Hartley accident Fund. From 1866 to 1872 , his firm had built 525 houses for their men, and they had now 206 on hand. In order to make provision for a considerable increase in produc. tion, they must now hove more workwen, and the only way to get them was to provide comTortable residences. Two roomed houses were not a sufficient temptation: thoy must be four. roomed, two apstairs and two down, and those they were providing. He did not think there wonld be much difteulty in getting men as long as the present rate of wages was kept up, or it maintained the same relative proportion to that of agricnltural wages. There was a decidedly improved desire amongst the colliers for elementary education, thongh the adnlt evening schools had not quite sncceeded, owing to the distaste of the men to grapple with the diff culties of learning to read and write after hard day's work, The asernge attendance a the children's school, however, had increased from 1,482 in 1870 to 1,740 in 1872, and every where the desire to edncate the children was increasing. As far as he conld see, there was no wish on the part of the mions to prevent the men from working full time if so disposed, nor was thare the remote disposition on the part of the Masters' Association to limit the ontput or keep op prices by any such methods.

## STORING RAIN. WATER.

Sir,--In reply to the query of yonr corre. spondent, "G. B. on the above subject, ther shire (where rain.water seems to he highly shire (where rain.water seems to he highly
valued), where all the rain.water from the roofs of the houses and other huildings is collocted and convejed by menns of domn-pipes and earthenware pipes into water-tanks formed undergrotend, -say, nnder a pantry or portion of callery, - which, from my ohservation, appear to act very satisfactority in prescrviog the water ool during summer months and from frost during winter, and purify it some way, so that, when filtered before use, it can even be used fo drinking purposes. I have myself been deceired, thinking I had been drinking spring.water. I think they are constructed as follows:- The ordinary foundations of the pantry (sunk in the ground 5 ft . or 6 ft . for the purpose) are lined inside with brick ( $4 \frac{1}{4}$ in.), huilt in cement; the hotton puddled, if the ground requires it, and paved with brick on cdge, or two flat courses in cement. The bottorn aud sides are then plastered vith a $\frac{3}{3}$.inch coat of Portland cement, carefully finished. The whole is arched over with brick. rork, leaving a man-hole, of course, in the top or the side-wall, as may be most conrenicut, for access. Ventilation mast he provided for, also overflow connected with trapled drain. The water is to he raised by means of a pump in the scallery for supplying slop-stone or forcing up to a cistera in attics for supply of bathe, se. wo water-tunks can easily be constructed whathers for filtering puruoses the suction-pipe to pump being in one chamber and inlet from down-sponts iu another

A Watels-DRLSier.

THE LABOURERS' COTTAGES BILL. The Labourers' Cottages Bill, introdiced by 11r. Whitwell and Mr. Wren-Hoskyns, has now oeen printed. It provides that Innd vested in corporations of horoughs may be laid out in sites of artizans and labourers. The plans drawa 11 by command of the Council of a borough mist be suhmitted to a puhlic meeting of burges:es. If approved, they have to he sent to the Home approved, they have to he sent to the Honie reject them, or to suggest such alterations as mas seem good to him. After the approral of tha Home Secretary, tho land is to be offered for sale, either hy puhlic and is to be offered for tiact, in separate parcela, the Council deter. mining the conditions of price and payment deter. the class of honses to be erected. The purchaser of a site mast bave a house bnilt and chaser of a site must bave a house built and ready for occupation within three years. The time may he extended by permission of the a thorities; but if the house is not completed feited by resolation of the Council, A schedule
contains a form of conveyance hy whioh a site, contains a form of conveyance hy whioh a site, owner, shall be transferred. It is expressly provided that any married woman who shall be owner of a site may sell and dispose of it in all wner of a site may sell and dispose of it in all not to bo subdivided; hut several persons may become joint owners. If passed with the necessary modifications, the measure will be of real service to the class for whoso benefit it has been drawn up. Fairly comfortable dwell. ngs are the frost condition of success in an attempt to improre the circnmstauces of art zans and labourers. This Bill greatly facilitate the acquisition of such houses without under mining the self-respect and indopendence of the occupiers

## POROUS TILE ROOFS

A coiting of the following mixture, namoly, equal parts of finely-sifted Portland cemont and finely-powdered brick or pieces of tilo, well mixed together to tho consistency of paint, and laid on the tiles with a hrush, in dry wenther, care being taken to damp the tiles, to promote perfect adhesion, would render them impervious to rain, and last a long time, for small cost.

## LONDON ROADWAYS.

The Westminster District Board of Works bave decided to recoat the carriage-way of Vic-toria-street, at a cost of abont 450 l ., and apply to the Metropolitan Board for permission to stop up the thorouglifare for four days, in order that a steam.roller may be used in the work. They street, at a cost of about 300 L , and ask for permission a cost of about 300., a and the stree abutting thereon for three days during the Whit. abusting thereon for three days during the Whit.
suntide recess of Parliament in order to use the steam-roller in the work, the traffio to be diverted hy Whitehall.place along tho Thames Emihankment.

## WINCHESTRR GUILDHALL

On Wodnestay last, the new guildhall for Winchester was opened by the Lord Chancellor The huilding was designed hy Messrs. Jeffery \& Skiller, of Hastings, and huilt by Messrs. Bull \& Son, of Soutliampton, at a cost of hetween 11,000l. and 12,000l. It is to serve also as an assembly room for the citizens, as a local
museur, and as a reading-room. The style museurr, and as a reading-room. The style
adopted is Geometric Gothic ; the heads of the principal windows contain has-reliefs of six principal events in the history of tho city, and a sculptaral group in the clock.tower represents Henry 1 . presenting the charter of incorporation to Florence de Lnm, the first mayor in the year 1i8. Florence de Linn is also tho subject or one of the forr statucs supported on granite represent King Firbert, King Alfred, and Henry IIf., of Winchestor. The building is no regarded locally with unmixed satisfaction.

## CHURCH-BUILDING NEFS

Folkestone. - Cheriton Church, Folkestone, has been re-opened after a restoration and ellargement, during which operations the tomb of the
grandlaughter of Sir Walter Raleigh was dis. granddaughter of Sir Waiter
Nottinghan. - The new Charch of St. Thomas, on Park-row, has been consecrated by the Bishop of the Diocese. The edifico was formerly 0 Presbyterian chapel. It receutly became un. used, and it was obtained and adapted as a church. To form an idea of the transsormation with square walls, I4 in. thick, piercod hy a double row of windows on three of its sides a flat plastered ceiling; a boarded floor, fitted with square pews hreast high; a large square pulpit in the centre, and as gallery at one end. With tho additions of a north and sonth end moulded arcadee, an nusidal and south aisle, olevated tiled floor and low screen, open henches an inlai mosaio munion munion cable, and a painted ceiling and some the intor wow be so the interior now presents to riew something like the appoarance of a ohurch of the Basilicas type. The windowa will be flled with paintert glass, and colour and gold will decorate the
walls of the church. The ceiling of the nave
is divided into a series of square and circula panels, fitted with combinations of frnits an flowers mentioned in Scripture, and divide from each other by painted and gilded border From the centre of this ceiling hangs a ga corona. As the building has been enlarge oxternally to the extreme limits of the gronn and will sooner or later be blockod out fro view by erections on the adjoining land, attempt has been made to ornamont the dea walls on the three sides of the same, but the street facade a row of nem stone windo has been inserted. The architects are Messr T. C. Hine \& Son; the contractors, Messr Marriott, Wartnaby, \& Scott; gasfitter, M Rhodes; stained.glass artists, Mossrs. Heator
Butler, \& Baynes; makers of the clearstor Butler, \& Baynes; makers of
windows, Messrs. Wheeler \& Co.
Great Hormead. -The little villago church St. Nicholas, Great Hormead, bas been opened, after having been closed for near twelve monthe, in order that it might under restoration and repair. The architect for restoration was Mr. A. W. Blomfeld, $t$ diocesan architect. All that he thought nece sary has now been done, except that the tow remains ns yet untouched. On necount of t dilapidated condition of the chancel, it w found nccessary to rebuild it ontirely, and nave has undergone an extensive restoration. fact, the exterior of the church, with the exce tion of the tower, has a new look about it. T plaster which formerly disfigured it has he removed, the flints refaoed, and the stonewo renewed. The whole work bas heen doue Mr. Gibbons, of Buntingford, who was the co ractor for the restoration of the churches Anstey and Barley, and is now carrying out reparation of Aspenden Charch, all four chure phanin a few miles of each other. The chancel and restry, which were in a very dila
dated condition, have heen taken down, and new chnncel, 2 Ift. hy 16 ft. 6 in., with an orga new chancel, 2 fitt. hy 16 it. 6 in., with an org chamher and restry attached, has been erec The general walling is built with local flin dressigga. The east window is in thrce ligh dressinge. The oast window is in thrce ligh with tracery of geometrical design, Aa op
roof of stained deal plastercd hetween roof of stained deal plastercd hetween

nave and aisle, the old slates having he removed aud tho timhers repaired, so as retain their original appearanco as far as p sible. The roof on the north aisle is new, in o A now porch, with an entrance doorway,
with an open roof of stained deal, covered with an open roof of stained deal, covered iv
lead, is erected on the south side. The whole lead, is erected on the south side. The whole the walling throughout the charch is rebuilt refaced where necessary. The brick battresse
cement repairs, and all other unsightly work cement repairs, and all other unsightly work recent date, are removed. New wiadows ha been inserted in the aisles and clearstory. wa their design heing copied from those previous existiug. All the windows are glazed wi rolled cathedral glass, and are fitted with slidi ron casements, for tho requisite ventilati New parapet walls, with moulded stoue copi and string. courses liave been bnilt to the ne and aisles. Internally the walls are re-plaster and the stonework to the arcades and elsewh throughout the building is cleansed and restor The chancel.floor is laid with Maw's encaus tiles, and a reredos has beon supplicd by $t$ same manufacturers. Peake's 6 in . red a black Staffordshive floor-tiles have becr used $f$ the passages in thenave and aislos, and new d hoors are laid throughout the hody of hurch. The old square high.backed pe waiuscot oak All the sittincs in the chum have heen roarranged, the seats near t tower heing new, and accommodation is pi vided for children by seats in tho tow New oak doors are hung to all the entranc with wrought.iron hinges of folinted desig For heating the chureh a Porritt's stove h been fixed in the centrc passage of the nas the iron grating of which is level with the pav ment, and the flae from the same is carried ment, and the flise from the same is carried in the north.east angle of the tower. restoration of the tower is to bo procoeded wi oncc. The oost of the restoration has be hoat $1,900 \%$, and 2502 are roquired for pair of the torer.
Kneesall.- The restoration of this church commenced a year ago hy Mr. H. Clipsham, Yorwell, under the direction of Mr. Ewan Chr expended upory the nave and of 900 L . has be expended upoz the nave and south aisle roo
walls, paring and flooring, heating, \&c. This work has been accomplishod through the liberality of Earl Blanvers, sapplemented by the vicar, parishioners, and others. The chancel was at a cost of about $205 \ell$.

Wakfield.-The mayor has laid the cornerstone of a now church ahout to be erected at Wrenthorpe. The inhahitants of this rapidlygrowing village have heretofore worshipped at which stands in their midst. A vicaras bas already been huilt, and the gromad secured for the chnrch is in convenient proximity. The edifice is to seat 300 , and it will oost about $\mathbf{1 , 2 0 0}$. The architect is Mr. T. W, Micklethwaite, of Westminster; and the contractors are Messrs. Thickett, of Horhury.
Weekley. - St. Mary's Church, Weekley, within the past twelve months, has heen restored, and is now reopened. The total cost of the work has heen nearly $2,000 l$., and the whole sum has
been defrayed hy the Duke of Bucoleuoh, the been defrayed hy the Duke of Buccleuoh, the ried out writh a view to re using as much of old material as possible, and in conformity the ancient character of the edifice. The nth porch and vestry have been rebuilt. Th lastering which defaced the exterior walls has removed, add the masonry has heen red, and tho interior walls replastered. strengthst window is placed in the chancel, and nerally that part of tho church is renovated. cleaning the north chancol wall an Early retained. retained. There is a similar window at
west end of the church. The floor of chancel is laid in Codwin's encaustic tiles. The church is reseated thronghout in oak, and ing the church Pork and red tiles. For warmbeen intruduced, Tho work has been carried ont under the direction of Mr. A. W. Blomfield, M.A., architect, London; and hy Mrr. J. Thompson, contractor, Peterhorongh. Mr. Buckle Steeple Gidding. - On Easter work. church was reopened, after having been restors at the sole expense of Mr. J. M. Teathcote, thed patron of the benefice. The work has been oarried out by Mi. J. Thompson, of Peterborough, from the plaus of Mr. A. Blomfield, architect. The east wiudow has heen filled with stained glass, the work of Mr. W. H. Constahle, Cam-Southend.-The now
Southend. The now chancel of Southend church has just been opened. It forms anhacr instatment of tho rebuilding of the old dern date, aud in the ginasi-Normon stively work was commenced some years ago the addition of a wide-gabled north aisle three hays; then a similar aisle was built the south side, with tho foundations of t-ceilinged nave. Recently a large chancel heen added, with ohancol aisles, vestry, and finished effect, for, in has still a singularly e, there aro low transepts hetween the ancel and nave aisles, which are only high as being huilt. Bat it is the new transept re long huilt. Bat it is to he hoped that ls are of coursed Kentish remedied. The dressings. The work has heen executed 11: Sauuders, of Maldon, under the late Mr. Slater, and undor Mr. R. Herhert Carpenter. Hemington (Northants).-St. Peter's Chureh has been reopened. It was chiefly interesting rebuilt in 1666 with the exception of the tower, Hall, the residence of the Montarue family. portion of the hall atill remains, near the church, out up into three teneuments, in one of which is magrificent chimney-piece, described in the connty histories. Tho nave windows are squarehoaded, mullioned aud transomed. The roof is open, with arched principals, having pendants ppeared; hat on thline down the east wall the nave, numerous moulded stones were found of Norman and First Pointed work, capitals and bases of columns, thus, including loubt that a church with aisles had previously stood here. The new chancel arch is deviously a larmony with the fracments, and is desigued uaciont capitals and portions of and rests on the nserted in the new jarts. ew design, of Second Pointed date, and is built
in Ancaster stone ashlar-work, with richlyUnder tho east window is a reredos, of de. recessed arches, in which is represented the Crucifixion,-Our Lord, St. Mary and St. John in the centre arch, with the two Marys and Salome and St. Joseph, Nicodemus, and the in oil.colonrs, either side. It is paind on slate, Mr. Daniel Bell. The chief features of Hemington are, however, its stalls, which were hroncht from Fotheringhay, but whether hronght from the colleriate churcher fom the chancel of from the castle chapel when pullod down hy James I.'s order it is now not easy to say. Th onds are highly carved, and the tops end with great croket curl, like the hoad of a pastora stall. In the enas and en the misereres are carved the hadge of the ducal family of York,-the coupled hoars, \&c. These were in a deplorable state, cut and broken, and whitewashed, and state, cut and broken, and whitewashed, and pews. They have heen carefully restored, under the architect's inspootion, by Messrs. Popper if Son, of Brighton. Sornewhat similar stalls, also from Fotheringhay, are at Tansor Church. The expense of the restoration has been horne by the Duke of Buceleuch, and has been carricd out by the late Mr. W. Slater and hy Mr. R Herbert Carpenter, the builder heing Mr. Margetts, of Kettering, and the clerk of works Hems, Lucas. The stone carving is by Mr. Harcy Luddington will now be restored by the of Buccleuch, under Mr. Carpenter.

## SCHOOL-BUILUING NEWS.

Halifax.-The now school connected with opened. The huilding the formatat bas been which was laid on the fomation-stone of adjacent to the chapel on the lower side, and has a frontage to Ormerod on treet lower side, and has the idea of the architect uniform of the arditect has been to make it there has not boon much expenditure chapel : mentas mentation. The buiding is in two stories. On the ground-1oor are teu class-roous. The schooldate 500 maring 75 ft . by 35 ft ., will accommobe plat schelars. A terracoota fountaiu will be praced in the middle of the room, hoth as an ornament and for use. Such fountains, we are informed, have been introanced in some schools who leave the school to get a drink about boys every ten minutes. A gangway has been erected from the school to the chapel, so that the scholars cau pass from one to the other without going into the streat. On the same floor as the school are a library, snperintendents vestry, and a hoist, the last-named being intended for use between the kitchen and the school-room when ea-parties aro hcld. The various works bave beon executed by the following firms:- Architect, Mr. Dearden ; masonry, Mr. J. W. Wilson ; oining and carpentry, Mr. Hy. Dearden; slating and plostering, Messrs. Taylor is Firth; plomb ing, Mr. Joseph Barker; whilst the hot-water apparatus has been supplied by Mr. E. Lamby. Upper Tooting.-Some simple school buildings for the district of St. Mary Magdalene's, rinity-road, have just been completed. The a few bands of red bricks, and no stone with nsed, except where nocessary for stability. The roofs aro ceiled with lath and plaster at the stained. Externally and rafters, which are stanned. Externally the covering is of Bungor comprises two schoolrooms arranged in plan shape of an $L$, with a lean-to porch. There is a small bell-tnret, formed hy carrying a portion of the roof on brackets to serve as a cenope to te hell. Tho cost of the school has heer about 4001. The worls have been expentod by Messers Dove, Brothers, Mr. Edmnnd B. Ferrey being he architect
Bala (North Wales). - The Bala schools built recently heen completed, and havo heen built from the designs of Mr. Ferrey. In plan they consist of a boys' school, 50 ft , by
20 ft ; girls' school, 32 ft . by 15 ft ., with clas 20 ft ; girls school, 32 ft . by 15 ft ., with class-
room, 17 ft . by 12 ft . There are grabled porches o the two first namod rooms. A master's residence is immediately attached. comprising, on the ground-floor, parlour, kitchen, scullery, and The walls are built of rough on the uptone, procured
in the neighourhood, and, in the case of the The and grls' scheols, are plastored internally struction and of open conPortraadoo slating, the they are covered with Portroadoo slating, the ridges heing formed of cerro-metallic ridge-tiles. The windows are principanly square-headed, with stone mnllions and casernents, and are fitted with wronghtiron caseruents, moving on contres. The dressinge are of Wrexham sandstone. Thero are spacions playgrounds to the boys and girls' sohools, with of necessary omces. Tho total cost, exclusive or fttings, has heon ahont $1,200 \%$. Tho clerk of the works was Mr. R. Woodcock, and the builder, Mr. David R horts.
Newchurch (Lancasicire).-The new schools $s$ in the epened on the loth inst. The building ound Gotho style of architecture. The 1872, here was a procession and Cloughtold, when has cost 1,400l. exclusive of site, which was piven hy Capt. and Mrs.Patrick, of Clougbfold. There is accommodation for 250 scholars. The shole are built of stone, and the building is open-roofed There is a large eoneral school, 59 ft hy 10 ft and an infant school, 30 ft . by 18 ft . There t., two class-rooms, 10 ft . hy 12 ft . ; two large lobbies for stores, hata \& ; two largo noomg below the infents' school and lohhy for boilere ea, stores, \&o. Tyro larre playgroud boilers, be Gitted with oymnasium playground ato to with wall and railines. The whole of thencod has been done under thepersonal superine work of the arehitect church. The contractora for Perval, of New are as follow :-For wors for the various works re, Mr :-For wood, slate, plaster, iron, and and lorick labour, Messrs. G. Parkinson \& Son, Henson i Co. Blenheim water apparatus, William Censon Co., Blenheim Works, Pendleton; gas, Ir. Homer Maxivell, Waterfoot; houndary woll ing, de., Messrs. Rostron \& Rothwell, of Newarch
Creech (Sonnerset).-The nev paroohial schools Creech St. Wichael, which have cost 800 l ., are now open. Of the total cost of the huilding, 00l. hare hoen raised by small contributions in the parish and neighbourhood. Mr. J. H. peucer, of Tannton, was the architect, and Mr. J. Dinham, the contractor. The site was giren hy Mr. Foster. The style of the huilding is a adaptatiou of domestic Gothio, and the naterial Monkton store, with grey hrick dress iggs. The walls are lined internally frith coloured brickwork, and the roofs opun-timbered arnished. The accommodation is for 170 children.

## STAINED GLASS.

Ripoz Cathedral.-A stained-glass window has just been placed in this cathedral to com memorate the recovery of his Rogal Highness the Prince ef Wales. The subject of the win dow is the restoration to health of a nobleman' sou at Capernaum. Messra. Ward \& Hughes, of London, were the artists. There are thre medallions. In the upper one is represented of our Lord and the no centre one, the meeting one, the rand the notleman; and in the lowe one, the recovery. Beneath the medallions The window is son liveth," (St. John v. 50) Mildred Birch, the gift of the Rev. Henry Mildred Birch, one of the canons residentiary Llandrillo Chury tutor to his Royal Highness.
Lumarillo Chwrch.-A stained-glass window has just been placed in the enst end of Lland Mo Charch, Cowgn, Nouth Wales. The window js one with five opemings and tracery, the sub ject chosen being that of the Crucifixion, whicb liphts ine compartments of the taree inner lights; in the ceutre is the figure of our Sariour on Chess, with the weeping Mardalen emhracing the cross beneath; on one side are the two Marys; on the other St. Jobn the Centurion Above and around the Savionr is a cloud of glory and angels adoring. The two outer lighte are filled in with ornamentation of fifteenth century character. The wiudow has heen de oned and executed by Messrs. Heaton, Butler Bayne, of Garrick-street, and presented by Mr. Edsard Brooke, of Caeu Wood-towers, Di gate, on recovery from a painful illness, which compelied him to resign the office of Sherife of London and Middlesex, to whicb ho was elocted last Midsummer-day
Wotton Church.-The window which sura the chancel arch at the east of the nave or the parish church of Wotton-nnder-Edre has been filled by stained glass, the gift of Mrs

Adey, as a memorial of her late hushand. The window consists of three lights: the centre is 9 ft . hy 3 ft ., and hears Christ as the Good Shepherd; that on the right, St. John the Evangelist; and that on the left, the Virgin Mary ; these are 7 ft . by 5 ft . each. Tho work has been done by Hardman \& Co., of Birmingham, nader Mr. C. P. Pritchett, architect, Wotton-under Edge.
Chuistchureh and Bowmenouth. - The east
window of the Priory Church hos been flled with stained glass by the shute fanuly, in memory of Mr. Thomas Deane Shate, late of Burton, near Christehurch, and Bramshaw, in the New Forest. The window is of five lights, filled as follows

| Espousals of the B. Y. M. | $\begin{aligned} & \text { Tbo } \\ & \text { Fisitation } \end{aligned}$ | The Ascension | The Purifica. tion. | $\begin{gathered} \text { Marriage } \\ \text { at } \\ \text { Catas. } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| The Presontation 10 the Temple. | $\left\lvert\, \begin{gathered} \text { St. Joseph } \\ \text { warned } \\ \text { Ly } \\ \text { Aggels. } \end{gathered}\right.$ | The fixion. | The Adoration of Kings. | The <br> Dispute in the Temple. |
|  | The Annuncia. tion. | $\underset{\text { The }}{\substack{\text { Thitity. }}}$ | The Adoration of Shepherds | The <br> Flight <br> Egret. |

The tracery is filled with sonls ascending, angels recuiving, augels with palm branches, anyels witl larps, vigilia, ora, the dore, the paschal lamb, tho nyrtle, and pomegranate. The lights Have a border composed of the crown and the fleur.le.lis, and the whole of the medallions are surmounted with a white lily, emblematical of the "pare Viryin." The colour of the ground. work of the window is blue. The work has been performed by Messrs. O'Connor, of Berners. street, Oxford-street. The greater part of the old stunework has leen removed and replaced with new by Mr. John Preston. Onc of the four "oitusely arehcd dwarf.looking windows" the north choir aisle has been filled with stained glass by the Rose family. The design is by Lady Rose, and the window is a memorial to tho late Sir George and Lady Rose. The window is of four lights, which are filled thns :-

There are representations of the Scripture toxts. The tracery, which consists of eight divisions, is filled with red and white roses in the three divisions right and left. The work
has been performed by Messrs. Burlison \& has been performed by Messrs. Burlison \& Gry Mr. John Preston, stonemason, and Mr. C. Burry, plumber, Christehureh.
Fippen Parish cluurch.-The two lnrge win.
dows on either side of the palpit in this ehnreh have been filled with stained glass. Each wiudow has two upright lights and a central top shape. In the four lights are represented, "The Anmouncement of the Angel to the Shepherds." "The Baptism of Chrise," "His Crucifixion," and "His Ascension." The portions over and putler the illustrations consist of geometrio and fuliatod bordering and ground-work, all of deop colouring. In the centre of the lower panels are Scripture texts allnding to the ecenes depicted; and in the top central shapes the Lamb and Banner and the Pelican are repre. ented. Messrs. Ballantine \& Son, Edinhurgh, were the artists by whom the work has been designed and executed. These windows have Tunbridge Wells, in memory of his wife, and Ler father and mother.
Cavendish Church. - Two windows in the south aisle of this chureli have just been filled with stained glass, at the sole expense of Mr. George Bocock. The windowe, which are in juxtaposition, one facing the east, the other the south, have heen designed and executed by thessrs. Cor st soms, of London. The one facing the east, - a four.light Perpendicular window, has received much moro elaburate treatment
than the other. In the two centre lights are
represented the Resnrrection and Ascension, and on the dexter and sinister sides of these two lights are figures representing St. Barnahas and St. Stephen respectively. The bases below these two figures are composed of ornamental glass, bearing a shield with cross and monogram jects saints defined; and the wholo of the sub. jects are surmotnted by rich canopies, under which are cherabim and seraphim holding scrolls, on each of which is inscribed Alleluia. The tracery of this window introdaces very acered emblems. The windor faciag the soutli is Geometrical in design, and consists of three lights, which are filled with grisaille glass, containing medallions. The medallion in the contre light contains the "Agnns Dei," snr. rounded with the passion-flower; and on the top of the light is a diadem, on the sides of which, a few inches below, are the Greck letters, Alpha and Omega. Each of the side.lights contains two medallions representing the Evange. lists. The work of fitting in the winclows has been ereouted lyy 3 H . Jacob Rice, plumber and glazier, Carendish.

## FROM SCOTLAND

Edinbugh. - A deputation from the city with regatd to the new dwellines for soldiers now in conrse of constrnction on the Castle Rock. The Lord Provost stated that there was a very strong objection to these bnild. tugs in Elinburgh, which would grow if nothing were done to remove the evils complained of The huildings were at once msightly, spoiling that splendid view painted by furner in his pictare of "Edinburgh" from the Grass. narket, and they were deficient in a sanitary point of viem. He hoped the Government would do something in the way of adomment of the dwellings. Mr. Conncillor Gowans remarked upon the want of sanitary appli mended by the town, some alterations recom an improvement in that respect once make an terinprone in the rese materially improve tho aspect of the dwellings. The cost wonla be ahout 2,0002. Alr. Cardwell of Guild Court hefore commencing the the Dean of Guild Court before commencing the hinildings, and no remonstrances had heen made. Mr. Bailie Tawse said that the present considera. tions did not come within their province at all to decide npon as a court, but as individual members they had objected to the proposal. Mr. Cardwell, replying to tho depntation, said that the Inspector-General of Fortifications would meot them on the apot at an early date to roceive any suggestious they might make, anit to 800 what could bo done. Since then, Sir Frederick Clinpuan, inspector of hospitala, hos Provost, Sir George Donglas, and the colonel of Engineers, has made a long inspection of the site and the building itself. Ho expressed great regret that the town had not spoken soon enough, and stated, that if it had done so when have beengs were first proposed, they would not substituted. Sir Ferderick is to send down to Ediuburgh the plans of such ornamentation and improvement as he thinks may be added to or made upon the buildings, on the nuderstanding city another parnment will pay a part, and the tions and additions, as he thonrht that perhons both the Government and the city were to blane in the matter.

## VARIORCM

Messrs. Plrtridge \& Co, have seut us a packet of smart little story-hooks,-"Never Give Up" (hy Nelsie Brook), "Poftiug Billy" (by Mrs H. C. KDight), "Two Christmas Dayg and the Christmas box" (by Mrs. Buffour), and severa? others. These all have a good purpose, seeking while they amuse, to indoctrinate the youns mind with a horror of the vice of over.drinking The more widely they are read the better Nothing but good can can come of their circu lation.-A new edition has been puhlished of the tro parts of Weale's Irudimentary Series deroted to "The Elements of Enclid" (Lock. wood \& Co.) Part I. contains the books 1, 2. and 3 ; Part II., hooks 1, 5, 6, 11, and 12.Mr. George Browning has published a salient little "Hemoir of the lato Emperor Napo. leon III.," and a poem, enticled "Rip Vau
Winkle," which bears npon it (Croft \& Co.

Paternoster. row). "Porcelain," observ Cassell's Popular Eilututar for May, "diffe from glass in the great preponderance silicate of alumina in its composition. It con
sists mninly of clay, which is infusible, ar
some allaline silicate, which fises and hine some alkaline silicate, which fuses and hin the clay together, rendering it impervious moisture. The fineness of the ware entire depends on tho purity of the clay, \&c., fro which it is made. The glaze which cove porcelain is produced by dipping the "hisoui ware into water in which is snspended finel ground felspar; the porous mass absorns inoisture, learing the surface coverod uniform with the felspar. It is then exposed in segga to a very high temperature, by which the felsp is melted aud the glazed produced. Stonewa and common "pottery-ware" are głazed means of common salt. The ware is dipped sand and water, placed in the formace, into whi has been thrown moist salt. The hea quiel converts the salt into vaponr. In the preser of the steam, the silica on the ware deoompos the salt, forming a silicate of sodinm, whic glazes the article, and hydrochloride noid, whi escapes." - Iron tells the following interesti story : - Ar Euglish gentleman, travelli (near Sinai), was struok with tho small bl stones he found in the dried ap wate courses which in the rainy scason convey $t$ thonsand streams that hurry to the sea, an having the curiosity to bring some home, he so discovered that they were turquoises of no 00 mon order. This determioed him to ma further researches. Erentually he has kuilt house near the junction of the Wady Kemn the Wady Makatteb, or the written ralley, a the Wady Megbam. Hore, aided by the frieud tribes he has taken into his pay, he has Eovered the old turquoise mines of the ancie stomes, the very tools they used, and the solishing and guinding pluces, Being a man polishing and grinding places, Being a man much energy, 10 has brought to bear npon t fortanate discovery the adranced knowledge our times, and he is obtaining and sending o to this country some of the finest specimens turquoises that exist. In sucla a lonely spot, naturally has not confined his attention to $t$ subject only, but bas traced out the system cortifications by which the Pharaohs protect their works and workmen, and, what is s more wondertul, has como upon the remains vast ironworks,-so rast, indeed, that ma thousand people mast have been employed up them, uoless the plant nsed was on quite grand a scate as that of onr largest furnaces the North of England." -The Leisure H for May contains six bitherto urpublished poe by George Herhert, recently discovered by Rev. A. B. Grosart, an anthority on early Eogl iterature. Three of these, "Enen Song," "T nell, and Love, are equal to most of bisted prcces. The sunday at Home inclu by another old Indian, Major.General E'dw Lake, T.E.

if thirty-four other such houses can be pi if thirty-four other such houses can be pr the town, there shall be forty houses, in whi aged people may live rent free.

Report on the Sanitary Condition of Doncaster.-The Doneaster Town Clerk has eceived from Dr. Simon, of the medical depart. nent of the Local Government Board, the report I Dr. Thorne on the prevalence of infectious liseases in Doneaster, and on the sanitary con-
lition of the horough. In a letter accompanying lition of the horough. In a letter accompanying
he report, Dr. Simon requests the town clerk Fill, in a short time, acquaint the Local Gorer-d. nont Buard with the steps whieh the Town
Jouncil propose to take to carry out the reeom. nendations of the report. Dr. Thorne eomes to he conelusion that tho large infuntile mortality a geuerally explained by the imperfect sanitary rrangements; the prevalenee of enteric fever
nd of epidcmic diarrhoea by the eonditions ad of epidcmic diarrhcea by the eonditions avouring oxeremental pollution of air and water; nd the spreall of searlet.fever and small-pox by he absenee of means of isolation and of propen hat the town should he provided with a prople rater-supply, whioh should supersede all pol. ated and doubtful private sources. The puhlie rells should not be used for domestic purposes, hould be kept locked. All puhlic sewers no entilated should he ventilated at once, and entilated sewers with offonsivo odonrs examined. '0 prevent the oscape of sewer-air into dwellinge, 11 comnoxion hetween the honse.pipes and the llowed to flow over a properly trapped drain Efficient means should be adopted to pose of the excrement and refuse, and action uisances due to pir.sties. Appended to the uisances due to pig.sties. Appended to the eport is Dr. Letheby's analysis of the Doneaster ew supply. The latter is said to he in every espect well suited for a town supply St. Peter's, Wolverlampton- - A consider.
ble portion of the intended decorations of the hancel of this old collegiate chmreh has just een cempleted, and the result is sald to be anels, commencing from the west, and their onors, are as follows. The names inarked with n asterisk aro those of prebondaries of the
follegiate Church:- North Side.- "Tho Sower," he Rey. the warl of Buckinghamshire; A. Sparrow ; "The Pearl of Great Price," C. Mander; "The Draw-Det," Mr. Merrick The Jost Sheep," Rov. Willinm Birkett; The Charge to Peter,"-St. John, xxi, the late
Irg. Cooke and Mr. Kettle. South Side. "The irs. Cooke and Br. kette. South Side- "The er," Mr. Henry Ward; "The Labourera in the "yard," Mr. Twentyman ; "The Prodigal Miss Nevo; "The Lost Pioce of Money," Einekes; "The Triumphal Entry into erusa]em," Mr. Griffin. The apse roof has heen
ilded and decorated at the expense of Mr. Ke; aud the figure of "Our Lord in Majosty," a tho west wall, is the gift of several eontri. aryne, of London, and the sum of 450 l . will he bout the cost. A stained. glass window will he laced in the chancel, by Mr. A. Staveley Hill
nd his sisters. The new decorations hare, it is enerally remarked, rather thrown into shade he east eud of the chancel, and the neat step fered towards providing o now roredos.
Laborr Sentences instead of Time Sen iences. -The adoptiou of a system of sen. encing prisoners to perform a given quantity of nard anid useful lahour instead of a fixed term of detention, irrespective of their industry and eformation, has recently been advocated by Hiddlesex. The principle is, indeed, partly being icted upon under the "mark system" of penal ervitude seritences. But Colonel Croll proposes orough gaols. The ratepayers, after being obbed, have to pay dearly 30l, for a year's voard and lodging of every prisoner on the iverage. Therefore, as well remarked by Mr. ooots, chairs, ooats, oloth, or other nscful arti les, let him he compelled to do so by all means, ooth for his own bencfit and as somo compensa. ion to the injured ratepayers.

## Association of Municipal Engineers and

 surveyors.-We are asked to mention tha Messrs. Rawlinson \& Harrison were elected nonory memhers, not vice-presidents, as stated in our notice last week.The Ryde and Newport Railway.-A disagreement has arisen between the Ryde horough surveyor, Mr. G. H. Stayton, and the Ryde and Newport Railway Company, as to the manner in main the white diverting the nater main at the tho , rew lined necessary by the pany wo. and lay lisu to mase and lay domn the new main in main, and to bave tho same ready for nse, as required by the 19 th section of the Railway Clauses Aet, before the existing main is dis. turbed. This the eompany, objected to do. Mr. Stayton also required the company to construe and maintain a good and sufficient cnlvert ( 4 ft . by 3 ft .) over the main, so as to leavo the same ccessible for tho purpose of repairs, as con tained in the 22 nd section. Tho ease was brought hefore the county benel of magistrates at Newport, and after the examination of Mr. Stayton, Mr. J. E. Greatorex, borough engineer of Portsmouth; Mr. H. C. A. Timins, the resident engineer of the eompany; Mr. A. M. Bell, tho contractors' engineor, and others, the bench gave a verdict in favour of the corporation on all the pointa in question.

Unfit Houses.-At the Surrey Sessions, the chairman (Mr. Haxdman) and a hench of magi. strates were engaged all day in hearing an appeal against an order of the Vestry houses iu Alphastreet and sisteen houses in Bexley-place, tho same being unfit for human habitation and incapable of repair. Mr. Craw. ford, M.P., and Mr. Laston were for the appol. lant, and Mr. Besley and Mr. Lyon for the respondents. This is the seeond time that "Torrens's Act," as it is called, has heen put in foree in this parish. On the former oecasion ho owner of the condomned houses appealed Queen's Benels, but her Mlajesty's judoes unani monsly eonfirmed that decision. In the present case, after hearing much evidence on both sides, Mr . Hardman dismissed the appeal with eosts. The bouses will, therefore, ho demolished, as it was arreed beforehand that the decision of this court should bo fina

Associate Institute of Kighway District Surveyors.-The annal meeting of this asso. ciation was held last month at tho Railway Hotel, Wells, Somerset, to transaet the ordinary business of tho association, and also to receive the report of the delegates as to their interviow with Mr. J. Stansfeld, at tho Local Government Board, in February last. It was proposed by the chairman (Mr. Jnmes Bateman), and carried unanimously, that a meeting bo beld in nanimously, tuat a meeting be held in June ion th smindon, wits, to tako into considera sion the present position of highway district survojors. A cordial voto of thanks was passed no the seorctary, who was again elected. Due notioe of tho place and time of meeting will be given, and tho attendance of all district sur. reyors is carnestly reqnested. Information may he had of the secretary, Mr. F. White, Chew Magna, Bristol; or of Mr. James Bateman, Kingston.on.Thames, Surrey.
The Didley Town-hall.-The extensive alterations which have beon carcied on at the Dudley Town.hall buildings, noder the superin. tendence of Mr. Tsanc Barradalo, of Leicester, is now provided under approtion. Accommodation is now provided under the same roof for all the puhlio offices. A staircase from the magistrates' chrks corridor leads to the police court and witncsses roon adjoining on the first floor. The puhlio eutrance to the conrt is from Priorystreet, where there are spacious waiting.halls and stone stairs. The magistrates have a sepa. rate entrance and staircaso. The council. chamber is in the new wing, and is lighted by light windows at the end, filled in with diamondshaped cathedral glass, and in each cuatrefoil head there is a wizard's pontagram in different colours. The roof is open.timbered, stained and varnished.

