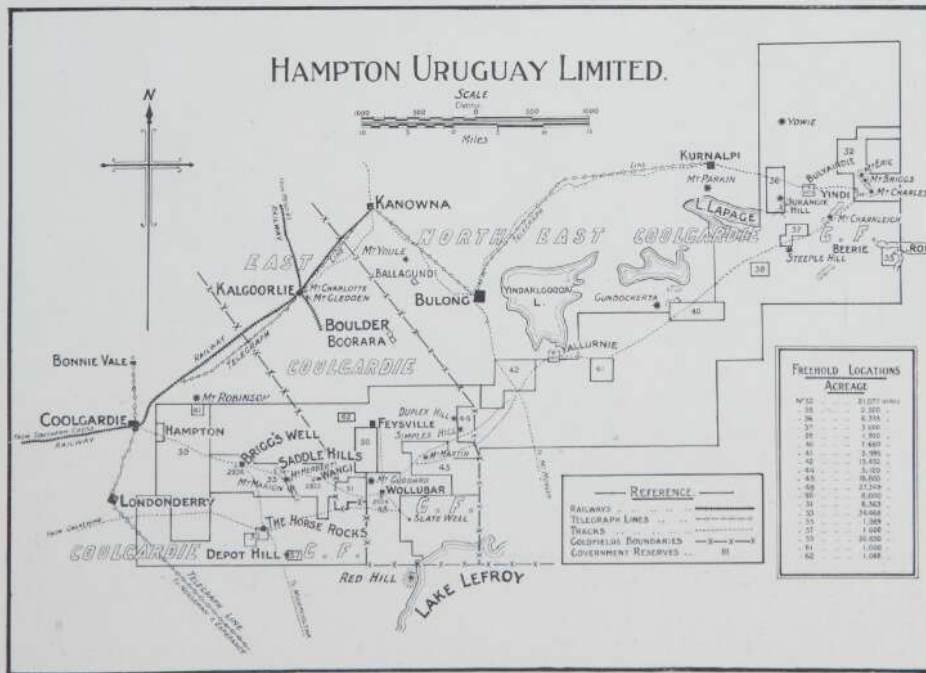

splendid system of electric tramways operating in that city. The official opening of the first section took place

Mr. EDWARD GRAHAM PRICE.

on May 20, 1902, when a regular service was inaugurated between Kalgoorlie and Boulder City and Kalgoorlie and Boulder Block. The

construction of other lines followed, and the company now has some 20½ miles of track (3 ft. 6 in. gauge) in operation, which serves a population of approximately 23,000 people. The company's rolling stock includes twenty Brills 19-ft. closed motor-car bodies with patent electric motor-car trucks, each having a seating capacity for twenty-eight passengers, the approximate weight of each of these cars being 12 tons; also five Brills 33-ft. closed motor-car bodies, each with a seating capacity for fifty-two passengers, the weight of these bogie cars being 23 tons each. Steel tyre wheels are used on all of the company's cars, and the small cars are fitted with hand breaks, while each car is equipped with circuit breakers. The company also keeps available for rush traffic a number of trailers, each with seating capacity for thirty-four passengers. The car barn and repairing shop are situated on the Boulder Road, and for its size is one of the most up-to-date in Australia. The building is composed entirely of steel and iron with the exception of the window frames and sashes, and measures 300 ft. long by 60 ft. wide.

WESTERN AUSTRALIAN PROPERTIES OF HAMPTON URUGUAY LIMITED, WITH THE EXCEPTION OF BLOCKS 45 AND 50, WHICH ARE OWNED BY HAMPTON PROPERTIES COMPANY, LIMITED, A SUBSIDIARY COMPANY.

All the necessary car repairs, retyring of wheels, armature winding, etc., are carried out on the premises, every variety of machinery for this purpose having been installed in the workshops. The late Mr. E. Graham Price took over the general management in March, 1903, and was fortunate in having from the very first the able assistance of Mr. W. H. Stanley, the present manager, who still continues to fill this appointment. From the high terms in which visitors to Kalgoorlie speak of the tramway system and its administration, it is evident that the general manager and his staff are fully in touch with the requirements of the travelling public and spare no pains in their efforts to meet them in every possible way. The firm of Messrs. E. Graham Price & Co. is agent for various private persons and companies throughout the Eastern States and in England, while Mr. Francis is also personally interested in mining, pastoral, and commercial enterprises in Western Australia. In 1903 he married Jean, daughter of the late William Johnston, of Fremantle, and has one son and three daughters.

*J. J. Dwyer, Kalgoorlie.*  
MR. FELIX CECIL COWLE.

FELIX CECIL COWLE, M.A., LL.B. (Melb.), barrister and solicitor, is a son of the late C. T. Cowle, who for many years occupied the position of manager of the English, Scottish, and Australian Chartered Bank at Adelaide. He was born at Maldon, Victoria, on August 18, 1865, and received his education at St. Peter's College, Adelaide, and at the Geelong Grammar School, entering Trinity College, University of Melbourne, for the study of law in 1883. During his course he was successful in winning a scholarship in modern languages, and completed his legal studies in 1889, being called to the Victorian Bar in that year. After practising in Melbourne for a couple of years in January, 1892, he came to Western Australia, and having served his six months' probationary period settled down to the practice of his profession in Albany, where he continued for about eighteen months. He next proceeded to Cue, where he arrived in 1893, and during the seven years of his residence there became well known throughout the Murchison district. In 1900 Mr. Cowle entered into partnership with Mr. C. L. Stawell on the eastern goldfields, the firm also carrying on

business in Perth, whither Mr. Stawell proceeded on behalf of the partnership in 1904. In 1907 the partnership was dissolved, and Mr. Cowle took over the practice at that centre, and has since carried it on on his own account. For twelve years Mr. Cowle has acted as solicitor to the Kalgoorlie Municipality, and fills the same office in respect to the local roads board, being recognized as the senior solicitor resident on the goldfields. He identifies himself with the various organizations of the district, and has been for many years a member of the local school board. He was for some time chairman of the Kalgoorlie Racing Club, and for his prominent services as a committeeman over a lengthy period has been honoured by the bestowal of life membership of that body, which owes much of its present success to his indefatigable efforts in earlier days. He is chairman of the Hannan's Club, which office he has occupied for about nine years, president of the Kalgoorlie Lawn Tennis Club, and trustee of the same organization, and a member of both Kalgoorlie and Tattersall's Clubs. Mr. Cowle married in 1896 Mary, daughter of Mr. Francis Bird, architect, well known in the pioneer days of the State, and now resident at Albany.

M. H. WALSH. Since the inception of the Kalgoorlie goldfields no man has become better known in the

community than Mr. Michael Howson Walsh, sharebroker and secretary of the Kalgoorlie Racing Club. He was born at Ballarat, Victoria, on August 22, 1870, and is a son of the late Judge Walsh, of that State. He pursued his educational studies at the St. Kilda Grammar School, and late in his teens began the study of law, which, however, he eventually relinquished. In 1894 he came to Western Australia, and becoming connected with mining circles was engaged in an official capacity at Menzies, on behalf of Mr. W. R. Wilson's Octagon Syndicate. This position he resigned in order to enter upon storekeeping pursuits at the same place, and later on turned his attention seriously to sharebroking operations, in which he has been engaged for over fifteen years. It is now (1912) twelve or thirteen years since Mr. Walsh took up his residence at Kalgoorlie, and during the whole of that time he has conducted a successful business. He has also a large *clientele* at Perth, where

*J. J. Dwyer, Kalgoorlie.*  
MR. MICHAEL HOWSON WALSH.

his brother manages his offices for brokerage, keeping in close touch with Kalgoorlie. Mr. Walsh also owns considerable interests in the pastoral and agricultural industry, having taken up a block of 4,000 acres at Wickiepin, which is at present in course of development for mixed-farming purposes. He is pushing forward operations rapidly, not grudging the expenditure of capital in order to attain the end he has in view. Already 1,000 acres have been cleared, and a fine flock

of merino sheep is pastured on the property. A feature, to which Mr. Walsh is giving considerable attention, is the breeding of a high-class type of horse, and for this purpose he has imported the Suffolk Punch stallion "Neotsfield Flash," descended from the best stock, from which he intends to breed suitable animals for use in the district. His interests are many, and the offices, honorary and otherwise, which he has filled, have brought him into touch with numerous business and social circles on the fields. He received the appointment of secretary to the Kalgoorlie Racing Club in 1910, prior to which he had been connected with that body as a committeeman and treasurer for a number of years. He is a member of the Weld Club (Perth), the Perth Club, and the Western Australian Club, and on the goldfields holds membership in the Hannan's, Kalgoorlie, and Tattersall's clubs. His hobby is gardening, and he derives great pleasure from his successful efforts in creating beautiful surroundings for his home in the well-filled flower-beds which grace its approach. In 1898 Mr. Walsh married Martha, daughter of the late Thomas Anthony, timber merchant, of Melbourne.

**JOHN GARDYNE HOLDSWORTH**, who holds the position of manager of the Australian Mutual Provident Society on the goldfields, was born at Sydney, New South Wales, on August 10, 1875, and is a son of Mr. Joseph Burdekin Holdsworth, one of the well-known citizens of that place. The subject of this memoir was educated at the Sydney High School after some preliminary preparation at private academies in Kingston-on-Thames in England. He concluded his scholastic course at seventeen years of age, and became engaged in mercantile life in the office of the A.M.P. in Sydney. Since that period Mr. Holdsworth has spent twenty years continuously in the same service, and in 1904 received the appointment of manager of the goldfields branch of that institution. Aside from his commercial interests he has been a patron and supporter of the better forms of outdoor sport, and has held official and executive positions in connection with the golf and bowling clubs on the fields, winning the Kalgoorlie Championship of the latter for the

season 1910-11. As a cyclist he registered some brilliant performances in amateur circles in Sydney and Western Australia during the period extending from 1895 to 1902, and holds many valuable trophies for his achievements. In various years he won the one-mile and five-mile championships of Western Australia. He is a member of the Goldfields Tattersall's Club. In 1902 Mr. Holdsworth married Grace, daughter of

*J. J. Dwyer, Kalgoorlie.*  
MR. JOHN GARDYNE HOLDSWORTH.

Mr. William Heale, well known in banking circles in Victoria, and has one son.

**ARTHUR EDWARD PEARCE GURNER**, principal of the firm of Messrs. Maughan & Gurner, insurance, shipping, and mercantile agents, Kalgoorlie, was born at Hackney, near Adelaide, South Australia, on May 28, 1866, and is a son of the late J. R. Gurner, the first dental practitioner to take up his residence in South Australia. The gentleman under review was educated at St. Peter's College, Adelaide, and at the termination of his collegiate career became engaged in winegrowing pursuits at Lyndoch. Upon the discovery of the Western Australian goldfields he decided to come to this State, and arriving at the scene of activity in 1895 spent a short time at Coolgardie prior to settling in Kalgoorlie, where he turned his hand to a variety of occupations. He was employed in water condensing at a time when the price rose as high as £5 per 100

gallons wholesale, the retail figure being 2s. 6d. for a single gallon. He was engaged in mining pursuits, occupying, amongst other positions, that of accountant on the New Victoria Consols Mine. Eventually Mr. Gurner joined forces with Mr. Maughan, formerly secretary of the Chamber of Mines, and as Maughan and Gurner the firm has since become favourably known among shipping and mercantile circles. The practical management of the business is under the personal conduct of the gentleman under review, who, upon the acceptance by Mr. Maughan of his present appointment, took over his partner's interests, and is now sole proprietor. He is agent for many leading English companies, and by his prompt and business-like methods has won the confidence of a wide *clientele*. Mr. Gurner gives a share of his attention to the public life of the town, and for ten years has occupied the post of honorary secretary to the Kalgoorlie Benevolent Society. He is also well known

*J. J. Dwyer, Kalgoorlie.*  
MR. ARTHUR EDWARD PEARCE GURNER.

as an amateur theatrical performer of some merit, applying his gifts to the support of the cause of charity. He is a member of Piccadilly Lodge, W.A.C., in the Masonic craft, as well as of Hannan's Club, while, his chief recreation being found in golf and bowls, he is a well-known figure on the local links and bowling-greens. In 1901 Mr. Gurner married Beatrice Margaret, second surviving daughter of the Hon. John Warren, of South Australia, and has one son.

**JOSEPH TAYLOR MONGER**, secretary of the Westralia Timber and Firewood Company, Kalgoorlie, was born at Toodyay, Western Australia—then known as Newcastle—on June 29, 1868, and is a son of the late Joseph Taylor Monger, also a native of the State and a member of the well-known Monger family, one of the oldest in Western Australia. He acquired his scholastic training at the Scotch College, Melbourne, where he remained until nineteen years of age, when he returned for a brief period to the land of his birth, and subsequently proceeded to Queensland, where he was engaged as overseer on "Coonburrah" Station. After some years on this run, he transferred his services to Messrs. Dalgety & Company's station property, "Gnomery," in New South Wales; and in 1893, when the mining industry began to boom in Western Australia, returned hither and became engaged for six years in the clerical and accountancy branch of

*J. J. Dwyer.* Kalgoorlie.  
MR. JOSEPH TAYLOR MONGER.

Messrs. Monger & Co., general merchants, of Kalgoorlie. He was afterwards employed for a short time in a clerical capacity on the South Kalgurli Mine, and at the inception of the Westralia Timber and Firewood Company accepted the post of accountant, being appointed to the position of secretary under the management of Mr. Robert Henderson, and his services retained when the business was taken over by the firm of Messrs. Graham, Price, & Co. Mr. Monger is a rifle shot of no mean merit, and in the pursuit of game he

finds his keenest recreation. He is one of the oldest members of the Kalgoorlie Racing Club. In 1910 he married Florence (now deceased), daughter of the late Thomas Paice, of Castlemaine, Victoria.

**ALEXANDER SMITH MCFARLANE**, manager of the Westralian Firewood Company, was born at Greenock, Scotland, on April 14, 1854, being a son of the late William McFarlane, of that place. He was educated in his native town, and upon leaving school became apprenticed to the engineering trade in the firm of Messrs. Card & Co., of Greenock. Having completed his indentures he engaged as engineer on one of the British-India Company's vessels trading to India, and in 1881 was on a vessel trading from China to Australia, at which period he recalls that there was not a single Chinaman resident in the district surrounding Port Darwin in the Northern Territory. In 1882 he settled in South Australia, and during the ensuing twenty years was chiefly employed as an engineer in the vessels of the Adelaide Steamship Company, trading to Australian ports, and also occupied the position of foreman on harbour improvement works then in process in that State. In 1897 he returned to his native land and spent a year in renewing his acquaintance with the scenes of his youth, during which he visited many of the places famous in Scottish song and story. In 1898 he was appointed to take a steamer from England to Western Australia, and after arrival rebuilt the vessel on behalf of the Swan River Shipping Company, of Perth. This steamer traded on the River Swan for a couple of years, afterwards being sold to a Queensland company. Upon the termination of this work Mr. McFarlane proceeded to South Australia, where he was engaged as engineer to the Thulounga Development Company and later was appointed inspector of machinery to the South Australian Government. He was inspector of the first seamless pipes manufactured at Mephan Ferguson's works, Killkenny, and in 1899 erected the smelting works at Port Augusta. Eventually he was offered and accepted the post of engineer of the Outer Harbour Works, and carried out the duties attached to that position until 1903, when he resigned and came to Western Australia to take over the

management of the Westralian Firewood Company. Upon relinquishing the Outer Harbour service, he was presented with a gold watch, suitably inscribed, as a token of esteem from the officers and men with whom he had been associated in the work. Whilst resident in the Central State Mr. McFarlane was prominent among music lovers, and was a well-known member of the Orpheus Society at Port Adelaide, of which body he was

*J. J. Dwyer.* Kalgoorlie.  
MR. ALEXANDER SMITH MCFARLANE.

one of the founders. He is an adherent of the Congregational Church, and for fourteen years was closely identified with the musical portion of the church service at the latter town. His favourite form of recreation consists in playing bowls, and he is a member of the Kalgoorlie Bowling Club. Mr. McFarlane has been twice married, his second wife being Sarah Victoria, fourth daughter of Mr. Thomas Telleson, of Moama, New South Wales, of which marriage there is a son and a daughter.

**ALEXANDER PORTER, J.P.**, secretary and director of the Kalgoorlie and Boulder Firewood Company, was born at Kates Bridge, County Down, Ireland, on October 16, 1854, being the only son of the late Alexander Porter, a farmer and storekeeper of that place. He received his education at the National School in his native village, subsequently attending the Belfast Mercantile Academy, and concluding his scholastic career at the Methodist

College, Belfast. After leaving school he assisted his father in his business until 1881, when he emigrated to Victoria, and upon arrival in that State joined the staff of the Colonial Mutual Life Assurance Society as its representative in Victoria. After a short time he was appointed to the management of the company's business in Hobart, Tasmania, and after a year in that city was transferred to the Adelaide office, where he controlled the operations of the institution in the Central State for about nine years. In 1896, his fortunes being adversely affected by the bank failures, which three years previously had created so great a depression in the Eastern States, he resigned his position and came to Western Australia, where his attention became attracted to the mining industry. Mr. Porter was instrumental in forming many of the early syndicates for the development of the various mining properties on the eastern goldfields, and about

J. J. Dwyer, *Kalgoorlie.*  
MR. ALEXANDER PORTER.

this time received the appointment of secretary to the mining managers' association—a body now defunct. At a later period he accepted the post of accountant of the Horseshoe Mine, but relinquishing this owing to a change of management, he entered upon the duties of secretary of the West Australian Goldfields Firewood Supply, Limited, at Kurrawang. Two years subsequently, in conjunction with Mr. John Coughlan, he established the Kalgoorlie and Boulder Firewood Company, of which he is a director, and ever since

its inception has performed the secretarial duties in connection with the business. He is also a director of the Goodwood Timber and Tramway Company, Limited, operating in Victoria; and has been one of the leading spirits in the commercial life of Kalgoorlie and the surrounding district, his interests extending over hundreds of miles of territory. Mr. Porter was appointed a Justice of the Peace by the Moore Administration in 1906. Whilst in South Australia he filled the post of Vice-Consul for Liberia for a time, and is a Justice of the Peace for that State. He is a member of Hannan's Club, Kalgoorlie. In 1907 he visited his native country in company with his late wife, a daughter of the late Gavin Shaw, of St. Kilda, Melbourne, who afterwards succumbed to a heart affection, leaving a daughter and two sons. Of the latter one is an officer in the Royal Field Artillery, England, while the other is at the King's School at Parramatta, New South Wales.

JAMES HURTLE CUMMINS, J.P., managing director of the Kalgoorlie Brewery, was born at Warrnambool, Victoria, and is a son of the late Michael Cummins, one of the early pioneers of that portion of the Garden State. His education concluded, he became engaged in farming pursuits on the parental property, and subsequently followed agricultural and grazing occupations in South Australia, at a later date turning his attention to the mining industry at Broken Hill, where he remained for seven years. During this period, in conjunction with his mining interests, he entered upon hotel-keeping, and became well known as "mine host" of several of the leading houses in the "Silver City," the erection of which was due to his enterprise and business acumen. In 1894 he came to Western Australia and spent a short time in prospecting on the eastern goldfields, towards the end of that year building a hotel at Kunnanalling, which he conducted for about four years conjointly with Mr. F. R. Williams, with whom he was in partnership. In 1898 Mr. Cummins purchased the West Australia Hotel at Kamballie, and still owns this house, which he carried on until about 1904, when he assumed the management of the Kalgoorlie Brewery, an establishment in which he was interested,

and he has continued to fill this responsible post ever since. He has a fairly large stake in the mining industry, and also holds considerable farming properties in the Kunjinn district. Mr. Cummins has taken an interest in political affairs, in 1904 unsuccessfully contesting the Ivanhoe seat, and at the general elections in 1912 he was a candidate for the North-Eastern Province, but was defeated by the Hon. R. S. Ardagh. For a lengthy period he has been well known in municipal affairs, being the founder of the Coolgardie Roads Board—the first body of its kind on the fields—and at a subsequent period was returned as mayor of Kalgoorlie, holding office for two years. He was a strong advocate for the erection of a new town hall, and never relaxed his strenuous efforts to achieve this object in face of considerable opposition—particularly as regarded the site—on the part of a large section of the ratepayers. The townspeople have since recognized the good judgment and foresight exercised in the erection of their present splendid town hall in what is generally acknowledged to be a most excellently chosen locality.

The UNION BREWERY, Kalgoorlie. It is a feature of goldfields life that as soon as each primitive settlement is established as a town of less or greater size the walls of a brewery are reared within its boundaries. Usually the promoters of these establishments entertain very glowing ideas of a speedy leap to fortune through the medium of the sparkling ale and nourishing stout which shall fill the huge vats and be sent forth in great consignments to quench the thirst of the gold-seekers, while in return the gold shall fill the coffers of the brewer. It not infrequently happens that these enterprising business men lose sight of the fact that many factors contribute to the success of such an undertaking, and in the working out of the venture considerable disappointment is experienced through failure in one or another department to realize or rise to its opportunities. Although now established beyond all the assaults of captious criticism as the premier concern of its kind on the goldfields, the Union Brewery during the earlier stages of its existence had a chequered career, the record of

which makes interesting history. It was first opened in a primitive style in 1897 by that enterprising

and renovated. They then turned their attention to a matter of supreme importance in the selection of a

about a highly satisfactory solution of this particular difficulty. The commercial push and acumen exhibited

by Mr. Frank Scott, one of the proprietary, prompted a forward policy which, including the building of hotels and the purchase of hotel leases, gave great impetus to the business and considerably increased the firm's turnover. In the course of time Mr. Scott purchased the interests of his co-partners in the concern, and the name of the brewery was once again altered, the title by which it is popularly known at the present time, "The Union Brewery," being bestowed upon it. Shortly after these events a severe throw-back was experienced, Mr. Hardwick, who was well known as the popular brewer, being accidentally thrown from his horse and killed. The services of Mr. Haig—who came direct from Hoare's Brewery in London—were next secured, and he proved successful in brewing a very

Photo by J. J. Dwyer.

PACKING ROOM.

and energetic citizen of his time, the late F. W. Whitfield, and in recognition of the burning political question of the day—the Federation of the Australian States—he gave the title of "The Federal" to his brewery. The difficulties in the way of producing a palatable beer, however, proved far greater than he had anticipated, and after passing through many anxious months he was obliged to admit that failure was staring him in the face. His health failed, and after his decease the mortgagee stepped in and disposed of the business, the purchasers being three progressive gentlemen, *viz.*, Messrs. Paton, Mair, and Scott. The new owners took over the reins of government with somewhat limited capital, but set to work with energy and determination to make a success of the brewery. Renaming it "The Shamrock" they had the structure, which had become very dilapidated, altered

brewer, but met with one disappointment after another in this department until the appointment of the late Mr. Phil Hardwick brought

marketable article. The financial aspect, however, still remained precarious, and at this juncture a great admirer of Mr. Frank Scott,

Photo by J. J. Dwyer.

WING OF SKIMMING ROOM.

in the person of Mr. P. Whelan, came to the rescue. Selling out his large interest in Hannan's Brewery Mr. Whelan placed the proceeds at the disposal of Mr. Scott, with whom he entered into partnership, and by this arrangement the enterprise was once more established on a sound financial basis. The untimely decease of Mr. Haig proved a severe blow, and the career of his successor in the brewing department, Mr. J. Liddington, was equally short-lived, death again intervening within a

Bartletto, Mr. J. E. KAYE. Perth.

very brief period. The heaviest reverse that had fallen to the lot of the brewery was yet to be met, when the master-mind of Mr. Scott, with its comprehensive grasp of the details of the business and ready perception of what would work to greatest advantage, was removed—his demise occurring when scarcely two months had elapsed after Mr. Whelan had entered the firm. An arrangement was then made between his widow, Mrs. May Scott, and Mr. Whelan to carry on the business on terms of partnership, and under this proprietary the brewery has been conducted ever since. The management was fortunate enough to secure the services of Mr. A. G. Simpson as brewer, and to the great ability of this gentleman, not only in the above capacity but also as a practical engineer, the subsequent success of the Union Brewery is, to a very large extent, undoubtedly due. Such excellent results have attended the efforts of Mr. Simpson in the brewing department that to-day the

concern ranks as one of the foremost breweries in the State, and such is the great popularity of the beer that it is being eagerly sought after, not only in Kalgoorlie, but all over the north-eastern goldfields and other portions of Western Australia. The brewery buildings cover about two acres of ground and are up to date in character, whilst the machinery is all of the latest type, the proprietary at the present time being engaged in the installation of a duplicate plant of the most modern design in order to cope with the daily increasing demands for Union beer, 900 barrels being the brewing capacity per week. Upon entering the brewery the reigning order, cleanliness, and method testify to the control of an efficient head, whilst the experienced employes,

what is known as the "skimming system," which undoubtedly effects a great saving in the production of beer. Hops from California, Bohemia, and Tasmania are used in the manufacture, all malt and sugar are of Australian production, and every step of the process is very carefully supervised, the result being that palatable beverage which has been so largely consumed during the past few years. The floor of the extensive cellar is granolithic, and, needless to state, is kept scrupulously clean, with its huge gyles and most modern refrigerating plant. All casks are manufactured on the premises from wood imported from Tasmania or America, and extensive bottling works adjoin the brewery, where a large staff is busily engaged under the supervision of Mr. Frank

UNIT OF REFRIGERATING PLANT.

each in his own department, contribute to the perfect working of a well-devised system. To Mr. Simpson must be given the credit of being the first brewer to inaugurate

Andrews in endeavouring to cope with the great demand for the popular "Gold Top" ale. The present managing secretary of the brewery is Mr. J. E. Kaye.

ARTHUR GEORGE SIMPSON, brewer and manager of works in connection with the Union Brewery, was born at Wentworth, New South Wales, on March 6, 1881, being a son of Mr. George Walter Simpson, pastoralist of "Old Borambola" Station, near Wagga Wagga, in the same State, who, for over a score of years was a prominent figure in commercial circles at Broken Hill, where he was the proprietor of the Waverley Brewery. The subject of this memoir received his scholastic training principally at Clare College, South Australia, and upon leaving school was associated for four years with the staff of his father's brewery. He relinquished this connection in order to serve his apprenticeship to the engineering establishment of Messrs. May Brothers, of Gawler, South Australia, his mind being bent on following this profession. A year later, however, he was recalled by his father, who initiated him into the details of the brewing business, and subsequently he spent fourteen

*Bartolito, Perth.*  
MR. ARTHUR GEORGE SIMPSON.

years in the brewery at Broken Hill, during the latter part of this period having charge of all the brewing and other work in connection with the manufacturing department of the business. Mr. Simpson also spent a short time in Victoria and New South Wales before coming to Western Australia in 1907, with the object in view of entering upon the pastoral industry in the great north-west. Upon arrival, however, he was offered the post of brewer at the Union Brewery, on the eastern

goldfields, which he accepted, and by the capable manner in which he has carried out his duties has brought the concern into the front rank among similar establishments in Western Australia. From a doubtful financial proposition the reputation of the brewery is now firmly established as a sound and paying business, and while first in importance in the State it is second in size to only one other, while as a brewer Mr. Simpson yields the palm to none in the Commonwealth. He makes a hobby of the study of mechanics and physics, the time not given to his duties at the brewery being spent in perfecting his knowledge in the theory and practice of various scientific matters, bacteriology and chemistry being two very favourite subjects. He is well versed in all things connected with engineering, and brings his knowledge of mechanics to bear upon his profession, making a study of the methods employed in the leading breweries of the world. He is fond of motoring, and may often be seen with members of his family indulging in this form of recreation. Mr. Simpson married in 1909 Violet Daisy, daughter of Mr. Albert Johnson, of Melbourne, and has two daughters.

ALLSOP & DON, assayers and metallurgists, Kalgoorlie and Fremantle, agents for the Australian Metal Company's chemicals, managers for the Havilah Gold Mine, Maninga Marley, Western Australia, etc., etc. FREDERICK WILLIAM ALLSOP was born in Auckland, New Zealand, in the late sixties, and is a son of the late William Allsop, well known in connection with the early Imperial Forces in Victoria. Educated at the High School, Ballarat, and subsequently graduating at the local school of mines, Mr. Allsop at the close of his scholastic career accepted an engagement to proceed to South Africa as metallurgical chemist for the African Gold Recovery Company—a branch of the firm of McArthur, Forrest, and Co. Upon arrival he served as chief assayer at the head office of the company in Johannesburg, and during the three years that he spent in this capacity became one of the foundation members of the Chemical and Metallurgical Society, now a well-known and world-wide institution. Prior to his return to Australia in 1896 he established the first cyanide works at Spitzkop, in the

Transvaal, South Africa. At a later date, whilst filling the appointment of chemist and metallurgist to the General Exploration Company in Melbourne, he pioneered the installation of the first electrical precipitation plant (Simien Halske process) in Victoria and New South Wales. He

*J. J. Dwyer, Kalgoorlie.*  
MR. FREDERICK WILLIAM ALLSOP.

also filled the office of vice-president of the Chemical and Metallurgical Society of Victoria, and opened the first plant for giving practical demonstration in cyanide metallurgy at the Ballarat School of Mines. In 1901 he resigned his position in Melbourne, and while working on his own behalf became well known in the chemical department of the industry in that State, and is recognized as one of the first members of his profession to use the cyanide treatment in gold recovery in Australia. Upon his arrival in the Golden West in 1905 Mr. Allsop opened in practice on his own account in Kalgoorlie. In 1910 he was joined in partnership by Mr. Don, and the firm is now recognized as the leading assayers and metallurgists in Western Australia, owning cyanide plants in various parts of the State and operating over a very wide radius. Mr. Allsop is a member of the Commercial Travelers' and of the Kalgoorlie Clubs. In his younger days he was a rifle shot of no mean merit, and made a hobby of this form of sport. He married in 1906 Lillian, daughter of the late John Holloway, merchant, of Ballarat, and has two sons and one daughter.

DAVID HECTOR DON, partner in the firm of Messrs. Allsop and Don, assayers and metallurgists, Kalgoorlie and Fremantle, was born at Ballarat, Victoria, in the early

*J. J. Dwyer, Kalgoorlie.*  
MR. DAVID HECTOR DON.

eighties, and is a son of the late Robert Don, timber merchant, who in his day was well known as one of the champion athletes of Victoria. He received his education locally, and during a finishing course at the Ballarat School of Mines was successful in winning all the diplomas granted by that institution in connection with assaying and metallurgical chemistry. Upon the completion of his course he was appointed assistant demonstrator in chemistry at the school, and subsequently, in 1907, came to Western Australia, where he was employed in his professional capacity by several companies on the "Golden Mile." He first joined his present firm—then known as Allsop & Howells—as assayer in 1908, and upon the retirement of Mr. Howells from the partnership in 1910 was admitted as a principal in the business, which has since been carried on under the style of Allsop & Don. The supervision of the assaying branch of its operations is Mr. Don's special department, and in this he finds sufficient scope for the whole of his time and energies, having little leisure for the pursuit of any hobby outside of his office life. He finds opportunity, however, for the perusal of scientific works, especially those with a bearing on his profession. Mr. Don brought to Western Australia a

FFF

reputation as an oarsman, having been well known in aquatic circles all over the Victorian State as the winner of many trophies in this particular line of sport.

WILLIAM ROBERT BURTON, one of Kalgoorlie's leading commercial agents, was born at Norwood, South Australia, on July 6, 1866, and is a son of the late Charles Burton, manufacturer, of that place. He received his education at the State school in his native town, and upon reaching his teens became connected in a clerical capacity with the firm of Messrs. Harrold Brothers, of Adelaide. After filling various positions during the fifteen years that he spent with this firm, in 1895 Mr.

*J. J. Dwyer, Kalgoorlie.*  
MR. WILLIAM ROBERT BURTON.

Burton came to Western Australia to open a branch for his principals at Esperance. Eventually this was closed down, and for a time he acted as manager of the local branch of Messrs. George Wills & Co. In 1898, desiring further scope for his energies, he continued his travels to Kalgoorlie, where he opened on his own account as commercial agent, and has met with signal success in the conduct of his operations. He is local representative for many well-known firms, including Messrs. George Wills & Co., of Adelaide, the Adelaide Steamship Company, the Commercial Union and National Mutual insurance societies, etc., and has established one of the largest existing connections with the big mining companies of the eastern

fields, supplying much of the material required for the development of the mining enterprise. Whilst at Esperance Mr. Burton took a deep interest in the welfare of the district, and was elected to the mayoral office, which he occupied for a couple of years. He is a Liberal in politics, and on two respective occasions has been a candidate for the Federal and State Houses of Parliament, though without success. He was one of the pioneers of the reform movement, and is always to the fore where his services are required, either in the cause of charity or in any for the benefit of the community. He is a finished orator and is versatile in his gifts, being considered the best Shakespearian scholar on the eastern goldfields. His leisure is devoted to the study of literature, the poetic side of which especially appeals to him. He is a patron of all forms of clean sport, and holds office as president of the Goldfields' Football League. In 1887 Mr. Burton married Annie, daughter of the late J. Vincent, of Norwood, South Australia, and has one son and three daughters.

JOHN BOILEAU, Ph.C., M.P.S., M.D.S. of W.A., S.A., Queensland, etc., chemist and druggist, Kalgoorlie, was born at Dublin,

*J. J. Dwyer, Kalgoorlie.*  
MR. JOHN BOILEAU.

Ireland, on June 1, 1859. He is the only surviving son of the late John George Boileau, J.P., of Dublin, who was a member of the firm of Boileau and Boyd, chemists and druggists,

which business was established in Dublin in the year 1700, and at the present time is carried on under the title of Boileau & Boyd, Limited, on the same site occupied by the original firm's premises. Mr. Boileau is also a direct descendant of the Huguenots, founders of the silk-weaving industry in the liberties of Dublin in 1665, in which year some 400,000 French Protestants left their native land and found refuge in Ireland. In the records of the French Church as far back as 1781, and again in 1786, in the archives of St. Bride's Parish Church, the name of his great grandfather is coupled with that of the famous James Napper Tandy as churchwardens, and the names of both gentlemen are cast in the old bell of the latter church, which is now in possession of the rector of St. Werburgh. The gentleman under review was educated at Wall's Academy, Portarlington, Queen's County, and at the High School, Harcourt Street, Dublin; in the late seventies he entered Trinity College, that famous and ancient seat of learning, where he studied medicine and pharmacy. Becoming connected with his father's establishment, he served his time as a druggist and pharmacist, and also studied dentistry under Mr. Baker, of Clare Street, Dublin. Upon the completion of his indentures he decided to try his fortune in Australia, and at the beginning of 1881 landed at New South Wales. Here he engaged with the firm of Messrs. Elliott Brothers, subsequently proceeding to Queensland on their behalf, and about a year later opened in business for himself at Brisbane, where he continued successfully for a couple of years. After further experience gained in different parts of Queensland, in 1888 Mr. Boileau came to South Australia and established businesses at Adelaide and Port Pirie. In 1894, at the time of the gold rush to the Western State, he joined the exodus from South Australia, and was the first chemist to open in business on the goldfields, where he is now one of the identities of the district. He has been a loyal supporter of the mining industry, and has also at intervals turned his attention to hotelkeeping, in the early days being a popular boniface of the Denver City Hotel at Coolgardie. In October, 1895, sustaining severe loss in the memorable fire that swept over the town and being further affected by the second large conflagration a few weeks later, he transferred his business to

Kalgoorlie, placing it in the hands of a manager for two years, at the end of which period he took control personally, and has since resided at that centre. He has identified himself closely with public affairs, and it would be difficult to find a more public-spirited man in any part of the fields. No movement has been set on foot without his active assistance, and his energy and enthusiasm alone are sufficient to ensure success in his undertakings. One of the founders of the first progress committee at Coolgardie since coming to Kalgoorlie, he has repeatedly served as a member of the municipal council, and is a sitting councillor at the present time. He is also a member of the local board of health. For over a quarter of a century he has been associated with the Masonic fraternity, and has made himself prominent in athletics, starting the first cricket club at Coolgardie, and taking the first team of footballers from the fields to the coast in 1896. His name stands for everything in the way of clean sport in racing circles on the eastern goldfields, and in conjunction with Mr. A. G. Hales he founded the first race club in Coolgardie. He is passionately fond of music, and was the sole originator of the Kalgoorlie Brass Band and Eisteddfod, among the most successful of similar movements in the district. A wide reader of scientific literature, he is also a keen student of political economy. Mr. Boileau married in 1887, and has two sons surviving.

JOHN JOSEPH DWYER, photographer, Kalgoorlie, was born at Gaffney Creek, in the Gippsland district of Victoria, on January 24, 1869, and is the fourth son of the late Michael Dwyer, who came from Tipperary, Ireland, in the early days of the mining industry in Victoria, and was well known among the various "rushes" in that State. The subject of this notice was educated at the public school in his native place, and when fifteen years of age left for the Mount Bischoff tin mines in Tasmania, where he spent about five years in the blacksmithing trade. Having reached maturity he took up photography as a hobby, and expended much time and thought on this work, successfully grasping the first principles of the art of which he was afterwards to make a profession. Deciding to adopt photography as a vocation, he

became connected with the studio of Mr. J. Bishop Osborne, of Zeehan and Dundas, where he remained for two years, gaining valuable knowledge and experience under the tuition of his principal. In 1892 he returned to Victoria and became engaged in a variety of occupations for a considerable time, at one period acting as travelling photographer, and subsequently figuring for a while as mining contractor on the quicksilver mine near Jamieson, Victoria. In 1896, hoping to find an opening to exercise his photographic skill profitably in a permanent position, he came to Western Australia, and in order to augment his capital followed the mining industry, prospecting through various parts of the north-eastern Coolgardie field. He also reverted to his original trade of blacksmith, at Niagara, and after doing a little

MR. JOHN JOSEPH DWYER.

photography in the same place obtained an engagement as special photographer to *The Goldfields Courier*, published in the palmy days of Coolgardie. A year later Mr. Dwyer established himself in business at Kalgoorlie, and rapidly worked up what is now the leading photographic connection on the fields. He still makes a hobby of his art and spends much spare time in experimental work, while his finished pictures rival any produced outside metropolitan studios. Mr. Dwyer is largely interested in the mining industry and in land, is a director of the Kalgoorlie Brewery, and a partner in the Grave and Dwyer Motor Co., Ltd., Perth.

J. W. FIMISTER & CO., hardware merchants, general house furnishers, wholesale and retail grocers, and wine and spirit merchants, of Hannan Street, Kalgoorlie, and at 39, Phillimore Street, Fremantle. (J. W. Fimister and C. A. Cutbush.) JOHN WILLIAM FIMISTER was born at Malmsbury, Victoria, on May 23, 1867, his father being the late John Fimister, of that place. He received his education at Corop, and subsequently was apprenticed to the blacksmithing trade, which calling he followed in Victoria for some time. In 1890 he came to Western Australia, and proceeding to Southern Cross continued there for about a couple of years until the discovery of the Coolgardie field in 1892. After following the life of a prospector for a time with varying results, the proceeds of his toil often being swallowed up by the heavy price to be paid for the daily necessities of life, ultimately he followed the rush to Hannan's find, and shortly after founded his present business in the main commercial thoroughfare of Kalgoorlie. His first premises were composed of bags, a primitive erection in keeping with the miners' tents, which was subsequently replaced by an iron building, and, as time passed and the transactions of the firm increased, in 1899 the present two-storey structure, built of stone and brick, was completed. The building now in use runs from Hannan Street back to Egan Street, the ground floor being devoted to the retail departments of the business, while the upper floor is entirely occupied as an immense showroom, where may be found every article required in household

furnishing, from the very smallest cooking utensil to handsomely upholstered drawing-, bedroom-, and dining-room furniture. At the rear are storerooms in which a considerable stock of all descriptions of hardware finds place, and the large enclosure fronting Egan Street is filled with ironware of all kinds and mining material, while beneath the storerooms is an underground tank of 30,000 gallons' capacity. The capital value of the stock is within the vicinity of £30,000, and the firm operates over a wide area, J. W. Fimister & Co. being known as one of the leading businesses in the gold-fields area. It represents the Commercial Union Assurance Company, Limited, and the Marine Association, Messrs. Brinsmead & Co. (whose pianos the firm always keeps in stock), Wertheim sewing machines, and Thos. Hardy & Son's South Australian wines, etc. Mr. Fimister has taken an active part in the development of the mining industry, and is

faith. He is a member of the Chamber of mines of Kalgoorlie, and is one of the best-known citizens of the gold-fields, having occupied a seat on the first municipal council, and for two successive years received the honour of the mayoralty, during his term of office in 1899 being appointed a Justice of the Peace. He is a keen supporter of the turf, and for over ten

MESSRS. J. W. FIMISTER & Co.'S PREMISES, KALGOORLIE.

one of the principal investors in the Ora Banda district, in which, with others interested, he places implicit

J. J. Dwyer, Kalgoorlie.  
MR. JOHN WILLIAM FIMISTER.

years has acted as president and chairman of the Kalgoorlie Race Club.

CHARLES ALFRED ALLEN, of the firm of Messrs. Allen and Brimage, produce merchants and forwarding agents, of Kalgoorlie, was born at Geelong, Victoria, on March 27, 1870. He is a son of Mr. George K. Allen, well known in commercial circles in that town, where he arrived from Kent, England, in 1851. The subject of this memoir received his education at Flinders School, Geelong, and at the age of sixteen proceeded to Melbourne and joined the staff of Messrs. Campbell, Pratt, and Co., stock and general salesmen and station agents. He continued his connection with this firm for some time, eventually resigning to join the Metropolitan Gas Company, where he was identified with the furnishing department for nine years. In 1894 he came to Western Australia, following the gold rush to the eastern fields, which was then at full flood. Upon arrival he entered the employ of Messrs. Climie, Eastwood, & Co., produce merchants, of Coolgardie,

with whom he remained for about three years, during which period he was sent to open the firm's branch at Kalgoorlie, of which he retained the management for about twelve months. In 1897, perceiving a good opening to start business on his own account, he joined in partnership with Mr. Ernest E. Brimage in the establishment of their present concern, and the firm now occupies a

*J. J. Dwyer, Kalgoorlie.*  
MR. CHARLES ALFRED ALLEN.

leading place among similar enterprises on the goldfields. As forwarding agents it has formed a very extensive connection, and it holds various agencies, including those of the Vacuum Oil Company and Messrs. Alcock & Co., billiard-table manufacturers. Mr. Allen, who is the senior partner, has charge of the financial department of the business, and manages affairs at the firm's office at Kalgoorlie. With Mr. Brimage he also holds interests in the agricultural industry, the firm owning a farm of over 1,200 acres near Goomalling, which is in an advanced state of development and where mixed farming is successfully carried on. Mr. Allen has always displayed an active interest in the public affairs of the district, and at one time was a member of the Kalgoorlie Roads Board. He has been prominent in matters pertaining to the local rifle club, in which he has served as committeeman, and has also filled the office of president of the goldfields branch of the National Rifle Association. He has been successful as an exponent of the popular sport, and is the possessor

of many trophies, besides being winner of the King's Badge. In his younger days he was a champion amateur swimmer, and is president of the local swimming club, besides which he is vice-president of the Kalgoorlie Bowling Club, and finds diversion for many leisure hours on the green. A portion of his spare time is given up to the cultivation of fruit trees and flowers, and he has met with more than ordinary success in his efforts in this direction. A member of the Masonic fraternity, Mr. Allen has held various honourable offices during his twenty years' connection with the craft, and at present ranks as Past Master of his lodge. He is a member of the Tattersall's and Kalgoorlie Clubs, and of the Commercial Travellers' Club of Perth.

ERNEST ELISHA BRIMAGE, member of the firm of Messrs. Allen and Brimage, produce merchants and

*J. J. Dwyer, Kalgoorlie.*  
MR. ERNEST ELISHA BRIMAGE.

forwarding agents, Kalgoorlie, was born at Forest Gate, London, on October 26, 1873, and is a son of the late Captain Thomas Brimage, of that place. He received his education in South Australia, and upon the completion of his studies joined the Education Department, being stationed at Port Pirie, where he remained until 1896, when he came to Western Australia. Here he first spent some time with his brother, Mr. T. F. O. Brimage, in the share-broking line of business, and subsequently for three years was engaged

in storekeeping pursuits at Kanowna in partnership with Mr. Harold Church, during the time of the big boom in that district. Selling out his interests in 1900, in conjunction with Mr. C. A. Allen he established the produce business now carried on by the firm in Kalgoorlie, in addition to which they have conducted a forwarding agency with very great success. Mr. Brimage makes a hobby of rifle shooting, and is a member of the Commonwealth Council of Rifle Clubs, in which capacity he visited Sydney in 1910 as a delegate from Western Australia to the Commonwealth Conference held in that year. He evinces considerable skill as an amateur photographer, and has met with numerous successes as a prizetaker in competitions in this State. He is also fond of the game of bowls, and spends much of his leisure time in pursuit of this favourite pastime, being a member of the Kalgoorlie club. Mr. Brimage was married in 1911 to Eliza de Burgh, daughter of Mr. Edward Joyce, late of the Mines Department, Perth, and has one daughter.

GUSTAV MENGLER is a son of the late Charles Mengler, of Kapunda, South Australia, and was born at Tanunda, in that State, on April 17, 1882. He received his education in his native town, and upon

*J. J. Dwyer, Kalgoorlie.*  
MR. GUSTAV MENGLER.

leaving school entered upon a commercial career. After a short period of experience in his native State he came to Western Australia, where he

joined the staff of Messrs. Watson's Produce Stores at Fremantle. Here he displayed such special adaptability that his principal within a few months transferred him to Kalgoorlie to take control of the firm's establishment at that town, with the option of purchasing the business within a given time. By the end of three months, and before he had completed his eighteenth year, he took advantage of this offer, and taking over the concern, began his career as one of the most successful merchants of Kalgoorlie, and among the best known on the eastern goldfields. In 1908, in conjunction with his brother, Mr. Hermann Mengler, he took up the "Lillydale" property, situated at Tenterden, and since that time has devoted himself to pastoral and agricultural pursuits, breeding some very fine merino flocks on his property. He has taken his share of public responsibility, being a councillor of the Kalgoorlie municipality, and a committeeman of the trading employers' association of the eastern goldfields, besides being identified with other organizations. His sport is the "sport of kings," and he is a member of the Kalgoorlie Racing Club, but he is also a general advocate for all forms of healthy and clean outdoor diversion. In 1908 he married Lucy, daughter of Mr. Richard Jaentsch, consulting engineer, his wife being a lady well known in musical circles on the goldfields, and his family consists of two daughters.

**ALBERT RAYMENT DAVIS**, engineer, Maritana Street, Kalgoorlie, was born at Wellington, New Zealand, on August 24, 1876, and is a son of the late T. F. Davis, an artist, who resided in the latter city. He pursued his scholastic studies in Victoria, and at fifteen years of age was employed for a short time in the printing office of one of the Melbourne papers. This was followed by a period of two years spent in the engineering department of Mr. B. J. Davis's business, which position he resigned to take charge of the mechanical department of the firm of Messrs. J. A. Walter & Co., of Melbourne. He remained with this firm until his departure for Western Australia in 1894, and upon arrival in this State first spent a considerable time in Perth, after which he went to Albany in 1899 to engage in the general engineering and bicycle business in partnership with Mr. C. F.

Baxter, now of Cunderdin. After a couple of years the partnership was dissolved, and Mr. Davis coming to Kalgoorlie took a post as mechanic and engineer in the Greenwell Motor and Cycle Agency business. In 1904 he purchased the business of the Goldfields Motor and Cycle Agency, and ever since has personally conducted this concern, having the leading motor connection on the fields. Mr. Davis, who is agent at Kalgoorlie for the "Ford," "Standard," and "Adams" motor cars, has a line of cars doing constant service in the localities of new "finds" and promoting the inevitable rush of eager gold-seekers to such places. In the past Mr. Davis was well known in the early days of motor racing in Western Australia, and holds numerous trophies both for cycle and car

*J. J. Dwyer.* *Kalgoorlie.*  
MR. ALBERT RAYMENT DAVIS.

events. The little leisure now at his command he uses in true sportsman-like manner with his gun. Mr. Davis married at Albany in 1900 Lucy Edith, daughter of the late Mr. Milne, of Busselton, a member of one of the oldest families of the southwest, and has one son and three daughters.

**THOMAS HARRY HARSE**, electrical engineer, Kalgoorlie, was born at Carisbrook, Victoria, on March 4, 1883, and is a son of Mr. Robert Harse, a grazier, of that district. He was educated at Queen's College, Maryborough, under Mr. C. McCay, and also attended the Maryborough School of Mines, subsequently taking a three years' course

at the Perth Technical School, having come to Western Australia in 1903. Mr. Harse, after serving his time with the Deep Leads Electric Transmission Company, of Victoria, was engaged on the electrical staff of the Perth Tramways Company for three years, resigning this post in

*J. J. Dwyer.* *Kalgoorlie.*  
MR. THOMAS HARRY HARSE.

order to seek a wider field for his energies, and upon arrival on the eastern goldfields for a few months found employment on the electrical fittings of the Boulder Town Hall. At a later date he accepted a position with Messrs. Noyes Brothers in connection with the installation of the electric light and tramways system at Leonora, and upon the termination of this work returned to Kalgoorlie, and in 1908 opened business on his own account as an electrical contractor in Palace Chambers, Maritana Street. Since that date Mr. Harse has worked up a large and increasing connection, and has obtained the major share of his particular line of work throughout the goldfields, his success in his profession being now an uncontested fact. His especial hobby is the perusal of scientific literary works, and by this means he keeps himself well abreast of the times in the science of general electricity and all the hundred and one details of his calling. He is a member of the Masonic craft and of the I.O.O.F., and in earlier days was well known in the football field and on the tennis lawns, but pressure of his professional claims latterly has precluded him from actively participating in the world of sport.

THOMAS JOHN CONNOLLY, contractor, Kalgoorlie, was born at Shelbourne, near Bendigo, Victoria, on May 6, 1868, and is a son of the late Thomas Connolly, a native of Kilkenny, Ireland, who was among the early pioneers of the Victorian State. He received his education

*J. J. Dwyer.* Kalgoorlie.  
MR. THOMAS JOHN CONNOLLY.

at the public school in the place of his birth, and concluding his scholastic career at the age of fifteen began to assist his father in the work of contracting and road-building. Five years later a partnership was formed between him and his brother William, which continued for about six years, and in 1894 Mr. Connolly decided to come to Western Australia, where, in conjunction with another brother, Michael, now farming in Victoria, he opened up in the

carrying business, and at the same time established and operated condensing plants at various localities

by undertaking contracts of various kinds. The streets of Kanowna were laid down by this firm at the

HORSES ON MR. T. J. CONNOLLY'S FARM, DOODLAKINE.

along the line of route to the goldfields and at Hannan's Lake, now known as Lakeside. Great hardships were experienced on the road to the fields through lack of water, and Mr. Connolly and his brother, who were very successful in shaft-sinking for the precious fluid, relieved much of the suffering by their enterprise in this respect and expended much capital in this way, being rewarded where others with less grit and perseverance had failed through abandoning their attempts before the requisite depths had been reached. The sphere of the firm's carrying operations extended from Southern Cross to the farther fringe of the goldfields area, including Menzies, Leonora, etc., and in 1897 the brothers added to their business

time that the field was booming, and many of the largest dams on the goldfields area were completed under their supervision. In 1903 the partnership was dissolved, and upon the departure of his brother for Victoria Mr. Connolly continued contracting on his own behalf. He has now attained the honour of being ranked as the oldest contractor on the goldfields, his principal operations being in the line of wood and ore carting. Having private sidings on the different railway lines in the vicinity of the goldfields, he is able to obtain wood suitable for the various purposes of the mines. He has been a considerable supporter of the mining industry, and with his brother prospected round the General Gordon mine, in the Kanowna district, the Red Hill, Block 45, and the Kurnalpi districts. In addition Mr. Connolly is interested in the agricultural industry, his largest holding being situated at Doodlakine, where he owns about 2,000 acres, whilst he also has considerable interests at Cunderdin. Both of these properties are in a forward state of development, substantial buildings having been erected, and practically the whole territory cleared and devoted to the cultivation of cereals and the raising of sheep for wool and mutton. Mr. Connolly has also turned his attention to the breeding of heavy draught stock, and has met with gratifying success in this department of industry. He is the owner of "Highland Shepherd," a stallion imported from New

MR. T. J. CONNOLLY'S RESIDENCE, STABLES, PLANT, ETC., AT KALGOORLIE.

Zealand, bred by Mr. Finsham, of Taumutu, his pedigree including a long line of noted sires, among which "Highland Prince" and "Crown Prince" were his immediate progenitors, and "Lord Salisbury," by "Young Conqueror," his great grandsire. His dam "Shepherdess" is also of the best blood from high-class imported stock. "Abbot McCormack," a heavy Clydesdale sire, also owned by Mr. Connolly, is well known among horse-breeders as a producer of valuable progeny, and his offspring are eagerly sought after by intending purchasers. This horse was also bred in New Zealand, and since coming into his present owner's hands has been mated with some of the best Clydesdales mares in the State. Mr. Connolly makes a hobby of horses, never being happier than when in the company of his equine friends, and he has been an exhibitor at the periodical functions held by the Kalgoorlie and District Trades Gala Show Society, winning several gold medals for horses, horse turnouts, teams, etc. He is a member of the Kalgoorlie Race Club, and keeps himself in touch with the events promoted by that body, but though the love of horses is the paramount passion of his leisure hours, he has never entered enthusiastically into the "sport of kings." Mr. Connolly married in 1902 Margaret, daughter of the late Edward Pauley, of Bendigo, Victoria, and has one son and four daughters.

ALBERT SCOTT McCLINTOCK, formerly secretary and librarian to the Kalgoorlie Mechanics' Institute, is the youngest son of Mr. Robert McClintock, of Edinburgh, latterly of Sydney, New South Wales, and was born in the latter city on January 28, 1881. Having received his education at well-known public and private schools in Sydney he obtained a position as clerk in a leading solicitor's office, which he filled for a time, and was subsequently successful in securing an appointment as assistant in the Sydney University library, which he relinquished to accept a more important post at the Working Men's Technical College in Melbourne. Whilst resident in that metropolis he acted as one of the directors of the accountants and clerks' association of the same city. In 1903 Mr. McClintock came to Western Australia, and thence onward, for ten

years, held the appointment of secretary and librarian of the Kalgoorlie Mechanics' Institute, the principal public library outside of Perth. This position he resigned in March, 1913, in order to accept the post of librarian in the new circulating library opened by the well-known

J. J. Dwyer, Kalgoorlie.  
MR. ALBERT SCOTT McCLINTOCK.

firm of drapers, Messrs. Boan Brothers, of Perth. Whilst in Kalgoorlie Mr. McClintock took a prominent part in the affairs of the town, for over six years serving as a councillor of the municipality, and acting on the electric light, fire brigade, finance, and other committees. He also, for some years, discharged the duties of secretary to the Goldfields' State-school Board, the University extension movement, and the Adelaide and Melbourne University examinations. He edited the "Western Australian Goldfields Souvenir" and several publications connected with the local library; and was prominently connected with the "Kalgoorlie Week" and "Westral" committees. He was a member of the local Eisteddfod committee and for some time treasurer of that body, and was associated with the Kalgoorlie branches of the A.N.A. and of the M.U., I.O.O.F. The Masonic fraternity also claims him as an adherent. In the sporting world Mr. McClintock has been well known as president of the Kalgoorlie Swimming Club, founder and for some years secretary of the Kalgoorlie Bowling Club, of which he is now a life member; and in the past as an enthusiastic follower of cricket and other pastimes.