Snbterranean Fire.-A fire has been raging anderground in Holborn, South Shields, over a area of 300 square yards, amongst the pan-ash and small coal, beneath valuable properties, several of which have fallen, causing the death of three persons lately. The fire has now burst blrough the surface, spread to a huilder's wareand is still burning.

The Steam Road-roller.-The Kensingtor Vestry have reeeived a report from the Com. mittee of Works, stating that the steam road. roller had been at work for 196 days, during whieh time it had rolled 147,113 superficial fards of granite, and 22,273 yards of fiint, in all 169,386 giving an average of about 861 yards per day The cost was as follows for the twelve montlis ending 14th Fehruary, 1873 :-Repairs, 157 11s. 4d. ; oil, \&c., 22l. Ts. 7a.; fuel, 74l. 5s. wages, 2322.15 s .10 d . watching, 522.17 s .7 d. neidentals, 12 s . 1d.; total, 3987.9 s .5 d . In ad dition to these expenses there are $46 l .0 \mathrm{~s}$. 10 d . fo a spreader ; labourer, 36l. 18s. ; ditto, 5l. 2s. Ild. watching (say half), 26l. Ss. 10d.; total, 1147. 10s. 7d. The Committee finding the ex. pense of watching the roller to he nearly 10 per cent., recommend that arrangements be made for housing it.
The Municipal Museum, Paris,-This nev Institution, Rne Sainte-Catherine, will be opened to the publie, it is expected, in July next. Oue compartment comprises fragments of architec ture and sculpture coming from the excavations made at all the points of Paris by the city engineers (antiqne altars and statues, relics of temples, triumplial arches, and other monuments of the Gallo.Roman period). There is also a moseum of decoration and furniture, consisting for the most part of articles obtained from the demolition of old Paris edifices, such as doorb, windows, panels, sign-boards of trades and corporations, strect-knockers, weather.eocks, and
other details of Medixval and Renaissance architecture; and a teehnological museum, com prising the tools and utensils employed hy the different elasses of Parisian sooiety during the Middlo Ages.

Mr. W. Bragge. - Mr. William Bragge, C.E., F.S.A., who has just given to Birmingham his rare aud costly Cervantes Library, has been appointed a Kripht Commander of the Order of the Rose by the Emperor of Brazil. When Mr Bragge was engaged in various engineering works at Rio Janeiro, he had frequent inter riews with the Emperor, and was appointed a Chevalier of the Order of the Rose in 1851. When the Emperor recently visited Sheffield, he honoured Mr. Bragge with a visit to Shirle Hall, carefully examining every part of an English private mansion, and has conrteonsly aeknowspecial honour mentioned above.
Destruction of Bricks.-The briek croft of Messrs. Benton \& Woodiwiss, railway con. tractors, Gorton, is a very extensive one, and is worked by Mr. G. Foster; briekmaker, who does not employ any "union" men. On Saturday afternoon there were ahout 50,000 finished brieks on the croft, and these were laid out to dry They were all in rood eondition at six o'cloels in the evening, but at eleven o'clock vearly 40,000 of them had been spoiled by having been trampled upon. Information was given to the police, and Union, have been apprehended by lnspector Cnion, have been apprehended by lnspector
Bourke, of the county constabulary, on suspieion Bourke, of the county constabulary, on susp
of having been concerned in the outrage.
Catoptric Street Lamps.-The terrace of Trafalgar.square has had its old lamps replaced by the catoptric strect lamps invented some time since by Mr. Skelton, and which are now fast coming into general nse. Three of these lamps have also been put up in St. Martin's place, to the improvement in the lighting of this usually dim part, The bottom of the lamp is closed in by four segmental panes of glass; one of these is fixed to a hinge, and has a stout wire projecting at the opposite part beyond the lamp frame. This one pane is pushed aside hy the torch. pole when the lamp has to be lighted, and closed up again hy the pole when that has been done.

The Mortar of the Great Pyramid, -At a Philosophical , metho Chemical section of the read a paper "On the Mortar of the Great Pyramid." This mortar consists almost wholly of gypsum or hydrous sulphate of lime; a spe cimen, analsed liy the phor containing as rauch as 92.83 per cent. of this hydrous sul. phate.
Builders' Benevolent Institution. - An females) inr pensionens (whimales and two street, St. James's, on Thursday next, the 22nd inst. There are four male and eight female candidates.

Street Architecture in Leicester.-A pile of new basiness premises, erected for Messrs. Jacohs \& Kenuard, in Horsefair.street, Leicester, has heen opened. The design is by Messrs Millican \& Smith. From the front parement the interior has the appearance of a bazaar ; and from a distance it looks much like a puhlio hall. The bnilding is said to he one of the most costly contrihutions which private enterprise has made to the Leicester street improvements.
Local Improvements. Mr. Stansfeld, in reply to Sir J. Bailey, in the Commons, has declined any Government rosponsibility for local rork undertaken in complianco with the Public loans in furtherance of these works, hut declined any responsihility as to their construction.
Restoration of St. Michael's Church Dawlish.-At a committee meeting held at the School.room, on May 8th, the Rev. O. Manley, vicar, in the chair, tho plans suhmitted by Mr St. Auhyn, architect, were highly approved of, and passed. The work is to he carricd out by a public subscription, about 1,000 t having heen already promised.
Election of Surveyor, St. George's Union. Tho Board had throe candidates, riz., Mr. R. H. Burden, No. 307, Oxford.street; Mr. II. Saxon Snell, 22, Southampton buildings, Chan. cery-lane; and Jur. E. Power, district surveyor's office, southern division of the City of laondon, 1, Walbrook-hnildings. A hallot was taken, which resulted in the election of Mr. H. Saxon Saell.
Crewkenne Cemetery Competition.-The Board have selected the desirns for new chapels nd lodge furnished by ilr. Ceorge Nattress, of Great James.stree, Bedrard-row, London, sub. ect to the instructions furnished to the oompeting rchitects. There were thirty competitors.
Society of Engineers.-Arrangements have been made for a visit of the members on Monday, the 19th insti., to the works of the Albert Bridge at Chelsea, the Thames Embank. ment at the same place, and the Wandsworth Bridge

Fall of a Bridge in America.-A bridge In Ilinois has given way while crowded with persons looking at a baptism in the river beneath. Fifty persons were supposed to have perished, and twenty-four injared.
Gas used in New York.-The amount of gas consmmed by the city of New York alone each year is estimated to be not less than $4,000,000,000$ feet

TENDERS.
Misleading Correspondents.-With reference to lists of tenders for new roads, Camberwell ( p . 356, ante), the sur-
veyor to the Camberwell Testry obligingly informs ns "that the eaid tanders were receped ly the Vestry on the 24 th of June last, and that the whole of the worls com.
prised therein are, with one exception, completed.s prised therein are, with one exception, completed." Wo
do not hesitate to हay that the lists were sent us by Mr. Riley, the contraetor for the work, who ought to hisve known that he was misleading.

## Brilliant Architectural Discoucries in Eastern Syria.*

BOOK of rea travel, adren ture, and dis. covery, hearing the rich fruits of culture and study in natural his tory, geology, local histocy, to pographical de scription, arcliteoture, il lustrated by the aid of the camera, written in good English, and perfumed hy a rare and delicate modosty,-such a hook as this does not often do credit even to tho press of Mr. Murray. It is, we know, against all rules of general criticism thns to commence a notice of a hook on Which it is not intended subseqnently to fall fonl. But we confess to writing under the chorm of a perusal at a single sitting, and we may he allowed for onco to speak before tho improssion has had time to evaporate.
It is not in the present year that Canon Tristram has to win his spurs, either as an explorer or as an author. It is fourteen years since he first visited Palostine, and his "Land of Israel" is no donkt known to many of our readers. We have hoen of lato rather over-dosed with the
Holy Land. A subject of essentially unrivalled interest, it has been selected as a themo by writers who possessed no spocial fitness for the task of its description ; or who, at all events, have not displayed much ability either to satisfy the intelligent ouriosity, or to fill and warm the imagination, of their readers. On hearing of a new work on Palestine, one is apt to hecome
conscious of a faint scent as of a sermon; and, whatever may or may not be the value of sermons under their natural circumstancos, they are, at all events, generally intolerahle in print.
The difficnlty experienced hy the readcr in their perusal leads to tho reflection of the ease, or at all evonts the ahsenoe of skilled lahour, which must have attended their production. Though a Doctor of Laws and a Canon of Durham, Dr. Tristram has not hy any means given us a volnme of sermons on Easterı Syria. Nor can We fail to pay a rospectful trihute to the admir. ahle taste of the few simple passages in which he has reminded us of the academio hood.
One main reason of the charm of the book we take to he that the writer is a praotical naturalist. Unless Solomon, Atisop, and Lord Bacon are all terribly mistaken, there is no sneh training, for
the man who seeks a higher culture than schools the man who seeks a higher culture than schools can"give, as the stndy of natural history. It has at once the advantages of a hoihy and of a curricning. It teaches cye and hand, awakens
industry, and stores the memory with golden wealth. For an exploration of an unknown, or almost unknown, country, snch as the pages in question have so graphically hronght before ns, it is, perhaps, the first qualification; for it in. spires a research tbat can never absolutely fail, and rarely he without valuahle resnlt. It tends to keep up the interest, the corrage, and thus the health of the exploror. It assuros bim, day by day, that something, however small, is secured for our common stock of knowledge, by

The Land of Moab. Travels and Diecoveries on the
Eart Side of the Dead Sean and the Jordsn. By II. B .

his toil and patience. And it not only leads to the record of zoological and botanical details that are in themselves of nas, hat it further tends to the more thorough comprohonsion of the geographical and architeotural features that may he committed to the portfolio or the notehook; and, above all, fills the mind of the traveller with a wonderful appreciation of the picturesqne.
The points which make Dr. Tristram's work a subject for comment in our pages are, of course, principally those which relate to the architecture of the country, a portion of which he is the first Europenn with eyes in his mind who has trodden. We may add those which relate to its engineering. As to this, we have a new proof of the wonderful energy and enduring skill of that mighty race who made Syria the frontier when their empire marched with the the Parthian monarehs. From south to nortb through the land of Moah, on the map which is inserted to show the route taken hy Dr. Tristrann and his companions, ruus the well-defined donhle wall of the paved Roman way, conneoting the fortresses, or central points, of Kerac, Rahbath, Dihan, Beth Meon, and Elealeh. The parement still exists, as it does on well-known portions of the ancient Roman roads in Italy; hut it is hroken up, and the flag. stones often stand on end. Tho width hetwecn the parallel walls is five yards. Across levol country the road stretohes as straight as an arrow. About eight miles to the west of this great military road a parallel line, aiso Romad, has been traced hy our travollers for ahont a mile and a half, leading to an interesting and extensive rain, known by the name of Um Weleed.
Next to the Roman roads, the chief engineer. ing features of the conntry are thoso which aro connected with water storage and distribution. To understand the importaneo, as well as to aecount for the extraordinary numher, of ancient cisterns, we mnst bear in mind the physical features of the country. It is not, like the valley of the Nile, a land "watered with the foot," or hy the use of the n'aura, or water-raising wheel Like Palestine, it is a land of hills and valleys, and "drinketh water of the rain of heaven," But it is not fed by that rainfall, as it gushes from springs and trickles in brooks. When the needfnl supply comes down, it is with such violence that it sweeps through the country, dolves deep clefts in tho marl, and rushes through ravines to the Salt Lake, that receives the entire drainage of tho distriet. Thus the construction of cisterns was an essential pro. vision for the snpply of the denso popnlation that once tilled and fertiilised tho now deserted district. On the Moahite stone, if we can rely on the translation of M. Clernont Gannean, is inscrihed the memorial that the ling of Moah ordered ovory man to huild a cistern for himself. Dr. Tristram givos ne a view of a tank at Ziza, town which, under the later Empire, was one of the most important places of Roman Arahia: this is constracted of solid masonry, and measures 140 fards hy 110 yards, or more than three times the area of the Great Birket Israil, at Jerusalem. The deptl does not seem to have heon ascertained, but the surface of the water was 17 ft .6 in . helow the edge of the tank. The masoury is magnificent. Tho courses run ahont 2 ft . thick, and many of the stones are 6 ft . long. This tank has been excarated at the angle of a wide shallow palley, just below the rising ground occnpied by the town. At its north-east angle, ahove the top, are very perfect openings for sluice-gates, in massive masonry. In a line with these gates, and also at right angles to them, are great walls, each supported hy a solid earthen embankment. The wall at right angles extends for some distance, heyond which the embank. mont is continued in the same line across the plain, so as to dam hack any floods that might
oome down the valley. Higher up, in the middle of the emhankment, was another set of sluice-gates for letting of the surplus water when the tanks were full. Stone breast-works, hacked by embaukments, are found further np the valley, constructed so as to torn the rainfall into the central channol.
As to architectural remains, Dr. Tristram is to be eongratulated on discoveries of nnusual im. portance. The long period of time during whioh this once fertile oountry has heen inhabited maybe divided into well. listinguished historic clapters, of almost each of which some distinct illustra tion has heen socured by the lahours of the expedition. To commence with the most ancient, -the mon-historic if rot pre-historio period, -we aro told of a region of dolmens and megalithic remains. The dolmens eonsist invariably of four stones, three set on edge, at right angles to one another, and the fourth, from 6 ft . to 10 ft square, fixed as a roof. In Moah they appear to he connined to the district between Heshhon and the Callirrhoe, althongh many similar structures are found in the bare parts of Gilead. They always occur on the sides, never on the tops, of hills. Irby and Mangles ohserved a group of twenty-seven dolmens in their route from Iis Salt to Nablous. These consisted of two parallcl npright stozes, with one flat roof. Mr. Fergnsson cites another considerahle group at a place called Kafr or Whas, not far from Tibneh. Dr. Tristram remarks that the three sreat classes of pre-historic monuments, viz., dolmens, stone circles, and cairns, oxist in great ahandance in three different parts of the oountry, hut are never found together. The cairns are fonnd exclusively in the east, on the spnrs of the Arabian range; the stone circles, south of the Callirrhoe ; and the dolmens, north of that palley. The existence of contemporary tribos, distinguisbed by different religions or funereal enstoms, living near to one another, is inferred from the observation. In our own country the co-existence of a hrrying, dolmen-building race, and of a barrow-raising incremating race, who paid small respect to the monuments of one anothor, seems oven more distinetly indicated hy the anomalons relations between these two distinct forms of funereal memorial
Advaneing to historic, though still very early times, we find traces of the Amorite inhahitants of the conntry in the sites and names of some of the cities, and in the use of hasalt as a brilding material ; the large hlocks of whioh were fitted together in mortarless walls, as in the nnoonrsed Cyelopean work of hetter-known regions. Thus on Jebel Shihan, the highest point of the monn tain platean, from which the Roman rond desceuds to cross the valley of the Arnon, a spot which Dr. Tristram identifies with the city of Sihob, the Amorite king, are fonnd numerons inclosures walled with blocke of nnsqnared hasalt, selected and fitted with extreme care, and resembling the Cyclopean remains in the Hauran or Bashan. They cover many acres. The side walls of the road are constructed of the same material; the use of which is more remarkahle from the fact that limestone is the native rock of the conatry, and is used in all huildings which can he referred to the last 2,000 years. A fortress on this hill is built chioly of limestone, althongh hlocks of basalt, taken from more ancient huildinge, have heen intermixed. A Roman temple near the fortress, of which broken shafte and Ionic capitals remain, was huilt of bmestone. It is very interesting to trace back the dim and haif-shrouded inks that connect, in this region, the earliest Somitio records with the relics of prehistoric times, "The Rcmnant of the Giants," at the time of the invasion of Palestine by Moses and Joshna, was foand lingering in the neighbonrhood of Cyclopean walls and megalithic tombs.
Ar of Moab, or Rabhath, Kir-Keres or Kerak, Dihon, Heshhon, and Elealeh, are other ancient cities of which the sites seem clearly
determined. Great interest attaches to anything The whole of the ridge was fortified; but the which may throw light on the situation of the iour citics of the plain, which were overthrown by the great geological convulsion in the time of bringes to our knowledue on this suhject, is a pro rosed identification of Zoar, the fifch of the con posed identification of Zoar, the fifth of the con on a bold headland, "overhanging the head of on a bold headinnd, "overhanging the head of cannok be said to be absolute, it yet has a good eanaot be said to be absolute, it yet has a grood prima facie raue. it from considerations which seem to us accept yet to have been disregarded by most investias yetors of this interestiog distriet.
Bela, or Zoar, is spolsen of as the least of the eitics of this ancient pentapolis. It was above the plain, in which the other four were sitnated Of these four more important cities, no shadow of a traco has been found. We must keep i vicw their designation, "cities of the plain ; which does not altogether preclude the idea that, like cvery other city in this region, they occupied "tells" or eminences, althongh they may have been comparatively low. But the plain
itself is now songht for in vain. The plain of itself is now songht for in vain. The plain of
Jordan, "as thou comest to Zoar," that was "woll vatered everywhere, beforo the Lord destroyed Sodom and Gomorrah, ns the Garden of th Lord, like the land of Egypt," is looked for in vain from the mountains of Moub. A small fringe of oasis, or fertile pasture, skirts the salt tide in plineeg. To the north of the miles' distance, aud rapidly expanding to width of some fourtecn miles eastmard she Jordan, lies Es Scisaban, or the Plain of sbittim. Soutb of the same lake lies an rea of sinilar conntry, covered first by cane hrake, then by a belt of rushes, then by a strip of tall, reedy grass, next hy a belt of scrub, affording only browsing for goats; then by zone of rich, park-lite land, yielding under cnlivation, barley, whent, millet, tohacco, and indigo; and, immediately on the gravel talus of the hills, by a scanty undergrowth, in which the osher, an asclepiad, is most conspienons. At some period of time, no one douhts, before the Ghor, or valley of the Jordan, had depression of $1,300 \mathrm{ft}$. belory tho level of the Mediterranean, tho gulf of Alaba, the castern of the tro horns of tho Red Sea, was the embouchure of the waters of this rreat line f arain. The plain grammatiol searo hie the book of Genesis, no less than Moslem tradition, implies the existence of a valley, now tradition, implies the existence of a valley, now nowhere to be found, before the great convilterms to a difference in the physical condition of the district before and after that overthrow. The vale of Sirdim, vallis Salsa of the Septuagint, contained muteibituminis. No asphalte pits or wells aro now known. The translation of St. Jerome is precise: in wallem silvestrem, qu
munc est Alare Salis. The term Shaveh, trans lated "dale," only occurs in this passage of the Old Testament, and is applied first to the depression running from Kireyat, or Kiriathim, down the vale of the Arnon, towards tho Dead Sea; and again, apparently, to the prolongation of tho same feature on the opposite coast. If Sodom was situated on or near the spot where Arnon on the east, and Kedron on tho west, fell into the original course of the Jordan, the whole description is perfectly clear. But if either the Persian invader, or the patriarch Abraham, had to make a detour round the actual north or south extremity of tho Dead Sea, the passago cannot be readily explained. There is thas good reason to suppose that in the orerthrow of "omnem circa eyfonem" we have the account of a phenomenon sucb as that which, on a smaller seale, but with not less awful surprise, ocenrred at Lisbon in the earthquake of 1705 ; when the quay, covered depth below the Tagus.

From this aucient date of Syrian eities, the oride tho most clearly-indicated period, that torate, and su dynasty, and the Romau protecover a period of 2,000 vears. Dr Tistram has discovered and described Machærms, the famons fortress of Herod, bnilt to cuard the Arabian frontier. Masada, the stronehold on tbe western shore of the Dead Sea, has been previonsly known. Machærus, now called D'Khanr stood on the summit of a cone, spex of a long flat ridge, running, for more than mile east and west, nearly half-way between mile east and west, nearly half-way between
key was an isolated and impreguable circnlar work, of exactly 100 yards diameter, on the very top of the cone. The periholus can be elearly traced, its foundations standing several feet depth; the surfaco. Where exist a well of great eistern, with the vallting of the roof still maining ; and two dungeons, one deep, and with its sides scarcely injured. Tho absence of any its sides scarcely injured. Tho absence of any f holes in the masonry, fitted for the recoption f staples of iron and wood, show that this wes a dungeon, and not a cistern. Dr. Tristrmm has added a most important identification to the very small namljer of sites that can be ourrery small namber of sites that can with the events recorded by tho Evangelists, in thus visiting and describing the spot whoro the messenger of Herod Agrippa "went and beheaded John the Baptist Agrippa " in the prison."

Under protection of the fortress lny a city, the ruins of which cover a larger area than any visited by our travellers, - square milo of undalating hillocks. A small Doric temple faced the sunrise, and an old Roman road wound from the city to the castle. This prodigious pile of stones stands at a height of $3,800 \mathrm{ft}$. above the Dead Sea, and the distant walls of Jerusalem, and the hill country of Judea, aro plainly visihle across the vnlley. With this fortress, in the fonrth year of Vespasian, fell the last fragmont of the independance of Judea
Of Romnn rule and infuence the traces are anmerous. We have mentioned the Dorie temple at Machorus. Similar fanes exist at Un Weleed and at Zehib, of the first of which Dr. Tristram gives a plan. We have mentioned an Lonic templo at Jebal Shihan. A fortited temple, of the Corinthinn order, forms part of the ruius of Kustnl. At Medeba a ronnd temple seoms to hare been conserted into a Christian church, and many Corinthinn capitals strem the ground. Two ruins of this to liave underrono an attemutod restoration hy the Saracens; for licre, as in the dome of the Rock at Jernsalem, capituls of differeut forms, ach fnr too small for the column on which it is placed, have been fised on the shaftg, and a block of stone has boen luid across them, wbich jet maintains its place.
From Roman times we thus come down to those of the Ehalifate, and of the Latin kingrim of Jerusalem. Chief amnng these may he nanzed the virgin fortress of Kerac, where Dr. Tristram's party were iuprisoned by the savare Mudjelli, or Turkish ruler of the place; and had the honour of occasioning the march of the Pasha of Jerusalem, with horse, foot, and artillery, to a rescue that was happily effected, valued friend of the expedition, Mr. Klein, of Jalued em, bofore his arrival. The walls of the double Castle of Kerac are moro massive and imposing than those of Avignon, which they recall to tho mind. The arch that faces the elliptical form used in some of our finest railivay tunnels. Dr. Tristram makes one of tho very few slips we have noted it raying that this fine castle was built noder King Falk, and strength ened under Godfrey of Bondogne. Kerac was the seiyneurie of Rene de Chatillon, in right of his second marriage ; and the lions rampant which fiank an Arabic inscription built into the wall of the castle, no dowht recall the golden hon of the Cbatinon escutcheon. Of worls of the Cbristian times, we can only Rasas, of which a photograph is given, as is tho case with regard to the square, solidly-built tower, standing mp to the height of six times its width, near the same spot, which is tho scene of a legend of the Jinns and the Gboules. wo have reserved to the close the discovery whole successfol expedition, and a tacit reproo to tho Palestine Exploration Society. Near the eastern limit of the plains of Moab was said to exist a ruined khan, which no one had visited, and which was not wortb the tronble of a visit Dr. Tristram had no idea of accepting Arab dicta as to matters of the kind; aud a sharp brought bim within view of a magnificent rnin mnnamed in the maps, and unknown to history What a moment for him! We enry him the thyill it must have cansed him. A equare quar than 170 sards caus a s bastions at each angle, and fire demi.bastions
between ; the curtain being 18 ft . high. On the sonth face was the ouly entrauce, a gateway, flanked hy two octagonnl towers, with a fretted façado of 52 yards long in the centre. On the wall is wrought a bold patteri of vandykes, or as Dr. Tristram puts it, " liko e contianed W, with a largo rose boss between each angle," above and wo the cut windly enaded to tion." "These patterns stand out boldly from the plane of the wall. Every side of their surface plare of the wall. Livery stdo of their surface work the forent and foliore ond", "" warie birds and beasts are cor endless arn an an cor Tp. Cty a upwards of fifty animals are represented, in al monldings of conventional patterns, and the in torstices filled in with very beautiful adaptations of foliage. The quadrangle was divided inte of foliage. The quadrangle warllelogram being 66 yards wide. Seventeen or cirlteen chamber on cither side of the entrance served for guard rooms. A large open hall, flauked by ehamber with vaulted bick roofs, formed the chief apart ment of this noble palace, for tho further detail of which we refer our readers to the work itsel and to the admirable woodents which give plan elcration, and details, of this long-forgotte Work of Oriental magnificence
We are disposed to agree with Mr. Fergussor in attributing this unique relic to the Persiar sovereigu Chosroes II.,-a determination which gires the date A.D. $611-627$. It appears neve to have been entirely finisbed. There is n trace of Christian symuol in the enrichment me presenco of the animal forms shows that i is not Saracenic. It is different from any thing Roman. Unlike the capitals of th Kubhet es Sakhrah, and of the Masjid el Aka at Jerusalem, those of the inner palace have beon wronght for the places they occupy; indee much of tho ornamontal work has been carre in situ, that is to say after tho stones were set thus the value of the discorery, as supplying al example of the arolitecture of an aze and a sty? hitherto anknown, is of tho first importance. Thi exquisite dotails of the fretwork aro well dis played by woodents from the photographs take many the rabrs party. Mey will sugg o $b$ found in Iudia Venice, and elsewhere, an nught to lead to some dissertation. We repro duce a restoration of ono frout of this hithert uuknoen Persisn palace, made by Mr. Fergusson Dr. Tristram deserves the thants of thi rehitect, the naturalist the eelorist, thi historion, and the reographer, and we las dour the pen only to glance afresh over his most iute restiug pages. $\qquad$
ROYAL ACADEMY EXHIBITTON.
Amoxass notes to be added to those alread a attractiveness of what may be seen at Burlineto House; for tho crowds that fill tho spaciou galleries are more than three. fifths of the faire of the more than three. in -it need searcel o said how composed the remainder may be and although it is a weak trust for judgment $t$ be led by what a pretty eritic sass of less prett faces that are to be found in the picture than her own, "She nover saw anytling $s$ lovely!" -it would he a mistake to think th Royal Academy Exhihition this summer not very attractire one.
A seated figure of a Grecian maiden wreathing bays for some happy victor's head is exquisitel ndicative of ML: F. Leighton's art, that in its hes form idealises without destroying nature anc probability : tho girl is very beautiful, with suct classic graces more often to be found epitomise cold marble than in the warmth of genia colour,- that it must be guessed she is th Vreath" (261), being laurel-crowned herself his highly-finished study is the single pictur Mr. Leighton coutrihutes, but a design for mara decoration, - an allegory of "The Industrial Art" f Peace" ( 1,270 ) componion to the alread phihited "Arts of War," forming part of projected adomment at the Sonth Karsingtor rusenm will fally acconnt for this, Of al Huseurn will fully acconnt for this. Of al lings in the word, excepting dragons ane omets,-als oris are most contentious he many-minded apprehension of their meaniog learning and inventive adaptation of various
attitudes in tho several models that go to its mould, this composition descrves all praise: the ladies who are engaged to adumbrate the peaceful nrts that belp ther to give ne peace; the hair. dressing j dressmaking,-looking-glass worship charmingly expressive and arranged (what a feast they would make for Mr. Poynter's dragon bofore More had left not much of him), hut the hard work of factory.mill lessened hy art; the great head-work that has reduced hand-lahour's ing-the earth and ocean; holding friendly converse with tboso from whom hundreds of miles of deep sea divide and do not divide us: the bread-making, in fact, to feed mind as well as body, should hear some part in an expesition of the industrial arts of peace.
Mr. Leighten's Monochrome is a notahle work, tbougb music, poetry, and perfume are made uppermost in his idea of peaceful art : industrial, he is one of its best expositors; better oxample coald those who ask for combi nation of the real and ideal refer, so far as tho refincment a olassical refincment gives, than to Mr. Leighton's hest pictures. Many stories have been told about dragons, heasts of insatiahle and epicurean appetite, and these lave been swallowed so generally, aud enjoyed so much, that Mr. E. J. Poynter zoust be considercd quite kind
to provide a new oue for all who are fond of the to provide a new oue for all who are fond of the marvelleus : besides, the dragonisa natiovalinstitution with Britishers, who kuow it to be more than the coiu of the hrain, if the head of the sovercigu does give currency to the tale or the dragon St. George put a finis to. Mr. Poynter, no doubt, has foud some very black-letter precedent to the popular edition, by which the true and particular account of the "Figbt between Morc, of More Hall, and the Dragon of Wantis nothing at all burlesqno ju this relation : the dragon is real onough to ritalise the report of the deadest cracker ever told to verify fights of fable, and, had it boen a vory old representation, snch a portrait of the period would put a dis. belief, further then would imply just a little doubt, if half a dozen Life Guards of more degenerato days would get the better of such a littlo difficulty as the dragon of Wantley, in less time than it had taken this concentrated force of a phalanx-the champion More, of More Hall. Mr. Poyuter's geajus has given hreath to the concatenations of crocodile, Chinese fireworks, and lion's paws, and shown how to his heat knowlodme, of the hest method in killing tbem. The picture is painted to fill a parel tbem. The picture is painted to fill a panel at Vbarnclifie Park, near Wharncliffe Chase, the scene of tbe legend, and to serve as a
 hases for exaggeration to mako monsters of,
to accornt for the boast of Crusaders begetting to account for the boast of Crusaders begetting
Medixeval belief in dragons. Even catile and Medireval belief in dragons. Even cathe and
sheep, and such harmess thinge, we ugly there ; and Mr. F. Goodiall is a more trustworthy authority than the first-class traveller of former days, who took toll with a venreance.
"Subsiding of the Nile" (292) leaves such a view of blank promise of pasture for gaunt herds, such a show of what inundation has hidden for a time, and killed to regenerate; doe damage that no dam of any age could presuch stability as tho wordd can sbow, and the wide expanse of calm, smiling sky, that would seem to emile the more if any raunt conld be made of this same stahility-in Mr. Goodall's "Faith." Landscape, native figurcs, camels, and cattle aro all so well depicted here that it would he quite a question as to the category of deno. should come under. He asserts a right to all, hit nore widely, that the true artist, like the tiue author, can tell thoroughly well of all he observes. The thorough system adopted by parent passes to son, and if the "Capri Girls mise of great distinction for Mr. H. Goodall is more tban half performed. It is a lovely pic ture, and not nearly so easily to he identified with the source of its style as Mr. C. Hunter ${ }^{2}$ seascapes are with Mr. Hook's. "Trawlers waitiug for Darkness" (386) is an cxtraordinary instance of example's dictation; not hut what the power must have heen ready, waiting its direction. How often is power misspen througb the want of this guidance.

That pity which is akin to love has done more for many an object of it than would he possihle to other regard, excopting that of love. Genius, eccentricity, and a ead end to them,
with the pity it excites, do for the marvellous with the pity it excites, do for the marvellons boy Chatterton what the amber does for the substanco, fy or moth or accidental matter, that it smrrounds and heautifies. Mrs. E. M. Ward admirably studied and painted pictures aro always looked for at Royal Academy exhihitions, more thoroumhly, thau in adding to the interest felt for the "Bristol Wonder,"-

The marrellous boy who perish'd in his pride.
Mrs. Ward shows him at work in his study, an attic ho had appropriated nnder his mother's roof, where, in solitnde, ho delighted to lock
limself up with bis books, papers, parchments paints, and drawing materials, to be surprised sometimes, having, in his cagerness to become husy, forgotten to turn the ley. The church of St. Mary Redcliff, seen through the window, fixes the locality, and makes tho story unmistakable. "Mrs. Edkins (his foster-motber) relates:-When she could get into his room she would. Onco he put his foot on a parchment on tbe floor to prevent her taking it np, saying, "You are too corious and clenr. Bighted; I wish you would bide out of the room. It is my room. that, bye moment of Mrs. Ward insernen hoy, and capol and with the brilliant skill with which interior effect and carefolly selected articles of still life are imitated, is a perfect realisation of the incident. Sun-rays fromarift in tho storm-laden sky stream ight througb the window that secms to hetoken the gleam of promiso that dark clonds to a Panteclinicon van as attempt to curb genius. So think many. If genius were the genius. So uncontrollable gift that somo of its appearbencficially ordained, indeed, that the gift should be a rare one; hat the supposition is about as ahsurd as would ho ingratitude for the brightness and warmeth of glorious sun. light that occasionally hurns a houso down, through a knot occasionally hurns a house ithe glass that admits it. From Tycho Brahe's timo to now comets have defied all opinion of their purpose, their use, their intended influence Short record of astonishing appearance, disturb ing cffect, and sudden exit, is the tale of al comets, and of Chatterton among them. Mrs. Ward will find numerous admirers of her very

Mr. J. Tissot has devoted much pationt lahour to the exquisite elahoration be exlibits connected with genteel sailor-life, and the attractive effect a smart lieutenant or first mate uniformly has on lasses or young ladies who love sailors (hy "uuiformly" it is not to be inferred that more than due allusion is made to the becoming wear of true blue; though it goes without saying, and is the most natural thing in the world, that many of its wearors are manly handsome gentlemen). Mr. Tissot's econes are as puzzling tosome as the second act of a Frenc comedy would be to any one who had not neen the first and did not know the language. The "Last Erening" (108) most certainly affccts the damse! who is looking at nothing, but taking binocular vien of a soparation from the good. to -nigh offoer seated with ber father, wor he bappiness and advantage. She is wondering how Walter will bear losing sight of her. She knows she never can live without him: the sca and ships are horrors to her, and her mother thought the same before ber. Walter thinks the rovernor hard but reasonable, as he kistens to the old adjuration to patience; and memorandum that "if a girl is not worth waiting for, she i
scarcely worth the thinking of. ${ }^{22}$ Tbis is as clear for one reading as all the very cleverly repre-
sented adjencts that form the descriptive sented adjancts th

locality for the story.
need for a sea voy wonld have depicted the Captain's Daughter"" (121) plainly to "The wiso to keep her in ignorance that her thought a cause for ane ignorance that ber health is this. Howsiety, and Mr. Tissot only whispers mana How log that intensely-loving lover will or doge to keep the secret, his worship knows or does not know. the girl is lovely : not only by reason of the face hringing the knowledge, but of the knowledge the face and the action of the beautiful hands express; for she knows better than she can he told how vague are the hopes entertained for her. It was not for the sake of paintiog intricate rigging, masts, and spars, and many other things, and giving such value to matter of fact-that, for the vulgar, is the great charm of the picture-the picture was paiuted at all. Old experience in hlack is th doctor, and be is criving a very honest opinion Mourning still a similar loss, he adjures the stout captain to caro for prevention Mr Tissot's interesting story is too pleasantly told not to leave it a sure thing that the dear girl will he se henefited hy the rayage that next will he se heneled we the rage that nex lover, and just in time for the ball that will be given on tbe occasion.