CHARLES EDWARD BAND, watchmaker and jeweller, Kalgoorlie, was born at Derby, England, on May 11, 1864, and is a son of the late Charles Band, a silk merchant of that town, and for many years one of the honorary governors of the Derby Infirmary during the presidency of Sir Thomas Roe, M.P., and afterwards of Sir Walter Evans. It is a matter of interest that this gentleman was selected with others to wait on the late Hon. W. E. Gladstone at his home at Hawarden Castle and present to the eminent statesman a set of Crown Derby china, costing £500, as a token of esteem from the people of Derby in recognition of his work on behalf of the Irish cause. The subject of this memoir received his education at All Saints' High School in the same place, and at the termination of his scholastic career served articles of apprenticeship for seven years to the celebrated English watchmaker, the late R. Camp. Having completed

J. J. Dwyer, Kalgoorlie.  
MR. CHARLES EDWARD BAND.

his indentures he went to New York, U.S.A., where he was employed in the firm of R. Nicholson, of Brooklyn, for some considerable time. Proceeding west he spent a few months at Chicago, and eventually settled for nearly three years at Fresno, California, in the capacity of manager of the business of Messrs. F. Simon & Co., jewellers. In the early part of 1892 he was attracted by reports of the prosperity of Australia and came to Sydney, remaining in the Mother State for about a couple of years. The gold fever

being then at its height in the western part of the continent, Mr. Band sailed for Fremantle, and for a period was engaged in business at Mr. Fushard's establishment in Perth. Coming to the eastern goldfields in 1898 he opened on his own account, and ever since has carried on successfully at his well-known emporium in Hannan Street, Kalgoorlie. The gentleman under review is a Freemason, and has held office in the craft at Kalgoorlie. His chief recreation at the present time is found in bowls, but he is a general patron of all forms of sport, and in former years made his mark as an amateur in the art of self-defence both in England and during the course of his travels. He is a great lover of Nature, and is fond of the pursuits of the wild, his varied experiences in America including bear-hunting expeditions in the Sierra Nevada Mountains, California, on one of which he and his Indian guide were attacked by Indians and severely wounded. Mr. Band is a warm friend of the canine race, having a special penchant for the Irish terrier, and always owns a champion representative of this favourite breed.

PATRICK WHELAN, J.P., one of the best known residents of Kalgoorlie, was born at Sragh, County Clare, Ireland, on January 1, 1855, and is a son of the late Michael Whelan, agriculturist, of that place. He received his education in the town of Kiltrush, and upon entering his teens was apprenticed to the drapery business, subsequently leaving his native place for the city of Cork, where he was identified with the softgoods trade until 1876. At the end of that year he came to Australia, and having landed in Adelaide, entered the house of Messrs. John Martin & Co., Limited, drapers, where he occupied the position of superintendent and shop-walker until 1881. He then resigned to open in business on his own account in Adelaide in partnership with Mr. James Noonan, a connection which lasted for some years, Mr. Noonan being succeeded by Mr. John Francis Landvoigt. In 1895 Mr. Whelan left Adelaide for the Western Australian goldfields, where he first became interested in the mining industry, and turned his attention to prospecting with considerable success, being instrumental in disposing

of several mining leases both in the Eastern States and in London. He was one of the founders of Hannan's Brewery Company, Limited, in which he held the post of chairman of directors for eight years, at the end of that period selling out his interest in the concern. In 1903 he acquired an interest in the Union Brewery of Kalgoorlie, which he retains in conjunction with the widow of his late partner, Mr. Frank Scott. He was one of the original shareholders of the Hannan's Land Company, which was formed with the object of building the Palace Hotel and Palace Chambers, and Mr. Whelan was also responsible for the building of the Shamrock Hotel (1897), which property he still retains. Mr. Whelan has identified himself to a large extent with public

J. J. Dwyer,

Kalgoorlie.

MR. PATRICK WHELAN.

movements, and in 1879, shortly after the establishment of the Irish National Land League by the late Michael Davitt in County Mayo, Ireland, he promoted the formation of a branch of the League in Adelaide. It is a matter of special interest to note that this was the first branch of that historical association established in the world, and its founder has received much honour on this account from his compatriots all the world over. He occupied the position of honorary secretary to the movement in Adelaide with unqualified success until his departure for Western Australia, and in 1883 while acting in this capacity was organizer of the public reception accorded to Mr. John E. Redmond, the leader of the

Irish Parliamentary Party. This gentleman and his brother, Mr. William Redmond, M.P., visited Australia as envoys of the Irish Nationalists, and at the close of their visit an Irish National Convention was held in Melbourne at St. Patrick's Hall—the building where the first Constitution of Victoria was framed and the earliest Parliament met for deliberation. Delegates from all parts of Australia and New Zealand attended this Convention, which was presided over by the late Hon. Dr. Kevin O'Dogherty, an Irish patriot, and Mr. Whelan was one of the two representatives chosen by their fellow countrymen in South Australia to be present on that historic occasion. A typical Irishman in love for his native land, he has never missed an opportunity to help the cause he has so deeply at heart, and much of the financial support which has been extended to it in Western Australia during the past twenty years has been a result of his untiring efforts. Mr. Whelan is a student of municipal government, and in South Australia occupied the position of councillor for three years, afterwards being returned as alderman by the citizens of Adelaide at the head of the poll by a very large majority. After three years his fellow aldermen paid him the compliment of refusing to accept his resignation—offering him leave of absence until his retirement by effluxion of time. He has been prominent in racing circles, and was one of the founders of the Kalgoorlie Racing Club, and an original trustee in whom the racecourse lands were vested by the Government of Western Australia.

PATRICK LYNCH, one of the oldest residents of Kalgoorlie, was born at Kilkie, County Clare, Ireland, on May 13, 1858, his father, the late Mr. Patrick Lynch, owning a farming property in that district. He was educated at schools in his native town, and having completed his scholastic career at seventeen years of age emigrated to Australia. Mr. Lynch landed at Adelaide, and shortly afterwards proceeded to Mount Brown, where he became engaged on the gold diggings. He spent five years at this place, during which period he encountered the various vicissitudes common to the lot of the pioneers who prospected the early alluvial fields, but notwithstanding a few disappointments met

with a considerable share of success. From here he directed his steps to the Barrier Ranges, and during the succeeding twelve years became a well-known citizen of Broken Hill. In the earlier part of this time he was connected with the mining industry

J. J. Dwyer, Kalgoorlie.  
MR. PATRICK LYNCH.

of the great Silver City, but at a later date became interested in commercial enterprise and took over the conduct of the Pinnacles Hotel. He also conducted a butchering establishment in the town and had a successful career until 1893, when he disposed of his various interests and crossed the Great Australian Bight to land in Western Australia. Immediately after landing at Fremantle

he made his way to Coolgardie and once more applied his energies to the search for gold, the mental visions of which like a magnet had brought

him to the land of his adoption. After three years spent in prospecting on the eastern fields Mr. Lynch came to Kalgoorlie and took over the lease of the Great Boulder Hotel, conducting that hostelry for over seven years. In 1903 he became proprietor of the Australia Hotel, one of the most favourably known and principal commercial houses on the gold-

fields, and has continued in the conduct of this business ever since. The building is one of the finest in Kalgoorlie, and the interior amply fulfils the promise subtly conveyed by the architect in his design for the street frontage. The bedrooms are roomy and comfortably furnished, the dining-room and drawing-room replete with all appointments for the convenience of guests, while the

Commercial Travellers' Association certificate is sufficient guarantee for the up-to-date management of the bar and the high-class character of

VICTORIA HOTEL, KALGOORLIE, THE PROPERTY OF MR. P. LYNCH.

the catering. Mr. Lynch also owns the Commercial and Victoria Hotels at Kalgoorlie and the Globe Hotel at

COMMERCIAL HOTEL, KALGOORLIE, THE PROPERTY OF MR. P. LYNCH.

Coolgardie, besides which he has many and varied interests on the goldfields and elsewhere. He is a great supporter of the mining industry, and is now working various leases, whilst he also assists in the financing of prospecting parties all over the eastern goldfields' auriferous belt. No man on the fields is more favourably known among the Irish community than Mr. Lynch, who ever has been a loyal and consistent supporter of the Irish Home Rule cause. During each visit of Irish envoys to Western Australia they have been entertained as welcome guests, while his house is the headquarters of the local movement for the support of autonomy for Ireland. For many years he has been connected with the Irish National Foresters' and Hibernian societies, and is an honorary member of both bodies. His favourite pastime is the "sport of kings," and he has raced several horses in Western Australia. He is also a fine horseman, and spends much time in the saddle.

MR. P. LYNCH'S AUSTRALIA HOTEL, KALGOORLIE.

MICHAEL JAMES O'KEEFE, proprietor of the Railway Hotel, Kalgoorlie, was born at Selbourne, Tasmania, on April 16, 1869, and is a son of the late James O'Keefe, agriculturist and contractor. The latter gentleman was a native of Tipperary, Ireland, and is a son of the O'Keefe who was a notable figure in the early days of the island, his name frequently appearing in the records as far back as the early fifties. Mr. O'Keefe's grandfather is described in the "Jail Journal" of the Irish patriot, John Mitchell, as a "respectable farmer, intelligent, educated, and well-informed, who emigrated to Tasmania soon after Lord Hawarden's great extermination of tenantry in Tipperary." He settled in the Westbury district, and became a bosom friend of the great Irish patriot, Thomas Francis Meagher, who, in company with Smith O'Brien, Kevin O'Dogherty, John Mitchell, and Gavan Duffy, was incarcerated as a political prisoner in the gaols of Van Dieman's Land. Subsequently Mr. O'Keefe was partly instrumental in securing the escape of these patriots, all of whom afterwards rose to high places in the citizenship of the Empire, and imparted their names in the pages of history for all time. The subject of this memoir was educated at Westbury and Beaconsfield in Tasmania, and leaving school in his early teens contracted for and conducted the mail service between Branxholm and Gladstone for some time. Before reaching his majority he was engaged in road contracting and mining, and when about twenty years of age took a twelve months' trip under Captain

Burt, who was making a tour of exploration through the islands adjacent to Tasmania. Upon his return he landed upon the mainland, and spent three or four years in the Gippsland district of Victoria, where he prospected over an area of some

J. J. Dwyer, Kalgoorlie.  
MR. MICHAEL JAMES O'KEEFE.

hundreds of miles. He next took a position on "Padman Creek" cattle station in New South Wales, where he gained considerable knowledge of stock, returning to the land of his birth in 1895. Here he again identified himself with the mining industry, and shortly after the outbreak of the eastern goldfields of Western Australia came to this State, where he occupied a

managerial position upon the mines for about four years. He then entered upon the hotel-keeping business, and since that time has owned and conducted several houses, which during his régime have commanded a well-merited popularity in official and commercial circles. He was proprietor of the Grand Hotel at Kookynie for some time, during which period he played an active part in the public life of the town and was elected to the mayoral chair. He resigned from this office on his departure, in the year 1907, for Kalgoorlie, where he purchased the lease of the Railway Hotel, which he has since conducted and rendered one of the most popular houses on the fields. The hotel, a solidly-built structure of brick and stone, contains some forty-four rooms, including dining-room with a seating capacity of over a hundred persons, billiard-room, smoke-room, drawing-room, and other apartments, all of which are most tastefully furnished and comfortable in all their appointments. Under the experienced supervision of Mrs. O'Keefe the catering is such as to satisfy the most exacting of patrons, and no effort is spared on the part of host and hostess to promote the comfort of visitors in every possible way, the atmosphere of "home" which is met with at every turn making the hotel a favourite rendezvous for a very large percentage of the travelling public. The hotel, which holds the certificate of the Commercial Travellers' Association, is happily situated right opposite the Kalgoorlie Railway Station, and without doubt will assume a still greater importance when the great Trans-Australian Railway shall have become an accomplished fact. The claims of our equine friends have not been overlooked, and during the great goldfields race carnivals which take place periodically throughout the year the ample accommodation provided is taxed to its utmost capacity. Mr. Michael O'Keefe, the genial boniface, is a rare sportsman, and during his lifetime has spent many a day in the hunting-fields in the various States of the Commonwealth. He is a staunch supporter of the turf, and is a member of the Kalgoorlie Racing Club, occupying a seat on the committee of that organization. He excels in the use of the gun, and frequently makes extended trips into the bush, where numerous wild turkeys, kangaroos, and other denizens of the wide, unpeopled tracts of

MR. M. J. O'KEEFE'S RAILWAY HOTEL, KALGOORLIE.

country fall victims to his unerring aim. Mr. O'Keefe married in 1901 Mary, daughter of Mr. Luke Heery, J.P., of Beaconsfield, Tasmania, a well-known and prominent citizen of that place for over a quarter of a century. He has a family of two sons and two daughters.

**JOSEPH ARTHUR STRONG**, proprietor of the Kalgoorlie Hotel, was born at Brunswick, Victoria, on June 10, 1876, and is a son of Mr. A. W. Strong, one of the most prominent citizens of Melbourne. He received his education at the Carlton College, in that city, and at the termination of his collegiate career entered commercial life by joining the firm of James McEwan & Co., Limited. Here he passed through all the departments of a big hardware establishment, resigning his connection with this well-known house in 1901 after seven years' service. He next accepted an offer made by Messrs. McLean Brothers and Rigg to represent that firm in

*J. J. Dwyer, Kalgoorlie.*  
MR. JOSEPH ARTHUR STRONG.

Victoria, South Australia, and Western Australia, and during two years of travel in this capacity he visited every centre of commerce in the above States in the interests of the indent department of the firm. He was induced to resign this position by an invitation from the firm of Messrs. John Dynon & Sons, of Perth, to act as their representative in Western Australia, which post he filled for a year. In June, 1904, he was appointed a representative on

the eastern goldfields of the Union Brewery, and continued as sole traveller for that firm for seven years, with headquarters at Kalgoorlie. At the end of this period he took over the lease of the Grand Hotel, Boulder, which he relinquished in favour of the White Hart, and ultimately became proprietor of his present house at Kalgoorlie. He is well-known as one of the keenest patrons of sport on the fields, and fills the office of president of the Kalgoorlie Railway Football Club, whilst he is a member of the Kalgoorlie Racing Club and the sister club in Boulder City. In the late nineties he was a champion Victorian oarsman, and represented his State in the intercolonial eights, having been twice a member of the crew which won the laurels for Victoria. He was also included in the champion pair, four, and eights, and his knowledge of matters aquatic is second to none in the Commonwealth. He holds over thirty medals for rowing, and a host of trophies, many of high distinction. He was also a member of the South Melbourne Football Club at a time when the club was well advanced in the contest for champion honours. In the manly art of self-defence he has been prominent among amateurs, both during and since his college days, and advocates this sport when conducted in a clean and sportsman-like manner. Mr. Strong is a member of the Kalgoorlie Club.

**MICHAEL O'CONNELL**, one of the early pioneers of the eastern goldfields, was born in South Australia, at Red Hill, near Adelaide, on December 10, 1866. He is a son of the late Michael O'Connell, who came from Ireland to Victoria when the country was very sparsely settled and was a successful prospector at Ballarat immediately after the discovery of that field. Educated in South Australia the gentleman under review started out on his own account before he entered his teens, becoming apprenticed to the carpentry trade in Adelaide where he completed his five years' term and continued in the trade until 1894. In that year the gold rush to the Western State bore him in its train to the eastern fields, where for a time he was engaged in prospecting for the precious metal. Water, however, being almost as valuable as gold he became interested in condensing, his party being the

first to strike salt water on the field, and subsequently, while retaining a financial interest in this enterprise, Mr. O'Connell turned his attention with considerable success to building and contracting in the district. He erected the first hotel in the vicinity

*J. J. Dwyer, Kalgoorlie.*  
MR. MICHAEL O'CONNELL.

of the Londonderry Mine, and was identified with the trade at Coolgardie, Kalgoorlie, Bulong, Daveyhurst, and other centres, following the rushes to each field in turn. He was a well-known supporter of prospecting parties, but although giving freely financial assistance to various enterprises was never fortunate in his investments in connection with the mining industry. In 1898 he entered upon hotel-keeping pursuits at Bulong, and has since owned and conducted the Halfway Hotel, Boulder Road, and subsequently the Union Club Hotel, McDonald Street, Kalgoorlie, where he at present resides. Mr. O'Connell took considerable part in the public life of the early days on the fields, and for some time acted as municipal councillor at Bulong in its palmy days. He was the chief promoter of whippet-racing on the goldfields, being founder of the present club; while various other athletic organizations and competitive sports events owed their formation to his energy and influence. He was a member of the Australian Natives' Association for many years. In 1897 Mr. O'Connell married Margaret, daughter of the late Richard Develin, of County Tyrone, Ireland, and has three sons and three daughters.

ALBERT CORRIGALL BORWICK, proprietor of the Criterion Hotel, Kalgoorlie, was born at Ballarat, Victoria, on December 26, 1886, and is a son of Mr. Peter Borwick, a well-known stock- and share-broker, of Ballarat, who has been associated with that business since the earlier days of the gold industry in that district, and is now regarded as one of the oldest representatives of the Exchange of those earlier days. The gentleman under review was educated at Ballarat, and upon leaving school became engaged in commercial pursuits in the employ of Messrs. James Taylor & Co., drapers, of his native place. In 1905 he resigned his position in this business in order to come to Western Australia, where he perceived that better openings were offering to men of enterprise and ability. After arrival for a short time he continued in his former line of business at Perth, and at the end of the same year proceeded to Meekatharra, where he joined his brother in the conduct of the Royal Hotel, of that town, and at a later date was

interested in the same connection with the Royal Hotel at Nannine. Mr. Borwick also became connected

*J. J. Dwyer,* Kalgoorlie.  
Mr. ALBERT CORRIGALL BORWICK.

with several mining properties noted for more or less good results, and his

name ranks among those of the progressive mining men who are supporting in their early stages various mines in the Murchison district, the development of which bids fair to benefit the State as well as their immediate promoters. With the object in view of launching out in business on his own account he left Nannine, and coming to Kalgoorlie seized the opportunity that offered of taking over the Criterion Hotel, a house which has always been distinguished as one of the best businesses of its kind on the eastern goldfields. The hotel is a well-built structure, with plenty of accommodation, the rooms being large, light, and well ventilated, while all the appointments are of an up-to-date nature and clubrooms and other conveniences are provided. Mr. Borwick is fond of sport, and has distinguished himself in various forms of athletics prior to his advent to this State. The pursuit of such game as the district affords now provides him with recreation, and he spends most of his leisure time in the saddle indulging in this diversion.

## BOULDER.

Boulder is a striking manifestation of how speedily a thriving town will spring into existence after goldfields of a payable nature have been located in the vicinity. Like Kalgoorlie, two miles away, Boulder speedily expanded and adopted all the modern conveniences and comforts of civilization. At the present time it possesses wide streets and well-paved footpaths, and is excellently lighted with electricity. Viewed from one of the rises in the vicinity the appearance of Boulder and its environs makes it difficult for the onlooker to realize that the place is not two decades old. The town which was proclaimed as a municipality on August 6, 1897, vies in importance as a commercial centre with Kalgoorlie, which it adjoins. It is situated within a mile of all the important gold mines constituting what is known as the "Golden Mile." At the first the municipal area was rather limited in extent, owing to the mine proprietors having persistently resisted being included within its boundaries, which, however, have since been gradually extended. The municipality now covers an area of 3,520 acres, and is connected by railway and tramway with Kalgoorlie, and by railway through Kalgoorlie with Perth and the coastal towns. The municipality at the end of the year 1900 contained a population of 4,550 souls, but its official population at the present time is nearly twelve thousand. The electric lighting is under the control of the council, and was

inaugurated at an initial cost of close upon £10,000, which amount has now been far exceeded. The current is supplied continuously for the whole twenty-four hours to the consumers at a cost per unit which is the lowest on the Western Australian goldfields, and is extensively used for lighting and motive power throughout the municipality. Electrically driven machinery is used by the council for breaking metal for road-making purposes, and Boulder vies with, even if it does not excel Kalgoorlie, in the value and number of its municipal enterprises. There are five miles of electric tramway, the fare over which is 3d., one terminus touching the old Boulder Block, now known as Fimiston, the very heart of the "Golden Mile," just outside the municipal boundary. The tramways connect with the Kalgoorlie tramways, both systems being in the hands of one company. Owing as it does its own electric lighting system as in Kalgoorlie, the thoroughfares are well lighted by arc lamps. The water supply is the same as that of Coolgardie and Kalgoorlie, being drawn from Mundaring by the goldfields water supply.

In the earlier stages of its existence the council rented offices from the mechanics' institute for municipal purposes, but it now possesses a town hall, capable of seating 1,100, and municipal offices, the whole being erected at a cost of £12,000. The mechanics' institute, now known as the Boulder Public Library, is of

considerable size. It contains a reading-room, daily open free to the public, well supplied with colonial and English newspapers, magazines, and reviews, and the library contains an excellent selection of books. The committee of the library takes advantage of the travelling libraries system, inaugurated by the Public Library of Western Australia, a purely Government institution, and the type of books forwarded to the Boulder Public Library, consisting as they do of advanced scientific textbooks and valuable general literature, is an excellent example of the reading tastes of this goldfields community. The hall attached to the public library is used for public entertainments, and is one of the largest of its kind outside Perth. It is capably fitted up, the stage being roomy and well equipped. The united friendly societies have erected a substantial stone building, comprising a large hall for lodge meetings, a dispensary, and offices. The Kalgoorlie and Boulder branch of the Amalgamated Workers' Association is a strong confederation at Boulder, and has a good stone structure which carries out the purposes of a trades hall for the locality. The influence in political circles of this society is paramount at the Boulder. All the prominent religious denominations are represented, each with its own place of worship.

The recreation reserve is under the control of the council, and is a very fine one, with a capital grandstand with an extensive seating accommodation. The ground

is used for athletic purposes of all kinds, and Boulder vies with Kalgoorlie in the excellence of its sporting and athletic contests. The reserve is installed with electric light, which enables it to be used at night for any sports or amusements. In the past Boulder was famed throughout Australia for the excellence of its musical combination—the Boulder Brass Band. Of recent years it has somewhat decayed, but there are indications of a revival to ancient form in the near future. Its amateur dramatic and operatic societies, however, are very strong and efficient organizations, and it is extremely problematical whether they can be equalled by similar organizations in any other centre of population in the State. The Boulder Racing Club is extremely active, and its fixtures rank with those of Kalgoorlie in importance on the goldfields. The racecourse is conveniently situated, and the improvements effected have cost over £27,000. This, as in the sister municipality, also serves as a public park. In the public gardens there is a well-constructed bowling green and tennis court.

The commercial life of the municipality is extremely active and extensive, and the emporiums of the principal thoroughfares would do credit to the more settled districts. One proof of this can be found in the fact that the telephone exchange contains nearly 300 subscribers.

The population of the town is 10,824 (5,705 males and 5,119 females).

**CHARLES ROBERT DAVIES**, J.P., B.A. (Oxon.), Mayor of Boulder (1912), was born at Worcester, England, on July 18, 1870, and is the eldest son of the late T. W. Davies of that city. He received his preliminary education at Worcester Cathedral School, whence he proceeded to Hertford College, Oxford, where he took his Bachelor of Arts degree in 1893. Having qualified for the legal profession he was admitted as a solicitor in England in 1897, and was engaged in practice for some time prior to his departure for Western Australia two years later. Upon arrival in this State he joined the office of the legal firm of the late George Leake, and subsequently, upon admission to the Western Australian Bar in 1900, took up his residence at Boulder, where he established himself in legal practice, for a time in partnership with the firm of Messrs. Ewing & Downing and subsequently on his own account. He has always taken a prominent interest in matters municipal, and was a member of the council for four years before being elected to the mayoral office, which he has now filled for three years in the most efficient manner. Upon the creation of the

Western Australian Fire Brigades' Board in 1910, he was elected to represent the eastern goldfields on this body, and still occupies that seat.

J. J. Dwyer,

Kalgoorlie.

MR. CHARLES ROBERT DAVIES.

Ever since his arrival in Western Australia he has been connected with military affairs, joining the

Defence Forces in 1900, and he now holds the rank of major in the Goldfields Infantry Regiment, of which corps he is second in command. He served at the front towards the close of the South African War as a member of the 2nd Commonwealth Contingent. Major Davies is a keen student of State politics, and was a candidate for the Legislative Council in the elections of 1911, but failed in the contest for South Province, his opponent, the Hon. J. Cornell, the selected candidate of the Labour Party, winning the seat. He interests himself in the various charitable and sporting bodies organized on the fields, and is a keen golfer, being a member of the local clubs. He is also a member of the Mines and City Workers' Club, Boulder, and the Hannan's Club, Kalgoorlie.

Councillor **HENRY GLANCE**, J.P., who represents the ratepayers in the Boulder Municipal Council, was born at North Melbourne, Victoria, on October 1, 1875, and is a son of the late Israel Glance, one of the oldest colonists of Victoria, and

for many years a prominent figure in North Melbourne circles. He was educated at schools in West Melbourne, and completing his scholastic career at fourteen years of age was engaged in manual work until his nineteenth year, when he came to Western Australia. Mr. Glance walked from Southern Cross to Coolgardie soon after his arrival in this State, and after a short sojourn in the great mining town returned to Fremantle, where for seven years he found employment in the harbour works—during which period he occupied the post of honorary secretary to the Harbour Workers' Union. Upon the completion of the works he again made his way to the fields, and worked on the mines in various capacities, about this time beginning to take a deep interest in the trades union movement on the goldfields. He was elected president of the Hannan's and Boulder A.W.A., and in 1903 was appointed to the position of secretary of that body. When the Australian Miners' Union amalgamated with the A.W.A. under the title of the West Australian Goldfields Federated Miners' Union, Mr. Glance contested the election for the general secretary of the combined organization, and was returned by a large majority to fill that office. *The Kalgoorlie Miner* of May 15, 1912, writing on the recent goldfields elections, said:—"As an organizer of electoral campaigns, Mr. Harry Glance, the popular secretary of the Federated Miners' Association, can claim much experience, and his energy and ability have gone a good way towards winning four seats for the Labour Party. Mr. Glance commenced duty as a candidate's secretary and organizer when the present Minister for Mines (Mr. P. Collier) first wrested the Boulder seat in the Legislative Assembly from Mr. J. M. Hopkins, who at that time was Minister for Lands, and he acted in the same capacity when Mr. Collier was re-elected against Mr. J. Lyon Johnston. He next seconded Mr. J. E. Dodd when that gentleman won the South Province seat in the Legislative Council, and he was Mr. Cornell's righthand man in the contest which led up to his fine victory against such a doughty opponent as the Mayor of Boulder." It may be mentioned that all the service referred to in this paragraph was done in an honorary capacity. Mr. Glance received his Commission of the Peace from the James Government in 1904.

In 1906 he was elected to a seat on the Boulder Municipal Council, which he has occupied ever since, filling the office of acting-mayor on several occasions. He is an enthusiast in the Labour movement, and with the exception of the time he devotes to the work of the Boulder Benevolent Society and the Fresh-Air League gives every hour to the furtherance of its interests. He is honorary treasurer of the Australian Labour Federation and advocate for the miners in the Court of Arbitration, and keeps himself conversant with the life of every part of the eastern goldfields over an area of hundreds of miles. In 1897 Mr. Glance married Clara, daughter of the late Edwin Barber, of Elminster, Somersetshire, England, and has two sons and one daughter.

Councillor BERNARD LESLIE, J.P., auctioneer and estate agent, who represents Boulder City in the

MR. BERNARD LESLIE.

local municipal council, was born at Dublin on July 27, 1863, and is a son of the late Patrick Leslie, solicitor, of that place. He was educated at the Jesuits' College and the Christian Brothers' College in Dublin, and at sixteen years of age left school to engage in commercial life. After filling a clerical position in the famous Jameson Distillery, Roe Street, Dublin, for six years he emigrated to America and spent a couple of years in the capacity of commercial traveller all over the United States. He next purchased

a share in a schooner and traded in her on Chesapeake Bay and the Delaware and Susquehanna Rivers for a further two years. He then proceeded to the State of Nevada at the time of a boom in the silver-mining industry, and eventually left America for Australia. After a visit to Broken Hill he went to the Euro-longa opal fields in Queensland, and subsequently to the White Cliffs opal fields, New South Wales. Here he remained for a short period, and in 1894 followed the exodus of gold-seekers to Western Australia soon after the discovery of the eastern fields. The railway at that time extended only as far as Northam, and Mr. Leslie walked from within a few miles east of that town to Hannan's Find (now Kalgoorlie) and commenced dryblowing, in which he met with considerable success in the many alluvial patches which he prospected. From White Feather (now Kanowna) he essayed to make a trip to Broad Arrow, where good alluvial gold was reported to have been found. With a mate he left Kanowna in good health and spirits, but after several days in the bush ran out of water, and both men were discovered by a party of prospectors in a perfectly nude condition, delirious, and very near death. So severe were the tortures which Mr. Leslie endured that his hair, jet-black only three days previously, had turned perfectly white, and his body was one raw mass from exposure to the fierce rays of the sun. Eventually he got to Broad Arrow, and after doing well there for a time returned to Kalgoorlie, where he became the proprietor of a condensing plant, water at that time finding ready purchasers at 2s. to 2s. 6d. per gallon. Having invested in mining interests at Bardoc he sold his plant in order to concentrate his attention upon this venture, and spent six years in this district, in the building up of which he took a prominent part. Leaving here for Mertondale, he prospected at the latter place for a year without his usual success, and at length proceeded to Mount Higgins, now known as Mulwarrie. Both at Bardoc and Mulwarrie he found plenty of scope for his energies, and at the former place was first president and founder of the pioneer progress committee, while to his efforts are due the formation of most of the public institutions first established at Mulwarrie, including the State battery, the Warden's Court, and the

public hospital. When Daveyhurst became prominent in mining enterprise Mulwarrie began to decline, and the above institutions were transferred to the more prosperous centre, where also Mr. Leslie remained for five years as auctioneer and general commission agent, during this period filling almost every public honorary position in the district. In 1910 he came to Boulder, and opened his present auctioneering and land and estate agency business, which he has conducted successfully ever since. He received his Commission of the Peace in 1898 from the Forrest Administration, and since his advent to Boulder has accepted the honorary position of acting-coroner, which he has filled for a couple of years. In 1911 he was elected to a seat on the Boulder Municipal Council, and in addition to displaying keen interest in the deliberations of this body evinces a disposition to promote the public good in every possible way. Mr. Leslie is an honorary member of the M.U., I.O.O.F. He married, in 1903, Jean, daughter of Mr. Heriot Brown, of Quambatook, Victoria, and has two sons.

Councillor JAMES ROCHE, proprietor of Tattersall's Hotel, Boulder, was born at Castlemaine, Victoria, on January 6, 1863, and is a son of the late John Roche, an early pioneer of Victoria, and subsequently one of the first settlers in the Lake Wakatipu district of the South Island of New Zealand. The gentleman under review was educated in New Zealand, and in his early teens left school to take up work on a sheep farm, where he obtained a good insight into the wool and mutton industry. Upon approaching manhood he became engaged in the iron foundry and engineering works at Invercargill, and served a five-years' apprenticeship, afterwards following this business at Port Lyttelton for a couple of years. In the late eighties he came to Victoria, where he entered the service of a life assurance office and was connected with the outdoor staff of this company for a similar period. At a later date he took over a coachbuilding, blacksmithing, and machinery agency in the north-east of Victoria, where he spent some six years, leaving there in the year 1891 to come to the Western State. Shortly after his arrival he was present at the ceremony when Sir William Robinson

read the proclamation conferring responsible government on what was then the colony of Western Australia. Mr. Roche made an early visit to the Murchison district, where he prospected for a time without any very satisfactory results. Returning to Perth he again became engaged in his former occupation of engineering and foundry work at Fremantle, and in partnership with

*J. J. Dwyer, Kalgoorlie.*  
MR. JAMES ROCHE.

another gentleman for a time carried on a similar business on his own account in the same place. At the start of the Coolgardie goldfield he was among the first to find his way thither, forming one of a party of what were known as "swampers," who, doing the journey on foot, had their swags carried by waggon. This party, taking train to York, "swamped" the remainder of the way to Coolgardie, and Mr. Roche did a considerable amount of prospecting both at that centre and in other parts of the eastern gold belt, joining in the various "rushes" and meeting with varying success. In 1903 he took up his residence at Boulder and turned his attention to hotel-keeping, and during the few years that have since elapsed has taken considerable interest in the advancement of the place. In 1911 he was elected a member of the local municipal council, and has continued to fill this seat. A supporter of the present (1913) Labour Administration in the early days of the goldfields he was prominently identified with the movement for the uplifting of the workers, and was then

vice-president of the Menzies Miners' Union. He is a well-known patron of sport, being particularly partial to football, and has held the office of president of the Goldfields Football League. He is also a member of the Boulder Racing Club. He finds recreation in walking and driving, and makes a hobby of a poultry farm which he owns in the district. Mr. Roche is married and has three children.

EDWARD WILLIAM VINE GRIBBLE, C.E., Town Clerk and City Engineer, of Boulder, was born at Ballarat, Victoria, on November 16, 1860, and is a son of the late Edward Vine Gribble, one of the most prominent mining investors of that town in the early and palmy days of its existence. He received his education at Grenville College, Ballarat, which institution he left at sixteen years of age to enter the Crown Lands Office at Melbourne, where he

*J. J. Dwyer, Kalgoorlie.*  
MR. EDWARD WILLIAM VINE GRIBBLE.

studied draftsmanship and surveying for some considerable time. Having completed his term of service at office, field, and observatory, he took a position in the Lands Office as Government surveyor, and spent three years in this capacity in the Portland and Strathbogie districts. In 1884 he was appointed town clerk and surveyor at Portland, and carried out the duties attached to the joint positions for four and a half years. Resigning at the end of that period, Mr. Gribble accepted the post of town clerk and treasurer of Essendon,

Victoria, which he continued to fill for over nine years, and ultimately relinquished to take the appointment of engineer and designing draftsman in the Construction Branch of the Railway Department of Victoria. After nearly five years in this office, in 1903 he made application for the vacancy in Boulder for town engineer, and being the successful candidate took up his duties in the same year. To these were added in 1908 the further duties of town clerk of Boulder City, and since that date Mr. Gribble has successfully discharged the dual offices. Since coming to the district he has watched the growth of the place with close interest, and has assisted in its development to a very material extent. As was natural, he had much to do with the formation of the town, the construction of public works, etc., and since his first connection with what is now the third municipality of the State has been responsible for a very complete and effective system of drainage, while he has laid out reserves and been prominent in many other schemes for the benefit of the residents. Mr. Gribble was one of the foundation members of the Boulder Mines and City Workers' Club, in which he is still interested, and he is a member of the Masonic craft. In musical circles he was actively concerned in the birth of the Boulder Liedertafel, which is now one of the most successful musical organizations of the Commonwealth, and he has also been a leading spirit in the management of the Boulder Eisteddfod. He was one of the founders of the Boulder Bowling Club, and is looked upon as the father of this sport on the eastern fields. In 1888 Mr. Gribble married Martha Emma, daughter of the late Charles Brown, of "Stavely," Hawthorn, Melbourne, and has three daughters.

Lieutenant-Colonel JAMES LYON JOHNSTON, J.P., commanding the 84th Infantry, Goldfields Battalion, and Secretary of the Boulder Racing Club, was born at Aberdeen, Scotland, on May 5, 1863, and is the eldest son of the late James Johnston, of that city. He received his education in his native place, and at eighteen years of age proceeded to Cape Town to engage in business there. After a short time he continued his travels to India, where he remained for seven years, visiting all parts of the country and gaining an

intimate knowledge of all the Native States. He left India in 1890, with the intention of settling down at Aberdeen, but, after a few years the call of Greater Britain became too strong to be resisted, and leaving the land of his birth once more, he sailed for South Australia. In Adelaide he engaged in commercial pursuits for less than two years, the boom of Coolgardie's prosperity drawing him to the Western State, where he speedily joined "The Old Camp" and began business as a sharebroker. At

J. J. Dwyer. Kalgoorlie.  
LIEUT.-COL. J. LYON JOHNSTON.

this early period he entered very fully into the spirit of the gold "rushes," and was among the hardy pioneers who spent their strenuous days in eager search for the elusive red metal. The excitement of prospecting appealed to him strongly, and he spent several years in courting the smiles of Fortune in this way, being one of those concerned in the cemetery "rush" at Kanowna. In 1899 he came to Boulder, and again entered the commercial arena, shortly afterwards joining his present partner, Mr. Donald Budge, in conjunction with whom he has carried on the business of sharebroking ever since. In 1876 Lieutenant-Colonel Johnston gained his first experience in military affairs as a bugler in Aberdeen. During his sojourn in South Africa he served as sergeant in the Cape Town Highlanders, and upon his arrival in India joined the Calcutta Rifles, with which he was connected for five years. He was one of the pioneers of the military movement on the

Western Australian goldfields, and upon the formation of the first volunteer corps in that district in 1900 received his commission as lieutenant. Speedy promotion to the rank of captain followed, and he attained his majority in 1909, when he was appointed second in command of the regiment and succeeded to the command upon the retirement of Lieutenant-Colonel Finnerty in 1910, being gazetted lieutenant-colonel in 1912. He has been active in municipal matters at Boulder, and during the eight years that he served as a member of the council he filled the mayoral office for three terms. A Liberal in politics, in 1908 he contested the Boulder seat unsuccessfully against the present Minister for Mines, Mr. Philip Collier. In 1909 he was appointed secretary of the Boulder Racing Club, which position he still fills, and during his period of office the club has reached the enviable point of being able to free itself from debt and build up a very considerable credit balance. Lieutenant-Colonel Johnston is a member of the Naval and Military Club of Perth. He married in 1899, Katie, daughter of the late Henry O'Sullivan White, Government surveyor of New South Wales, and granddaughter of the well-known New South Wales Government surveyor, George Boyle White, and has two sons and one daughter.

MICHAEL BALFOUR SCOTT, barrister and solicitor, Boulder, was born at Bacchus Marsh, Victoria, on April 21, 1867, and is a son of the late Rev. James Scott, D.D., of that town, and later of Hobart, Tasmania. He pursued his scholastic studies at the High School in Hobart, and at sixteen years of age, upon leaving college, was articled to the late Justice A. I. Clark, then in practice in that city. Having completed his indentures under this gentleman he was admitted to the Tasmanian Bar in 1889, and for a few years engaged in practice locally. In 1896 Mr. Scott came to Western Australia, shortly after the influx of goldseekers resulting on the important discoveries on the eastern fields. Upon arrival he became connected with the office of Mr. N. K. Ewing at Perth, with whom he served the requisite probationary period before his admission to the Western Australian Bar. In the early part of 1899 he took up

his residence on the goldfields and established a practice at Boulder, where he has since become one of the well-known identities of the place. From the early days of his advent to the district he has held the post of solicitor to the local municipal council, and has thus been debarred from taking part in the deliberations of that body; but almost every other organization or movement having for its object the improvement of the city and the conditions under which the community exists, has had the benefit of his support and sympathy. Mr. Scott, though actually not a pioneer of the Boulder Racing Club, was one of its early members, and has always been prominent in advancing the interests of that body. For six years—from 1904 to 1910—he occupied the office of chairman, having previously served on the committee, and during his term of office most of the improvements which have caused the club to be ranked among the most up-to-date of similar organizations were devised and carried out. He was also the first to publicly advocate the appointment of stipendiary stewards to control racing in the State. Musical societies and other recreative clubs have honoured him as a patron, and there are few circles where his personality is not recognized in a greater or less degree. Mr. Scott married in 1896 Maud, daughter of the late George Gregory, of Hobart, Tasmania, and has one daughter.

ALBERT EDWARD HEATHCOTE, surgeon dentist, Boulder, was born at "Hously Hall," Ecclesfield, Yorkshire, England, on June 14, 1878, and is a son of Mr. Thos. Heathcote, of that place. His early education was received in his native town, and upon coming to Australia with his parents while still quite a lad he completed his scholastic studies at Cootamundra, in New South Wales. Before reaching his teens he struck out for himself in the industrial world, serving his apprenticeship to the building trade, and long before he arrived at man's estate had established himself as a contractor on his own behalf in Western Australia. Various important contracts, chiefly in the southwestern portion of the State, were carried out by Mr. Heathcote, who continued in this line of business until his nineteenth year. About

666

this time he found himself in Kalgoorlie, and relinquishing the building trade entered upon a course of study at Piccadilly College, shortly afterwards turning his attention to study pharmacy under Mr. W. L. Thomas. He concluded his term with Mr. E. Parry, at that period chairman of the board of the Pharmaceutical Society of Western Australia, and having achieved success

J. J. Dwyer, Kalgoorlie.  
MR. ALBERT EDWARD HEATHCOTE.

in this department took out indentures to Major T. Flintoff, dental surgeon, of Fremantle. After five years' study under the latter gentleman, during which time he was associated with the dental work of the Government hospital at Fremantle, he passed the necessary examinations with credit, and returning to the goldfields in 1908 began practice on his own account at Boulder. At a later date he purchased the practices of Mr. Boxall and Mr. Wilson of Kalgoorlie, and within two years had worked up a connection so extensive that a staff of fifteen assistants was required to cope with its demands. Outside of his profession he has various interests. He holds agricultural property in the Williams district, where for a time he carried on farming pursuits. He is also a keen supporter of mining development, having been a promoter of numerous prospecting parties and member of syndicates formed on the field with the object in view of opening up fresh claims. He is a lover of a good horse, and sporting events in connection with the racing clubs of Kalgoorlie and

Boulder command his interest as a relaxation from his professional duties. Mr. Heathcote married in 1907 Margaret, daughter of the late Paul Alday, of Portland, Victoria.

HARRIE SAXON LEE, J.P., M.P.S., chemist and druggist, Piessie Street, Boulder, was born at Ballarat, Victoria, on June 14, 1869. He is a son of the Rev. G. D. Lee, a Presbyterian minister who came to Australia from Nottingham, England, in the early fifties, and is one of the best-known identities of Ballarat, his years now being within a decade of the century. The gentleman under review was educated at Hamilton College, Victoria, under the late Mr. H. B. de la Poer Wall, M.A., F.R.G.S., one of the foremost educationalists of his day in Australia. At sixteen years of age he

J. J. Dwyer, Kalgoorlie.  
MR. HARRIE SAXON LEE.

left the college to continue the study of pharmaceutical chemistry, begun under Mr. Wall, and served his indentures to the late Mr. Carl Klug of Hamilton. Mr. Lee concluded his studies at the School of Mines, Ballarat, from which institution he received his certificate and diploma of pharmacy, and subsequently proceeded to Melbourne. Here he became dispenser with the firm of Messrs. T. H. Huntsman & Co., at a later period acting as relieving manager in the various branch businesses carried on in Melbourne and its suburbs under that name. After two years in Melbourne he went to

Warrnambool in the same State, where he managed the business of Mr. H. London for seven years. In 1896 he came to Western Australia and accepted a position with the firm of Messrs. John Boileau & Co., as manager of its Boulder Block branch, which he retained for a year. He then resigned in order to open on his own account in his present premises, and has since conducted operations personally with marked success. It is interesting to note that this was the first chemist's shop opened in Boulder City, and the third business of any description established in that town. Mr. Lee was granted his Commission of the Peace by the Moore Administration in 1901. He represented the ratepayers in the municipal council for three years, and subsequently contested the mayoralty against the retiring mayor, Lieutenant Colonel Johnston, but was beaten by a narrow majority. He is a member of the Presbyterian Church, and holds office as elder of that body. An enthusiast in Freemasonry, his honours include Past Master of Lodge, No. 25, W.A.C., and Grand Junior Warden. In 1898 Mr. Lee married Ada Frances, daughter of the late William Hughes, of Geelong, Victoria, and has one son surviving.

STEPHEN BESTON, J.P., merchant, Boulder, was born near Launceston, Tasmania, on April 8, 1866,

MR. STEPHEN BESTON.

and is a son of the late Patrick Beston, a farmer of that place. He pursued his scholastic studies at Bridge

North, about 12 miles from Launceston, and at fourteen years of age commenced work in the agricultural industry. For fifteen years he followed this calling in the Tamar River district, and at the end of that period became engaged in hydraulic sluicing on the mining fields.

In 1895 he came to Western Australia, enticed by the prosperous condition of the mining industry on the eastern goldfields, and after reaching Kalgoorlie purchased a condensing plant and conducted the business of water condensation for the public for a number of years. About eighteen months before the water supply scheme became an accomplished fact, Mr. Beston disposed of his plant and opened in the bakery trade at Boulder, five years later enlarging the scope of his operations by establishing himself as a general merchant in conjunction with his other business. He owns two stores at Boulder, the departments comprising grocery, wine and spirits, ironmongery, etc., the main premises being situated at the corner of Forrest and Wilson Streets and the branch store in the centre of Burt Street. Mr. Beston specializes in whisky, which he imports from Scotland. He has a staff of eighteen

employés who are kept employed all the year round. He acts as agent for the North British Fire Insurance Company, and is a director of the Boulder Brewery Company. In addition to the management of his manifold business affairs, he takes a

MR. S. BESTON'S STORE, BURT STREET, BOULDER.

keen interest in the political affairs of the State, and gives considerable attention to the public interests of Boulder. In 1906 he was elected to a seat on the municipal council of Boulder, and two years later received his Commission of the Peace from the Moore Administration; he is also a member of the conference of local bodies on the goldfields. He is a trustee and treasurer of the Roman Catholic Church at Boulder and a member of the Boulder Bowling

Photo by J. J. Dwyer. MR. S. BESTON'S PREMISES BOULDER.

Club. In 1898 Mr. Beston married Susan, daughter of Mr. William Eden Wright, a farmer of Victoria, and has two sons and two daughters.

The **BOULDER CITY BREWERY COMPANY, Limited.** This important brewing concern, which in a single decade has earned for itself a reputation extending far and wide throughout the States of the Australian Commonwealth, was founded in the year 1903, and has the unique distinction of being the only brewery in Boulder City. Its predecessor on the fields—the old Toorak Brewery at Coolgardie—was purchased outright by the present company in the year above-mentioned, since when the whole plant has been modernized and the buildings extended until, at the present time, they cover an area of four blocks, comprising in all over an acre of land. The firm's premises, located within half a mile of the city centre, are constructed on the most approved hygienic principles, and it is under the most favourable conditions that the famous Boulder beer and stout is produced. In the erection of the brewery quarters the well-known gravitation principle was adopted, long years of experience having demonstrated the sound advantages this system maintains over all others. The tower block has four floors, and on its summit have been placed the huge tanks in which is stored thousands of gallons of water, the source of which—Mundaring—lies several hundreds

of miles distant from the present theatre of operations. From these tanks the water undergoes distillation, and in its purified form passes to the boiling vats, where the liquor from the malt (which has already been subjected to various processes

and cool cellars will accommodate as many as 200 hogsheads without undue strain on its resources. Power is provided both by steam and electricity, the latter being supplied by the municipality of Boulder. The company manufactures all the casks required in the brewery, and the cooperage is replete with every requisite for the turning out of the finest casks and for the execution of repairs. To minimise the extreme heat of the goldfields summer a chilling plant of the very latest design has been installed, including a West's refrigerator comprising two cylinders, each with a capacity of seven hogsheads, and by means of a "Gloria" machine forty dozen of beer may be bottled hourly. One product of the company, of which it is justifiably proud, is the famous Boulder stout, which surpasses in quality any similar beverage produced not only in Western Australia but in the Commonwealth, brewers generally throughout Australia, whilst claiming for their products many virtues, awarding it premier place for brilliancy and quality. The name "Boulder Stout" has become a household word from Norseman to Lawlers, and the output of this favourite beverage has each year increased until at the present time (1912) it has reached 4,000 dozen bottles per month. Only the finest English and Irish malt hops are used in its manufacture, and the stout will compare favourably with the best brands imported from the Emerald Isle. The head brewer, Mr. Theo. Bock, has been associated

J. J. Dwyer, *Kalgoorlie.*  
Mr. LEO BRICE.

of preparation) and sugar are added, the whole being boiled by the aid of steam. After undergoing certain other processes the beer is conducted to the fermenting gyles, whence it reaches the cellars, where it is cleansed, filtered, and placed in casks for distribution. The plant has a capacity of twenty hogsheads, while the spacious well-ventilated

THE BOULDER CITY BREWERY, BOULDER.

with the goldfields for the past fourteen years, first with the Lion Brewery Company, and afterwards with the Toorak Brewery Company, transferring his services to the present management when the latter concern was secured and reconstructed under the present designation. Prior to coming to Western Australia Mr. Bock had had many years' experience at the Silverton Brewery, near Broken Hill, New South Wales, and his intimate knowledge of brewing in all its details has largely contributed to the success which has attended the promotion of the present extensive brewing concern. For the past seven years the secretarial post has been filled by Mr. Leo Brice, a native of Cheltenham, England. Educated at Cardiff, Wales, at the age of ten years he commenced his commercial career as a junior in an accountant's office in the lastnamed town. In 1888 he came to Australia, and up to the time of accepting his present appointment was associated with mining accountancy at Broken Hill, Adelaide, and Kalgoorlie. Since taking up his duties as secretary Mr. Brice has ably seconded the efforts of the head brewer, and his business acumen has played no inconsiderable part in bringing about the five times' increase in the firm's output over the period. He is one of the best-known figures in commercial and social circles on the fields. The directors are Messrs. M. Jackson (chairman), E. Pauley, S. Beston, A. H. de Baun, and M. T. O'Halloran. The firm's outdoor representative is Mr. Francis B. Coory, who is also widely known on the fields.

**MATTHEW EARNEST MAZZUCHELLI**, watchmaker and manufacturing jeweller, Lane Street, Boulder, is a son of the late Joseph Alfred Mazzucchelli, of Coolgardie, who came from Switzerland to Victoria over half a century ago. He was born at Stawell, in that State, on May 16, 1876, and received his education in his native town. Having finished his scholastic career he entered upon the watchmaking trade in the establishment of Messrs. Cohen Brothers, well-known in the business world of Melbourne, and served with that firm for over three years. At the close of that period he returned to his native town, where he completed his apprenticeship and worked

as journeyman for Mr. Fred Sack, with whom he remained until his departure for Western Australia in 1898. During the eight years of his connection with the trade in Victoria, Mr. Mazzucchelli was employed in Stawell, Warracknabeal, and Shepparton subsequent to serving his indentures in Melbourne, and during this time gained an expert knowledge of his work. Upon arrival in Western Australia he spent a brief period at Coolgardie, a couple of months later entering the employ of Mr. James Robertson, of Boulder, where he continued for over five years in the same connection. He then formed a partnership with a fellow-employé, Mr. M. B. Downes, and, resigning from Mr. Robertson's service,

*J. J. Dwyer.* *Kalgoorlie.*  
Mr. MATTHEW EARNEST MAZZUCHELLI.

in conjunction with this gentleman established the business of Mazzucchelli & Downes, which has held a foremost place among similar concerns on the goldfields ever since. In 1912, this partnership was dissolved upon the decision of Mr. Downes to open a business in Albany, and Mr. Mazzucchelli has since carried on operations on his own behalf. In a quiet and effective way, he has interested himself in numerous affairs pertaining to the progress of the town, but on account of a very retiring disposition has consistently declined to accept any prominent public office. He takes a deep interest in all church work, and holds office as vestryman in St. Matthew's Anglican Church, Boulder, besides which he is a committeeman of the Boulder Benevolent Society. For a

considerable period he has held membership in the Masonic fraternity, and is an office-holder in the Boulder Lodge, No. 23, W.A.C. He is connected with the M.U., I.O.O.F., and is a member of the Boulder Racing Club. He has been an enthusiast cyclist ever since the wheel first made its appearance in Australia, and still continues to take exercise in this way. Mr. Mazzucchelli married in 1901 Clara, daughter of Mr. George Cronk, merchant, of Hopkins and Shannon Streets, Boulder, and has two sons and two daughters.

**EDWARD PAULEY**, senior partner in the firm of Pauley Brothers, produce merchants, Boulder, is a native of Victoria, having been born at Bendigo on April 5, 1869. He is a son of the late Edward Pauley, a farmer of that district, who was one of the first to prove the existence of payable gold in the deep alluvial ground at Bendigo, the first bucket of ore taken from the shaft yielding the splendid return of 3½ oz. of smelted gold. Mr. Pauley is a grandson of Gunner Edward Pauley, who distinguished himself on the field of Waterloo in 1815, under Wellington, and whose medal is now a prized possession of the gentleman under review. Educated at Wellsford, near Bendigo, Mr. Pauley, after entering his teens, joined his father in the work of the farm, and continued in this connection until his twenty-seventh year, when he crossed the Bight to Western Australia. He was attracted to this State partly by virtue of the gold discoveries, which were bringing it into prominence all over the world, and also with the intention of joining his brother, Mr. Thomas Pauley, who had preceded him and had obtained a post on a mine near Broad Arrow. Upon the arrival of the newcomer the brothers joined forces and opened a storekeeping business at the Railway Venture Gold Mine, near Broad Arrow, which they carried on successfully for some considerable time. In 1897 a removal was made to Boulder, where the firm established a produce store towards the end of the year, which has since held its own against all competing concerns, and has the reputation of being the largest retail produce business on the eastern goldfields. The principal mines on the "Golden Mile" are supplied by this firm, and the operations of the business are under the personal

supervision of Mr. Edwd. Pauley, who makes periodical trips throughout the agricultural areas of the State, and is accustomed to handle between 3,500 and 5,000 tons of mixed produce per annum. The partnership between the brothers—which it is interesting to note was first established in Victoria in the early nineties, so is for over twenty years' standing—still exists, and its enterprise has been extended to the pastoral and agricultural industry. In 1900, the

*J. J. Dwyer, Kalgoorlie.*  
MR. EDWARD PAULEY.

Messrs. Pauley took up a large farming property situated near Wiekepin, about 14 miles east of Cuballing. It consists of 4,000 acres, and the land when it first came into possession of the present owners was in its virgin state. A large amount of capital has been expended upon the improvement of this property, which is now in a very forward state of development, between 400 and 500 acres having been brought under cultivation, and pastoral operations inaugurated on a fairly large scale. The soil and climate have been found to be best suited to the production of cereals, wheat and oats being the chief crops harvested, and in forming the flock, the popular merino was chosen as most profitable for the purpose in view. Subsequent experience has justified this selection, excellent prices being obtained for the wool, while a very high lambing average is kept up. An ever-ready market is found for the lambs on the goldfields, and dressed lambs, averaging 28 lb. in weight, command wholesale prices

up to 6d. per lb. The farm is under the management of Mr. Thomas Pauley, who devotes the whole of his time and attention to the various departments of the industry. The brothers have also had a considerable amount of mining experience in Western Australia, particularly in the Edjudina district, where they erected a battery for public crushing. Soon after the erection of this plant the Government of the day subsidized the mill in appreciation of the assistance given to the mining industry by our subjects. They have also been large shareholders in many schemes for the development of the industry locally. Mr. Pauley, sen., is one of the directors of the Boulder Brewery Company, Limited, in which he holds large interests, and is also a director of *The Evening Star* newspaper, the local daily paper at Boulder. He is a member of the Roman Catholic Church, and takes a prominent interest in the advancement of this cause. His sympathy and financial support have been of great assistance to the local church, and the committees connected with the management of that body have frequently been glad to avail themselves of the business experience possessed by him and which he is ever willing to place at their disposal. He is a true sportsman, and was among the earliest members of the Boulder Racing Club, also finding pleasurable recreation in the use of the gun, which has always been a means of favourite diversion to him. Both flying and forest game have found cause to regret his steady aim, and before Mr. Pauley's advent to the interior of the State he was a frequent exponent with rod and hook of the

"gentle sport" of fishing in river and stream. His love of a good horse amounts almost to a hobby, and he always contrives to have in his stable one of the best roadsters obtainable. Mr. Pauley married in 1902

*Bartolotto, Perth.*  
MR. THOMAS PAULEY.

Johanna, daughter of Mr. J. Quinlan, farmer, of Clare, South Australia, and has a family of three sons and one daughter. Mr. Thomas Pauley is now a member of the Cuballing Roads Board, and has been chairman of that body, besides which he has identified himself with most of the movements making for the progress and advancement of the district. He was married in 1908 to Edie, daughter of Mr. Barbary, of Moonta, South Australia, and has two sons.

MESSRS. PAULEY BROTHERS' PREMISES, BOULDER.

ARTHUR STUBBS, J.P., timber merchant, Boulder, was born at Balmoral, Victoria, on January 9, 1873, and is a son of the late William

different classes of work carried out, which cannot be met by means of the local products, are imported direct from the Baltic, while the Western

charitable organizations. He was gazetted a Justice of the Peace in 1906, having received his Commission from the Moore Administration. Mr. Stubbs was one of the founders of the Boulder Eisteddfod, and was chairman during its second year, and at the time of writing (1912) still holds that office. He also acts on the committee of the Boulder Racing Club, one of the most successful

Stubbs, one of the pioneer teachers in the Victorian Education Department. He received his scholastic training principally under his father, and continued his studies well into his teens, whilst working as a junior in an office from ten years of age. In 1889 he became apprenticed to the building trade, specializing in carpentry and the timber departments of the trade, and five years later came to Western Australia and engaged in contracting for seven years. During this period he placed to his credit many of the leading public and private structures in the metropolis, among which may be specially mentioned the old Legislative Council Chambers. In the year 1900 Mr. Stubbs proceeded to the goldfields and took under his own supervision a hardware business, in which he had previously held an interest in conjunction with his brother. He also contracted for several large buildings on the fields, and not long after his arrival established on a small scale the present flourishing timber business now carried on by him. This proved very successful, business increasing in volume year by year, until he now holds the premier position in the trade in Boulder. He owns the only timber mill in the town, and in addition to the output of his own trade the milling for other timber yards is done at this mill, which is a very profitable adjunct to Mr. Stubbs' other operations. Timbers of various kinds suitable for the

Australian timbers, including a large proportion of jarrah, are procured from the Greenbushes district. In connection with the other branch of the business Mr. Stubbs is a large importer of ironmongery goods and all kinds of hardware from England and America, and his stock is a very complete and representative one. During his residence on the goldfields he has taken an active interest in the municipal life of Boulder, and for three years represented the rate-payers of that city in the council chamber. He occupies a seat on the committee of the Boulder Public Library, and is an honorary office-holder in several semi-public and

J. J. Deyer, Kalgoorlie.  
MR. ARTHUR STUBBS.

sporting organizations of its kind in the Commonwealth. The popular games of golf and bowls provide him with necessary recreation, and he is a champion bowler, filling the office of vice-president of the local club, while he is vice-president of the Boulder Golf Club. Mr. Stubbs was

married in 1903 to Dora, daughter of the late Albert Warnecke, farmer, late of Cunderdin, and his family consists of two sons.

**BENNO ZOWE**, one of the pioneer commercial men of the eastern goldfields, is a native of South Australia, having been born at Blumberg, near Adelaide, on October 7, 1874. He is a son of the late Julius Fredrick Theodore Zowe, a cabinet-maker, who came from the Fatherland to Australia in the early fifties and settled at Kapunda, South Australia, where the gentleman under review received his education. At the close of his schooldays he was apprenticed to the butchering business in the firm of J. M. Watts, of that town, and completed his indentures with this old and well-established firm. At the time of the

*J. J. Dwyer, Kalgoorlie.*  
MR. BENNO ZOWE.

first gold discoveries at Coolgardie he joined in the general exodus from the Central State, and upon arrival in Western Australia became a member of a prospecting party at Northam, which proceeded to the scene of activity. Dame Fortune, however, reserved her smiles for others, and after a year of work with only disappointing results Mr. Zowe turned his attention to commercial enterprise, and for three years conducted a butchering business at Coolgardie. Disposing of this concern in 1897 he came to Kalgoorlie and purchased the old Smithfield Meat Markets in Hannan Street, which he carried on

for a year, eventually selling out to the firm of Messrs. Kidman & Uhr. Having previously formed a partnership with Mr. Arthur Daff, he now opened in Boulder City, and since 1900 the firm has operated very successfully in Piesse Street. The subject of this notice has also established an independent business in Burt Street, which he personally supervises conjointly with his other interests, and in addition to his commercial enterprise is a power—none the less important for being unobtrusive—in mining circles. Much of the capital which he has amassed through his business operations has been applied to the opening up of new mining claims, and he has taken a personal part in the development of many of these. During the past twenty years he has been present at all the more important "rushes" to newly-discovered fields, among which may be mentioned the Wealth of Nations, Lake Darlot, Hayes' Find, Bullfinch, and Kurnalpi, in the last-named of which he has strong faith. He is a general advocate of sport and a member of the Boulder Racing Club. In 1892 Mr. Zowe married Rose, eldest daughter of the late Benjamin Harris, of Kapunda, South Australia, and has two sons.

**CHARLES JAMES MONTGOMERY**, member of the firm of Messrs. Montgomery Brothers, drapers, of Boulder, was born at Canningstowe, County Cavan, Ireland, on July 23, 1873, and is a son of the late Maxwell Montgomery, a farmer of that place. He pursued his education in the National School in his native village, and at seventeen years of age sailed for South Australia in order to join his brother who had preceded him to the Antipodes. Upon arrival he became engaged in commercial pursuits at Mintaro, but after a brief sojourn in the Central State decided to come to Western Australia, where the gold boom was in the full zenith of its brilliant day. Mr. Montgomery first entered into partnership with the late J. McHenry Clark, in conjunction with whom he opened a business at Southern Cross. This connection was dissolved, however, in less than twelve months, and the gentleman under review launched out on his own account, conducting trading operations under the name of C. J. Montgomery & Co. A year later the firm of Montgomery Brothers was formed,

and shortly afterwards a branch business was opened at Menzies under the personal conduct of the subject of this notice, who subsequently extended the scope of operations to Kookynie and Leonora. When Kalgoorlie eventually became the centre

*J. J. Dwyer, Kalgoorlie.*  
MR. CHARLES JAMES MONTGOMERY.

of the mining industry of Western Australia the firm established at that important place what has since become one of the leading drapery businesses in the State. The success of the Kalgoorlie emporium justified the opening up of a similar store at Boulder, where the same good results followed; and in 1911 when the firm of Messrs. J. H. Hicks, of "White House," Fremantle, went out of business, the Montgomery Brothers took over the establishment, and have since worked up a connection second to none in the principal seaport of Western Australia. Mr. C. J. Montgomery has always identified himself with the public life of the State, and in the earlier days of his advent here served in various capacities, at one time filling the role of municipal councillor at Menzies. He is keenly interested in the advancement of Boulder, and is a member of the committee of the Boulder Racing Club, while for many years he has been associated with the Masonic fraternity and has held office in that body. He is an enthusiastic amateur gardener, and is especially successful in the cultivation of roses. Mr. Montgomery married in 1909 Jessie, daughter of Mr. Charles Lindsay McLean, of Boulder, and has one son and one daughter.

RAYMOND LIONEL LEANE, proprietor of the house of J. H. Pellew & Co., drapers and mercers, of Boulder, was born at Prospect, South Australia, on July 12, 1878, and is a son of the late Thomas J. Leane, of Adelaide. At the conclusion of his scholastic career he became apprenticed to the firm of Messrs. Martin Bros., drapers, of Burlington House, Rundle Street, Adelaide. During the five years that he served in this well-known establishment Mr. Leane passed through all branches and departments of the business, and in 1896, upon receiving the offer of an appointment from Messrs. E. Barnett & Co., of Albany, Western Australia, came to the southern seaport. He continued in this connection for four years, eventually resigning in order to offer himself for service in the Boer War in South Africa. Failing to be selected by the authorities he joined the firm of Messrs. D. and W. Murray, Limited, at Perth, and spent seven years in this service, spending a year at Fremantle as the firm's representative there, and proceeding thence to the eastern goldfields, where he took charge of the local branch for a few months. From there he was retransferred to Perth and was given control of the millinery and lace department, remaining here until 1907. In February of that year Mr. Leane became a partner in the business known as "The New Economic, Limited," trading in Fremantle, Kalgoorlie, and Boulder, in connection with which he took joint management

with his brother of the latter two branches of the house. During the course of 1908 he disposed of his interest in the firm and purchased the Boulder branch of the business, which he has since conducted under the original title of J. H. Pellew and Co., this house having been

J. J. Dwyer,

Kalgoorlie.

MR. RAYMOND LIONEL LEANE.

established in the first instance by Mr. Pellew. It is a high-class establishment, and clients have found themselves able to rely with confidence on the business-like methods that are the rule of the house. Mr. Leane, whilst living at North Perth, was twice returned unopposed to

represent the East Ward in the local municipal council. He was one of the first to move in the Greater Perth scheme and one of the original delegates appointed to meet the Perth Council in conference. Mr. Leane joined the Volunteer-Garrison Artillery at Albany under the late Major Moore, and shortly after coming to Perth transferred to the Commercial Corps in the Perth Infantry Regiment, where he served for three years. On account of the pressure of business duties after his arrival on the goldfields he tendered his resignation, but upon returning to the metropolis again took his place in the forces, and in 1905 assisted in the formation of a company at North Perth and Leederville. In connection with this company—C Company, of the 11th Infantry Regiment, under command of Lieutenant-Colonel Strickland—he received the appointment of lieutenant, and having passed for his captaincy was gazetted to that rank at a later date, no vacancy existing at the time of his examination. In 1910 he received his commission of captain, and having once more taken up his residence on the goldfields was given command of C Company, Boulder, in the 84th Infantry Regiment, Goldfields Battalion. In 1911 he passed for his majority, promotion to which rank will follow in the course of time. In 1902 he married Edith, daughter of Mr. J. Laybourne-Smith, dentist, of Adelaide, South Australia, and has three sons and one daughter.

MESSRS. J. H. PELLEW & CO.'S PREMISES, BOULDER.

MATTHEW JACKSON, merchant, of Boulder, was born at Alston, Cumberland, England, on November 25, 1865, and is a son of

MR. MATTHEW JACKSON.

Mr. Joseph Jackson, of the same place. The latter gentleman was one of the early prospectors of Victoria in 1860, and was one of the first to erect a puddling machine in the pioneer gold-mining days of that State. Educated in his native town, upon leaving school he served his apprenticeship to the trade of carpenter and wheelwright, and after completing his five years' indentures followed his calling in the Old

Country until the early part of 1868, when he sailed for Australia, and arriving at Townsville, in Queensland, proceeded thence to Charters Towers, where he worked at his trade for a year. He then went to Chillagoe and opened an hotel at a place called Muldiva, where he carried on for five years. Selling his interests there in 1894 Mr. Jackson came to Western Australia, attracted by the gold-mining boom, then at its height, and making his way to the Coolgardie district started business at Mount Burgess in the grocery and bakery line of trade. This he relinquished shortly afterwards to join in the pursuit of the elusive red metal, and journeying to Mount Darlot prospected in that district for a considerable time, but without any great success. After a return to Coolgardie and trading operations, in March, 1896, he came to Boulder Block and opened the second store in the now populous centre, where for six years he carried on as grocer and general merchant. The scope of his business expanded rapidly, and in 1901 he found it necessary to open another

store in the heart of Boulder City, and has continued ever since to operate from this central position in Burt Street. His career as one of Boulder's prominent commercial men has been a very successful one, and he may be included among those who have aided in bringing the city into

MR. M. JACKSON'S PREMISES, BOULDER.

its present premier position. He has actively identified himself with the public life of the place, and for some years has occupied a seat as city councillor, in addition to his municipal services being closely connected with the development of the mining industry. He was responsible to a large extent for the reopening and financing of the Golden Ridge Mine after it had been abandoned by an English company, and as chairman of directors, with a syndicate of twelve other citizens, continued its development to the paying concern that it has since become. He is also a director of the Boulder City Brewery Company, Limited, and has occupied the chair for over five years. He is a member and president of the Mines and City Workers' Club, and has been associated with the Masonic fraternity for a lengthy period, being a member of the Golden Pillar Lodge, No. 67, W.A.C. A keen sportsman, he heartily advocates all forms of clean outdoor recreation, and is vice-president of the Boulder Racing Club, having served for a decade on the committee of that body, while his personal preference inclines to golf and bowls. He married Mary, daughter of the late Michael Scanlen, of County Clare, Ireland, and has two daughters.

JOSEPH PARERAS, proprietor of the Albion Hotel, Boulder, was born at Alella, Barcelona, Spain, on December 23, 1859. At fifteen years of age he obtained work in Barcelona, and subsequently opened a restaurant on his own account in the same city. To escape from the unsatisfactory

J. J. Dwyer, Kalgoorlie.  
MR. JOSEPH PARERAS.

condition of affairs then existent in Spanish political circles, in 1892 he came to Australia, landing in the first instance at Melbourne. The report of gold discoveries in the Western State, however, determined him to seek the land where speedy fortunes were being made, and on

October 25 of the same year he first set foot on Western Australian soil. Mr. Pareras lost no time in establishing himself in the commercial world at Perth, and in April, 1894, in conjunction with two others he opened the Duke of York restaurant in that city. Twelve months later he disposed of his interest in this business, and coming to Kalgoorlie in November, 1895, began a successful career as joint-proprietor, with Mr. John Cabus Parer, of "Parer's Restaurant." In the big fire that occurred on October 22, 1896, this building was burnt down, but was immediately rebuilt and reopened in the following December, and while carrying on a brisk business in the town the partners interested themselves in sending out prospecting parties to different parts of the goldfields. In 1897 the firm built the present Albion Hotel, which was opened for business on January 1, 1898, and was carried on successfully for a time. On account of the indifferent health of his partner the responsibility of the conduct of both businesses fell upon Mr. Pareras, and finding himself unable satisfactorily to cope with the demands

made upon him he leased the hotel for ten years. In 1897 he took out his papers of naturalization as a British subject, and two years later revisited his native country. In

MR. J. PARERAS' ALBION HOTEL, BOULDER.

1901 he returned to Australia, and took over control of the Kalgoorlie business, at a subsequent period rebuilding the Albion Hotel, which was destroyed in the Boulder conflagration on June 6, 1902. His dissolution of partnership with Mr. Parer took place in December of this year, and for a time the gentleman under review continued to conduct the restaurant, while interesting himself in mining enterprises at Yarri and elsewhere without any very great success. In 1904 he went abroad again and travelled extensively in different parts of Europe, returning to Australia in March, 1907. The lease of the Albion Hotel expiring in March, 1908, Mr. Pareras returned to Boulder and assumed control of the business which had suffered serious decline and was at a very low ebb. Under his able management operations were established on thoroughly up-to-date lines, and in the few years which have since elapsed the hotel has earned a well-deserved reputation as one of the best-conducted houses on the goldfields. Mr. Pareras is a lover of art, music, and books. He is a member of the local bowling and golf clubs, and of the Boulder Racing Club, and fills the offices of patron and vice-president of leading clubs on the fields. He is a committeeman of the Licensed Victuallers' Association of the goldfields.

Photo by J. J. Dwyer. LAWN AT REAR OF ALBION HOTEL.

ALBERT WILLIAM RODDA, of Boulder City, was born at Tannunda, South Australia, on May 24, 1858, and is a son of the late William Murdoch Rodda, of that place. He received his education in his native town, and at fourteen years of age was apprenticed to the general storekeeping trade for four years. At the end of that period he removed to Moonta, where he was engaged in the same line of business for a considerable time, proceeding thence to Riverton and Broken Hill. At the latter town he established a men's mercery store and remained there for seven years, making his departure for Western Australia in 1894. The excitement caused by the Coolgardie rush drew him to the scene of the find, and for about three years he followed divers occupations at the "Old Camp." In 1898 he came farther east, opening in business as men's clothier at Kalgoorlie and Boulder, where he carried on successfully for some years. Mr. Rodda first became interested in the hotel trade in 1900, and with the

exception of less than two years, when he was farming in the Temora district of New South Wales, has continued in his line of business ever

*J. J. Dwyer, Kalgoorlie.*  
MR. ALBERT WILLIAM RODDA.

since. He has been in turn "mine host" of the Miners' Rest, the Union Club, the Court, and the Grand Hotels at Boulder, and whilst conducting these hostelries has found time to interest himself largely in the mining industry, giving material financial assistance to the development of numerous claims on the eastern fields. He has been a member of the Ancient Order of Druids and has been elected a life member of that Order. He is also a life member of the Boulder Racing Club, having been connected with this organization since its inception, serving for eleven years as a committeeman, during the greater part of which period he filled the position of honorary treasurer. In his younger days Mr. Rodda was a well-known amateur performer on the turf, having trained and ridden to victory many winners at Broken Hill and on the Western Australian goldfields. He still maintains a lively interest in this sport, but his chief recreation is taken in driving, and he has always a good horse in his stable.

### KANOWNA AND BULONG.

Kanowna is one of the principal municipal townships of the North-East Coolgardie goldfield, and is situated 12 miles from Kalgoorlie, on a branch railway. Although the North-East Coolgardie goldfield was only proclaimed on February 19, 1896, Kanowna was previously known to old miners and prospectors as the "White Feather," and was at one time an alluvial field of some importance. It attained much prominence in 1898, when the output of alluvial gold from the deep leads was very considerable. Following on the alluvial deposits reefs were discovered, and several companies were organized for working them. There is a peculiar feature in connection with mining in this district in the form of a "clayey" deposit known as "pug," richly impregnated with gold, but which forms a difficult extraction problem.

The township is lit with electric light, and the comforts of civilization are not wanting, though a good deal of its ancient glory has in a measure departed. There is a telephone exchange, and the post and general services are up to date and efficient.

KANOWNA.

The Government hospital has accommodation for seventy-five patients. The religious life is well represented, and is strong and vigorous, there being several churches. The population of Kanowna within a five-mile radius is a little over 1,000.

About 15 miles south of Kanowna and 20 miles east of Kalgoorlie is situated the mining township of Bulong, to which there is communication by coach daily. It is a pretty little town, the streets and footpaths being well made and kept. Ornamental trees are planted on both sides of the streets. The natural bush and timber

surrounding the town have been preserved, giving the place a rural rather than a mining appearance. The township possesses a post and telegraph office, a Government hospital, miners' institute, three hotels, and a brewery. Population 550, within a five-mile radius; and of the town, 157.

JOHN LOUIS MARTIN, J.P., Mayor of Kanowna, was born at Yandoit, near Newstead, Victoria, on April 11, 1868, and is a son of the late Henry Martin, farmer and merchant, of that place. He received his education at a public school in his native village, with a finishing course in Melbourne, and at the termination of his studies became connected with the railway department of Victoria, rising to the

J. J. Dwyer, Kalgoorlie.  
MR. JOHN LOUIS MARTIN.

position of stationmaster before severing his connection with the department in 1894. Arriving in Western Australia during the latter year he turned his attention to the mining industry at Kanowna, being one of the pioneers of that field, where he suffered many hardships and privations in common with other early prospectors in the district. He is now looked upon as the oldest resident of the town which, from the first, he has made his headquarters, whilst following the "rushes" to all parts of the eastern goldfields as they occurred from time to time. Finally, settling down at Kanowna in 1902, he erected a crushing battery for his own use and also for public crushing purposes, and in addition to this venture is also interested in several mining propositions in the district. He takes keen interest in the public

welfare, and for ten years past has been identified with the local governing bodies, i.e., the roads board and subsequently the municipal council, in 1910 being elected to the mayoral chair, and again in 1912. Mr. Martin is a Past Master of the Golden Feather Lodge of Freemasons, a Mark Mason, a Royal Arch Mason, and an officer of the Goldfields District Grand Lodge of Western Australia. The local hospital also claims a portion of his interest, and he holds office as a member of the committee of this institution. He married in 1900 Leila Marion, daughter of the late Ernest Wallace, of Sydney, and has one son and three daughters.

Councillor WILLIAM ADOLPHUS WYATT, who represents the ratepayers on the Kanowna Municipal Council, was born at North Adelaide, South Australia, on November 27, 1858, and is a son of the late William Wyatt, one of the early pioneers of the Central State. He was educated principally at the scholastic institution conducted by Messrs. Nesbit & Drew, and upon the conclusion of his studies became apprenticed to the trade of carpenter and joiner. Having followed his calling for a few years in his native State, in April, 1894, he came to Western Australia with the intention of proceeding direct to the eastern goldfields. With others, however, he was debarred by the authorities from going farther than Southern Cross, the scarcity of water on the fields being attended with considerable loss of life. At a later period, upon the discovery of the Wealth of Nations and Londonderry Mines, he carried out his original intention, and upon this occasion, with his wife, walked from Southern Cross to Coolgardie, where, soon after arrival, both were stricken down with typhoid fever, contracted in Mrs. Wyatt's case from attendance upon the suffering prospectors who had preceded them. In the early part of 1895 they removed to Kanowna—Mrs. Wyatt being among the first five women to proceed thither—and opened the Federal Hotel, then known as the Oxford Saloon; and in August of the same

year Mr. Wyatt was one of the fortunate prospectors to own an interest in the General Gordon and General Gordon Extended Mines. He was present at nearly all the "rushes" that have occurred on the eastern fields, and besides actively participating in the work of prospecting has supported the mining industry by assisting in the sending out of prospecting parties, chiefly on the North-east Coolgardie field, around Kanowna. He still continues the conduct of the hotel, and since taking up his residence at Kanowna has furthered the interests of the district in every possible way. With a short break he has been a member of the municipal council since within two years of its foundation, and he was one of the founders of the Druids' Lodge at

J. J. Dwyer, Kalgoorlie.  
MR. WILLIAM ADOLPHUS WYATT.

Kanowna; while his wife, who was looked upon as the mother of the town, took a leading part in the affairs of the local hospital in earlier days. Always fond of outdoor sport Mr. Wyatt, prior to his advent to this State, was known as an inter-colonial footballer, as far back as 1878 playing for his State against Victoria; while he was one of the crew to win the eights in Adelaide in the year 1894. Mr. Wyatt has a family of two sons and one daughter.

Councillor ARTHUR WHITWORTH, who represents the rate-payers on the Kanowna municipal governing body, was born at Oldham, Lancashire, England, on February 28, 1866, his father being the late Robert Whitworth, of that place. At the close of his education, when eleven years of age, he took a commercial position in Manchester, but relinquished this line of business in favour of railway construction work, being engaged in the fitting department of the Newton Heath Railway Workshops. Some years later he worked his passage to Queensland, where he joined his brother in the mineral waters manufacture for about six years, in 1892 coming to Western Australia. Here he was employed as foreman in Messrs. Donaldson's mineral waters factory at Perth, subsequently finding his way to the eastern goldfields, doing the journey from Southern Cross to Kanowna on foot. At the latter place Mr. Whitworth, in conjunction with the late John Muller, opened in the bakery business and worked up a thriving trade, eventually conducting the most important business of its kind in Kanowna. A keen supporter of the mining industry he gave a considerable amount of time to prospecting, personally sinking shafts and financing various enterprises which did not always prove successful. Having sustained somewhat serious losses in this way he turned his attention once more to the manufacture of mineral waters, and has continued successfully ever since. Mr. Whitworth is interested in real estate and owns the Commercial Hotel in Kanowna. He was returned as a member of the local municipal council some years ago and has since served continuously on that body. He is an advocate of outdoor sport, and is well known in connection with local football events. He married Lily, daughter of Mr. J. Frederick, of Hay Street, Perth, and has five children.

Councillor HENRY NELSON WILLIAMS, Town Treasurer to the Municipality of Kanowna, was born near Bega, New South Wales, on May 20, 1870, and is a son of Mr. John Williams, farmer and grazier, of that place. He pursued his primary studies in public schools in his native State, and after a finishing course under private tuition entered upon business pursuits in Bembooka,

New South Wales. For five years he was identified with the firm of Messrs. Finn Brothers, general merchants, of that town, and in 1893 resigned this connection and came to Western Australia at the time when the financial crisis in the Mother State sent the more adventurous spirits far afield in search of more promising pastures. His intention was to settle on the land, but upon arrival he changed his mind and opened a produce business in Perth, which, however, shortly afterwards he sold in order to test his fortune on the newly discovered eastern goldfields. Accordingly he established himself in Bulong as a draper and soft-goods merchant, and conducted this business for about three years, but a fire completely destroying his premises he was reduced to making another start. For a time he acted as manager of a branch business in Kanowna for Mr. John R. Saunders, and eventually took over this concern on his own behalf in 1909, and has carried it on ever since. Mr. Williams was elected a

J. J. Dwyer, *Kalgoorlie.*  
MR. HENRY NELSON WILLIAMS.

member of the local municipal council in 1905, and has served as councillor, with a break of one year, ever since. When first returned he held the post of town treasurer until his retirement in 1909, and during the present year (1912) has again been appointed to that office. He is connected with almost every public or semi-public body in the town, is chairman of the hospital committee, chairman of the district school board, and treasurer of the library

and reading-room, while every movement for the advancement of the place meets with his cordial support. Mr. Williams married in 1900 Edith Mary, daughter of the late John Holt, well known in the mining industry of Victoria and this State, and has three daughters and one son.

Councillor FRED PARTRIDGE, member of the Kanowna municipal governing body, is a son of Mr. S. D. Partridge, of Ballarat, Victoria, who was one of the earliest colonists

J. J. Dwyer, *Kalgoorlie.*  
MR. FRED PARTRIDGE.

of that State. Educated in the latter city, upon leaving school Mr. Partridge entered commercial life, and was associated in turn with several business houses, transferring his services as the opportunity of promotion presented itself. In 1901 he came to Western Australia, and upon arrival joined the well-known firm of Messrs. Sandover & Co., of Perth. Shortly afterwards he came to Kanowna and engaged in mercantile pursuits, in 1902 accepting a post as assistant to Mr. McCabe, storekeeper, of that town. Within a brief period Mr. Partridge was admitted into partnership, and at the end of 1907, when Mr. McCabe left the goldfields, he took over the business, and has since carried it on on his own behalf. Since coming to Kanowna he has been prominently identified with the public life of the place, and in 1910 was returned as councillor to the local municipal chamber, which office he still holds.

He has filled the post of chairman of the hospital committee, in which body he has served for five years, and has taken a leading part in the rifle club movement on the goldfields, being captain of the Kanowna Rifle Club, the secretarial duties of which were in his hands for a considerable period. He is connected with the Kanowna branch of the Ancient Order of Druids, and proved himself a most capable organizer in the capacity of secretary of this lodge. Social, sporting, and charitable organizations alike command his ready support and sympathy, and there are few better-known citizens in the district. Mr. Partridge married in 1909 Mary, daughter of Mr. Quigley, formerly a well-known resident of Bulong, and has two sons.

JOHN CABLE, J.P., General Chairman of the Kanowna Roads Board and member of the firm of Messrs. Cable, Lardner, & Jones, of Kanowna and Kurnalpi, was born at Beaufort, Victoria, on October 28, 1861, and is a son of the late James Cable, a well-known identity on the goldfields of Australia and California. He received his education at Talbot, in the Victorian State,

J. J. Dwyer, Kalgoorlie.  
MR. JOHN CABLE.

and upon leaving school followed in the footsteps of his father, prior to his advent to Western Australia spending many years on the mining fields of the eastern portion of the Island-Continent. In 1886 he took passage for Fremantle, his intention

being to prospect the mineral wealth of this State, and in pursuance of this object—with which he combined commercial pursuits as opportunity permitted—he has been identified with every goldfield in Western Australia from the Kimberley to Kurnalpi. In 1901 he came from the latter place to settle in Kanowna, where he immediately established himself in business on behalf of his firm, which, under the title of Messrs. Cable, Lardner, & Jones, general storekeepers, has become well known at Kanowna, Bulong, Raddalls, and Kurnalpi. Upon taking up his residence in the town Mr. Cable began to interest himself in the public affairs of the community, and at an early period was elected to the office of councillor of the municipality, in which capacity he acted for some time. Subsequently he was returned as a member of the Kanowna Roads Board, and has served continuously on this body for the length of a decade, being the present chairman of the board. He received his Commission of Justice of the Peace from the Forrest Administration in 1898. He is a keen supporter of the mining industry throughout the district, aiding in the promotion of prospecting parties, etc., and in addition to his other interests has devoted a share of his attention to the breeding of blood and draught horses on a pastoral property which he owns at Kurnalpi. Mr. Cable married in 1897, in the City of Buffalo, U.S.A., Ellen, daughter of the late John Lardner, of Lockport, and has five sons and three daughters.

JAMES MCINTYRE, proprietor of the Kanowna Brewery, was born at Ballymenagh, County Londonderry, on March 17, 1863, and is a son of the late William McIntyre, farmer and contractor, of the same place. He received his education at the National School in his native town, and at sixteen years of age became connected with his father in the contracting business, also giving a portion of his time to work on the home farm. Upon attaining his twenty-fourth year he emigrated to Victoria, where he turned his attention to contracting on his own account, and continued in this line of trade until he was drawn into the general exodus from the Eastern States to Western Australia in 1894. For over a year he engaged in the

work of prospecting, and about the end of 1895, having been offered a position in Hannan's Brewery as cooper, devoted his spare time to learning the method of brewing under the late Daniel Langford, then chief brewer at that establishment, who afforded him an insight into the business which has since proved invaluable to him. Upon leaving Hannan's Brewery Mr. McIntyre was identified with several similar concerns in turn, and this way gained an extensive knowledge of the different methods employed with success. In 1898 he opened on his own behalf a brewing establishment at Bulong.

J. J. Dwyer, Kalgoorlie.  
MR. JAMES MCINTYRE.

and during the halcyon days of that district for eleven years commanded all the trade of the place. In 1909 he purchased the Kanowna Brewery—the only establishment of its kind in the town—and ever since has successfully carried on business, the brewery being managed on up-to-date lines, and both brewing and management being in the hands of the proprietor. Mr. McIntyre has found time to take an interest in public affairs, and while resident at Bulong served for some years as municipal councillor, besides being a member of the hospital committee and other useful organizations. For a lengthy period he took a keen interest in rifle shooting, and occupied the position of captain of the Bulong Rifle Club for three years. In 1901 he married Katherine Matilda, daughter of the late John Coen, farmer, of Galway, Ireland, and has six sons and one daughter surviving.

**RICHARD BAUGH, A.P.S.**, pharmaceutical chemist, Kanowna, is a native of Llanymynech, Wales, where he was born on January 29, 1865. He is a son of the late Richard Baugh, a farmer of the same place, and received his education locally and under private tuition at Oswestry, Shropshire, subsequently passing through a collegiate course in Carnarvon. He pursued his professional studies under Dr. Muter at the South London College of Pharmacy, and after completing his apprenticeship and taking his diploma from this institution accepted a position as assistant in Kingston-on-Thames,

MR. RICHARD BAUGH.

where he remained for about two years. In 1887 he proceeded to Dublin, where he filled a responsible post in the famous firm of Messrs. Hamilton, Long, & Co., chemists, and afterwards was identified in a position of trust with Messrs. John Evans and Co., of the same city. At a later date he gained a wide experience in the drug and pharmacy trade in Ireland as dispenser in the Government Service to the Irish Prisons Department, which was supplemented by a couple of years in the profession in London. In 1893 he took passage for New Zealand, and after spending less than a year in the Dominion arrived at Coolgardie, Western Australia, towards the end of 1894. For awhile Mr. Baugh abandoned his profession in favour of prospecting, but not meeting with success in his endeavours opened a pharmacy at Kanowna in partnership with Mr. Owen Evans, in conjunction with whom he carried on business until

1900, when the connection was severed, and Mr. Baugh has since conducted operations on his own behalf. He has taken a leading part in the life of the town, and was one of the original managers of the Caulfield Memorial Library, in which he held office for some considerable time. He was a member of the first municipal council, and after a lapse of some years was again elected in 1901 to represent the ratepayers on this body. He has been connected with the management of the local hospital, serving on the committee, besides acting as dispenser for four or five years. He is a member of the Masonic fraternity, an honorary member of the Lodge of Foresters, and interests himself in the Kanowna Rifle Club, his favourite form of recreation being wild duck shooting. In 1904 Mr. Baugh married Maud Elizabeth, daughter of the late Mr. Patrick Shiels, a well-known bank manager of Melbourne, Victoria, and has two sons.

**HARRY ROWE TAYLOR**, Kanowna, was born at sea, in the Bay of Bengal, on the sailing vessel "Clydesdale," on December 23, 1864, being a son of the late Francis Taylor, of Kent, England, who followed the calling of a master mariner. He pursued his educational studies in Dublin, and upon leaving school entered upon marine pursuits as apprentice in the "Liverpool," a boat belonging to the line of Messrs. Sinclair & Co. He followed a seafaring life for sixteen years, at the end of which period he was attracted to Western Australia by the widespread report of gold discoveries on the eastern fields, having previously spent two years as chief mate on board the revenue schooner "Meda" sailing round the north-west coast. Upon arrival at the goldfields he began dryblowing at Hannan's Six-Mile, but meeting with but small reward for his labours continued his journey to Kanowna, where he became engaged in reefing, working leases with a couple of mates. Since that period Mr. Taylor has been a consistent supporter of the mining industry, continually testing his fortune as a prospector and giving financial assistance to various parties in their search for the precious metal. Among these may be mentioned Messrs. Routledge and Graham, who met with such brilliant success in the discovery of the rich patch of

indicator gold at Kurnalpi, on which nearly 1,100 oz. of gold were recovered in three months, its value being over £4 per oz. Mr. Taylor is the proprietor of the Railway Hotel at Kanowna. He is a member of the Masonic craft, having joined the fraternity nearly a quarter of a century ago. He married in 1896 Myra, daughter of the late Henry Lloyd, late of Fremantle, an engineer in the railway department of the Government service.

**ALEXANDER CAIRNDUFF**, fancy-goods dealer and tobacconist, Kanowna, was born at Hobart, Tasmania, on January 20, 1873, and is a son of the late Rev. Alexander Cairnduff, M.A., who filled the office of a Presbyterian clergyman in the above city for nearly forty years. The gentleman under review was educated in his native place, and at the close of his scholastic career proceeded to Victoria, where he became engaged in the postal department of the Civil Service for some years. Eventually he came to Western Australia, and upon arrival at Kanowna in 1896 turned his attention to prospecting, and ever since has maintained an interest in the mining industry, supporting with financial

J. J. Dwyer, Kalgoorlie.  
MR. ALEXANDER CAIRNDUFF.

assistance almost every lead discovered in the district. Success, however, followed his efforts in only a limited degree, and within a year of his advent to the field he opened in business as a fancy-goods dealer and tobacconist, and has continued

with satisfactory results in this line of trade. Mr. Cairnduff has interested himself in the public institutions of the place, and for a considerable time served the community as a member of the committee of the local hospital. He is a member of the

Foresters' Lodge at Kanowna, and has filled the office of treasurer of that body. In matters of sport he has been prominent, acting as secretary to several athletic clubs, including the cricket and football organizations, whilst as a runner he attained

to considerable success on the eastern goldfields. Mr. Cairnduff was married in the year 1903 to Caroline, daughter of the late Francis Murphy, of Bendigo, Victoria, and has a family of two sons and three daughters.

### BROAD ARROW, MENZIES, AND MALCOLM.

The township of Broad Arrow is situated about 25 miles north of Kalgoorlie, on the Kalgoorlie-Menzies railway line. The town was once the scene of very extensive alluvial operations, and there was a very large population of miners working in the immediate vicinity. For several years, however, a depression has existed, but there are signs of returning prosperity. The water supply of the township is mainly obtained from the Government dam, which has a capacity of 10,000,000 gallons. The affairs of the little community are looked after by a roads board and local board of health, and the population is about 280.

About two and a half miles south of Broad Arrow is situated the small mining township of Paddington, of which the population is about 220. There are several mines in the vicinity, the principal being Paddington Consols and Star of the West.

Continuing the journey northward from Broad Arrow along the Kalgoorlie-Menzies railway line, the small mining township of Bardoo is reached about eight miles northward of Broad Arrow. The situation of the township is very healthy, and is surrounded by hills. The township is not, however, dependent alone on mining for its existence, as from the hills in the immediate vicinity large quantities of sandalwood are obtained. It contains the usual post and telegraph services, and comfort and entertainment are not lacking. A Huntington mill has recently been erected on the old Zoroastrian Mine, and a revival of mining is confidently expected.

Menzies, the principal town of the North Coolgardie goldfield, is situated 80 miles north of Kalgoorlie, and distant 467 miles by rail from Fremantle. The town is named after L. R. Menzie, who discovered a reef and applied for a lease which has since developed into the Lady Shenton Mine. It is claimed that the first gold was unearthed in this portion of Western Australia at Ullaring by James Speakman some months prior to Bayley entering Coolgardie, and that records are extant of his having reported the fact to the warden at Southern Cross. The news of the Menzies discovery speedily attracted people to the spot, but the difficulties with which earlier comers had to contend were very great. Food supplies ran out, water was not obtainable in any quantity, and tales of hardship heroically endured were common. However, these difficulties did not deter the hardy pioneer, and the forerunners of commercial

enterprise were not lacking. The amelioration of these conditions was only a matter of a very short time, and soon both water and other supplies were procurable, though, as might have been expected, the cost was commensurate with the labour. In February, 1895, the goldfields warden visited the field, and having settled the locality of the townsite commenced to issue the necessary licences for business and residence areas, and settlement proceeded apace.

In December of the same year the first Government land sale was held, and the aggregate amount realized was £25,555. The prosperity of the township now seemed secure, and stores, hotels, and public buildings were soon erected. As was the case in many previous mining "rushes," the inevitable progress committee made its appearance, one of the first members being the Hon. H. Gregory, now member for Coolgardie in the Federal House of Representatives. A significant feature was the fact that Mr. Gregory's defeated opponent, Mr. Hugh Mahon, the same month issued the first copy of a newspaper in the new community. On December 20, 1895, Menzies was proclaimed a municipality, and on January 20, 1896, the council, consisting of a chairman and six members, was elected, Mr. Gregory gaining the distinction of being the first chairman. Menzies continued to progress by leaps and bounds, and the population increased similarly. The natural effect of this impetus was that the municipality was granted increased representation, the council being granted the status of a corporation with a mayor and nine councillors. Mr. Gregory filled the first mayoral chair, and extended functions were granted to the council by creating it a local board of health with jurisdiction for some distance outside the boundaries of the municipality. An agitation commenced for the extension of the railway to Menzies, the mining having grown apace—not only were there many mines in full working order, but the number of small "shows" appeared innumerable. The railway was granted and the contract at once let, the line being opened for traffic on March 21, 1898. At the dawn of the twentieth century Menzies was a town of fair appearance and of some magnitude. It is situated on a plain and partially surrounded by small hills, which are the scene of the mining operations. The town is well laid out on the rectangular principle, the streets are wide, and the principal business houses are substantially built of brick

and stone. At the end of December, 1900, the capital value of rateable property was £87,062, the annual value being £19,635, and the revenue derived from all sources totalling nearly £5,000. The town hall is a fine building situated at the south end of Shenton Street. It comprises a suite of offices, a large and well-appointed council chamber, a public reading-room and a circulating library. There is a large hall adjoining capable of seating 500 people, and with a well-constructed and equipped stage. At the present time Menzies has allowed its municipal privileges to be withdrawn, the decline of mining in recent years rendering it almost impossible to carry on as a distinct municipality, and it is now the centre of Menzies Roads Board district. However, the town is again making rapid strides, and it would appear that much of its previous prosperity and population may return. One of the greatest boons is the public battery, and much valuable machinery has been obtained for the proper working of the mineral leases. There are a host of small payable shows in the district, and at present the outlook is very satisfactory. The water supply for the district is conserved in a Government dam, which has a holding capacity of 3,000,000 gallons, whilst another tank with a capacity of 8,000,000 gallons supplies the

mines. The population of the town is 716, and of the surrounding district 9,000.

About midway between Menzies and Mount Malcolm there is a very promising goldfield called Niagara, which of recent years has given a definite assurance of being a fairly permanent field. A State battery has been installed in the vicinity, and the small "shows" can be profitably worked. The post and telegraph arrangements are up to date and efficient, and a Government school has been established at the centre. The population at present numbers about 150.

The township of Malcolm is situated about 170 miles north-north-east of Coolgardie, and 66 miles from Menzies by rail on the main line which extends from Kalgoorlie to Laverton. The township is on the Mount Margaret goldfield, and is the railway junction for Gwalia and Leonora in the west and Morgans and Laverton in the east. It is well supplied with hotels, having four to a total district population of about 400. There is a public works station (architectural division) at this point, post and telegraph offices, police quarters, Government hospital, and a town hall, and, being a railway junction, it has a certain importance not altogether borne out by the value of the place itself.

### LEONORA.

Leonora is an important municipality and township in the Malcolm district of the Mount Margaret goldfield, and is named after a mountain of that name a short distance from the town. It is centrally situated on the field, and its history may be said to date from 1896, when it was virtually founded by a party headed by Sullivan and Weddeck, who first discovered the reef there, though prior to that other prospectors had been conducting operations for some time but without result.

The first mine was named the Johannesburg, and though the surface proved rich it was subsequently found to be too low grade for payable results. The discovery of other reefs, however, followed very quickly, and miners

and business men flocked to the field, and the opening of the Sons of Gwalia Mine some two miles distant from Leonora set the seal of permanency on the new field.

Soon after settlement commenced at Leonora a progress committee was elected, and it controlled the direction of public matters for a fairly lengthy period. The increase of population, however, necessitated the constitution of a body endowed with wider powers, and after some delay and a considerable amount of agitation the

LEONORA.

town was gazetted a municipality in August, 1900. Even at this early stage of the township's history the first view of the locality impressed the beholder with an idea of solidity and prosperity, for many of the buildings

HHH

were, for such an outback settlement, distinctly imposing. The distance by rail from Kalgoorlie is 130 miles, and the presence of the railway allows for rapid communication with this centre of the eastern goldfields. The township is connected with Gwalia by municipal electric tram, and electric lighting, also a municipal venture, is a feature of the place. Practically the terminus of the eastern goldfields railway, though a branch line still extends for some considerable distance from Malcolm to Laverton, it is also the centre of a number

of most important mining propositions which lie within a radius of five miles. The usual Government buildings and police quarters are supplemented by a warden's court, and the township possesses several very healthy commercial emporiums, besides seven hotels. A splendid supply of fresh water is brought from Station Creek, eight miles distant. The town is thoroughly reticulated, the water pressure being 90 lb. to the square inch. The population of the municipality is 1,250, and of the surrounding district 2,480.

JOSEPH CURTES SEMKEN, J.P., Chairman of the Water Board of Leonora, was born at Brighton, Victoria, on September 12, 1859, and is a son of the late William James Semken, builder and contractor, of that place. Upon leaving school at an early age he entered upon commercial life in a drapery business at St. Kilda, Victoria, and a year later became apprenticed to the carpentry trade under his father, who followed that calling. Having completed his term of training he worked as a journeyman for about five years, and for some time acted as foreman for the late Henry Cheel, a well-known building contractor, of Melbourne. At twenty-eight years of age Mr. Semken started as a contractor on his own account, and for many years pursued a successful career in Melbourne and its suburbs, being responsible for the erection of many of the leading structures in the metropolis and its vicinity. At the time that the eastern goldfields had been proved, and the boom was at its height, in the year 1895 Mr. Semken came to Western Australia, and upon arrival at Coolgardie accepted a position as foreman for the firm of Messrs. Reid and Rowe, builders and timber merchants, which post he retained for about a year. Subsequently he came to Menzies and began operating in a business way on his own behalf, selling out after three years and returning to the coast. For a couple of years he conducted an undertaking establishment at Fremantle and Subiaco, and in 1900 came to Leonora to open in the same line, with which he combined business as a builder, relinquishing this branch of trade after a time in order to establish livery stables, which he still carries on. After twelve months' residence Mr. Semken was elected to a seat in the municipal council, retiring shortly afterwards in order to contest the office of mayor, which he held for three

terms. During this period he used every effort (and with his council was successful) in securing Government assistance to replace the old steam tram service by electric traction, and also in having the town lighted by electricity. About this time, also, the Leonora water scheme was inaugurated at a cost of over £20,000, and upon the inception of the water board in 1907

over 200,000 gallons. Mr. Semken was granted a Commission of the Peace in 1905 by the Moore Government. He married in 1880 Mary, daughter of the late William Holdsworth, of Windsor, Victoria, and has four sons and one daughter.

Chas. Wilson,

Leonora.

MR. JOSEPH CURTES SEMKEN.

Mr. Semken was elected chairman, which office he has since retained. The Board is composed of two representatives nominated by the council, two by the Mines Department, one by the Government, and one by the Mount Malcolm Roads Board. The town water supply is drawn from wells situated about eight miles from Leonora, and from it 110,000 gallons are supplied daily to the Sons of Gwalia Mine, other mines in the district also being provided for. The plant includes the latest type of gas-producer, and 4-in. pipes lead to the reserve tanks, which have a storage capacity of

LESLIE NORMAN ASHE, Secretary of the Leonora Water Board, was born at Moonee Ponds, Melbourne, Victoria, on August 22, 1886, and is a son of the late John Henry Ashe, well known in racing circles in that State. He pursued his scholastic studies at public schools in Melbourne, completing his education at the South Melbourne College and Working Men's College, Melbourne, subsequently entering the Broken Hill School of Mines, where he took a course in engineering. In 1908 he came to Western Australia and joined the staff of the Western Australian Bank at the head office at Perth, at a later date being transferred to the Leonora branch of that institution. Resigning from the bank service Mr. Ashe became identified with the mining industry, and was employed for some time in the Tower Hill Mine at Leonora, afterwards entering the fitting shop of the Sons of Gwalia Mine. Upon the resignation of the former secretary of the water board (Mr. E. L. Wright) the post was offered to Mr. Ashe, who accepted it, and has since carried out its duties. These practically comprise all the details in connection with the management of the scheme, the whole of the administration under the guidance of the board being in the hands of Mr. Ashe. Outside of his official obligations he makes a hobby of engineering and model making, devoting the whole of his leisure time to this fascinating pursuit. He is also a great reader—Shakespeare and Tennyson being his favourite writers. He married in

1911 Grace Marjory, daughter of the late Mr. Dodds, of Queensland, and has one daughter. It is interesting to note that Mr. Ashe's grandfather, the late Benjamin Bartley, was a well-known Victorian pioneer, who settled in Chiltern, and having amassed a considerable fortune was able to devote much of his time to the service of the community, and filled in turn almost every important public position in the district for over half a century.

Councillor VICTOR FRANKLIN VINCENT, member of the Leonora Municipal Council, was born at Glen Innes, New South Wales, on September 18, 1877, and is a son of the late Arthur Edward Vincent, journalist, of New South Wales, proprietor of some of the well-known early country newspapers of the Gwyder and New England districts of that State. He was educated at Moree, and while still quite a lad began active life in a lawyer's office in Sydney, being at that time intended for the legal profession. He remained in the same office for nearly seven years, and in 1897 came to Western Australia. Upon arrival at Fremantle he

up this connection to accept the post of accountant to the Weld Hercules Gold Mine on the Murchison

Chas. Wilson, Leonora.  
MR. VICTOR FRANKLIN VINCENT.

field, near Cue. Upon the closing of the mines he took a temporary post in the Mines Department at Mount Magnet, this centre being the headquarters for the dispatching of goods and general supplies throughout the

turned towards Leonora upon the completion of the railway line to that town. The business was then transferred to the newer centre, and Mr. Vincent has since conducted operations at that place, and in 1906, upon the retirement of Mr. Field from active commercial pursuits, took over the sole control and ultimately the proprietorship of the store, which is the most thriving concern of its kind on the North Coolgardie and Mount Margaret goldfields. Within the past five years Mr. Vincent has found time to devote to public affairs, and prior to his election to the municipal council was well to the front in matters affecting the welfare of the community. He is a member of the Leonora Water Board, president of the A.N.A., in which body he has always taken a deep interest. He is a warm supporter of organizations for the purpose of recreation, and as an athlete has displayed more than average merit. He is fond of literature, his taste tending chiefly in the direction of Australian poetry. Mr. Vincent married in 1899 Ethel (now deceased), daughter of the late Richard Williams, of Whittlesea, Victoria, and has two sons and one daughter.

Photo by Chas. Wilson.

PREMISES OF MESSRS. JAMES FIELD & CO., LIMITED, LEONORA.

entered the service of Messrs. Dalgety and Co. as shorthand writer and corresponding clerk, resigning after six months in order to join the Government Service in the Public Works Department on the Murchison goldfield. Two years later he gave

HHH2

East Murchison district. Here he became associated with Mr. Field, the principal merchant of the place, and was offered the position of manager of the business, which he continued to carry on at Mount Magnet until the main trend of traffic

JOHN McCALL, L.R.C.S. (Edin.), District Medical Officer, Leonora, is a son of Sir John McCall, Agent-General in London for Tasmania, and was born at Ulverston, on the north-west coast of the latter island on June 5, 1884.

He received his primary education at Officer College, Hobart, whence he proceeded to Scotland and pursued his medical studies at the University of Glasgow and Anderson's Medical School in the same city. He received his diploma from the University of Edinburgh in 1909, and subsequently spent a considerable time in various hospitals in the chief centres of the Old Country. Returning to Tasmania he acted as assistant in his father's practice until 1910, when he accepted the position of district medical officer at Kanowna, and carried out the duties attached to that post until he was offered that of medical officer to the Gwalia medical fund at the Sons of Gwalia Mine at Leonora, which he filled until October, 1912, when he was appointed to his present position. For a considerable time he has made a special study of diseases of the nose and throat, having had special opportunities for the observation of these diseases while walking the hospitals in England. He has also specialized in the study of gynæcology, and keeps well abreast with modern ideas in medicine and surgery by the perusal of a wide range of medical and scientific works. Dr. McCall during his college days represented his college in Rugby football, and was also a fair exponent of the art of self-defence.

**WILLIAM LEONARD BOYD**, J.P., proprietor of *The Leonora Miner* newspaper, was born at Beechworth, Victoria, on June 24, 1870, and commenced his career as a journalist on the staff of *The Rutherglen Sun*. He was next identified with *The Corowa Free Press*, where he passed through every department of a newspaper office, rising from compositor to the head of the reporting staff. In 1896 he came to Western Australia, and after occupying a position on the mechanical staff of *The Murchison Times* for a year, purchased a plant, and in November, 1897, issued the first number of *The Malcolm Chronicle*, which publication he carried on for eight years. For a considerable time he edited *The North Coolgardie Herald*, which he relinquished to take over *The Leonora Miner* (started by Mr. W. H. Barker on July 8, 1899), and has conducted this journal ever since. Mr. Boyd was elected a member of the first

municipal council at Malcolm, and subsequently served in the same capacity at Leonora for four years, and has always taken a leading part in all movements for the advancement of the district. He was appointed to the honorary bench of magistrates by the Wilson Government in 1910. He was married in 1899, and has one son and two daughters.

**JAMES HENRY MARKS**, barrister and solicitor, Leonora, was born at Wellingrove, New South Wales, on July 28, 1873, and is the eldest of the eight sons of the late T. H. Marks, general merchant, of Mudgee, New South Wales. Educated at Newington College,

MR. JAMES HENRY MARKS.

Sydney, at the termination of his scholastic career he entered into articles with the professional firm of Messrs. Laurence & Rich, of that city, and was admitted to practise as a solicitor in New South Wales on August 22, 1896. After varying periods of practice in Berrigan, Sydney, and Bombala, Mr. Marks left his native State for Western Australia in August, 1902, and in the following year was called to the Western Australian Bar. He immediately proceeded to Cue, where he remained for over a year, at the end of which period he returned to Perth for a short time, before coming to Leonora in 1906. Since that time he has practised on "the edge of the beyond," his *clientele* extending for hundreds of miles into the back country, besides which he acts as

solicitor to the Gwalia Central Gold Mines, Limited. Mr. Marks is a man of public spirit, and in pre-Federal days was prominent in the Mother State for the active interest he took in the important events leading up to the establishment of the Commonwealth of Australia. He is president of the Leonora Club, and is connected with the Masonic craft, being a Past Master and Secretary of Lodge 64, W.A.C. He is a cordial patron of all forms of clean sport, and in particular is an active participant in the game of cricket. In the year 1908 Mr. Marks was married to Gertrude Marion, daughter of the late George Cruickshank, pastoralist, of "Gunningrall" Station, Bombala, New South Wales, and has one son.

**SYDNEY FRANCIS BRIDGE**, J.P., ironmonger, Leonora, was born at Ramsgate, Kent, England, on May 2, 1869, and is a son of the late William Simmonds Bridge, architect, of that city. He received his education at St. Peter's Grammar School at Broadstairs and at the Grocers' Company School in London; at fourteen years of age entering commercial life by joining the London office of the well-known Australian firm of D. and J. Fowler, Limited, wholesale merchants, in which service he remained for four years. At the termination of this period he became connected with the business of Messrs. Henry Berry & Co., tea and coffee merchants, and continued in this employ until he decided to come to Australia in 1889. Landing in South Australia he joined his brothers in a business partnership at Mount Lofty, and three years later, upon the rush to the eastern gold-fields, sailed for the Western State. Almost immediately he began work as a prospector over the Coolgardie and Murchison fields, and followed this industry for more than eight years, during which time fortune divided her favours, periods of success being balanced by a run of "bad luck" in which everything would seem against the worker. In 1897 Mr. Bridge joined the firm of Messrs. Rockcliffe & Co., merchants, then trading at Kookynie, Niagara, Menzies, and Leonora, and subsequently he was appointed manager of the Niagara branch of the business. Being transferred from there to Leonora, at a later date he took over the business on his own account, acquiring the sole interest, and has

since carried on successfully. Mr. Bridge was first created a Justice of the Peace by the Moore Government, but resigned his Commission owing to pressure of business claims being reappointed by the Wilson Administration in 1910, his official duties now including those of the Licensing Bench. He takes a deep interest in the advancement of the Anglican Church, and holds the position of treasurer of the local branch, having served as a committeeman for several years past. Driving and gardening form his chief means of recreation, and he spends most of his leisure time in the bosom of his family. In 1901 he married Florence Elizabeth, daughter of the late Professor Miller-Heimann, of Heidelberg University, Germany, and the University of Adelaide, and has one son and two daughters.

**HERBERT GEORGE WEBB**, proprietor of the White House Hotel, Leonora, was born at Adelaide, South Australia, on September 20, 1881, and received his education at Prince Alfred College, in that city. Upon the termination of his scholastic career he came to Western Australia, where his parents had preceded him, the late Mr. Webb having come from Broken Hill to Menzies, where he was established as mine host of the White House Hotel. The subject of our memoir arrived in the State in 1896 and immediately took

up his residence on the eastern goldfields, entering the office of Messrs. Moss Brothers, assayers, of Menzies, under whom he began the study of assaying and general metallurgy. About twelve months afterwards he proceeded to Kalgoorlie, where he continued his studies and served as assistant metallurgist to the Kalgorli

Chas. Wilson.

Leonora.

MR. HERBERT GEORGE WEBB.

Mine, which post he held for upwards of five years, during the major portion of this time doing very responsible work. In 1903 his services were requisitioned by his father, who entrusted to him the management of a

branch hotel at Euro, near Leonora, which he conducted for over a year, subsequently joining the late Mr. Webb in the carrying on of the White House Hotel at Leonora. In 1912, upon the decease of his parent, he took over the business on his own behalf, and has since given the whole of his time and attention to the management of the hotel on the very best lines. The White House is built of brick, and is a one-storeyed structure with lofty and well-ventilated rooms and large, airy hall. An atmosphere of comfort is breathed on every side, and most of the luxuries found in city hotels are provided, the hotel being up to date in every respect. The sitting-rooms, lounges, etc., are replete with every requisite, and one of the largest and best sample rooms in the State has been built to meet the needs of travellers, besides being in frequent use for socials and other festive meetings promoted by the local lodges and other bodies. Mr. Webb is interested in the mining industry, and has given considerable support to prospecting parties and the opening up of new mines, etc., in the past having done a little prospecting on his own account. He is very fond of horses, and takes his recreation in the saddle, generally having a good hack in his stable. He formerly acted as secretary of the local race club, but has taken up few public positions on account of the strenuous demands of his business.

## GWALIA AND LAVERTON.

Two and a half miles from Leonora and about 534 miles from Perth is to be found Gwalia, the most important mining centre north of Kalgoorlie. The township is connected with Leonora by an electric tramway. There is one big mine located at this centre employing about 500 men, and two smaller mines with very good prospects. There is a daily postal service between the township and Perth. The business portion of the town is some distance away from the post office, at what is known as the Gwalia Block. One of the first experiments of the Government as purveyors of liquor is in operation at this centre, and the only hotel in the town is conducted and controlled by the State. The township is supplied with water from wells about nine miles distant, north of Leonora, where a thoroughly efficient plant has been installed by the Government. The population of the district almost equals that of Leonora, reaching over 1,000, and Gwalia is one of the firmest established of mining fields throughout the State.