ARCHITECTURE AND DECORATIVE ART IN THE TNTERNATIONAL EXHIBITION.
To make an Art. Exhibition every year, on so largo a scale as the galleries of the International Eshihition building demands, is, as we have duly pointed ont before, scarcoly possible. In regard to the highes branches of art especially, it is nseless te expect that pictore galleries of this extent can be Ellicd annually with modern paint ings of at all a high averago. But although a first hasty walk through this year's Exhibition will convey the impression that there is in the ait department a mass of things not worth looking at, a more careful inspection shows that there is enough of good art to he discorered, of one kind or another, to furnish matter for much onjoyment and some study, though intermixed with much of an inferior kind.
The collection of architectural drawings in the gallery of the Albert Hall, though not numerous, is good in point of quality, so far at least as draughtamanslip is concerned; and includes, with some well.knowu works, some which wo have not seen illustrated hefore. Mr. Worley's "Interior of Exchange Hall" $(2,904)$, part of a competition design for Stockton Exchange, is a grood water-colour of a rather fine room, witly no very special character about it. Tho "Wesleyan Chapel, Tunbridge Wells" ( 2,905 ), by Mr. C. Bell, is a very good design of its class, Early Gothic, with a side entrance and stair turret to gallery, treated in an original manner; tho drawing a line one, in sepia for the main huld. ing, and the hackground and accessory huldings for High School, at Kollsapur" (2,908), is hattor for High School, at Kollhapur" $(2,008)$, is hettor
than many engineering designs wo haro soen. than many engineering designs wo havo soen; T. Dowland Plumbe's "Bryant and May testi Mr. Now and Mryan and lestimonial Fountain" ( 3,913 ), if not matchless, is certaizly not helow the ordinary merit of Edwards' "W esan Chapel, Stole Natcbelt " Edwards's" Wesleyan Ohapel, Stoke Newington" $(2,915)$, looks, perhaps, rather better in the drawing than in reality, but it is a bnild ing of considerahle merit and originality the treatment of the tower, with its heary, almost unbroken, brick buttresses, and the bigh narthex roof forming a kind of transept to it, realises a solid and dignified effect. A pretty hit of domestic architecture (half timaer) Mr. Young. and Mr. Hall's church at Dorchester $(2,918,2,925)$ will bear inspection. Mr. Weir's "Wesleyan Chapel, Clapham" $(2,928)$, is a fine drawing of a very weak design. "A Cottage Residence," by R. A. Came ( 2,929 ), is very good, both as to drawing and design. Mr. Howard Sayo's beautiful drawing of the Aberystwith College $(2,034$.$) is much hotter seen here than at the$ Academy last year, where it was haig too high. It is quite a study in per-and.ink drawing of this type. There is also a coloured drawing of Victoria-terrace at Aherystwith. Mr. Morrison Marnock's drawings (2,931-5-6) should be ine
execution. Tbe " Sketch of half-timbered Honse with Shop" is in every wry praiseworthy. Messrs, George \& Vaughan's "Entrunce-lodges, Ronsdon, Devon" $(2,937)$, are a little too for Suspension- bridge between Putney and Ful. ham" ( $3,9 \pm 5$ ) is ontirely spoilt hy the bird-ango erections on the top of the piers, intended to give " lightness," uo doubt, but only resniting in clumsiness. Snch things as the piers of a sus. pension-bridge cannot be treated (architec. sign for a Gentleman's House" ( 2,914 ), by Cole A. Adams, is good in its way : a strong? y . coloured red.brick structure, with angle-tower decorated with sgraffito work in its upper
stages: and "Chorley Town-hall, 1872 " $(2,919)$, stares: and "Chorley Town-hall, 1872 " ( 2,919 ),
by Mr. A. Bickerdike, is a surcessfu! attempt at what may be described as Gothic gronped and composed in a Classic manner. A "Design for by Mr. E. Monnt, is a good monumental-looking interior, with double pier-columns, and
blind" triforium decorated with wall-paintings
In stained glass there are only a few contribu. tions this year. The window by Messrs. Gibbs,
on the sonth.east staircase, "Tbe Consceration of on the sonth.east staircase, "The Consceration of
Solomon's Tcmple," is one of the usual patch. works of coloured dresses and architectural canopies, without a single suggestion in treat. ment other than what has been done a hundred times before. On tho uorth-wost staircase three domestic windoms, ly Mcessr. Cox \& Sons, suggests some originality of troatment in a simple manner. The upper one, of a Renaissance type, shows renn treatment of foral ornaments in panels the Gothic namner, cshibit small firure ones, 14 from Chaucer, Shakspeare, Mitton, aud Teunyson, with roedallion portraits of the poets, tho greater part of the space, however, being occupied by geometrical diaper in small squares, and with bappily-toned border of conventional leaves in low green tiats: the whole effect is very pleasing, though tho figure portions aro not the most satis. factory part. A window adjoining, illustrating heads (life size), which are coarse and inexpres sive to a degree, illustrating onco more the unsuitability of stained glass to represent any but figo most conventional and unomamental type of joining show a tolerably rich, offect of colour. The window for St refined, College, Cambridgc, by Messrs. Morris \& Go. (south. West staircase), claims moro special notice, as marked by an individuality of style is put forward as the one new light in and glass art by a school tho are anch atainod. praise one another. Whis are much given to containing full. length portrait figures of throe benefactors, or formor "heads" (we presume), of Stuefactors, or formor " heads" (we presume), of St. Peter's College, in red furred gowns, and the window over the fransom cawpel, crossing the mindow over the transom. All thess, in the spaces below, is left (after Mr. Morris's recent manner) in quarrics of nearly white glass, with a very slight grisaille diaper, This metbod, by which the figures stand out in a blank space, must bo designated as a whim, Which may or may not have a good effect, ac. cording to circumstances. In the prosent instance could have been treated, if tho colour of the dresses of the figures is obligatory; for is is difficult to see what colour accessories could har. monise with them, without rendering the whole design rery sombre and hoary. The faces of the figures are better drawn and delineated than in most similar cases, though the exageerated happy; tho effect of the mass of dull red in the drcsses is anything but pleasing, and it wonld surely have heen better to havo idealised the costnme a little. If the mindow is to be placed at some distance, and high up, it nay look better than lere; as it is, wo cannot regrard the effect as very happy. The oentre figure, with the big cowl over the head, soems even studiously ungainly, but the design is at all events free from vulgarity, which is a good deal to say as stained glass designs go. A curious contrast to this is a German window, on the N.E. staircase, commemorative of tho late Teatonic successes in arms: a mailed figure leaning on a shield bear ing the Prnssian eagle, and bolding a battle-axe the head is relicued arainst a kind of but work. Everything here is purely conventional;
the colour is better than in many German windows we hare seen (wo intend no very extra. ragant commendation) ; and there is a certain dignity in the design. Plaood at a proper dis. modorn Renaissance huilding, it would fall into modorn Renaissance
All the decorative furniture, \&c., Trorth speak. ing of is collected this year in Room XIX., and ing of is collected this year in Room XIX., and quality of the collection it makes, tho average quality of the work, in proportion to quantity, being better than in either of the two previous ycars. In regard to the furniture proper cahinets, and so forth), there is more clegance of form and less of that stitriess and angularity of line which has previously characterised so much of the Gothic furniture. Among good things in ( 2,639 and others), of good and some cabinets design. sideboard by C. Beran what uow plain wood, with polished shafts, and has-reliof illustrative of corn and wine carved on the cup board doors, is a piece of work in very good toste, and well ezecuted, withont any show or glitter; the only mistake is in the rather coarse bluo and white flowered tiles at the back, which do not at all harmonise mitb the tone of the wood, or with the style of the whole thing. W ato ererything tats, because tiles are inserto ment ought to be exorcised in the seleotion them, otherwise this source of effcct becomes mere trick. A dining.room chair, by the same hand $(2,621)$ is equally praiseworthy, simple and yet effective, and thoroughly snited to its pur pose. A chair and cabinet of inlaid marble (2,623-4.), by F. Dalan, are very woll executed, but the material is qnite out of place in a chair which ought always to appear, though solid The ebonised cabinet ( 2,631 ) is not improved hy the introduction of Mr. Moyr Smith's tile-paint ings. A small standing oak fire screer ( 2,631 a) exlibited by Messrs. Cox \& Sons, is really a new idoa and a pretty one. It consists of centre-piece and two unfolding leaves, each panes of stained giss. not rood, but glass; the finish at the top is ing thing. The oaken sideboard (2,638) designed by Mr. Talbert, is a very good solid inlaid conventions olject; the effcot of the here, again, the tiles aro ont of keepine with the here, again, the tiles aro ont of koeping with the
rest, and injure the effect. Messrs. Cox exhihit some brass church furniture in their nsunil style and with their usual excellence of exeoution, but presenting nothing for comment. An ohonised cabinet with canopy, by S. J. Nicholl ( 2,630 ), is tho most original piece of farniture design exhibited; the "composition" and ontline are very good; it is decorated with conventional caf patterns on a gold gronnd, somemhat resem. often found in Persian porcelain. Among artioles of farniture of the Reporcelain. Among articles by Fourdinais With numerons delicately-carved forures ; mixture of inlay with carving (a light wod for tho flesh-tints of the figurcs, and a darker ono for the drapery) is, howevcr, a questionahle expedient. The large oak bookcase ( 2,610 ), by Venter, of Brussels, is a good pieoe of oak oarcing, mostly guirtless of sandpaper, in the Brussels taste, with panels carved in rclief, somewhat in the Grinling Gibbons mannor the decoration has little reference to the object of the artiolo. The inlaid marquetcrie cahinct by Salour and Fanderschuren $(2,632)$, is a specimen of a class of work in which the labour is very mach out of proportion to the artistic esult. Somo wiso person has taken the trouble o paint two trbles, one in imitation of inlaid rood, and another in imitation of inlaid marble (2,621, A and B); they are really wonderfully clance; their quite cheat the eye at first time and labour over them, which it mat man hoped ho will learn to employ to better in future. With these, in artistic value, may be classed the inlaid marqneterie table ( 26.2 ) be N. Corpaten a most 2,622 ), by the worst possible taste ns to design or work in The Duke of Edinburgh lends dingn and colour. and chair (2635 6) bingalese cahinet and chair ( $2,635-6$ ), the former curions from composed, and both fr the of which it is character of some of the oddly "Classic" daracter of some of the ornament ; and an adian chair of pierced ivory, sitver mounted: wroag application of ornament; the whole of
the framework, and even legs of the chair, are composed of thin ivory, pierced in an almos gauze. like perforated pattern. It is to be pre tho required support, bat the look of the thing is as if it wapporl, wat the look or the taing vere venturous cuough to sit down on it. The tore venturous cnough to sit down on it. The ( 60.4 A) is a yery pood by Doulton \& Co , - , is a yery good piece of terra-cotta and flowers so and defined in the irieze of hirds idea that under the sheif, as to suggest the wards; but it is a hare been tooled up after cannot get bettor designs to lay their material on: the present, as a design, is simply worth less. Under this chimney-piece is a specimen of damascened mork, by Zuloaga (Spain), whose Fork of this kind me noticed last ycar, iu the shape of a large salver (,- 675 ), of really splendid workmanship and design; and four brass trays $(2,666)$, with flat incised ornament, by J. IV. Singer (Frome), are very good specimens of this sind of work ; and a brass cnamelled salver with a radiating pattern of somewhat Mooriah character, by Isepec (France) (2,664), is a rery bcautiful piece of work.
There is too great a run, as we have hiated, on tiling. It seems to be accepted nstauce thero is anything on tiles; for Mr. Marlig, for the "Seren designs here, by executed on tilos in which ono feels that design is quite thrown which is quite thrown iway on a materal in Messrs. Simpson \& Sons Lessrs. Stmpson \& Sons exhibit great panels of anime hima tutod artietic mind rr. Culomon lad car's, win female car s ( 2,466 ), hut sends a similar one on a larger it is too large in the fignre is not so successful; is too large in the body, and too small in the the drawince Mr. Moyr Smith's design "Homeros," he arawing of which is in the Academy, is here executed in tiles, and is, at all ovents, in a anner and execution, suitable to tile painting, which cannot bo said of much of the work of this kind. The contribntions from Minton's art. pottery studio seem moro marked by good recution than good art. Two small vessele $2,621 a, 2,657$ ), carved in stone by Lieat.-Col. Pollock, present a novel effect from the subdued ilver-grey lastre of the surface, which is carved with birds and flowers on a small scale in low elief. They would be yalued by artists as Two sories in a still-jite painting.
Two mosaic life-size figures, designed by Mr. F. W. Moody, and worked iu the Kensington. School of Art by F. H. Cole and others, nro adel (2,560.1). position, and has most character. The drupery in the Raffaelle is somewhat stiff in Line, and the face ishardly a stccess, hat would probably appea better at a proper distance: these are almost too near the eye to be fairly judged of as mosaics Tbe specimen of artificial mosacio pavement, by Messrs. Rust \& Co., in the Albert Hall crallery should be looked at by all architectural visitors Who have not yct employed or noticed this ver beautiful manufactrre, which gives a tore and texturo of sarface for floors and dados mach richer than tiling. Some of the geometric colour designs in this are very good.
Wo may mention in this place the remarkable acsimilo (produced by the aid of photography) gallory. In the wroy of illustrative this quito an achere as well as the line of the giving the texture the topestry itself, ns an example of enly atter of at the well the portrayi of human figures in action, is is full of spirit in mony places, and grouping childish spirit in many places, in spite of the childish in character of the drawing; as a study of dene in colour it is sugrrestivo enough to the deoorativo artist of the present day. From tapestry to laco is an easy transition; and we may concludo our jottings on dccorative art by mentioning that there is some ploasing laco design to bo seen in the Gallery and in room XIX., among which wo are glad to 500 examples of moro stadied and geometric design than is common in this kind of work ; much of what is catled good lace appearing to consist, in point of design, meroly in a kind of aimless mingling of forms to produce a pretty and intricate ensenzute. Exceptions to this are tho lesigns marked 2,722-3-1 (in Room XIX.), which
are rery systematically porked ont ; the last-
namcd, however, is a copy of old French lace, made at Lady Molyneux's school. This, which is in squares of alternating geometric patterns, very mnch resembles in style of trcatment tbe laco which is now made by the native Brazilians, artistio effeot is much superior to "Brussols," though a fur less delicate manufactnre.
We reserve some remarks as to the foreicn pictures that are worth looking at; wbich really are not "few", thougb cortainly somewhat "far betwoen."

PICTURES BY PHILTIP AND CRESWICK
The idea of making the 1nternational Exhibition an opportunity for collecting together tho works of a good one, and has resulted in giving an interest to the picture-grallerics this year whioh In regarding the collcoted works of any one artist, we are able often to form a far better than from acquaintance with a comparatively small number of specimens which accidental snccess has popularised; and even prac-
tised art-critics may find their judgmont of a painter materially modified, for better or worse, by a study of all his principal works in
justaposition. In carrying out in future exhi justaposition. In carrying out in future exhibitions the idea thas started, the selection, we
aro told, is to be made with care, and the choice of a painter's name for this kind of illustration is to be regarded as a testimony to the real posthumous value of his works. It may also, how. ever, have the effect in some cases of exploding The paintings by Phillip and Oreswick col lected in Galleries XV1. and XV11. number about 330 (including sketches and unfinished pictures), of which considerably the larger proportion are by the former artist. Tbe juxta. painter is an unfortunate one for the landscape killed by the bright colouring and "full" paint. ing of tho Spanish scenes of Phillip. In a general way, tho mixture of landscape with
figure suhiects is not disadvantageons to either but whero one painter has worked in such com. paratively quiet and delicate tones, the manifest anjustico of placing his piotures amid a number to have been avoided, and the landscapes placed .separately. The collected works of Phillip exhibit to a rcmarkable degreo tho change whicli may come across the tone, style, and predilcctions of come across the tone, style, and predilcctions of the samo painter in tho course of an artistic life. fime. The earlior works of Philip, -mostiy of faint ecbo of David Wilkie, with a truer feeling for colour, certainly, but also a feebleness of ing for colour, certainly, but also a feebleness of could afterwards paint works characterised by could afterwards paint works characterised by These earlier works, therefore, we cannot rcgard as "John Phillip," but only as the preparation for him. He found his real powers and capa, bilities, both as to execution and expression, when be made Spain the land of his artistic
adoption. But in his Spanish pictures there adoption. But in his Spanish pictures there are,
again, two distinctly-marked periods, the point of change being almost precisely referable to the year 1860 . The Spanish pictures painted before tbat year include some of those by which the artist has been most popularised through exhibition and engraving,-such as "Tbe Gipsy
Sisters" (1,217 in tho Exhibition Catalogue), Sisters" $(1,217$ in tho Exhibition Catalogue $)$
"The Letter-writer of Seville" $(1,223)$, and others. In these and kindred works the painter seems merely to have scized on the outward materials which are presented to the painter in Spain, the glow of dark cheeks and hright black and his style of manipulation is of that kind of hard and brilliant polish and finisb which takes the popular eye, aud leads to a demard for since 1860 that the artist shows evidence of baving penetrated into the national character to such an extent as to throw the inner spirit of it, as well as the outward form, on the canvas. His manner of execution too, subsequent to the above date, is much altered; the oolours become richer and more harmonions, bnt less bright the manipulation changes from the polished smoothness of the earlier works to a manner rongher in appearanco, but with far more rioh ness and fariety of texture. The one excention in point of character perhaps, mone the earlier gictures, is the admirable "La Carita," painted
in 1857, the result of careful studies from the roverend father depicted, and who is rclated to have been surprised and scandalised at the result of the sittings be gave, till the artist explained that it was his "pradonce" which was intended to bo illustrated. Of the latc series one of tho earliest and cleverest as study of character is "Doubtful Fortune" ( 1,203 ), where a young Spanish lady is having her fortane told from cards held by a stardy half-savage-looking gipsy girl, with matted black
locks, who screws up her eyes, and fairly grins locks, who screws up her eyes, and fairly grins
in ber endeavonr to decipher what is "on the cards." Among the larger oompositions, the fine one (perhaps his hest work) "La Gloria" ( 1,311 ), sbonld be compared with the first sketch for the work on the opposito wall $(1,229)$; the manner
in which tbe composition bas been altered is interesting. In the sketch the perspective of the composition is sbarper, tbe foreground group occnpics a larger part of the canvas, and the gay scone in the oourtyard beyond is backed by an arched gateway so placed as to seem a kind of trium phal arch over the prinoipal background figures. In the finished pieture the dancers are more fally sbown, and the work is probably more taking to the popvlar eye; but breadth and effectiveness of composition as well as feeling are been somewhat sacrificed. Tbe large pic ture of "The Early Career of Murillo" (1,329), is not altogether a good subject for the painter here is some want of concentrated interest in it As a composition it is very carefully worked out, and the figure of the "Gitane," who bas probably becn acting, with her little boy, as a model is very characteristic, with her sensuous ex berance of form and stnpid gaze at toe picpoint and expression, as well as in powor point and expression, as we scenes at the State lottery, "Loteria Nacional," "Reading the Numbers" and "Buying tho Tickets" ( 1,212 and 1,235 ; the ordor should have been reversed in hanging). The contrast in the former, between the look of the fierce, desperate man who has drawn nothing, and the evil-look. ing female who lowers from bohind, and on tho other side the gay, thoughtless couplo who have heen lucky, is finely given; and in "Buying the Tickets" there is a fine strose of satire in the action of the little girl devoutly kissing the hem of the priest's garment, while that wortlyy is at the same moment carefally inserting his ticket between the leares of his breviary. The figures on the left in this picture scarcely explain them selves sufficiently, or else aro insuficiently con nected with the suhject. Among tbe smaller works a conspicuously excellent one is "A Chat round the Brazier" ( 1,307 ), where tbe priest demonstrating an argument by the holp of his pipe, and the fat, jovial-looking dame opposite to him, form a contrast full of geauine bumour the rest of the figures find their place well in the composition, and helpout the point of it. "Tho Wine-drinkers" $(1,313)$ is a perfect picture of Inxurious indingence; and among the single figures a somewhat similar success is achieved damsel reclinine lazily back, and slowly puffing damsel recliming lazily back, and slowy puing out tho smoke between her fat languid intensity of enjoyment. The unfinished languid intensity of enjoyment. in Room XVII. pictures, which are an then that the artist's talent and power were improving to the last The large picture, "Selling Relics at the Oburch porch" is one of the best and most carefull composed in the collection, hoth as to gronping nd colour: the collection, homplating gronpin chase with a smirk of satisfaction at the bargain and the pomposity of manner in the stout old lady struggling into the charch-door with be hack to the spectator, are excellea itcms this work; not less so the beggar's dog, un painted, and merely indicated hy a few masterly strokes. "Off Daty" ( 1,458 ), "Mendicants hild's face exquisite), "The Scamstress" ( $1,4.51$ ), an admirable composition of two figures, are all worth attention ; ond one of the cleverist things in the gallery is the rough sketch callea "Winnowing Corn" ( 1,462 ), a simple but most effectively grouped composition of three figures; the action of the young woman winnowing, the way and movement of her body under the aress, are given in a most masterly manner.
Dear me, what a wrotohed dauh! Some amateur, I suppose," was the comment rented in our ears by two respectable persons of broad. cloth variety, at the moment of making our note. Will it ever be any use lettiog the British public into a picture-gallery? Before quitting

Phillip it may be mentioned, that the artist is epresented also by a fair proportion of portraits, decidedly weak in treatment. That his subso. guent neglect of portraiture was not from want of power to treat it in later years, is evident from the simple but striking likeness of "Sam. from the simple ", (1,257), mongh, A. palette in hand, beki nd moors nd untricomed in moors olour drawings. lour drawings.
of our late distinguisbed landsoape-painter, is more difficult to know wbat to say, in oviewing an exhibition of his collected works. Whilo wo observed that Creswick suffers by mmediato juxtaposition witb Phillip's pictures, may be coabled whether tho collection of bis pictures in a separate apartment would not have exposed him to a disadvantage of another kind, resulting from their comparative sameness of tone and treatment. There is, in fact, scarcely enough in Creswick to sustain onr interest through a large number of his works. That there is a heautiful fecling in nearly all of them is unquestionable; the rcason they do not affect Is more we take to be the lack of what may bo called intensity of aim in any direction. He
seldom riscs to the poetry of landscape, to any seldom riscs to the poetry of landscape, to any oxpression of its metaphysical sense and beauty, the interest of his pictures is mostly realistio, and yot it is not realistic enough to impress as powerfully from that side. This is what causes the comparative failore in effect of such land scapes as "A Place to Remember" $(1,197)$ and "England" $(1,209)$. The latter is a realistic representation of au every-day English coantry scene; bnt, for a realistio representation, the tone antl texture of foreground, water, and trees is not sufficiently wrought ont and discriminated. It is possible to affect the mind strongly hy such minutely finished realistio strdy as Brett' "Among the Grauite Boulders," in the Academy or by such.a powerful orasp of the broade eloments of light, shadow, and tone in landscapo ns is to be seen in the magnificent works by Dupré and Corot at present in Old Bond by Dupre and such comprehensive convention slism as that of Cox and De Wint. But it is not rossible to do by mepresentans which erade the ultimate rance in hoth directions, and which
 are a compromiso between poetry and reausm And this is tho case wion a majority o the ata of col ard tone aro subordinated the detail to the gencral effect; a system adopted by Turner in many of bis grandest works,-but then with Turner the general cffect is always broad and powerful enough to compensate for this witb Creswick it is not so. That he could on occasion rise to the poetry of natare is evident from such works as "Evening" ( 1,390 ), and, so far as composition is concorned, "On the Clyde" $(1,215)$, and "On the Greta" ( 1,260 ), two of his most individual works as to motive and tone. But it is equally certain that he did not often rise to it; and a majority of his pictures convey the idea of being landscapes composed according to a rule, and marked by a mannerism of treatment whicb is broad indeed, but is not tbe less a mannerism, evident enough when a number of his works are hrought together; whioh, indeed, extends itself in some degree to details, as in the "inevitahle dog" with his tail on one side, which forms a foreground ohject in so many of his pictures. The works of Creswick, in sbort, are monuments of a very refined taste, a great love of the natural scenery of England, and a of its quieter and milder aspects, But this does not make a great landscape-painter; and the repntation of Creswick must he held to he rathor impaired than cnhanced by this collected exhibition of his works.

The Development of Persia. - Baron Router, says the Echo, has obtained great powers for the develupment of Persia. To him belongs the power of making railways, of remitting ima port dnties, of mining [and utilising the forests] of making canals, a bank, gas-works, telegraphs, posts, de., dc. We can hardy sce, meed, what is left to the Shah. We should be very sorry to loso Baron-we had almost written ShahReuter; we hope he will administer the realm of Persia from the capital of the country upon which his energy has already conferred much benefit, and in which his name is a housebold word.

LONDON GOVERNMENT
AN influential deputation was introduced to Mr, Brace, Home Secretary, on Saturday last by Lord Ebury, with the view of renewing the juterest felt hy the Govermment in the great question of Metropolitan Government. Lord Napier and Ettrick followed, and the Lord Provost of Glasgow afterwards gave some which had been effected in his improvement Which had been effected in his city, Mr. J. A. Storr spoke of the neglect experienced hy the lower classes for want of a central hody; and
Mr. James Beal presented a memorial signed by Mr. James Beal presented a memorial signed by Mr. Bruce that the Administran, and reminded Mr. Bruce that the Administration were really pledged to deal with the question.
Mr. Bruce, in bis roply, fully admitted this, and regre when the question was bo the leadinis was taken in hand it should question pasig question of the Session. The of a municipeve, for it was one of the creation rovernment the institution for the of great importance; and for aity of ar the first time of a musicipality a municinality than three millions of people, intelligence and wealth should fairly represent the of no ordinary charaoter. This mould be an institution of immense power, if it fairly repre. sented Lendor, and it wonld he in the highest degreo unwise not to create a body equal to the task. Of conrse, there would he difficult ques tions, and matters of great anxicty, and the suhject could not be dealt with hy Parliament without ample time being given. The Govarn ment had not yot found the time to make this foremost question of the Session, but be was not without hope that it might be made the first measure of the next Session, for he wes bound to say that he did not know of nuy other moun important snhject whicb could arise.
Much credit is due to Mrr. Beal for oontinned perseverance.

## THE VIENNA EXHLBITION

The rotunda ef the Exhibition building in Tionna is ever 210 ft , high; each pillar sup. porting the heavy ceiling is large enough to contain a sraall summer-house. Seen from the floor, people in the first gallory appear like dwarts; the Victories deoorating the panels of the jute lining ef the ceiling, which, seen from figures $21 . \mathrm{ft}$. long, and are consequently four times tho natural size. During the opening ceromonies, at the moment when the imperial and princely personages mado their appearanee, over 7,000 persons were assembled in the retunda, but notwithstanding this, there were empty spaces of from 120 ft . to 180 ft . long, and 30 ft . to 36 ft . wide. The colossal lion, sent for exhibition hy a Tarisian firm, which, with the pedestal, is of the heirbt of a middling sired epedal, is of the at all imposing, but has merel the does not look of having been oxpressly merely the appearanco of having been oxpressly made for the decora. tion of the rotunda. The extraordinary dimen. sions of the greater, and tbose of the smaller lantern, as well as the imposing light arcades with the gigantic windows, all of which must he seen to he appreciated, are sufficient reasons for the fact that, even during rainy weather, it is so light in the rotunda tbat pencil.notes may bo Witb all this without straining the eyesight, ion all this grandeur, these gigantic propor ions have no heavy and oppressive effect.
At the dinner given to the British exhibitors, Mr. Doott Russell, when his health was drunk lamed a trihute of adiniration and gratitude or his colleagues, Herr Engert, the engineer and Herr liasenhauor, the architect. When everyhody had said his building would tumble down, Engert made it solid as a rock; and when everyhody declared it hideous, Hosenhauer stepped in and made it beautiful.
Vienna, either inside the Exhihition very bright in Venna, either inside the Exhihition or out. Tbe foolish inhahitante, hy pntting on preposterous prices, have aided other less avoidable causes in rightening strangers and keeping them away Gradually, however, we have little doubt, the attractiveness of the Exhihition will orercome these ohstacles, A great mistake, howerer, has been made at starting.
rurated house of the British Commission, a cor rugated iron huilding, has heen fitted up in charming style hy the wise liherality of various manufacturers and decorators, Behind this is the "Exhibitors' Cluh-room," a building con

British exhibitors have to thank the private liberality of the Commissioners, who suhscribed as they have done in out of their own pockets, avatories are the worl of Mr. Jeanings, and excite as mucb admiration amonorst foreign visitors as any part of the Commission House An Imperial persona of the Commission House imperial personage who inspeoted them, ob detail of whicb is really admirahle, "It is arrangements like these that thirahle, "It is in pproachahle hy any other people-ils sout ab. approachable hy any other people-ils sout ab. oncerne le confort et la propreté," the co qui concerne le confort et la propreté". The handCome iron railing environing the whole of the the Coalbrook Dale Company.

EDINBURGH ARCHITECTURAL ASSOCIATION
Tris closing meeting of this Association was beld in the Rooms, 37, Georgc-streot, on Wednes. day evering, the 14 ch inst., the presidont (Mr John Paterson) in the chair. Aftor the admis. sion of new members and the consideration of financial and other arrangements of the council, the following office.hearers for next session were elected:-Mr. John Bryce, as jpresident the retiring president and Mr, Thomas Hender son, vice.presidents ; Messrs. Dick, Heron, Macpherson, and Somerville, members of the council, in room of those retiring.
The secretary reported that fifty-sir new memhers had joined the Association during the session, and a valuahle addition of books had beeu made to the library, including gifts of their works from Mr. Fergusson and Mr. Sharpe, also friends of books, drawings, and casts from them a number of original drawings and trin skotches of the Soott Monument, by Kemp.
The president then read his valedictory address in the course of which he congratulated tho members on the numher of papers read and the interest whicb had heen maintained throughout the session. The remarkable circumstance of of the desion of one cathedral and the fixing the design of another for this city in one year was intoresting to tbem, showing an advance of the public taste which promised well for the Mr pripects of architecture.
Mr. Shiells moved, and Mr. Henderson econded, a rote of thanks to tile presideut for sordress, and votes of thanks were also ccorded to the retining office-bearers.

GUNTHORPE BRIDGE, NOTTLYGHAM.
The foundation.stone of a Jong.desired bridre, o connect the villages of South Notts, has been laid. This hridge is situate at Gunthorpe and East Bridgeford, about halk. way hetween the Trent Bridge, Nottingham, and the bridge over the Trent at Newark, there heing at present no intermediate bridge between those two points in the river. The bridge is beiug built hy a privato company, composed of the principal landowners, gentry, and farmers of the neighhourhood.
The construction of the bridge is simple, and vill afford a good example of a cheap hridge considering the great widlh of the river aud ite iability to loods, on a very large scale.
The ahutments will he of stone, carried down o the red rocks and marls whicb underlie the bed of the river, and will rest upon a concrete foundation. The stone used is to a large extent derived from the old Trent Bridge, Nottingham which has lately heen taken down and removed hy Mr. Smart, the contractor for the Gunthorm Bridge. Much of the old stone has heen sold for the restoration of churches and other simil vork, and has hoen hrought in most opportunely for this new brilge, it being of a character able for hridge building.
The approaches to the abutments from tbe roads on both sides of the river will be owth properly fenced. All the rest of the stone, and e of iron. The total span of the the hridge will the ahatments is $350 \mathrm{ft}^{2}$, and this harge hetween is crossed, in the first place, hy a pair of ing is crossed, in the first place, hy a pair of iron grinciple, resting on the the bowstring girder principle, resting on thae north ahutment at one other. These cylinders are ench cylinders at the sunk into the rock in the deepest in diameter, stream, and filled with Portland cement part of the After this are five other pairs of iron girders,
each of a length or span of 50 ft ., making, with
the first bay, a total length or waterway of 350 ft . These a total length or waterway of cast.iron piles latter girders are supported by them are 2 ft , in liameter, and screwed throurh the gravel bed of the river into the rock. The apper parts are 14 in , in diameter, and are oraced together transversely with wrought.iron truts and girders. All the girders are formed of wrought iron, and so secured torether as to form a continuous girder, holted down fast to the arge 6 ft . cylinders, and lying loosely upon riction rollers, fixed to the upper ends of the nrermediate pile-supports, and upon the stone hatnents. The road way is formed of two layer of hitumenised timber, holted down to trans. erse wrought-iron girders, which aro riveted up both ends to the horizontal main girders Te bridge bas been designed by Mr. A. O ultiotton, M.Inst.C.E., who has beed the con alving engineer to the company mercement. The resident suporintendent of th Smart is the coutractor for the masonry.
improvements at the

## HIGH-LEVEG RAILWAY STATION

## CRYSTAL PALACE.

A NeIM entrance to the High-level Station of the London, Chatham, and Dover Railway Com pany has heen for some months in progress, and will be opened to the public in ahout a fortmizht The entrance is from the Farcuhar roa by aight of steps, leading to a light iron bridge This is covered hy a galvanised iron roof and th whole forms an important addition to this eva ensive torminus, which may now be said to bo equal to any local station iu the be said to bo its arrangements. The new entrance will prove great boen to the residents in the Farquhar and ther roads on the south side.

## BUILDERS' BENEVOLENT INSTITUTION

 An election of four pensioners (two men and two women) on the funds of this institution took place on Thursday, at Willis's Rooms, St, James's, the president, Mr. Edwin Lawrence (Lawrence Bros.), in the chair. There were eleven candidates-four men and seven women, There wero eight female candidates up till within the last few days, hut one of therm (Mrs, And Williams) is dead. The poll opeued at twelve oclock, aud closed at three p.m ; wheu the scrutineers (ALesars. Stirling \& Hall) announced the result of the voting to be as fol lows:-Males-Francis Sandon (7thapplication) 2,378; Duniel Thomas (0th application), 1,186 Richard Grove (ist application), 112; Jour Thomas (1st application), 910. Females Elizabeth Trevethan (Gth application), 2,656; Eliza Lamhert (5th application), 1,720; Arabella Hambrook (4th application), 3,153 ; Sarah If Bear (tth application), 625; Elizabeth Silcock (Znd application), 2,752; Jane Ramens (1st application), 1,282 ; A. M. Trilliams (1st appli. cation), 618.The chairman therefore declared the successful candidates to be:-Francis Sandon, Daniel Thomas, Arabelia Hambrook, and Eliza. heth Siloock. This makes a total of forty seven pensioners now on the fuuds of tho institution wen' $y$ men and trenty.seren women; the malcs receiving 252 , and the females 20l. a year.
Votes of thanks were passed to the presiden the scrutineers, the treasucer (Mr. Gearge Pluck nett, of the firm of Cuhitt \& Co.), and the secretary (Mr. A. G. Harris), for the interest they severally take in the welfare of the Insti. thation; and the president expressed his regret that Mrs. Trevethan was unsnccessful, it heing ler sixth application. He trusted that she would he successful at the next election, which does not take place, however, till six months heuce.

Check to the Tramway System. -The select Committee on Metropolitan Tramway have refused their sanotion to the laying down of tramways in Marylchone-road, Euston-road, George-street, Tottenham Court.road, and Far ingdon-road. The committee have sanctioned a he over westminster Bruge, passing, hy way Whitehall. Whitehall-place

ARCHITECTURAL REMAINS ON THE EAST SIDE OF THE DEAD SEA.*

Farade of the Palace at Mashita, Restored by Mr. James Fergusson.
a New Masonic Halli in canderwell. A company of Freemasons has heen formed for the purpose of execting a new Masonic hall in Camberwell, speoially adaptod to the requirements of the craft, in counexion with the lodges of the south metropolitan district; and the plans of the building also include a large hall for the general use of the public when it is not engaged tor Masonic purposes. A favourahle site has beon secured for the erection of the building, in the Camherwell New Road, betweon the post. office and county-court, close to the station of the Yondon, Chatham, and Dover Railway Com. pany. The site possesses a frontage of about 70 ft ., with a depth of 150 ft . The plans bave been prepared by a well. known architect, and memher of the craft.
The front of the building, in Camberwell New. road, will he of red hrick, faced with stone dressings. Tbe large ball will be approacbed hy a corridor leading from the vestihule. It will be 54 ft in leagth by 37 ft . in width, and at one end will have a raised platform, and at tbe back of this a small room, where there will be every accommodation for dressing, so that the hall will be well adapted for dramatic performances, concerts, and otber entertainments of a similar character. The lodge-room, which is as ft by 22 ft ., will be fitted in the most approved Masonic style, and in strict accordance with the rules of the craft. In communication with the lodge-woom there will be a readination witb the by 13 ft ., fitted with a library, and well supplied with newspapers and magazines. On the opposite side of the building there will he a dining. soom, 32 ft . hy 18 ft ., in connexion with which
site there will be a Board-room, 19 ft . by 12 ft ., for there will be a Board-room, 19 tt . by 12 ft ., for
the transaction of purely Masonic business. The the transaction of purely Masonic business. The
basement story will contain the modern cooking basement story will contain the modern cooking
appliances, as well as a range of wine-cellars appliances, as well as a range of wine-cellars
and larders. The hall will be capahle of accom. and larders. The hall will be capahle of accom. cost of the building is about 3,000 l.

The Newspaper Press Find.-The dinner on Saturday, the 17 th instant, in aid of this paluable Institution was a great success in every way. Mr. J. A. Froude, M.A., who presided, made an admirable speeoh, and the contributions from the 210 gentlemen who supported lim on the occasion, amonnted to something over 1,200 . ho other apeakers were the Hon. E. Ashley, Col. Birchall, Lord Houghton, Mr. A. Trollope, the Marquis of Lansdowne, Mr. Newdegate, M.P., Sir Erskine Perry, Mr. Godwin, and Sir Jolius Benedict. Considerable prominence was given to a concert in the course of the entertainment,
in which Mr. Maybrick and Miss Blancbe Cole particularly distinguished themselves.

OFEICE-BEARERS AND NEW LAWS: ROXAL INSTITUTE OF BRITISH ARCHITECTS
Ar the annual general meeting the following office.bearers were elected:-

President. - Sir G. Gilbert Scott, R.A.
Tireo-Presidents,
Hessrs. Horace Jones, John Gibson, ard Ordinary Mem

 ountry members.
Hozorary
Honorary Secretary.-Mr. F. P. Cockerell (foreign

## Secredary. -Mr. C. L. Eastlake

## tulitors:-Messr3. Jose 1homas Morris, Associate.

Hon. Treasurer and Banker.-Sir W. R. Farquhar.
Hon. Solicitor-Mr. F. Ourry.
Attendance of Past Vice. Presilents at Council The following resolution was come to:-"That the council be empowered to invite past vicepresidents of the Institute to attend the meetings of the council, and to take part in tbe deliberations, but withont a vote.
In referenco to the proposed grant in aid o the art classes, which the committee of managcment have heen compelled to ahandon for the prosent, it was explained that the olasses, if
resumed, wonld he conducted on a diferent system, and that no further application wonld be made for pecuniary assistance from the Institute. On this understanding it was resolved "that the sum of $30 l$. he granted out of the funds of the Institute, towards liquidating the liahilities incurred hy the art classes committee in tbeir endearour to carry out the sobeme originally proposed."
An annual hudget is to be prepared and circnlated provionsly to each annual general meeting.
A dinn
dinner (for arohitects and amateurs of architecture) is to take place at Willis's Rooms, the chair.

THE WANT OF ART CULTURE.*
To those who look on art as the embodiment of a principle which is deepest in our nature-as the grand medium hy which the suhlimest ideas and most exquisite sensations are conveyed to
us, and through which we hear most distinctly the eternal truths which have their archetype in nature, and their answering chords in the human
soul-the full recognition by the authorities of soul-the fall recognition hy the anthorities of
Liverpool of its dignity and value, and the sucLiverpool of its dignity and value, and the suc-
cessful revival of the annnal exhibition after so long a slumber, will appear as an important event, more especially if they consider that art. education is the great mental want of the town, and that there is, perbaps, no place in the civilised world that needs its refining and elevating inflinence more. "Indeed!" If ancy some onc exclaiming, "Liverpool in especial need of a refining and elevating influence-Liverpool, the second city in the empire, and so renowned for
her progress from almost nothing, within the her progress from almost nothing, within the
nemory of man ?" Xes, I repeat it-there is no place that needs tbo spiritualising influence of art more than Liverpool. The progress for which intellectnal progress; and her chief features at this hour, despite the efforts of Roscoe and others to educate and intellectualise her, are not her literary or scientific institutions, hut ber comunercial. This is stamped npon harm and man on his head and face; and may be seen from an external view of the town as you approach it from a distance, or walk througb its chief thoroughrares.
Snch a view shows at once that the chief features of Liverpool are those generated by her commercial development, viz, her docks and
river-wall, her warehonses, enormous honse, railway sheds and hotels, and a thousand other objects of great utility : these are the material emhodiments of ber yearnings and desires -the symhols and expression of her most earnest aspirations; her heart and soul are in them, ber
life-hlood flows throngh them, and they are life-hlood flows throngh them, and they are
amone the wonders of the world among the wonders of the world.
Of London, tho most renarl
Of London, tho most remarkahle huilding or
architectural group in the distant view is St * From -

Paul's Catbedral; in Paxis it is the Cburch of St. Generiève or Notre Dame; in Rome it is St. Peter's and the Vatican ; in Venice and Florence and Pisa it is some church or palace or baptistery; in Spanisb and German cities it is cathedrals, as, indeed, is generally the case at home; in Constantinople and Mabommedan lands tbe most remarkahle haildings are either mosques or tombs, and eren in China and Japan they are pagodas. Bnt in Liverpool, nulike all other places I can recollect, the chief featnres are commercial and municipal edifices-onstomhonse, town-hall, exchange, pnhlic offices, hlocks
of mercantile honses and last, hut not least, lines of warebouses, whicb form a sort of western wall to the town, and which, for size, had they heen built on the banks of the Nile instead of the Mersey, would have dwarfed the Pyramids. A church dome or two and a few spires are with those ohicots I have named, and to which may he added the tall chimneys of manufac. may he added the tall chimneys of manufac-
turing works, which, of all objects that hreak the sky-liue and soar into the welkin, are tbe most remarkahle. By these the spires are not only rivalled, they are totally eclipsed in dignity and power. I conld point to some of tbese-to one, more especially, in the neighhourbood of
Vanxhall-road-which must raise greater emo-Vanxhall.road- Which must raise greater emo-
tions in most minds than any of our steeples or monumental crections.
We are in the nineteentb century in regard to physical science and to literatnro; and in regard to some otber tbings perhaps in tbe twentieth ; but in art we are in the tentb; nay, tbere were
cities in Italy, if not throoghont the Continent, cities in Italy, if not throoghont the Continent,
that were in a much hetter condition with respect to art in tbe tenth and eleventh centuries than what we are now in; and there was no
place of the population and importance of Liverpool, at any period either in the ancient or modern world, in this state. We consider onrselves in the zenith of civilisation; hat ther were communities not far remored from the
tine called the Nadir of the Human Mind in the West-the darkest point of the period during which took place what modern philosophy has termed the slcep of the human intellect-in which art developed itself, and, in spite, not only of the gencral ignorance, bnt of actual Eastern Roman Empire, under tho belief of its corrupting Christiauity. In the eighth ceatury, under the auspices of the Popes and of Charlemagne, great stir and progress were made in the arta, which exhihited the germs of those original nd suhame conceptions that distinguish the schools
century.
Bear in mind that the soil from wbicb sprang these great schools must liave been, not merely the love of art in a few isolated artists--men before tbeir age, -bat the lovo of art in the pople, and the interest they feit and manifested heen in Florence in the thirtecntb century when the people walked in procession to condnct Cimabne's picture of the "Madonua" to its place in the Chnrch of Sta. Maria Novella, Anjou, and with snch rejoicings that, says traition, they changed the name of the street to Borro Allegni (Mcrry Borougb)? How fertile nust the mental soil have hecome a generation or so later, when it is said that pictures painted by Giotto in different citics of Italy hecame the seeds of so many scbools of painters? So arose some of the greatest schools tho world ever saw. There was more art-life and art-stirring even among the people of the old oity of Cologne,
remote from Roman traditions, and not long emote from Roman traditions, and not long after the irruption of the harharians upon the
Roman empire, than we find arnong ns at this Roman enpipire, than we find among ns at this lay. About a thonsand years ago an carly og arose Germano-Christian schood of Pet til the tbirteentb cantury -a school with which the contemporary Italian and Byzantine Schools, it is said, wonld not hear comparison.
It is true we have the highest form of art in the highest form of literature in our lihraries,I mean that eldest sister of painting and sculpture, poetry, which is hut tbe same spirit of the heantiful in our life-the same expression of hreatbed tbrongb another vehicle; hut it mnst be confessed that the poet on canvas or in marhle is a more interesting teacher to the general mass of mankind than the poet in song perhaps he is the most interesting and attro tive of all. Art is nore tangible than poetry
and better adapted to act upon the ordinar mind, and will operate upon minds incapahl of following the flights of the poet. Painting and sculpture are prohably necessary as step-ping-stones, along with music and arcbitecture to lead the mind to the highest form of art poetry, and prepare it for her highest ininistra tions. And, if tho inission of art is not superseded hy poetry, it cannot he by any other hranch of literature or hy physical soience whicb latter alone, and without the aid of art, nnexercied greater number of facnities in tho wo down-reachcs a lower stratum of sooiety, than the teachings of philosophy; and, if it did not, it twonld still he an indispensahle means of edncation, considered in its full signifioance: it appeals to and refines the lowest, and is necessary to the highest ranks, which, withont it, would remain comparatively rude and savage. The fine arts bave heen truly said to bo to a bighly commercial and opulent state of society That chivalry was to the fendal system: they wear down its asperities, correct its selfishness relieve the steroness of its action, enliven the dulness of its repose, and mitirate the fierceness $f$ its enjoyments. Where the arts are well nderstood fashion cannot he so monstrous or intastic as whore they exert no salutary dominion over the fond love of rariety.
I feel it would he only just to say that tbe desideratum $I$ am complaining of is not confined o the good old town of Liverpool : defciency ith art-cultnre on tbe part of the puhlic, including be highest ranks, is the great characteristic of our country, which has heen vehind all her Continental neighbours,- not only Italy, but France, Spain, Germany, Belgium, Holland,-in ber patronage of and devotion to art,-hehind all the great European nations except Russia; though her intellectual soil is rich enongh to produce individnal men who might compare with Michelangelo or Raffaelle. In fact, the union of art and philosophy so much hoasted of in the schools of ancient Grecce and modern Italy, and which is essential to the highest prosperity in hoth, has yet to be consummated in England. lany of our highest names in literature have seen deficiont in art-culture and ignorant of art.
Man, the Scripture tells ns, walketb in a vain shadow and disquieteth himself in vain; which does when iu scarch, for their own sakes, of te employs his entire faculties upon them. But walks in no vain shadow, I thituk, when in searcb of the heantiful, either in nature or art ; all is not vanity and vexation of spirit under the sun to him who can hold communion with these, and enjoy their simplest offerings. Of no hranch of art,--painting, sculpture, architecture, poetry, music,-can we grow weary. These, inasmuch they partake of the infinitude of nature, which they are hased, can never lose their charm while we are true to them, or pursue them in a right spirit in earnest lowe and confidence. The leas they beww are pleasnres hestow are alled plessur eni g, which neither isapper with the hoom of youth, chat lisappear with the hloom of youth, change with frail hodies to the dust. The hright dreams of yonth, of an Eden and Elysium laid up in the romb of the futare, must fade into tho clay hamlets of reality - bnt those reared hy imagina tion from the bright pages of truth and natnre re a perpetual solace to the beart, and spread continuons and pervading charm over the whole f existence. They are the great ohjects to which all else should he made suhservient; they re not means or an instrument of life, but an hject of life with something divine in them. Phere never was a trne artist but what might say, at the close of life, in reference to art, wbat Coleridge said of poetry, that it had heen to him ts own exceeding great reward; that it bad sootbed his affictions, multiplied and refined his enjoyments, and given bim the hahit of soekin he good and the beantifnl in all that met and urrounded him. Nay, it is worthy of note tbat, while many favoarito pursuits of men,-as shooting, hunting, fishing, horse-racing,-are nd orthy of men, since they involve the tor turing right to bige ond creatures which havelses, and which, as lords of crcation, we are honnd to protect, the parsuits of art, as of literature, are worthy not only of mon, hat of the greatest rods; and it is not dimincult to conceive that suoh pursuits will he renewed in a fature and higher state of existence.

## THE PRESENT POSITION OF GOTHIC

 ARCHITECTURE.*
## ONE of the most prominent defects in our

 presont system of working is the want of some united action between us. Every architect now doeth whatsoevor seemeth good in his own eyes style, and too often indulges in what is fantastic and eccentric, in the hope of being original. In the case of men of great ability, they have the facalty of seeing what is appropriate and in harmony with the spirit of their designs. With less skilful designers, however, the results arising from this condition of things are too often glaringly crude and incongruous. Now, if some the best path to pursue, this condition of things could not exist, and we might entertain a reasonsonable hope of seeing a general movement of progress all along the line, and not, as at present, fitfully and in various directions. Although it is undesmable, if indeed it be possihle, that the indiduality of the designer should be lost; nevertbeless, there exists among certain schools a pernicious habit of placing the artist before the art in the case of a few favourite men. This is manifestly wrong: the elevation of the art should he our first consideration, the individuality of tbo artist second. We need, therefore, I think, some generally accepted code oflaws and precedents to govern and direct oar laws and precedents to govern and direct onr
efforts. Let us, for oxample, agrce npon some particular phaso of Medioval art; and taking that as our point of departure, extend and develop it until it becomes capable of answering all the numerous requirements of our time. Let us, as the stgle expands, engraft apon it such features from other sources as we may see fit, carefully keeping them suhordinate to, and in
harmony with, the ruling principles of the master style.

There is another point in which the Gothic school runs into extreme, and that is in the quality of what I must term quaintness for
want of $a$ better title. That this quality is possessed in a very large degree by most Mediæval buildings, is unqwestionablc-indeed, appears to be inseparable from them. It must be remem. bered, however, that this is mostly the result a bered, howover, that this is mostly the result o and that, do what we will, wo can never impart and that, do what we will, wo can never impar
to our new buildings tho picturesqueness of the to our ney
old work.

Quaintness has a constant tendency to degenerate into mere ugliness, and it is to be feared there is much truth in the accusation that there cxists an incredible worship of tho ugly amongs
us. Just at preseut, too, to the hest of my jndghan . "old china stye" if may so term it, is spreading amongst ns, and we may so term it, is spreading amongst ns, and we
see men search every quarter of the globe for see men search every quarter of the glowe for
examples of quaint, curious, and ugly ohjects to examples of quaint, curious, and ugly onjects to
copy from. The present attempts to introduce the long, square-headed windows and broken pedimented gables of Queen Anne's reign, the lumpy furniture of the Cromwellian era, and the ingenious bnt semi-barbaric ornament of China and Japan, indicato the extravagant lengths to which a certain school is inclined to go in its soarch after novelty.
While the progress of the revived atyle has been, on the whole, continuous and well marked with respect to ecclesiastical architecture, it must be confessed that we have not made nearly so much advance with onr secular buildiugs. Here we are more left to our own resources, not having so many examples to guide us, and heing ohliged to initiate buildings in the new stylc of a type and for purposes unknown in those more primitive times. In some of the country mansions recently erected, however, tho style has with the utmost felicity. It is in onr civic architecture that our failures have been most oonspicuous. Too many of our hotels, railway type of ordinary town-house, with a thin ontward veneer of Gothic detail altogether wanting in the true sentiment of the style. It is here, too, that those vagaries of which wo have been speaking are to he found in the greatest abund. ance, and where thore is most need of some more settled and acknowledged art-authority to direct it.

In one very conspicuous instance our revived Gothic has not been found equal to the occasion I allude, of course, to Mr. Street's designs for the new Law Courts. If ever there was a signal
opportunity for displaying the capabilities of the opportunity for displaying the capabilities of the
style, this was the one; and I think I speak the general verdict of the profession when I say tha the result is a failure. The building, if execated as designed, will be feeble and disjointed, lamentably wanting in that grandeur of conception and unity of parts which should characterise a great pnblic edifice. I say this witb regret, and with a high respect for Mr. Stroet's great talents, Medimeral art much discouraged by this failure: it does no prove that the revived Gothic is nnsnited modorn wants, still less that it is worked out. helieve the style to be still young and fall of vigour; but we must look around as and note our shortcomings well, so that we may rise through our very failures to higher things. The most urgent need of the style at present, then appears to be more uniform and combined action on the part of its professors, guided by a recognised and accepted series of art-canons with snfficient influence to curtail the vararie and eccentricities that at prescnt disfigure it Thus we shall form a common platforin on which to work in the developmont of that ideal rohitecture which earnest men strive for in the hope of seeing it realised in the fulness of time.

## NOTES FROM AMERICA.

The writer, a few years back, might have been seen attired in his hroadeloth, neatly gloved, and with glossy hat, wending his way to Charing cross, and anxiously looking for the omnihus to and him to his domicile, where a deate meal ond been prepared for his appetite. What a con trast! Now he is suitably attired in a good strong
pair of grey woollen pants, with a warn woolly pair of grey woollen pants, with a warn woolly manner worthy of $O$. Smith, late of the Adelphi and accoutrements to match, viz., a good Spence filie, a levolver, and a tomahaink axe. His
worlaly goods consist of a blanket, sundry pairs of socks, and two shirts, home-made, and, what is more, "never requiring any starch. These, done op in a knapsack, and safely strapped to his back, comprise his outfit for soveral months.
His companions are of various nationalities. The His companions are of various nationalities. The boss surveyor is English by birth, Americanized onadnltarated Cour humble scrvan inmen seem to be half Dutch and half Irish; the cook is a French Canadian; and twoothers,-I do not think I could tell where they were born, for they speak the Canadinn French, know a little German, and can "gab" the Indian tongne. So we set off with a conple of tents, a fow iron pots for cook. ing, and our surveying-apparatus, and start for Kansas and Missouri,-places that have a tolo are now rapidly filling up, and will eventnally become important states in the American Union. Before I proceed further, nerhans a few words to intending settlers might not be amiss; for I have seen, and that with great pain, many heartrending scenes of the useless class of my countrymen coming out as clerks, shopmen, dc., and who aro looked upon and treated with a great deal of contompt. What is wanted, and will be do hard to well, are muscle, sinew, and a will to do hard laborious work. I have met colonies of poor wretches from various cities of the eastern derous weapons, women with fancy dresses and gilded carrings, who have thonght of taking up land as a sure road of heaping np "piles" of stamps (or money, as you English folks would Say), hut alas ! with no knowledge of farming. Instcad of that useless kind of trash (hard word, you say, but it is really used among the settlers), the things wanted are, agricultiral implements, with a littlo ready cash, provisions to last for a fow months, and a real grood sound constitution : one which does not mind catehing the agne, and can hear up even if it does have a touch of the malarial fever,-occurrences of no unusual character.
Kansas is a prairie country ; thickly studded with buffalo herds, though settiers seem to be driving the animals further west. To read of the fearful exploits of a bnffalo hnat (in'my experience, which is limited), and to see one in rood stout, fiery buffalo with a Spercer rifle, is about the same sport as one would see
in "fixing" a savage bull on Woking Commongood deal of riding, lots of prancing, pawing and bellowing, but with a good level aim, it is 4 great deal less excitoment than what I was used, years back, to witness in Old Smithfield Market. The true Kansasian is a fine, noble ree-hearted fellow; his pride is his horse and his little "tand claim." True, he is ignorant or hooks, knows nothing of a city life, but he horoughly understands the country in which he ives and is a pretty good judge of cha racter, and, for the information of a rowdy, is dead shot. But a word as to the Kansas girl reared on the borders, having never seen as many as fifty people together, and unknown a "ry goods" (linendraper's) shopman Whle herknowledge of the world scarcely reache beyond the humble cabin and the surrounding prairie, her privileges and rights are to be truly happy, chew gum, and go barcfooted. She never shudders or starts at the name of Indian, for she has been handled and caressed by the brawny arms of the "red bravo" when baby; and the howlings of the wolves and hellowing of the stampeding buffaloes are With With all this rough-and-ready kind of lifo, there s a line where rodesty commences, and must be respectea. Ther Jim is not in the way, sho an lisel sung an axe or sight a rike with very little compunction or hesitation; so hunters and sportsmen know how to govern theinselves accordingly
You may travel for days in the prairie without the sight of a single tree, hill, or the appearanco of a single human boing. Now and then a herd of a hundred buffaloes tramping along the monotonous plain, shaking the earth like an earthqnake, with their roaring and tramping; but occasionally a valley is scen, mostly between two hills, and then the sight of true bordel settlement is had to perfection, -the little $\log$ cabins here and there dotted in the perspective; the occupants toiling miles and miles away from a neighbouring settlement, in the hope of providing a home for their children (in many cases, it might truly be said, for their grandcbildren). The sight of a surveying party is ahout as sen. sational an affair as a circus in a far-back conntry village. The news of their arrival spreads like wildfire; hospitality is offered; farmers, hunters and sconts wait on you; and the tales of some of the early settlers are not only interesting, but show the hardships of a pion life, but scalpings, murders, and robberies by the Indians makingone shader at therecital "The "cont" is an individnal not to be possed orer lightly With the cunning of a passed over lightly constitution, and the hrevery of ardy in ferrets ont, and traces up the Indian hon, be fere Who go in largely for stealing horses and cattle The proressin and making dne allowance for a little exaggeration for the for the crack of an Indian rifle may settle knotty question of "lawful apprehension"
without the aid of a judge. without the aid of a judge.
Kansas and Missouri occasionally engago "Judge Lynch" to try and settle sundry little act of abstraction, and the borse and cattle copers (i.e., cattle-stealers) are generally taken to a free "full-dress necktio social." The border settle ments are usnally guarded by the United States cavalry and artillery, and the Indians just now though not in Kansas or Missouri, are giving them a deal of tronble. Humanity desires them not to he killed and bunted like wild beasts,the settlers go in straight for a general annihi lation. The contrast with the Indians of Canada and those of the Umited States is so wide, that there must be a leakage somewhere in the governing powers of the United States, whicl should be repaired. The ministers, particnlarly those of the Episcopal Church of England (wit the forms altered in accordance with the United States governing powers), declare the Indians can he civilised, but do away with post agents, \&c The settlers, on the otber hand, declare them to be a cunning, lying, thieving, and murderous class of beings who should he swept from the face of the earth. Quercus.

The Colunbia Fish Market Tramway Bill.-All opposia against the scheme for the extension of the rails of the Great Eastern Railway into Columbia Market, the Bill will now proceed as an unopposed Bill of the Corporation of the City of London.

FIREPROOF CONSTRUCTION.
In the course of the evidence given hefore the comuritee on the means of protecting the metropolis against conflagration (Society of Arts), Mr. William Spanton, of the metropolitan salva corps, expressed the following opinions :-
Q.- What structural arrangements for large warehoases docs your observation suggest as the best for the prevention of the spread of intages brick piers, groined brick arches, and concrete floors, as the best description of incombustible and firo-resiating construction for any building, especially those containing large bulks of produce and mannfacture; still the space required for this kind of constrnction is such an objection that it is seldom met with except in vaults. The next hest description of fireproof construction is that where, though the floors are snpported hy iron colnmne, these columns are filled in with concrete, and surrounded by the same material and cement, to a thiokness of ahont 6 in ., so that the protection afforded to the iron prevents its being affected by the heat to so great an extent as it otherwiso would he, and if the joists are of T-iron, ordinary hoop-iron taking the place of old-fashioned latlis, tho space hetween the joists heing filled in with ooncrete, though timher flooring may cover the whole. hnilding, and one which would prove fire-resieting to a vory great extent, oven in ordinary poists were filled in with concrete, say 6 in. joists were filled in with concrete, say 6 in.
thick, instend of shavings and saydust, as is now generally to ho found, very much protection genold he provided, and it would not only prevent wonld he provided, and it would not only prevent a building burning so rapidly as is now the case, but at the same opportunity for the rapidity with whicli a building hurns when once on fire
Q. What do you consider the best materiale Q.- What do you consider the
A.-The question as to what material staircases should be construoted of I have long since considered, and I cannot agree with many who approve of stone staircases, except for extornal purposes. Of conrse thcro are warehouses and othor buildings where a mabsive stone staircase leads to landings in the centre of a hlock, on which are good iron doors leading to the various rooms or Hoors filled with goods, and perbaps occupied with workpeople, the entrance being from the street and ending at the roof. Nothing can be hetter than this kind of stairoase, where it is perfectly independent of the floors and their contents, because the probahility is that auy of theso floors might be harnt out, and the staircase by no means affected by the heat on acconnt of tho proteotion afforded to it by the iron door; at the same time I am strongly op. poscd to stone staircases under nlmost any other oircnmstances for internal purposes. And I cases, as at present constracted, were filled in with good concrete hefore the tread is fixed, they would form ahont the best and most fire-and. water-resisting description of staircase that has at present been devised, and wonld, in my opinion, he the next hest to hrickwork itself. know well how nice a good stone staircase looks
and is for use, when no fire happens, but I also know the ferrful conscquences of a nice-looking know staircase cuddenly giving way without ony stone starcase suddenly giving way without any warning when it is heated anc
upon it in extinguishing a fire.
$Q$ - What do you consider the best materials for the construction of roofs?
A.-The hest description of roofs I can conceive are those covered in with stont slate, with about 1 in . of fine concrete hctween the laths and the slate. This would not only resist any
fire from an adjoining hnilding, hnt wonld, under most cironmstances, withstand any nse to which the roofs might be subjected hy firemen and others. Q.-What precantions do you recommend as respects the flues of farnaoes?
A.-I cannot conceive that any difference of opinion ought to exist as to heating furnaoes, or the precautions necessary to avoid accidents by fire from them, so long as all timber is kept well olear of the heated parts, and properly. oonstructed flnes only used. Furnaces are as safe as any other desoription of heating apparatus.
Q.- What precantions do you recommend as respects open fireplaces ?
A. - So far as open fireplaces are concerned
there is no donbt that, with ordinary care, nothing can bo more safe, and accidental fires should not occur from anything in respect of them, solong as the hearth-stones arc not placed within a rer, and no such materia fittings and flues; and no question onght to arise as to the advantage of open fireplaces in refcrence to ventilation over evcry other dcscription of heat ing.
Q. What precantions do yon recommend as respecta gas lights?
A.-Respecting gas and the risk of fire from its use, I have no donht that it is the most safo mode of lighting, so long as proper care and attention are given to it. Having every light safely fixed, and properly protected from con tact with any inflammable article near it, and having every room in which it is nsed fitted with ventilator into the tlue of such room, there need not he any apprehension on that head
Q.- What do you mean by conorete
A.- It may be made of many kinds of mate rials. What I refer to is that made with ordi nary fino ballast and lime.
Q.-Would it not be hetter adapted to resist heat if made with clinkers or things of that kind, which had been harned?
A.-I am not so sure abont that. It might be more binding, hut I helieve the small ballast I speak of would not be greatly affected hy heat any more than that made of clinkers. It simply introduces the idea of using a new description of material we know little or nothing ahout instead of nsing that which has boen answer the parpose so woll
Q.-W Wete?
A.-The effect of fire on concrete is scarcely perceptihlo in ordinary fires, especially where hut in cerge and foors consist of this material heat, split into irreoralar forms, but not autil heinc nearly of f wary the result cannot be compared to ordinary stone. Colonel Beresford. - At the great fire at Cotton' Wharf it terminated in a floor in Alderman Humphroy's premises, termed Hay's Wharf. The floor was full of hamboo canes, which were hurning with an intonso heat, hut it had no effect on the roof, which was filled in with concrete. The
roof was perfeotly lurid, hut the fixe did not pass

- With regard to the construction of build. ings, are there not $\}$ some sandstones which wil tand fire, and not aplit like granite
A.-I do not think huildings constructed enirely of granito would bo specially susceptihle of fire beyond those of any other stone. I oonsider stone in general exceedingly objectionable, and inclined to split when a fire ocears; almost ny description you can name.
Q.-It is said that in Paris, where, during the ores misticincendiarism, they bad a good many fres, some of them, particularly that at the hy asphalte. Is it a fact that there are two sorte of asphalte in use, the bituminons or inflammahle, and one that is not inflammahle-the Val de Travers?
A. $I$ I believe it is difficult to find any asphalte that is not somewhat inflammahle. I know o one ; but I think a great deal of the immumity rom fire which Paris enjoys is due to their system of building, and many other arrangomente we have not in London. They have no yydrants, hnt almost every soldier nnderstands extinguishing fires, so that there the means of purs in ersices rendered by the military cenerall in ervicest to respect to " o that every floor is comparatively ficeproof As a rnle, in English huildiags, as the work proresses, the space hetween the flooring and the joists is made a sort of dnst-hole, or receptacle or shavings, sawdust, \&c., arising from the work; thercfore, if once a fire happens, you have all the materials ready introdnced and thoronghl prepared ready for a very rapid combnstion,
Q.- Some time after the large fire at the City Flour Mills it was noticed that many of the iron joists were still in their places, not twisted. Do yon know whether they were flled in with concrete, which had dropped out ?
A.-They were, I know, fittod in with stone, not concrete. A great deal of the action of a fire npon iron materials of that kind dopends
upou the cnbic contents of the bnilding and the
length of the iron in use. The shorter the iron the more likely is it to remain in its place withont twisting. Had that building heen divided into two, as it should have heen, the action of the fire on the girders and rafter would have been very much less than has proved to be the result.

ARCHITECTURAL COMPETITIONS
Oxe or two of the points made by Mr. T. Blashill, in his carefnlly-prepared paper on this tectaral Association, may perhaps pith advan. tage he given in his own words :-
I-As to the System of Competitions generally. is No donbt, arohitectnral competitions have boen invented as a means of escape from the evils and uncertainties attending the dis tribution of patronage. A perfectly fair com petition should ensure the selection of the best man in each particular case, and of corres the hest man would have a right to the employment Now, judging hy what we see in ordinary life does the puhlic want or expect to get in each case tho best,-that is, the most able man? an has such a one a right to expeot that eaoh work shall, after proof of his superiority, he given to him? I believe nothing could be more mon stronsly ahsurd than the position into which uch ideas wonld lead ns.
In ordinary transactions between the profes sional man and his client, it is found convenien to treat the matter of remuneration as heing fixed heforehand, the question being as to the quality of the services, which are always in reat measure uncertain, to he rendered in retur for it. Now, a client does not seek out the greatest genius availahle ; he goes to some one whom he knows, or whom a friend may have omployed; to a neighbour, or to the nearest person of good repute. But he is almost certain o prefer hefore all these a person whom he has lready himself emplozed, if even with some hing short of perfect satisfaction. It may he difficult to say how far he is influenced by the talent or the merit of tho candidate, and how far by more whim or liking but everyhody warth nnowing is oreatly infinenced by the latter, and nowing is greaty of confile and his nuede of selection are on the wholo bene fis to loth paries and to the work. They cial to both parties, and to the work. They aro coraily people forcnce rather than upon strict measure of capacity. They know that ordinary husiness is quite within the range of ordinary men, and they trust people whom they like and know to he fairly trained and practised.
Fancy a man making every fresh husiness transaction the occasion for a cold.hlooded selection of the hest man within reach, disregarding old associations,-honest, hat perhaps neffectual efforts to excel, - the straggles of moderate capacity,-the sentiment of neigh. hourhood, - in order to put his work into the hands of the hrightest practitioner he can hear tell of, and getting ever snoh a little hit more for his money. Iou cannot imagine a more detestable animal than this, or one more likely to be robbed through thiok and thin.
Now, a committee man will generally be allowed to have done his duty in his pnblic capacity, if he doos as well for his constituents in the matter of patronage as he would dofor himself. Thore are, however, influences brought to bear which complicate this question. Privately client might go to a friend, or the relation of a friend, and (blood being thicker than water), even a relation of his own, knowine nothing of his capacity, while one could not defend his acting in the same way in a public matter. But even in cases of tho grossest favonritism or hribery, the check is not renerally sought in any system of competition like our own, hut in publicity if the nature of the tramsaction adrits of it and in the dencerous oharacter of the husiness if it is secret and corrnt. In any case a disappointed rival can have little right except in his gmality of can payer, to meddle in the matter." . . "rI believe we shall never effect
, ment necessity of treating matters relating to architreat on ther math of biness. Indead treat any other marm convin nothing but the firm conviction that all the world ontside onr own circle is in the wrong,
can make it prudent to neglect this rnle. By
adopting it, we place ourselves in proper relation with the people with whom we have to deal; hy neglecting it onr position hecoraes exceptional and therefore false. We lay onrselves open to misconception and suspicion, and our conversa. tion and literatnre become encumbered with complaints and acensations against onr clients and our brethren, to "n extent unparalleled in any other profession."
II.-As to some Results of Competition not beneficial to Art.
"We have seen ideas adopted which, from looking well on paper, have taken the public fancy, to a degree not at all warranted by their fancy, to a degree not at all warranted by their effect in actual execntion,-ideas of the draughts.
man merely as distinguished from those which man merely as distingoished from those which
are developed in the mind of one who has to are developed in the mind of one who has to
stady materiads and construction, and to think of the purpose of each part of the hnilding he of the purpose of each part of the huilding he
has to design. I commend this question par. has to design. I commend this question par.
ticularly to those who may adrocate the com. ticularly to those who may adrocate the com.
petition systern, because it is one somewhat petition systern, because it is one somewhat
difficult to decide ; but it is worth our difficult to decide, but it is worth our
consideration that while in former times pro. consideration that while in former times pro.
gress was made hy study of bnildings actually gress was made hy study of bnildings actually
exected, we now stndy pictures of bnildings erected, we now stndy pictures of buildings never to be erected, and the effect of this must
he prejudicial to that forr of art which is he prejudicial to that form of art which i practised hy ourselves."
III.-As to the Selection of Archatects by Public Bodies.
"Our pullic bodies have no idea of giving ap their patronage, which, in the eyes of the worst of their members, is a lcgitimate sourco of
influence, and in the eyes of the hest of thera is a duty which they are elected to $d o$, and no to delegate to an assessor. Indeed, apart from competition, there is no douht that our pablic hodies are able to choose their architects with as mnch fairness and discretion as they exercise ploy. Will any one say, for instance, that the Government, which can raake peace or war, or select the Viceroy of India, could not be trusted to select the architects of tho offices where the hookkeeping part of their business is conducted? And this applies with equal force to the case of a burial board, with their pair of cemetery chapels and lodge. Nepotism is an evil which the public understands and can guard against, it so as it wishes to do so; bat nothing favours can mse in secret that influence which he nowld not ventare to use openly. If, however, this system continues to prevail, we must still hear of people manonvring for nominations to com. pete, with the snbsoquent finessing, and the hling over the award, till at length squabhing over the award, till at length parties
withdraw from the contest, some of them with reputations (or perhaps only tempers) so ruffled that they cannot settle down into their normal shape without letters and pamphlets more or less damaging to everyhody concerned. Vastly more dignified, as it seems to me, is it to have a short and sharp quest after a job if you are are older; after which most of yonr brethren not only let you carry it out in peace, hut wonld if needful, give yon (at least in London) their cordial sympathy and help."

## CONCRETE BUILDING UNDER WATER.

 At a meeting of the Institution of Civil Engigeers, May I3th, Mr. T. Hawksley, president, in and the Provisional Works Suline Mouth" by Sir Charles Auruted at the sulina Mouth," by Sir Charles Auguatus Hartley, Was read. The provisional piers consisted of close piling, on either side of whichs being of close piling, on either side of which stones of less than a cubic foot in size were thrown from harges and allowed to take their natural slopeup to the water.line. Daring the five years up to the water.line. Daring the five years ridge of stonework to the level of from 3 ft. to 4 ft . below the water. line, and the sea and inner slopes were rednced to $2 \frac{1}{2}$ to 1 , and $1 \frac{1}{2}$ to 1 , respectively. The problera was, how best to honld in an open sea. way a solid wall $1 \frac{1}{4}$ mile long, 10 ft . thick, and of nearly the same height, from an irregular foundation of pierre perdue to the leve of the fast.rotting timber superstruc. ture. At first, the wall was built on a roughly. levelled fonndation, hy lowering masses of unset concrete, within movable timber dams fitted, in lengthe of from 15 ft . to 30 ft ., to the framework
of the piers. The earlier trials were unfortunate, from the proportion of cement mixed with the stability of the blocks ander water some 35 -ton hlocks at tho pier.head, where the proportion of cerment to gravel was only 1 to $4 \frac{1}{2}$, succumbed to the force of the winter gales Ultimately. hy the end of the summer of 1868 , a leagth of $2,79 \mathrm{Ift}$. of the north pier was suc. cessfully completed, the proportion of cement to the sand and gravel being 1 to 3 in the immersed portion of the wall, and 1 to 6 in the part above porter. But although the progress of the aboriks
water had been hitberto eatisfactory, increasing difficulties and expense were met with in the rougher water seaward, and this induced the anthor, in the spring of 1869, to adopt an alternative plan for consolidating the seaward end of the piers, hy carrying np the wall from a
foundation on the rockwork carefnlly levelled foundation on the rockwork carefnlly levelled
hy hand. Accordingly, a perfectly level bed at the depth of 5 ft. over a width of I2 ft. on the river side of the sheet piling was executed hy Russian divers for the next $1,247 \mathrm{ft}$. of the north pier. To afford greater socnrity to
the foundations, four 3.in. oak planks were spiked to tors, four 3 -in. oak planks were inner row of the provisional piers, the lowest plank heing fixed at 7 ft .6 in. helow the water. line. On the foundation thus prepared, blocks weighing 18 tons each, composed of ono of coment to seven of sand and gravel, were lowered from the timber platform above to their destined fite hy powerful "goliaths. As each hloak was 5 ft . wide, and the distance hetween the gnin. tuple rows of piles was 7 ft .6 in., the interval between the blocks along the line of works was ft. 6 in. The blocks were lowered when ten days old, and the spaces between them imme diately filled up with newly-made concrete, which ultimately consolidated the whole mase In 1869 the corsolidation of the north pier wa carried out to $3,200 \mathrm{ft}$. from the shore, and the onth pier was consolidated for a length of 699 on the plan first adopted at the norih pier. In this year steam machinery was erected on shore or the constrnction of blocks of from 10 tons to ot tons each, which were afterwards thrown rom pontoons at random on the outer alope of the rock-work adjacent to the head of the north piar, where the waves were fonnd to level down log length of I, 438 fete. fo $18 \%$, the remain
 orisolinited, and now iron lighthouse was light. The ctedintion a fourth.class dioptric Iso completed up to the of the sonth pier was but its crown wpork whe the high. Water hine in 1870, burne the fork was not finished the
The total sam foxing year
of which the of which the north was $5,332 \mathrm{ft}$. long, and the south 3,457 ft., amonnted to $185,352 l$. on the 30th September, 187I, when the works were entirely finished.

## THE CHANCES OF ANOTHER BUILDING

 STRIKE.The huilding operatives of London, partica not acting in carpenters and the masons, though view to concert, aro acting with possible this anotier increase of wages, if posster builders received a notice that a demand master builders received a notice that a demand
would he made upon them for compliance at a would to made upon them for compliance at a
date not many weeks distant. Meetings are date not many weeks distant. Meetings are
heing organised and held weekly, for the further ance of the object, nnder the name of the ance of the object, nnder the name of the
"Advance of Wages Movement"; but the word "strike" is as yet kept prudently in the wack ground. To speak plainly the y in the back. cannot and will not be attempted hy the build ing operatives of London muless their present organisation assumes a far different complexion, and shows a greater vitality and tone than what it seems capable of at present. The chances are all against the success of another building strike in London this year. A partial attempt might take place; but such another strike as that of last year is impossible. The demoralisa. tion and the hardship that the last contest worked to the operative ranks is too fresh in the minds of both union and non.nnion men, and they will not be moved to action by any mere call on the part of those or a section of those who led them hefore, and wonld he likely to lead them nem in the event of another strike. The provinces would give little or no support to second striles and the distinct trade societios of the enpentere, joiners, and masons would not sustain by their
funds any strike which was attempted withou their approval. Any straggle precipitated in London at present would have to he carried or by voluntary aid external to society fands, anc by the levies of those workmen mahing commor The with the strikers.
The bnilding trade is somewhat hetter at the present moment than it has hecn for soma months past; but though this fact might affors an encouragement, it would at the same timu afford no guarantee that fresh dermands could bl enforced at $a$ lapse of eight or nine months afte a settled agreement had hoen concluded, and s propssition acceded to that any futare dispute should he referred to arbitration. What did the building operatives of the metropolis gain $\mathbf{h}$ their last struggie? Less time and less waces They are now offered by the master builders thr option of making more time, and consequentlo morc wages; but this they decline, on the ple that "overtime" is one of the grentest evils o the huilding trade. Now it is an incontro vertihle fact that there are hundreds of carpen ters, joiners, raasons, and other workmen, ever arnong the society-lands, working nightly ir London overtime, for regular and what are caller irregular firms, or non-society shops. The societies are powerless to abolish overtime ; thes wish to see it put down, yet they prudently allow their own memhers to work it. Overtime will always exist for workmen who desire tu nerease their income; and no matter how trande societies may attempt to control it, the exigencies of modern life and puhlic wants will necessitat vertime being worked. Let our building operatives be wise in time, and avoid strikes even when successful, the gain is hul many trade and the prosperity of the nation feel the evil effects. Trade-unions aro not evils in them: selves,-they have their great use ; but, unforin. selves,-they have their great use ; but, nnforin. balanced the good they have accomplished for banced the good they have accomplished for
the beuefit of their members. How many car penters or joiners are there who lived throngh penters or joiners are there who lived throngh

strike can conscientiously say that they have trike can conscientiously say that they have Ideness ruins, drink rains, strikes ruin, and the last is a species of intemperance which commonly embraces all and works ruin to many.
mater Wo wisly the all and works ruin to many. very grood they car fairly and honestly empire every good they can fairly and honestly attain z and will never find any favour at our hands, We vannot look with any farour at our hands. We pon the occurrenco of either a lock.out or a trike; for we believe both to be unnecessary. Whatever obstructs or retards the industries of country, and tends to beget an ill-feeling between the employer and the employed, cuts atthe root of all social good and is cumulative in disaster.
Our monition to. day to the workmen of this metropolis is a kindly one. Let them take it in the spirit with which it is offered by those who have known their position long and well, who. ave gauged all their resources, and who wiah: them from inflicting as most vital interests.