Although the Mount Margaret goldfields can lay claim to several thriving townships, some of which have gained the distinction of municipal honours, there are few that possess better futures than Laverton, if we except, perhaps, Gwalia and its famous mine. Originally known as "British Flag," this inland mining town on the terminus, really speaking, of the eastern goldfields railway, has been named in honour of Dr. Laver, who has done so much towards the development of the district, and in recognition of the many services he has rendered the locality. When the British Flag prospectors visited Coolgardie to secure the necessary documents they met Dr. Laver and informed him of the new locality, which he decided to visit. When he did he was so impressed with what he saw there that he resolved to remain, and at once secured a personal interest in the British Flag claim, and has, furthermore, by his many investments, proved his personal faith in the field in general. Laverton is the most centrally situated town

in this district, and the registrar's offices have been established here, and the warden's court holds monthly sittings. The township is situated in the centre of a number of mines which are in active operation and employing considerable labour. A State battery has been erected, and is of inestimable benefit to the prospectors and owners of small holdings. The site on which the township stands is a clean and healthy one. The district hospital, which is extensive and thoroughly equipped, is maintained by subscriptions and Government subsidy. It has three large wards and conveniences, with handsome and commodious quarters for the resident medical officer. Laverton, as can be

surmised, is the chief distributing centre of the district and is of some definite commercial importance, and as the area of its ramifications extends from 20 miles south to 120 miles north, a good impression can be gained of its importance. Besides gold mining there is considerable activity in pastoral industries, for which the country is very well adapted. The water in the district is of good quality and easily obtained by sinking, and several market gardens are being successfully cultivated. The hotel accommodation is very good, and though the population of the town and district is at present only a little over 400, the numerous industries will carry a far larger number in the future.

## Along the Midland Line.

The midland railway, the only remaining land-grant railway in Western Australia, was the outcome of a proposal made by Mr. John Waddington in 1884, when Western Australia was trying to secure railway communication at a price then thought to be cheap. The first idea was to run from York to Geraldton, but ultimately it was decided to start from Midland Junction and end at Walkaway, the southern terminus of the Government line from Geraldton. The railway was started by the Midland Railway Company in 1886, but

return for the fulfilment of its contract. Comparatively little alienation of it took place, however, until 1905. In that year the Government decided upon a forward agricultural policy in regard to Crown lands, and the company was not slow to see that there was advantage to the country as well as to itself in bringing the land owned by it under more immediate public notice. That this policy has been successful may be seen in the remarkable development that has taken place during the last few years. Realizing that outside the company's area and

Photo by C. E. Farr.

financial and other difficulties delayed the construction, and it was not wholly opened to traffic until 1894. Though, strictly speaking, the railway is confined between the two termini mentioned, colloquially it is used to denote the whole stretch of country from Midland Junction to Geraldton.

Within the district served by it are large portions of what are geographically known as the Swan and Victoria districts. Extending north and south through a distance of nearly 300 miles the line serves a very considerable area of first-class country. Much of this, of course, was taken by the company in

further to the east there are equal opportunities for successful cultivation, the Government proposes, when opportunity offers, to construct a parallel railway line, some 50 miles from the midland line, connecting Goomalling with Mullewa on the Murchison goldfields line. The first part of this—from Goomalling to Wongan Hills—has already been constructed.

As might be expected over such an enormous area, the characteristics of the soil vary considerably. In the main the country may be said to consist of large sections of undulating land of good quality, interspersed with stretches of sand plain. The good land is excellently

adapted for growing wheat, as the annually increasing yield from the district shows. The average may be assessed as "sixteen-bushel land." Wherever the rainfall is sufficient, fruit-growing may be carried on with advantage, citrous fruits doing particularly well. In some parts, as on the Greenough Flats and around Dongarra, where the soil is heavier, root crops are successful; and even the sand plains are useful for feeding stock during the dry season. In fact, from a pastoral and cereal-growing standpoint, there is little country in Western Australia to excel the belt that stretches from midland to north of Northampton, and runs inland for about 100 miles.

Avenues for industrial development beyond those mentioned are not wanting. Experiments at the Chapman Farm have proved that the Angora goat thrives well in the Victoria district, and those best acquainted with the country are strongly of opinion that there is a great success awaiting anyone with a knowledge of ostrich-farming.

In the neighbourhood of the Irwin River there are

known deposits of coal, said to be of quite as good a quality as Collie coal. One of the seams was opened up and a lease granted by the Government. This was afterwards cancelled, as the Midland Company claimed the title to the land, consequently little work has been done. Probably there will at some later date be an industry in that district comparable with that now being carried on in and around Collie.

From Northampton to Geraldine there is a belt of metalliferous country carrying copper and lead, and extending over about 100 miles of country. In the early days this district was actively worked, and large quantities of lead and copper were exported. The isolated position of the mines and the cost of transit required good prices for the minerals, and for that reason the industry dwindled when prices fell. Later the gold discoveries claimed attention to the exclusion of other forms of mining, but of recent years there has been a slight revival, and there is little doubt that some time in the future the extraction of lead and copper will again become an important industry in the district.

### GINGIN AND MOORA.

Gingin, the first important centre on the midland line, is picturesquely situated on the Gingin Brook, about 50 miles north of Perth. The district is especially noted for two things—its oranges, the excellence of which is known all over Western Australia; and the remarkably fine cattle which are bred and fattened on the rich feed which grows at the foot of the Darling Range. The land is well adapted for ordinary summer fruits as well as citrus varieties, and the plentiful supply of water afforded by the brook makes the growing of vegetables, particularly potatoes, an easy task. The character of the soil is distinctly favourable to the cultivation of cereals, and much is being done in that direction; but from the early days the district has been marked out as cattle country, and grazing is the principal industry carried on. The timber of the surrounding country is mainly banksia and redgum. Wallaby and kangaroo abound there, while the brook affords a home for ducks. To the sportsman, therefore, Gingin offers abundant facilities, and many are attracted to the town. Though situated in one of the older settled districts of the State the town is but small, the population numbering little over 400. It possesses the usual post office, police station, and courthouse, and churches belonging to the principal religious denominations. The local government is in the hands of a roads board, the town not having yet attained the dignity of a municipality.

Some 50 miles further along the midland line from the town of Gingin is situated the thriving town of Moora, the centre of an important pastoral and

agricultural district. Since the Midland Railway Company entered upon a progressive policy Moora and district has made great progress, and there is every indication that it will become the principal town on the midland line. The usual Government buildings have, of course, been erected, and are some evidence of permanence; but the commercial prosperity is better indicated by the fact that the Western Australian and National Banks and the Bank of Australasia have opened branches for the convenience of the settlers. Moora has also attained the dignity of possessing a newspaper, *The Midland Advertiser*, which is published once a week. The local affairs of the district are managed by a roads board, which has its office in the town, while a fine agricultural hall affords the convenience for public meetings and entertainment. The population within a four-mile radius of the post office is about 1,000.

The country round about is undulating in character and the soil varies from red loam to sand. With an average rainfall spread over eight months of the year, the district is admirably suited for wheat-growing as well as for pastoral pursuits, and though stock-raising has been the principal industry in the past, the other branch of agricultural science is rapidly forging ahead.

Some 30 odd miles to the east of Moora on the Victoria Plains is situated the well-known New Norcia Benedictine Mission Station, established by the Roman Catholic Church over fifty years ago, at present probably the most unique and important work of its kind being carried on in the Commonwealth.

JOHN EDWARD WEDGE, J.P., pastoralist, of "Whakea" Estate, Gingin. The gentleman under review was born at Box Hill, Victoria, on June 6, 1857, and is a son of the late Charles Wedge, who came from England to Australia in the early thirties and settled at Hobson's Bay, his profession being that of a surveyor. Removing to Fremantle at an early age Mr. J. E. Wedge attended the scholastic institution conducted by Mr. G. H. Humble at that seaport, this well-known schoolmaster still being a resident of the same place. At the conclusion of his education he proceeded to Shark Bay, where he turned his attention to the pearling industry, and eighteen months later became associated in the same class of enterprise with Mr. A. E. Anderson, of the firm of Messrs. Grant, Harper, & Anderson, of "De Grey" Station, in the Roebourne district, these gentlemen carrying on pearling pursuits in conjunction with their station interests. Eventually Mr. Wedge was employed on the station, where he gained a comprehensive knowledge of all the departments of stock management and other details of station enterprise, and at a later date, in partnership with his brother (Mr. F. A. Wedge) he took up pastoral leases on the Turner River, where he stocked and generally developed the "Cobbalana" Station successfully for about eleven years. At the conclusion of this period he disposed of his share in the property to his brother and spent two years in making a tour of the Eastern States and New Zealand, his object in this trip being to make himself acquainted with the different systems and methods in vogue in connection with the pastoral enterprise to which he has since devoted his energies. In 1894 he returned to Western

Australia, and in 1895 joined the late Charles Harper and John Edgar in the purchase of "Cheriton" Estate, Gingin, which afterwards was subdivided, Mr. Wedge's portion comprising 2,240 acres of beautiful undulating country, which he devotes principally to purposes of fattening

Bartlett,

Perth.

MR. JOHN EDWARD WEDGE.

and raising stock, confining his efforts to the breeding of cattle, horses, and sheep. In conjunction with "Whakea," by which name the estate is known, he also works another property of 14,560 acres freehold which he owns, situated 45 miles north of Gingin, and from this station, called "Mimigarra," from time to time he draws supplies of stock, which are fattened at "Whakea" and subsequently trucked to local markets, where good prices are usually realized. The herd is composed chiefly of the popular shorthorn

strain, and recently Mr. Wedge has been crossing this breed with Hereford bulls with very satisfactory results. A flock of 700 sheep is kept, and the merino ewes crossed with English Leicester rams have proved satisfactory, a special feature being the production of early lambs for the local markets. About thirty horses, including a number of Clydesdales, are kept for the work of the farm, and in addition Mr. Wedge has made something of a hobby of the breeding of a limited supply of blood stock, well-known performers like "Jemidar," "Jesserant," and "Pumice" being representatives of the "Whakea" Estate. The station homestead is a brick building containing eight rooms and presents a very substantial and comfortable appearance, the interior being in no way disappointing. A flower garden has been cultivated in the front of the house, and amid the many favourite blooms which give colour and fragrance to the place special mention may be made of the roses, upon which much care and skill have been expended with enchanting results. An orangery of about four acres in extent also lies in the near vicinity of the house, wherein the trees, although still young, give promise of proving among the best in the district. Mr. Wedge has taken his part in the local public life of the district, and for ten years occupied the chair in connection with the local roads board. He was created a Justice of the Peace in 1897. His religious interests are centred in the Church of England, and he is a synodsmen and warden of the local church of that communion. A keen supporter of all outdoor athletics and manly diversion generally, he is the present president of the Gingin Race Club. Mr. Wedge is a member of the Weld Club. He

"WHAKEA" RESIDENCE OF MR. J. E. WEDGE, GINGIN.

married on October 7, 1896, Isabella Elizabeth, daughter of Mr. W. R. Williams, of Gingin, and has three sons and six daughters.

The late JOHN DEWAR, "Biddaminnie," Gingin, came originally from England to Western Australia by the sailing vessel "Warrior," landing at Fremantle in the early thirties when the colony was only in its infancy. While still quite a lad he was entrusted with the carrying of the mails on horseback between Perth and York by his father, who was mail contractor for that route, and who, in addition to this enterprise, carried on farming pursuits, for which purpose he held on lease certain agricultural areas on the Swan River. After spending some years on the home farm Mr. John Dewar came to Gingin, where he purchased 65 acres of land from the Government, and in conjunction with this leased 209 acres (the property of the late W. D. Moore), which he subsequently purchased, forming the nucleus of a fine

MR. JOHN DEWAR.

estate of nearly 8,000 acres of freehold country, of which he afterwards became possessed as a result of judicious selection of additional area, by means of which he enlarged the original holding. Here he engaged in cattle-raising on a fairly large scale, the herd numbering in the vicinity of 700, which represented the largest enterprise of this nature in the district. A good class of dairy cow, bred for the Indian markets, was a specialty of the proposition,

and dairying was also carried on to a considerable extent in spite of many obstacles to success which beset the pioneer in this industry, such as the carting of produce over fifty-six miles by teams to the city of Perth. Mixed horse-breeding was resorted to with good results and shipments of this class of stock to India were frequent, in those days it being no unusual thing for upwards of 150 head of horses to be grazed on the "Biddaminnie" Estate. Sheep also had their place in the scheme of the venture, the flock numbering upwards of 2,000, chiefly of the merino breed, the wool from which was despatched annually to London, in the course of the eighties, where an average figure of 1s. 11d. per lb. was realized. The demise of the late Mr. John Dewar took place at Gingin on June 25, 1911. WILLIAM FRANCIS DEWAR, second son of the subject of the foregoing notes, is now in possession of a portion of the old estate, to which he has given the name of "Spring Park," and which comprises some of the finest land in the district, where sheep, cattle, and horse-breeding is conducted with conspicuous success. Mr. W. F. Dewar has been connected with affairs of local government, having served for a time as member of the Gingin Roads Board. He was married in June, 1894, to Elizabeth, daughter of Mr. Charles Masters, of Guildford, Western Australia, and has four sons and one daughter.

JOHN O'NEIL, J.P., of Chittering Brook, Western Australia, is a son of the late Mr. John O'Neil, one of the early pioneers of agriculture in the State, who settled at Chittering in 1865. He was born on his father's farm on June 22, 1866, and received his education at the State school on the Swan presided over by Mr. G. W. Logue, subsequently attending a private academy at Guildford. He left school before he was thirteen years old, on the death of his father, and went home to share with his mother the responsibilities of working the farm, which, then an undeveloped tract of scrub, has been brought by his untiring industry into the premier place among such properties in the district. Mixed-farming operations are carried on, cereals being grown, and cattle, sheep, and horses raised on the property. Mr. O'Neil has been

chairman of the Chittering Roads Board for the past twelve years, and for some time has held the position of electoral registrar. He received his Commission as Justice of the Peace from the Daglish Government, and is recognized as a man

MR. JOHN O'NEIL.

always able and willing to play his part in the various public functions of the neighbourhood, frequently taking the chair at public meetings and in other ways displaying his interest in the welfare of the place. He is a keen student of the methods of the political world and is conversant with the details of its history in Western Australia, himself being a supporter of the Liberal Party. For over twenty years Mr. O'Neil has been a member of the H.A.C.B.S., having been connected with this society almost since its inception. He is a member of the Celtic Club, Perth, and his records in the world of sport point to him as an excellent cricketer in earlier days. In 1886 he married Ellen, daughter of the late Mr. C. W. Morely, of Swan, and has three sons and three daughters.

JOSHUA ARTHUR WALDECK, J.P., of "Glenholm," Moora, was born at Greenough, Western Australia, on February 13, 1876, and is the third son of Mr. Joshua Watts Waldeck, an old and respected native of this State now residing at Greenough, but for some years engaged in pastoral pursuits at "Warracootharra," his station

near Mount Magnet, on the lower Murchison, where the gentleman under review spent his boyhood days before proceeding to Fremantle to pursue his studies at the grammar school under the tuition of the Hon. Henry Briggs, President of the Legislative Council of Western Australia. Upon leaving school he returned to his father's station, which was the first pastoral lease taken up in the district in the early eighties, when wool had to be carted to Geraldton, a distance of some 300 miles; and these long trips were undertaken by the lad of fourteen, who, with the assistance of a single native, took charge of the teams and conveyed many loads of wool to the coast for shipment to London. During such journeys various hardships and dangers had to be encountered, and one incident stands out in Mr. Waldeck's memory, when, about halfway to Geraldton, a tire came off one of the wheels of a heavily-laden dray, and the difficulty could only be overcome by replacing the tire and wedging broken horseshoes between that and the felly of the wheel, thus enabling the teamsters to complete their journey. Mr. Waldeck remained at "Warracootharra" until the year 1898, when he turned his attention to mining pursuits on the Murchison goldfields, where he had the distinction of being, in conjunction with his cousin, the discoverer of the first gold on the field now well known as Youanme. They worked the original claim known as the Marguerite with fair success, but abandoned the mine on account of the distance (80 miles) to the nearest crushing plant at Mount Magnet. After spending six

months at "Warracootharra," Mr. Waldeck returned to the Mount Magnet fields to join Mr. Tom Payne, the discoverer of the Paynesville field, and worked various claims with a fair amount of success. Eventually he decided to enter upon agricultural pursuits, and purchased an improved farm at Pingelly, which he disposed of in 1902 upon his acquirement from Mr. Fred. Broun

C. E. Farr,

Perth.

MR. JOSHUA ARTHUR WALDECK.

of "Glenholm," where he has since resided. This estate comprises 3,010 acres of magnificent cereal-growing and grazing lands, well watered by dams and permanent wells and by the Moore River. Wheat-growing is the chief industry, and from 400 acres sown last season (1912) the splendid average of 22 bushels

of wheat was stripped. Lambs are bred from a flock of 500 merino ewes and crossbred rams, and a small clip is taken, which, in London, realized (1912) 1s. 1½d. per lb. A few Ayrshire cows are bred on the property, and recently Mr. Waldeck purchased a fine Jersey bull for breeding purposes. He breeds all his own Clydesdale horses, owning a fine stallion which has sired some first-class draught mares; and at the present time there are sixteen draughts working on the farm. The homestead is a pretty bungalow built of bricks made on the property, and comprises eight rooms, forming a very comfortable home. Outbuildings, comprising stables, barn, machinery shed, etc., are constructed of sawn timber and galvanized iron, and are in every respect complete and up to date. Surrounding the homestead area is a fine orchard of various fruits, and worthy of special mention are sixty fine navel orange-trees planted by Mr. Waldeck when he first took over the property, which are very prolific bearers. Mr. Waldeck in 1897 was created a Justice of the Peace, and had the distinction of being the youngest magistrate in the State. He takes considerable interest in the public affairs of Moora, is a member of the local roads board and the hospital committee, and is chairman of the Moora Race Club. He actively participates in various outdoor sports, and is especially fond of cricket, having captained the local cricket club. On February 25, 1902, he married Christina, daughter of the late Robert Reedhead, of "Mininooka," Geraldton, and has one son and four daughters.

Photo by C. E. Farr.

MR. J. A. WALDECK'S HOMESTEAD, MOORA.

"RANFURLY" PARK, the magnificent property owned by Mr. John Stuart, J.P., is situated about seven miles from the town of Moora, and in close vicinity to the Barberton Railway Siding. Mr. Stuart is a native of Ireland, having been born near Dungannon, County Tyrone, on May 9, 1857. He received his education at the famous Granville and Caulfield schools, near which town his father's farm was situated, and at the close of his studies received his initiation into agricultural pursuits on the parental property before leaving for Australia by the "Hornby Castle" in the year 1887. He landed at Melbourne after a voyage which, on account of volcanic disturbances in the tropics, extended over three and a half months, the vessel having a very rough passage, and subsequently spent five years in the Eastern States prior to his coming to Western Australia in 1892. For the next twelve years Mr. Stuart was engaged in business in the metropolis, retiring from commercial pursuits in the year 1904, when he paid a visit to England and the Continent, being absent from the State for eighteen months. Upon his return he lived privately at Cottesloe for a few years, and in 1908 purchased "Ranfurlly" Park, where, in conjunction with his son, Mr. F. R. Stuart, he entered upon pastoral and agricultural pursuits. The midland railway line runs through the centre of the estate, with the Moore River on one side and the Wannery on the other. Both streams pursue their course for many miles

through the property, which comprises some 9,000 acres of what is generally acknowledged to be among the finest wheat-growing country in Western Australia. Mr. Stuart's enterprise embraces mixed farming in its various branches, but its most important department, perhaps, is

anticipated that the previous year's figures will easily be maintained. Stock-breeding is carried on on a fairly extensive scale, the horses including hackneys, thoroughbreds, and draughts. Mr. Stuart owns "Polly Royal," a beautiful bay mare with black points, and famous for her

Photo by C. E. Farr. MR. J. STUART'S RESIDENCE, MOORA.

the cultivation of the above-mentioned cereal, and in this branch of operations very successful results have been obtained. For the season of 1912 the excellent average of twenty-three bushels to the acre was harvested, in some portions of the estate forty bushels to the acre being yielded, while the hay crop went as high as three and a quarter tons to the acre. This year (1913) 1,700 acres are under crop, and it is

perfect front and hind action, imported from the Sandringham Stud of the late King Edward VII. "Polly Royal" is by "Royal Banegelt," out of "Polly" by "Lord Derby II.," all English Stud Book stock, and raised in the stud of the late King. At the time of writing (June, 1913) this magnificent hackney mare has a colt foal at foot by "Suffolk King" (9034 English Stud Book), the property of Mr. Warren Marwick, of York. Special mention must also be made of the imported Shire stallion, "Shipton Spark" (26680 English Stud Book), a splendid black horse standing 17 hands high, and descended from some of the finest blood stock of England. Sired by the champion "Shipton Calamint" (24612), from the mare "Dignity" by "Waresley" (41699) by "Castle Bromwick Kieth" (17865), "Shipton Spark" had an unbeaten record in the Old Country. He has acclimatized well, taking kindly to his new quarters, and evidences of his quality are to be detected in his early progeny, which show great promise. Altogether there are about seventy horses on the estate, including a number of pedigreed mares sired by the famous South Australian Clydesdale, "King Edward." South Australia has also been levied upon in the foundation of the flock, pedigreed rams having been imported from the well-known "Canowie"

Photo by C. E. Farr. "SHIPTON SPARK" BY "SHIPTON CALAMINT."

stud of that State, and other representatives of first-class stock have been procured from Sir Rupert Clarke's Victorian flock. Shorthorn and Jersey cattle were imported in

MR. JOHN STUART.

the first instance from the Central State, and from these a good class of dairy cow has been bred, while among the swine will be found many that have figured as champions and gained awards at the Royal Agricultural Shows, Perth. Mr. Stuart has made a special point of starting his industry with high-class stock, and well deserves the success that has attended his frequent essays as an exhibitor at the Royal and other shows. The homestead at "Ranfurly" Park is a model home, while the outbuildings, which include the largest and most complete machinery-shed in Western Australia and one of the most commodious haysheds, are a feature of the place. During his residence at Cottesloe Mr. Stuart was elected first mayor of the municipality in 1907, and was pressed by a large and influential portion of the

electors to occupy the chair for at least another term, but with this request he was unable to comply on account of having assumed the duties of director of the property under review. He was one of the founders of the Cottesloe Masonic Lodge, and is Past Grand Treasurer and representative for Rhode Island, of the same Order, while he also represents Canada in the Western Australian Royal Arch Grand Lodge and is a member of the Grand Lodge of Knights Templars. He received his Commission of the Peace for Perth district during the *regime* of the Leake Administration. Since coming to Moora he has been pressed into service in various directions, at the present time holding office as vice-president of the Moora Agricultural Society and trustee of the Moora Agricultural Hall. He acted on the building committee of the local hospital, and is now a member of the board of management, and was also a member of the building committee of the Padbury Memorial Church, in which he fills the office of vestryman. He is president of the Moora branch of the Liberal League, is a member of the executive committee of the Farmers and Settlers' Association of Western Australia and president of the local branch of that organization. He is well known in the neighbourhood as a cordial patron of all healthy outdoor sport, and presides over numerous sporting bodies, among which may be mentioned the rifle club, football club, and cricket and polo clubs. He is vice-president of the Moora Race Club and has acted in the capacity of honorary judge for the past four years. In 1887 Mr. Stuart married Nora Louisa (now deceased), daughter of the late Henry Charles Hills, of Hills and Saunders, and one son survives, FRANK ROBERT STUART, who was born at Perth on August 15, 1889. After attending preparatory

schools in this State he proceeded to Harrow, England, in 1903, and continued his studies at this famous seat of learning for five years. Whilst at this institution Mr. Stuart was very prominent in the athletic circles of the school, particularly in cricket, football, rifle-shooting, and boxing, and holds many trophies for combined athletic sports. He also served for three years in the 25th Middlesex Volunteers and for twelve months in the Officers' Training Corps. Returning to Western Australia in 1908 he spent three years on his father's estate, gaining experience in mixed

MR. FRANK ROBERT STUART.

farming, and having obtained a comprehensive knowledge of all departments of agriculture and stock-raising he took over the management of the place, which has since been under his control. Mr. F. R. Stuart is secretary of the local branch of the Farmers and Settlers' Association and represented Moora at the first conference of the parent body held in Perth. He is also secretary of the Moora branch of the Liberal League,

OUTBUILDINGS AT "RANFURLY" PARK.

a committeeman and honorary steward of the local race club, committeeman of the rifle club, and has followed up his athletic career by a prominent connection with the sporting clubs, having captained the cricket, football, and polo clubs, with which he is still associated.

**GEORGE HENRY HOLMES, J.P.**, who resides on his "Oakfield" Estate, near Moora, was born at Elsternwick, East Yorkshire, England, on March 16, 1868, and is a son of the late Abraham Holmes, a farmer of that county. After spending his early years on the home farm he came to Western Australia in 1892, his first position in this State being with Mr. E. Roberts, of "Yatheroo," where he spent two and a half years before selecting land on his own account in the Koojan agricultural areas. This was one of the first selections taken up in the district, and was then known as "Elsternwick," after Mr. Holmes' birthplace. It was worked and generally developed with marked success until 1908, when it was sold by Mr. Holmes to Mr. John Stuart, who renamed it "Ranfurly" Park, and has since brought it into the front rank of such properties in the neighbourhood. After relinquishing the above estate Mr. Holmes lived in retirement at Perth for a few months, but the active life he had always led made long leisure distasteful to him, and his attention being attracted to Cannington he there purchased the magnificent property of "Greenfields" from the late Mr. W. L. Gibbs. During his year's residence on this estate Mr. Holmes considerably improved it in many respects, and it is to-day looked upon

as one of Western Australia's finest dairying propositions. Leaving "Greenfields" in the capable hands of the manager, Mr. James Hill, he came back to Moora early in 1910, and purchased two properties owned by Messrs. Henry MacNamara and William MacNamara respectively, which he amalgamated and called "Oakfields." Here he resided for eighteen months, at the end of which period the property was sold, and Mr. Holmes once more returned to "Greenfields." His sojourn was,

MR. GEORGE HENRY HOLMES.

however, but a brief one, as a projected trip to England caused him to lease the estate to Mr. Charles Sweeting, who still resides there, conducting a very large slaughtering and stock-dealing business on his own behalf. On August 12, 1912, Mr. Holmes, with his wife and family, sailed for England, and during an absence of ten months did a

great deal of sightseeing in Great Britain with the aid of a motor car, covering no less than 7,000 miles in this way with considerable enjoyment. France and other portions of the Continent were also visited, and in June, 1913, the party returned to Western Australia, when Mr. Holmes repurchased "Oakfield," where the family now resides. The estate comprises some 2,000 acres of excellent wheat-growing and grazing country, through which the Moore River threads its way, and in addition to this means of water supply wells have been sunk and dams constructed, making a shortage practically impossible. About 1,400 acres have been cleared and cultivated, and apart from agricultural operations mixed types of sheep are bred for the wool and mutton markets, and an even better paying proposition are the Berkshire pigs present on the estate. The field work is carried out with the aid of fourteen strong Clydesdales, and a few lighter horses are in evidence which are used for buggy or saddle purposes. The homestead, which has lately been reconstructed and generally improved, is a very comfortable residence of eleven rooms, and in the vicinity are the usual out-buildings, including stables, motor garage, machinery shed, slaughterhouse, milking sheds, barn, etc., nothing being wanting to hinder the most up-to-date administration of the farm. In addition to "Greenfields" and "Oakfield" Mr. Holmes also owns property in the City of Perth and at Queen's Park and Moora, and in the last-named town he built and owns the Commercial Hotel, one of the finest country hotels in Western Australia. Whilst at Cannington Mr. Holmes served as town councillor, and subsequently was nominated for the mayoralty, being defeated by the narrow margin of six votes. He is one of the promoters of the Moora Agricultural Society and also of the local race club, and is a leading light in social as well as general public functions in the district. He was appointed a Justice of the Peace for the Swan district in 1906. He has been twice married, his first wife, Annie, being a daughter of the late James Walker, of Hull, England, by whom he had three sons and two daughters, dying in 1908. On December 8, 1910, he was united to Alberta Gertrude, daughter of Mr. Joseph Ottey, of Daylesford, Victoria.

Photo by C. H. Park. "GREENFIELDS" HOMESTEAD, CANNINGTON.

"BLANTYRE," Moora, the property of Mr. James Gardiner, J.P., of Applecross, is situated about eight miles east of Moora. It is a fine property, comprising 5,000 acres of

MR. JAMES GARDINER.

excellent wheat-growing and stock-raising country watered by wells and several dams, all of which have been sunk within the past eight years. The estate is enclosed by a six-wire fence, for which posts were cut from the jam timber indigenous to the district, and subdivision made into twenty paddocks. A homestead and outbuildings were erected, and although at present only a small area has been cleared for cultivation it is the intention of the owner to make of "Blantyre" an up-to-date mixed-farming proposition in which wheat-growing will receive a prominent share of attention. The flock

of from 1,500 to 2,000 sheep consists principally of merinoes, but Oxford Downs and Shropshires are also bred by Mr. Gardiner, who owns the Oxford Down ewe "Annie," winner of three championships at the Moora Show and one at the Royal Show, Claremont. "Annie" is by the English sire "Editor" (4615), and was imported to Western Australia by Mr. G. J. Gooch, of Gingin, who subsequently sold her to Mr. Gardiner. The clip from "Blantyre" is shipped to the London markets and commands good prices, last season (1912) realizing 1s. 1d. per lb. JAMES GARDINER is a New Zealander, having been born in the Dominion in 1861, where his father was one of the early pioneers. He was educated in South Australia, and upon leaving school joined the South Australian Carrying Company. Later on he was associated with several leading firms in the Central State, and subsequently proceeding to Victoria obtained a position with W. Hamilton & Co., stock and station agents, of Melbourne. Transferring his services to the firm of Messrs. Gordon & Gotch, in 1895, he came to Western Australia on their behalf and established the Western Australian branch of that firm, the operations of which he controlled as an auctioneer. Mr. Gardiner first entered Parliament as representative for Albany in 1901, and accepted the portfolio of Colonial Treasurer in the James Ministry on July 1, 1902, from which he resigned on April 20, 1904. ROBERT KEITH GARDINER is the eldest son of the foregoing gentleman, and was born at Middle Brighton, Victoria, on April 14, 1891. He received his

education principally at the Guildford Grammar School under the late W. Stewart Corr, M.A. At seventeen years of age he left college and proceeded immediately to "Blantyre," then under the care of a manager, twelve months later assuming control over the whole estate. Mr. R. K. Gardiner is a prominent amateur athlete, having distinguished himself in football and cricket both before and since leaving college; and in 1912 was selected

MR. ROBERT KEITH GARDINER.

to represent the north-eastern district polo team in the Easter matches with Katanning, two out of three matches being won by his team. He is also a strong supporter of Moora Agricultural Society, having been for several years on the committee, and he is a regular exhibitor at the society's shows.

Photo by C. E. Farr.

"BLANTYRE," THE PROPERTY OF MR. JAMES GARDINER, MOORA.

WALTER REGINALD CLINCH, J.P., "West End," Moora, was born at Greenough, Western Australia, on November 22, 1876, and is the third son of Mr. Thomas Clinch, of that district, who came from Berkshire, England, in the early days of settlement in Australia, and was concerned in the gold "rush" to Ballarat, Victoria, where he remained for about four years. The subject of this memoir received his preparatory education at the Government school of his native place, completing his scholastic career at Prince Alfred College, South Australia, under the head mastership of Mr. Frederic Chapple, B.A., B.Sc. Leaving college, he returned home and took up clerical duties in connection with his father's roller flourmill at Greenough, where he spent six years before embarking on a commercial enterprise on his own account at Mount Magnet on the Murchison goldfields. This business he conducted successfully until March, 1901, when he disposed of his interests and returned to Greenough, there leasing from his father a farming enterprise brought into a forward state of development by Mr. Thomas Clinch. In May, 1903, he purchased "West End," a property near Moora, originally owned by the late Charles Clinch (uncle of the present owner), at whose demise it was inherited by his son, James, who eventually sold it to his cousin. The Moore River, a permanent stream, flows through the estate, and in addition to this means of supply the land is splendidly watered by three wells with windmills attached, while large pools on the river have been deepened from time to time, forming reservoirs which never fail. By

these means a copious supply is obtained for the farm and all domestic requirements all the year round, and it is not the least of the many advantages enjoyed by "West End" that it has never known a shortage of water. Mr. Clinch has considerably enlarged the estate since it came

MR. WALTER REGINALD CLINCH.

into his possession, increasing the 800 acres to something over 7,000—including 3,000 acres of pastoral leasehold. He has 1,000 acres cleared and cultivated, and the land, which is of average quality, is sown on the fallow system, the chief enterprise being the growing of cereals, principally wheat, although oats and barley are also successfully produced, and field peas on a small scale are being tried as an experiment. He has applied the use of lime with benefit to the crops, in the summer time, on fallow land drilling 2 cwt.

of lime to the acre, the object of drilling in this season being to allow the lime to percolate through the soil before seeding time in the autumn, and preventing any detrimental effect upon the sown later. As a result of this method harvests yielding as high as thirty bushels to the acre have been produced. Some attention has also been given to horticulture, and a small orchard of mixed fruits surrounding the homestead presents a very promising aspect, while twenty large almond-trees, planted by the late Charles Clinch sixty years ago, are still producing heavy crops. The flock of 1,000 merino sheep produces a good class of wool, which is sold at local markets at satisfactory prices, and the number of the flock is to be augmented very shortly in order to stock the 3,000 acres of leasehold property lately acquired by Mr. Clinch. Some fine brood mares, bred for use on the farm, were sired by the Clydesdale stallion "Royal," lately sold by the proprietor of "West End"; and "Earl of Darnley," a fine bay Clydesdale, now does duty on the farm. The sire is by "Darnley's Best," a Melbourne show-ring champion, from "Maggie" by "Young Botanist," and was imported from Victoria by Messrs. Henry Wills and Co. for their York stud, and was subsequently purchased by Mr. Clinch. Lighter sorts include youngsters by "Christmas Carol," trotting stallion, the property of the above firm and a prizewinner at the Royal Show. The "West End" homestead is built of ironstone excavated from the spot for the purpose, and consists of seven rooms substantially built and roofed with iron. The old dwelling-house, which adjoins the newer structure, was constructed on an old-time method, known as "rammed pug," and now does duty as a workmen's cottage. Water is laid on to homestead, garden, and yards. The stable, strongly built of sawn bush timber, was erected by the original owner of the property, the timbers used being white-gum and salmon. Having stood the test of fifty years, this building utterly refutes the popular notion that salmon is unsuitable for such purposes on account of its being peculiarly open to the attacks of the white ant. The shingle roof timbers were cut and sawn by hand in the bush adjoining the homestead; and a visit of inspection reveals various other buildings, including hay sheds,

VIEW ON MR. W. R. CLINCH'S "WEST END" ESTATE, MOORA.

machinery, cart, chaff and grain sheds, blacksmith and carpenter's shop, all built on the same system. Some ornamental trees add to the beauty of the homestead area, notably two nine-year-old English oaks, which make a pleasant rest for the eye with their umbrageous branches. Mr. Clinch is a trustee and honorary secretary to the Moora Race Club, and was a member of the first committee of the local agricultural society. He is fond of all forms of clean outdoor sport, has captained the local team of cricketers, and is now president. On June 22, 1904, he married Clara Grace, daughter of Mr. J. Mortimer, of Gingin, and has three daughters and a son.

**WALTER SCOTT RALSTON**, J.P., merchant, Moora, was born on March 11, 1874, at Belfast, Ireland, his father being the late Francis Ralston, who was engaged in farming pursuits about twelve miles from that city. He received his primary education at the model school in Belfast, and subsequently attended the Mercantile College until he was sixteen years of age. He was then apprenticed to the ironmongery trade with the world-famed firm of Blairs, Limited, and his indentures completed he was installed at twenty-one years of age as manager of the ironfoundry branch of the same firm, during which time he was closely associated with the shipbuilding yards of Messrs. Harland & Wolf of Belfast. Early in the year 1897 Mr.

he accepted a similar berth in connection with the firm of Messrs. William Sandover & Co. of Perth, with whom he remained for two years. Returning to his old firm, then a limited company at Coolgardie, Mr. Ralston undertook the duties of traveller in the Murchison and Northern districts, and was also identified with the firm as manager

MR. WALTER SCOTT RALSTON.

State, and Mr. Ralston, returning to the capital, was employed by the house of Messrs. McLean Brothers and Rigg as its country traveller in the agricultural areas, where he realized the opportunities offering for the establishment of a business in the centre of the Midland Railway Company concession. Resigning his position with Messrs. McLean Brothers & Rigg he came to Moora in December, 1905, and established his present up-to-date store in what was then but a tiny settlement with only a few inhabitants in the township and surrounding district. His sagacity has been amply proved by the wonderful rate at which the place has developed—which is a fair index to the excellence of its agricultural prospects—and with foresight matching the former quality he has advanced with the times and has deservedly earned the distinction of being the leading merchant of Moora. Mr. Ralston caters not only for the local trade, but does an immense business with the agriculturists and pastoralists as far distant as 100 miles from the town as a centre. His staff is large and capable, dealing efficiently with the different departments, which include drapery, grocery, ironmongery, crockery, saddlery, builders' and building materials, oil engines, motor cars, etc., and he is sole agent in the district for the famous "Onkaparinga" woollen goods and Marshall's boots and shoes. Being a direct importer of all kinds of goods Mr. Ralston buys at keen prices, and is able to give his customers the benefit in reduced values, besides procuring by this means a large variety of the latest and most up-to-date articles of commerce to tempt all classes of the community. In 1909 he established a branch business at Coomberdale on the same line, which has made good headway under the control of a capable manager. Mr. Ralston has interested himself in the public welfare of the district, and is highly esteemed not only for his business ability but also for the painstaking care which he displays in the smallest detail when acting in his official capacity. He is chairman of the local board of health, and in 1909 received the Commission of the Peace for the district. In 1909 he married Elizabeth Josephine, daughter of Mr. Philip Terry, of South Australia, who has proved herself a worthy helpmate.

MR. W. S. RALSTON'S PREMISES, MOORA.

Ralston left the Old Country by the R.M.S. "Ormuz" bound for Australia and landed at Albany, whence he proceeded to Coolgardie on the

of the Kalgoorlie branch of the business for four years. The Monger's W.A. Stores Limited then relinquished commercial pursuits in this

CHARLES KRUGER DAVIDSON, of "Glentromie," New Norcia, is the fifth son of the late James Davidson, who came to Australia from "Kerrimuir," Scotland, in the year 1847, and settled down to farming pursuits in Warrnambool, Victoria. In 1862 the late gentleman revisited his native country, and during the return voyage he met with an accident on board ship and died before the vessel reached its destination. The subject of this memoir was born at Warrnambool on October 16, 1857, and received his education in his native town under the late Mr. Burston. After leaving school he was employed by the late Mr. Kruger, a merchant of the same place, with whom he remained for two years. In 1875 he left Warrnambool in order to take up farming land near Sheep Hills, where, in conjunction with his brother John, he carried on business as farmer and grazier for twelve or thirteen years. At the end of this period he left his brother in charge of the Wimmera property and came with his family to Western Australia in 1888, at the invitation of his wife's uncle, the late Walter Padbury, then owner of "Glentromie," to take over the management of the latter estate. The property at that time consisted of 5,600 acres of freehold country, but held in connection with this was a leasehold run amounting to something over 60,000 acres. During

the four years that Mr. Davidson remained in the position of manager for Mr. Padbury he made many improvements on the estate, doing a good deal of fencing, tank-sinking, ringbarking, and clearing.

MR. CHARLES KRUGER DAVIDSON.

At the end of 1892 Mr. Padbury disposed of a large portion of the leasehold property, leaving about 16,000 acres, inclusive of the above-mentioned freehold, to be embraced in the "Glentromie" Estate, which about this time was taken over on lease by the gentleman under review, who continued as lessee his strenuous exertions in the way of improvement.

In 1907, upon the death of Mr. Padbury, under the terms of the will the property was inherited by Mr. and Mrs. Davidson, and shortly afterwards the new proprietor purchased from the Midland Railway Company 7,000 acres of the leasehold part of the estate, which brought the freehold up to 13,000 acres. Of this from 350 to 400 acres have been cleared, while the remaining portion is ringbarked and partially cleared, making about 9,000 acres of splendid grass country. "Glentromie" is situated in the centre of the Victoria Plains and in the near vicinity of the New Norcia Mission Station—one of the landmarks of the district. The Moore River flows through the property, and in addition there are three perennial springs, which, with several tanks and dams, make the estate practically secure as far as the water question is concerned. The property was among the first taken up in the district, and even in Western Australia, as far back as the early forties, being leased from the Government by two Scotchmen, *viz.*, Messrs. McPherson and Davidson, who erected on the property the homestead now occupied by the present owner and his family. The farming enterprise on "Glentromie" consists mainly in the breeding of sheep, cattle, pigs, and horses, while agriculture is carried on on a limited scale. For his merino flock—numbering in the vicinity of 3,000—Mr. Davidson favours a strain produced by the introduction of Victorian and Tasmanian stud sheep. For many years he has been a successful exhibitor at the Royal Show, and has carried off first prize for merino wool on many occasions, being beaten once only in seven years. At the Franco-British Exhibition in 1908 he was awarded a diploma and gold medal for merino wool, and in 1911 was successful in securing the "Diplôme de Médaille D'or" at Roubaix. In 1905 at the Perth Royal Show the Gooch Cup, for five six-tooth merino wethers, was awarded to Mr. Davidson, on which occasion the sheep were shorn and their wool valued, after which they were killed and the value of the carcasses taken. The sheep averaged 14½ lb. of wool, valued at 10½d. per lb., while the average weight of carcass was 73 lb., which according to the ruling standard of the time, was valued at 4½d. per lb., making an average for wool and carcass combined of £1 18s. 2d. per sheep. Mr.

Photo by U. E. Farr. "VALERE" BY "POSITANO."

Davidson attributes the success of his flocks principally to the good strain introduced by five rams which he purchased in 1898 from Mr. W. T. Loton, of "Springhill," descendants of a son of the famous "President,"

animals have been bred, and Mr. Davidson is now in possession of a unique team of six from the one mare. Accompanying this article may be seen a photograph of the racing stallion "Valere," who is not

adjacent to the homestead, which is considered one of the most comfortable country residences in the State. The outhouses are worthy of special mention, and include two four-roomed cottages for married

Photo by C. E. Farr.

"GLENTROMIE" HOMESTEAD AND OUTBUILDINGS.

sold in Tasmania for 1,500 guineas. The wool from the "Glentromie" Estate is shipped annually to London, where it invariably commands good prices. The herd is composed chiefly of shorthorns and numbers between 300 and 400 head, bred mostly for the beef markets, as high as £20 per head having been obtained for a mixed mob of cattle sent to Perth in 1901. At various times Mr. Davidson has imported bulls from the well-known "Dugdale" stud of Bacchus Marsh, Victoria, and also from the famous stud of J. H. Angus in South Australia, but, latterly, he has obtained most satisfactory results from bulls purchased from Mr. A. W. Edgar, of Gingin, Western Australia. At one period horses of a light type were bred on a large scale at "Glentromie," but of late years enterprise in this line has been

unfamiliar to sporting enthusiasts of this State. In 1909 "Valere" was favourite for the Perth Cup from the issue of the weights until the day of the race, when he ran third to "Scorcher" and "Loradano," less than half a length separating the trio. He also ran third in the Derby, in "Post Town's" year. "Valere," who is by that successful sire, "Positano" by "St. Simon" out of "Valence" by "Autonomy," one of "Chester's" best sons, is a beautiful brown horse standing over seventeen hands high, and, given opportunities, should prove a worthy son of his famous sire. Three of "Valere's" stock have been nominated for the Sires Produce Stakes of 1914, and their performances will be watched with interest. In the agricultural branch of the enterprise wheat and hay are the

couples employed on the farm, men's quarters, shearing-shed, machinery-sheds, stables, and four loose-boxes, etc., all built of brick with galvanized-iron roofing. Mr. Davidson is chairman of the Victoria Plains Roads Board and president of the local agricultural society. He is a cordial patron of all forms of outdoor sport, a member of the Moora Race Club, and when in Victoria was a prominent figure in athletics, particularly in pedestrianism, being successful at Ballarat, Stawell, Horsham, and various other places. Each year since 1902 a team of cricketers from the city have travelled to "Glentromie," and the visitors have always carried away pleasant memories of Easter holidays spent as the guests of Mr. and Mrs. Davidson, when golf, tennis, cricket, and kangaroo hunts have been the

confined to the breeding of a few thoroughbreds and sufficient draughts for the requirements of the property. From a prolific draught mare by "Pranjip" several fine

1112

chief crops produced, and in 1912 as high as twenty-six bushels to the acre was stripped and three tons of hay reaped to the acre. Three acres of orchard and vineyard lie

order of the day. Mr. Davidson married in 1885 Amelia Jane, daughter of the late Thomas Payne, of Sheep Hills, Victoria, and has a surviving family of one son and one daughter.

**THE NEW NORCIA BENEDICTINE MISSION STATION.** The Spanish Roman Catholic Mission Station at New Norcia is situated in the Victoria Plains on the banks of a branch of the Moore River, some 80 miles distant from Perth and 15 miles from Mogumber on the mid-land railway. The mission, the primary object of which was the civilization and Christianizing of the aborigines of the district, was inaugurated in the year 1846 by members of the Benedictine Order under the administration of Father (subsequently Bishop) Salvado, one-time diocesan of Port Victoria and Palmerston, Northern Territory, and afterwards Titular Bishop of Adriana. The present Lord Abbot of New Norcia, the Right Rev. Dom Fulgentius Antonius Torres, succeeded Bishop Salvado on the death of the latter in December, 1900. Dr. Torres was born at Ibiza, Balearic Islands, Spain, on June 24, 1861. He made his first studies in his native city. At the age of sixteen he proceeded to the university at Barcelona, there to complete his higher studies. In 1880 he entered the Episcopal Seminary of Vich, and went through a course of theology. Upon leaving the Seminary he entered the Benedictine Monastery of Montserrat, taking the Benedictine habit on June 8, 1885. After a year's novitiate he took his simple vows on June 21, 1886. He was ordained priest in 1887. In 1889 he took his final or solemn vows. He remained at Montserrat until 1895, when his Abbot sent him as "Superior" to open a new mission in the Philippine Islands. In December, 1897, he was recalled home. In 1898 he became rector of the Montserrat Church in Naples. It was in Naples, a year before his death, that Bishop Salvado met Father Torres, and at once decided that here was the very man to succeed him as Abbot of New Norcia when the post should become vacant through his (the Bishop's) demise. He lost no time in applying to the Superior of the Benedictine Order in Spain, his request being that Father

Torres might be permitted to accompany him back to Western Australia as his coadjutor. With wise forethought he also arranged for the affiliation of the Abbey and Benedictine Community of New Norcia to the Spanish Province of the Cassinese Benedictines, for up to that period the Abbey had occupied a somewhat anomalous position, in that it was attached to no province or congregation, a special favour of the Roman Pontiff, Pius IX., conferred in 1859, having absolved the Lord Abbot from any ecclesiastical jurisdiction, save only the supreme

of the Abbey of New Norcia, and in March, 1901, he sailed for Australia. In October, 1902, at the conventual chapter of the Abbey of New Norcia, under the presidency of the Rev. P. D. Rudesindo Casanovas, Consultor of the Province of Spain, the Right Rev. Administrator was unanimously elected successor to Bishop Salvado. This election was duly "confirmed" according to the constitution of the Benedictine Order. Returning to Europe Dr. Torres received his "abbatial benediction" in January, 1903, in the church of St. Ambrose della

Massina, the residence of the Procurator-general of the congregation. The fifty years and more which had elapsed since Father Salvado, fresh from the Abbey of "La Cava," in Italy, had inaugurated the mission of New Norcia, had seen the enterprise very firmly established in the face of what must at first have seemed almost insuperable difficulties. Bishop Salvado was a man of most indomitable courage and immense powers of resource. Aided by a small but devoted band of Benedictines, immediately upon his arrival in Western Australia he set to work to found a home in the wilderness, not only for himself and his helpers, but also for the natives who were at that time numerous in the locality. The bodily and spiritual welfare of the aborigines were ever the foremost objects in the progressive schemes of this pioneer missionary of the faith. From the humblest beginnings—a small acreage, a Government grant of 78 acres, painfully cultivated in primitive fashion by the monks themselves (Father Salvado was his own ploughman)—rude log huts, and too frequent intervals when privation seemed perilously akin to sheer starvation (lizards and edible roots were often the best of their fare), the interests of the little community gradually developed until to-day the Benedictines control upwards of 30,000 acres of land in the fertile Victoria Plains district. In addition there are now branch mission houses at

RIGHT REV. DOM FULGENTIUS ANTONIUS TORRES.

authority of the Pope. By Bishop Salvado's diplomatic action New Norcia was protected from the danger of falling under secular religious control after his decease. The death of Bishop Salvado in Rome, whither he had been recalled from Montserrat by Pope Leo XIII., left New Norcia without a head. Mindful of the Abbot's expressed wish the Sacred Congregation of Propaganda Fide, after due consultation with the Superior of the Benedictine Order, nominated Father Torres Apostolic Administrator

Wyening and Namban, where both agriculture and viticulture are carried out to a considerable extent. The aborigines, though belligerent at

Australian streams, the flow of water diminishes, or even entirely ceases, during the summer months of the year, these properties are irrigated

which they derive a considerable revenue—their wool invariably commands a high price in the market—while for many years the horses bred at New Norcia were eagerly sought after and purchased at reasonable rates by settlers in search of sound, reliable stock. The Benedictines being an "enclosed" order, the monastery, a picturesque two-storeyed building with wide verandahs, occupies three sides of a quadrangle; on the fourth side, fronting the road from Perth to Geraldton, is the principal entrance, a good example of classical architecture with massive wrought-iron gates. Opposite this, on the far side of the quadrangle, is the mission house, erected in the renaissance style, containing the archives of the establishment and the Lord Abbot's suite of apartments. On the first floor of each wing are the rooms occupied by the mission fathers, above are the lay brothers' cells, and on the ground floor are reception-rooms, guest chambers, offices, and the monks' refectory. The whole edifice is composed of brick and stucco, very solidly constructed with walls over two feet in thickness. Perhaps one of the most interesting features of the monastery is the library, which contains many volumes of very

Photo by C. E. Farr.

QUADRANGLE OF MONASTERY.

first, soon came to look upon the good fathers as their best friends. A native village—some of the original cottages may still be seen—became a feature of New Norcia (so-called after Norcia, a small town in Central Italy, celebrated as the birth-place of St. Benedict), schools were established, and in return the natives assisted in the field work, always, however, receiving the current rate of wages in return for their services. Others were employed in the bootmaker's, carpenter's, or wheelwright's shops, or at the blacksmith's forge. A store attached to the mission supplied the natives with all they were likely to require at cost price. By slow degrees the mission became entirely self-supporting, as it is to this day—for the small grant allocated by the Government is too infinitesimal to be seriously taken into account in the community's financial estimates. A flour-mill was built, which not only provided for the needs of the monastery, but also proved of inestimable benefit to the scattered settlers for miles around. Soap, macaroni, butter, olive oil; in short, practically all the necessities of every-day life were, and are, manufactured at New Norcia. A large orchard of citrus and other fruits, a fine vineyard, a kitchen garden, and an extensive olive grove are situated upon the banks of the river, and when, as is the case with most

by means of a dam located in the hills a quarter of a mile away. The vineyard is utilized for the cultivation of wine-making grapes. The community owns a large number of vines—about thirty thousand in all—and the cellars beneath the monastery buildings are well stocked with

Photo by C. E. Farr.

INTERIOR OF MONASTERY CHAPEL.

maturing wines. Some of these have been in wood for half a century and more. In addition to agricultural lands and vineyards the Benedictines possess fine flocks and herds from

great value—a few are practically priceless. A very rare work is a sixteenth-century Polyglot Bible, with parallel versions in Greek, Latin, Hebrew, Coptic, and Syriac.

Only very few copies of this particular edition of the Scriptures are in existence. There are two oratories within the abbey precincts—one in which the daily offices are

scope for his wide culture and splendid powers of organization. The native tribes of Western Australia are a dying race; the trend of civilization must be responsible at no

accessible brethren, has comparatively recently been established on the Drysdale River, in the far northwest, a hundred and fifty miles from Wyndham—he very wisely turned his great energies into another and equally important channel. An enthusiastic educationalist, Dr. Torres is responsible for the girls' college of St. Gertrude, an institution which is in the capable hands of sisters of the teaching order of St. Joseph. A lofty, red-brick building, with cement facings, Spanish Gothic in type, erected from Dr. Torres' own designs, the college occupies a commanding site on the brow of a low hill overlooking the monastery and the wide valley of the Moore River. Its fine façade is beautified with costly marble work and mosaic tiles imported from Spain. Expense has been no object in the accomplishment of this notable scheme, which was entirely carried out under the direct supervision of Dr. Torres himself. The ultimate cost exceeded £30,000. There are bath-houses and every convenience for the comfort and well-being of the inmates of St. Gertrude's. The infirmary is completely isolated from the main body of the building. The dormitories are spacious and airy; the living-rooms scrupulously clean and neat. The college fees are so low as to be practically nominal. The tuition, needless to say, is admirable,

Photo by C. E. Farr.

GIRLS' SCHOOL.

said, an exceedingly ornate and magnificent specimen of Byzantine architecture, with details richly elaborated—more than £300 worth of gold leaf has been utilized in decorating the carved woodwork of the chapel; the second, the lay brothers' chapel, is chiefly noticeable for its altarpiece. The parish church of New Norcia—the boundaries of the abbey have been largely extended of late years—is situated just without the monastery gates, on the opposite side of the main road. It is a large cruciform structure of rough-hewn stone, flanked by a stately campanile of recent date. The pile is dedicated to the Holy Trinity. Within the monks' choir, at the back of the high altar, is the tomb of the late Bishop Salvado, whose body was translated thither from Rome as soon as the Italian law permitted the removal of his remains. A handsome sarcophagus of white Carrara marble is suitably inscribed and headed by the emblem signifying the word "Pax," the motto of the Benedictine Order. The high altar of the church is enriched with a reredos of carved wood, a work executed by a craftsman of no mean ability. When Dr. Torres assumed direct control of New Norcia it did not take him long to discover that the primary object of the mission, the bodily and spiritual welfare of the aborigines, afforded insufficient

remote period for their inevitable extinction—in any case in the more settled districts of the State. Already the inhabitants of the native village at New Norcia were reduced to a mere handful, the survival of the fittest. So while by no means neglecting the claims of the aborigines—those that still remain at

vessels of precious metals and a number of sacerdotal vestments, richly jewelled and embroidered by the skilful fingers of the Benedictine nuns. The college is 200 ft. in length, 72 ft. high, and 75 ft. in breadth. Close by St. Gertrude's is a school for native children, very little inferior in the matter of accommodation to that of their fairer-skinned sisters. The native boys' school is not far from the

designed by Dr. Torres. All that has been said concerning the internal arrangements of St. Gertrude's may be repeated and even emphasized here. Among the Lord Abbot's projected improvements, which will probably take shape and form in the not too distant future, is a new monastery that is to occupy a suitable site not far away from the present abbey; the latter building will then serve as

quadrangle and cloisters. A painting of the present Pope, Pius X., and a few devotional pictures decorate the walls. While on the subject of pictures it may perhaps be mentioned that a striking portrait in oils of Bishop Salvado, done at Barcelona shortly after his death, hangs in a room adjoining the old refectory. Four bedrooms open into the guest chamber. An apartment on the opposite

old flour-mill and granary. The brick-kiln, where most of the bricks used in the construction of the college were manufactured, lies in a hollow near by. The New Norcia cemetery

a seminary for the training of young men of different nationalities who have a vocation for a life of prayer and sustained missionary effort. The hospitality of the Benedictines is

side of the quadrangle is utilized for the service of meals, and a lay brother is told off to attend to the wants of the visitor. The occasional guest will probably be aroused from

slumber each morning of his stay, precisely at 3 a.m., by the measured tolling of the monastery bell—twenty-four strokes in all—an iron-throated monitor whose summons the whole community, from the Abbot down to the youngest lay brother, must alike obey. From three to six, both winter and summer, the monks engage in prayer and silent meditation. At six o'clock they break their fast, then each one to his special avocation—the vitiiculturist to the vineyard, the shepherd to his sheep, the agriculturist to the fields. The community of New Norcia consists of fifty monks, lay brothers, and Benedictine Fathers. Some among them are men who have grown so old in good works as to be past all further toil, and these live a life of their own—a little community dwelling apart from their more active fellows, but one with them in faith and charity, and the hope that reaches out beyond the grave. The monastic choir of New Norcia is justly celebrated throughout the State for its admirable rendering of Gregorian music, and at the Easter services and on high festivals the church of the Holy Trinity is always crowded to its fullest extent. Bishop Torres is ably assisted in his onerous duties by the present prior of the community, Father Bass, and by the majordomo of the mission station, Father Gerard Castanares, the bishop's "right-hand" man. Father Castanares was

born in the province of Burgos, Spain, on June 26, 1871. Before coming to Australia he was engaged in missionary work in the Philippine Islands during the Spanish-American war. From there he came

and there he remained for two and a half years before returning to Southern Cross to spend a further three years as priest-in-charge of the Roman Catholic church. In March, 1911, Father Castanares returned to

Photo by C. E. Farr.