## SCHOOLS OF ART.

Lambeth.-There was a large gathering of the riends of the students of the Lambeth School of art, in Miller's-lane, Vauxhall, on the occasion of the yearly distrihution of prizes and certificates. The Rev. Canon Gregory presided. In the course f his opening remarks, as reported by the South ondon Chromicle, he said it was eighteen years the school was fonnded. In their early ays the school encountered many difficulties, nil they were fortunate enough to secure the services of their friend, Mr. Sparks, as head master. Since that time their history bad been ne of progress and development. They were hen met for the second time in that second oora, their old premises having becono too trait for them; and even with this increased ccommodation, he mnst say that the art-school vas well used as well as woll tanght. But they had not quite got rid of the housing difficalty, or, although the mouey had heen paid, some 200l. had been advanced by himself and others. They were anxious to raise this 2007 ., and were ndeavouring to raise funds hy way of lectures and concerts. In conclusion, he said that none
but several had gained silver medals. As George Leslie, A.R.A., thon delivered an interesting address upon tbe spirit which should onimate artists in their work. Opening with a criticism by Mr. Rodgrave upon the lectarer's remarks on art at the St. Martin's lane school recently, that these schools of art were not to make artists, but to produce in the people who attended them a taste for art, Mr. Leslie dcplored the division of labour wherehy artists waro confined to one branch of art, and which tonded to destroy that unity of design in buildings and other under takings which was the distinguishing feature of many ancient works. In conclnsion, he said, with all due deforence to Jr. Redgrave's opinion, in the true sense of the word, -artists of the same family to which it had been his pride to belong: and when he saw such drawings as they had before their eyes, no ono could say that those capable artists.
Shefieht. The annal conversazione of this sohool, and the opening of tho exhibition of pictures in connexion therowith, have taken place at the school. Amongst the company were the Mayor and Master Cutler, the Mayor of lotherdent of the School of Art), Mr. B. Wake, Mr. Cox (Pall-mall), \&c. Mr. Sunnes, the liead master, in his annnal report thus speaks of what the students had accomplished :-
the pest year will pertasps be formed best be thool during the post year will perlaps be formed best by quoting from
the report made by the examiners at Sonth Kensingto upun the works of the studeuts sont to Loudon for adjudiantion as usual in April last, und by comparing the prize list with that of hast yeur. 'lhe report salya, 'considerable
rersatility in the rauge of suljects, which mere pursucd enerally with a success above the arerage. Tha pecured ational prizes, 4 free studentships; in 1872,38 prizes,

 eicht oclock most of the company proceedod o the large studio beneath the "cast" room, to vitness the presentation of pizes to the successul students by Mr. Cole. The chair was ocerintroduced Mr. Cole, who said the presiclent had asked him to give ar opiniou noon the state of he Sheffield School of Ait. Ho should attempt vould be arrecable for them to know that the chool of art had carned more State money iu 872 than in 1871 . In 1871 it received from joverament 267 l. upon the results of the work, and in 1872 it had recoired 3212 . There had ean a slight decline in numbers: last year 274 pupils. But there had becn a mucb larget leclino in fees. From some mystcrious reaso he fees had declined about 1002 . last year. In S71 thoy amounted to 9007 . ; and in 1872 only with other schools throughect to their position with other schools throughout the country, that was shown by tbe prizes received by the head. naster. Thero was a system by which one prize A $50 \%$., two prizes of $40 l$., thrco prizes of 302. , and several prizes of $10 l$. Were distributed in ecogaition of the work of the schools. Their ead-master, as in the prccoding year, had akon a 302 , prize. It would no doubt bo satisactory to then that out of 122 schools Shefficld et least took that position. They were in a low hbh, however, in regard to drawing in Sheffeld. immor a littlo in Sheffield. The number of tudents bal nearly doubled last year ; there vere 17 I students in the various elementary chools. They were nibbling at science. In
87 I there werc less than 90 , 187 I there wele less than 90 students; and, in S72, the students obtained from the State as tadents lcarning something of chemistry; some ew learning mathematics; some fow botany jut, in a town like Shefficlu, which depended so were havizg an inky, how many did they think te say 100? No. There was not one. It was ho same with regard to metallargy. Such wa ho state of the progress in science and art.

Opening of a New Dock in Limerick.The Lord Lientenant and Countess Spencer lock at $L$ matrek, which has just been finished after five yeara' labour, at a cost of 20,000 ?

HOUSE PROPERTY IN LEEDS.
An unnsually large sale of house property has taken place in Leeds. The property in Wm. Croysdale, situated at Richmond late Mr and Pottery-field, Leeds, and comprised 270 dwelling houses and shops, a rosidence known as Richmond Hill House and a residence known as Richmond Hepper (Messrs. Hepper \& Sons) Mr. John Hepper (fessrs. Hepper \& Sons) officiated a (Messrs. Barr, Nelson, \& Burr) were represented Messrs. Barr, Nelson, \& Burr) were represented
by Mr. F. Barr ; and the surveyors, Messrs. Bel \& Thornton, were also present. The property was divided into twenty-seven lots, and, with one exception, they were all sold, the aggrogat amonnt realised being $24,015 \%$. The unsold lot, -a parcel of land, -was not put up to com petition. Tho property had been previously valued by Mr. J. Bell, sen., at $21,019 l$. only 4. more than the sum actually realised.
The following shows the rental of a few lots the number of years' purchase whioh the pur chasc-money represents, and the price paid:-

THE ST, GOTHARD RAILHAY
$W_{B}$ were enabled to give some early details respeoting tbis great undertaking, and we now take from the Greuzpost the following particulars with regard to the machinery used in the construction of the St. Gothard tunnel machines in operation may be divided into two classes: tho buring-machines propor, which work mechanical means ontsida the apparatus and supply the motiso power for tho forme latter supply the motive power for tho former. The would be likeoniso impossible to bry hand; it steam-congines, as an engine posted in tho interior of the tunnel wanld soon posted in tho interior with smoke, and not only make it impossible for men and animals to exist in such an atmosphere but would soon extinguish its own fre. Nothing was scemingly left but to place steam-engines ontside the tunnel, and to condact tho steam generated in them in pipes to the boriag-place. But this also was impossibie of execution: the steam would havo been condensed in its progress chrougb the pipes, and eventually changed again into water. Professor Coliadon, of Geneva proposed therofore the application of compressed air as a motive power. By means of the latter, the engineer is enahled to conduct power with little loss to almost any distanco. Before the structed, in which the air is compressed to the wentieth part of its volume, hy a force of 300 horse. power. This power is supplied by immense water-wheels, driven by the wild waters of the Reuss and the Tessin (Ticino). The compressed air is conducted in pipes to the place of opera. ion, where it enters into a cylinder, and expanding in the latter, moves its piston with great rapidity backwards and forwards. The piston is connected with the cutter, which pene. trates deeper and deeper into the rock with each stroke. The boring-machines, of which there are several, bore together fifty to sixty holes. soon as the latter are made, the machines, miners fill the boles with powder or dynamite, and
fire then. As soon as the mines are exploded a valve of the air-conducting pipes is openced, and the force of the compressed air rushing ont anives all the smoke in tressed air rushing ont tunnel Afer the fir of the been cleared away, the labour of boring begins been cleared away, the labour of boring begins Göschonen dircct with Whinch is to connect mestron littlo 6,000 ft bew the summ bours long, and is ,000 below the summits of tho Gothard voight 1 mountains. What a superincumbent has undertaken the work, which was estimated has undertaken the work, which was estimated
53 million francs, for 50 millions, and promised to finish it in cight years.

## THE BRIDE STONES

Sin,-Tho relice, mentioned in the Builder, No. lis7a, aro described in tho "Mona Antiqua Restaurata," of the Rer. Henry Rowlands, second edition, A.D. 1766. The stones are in the parish of Biddulph, in the connty of Stafford, on a rising ground in the break or opening botween tho Clond and Woof.Lowe, two of the hills running throngh Staffordshire, Cheshire, Derbyshiro, and Yorkshire, into scotland. In this work they are engraved with apparent accuracy, and as follows:-A pavement leads from the west, composed of broken pieces of stone, $2 \frac{1}{2}$ in. thick, laid on pounded white stones, 6 in. deep, tinged with black, caused hy ashes and oak charcoal possibly. The sides of the cave were composed of two nnlewn free.stones, about 18 ft . long, 6 ft . in height, and I 4 in. thick, each broken iuto two pieces.
A partition stone was placed across these two long stones, about ${ }^{-\cdot}$ in, high, and 6 in. thick. A circular hole was mar $\because$ this stone, $19 \frac{1}{2}$ in in diameter. The height fron the pavemicnt to the covering was 5 ft . $10=$. Stones covered the whole rolic and tw similar monuments were in the vicinity $A^{\prime}$ the west ontrater opering of the or prese, for opening, of the carp or passab, were fou toporing, 2 ft . thic ${ }^{*}$ and . $1 \mathrm{ft}, 3$ in, square, and ther weat it. thic and fle 1 .n. broad. Fur ther west is, or 28 , a circle, composed of eight buights ${ }^{1}$ an disthe hoad, of various beights alr Japes, distant about 6 ft from cach othe in a semicircular form. Within aro,
or wer , iswo stones, where the cartb is black, and -aixed with ashes aud oak charconl. The circle is 27 ft . in diamcter. 20 ft . eastirard is or was, a standing stone, and another at a
similar distance heyond. similar distance heyond. I hopo that the new proprietor will cause this ancient relic to be
preserved.

## POROUS TILE ROOFS

For this evil there is a nost simple and cheap remedy. Give tho tiles a coat of coal tar, which can be obtained at a trifling cost from any gas works. One coat will answer the purpose; is better. Thero is not the slightest objection as a matter of taste to the colour of the tor dark brown colour, just the colour of an old tile roof stained with age; -but if a red or grey colour is desirod, sift fine sand of either colou over tho roof whilst the tar is wet; it will adhere firmly. I speak from experience.

THE LONDON AND MIDDLESEX ARCH ROLOGICAL SOCLETY.
The general mecting of this Socicty was held on Tharsday in last week in Lincoln's-inn Hall, Which had been lent thom for the occasion hy the benchers. The chair was taken by Lord Talbot do Malahide, who in his opening remarks referred to the proposed vandalism of destroying Northam. berlad House, which was now the only remain. ing nobleman's residence of its class.
Mr. E. W. Brabrook, F.S.A., then road an interesting paper "On the Hon. Society of oh's-im, in which ho shortiy traced the As affording society from its commencement, quoted from Fortescue that the young benchers in those days could live in London comfortably on 202 a year.
A paper by Mr. W. H. Spilsbary, the Mibrarian, "On Lincoln's-inn and its Library," was also istened to with interest by the momber.
A third paper, by Mr. Coote, "On the Inns of Chancery," was for some reason omitted.
The members then visited the library, spacions
sitchen, old hall, and chapel of the Hon. Sociot
of Lincoln's.inn, and proceeded over the way to of Lincoln's.inn, and proceeded over the way to
Rolls Chapel, where enother paper explanatory Rolls Chapel, where another paper explanatory of the antiquities of the building and once, by the Rev. J. S. B
Mr. Bloxam gave some explanations about one of the interesting features of the chapel, the monnment of Dr. Yorng, who was Master of the Rolls in the time of Heary VII.
The membors then went to Gray's.inn, where a paper "On the History of the Society and the Building," hy Mr. W. Donthwaite, was read. Some of the old manuscripts and books, the few remnants of the Great Fire, were admired, eapecially a copy of the bible in Latin, in diamond type and illuminated on vellum abont the thirteenth or fourteenth century. lihrarian called attention to the reminiscences of Lord Bacon, who was their chief glory, and who lived for many years in the square close by. A visit was paid to the chapel of Gray's.inn, after
which most of the members partool of a collation which most of $t$
at the Old Bell.

OAK.
SIR,-In reply to your oorrespondent,- a herring-bone pattern for floors will do very well. Cut the oak out directly in lengths, 4 ft . long, 6 in. wide, $\frac{1}{2}$ in. thick, and boil the timher, if possihle, in a brewer's boiler, or any large possihle, in a brewers boller, or any large the sap and season it; then stack it in any dark chamber, with plenty of air, taking care it is placed perfectly level, with $\frac{1}{2}$ in. pieces of wood In six months it will he ready for use. Then In six months it will he ready for use. Then plane it smooth, and fo it down with long fine brads. The finer the saw you nse in cutting the timber the less will ho the lahour after in
planing it.

A PROFESSIONAL TRIBUNAL.
AT the meeting of the Royal Institute of the Architects of Ireland, held on the 17th ult., the following resolution was passed :-

HOUSE AGENTS AND HOUSE AGENTS.
 This action, brought in the Lord Mrayor's Conrt, hefore Sir T. Cbambers, Q.C., Deputy Recorder, was to recover 17l. 10s. commission at 5 per cent., on the letting of new premises. The plaintifir stated that, in Angust, 1872, Mr, Bryant
had a house being built in Wison gtreet, Finobnry, Where he, the plaftifif, was a dealer in cigarates and tenant for it, be would give him the usual 5 per cent.
commission. He found H temant named 8 tevens, and in
 the honse at ${ }^{\text {a }}$ yeanly rental of ispot. Whe he the
thlaintifi, anked for his commission, Mr. Bryant referred plaintifi, alked for his commission, Mr. Bryant referred
him to Mr Newson, his house igent, who ho said had
made all the arrang gements for lettion the house, nad to
 son would give him something, Witness sidid he had
motbing to do with any arrangements as to lettiag the
honse, all he had to do was to find a sonant, and ho had
done so. When he applied to Mir. Newrson, that pergon doneso. When he ap
atterly repudiated him
The defendant now denied promising the plaintify any dnced a tenant at onvoe. When the plintifift introducod Mr. Stereng, he (defendant) anked smon. per annam for the gerced to talke them that day or the next, he would make him a present, as it would save the expense of emploging
house-agent aferwards. Having had to pay Mr. New-
 if he world gira him snything.
A strong point was raised that the plaintiff not being a hounse. agent, wis prooluded makng honye agents charges.
Tho learned Judzo, in sum ming un, told the jury there could bo no doubt but that the plaintifin introduced e cns. tomer for the premises, and was perhaps entitled to some. thing for his tronblo; hut it was a question
could recorer for commission as house-agent.
The Jury garo a perdict for the plaine- aident. for five pounds, Which will recover coots, on the lower socle, a matter that will add some firty pounds to the verdiet.

READING GRAMHAR SCHOOL
Srr,- - Ans 1 I fear it is too true that the annonnooment
in the Builder of last week is ilikely to prove correct: that our old Tudor Erammar school in the Forbury (whicb
antes from the time of Heary VIL.), is doomed and wiM soon be a thing of the past. This $\mathbf{I}$ much regret, in com. mon with many of my fellow townmen, Surcly the
monmberless associations connected with this old building
nut numberless associations oonnected with this old butding
onght to bo sufficient to protect it trom entire demolition.
 exeanent free ilibrary, and neews.rom disgrace. It would thus be anrrying on in its old age

The evidence was as uaual very conflicting, and the surreyr ecallod on each side as to the amount of damage "ere eqnally at variance.
The Judge, however, summed up in farour of the short house, and the jury mulete tall honse in 100 , Verdiet for $10 \%$, with costs.

## COMPETITIONS.

St. Luke's, Cambrilde.-A new district church is about to he erected for this increasing neighbourhood. The committee invited the following architects to lay sketches hofore them: -Mr . E Barr; Mr. E. Bayb, Cambridge; Mr. Fawcett
Cambridge ; Mr. J. Norton, London; Mr. Smith Cambridge ; Mr. Jd Mrton, L. Rowe. Ultimately of the Adelphi; and Mr. R. R. Rowe.
they selected $\mathbf{1 I T}$. Smith to carry out the work. they selected Mir. Smith to carry out the work.
Chestar TVorkhouse. - In a letter addressed
tc the chairman of the Board, Messrs. IIurray \& Thomas, the authors of the plans "We Fight t Win," call attention to a report in which Mr Culshaw states that the majority of the plan sent in oannot he exeouted under 48,0001 . The say:-"Our plans heing approved of by thi guardians, and amongst the thirteen gelecte designs, we were very muoh surprised to hea such a statemont had heen made, whilst wo ar prepared to carry ont the works for the sun oamed in our estimate,-viz, 27,0001 ., whic is under the specified amount hy $3,000 \mathrm{l}$. W may further add that Messrs. J. Parker Son, contractors of the Liverpool Exchang Municipal Offices, Dale.street, and the Roya Eschange, Manchester (now in course of ero tion), aro prepared to nndertake the work at th sum stated in our estimate. In common fairne on ourselves, being the lowest in estimate, $w$ consider ourselves ontitled to the first promium. o the building committee.

NET LANDLORD AND TENANT AGREEMENTS AS TO BUILDLNGS ON FARMS, \&o.
Tire North Riding of Yorkshire Chamber rriculture have inaugurated new conditions holdings between landlord and tenant which a deserving of notice.
Several discnssions at previons meetings the Chamher led the conncil to delegate to the chairman, Mr. E. T. Cayley, of Wydale Ha who, besidos being a large landed proprietor, a harrister-at-law and an ahle conveyancer, rame an amended form of agreement betwe andlord and tenant; and last week Mr. Cayl suhmitted his form of lease, which contai wenty clauses, and the main alterations fro the form of existing leases relating to the tenn f the land and tenant-right. These are pri cipally a year's notice to quit from either sid he reservation of the winged game to the han or coursine and ralbits hy ferretinc and dirgin by to rse wire petting to exclnde mabhits.
nd to use wive preservation Alantip of fruit-trees, non breaking.ing phatne materials for repair orp loth clase says, that after a notice is given quit a when㲘 be entitled to a following crop, according to $t$ custom of the country
The next important matter is compensati or "unexhausted improvements in bnildings , and las 16 h going tenant the then value, as ascertnined paluers, of any liming, claping, marling, durable improvement ; and of any draini building or permanent improvement, which 1 tenant may have made, with tho consent of landlord in writing, for which he shall not ha heen proviously compensated, by reduced re lougth of time, or otherwise.
The 17th clause provides for the remoral buildings erected by the tenant withont conse if not taken by tho landlord at a valuation, three months' damages to he made good,
The tenants look upon these proposed n agreements as a step in the right direction, as being some long way ofi their interests many of the new clauses.

BOROUGH SURVEYOR FOR HARWICH. $812,-1$ cannot avoid calling your attention to an adver-
tisoment in your last edition. There must surely be some mistake ebout it. I find, by referring to the last census, that Harwich is a borough, wifh muinipal and Parliarests in Parliament, sad has a population of between six and
and seven thousuad. Harwieh wants a ourctwor, \&c.,
with a prectical knowledge of sanitary matiers, who must large satary or 80 . per anium. are any perquisites allowed P It would be wrong of me
to eny any more, Mr. Editor, or to critioise in an nukind spirot it. The 19 gure 1 in front of the 8 has been omitued
inoun
1801 . about it. The 11 gure in iront of the 8 has been omitited.
180l. would grobably be the correct figare. I feel quite
glad that I have hit upon it, and the Harwich Board will glad that I have

## the institute dinner.

Sif,-I shall be mach obliged by your allowing me to
state in your journal that the Institute dinner for arehiand amaleurs of arehitecture) has been unavoidubly be held at Willls"s Rooman, at bult pust six for seven p.m. Gentlemen desirous of hoing present on the occasion
should formard their names as soon as possible to the Institute. T Chables I. Eastiake, Secretary,

## SEWERAGE WORKS.

Ocford.-The question of the drainage Oxford, which has engaged the attention of the uthorities for upwards of twenty years, ma low ho looked npon as practically gettled. ho last monthly meeting of the local board, the Irainage oommittee presented a report recomnending the acceptance of the tender of Mr
J. T. Aycock, of Norwich, for the constraction 7. T. Aycock, of Norwich, for the constraction of the first section of the street drainnge works or the sum of 15,0002. After a lengthened dis. enssion, the hoard resolved to accept the tender if Mr. Aycock. The survoyor's estimate for the intire cost of the works is put down at the sum of $85,000 \mathrm{l}$., namely, for the town sewerage and utfall, $60,000 l$; for the pumping station,
$0,000 l$, for the pumping main and overflow, $0,000 \mathrm{l}$; for the pumping main and overflow ,000l. ; for other drainage works, 5,000l. ; an or incidental expenses, 3,000t.
Ohester. - The sewrering committee having reffix the common seal of the city to the daplicate maveyance of Mr. Viggar's land, Sealand, pur-
hased for the outfall works, and to the a ree rent hetween the council and the county jus ices, with respect to the carrying of one of the atercepting sewers through tho county gaol at te coatle, this was agreed to by the council he same committee, at a meeting on the 12 th Lay, opened the tenders for tho new system 0 atercepting sewers, which were as follow:-

After some disonssion Mr. Roherts's tender as accepted hy the council.

## NORTHUMBERLAND HOUSE.

On the consideration of the Charing-cross and ictoria Embankment Bill in the Commons, Lord Elcho said that, while admitting that onses of such architectural pretensions as this tansion must give way to publio improvements, e recommended that some superintending hody hould he appointed to act in mnion with the irst Commissioner of Works, in order to save he metropolis from disfigurements, snch as annon.street and Charing-crossrailwaystations, nd the varions railway bridges across the hames, as well as to prevent changes of the ind recently made in Kensington Gardeas. Mr. Bouverie said the Committee on this Bill, hile regretting the necessity for removing one the fow remaining specimens of princely manireot route from Charing-cross to the Emhankent so orerwhelming that they gave the preluke of Jorthnmherla a thourh bo amentary protection, gave his assent to the loss t the mansion for the sake of puhlic conenience. Tho now street also received the
approval of Mr. Wyatt and Mr. Barry, and on effect of its construction wonld be to hide the iron railpay shed which bad hecn alluded to.
The plans would be submitted to the Institute of Archite would be submitted to the Institute the finest in tho metropolis.

The motion was agreed to

THE ARCHITECTURAL ASSOCIATION'S VISITS.
Ox Saturday, the 17th, tho Architectnral Association visited St. Luke's Church, Redcliffesquare, South Kensington, now approaching square, Sout kensington, now approaching the works. The president (Mr. Mathews), Mr Thos. Blashill, Mr. S. Flint Clarkson, and other leading memhers of the body, were prosent. The architects, Messrs. G. \& Henry Godwin, met them on the spot, and gave some particulars of the
building, and of the difficultios which had to he overcome, especially in respect to the foundations,
It is a large church, nearly 150 ft . long, and tho nave has a width of 35 ft . $4 . \mathrm{in}$. from centre to contro of main columns; hat, as we shall take תn opportunity to give some illustrations of the building, we need not now go into particulars. The majority of the party ascended to the top of tho spire, on which the cap.stone bas since heen placed. The Association afterwards visised the over a number of thoir houses on the Redclifie ostate.

Ir has heen decided to have at least another week of holiday study on English gronnd hefore going further a-field. Grantham, Newark-onTrent, Southwell, and the parish churches and other huildings in the neighbourhood, will, it is to ho hoped, give pleasant occnpation to a propor of next Agat course, direct the Mr. Jamsa sharpe will, of course, direct the expedition, and, as hefore, will map out the ronte in detail, after carefully groing ore made and put forward, the middle of July will he named as the time by which those who will he named as the time by which those who
wish to take part must finally mako up their wish to take part must funally mako up their
minds and send in their names.

## CHURCE-BUILDING NETFS.

Llanfachreth (near Dolgelly). - The church here has just heen reopened after having been heen tonched, hat remains as before has not odifice pulled down possessed no archæoological or architectural interest whaterer, and was in a dilapidated condition. In plan the new building consists of a nare, 4.6 ft .6 in . long and 0 ck in. in with a restry on the north with a restry on the north side of it. The walls charch and partly of new materials of the old
cocal stone The dressings are of Wrexham freestone. Ex. crnally, the roofs are covered with Portmado slating. A hold arch snpported on corhels scparates the nave from the chancel. The seats are all made of pitch-pine hy the contractors (Without extra cost), though deal was specilied. being of rather open; those to the chancel being of rather more elaborate design, with traceried fronts. The nave has an open stained roof, the chancel a panelled wood ceiling. The
pulpit is of pitch pine, with partly open traceried panels, and stands on a stone base. The font is of Wrexham stone. The ravo is paved with tile of differont colours, handed with slate ; there being a handsome encaustic tile pavement to the chancel. The altar.tahle, communion-chairs, and railing, are to the architect's design. The total cost has heen upwards of $1,200 \mathrm{l}$, the greate portion of which has heen defrayed hy Mr. Jobu Taughan, of Hannan Park, and the Hon. T Pryeo Liloyd. Mr. Ferrey, of London, was the architect. Mr. Alfred Guy was clerk of the works; and Messrs. Jonathan Smith \& Lewis Evans, of Dolgelly, were the contractors.
Cheddar.-The parish church of Cheddar (St. Andrew's) has heen reopened after having audergono a restoration, from designs hy Mr hutterfield, architect. The cost of the work has Mr. Buttorfield was 3,000l., hut the estimate has heen exceeded to the amount of $500 l$. The church, hefore the restoration which it has just Its main was in a seriously dilapidated state
the south of it, had all fallen outwards, and the walls ahove them were dangerously cracked and out of the perpendicular. These, with a large laken down and rebuilt heen largely repaired, and its stonework, where defcetive, renowed. The tower windows, which were huilt up, have heen opened, and the pierced stone parapets and pinnaoles of the church have hoen taken down, repaired, and reset. Many of the pinnacles bad disappeared. The roofs, whichrepared in every part, bave to a large extent heen newry, rohoarded, and covered with new lead, ne vestry. Remains of strong heen pnt npon found upon the walls heath the white whe 11 parts of the che The tow wash in ands of the chnrch. The remains of paint. gid the ceiling has heen repainted were clear, colours, in imitation of repainted in bright colours, in imitation of the old work. The chancel coiling, heneath an old roof of a higher
pitch than that of the nave, is a new one, and of a different of the nave, is a new one, and painted, so as to oarry. This also has heen painted, so $2 s$ to oarry on the colours of the nare roof eastward. The walls of the chancel and the wall on the west side of the chancel aroh are inlaid with lines of constructional colour, with some addition of painting. The remains of old glass which were scattered throughout the win. dowe of the ohnrch, and which had already heen much moved and patched, have heen collected into the largo windows of the south chapel already mentioned, and have heen put together and barmonised on a new flowered ground. The entire ohurch has been reglazed. The chureb has heen entirely refloored and repaved, and a great amount of earth has heen cloared away nave and aisle seats have heen retained and new ones in oak added. The chancel fittincs are new, bnt somo old oak panel. ling has heen nsed np in parts of them. The old screons to the two side chancels have heen refixcd. The church has heen bighted hy coronas and hracikets for ras, and bgated hy heated. A new east window, painted, has heen prosentod hy a lady to tho chnrch. The suhjeot is the Ascension of our Lord. The window is the work of S. Gibbs, of London. The expense of the restoration has mainly faller on the Marqnis of Bath and the vicar of the parish, the extent of which will he ahout 3,500 l., and this arrespective of the repair and improvement of the organ, at a cost of $65 l$, and the entire refitting of the church with now gas-fittings, at a oost of 907. ; the old standards heing removed and coronas suhstituted.
Ashhory, near Shrivenham, has of St. Mary, after restoration, hy the Bishop of Oxford. The church, liko many others in the neighhourhood, ture tigns of tho suocessive ages of architec. lare, the earliest portion of the huilding, dating hack to the twelfth century. The Norman tower, with zigzag mouldings on the soath side,
had been huilt up, hat it has now heen opened had heen huilt up, hat it has now heen opened at the special request of the Incorporated
Church Building Society. The upper part of Church Building Society. The upper part of
the tower (Early English), heing much dilapidated, has (Early English), heing much dilapiheen re- hew helfry. chamher made the floor of the tower heing curtained off as $a$ vestry. In the south transept, which helongs to the Docorative style, a moniaprohaly arch has heen discovored, under which the tounder of lise chapel was hare heen demolished, and open seats suhstituted, showing the pillars of the nave, whioh were huilt in the Porpendicular period. A new pulpit of free. stone, carved, has heen placed in the room of the old one. Thero is $a$ reredos of the same material in the chancel. The floor of the chancel is laid with Minton's tiles, at the cost ial Ecclesiastical Commissioners. The metao. the mow in the sonth transer the TV. Chamhers. The central suhject reprosents Christ preaching the Sermon on tho Monnt. Another subject represents Moses keeping the tlock of Jetliro, his father-in-law, tho Priest of Midian. A third contains a representation of Boaz and Ruth. The fourth window represents an angel "Hying through the midst of heavon." The church is warmed hy Parrett's stovos. The arclitect employed was Mr. J. W. Hugall, of Oxford; and the huilders Messrs. Wall \& Hook Brimsoomb, near Stroud. The total cost of the (defration, exolusive of the chancel repairs (defrayed hy the roctors, the Ecolesiastical Commissionera), is nearly 1,100 t.

Butsthorpe.-The work of restoration at Bilsthorpe Church is progressing. Mr. Mine, the diocesan surveyor for the counl.y of Notts, is
the architect; and the builder is Mr. Young, of Lincoln.

Tuman Longevity: its Facts and Fictions. B Walitasi J. Thows, F.S.A., Deputy Libraria House of Lords. Londun: Marray. 1873. Mr. Teours's painstaking researches into allege cases of centenarialusm are well known, a hey now form aa interesting volume, in whe thers show to he donbtful, and a few them estahlished. Mr. Thoms has not go disprove every such case, as bas heen done;
that his rosults are all the more just and valuable. He bas proved that some such case do occur, but that in still more a tendency t exargerato and excite astonishment and reverence amongst acquaintanceshasinduced sapposed centenarions and their friends not only to gc "beyond the wcore," but far beyond even tbe century, wbich is so seldom, and ever so little exceoded. We do not despair, as we have before said, of the lengthening of man's days to 100 years as a much more common limit tban now, cousiderably lengthening ahready; but we suspect tbal heyond that extrome point no merely sanitary improvement is ever likely to lengthen man's days, or to stave farther off those natural causes of decay under which the frame once composed and cansolidated goes on to become constrictod, ossified, and at length incapable of vital move ment. $A$ s ono of the Gregorys remadked it a of the pery causes of life itself,-which build up athe organism and then consolidato its tissues tbat go on to constrict and witber it away; so tbat nothing short, one wonld tbink, of retrogressive intervals of constrictive-life suspension, far more potent and actna] than "naturo's syyeet far more potent and actmal than "nature's sweet - retrograde and connteract tbose constrictive processes which otherwise inevitably result in decay cesses which otherwise inevitably resu
Mr. Thoms's volume includes a searching inquiry into some of the more remarkable instances of buman longevity and suggestions for testing repnted coses, illnatrated by the examples civen. Of course among others wo
have bere old Parr's pretensions to 152 years of - age discussed, much to thoir disndvantago, and atso those of Henry Jenkins to 100, in both of which cases Mr. Thoms deolaros that not a tittle of evidence in their farour exists.

We shall conclude witb a case for bis inquiry which happens to baro just beon anonouced in the notspapers $0 . s$ follows

Lady Smith, widow of Sir Edmund James Smith, the ominent botanist, who was knighted by George IV.,

This treatise, though one of a series of text-books of science, adapted for the use of artizans and students in public and other schuols, is not to be inasmuch as one special purpose of it is to initiate tbe outer public into the inner modes of thonght and tall among savans themselves, and not to adhere rigidly to the ordinary text-book style. As the author remarks:-
"In England at the present timo it may nlmost be said tnught in ordinary text-books, and the other a sort of Conting sciance kuown more or less perfectly to practica
electricians, and cxpressed in a frafmentary manner in clectricians, and expressed in a ragmentary manner in Natthicosen, Clarl, Tariey, Culler, and others, The
acienco of the schools is 8 dissimilar from that of the practical electriciun that it has beon quite impossible to give students any sufficient, or eren approximately oulf
cieut, text-book.
First, Tbe plan followed is as follows: cieut, text-book. . The The plan followed is as fousws:-
First, a general srnthetical view of tho science has been
given, in which tho main phenomena aro described and the torma employed explained. This general riew of the science cannot be made tery easy reading, although i
will probubly be found easier by those who binve no pro conceived notious anout tension, intensity, and Bo forth,
than lyy students of fold text-books. If this portion of the than by students of old text-books. If this portion of the
worl can be mantered, the student will then be readily
able to nuderstand what follows viz the deseription able to maderstand what forsows, viz, the description o the apparatus used to measure electrical maguit,
to produce electricity under various conditions.
-"Notes on Bods and Bedding, historical and ancodotal. By James N. Blytb. Simpkin, Anrshan, \& Co." This small volume contains a beds and of intoresting matter in regard to "Moniton Lace-making, illustrated. London The Bazaar (Nowspaper) Office, Wollingtonsireet." "Futh and practical instructions for acquring this beantipul art" witb patterns illustrated, are given in this useful little treatise.

## Miscellanea.

Whitby Piexs and Harbour Commis sioners.- At a meeting of the Piers and Tarbour Trustecs, an important plan, prepared under the instractious of the Local Board was taken into consideration. This plan is for the harbour to Bormole quay by tho side Norm North. Enstern Railway, and near the termini of the Scarbro' and Whitby and Middlesbro', Redcar, and Wbitby Union Railways; and also for the opening out of a new road at the end of Baxter comprises a 75 ft . quay, and a 30 ft . road. Tbe plan, with a little modification, received the approval of the commissioners, and, it is hoped, will also meet the views of the North. Fastern directors, who are expected to visit Whitby a Wbitsuntide.

National IIealth Society.-This society held its seventh meeting this scason at the rooms of the Social Science Association, on May lst wben the snbject of "Infant Mortality was considered in a paper by Dr. Alfred Carpenter of Croydon; tbe means aso by whe consti tutional weakness is doveloped were discussec at somo lenroth. The autbor urged that every nian is entitled, at birth, to a fill measure of bealth, and tbat any departure from tbat standard is to some extent depriwing bim of his bithright, He considered, therefore, hereditary or constitu tional weaknesses as mortg ges efected by tbe profligacy or the ignorance of our ancestors, and that it bccame the daty of tbe society to show the way in whicb such mortgages could be paid off. In pointed out that Darmin's observation bat demonstrated bow errors hecame imparted to promeny, and that hereditary diseases wer orrors propagated in the descendants of tbose who committed such errors. Mo tben pointed ont that it was sbown statiatically that 81 per cent. of our population were hurriad into anotbe world before their timo in cousequence of such crrors, and that the wbolosale destruction of infant life wbich rvent on yearly in Christian England was fir beyond the destruction which was perpetrated by King Herod before the com mencement of the Christian ara. Ile tben sbowed tbat such destruction was not a necessary con tincency hut could bo materially reduced by corporate action, illustrating his point by rafer ence to sub-district of Beddincton and Wal lington, in with is sitnted the Croydon sewar ing, in which is situated tho Croydon sewag anc in bilden born died bofore it rencbed
 the age of one year ropulati ithin half m mite of tho somere- the deat ate was only 1 in $13 \frac{1}{2}$.

Uniformity of Valuation Bill. - Mr Stansfeld's Bill for tho uniformity of valuation lasses rateable property as follows:-1. Houses r huildings without land otberwise than gardens here tbe gross value is under 20 ., maximum ate of deduction to be ono-fourth; 2. Houses and buildings withont land otber tben cardeus and pleasure.grounds palued therewith for inhabited house duty, where the cross value is 20l. and nnder 40 l., maximum deduction to be one-fifth; 3. The like, where the gross value is tol or upwards, maximum dednetion one-sixtb 1. Buildings witbout land wbich are not liahle to inlabited bonso duty and are of a gross value of 20l. and under 4.02., maximum deduction one fiftb; 5 . The like, of a gross value of 40 . and prarde, maximmm deduction one-sizth; 6 Land with buildings not bouses, one-tenth; 7 Land without baildingrs, one-twentioth; 8. Mills and manufactories, onethird. The following ar all placed together, viz., briokyards; mines and quarries ; rights of fishing, fowling, shooting, and sporting ; tithes and tithe rent.cbarge ; railways canals, docks, tolls, waterworks, and gnsworks and rateable hereditaments not included in tb foregoing classes; and the maximum rate of deductions for all these is to be determined in each case according to the circumstances and tho Feneral principles of law, as amended by this Bill. The maximum rates of deductions abovo prescribed are also not to apply to houses or bildings let ont in separato tenemonts; the rato n such cases is to be determined by the assess mont committee.

Society of Biblical Archrealogy.-It is intended shortly to publish a series of transla tions of all the important Assylian and Egyptian oxts which oxise in the vard coneco the English student tbe remains of uudoubtediy coldest and most antheutic literature in the forld, the foundation of all bistory, archaolog and Biblical exposition, tho contemporaneous recorda of the nations and writers of tbe Bible. The selection of the records will not be confined to those bearing directly on the text f the Bible but embrace the entire range of Torption and Asgyrian history and literature

The Amual Conversazione of the Presidon of the lnstitution of Civil Engrineers is to take place on fuesday next, the efth inst., in the West Galleries of the International Exbibition The invitations hare again beer issued in tbo names of the President and Mrs. Hawksley and tbe distinguishing feature of last years reception,-tbs presence of ladies,-is to ba repeated. The machinery will bo shown in motion, and will be explained by the different exbibitors, aided by members of the Institution.

The New Deaf and Dumb Institation, Bristol.-The new premises now heing huilt for the Deaf and Dumb Institution at Bristol, near
the Queen's Hotel, Tyndall's Park, is in a for. ward state. It is heing erected from designs hy Mr. J. Bevan, of Bristol, architect, and the work is heing done by Mr. Gay, contractor. The new institution is designed to accommodate ahont seventy children (double the numher of papils now under instruction). The style is domestic Gothic. The huilding will consist of a entrance in the middle will he approached from the Queen's Hotel-road by a fight of steps; at cipal staircase, and hehind that all he the prinmeals, with a school-room ovor. A wing on either side of the entrance will provide roons for the committee and matron, apartments for the teachers, and day-rooms and dormitories for pying the riplit and the pupils, -the hoys occu pying the riglat and the gin's the left wing. A inmates. The basement contains the nsual domestic offices and bathing and lavatory accommodation for the children. At the back of the building is a large playground. The master' and will overlook the park. The hnilding en and will overlook the park. The hailding will addition to the estimated freestone dressings. In house, $4,000 t$. will he required for the new huild house, 4,000 . will he required for the new haild

Mr. Plimsoll, onr Seamen, and our Ships It is to he regretted that M . Ir . Plimsoll has met with difficulties, even with the Board of Trade ships and our seamen. securo the safety of our information has heen refused he complains that aid him in the saving of lives, while this very information was frooly given to underwriters in order to aid them in making their investments Nevertheless, the influence of coming legislation Mr. Plimsoll, in the repair of slin, acoording to standing "the cry of tho Board of Tradwith. delay." Why shonld the Board of Trade for delay." Why should there he any delay in the
saving of Byes? As to orerloading, and ospe. cially deck-looding, Mr. Plimsoll has put into cially deck-looding, Mr. Plimsoll has put into printed form, and is circulating, a speech of which is important and instructive. It shows Which is important and instructive. It shows of the resnlts which followed the removal from the statute Book, in 1862, of the prohibition which previously existed against the practice of eck-loading. The Commission is at work.
Dulwich College Authorities and the North-east of Iondon.- The vestry autho. and a placard, stating objections to the pamphlet of the Endowed Schols objections to the proposal of the Endowed Schools Commissioners that the of the parishes of St. Iake give 10,000l. to each of the parishes of St. Luke and St. Botolph, towards the erection of schools, under Edward Alleyn's will, for tho benefit of the lower middlo class; and urging that while 135,000 . have heen expended for the herefit of 322,000 sonls on the south of the Thames, and educating a little over to the educational of $20,000 \mathrm{l}$. is very inadeqnate to the educational wants of a population on the north of the Thames estimated at 475,000 souls, or whose wants at present no college has heen provided. They are the more earnest in their opposition to the scheme of the commissioners because it is notified that the next step which the latter propose to take is to erect more schools on the sarrey side of the water. It is intended to hold several pablic meetings in the

- metropois on tho

Proposed Museum for Sheffield,-At a secont meeting of the Town Council, the mayor Public Jibraries Committee to antion to the Free and estimates for the erection of a public museum on the site immediately adjoining the Central Lihrary huilding, and to mubmit the same for the approval of this Council." After some discnssion, Mr. Rohertshaw moved as an mendment, "That the Free Lihrary Committee be instrncted to take into consideration the best means of ntilising the land adjoining the Free Library buildings, and report to the Council thereon." The committee, he said, might then consider, not only the utilisation of this land, bnt whether they could get more land, and then they conld erect a mnnicipal-hall and a museum also. The motion was lost hy a majority of

Alterations at the Islington Workhouse Schools.-At a reoent meeting of the local Board of guardians, the clerk presented Mr. Higgins's hill, as surveyor for alterations at tho schools. It amounted to 29l. The contract amounted, Mr. Kigg said, to 500 l. Mr. Wilt. and a first. surveyor's charge was 6 per cent. charged 5 per cent. He olsserved that o chare had heen made on the value of old materia which ought not to he allowed. Mr. King said the School Visiting Committeo had carefully cxamined the account, and they considered satisfactory. It had heen settled that arehitects were entitled to chargea commission on utilising old materials, as their skill was reguired in dealing with thom. The amonnt was only 5 l. He moved that the hill he paid. After some discussion, in course of which Mr. Wiltshire moved as an amendment, that a commission of per ceat, he paid on 4131 , the amonnt of the two contracts, the motion of Mr. Wiltshire was arried.

Alexandra Palace.-The opening of the Alexandra Palace and Park on (this) Saturday aso 2 th instant, will be an event of importance as adding a new place of amusement and recrea ton to the metropolis, and ospecially as providing for residents in the great and rapidly growing similar attractions to those so long enjoyed at the Crystal Palace by their sonthern brethren The natural heauty of the Alexandra Park, heightened as it is hy judicious and tasteful planting, would alone snffice to attract myriads of visitors, and the extent of the grounds (which embrace 220 acres) renders them a valuahle addition to the oxisting lungs of London. The great organ, hy Mr. Willis, huilt under the aperintendence of Sir Michael Costa, is one of he largest and finest instruments in the kiag. dom. A first.rate orchestra, has been formed by Mr. Weist liw, the condactor of the company' music, and an efficient choir of 300 voices will assist in the oratorios and other great perform

A Town Lighted hy Air Gas.-Great Marlow has heen lighted hy way of experiment with air gas, by charging common air with vapour of mineral oil hy means of Eromsohroder's patented apparatus. The result is said to have higher illuminating the new gas having one. halt also stated that the new gas harns more slowly than coal gas, so that 100 ft . of it will go at least trwice as far as 100 ft . of coal gas. It is kaid to store and travel quite as well, and can he pro duced at half the cost. The gas is inodorous and not explosive. A gallon of petroleum makes abont 700 ft ., and 70 ft . of air make 100 ft . of the gas. If all this ho correct, it romains to he the advantaces to themselves to appropriate share thanges to themselves, or will at loast the apparatus proposes to provide cheap gene. rators on a small scale for provide cheap gene.

## International Fruit, Flower, and Vege-

 tahle Exhibition. - A groat horticultural Seption is to he held in tbe beginning of nnder ther at the Mauchester Botamical Gardens, scrihed 25? rond ge of her Alajesty, wh the Ropal family. The conncil of the Manchester Botanical and Horticultural Soeiety have suhscribed 4002 towards the necessary expenses. has been appointed, and suhscrintions are solicited. A liberal sum will ho offered in prizes, and the committee helieve this will he the Fruitest horticultural show of its kind ever seen Fruits of foreign growth, as from France, Italy, Turkey and Egypt, and from the United States of America, will be hrought together, and placed side by side with fruits grown in our own land. There can he no douht hut that such a displayOfficers of the Royal Academy,-Mr. J. P. Knight having retired, after many years' sorvice, from the post of secretary, the conncil have determined, we understand, to seek by advertisement a new secretary ontside the walls of command the services of a, man of ability. The keepership is also vacant, Mr. Charles Landseer having resigned the appointment. This will Somechan he again filled by an Academician. the view of res in the lihrary are talked of with affording additional facilities to readera.

Congregational Church and Schools Leek. - Extension of Buildings. - A new range of buildings has just heen completed here : comprising on the ground-floor a lectnre. room, 45 ft . hy 23 ft ., with entrance, so. ; and, hove that, four commodions class-rooms, com. municating with the present upper schoolroom. The new building is stone-faced, as the rest, and finished at each end hy a gahle and substantial hnttressed chimney. On the lower story it has roomsped three-lignt windows into the lectare moulded areh resting, won moulded arch, resting upon short columns, with carved caps in the jambs; the upper story gives cusped two-light, and circlet over in each. Mr. W. Sugden, of Leek, is arcbitect of all the huildings.
The Trades Movement.-The carpenters: employed hy Mr. W. Brown, huilder, Londonday ware on wayes. It appears that Mr. Brown has a imet on hand to he completed by a certaia ime on forfeiture of 5l. a day, and consequently hose ion and strike. ronworks of a largo firm near Wolverhamptota eft their duty suddenly at the end of the week, because they oonld not get an immediate increase of wages. The furnaces were thus out of hast for four days, and the puddlers and millmen idle. The offenders were brought hefore the magistrates, when they expressed contrition and agreed to pay 10s, each as compensation for mischief which cost their employera 100 l .
The Now Telegraph Cable Ship.-The first ship that was ever constructed for the special purpose of laying telegraph cahles has arrived Hooper's Telegraph Works (Limited), hy Messrs, Mitchell \& Co., of Newerstle. The length of the ressel is 350 ft ., heam 55 ft ., depth 36 ft ., and the regristered tonnage 5,000 tons. She has an nnusually large beam in proportion to her longth, $t$ heing an important objeot to have the circular tanks for the stoware of the telegraph cables of as large dimensions as possible. The cable-tanks are three in numher, and consist of circular pper deck, and of as aeam of the ship would permit. Their structure is incorporated with that of the hull itself, in such a way as to give matual support.
Moyal Architectural Mnseum.-The Gold : miths' Company have forwarded to the connoil the Royal Architectural Museum a donation f 50l. to help the institution in its work, in eturn for which the coancil andertake to ex. init the designs for the plate for which the roldsmiths' Company offer prizos. The artrorkmen's "evening modelling and drawing lasses have been well attended, as many as ixty entrance-fees having heen paid. This ronst is mainly owing to the yery practioal Redferm, imparted hy Messrs. Brim and Redtern, two members of the Musenm council, instructors, while the council are seeking funds to provide for a permanent paid teacher,

A New Club-honse for Liverpool, We anderstand (says the Liverpool Albion) that a munifioent gift is about to be made to tho Conserpativo party in Liverpool. A millionaire alderman has just effected the purchase of the property and ground at the junction of North dohn. street and Victoria.street at a cost of nearly $30,000 l$., with a view to erecting there a building adapted for the purposes of a club, which he is to hand over to the Conservative party as a free gift for political pnrposes.

Value of a House in Pall-mall. - Tho freehold mansion, land-tax redeemed, known as Adair House, Pall.mall and St. James's-squarc, lately in the occupation of the Dowager Lady Adair, recently deceasod, was sold by auction,
on Wednesday last, hy Messrs. Rashworth, Ahhott, \& Co., of Savile.row, and produced the large sum of $35,500 \mathrm{l}$. If we rememher rightly, a larger sum was offered for it by the adjoining club, when they were arranging to huild their house.

Portmadoc.-A new church, to accommodate 400 persons, will shortly he commenced ats Portmadoc, North Wales. The building is to he carried ont under the supervision of local archiects, Messrs. Roherts \& Morrow, from draw ings by Mesers. Axmann \& Perrott, of Londons

VOL. XXXI.-No. 1582.

Bolton and its Toun Hall.

HE now Town Hall, at Bolton, of whieh we give plans this week, and which is to be for mally opened by H.R.H. the Prince of Wales on Juno 5th, will be com pleted by that date so far as the principal apartments are con. cerned, although in many minor points there will be a good deal still incomplete, the in. tended date of the open. ing having been un. avoidably anticipatcd by a month or two, in accordance with the en. gagements of tho Prince and Princess. The building occupies an exceed. ingly cffective site, in what is called "Town Hall-square," with a wide area in front, and a very fair amount of open spnce on the other three sides : the buildings flanking this square are unfortunately, at present, of a comparatively mean and common type; and it is to be hoped
that in time they will he rebuilt with such a degrce of statelinoss as to form a more suitable surronnding to the now bnilding. We could scarcely rocommend, however, the adoption o the same style or manner, for such rebuilding, as that which has been adopted in the Town Hall, whioh is the usual "school" type of Roman design, with an engaged order of columns or pilasters, running through two storie日, and with the usnal charaeter of window.dressings, pedimente, and se on. Tho symmetrical disposition of these features always gives, though not a novel, a stately effect, when arranged on a largo scale, as in the present case; and the
building will retain this effeet, at all events until weather and time shall have told on it, We shall, however, give a view of the exterior next week, and our readers can form their own judgment
In regard to the intorior, the plan is in most respects praiseworthy, ospecially in rogard to the manner in which the corridor communication is carried right round the building, as will be
seen on the plans; whioh in other rcapcets, as to the arrangement of the various compartments, will sufficicntly explain themselves. Tho great deficiency is the want of what may be called a grand or "state" staircase in conncxion with
the main entrance. There is no laok of stairthe main entrance. There is no la.k of stair-
caso accommodation, but there is no grand or effective route from the principal entrance to the mayor's state apariments. The basement is occupied by waterworke', treasnrer's, and rate offices, and other municipal offices, and by the police accommodation and prisoners' cells; a large part of the basement under the grea hall being utilised as a drill and mnster room for the police force. This portion of the baso. ment has to be lighted almost ontirely by gas, bat in nearly every other part of the offioes the windows are ample, and the light is rery good: the brilding being elevated on a very high rusti. oated base, this story is entirely above the

- See p. 426.
ground, and the principal business entrances for the public are on the ground level, and very convenicntly placed for access to those offices where the chief pressure of basiness will occur The corridors and the floor under the great hall are fireproof (on Dennett's principle), the rest of the floors boarded. The first.floor corridor is laid entirely with Minton's tiles, in a simple and suitable pattern, forming a suocession of panels; in the ground.floor corridor the samo motive is carried out with the border tiles only the rest being flagged, excepting the principal entrance and the corridor immediately adjoining, which is laid with a moro elaborate tile design (not completed at the time our notes were made). The walla are finished with ordinary plaster, the principal rooms being decorated in colour. The roof of the great hall is (construc. tionally) an ordinary queeu-post truss, the risible ceiling heing formed by heary ooffered panels in plaster moulding and brackoting. The roofs are slated throughout with Velinhelli slates.
The large ball, without making much protenco architectnral grandeur, is a very cheerfullooking and effective room, as finished and decorated by Messrs. Simpson \& Sons. The deeply-coffered ceiling, already mentioned, has an undeniably good effect on the cye, and its hollows and projections will servo to breal up and disperse any echo which might have been returned from a perfectly flat ceiling when the hall was used for music ; though it is matter for regret to see so much labour and material $\varepsilon$ pent in mere lath and plaster cradling. A gallery, capable of accommodating two ranks of seats, rans round three sides of the room (very much on the same plan as what is callod "the balcony" in St. Jameg's Hall, Piccadilly), tho under side of this gallery heing bracketed ont from the wall in the form of a cove, which makes the finish to the lower stage of the design, consisting of wall-pilasters and arcades. Above the gallery the wall is divided by shallow pilasters running from the surbase to the oornice, with tho uszal slico of architrave, balanced on tho top of cach pilaster, which seems inevitable in buildings in bis style, and carrying an arcade whieh cuts into the cove of tho main ceiling. The pilasters are made a good deal doeper against tho end opposite the orchestra, with tho viow, probably, of breaking up a return echo. The space occu. pied by the orchestra (subtracting the large amount required for the organ), is not very great, and will not accommodate a band and chorus of adequate unmbers (if this is considered a dosidoratum), but perhaps speaking rathor than mnusic will he the chief use to which the hall will he put. The room is calculated to seat an audience of 1,800 . The material, hard plaster with which tho walls and ceiling are almust entirely finished, will make this a room withe decided tendency to echo, and rather reverbera tive than sonorons; but as the hall is not on the argest scale, this will not he so disadraptageons as it might otherwise be. The decorations of the valls and ceiling are iu tho main effective, though thero is in this, as well as in other parts of the building, too liheral a use of gilding on he ceiling for refinement of effect; the best portions are the pilasters and wall panels of the upper portion of the room,-the former a deep red with foliated scrofl onnament of a good type and the latter diapered in gold on a warm cream ground. The treatment of the doors, with panels in black and gold on stiles of a warm morone tint, is very effective per se, but rather too pro nounced for the rest of tho work. Round the frieze of the hall are inscribed the following texts :-"Except the Lord huild the house, they labonr in vain that build it: oxccpt the Lord keep the city, tho watchman waketh but in vain." "Blessed are the nations whose God is the Lord, and the people whom He hath chosen for His own inheritance." We confess to a con-
viction that the fecling of the said passages is singularly out of kceping with the style of their decerative surroundings, and to a decided dis like to sce words whieh, if they mean anything, mean something very deep and serious indeed, thrown in as part of a decorator's ordinary stocts in.trade ; with a moro refined and intelloctua style of design, they might go very well indced. The figntes of angels blowing trumpets in the spandrels are, on Messrs. Simpson's own autho rity, "boldly drawn" (whatever that may mean); we should be disposed to call them absurd. The semicircular windows over the cornice are filled with stained glass in panela painted in grisaille, furnished by Mr. Barnett, of Newcastle.on.Tyne; the work answers its parpose, but might havo been better. The arche at each oxtremity of the longer sidos, not picreed with windows, are treated as recesses occnpied by four groups of plaster figures, each corsisting of a female figure and two ohildren, and representing the four Seasons; these are modelled by Mrr. Paul, and though not "high art," nro well-intcutioned and pleasing. "Winter" is the best composed and most original. On tho wbole this hall may he characterised as a successfnl piece of ordinary decoration, appealing rather to the eye than the mind. We should mention that the surbase at the back of the gallery is faced by parquetry in various colourod woods by Messra Arrowsmith, who have also executed a more elaborate parqnetry plinth aud dado to the Council Chambor; the whole of this work is esceedingly oreditable to then, both in regard to good taste in arrangement and excellenoe of esecution. Above the parquetry wainscot the wall of the Council Chamher is decorated in panels with scroll ornament, and with a fricze above, with diaper ground on which at intervals are iatrodnced small panels containing figures cmblematic of various Bolton industries. The ceiling, which is divided into panele with a separate design in each panel, ie the best part of the decoration here, and the best perhaps in the building. The decorations of the mayor's banqueting-room display again in the ceiling that over. use of what may be called "gilded vegetation," which is not in good taste though it gives what is called a "handsome" appearance to a room ; the reat of the decoration in this room is well balanced and effective, and the figures on tho ceiling and frieze representing the "planets," tho "monthe," and the "four elements," are some of them very elegant, and great deal better than the "industry" figures in the Council Chamber. As to the "silhouettes of elible animals" round the walls, a whim in tho decoration of dining-rooms which is beooming a fashion now, we should say that they were very fitted to amuse children, hut out of place on any ther consideration. The douhle columns near ech end of this room are a warning instance of "constructed decoration." They stand on nothing elow this floor, and carry nothing, not even a "soffit," but are planted straight up against the veiling. 'The cffect is not good. The Mayor's Reception-room (not yet docorated) may he made a vcry effective little chamher, considering its situation, plan, and lofty proportions; bat it is deficient in light, its singlo windows being screened by the colonnade in front, an instance of the result of using southern styles in a northem olimate. The Sessions Conrt is well arranged and well lighted, with two tiers of windows and a skylight of obscnred plate glass, with cmbossed ornamental design. The various communioations with the court, for magistrates, police, the jury, and the puhlic, are conveniently arranged, and quite indopendent of each other. The business-rooms in general have an ample provision of light, and the corridors as much as is possible with the plan of bailding, and, on the whole, perhaps as much as is necessary. Each of the longor passages is commanded by a stair.
case window opposite each end, so as to give a througb light.

The priocipal contracts for the building have been carried out by Mesors. Ellis \& Iinchcliffe, o Mancbester, whose work includes the ordinary particulars of a general buidding contract, with the addition of the approaches, which are bcing newly paved, \&ce, under the snperintendence of Mr. J. Proctor, the borough surveyor. Of the exter bal work we will furnish one or two particu lars next week, when we proposo to give tbe
view of the exterior. The bells, inoluding one view of the exterior. The bells, inoluding one
large bell for striking the hours and four giarterlarge bell for striking the hours and four quarter
bells, aro by Messrs. Warner \& Sons. The olock, bells, aro by Messrs. Warner \& Sons. The olock
mannfactured ly Messrs. Potts \& Sons, of Leeds is from designs and plans by Mr. E. B. Denisou. It will ring chimes at tho guarters in a somewhat similar manner to tho Westminstor clock. The dials are 12 ft . in diameter, the centre-piece being 8 ft . diameter, in one casting of half.inch plate.glass: they will be illuminated at night. The whole of the internal decorations are, as we have said, by Messrs. W. B. Simpson \& Sons except the decoration of the corridors, whieh is by Mr. Heyes, of Bulton. The sculptaro in the tympaumn, which constitutes the chief external decoration, is by Mr. Calder Marshall. The locks and door-furnitnre are supplied by Messrs. Smith, of Birmingham, and are of excellent quality. The kitchen-range and tiling, and the grates and chimney-pieces on first floor, arc supplied by Mr. Wilson, of Manchester; those on the ground. floor by Messra. Pattison, also of Manchester. The tiling is entirely supplied, the only portion laid by them is that in by Messrs. Bonrnes : the rest has been laid ornamental cast.iron work has been furnished by Messrs. Macfarlnne, and includes a particu. larly good and appropriate pattorn of stair-rail ing. The warning and ventilation of the build ing has been carried out hy Messrs. Haden $\&$ Son, of Trowbridge, who have also supplied the hoists, \&o. The great hall is warmed by bot air admitted through perforations in front of the platform. This soems rather a one-sided (or one.ended) way of leating a large room, and would have a tendency to keep one end of the room too warm while the other is too cold. Per baps the fposition for the inlet is chosen on the principle, that in rooms for hearing in, the system of admission and expulsion of ail whieh sound in the same direction as that in whieh sound is to be propagrated, and thus the words of the orator or the notes of the vocalist are to be borne on a blast of hot air to tho furthest corner of the apartment. This is the only portion of the building whicb is warmed with not air, the heat in the other rooms and tho corridors being supplied (in addition to ordinary freplaces) by a hot water circulating system and hot-water coils, which latter are liberally supplied, under the windows of the larger rooms, the banqueting-hall, council cbamber, \&c. The inlet for ventilation (bosides windows) is by ordinary wall gratings, communicating with the rooms. The outlet for the great hall is througl part of the small ornamental coffers along the margin of the coiling, and thence into the main tower, whicb tbus maites the nseful with the ornamental, and becomes the principal ventiator. All the rest of tbe nsed-np atmosphere which rise above the roof, over the four corners of the large ball, and form external features. These will have a hot-water coil inserted in them to insure a current upward. The water arrange. ments of the entire huilding lave been supplied and carried out by tbe Boiton Waterworks Com pany, and by Mr. R. Haywortb, of Manchester, plumber, the supply including a 3 -in. main for pressure. Mr. Mayporth hos also fuy hydraulic pressure. Mr. Haypporth has also furnished the speaking-tubes, which form a communication hetween the principal rooms of the building. The fittings of the court and coancil chamber are snpplied by Mcssra. Dovestone, Bird, \& IInll, of Manchester; tho lightning-conductors and torminals by Nessrs. Hibbert \& Son, of the Bame town. Tho gas supply is laid on by the Bolton Corporation Gas Company (the corpora. tion having recently become proprietars of the principal gasworks, originally a private enter. prise), noder the superintendence of their manager, Mr. Veevers; the chandeliers in the breat hall,-eighteen in numher,-are furnished pany, of Coventry, as also that in the mayor's reception-room; that in the Borongb Court by Messrs, Messeagera, of Birmingham; and
those in the mayor's dining-room by Messrs Wingfield, of the same town, who have also sup plied the corridor lamps; the pendants an brackets in othor rooms are also supplied b these two last-named firms. The organ is bein built by Messrs. Gray \& Davison.
The building has been erected from tbo de
igns and plang of Mr. Wr. Will of signs and plans of Mr. W. Hill, of Leeds, Mr Woodhonse, of Bolton, having acted as residen and assistant architect; and the work bas been executed under the immediate snperintendenco of Mr. Jephson, as clerk of tho works. The totals of the principal contracts are as follow:-

| General contract | $\left\{\begin{array}{l} A=£ 11,3 ; 8 \\ B=4 \pi, 15) \end{array}\right.$ |
| :---: | :---: |
|  | $(\mathrm{C}=13,396$ |

The total cost, including purchase of site, will about 150,000 2.
Having thus discbarged our conscience of the usiness statistics in rogard to the New Town hall, we may be at leisuro to look round us for few minutes and notice anything else that may ur aral aspect of Boltou. The general look o hings is not, we must confess, einer interesting exciting; such " picturesque" effect as there may he in the older streets resulting rather from general embrowned smokiness than from any more captivating qualities. The approach to Bolton, by the way, from the Wigan sido, is by o means devoid of the picturesque, and the landscape is not so blackened and defaced as in he immediate ricinity of some other manufac may towns. The street arcbitecture, however, may certainly be pronounced, in the main, rincipal arcbitectural work of recent dato Mr. Paley's large church at the end of Deane's. gato, which derives the more effect from the sudden and rapid fall of the street here toward he enat, leaving tbe church on a high-leve promontory. It is a cross church, in the Late Gcometric style, witb a north.west tower of very dignified design and treatment, the detai of the upper portion verging more towards the later Decorated or Curvilinear style. The whole reatment is broad and simple througbont. The s lofty entirely of ashar masonry. The nave piers, giving a look of ample space. There is no a detail in tho huilding, as far as we noticed hat is not repeated from Medireval Gothic; but servative" spen of modern Gothic of the "con sides this, tho buildings by Mr, Woodbonse, already named as resident architect for the Town-hall, form the best items by far amoug the newer work. The Gas Company's Offices, closoly adjoining Town-hall-square, is a very good building of the French Gothic type, of red brick, with stone bauds. The windows are very well treated. The office portion is well discriminated from the mero working portion discriminated from the mero working portio in the extornal design. The woole of the internal fittings are in good keeping, and are effectivo in desigu without ignoring ntility. The front of Bradford-huildings, in Mawdsley-street, by the same architect, is another well . designed and effective red brick building. A new hank in Deancsgate is getting op, from tbe desigras of Messrs. Cunliffo \& Freeman,-a
building of light-tinted frecstone, with grey building of light-tinted frecstone, with grey
granite slafts, and showing a very good type of conventional foliage carving in the capitale, and other decorations; but the "stylo" is scarcely developed in the present stage of the building. Bolton possesses a park also, to be attained by a walk out to the north of the town through very grimy and minviting streets, and past waste land of a desolate.looking character but the park itself is well situated on a slope risin from the banks of the small stream, the Croal "upon" which the town is situated, or would be if the stream were large enougb for any town to laid out provisionatuated on it. The park is well the materials for a very pretty place, bat i Wants more flowers and ornamental gardening
affordingr a riew not only of the smoke of Bultor but on a clear day (as we were credibly informed of the estuary of the Mersey in the distanc This portion of tbe ground is further diversified y a kind of templo or tribune, with pillars an arches in front, which forms a conspicuous objec from the railway below, where passengers gene rally wronder "what it is"; but if they got ou and cance up the hill, they wonld be no neare inding ont. Returming along the Chorley.road the "West-eud" of Bolton, bordered by a nea type of bonses, and neater gardens), we may notice a little of the road the Wesleyan Chapel nother of Mr. Woodhouse's works, the treat ment of the west end of which is highly creditablo to its architect, both in regar to tbe play of line in the buttresses, an the provision for effect of light and shadow in arches and window recesses; this is better little bit of modern Gothic design thar one often meets with in a provincial town, and we may congratulate Bolton on possessing a loca architect of more than averago ability. Furthes in, in St. George's.road, is tbe Congregationa Chapel, by Mr. Oliver, of Newcastle, who is not anknown as the architect of a good many Dissenting places of worship, but who has don tute of relief and shadow in reveals and mould ings. The market iu Bolton, the main portion built a good while ago, is an excellent specimen (interually) of what a general market sbould be in regard to light and ventilation; the fish. market, a more recent erection, is equally suitablo in this respect, and shows a little mor atteunpt at external architectural expression of suitable nature; the old market being a mer the river is a natural transition; not that ther is much comnexion between them in this parti. is munch comnexion between them in this parti. the great Thames Embankment work to know thet similar schemes bave been carried out almost simultaneously in other towns ; and Bolton sima has its embaukment scheme. The iver aforesaid, which "washes" the town Bolton (no ordinary task), runs in a deep narrow chamel throngh a part of the town, between he houses ; that is to say, it "runs" now, bu t appears that it formerly crawled tarough muc mind, and in droughty weather approached to state bordering on stag口ation, endangering the iealth of loyal inhabitants on its banks. Where pon the corporation of Bolton, with a wise con sideration of the fitness of things, laid each of the oanks with a smooth stone parement, sloping down n each side, and leaving in the centre a deeper channel, down which, even in dry weather, th silver Cronl now rushes in an impetuons tor ent, at least 2 ft . wide. As to the owever, that is hat a poetic epithet, for th ewers discbarge into it. Serionsiy, howeve his emhanking was toe most sensible thing tha ould bo done with the stream, and when there a heary rain, a most efficient "scoar" is a noe secured; and such a piece of sanitary work o none the less meritorions for being on a small scale. The question of sewage is heing mooted 0 be attempted. But there our notes on Bolton must close for the present.

Munificence.-Sir Josiah Mason, wbo has lready built and endowed an orphanage at Erdington, near Birmingham, at a cost of moro han a quarter of a milion, has now arranged to rect and cridow a scientific college in Birming. ham, on which will probably be expended at least an equal amount.

LINEAR PERSPECTITE SEMPLIFIED. Turss useful and comprehensive little book* a translation of the work on Perspective which the Ministive des Bearu* Arts in 1870 directed to of France, porsuant to a recommendation made the previous year by M. Dumas, late Minister Public Works, who then stated that the antbor of tbis work, M. V. Pellegrio, late Proantbor of Topography at the Milititary Sohool of fessor of " opography at the Mifitary Sohool of
St. Cyr," bad luen able, by dint of researcb and St. Cgr, "oad ween abi, by dint of researcb and
ability, to condenso into a small number of pages the laws of perspective, and to extrant from a connsed simple and easily applicable to evcry possible k of instruction, and the practical recogon of its valuo by Government, is not usually
htly bestowed in France; and we are not prised to find that tbe work, small as it looks bulk, quite bears ont the character thus given
it. $\AA$ treatise which undertakes to give all the painter needs of the tbeory of perspecire, and its application, within the compass of
ifty duodecimo pages, aud with the aid of one theet of small diagrams, would be a welcomo aovelty to the student, and perhaps an object of some conterapt to the teacher of perspective in his country. But we havo always been of arach of painting has been extremely hampered n English treatises by the want of a comprerensive and simple illustration of its leading
rinciple, and by the multiplication of ietricate liagrams and problems, which serve no purpose out to deter and nystify the heginncr with a xist, the whole of the various problems of rerspective including in reality nothing more ban the application of the same rale to different :ases, instead of requiring a jumble of lines and fgares to elucidate it, appeals, in fact, to othing more occult than what may be termed rdinary common sense
The author, avoiding geometrical problems in he frst instance, goes at once into the practical ueestion of the apparent sizes and proportions
of figures on different planes of a picture, ind gives simple methods of determining their Ind gives simple methods of determining their
elative height and scale; having conteuted himelf witb simply stating at the ontset tho broad roblem of perspective to be, "to reproduco on a ions lieight, length, and width, and to givo dimentions lieight, length, and width, and to givo to this lane surface (the canvas) the apparent depth
f naturo." What is to he noted in this portion of natur." What is to he noted io this portion
of tho treatise is the close connexion kept up by he author between the theory and tho practical working out of a picture, which in many sucb works are kept so far apart that it is some time before a beginner is enabled to bridge the
rulf thus fixed between theory and practice: indeed, M. Pellegriun almost assumes practice to take precedence of theory, for be adds that while perspective enahles us to accomplish the object just indicated, "there is still necessary the first aketch of the picture, - the composition,-a work entirely of feeing, which the artist tbrows on
the canvas, having nothing to guide bin but his inspiration." A certain amount of eye for perspective, on the part of tbe student, is thus where this does not exist, it is probahle that the most systematic instruction will be of bitle avail. The frrst section of the hook having dealt with the second and longer section is devoted to that class of problems which in England we are more accustomed to consider as "perspective," in-
cluding tho explanation of the rationale of "distance" and "vanishing" points, \&cc., which "distance" and "ramishing points, \&c., which is given iu a remarkably clear and simple
m inner ; and without a single superfuous sentence. The whole of the problenis and examples dealt with throughout the book are
illustrated, as we observed, in a single sheet of twenty-four suall and simple diagrams, all given $2 \frac{1}{2}$ in many tinted spaces of similar size (ahout $2 \frac{1}{2}$ in, by $1 \frac{1}{2}$ in.) supposed to represont the artist's drawing-hoard, and in whicb all the
main points, as tbe baso line, the horizontal main points, as the baso line, the horizontal
line, the distance points, \&c., are indicated in each diagram by the same reference letter, however their relativo situations may differ, so
that the comparison of one problem with another
*The Theory and Practice of Linear Perspective,

Uso of Arists Usi of Arists, Ati-Student, kc, Translated froz
French of V. Pellegrin. London: Bickers \& Soz
is much facilitated. In each case the diagrams are as typical (so to speak) as possible, and inustrated the the smallest possiole number of lives, so that the fact of the universal appli-
cability of the same privciple in perspective is cability of the same priveiple in perspective is
almost forced upon the stndent's mind; while, at the same time, tbe succinct brevity of the explanations, though furnisbing all tbat is necessary, compels the stadent to think as he proceeds, and leaves him to acquire the art of
roadiness in perspective drawing in the only possible manner in which it cas be acquired, viz, by the patting in practice for himself, in actual drawings, the theories which are here presented in their simplest and broadest form. Nothing could give a better idea of the thoroughly practical nature of this fittio book than the manner in which the author disposes, at the close of the work, of the question of lines which are " net perpendicalar to the plane of the picture, "as in a mountainous road, or the slope of a roof; tbe lines of these will terminate, as has aready bcen said, in some point of tbe picture theoretical parallel simple, but I do not think it of sufficient atility to bo songlt after. It appears to case that the perspective, estimated from sentiment only, suffices, considerine that on whatover ground a buildine is sitnated, the wolls are always vertical, and the lines of windows borizontal, as also the lines of tiles and the lower edge of the roofs ; and that, conscquently, the gencral rules ore there for aiding the artist to correct any error he may have made in appreciating the perspective." There is much common sense, too, in the ohservation in recard to the snpposed necessity for a technical study of the drawing of shadows, which does not, M. Pellegrin thinks, "form such an important part of perspective as might be supposed. In fact, would it be possible in any picture whatevcr to deter-
mino grometrically the shadows of the ohjects of mino geometrically the shadows of the ohjects of
wbich it is composed ? And, further, would he result obtained, however mathematically correct, he real from an artistic point of view? He promises, nevertheless, to endeavour to find a few simple and practical rules on this point in he added to the present work as an appendix Wo do not hear whether this appendix has yet appeared; it is not added to the present English edition.
Wo regret to have to mention one serious drawback to the value of the present edition as a text-book in Euglish scbools; it has been very bricin translated. We have not the French clear-hat hand, but we have no donbt that bo and intelligible French; many sentences in the ranslation are by no menns clear and intelligible English, and it is quite evident in many cases that this has arisen from the literal translation of a French idiom instead of tho suhstitation of the corresponding English one. The Englis $h$ preface is signed "G. D.," and we therefore pre no otber translator's name, is to be credited witb the work. We know no more of " $G$. $D$ " thon be does of French and English idiom, but we counsel the publishers, if a second edition of the work shonld (as we hope) he demanded, to have the translation revised by some one who nnder stands both.

ON TASTE IN COLOUR.*
In rooms to be lived in, avoid simple white for colour of walls and paint (as in too many drawing-rooms); avoid also ally extremely dark treatment. The wall hous shonla he plexions people. Delicate whito intensifies by contrast any unpleasantness or want of perfection; extremo dark would make people look white and ghastly. Nentral colours will be found the hest -generally some gray or cool colour that will contrast with warmth of complexions. On no account let an absolutely pure colour be used for general surfaces. Nature provides no such colour in pigments. Her yellows aro greenish or reddish, and so on. Nor does sbe use it to any exteut in inanimate nature. So much
so that you will find that if you bave much difficulty in describing a colour, you may be certain it is good: the more difficulty the more beauty. Nature trnsts mainly to gradations of toue, using vivid colour in smal! quantitios only, as in the touches on bright flowers

* Yotes of a a address by Mr. D. W. Wynfield, at tho
rchitectural Association.
and buttcrflies. This teaching of vaturo will be found seconded in the pictures of the greatest artists, and in the pood old decorated interiors of, for example, Italy and Flanders In following such teaching, you will, howerer need to consider the object to which (in domestic work, say) the rooms are to be devoted. A drawing-room, it is agreed, shonld bo light, restive, and gay; a dining-room at once moro sober, and with more depth and warnth, as befits its uses. Yon must also consider the light and shade; openings, and the positions of them; for these may (or may not) effect for yon contrast of tone, and may even touch tho question of the good sonse of your whole scheme of decoration.
Mr. Wynfield gare suggestions for treatment
I. A Drawing-room.-Walls.--A light nentral gray, fawn colour, or pale green (not dark, bnt not white). Dados are suitahle for all rooms, oven drawing-rooms. They may be made of wood, painted as the room doors, or of stamped leatber, or of the French paper imitations of with the heads of sitters, and adds much interest if it has its sentiment or story. If flowers form part of your decorations, have no rebef no imitation of Nature's ligbt and sbadc. A wall must be a wall; if, neglecting this, you introduce illusions to the eye, tho sense of solidity will not be suggested. The Japanese decorate on correct principles, with trutb to the idoa derived from nature, and truth in art, adaptation of representation to materials and method. Wooducork.-Have no graining anywhere; its aspect, however well esecuted, is repulsive Real woods are always beautiful. Plain painting may be darker or liohter than the general wall surfaces ; both will look well. The doors may have stencilled decorations in angles of panelsbirds, or butterfies, or plants, or any beantiful naturel ohjects will supply motives (a decoration used in rooms by Mr. H. S. Marks, Mr. Leslie, \&o.). Ceilings should rarely he wholly white, except of balls or where the light is dofective.
Papered ceilings look well. Tbe use of gold is generally satisfactory; it reflects a warm tono on everything below. Put a good amount of colour on a ceiling,-not, however, making it so dark as to bring it too closo to the eye. The Carpet must be either lighter or darker than tbe walls. It is always lighter at a ball, where white dresses abound. This is following out the artist rule, to make either background or foreground run into the figure. If this is not done in paintlog , a womas in whic sa war instance, against a dark floor and dark walls will look like a cut-out figure stnck on, and the same sort of result would occur in rooms. As in ordinary life, drcsses are dark in colour; where a light wall tone has been recommended, the carpet will bave to he darker than the walls, Not too vivid in colonr, however, and, " of conrse, no flowers, ferns, hirds' nests, and suchlike fear ful things. Furniture and hangings should not ho too much alike in colonr ; have, eay, tbo carpet one tone, the coverings of the furniture another, and the cartains and other hangings a third. Have summer and winter hangings and furnituro covorings: those for the former light and cheerful, the otbers with more warmth, and suggestive of comfort and home life. $\Lambda$ table-cloth, occasional chair, or a rng, may supply a hit of effectipe contrast with prevailing hnes of havgings, so., and a spot of vivid colour in a vase or soma small hanging will complete the formal decoration of the room.

2. In a Dining-room,-used for its principal purpose mainly by ges or lamp light, - the livinis figures are seen in more detail around the lights. And decorated walls and woodwork will thus he unk into the hackground among half-lights. More prononoced decoration will be allowable in conseqnence (and deeper, warmer tints are pleasanter bere).
3. As to Colour in Chureches.-The lecturer said, in answer to a question, that tbe application of distinct colour is not always a grin. Ho ogretted at times, in revisiting cathedrals, the loss of light and shade,-the realisation of a vision or drcam in purity of stone,-seen in visits aforetime. A building rich in variod orms often loses especially by applied colour. If colours must be used (and in cases where it is not thus out of place) pretty colours shonld be avoided; all riolets, grecns, and so on. Much of tbis sobriety in colour may have been safely and wisely dispensed with in the Middle Ages, when tbe dresses of the people and priests made tbe centro of the building a mass of brillinit
colonr ; but there is littie colour from these sources in a modern church. And without this proportion,--this bolaucing of colonr, there
mnst be failure. Proportion is at the bottom mnst be failure. Proportion is at the b
of all goed colour,--of all beauty, in fact. Mr. Edmund Sharpe, following Mr. Wynfield, urged, further, the aroidanoe of violent colour in church-decoration. The use of colour at all is very doultful, where there is much play of colonr should he sparing. Probahly, it should be confined simply to flat sarfaces. In Lichfield Cathedral, in time past, when the colour was taken of the rault the sense of space was at once wonderfully increased. As soon (eaid Mr Sharpe) as the vaults and dome of St. Paul's are space, - giving St. Paul's on apparent heicht and size beyond St. Pcter's, apparent heigh Mr. R. P. Spiers hold hy Mr. Wynfield's prin. ciple of nsing neutral tints, hrightened here and there by hright points of colour, La Sainte Chapelle (Paria) and Notre Dame de Bonne Chapelle (Parib) and Notre Dame de Bonne
Secours (Rouen), troo well-known examples of strong colonr,-fail to satisfy,-especially in strong colonr, fail to satisfy, especially in
respect of the discords from the light passed respect of the discords from the light passed would have heen more impressive (and pleasing) with the walls perfectly plain. In donestio with the walls perfectly plain. In domestic
bnildings, ceilings with much colour seem bnidings, ceilings with much colour seem
doublful. Some quiet colours on the cornice, doubtrul. Some quiet colours on the cornice, and stencilled patterns to lead it into the ceiling,
will conneet all with the wals, and leave the will connect all with the walls, and leare the
pleasing seuse of light and space. Horizontal lines, in the way of divisions to wall-space, augment the apparent size, including the hoight of rooms. Tho dado and frieze,-so uniformly done away with of late years, - are a real loss in
this way. The Roman and Greek arrancement this way. The Roman and Greek arrangement lighter portion above, and a friezo ahont a foo deep nnder the ceiling, has much to recommend it. The division of the height of a room into two sections:-the lower section carried to, say, 5 ft .
from the eeiling, of darker colour, used as a from the eeiling, of darker colour, used as a ground for pictures (pictures, rods, \&c., abovo it), and the upper section lighter (a very dee]
fricze, in fact),-this arran mement is for some rooms even more suitable, and has a little more of tho charm,-simple as it seerns,-of novelty.