THE MONASTERY.

to Western Australia in 1901 and proceeded to New Norcia at the same time as Bishop Torres; then he took up his position as majordomo for the institution. After spending three years at the mission station Father Castanares proceeded to Southern Cross, where he was priest-in-charge of the Roman Catholic church of that town for eighteen months. He then took over the management of the Berkshire Valley mission station,

New Norcia, where he has remained ever since as majordomo of the mission. Dr. Torres himself inaugurated the Drysdale River mission, in the Kimberley district, a work not without a very real element of danger, for the natives in those remote regions are numerous and inclined to be bellicose when they find the white man encroaching—as they imagine—on their immemorial preserves. The community now

VIEW, LOOKING TOWARDS THE NORTH.

*regime* at the mother-house since the beginning of his term of office. Some of these innovations, excellent though they are, have been resented by the elders of the community, who remember the days of their youth. For instance, the introduction of tablecloths and chinaware in the refectory pleased them not at all, and they still continue to lament the primitive tin pannikins and bare wooden boards so strongly associated in their minds with the beneficent rule of the beloved

behold lying below him the spacious colleges and the white community buildings of the mission standing ringed about with vineyards and fruitful orchards and set in the midst of fertile fields backed by low undulating hills timbered with stately forest trees. The monastery gardens, with their flower-bordered walks, by the side of still pools, the haunt of graceful swans, make a pleasant resort for the community during the brief hours of recreation, especially when the sun is slanting

But it is the old days that go to make up history, and the story of the gradual building up of New Norcia by its intrepid founder must appeal to all who reverence whole-hearted endeavour and difficulties bravely overcome. Bishop Salvado, wandering lonely through the bush on Bagi-Bagi Hill one autumn day nearly seventy years ago close to the now historic spot, the scene of his future efforts; Bishop Salvado trudging 50 weary miles into Newcastle and 50 weary miles back to New Norcia

ORCHARD AND GARDEN AT REAR OF MONASTERY.

founder of the mission. The new refectory is a handsome roomy apartment, furnished throughout in polished jarrab. After a dreary

westwards and the whole wide valley bounded by purple hills lies steeped in a rich golden glow. One might almost imagine oneself in sunny

carrying a heavy ploughshare on his shoulders and recruiting his spent energies on bread and black tea, if he were lucky; driving a bullock-team

and dray through the treacherous ford of the Avon River, narrowly escaping death by drowning; organizing a concert in Perth, himself advance agent and sole performer—and no mean one at that—in order to raise much-needed funds for the mission: ministering among his faithful blacks, at one and the same time their father and their brother, their guide, counsellor, and familiar friend; superintending their amusements, baptizing their children, and at the last closing their eyes in the dark hour of death—this is the heroic figure, indissolubly connected in the mind of each one of us with his beloved

length and breadth of Australia, but all over the world, wherever the pioneers of Christianity and civilization have penetrated. This brief article may perhaps be closed by a beautiful story which concerns the origin of the tolling of the monastic church bell at 3 o'clock each morning. It is related how once, long ago, a traveller who had lost his way in the trackless bush, becoming faint and exhausted with fatigue, lay down in the desolate forest to die. He had sunk into a semi-stupor, when suddenly he heard in the distance a measured tolling. At first he thought that he

must be dreaming, but still the muffled notes rang out. Painfully he stumbled in the direction whence the sound came, and at last, to his joy, he beheld the monastery buildings lying grey and peaceful in the light of early dawn. Utterly spent, he arrived at the mission, where he was kindly tended by the monks and carefully nursed back to strength. Since then, in commemoration of the event, twenty-four strokes, one for each hour of the day and night, have been sounded on the church bell at three o'clock every morning year in and year out.

great southern railway. Subsequently he became engaged in contracts for the clearing of land, fencing, tank-sinking, etc., until 1892, when he turned his attention to land settlement on his own account and took up 250 acres in the Moora district, which he continued to develop until 1897. In that year Mr. McKeever acquired an additional 330 acres of virgin country, and this area he has since largely increased, the "Springdale" Estate now embracing an extent of between 5,000 and 6,000 acres of the pick land of the district. Some fine wheat yields have been produced from the 1,400 acres of cleared cultivation fields, and the judicious system of fallowing employed gives the soil every opportunity of retaining its energies, so that the averages are well kept up, twenty-five bushels of wheat and 30 cwt. of hay to the acres being harvested. Both wheat and wool are shipped to the London markets by Mr. McKeever, who grazes a flock of 1,400 merino and crossbred sheep, and has in addition a small herd of about

NEW NORCIA PARISH CHURCH.

mission, whose death in the fulness of years was mourned, not only by his own little community, but the community at large, as few have been mourned within the memory of living man. New Norcia has been fortunate in its abbots. Bishop Salvado's successor, Dr. Torres, has endeared himself to a host of friends by his unflinching courtesy and genuine kindness of heart, while his singular ability and scholarly culture are recognized at once by all who have been privileged to meet him. Under his administration the mission is likely to become an example of its kind, not only throughout the

ROBERT JAMES MCKEEVER, of "Springdale," Moora, was born in Tyrone, Ireland, on August 12, 1859, and is a son of Mr. Robert McKeever, of that county. He received his education in his native place, and after completing his studies became engaged in marine pursuits, spending twelve years as an able-bodied seaman on various vessels. His last berth was on the ship "Glenora," trading between England and Australia, and having left this boat at Fremantle in 1887 he shortly afterwards obtained employment in railway construction work on the Albany to Beverley section of the

C. E. Farr.

Perth.

MR. ROBERT JAMES MCKEEVER.

twenty cattle to supply domestic requirements, and some Berkshire pigs which are bred for market purposes. About twenty-three working Clydesdales may be found at present on the farm, besides which a few lighter sorts of horses are kept for buggy and saddle use. The property is subdivided into sixteen paddocks, all the fences being constructed with jam posts and six or seven wires, to

which wire-netting has been added to make the enclosures dog-proof. The homestead, built in 1897, contains eleven rooms, and in the vicinity an orchard and vineyard has been planted, where various kinds of fruits and grapes are grown for the use of the household. Mr. McKeever is a member of the local health board, and was a committeeman of the local agricultural society for some time. He is convener of the Moora Race Club, and interests himself in the general advancement of the neighbourhood as a member of the progress association committee. In 1892 he was married to Mary, daughter of Mr. John Dix, of "Mambooda," near Moora, and has two sons and six daughters.

**WILLIAM JOSEPH EDWARD MURPHY, J.P., "Wilgie Hill,"** Dalwallinu, situated sixty miles north-east of Moora, is a son of the late Mr. Edward George Murphy, county councillor, of Kilmagarvogue, County Carlow, Ireland, where the gentleman under review was born on April 16, 1880. He received his scholastic training at Clongowes Wood, County Kildare, and subsequently at Trinity College, Dublin, but while attending the latter

met with an accident which compelled him to cut short his course of study, and for several years caused him so much trouble that, upon the

*Bartlett.*

*Perth.*

MR. WILLIAM JOSEPH EDWARD MURPHY.

advice of his physicians, in 1906 he left the Old Country for the milder climate of Western Australia. After a year spent in visiting the chief centres of this and the Eastern States

Mr. Murphy in 1907 took up a block of land from the Government comprising about 4,000 acres, to which he subsequently added another 2,000 acres, and entered upon the development of this property, which he has continued to improve ever since. He can fairly claim to have been the pioneer of this district, which, lying 60 miles north-east of Moora, on the Midland line, the nearest railway station to the holding, before his advent was considered to be outside the rain belt. Messrs. Quinlan & O'Connor have since taken up "Milabi" Station, adjoining the property of Mr. Murphy, who acts as overseer on behalf of these gentlemen. Mr. Murphy takes considerable interest in the advancement of the district, and was one of the founders of the Wilgie Hill Progress Association, also taking an active part in the movement which eventuated in the construction of the Wongan Hills-Mullewa railway. In his earlier days he was prominent in all forms of manly outdoor sport, being especially proficient in football, cricket, and hockey, while for a considerable period he was a well-known member of the Carlow and Island Hunt Club. He is a member of the Western Australian Turf Association and of the Weld and Perth Clubs.

## MINGENEW AND DONGARA.

Between Moora and Mingenev on the Midland line there are several stations which are destined to become agricultural or pastoral centres of increasing importance. Among the principal of these are Watheroo, Carnamah, and Three Springs, the last-named being in the midst of a thriving agricultural area from which during the past season many thousand bags of wheat were sent away. The area of country from Arrino (the station next to Three Springs) to Nangetty, some 15 miles north of Mingenev, is probably one of the finest blocks of agricultural country that could be secured in the Commonwealth.

Mingenev, a town on the line about 80 miles from Geraldton, is the centre of the Upper Irwin district, an important agricultural and pastoral country, over the greater part of which the soil is exceptionally rich. It is the natural depôt for stock of all descriptions arriving from the north-west stations. These are sold by auction and dispatched from the trucking yards to Perth and Fremantle. The town also exports large quantities of wheat, chaff, oats, and wool. The Irwin River coal beds are situated at no great distance from Mingenev, and

at Yandanooka and Arrino some few miles away there are extensive deposits of copper, in connection with which many leases have been taken out, and a certain amount of work is being done. In the town itself there are the usual Government buildings, roads board offices, bank, and an Anglican Church. The population of Mingenev is about 300, and the affairs of the town are controlled by the Upper Irwin Roads Board, sanitation being in the hands of a local board of health. The roads board district embraces an area of 10,000 square miles, and the unimproved rateable value of the land within it is £426,781.

The township of Dongara is situated about 46 miles south of Geraldton, near the mouth of the Irwin River and within a mile and a half of the coast. It is the centre of one of the oldest districts in the State, the first settlement in the neighbourhood dating back to the forties. The town, though only possessing a population of about 300, is in the middle of a wonderfully fertile district, from which magnificent grain crops are reaped. For many years a roller flourmill has been in active operation, and there are other buildings, including a

branch of the Western Australian Bank, which bear ample evidence of the solidity and commercial stability of the town. In order to facilitate the export of products, a fine jetty has been erected at a distance of one and three-quarter miles from the town. Adjoining the town is the marvellously rich Dongara flat, having an area of about four miles by two miles, the soil of which is so rich that crops grow rank if it is manured. In fact, right along the Irwin River there is good soil, and the number of successful farms shows that settlers have been quick to realize its value both for agricultural and pastoral purposes.

South of Dongara are some fine caves, which in the opinion of the residents compare favourably with the better known examples in the south-western portion of the State. These have been well described in "Victoria and Murchison Districts" issued by R. M. Cochrane, to which we are also indebted for our information concern-

ing Greenough, Geraldton, and Northampton. "These caves have been known for years, but they have never been explored thoroughly. A few people have penetrated into them a short distance, just sufficiently far to be aware of the vast possibilities of the unknown depths which have never been penetrated. At Jurien Bay is the Morla Cave. It has a very small entrance, but is a very large cave. There are more than three chambers opening one out of another. It has not a very high roof, but very few have ever been beyond the third chamber. One or two adventurous spirits went into the fourth chamber. No end has ever been found. The caves are haunted by wild dogs. Fifty-six miles south of Dongara are the Stockyard Gully Caves. These are the biggest caves of all. The roof is about 150 ft. above the floor, while the width is fully 200 ft. The distance to which one can penetrate is unknown. The Worada Caves are 40 miles south of Dongara."

ROBERT ARCHIBALD STRACHAN, Manager of the Mingenew Branch of the National Bank of Australasia, Limited, is a Victorian by birth, being a son of the late Mr. John Smith Strachan, agriculturist, of Burrumbeet, near Ballarat, who was also one of the manufacturing pioneers of Victoria. The gentleman under review was born at the former town on September 7, 1856, and received his education principally at the Government school, in the intervals of study being employed on his father's farm, where at the early age of thirteen he was entrusted with the driving of a steam thresher. In 1876 he left home and entered the Victorian Confectionery Works at Melbourne, of which his father was proprietor, spending four years in this establishment, where he learnt the confectionery trade. In 1880 Mr. Strachan, sen., disposed of this business, and his son, then a young man of twenty-four, joined the National Bank as junior clerk at Melbourne in the year 1880. His connection with this institution has now extended over thirty years, during which period he has occupied various positions in Victoria, New South Wales, and Western Australia, his first managerial post being at Cordillera, in the Mother State, some twenty years ago. He came to Western Australia in 1895, and for nine years was stationed at Northam. He was next transferred to Katanning in 1907, after several years proceeding to Mingenew, where he has since continued. During his career

Mr. Strachan has shown himself a man of wide sympathies, social, club, and sporting life all appealing to him in its different phases; but his chief interest for many years was centred in the military movement of Australia. His connection with this began in the early eighties, when he joined the East Melbourne Artillery, subsequently transferring to the Prince

MR. ROBERT ARCHIBALD STRACHAN.

of Wales Light Horse at Ballarat. Upon arrival in Western Australia he was the first unit to join the Volunteer Corps formed in the eastern district of Northam, and infused so much enthusiasm into his fellow-members that in spite of great difficulties in securing instructors,

rifle range, uniforms, rifles, and ammunition, such a standard of excellence was attained that on the occasion of the visit of the Duke of York in 1901 they distinguished themselves by taking to Perth a troop of over ninety, which for horses and horsemanship had never been equalled in the State. Prior to this Mr. Strachan had received his commission as lieutenant, and upon the resignation of Captain Mitchell he took charge of the No. 4 Squadron, 18th Australian Light Horse, shortly afterwards being gazetted as captain. In 1906 he resigned in accordance with the Federal age limit regulations, but subsequently formed the first troop of 18th Australian Light Horse at Katanning soon after his arrival in that district, and during the Kitchener campaign attended in charge of his troop. In connection with his military work he is the holder of a handsome silver cup, a medal, and other trophies. In matters of sport Mr. Strachan was one of the promoters of the Northam Bowling Club and a member of the committee of that organization. He married in 1892 Charlotte, daughter of the late Mr. Matthew Creagen, of Stawell, Victoria, and has a surviving family of three daughters.

"NANGETTY," the property of Mr. Richard Smith, of Adelaide, now under the management of his fifth son, Mr. Gordon Law Smith, is situated about 11 miles from Mingenew in the Victoria district of Western Australia. It comprises a

Photo by C. E. Farr. NEAR VIEW OF HOMESTEAD.

block of land which measures about eight by six miles and includes much of the best country in the upper valley of the River Irwin. The country is chiefly undulating with a big expanse of rich alluvial flats. Scarcely any timber is to be seen. The ground is covered with an abundance of beautiful feed, trefoil, capeweed, wild oats, dandelion, crowsfoot, barley grass, and many other renowned fattening grasses, besides being thickly dotted all over with a wealth of blue bush which in the summer affords a welcome change from the dry feed for the stock. The River Irwin runs right through the property and the fine timber on the flats on either side provides welcome shade for the sheep and cattle. On the western boundary there is a fringe of fairly level and lightly-timbered sand plain, where water is easily obtained at shallow depths. Comprising 35,000 acres of territory "Nangetty" is used almost exclusively as a pastoral proposition, the small areas devoted to the cultivation of hay being tilled solely with a view to supplying the requirements of the working horses. It is, however, worthy of mention that two tons to the acre have been reaped in this department, showing that the land

only needs development in order to give splendid returns in agriculture. When purchased by Mr. Smith in 1903 comparatively little

has been in connection with water conservation that Mr. Smith has scored his signal success in the building up of his enterprise. At the present time there are thirty-three paddocks each supplied with permanent water, and no part of the run is more than a mile and a half from a trough constantly supplied with clean water. Besides the original wells and several new ones on the sand plain, there are twelve large excavated tanks which have involved the removal of over 66,000 cubic yards of earth, and these are frequently more than full, for each has its depth and capacity greatly increased by embankments, and the water is often above the excavation line. In addition, on the catchment side of each tank is a dam intended

"DUKE OF NANGETTY," BY "DUKE OF CONNAUGHT 16TH."

improvement work had been done on the run. The larger portion was undivided, only five paddocks being made, and only two of the subdivisions were provided with permanent water. The rainfall, however, averages 14 or 15 in., and it

to trap the silt and form a supplementary supply, these being in themselves extensive works. Many million gallons of water are thus stored, and it is hardly possible to imagine that a shortage should ever occur, one of the most difficult problems by

Photo by C. E. Farr. "NANGETTY" HOMESTEAD AND OUTBUILDINGS.

which the pastoralist in these regions is confronted being solved as far as "Nangetty" is concerned. The whole of the property is fenced with vermin-proof fencing constructed with six wires and netting, and the numerous subdivisions are carried out in relation to the tanks in such a way that each tank may be made to water several paddocks—a plan which is being continued in further work of the kind. Each tank is supplied with a good windmill, generally of the "Monitor" pattern, and the pumps are fixed at the water level, the intake pipe being provided with a movable elbow and the end fastened to a float, so that it always remains less than a foot under the surface. By this means the clearest water is always drawn and there is no fear of the inlet being choked with silt. On the bank of each excavator tank two 6,000-gallon corrugated iron tanks are placed, and into these the mill pumps the water, which is then served to troughs made on a simple and effective plan with sheets of 20-gauge flat galvanized iron. There are in all seventeen windmills, and "Nangetty" has a heavy dam plough and a complete tank-sinking plant of its own. During the first season of Mr. Smith's occupation the station only carried 8,000 sheep, a number which was nearly trebled within three or four years. To establish the flock he shipped several thousand picked ewes from South Australia, together with stud rams from one of the best stud flocks of strong-woolled merinoes in that State, and the result of this introduction of superior blood has been a flock which reflects great credit upon the place, in one season the whole of the grown sheep averaging 10 lb. 7 oz. of wool. There are some 600 odd head of cattle on the station, most of which are fattened for the market, the fat cattle from "Nangetty" being among the finest sent to Perth. Apart from these, Mr. Smith is building up a herd of pure shorthorns of the first quality, the head of the herd being the fine shorthorn bull "Duke of Nangetty," a son of "Duke of Connaught the 15th," No. 416, South Australian Stud Book, bred by Mr. T. K. Bowman, of "Campbell House," South Australia. The cows of the breeding herds are of stock from "Bulloo Downs," Queensland, and Macfarlane's herd at "Wellington Lodge," South Australia. Mr. Gordon Law Smith took over the management of "Nangetty" in 1912.

"PARAKALIA," the property of Messrs. Maley Brothers, Three Springs. The "Parakalia" Estate is situated in the growing district of Three Springs, lying about two miles

grain and hay and good stock-fattening grasses. Since the acquirement of the property by Messrs. Maley Brothers in 1907, however, a change has come over the face of

Photo by C. E. Farr.

GROUP OF MARES.

in a westerly direction from the town of that name and embracing some 10,000 acres of land ideal in every respect for agricultural and pastoral purposes. As brief a period as six years ago there was not an acre of cleared land in the locality, the whole being covered with a formidable forest of murrell and salmon-gum, which indicated the fertile character of the rich red and light loamy soils prevailing over a wide area—since proved so excellently suited to the production of

things, and the 2,000 acres now cleared and cultivated represent the spirit of energy and enterprise which they brought to bear in the development of their proposition. There is plenty of moisture in the soil, and wells have been sunk and dams constructed in various parts of the property, while several windmills serve their useful purpose in making the utilization of the water supply a simple and easy matter. Wheat, barley, and oats are grown in large quantities, and some marvellous

Photo by C. E. Farr.

"MAORI KING," BY "LORD CECIL."

results have been secured, the splendid milling qualities of the grain proving sufficiently the filling capabilities of the soil. To quote some results: Last year (1912) from an area of close upon 1,500 acres Messrs. Maley obtained an average of 22 bushels of wheat, while "Chevalier" barley has averaged 45 bushels, "Cape" barley 60 bushels to the acre, and oats 50 bushels—constituting a record for the district. As high as three tons to the acre have been realized for hay, and even in 1911, a particularly dry season, half a ton of hay and 14 bushels of wheat to the acre were harvested. Having established on good, sound business lines the cereal-growing enterprise, Messrs. Maley Brothers turned their attention with special concentration to the project of breeding something out of the common run in draught stock, and to this end purchased, through the Otago Farmers' Co-operative Union, twelve pedigreed mares, comprising some of the Dominion's most renowned stock. These include "Kate," "Bloss," "Mag," and "Emily," bred by Mr. Alex. Allison, of Clarkesville; "Nancy" and "Dinah," bred by Mr. J. W. Blair, of "Abbotsford Farm," Outram; "Bess" and "Mag II.," bred by Mr. W. R. Gawn, of "Deer Park," Mossgiel; "Kate II.," bred by Mr. William Charters, "Ury Park," Mossgiel; "Jip," bred by Mr. P. Client, "Balacutha"; "Violet," bred by Mr. A. Douglas, "Lowriston," East Taieri; and "Jean," bred by Mr. William Johnston, of "Glen Ore"; all of New Zealand. Their pedigrees are as follow:—"Kate": sire "Elderslie's Pride," g. sire "Crown

Prince," g.g. sire "Lord Salisbury" (imp.), dam by "General Outram," g. dam by "Marquis" (imp.); "Bloss": sire "Royalist," g. sire "Hard Times," dam by "Jean" by "Lord Cranbourne" by "Lord Salisbury" (imp.); "Mag": sire "Prince George," dam 1205 C.S.B., by "Hatfield" by "Lord Salisbury" (imp.), g. dam by "Britain"; "Emily": sire "Merry Morning" 11432 C.S.B. "PARAKALIA" HOMESTEAD, THE PROPERTY OF MESSRS. MALEY BROTHERS.

the Royal Show. 1911: 1st prize, open class, at the Geraldton and Greenough shows, and champion certificate at the former. 1912: 1st prize, open class, at Greenough and Irwin shows, and winner of the "Lloyds" 20-guinea cup at the latter; 1st prize, open class, Royal Horse Parade, Claremont. "Maori King" was sired by "Lord Cecil" by "Lion King" by "British Lion," his dam being "Bloss" by "Tasman," g. dam by "McCallum," g.g. dam by "St. Alexander"; and he was imported direct from New Zealand, where he was bred by Mr. J. W. Blair, of "Abbotsford Farm," Outram. Already he has got some fine foals for his owner, which may be seen at the present time at "Parakalia." A flock of 3,000 sheep of mixed breeds is kept chiefly for the mutton markets, and Berkshire pigs are bred from a noted strain imported to Western Australia by Mr. P. Corbett, of Broome Hill. The "Parakalia" homestead was built in 1911, and the outbuildings, comprising men's quarters, grain and machinery shed, stabling, etc., are up to date in every respect. CHARLES CROWTHER MALEY, J.P., the senior partner of the firm, was born at Greenough, and is the fifth son of the late John Stephen Maley, a pioneer of the farming industry in this State, of which he was a native. In the early days he was engaged in mixed farming at Greenough, and also owned the Greenough and Dongara Flour Mills, while, in conjunction with Mr. D. Harwood, he was part-owner of the Geraldton Brewery and other enterprises in the same district. Young Maley received his training in farming pursuits on his father's property at Greenough, both before and after an absence at Fremantle, where he pursued his scholastic studies under the tuition of Mr. (now the Hon.) Henry Briggs. Subsequently he spent many years in the hotelkeeping business in the mining districts, and in 1910 settled at Three Springs, where he has continued ever since. Mr. Maley is a member of the Victoria District Agricultural Society, of the Royal Agricultural Society, the Farmers and Settlers' Association, and the Upper Irwin Roads Board; and received his Commission of Justice of the Peace in 1912. On January 19, 1909, he married Sarah Teresa, daughter of Mr. Patrick O'Toole, of County Galway, Ireland.

IRWIN SAMUEL MOORE, J.P., mercantile manager, Dongara, is a son of the Hon. Samuel Joseph Fortescue Moore, who represents the Irwin district in the State Legislative Assembly, and a notice of whom appears in the first volume of the present work. He is a native of the place where he now resides, having been born at Dongara on November 21, 1875, and was educated at the Perth High School under the tuition of Mr. F. C. Faulkner, M.A., where he acquired a sound commercial training, thoroughly equipping him for the sphere in life to which he was destined by his parent. Upon the completion of his scholastic career Mr. Moore returned to the place of his birth and entered upon the position of accountant in the mercantile enterprise carried on so successfully by his father in that district. This he filled with credit right up to the period of his father's retirement from business pursuits in 1901, when he received appointment to the responsible post of general manager of the whole of the affairs in connection with the commercial, farming, and pastoral enterprise so long and ably conducted by the latter gentleman. In addition to the large amount of business which this position entails upon him he has launched out on his own account, having a considerable stake in various farming and pastoral propositions in which he became privately interested some years ago. He is well known in the neighbourhood as a breeder of horses, sheep, and cattle, and at various times has been a successful exhibitor at the Irwin and Greenough shows, where his greatest triumphs have been scored with his draught horse stock, which bears an excellent reputation; at the present time he has running on his property some fine draught mares together with a few medium draughts. Mr. Moore owns in conjunction with his brother, Mr. R. J. Moore, a fine holding of 6,500 acres of first-class sand-plain country lying some few miles distant from Dongara, which has proved highly suitable for the depasturage of sheep; in addition to this he has taken up in the Victoria district 5,000 acres of grazing leasehold, which is proving an eminently profitable proposition. He interests himself in the local organizations formed for the advancement and government of the district and for the promotion of social and recreative intercourse. He is a member of the Irwin Agricultural

Society, taking also keen interest in the outdoor sports and pastimes indulged in by the inhabitants of the place where he resides. In 1892 in open competition he secured the Royal Humane Society's Medal for proficiency in swimming and life-saving. Mr. Moore is a member of the Weld Club, Perth.

REGINALD JOHNSTONE MOORE, of "Wye," Yardsboro, was born on January 26, 1878, and is the second son of the Hon. S. J. P. Moore, member of the Legislative Assembly for Irwin district, whose biography appears elsewhere in this work. He received his scholastic tuition at Perth High School under

Bartletto.

Perth.

MR. REGINALD JOHNSTONE MOORE.

Mr. F. C. Faulkner, M.A., and leaving this institution at the end of 1896 entered the head office of the Mines Department of Western Australia during Sir E. H. Witteboom's term of office, where he continued for nearly two years. He next turned his attention to prospecting on the Murchison goldfields for a few months, but abandoning this venture again became associated with the Mines Department, and was resident in several towns on the eastern goldfields during the three years that he remained in this branch of the Public Service. Subsequently he followed the life of a prospector again for a time with fair success, and in 1906 came to Dongara, where, in conjunction with his brother, Mr. I. S. Moore, J.P.,

he was occupied with the affairs connected with his father's farming and commercial enterprises until 1909. In that year he became engaged in farming pursuits on his leasehold property, "Wye," owned by the Hon. S. J. F. Moore, situated four miles north-west of Yardarino and about 12 miles from Dongara; and about the same time, conjointly with his brother above-mentioned, purchased from the Midland Company 6,500 acres of what is known as superior sand-plain country, a mile distant from the latter estate, and commenced operations thereon. This land has justified their expectations as good sheep-fattening country, and on similar soil adjoining some excellent wheat yields have been recorded. Mr. Moore, therefore, is only voicing the opinion of many in the district when he affirms that "this class of country both for wheat-growing and grazing has a great future," its position within the 17-in. rainfall area being greatly to its advantage. Mr. Moore also leases a property adjoining "Wye" from Mr. F. Pearse, which comprises 1,200 acres, 500 of this being cleared and cultivated. "Wye" is splendidly watered by six permanent wells from which the water is pumped up by windmills; and this property, which is 9,000 acres in extent, includes 1,000 acres of first-class cereal-growing soils. Some wonderful wheat crops have been produced by Mr. Moore on 600 acres of this area, as high as thirty-five bushels to the acre having been harvested together with some fine hay yields, the modern method being adopted of working the soil in a thorough manner before seeding. This season (1913) 450 acres have been brought under cultivation, and the crops give promise of again being among the best in the district. The remaining portion of "Wye" Estate consists of good sheep-grazing country, and Mr. Moore has a flock of 3,000 shesps, the major portion of which are merinoes. About fifteen draught horses are kept, and recently the purchase was made of a fine Clydesdale stallion, the dam of which was imported from New Zealand by Mr. S. J. Phillips. This stallion, which is now (1912) two and a half years old, was sired by one of the best horses in New Zealand. Mr. Moore is a member of the Irwin Agricultural Society, of the Pastoralists' Association, the Farmers and Settlers' Association, and of the Weld Club.

J.J.T.

"IRWIN" HOUSE, Irwin, the property of Mrs. Scroope, widow of the late Francis Lockyer Burges. Manager, Irwin C. Burges. In the very early days of Western Australia at the time when Sir James Stirling

10,000 acres of the frontage to both banks in blocks of from 100 to 200 acres, which practically secures the whole of the river frontages for about 15 miles. "Irwin" House is the oldest established homestead

Photo by C. E. Farr. PRESENT HOMESTEAD AT "IRWIN."

was Governor, nearly the whole of the country between Greenough and Mingenew in the Victoria district was taken up for pastoral purposes by Messrs. Lockyer Burges, Phillips, and Hamersley. They worked this extensive tract as a company for about twenty years, at the end of which period they divided the freehold, Mr. Hamersley taking the portion in the vicinity of Greenough, Mr. Phillips the lower country, and Mr. Burges the tract extending from nine miles above Dongara up the River Irwin, a permanent stream which flows through the property. On either side of the river for a

in a very wide radius, and though a large part of the residential portion is comparatively modern, the surroundings all bespeak extensive settlement long before the present structure came into existence. Situated one and a half miles from Irwin Railway Siding and 12 miles from Dongara, the house is of bungalow-like building of brick, with a broad verandah running round it. A feature of the garden is a row of nine large fig-trees, on which have been carved by visitors to "Irwin" House initials and dates reaching as far back as 1866. One of the finest wells and windmills in the

ORIGINAL "IRWIN" HOUSE HOMESTEAD.

depth of about half a mile is wonderful pastoral and wheat-growing territory, and Mr. Burges was fortunate enough to secure about

district is situated in the centre of the garden; and about a mile distant from the homestead may be found the Irwin Springs, whence the

necessary supplies are drawn for the locomotives of the midland railway. In addition there are existent on the property eight wells, which have been fitted with elevated tanks and windmills, so that the water supply for the whole estate has

who, although still quite young, has proved himself to possess administrative powers somewhat above the average. He has a large area of country to administer, various properties having been added by Mrs. Scroope to the original 10,000 acres

and other cereals. Mr. Burges has secured some splendid averages both in wheat and hay, and in 1911, one of the most disastrous seasons ever experienced in Western Australia, he obtained the remarkably good results of 21 bushels of wheat to the acre from land which had not been fallowed, while from the fallowed fields two tons of hay to the acre were reaped in the same year. In normal seasons this land when properly worked is capable of producing from 30 to 35 bushels to the acre. Portions of the land upon the estate have been farmed for upwards of twenty-five years, and under modern methods is still producing, and likely to produce, good crops. The property is completely fenced in and subdivided into forty paddocks. The style of fence adopted by Mr. Burges, and which he considers most economical and durable, is constructed with jam posts planted 22 ft. apart, and seven wires spaced as follows:— Ten inches between the top wire and the next, 8 in. between the fifth and sixth, the latter being barbed, 6 in. between the fourth and fifth, 5 in. between each of the next three, and 6 in. between the lowest and ground level. Two jarrah droppers, 7 ft. apart and secured at each wire, are placed between the posts. This class of fencing, including material and labour, costs £30 per mile. Natural grasses abound on "Irwin" House Estate, making it splendid land for sheep, and a flock of 9,000 is grazed on different parts of the property. With Mr. Burges the merino holds pride of place, and the foundation of the flock was laid by importations from the well-known sheep station "Nalpa" in South Australia, whence 1,000 ewes and rams were bought in the first place, the characteristics

"STRATHALBYN MODEL IV." (CHAMPION SHORTHORN COW, IRWIN SHOW, 1911 AND 1912).

been made practically secure. The natural timbers on the property consist chiefly of blue-gum, with jam and black wattle in smaller proportion, and there is also a considerable area of scrub country. A curiosity is shown where the broken branch of a burnt blue-gum in its fall became firmly wedged in the fork of a standing tree, and Nature, bringing her wonderful resources to work, grafted the green limb on to the living wood, with the result that it lives on, drawing its supplies of nourishment through the root and trunk of its supporter. Mrs. Scroope, the owner of "Irwin" House, is at present (1913) residing in England, and the property is under the management of her eldest son, Mr. Irwin C. Burges,

of freehold comprising "Irwin" House. From the Midland Railway Company was purchased 14,000 acres of good sand plain, which has made splendid sheep country, and another 9,000 acres of land of similar class was acquired from the Government, upon which stock are depastured during the summer months of the year. Some excellent stock-fattening country has also been secured about eight miles from Mingenew, and with this 3,200 acres the area of the whole is brought up to some 36,000 acres. Some of the finest wheat-growing territory in the State is to be found at "Irwin" House, and of the 4,000 acres which have been cleared about 2,000 acres are devoted to the production of wheat

"Sir Percival," g. dam "Blossom 4th" by "The North," g.g. dam "Blossom" by "Darwin," g.g.g. dam "Blossom" by "Cromwell," g.g.g.g. dam "Blossom" by "Star" (Watson). "Sir Percival," sire of "Blossom 6th," was champion at the Royal Show on several occasions, and "The North" by "Champion of the North" (imp.) was one of the best horses of his day. "Clan Donald," who is of docile nature and easily handled, won second prize at the Royal Show as a yearling, second prize at Geraldton as a two-year-old, and the open prize at Irwin Show as a three-year-old. Conspicuous among the lighter sorts of horses on the estate are two polo ponies, viz., "Miss Dawson" by "Dawson" (a well-known pony sire owned by Mr. McK. Grant), dam "Spec" by "Teheran"; and a half-Arab by the pure-bred Arab "Arabian Knight" (also owned by Mr. Grant), dam "Spec" by "Teheran." IRWIN CARLETON BURGESS was born at "Irwin" House on May 25, 1888, and after a preliminary course of education under private tuition, at the age of ten proceeded to Campbell College, near Belfast, Ireland, where he not only attained success in his scholastic studies, being one of the six prefects of his college, but was a prominent figure in athletic sports, particularly in hockey and tennis teams, which he captained for some time; and was a member of the first fifteen of Rugby footballers in 1905-6 when Campbell College had an unbeaten record. Leaving school in 1906, he returned direct to Western Australia, and under Mr. O'Halloran, who was then managing "Irwin House" Estate for Mrs. Scroope, obtained valuable experience in the pastoral and agricultural industries which fitted him for assuming the sole control in 1910, since which date he has continued to direct operations. He is a member of the Irwin Roads Board, having topped the poll with a record vote on the only two occasions he was a candidate for election; is vice-president of the Irwin District Agricultural Society, of which body he was for three years honorary secretary; honorary secretary to the local branch of the Farmers and Settlers' Association; and vice-president of the several athletic bodies in the district. His chief recreation is found in polo playing, and he was a member of the northern district team which visited Katanning in 1912 and 1913.

EDWARD WINTERINGHAM CLARKSON, J.P., of "Tyford" Farm, Dongara, was born at Perth, Western Australia, in the year 1845, and is a son of the late Charles Foster Clarkson who came to the new Crown colony from Salisbury, Yorkshire, England, in 1833, thus being one of the first settlers in the western portion of the Land of the Southern Cross. The gentleman under review, who is self-educated, at an early age was apprenticed to the blacksmithing trade under the late Solomon Cook, of Perth, and, his indentures completed, entered the firm of Messrs. John Summers & Co., coachbuilders, of the same city, with whom he remained until 1868, when he came to Dongara and engaged in the blacksmithing business on his own account until 1876. In that year he purchased from Mr. Joseph Chivers a property known as "Spring" Farm, comprising 700 acres, together with the stock, buildings, machinery, and everything incidental to the farming enterprise there carried on. Though never at any time resident on this property, Mr. Clarkson con-

cultivated, 500 being sown yearly in accordance with the system of fallowing, although as high an average as thirty-three bushels to the acre has been obtained from land not fallowed and without the aid of fertilizers. Wheat-growing is the chief department of industry at "Tyford," and it is also carried on on a lesser scale at "Spring" Farm (which is situated about two miles distant from the larger property), 150 acres of crop being sown annually here and some good results attained. Both holdings are fenced with good substantial fencing, jam and jarrah posts having been used for this purpose with seven wires strung through. It is worthy of mention that some of the jarrah posts have been in the ground for forty-eight years and are still serving their purpose. The farms are subdivided into fourteen and ten paddocks respectively, and in almost any part of either estate water may be obtained. The Irwin River flows through "Tyford" Farm, and several permanent wells, with windmills erected over them, may be found in different

MESSRS. R. W. CLARKSON, E. F. CLARKSON, J. W. CLARKSON, AND T. H. CLARKSON.

localities. The farms are stocked with sheep, cattle, and horses, the flock being represented chiefly by

a prizewinner for his owner at the Geraldton and Dongara agricultural shows. About 300 head of cattle are

of this class of stock keeping up the reputation of the farm in this department. The homestead of "Tyford" Farm is a most comfortable and commodious house of fourteen rooms, which has been beautified in aspect by a plantation of fine fig, mulberry, and other fruit trees, together with grape vines and some well-grown ornamental and

TYPE OF HEREFORD BULL IN USE AT "TYFORD" FARM.

C. E. Farr,

Perth.

MR. EDWARD WINTERINGHAM CLARKSON.

the merino and Leicester types; while about forty draught horses are kept for the requirements of the farming proposition. Mr. Clarkson has achieved a reputation as a very successful breeder of the same class of stock for the market, the sire used for this purpose being the well-known Suffolk stallion, "Rendlesham Earl Grey" (2977), which has been

grazed, a good class of Hereford being bred by Mr. Clarkson from a fine imported bull brought to this country from England and considered by experts to be one of the finest Herefords in Western Australia; some good cows of the same type are also running on the estate. Some attention is given to Berkshire pigs, a few well-bred representatives

shade trees, worthy of mention among which is a thick clump of the beautiful ironbark, providing excellent shelter during the summer months. In addition, a three-acre orchard adjoins the homestead area, and a large kitchen garden, where

Photo by C. E. Farr.

MR. E. W. CLARKSON'S HOMESTEAD, DONGARA.

a plentiful supply of vegetables is grown for household use, may also be found in the vicinity. Water is conserved in an underground cement tank, capable of holding 23,400 gallons, which is supplied by the home-stead roof catchment of the annual rainfall. The stabling and outbuildings are complete in every respect and well up to date, and in all branches of its industry "Tyford" Farm will bear comparison with other propositions of a similar nature in the district. Cattle and horses are also grazed on "Spring" Farm, and Mr. Clarkson has been a successful exhibitor in past years at the Irwin and Greenough shows. He owns conjointly with the properties mentioned a grazing run of 664 acres close to "Tyford" Farm, where sheep and cattle are depastured, and yet another estate situated on the Upper Irwin is conducted by him and his sons, this latter consisting of 4,045 acres of excellent stock-fattening country taken up in the first instance by the late W. D. Moore in the early sixties. It was subsequently purchased by Mr. Clarkson, who grazes cattle there during the winter months, but in the absence of permanent water is compelled to transfer the stock to Dongara during the summer. The whole of this property is ringbarked, and natural grasses grow luxuriantly. Mr. Clarkson received his Commission of the Peace in 1901. He is a member of the local roads board and of the Irwin Agricultural Society. Since the inception of the Methodist Church in the district in 1885 he has occupied the office of steward in this body, and takes considerable interest in its advancement. He was married in 1875 to Sarah, daughter of the late William Grant, of Dongara, who came to Western Australia in the early fifties, and has a family of four daughters and four sons, the latter being all partners with their father in his farming enterprise. They are respectively:— Robert Wilberforce Clarkson, born May 26, 1879 (married); Edward Foster Clarkson, born October 11, 1882; Joseph William Clarkson, born May 16, 1886 (married); and Thomas Henry Clarkson, born February 12, 1888.

**WALDECK BROTHERS,** Dongara, the proprietors of the "Bonniefield" and "Riversdale" estates. (Frederick Waldeck and

George Waldeck.) "Bonniefield," the finely-developed property upon which Mr. Frederick Waldeck resides, was originally taken up by

MR. FREDERICK WALDECK.

the late Henry Fletcher Waldeck, father of the gentleman under review and a pioneer farmer of Western Australia, Perth being his birthplace. After the decease of the late Mr. Waldeck, which occurred in 1883, his widow was left with eight little children, the youngest of whom was born on the day of Mr. Waldeck's death, and great credit is due to Mrs. Waldeck for the way in which she bravely battled for her family until her sons were old enough to shoulder the burden for her. She died in 1905, having earned the

gratitude of her children for her wise training and the respect of all who knew her for her management of the affairs of the farm. The 600 acres which comprised the holding in the first instance have since been considerably added to, and at the present time 1,000 acres of good wheat-growing land and 5,000 acres of excellent sheep country represent the enterprise which has been apt to seize the opportunity and make additions which have multiplied the

MR. GEORGE WALDECK.

value of the estate almost sevenfold. "Bonniefield" is a splendidly-watered property, the precious fluid being obtainable almost anywhere at a depth of 40 ft., and full advantage has been taken of the bounty of Nature

HARVESTER AT WORK ON MESSRS. WALDECK BROTHERS' PROPERTY.

in this respect, with the result that there are fourteen wells in different parts of the estate, each fitted with a windmill, making the utilization

of three tons to the acre was reaped from land which had been thoroughly fallowed and worked before seeding; while thirty-six bushels of wheat to

has been worked for the past forty-eight years, until the last couple of seasons no fertilizers ever having been used. A flock of from 2,000 to

Photo by C. E. Farr.

"BONNIEFIELD" HOMESTEAD AND OUTBUILDINGS.

of the supply very direct and simple. Eight hundred acres of the best land have been cleared and cultivated, and some phenomenal crops have been grown by Messrs. Waldeck Brothers, who have the reputation of being model farmers. In 1907 the excellent return of 320 tons of

the acre was stripped from a patch left for seed for the following year. "Yandilla King," "Federation," and "Baroota Wonder" varieties have been grown with good results, and last year 400 tons of chaff were cut at "Bonniefield" and sent to the Murchison district, while the same

3,000 sheep is bred chiefly for mutton, although the wool has realized good prices at the London markets. The head of the herd of Ayrshire cattle is a young pedigreed bull, whose sire (now defunct) was the property of Messrs. Waldeck Brothers and proved himself not

Photo by C. E. Farr.

PLOUGHING ON THE "RIVERSDALE" ESTATE.

chaff was obtained from hay grown on 90 acres, and in the drought season of 1911 what must be considered a really wonderful average

amount was also produced at the sister property of "Riversdale." These returns speak volumes for the fallow system upon which the land

only a successful sire, but also won repute as a show-ring performer in Western Australia. Among the stud cows are two worthy of mention,

one having been a prizewinner at the Irwin Show of 1910, upon which occasion she was milked at 5 p.m., and again at 9 a.m., producing 43 lb. of milk; in this event Messrs. Waldeck Brothers have been successful for the past six years continuously at the same function. Young and promising stock of a similar breed are coming on at "Bonniefield," these being a splendid advertisement for the excellent grass country found in this region. The horses are principally represented by about thirty draughts, which are kept for farm requirements, and the firm was the owner of the Clydesdale stallion "Scotch Thistle," who before his demise was a noted prizetaker at the Greenough and Geraldton shows, where honours were also awarded to brood mares from the same property. The "Bonniefield" homestead is a modern structure containing eleven rooms which have been fitted up with every regard to the ideas of the present day, all conveniences and many luxuries being enjoyed by the inhabitants of this spacious dwelling, which is surrounded by some very fine shade trees that give it a most pleasing aspect. The companion property of "Riversdale," where has been erected the eight-roomed homestead which forms the residence of Mr. George Waldeck and his family, is situated about three miles east of Dongara and covers an area of 540 acres of good country, the whole of which is fenced and subdivided into six paddocks of varying extent. It

possesses the same natural advantages as "Bonniefield," water being plentiful and fine pastures for the stock abounding, and similar improvements have been carried out in the matter of wells and windmills. In 1910 Messrs. Waldeck Brothers purchased a third property of 3,800 acres at Mullewa, which they have since fenced with jam posts and sheep-proof wire-netting. The divining-rod was used to discover localities favourable for well-sinking over this estate, with the result that in plenteousness of water supply the estate equals the more southerly properties owned by the firm. A considerable amount of development work has already been accomplished, 700 acres being cleared, and in the present year (1913) 230 acres have been placed under crop, while the fallowed portion covers 450 acres. Great hopes are entertained by the proprietors in regard to this property, which is expected to turn out splendid country. FREDERICK WALDECK was born at Dongara, Western Australia, in 1869, and is a son of the late Henry Fletcher Waldeck, above-mentioned. He received his primary education in his native place, subsequently completing his scholastic studies at the Fremantle Grammar school under the tuition of Mr. (now the Hon.) Henry Briggs. Leaving this institution at the age of seventeen Mr. Waldeck returned to "Bonniefield" and devoted his attention to agricultural and pastoral pursuits, taking over

control of the property conjointly with his brother in the year 1896. He has taken considerable interest in the public affairs of the district, and is a member of the Irwin Roads Board and the Irwin Agricultural Society respectively, for eleven years continuously having held the position of honorary secretary to the latter body, and he is also associated with the local branch of the Farmers and Settlers' Association. For thirty years he has served as organist to the local Methodist Church, and in earlier days was a prominent figure in cricketing circles in the district, having captained the local eleven. Mr. Waldeck married in 1902 Gertrude, daughter of Mr. Frederick Chapple, B.A., headmaster of Prince Alfred College, Adelaide, and has four sons. GEORGE WALDECK is the second son of the late H. F. Waldeck, and was born at Dongara in 1871. He was educated at the same schools as his brother above-mentioned, and has since pursued a similar career, returning to his father's homestead a year later. He is a member of the Irwin Agricultural Society and of the Farmers and Settlers' Association of the district; and has occupied office as circuit steward in connection with the local Methodist Church for the lengthy period of eighteen years. Mr. George Waldeck was married in 1908 to Annie, daughter of Mr. Philip Lane, of the Burra, South Australia, and has a family of one son and two daughters.

## GREENOUGH.

"The Greenough Flats, which are only about 13 miles from Geraldton, are justly celebrated throughout the State. There are the Front Flats and The Back Flats. The former are about 14,000 acres in extent, and the latter about 40,000 acres. In both the soil is remarkably rich and fertile. Both were settled very early in the history of this State, and then, as now, were considered the pick of the agricultural lands. In the early days some phenomenal yields were obtained, reaching to 30 bushels per acre. In those days manures were unknown. Without manure, except perhaps a little stable manure, 60 bushels of oats to the acre were obtained. These phenomenal yields were no doubt due to a very favourable season, as the method of farming employed was the same. A fair average yield on The Flats for oats would be about 20 bushels. The ground then was so rich and the wheat grew so high that it fell over. That is not so now. With good farming The

Flats will produce fine crops even now, after years of continuous cropping. The soil, for the most part, is a rich alluvial, of a chocolate colour. The water does not lodge. On the Back Flats the clay subsoil comes very near the surface. There the water in many places will lodge. In 1869 the rust destroyed the crops, and the settlers suffered great losses. There are now occasional traces of rust to be seen here and there, but nothing of any consequence. Whatever the cause of the rust in 1869 may have been, it is not now likely to recur."

The town itself, though it has been in existence for very many years, has a population of less than 400 people. It possesses, however, post office, savings bank, State and private schools, mechanics' institute, and several fine places of worship. An up-to-date flourmill, erected in a central position in the town, grinds the wheat for the surrounding farmers.

MAJOR JOHN LOGUE, "Mount Hill," Walkaway, was born in the year 1861 at "Ellendale," about nine miles east of the place where he now resides, and is a son of the late Major Logue who came with his parents from the north of Ireland in 1830 and settled on the Swan, his father, the late Joseph Logue, B.A., being engaged in the teaching profession. For five years from 1872 Mr. Logue was a member of the Legislative Council, and during this time he rendered good service for the district, being recognized as a particularly fine speaker. The gentleman under review was educated by private tuition at his home, "Ellendale," where he afterwards became engaged in pastoral work in association with his father. In 1881 he proceeded to the Lower Murchison and entered the employ of the late A. J. Ogilvie, of "Murchison House" Estate, where he remained for nine years in the capacity of overseer. At the end of this period he purchased a share in the "Tamala" Station, at Shark Bay, also the property of Mr. A. J. Ogilvie, the business of which was conducted under the name of Ogilvie and Logue until the year 1906, when Mr. Logue bought out his partner's interests in the concern and, acquiring in addition "Cararang" Station, has continued in possession of these properties ever since, spending in all twenty-nine years at the Lower Murchison and Shark Bay. The property at Shark Bay comprises 800,000 acres of pastoral country, and the value of the estate has been considerably enhanced by the installation of some 30 miles of piping for the conveyance of water by means of gravitation to all parts of the property. "Tamala" is stocked with 50,000 sheep and a mob of about 200 horses, the types bred for station use being chiefly Suffolks, with a few lighter sorts. About 500,000 acres of this run have been fenced with rabbit-proof fencing at a cost of £3,000. "Mount Hill," near Walkaway, comprises 20,000 acres of conditional purchase pastoral and freehold lands, the major portion of which is suited principally for grazing purposes, although some of the finest wheat-growing area in the State may be found within its boundaries. The homestead here was built by the late Michael Morrisey, and in later years has been added to and improved by Mr. Logue. The latter gentleman is a

partner in the "Ellendale" property, now managed by his brother, Mr. Ken. Logue. He takes an active interest in the public affairs of the district, and is president of the Greenough Farmers' Club and member of the Royal, Greenough, and Northampton agricultural societies. In 1903 he married Dorcas Ann, daughter of Mr. Lockyer C. Burges, of "Oaklands," Northampton, and has a family of three sons and three daughters.

The late F. W. WALDECK, of "Mount Pleasant," Greenough, was born in Germany on November 3, 1807. He served an apprenticeship to the tailoring trade in Bremen, working as a journeyman for some time. Removing to London he set

Mr. F. W. WALDECK.

up in business, and whilst there was selected as a missionary and sent to Western Australia with the Rev. Dr. Gustianini, who was instructed to organize a mission among the natives. The couple arrived in the good ship "Adingham" on July 10, 1836, and immediately set about in an endeavour to Christianize the aborigines. A church and schoolhouse was erected at Guildford, and on the banks of the Swan a farm was started, the natives being employed in the general work. The Rev. Dr. Gustianini was recalled the following year, and Mr. Waldeck set up in business in Perth, where with but one interval he continued for twenty-four years. Here he joined a little band of earnest Christians who had erected a Methodist church,

and was a zealous worker in the cause of Methodism, being steward and superintendent of the Sunday-school for nearly the whole time that he resided in the metropolis. A mission for the natives was established at Wanneroo, and Mr. Waldeck laboured in this centre for three years, at the end of which time the Church was compelled to abandon the mission from lack of sufficient funds. In 1859 Mr. Waldeck with his family removed to Greenough, where he commenced farming, which occupation he followed till the time of his death in 1895. Here, as in Perth, he worked earnestly in the Methodist cause, ably assisted by his wife, Mrs. Fredericka Waldeck. Although not a qualified medical practitioner, he rendered valuable assistance to settlers both far and near, and in many ways endeared himself to all with whom he came in contact. Mrs. Waldeck survived her husband by ten years, her death taking place in her ninety-third year. She left 135 descendants.

JOSHUA WATTS WALDECK, who owns the "Mount Pleasant" property near Greenough and is a well-known and highly-respected resident of that district, was born at Perth on May 16, 1848, and is a son of the late Frederick William Waldeck, above-mentioned. He received his education at the Perth State School, and at the age of eleven came to Greenough, where he assisted in farm duties on the "Mount Pleasant" Estate, which at that period was the property of his father. When he was twenty-one years old the late Mr. Waldeck relinquished active life and went into retirement, when the estate was taken over on a leasehold by the gentleman under review, who worked it successfully as a mixed-farming enterprise for nine years, at the end of which period the lease expired. He then commenced operations on another farming property on the "back flats" of Greenough, and continued to carry on a prosperous proposition in this locality for seven years. Becoming tired of farming about this juncture he left his family at Greenough and proceeded with sheep to the South Murchison, east of Mount Magnet, where he established the "Warra-cootharra" Station. In 1905 he left this in the hands of a capable manager, and returning to

Greenough took over the licence of the Hampton Hotel, which he personally conducted with success for three years. This period was followed by fourteen years at "Warra-cootharra," whither he repaired with his family after disposing of the hotel business, and settled down to the life of a pastoralist and farmer. In those days the natives of the Murchison district were more or less hostile to the whites, and Mr. Waldeck had the misfortune to lose his eldest son at the hands of the blacks. The unfortunate lad was mustering sheep when he was speared through the abdomen by a native in hiding, the scene of the tragedy being about eight miles distant from the homestead. The alarm was given by a shepherd who, with Mrs. Waldeck, proceeded to the spot, and placing the injured boy on a vehicle started for the nearest neighbour's homestead 60 miles away. Fifteen miles of this dreary journey, however, had only been covered when young Waldeck expired. In 1905 Mrs. Waldeck and children returned to "Mount Pleasant," and in 1911 Mr. Waldeck sold the station and purchased outright the "Mount Pleasant" Estate at Greenough, which he has conducted as a mixed-farming enterprise ever since. The property is situated on the fertile lands of the "front" flats of the district at a distance of four miles from

under cultivation. Last season (1912) the excellent return of twenty bushels of wheat to the acre was obtained from a field which has been worked for fifty years, and two and a half tons of hay to the acre is quite an ordinary harvest at "Mount

Wallace Miller,

Geraldton.

MR. JOSHUA WATTS WALDECK.

Pleasant." Adjoining this specially superior land are 250 acres of splendid grazing paddocks, upon which during the whole of last year were depastured 1,200 sheep. The whole

localities. A special feature of the "Mount Pleasant" enterprise is the raising of pigs for market purposes, and Mr. Waldeck has gone to considerable trouble and expense in making suitable arrangements for the carrying on of this industry on a fairly extensive scale, having had 270 acres of land enclosed with cyclone fencing at a cost of £28 per mile for material alone, without including the cost of erection, as a run for the swine. In every respect the piggery is up to date, and Mr. Waldeck has given careful attention to the breed, favouring a cross between the Tamworth and Berkshire, whence he gets some fine stock which are not only very prolific but which fatten rapidly on the Greenough grasses. He deals in a smaller way with cattle and sheep, and has obtained good prices for wool from "Mount Pleasant" both at the local and London markets; while a number of draught and lighter horses are kept for the requirements of the farm. The homestead is a comfortable dwelling, beautifully situated in close proximity to the seabeach, being only half a mile distant from the shores of the Indian Ocean. Adjoining is a fine fruit and vegetable garden, and Mr. Waldeck has been a very successful exhibitor of the latter product at the local shows. The outbuildings are very complete and comprise barn and stabling,

Photo by C. E. Farr.

"MOUNT PLEASANT," RESIDENCE OF MR. J. W. WALDECK, GREENOUGH.

the Greenough Road Siding. It comprises 900 acres of excellent agricultural country, and very fine crops are produced on the 450 acres which have been cleared and brought

of the property is fenced and subdivided, and wells provide a fine permanent water supply, which is utilized by means of windmills which have been erected in various

men's quarters, machinery shed, etc., and in every respect the appointments of the farm are such as to cause it to rank among the premier properties of the district.

Mr. Waldeck is a very popular member of the community, and was at one time chairman of the Greenough Roads Board, of which he is still a member. He is chairman of the school board of advice, a member of the Greenough Farmers' Club, and at sixty-five years of age still a keen cricketer, taking his place in the field with the Walkaway Eleven, among whom he is affectionately known as "Sonny." Mr. Waldeck married on December 9, 1869, Catherine, daughter of the late F. W. Pearson, of Newcastle-on-Tyne, England, and has six daughters and three sons.