ON RESULTS OF A RECENT investigation into ANCTENT MONCMENTS AND RELICS. rofal tinstitute of british ahchitbcts.**
Trere is a class of monuments in the Hohridos hardly noticed by previous investigators, npou Which I have so far arnived at no power of
definition; but, as my attention is still cugaged on the suhject, I renture to ennmerate theni amongst others, without connecting them with any of those I havo undertaken to descrihe.
Their condition, arrangerent, and appearances are so similar to what aro described by Mr. E. I. as found hy him in the desert of Tih, that I adopt his words in describing them, tbongh the descrip. tion he gives is sometimes applicable ouly in part to some, and in part to others; bnt evcry feature in his description is to be found in one or other of the Hebridian relies, the nataral physics of tho localities also agrecing in description. After passiog a placo called Amilah, he describes the wády ho is traversing as finding "its way through a very narow winding gorge, with grand precipitons sides, into Ain el "Elyá." lere is a spring of ranning water, and the valley and vegetation. Shortly after leaving this place we came to a group of nawrimis, on the hills to the left of the wády, which were moro perfect than any wo had hitherto seen in the periusula. They consisted of two detached houses, on sepa. rate hills, and a gronp of five on the side of a higher eminence. At least tbree out of the five were apparently nntouched. Their dimensions averaged 7 ft . high by 8 ft . in diameter, but one Was ully 10 ft . high and 8 ft . diameter inside. they wers cironlar, with an oval top. In the smaller hole, both ronghly lind beside that a smailer hole, both ronghly lined with stones; thich earth had aceumalated of stone, over Which earth had accumnlated. Some hnman bones which we found in the cists at first led us to the conclusion that they were tomhs; but the *From a paper by Mr. J. S. Phené, F.S.A., read
they had never contained perfect skeletons, proved that idea to he erroneons. In the swailer the action of fire, and in one or two small pieces of charred bone and wood were found. The country all round is covered with them, every hill-sido having some remains of nawámís upon ircles, "lose hy the nawamis were some stone of the similar featnres in North Britain; but the curtailed tomh cist, and the place for cremative operation within a small structure, have been already before you, while the buildings themelves agree exactly in desoription with some o Hebrides, as shown on the diasrams
Of what appear to me mopur
urposes, I hee to draw aterts for sacrificial hare discorered in North Britain to mounds distinct ontlinc of animal forms, having the stances, indeed quite as clearly defined as these in America, of which latter good illustrations will be found in the Smithsomian Contributions to Knowledge. In cvery case, so far, in which I haro excavated these monnds, I have fonnd huan remains, generally accompanied witb vidences of cremation, and in every case also r megntitho stone structures, of ten of large or megalithic description. The forms are mostly serpentino, but in some cases fish-like; and, in Amerioan mounds, whicb resemhled that of the Amerioan mounds, whicb resemhled that of the appears to have been gonerally talien advantage appears to have bcen gonerally taken advantage in the form desirod, or heaped up and added to for the same purpose. In enme cases both these processes have evidently heen resorted to.
Several of theso monnds time has not yet permitted me to cramine by exoavation, and us well for of the most distant with each otber, as to allow the hroadest inquiry. At the same timc, on this point, I deprecate opinions formed by any who have only mado a partial examination, and who may thus have come to a conclusion from the examination of any ono specimen that may affect in their minds the whole question.
It must be remembered that Dr. Borlase dis covered such a mound on Cambre Hill, in Corn wall; and this, together with the castom of plauting such elevated spots, gives ground for number, have existed in England, the fow in of which have been ohliteratcd by such process whilo the hahit of altogether levelling is too well known by the recent cases at Stonehenge, and Dorchester, near Oxford, to say nothing of the noble preservation of relics in Wiltshire, hy Lubhock, to leave any doubt that invalnahle scientifio treasure of this class has been de stroyed in England.
This, indeed, has tonched the very remarknblo mound near Loch Nell, whicb is as distinctly in the form of the Eryption Creas as any of the sculptures in Egypt, the only deficient portion being that whicb could lare heen removed with tho greatest facility, from its less important dimension, the débris still lying strem on the most convenient spot, and the area so thrown open to the agricultnrist facing tbe south. West while the marss of the plough upon it are still
risible, though betraying many years of disuse. risible, though betraying many years of disuse. secluded glens of the district around the triple. peaked montain Cruachan. The well-known cry of the Campbelle, - "It is a far ory to Lochow,"-intimating the remoteness and se curity from ineursion of that district, we may uaturally infer that here monnments of a Pagan religion might have remained unmolosted when even the
spoliation
The mound, as illustrated, shows to the wes of the head a great cairn. The west was a direction peeuliarly selected for burial with many ancient nations, as indicative of the conrse of the departed spirit, emblemed by the setting sun.
If,

If, as I find reason to assume, mountains were distinctive features of adoration,-thongh, curiously enougb, not included in the objects "The Scotish a valuable work now prolis. Regiments," - then the position of the whole figare, which has clearly heen connected with sepulchral, if not sacricicial rites, has the same endency, heing west of Crnachan; while a local Gaelic tradition asserts that persong were led
execution warking along the ridge to the ether in is, eas to important position the monud as a theatre, the action npou which of whatevcr character, could be seen by many housauds, have led me to the conclusion that as an erection for sacrifice. Wheu 1 firs orsea it, there was what appeared to me the ments now lie around which show some of the largest stones to have heen reduced by blasting: On opening it in company with a party of able scientific and professional men, we fonnd a pacions megalithic chamber within; this was composed of three large blocks of granite, placee somewhat in the position of a triangle. In this were remains of bones reduced by cremation to very small dimensions, mixed with charcoal and charred earth, so as to require separation by washing. Amoncst the charred vegetable matter vere shells of hazel-nuts and some relics. A flint instrument was fonnd here, a flake of chal. cedony in an adjoining tomb, and a stone celt in another ; the two former not being local materials.
I am impressed with the idea that thero is till a chamber to the east of the larce enstert block of granite, but the great chamber itself was a grand specimen of sepulture and cro mation
The spine of the form appeared to have been distinctly constructed of hlocks of granite, and on each side theso hlocks had rows of smaller hlocks, tapering away in reduced size as they rcceded from the main colnmn.
The district for many miles has grand sepnlchial remains, extending even beyond Berigonium and through Glen Lonan, towards Cruachan, a feature al most always attendant on the mounds of this class which I have discovered, and which are also in each case accompanied by what are generally called Druidical stones, either as monoliths or ciroles, or both.
This great serpentine form has also a serpen ine avenue leading from its head, as shown in diagram $B$, while around the head is a partial circle of stones of the same kind, which pats heyond all question the connexion of the cairn and the reptile form.
The enormous labour displayed in tho forma. tion of the great cairn, or disk, formed of largo onlders arranged with the greatest symmetry, and covered over with a uniform coating of tare left their lobonr unfinished for a little worl hy cutting away the mound if the latter were no yort of their desiom so as to continge the circle $f$ stones completely rond $o s$ is usual in met nonumen , where the disk fits on to the head. If simply cairn wero wanted, like others in the neigh. ourhood, any spot than the one selected wonld have heen better

## In the particula

In the particular case of this monument, it is emnrkable that the locality ronad Loeh Awe hounds in Gaclic legends of mythic serpents, the great Python of the neighbourhood being "Son of tho Light," but who died from t Son of tho Light," ffects of tho enconnter.
A similar mound was opened by me in the oble part of tbe Marquis of Lothian at Mon teviot, in Rosbnrghshire. Tho form, thougb learly shaped into an anmal outlino, is more that of a fish than a reptile. The plan and elevation of it are shown in diagram $\mathbf{H}$, where it is laced in position for comparison witb some of he American mounds. The noble marquis sindly gave me permission to inspeet it, and also laced somo fine Border lads at my disposal, nder his intelligent master-forester, Mr. Weaver who took great interest in the proceedings, the marquis himself giving me information which I was rery glad I was in ignorance of before.
I was attracted to this mound (which has been shaped out of a natural water deposit) from its vidently manipulated form. When I obtained permission to excarate, the marcuis gave me also some facts which relieved my only difficulty. Here at least there trere no Drnicical remains hut on my asking for the rocords of the estate to bo examined to find if there was any mention of the mound baving been worked in modern times, it not on? appeared to have been unmolested, but a Druidical circle, bearing the name of "H Hrestanes," was reported as havinc been near this spot

On digaing beue
One beo the site to me to found to have tion beneath it, as the natural "walls" of tbe
former excavation were fonnd in their original state in each direction. No relics were fonnd here. But I then adoptod a plan I had nsed at
Letcomhe Cnstlo, in Berkshine, and which was Letcomhe Castlo, in Borkshire, and which was used suhseçuently at Maiden Castle in Dorsetshire, in which cuttings wore mado in directions sonth and east from the centre. Tho results of my excavations at Letcombe are given in the proceedings of the Oxford Architecural and Historical Socicty for $18 \% 2,1$ p. 2,3 , and 65 ; and those of the excavations at Maiden Castle, by the Britigh Archroological Association, were fully reported in the Times, and in the "Journal" of that Association. In this case, nearly equidistant from the spot I had first selected, were foundone to the east and one to the south-a human skeleton; the hones were not burnt, but were Maiden Castles. A mound near this, but on the opposite side of the Teviot, has a curious legend attached to it, as follows:-

## Forty paces from the Stabric mire," Sita David Leslie in his golden chair."

David Leslie was, as we learn from Bordey minstrelsy, a leader in the Battle of Philiphaugh and mnch too modern for my inquiries. with his history, whicb rather tends to point out the locality I am describing as one retained in the memory of the old inhabitants as sacred, no
doubt in comexion with the stone circle of Hare doubt in connexion with the stone circle of Hare
stanes. David Leslie is represented, when in : stanes, David as being accosted hy an ancient man who, it would seem, abode near this mound, and who advised him how to operate so as to overcome his enemy, and by following whose advico my was successinl, personage, as he is represcnted as figuring in fights over a period of more than 105 years, bar. $+\quad$ No result attended the excavation into this mound, which I opeued at tho suggestion of the marquis, to sco if any explanation of the legend could be found; but near: it, somewhat to the northward, were the remains of a circular
tumulus, with evidences of a small cist, like those I have dascribed as in the Cumbrao tumulue While montioning this locality, I can bardly avoid roferring to tho immenso uru exhumod by me as the resialt of some fragments disturbed in ploughing + on a farm on one of the estates of the occupation of Mr. J. Shiell, who aided my search for tho cistraen. The urn I had the honour to exhibit, together with other British last year. Its unusual proportions, and the large mass of bones which lad heen suhjected to creof the remains of a single person, and its position was so peculiar with respect to the conical hill, the Danion, which stood between it and the triplepeaked Eildons, that I am impressed with the dea that it was a sacrificial nra,
Diggrams Daleth and He illustrato tho last monument I shall mention. It is the last I have discovered of this class, and has the characteristics of a mound, formed out of a natural hillock distinetly shaped by labour, and an embankment which has been orceted by material from the adjacent shore. It is at Skelmorlie, in the grounds of Mr. Jolin Graham, on the estate of the Earl of Eglinton and Winton.
The ombankment (now severed hy a modern aoadway) was oxiginally ahout 400 ft . long, and the oval summit of the hillock 110 ft . from enst as well as tho Great Cumhrae tumulus, lios westward from the grand Druidical slation of Cuff Mill, vear Beith, and the district had formenly a vory ominous name, "The dead south of this is an interesting cromlech, referre to by me in the "British Areboological Jonrnal" for September, 1871, p. 357 . And the locality has retained to this day the features of some remarkable tradition, for to enter it has been said from time immemorial to be going out of the world, although the popnlons town of Largs is in the centre of the district. "Out of the world and into the Largs," the common expresdescribed by a single writer, thougb often quated by others, means "slopes." There is 110 such word as "langs" in Gaelic, but there is Las'-ag,
which, by the transposition of the $g$, become * A muddy stream of that name, forty paces from the
mound. $\underset{\text { ferred }}{ \pm}$
(r)gs, the meaning of which is "clame" dence of cromation this monnment discloses. I dog down the sides of the hillock at the cardinal points to examine if the strata had heen dis turbed, and if any archæological features presented themselres. This lahour was without rosnlt. I then continned the trenches on the summit, so as to meot in the centre; and at a
depth of abont 2 ft . came upon a paved platform depth of abont 2 ft . came upon a paved platform
80 ft . long and 5 ft . wide, curved as a true 80 ft . long and 5 ft . wide, curved as a true segment, extending from the nortb-east to the north-west points of the compass, which, curionsly enoagh, at that latitude form the points of the snn's setting and rising on the longest day. Tho platform had been intensoly hurned, and the earth heneath it, to a considerahle depth, was changed by the action of tho fire. The interstices of tho stones, wbich latter were smooth sea houlders from the shore, wero the latter, abonal and black earth; on washing were revealed. The victims must have been many to have covered an area of 400 square feet with t
bones.

It must be admitted that, to those coming from a southern clime, the lengthening of the day in summer must have been the one object of note; and, on reaching such a barrier as the Clyde, I can well understand that progress might be arrested, while, if at Midsummer, the retrogression of the sun would be a bint to the wanderer to retrace his course, and the interval of the sun's disappecrance on the longest day
would be a matter of special record, and no would be a matter of special record, and no of the hillock on which the platform is was quite unsuited for a beacon, being screened both to seaward and landward; in the latter caso, by
mnch higher hills. Time will not permit me to mnch higher hills. Time will not permit me to which, I am sure, some of the monoliths I have examined in the north-west were erected; hut that the effects which I observed could have heen misunderstood by the erectors of them I feel is impossihlo: indecd, they must have been erected for the special purposes I found they fulfilled. Nor can I refer to the romarkahle orientation of the dolmens and cromlechs in the north of Ireland, and at Ach-na.cree-beg, Argyleshire, some of the featnres of which have heen published in my papers, in the "Britioh Archseological Journal," and in my lectures at Belfast and Paisley; but I cannot conclade the o a of sacrificial mon of the circles at Stanton Drew, in Mr. Fergusson's "Rude Stone Monuments." It will he seen at ouce that it forms an illustration of adaptation of the circle, with head and uimhus hoth formed by the posi. serpent the stones, and placed superior to artificial sloping of the adioining ground, while whether formed or selected, the position is again no of almost east and west, as also are those of Loch Nell, Skelmorlie, Monteviot, and, as far Is I Lavo looked at the bearings, of all those which I have noticed. Does it not appear that, place the stones of this moncment in a position corresponding with their ideas of traditionary erpent-worsip, the real design was overlooked which was that shown in the diagram?
I cannot close tho last portion of my subject without a glance at the historical evidence in favour of sacrificial monuments in Britain. Cbear says the Gauls (ergo the Britons) "have figures of vast size, the limhs of which, formed of osiers, they fill with living men; which, heing set on fire, the men perish enveloped in tho flames." ${ }^{*}$
Cwsar, it is to be ohserved, gives no account of the form of the figures; but, as he informs ns respecting a deity which he identifies with Mercury, on the ground, apparently, that he is a have many imases of him" persons have appa rently jumped to the conclusion that the figures were representations of the human form,-I repeat, jumped to the conclusion, because tho monstrous things somotimes represented as grea themselves, and, if they did, would have tumhled down directly the torches were applied to the lowor parts, certainly are not authorised by the text. But, as it is simply beyond belief that
contexta viminibus meubra vivis hominibus complent contexts wainitus membra vivis hominibus sumeensis, cireumpenti dlamma exanimantur

Cassar could have stated this without foundation it wonld be interesting if wo conld discover what he did mean. It appears to me the conclusions formed were near, and yet very wide of the mark. Strabo's statement that in these figures were "wood for fuel, and several kinds of wild heasts," clearly shows that the figure conld not ave been the basket-idol in our popular repre. nentation, but rather an arena. Now, if we can anite these two features, we shall probably approximate towards the mark, stil more so if we can show that the two quited come ander
the special description Cresar gives of the British leity already mentioned.
In the immediate neighhourhood of Cresar's land is euch an image, 240 ft . high, and on so steep a slope of a liil! (about $50^{\circ}$ ) as to look almost upright; this figure, fenced round in the manner customary with the Britons in their in a mer the woods, and which is still retained Sussex, would have represented an almost upright human figure, and at the sime time an arena. Moreover, it would have agreed exactly with the word "contexta" as the "iuterwoven" work wonld have surrounded the limbs.
I think it will bo found that in the gladiatorial shows of Rome beasts and men were not mised till after pretty gencral knowledge of Britain and British customs had been acquired; and, as have been found in Britaiu,
But the deity that Cessar mentions as the one of whom the Britons had imarges is thns described by him,-"They consider him their guide in travelling and on their journeys, and believe him to have vory great infnence over the aequisition of gain and mercantile transac. tions." If, theu, we find a figure laving the former features, and also possessing the sy mbols of journeying, and placed, noreover, in the mercantile dealings with the Continont, we have, I think, a strong case.
An enormous figure, having all these charac teristics, at Wilmington, in Sussex, has heen erroneously attributed to the idlcness of the monks of an adjoining priory, who, it is asserted thus portrayed a pilgrim. It was not the result of ideness, for it is a device of grat care and
arrangement. It is not the work of the monks, arrangement. It is not the work of the monks, still less a monkish representation of a pilgrim, form in a religion devotee ; yet the staves indicate that it was traveller, and to that extent it agrees exactly with Cossar's description.
Io this we may add that there is no known fignre in Pagan mythology that agrees with that description; bnt its precise representation is rems, of one which, for comparison, I give an illastration.
The Wilmington figure towers to an immense height; and when the spectator is only as ligh as the breast, on looking north, the whole of the contry botween him and the mid-surrey hils is fully broment material so cut away thrown into a chine on the west, as shown hy the section.
It was so formed that it would dischargo the rain from its surface in every direction, probahly the cause of its long duration. Tho head is above 21 ft , in diameter ; and if the figure were kept clean, as in the case of the white horse in Berkshire it could easily have been used for a day signal station, two of which, witb the aid of the chalk, would he found enough to communi cate even with London. But the whole district over which this figure towered was an enormons wood, sacred to two deities, known as Andred and Andras,-1n other words, to the powers of nature. These deities are often descrihed as one Hill, wor weat shark of Mr. Charles Hill, at Weat Hoatbly, known as "Great upon Little," from ${ }^{\text {the smallness of its hase, has been }}$ traditionally connected with the worship of the latter deity, and I hare little doubt it was so This stone had till lately tbe autographs of Fox and Pitt upon it, and is in a beantiful, but weird and Druid-looking glen. This stone is shown on diagram $Z$, in comparison with one in Northerm India; but the work of art at Wilmington tells more of the perfect idol, and its Colossus-hke form speaks also of the great veneration of its designers for the onjeot, represented, and reminds us of the form of that at Rhodes, itself a great seat of mercantile trausactions in its day Eron now, whatever were its former uses, it acts as an enormous gnomon, and at noon the

Fun is exactly over its head, and the wbole figure disappears, while the most casual observer could casily trace by the shadows, as they lessen and decpen in toue, the hours before and after noon The grostic gem slows the sun and moon in connexion with the figure; and it is strange that Whice the surrounding heights, whioh comprise the Beachy Head range, are covered with British tnmuli. The part of the coast near to the figure has an immense crescent or lunar.shaped em. hankouent, generally called Roman, but wbicb is certoinly a British construction,
Numerous derivations have been suggested for the name or names of the deities, none of which appenr to mo satisfactory. The title seems, I think, compounded of the Celtic possessive
prououn an, and dreos. This expression would prououn an, and dreos. This expression would
probably include both divinities, and signifies probably inc
A British urn was lately found, almost at the noment of my last visit, on the farm of Mr. Thomas Lambe, with hones and charcoal; and large nnmhers of bronzo celts and other British relics have been discovered from time to time at some distance from, but in full front of, the figure.

SCHOOL.BOARD PUPILS AND COOKERY. A FEW wreeks since it was stated in the Builder nown "Jonn HoGregor, of the Temple, well of the London School Board, had Groposed to take 1,000 fema school Board, had proposed to the London School Board schools, to hear and witness Mr. Buckinastor's lectures and demon. strations on practical cookery, at the Intornational Exhibition. Mr. McGregor is carrying bis $w$ isely.conceived and generous desicn into effect On Saturday last a select party of about forty pupil.teachers and scholars from the Greenwich School district were conducted by Mr, MoGrecor to tho Exbibition, carefully chaperoned hy him there, and passed into Mr. Buckmaster's leeture. theatre on Cookery, where good places and "tasting" privileges were secured for them. halled bis interesting cbarge on sindness, mar. ion and homewards as well as int it The ceedines creatly interested int. The pro. ceedings greatly interested the young people, doubted whether a titho of the advan it may be templated, and witbin reach, wantages contemplated, and witbin reach, were realized hy the visit. The youngsters had to take "pot. luck, so to speak, as regards the subjects of the or workine as for working.men's children. The programme of the day emhraced "Spinach," "Cauliflower, au gratin," and "Croquettes of Potatoes." It is rather sad to think that these girls-fature mothers, it may he,-should have listened to Mr. Buckmaster with interest, and that they should have watched leenly every neat movement of "Charlotie" and Mr. Buckmaster's other clever assistants, but that they should he left to regard the whole performance as extraneous to themselves and the families to which they severally belonged. The working classes, and even many of what may he called the middle class, are terribly exercised by this great "food question." It may be feared that information as to how to cook "spinach," or how to treat blossoms of "cauli.
floper ath gratin," with "Parmesan cheese" floper au gratin, with "Parmesan cheese"
(2s. Gd. per pound), or even the way to make "Croquettes of Potatoes," will be regarded as not quite offering a stone for bread, but as offer. ing a babblo. Spinach is a very small item in tho stores of the greengrocor, and it is rarely scen on tho table of tho working man. Cauli. flower the working classes do consume, but not with Parmesan cheese. Potatoes they use largely hut it would be much more useful, and better for London School Board ohildren, to know how to pare, hake, or boil them than to know how to make "Croquettes of Potatoes."
It is to be regretted, we venture to think, that the occasion of the visit of these young people from the London School Board should Buckmaster could to account specially, Mr. real practical value on Pot-au. fevem lessons of ing its French name), on Poor Man's Soup Cab hage Soup, and even on Tri Nans Soup, Cab. making of a plain ard inexpensire, and on the dumpling.
carrying bo hoped that Mr. MacGregor, in sorrying out his generons design, may he ahle to to London School Board childrenr. Buckmaster to London School Board children will communi. to the greatest possible number" possible good

## ROYAL ACADEMY EXHIBITION

## Since Adam gave donomination to beast and

 bird, hefore Paradise was lost to the peerer, and the wide world ontside was mado common home for man and beast and bird aliko, no human means since has distinguished cach from each, ferce lions and cumning foxes, tigers and tamed brutes, the soaring eagle and the piping bull. finch, polar bear and pet spauicl,-in fact, al animal creation, from elepbant to tom.tit, - 8 plainly as Sir Edwin Loudscer's art. The combative stag and the timorous rabbit,-flocks and berds,-oll follow at his bidding to prove bim Adam's counterpart in the control that was a gift, - the gift of mind to fashion rule under that of tbe Ruler.Interminable courses of beef and mutton, with goat.fesh for a change occasionally, are the food of common belief in what constitutes animal. painting of the present day: a picture of a pet horse or funny dog is quite enourl to come under its category. Pythagoras become the saint of all that see no soul in a dumb bruto' eye!

Ir. H. IV. B. Davis has made his cattle-piece an interesting picture by mere copyism, but its verisimilitude includes all tbe poetry that in (453), some kine rcsort to a shallow pool, whereon water-lilies repose in lazy Juxuriance, and the kingfisher and wagtail know it to be a pleasant haunt; the sky is hazed with heat, and the midges hom wbilst the bigger flies worry the poor cows, that breathe audibly their sighs of tronble; toss their heads, rub their hitten limhs, or lash from their flanks the tormentors. One would need to sit down and pash onc's hair back to recall anything of its kind better dono than this: tbo creatures are so well drawn, and painted with such force and reality
Mr. H. Hardy's fighting lions have already heen mentioned: they are sure to get all the If DIr, Bziton
If Mr. Briton Rivièro is not spoitt hy praise he may become a great artist, thongh he has to nnlearn as well as to learn. "Argus" ( 161 1), the faithful hound of Ulysses, recognising his master, even when coming death har glazed his eye, must depend mucb on type explanation: the dog looks more as if narcotised than near naturs's measured call ; but it is a clever picture
nevertheless. "All that was left of the Homeward nevertheless. "All that was left of the Homeward Bonnd" (986) is a girl lashed to a bit of broken mast; the raft for a dog, too, that shivers with in thation and consciousness of predicament dead, or in a swoon, liappy than the child, interestivi obe swoon, fie dog is the more at best. A hoat or a bit of a dragreeable one it likely that a haven awaited tbe sufferers would change the impression this picture leaves, painful one, though it is not seen at first or second sight if the poor little maiden be dead or not. However, partial success in such an attempt as this pits fortb is worth tons of such olatitude as smiles from the walls of somo of the galleries.

A cynic,-one, perhaps, of the many hundreds disappointed painters who had hoped to improye tho character of the present exhihi. Lion, so far as his offered great help promised,ing's worth of the proverh, "Succoss may be deserved, but not commanded," than to take its value ont in discovering where success, if not attained, has been deserved, There is ever a smell of the expired ment of so many thel Vauxhall in the announce. of the Royal Academy budget: in number surplus to the unit unquestionably; but is it their room or the unir compquestionably; but is it their makes the wanting of the one polito excuse of the otber?
It is necessary to be crnel
imes nece if some. times, and if it were plainly stated, as it safely might be, that the hest of a choice was pre. sented, no silly douhts could be entertained of the justice shown, any more than the capability of judging could be denied to those whose roublesome task it is to make this choice. But tbe same names for supplementary help appear again and over again in tbe catalognes: grim pictures of destruction, with no great recom. mendation of construction, such as Mr. F. W. W. Topham's "Pompeii" (550), Mr. I. B. Roberts's Homeless" (510), or "The Rush for Water: by Mr. J. B. Burgess, are well placed. "The Introduction of Lady Mary Wortley Montagu to the Kit. Kat Club" (405) is very clearly and
cleverly told hy Mr. A. C. Gow, though he just as clearly and cleverly shows it should have Lord Kingston, at a meeting to choose "tonsts" for the meargston, at a meeting to choose toasts for tyrant of rined to nominate his daughter, raunting her cight years old, as a cand witb those of any lady rules of the club making ity on the list. Those beauties who aspired to the hiccough of houour should ave been seen and approved, the small evil wos seut for, and came in a quake and her best frock. This is an historical pioture! very small and finely done.

The Path of Roses" (517), by Mr. W. F. Ycames, is a pretty conceit of earliest wodded ifo: the happy pair stand in the porch to be pen with Howers: flowersom, witb a pleasan tring of maiden mischief on one side of it, and band of minstrels on the other Cireum stances look uncommonly promising, and let ns bope they may be happy : a pretty state of things it will be, after all the expense, if they are not.
Mr. H. Le Jenne's children are more charmingly delightful than ever, from his having dopted a culiarly ery minning and pretty one.
"Mending the old Cradle" (600) is the motive or some admirable handiwork, hy Mr. A. Stocks, and gives such tone and strong colour to domestic happiness, that the painter must be answerable or the consequences
"Toddles" (601), by Mr. J. MLorgan, takes the ext step in these nataral proceedings. As asual, the amenities and troubles of childhood's rowth form variously the suhjects of many pleasant pictures; from the pink baby, "The family, by Mr. F. D. Hardy, don to a large, littla "amily, by Mr, F. D. Hardy, down to the pretty "Simpletons" (960), Mr. S. L. Fildes has placed n a stationary hoat, with a pretty hit of Tbames cenery for a hackground, and very smooth water for the reflection his spoony lovers give they are incapable of taking any themselves: he sedate pug.dog sits in judgment of their rivolity; but they would not give one of the many rushes at hand for more wisdom just now ot one for other opimion than their orn, and of each other. Mr. T. Webster's "Truant" (269) being "run in" by three special constahles for he occasion, is too woll aware of the stern nature a mild look may hide, not to be restive aud ecalcitrant at sight of the old schoolmaster eady with his cane: he is, however, one of the boys with many friends, who secure for Mr. Frehster a very larre circle of admirine ac quaintances.
Mr. F. D. Hnrdy, agrain, shows an older child boan the pink of hahydom: little people grow ery wise and Fery early wise in London's hack streets. In "Looking for Father" (161) where father is too of ten to be fonnd; on cold nights when mother's cough is bad and strike las lessened the little store garnered for more home comfort than heme affords now: the tavern's warmth and cheer; the loud talk that drowns thought, are for father the lethe of troubles he is too weak to face: and poor little Madge wilT watch for an honr through the gap in the curtain hefore father staggers out of tho doorway that leads to the workhouse as surely as to the bouse of entertainment for man and beast
Mir. W. O. Orchardson depends too much on a dexterity that used to bo but one of his qualifica. tions; it is the only recommendation now of such fimsy forwardness as a lonr lady with a small bead owning a blood. hound with a big head shows Wandering in a wilderness of snn. Gowers, the first likely enemies to be met with are the ear wigs; but "The Protector" (194) is capable of "Cealing with greater things, and so is the painter. "Cinderella" (354) posed in contemplation of her haptismal ashes, gives no idea of what fairy dress could make of her ; or her godmother, further than to give her a name. "Oscar and Bain" (208) are two rough terviers very cleverly sketched.
Mr. Eyre.Crowe is to be lauded for the completeness with which he works out his pictures, thongh, to be original, he goes beyond probability, Brothers of the Brash" (234) are four housepainters, at work for a wager, one would think, to colour the front of a honse down in five minutes; for they wriggle and writhe, with desperate determination, on a long ladder, that should have had its maker's name upon it,-it is such an unhending, strong one, which two com. panions are steadying, one at its foot and the otber from the roof of the narrow strip of edifice
hat such energy and free play of eight lively erms and legs mast make nothing of in no time. Photography could not have more clearly help is suggested too plainly not to he answernble for some of its real and nnreal appearance: the perspeotive, with that strango perversity of the perspeotive, with that strango pervcreity of
fact rellected, suggests this. Mr. Crowe has four or five exhibits; but this is the best. "At the Pit-door" ( 626 ) only means dreadfulness, se far as Exeter Hall teaching implies. Warm
admirers of a popnlar actress are getting warmer admirers of a popnlar actress are getting warmer
in their efforts to secure front seats at the in their efforts to secure front seats at the
theatre of her triumph, and a variety of per. nenages are acting a stroggle. Here is laid bare the difference that must cver separate talent
from genius. A Leech or a Tenniel would make more of such a subject in on hour than nny pains.taking for three months conld hring as its voward for labour merely on the part of those who must copy what they see, and not see at a glance what there is to copy.
Mr. E. Long is a very earnest and amhitious painter, and shows that he studies; bnt "The Moorish Proselytes of Archbishop Ximenes, Granada, 1500 " ( 628 ), are likely to be regarded as ensincerity shonld ever be. It is poor change, the paper words of false note for the ready curreney even of copper coin. Convicts to a Peni-
"Tho Poor of the Village" (6I4), "au they be honest," are better worth consideration, though Ifr. J. Israels, a Dutch painter, delights in dinge and heary gray to manch. Ugly peasants are buying tood from the proprietor of at ashig-boat shat they would eat. The poor of tho village are of the merriest so long as they have the whereof the merriest sod ang as they have the whereside, the silver lining of dark cloud, and with side, the silver lining of dark cloud, and with the tinkle of tin pots and a song to the hahy, a
hope that plearnter heliof in sea-side peasant hope that pleannter helicf in sea-sid
life may be fonded on our own heok.

STRAINS IN IRON BRIDGES AND ROOFS. Two books come to our hands simultaneously bearing almost the same title,* on a subject which has of late years often hoen written apon, Ono cause of tho frequency of the appeainance of such hooks may be the high and abstrase manner in which strains in girders have been theated by some authors. A master of tho higher mathematies too often overlooks the foct that these whom he writes for are not all equally as learned as he is, and when he writes on such a subject as the strains in girdors,-one that is interesting to a multitudo of people, matieal analysis of them is very imperfectly, if at all, nuderstood by most of thoso whom ho would wish to instruct ; and, indeed, this subjeot of strains is one of those which can be explained in a hetter and clearer way by other and more simple nethods. Another cause is, that writers to address, and in trying to accommodate what they have to say to the greatest possible they have to sny to the greatest possible
nnmber of readers, they adopt mixed methods nomber of readers, they adopt mixed methods
of roasoning, - $a, \mathbf{h}, \mathrm{c}$, for the novices, and higher pabulum for more advanced students, whereby they make, perhaps, as much as half Whereby they make, perhaps, as much as half
the hook unintelligible to one portion of the the hook unintelligible to one portion of the
community, and tho remainder uninteresting to community, and tho remainder uninteresting to
others. The two anthors whose books are before us treat the subject, with more or less success, us treat the subject, with more or less success,
without the aid of the higher mathematics,Mr. Shreve algrebraically, and Mr. Cargill gra. phically. The graphical method has some advantages in plainness of perception to the senses, but is tiresome in intricate cases, while the
algebraical method is more comprehensive, but algebraical metlod is more comprehensive, but 3ess perceptible in the process of reasoning. Mr. Cargill anys, "it cannot be denied that a method of arriving at any desired result in the field of science which appeals to the senses as woll as to the mind, mist be more congenial to the comparatively untrained intellect than that which calls into play the mental faculties only. In the former case we perceive, and therefore
understand; in the latter, whether we underderstand or not, we perceive nothing." But sarely the first part of the case is over-stated, for we certainly perceive many things which we do not understand; and so with diagrams of strains
 "Strains apon Bridge Girderp end Roof Trusseg." By
Thomas Cargill, C.E. K. \& F. N. Spon, London.
1873.
forces, but it is only hy a process of abstract easoning that we perceive that they do so; and made evidcut to the senses, of the truth of that which we manst have understoed before we conld have made a memorandum of it. And we con. ceive that pupils may easily bo led into super. ficial habits of reasoning, by regarding line on paper as proving anything of themselves.
be ongineering and architectural professions there are "men of paper,"-those, namely, who iu designing a strncture, hegin by drawing lines on paper, not having previonsly considered fully and exactly what they wish to draw, but trustinc that, somehow, a few lines laid down will suggest others that ought to follow. So with diagrams of straius. They shonld he made as memoranda of the processes of abstract reasoning, and not as primarily domonstrating anything. In the simplest form of the principle of the composi. simplest form of the principie of the composi.
tion and resolution of forces, two forces acting in different directions, and mecting in one and in different directions, and mecting in one and rillm by one force acting in a certain direction, the intcnsity and direction of whicb are graphically represented by tbe length and direction of the diagonal of the parallelogratn drawn ahout the lines representing the two component forces; but this intensity and this directiou are not proved because they are represented by the diagonal of the parallelogram, but because of abstract necessity. Diagrams are very useful in these calculations; hat it is quite possihle that by too frequontly rclying upou lineal representaתay be ces, a hahit of working withoud was the warning of an engineer to his pupils.
Before entering upou the general question of strains, Mr. Cargill makes some remarks on the elasticity of iron, from which we quote the iron bar, after supporting it considerable load will not retnun to its original length, but will undergo a permanent alteration in that direction. This permanent increase of length is termed the 'set,' and its amonnt depends npon the force applied and the nature of the material. When 2 bar is subjected simply to its safe working. load there is no appreciable set; but as it becomes necessany to test bars in order to ascer tain the quality aud strcagth of the iron, a heavy strain must be appied, and the set 1s, to some material. . . . If the veight bo too great, and tho set of $n$ correspending marrnitude, the elasticity of tho iron is injured." In this we agree. It has always secmed to bo folly to apply excessive test-loads in trying the strength of materials, for it by no means follows that hecause a har may have borne a giveu strain once it will bear as much a second time. It is true that if the indicators are sufficiently delicate to show the actual elongation nader a given strain, and that strain be repeated with the result tbat the bar returns to its original length hardly the forco is removed, tho test-load can hardy he too high; hut imperfections of probably always render these cxtreme test iudesirable. "There are some peculiarities attending the set of iron deserving of atten tion. In the first place, it is not produced instantaneously, but some time is reqnired for it to acquire its full amount due to a taken place, and the weight has been has movel, the second application of it, or of any smaller weight, produces no further set any permanent elongation in the material. Should a considerahly greater weight be applied, then the bar will undergo another elongation or set, due follows breater strain upon it." That which as if a certain duration of time were neccsear to enable the materinl to adapt itself to the particular circumstances of each case for if heary weigbt be suddeuly and rapidly applied to a har it will break, or rather snap at once, with. out undergoing any elongation of its length; the strain is induced so quickly that the elastic force itself."