THOMAS CLINCH, of "Cliff Grange," Greenough, was born at Cholsey, near Wallingford, Berkshire, England, on February 27, in the year 1836, and is a son of the late William Clinch, a farmer of the Greenough district. He received his education at the Cholsey Government School, completing his scholastic career at the private academy conducted by the late William Clifford of Aston-Upton; and leaving school at the age of thirteen entered the iron-plate works of Messrs. Ewbank & Gould, manufacturers, of Long Lane, Bermondsey, and on the Thames, at the same time continuing his studies by means of evening classes. In 1857 he sailed for Australia by the American ship "Winfield Scott," and landed at Melbourne after an uneventful voyage lasting for three months. Upon arrival he proceeded to Ballarat, then the scene of great gold-mining activity, and engaged in the carrying business at that centre until railway communication was established between the goldfield and Geelong. Upon the day of the opening of the railway Mr. Clinch boarded the coach for Melbourne, and taking passage by the s.s. "Balaclutha," bound for Albany, arrived at that port in June, 1861. He journeyed overland to Perth, where he remained a few days only before starting out on horseback for Berkshire Valley on the Victoria Plain, a ride of 120 miles through bush country. "Berkshire Valley" Station was then the property of Mr. Clinch's brother, James, and the gentleman under review remained at the station as overseer for a period of eighteen months before accepting a similar position on the estate owned by his younger brother,

Charles, at Moora, and known by the latter name, which has since been changed to "West End" by the present owner, Mr. W. R. Clinch, a son of Mr. Thomas Clinch. He was next engaged by the late Walter Padbury to manage his property "Yatheroo," where he continued for five years, in 1869 coming to Greenough to take over the mill and property there from Mr. Padbury, which he conducted on his own behalf until the year 1900, meanwhile having increased the landed property from 200 to 2,000 acres. Finally he handed the mill and farming interests over to his sons, and has since lived in retirement at "Cliff Grange," a residence lying adjacent to the mill. In 1888 Mr. Clinch visited the Eastern States, and at Melbourne purchased a harvester from Messrs. Nicholson and

for the State during the *régime* of Governor Smith, which Commission he resigned in 1903. Mr. Clinch has in his possession an interesting curio in the shape of an old Bible which was presented to him on June 28, 1844, by the famous Dr. Arnold, who afterwards held the portfolio of Minister of Education in England. He was married in the year 1868 to Sara, daughter of the late William Mortimer, of Gingin, and has a family of four sons and two daughters.

ARTHUR CHARLES CLINCH, J.P., of "Mill Farm," Greenough, is a native of this State, having been born at Yatheroo, in the Melbourne district of Western Australia, on November 23, 1868, and is the eldest son of Mr. Thomas Clinch, a pioneer of the State, a biographical notice of whom appears on this page. He was educated at the Fremantle Grammar school under Mr. (now the Hon.) Henry Briggs (President of the Legislative Council), and completing his scholastic studies in the year 1885 he came to Greenough and took over the management of his father's mill until 1890, when he continued the conduct of the concern on terms of partnership with his parent. Ten years later, upon the retirement of Mr. Thomas Clinch from active business life, the enterprise was taken over entirely by his son, who has since rented the mill and adjoining property and carried on operations on his own account. Prior to this time there existed in the mind of the public a good deal of prejudice in regard to Western Australian flour, and the Forrest Government, realizing that something must be done to remove this, promoted the Coolgardie Exhibition in 1899, in which a specialty was made of an exhibit of local flour, millers from all parts of the State being invited to compete. The flour turned out by the Greenough Mill obtained first and special prizes at this exhibition, and, subsequently, samples sent to the Glasgow Exhibition of 1901 secured an award, while at the Paris Exhibition of 1900 the same exhibit was again successful. Since that year the flour milled at Greenough has taken prizes whenever shown in this State. In order to test the keeping qualities of the flour, consignments were sent by the Government to the north-west, where the test proved

Perth.

MR. THOMAS CLINCH.

Morrow, which being the first to be brought to Western Australia naturally became a prominent object of interest among the pioneer farmers. He also purchased from Messrs. Schumacher, of Kilkenny, South Australia, the roller plant for the flour mill, this being the second roller plant erected in Western Australia, which is still running satisfactorily. Since settling in the district Mr. Clinch has identified himself with almost every local institution of merit, and the development and extension of many of these are due to his foresight and good judgment. He was among the first to receive the Commission of the Peace

very satisfactory in every way. Thus the prejudice of the public was overcome, and to-day there is an extensive demand for the locally-grown flour which extends even beyond the shores of Western Australia. It is interesting to note that the Greenough Mill, which aided so materially in bringing about this change of opinion, was the second erected in the State, and the second mill to have a roller plant. The agricultural area in connection with the "Mill" Farm now comprises 1,100 acres, a large portion of which was acquired by Mr. Clinch from adjoining farm, and practically the whole of this is cleared and under cultivation on the rotation system of cropping, this season (1913) 350 acres being sown with wheat, barley, and oats, all of which present a very promising appearance. Like most of the Greenough country this farm produces some wonderful crops, and the records have run as high as three tons of hay to the acre, thirty-five bushels of oats, thirty bushels of English and Cape barley, and twenty-five bushels of wheat. On the pastoral side of the industry some idea of the quality of the grass country may be gained from the statement that five sheep to the acre have been fattened on land where trefoil, wild oats, and dandelion grow luxuriantly, and in 1912 from this area Mr. Clinch turned off 1,000 fat sheep and about 100 head of cattle. In addition 200 pigs are

found on the property, together with lighter sorts of horses, and the blood stallion, "Beatenally," a fine brown horse by "Fusilade," serves as a good stamp of station sire, and is available in a limited degree to other

Greenough & Evans, Perth.  
MR. ARTHUR CHARLES CLINCH.

breeders in the district. An imported pedigree bull is at the head of the herd, and a few fine pedigree milkers are also grazed on the run. The "Mill" Farm is well watered by permanent wells, in connection with which windmills have been erected, and in addition the Greenough River

vicinity of the house is a vineyard covering about two and a half acres, Mr. Clinch's experience with vines of the right variety being that, with proper cultivation and attention, a profit of £1 per annum may be made from each vine, having proved which he intends to extend this branch of his industry. Sufficient vegetables and fruit for household use are also grown on the homestead area. The outbuildings are up to date, consisting of barn, hay-loft, loose boxes, stabling, machinery shed, a fully-equipped blacksmith's shop, drafting-yards, stockyards, chaff-cutting plant, etc., and all blacksmithing and machinery repairs are done on the property, also the building of all waggons, lorries, drays, etc., etc., needed for use on the farm. Mr. Clinch is chairman of the Greenough Roads Board, of the health board, and of the local hall committee. He is a member of the farmers' club and of the school board, is captain of the rifle club, and has served as judge in miscellaneous sections at the Geraldton and Dongara shows. An adherent of the local Church of England, for seven years he has filled the office of vestryman to that body, for which he also acts as secretary. He received his Commission of the Peace on July 23, 1910. Mr. Clinch married in the year 1891 Edith, daughter of Mr. Joshua W. Waldeck, of "Mount Pleasant," Greenough, and has two surviving sons.

Photo by C. E. Farr.

MR. A. C. CLINCH'S "MILL FARM," GREENOUGH.

housed, representing yet another phase of industry on the "Mill" Farm. The flock is kept for the lamb trade principally, but the yearly wool clip is despatched to London, where very satisfactory prices are commanded. A goodly number of working draughts are

flows through the property. The homestead, a very comfortable and commodious building with interior nicely furnished, is situated five miles distant from Walkaway, three miles from Greenough Railway Siding, and one and a half miles from the sea beach. In the immediate

FRANCIS EDWARD MORTIMER CLINCH, "Donaville," Greenough, was born in the district where he now resides on June 1, 1879, and is the youngest son of Mr. Thomas Clinch, whose portrait and biography appear in the pages of this work. He acquired his primary

education at the public school in his native place, subsequently proceeding to Fremantle, where he pursued a finishing course of study under the direction of Mr. (now the Hon.) Henry Briggs, who conducted the well-known Fremantle Grammar School where so many prominent Western Australians received their early training. Leaving this institution at the age of sixteen, Mr. Clinch returned to Greenough, where for some time he was engaged in farming and pastoral pursuits on his father's estate. In 1901 he was established by his parent on his present property "Donaville," an excellent farming enterprise originally confined to 280 acres, which, by the purchase of two adjoining properties of 310 and 250 acres respectively and a conditional purchase leasehold comprising 500 acres in the near vicinity, has now an extent of 1,314 acres. The estate has the advantage of being situated on the main roads leading to Greenough Road Siding, Walkaway, and Geraldton, all macadamized highways and kept in excellent condition, and the prettily-situated homestead overlooks the sandhills which separate the Indian Ocean from the famous Greenough Flats. Of the entire area of the estate practically the whole of the wheat-growing land is cleared and has been brought under cultivation by Mr. Clinch, who has had some fine returns. One paddock in especial has been continuously cultivated for over forty-five years, and at the present period is capable of producing two tons of hay to the acre without the aid of phosphates—an instance which gives some idea of the value of the "Donaville" land for agricultural purposes; in 1912, the excellent return of twenty-nine

bushels to the acre was obtained from a wheatfield which was awarded second prize for the district by the Greenough Farmers' Club. The pastoral areas of "Donaville"

C. E. Farr,

Perth.

MR. F. E. M. CLINCH.

are eminently suited to the fattening of stock, and close on 800 sheep are depastured there all the year round in addition to cattle and horses, the luxuriant growth of natural grasses being a feature of the country. About twenty-four draught horses are kept on the property, and a few good milking cows are also in evidence. The whole of the property is splendidly watered by permanent wells, in connection with which windmills have been erected, and for domestic purposes an ample supply of rainwater is available. A great deal of improvement work has been completed in

the shape of fencing—jam posts and six or seven wires being used for this work—and outbuildings, the latter comprising barn, machinery shed, a stable containing fourteen stalls, blacksmith's shop, dairy, piggery, etc., while fowl-runs for the accommodation of 200 fowls have already been built, and Mr. Clinch intends in the near future to give a considerable amount of attention to the poultry industry. The homestead, which is reached by a three-mile drive from the Greenough Road Siding and five miles from Walkaway, is a substantially-built structure containing seven rooms, the stone used in its construction having been quarried out of the hillside quite close to the site of the house. It is surrounded by ornamental trees, and has a well-kept vegetable garden near by where fine fresh greens are produced with the aid of the good water supply; and a little distance apart is a small vineyard and orchard, also with the water laid on. Mr. Clinch takes an active interest in the affairs of the district, and during 1909-10 occupied the position of secretary to the farmers' club, a body of which he is still a member. He is treasurer of the Greenough Rifle Club, and a member of the Farmers and Settlers' Association. His religious sympathies are with the Methodist connection, and he is a supporter of the local church of that communion, holding office as circuit steward. He cordially advocates indulgence in outdoor sport, and is a patron of the local institutions for this purpose. In September, 1895, Mr. Clinch married Ena Gertrude, daughter of Mr. John F. Morrell, of "Hautville," Northam, and has two daughters.

"DONAVILLE," RESIDENCE OF MR. F. E. M. CLINCH, GREENOUGH.

JONES BROTHERS, "Belay" Farm, Walkaway. "Belay" Farm was originally owned by a syndicate formed by Messrs. Burges, Hamersley, Phillips, & Co., from whom it was purchased in 1858 by the late John Jones, father of the present owners, who worked the property successfully as a mixed-farming enterprise up to the time of his death, which occurred in 1895. The late John Jones came from Wales, England, in the very early days of colonization in Western Australia, and being a mason by trade was engaged on various works at Geraldton and in the surrounding districts before coming to take up his residence at "Belay" Farm. Mr. John Jones was a man of public spirit and was chiefly instrumental in having the railway survey removed from the front to the back flats of Greenough, touring the district to obtain signatures to a largely-signed requisition which was presented to the Government who decided in favour of the alteration, and hence the present position of the Walkaway Railway Station. The "Belay" property at his death was willed to his widow, Mrs. Maria Jones, upon whose demise on July 5, 1905, it came into possession of the present proprietors, who have continued to carry it on conjointly ever since. The estate is conveniently situated on the fertile

relief of thick clumps of trees surrounding the dwelling. The whole aspect is one of wellbeing and prosperity, and although there is at all times to be found a charm in the

MR. WILLIAM JONES.

appearance of cultivated fields, "Belay" may be said to possess a splendour which is all its own. A more comprehensive survey of the estate confirms the impression that it has been dealt with by experienced and skilful hands, and the reputation borne by Messrs. Jones Brothers

cereals, while the remaining half is splendid stock-fattening area. The locality is favoured by a regular and abundant rainfall, and good natural grasses flourish on these grazing pastures, while for further water supply a well, 84 ft. deep, has been sunk, over which is built a powerful wind-mill, by means of which an inexhaustible stream of good fresh water is directed to all parts of the property through 1-in., 2-in., and 2½-in. pipes. Fencing operations have been completed all round the boundary, six and seven wires being employed to make a sheep-proof barrier, which with the jam and jarrah posts form a neat and substantial fence, and this system has been continued in the subdivisional fences cutting the estate up into ten good-sized paddocks. Fine yields have been obtained from the cultivated portions, and even in a phenomenally bad season Messrs. Jones Brothers registered the respectable average of twenty bushels of wheat and two tons of hay to the acre, giving some idea of the possibilities of the soil under more favourable conditions: one paddock on the estate has been cultivated for upwards of sixty years and is still producing good crops. On the pastoral side some fine Clydesdales have been bred at "Belay," among which are some noticeable draught mares sired by

Photo by C. E. Farr.

"BELAY" FARM, THE PROPERTY OF MESSRS. JONES BROS., WALKAWAY.

Greenough flats, within two miles of the Walkaway Railway Station, and on approaching the homestead from the township the cultivated areas present a fine spectacle, which is enhanced by the

of being "model farmers" is thoroughly well earned by the abundance of evidence forthcoming. The property embraces some 1,800 acres of country, 900 of which are eminently suited to the growing of

the now defunct imported stallion "Albyn's Stanley," by "Prince of Albyn" out of the valuable mare "Nellie." "Albyn's Stanley" was the property of Messrs. Jones Brothers, and was three times

successful in the Western Australian show-ring, being twice a winner at Greenough and once at the Dongara Show. Exactly a similar record was established by "Blue Ribbon," another of Messrs. Jones Brothers' successful sires (also defunct), a son of "True Ribbon," and responsible for some of the promising stock on the property; while, with a fine mare "Gipsy," two firsts were secured at the Greenough Show. A few good Jersey cows are milked, but cattle breeding for market purposes has not been included in the operations of the farm. "Belay" homestead, in which the senior partner, Mr. William Jones, resides, is a very comfortable and substantial structure built with stone procured from the property, and giving a picturesque touch to the dwelling are some fine ornamental gums and a few large fig trees which flourish in the near vicinity and afford welcome shelter during the hot summer months. A special feature of the homestead area is a well-tended vegetable garden, and Mr. Jones has been a very successful exhibitor of products from this department at the local shows being beaten only once in the potato exhibit in eight successive years. The outbuildings are complete in every way and comprise men's quarters, barn, stabling, wheat-house, machinery shed, blacksmith's shop, piggery, dairy, etc. In addition to "Belay" Farm Messrs. Jones Brothers are part owners with Messrs. James, Henry, and Charles Jones of a pastoral property known as "Boojardie" situated 12 miles west of Mount Magnet on the Murchison and containing 374,000 acres of land in one vast block. Of this 273,000 acres are fenced with mulga posts and five or six wires, and on this estate are depastured 10,000 sheep, 700 head of cattle, and 120 head of horses, which rapidly put on good condition when introduced to these splendid natural grass pastures. The property is excellently watered by thirty-eight wells, sixteen of which are fully equipped with windmills and troughing, and galvanized iron tanks of a capacity of 5,000 gallons each; and this adequate water supply, together with the fact that the property is so close to a ready market and other advantages, makes "Boojardie" a very valuable station property. A homestead of six rooms

is erected on the estate and up-to-date outhouse, stockyards, etc. complete the station equipment. WILLIAM JONES, J.P., was born at "Belay" Farm on August 7, 1861,

C. E. Farr.

Perth.

MR. JOSEPH JONES.

and is the eldest surviving son of the late John Jones. He was educated under private tuition in his own home, and at a very early age began to assist in the work of the paternal farm, which, upon the death of his father in 1895, he took over

possessors, and have continued the development of the property ever since. Mr. Jones has been an energetic worker in connection with the Greenough Roads Board, of which he is still a member, for over twenty years. He is a member of the local farmers' club, chairman of the Walkaway Hall Committee, and a member of the Farmers and Settlers' Association. On June 10, 1896, he married Nora, daughter of the late John Morrisey, of Walkaway, and has four sons and a daughter. JOSEPH JONES was born at "Belay" Farm on February 12, 1875, and received his education at the Walkaway School, where he remained until the age of sixteen, when he entered upon the career he has since followed, receiving training of a scientific character on his father's property. He is a member of the Greenough Farmers' Club and of the Farmers and Settlers' Association, and like his brother is a keen supporter of all clean forms of healthy outdoor sport. Mr. Joseph Jones recently had erected an imposing bungalow home, to which he has given the name "Redcliffe," where he resides with his family. The house, which is built of brick, contains seven rooms and is fitted up with all modern conveniences, a broad verandah considerably enhancing its

"REDCLIFFE," RESIDENCE OF MR. J. JONES, WALKAWAY.

on lease from his mother in conjunction with his present partner. Ten years later, upon the demise of the late Mrs. Jones, they became sole

appearance. He married on January 15, 1907, Nora, daughter of Mr. Joseph Silcock, of Greenough, and has two daughters.

## GERALDTON.

Geraldton, a seaport town situated on the shores of Champion Bay, 210 miles by sea and 287 by rail from Perth, is the principal town in the State north of the capital. It is the chief port of the Victoria district, comprising a very large and important pastoral and agricultural area and also the Murchison mining fields. Judged by the amount of Customs revenue it is the second port in the State, inferior only to Fremantle, while it exports more wool than any other port except one. The town, which is under municipal government, possesses a magnificent pile of public buildings and one of the finest town halls in the State. The other public buildings include churches, State and private schools, courthouse, convent, and many others. In the library is preserved the barrow utilized in turning the first sod for the first railway built in the State—that from Geraldton to Northampton. The most conspicuous landmarks are the tower of the Globe Brewery—an establishment erected and equipped at a cost of £12,000—and the Point Moore Lighthouse. The hotel and coffee palace accommodation is particularly good, some of the hotels being spacious enough for much larger towns.

The hospital is a large building, having to meet the needs of the district as well as of the town.

Geraldton is the summer resort for the mining population of the Murchison goldfields, there being an esplanade with a splendid promenade pier some 800 ft. long, fitted with a bandstand and seating accommodation. Ample provision is also made for all forms of sports, including field sports and boating, so that the visitor finds plenty to occupy his time. "But as a tourist resort Geraldton has not yet come into its own. The beach is all that could be desired, but little attempt has been made so far to make it attractive to visitors. There is, as yet, no motor-launch or pleasure steamer making cheap trips, as is the case at Bunbury, a town of the same size as Geraldton. When Geraldton caters for the tourist traffic, it is tolerably certain that she

will secure her fair proportion of it. The Abrolhos Islands, which are situated some 40 miles away from Geraldton, have been truly described as 'The Naturalists' Paradise.' If an hotel or good boarding-house were erected there, they would in time become one of the most favourite tourist resorts on the whole coast. There are few places which possess finer natural advantages than Geraldton, and in course of time it is inevitable that it will be a flourishing and populous city. Its immediate hinterland comprises millions of acres of fine arable land within the belt of assured rainfall. Behind this are the Murchison goldfields, where the industry of gold mining is firmly established for years to come, and is certain to expand as the mines of Meekatharra, the Black Range, and other centres are more fully developed.

"The prosperity of the town is based upon its industries. The tract of country, from the Irwin River to the Murchison River and beyond is destined to be one of the greatest wheat-producing centres in all Australia. It has been described as 'The Great Wheat Belt,' and it is correctly so named. The annual average, with very little land in fallow, is now 16 bushels. When more land is fallowed and better

systems of farming are employed the annual average should not be less than 20 bushels. Soil and climate are alike admirably adapted to the growth of cereals. The seasons are remarkably regular and the rain falls exactly at the time when it is needed. The rainfall at Geraldton averages nearly 19 in., the great bulk of which falls in the winter months. The dry months are from early in December to the end of March.

"The town at present suffers from lack of a good water supply. At Higgotty Springs, about 400 ft. above the level of the town, there is an abundant supply of perfectly pure, palatable water. The cost of laying on the water from Higgotty Springs and reticulating the town would amount to £20,000 or thereabouts. There is no doubt that this is the source from which an abundant supply of pure water will ultimately be obtained.

Photo by Wallace Miller. MARINE TERRACE, GERALDTON.

"Travellers on visiting Geraldton for the first time will be struck with the similarity of the bay to the Riviera. The seascape reminds one of a strip of the Mediterranean. It is, in fact, the Australian Riviera, and when, as time goes on, the foreshore is reclaimed and adorned the resemblance will be still more striking.

PUBLIC BUILDINGS, GERALDTON.

The present frontage to the sea is anything but pleasing. The reclamation of the foreshore will obliterate this view and replace it with one more pleasing."

The railway system to the Murchison fields starts

from Geraldton, and another railway runs first to Northampton and then out into the northern portion of

TOWN HALL AND COUNCIL CHAMBERS.

the wheat belt. The portion from Geraldton to Northampton is the oldest railway in the State, the inducement to build it in those early days being that it brought the copper mines of the latter district within easy reach of a port.

The population of Geraldton itself is set down as 4,650, but if the outlying district be included, it is little short of 10,000.

RAYMOND GEE, M.A., Resident Magistrate, Geraldton, Chairman of Quarter Sessions for the Victoria Magisterial District, Chairman of the Geraldton and Greenough Licensing Benches, and Magistrate to the Local Courts at Geraldton, Northampton, Greenough, Dongara, and Mingenev, was born near the famous town of Ross, Herefordshire, England, on August 14, 1857, and is a son of the late Thomas Gee. He received his scholastic training at Hereford School and Brasenose College, Oxford, where his academic honours included First Class in Classical Moderations, 1877; Second Class Lit.Hum., 1879; B.A., 1880; and M.A., 1885. Upon the completion of his University course Mr. Gee spent some seven or eight years in the teaching profession in England, during a portion of which period he was a master in the Royal Naval School, New Cross. In 1887 he crossed the seas to Western Australia to fill an appointment as master in the Perth High School, which he held for two years. Resigning this post he was for some time associated with the Hon. Henry Briggs, J.P., the present President of the Legislative Council, who at that period conducted a well-known educational institution at Fremantle, and eventually Mr. Gee joined the Government

KKK

service in 1894, when he was appointed to the office of mining registrar, clerk of courts, etc., at Mount Magnet. Two years later he was transferred to Dandalup as goldfields warden, and upon the closing of this centre as a goldfield about a

Wallace Miller, Geraldton.  
MR. RAYMOND GEE.

year subsequent to his appointment he was sent as registrar to the Collie coal field, during a portion of the

eight years that he spent there discharging also the duties of resident magistrate. In 1908, when the Collie and Bunbury magisterial districts were merged into one, he was transferred to Geraldton to fill his present post, and with the exception of six months, when absent on a trip to the Old Country, has continued here ever since. For four years Mr. Gee was returning-officer for the Geraldton district and central province. He is a member of the Weld Club, Perth, and of the Geraldton Club. He married in 1895 Annie Matilda, eldest daughter of the late Rev. R. W. S. Alderson, of Pinjarra, who came to this State as chaplain to the Fremantle Prison in 1857, previously having occupied the post of Imperial chaplain, serving with the British Army in the Crimea. There is issue of this marriage, one daughter and two sons, the elder of whom is a King's Scholar of St. Peter's College, Westminster.

GEORGE ADAM KEMPTON, Mayor of Geraldton, is a son of the late Thomas Kempton, of Victoria. Born at Malvern, in that State, on August 5, 1872, the gentleman under review received his education locally, and at the close of his

school-days was initiated into commercial life in Victoria, before coming to Western Australia at twenty years of age. Upon his arrival he proceeded to the newly-discovered Coolgardie goldfields, and for some three years followed the ups and downs of prospecting enterprise in that and the Lake Carey districts. In 1875 he entered into a business partnership with Mr. Walter Thomson in Boulder City, which was then

Wallace Miller, Geraldton.  
Mr. GEORGE ADAM KEMPTON.

in its infancy. His intention being to study for a profession, at a later date Mr. Kempton took up his residence at Perth, and having duly qualified spent six years as assistant to Dr. A. J. Wright, the well-known surgeon-dentist of the capital, under whom he gained most valuable experience. About a couple of years after receiving his diploma he started on a professional tour through the north-west, with the object of selecting a suitable centre from which to establish a practice on his own account, and, deciding on Geraldton, settled at this seaport in 1908, where he has always found plenty of scope for his professional skill. Since his arrival Mr. Kempton has devoted all the time he can spare to the consideration of public claims, and since 1910 has served as a member of the light and finance committees of the municipal council, having been a consistent advocate and agitator for the establishment of an electric-light plant for the use of the town. In July, 1913, he was returned to the mayoral chair rendered vacant by retirement of previous occupant,

Dr. L. M. Hungerford. He is a member of the council of the Liberal League, and in pre-Federal days took an active interest in the question of federation, he being one of the returning officers at the time of the first Commonwealth elections at Boulder. He also acts on the local school board; is a member of the committee of the Geraldton Agricultural Society; is associated with the Masonic fraternity, in which he is a Past Master; and is a member of the Geraldton Club. Outdoor sports command his sympathy, and he is connected with every sporting organization formed in the district, finding personal recreation in bowls, tennis, and swimming. Mr. Kempton married Jessie, daughter of the late James Price, a well-known mining man of Victoria, and has three sons and one daughter.

LAUNCELOT MACHELL TRAVERS HUNGERFORD, L.R.C.P. and S.I.-L.M., Rotunda, Dublin, is a native of Cork, Ireland, where he was born on January 7, 1865, his father being the late Henry J. Hungerford, LL.D., of Dublin. He pursued his primary studies at King William's College in the Isle of Man and at St. Malo in Normandy, subsequently attending St. Faughman's College in the south of Ireland. Having decided to follow the career of a physician, he became a medical student at Queen Adelaide Hospital, and took his diplomas at the College of Surgeons, Ireland. Shortly after completing his studies Dr. Hungerford came to Western Australia, where he received the appointment of district medical officer and quarantine officer at Dongara, under the Forrest Administration, and retained this position for a little less than two years, being transferred to Busselton, Sussex district, in the same capacity, to his duties being added those of resident magistrate of the latter district. After continuing at this centre for ten years, he was appointed district medical officer at Perth in 1903, at the same time becoming health officer to the metropolis, resigning these offices in the following year in order to accept the appointment of district medical officer and quarantine officer at Geraldton, where he has since been stationed. His professional duties include the control and supervision of the Geraldton Government Hospital, medical officer to the local gaol,

police surgeon and railway medical officer, the last-named office being one of the only three similar appointments in the State, the other two being at Perth and Kalgoorlie. He also acts as medical officer to the Independent Order of Oddfellows in the local lodge, and is visiting district medical officer of Greenough. During the eight years that he has held these various official positions Dr. Hungerford has become a well-known figure in the community, and has given much time and attention to furthering the various schemes for the advancement of the district. Outside of his profession he has filled several public appointments, among others that of councillor of the Geraldton municipality, and in 1912 he was elected, unopposed, to the mayoral chair, from which office he resigned in July, 1913. He is a member of the Masonic craft, being a Past Master in the fraternity; and is a member of the Geraldton Club. In addition to his official claims, Dr. Hungerford has an extensive private practice in and around Geraldton, and in consequence finds little time to devote to purposes of recreation. He married in 1892 Alice, daughter of the late Robert Wardrop, barrister, of Dublin, Ireland, the issue being one son and two daughters.

BENJAMIN MURRAY FULLER, Mayor of Geraldton (1911-12), was born at Callington, South Australia, on January 24, 1873, and is a son of the late Captain B. M. Fuller, a well-known identity of the pioneering days on the River Murray. He received his education principally at Milang and under private tuition in his father's home, at the termination of his school-days joining Captain Fuller on the river boats, where at a later period he became mate on the "Paringa" and the "Princess Royal," both of these vessels being owned by his father. Subsequently he became connected with his brother-in-law, Captain E. H. Golding, in the shipping and wool trade for some considerable time, and in 1895 came to Geraldton, where he joined the staff of Messrs. Wainwright & Co., at that time leading general merchants of the town. Three years later he resigned from this service in order to join the firm of Messrs. Clutterbuck Brothers at Geraldton, where he filled the position of accountant for seven years, in 1905 accepting

that of manager of the produce department of Messrs. Paterson and Co., Limited, of Fremantle, in their establishment at Northam, in which firm he held an interest during the three years of his connection with its operations. In 1908 he received an offer from the firm of Messrs. F. & C. Piesse, of Katanning, to become their representative in Geraldton and the Murchison district, where, after retaining this post for a few months, he decided to open in business on his own account. In September of that year Mr. Fuller purchased from Messrs. E. Wolff & Co. the general drapery business established and carried on by them for some time at Geraldton, and has since worked up a large connection in the neighbourhood, where the emporium has become widely and favourably known. Mr. Fuller has always taken considerable interest in public life, and prior to his departure for Northam served a year in the Geraldton Council as representative for West Ward, upon his return again being elected to the Chamber by the ratepayers of Central Ward. In 1911 he was invested

Wallace Miller, Geraldton.  
MR. BENJAMIN MURRAY FULLER.

with mayoral honours, and his administration of the office was of a singularly successful character, so much so, that at the ensuing election (1912) he was again offered unopposed nomination, but owing to the pressure of his business claims he was unable to accede to the wishes of the ratepayers. Mr. Fuller still maintains, however, an

KKK2

active concern in the welfare of the municipality, and is prominent in charitable movements as president of the visiting nursing scheme and other humane organizations. He is a member of the Geraldton Chamber of Commerce and president of the local traders' association, while in the world of sport he is recognized as a patron of all clean outdoor forms of diversion. He holds office as president of the Geraldton Rowing Club, being also a member of the Geraldton Bowling Club, this being the form of recreation which most strongly appeals to him. He is an officer in the Masonic fraternity, a member of the Commercial Travellers' Club, and of the Geraldton Club. In 1902 Mr. Fuller married Henrietta, daughter of Mr. John Taylor, of Geraldton, and has one son and one daughter.

Councillor LEON GOLDBERG, representing West Ward in the Geraldton Municipal Council, was born near Hamburg, Germany, on February 10, 1870, and is a son of the late Solomon Goldberg, merchant, of that city. He received his education chiefly in the Fatherland and in France, at the termination of his schooldays entering upon the study of engineering. Having taken his certificates for both theoretical and practical work he came to Western Australia in the year 1899, and upon arrival became connected with the Government Railway Service. Having worked in the locomotive department for over twelve months, shortly afterwards he received his certificate for engine management and proceeded to Lawlers, where, after a brief period, he relinquished his trade and launched out in business as a produce merchant and general transport agent, continuing at this centre for six years. He also established branch businesses at Mount Magnet, Sandstone, Meekatharra, and Nannine, and spent about five years altogether in these respective places, ultimately selling out his goldfields commercial interests whilst retaining all real estate of which he had become proprietor in that district. Mr. Goldberg came to Geraldton in 1909, where he opened and has since conducted the operations of the Murchison Forwarding Company; and soon after his advent to this seaport he began his connection with municipal life, being elected to a seat on the municipal

council in the year following his arrival. It was chiefly owing to his influence in the Council that an electric-lighting service was secured for Geraldton, his persistent advocacy of the scheme demanding for it the serious attention of the authorities, by which in due time it was brought into effect. Mr. Goldberg, as a close student of politics, holds the position of vice-president of the Geraldton branch of the Liberal

Wallace Miller, Geraldton.  
MR. LEON GOLDBERG.

League. He is a member of the Masonic fraternity having filled office in the craft, is vice-president of the Geraldton Rowing Club, and a supporter of all clean forms of manly outdoor sport. He is president of the local chess club, in which game he excels, and for open-air recreation takes long trips in his Darracq motor car, which had the distinction of being the first motor car in the district. Mr. Goldberg is a member of the Geraldton Club. He married in 1895, Betty, daughter of the late L. Fyen, of Palestine, and has one son and three daughters.

Councillor ERNEST HENRY BREDE, who represents West Ward in the Geraldton Municipal Council, was born at Southgate, Middlesex, England, on June 17, 1860, being a son of the late Robert James Brede, architect to the Metropolitan Railway Company of London. He was educated in the world's metropolis, and upon the termination of his

studies, served his apprenticeship to the mercantile marine service on the sailing vessel "Elmstone," which traded with China. For fourteen years Mr. Brede followed a seafaring life, voyaging over many seas in various sailing boats and steamers, and retiring after a period of service as mate in the Adelaide Steamship Company's vessels on the Australian coast. Upon abandoning marine pursuits he joined the railway branch of the Civil Service of Western Australia as foreman under the first pier-master appointed at Fremantle. Three years later he was transferred to Geraldton, where he was promoted to the charge of the Geraldton jetties, and after holding this position for a further three years, he resigned in order to open in business on his own account. His first undertaking was the recovery of the salvage of the wreck of the "Mayhill," which occurred on the reef at the entrance to Champion Bay, and upon the conclusion of this work, which he brought to a very successful issue, he

Wallace Miller, Geraldton.  
MR. ERNEST HENRY BREDE.

accepted a temporary post in the firm of Dalgety & Co. Mr. Brede ultimately took over the stevedoring business formerly carried on by Captain Tindal, and has since conducted operations with highly satisfactory results. Ever since his advent to Geraldton in 1894 he has displayed a warm interest in the welfare of the port, and has been very energetic in assisting in all movements tending to its advancement. His connection with the municipal council has extended over seven years, during the

whole of which time he has represented the ratepayers of West Ward. He was one of the founders of the Floral, Art, and Industrial Society of Geraldton, and for several years acted as honorary secretary to this body. A member of the Masonic craft, he holds office in the Royal Arch Chapter, and has also been connected with the Rechabite Friendly Society for over thirty years, having been the recipient of all honours that the lodge can confer. For a lengthy period he has interested himself in amateur sport, particularly in football and cricket, and is a member of the local race club. In 1889 Mr. Brede married Fanny Jane, daughter of the late William Gibbings, architect, of London, who came to Western Australia and settled in Northam in the late eighties. He has issue four sons and four daughters.

Councillor EBENEZER CULLIFORD BARTLETT, representative for West Ward in the Geraldton Municipal Council, is a son of the late James Bartlett, farmer and orchardist of Belair, South Australia, where the subject of this notice was born on November 27, 1870. He received his primary education at the local public school, subsequently attending Prince Alfred College. At the close of his scholastic studies he was apprenticed to the trade of cabinetmaking in Melbourne, where he remained for over five years. Returning to South Australia, he opened in business on his own account at Unley, and after continuing there for some years, he joined the South Australian Fifth Contingent upon the outbreak of the Boer War in South Africa, and entered into active service with the rank of corporal. Mr. Bartlett took part in several skirmishes; was present at the Graspan action; and during his eighteen months' service was frequently under fire, his knowledge of the bush making him invaluable as a scout. After being promoted to quartermaster-sergeant, he returned to South Australia, and having recruited in his native State, came to Western Australia, where he settled at Kalgoorlie in 1902. For five years he carried on business as a contractor and builder on the gold-fields, at the end of that period leaving with the intention of proceeding to the north-west; but altering his plans, upon reaching Geraldton, he

remained there, where he has very successfully conducted business ever since. From a very early period of his advent Mr. Bartlett began to take a live interest in the public affairs of the community, and three years after his arrival contested a seat in the municipal council chamber, being returned by the ratepayers of West Ward in 1910. In the following year he took the field as a candidate for the mayoralty, but was defeated by Mr. B. M. Fuller. He has manifested a prominent activity in the Australian Natives' Association, and in the year following his arrival founded a branch of the organization in Geraldton, of which he was first president, an office he has filled for three terms. Mr. Bartlett previously held the same

Wallace Miller, Geraldton.  
MR. EBENEZER CULLIFORD BARTLETT.

distinction at Kalgoorlie, and he was also a member of the board of directors for the State for two years, besides which he occupied the post of general vice-president for a term. He is a member of the committee of the agricultural society, and was one of the principal movers in obtaining the new show ground from the Government. He is a keen student of politics and a supporter of the policy of the present (1912) Labor Administration. He finds his chief recreation in rifle shooting, and in the district is regarded as a fair marksman. In the year 1898 he was married to Clara Maud, daughter of the late Captain Harris, of Port Adelaide, South Australia, and has a family of two daughters.

Councillor PATRICK STONE, merchant, of Geraldton, and representative for East Ward in the local municipal council, is a native of Ireland, having been born at Burncrannah, near Londonderry, County Donegal, on March 14, 1854. His father, the late James Stone, was a member of the British Imperial Service, and, after being stationed in India for some time, accepted a position as officer in charge of the convict settlement at Fremantle, Western Australia, where he settled with his family in 1856. The subject of this memoir pursued his educational studies in the Roman Catholic School at the abovementioned seaport, under the tuition of the late Mr. Rooney, father of the present principal of the Training College, Claremont. At the close of his scholastic career he became connected with agricultural pursuits on the farm owned by the late Mr. Stone in the Geraldton district, where he continued until he reached his twenty-fifth year. He then turned his attention to mercantile enterprise, and establishing himself in business on his own account in the town of Geraldton, he followed a successful career, becoming well known as one of the pioneer commercial men of the place. Mr. Stone was a prominent supporter, in its palmy days, of the mining industry in the Northampton district, which was opened up very early in the history of the State, and which, as a lead and copper proposition, had led the way among similar enterprises in the district. He also kept his eyes open for promising investments in real estate, and from time to time purchased properties that were put upon the market. In this way he became proprietor of several valuable holdings in the surrounding localities, which are stocked with sheep and cattle, and leased to tenants who continue the development of the land for pastoral and agricultural purposes. He owns also the Commonwealth Hotel, with the adjacent block of buildings, of which his storekeeping premises form a part, and which is represented in the illustration which accompanies this article. During the thirty-five years of Mr. Stone's residence in the town of Geraldton he has watched

the growth of the seaport with increasing interest, and has devoted a considerable amount of energy and ability to promoting the welfare of the community and the advancement of the district. While still in

C. E. Farr.

MR. PATRICK STONE.

Perth.

early manhood he was elected to a seat on the Greenough Roads Board, and did good service in this body before taking up his residence in the town, where, shortly afterwards, he was returned at the local election as

period upon his election as member for Greenough district in the Western Australian Legislative Assembly, an office he occupied for six years. His platform was that of an Independent Liberal, and whilst in Parliament he played an active part in the breaking-up of large estates for closer settlement, and was also successful in his persistent agitation for the construction of a railway line to the Chapman district—now one of the best producing localities in the State. He was likewise prominent in the organization of the movement to bring about similar facilities for the convenience of the residents of the Murchison district, his services in this regard being fully appreciated by the inhabitants of the goldfield. In 1912 Mr. Stone again contested a seat in the municipal chamber, and was returned to represent the ratepayers of East Ward, in whose interests he continues to sit. His leisure hours are fully occupied by the claims of a large circle of friends, many of long standing, who turn to him for sympathy and advice in their various undertakings, his lengthy experience of the district and successful management of his business placing him in a position to assist those in need of such help. Mr. Stone married in 1877 Ellen Emily, daughter

COMMONWEALTH HOTEL, STORE, ETC., THE PROPERTY OF MR. P. STONE.

a member of the Geraldton Municipal Council. Mr. Stone served for fourteen years in connection with this body, retiring at the end of that

of the late James Roe, the well-known journalist of an earlier period of Western Australian history, and has four sons and three daughters.

Councillor CHARLES CONWAY, M.P.S.A., druggist and chemist, who represents the ratepayers of Central Ward in the Geraldton Municipal Council, was born at Chicago, U.S.A., on January 15, 1857. He was educated primarily in England, at St. Peter's School, Woolwich, and in 1879 accompanied his parents to Western Australia, where he continued his studies, especially devoting his time to mastering the science of pharmacy, which he had chosen as his profession.

Wallace Miller, Geraldton.  
MR. CHARLES CONWAY.

Upon completing his course he proceeded to Geraldton and entered upon the appointment of dispenser to the Victoria Hospital, a position he held for seven years. In 1891 he opened the pioneer pharmacy of the North, and in a short time became a well-nigh indispensable member of the community, his services being requisitioned in the most remote parts of the district, and always readily rendered where relief could be afforded to sufferers. As assistant to the only medical practitioner between Perth and Carnarvon, Mr. Conway gained considerable experience in medicine and surgery, and became quite accustomed to prescribe for ailments, even of a serious nature. While making a close study of the plant life of the district he discovered various valuable herbal remedies which have proved successful in many cases of sickness and disease. Though a man of many professional claims, Mr. Conway has taken a lively interest in local public affairs, and has served for various

periods as a member of the municipal council, as far back as 1900 representing the ratepayers of East ward in that chamber. He is a member of the Geraldton Club. Mr. Conway is a widower; his late wife, by whom he had issue three sons and three daughters, was a daughter of Mr. Louis Leverman, of Greenhough, an old colonist of the district.

WILLIAM HENRY FULLER, Town Clerk of Geraldton, is a son of the late Hon. Henry Robert Fuller, of Adelaide, South Australia, who represented the District of West Adelaide, in the House of Assembly, from 1865 to 1870, and, in 1894, was returned for the Central District to the Legislative Council. For 21 years he was a member of the Adelaide City Council, twelve of which he was alderman, and he occupied the mayoral office for several terms. The late gentleman played an important part in the history of the large enterprise now known as John Hill & Co., mail contractors, joining with Messrs. John Hill and George Mills in the purchase of the business upon the retirement of Messrs. Cobb & Co., and continued to hold an interest in this concern until his decease in 1905. Mr. W. H. Fuller received his early scholastic training under the tuition of the late John L. Young, whose academy of instruction at that time was the leading institution of its kind in Adelaide. Subsequently he attended the North Adelaide Grammar School, Prince Alfred College, and Hahndorf College, and proceeding to London took a finishing course with Professors Steele and Lang, and at the University Training College, Gower Street. Returning to Adelaide he entered the well-known firm of John Hill & Co., Limited, coach proprietors and mail contractors, being considered an expert "whip" and a well-known amateur rider and driver, and was in charge of the passenger booking department, at a later date becoming manager for Rayner, McGowan & Co., in a similar line of business in Terowie, Silvertown, and Wilcannia. He again joined the staff of John Hill & Co., Limited, as manager and secretary at Broken Hill, and later in the same capacity at Clare. He spent a period on his father's station, "Harward," at Para Wurlie, Yorke Peninsula, and for nearly three years was travelling in the Eastern States before

coming to Western Australia in July, 1904. Arrived at Perth he undertook some special business for the Royal Agricultural Society in connection with the last show held at Guildford, and was in the Statistical Department of the Government Railways for a time. He was accountant to Messrs. Wilson Gray and Co., when he was offered and accepted the appointment of town clerk in connection with the Guildford Municipal Council on May 1, 1906, which he continued to hold until August, 1911. In November, 1911, he entered upon his present duties as town clerk of Geraldton. By the efficient discharge of his many duties in Guildford Mr. Fuller won the cordial respect and esteem of the members of the council, the corporation staff, and of the community whose interests he served so well. As an administrative officer he is tactful and courteous, and by the exercise of the invaluable quality of foresight has succeeded, since taking office in Geraldton, in bringing about an increase of revenue without undue pressure on the ratepayers. His experience and knowledge of municipal procedure have been of much benefit to the Council. Mr. Fuller was appointed a Justice

MR. WILLIAM HENRY FULLER.

of the Peace for South Australia in 1894, and also served in the Melville and Warooka District Councils in that State on different occasions. He is an advocate of outdoor recreation, takes a lively interest and prominent position in all public functions, and spends his

leisure time on the bowling-greens; when a resident of Guildford being a member and on the committee of management of the Swan Bowling Club. He married Sallie D., daughter of the late Thomas Graham, J.P., of "Blackwood" Estate, near Strathalbyn, South Australia, and has two daughters.

The late WILLIAM TRIGG, founder of the well-known firm of Trigg Brothers, Geraldton, was a

Mr. WILLIAM TRIGG.

native of Hartford, England, where he was born in 1828. Before completing his third year he came to Western Australia with his parents by the ship "Egyptian" in 1831—about two years after the foundation of the colony—the voyage extending over four months. Mr. Trigg took up his residence at the northern seaport in the early sixties, and both as an architect and a master builder soon obtained a sound and extensive reputation. He was responsible for the plans and erection of many of the finest buildings of the town—public, private, and ecclesiastical—and his worthy work of years has materially helped to place Geraldton in its present honourable position as second only to the principal seaport of the Western State. He also played his part in the early administration of the infant settlement, being elected to a seat on the first municipal council formed in 1871, and serving in that body for many years. He took an active interest in the advancement of the district, being among the prominent workers in the various movements set afoot, having as their object the welfare

of the community among whom he resided. His death occurred in 1885. Mr. William Trigg's eldest son, the late ONSLOW A. TRIGG, followed in his father's footsteps, and was a well-known character in Geraldton and the surrounding district. He was born in Perth in 1860, and received his education in the capital and at Geraldton, subsequently applying himself to the trade of carpenter and builder under the guidance of his parent and giving considerable attention to the study of the principles of architecture. In order to perfect himself in the details of his calling, Mr. Onslow Trigg, with his brother Ernest, proceeded to Adelaide and Melbourne in the year 1885, where he remained for a lengthy period, acquiring a comprehensive knowledge in the various branches of the building trade,

Mr. ONSLOW A. TRIGG.

eventually returning to Geraldton to carry on the business left by his father, whose demise had occurred during his absence. For about two years, in conjunction with his brother, he continued the conduct of the building connection, at the end of which period Mr. Onslow Trigg took over the business of the Freemasons' Hotel (the present structure, of which an illustration appears in these pages, being erected by Messrs. Trigg Brothers in 1896), and carried it on for about five years, becoming well known throughout the district as the genial boniface of this popular house. The administration of the family estate meanwhile was attended to by Mr. Ernest A. Trigg, who held a sleeping partner's interest in the hotel. For many years the

late Onslow Trigg held a Commission of the Peace, and though not serving in any municipal capacity was connected with several of the local progressive and sporting bodies, and was a member of the Masonic fraternity and of the Geraldton Club. He was married in 1896 to Charlotte, daughter of Mr. Thomas Wiley, of Greenough, and a family of five daughters and one son survive him. His death took place suddenly in December, 1912, as a result of heart failure, in the fifty-second year of his age. The present head of the Trigg family, ERNEST AUSTIN TRIGG, was born at Perth, Western Australia, on January 6, 1862, and is the eldest surviving son of the late William Trigg. Upon the completion of his education, which he received in Perth and Geraldton, he was initiated, with his late brother, into the practical details of the building trade, and also joined him in reading for architecture. The association thus begun was continued for many years, the brothers travelling together to the Eastern States and pursuing their further studies in company, also jointly taking over the management of the business at Geraldton, as above stated, upon the

Mr. ERNEST AUSTIN TRIGG.

decease of their parent. Mr. E. A. Trigg has given a share of his attention to public matters, and was first elected a councillor of the municipality in 1894, since which date, with a few breaks, he has continued to sit at the council table. With his late brother he was prominent in local military circles, both gentlemen having won renown as crack rifle

shots and winners of many cups, medals, and other trophies. As members of the Geraldton Rifle Volunteers for nearly a quarter of a century, during which period they held rank as non-commissioned officers, they assisted in upholding the prestige of the district, and worthily did their part in popularizing the movement at that centre. Mr. Trigg has visited different parts of the world, being absent for months at a time on pleasure trips, when he derived considerable interest and profit from enlarging his experience in the ways and customs of other countries. Like his late father and brothers he is prominent in Masonic circles, and holds rank as Past Master, being a Freemason of longer standing than any other member of the craft in Geraldton and occupying the office of secretary of No. 3 Lodge, W.A.C. He married in 1905 Marie, daughter of the late Edmund Le Couteur, of

to marine pursuits, being identified with the steamship trade for many years. In particular he gained valuable experience on board the Eastern Extension Telegraph Co.'s cable ship "Sherrard Osborne," subsequently

his brothers, Mr. W. Trigg is a crack shot, and for years has been and still is captain of the Geraldton Rifle Club.

Wallace Miller, Geraldton.  
MR. WALTER WILLIAM JAMES TRIGG.

joining the Adelaide Steamship Company, in which service he rose by degrees to the position of chief engineer. Of the many boats of which he was chief engineer, the last was the ill-fated "Yongala," from which he resigned some time before the fatal disaster overtook her. In conjunction with his brother, Mr. E. A. Trigg, in 1907 he opened the Geraldton Cold Storage and Ice Works, which were carried on for about five years. He has accompanied his brother, Mr. E. A. Trigg, on a couple of sea trips, and has only recently (1913) returned from England and the Continent. WALTER WILLIAM JAMES TRIGG, youngest son of the late William Trigg, is also a native of Geraldton, having been born there on September 18, 1869. He was educated at the Perth High School, and became a partner in the firm of Messrs. Cope & Trigg, land and estate agents and auctioneers, of Geraldton, with whom he remained for many years. The whole of his life has been spent in commercial pursuits in the place of his birth, and he is the present manager for the Geraldton Ice and Cold Storage Company. In 1895 Mr. Trigg married Caroline, daughter of the late George Baston, J.P., first mayor of Geraldton, and he has a family of two sons and three daughters. Like

WILLIAM MOORE, J.P., one of the oldest residents of the Geraldton district, where his advent dates back to 1865, was born in Perth, Western Australia, on August 1, 1848, his father being the late James Moore, who came to this State from Kent, England, in the early thirties. He received his education in the old State school at Perth, and before reaching his teens became engaged in mercantile pursuits, joining the staff of Mr. J. T. Monger, storekeeper, of York, where he continued for two years, removing to Newcastle (now Toodyay) when the business was transferred to that centre. In 1865 Mr. Moore came to Geraldton as assistant in the store conducted by

Wallace Miller, Geraldton.  
MR. WILLIAM MOORE.

Messrs. H. Gray & Co., known as "Cambrian House," which had been established two years previously. He spent 21 years as manager of the Greenough branch of this well-known firm, and upon the closing of the store was appointed to the management of the firm's business at Geraldton, which post he has retained since the year 1897. Mr. Moore received his Commission of the Peace from the Wittenoom Government in 1897. He has worthily served the ratepayers of Geraldton by filling the position of councillor in the local governing

Wallace Miller, Geraldton.  
MR. FRANCIS AUBREY TRIGG.

Guernsey, Channel Islands. FRANCIS AUBREY TRIGG, third son of the late William Trigg, was born at Geraldton on February 11, 1868, and pursued his scholastic studies at the Perth High School. At the close of his education he spent some time at home prior to entering upon commercial pursuits in the firm of Messrs. Shenton & Co., of Geraldton. After two years in this business he relinquished the connection in order to learn the engineering trade in the locomotive shops at Fremantle, and having concluded his apprenticeship turned his attention

body for over ten years. A devoted member of the Church of England he has laboured earnestly in the interests of the Greenough and Geraldton branches of this cause, acting as lay reader for over a quarter of a century and assisting in the foundation of Sunday-schools in connection with both churches. He has also been a moving spirit in the Good Templar and Rechabite movements, and was the first Good Templar initiated in Western Australia, the ceremony being performed by the late Charles W. Gray, who held full authority from the Worthy Grand Lodge of Melbourne. For over 40 years he has been connected with the Rechabite Tent at Geraldton, and has filled every office in both Orders. Mr. Moore was one of the founders of the mechanics' institute in Geraldton, and in many other ways has lent his influence for the promotion of worthy ideals among the local community. He married in 1870, Jane, daughter of the late John Jones, of the British Army, who came to this State in charge of an emigrant ship, and afterwards continued in the Western Australian Government Service until his death. He has issue four sons and one daughter, his youngest son having been connected with the Public Service of State and Commonwealth for about 15 years.

"THE GERALDTON EXPRESS." *The Express* was first brought into existence on September 3, 1878, as *The Victorian Express*, its name marking its connection with the magnificent Victoria district of Western Australia. In 1894, owing to the influx of many newcomers from the Eastern States, the old name was found to be misleading, particularly to residents of the goldfields, and the paper was renamed *The Geraldton Express*. Its founder was the late Mr. Isaac Walter and its first editor the late Mr. Stephen Montague Stout. After a lapse of ten years *The Victorian Express* Company, Limited, purchased the newspaper and carried it on until 1895, when it was purchased by Mr. J. M. Drew, the present proprietor, who had then been associated with it for several years in the capacity of editor. Since Mr. Stout, its original editor, vacated the chair, *The Express* has been editorially controlled by a number of well-known journalists who succeeded each other

in the following order, *vis.*, R. C. Howes, Francis Hart, Alfred Carson, J. M. Drew, F. C. B. Vosper, Audree Hayward, W. R. Bodley, W. Steel, and W. H. A. O'Connor, the last-mentioned having been in charge for the past eighteen months. From its foundation, but particularly since Mr. Drew took editorial and proprietorial control of its columns, *The Express* has always been noted for a boldly progressive and democratic policy. It has ever been an unflinching opponent of privilege, a zealous champion of the people's rights, and an unwearying guardian of the great mining, agricultural, and pastoral interests of the Murchison and Victoria districts, with the progress and welfare of which its own interests are so closely interwoven. Long before any newspaper was published on the Murchison goldfields, *The Express* identified itself with the interests of the miners and sturdily urged their claims upon the attention of the somewhat apathetic authorities of the day. It was the first newspaper to urge the construction of the railway from Geraldton to Cue, it fought strenuously for the provision of water supplies for the diggers, it forcibly advocated the claims of the goldfields people to proper hospital accommodation and medical care, and in many other ways manifested a practical sympathy with the men engaged in developing the auriferous resources of the goldfields. The good work done by *The Express* for the Victoria district will not be soon forgotten. Under Mr. Drew's control it steadfastly and eloquently demanded the throwing open to agricultural settlement of the vast tracts of surpassingly fertile country which form the hinterland of Geraldton, and its efforts were finally crowned with success. A striking testimony to the wisdom of this policy of unlocking the land is to be found in the enormous areas which have been and are being got ready for the plough in the Victoria district. Last year the district had over 100,000 acres under wheat, from which were harvested nearly 1,500,000 bushels of grain; yet the district is only on the threshold of its development. That the far-seeing, bold, and public-spirited policy of *The Express* has won it general confidence and esteem is amply proved by the large and increasing circulation it enjoys among all classes of the great communities with which it is associated.

W. H. A. O'CONNOR, the editor of *The Geraldton Express*, came to Western Australia over eighteen years ago from his native State of Victoria, where he had for some years been engaged in newspaper

C. E. Farr.

Perth.

MR. W. H. A. O'CONNOR.

enterprises. After several years of varied experiences on the goldfields Mr. O'Connor re-entered the ranks of journalism; and for the past fifteen years he had been prominently connected with the goldfields, metropolitan, and rural Press of this State.

FRANCIS HENRY CRITCH, manager of *The Geraldton Express* Company, Limited, and a colonist of some forty-five years' standing, served his apprenticeship to the printing trade in *The Fremantle Herald* office, and filled the position of foreman printer on that paper for many years, at the time that journal was owned and edited by Messrs. James Pearce and William Beresford. About the year 1882 he came to Geraldton as overseer and printer of *The Victorian Express*, the title under which *The Geraldton Express* of to-day was then published. Mr. Critch has continued to hold the post of printer and publisher of this paper up to the present time, and, in conjunction with the late editor-in-chief (the Hon. J. M. Drew, M.L.C., Colonial Secretary in the present Ministry), has witnessed many changes in connection with the history of *The Express*. As a public

man he has served as councillor in the Geraldton municipality for eleven years, and was an enthusiastic

Wallace Miller, Geraldton.  
MR. FRANCIS HENRY CRITCH.

member of the Geraldton and Fremantle Rifle Volunteers, having served in the two companies for a period extending over twenty-two years. Upon his retirement with the rank of sergeant he was the recipient of the long-service medal.

"THE GERALDTON GUARDIAN."—The first issue of this popular journal was published on October 8, 1905, an illustration of the Point Moore Lighthouse being appropriately embodied in the original headline. It consisted of eight demy-folio pages, printed on a demy Wharfedale machine two pages at a time, and the bulk of the reading matter was set up on a monoline typesetting machine, the motive power being provided by a 2½-h.p. oil engine. Within twelve months, however, it became necessary to instal larger machinery, and a super-double royal Wharfedale and 5-h.p. engine having been procured, *The Guardian* celebrated its first anniversary by appearing as a four-page demy sheet, while shortly afterwards its periods of issue were altered from twice to thrice weekly. Since that date each succeeding year has witnessed an increase in size, and the paper now consists of four pages containing eight columns 24 inches in length, published on Tuesday, Thursday, and Saturday evenings, with an

occasional supplement. The cable and telegraphic news is practically the same as that published in the metropolitan evening papers, and the circulation of *The Guardian* in the district for which it caters equals that of any other newspaper in the northern areas. The first editor was Mr. H. Allerton Cowper, and he was succeeded by Mr. R. M. Cochrane as leader writer. Mr. H. B. Geyer, a journalist with lengthy experience in the north-west, occupied the editorial chair for six months, and upon his yielding to the call of the land, Mr. E. G. Farrington, the present editor, an experienced English journalist, was appointed. Before and since the days of Liberal Leagues *The Guardian* has claimed to be a Liberal journal for the Victoria district, but though its political policy and that of the Liberal Party are generally in accord, the paper itself is independent, and the policy solely controlled by the proprietors. *The Guardian* has been a big factor in promoting the agricultural development of the Victoria district; in fact, the advance in land settlement in the

decentralization and a just expenditure of the public funds in its district. Adhering to the policy of keeping abreast of the times, the proprietors have just installed a typograph composing-machine, the first of its kind to be used in a newspaper office in Western Australia, and the newspaper and printing office now holds a premier position among similar enterprises in any centre north of the capital. EDWARD CONSTANTINE, senior partner and founder of the business of Messrs. Constantine & Gardner, printers, publishers, and commercial stationers, proprietors of *The Geraldton Guardian*, was born in the village of St. Blazey, Cornwall, England. Before he attained his third year his parents emigrated to South Australia, and he was educated at the Wallaroo public school in that State. Upon the conclusion of his studies he went to work at the office of *The Kadina and Wallaroo Times*, and subsequently was employed in the printing trade at Broken Hill, New South Wales, coming to Western Australia in 1894. At that period

the trend of the population was towards Coolgardie, but as typhoid fever was prevalent in that district, and Mr. Constantine had only recently recovered from an attack contracted at Broken Hill, he decided to seek employment on the coast, and accordingly settled at Geraldton, where he has resided ever since. In March, 1898, he opened in business on his own account as a general printer, a venture which proved very

PREMISES OF "THE GERALDTON GUARDIAN," GERALDTON.

neighbourhood during the last few years has been coincident with the establishment of the paper. It has also forcibly advocated a policy of

successful, the business expanding at a rapid rate, and in December, 1902, Mr. Frederick Gardner was admitted into partnership, since which date

the firm has experienced an unchecked career of prosperity, having now the largest staff and widest connection of any printing office in the district. Mr. Constantine' is interested in sport, and as an active footballer was largely responsible for the inauguration of club football in Geraldton soon after his arrival in the town. He is also an enthusiast in aquatics and a skilful oarsman, for many years being captain of the Geraldton Amateur Rowing Club, and for his services in this respect was elected a life member of the institution. He takes a keen interest in the public affairs of the town and district, but the only official position he now occupies is that of treasurer to the Geraldton Benevolent Society. FREDERICK GARDNER, the junior partner in *The Geraldton Guardian*, is also a native of England, having been born near Richmond, in Surrey, in 1869. His parents settled in New Zealand when he was about seven years of age, and at a later date he was apprenticed to the firm of Joseph Payton & Co., of *The Wairarapa Daily* (now *The Daily Times*) in Masterton, in the provincial district of Wellington. At the conclusion of his apprenticeship he worked for two years on *The Evening Press*, Wellington, then owned by Messrs. Wakefield and Roydhouse, and at the close of that period he came to Australia, and for several years following his arrival in Adelaide was on the staff of *The South Australian Register*. When the sensational finds at Coolgardie were announced Mr. Gardner came to Western Australia, and after twelve months' experience with the dryblowing dishes, etc., on the Murchison, he decided to return to the "inky way," on the staff of *The Geraldton Express*. When *The Morning Herald* was started in Perth he joined that office as "stone hand," and some few years afterwards was appointed foreman printer of *The Daily News*, which position he relinquished two years later to join Mr. Constantine in business at Geraldton. Mr. Gardner has taken considerable interest in public matters, and in 1912 was elected a member of the local municipal council for the second time. He has served for some years on the committee of the local agricultural society, and occupied a seat on the committee of the Geraldton Mechanics' Institute.

RUSTAT HENRY HEMSTED, M.D. (Univ. Brux.), M.R.C.S. (Eng.), L.R.C.P. (Lond.), is a son of Mr. Henry Hemsted, surgeon, of Whitechurch, Hampshire, England, his grandfather and great-grandfather also having followed the same profession, while two of his brothers are doctors and two dentists. Born at Whitechurch on December 25, 1868, Dr. Hemsted received his early scholastic training at Epsom College, subsequently taking his medical diploma from St. Mary's Hospital, London, in 1893. After practising for some time at Wakefield, in Yorkshire, he joined his father in practice in his native

Wallace Miller, Geraldton.  
DR. RUSTAT HENRY HEMSTED.

town, and at a later date entered into partnership with Dr. Arthur Coates, of Bristol Infirmary, where he spent eleven years. The more genial climate of Cornwall tempted him to that county for a time, and the same reason prevailed in eventually bringing him to Australia in 1910, reports of the favourable climatic conditions, especially of the Western State, having reached him in the old country. Among the appointments held in England by Dr. Hemsted (who is a member of the British Medical Association) were those of district medical officer and medical officer to the infirmary, Whitechurch; deputy medical officer to the isolation hospital; surgeon to the police and post-office; and other appointments in the public service. Later he became clinical assistant at the London Throat Hospital, and also studied in Brussels, where he obtained the

degree of doctor of medicine at the University of that city. At the beginning of 1910 he decided to give up practice for a year and to devote his time to the study of the recent developments in medicine and surgery, for which purpose he attended some of the chief London hospitals, including the West London; the Hospital for Diseases of the Ear, Nose, and Throat, Golden Square; and the London Throat Hospital. Upon arrival in Western Australia he proceeded to Geraldton, where he established himself in his profession, and has since continued at this centre. Dr. Hemsted keeps himself well abreast of the times by the perusal of modern scientific works, especially those with a bearing upon medicine and surgery. He is in touch with the social life of the town, being a member of the Geraldton Club and of the local bowling club. He has been a keen motorist for many years, and was one of the first doctors in England to use a car in place of horses; this hobby, with fly-fishing, constituting his principal amusements. He married in 1898 Gertrude, daughter of Mr. W. Munn, who for many years was in charge of the Bank of England note mills, and now lives in retirement. There is one daughter by the marriage.

ADAM HENRY MUIR MACMORRAN, M.B., C.M., M.D. (Edin.), Health Officer to the Geraldton district, was born at Newton Stewart, Wigtonshire, Scotland, on February 12, 1869, and is a son of the late Thomas Macmorran, general merchant, of that town. He received his education at the Ewart High School (gold medallist, 1887) in his native place, and in 1887 entered the University of Edinburgh, gaining his diploma of M.B. in 1892, that of C.M. in the same year, and M.D. in 1894. At the conclusion of his university course he travelled through the famous watering-places, the spas in Belgium and Germany, making extensive observations and gaining valuable experience, subsequently volunteering for Government service at the time of the cholera epidemic at Hamburg in 1893. Returning to England, he was appointed clinical medical officer under Mr. (now Sir) Frederick Treves at the London Hospital, Whitechapel Road, of which he is a life member, and upon resigning this

post accepted that of assistant in one of the largest practices in the East End of London, in which he later became a partner. Dr. Macmorran filled the appointment of divisional surgeon of police of the metropolitan Forces of London, and conducted the examinations of the men at work under compressed air in the Greenwich Tunnel and on the tube railways. At the commencement of the construction of the Rotherhithe Tunnel also he was engaged in similar professional duties, and contributed a paper to the *British Medical Journal* dealing with this class of work. Owing to a breakdown in health he took a trip to New Zealand, and on his return began practice in the West End of London, where he remained for two years, at the end of which period he was again compelled by health reasons to seek a change of climate. Arriving in Western Australia on May 1, 1906, Dr. Macmorran came straight to

Wallace Miller, Geraldton.  
DR. A. H. MUIR MACMORRAN.

Geraldton, where he purchased the practice formerly carried on by Dr. Thom, and three months later was appointed health officer to the Geraldton municipality, which office he has retained ever since. Dr. Macmorran is an enthusiast in analytical work and bacteriology, and his advent to Geraldton occurring soon after an outbreak of the bubonic plague in that district, he was instrumental in having all the infected area completely rebuilt, half of the main street undergoing reconstruction in carrying out these drastic measures. He takes a prominent

interest in the Commonwealth military movement, and holds the rank of captain in the A.M.C., in which he displays the keenest interest. He is a member of the Geraldton Club, and occupies the office of vice-president of that body; is Worshipful Master of the Masonic fraternity, in connection with Geraldton Lodge, No. 3, W.A.C., and Honorary Scribe "E" of the Royal Arch; and acts as honorary surgeon to the Victoria District Turf Club. In 1900 Dr. Macmorran married at Malta Jessie, daughter of the late Captain William McMicken, R.N.R., late commander of the Cunard fleet, and has two daughters.

ARTHUR HOSSEMAYNE DU BOULAY, J.P., barrister of Lincoln's Inn, London, practising at Geraldton, Western Australia, was born at "Stock House," near Sherborne, Dorsetshire, England, on March 11, 1843, and is a son of the late John du Boulay, J.P., and deputy-lieutenant for Dorsetshire and Wiltshire for many years. He received his education at Harrow School, and upon the close of his scholastic career entered the Royal Navy, but owing to indifferent health he had, after six years, to relinquish the idea of the Navy as a profession. Coming to Western Australia, he engaged in pastoral pursuits on the "Minnanooka" sheep station, in the Victoria district of this State, a property owned by his cousin, where he remained for nearly six years. Returning to England in 1868, he studied law and was called to the Bar in the year 1873. Subsequently he returned to Western Australia, settling in Geraldton, where he commenced the practice of his profession, and has continued ever since. During this period he resided for a great many years on a farm which he had purchased in the vicinity of the town known as "Woorree," and, in conjunction with his other pursuits engaged in the agricultural industry, personally superintending the operations of the estate. He has interested himself in the progress of the place, and, before the registration of Geraldton as a municipality, occupied the office of chairman of the then governing body. He also acted for many years in a similar capacity to the Geraldton Roads Board. On four different occasions he was appointed acting Government Resident and resident

magistrate of Geraldton, during the temporary absence of the permanent officials, and for over thirty years he has exercised a Commission of the Peace for the whole State. In the early days of the Victoria District Turf Club Mr. du Boulay was prominent among the officers of that body, and he is connected with most of the public and social organizations of the district. His favourite recreation is reading, Kipling's, together with other well-written works of

Wallace Miller, Geraldton.  
MR. A. HOSSEMAYNE DU BOULAY.

fiction, commanding his cordial appreciation. Mr. du Boulay married in 1867 Caroline Emily Josephine, daughter of the late Rev. George Routh Howard, a former rector of Geraldton, and has three sons and one daughter.

JAMES WALKER CLYDESDALE, barrister and solicitor, Geraldton, is a native of New South Wales, having been born in Sydney on October 4, 1857, whither his father, the late James Walker, had come as a member of the Imperial troops in 1851. He received his education in different parts of the world, concluding his scholastic studies at the University of Glasgow, where he specialized in the faculty of law. Whilst waiting to be called to the Bar he maintained himself for three years by literary work in London, writing for the magazines and acting as extra leader-writer to some of the London and Scottish dailies. He was admitted to the Bar

of the Middle Temple of London on May 4, 1887, and is registered in Purcell's "English Law List" of 1904 as "Clydesdale, J. W., expert in Russian, Spanish, Spanish-American, French, Brazilian, Dutch, and Italian law." After practising in England for ten years in the Chancery and Common Law divisions, the severity of the climate forced him to seek a milder clime, so in 1897 he came to Western Australia and settled in Perth for five years. At the end of this period he opened in practice on the eastern goldfields, where he carried on successfully for a considerable time. Returning to Perth, he seized an opportunity which offered to establish himself in the then flourishing goldfield of Meekatharra, but finding the inland temperature too trying, came to the coast again, and in March, 1911, took up his residence at Geraldton, where he has since rapidly made his way in professional circles. Mr. Clydesdale's reputation

MR. JAMES WALKER CLYDESDALE.

was enhanced during his sojourn in Perth by his conduct of the celebrated Morris-Randall murder trial, which occupied over a week in the hearing. Outside of his profession he has figured in public life, and on two occasions contested the Canning electorate—subsequently known as South Perth—as independent democrat, but in each instance was defeated by a small majority. He has played a prominent part in the military movement, having had considerable experience in England in the yeomanry and the Inns of Court Rifle Volunteers, and after his

advent to this State was responsible for the formation of the Cannington Mounted Infantry, from which he resigned with the rank of captain, being the first volunteer to be promoted under the Commonwealth defence authorities. Literature is Mr. Clydesdale's chief hobby, and being a linguist of wide range—Arabic, Hindustani, Persian, and the various European languages all being familiar to him—he spends all his leisure hours among his books: "*Vita sine literis mors est.*" Chaucer is his favourite English author, while he makes frequent translations from the treasure storehouses of Oriental literature, this form of mental exercise having become almost a passion with him. Mr. Clydesdale has been twice married, his first wife being a daughter of Captain Crawford, shipowner, of Port Glasgow, Scotland. Some years after this lady's decease he espoused Una Mary Caroline, daughter of Mr. Theodor von Engelbrecht, of Geraldton, formerly of Gwalia, South Australia.

EVERETT HENRY BARDWELL, barrister and solicitor, Geraldton, was born in Melbourne, Victoria, on February 18, 1856, being a son of the late Everett Bardwell, Crown Solicitor of that State. His early education was received in a private school, and subsequently he became a student of the University of Melbourne, where he studied for the legal profession, qualifying in the late seventies. After practising law in the Victorian capital for about sixteen years, in 1897 he came to Western Australia, and shortly after arrival was gazetted an officer of the Supreme Court of Western Australia. Some twelve years later he resigned from the Government service in order to start practice on his own behalf in Perth, and at the close of 1910 established himself at Geraldton, where he has since continued. Outside of his profession Mr. Bardwell is a noted conchologist, having a very fine collection of shells, and being an acknowledged authority on the subject. He spends a good deal of his leisure in taking long walks along the sea-beach, and is continually adding to his specimens, finding healthful recreation in this pursuit. He married in 1881 Fanny, daughter of the late Hugh Peck, a well-known citizen of Melbourne, and has three sons and one daughter. Two of his

sons are engaged in the pearling industry in the north-west, one of whom held an officers' commission in the South African war.

HAROLD WILSON, LL.B. (Lond.), barrister and solicitor, Geraldton, was born at Croydon, Surrey, England, on October 5, 1866, and is a son of the late Robert Wilson, a merchant, of London. He received his scholastic training at Sidcot School, Somersetshire, and subsequently took his LL.B. degree with honours at the University of London, in which city he also served his articles to the legal profession and was admitted a solicitor in 1889. In 1890 Mr. Wilson came to Western Australia as managing clerk to the well-known firm of Messrs. Parker and Parker, solicitors, of Perth, with whom he remained for over three years, resigning to open in practice on his own account at Geraldton, where he has since continued. Outside of his profession Mr. Wilson takes an active interest in politics, and he was one of the founders of the Liberal League in the district where he resides, now holding the office of president of the northern council of this organization. For many years he has acted as solicitor to the local municipal council, and he is a member of the Weld Club, Perth, and of the Geraldton Club. An omnivorous reader of the miscellaneous literature in various languages, he has made a special study of old Norse and Romana literature and the Elizabethan dramatists. Mr. Wilson married in 1912, Jean, daughter of Mr. Robert Darling, of Fremantle.

JOHN RAYMOND GEORGE ELIOT, Clerk of Courts, Clerk of Quarter Sessions, District Registrar, Branch Manager of the Government Savings Bank, Treasury Paymaster, etc., Geraldton, is a son of the late George Eliot, who arrived at Geraldton in the year 1870, and was the first Government Resident in the colony of Western Australia. He is a native of this State, having been born at Bunbury on November 17, 1853, in which town he also received his education. At the close of his schooldays, in 1871, he started active life as clerk in the Imperial Service in the Comptroller-General's department and at the Geraldton Gaol, but

resigned this position after a year in order to enter upon the career of a settler and pastoralist in the Bunbury district, where he continued for about nine years. In 1884 he again became connected with the Government service as clerk to the Treasury at Geraldton, and shortly afterwards was appointed to the various offices above enumerated. At this period the present well-laid-out town was, comparatively speaking, non-existent, a few buildings constituting the little settlement which was destined to expand into the important seaport of to-day. Mr. Eliot has watched with sympathetic interest the evolution of the place, and has assisted its advancement in every way in his power. He has made a hobby of his official duties, and has never allowed any private interests to interfere with the conscientious discharge of the manifold details involved in his varied offices. He was one of the

Wallace Miller, Geraldton.  
MR. JOHN RAYMOND GEORGE ELIOT.

foundation members of the Geraldton Club, and in the early days of the town was prominent in racing circles. He is now a devotee of bowls, and takes his recreation on the local green. He married in 1909 Eva, daughter of Mr. M. B. McNamara, of Port Lincoln, South Australia.

EVELYN PIERREPONT ERSKINE, Sub-Collector of Customs, Geraldton, was born at Cheltenham, England, on September 7, 1870, and is a son of the late Hon. James Augustus Erskine, K.S.F. (a Spanish

order signifying "Knight of St. Ferdinand"), who was brother to the tenth Earl of Mar and Kellie, and in 1836 was appointed first Commissary General in Australia, at Sydney. The gentleman under review received his education at Portsmouth Grammar School and St. John's College, Hurstpierpoint, and upon the termination of his scholastic career, joined the staff of the Oriental Bank in London. In the year 1889 he came to Australia and took a position as jackeroo on "Innamincka" Station in South Australia, where he remained

C. E. Farr, Perth.  
MR. EVELYN PIERREPONT ERSKINE.

for nearly three years. In 1894 he sailed for the Western State and entered upon commercial pursuits at Mandurah, in 1897 becoming connected with the Civil Service in the Customs branch in the days of State control. Mr. Erskine filled various positions in the service, and from time to time received promotion, until, in 1909, he was appointed to the post of sub-collector of customs at Bunbury, accepting transfer to Geraldton in 1910, since which date he has filled his present office. Outside of his official duties he has taken a prominent interest in the cause of the Church of England, of which body he is a member, vestryman, and lay reader for the Geraldton district. He is also a committee-man of the Church of England Men's Society, in which organization he has played a leading part. He was one of the founders of the Bunbury Yacht and Rowing Club, and a member of the first mounted infantry regiment in the State of Western

Australia, being now scout-master of the Boy Scouts in Geraldton. Mr. Erskine is a deep reader, and finds enjoyment in the perusal of works of history, etc. He was married in 1897 to Amy Maria, daughter of Mr. Joseph Hough, pastoralist, of Collie River, near Bunbury, and has three sons and five daughters.

JAMES RICHARD GUARD, Post and Telegraph Inspector for the northern division of Western Australia, was born at Clunes, Victoria, on September 22, 1872, and is a son of the late John Guard, mining manager, of Charters Towers, Queensland. He received his education in his native town, and at the termination of his studies joined the public service in the Post and Telegraph Department. After serving for eight years in Victoria he resigned in order to accept a more

MR. JAMES RICHARD GUARD.

lucrative situation in the Post and Telegraph Department under the Western Australian Government, coming to the latter State at the end of 1894. For eight years he continued as telegraphist at the head office at Perth, and in 1902 was promoted to the position of chief operator at Menzies, subsequently being appointed to the charge of that office, a position he held for three years. He was then transferred to the Laverton office, where he spent four years, at the end of which period he was removed to the more important post at Bunbury. After four years at the latter place, in 1911 he received an appointment to

the inspectorship of the northern district, where he has since continued. His favourite outdoor recreation is bowls, and he is a member of the Geraldton Bowling Club. In 1896 he married Hannah, daughter of the late J. W. Stark, of Port Adelaide, and has one son and three daughters.

**HUGH SERJEANT**, District Engineer at Geraldton for the Western Australian Government Railways, was born at Lake Learmonth, Victoria, on September 5, 1865, his father, the late Canon Thomas Wilson Serjeant, B.A. (Oxon.), for twenty years incumbent of Williams-town Parish and acting-dean of Melbourne for a considerable time, having come to Australia in the early days of missionary work in the above-mentioned State. The gentleman under review at nine years of age began his education at the Scotch College, Melbourne, and upon the completion of his scholastic career on January 3, 1883, joined the staff of the Bank of Australasia in that city. He worked his way up through the various grades of the service into the correspondence room, where he held the position of general manager's junior confidential clerk until January 3, 1885, when he severed his connection with the bank in order to take up surveying and engineering as a profession. Two days after leaving the bank's service he commenced work as a chainman on survey for the Railway Department of Victoria, being employed on the Tatura - Echuca, Dunolly - Inglewood, and the first section of the Avoca-Ararat railway lines. In February, 1887, he was promoted to the position of foreman in the camp, and acted in this capacity on the Frankston - Mornington, Maldon - Llanacoorie, Croydon - Warburton, and Lilydale-Warburton surveys. In July he became field assistant on the construction of the Kerang-Swanhill railway. Upon the completion of this work he took a similar position on the Great Southern line, Victoria, which cost £278,000, and was then taken into the head office, Spencer Street, Melbourne, where he spent four months; after which he was selected by the authorities for the task of supervising the construction of the Warracknabeal-Beulah line, which was built under the butt-gang system, the work being carried out under the immediate

supervision and guidance of the departmental officers without the intervention of a contractor. Upon the completion of this line Mr. Serjeant was retrenched, owing to the temporary stoppage of all railway construction work in Victoria, and after travelling through the State for a month or two he landed in Western Australia towards the end of March, 1894. Whilst waiting for parliamentary estimates relating to surveys of new lines he was engaged for six months in clearing goods through the Customs and in shipping work generally, and on October 16, 1894, joined the Western Australian Civil Service and was appointed assistant to the surveyor in charge of the Yalgoo-Magnet section of the Mullewa-Cue railway survey. He next became assistant engineer on the construction of the Eastern Railway Deviation No. L, extending from Bellevue to Lion Mill, and upon the resignation of the resident engineer in charge of the work was promoted to the vacancy. Upon the presentation by the contractor, Mr. W. N. Hedges, of a claim for £35,000 on account of extras and additions Mr. Serjeant recommended that £8,900 be paid in settlement thereof; and upon the case being referred to arbitration Mr. Hedges was awarded slightly under £10,000, the Crown Solicitor (now Mr. Justice Burnside) taking the opportunity of publicly acknowledging his appreciation of the way in which the figures had been handled and placed before them by Mr. Serjeant, who had completed the work and signed on behalf of the Government the final certificate for completion of the contract for £87,000. At the termination of this arbitration case Mr. Serjeant acted as chief clerk to the Chief-Engineer for Existing Lines for four months and passed on to the charge of the drafting-room, carrying out the supervision of all engineering and architectural works incidental to the requirements of a Government railway system until January 2, 1901. From this date until July, 1904, from time to time he acted as district engineer throughout the State, dealing with all legal matters affecting the branch with which he was connected and personally conducting cases on behalf of the Commissioner of Railways before the Railway Appeal Board. On July 1, 1904, he was appointed district engineer of the southern district, and held this position until

April 11, 1912, when, after a few months' absence on long-service leave, he resumed work as district engineer of the northern railways, which position he still holds. In addition to the maintenance work of the district Mr. Serjeant has charge of the construction of the Geraldton new station yard and buildings, a work which is being carried out by day labour at an estimated cost of £56,000. In 1901 he was elected a member of the American Society of Civil Engineers. Mr. Serjeant married in 1895 Nina, daughter of the late Alfred Goulding, a well-known journalist of the Eastern States, and has one daughter.

**THOMAS ANDERSON KIDD**, J.P., Geraldton, was born at Elie, Fifeshire, Scotland, on November 6, 1847, being a son of the late James Kidd, originally of that place, who

C. E. Farr, Perth.  
MR. THOMAS ANDERSON KIDD.

became one of the earliest settlers in Victoria, and the original owner of "Bushy Creek" Station. He accompanied his parents to Australia in 1859, and for many years followed commercial pursuits in Victoria, being connected with banking circles in the Eastern State for some considerable time. In 1894 he brought his family to Western Australia, and after trading for a few months as forwarding agent and provision merchant at Southern Cross, Kalgoorlie, and Coolgardie, travelled across country to Geraldton, where he settled down to business pursuits.

Mr. Kidd was created a Justice of the Peace for the whole of Western Australia by the Forrest Administration in pre-Federal days, and has acted in this capacity ever since. He is of a retiring disposition, and takes little part in the public life of the town, preferring to spend his leisure quietly in the bosom of his family. He was married in 1871 to Emma, daughter of the late Mr. Nankivell, of Maldon, Victoria, and has six sons and two daughters.

Captain JAMES CECIL KIDD, public accountant, sworn valuator and auctioneer, Geraldton, was born at Stawell, Victoria, on June 15, 1877, being a son of Mr. Thomas Anderson Kidd, J.P., of the same place, mentioned elsewhere in this work. He received his education in Melbourne, and upon the conclusion of his scholastic career became engaged in commercial life in that city

Wallace Miller,

Geraldton.

CAPTAIN JAMES CECIL KIDD.

until 1894, when he accompanied his father to Western Australia. Upon arrival in this State he proceeded to the eastern goldfields where, with Mr. Kidd, senior, he opened as forwarding agents and provision merchants at Southern Cross, trading to Kalgoorlie and Coolgardie. In 1895 he came to Geraldton, overlanding with his parents and other members of the family from the above-mentioned centre, and for a time was connected with the firm of Messrs. Parkes Brothers & Kidd; three years after his advent to the town he

established himself in business on his own behalf as above. Captain Kidd has met with pronounced success in his mercantile proposition, and in addition to being one of the prominent business men of the place has more than perhaps any other resident identified himself with the public life of Geraldton. He takes a leading part in all local institutions, since April, 1899, having filled the post of secretary of the Geraldton Mechanics' Institute, which owes to his efforts its proud position as one of the most flourishing organizations of its kind in the State, while the secretaryship of the Geraldton Chamber of Commerce has been in his hands since 1900. For over a decade he has acted as municipal auditor, and is an acknowledged authority in all matters connected with the roads board, in which he has filled the secretarial office since 1903. At a yet remoter date he became secretary of the Geraldton Club, having retained this position ever since 1898. For over fourteen years he has been connected with the military service of the State, his first company being the Geraldton Rifles, which he joined as a private, transferring to the Geraldton Mounted Infantry, where he held rank as a non-commissioned officer. This regiment ultimately was merged into the 3rd Squadron 18th Australian Light Horse, in which he was subsequently gazetted to the rank of lieutenant, receiving his commission as captain in 1907, being then in command of the 3rd squadron, and second in command of the regiment. Captain Kidd now occupies a place on the reserve of officers. He is *au fait* with all kinds of athletic sports, specializing in tennis and aquatics. Rowing, perhaps, is his favourite diversion, and he was one of the earliest members of the Geraldton Amateur Rowing Club, since having had the distinction of honorary life membership conferred upon him by his fellow members. He was also a foundation member of the Geraldton Tennis Club. Captain Kidd married in 1910, Grace, daughter of Mr. William Moore, mentioned elsewhere in these pages, who has been one of the identities of the district for well-nigh half a century.

ERNEST ALBERT HENRY GURSANSCKY UDY, accountant, Geraldton, is a son of the late Mr.

Henry Udy, and was born at Brunswick, a suburb of Melbourne, Victoria, on November 9, 1861. The gentleman under review was educated at Bathurst under private tuition, and upon the termination of his studies came to Western Australia, where he joined the Civil Service in 1898, being appointed junior clerk in the Lands Department. He continued in the head office at Perth for thirteen years, during which

C. E. Farr,

Perth.

MR. E. A. H. G. UDY.

period he rose to the position of paymaster, and at a later date was further promoted to the post of Government land agent at Geraldton. Mr. Udy resigned from the Government service in 1912 in order to launch out on his own behalf, and established himself in the same town as public accountant and valuator; he also acts as agent for the prominent firm of Messrs. George Wills & Co., of Adelaide, Perth, and Fremantle, etc., and for the Victorian Insurance Company. Since his advent to Geraldton he has made his name on the lecture platform, having previously taken a foremost part in the leading debating societies of Perth. He is very fond of study, and while devoting much of his time to various other subjects, that of political economy, perhaps, engages his chief attention. He is also in touch with most of the best writers of the day and with the classical authors. He occupies a seat on the board of directors of the central executive for Western Australia in connection with the Australian Natives' Association, of which body he has been a vice-president.

and has passed through its various chairs. A patron and supporter of most forms of healthy outdoor sport, he has taken a specially prominent part in football, and he represented Western Australia at the first meeting of the Australian Football Council held in Melbourne in 1906. He also served for eight years on the council of the Western Australian Football League, and upon leaving Perth was honoured with life membership in that organization. He was closely connected with the Western Australian League of Wheelmen, and for five years acted on the council of this league; is secretary for the Victoria District Turf Club; and takes his own recreation on the bowling-green. He married in 1909 Adelaide, daughter of Mr. Matthew Ferguson (now retired), a well-known mine manager in this State and in Queensland.

**HENRY STUART MACKENZIE**, J.P., founder of the well-known firm of H. S. Mackenzie and Co., auctioneers, stock, station, land, estate, forwarding, and general agents, Geraldton, now living in retirement, is a son of the late H. S. Mackenzie, of Windsor, England, formerly a resident of Rosshire, Scotland, and an early scholar of the famous Winchester College. The subject of this notice was born at Windsor, where he was educated under private tuition, and concluding his studies at the age of seventeen, came to Australia and settled in Queensland, where he became engaged in the pastoral industry for a number of years. When the rush to the Palmer gold diggings occurred he was among the pioneer prospectors on the scene of the find, and was subsequently identified with other fields, among which were the Gympie, Calliope, and Tableland diggings, while he also had considerable experience in tin-mining in the Herbert district of Queensland. In 1886, when the news of the Kimberley gold discoveries was circulated throughout the States, he was among those who financed a party to proceed to that district, and, shortly afterwards turning his steps thither, arrived at Hall Creek, in the centre of the great north-west, where he established the business of mining agent, storekeeper, and general broker, an interesting fact being that this was the first mining agency established in Western Australia. At an early date after his advent to the district,

LLL

in conjunction with Messrs. McPhee, Lamond, and others, he secured a mob of cattle from Mr. Durack's "Ord River" Station, which had then been formed only two or three years, and for some time supplied the miners with beef, which had become very scarce only a short time previously, a team of working bullocks having been sacrificed in order to provide food for the men, who gladly paid 2s. 6d. per lb. for the flesh. After residing at Hall Creek for five years Mr. Mackenzie came to Geraldton to establish a coaching and postal service to Cue, and having conducted this for half a decade, spent about two years in running a postal service on the Murchison, subsequently over-landing to Laverton, where he started business as mining agent and auctioneer, and where he continued for about five years. In 1907 he came to Geraldton, and opened the business of H. S. Mackenzie, from which he retired in 1912, after a successful commercial career in this

held several other offices. He has been a member of the Masonic craft for over twenty years, and is a foundation member of the Laverton Lodge, of which he was first secretary, and before leaving the district he obtained the rank of S.W. He is one of the oldest members of the Geraldton Club, and has been closely identified with racing matters, to him being due the credit of having formed the Northern Goldfields Racing Association, while he has also acted as secretary to the Laverton and Geraldton race clubs. In 1880 Mr. Mackenzie married Agnes, daughter of the late Thomas McWhinney, architectural modeller, of Brisbane, Queensland. The McWhinneys were among the pioneer families of the Northern State, and to-day Mr. McWhinney's art stands out prominently in the public buildings of that city. Mrs. Mackenzie has accompanied her husband in his many journeyings, sharing his privations, and was the first white woman on "Sturt Creek" Station, about 80 miles from the present Tanami goldfields, in the Kimberley district, close to the border of the Northern Territory. Their one son has also been his parents' companion in pioneering life, and was the first European child in the above-mentioned district.

Imperial Studio,

Albany.

MR. HENRY STUART MACKENZIE.

town. When the Geraldton co-operative flour mill was established he was appointed first secretary, a post he held for some considerable time. Latterly he has become interested in the orchard industry, having purchased a property at Mount Barker, where he proposes to settle down and spend the remainder of his life. Mr. Mackenzie has always taken a prominent part in public affairs in the various centres where he has resided, and for some years he acted as chairman of the health board at Laverton, where he

**H. S. MACKENZIE & CO.**, auctioneers, sworn valuers, stock salesmen, and public accountants and auditors, Geraldton. (M.O.S. MacKenzie and F. C. Overheu.) This partnership was established in 1912, to take over the business founded by Mr. Henry Stuart Mackenzie in 1891, upon the retirement of the last-named gentleman from commercial life. The outdoor portion of its operations is attended to by Mr. M. O. S. Mackenzie, while Mr. Overheu, public accountant, who distinguished himself by winning the Dicksee Prize for Western Australia in 1912, has charge of the official and accountancy work connected with the firm's business. The concern operates over a very wide range of country, the Victoria, Murchison, and north-west districts all being included within its scope, and having been founded on a sound commercial basis and conducted in accordance with approved principles the popularity which it attained under the earlier management should only be augmented under the new régime. The senior partner of

the firm, MONTROSE OSCAR STUART MACKENZIE, is a son of the founder, and was born at Watsonville, North Queensland, on July 23, 1884. He received his education at St. Peter's College, Adelaide, and having concluded his studies entered the office of the Western Australian Bank, as junior,

Wallace Miller. Geraldton.  
MR. M. O. S. MACKENZIE.

at Laverton, from which he resigned three years later after having been promoted to ledger-keeper. He then joined his father in the conduct of the business of which he is now principal, and has continued in this connection ever since, in 1912 taking over the concern as above mentioned. Mr. Mackenzie is a member of the Geraldton Club, but finds little leisure for public or social life, being completely absorbed in the management of the growing business. He married in 1911, Ellen Louise, daughter of Mr. G. T. Kenward, of Katanning, Western Australia, and has one daughter. FREDERICK CHARLES OVERHEU was born at Millicent, South Australia, on July 3, 1880, and is a son of Mr. F. Overheu, pastoralist, of "Nimdedilling," Pingelly, W.A. He was educated at St. Peter's College, Adelaide, and subsequently joined a survey camp on the great southern line in the Western State, which he left to join the staff of Messrs. Henry Wills & Co., of Fremantle. After spending a short time in Albany on behalf of this firm he was transferred to the Geraldton branch as accountant, resigning after ten years'

service to take the position of secretary of the Victorian District Co-operative Flour Milling Co., Limited, which he held for two years. He relinquished this connection in order to study in Perth for his final accountancy examination in 1912, and having passed the test successfully became Dicksee Prize-man for his year. Shortly afterwards he joined Mr. M. O. S. Mackenzie in purchasing the present business in the active conduct of which he has since been engaged. Mr. Overheu has occupied the office of municipal auditor to the Geraldton Council for some years. He has filled many secretarial positions to local sporting bodies and friendly societies, and is an Associate of the London Association of Secretaries. He is fond of

MR. FREDERICK CHARLES OVERHEU.

cricket and tennis, and takes his recreation chiefly in these forms of sport. Mr. Overheu married in 1912, Florence, daughter of Mr. George Bond, of Subiaco, Western Australia.

RICHARD GEORGE KELLY, manager of the Geraldton branch of the firm of Messrs. Dalgety & Co., was born at Liverpool, England, on July 29, 1872, and is a son of the late Thomas Kelly, Civil Service Inspector in connection with the Liverpool Postal Department. He was educated at the Liverpool Institute, and upon the completion of his scholastic career joined the head office of the Liverpool Blue Funnel

Line of steamers (Alfred Holt and Co.) in the clerical branch of the outward freight department. After five years he was transferred to the marine service as purser on the steamers "Saladin" and "Sultan," respectively, trading to the Western Australian coast. In 1898 he resigned the Blue Funnel service, and on January 1, 1899, opened in Geraldton on his own account as agent for the United Service steamers trading between Fremantle, the north-west ports, Java, and Singapore. In August of the same year these agencies were taken over by the firm of Dalgety & Co., and Mr. Kelly was appointed accountant. Two years later he was promoted to the post of manager of the Geraldton branch of the Company, which position he still holds. Since coming to the district Mr. Kelly has associated himself with the various movements for the advancement of the place, and for some time occupied a seat on the local municipal council. He has taken an active interest in the deliberations of the Chamber of Commerce, in which he has filled the presidential chair; has also presided over the Geraldton Club—the leading club of the north-west; and is a keen

Wallace Miller. Geraldton.  
MR. RICHARD GEORGE KELLY.

advocate of clean sport, having served for a considerable time as a committeeman of the Victoria District Turf Club. Mr. Kelly married in 1903 Ida Mary Lillian, daughter of the late Mr. Parker, of the western district of Victoria, and has four sons.

CROOKS & BROOKER, Limited, Geraldton. (Director and Manager for Western Australia, A. E. Builder.) This well-known South Australian firm of ironmongers, builders, contractors, and timber merchants, first opened its doors for the transaction of business in Western Australia in the year 1893, when the managing partner at Port Adelaide, Mr. William A. McDonald, accompanied by Mr. R. P. Young, a gentleman in the employment of the firm, arrived at Cue, in the Murchison district, the settlement being then in its infancy. The journey from Geraldton to Cue occupied eleven days, being accomplished by means of an express waggon and pair of horses brought by steamer from Perth, and upon arrival Messrs. McDonald and Young found everything in a very primitive state, the Western Australian Bank conducting its business in a tent, while the warden of the goldfields was similarly accommodated. After inspecting the different localities, a choice was made of Day Dawn as a venue of operations, the promising mine, now known as the Great Fingall, being then in course of its early development. A commodious building shortly afterwards was erected, in which, in an incredibly short space of time, taking the immense difficulties of transport into consideration, a large stock of hardware of every description was stored, and business was started under the name of R. P. Young, who remained as manager of the new enterprise. Some idea of the exceptionally heavy outlay involved in launching such a concern may be gained from the fact that teams took three weeks in conveying goods from Geraldton to Day Dawn, making a charge of £24 per ton for freight, which, in the case of such weighty merchandise as mining requisites and general hardware, brought the

LLL2

expenses up to a high figure. The venture prospered, nevertheless, and during Mr. Young's term of management, which lasted for three years, a branch was opened at Cue, which made such rapid progress that a large block of land in the centre of the town was secured, upon which the present large and roomy premises were built, and in 1898 the Day Dawn business was closed and the head office transferred to Cue. Upon the resignation of Mr. Young, Mr. A. E. Builder, formerly an employé in the business at Port Adelaide, was appointed to control operations, and about this period the firm's name in South Australia was substituted for its former title, since when it has been known, both at headquarters and at the various branches which have been established, as Crooks and Brooker, Limited. In 1899 Mr. McDonald and Mr. Scates (another member of the firm) took a trip to

had premises erected in a very central position, which were completely stocked and placed under the management of Mr. H. W. Bell, who is now assistant manager at Geraldton. Prior to the latter date the firm, in 1900, continued its progressive policy by opening at Nannine, and two years later business was resumed at Day Dawn, and has continued ever since, while in 1906 a branch was established at Sandstone, and one at Meekatharra a year later. The ramifications of the business now extend all over the goldfields, and the firm carries large stocks of ironmongery, builders and contractors and miners' requisites, with everything in the way of household hardware. A speciality is made of the timber trade. In 1910 the head office of the business was removed to Geraldton, where it has since continued. Among other important agencies held by Messrs. Crooks & Brooker is that of Nobel's Glasgow

MESSRS. CROOKS & BROOKER'S PREMISES, GERALDTON.

Peak Hill, and finding sufficient opening there to warrant the extension of operations in that direction

explosives, the firm having charge of the magazines at Cue, Meekatharra, Nannine, and Geraldton.

**WILLIAM ERNEST RANDLE**, manager for the Geraldton branch of Messrs. Millars' Timber and Trading Company, Limited, was born at Richmond, Victoria, on March 27, 1870, and is a son of the late William Henry Randle, contractor of that place. He was educated at Prahran in the same State, and upon the completion of his education served his apprenticeship to the trade of carpenter and joiner, subsequently being compelled to enter business on account of the sudden death of his father. In 1897 he disposed of his interests in Victoria and sailed for Western Australia, upon arrival being employed in his trade on the Perth Observatory buildings. A year later he joined the staff of the Perth City Council, serving as clerk of works in connection with this body for nearly four and a half years, during which period the whole of the wood paving

Wallace Miller, Geraldton.  
MR. WILLIAM ERNEST RANDLE.

of the city was carried out under his supervision, together with the Wellington Street main surface drain and the erection of the Parker-ville stone-crushing plant. Upon relinquishing the service of the council, he was engaged for a short time with the tramway company as chief receiving clerk, and with the Fremantle Council as supervisor, before joining in 1903 the firm of Millars' Karri and Jarrah Company, Limited, by which name his present firm was then known. After serving for three and a half years in the Perth office, Mr. Randle was promoted to the charge of the Geraldton

branch, which position he has retained ever since. Since taking up his residence in the district he has given a considerable amount of attention to public affairs and holds the office of vice-president of the Geraldton Chamber of Commerce, besides which he served for two years as a committeeman of the local agricultural society. He has been a member of the Masonic fraternity for nearly a quarter of a century, having held various offices in the craft, he is a member of the Geraldton Club and takes a prominent interest in all legitimate outdoor sport. In earlier years he was well known on the cricket field, but more recently has spent his leisure chiefly in bowls, and is vice-president of the Geraldton Bowling Club, besides which he holds membership in the local polo club. Mr. Randle married in 1893, Florrie May, daughter of the late William Sedgman, of Melbourne, a lady who has taken a leading part in matters connected with the Anglican Church at Geraldton and in all charitable movements.

**CHARLES HORMAN**, wool, hide, and skin merchant, Geraldton and Fremantle, Western Australia. Head office: Sydney, New South Wales. This firm commenced business at Geraldton soon after the establishment of its operations in Western Australia in 1901, and during the ensuing decade its ramifications have been extended from Watheroo, on the midland railway, to Port Hedland, in the north-west, and all over the Murchison and Gascoyne districts. A very large trade in wool, hides, tallow, sheepskins, kangaroo skins, etc., is carried on in this area, the wool and skins being exported to London, kangaroo skins to America, and hides to the Eastern States; while the firm makes a speciality of rifles, guns, and ammunition, which find a ready sale among its numerous patrons. It acts as agent for various commodities and companies, being sole representative in Western Australia for Thomas' Carbolyzed Soluble Sulphur Sheep Dip and Thornley & Co.'s celebrated "Kondo" (Registered) Concentrated Food for Horses and Cattle. It is also sub-agent for the Royal Exchange Assurance Society. **ALBERT ELLIOT GOODISSON**, manager of the Geraldton branch of Charles Horman, was born at Dubbo, New South Wales, on March 17, 1871,

being a son of Mr. Richard G. Goodisson, who is well known in the stock and pastoral industry of that State and Victoria. He was educated at Dubbo and Wagga, with a subsequent course in the Caulfield Grammar School, which was supplemented by a final year at the Melbourne Grammar School, upon completion of which he entered the firm of Messrs. Synnot Brothers, hide and skin merchants, of Melbourne. Five years later he became connected with

Wallace Miller, Geraldton.  
MR. ALBERT ELLIOT GOODISSON.

Dalgety & Co., and after fourteen years with this well-known company, resigned his position as manager of the hide and skin department at Fremantle in order to accept his present post, which he has filled for nearly seven years. He is a member of the local agricultural society, and is one of the most active promoters of its advancement. He also takes keen interest in politics, acting as treasurer and member of the local branch of the Liberal League. His favourite sport is cricket, and for several years he has held the position of president of the Geraldton Mercantile Cricket Club. Mr. Goodisson married in 1904 Lillie Elizabeth, only surviving daughter of the late Dr. John Richard Price, of Holyhead, North Wales.

**JOHN CROTHERS**, builder and contractor, principal in the Geraldton Land, Building, and Investment Company, was born at Campbell's Creek, near Castlemaine, Victoria, on March 14, 1864, and is a son of

the late Thomas Crothers, agriculturist, of Carag Carag, in that State. He was educated under private tuition, and in his early teens started work on his father's farm, subsequently being employed on a pastoral property near Corop. At 17 years of age he proceeded to Sydney and served a five years' apprenticeship to the building trade in and about the New South Wales capital, being engaged in the erection of some very large residential structures. After spending some time at home with his parents he did a good deal of building and contracting at Kyabram, then in its infancy, most of the private houses, stores, etc., being erected by him; upon leaving there he arrived in Melbourne just at the time of the bursting of the great land boom. Here he met with a severe accident in falling from a building, which occasioned his retirement from

Wallace Miller, Geraldton.

MR. JOHN CROTHERS.

the building trade, and returning to Kyabram he resided there until 1896, in which year he came to Western Australia. Shortly afterwards, family reasons compelled his return to Victoria for a time, and upon once more arriving in the Western State he turned his attention to the mining industry for a time, before resuming his trade at Kalgoorlie, where among many fine buildings he erected the city markets, Fimiston Hotel, the grand stand on Kalgoorlie Race Course, York Hotel, and other places of importance. After eight years on the goldfields and a subsequent period at Perth,

where he fulfilled several contracts for leading commercial premises, Mr. Crothers spent two years at Carnarvon, and in 1908 came to Geraldton, where he has since become a well-known figure. Besides controlling a large connection as a contractor he is interested in the ideal concrete block manufacture, having imported the first machines for turning out concrete blocks for building purposes in Western Australia. He has established a branch of his business at Northampton, and in addition to his business interests owns considerable landed property in the town, being the proprietor of the "Harbour View" Estate, which has been cut up and is now in the market for residential purposes. Mr. Crothers has been a member of the craft of Freemasons for many years and takes an interest in politics, being a committeeman of the local branch of the Liberal League. In 1887 he married Sarah Ann, daughter of the late John Fimister, of Goulburn Valley district of Victoria, and has four sons and one daughter.

Captain WILLIAM THORBURN JOHNSTONE, trading in Geraldton under the title of the "Geraldton Stevedoring Company," was born at

C. E. Farr, Perth.  
CAPTAIN WILLIAM THORBURN JOHNSTONE.

Lenchers, Fifeshire, Scotland, on July 6, 1870, being a son of the late Rev. Robert Johnstone, pastor of the Lenchers Presbyterian Church for over forty years. Educated at the Madras College, St. Andrew's,

Scotland, Captain Johnstone at the close of his schooldays entered upon seafaring pursuits as an apprentice with the firm of Thomas Law & Co., of Glasgow, in the sailing ship "Morayshire." For twelve years he continued to trade in various vessels belonging to this company, taking his master's certificate before resigning its service in order to join the firm of Messrs. Smith & Service in the Mount Line of steamships, where he began as third officer, and within a few months was promoted to the post of chief officer. The company subsequently disposed of the ship upon which he was serving to the Donald Currie Line of boats, and Captain Johnstone transferred his services to the new owners, shortly afterwards being given command of the "Aros Castle." During the eight years that he spent with this company he occupied various responsible appointments both ashore and afloat, including that of superintendent of loading of steamers at Continental ports, and during the progress of the Boer War was in command of troopships carrying soldiers to and from South Africa. At the close of the war he resigned from the service and joined the firm of Messrs. MacLay and McIntyre, owners of merchant steamships, for whom he commanded various boats. In 1911 he visited the port of Geraldton, in Western Australia, as master of the s.s. "Jeanara," and perceiving a good opportunity for opening in the stevedoring line of business, arranged a partnership with Mr. Peter Forrester, and returned to this State after he had safely handed over his ship to the owners at Newcastle, England. The partnership only existed for a few months, Captain Johnstone buying out his late partner's interest, since when he has conducted the business on his own account. He has been a member of the Masonic fraternity for about a decade. He takes his recreation as a keen sportsman, revelling in all kinds of athletic exercise "for sport's sake," and latterly gaining distinction as an excellent exponent of both golf and bowls. Captain Johnstone married in 1896 Elizabeth, daughter of the late Robert Dixon, merchant, of Helensburgh, Scotland.

ALFRED SEARLE, of the firm of Messrs. Searle & Oliver, general commission agents, wheatbuyers, and representatives of Messrs. John

Darling & Sons, was born at Hindmarsh, South Australia, on January 10, 1869, and is a son of Mr. John James Searle, farmer, of the Harden district of New South Wales, and for many years a well-known resident of the Central State. The gentleman under review received his education at various South Australian schools, and having concluded his studies at Quorn joined the railway service, subsequently resigning his position of goods clerk in order to accept an appointment as wheatbuyer on behalf of the firm of Messrs. John Darling & Sons, which he retained until the failure of the wheat crop during the drought of the middle nineties. In 1896 he came to Western Australia, where for thirteen years he was identified with the Government Railway Service, during the major portion of this period filling appointments as stationmaster in different parts of the State. When the firm of John Darling & Son established its wheatbuying business in Western Australia Mr. Searle once more became connected with this well-known house, taking charge of the agency at Geraldton. In 1912 he launched out on his own account at the same centre in conjunction with Mr. Oliver, taking over the district agency for the above firm; and, in addition, acting as local representatives for Messrs. Paterson & Co., Couch, Calder, & Co., and the Insurance Office of Australia, Limited. Mr. Searle is a member of the agricultural society, and for over thirteen years has been identified with the Freemasons' craft. He is also a member of the local turf club, and advances the cause of sport in every possible way. He married in 1894 Annie, daughter of Mr. Andrew Gwynne, farmer, of this State, and has two sons and one daughter.

**WILFRID FEATHERSTONE OCKERBY**, manager of the Geraldton branch of the firm of Messrs. Ockerby, Lehmann, & Co., Limited, is a son of Mr. Thomas Ockerby, the principal of the firm, and was born at Devonport, Tasmania, on July 16, 1889. He received his scholastic training at the Scotch College, Western Australia, and, at the close of his collegiate course, entered upon a commercial career by joining the clerical branch of the father's business-house at Fremantle, subsequently taking charge of the wheat export department of the company's

operations. At a later date he was placed in control of the firm's business at Narrogin, and in 1911 was promoted to the management at Geraldton, where the business has expanded in a remarkable degree, this being now one of the most important branches of the house. Mr. Ockerby is an athlete of no mean merit, and whilst at Scotch College took a leading part in cricket and football, playing for two years as a representative of the institution in the latter sport. He gives the major portion of his leisure at the present time to aquatics, being an adept at rowing and swimming, and formerly

Wallace Miller, Geraldton.  
MR. WILFRID FEATHERSTONE OCKERBY.

known as a prominent member of the Fremantle Swimming Club and winner of many trophies in that branch of sport. He is also fond of riding exercise, and usually has a good saddle horse in his stable.

**ARNOLD MEADOWCROFT**, J.P., general agent, Durlacher Street, Geraldton, was born at Vepery, Madras, India, on June 9, 1866, and is a son of the Rev. D. Meadowcroft, of Wellington, New Zealand, who officiated as pastor of the Perth Congregational Church in the early seventies. Educated in the public schools of Victoria the subject of our notice subsequently spent two years in the legal office of the late Sir Matthew Davies, of Melbourne. About the end of that period he received an offer from the late Henry Gray, who was visiting

Melbourne, of a position as assistant in his store at Geraldton, Western Australia, which he accepted, taking up his duties in 1884. Three years later Mr. Meadowcroft resigned his connection with this business in order to open on his own account, and after a further three years disposed of his interests to his partner, and entered upon a clerical position in the firm of Messrs. Wainwright & Co., with whom he remained for five years, two of which were spent in the management of the Greenough branch of the business. Starting again on independent lines Mr. Meadowcroft established a business at Greenough, which he carried on for four years, but subsequently sold and became accountant to the firm of Robert Darling & Co., in Geraldton, continuing with this house until the interest was transferred to Messrs. Frank Green & Co. About 1906 he was offered and accepted the post of manager for Mr. Frank E. Davies, wine and spirit merchant and general forwarding agent, in Geraldton, and upon the subsequent disposal by Mr. Davies of his business Mr. Meadowcroft retained several of the agencies and has since carried on on his own behalf. Besides acting as a forwarding, customs, and commission agent his business comprises land and estate agency and a stock and station department, while he also undertakes accountancy and audit work, and as a valuator and auctioneer has a considerable connection. Among the various important firms for which he acts as district representative, may be mentioned the National Mutual Life Association of Australia, Ltd.; the South British Insurance Co., Ltd.; the Emu Brewery, Ltd.; Lionel Samson & Son, wine and spirit merchants; Mills & Ware, biscuit manufacturers; J. V. Ferguson, West Australian wines; S. Smith & Sons, Yalumba wines, South Australia; J. & W. Bateman, general merchants; etc., etc. Mr. Meadowcroft has served as a member of the municipal council and as valuator and auditor for the same body. He holds the position of valuer to the Commonwealth under the Land Tax Act, and is himself largely interested in the pastoral and agricultural industry, his sons having charge of his properties at Mullewa, on the Cue railway line. An active member of the Masonic fraternity he

also has passed through all chairs of the M.U., I.O.O.F., and for some years occupied the position of secretary of the Victorian District Racing Club, being a patron and supporter of all clean forms of sport, and the present treasurer of the football association. Mr. Meadowcroft married in 1886, Maria, daughter of the late James Carson, connected with the Imperial Service in the early days of the State and later with commercial life at Geraldton, and has two sons and two daughters.

JAMES STOKES, saddler, Geraldton, was born on Stanley Island, of the Falkland Group, on September 22, 1852, and is a son of the late William Stokes, an armourer of the British Imperial Service. When eight years of age he came with his father to Fremantle, and after attending a school in that seaport for a time, turned his attention to farming pursuits on the Greenough Flats.

Wallace Miller, Geraldton.  
MR. JAMES STOKES.

where he continued for about a decade. He then removed to Geraldton and served his apprenticeship to the saddlery trade for eight years, at the end of which period he opened in business on his own account in the same town, after having spent about a year in the trade in Perth. Mr. Stokes has now (1913) completed over thirty-five years of commercial life in Geraldton, a four-years' term of partnership with Mr. Arundel, of Perth, being included in this period.

In 1893 he took a trip to the Old Country, and visited many places of interest in Great Britain and on the Continent. Upon his return he was for a while associated with his second son, who had taken over the business from Mr. Arundel. At the present time he lives partially in retirement, and though retaining an interest in the concern, has handed over the chief management of its operations to his son. For over thirty years Mr. Stokes has been connected with the Rechabite Order and with the M.U., I.O.O.F., having passed through the various chairs of these organizations and received all the honours in

Wallace Miller, Geraldton.  
MR. CHARLES O'NEIL STOKES.

their power to bestow. He is a prominent member of the local Methodist Church, of which he is a trustee, and holds the office of treasurer of that body. In 1876 Mr. Stokes married Mary Ann, daughter of the late Davis McMullen, of Perth, and has five sons and two daughters surviving. CHARLES O'NEIL STOKES, who conducts the above-mentioned saddlery business in conjunction with his father, was born at Geraldton on June 30, 1880, and received his education at the local State school. Having completed his studies, he immediately joined Mr. Stokes, senior, in the trade. He has maintained his connection with the business ever since, and gives most of his time and attention to his commercial interests. He is a member of the Lodge of Odd-fellows. He is fond of a good horse, but takes his chief recreation in bowling, being a member of the Geraldton Bowling Club and

of the Victoria District Bowling Club. He married in 1903 Phyllis Alethea, daughter of Mr. Francis Gow Armstrong, of Geraldton, and has two sons and three daughters.

FRANK GREEN & CO., general providers, shipping agents and farmers, "The Big Store," Geraldton. This important trading concern, which is one of the largest businesses of its kind north of Perth, commenced operations under the present management in 1907, Mr. Green having purchased the business from Mr. Robert Darling, to whom it was sold by Mr. Urch, who first established it in the early eighties. Within three years of the time of its being taken over by Mr. Green the trade had increased to such an extent that larger premises became imperative, and accordingly the drapery establishment carried on in Marine Terrace by Mr. J. G. Smith was purchased by the gentleman under review, who made various improvements and enlargements, and in addition acquired a large storehouse in order to cope with the demands of the connection. Practically all lines of goods are stocked by this progressive firm, which describes itself in detail as grocers, drapers, wine and spirit dealers, produce merchants, and importers, while ironmongery, glassware, crockery, boots and shoes, etc., are all included in the well-stocked departments; and the term of "universal providers," which the proprietors have deservedly adopted, is no misnomer. In addition to the fresh and clean groceries—which are carefully stored during the short interval that elapses before they are handed out in parcels over the counter or consigned to the carrying vans to be delivered all over the district—special delicacies of best quality are stocked, especially for the Christmas and other festive seasons, when such are in extra demand, fruit cakes, plum puddings, and finest English chocolates finding a ready sale. The wine and spirit department is represented by a variety of brands, Piesse's Wines and Seppelt's Brandies meeting with the approval of local consumers, while the "Swan," "Globe" and "Emu" Ales are equally popular; various cordials and liqueurs are also retailed. The store is a double-fronted, one-storey structure, with wide verandah and a large area of

handsome plate-glass window-frontage, where are displayed to best advantage the many lines of merchandise in which the firm deals, whilst in the interior cleanliness and order prevail. A staff of 21 employes is busily engaged in carrying out the requirements of customers, and the virtues of promptitude and courtesy are always observed. The firm also acts as local agents for the recently instituted State steamship service, the inauguration of which, it is anticipated, will materially assist in the development of the north-west trade. Mr. Frank Green, who personally supervises the operations of the business, was born at Yoxhall, Staffordshire, England, on August 9, 1875, and is a son of the late Thomas Green, a farmer of that place. He received his scholastic education at Tamworth Grammar School, Staffordshire, and at the close of his schooldays at 16 years of age he accompanied an elder brother to Western Australia, landing at Albany in 1891, shortly after the establishment of responsible government in this State. Upon arrival Mr. Green became engaged in railway construction work, but after a few months of this laborious occupation he decided to try his fortune in the north-west, and reaching Geraldton accepted employment on the delivery of mails between that

and, further, was tempted by a spirit of adventure to test his luck on the Coolgardie goldfield, being one of the first arrivals at the scene of the find. After spending a considerable period in prospecting, and enduring many privations without winning any of Fortune's smiles, he returned to the Geraldton district, where he assisted in the construction of the railway line to Mullewa. Upon the completion of this work, in conjunction with Mr. W. J. Thomson, he undertook to open up the country from Mount Magnet to Lake Way and Lawlers, and was the first white man to take camels over this area. This mission occupied nearly twelve months, after which he parted from Mr. Thomson and returned to Mullewa, where he entered the Government service and attended to the despatch of mining machinery to the goldfields. In September, 1895, Mr. Green started on his own account as a carrier at Geraldton, and during the following three years was also engaged as a commission agent and auctioneer in that district. He next took a trip to the Old Country, during which he revived the old associations of his youth, and visited many places of historical interest, upon his return joining the Railway Department and working as a shunter and guard on the Murchison line for a period of three

demands of the business that he was rapidly promoted to the management, and three years later bought his employer out, and has since carried on operations on his own account. Mr. Green devotes almost the whole of his time to his business interests and has little leisure for public life of any kind. For a considerable time he occupied the post of chairman of directors of the Victoria District Flour Milling Company, and he is interested in the

Wallace Miller, Geraldton.  
MR. FRANK GREEN.

MESSRS. F. GREEN & CO.'S PREMISES, GERALDTON.

centre and Perth, in the days prior to the railway service, when the mails were conveyed to and fro on horseback. At a later date he turned his attention to stock-droving,

years. In 1904 he was offered by Mr. R. Darling a position in his store in Durlacher Street, Geraldton, which he entered as assistant, but proved himself so adaptable to the

advancement of the Geraldton Agricultural Society, of which he is a committeeman. He is a member of the Geraldton Chamber of Commerce, vice-president of the Geraldton Trades Association, and a member of the M.U., I.O.O.F. Mr. Green married in 1898 Ellen, daughter of the late Thomas Cooper, of Tamworth, Staffordshire, England, and has two sons and two daughters.

JOHN URCH, wine and spirit merchant, general merchant, etc., Geraldton. This business which was established by Mr. Urch as far back as 1882, and is now the oldest commercial enterprise in Geraldton, comprises in its scope the operations of general merchant, wine and spirit dealer, produce purveyor, etc. It is conducted entirely on independent lines, the interests of no special agents having to be considered in stocking the different departments.

Practically all lines of goods, from the immense variety of articles large and small which go to fill the shelves and floorage space of the general store, to the smaller and well-selected wine and spirit department, are carried, to the latter branch of the business very especial attention being devoted. Mr. Urch is a large importer of liquors from all parts of the world, and his French brandies and German lager, which come direct from the cellars of the Continental vineyards and breweries, are exceedingly popular and obtain a ready sale. His connection extends right through the Murchison goldfields as far north as Broome, and is continually increasing, the good name obtained for the firm's merchandise bringing in large orders from time to time from new quarters. Mr. John Urch was born near Frome, Somersetshire, England, on June 11, 1856, and is the son of the late Stephen Urch, a merchant of that place. He received his educational training in the town of Frome, and upon the completion of his scholastic career entered commercial life by joining the well-known house of Messrs. Fry and Sons, manufacturers of cocoa, etc. For ten years he was employed in the export department of that firm, during which period his knowledge of the overseas dominions of the great Empire became greatly enhanced, and the importance of "Greater Britain" forced itself with increasing persistence on his apprehension. At length, deciding to try his fortunes abroad, Mr. Urch, in 1882, left the shores of the Old Country with Western Australia as an objective, and upon arrival in this State turned his steps direct to Geraldton, where almost immediately he perceived that there was an opening for the establishment of a business on general storekeeping lines, to which with advantage could be added the wine and spirit and produce departments. His inauguration of trading operations was attended with encouraging success, and as one by one the then existing firms closed down from one cause or another, Mr. Urch's store came more and more into popular favour, and has held its own against all comers ever since. Mr. Urch, whose health was the chief reason for causing him to settle in Western Australia, soon found the climate of Geraldton decidedly beneficial, with the result that his shattered constitution

recovered its normal tone and he has since enjoyed the best of health. Upon his advent to what was at that period little more than a small

Wallace Miller, Geraldton.  
MR. JOHN URCH.

hamlet containing a handful of people he began to take a natural interest in the welfare of the community among which he had cast his lot, and to concern himself in all movements for the advancement of

municipality he was elected to a seat on the council, which he occupied for four years, and subsequently for three successive terms the distinction of chief magistrate of the town was conferred upon him by his fellow citizens, his retirement from the mayoralty taking place in 1911. Since those early days before referred to Mr. Urch has watched the growth of the town and the development of the district, until to-day he has the satisfaction of witnessing the position of the tiny seaboard village of thirty years ago raised to that of the third port of the State. He is a member of the committee of the public library of Geraldton, on which body he has served for over twenty-seven years, having been prominent in its foundation. Mr. Urch has a stake in the agricultural interest of the district, having purchased a farming property at Narra Tarra, about 18 miles from Geraldton, consisting of 2,400 acres. Many improvements have been introduced, and the farm is devoted to cereal growing, sheep, and general mixed farming. He gives a considerable portion of his leisure time to the supervision of this property, but takes a general interest in all forms of clean sport, and spends an occasional hour for recreation on the

MR. JOHN URCH'S PREMISES, GERALDTON.

the town and district. Prior to the days of local municipal government he was always to the fore in supporting progressive schemes, and when Geraldton at length was gazetted a

local bowling-green. Mr. Urch married in 1880 Martha, daughter of the late J. Masters, of Frome, Somerset, England, and has a family of two sons and four daughters.

EDWARD POPE, J.P., of the firm of Messrs. Edward Pope and Co., commission, indent, insurance, and general agents, Geraldton, was born at Hull, Yorkshire, and is a son of the late Henry Pope, who was connected with the shipping industry of that city, his brother, the late Rev. Henry John Pope, D.D., being a Methodist divine of world-wide reputation. He was educated privately, and at the conclusion of his studies entered a shipping office in his native place, and spent many years there and in London before coming to Australia in 1893 under engagement as assistant manager to the firm of Messrs. Wainwright and Co., then the leading merchants in the Geraldton district of the Western State. After a short period, however, he retired from this service and opened in business on his own account in the same town, where he has continued in different capacities ever since. Prior to coming to Australia Mr. Pope had manifested considerable interest in public affairs, and was a vice-president of a suburban school board. Shortly after his advent to Geraldton he was elected councillor to the municipality, and served with much acceptance on that body for six years.

Wallace Miller, Geraldton.

MR. EDWARD POPE.

During this period he proposed to the council, and afterwards to the Premier of the State, Sir John Forrest, that an esplanade should be built in the vicinity of the old jetty, and the latter converted into a pleasure pier, a work which was brought to a successful completion at a time

when Mr. Pope occupied the mayoral office in 1901. He was also prominent as one of the founders of the Chamber of Commerce, and was at an earlier period president of the progress committee of the town, while the free library movement owed much of its success to his support, and it may be said that he led in the effort to rebuild and improve the mechanics' institute. He has been chairman of the school board for many years, and is one of the principal workers in the Methodist Church, holding office as local preacher and circuit steward. Before coming to this State he did good service as a voluntary lay preacher among the German community in London, to whom he ministered in their native tongue; he is also well known as a translator of German hymns. Mr. Pope received his Commission of the Peace from the Forrest Administration in pre-Federal days, and has taken his full share of magisterial duties. He finds his recreation chiefly in literary pursuits. He was married in London to Caroline, daughter of the late Thomas Green, merchant, formerly of Melbourne, Victoria.

JOHN HENRY SCOTT, plumber and fitter, Geraldton, was born at Windsor, a suburb of Melbourne, on June 24, 1872, and is a son of the late John Henry Scott, well known at that place in the calling afterwards adopted by the gentleman under review. At the close of his education he entered the office of Messrs. G. S. Brown & Co., of Melbourne, but after a short experience abandoned the idea of mercantile life, and became apprenticed to the trade of plumber and fitter in Melbourne. Upon the completion of his indentures he spent a couple of years in the trade in his native State before coming to Western Australia in 1895. On arriving in Perth he accepted employment with Mr. J. M. Lapsley, the present superintendent of the fire brigade, who was then carrying on business in the metropolis. Relinquishing this connection, he was employed in journeyman work in different parts of the State, and eventually opened in business on his own account in Busselton, where he spent nine years. In 1905 he came to Geraldton, considering this the most progressive centre in the rural districts, and has since conducted a general plumbing business,

which has increased to substantial proportions, his connection extending over an area embracing some hundreds of miles. Mr. Scott is a member of the agricultural society of the Victoria district, and has taken an active interest in that body. His special hobby is music, and for many years he has taken a

Wallace Miller, Geraldton.

MR. JOHN HENRY SCOTT.

leading part in the leidertafel and orchestral society, being a committeeman of the latter organization. He has also given a good deal of attention to church music, being a member of the local Church of England choir, and giving material assistance at the Easter and Christmas musical festivals in connection with the services. He is a member of the Masonic Lodge and a Past Master in the craft. He takes a healthy interest in all outdoor exercises, in his younger days having been prominent in football, and now giving his attention chiefly to bowls. Mr. Scott married Rose Agnes (now deceased), daughter of the late Abraham Cole, of Perth, and has two daughters.

CHARLES EDWARD HANKINS, superintendent and inspector for the northern and midland districts of the Liverpool and London and Globe Insurance Company, was born at Bendigo on February 3, 1879, being a son of Mr. William Hankins, well known in the commercial community of Bendigo for over thirty years, and now a resident of Western Australia. The gentleman

under review was educated primarily in Bendigo, concluding his commercial training in Messrs. Muirden Brothers' mercantile college in Perth. Upon commencing active business life he entered the Sun Fire office as junior in the Perth branch, and rose to the position of managing clerk during the ten years that he spent in this service. He then became connected with the Guardian Insurance Company in the same capacity, and after three years in this office, resigned in order to accept his present appointment. Mr. Hankins is largely interested in the agricultural industry, owning nearly 6,000 acres of land within 50 miles of Geraldton, of which 1,000 acres are prepared for cultivation and 500 acres devoted to wheat crops. He has placed a competent manager in charge of this property, he himself attending to the demands of his business, which carries the largest connection of its kind in the district. Mr. Hankins is a shorthand writer of great ability, and for some years acted as tutor in the Stewarts' Shorthand Academy at Perth. He takes a great interest in the Australian Natives' Association, and has filled the office of president of the Perth

Bartletto, Perth.

MR. CHARLES EDWARD HANKINS.

branch of that body. He has also been well known in Masonic circles for the past decade, having attained the rank of Worshipful Master of King Edward Lodge, No. 68, W.A.C. He is a patron of all forms of clean outdoor sport, and takes a general interest in the advancement

of the district. Mr. Hankins married in 1904 May, daughter of the late T. Ayling, of Richmond, Victoria, and has three sons and one daughter.

WALLACE MILLER, photographic artist, Geraldton, is a native of Victoria, having been born at Ballarat on July 22, 1868, and is a son of the late John A. Wallace Miller, one of the pioneers of that district, where he arrived in 1852. At the conclusion of his scholastic course at Garbutt's College, he was apprenticed to the photographic business with the well-known artists, Messrs. G. Richards & Co., of Ballarat. Upon the completion of his indentures he proceeded to Melbourne, where he gained a valuable experience of the art in some of the leading studios of that city. In 1892, coming to Western Australia, he fulfilled a year's engagement with the firm of Messrs. Tuttle & Co., photographers, of Fremantle. Upon the outbreak of excitement consequent upon the discovery of the eastern goldfields, he left the coast and spent a considerable time in prospecting all over the Murchison and Coolgardie districts, being among the earliest pioneers at the latter place. In 1890 he opened a photographic studio at Geraldton, and has pursued his art with such success that he is now regarded as the leading representative of his profession north of Perth. In the world of sport he is an enthusiastic fisherman, and spends all the hours of leisure he can command in pursuit of this diversion, being most successful with the rod and line. In 1901 he married Mary Paterson, daughter of the late Walter Downie, merchant, of Moonee Ponds, Victoria, who arrived in that State in the early fifties. His family consists of two sons and two daughters.

CLEMENT BEST, general furnisher, Geraldton, is a son of Mr. James Frederick Best, who has been connected with the mining industry of Western Australia for about fifteen years. He was born on June 12, 1870, and received his education in New South Wales and Western Australia, at the close of his studies commencing commercial pursuits in Geraldton in the employ of Messrs. Petchell & Kenny, then in business as general storekeepers in that town. After a short experience with that

firm he joined the then premier house in the district—that of Messrs. Wainwright & Co.—and continued for seven years with this firm, subsequently removing to Perth, where he gained further valuable training in some of the leading metropolitan stores. In 1908 Mr. Best established himself in business at Geraldton,

Wallace Miller, Geraldton.

MR. CLEMENT BEST.

and making excellent headway from the very start, found himself compelled to enlarge his premises at the beginning of 1913, when the present fine store in Marine Terrace was erected. Mr. Best is prominent in the local sporting world, being a patron of all forms of clean outdoor sport, while he finds personal recreation principally in fishing, swimming, boating, and all kinds of aquatic pursuits. He is fond of reading, and usually makes a selection of works dealing with the popular sciences, in the perusal of which he obtains considerable profit and enjoyment. He married in 1902 Adelaide, daughter of Mr. R. Gilgen, of Morgan, on the River Murray, South Australia, and has three sons.

FREDERICK WILLIAM WARWICKER, grocer and general storekeeper, provision dealer, ironmonger, etc., is a son of Mr. Frederick Warwicker, of Geraldton, in which town he was born on April 25, 1878. His education was received in the same place, and at the close of his schooldays he was for a short time connected with the Club

Hotel, which he left in order to join the firm of Messrs. E. & F. Witte-noon. He subsequently became clerk in the office of Mr. du Boulay, solicitor. Mr. Warwick afterwards occupied a position with the firm of

Wallace Miller, Geraldton.  
MR. FREDERICK WILLIAM WARWICKER.

Messrs. Wainwright & Co., being employed in the grocery department, where he obtained a valuable training for the business he now carries on. After a considerable period spent in this house he joined the traffic branch of the Government railways, where he continued for nearly five years, resigning from the service at the end of that time and joining the grocery staff of Mr. W. Oswell, with whom he remained for a similar period. In 1906 he opened in business on his own account in Geraldton, and from a small beginning the business has extended by leaps and bounds, until it now controls as large a share of patronage as his present premises will allow. Mr. Warwick's sphere of operations embraces the whole area between Broome and Meekatharra, and, in his special line of grocery trade, his reputation stands second to none in the Victoria district. He is a shareholder in the local co-operative flour mill, and at the present time is one of the directors of this enterprise. A member of the local agricultural society, he has served on the committee of this body; is a member of the Masonic fraternity; and makes a hobby of friendly society work, having held office as Chief Ruler in the Independent Order of Rechabites and Provisional Grand Master

of the M.U., I.O.O.F.; while he acts as secretary of the John Shipton Lodge of the above Order, which post he has held since 1901. Mr. Warwick married in 1907 Edith Valentine, daughter of the late William Carter, of Walkerville, South Australia, and has one son.

ARTHUR JOHN DAVIES, tobacconist and stationer and fancy goods dealer, of Geraldton, was born at Eaglehawk, Victoria, on February 15, 1874, his father, the late David Davies, being a well-known identity of Bendigo for wellnigh half a century. He received his education at the Eaglehawk State School, and at the termination of his studies was

C. E. Furr, Perth.  
MR. ARTHUR JOHN DAVIES.

apprenticed to the tobacco and hair-dressing trade in Bendigo, where he spent five years before proceeding to Melbourne, in which city he was similarly employed for a further ten years. In 1900 he came to Western Australia and gained two years' experience of life on the goldfields before eventually coming to Geraldton and establishing at that centre a business on his own account, which he has since conducted. Mr. Davies holds various interests in real estate in the town and district, and since taking up his residence at Geraldton has identified himself with the life of the community in various ways. He is a member of the agricultural society, and for some considerable time has been connected with the Masonic Lodge and the mechanics' institute in that town. He also takes

an active interest in the Victoria District Turf Club, the local rifle club, and the rowing and bowling clubs, taking his own recreation in this last form of sport. In 1904 he married Louie, daughter of Mr. Daniel McGilvray, the first railway guard in Western Australia, whose term of service extended over a longer period than did that of any other similar official on the lines. He has a family of two daughters.

AUGUSTINE PRUNSTER, shipping and family butcher, Geraldton, was born at Guildford, Western Australia, on December 17, 1872, and is a son of Mr. A. Prunster, of York. He obtained his scholastic training at the Subiaco Orphanage School, and in 1889 came to Geraldton in the employ of the late John Cream, who subsequently sold his butchering business to Mr. S. L. Burges, with whom Mr. Prunster continued until he took over the connection on his own account in 1903. He has since conducted operations under the original title of his first employer, and has built up a very thriving trade, maintaining successfully the prestige of the business with which he

Wallace Miller, Geraldton.  
MR. AUGUSTINE PRUNSTER.

has been connected as man and boy, employé and principal, for nearly a quarter of a century. Mr. Prunster is a member of the agricultural society and of the Independent Order of Oddfellows, and has filled all the chairs in the local lodge during the period of his connection with

that body. He is a committeeman of the Victoria District Turf Club, in which organization he has taken a leading part, and has owned various racehorses which have performed with success, chief among which was the well-known horse "Tremendous." He married in 1890 Frances Emma, daughter of the late William Robert Smith, a former resident of Geraldton, and has two daughters and four sons.

**GEORGE MONTGOMERY RENNIE WYLIE**, proprietor of the well-known Freemasons' Hotel, Geraldton, was born at Dollar, Clackmananshire, Scotland, on September 17, 1887. He is a son of the late George Wylie, of the Indian Civil Service, who, born at Kincardine on October 9, 1860, was educated at the Dollar Academy and at the Royal Indian Engineering College, Coopers Hill, where he gained the scholarship of the Public Works Committee of the Council of India in 1881, and the Fellows' Scholarship in the following year, also being made a Fellow of the College. After passing through the usual practical course the late Mr. Wylie joined the Public Works Department of the Government of India in November, 1883, and was employed on special duty in the Aligarh Division, on the Ganges Canal, and on the Machua Weir. In January, 1885, he was transferred to the Mainpuri Division, and, after six months' service there, was posted

to the Etawah Division, Lower Ganges Canal, where he remained for seven years, gaining much experience in the working of silt traps. In 1892 Mr. Wylie was transferred to the Anupshahr Division for a few

C. E. Farr. Perth.  
MR. G. M. R. WYLIE.

months, and thence to Hardwar, where he superintended the putting in of the headworks of the Ganges Canal. In January, 1894, he was appointed Executive Engineer, third grade, and was posted to the Meerut Division, where he served first as sub-divisional and afterwards as divisional officer, until his death from enteric fever on December 23, 1896.

Just prior to the time of his demise he was one of those selected to fill the post of Chief Engineer in the Indian Civil Service. Mr. Wylie was elected an associate member of the Institute of Civil Engineers (Lond.), on January 14, 1890. The subject of this memoir received his education at the John Watson Academy, Edinburgh; the Brentwood Grammar School, Essex; and subsequently at the University of Edinburgh, where he took special courses in engineering and agriculture in addition to the usual curriculum. At the close of his scholastic career he came to Western Australia to rejoin his relatives, who had taken up a farming property called "Broadlands," near York, in this State. After his arrival he resided on the farm for a couple of years, during which period he was actively engaged in the agricultural industry, and in 1911, after disposing of part of his holding, he invested in the Freemasons' Hotel at Geraldton—one of the leading hostels north of the metropolis. This house, which enjoys the patronage of the Commercial Travellers' Association, occupies an excellent position, being situated on the corner of Marine Terrace and Durlacher Street, directly opposite the jetty, and commanding a fine view of the bay, where steamers from Perth and the north-west are continually moored. The beach, with its fine facilities for bathing and other aquatic pursuits, is less than 100 yards distant from the hotel, which also enjoys the advantage of being only a minute's drive from the railway station. The structure is of stone and of up-to-date architecture, containing thirty large bedrooms, to the proper ventilation of which every attention has been given. The sitting-rooms are well furnished and replete with every comfort, the smoking-rooms equally inviting to devotees of My Lady Nicotine, while the specially-appointed commercial-room may be said to be the most popular of meeting-places between local representatives of the mercantile world and the ambassadors of commerce from various parts of the island-continent and other places. There are three bars, the conduct of which is above reproach; while in the region of the culinary department cleanliness reigns supreme, and the official whose duty it is to attend to the cuisine achieves triumphs daily in the perfectly-prepared and artistically-served repasts which are

MR. G. M. R. WYLIE'S FREEMASON'S HOTEL, GERALDTON.

spread in the comfortable and handsomely-furnished dining-room. At present the house is lighted throughout with gas, but arrangements are being made to have electric-light installed as soon as the projected scheme for lighting the town by this method is brought to completion by the municipal council. The Freemasons' Hotel is easily the most popular house in the district, and among its patrons are the Governor of the State and the vice-regal party, His Honor the Chief Justice, and other notabilities who, when visiting Geraldton, always make this hotel their headquarters. The management is under the capable supervision of Mr. J. Mackay, who is thoroughly versed in all the details of his responsible position, having been in touch with the best metropolitan hotels. Mr. Wylie is a member of the Victoria District Turf Club, and has served on the committee of that body. He is a prominent patron of all forms of outdoor sport, and holds office as vice-president of the local football club and of the railway cricket club. He was married in 1911 to Veronica, daughter of Mr. Scanlan, of Perth.

and rural contracting. In 1906 he came to Western Australia, having first won in the Central State the distinction of the rank of "ringer"—the hall mark of proficiency in the shearers' world—and continued in a similar line of life in the Murchison district for five years. He then opened a storekeeping business on his own account at Yoweragabbie, which he carried on for a short period, when the opportunity occurred to take over the lease of a first-class

Wallace Miller,

Geraldton.

MR. ORACLE STUART GREEN.

ORACLE STUART GREEN, proprietor of the Victoria Hotel, Geraldton, came originally from South Australia, having been born at Black Springs, in that State, on May 16, 1884. He is a son of Mr. Charles P. Green, formerly of Douglas, in the Isle of Man, who emigrated to Australia in the early sixties. He received his education at the State school in his native town, and at the termination of his studies, followed by turns various occupations connected with country life, being employed as a shearer, and also turning his hand to station

hotel, viz., the Victoria Hotel at Geraldton, and early in 1911 he entered upon the conduct of this house, in which he has since continued. Mr. Green interests himself in the organizations of the district, and is a committeeman of the Geraldton Agricultural Society and a member of the Victoria District Turf Club. In 1911 he married Florence, daughter of the late Mr. Holeman, of Melbourne, and has one daughter.

WILLIAM ROBERT EASSON, managing partner of "Macalpine," the leading confectionery and fruit business in Geraldton, was born at Perth, Scotland, on March 24, 1874, and is a son of Mr. David Easson, who came to South Australia about 1877 and was engaged for many years in the railway department of that State. The gentleman under review pursued his scholastic studies at Kapunda, and upon leaving school was apprenticed to the bakery and confectionery trade, in which he continued after his arrival in Western Australia in 1895, conducting a bakery and storekeeping business at Mullewa. He also carried on a store at Gullewa, and took a keen interest in the mining industry in the Murchison district, becoming well known as a supporter of prospecting parties, though rewarded with very little success in this direction of his enterprise. Mr. Easson subsequently spent four years at Field's Find, where he was proprietor of the Club Hotel, and upon leaving that centre again engaged in his trade, this time at Kalgoorlie, where he remained for a couple of years. He next took over the conduct of a general store, with which was combined the local post office, at Baron Rothschild, on the Murchison, and at a later date followed commercial pursuits at Meekatharra. In 1911, coming to Geraldton, he purchased a partnership in his present business, known as "Macalpine," of which he assumed the management, and which is now one of the best-known commercial concerns of the town, it having already established a reputation second to none in the district. For many years Mr. Easson has been a prominent member of the Ancient Order of Druids. He married a daughter of the late W. Buchanan, of Wilcannia, New South Wales, and has one son and one daughter.

### NORTHAMPTON.

"The old town of Northampton is located in one of the most fertile spots of a fertile and favoured district. In the early days the town was an important mining centre. The mines of copper and lead employed many hundreds of men. The mining industry then was considered of such importance that the first railway built in the State was the line from Geraldton to Northampton. Then the price of the base metals fell to unremunerative figures, and one by one the mines were closed down. Since then there has been little work done, though the lodes at Northampton are true fissure

veins and are undoubtedly rich. Some day, no doubt, they will again be in active operation. But if never a pick is put into the ore or a shot fired the agricultural resources of this fertile and well-watered district are such that Northampton must grow into a town of considerable size and importance. For the growth of cereals, fruit, dairy produce, garden produce, and stock, the district can fearlessly challenge comparison with any part of the State." The town has a population of nearly 900, and is well provided with permanent public buildings and hotels.

## The Murchison Goldfields.

East from Geraldton to a point about 400 miles into the interior and then a little over 300 miles in a northerly direction is the course followed by the northern goldfields line, through the Murchison goldfields.

This goldfield was proclaimed on September 24, 1891, preceding the more important discoveries on the eastern goldfields by a few years. The boundaries were altered on February 8, 1895, and its area is now 20,513 square miles. Judging by the date of its proclamation it would be at once assumed that the Murchison goldfield is one of the youngest auriferous mining centres in the world, and so far as the discovery of payable gold

Murchison goldfield is highly metalliferous, and not alone gold but the baser metals can be conveniently and profitably worked. The glamour of the goldfields certainly forced the discontinuance of mining the less precious metals. But sooner or later they will receive the attention they deserve. The gold-mining centres are of proved value, for at Day Dawn is the world-famous Great Fingall Mine, which is entitled to rank as one of the greatest in the world.

The field in general is remarkable for the number of claims which were worked in its earlier days. Owing to the glamour of the richer discoveries of Coolgardie and Kalgoorlie or from want of appliances to sink to any depth

Photo by L. Shapcott.

is concerned this is no doubt true. However, as far back as 1854 Robert Austin, the explorer, ventured the opinion that the country which is now comprised in its area would probably become one of the finest goldfields in the world. A proposition in some respects not altogether devoid of truth.

For administrative purposes the Murchison goldfields area is divided into four districts, namely, Cue, Nannine, Day Dawn, and Mount Magnet. However, the district of Day Dawn has been practically merged into that of Cue. The whole belt of country extending from Geraldton and Northampton well into the East

or from the proverbial fickleness of prospectors ever ready to abandon a good payable moderate "show" for the hope of striking bonanza elsewhere, these mines were abandoned, though the official records in many cases show that the last crushings were payable. Many of these mines, with almost absolute certainty of payable gold below, are now left idle, awaiting men with experience and capital to realize their further richness, and so gain the reward of their adventurous exploitation.

The mineral resources, however, of the Murchison district do not altogether sum up the whole of its

richness, for it is also well adapted for pastoral pursuits. In the early days of the history of exploration in Western Australia, in fact, this feature of its usefulness was the predominant one, and the stories told by the Gregory Brothers of its "rolling plains" pointed out even at that time its potential wealth and possibilities. There are millions of acres which are admirably adapted for the pastoralist industry. The ground is covered with a stunted herbage which sheep eat greedily when grass fails, and water is obtainable at very shallow depths by sinking. Practically the whole of the land almost to Meekatharra has been taken up under pastoral lease.

The output from the Murchison goldfield during the year 1911 was 119,633 oz., and though this was a decrease of over 4,000 oz. on the previous year's record, still the mining on the field itself shows every prospect of early revival.

As the name suggests, the East Murchison goldfield lies east of Murchison, a field which was proclaimed on June 28, 1895, and contains an area of 28,369 square miles. The principal township is that of Lawlers, being named after Patrick Lawler, the head of the prospecting party which discovered the field, first finding gold on Lame Horse Creek. This was not the first party to search the field, as it had been previously traversed but without success. The natural difficulties in this field have been extreme, but the reefs have been proved of great size and are now very payable.

#### MULLEWA.

The first township of note on the Geraldton-Meekatharra line is about 65 miles from Geraldton. The country surrounding is not to any great extent auriferous, and the township is the centre of an agricultural and grazing community. A large area is now under cultivation, and the genesis of an agricultural district of note distinctly present.

The Victoria district was one of the first to be mentioned by the earlier explorers, and this township on its outer edge practically, will probably demonstrate its richness equally as well as its better known centres. Mullewa is within the belt of assured rainfall. Its importance can be gathered from the fact that it is the first post and telegraph office on the overland stock route after leaving the north-west stations. Large quantities of sandalwood are obtained in the vicinity, and this valuable product does not exhaust its valuable timber supplies, for quantities of salmon-gum, an excellent mining timber, are obtainable, and is railed to the adjacent Murchison fields.

About 73 miles along the Geraldton-Meekatharra goldfields line we come to the township of Yalgoo, the

principal centre on the goldfield of that name. Most of the mines of the district are situated at some distance from the town. However, mining is not the only industry carried on, for the principal sheep stations in the Murchison district are adjacent. In the early days of the discovery of the field considerable alluvial mining was carried on at Yalgoo, but at the present its mineral wealth is more that of the district and not of the township.

#### MOUNT MAGNET.

About 50 miles south from Cue, and reached from Geraldton after a rail journey of nearly twelve hours' duration almost due east is to be found the promising mining township and municipality of Mount Magnet. Its name is given to one of the divisions of the Murchison goldfields, and its altitude is about 832 ft. above that of Geraldton. The town is well laid out, and its main streets planted with pepper-trees. The municipality was formed in 1896, and is, following the usual custom of goldfields' townships, up to date and progressive. The gold-bearing country consists of some very rich reefs which are now being worked with assiduity and enterprise. At first purely and simply a mining centre, Mount Magnet is now the centre of a very promising pastoral industry, and the clip this season (1913) should be well over 2,000 bales. The town is the centre also of a most promising district, being connected by rail with Sandstone, the headquarters of the Black Range goldfield.

The religious life of the town is strong, most of the various sects having headquarters at Mount Magnet; the district having two other proclaimed towns, Lennonville and Boogardie, both active mining centres, and the new field Youanme, 60 miles south-east, giving great promise for the future. The population of the municipality is about 700, and the municipal life is strong and vigorous. The recreation ground, about five acres in extent, is largely availed of, and the productiveness of the soil in the vicinity of the township makes the beautifying of this and other centres a matter of no great difficulty.

Boogardie, which is situated about four miles from Mount Magnet, is practically a suburb of the latter place. It possesses some promising mining ventures. The population is about 200, and with more capital invested this centre would yield very good results.

Six miles from Mount Magnet towards Cue, on the main railway from Geraldton to Meekatharra, is to be found the very promising mining township of Lennonville. It is in direct telephonic communication with Mount Magnet, and is a very prosperous centre. One element in its prosperity is to be found in the State battery, which makes possible the successful carrying

out of small ventures. The water supply of the town is undertaken by the mines water supply, and is reticulated throughout the township. There are a Government school and post and telegraph offices, whilst the public spirit has brought forth a most excellent mechanics' institute and reading-room to cater for the intellectual needs of the population.

### SANDSTONE.

Situated about 600 miles north-east of Perth, and 93 miles by rail from Mount Magnet, being the terminus of a branch line from the latter place, is Sandstone, the centre of the Black Range gold-mining district. Less than nine years ago this now important gold-mining area was an almost unknown and unexplored wilderness, without facilities or population, and traversed only by a few teamsters who plied between Lawlers and Mount Magnet. To-day sees a remarkable

is extremely well planned and built, containing all the comforts and facilities of a city. It is well illumined with acetylene gas, and possesses a telephone exchange. The religious life is strong and vigorous, and the charitable institutions, such as the hospital, well equipped to carry out their excellent work. This township is only one of the many examples of goldfields' municipal enterprise throughout the State, for in point of view of its many facilities this outpost of civilization would vie with many older established communities, in fact, far distancing some in the race for progress.

Maninga Marley, situate about 20 miles east of Sandstone, carries a population of about 200, and has some important mines. The output of gold from this centre is increasing, and shows every prospect of greater prosperity. The country between Sandstone and the Marley is dotted here and there with mines in different stages of activity, all adding their quota to the output of the district generally.

Photo by L. Shapcott.

MEEKATHARRA.

change, for where once reigned desolation is now the scene of an extremely prosperous and still more promising goldfield. The whole of the district is being mined with increasing success, and the value of the ore won approximates to £1,000,000. Even yet the gold-mining industry of the district is only in its infancy, and but mere belts of a country known to be entirely auriferous have been tested and proved. To many the outlook for the district is second only to that of Kalgoorlie, and this is not the prophecy of optimistic dreamers but of those well able and competent to judge. The district was opened up as recently as 1902, the forerunner of its greatness being the finding of the usual payable alluvial field; but it has now become a big reefing centre. Sandstone itself is of even more recent growth, and now possesses a population of 900. It was practically reclaimed from a dismal scrub, and the transformation has been rapid and complete. The town

MMM

### CUE.

The flourishing town of Cue might well be termed the capital of the Murchison goldfields, taking the place that Kalgoorlie holds on the eastern fields. The municipality was proclaimed in 1894, and is very pleasantly situated. The streets are wide and well laid out and kept in excellent repair. The present population of the town is nearly 900, and that of the district about 2,000. The town is the centre of mining activity of a large field, and contains the offices of the warden and resident magistrate of the district. The town is well supplied with water from Nallan, the pumping station being some miles from the town. The water scheme was responsible for a capital cost of £23,000, and is complete and ample for the needs of the community. Cue is the place of publication of the principal newspaper of the district, *The Murchison Times*, which enjoys a

wide circulation and popularity. As in the case of Sandstone, one of the principal illuminants is acetylene gas, and the town is well lighted in consequence. The town possesses an excellent volunteer fire brigade, and the immunity it bears from disastrous fires is due to the organization and equipment of this very efficient body. In more ways than one the town bears comparison with many of the centres of eastern goldfields life, and in none more than its excellent racing club. The Murchison Racing Club has been in existence almost from the inception of the town. The club is financially a very sound institution, and possesses a thoroughly-equipped racecourse and accessories. Together with this feature of social life must be mentioned the excellence of the Murchison Club, which is located in fine premises. Municipal enterprise has not been lacking for the welfare of the community at large, for controlled by the council is a fine recreation reserve equipped with an excellent pavilion. Being the official centre of the Murchison district it has been adorned with a fine block of public buildings, including post office, savings bank, and warden's office. The offices also of the mining registrar, inspector of mines and machinery, police and land officials are also located in this building. Among the public buildings may also be mentioned the hospital, public school, masonic hall, workers' hall, and miners' institute, whilst several of the associated banks have established branches at the centre.

Cue is essentially a place of small "shows," when we except the Great Fingall Mine, which more properly speaking belongs to Day Dawn. However, these shows have yielded a considerable quantity of gold, with prospects of increasing prosperity in the future. The discovery of the field dates from 1891, when a prospector named "Tom" Cue discovered gold on "The Patch," and it was only in 1893, two years later, that the place changed from an alluvial field to a properly constituted mining centre. The known amount of gold produced by Cue and Day Dawn fields at the end of June, 1909, was 2,032,091.9 oz.

Cue, however, in common with other Murchison gold-mining centres, possesses very definite pastoral propositions of no inconsiderable value. The surrounding country is well adapted for a further increase in this industry. Taken altogether, then, the prospects of this earlier mining centre are still distinctly promising.

#### DAY DAWN.

As a mining field Day Dawn is comparable to Mount Morgans in one great and essential particular—each possesses one great mine and no other has ever been found. Situated some three or four miles from Cue and on the Geraldton side, it has a population somewhat in excess of Cue, owing to the ramifications of the

Great Fingall Mine. This mine was the first in the district to undertake the penetration of the hard diorite zone to a considerable depth. This action, successful as it has been, has gone a long way to demonstrate the existence of permanent and profitable reefs at lower levels. The record of the mine up to date is the best proof of this assertion, for up to June, 1909, 940,444.4 oz. had been recovered, the mine paying dividends to the value of £1,675,000, the total value of gold recovered being well over £4,000,000.

The mine employs close upon 500 hands, and the little community, which was proclaimed a municipality in 1895, depends almost entirely upon its success for existence. However, there are some other good gold-bearing reefs in the vicinity, and these have also to a certain extent contributed to the success of the town, which has doubled its population in the last ten years, being now about 1,400.

Everything is up to date, and the commercial life brisk and vigorous, Day Dawn sharing in some degree the value of pastoral country adjacent. The town has a telephone exchange, and the travelling public are well catered for.

#### NANNINE.

The township of Nannine is situated on the shores of Lake Annean, about 50 miles north-east of Cue and on the Geraldton-Meekatharra railway. There are some promising reefs in the vicinity which are being steadily developed. Until the line of railway was completed from Cue the mining industry in this neighbourhood had been greatly hampered by the cost of cartage from that centre, rendering it almost prohibitive to instal the necessary machinery to properly develop the industry. However, this is now a thing of the past, and mining in the vicinity is being steadily developed.

The township was declared in 1893, and three years later the municipality was established. Besides the usual Government buildings, there are a hospital, a miners' institute (containing nearly 1,000 volumes), a public school, and several churches. The streets are two chains in width, and the principal thoroughfares are planted with pepper-trees. The population of the municipality is now about 250, but in earlier times was nearly double. However, the revival of mining in the near future will no doubt restore the township to its former glory.

#### MEEKATHARRA.

About 25 miles north of Nannine, and the termination of the northern goldfields railway, is the township of Meekatharra. The district of which Meekatharra is the centre is from a mining point of view most promising. A State battery erected at the centre is kept in constant employment, and the financial prosperity of

the little community appears assured. There are two schools (one State and one private), a hospital, three hotels, numerous business establishments, and the town is rapidly extending. The water supply is abundant and of good quality, being brought from Garden Gully, 12 miles distant. The population is at present nearly 1,300.

#### WILUNA.

A record of the towns of the northern goldfields would hardly be complete without some reference to the principal mining centres of the East Murchison goldfields. Wiluna, one of the most recent and yet one of the most progressive of these centres, is situated in the East Murchison goldfields district equi-distant from Lawlers and Nannine. With Nannine and Sandstone there is weekly communication by coach. The reefs in the district, though somewhat patchy, are distinctly high grade, and the outlook of the field is very promising. The lodes are of larger size but low grade. At present on this field there is a privately-owned battery and a public battery both in full employ. The township is on the main stock route to the eastern goldfields, and the population of the centre is about 400.

#### LAWLERS.

Like unto the fabled stories of the Oriental seers is the growth of mining centres in this State, and Lawlers, the chief centre of the East Murchison field, comes well within this category. Though its former glory may have to a certain extent declined, the township, which is situated 76 and 90 miles respectively from railends at Leonora and Sandstone, is still the centre of an important mining district. It is the place of residence of the warden for the district, which comprises the town sites of Vivien, Sir Samuel, Kathleen Valley, and Lake Darlot or Woodarra. In the near future it should be connected by rail with Leonora, being but another link in the excellent system of goldfields railways in this State. The mining interests at present warrant this further expenditure. The principal mining centres, with their distances from Lawlers, are:—Waroonga, 7 miles; Cue's Patch, 8 miles; Vivien, 8 miles; Sir Samuel, 32 miles; Kathleen Valley, 40 miles; and Lake Darlot, 50 miles. There are two State batteries at work in the district, and two privately-owned mills are subsidized by the Government in Lawlers. The population of the township is over 300.

## The North-west and Far North.

The great north-west division of Western Australia embraces in the popular mind that vast area of country stretching from north of Geraldton up to Wyndham in the extreme north of the State. To most it is still a vague and undefined territory to which attaches that glamour of romance that enfolds far distant lands, more especially if they are believed to contain hidden treasure. Though historians, more conversant with the development of the Eastern States, point with pride to Captain Cook as the effective discoverer of Australia, and to Botany Bay as the sacred spot where he first landed, that navigator was not the first Englishman to set foot upon Australian soil. Fully a century earlier—in March, 1688—William Dampier, that compound of buccaneer and imperialist, anchored his little vessel within the protecting arms of King Sound, at the head of which the town of Derby now stands, and spent some weeks studying the habits of the natives and exploring the immediate country round about. Unfortunately to Dampier,

whose mind was filled with memories of the rich East India islands, the land seemed desolate and barren, and the report which he carried to England concerning it was unfavourable. Though he returned to the west coast eleven years later, he had no more favourable report to make, and for nearly 150 years afterwards the only knowledge of the country were a few vague marks on a chart.

The settlers who founded the colony at Swan River in 1829 had neither the means nor the opportunities for exploring this faraway territory, but in 1838 Lieutenant Grey—afterwards Sir George Grey—discovered the Glenelg River, and returning in the following year explored and named the Gascoyne. He brought back specimens of pearls secured on the trip, and

foreshadowed the development of what has since become a prominent industry in the State. From then knowledge of the country round the Gascoyne increased as the years went on, but it was not until 1861 that an expedition of any extent was carried out. In that year an expedition under Surveyor F. T. Gregory discovered the Fortescue and De Grey Rivers and the Hamersley Range, as well as a large grassy tableland admirably adapted for those pastoral pursuits which were bringing unheard of wealth to people in the Eastern States. In 1866 the country between Roebuck Bay and Point Walcott was examined and proved suitable for squatting, but it was not until 1871, when Alexander Forrest discovered the fertile Kimberley district that the north-

west can be said to have been opened up. Speaking at a banquet tendered to him in 1901, shortly before his death, Mr. Forrest said:—  
“He had lately returned from that country (Kimberley) and had found fish in the waters, ducks on the pools, turkeys, kangaroos, and

Photo by E. L. Mitchell.

CARNARVON.

emus in the bush and on the plains. There were now over 1,000,000 head of cattle and 500,000 sheep and a large population. That was the result of his expedition. He had been one of the first to send sheep there in order to prove that it was a good country for sheep, and these sheep stations were now gold mines." Since that date development has been even more marked. At the end of 1912 the total stock consisted of 1,938,554 sheep, 659,351 head of cattle, and 26,129 horses, while the area held under pastoral lease was 62,826,224 acres, of which 32,339,518 acres were embraced in the north-west district and 30,486,706 in the Kimberleys (far north). And yet little more than the fringe of the available pastoral country has yet been touched. The interior

has been avoided because of the absence of water, but since boring has recently proved that a large artesian basin exists, country previously considered unworkable is now being stocked with every prospect of success. The sheep country is practically confined to the north-west district, while cattle are reared in the Kimberleys, but there is little doubt that when improved methods of transport are brought into use wool will form a considerable item in the Kimberley export trade.

The possibilities of the north-west and northern districts are not, however, confined to pastoral pursuits. All along the coast there are, as we have seen, extensive beds of pearl shell, and a lucrative and important pearling industry has been in existence there for many years. Then to the Kimberley district belongs the honour of possessing the first payable goldfield in Western Australia. In June, 1886, Governor Broome, in a message to the Legislative Council, congratulated the country on the discovery of "an extensive goldfield of rich promise in the Kimberley district." Shortly afterwards gold was discovered at Pilbara and on the Ashburton, and for some years a satisfactory output was maintained. With the discoveries at Yilgarn and Kalgoorlie the interest in the north rapidly waned, but there is every chance that as the country is further opened up payable goldfields, though not perhaps of a sensational character, will be found in the great north-west.

#### CARNARVON.

Carnarvon is situated at the mouth of the Gascoyne River, and is the shipping port for the wool produced in the extensive pastoral district lying inland from the town, where there are several large sheep stations, the total number of sheep being well over 750,000. The town is in regular communication by water with Fremantle, and has a reputation for healthiness. Within less than two degrees of the tropics it is naturally hot, but not unbearable, and good water is abundant. The public buildings consist of a courthouse, school, residency, gaol, hospital, and library, and many of the edifices would do credit to a larger town. The hotel accommodation is good, and commercial prosperity is shown by the existence of branches of the Western Australian and Union banks, and by the presence of several large stores. The town is governed municipally by a mayor and councillors, and has a population of 755.

#### ONSLOW.

Onslow, situated on the coast well within the tropics, has a population of about 300, half of whom are coloured people engaged on the pearling boats. It is the principal port of the Ashburton pastoral district and of the Ashburton goldfield. The anchorage is an open roadstead exposed to the prevailing winds, and

\*MMM2

vessels calling there have to discharge their cargoes into lighters. For convenience of shipping a tidal jetty has been constructed, which is connected by a tramway with the town. There are some good public buildings, all substantially built of stone, including those necessary for the administration of customs, post and telegraph service, and so on. The religious needs of the people are cared for by the Church of England, while the Ashburton Mechanics' Institute and Public Hall provide meeting-places for the discussion of local affairs.

Onslow is the rendezvous for some twenty vessels engaged in the pearling trade, and from the fact that it is the port of a pastoral as well as a mineral district large quantities of wool, lead, copper, pearl shell, and kangaroo skins are exported from the port. The soil of the district is good, and with a reasonable rainfall produces those luxuriant grasses which have made the Ashburton an ideal squatting district. The fertility could be greatly increased by using the Ashburton River for irrigation purposes. If that were done there is no doubt that rubber, cotton, cinchona, and other tropical products could be cultivated with great success. As regards minerals, gold, silver, lead, and copper have already been found, and the field only needs the impetus of a sensational find to bring it under the notice of prospectors.

The temperature ranges from 41° in winter to 117° in summer, but for about seven months out of the twelve the climate is exceptionally good.

#### COSSACK.

Cossack, a seaport town originally known as Tientsin (from the name of the vessel which first carried stock to the north-west) and later as Port Walcott, received its present designation from H.M.S. "Cossack," which carried Governor Weld on a visit along the west shore of Port Walcott, and is some nine miles from Roebourne, with which it is connected by a tramway. A further tramline connects Cossack with Point Sampson, about four miles away, where a long jetty has been erected for the convenience of those shipping stock. The anchorage at Cossack is an open roadstead, and vessels over 200 tons are unable to come alongside the jetty. Larger boats have to discharge the cargo into lighters. The town possesses some substantially built public buildings, two hotels, and an assembly hall. The solidity of the buildings is a matter of necessity, as the fierce storms which sweep along the coast at intervals make short work of flimsy structures. The port is regularly visited by steamers running between Fremantle and the north-west ports and Singapore, and the inhabitants of the town, numbering about seventy whites and over a hundred aliens, are thus kept in constant communication with the capital.

### ROEBOURNE.

Roebourne is situated on the Harding River, some eight or nine miles inland from Cossack, which serves as the port to the town and is connected with it by a tramline for the conveyance of passengers and freight. Roebourne is named after Captain J. S. Roe, R.N., the first Surveyor-General of Western Australia, and is the chief town in the north province. Formerly it was the distributing centre for the Pilbara goldfields, but lost most of that trade when the railway was constructed from Port Hedland to Marble Bar. Its importance now rests on the fact that it is the centre of trade for a large portion of the pastoral country of the north-west. For many years it has been known that minerals such as gold, copper, and lead are to be found in the immediate neighbourhood of Roebourne, but nothing appreciable has been done in the way of developing the reefs and ore deposits, so that

practically destitute of vegetation, but must have some attraction for the natives, as rude carvings of animals and birds are found on the rock surfaces.

### PORT HEDLAND.

Port Hedland, situated on the coast about 1,063 miles north of Perth, has made considerable progress since the opening of the Port Hedland to Marble Bar railway line, which made it the principal port for the Pilbara goldfields and also the distributing centre for the extensive tinfield at Wodgina. It is also a convenient place for shipping stock, and this fact, combined with its trade with the goldfields, will probably in the near future make it one of the most important towns on the north-west coast. It has a substantial jetty, and the channel has been buoyed to ensure the safety of shipping. A further stimulus to trade exists in the proximity to the port of extensive beds of pearl shell,

ROEBOURNE.

it is still a matter of uncertainty whether payable metal could be secured. Being the centre of the district, many of the public officials have their offices in the town, while the Court of Quarter Sessions is also held, the resident magistrate being chairman of the court. The town is well laid out, with wide streets and substantial public buildings, and has a population of 250 people, about thirty of whom are Japanese or other aliens.

About 50 miles east of Roebourne is the Whim Creek mining district, where the Whim Well and Mons Cupri copper mines are situated. An outlet for this district has been made at Balla Balla on the coast, some 13 miles away. An anchorage, sheltered by Depuch Island, has been secured, and a small township is in existence. On a large rock on Depuch Island there is an inscription showing that H.M.S. "Beagle" called there in 1840, and traces still exist of the visit of French navigators still earlier in the century. The island is

which are being actively worked. In addition to various public buildings the town possesses four hotels, several stores, and a branch of the Union Bank. The population is about 350.

### MARBLE BAR.

Marble Bar, which derives its name from a curious ridge of slate crossing the Coongan River near the town, is situated about 120 miles inland to the south-east from Port Hedland, and is connected by rail with that town. It is the chief town of the Pilbara goldfield, and is the seat of the warden and resident magistrate. At Moolyella, 12 miles from the town, and at Cooglegong, 40 miles to the west, there are large deposits of alluvial tin, and both sluicing and dry-blowing are being actively carried on. For the help of the miners the Government subsidizes a public battery in the town, so that crushing may be cheaply carried

out. The district has pastoral as well as mining possibilities, and several pastoral leases have already been taken up. The Pilbara district is well traversed by rivers which during the cyclonic storms become rushing torrents, but in ordinary circumstances they are only series of pools. The only public buildings in Marble Bar are those necessary for the transaction of official business. The population of the district is about 450.

#### NULLAGINE.

Nullagine, situated about 75 miles south of Marble Bar, in the southern portion of the Pilbara goldfield, has a population of about 150. In addition to the gold which exists in the district, small diamonds have been discovered in the conglomerate formation, and in several localities there are indications of copper. Asbestos has also been found. For the convenience of miners desiring to crush their stone the Government erected a ten-head battery in 1905, and this is kept working on payable stone. Like the other inland settlements in the north-west, it is becoming the centre of a pastoral district which has made good progress during the past few years. The town has telegraphic communication with Marble Bar, and a weekly mail service to and from the same centre.

#### BROOME.

Broome, one of the principal cargo ports on the north-west coast, is situated on the shores of Roebuck Bay. It is the terminus of the Eastern Extension Cable Company's alternative cable from Banjoewangie, and contains extensive buildings for the accommodation of the staff. Its main importance, however, is derived from

Photo by E. L. Mitchell.

BROOME, SHOWING JETTY.

the fact that it is the headquarters of the pearling industry, and as such is possessed of a more cosmopolitan population than any other town in the State. Having an excellent harbour the pearling boats are enabled to lie up with safety during the hurricane season along the coast. The steamers running fortnightly between Fremantle and Singapore call there, and it is further served by the coastal boats on the line between Fremantle

and Wyndham. A tidal jetty for shipping, with cattle yards and tramway, have been constructed, and a splendid supply of fresh water is secured from an artesian bore. The rise and fall of the tide at Broome is about 28 ft. Being right within the tropics the climate is extremely hot in summer, but the heat is tempered by the strong sea breezes which blow almost continuously during the season. Among the public buildings are the Government residency, courthouse, public quarters, gaol, post and telegraph offices, and

Photo by E. L. Mitchell. BROOME.

customs house. An excellent literary institute has been established for the use of residents, and several good hotels afford accommodation to visitors. The Church of England and Roman Catholic Church both possess excellent buildings, and there are many fairly substantial private dwellings. Two of the associated banks—the Western Australian and the Union—have branches in the town. Amusement is provided by the Broome Racing Club and tennis and cricket clubs. The town is governed by a mayor and nine councillors. It is the Quarter Sessions town for the district, Courts being held in March, June, September, and December, under the chairmanship of the resident magistrate, Mr. G. T. Wood. The white population of the town is set down as 866, while the coloured population, ashore and including the crews of the pearling boats, is estimated at about 3,300.

Seventy miles north of Broome is Beagle Bay, where, since 1890, the Roman Catholic Church has conducted a mission for the aborigines.

#### DERBY.

Derby, the chief town of the West Kimberley district, is situated on King Sound not far from the mouth of the Fitzroy River. At the entrance to King Sound is the spot where William Dampier, the first Englishman to land on the shores of Australia, beached his vessel. Derby has a fine natural harbour some two and a half miles away from the town, with which it is connected by a tramway in order to facilitate the loading of stock. The jetty, which is of considerable length, has a cattle

yard and race attached so that cattle can be walked on to the steamers. It is estimated that about 16,000 head of cattle are sent away from the port during the year. The town has several public buildings, including court-house, police station, post office, and goods sheds. The resident magistrate is also chairman of the Court of Quarter Sessions which sits regularly in the town. The district contains some fine pastoral land, well watered and abounding in game. It is also well adapted for the cultivation of rice, cotton, bananas, and other tropical products. Derby is the port of Kimberley goldfields, being about 380 miles from the goldfields' centre at Hall Creek. There is a good road between the two towns, and at Fitzroy Crossing there is telegraphic communication with Wyndham. The population of Derby is 228, and of the whole of the district 450.

WYNDHAM.

#### HALL CREEK.

Hall Creek, the central township of the Kimberley goldfield, and the headquarters of the warden for the district, has several commodious public buildings, though the population of the whole district is under 200. In the days when Kimberley goldfield was a promising district the township was a place of greater importance, and there are signs of revival now manifest, as the question of treating the low-grade ores is receiving attention. In addition to mining activity, there are several large

pastoral leases held in the district. Hall Creek is only 240 miles away from Wyndham, but the road is not so convenient as that to Derby.

#### WYNDHAM.

Wyndham, the farthest northern town in Western Australia, is situated on the shores of Cambridge Gulf. The gulf provides an excellent natural harbour, and is equipped with very complete facilities for shipping stock, Wyndham being the headquarters of the cattle trade. The arrangements for shipping the cattle are such as

to allow 500 head to be embarked within three hours. Most of the cattle are destined for the markets of the southern portion of the State, and for some years the question of erecting freezing works at Wyndham has been under consideration. It is contended

that if this were done the risks and expense attendant on shipping live cattle would be obviated, and as a consequence meat would be cheaper. So far, however, no practical step has been taken to carry the idea into effect.

The public buildings at Wyndham consist of post office, residency, hospital, police quarters and gaol, and a mechanics' institute with a good library. The average temperature is necessarily high, but the town is not considered unhealthy, though the water supply leaves much to be desired. The population is about fifty.