Now, any elastio material,-as distinguished from those notorionsly brittle, for all materials aro more or less elastic, - will resist for a moment without ruptare, a greater force tban it will bear during any considerable time, and the statement should have heen that it appears as if a certain duration of time were necessary to overcome the
sudden application the strain is induced so quickly that the elastio force recovers itself before the stiain has had time to iujure it.
Mr. Shreve treats the case differently, and moro comprehensively. He keeps up through. the case is stated gradually, beginning with the simpler and proceeding to the more complex forme the game formule heing adopted through out with such modifications only as the difierent cases roquine, ench case being considered as part of tho whole After the disension of the strains in each form of thes an crample riven, worked out in detil, showing the appli given, worked out in dctail, showing the appli. deduced from the fers statements are al deded fore bot fin principles of constraction, the foremost of which 18 that of tho lever, the second the resolution of forces, and the third the equality of moments of forces in stractnres in a condition of equilibrium. (The moment of a force at any point is its amount multiplied intc itis distance, measured at right angles to its
direction, from the point about which the direction, from

1. Of the Lever.-If a weight he borne by a beam, or truss, resting at its extremities upon two supports, these supports may he considered as reacting with two upward pressures, whose sum is equal to the weight; and the weigh borno by either snpport, or the reaction of either support, is to the whole weight as the distance from the centre of gravity of the weight to the fusther support is to the whole length of the beam or truss.
2. Of the Resolution of Fiorces. - If three forces acting at one point balance, thrce lines parallc to their directious will form a triagle, whose sides will be proportional to the forces.
. Of the Equality of Moments. -The moments of the forces acting upon a body in equalirium which tend to turn it in one directon abont a certain point, are equal to the moments of the forces which tend to turn it in the opposite direction,-the forces and the point beiug in the same plane. The direc tions in which the forces act which are brought to hear upon the members of a truss, are horizontal, vertical, and inelined. The strains in duced in tho inclined or diagonal braces may be resolved into horizontal and vertical strains by the application of the principle of the resolution of forces. In a truss snbject to a uniform constant load throughout its longth, and a uniform movable load, the horizental strain are greatest under a full load, but the vertical strains are greater when the truss is partially (hut more than half) loaded-the load extending from one abutmont,- than they are uuder a ful load of equal density, and the greatest vertical strain in a trass subject to a rolling load is the strain at any point prodnced by tho constant truss weight added to the strain from the rolling load when it reaches that point, and covers the greater part of the triss. This greater vertica strain from a partial load is, apparently, an anomaly, but it is shown hy Mi. Shreve to be so in fact. Mr. Cargill says that to correet this inequality, tho platforms of bridges have some times beeu loaded with ballast, to increase the dead weight, and to lessen, comparatively, the effect of the rolling load. He does not, how ever, approve of this, but suggests a better system of bracing. Both anthors give considerable space to the discussion of tho strains i roofs, es well as in bridges, but while the one treats of roofs separatels the other treats the strains in them os part of the general subject of straing in trusees , hoth howerer, trent the ect theorically only, and althouph a studen mar mount and matoro the in truses, o mut look the trase ecoury the strengh necessary to be given to them. Thi is no dis parg o be done in designing a hridge or a roof is to ascertain the awoun and the nalure of the then, to the rccords of trustworthy experiments on the strength of materials will enable any one who has had sufficient practical experience in the working and use of materials to assign to the working and use of materials to assign to each member its. proper dimensions; hat this practical acquaintance with materials is ahsobe designed, because there are many things to be oonsidered which cannot be taught in hooks or lectures, and the merely theoretical man onn no more design proper structures than the merely practical man can; and of his works we know too much to ome sorrow,

LONDON SUBURBAN TAVERNS.
The habits of a nation are cbanged by the growth of its cities; and when London was com" Maratirely small, this country was known as very inappropriate if applied to it in the present day. In the time of good Queen Bess, the citizen after bis day's work could stroll oat into the country and como home again to bed after enjoying the healthful smell of the hayficlds; but now it is a day's journey to get out of sighit of streets and chimney-pots. Eren at the bcgin. ning of the present century grass was to be found Smith relates in his "Book for a Rainy Dar," that in 1772 all beyond Portland Chapel, iu that in 1772 all beyond Portland Chapel, iu
Great Portland-street was country. Surith's Great Portland-street was country. rccommended to rise early and take milk at the cowhouse: so sbe used to cross tbe Now.road and walk to a place called William's farm near tho "Jew's Harp House Taverv and Tca.gardens," on the borclers of Maryleboue Park, where Speaker Onslow was at one time in the habit of spending his evenings, till be
was discovered and made too much fuss with to with his quiet habits.
The pablic-house in Albany-street, with the odd sign of the "Queen's Head and Artichoke," was at the time that Mrs. Sraith took her morve ing walksa little old tavern in a meadow eutered from the New-road by a turnstile. Tbe sign was a weather.beaten portrait of Queeu Kliznbeth, and the report was that tbe house had beeu kept originally by onc of ber Majesty's gardeners. Londoncrs of atd lived a mucb more out-of.door life than they do now, and ronnd London were numerons wayside.inns and tea.gardens, whicb tho mighly popular, and much frequented. In were public. houses $t$ twich substantial tradesmen and their famili were in the habit of regaling themselres in the same inanncr as is now conmon ou the Boule. ards of Paris. These seats and tables may only used hy the working classes.
We have before us drawings of some of the oid inns round Londou taken at the beginning of the last century, with MIS. memoranda rela. ive to their history; and in the following notice of these inns, nost of them now either destroyed or swallowed up by the ever onvard tide of London growth, we hare incorporated this infor. mation. Some of the inns obtained a siniste eputation from tbcir landlords being in league
The "Chalk Farm Tavern"
The "Chalk Farm Tavern," now rebuilt in the midst of shopss, was, only a few years ago, in so retired a situntion, that tbe field near it was hought to be a specially appropriate place for the fighting of drels, and many a weary man has rested bis limbs upon a bed in this honso as his lifo was fast ebbing away. Furtber north was "Belsize House," formerly a family man. sion, but turned into a place of entertainment in 1720. At tbat date twelvo "stout fellows com. pletely arined were employed as a patrol between this place and the town. In June, 1722 the appearance of nobility and gentry at Belsize was so great that they reckoned between 300 and too coacbes; at which time a witd deer wa huated down and killed in the park before the company, wbich gave neariy thrce hours' ditcr sion. About thinty years after this the house was again inhabited by gentlicmen. It was re built, and tbe Right Hon. Spencer Perceval lived in it for a time.
Tbo "Upper Flask Inn" at Hampstend was oure a frmons house. Here Clarissin Larlowe lodged when she attempted to escape from Lovelace, and the Kit.cat Club met in one of Richard Blackmore refers to the place in porm, "The Kit.Cats ."

## 

The house was afterwards converted into a private residence, and George Steevens, the Shakspearian editor, lived iu it.
Tbe "Two Wrestlers," at Highgate, was an supposed to have a date over the chimney, said that Charles II. aved Eochostor 1502. It is make it their abode for one night oro obliged 1,664 , wbeд they were ont on one of the rober, excursions it afterwarls hecn their roving resort of highwayrnen. Keutisb town was toler-
ably wel, supplied with inns; but they did not spring. The manor of Highbnry formerly be add to tbe safety of travellers. Those who now longed to the Knights Hospitallers of St. Joh prss these houses in a yellow omnibus will find difficult to realise the state of things repre sented by the following particulars. Opposite we Bull and Gate" Squire Greenwood was
 out aftcr frightening the village, got clean of Tyburn, in May, 1730. The "Eull and Led was kept by John Young, who was banged at Kcuaiogton, for the robbery of Thomas $S$ winton, in May 1730 . Thome bed at the "Flask" for a Matthews's, near Hishmate Church on the 13 the of Aurust, 1731.

Copenhagen House" stood alone in the fields upon whioh the New Cattle Market has lately been built. It is called "Coopen Hagen" in Camden's "Britannia" (1695), and was, accorch ing to tradition, the residence of a Danish princ or ambassador during the Great Plamue of 1665 . I780 Lord Georre Gordon's rioters passed the bouse, on their way to nttack the peat of Lord Mansficld at Caen Wood, and at this time a part of soldiers were sent to occupy tho place unt the riots were sent
The "Dun Cow," at Holloway, was built in 1601, and on toe view of the house that is now betore us is the followis ans. noto relating to ne of the notorious trequenters of the place:In this bouse last year, tbe 205 b of October mest a person whom 1 took for an honest man his convcrsation was agreeable, and he wh.s very goox.looking. Since many times I have thought of my fortuate escape, for he was no other than the notorions Turpin, $A$ little after he left me he stopped Lady Dolin's chariot and robbed he of 12l. and her watch and rings. This is the last public ion in Holloway. I find Turpin is staying near Hackney. 8 May, 1731 ."
The site of the Great Northern Station a King's Cross was formerly a lonely spot. Near the "Red Liou," Battle Bridge, Jobn Everett, of St. Pancras, tbe highwayman, stopped Mrs Hanlv's chariot, for which crime be was hanged at Tyburn, on February 29th, 1730, Rober eech, the landlord, being evidence against bim
Ball's Pond takes ita name from a former keeper of a public-house near Nowington Creen -ore Jobn Ball, wbo kept tho "Salutation" about the middle of tbo seventeenth century, a place macb frequented by the lower orders to ee the sports of bull-baiting. ducl.hunting, The ancient village of Islington was long funious or its inns:-

The Quneris Head and Crown in Istington tow
Wore, for its brewing, the brightest renownn.
These two houses were both situated in the Lower.road, and thero was a tradition tbat the Tresaen's Head" was once occupied by Lord Treasurer Burleigh. It was a fino specimen IIcnry VII. The "Crown" previonsly to crown was pulled down 1820. The "Pjed Brall," situated in t Upper-street, was built about the reign of Elizabeth, and tradition claims it as the residenco of Sir Walter Raleigh, and the first house in Eagland Where tobacco was smoked. The "White Con. duit House ${ }^{3}$ was built about the year 16.11 , and was for many years quietly situated in the fields. It took its name fronl a stone conduit which we close by and is shown iu the engravings of the honse. It was originally a small ale and cake house, nt which time White Conduit rolls were nencly as well known as Chelsea buns. The wheel-pond close by was a noted place for duck. buntivg, and the hoase was long a favourite as semi-country resort. The original tavern was then down in 1832, and rebailt, and in 1819 the ardens were let on huilding leases. The author is foc "Beauties of England and Wales" write cutertainm of some of these suburban plaocs of raverns of Hi-hbury adjacent ted-garke whin Conduit and Copenhagen Houses, all in fine open situations, and furnished withl bowling.greens, \&c., afford a diversity of catcrtainment to numbers of the midale and lower classes from Thomes Lord, one the the hours of relasation. Conduit Cricket Club, subsequently established the Marylebone Club, and gave bis name to she famous ground at St . Johr's Wood.
The "Canonbury Tavern," bowling-green, and ea. givdens, were kept by tbe widow Sutton roin 1785 to 1808 , during which period their Tnme wns widely spread. "Sadler's Wells" STusio Houso, subsequently Sadler's Wrils
Theatre, was onco celcbrated for its chalvbente
of Jerusalem, and "Highbury Barn Tavern to the its name from
o the prior's bouse

wero numerous and of some renown. Tb
"Tbree Cranes," in Church-street, was a pulbli hostelry in the early part of the fifteent century, and took the unme of its sign from the machine fur raising weights, and not from $t$ fird. The men engaged in building the towe Augustine's Church, as it was then called, 410 , were paid nt this house, and from thi conncxion the machine used by the builders wa alken as a sign. On the 17th of Dccombe 1729, Beajamin Keys and John Johnson followe John Stainer, with the Norwich mail-bags, fron his bouse, and robbed and mardered him beyon Clapton, his bouy being found in a pond there o tbe next day. Tho "Cock,", at the corner
sylvester-row, Church.street, was here in 1651 sylvester-row, Churcl-street, was here in 165 lord. In a ra inens struek by too conspirators met, on tho 2nd of October, 166 o waylay and assassinato Charles II. on h etura to town from Sir Thomas Srner's man son, afterwards called tho "Black and Whit foute." The inen were baalked in tbeir design he one of their compauions being known t landlord, John Braine, who sent to inform ii Thomas. In tho menn time they escaped deft their swords behind them. There is oken the "White Hart," iu Marestreet aken prisone colonel Osey, fie regicide, wa for three weelss by Ann Nichole what ad been an sorvent of his whl liva Barber's Barn, in the same street.
The "hing's Head" changed its name severtal mes. Previously to the restoration it was calle "Cromwell's Head," but afterwards the andord, one Oweu, was ordered to be publicly whipped and pilloried for baving such o sigu Faring thus been taught wisdom, he pht np porcrint of one of the Princes of Orange, whic Hend" The"Bla Peme Mis Charles' on We stre Whels-stre, pan who a coad to London" "Tcmeres day, "was originully called the Cmplars llouse," but tho reason for such ance is was the once magnificen nerd
 posed to be the oldest house of entertainmen in Hackney, and in 1434. the Prior of St. Joln's granted a hostelry called the "Pie" to one John of Banbury, on the condition of bringing bait to him as he passed to his house. Mare-street was then called Gavestonstreet. The bouse was palled down to form the Grove namy year: the "Tho Green Dragon, atterivards called road, the infmerland Arus, Bagnigge WellsTo, Tom Billings for the murdur of her husband witnesses a dinst Bakey, being one of tho Tyburn on Tiays her. She was ournt ilive at at the same time.
The "Pindar of Wakefiold," in Gray's Innne, was destroyed by a nutrienne in November, and at wich time the daughters of the house was rebuilt in 1家.
Buthind the " Ealf.way House," Hampstead rond, famons for its "prime cakes, twopenny, and ale," Parson Kinnersly robled Squire Thrupp of 500l. after wonnding him. He was in April, 1730
The Manor of Tothele, Totenhall, or Totten barn Court, is mentioned in Domesday Book, and in the year 1560 it was demised to Queen Eliza. beth fur ninety-njue years, in the name of Sir tobert Dudley. It afterwards became the property of Isabella, Conntess of Arlington, fions thom it was inherited by her son, Charles Fitzroy, Duke of Grafton. In 1768 it was vested in the Hou. Charles Fitzroy (afterwards Lord Southampton), and a few years afterwards Fitzroy.square, Crafton.strect, \&c, were built apon part of the site Tottenham Coart is described in Dodsley's "Loudon and its Envi ons" (1761), as "a pleasant villare situnted between St. Ciles's aud Irampstead "'; and Cay had previously nuentioned it in his verse as: ural place:

When the swreet brenthing spring unfolds the buta,
Inve flies the dusty towa for shady woods,
Then Tottenham fields with roving beauty swarm,
Aved Hampstead balls the City rirging marmar."

The "Manor House" was transformed into a public house and tea gindens in tho seventeenth Giles's, for 1645 , it appears that three persons wero fined a shilling inpiece" for तrinking at Tottenhall Court on the Sahhath dave. sign of the house was the "Adam and Eve." and the tavern at tho corner of Haston and Hanpstead roads still retains this sign. Edon-street,
which is the first turning from the New-road on which is the first turning frome the New-road on
tho west side of the Inmpstead-road, was built on the site of the gardens. Hogarth has introduced this tavern into his picture of the "March to Finchley," and Broughton and Slack exbibited here their pugilistic skill. It was at one time well and reputably attended, hat the Crooseberry fair in Tottenham-Court-road hrought together so many persons of the lowest class that early in the cightcenth century it had obtained a very
ill name as a resert of vicious characters, aud soon after the f'rir in 1730, seven footpads were taken at this place. The "King's Nead," to which Miss Morris was taken agaiust her will hy one Russel, was close hy the "Adans and Eve." For Margaret Pendergrass were hangod a Tyburn in May, 1728.
The notorious James Dalton was taken prisoner at tho "Bull's Head," Tottenham Courtroad, for the robbery of Dr. Mead hy stopping his coach in Leather.lave, Holborm, in Decomber, 1729 . The man committod above Gfty rohberios in and near London, and was evidenco against In and near London, and was evidenco against his deserts, and was langed it Tyhurn on May his deserts, and was lianged at Tyhurn on May
12, 1730. Tho "Farthing Pie Honse," Now12, 1730 . Tho "Farthing Pio Honse," New.
rond, at the corner ol Norton-street, was so rond, at the corney ol Norton-strect, was so that low prico. It was afterwards called the "Green Man." In a pond near the lionse, Mr. Haddle, tho landlord, found the trunk and limhs of a Mr. Mays, wrapped in two hlankets, on March 36,1724 , nad shortly after the mur. dered man's wife, who committed the crime, was
bnrnt at Tyburn, as mentioned before. The bnrnt at Tyburn, as mentioned before. Tho
liouse was visited by many opulent frecholders, and Wilkes frequented it to obtain rotes when he was a candidato for tho county of Middlesex. The painter Wilson often plased sleittles here. Tho "Rose of Normandy" tarern, gaming. house, and bowling-green was a very old place of entertainment, joincd to the hetter known Marylehone Gardens. Loncs bowling-green, at the "Rose," at Marylebone, is mentioned in the Lomion fazctta for Januars 11, 1691, as half a mile distant from London, and in 1746 robberies were so freqnent, and thieves so desperate, that hase a prietor of the fardens was of soldieve to then to and from London. Sheffield, Duke of Backingham, is said to hare been a constant frequenter of tho place, and Lady Mary Wortloy Montigu is supposed to have referred to him in her lino:-
"Some dakes at Maryione lomi time away,"
The gardens are also made by Gay the scene of ono of Macheath's dobauches in the "Beggar's

Tho taverns and tea-gardens of Paddington and Bayswater were long in high repate. The "White Iion," the "Red Lion" the "Pack-
loorse" and the "Wheatsheaf", were oll okt houses, and with the latter tradition couples the namo of Ben Jonson. Knightshridge again, as the chief entranco to London, was well supplied favourite resorts by day, but at night they were frequented by highwaymen, and a MS. annotator that " 110 good man walik thero too lata unless he can mako his party food." Knightslridge was 2 sort of Gretna. Green of the seventeenth and eighteenth centuries, and tho couples who to the taverns of the place. The "World's \#nd" is referred to by Pepys, Congrove, and many of the old dramatists. was on tho sito of St. George'ser la
was on tho sito of St. Georgo' s-row.
The "Malherry Garden" rt Pim
stood on the sito of Buckinglam Palace, which favourite place of eutertainment in the reign Charles II., where tho gay world were fond of spending their evening hours. The most interest. ing recollection of it to us, however, is that of John Dryden sitting there eating the tarts he loved.
Wo must now bring this notico of suburban inns to a close, not from lack of materials but from lack of space, hecause an account of all the inns
that once surrounded London would fill a volume rather than an article. Wo will, however, nenion in conclusion two inns of much interest at Fulham. Tha "'Golden Lion" was erected to local tradition, Bishop Bonner lived for a time. Tradition adds that a subtermanean path come. 'Tradition adds that a subserionean path withe palace. At the " King's Arms" a party of Londoncrs are said to have aken refugo at the time of the fire of London, and that event was commemorated at this house on the 1 st of Septomber for many jears.

PUSSIA, KHIVA, AND ART PROGRESS.
If would he difficult to find an artistic and architectural problem more enrious than Cobden trapelled as one as it now 1s. Mr colso fros of instur the world in the principles of fiee instructiog scems to have been moro especially interosted seems to have been moro cspecially interosted
iu Russia. Russia is in what may be con veniently termed a midule age stato of progress. enothor anothor parallol this our awa middlo Ages. this island, now-a-days, so dimerent from the past, no Poter the Hormit, nor Lhomas an Beckelt could hope to sud many sympathisers or helpers oor can there bo any possilinty of "building cathodrals" on a groat scalo as of yore. The feolings of men have changed, and the wealth of
building has cone into other channels. But in building has gone into other channels, But in nation, as church building and no small portion of the national industry is omploged in the making of silver and git church ormarnents, in tho casting of statues and columns, in the burnishing of domes and cupolns, and in marhle carving for the "ornamentation" of catliedrals and shurches; and, his adds, that the most gorgeons products of the Lussian looms are destined for the hangings of need say nothing at present of the art.8tyle in which, or from whieh, these things are execnted Some fature world's exhibition may perlaps show ns typical fxamples ef those curions thing -of the past still in the present. We sinply note frots.

It wonld seem almost impossible to transport oneself into $n$ distnat time so as to thoroughly realise it, and though so much stady has heen inpossible to understand the intensity of feeling which broncht into evistence thoso great cathe drals and churches which nowadays, in architects offices, form the "precedent" by which to go to wothing well conld be done! But in Russia this is, in reality, all now going on, in a natural way Books of precodent can be done withent, and the now chureh wonld seem to grows, naturally, ont
of the one last built, and int. Colden, ever with of the one last built, and Mr. Colden, even with his somewhat hard commercial eyo, conld not
hut be strack with the individuality of some of tho work done. One of his buitding acconnts is curious. We saw by the sile of a kreat church, "sparkling with ornaments" at Nishni Novogorod, where the Great Fair is held, a very simple, unpretending mosque, 80 ontirely withont ornamental details, and so plam, that he could not bat ask his Mahometan gaide how it was, with but whiterwashed walls, and without ixtan cloth and pnlpit of wood. The answer he got here?" "it must he indeed somethine not litule curions to see a huilding going on from pure necessity alone, and with not only no borrowings from fashionahlo surroundings, but all roing on in ahsoluto opposition to them all, We can hardly imagine a place anywhere wherein the art of it can be in a more puzzling stato than in Russia. The Middlo Ages in the present! All sorts of experiments are said to have heen made by the late Emperor to foster this and that manufacture, and Mr. Cobden noted that no country in tho world ever suffered so much from attempts to force a manufacturing system foreion to it into artificial life, as in system foreign to it into artifiel lite, as in
Russia. Nowhere else has the experiment been mado on so largo a scale, npon a community so anprepared for the experiment. It is indeed wonderful to think how porsistently some men will go on in error. Art. manufacture now well-nigh rules the world, and the Russian bas been trying, hy dint of machinery of English
manufacture, to do that which it would almost
eem Entrland alone oan do. All those miracles hibit are here to be seen, horrowed from England, by the side of other machinery of the nost primitize design and construction The plourga are on the molel of those in uso the ploss fincinne and the scathes and ing you hor ben Wha ancient scytnians. What a curnous thing it wonld he to see a nation working ont its owl capabilities in its own way only. Russia, liko all other countries, has its own natural art in dustries, leather work, coarse linens, cordage coarse woollens; and, not least, articles of wood, in the manipulation of which the Russian is not a little original and ingrnious. The in genuity of the common people in the working of wood, says Mr. Cohden, is truly remarkable Every nation to its own inclividuality mase surely be tho gaiding light of the future. It is hy the working ont of its own special capaci ties and individualities, that natious, artistically, are to "progress," and not by the transplantins of exotic productions into them. In Russia this is to be noted in a most remarkable degree.
Aud, again, would there not scem to be power peculiar to itself in Russia, to elaborate pity it is that all goverure of its oxn. What such matters as these. It was the steady aim of the late emperor to "improve" his people out of themselves,-to borrow from other nations, espe cially from England, all he could; and never before, pertops was so meh capacity and wealth perunps, was so much capacity and make men other than what nature made thean. Mr. Cobden Ir. Cobd la migh, an points out how well the Russian can do his onen is artificially forced on him,-his own work iu his own materials, that is.

To go but a step further with this singularity o tlo Middle A ges in the present. Russia, says Mr Carlyle,-great, silent innssia, without, as yet, oice,-nought but the raice of its cannon, and it say, when it does speak? Well, wo must patiently wait. Blat at least wo may see what Rnssia does, and there can be no sort of miscalie er amhiguity about it. Rassia is progressing. and is going on further and furtber, and the curious artistic qnestion is, -of conrse, looking teadily at art, What is Russia taking into hoso distant regions, and how far will it onst out of oxistence what it finds of original matter and what will it put in the pace of it? Khivib is further off hy a long, long way than the Middle Ages. The " walled town " and its strange ways take ns almost as far back as the days of old Canaan, so wonderfully do things continue in tho far East! Will Khiva gain anything through Russian " occupation," and what will it grain?

CONVENTT CHAPEL OF THE ASSUMPTION KENSINGTON.SQUARE.
We give an illnstration of the chapel of the Convent of tho Assumption, Kensingtou-square.
The plan consists of a nave, 27 ft . wide, without aisles, lighted by a lofty arcaded clenrstory of single lancets, with a barrel-roof rising from half-vaulting over the clearstory windows. This portion of the church is dovoted to the nums choir, and accommodates at present the young ladies under their tuition, but whom it is intended to pace hereatter in the ante-chapel. Beyond the choir extends the chancel, 20 ft deep. A simple arcide, carried on slender polished granite shafts, surrounds tho high altar and above this rises a raulted ceiling in polished woods of two colours. To tho right of the the rear are arranged sacristies for the almoner and the sisters. At present, these portions of the design alone are finished, but it will combine when completo, a tribune at the end opposite the altar for stransers, and a loft.y boll-turret It is, moreover, hoped shortly to replaco the present temporary altar, hy one, as shown in our drawing, in Caen stone and alahaster, the altay itself and tabornaole being in silver parcel-gilt. and enamelled and jewelled. The entire cost of the buildings, as at present completed, las not exceeded 2,700l. The contractors for the worl were Messrs. Jackson \& Shaw, of Enrl-street Westminster; the carving having been executed metalwork supplied by Messrs. Hart \& Peard. metawork supplied by Messrs. Hart \& P
The architects are Nessrs. Goldio \& Child.

## SMOKING AND THINKING

Ar an artistic symposium rot long ago we observed three or four young gentleruen workivg Ward for architectur, not one of tlinm yet of age suression of Shakspeare ; and the fucstion oc curred to us, "Does tobaceo impair tho thinking facultics? Smoking is a habit so commou that tbis inquiry thay creite somo surprise. Since tobacco has got into literature, tho praiso of the pipe has been botb sung and said, and not a littlo line writing has been expended in eulogy of it as the of tho thinker in bis meditative hours. The very frequency of tbe practice gives interest to the inquiry, and we propose to lay before our readors inquiry, and wo propose to lay before our readors
sime data which will enable them to answer the question. And, first, it must be recollecter that whatever theory may bo held as to altimate whatever theory may bo held as to nimmate dependent for its duo performance upon ecrtain physiological conditions. The brain is tbe inphysiological conditions, strument of thonght, and is a highty complex machine, of which tbe blood is the motive power.
The process of thinking destroys a certain portion The process of thinking destroys a certain portion has tbo power of repairing this waste by solecting appropriate matter from the vital fluid with whicb it is at short iutervals yegularly bathed. Honce it will he apparont that the healthy condition of the brain depends apon tho quality of the blood, by and from which it is sustained. as a matter of conrso, affect the health nnd activity of tbe brain. If, then, we ascertain the physiological effeet of tobneco npon tho lifedluid, we shall he in a fair way for deciding the confirming the views thris arrived at. There is nothing stronger in medical ovidence than the agreoment of physiology and pathology.
Dr. Richardson has so clearly explained the inflacnco of smoking ypon the blood, that it will be best to quote his graphio account. His
scientific eminenco entitles lis cvidence to re ipect, and lopers of tho weed must recollect that it is a smoker to whom thoy are listening :On tho blood the prolonged inbalation of tobacco prodnces changes whicb are very is natural, and in extremo eases paler. In sucb instances the deficient colour of the blood is communicated to tbe body altogether, rendering the oxternal surfaco yollowish, white, and puffy. Tho blood being thin, also crudes freely, and a cut surface bleeds for a long time, aud nay contion to remedies. But the most important whange is exerted on those little bodies which tlont in myriads in the blood, and are known as the red globules. Tbese globules have naturally i donhle concave surface, and at their edges a in alkalies, and are line. They are very soluhle in alkalies, and are strbject to change of shape wh cbaracter, when the quality of the Hnid in lensity. The absorption, therefore, of the fumes f tobacco necessarily leads to rapid changes in them; they lose their round slape, they become val and irregular at their edges, and instead of laving a mntual attraction for each other and "uuning togetber, a good sign of their physical health, tbey lie, loosely scatterod before the eye, is though they spoke to him, and said the words hat the man from whom they were taken, is lhysically depresscd and deplorably delicient Totb in muscular and montal power." Tobacco modifies the circulatiou in the brain, is in other portions of the body. Hence, it wonld be remarkable imleed if it atid not exercise 'A sincere, self-ohserving smoker can thougbt, A sincere, self-ohserving stooker cannot fail,'
says $\mathbf{~ M}$. . Meunier, "to recogrise that tobacc reates a new naturo, more disposed to dreamin reates a new naturo, more disposed to drearuing hau action." Althongh a great smoker himself,
10 considered the babit pras inimical to the national mind. His frequent diatribes to the national mind. His frequent diatribes acgainst he habit of twenty years was long too strong ior bim. So close was the connexion between work and smoko with M. Meuvier, that the wount of intellectual labour he had performed was chronicled by tho extent of his consumpan of tobacco. When, at last, after many with bis individed attents, it required several weeks of which bonnd him. The mode by which nicotine cets upon the blood-ressels explains tbe apparent
contradiction that it glould be able to excite into momentary activity an organ which it lins cr-ver-actirity suyped. 1 excitement an apparatus of the walls of the hlood-vessels are quiekly followed by a general fatiguo which is only a modified paralysis. Thinking, as we have lation. When, by continual nsame the coreburcu tissue of the blood-vessels has become gradnally bemumed, the blood, in place of its natinal rapid fow, circulates slowly and sliggrishly, and tho functional energy of the brain is climinished But with o new exhibition of the stimulant, the mnscular contractility is agilin stirnulated, the roulation becomes quicker, the braiu, bun dantly and regularly bathed by the life-flood akes up again its functions, the brain-powe tho activity thus produced cannot last. With this stimulation disappear the brilliant result wbich it had produced, aud the orgau falls iuto relaxed condition, from which ouly increased oses can teroporarily rescue it.
One of the resulics upon the brain is the loss memory. Many authors have noticed this fact The case of labbe Moigno, tho celebrated ditor of Lets Jondes, is curious. Ho had often lways la habit of taking suuft, which had tempo to prejudicial results. After varions nse. In reunnciations, he had returned to it mati in 1801, whilst engaged in some raatbe five gro labours, he took from twenty to twenty laving recourse to tho indf box. The effect was a rapid extinction of the faculty of memory Ife had learned several languages by thei root words, of which he knew from 1,200 to 1,500 of each tongue, but he fonnd that his power of recalling thesc words was gradually became each aud rccoursecsary Struol wat this fact, he resolred to abondon the tatation and cigar. Writine feter air as a non-smoker, lo says, - It has experience the commencement of a veritable resurrection health, mind, fund momery , our idea of heall, mind, and mory; our ideas have our work oasicr seen gradually return that army of words whe had granaily recovered all its riches, mell its sensibility, has rccoverod all its riches, all its sensibility personal enemy of nuemory which form of sinff, is a personal enemy of nemory, which it has destroyed little hy little, and sometimes very promptly, can not be douhted. Mauy persons with whom we are acquainted, - M. Dubranfaut, the celehrated chemist, forexample, - havernnthe same dangers and escaped them in the same fashion, by renouncing tolacco, which we do not hesitate to say harms the greatest part of tbose who employ it, since for one smoter or snuffer who uscs it here are ninety-nine who abnse it."
Memory depends upon the vigour and health the nervons system; it is likely to be mentred by whaterer causes unhealthy excatement and ncrvous waste. Henco if the smoker's tom of fail it may be considercd as one sympfrom which ari iojury of the nervous centres, fies become coarshe, and this leads to ballucina. tions. Blatin gnotes from Ehrhart somo curious cases of tbis niture. M. X forty sir poars old uervo-sancrine temporament, and in apparent good health, had often experienced embarrassment in speech and motion after indulgence in tobacco. One fino day in the country, when the air was calm, and the sun was shining brightly, ho was astonished to see a heary rain-shower Which appeared to bo driven towards him by a violent wind. He extended his haud. No drops were falling, his eluthes were quito dry, but at palpitation violent beating of lia way he vision disappeared. Many times this phenomenon recurred. He abandoned tobacco, and himself perfectly oured, ho commenced thinking smolso, perfectly cured, ho commenced again to appeared. Complete abstinence was his only safety.
The step from temporary hallucination to chronic lunacy is not very great, and we find on and whoso recopery was ine to a luche insane, which barred him from access to his usnal indulgence. Druhen narrates another note. worthy case. A middle.aged man, in good health and of steady habits, was sent by his employer to Paris, charged witb papers of con-
siderable raluc. The importance of the trust preyed very mucb upon his imagination, and led to attack of mclaucholy mania. He was under modical treatment about three weeks, during which time his usual desirc for tobacco disappeared. On his recovery he again com menced smoking moderatcly. A few months after another attack commenced, and be began to talk onco more of the (imaginary) risks and dangers he had cncountered in his joarney to Paris. Druhen saw that ho was upou the brink of insunity, and his first prescription was "No obaceo." Under this regime the man has simee Thes tho best health.
These factz, olthongh enrions, are not catirely decisive, for in juduring by iudividual cases there is always a risk of mistaking the exception for the rule. There iure, however, data of a more absolutely convincing nature wbich we commend tho carefil consideration of yonng smokers and their parents.
In 1855 M . Bertillou divided the $\mathbf{1 0 0}$ pupils of the Paris Ecole Polytechnique into smokers and ron-smokers, with a view of testing this question. The results in the cxaminations of the wenty wo stood highest, and those next to tbem, haro becu thas stated:-

An examination of this table will show tbat whilst the nen-smoking pupils exhihit a stead pward tendency, the contrary is the case wit he smokers. Althonch tho majority in number hey were the minority in intellectual attain ments. The contrast is most instructive, and ence of thie popular mary tbo deadenigg iniu的 activity of tbe brain. If tobacco were, as its pologists sometiaes chaim, the handmaid of hought, a very different result must have en ded. Dr. Miurray, of Newcastie, who is not an opponent, but a cefender of smoking, says, "My own pors mal experience and obscryation amod medicar stratents, is supported by the results of examinations for har and divinity, smokers havin been found hebind non-smokers in mental calibre. so long ago as 1600 , a medical writer sad tohace bot safe for the young, and should be called ouths baze. Sir Beyjamin Brodie, from tho result of experiments upon animals, affims that the oil of tobacco acts hy destroying the fanc tion of the hrain. This, of course, refers to it administraiion as a poison; but who can think with coolness upon our youth, voluntarily sapping tbo vigonr of their brains-the only organ in wbich we excel (?) the brute creation-and tons wearing out their nervous systems ere they have fairly entered upon the important duties of life? It will be seen tbat medical science and sta listics confirm by d posterioni evidenco that which physiology would lead as to expect on a priori grounds. It would he folly to suppose tbat tho brain, with all its minntely wonderful mechanism, should not be injured by continual contact with blool weakencd and dateriorated-poisoned-hy contact with the deadly principles rolved in smoking tobacco
Smoking is now so common amongst person of unformed constitutions, that the facts here detailed acgnire a grave importance. If juvenile smoking contiunes and extends, we may look for duller intellects in with wenker brains and dation. Lintellects in a continued serios of degra brigt. Lethose a woula not have our brave bright, English lads degonerate into a race o dyspeptic dullards, warn them, as they wish for the full exercise of that power to think, which is their greatest privilege and glory, as they hope
for clear heads and anclouded bruins, to resist tbe dreamy seductions of tobacco.

Enamelled Bricks. - It is roportod tha works are now heing erected in Pittsburg to manafacture pressed bricks with enamelled facinge. The enamel is made of various colon's to suit the tastes of arcbitects or builders, and is impervions to water or acids, having a surface that can be cleaned like glass.

THE SALUBRITY OF HOBART TOWN, or hobarton, tasmania.
Ax important paper "On the Climate and Vital Statistics of Tasmania," by Dr.E. Swarbreck Hall, Fellow of the Royal Society of Tasmania, and an honoraxy momber of severa! London societies, has been printed by the Colonial Goverument, along with certain tables, being, as the general title states, the "Results of five years' Meteorological Observations for Hobarton, with which are incorporated the results of twenty-five years' observations previously published by the Royal Society of Tasmania, and completiny a period of thirty years."*
The paper by Dr. Hall givos the results of his long medical experience in the colony; tho facts and figures, as he nrges, "establishing a health character for the climate not to be surpassed hy any colony under the British flag." Hobarton, it appears, is annually hecoming more and nore lasian Colonies and India.

 Which the eoneentrution of a city popyilition wrinh luwhys
produce, whatever may be the limatic and looul advanproduce, whatever may be the climatic and looul adran-
tuges, unless special care be taken. The ootone table

The city is ahout two miles in length and a little less in breadth, and the population caunot be cousidered dense; in fact, a great proportion of the houses stand isolated in their own grounds with gardens around. By the Census of 1861 there were, on the population of the wholo island, $5 \cdot 12$ persons to every inhabited house; the
Census of 1870 includes stores with houses, Census of 1870 includes stores with houses,
so that a similar calculation for that year cannot so that a similar calculation for that year cannot be made; but the houses in Hobarton have increased in the nine ycars' interval more than the inhabitants. From visitors, and the vessels in port, tho mortality of Hobarton is abnormally augmontod considerably. Dr. Hall gives a notable list of persons in the colony still living, 101. years of ace, who is known to the Doctor, was in the habit of riding ovor the country, Peruvian fashion, till she was 100 .
Dr. Hall, by the way, gives an instructive instanco of the prevalenco of typhoid fever in the Queon's Asylum so long as bad arrangements as to tho removal of sewage prevailed and the
disappoarance of it on the alteration of these aisappoarance

CLEANSING AND VENTILATION OF THE LIVERPOOL SEWERS.
Is the local Health Committee, Mr. Deacon (the borough and water enginoer) has presented a printed report on the condition and ventilation of the sevvers of the borongh. With referenoe to tho removal of deposits, the report stated, that since August, 1871, when the work was systemalically commenced, the length of sewers cleansed had heen 25 miles, at a cost of about 2000 . per mile. The work of cleansing the remainins 14 milos, all much in the same condition, would occnpy aburt fourteen months, and the cost was estimated at $5,000 \mathrm{l}$. The total estinuated cost of cleansing all the sewers once would be 13,400 l. It had been found, however, by a large numher of examinations lately made, that the deposits renoved within the last eighteen months were, in most cases, zecnmulating again, often rapidly, and the detailed information obtained led the engineer to the oonclusion, that while, at tho present rate of cleansing, the work would not he qnarter from the commencement, iu 1871, at an querage cost of ahont 2,555 l. a year, at the end of that time it would cost at least 2,0002 , a year to maintain a reasonable standard of freedom to maintain a reasonable standard of freedom
from deposits. Assuming the average expendifrom deposits. Assuming the average expendiquarter from the year 1871, to be inevitable, and quarter irom the year 1871, to be inevitable, and that when the proposed works had heen carried
out, an expenditure of $750 l$ a year would be necessary to maintain the sewers in good condition as regards deposits, then capitalising 1,2500 . per annum, i.e. the difference between the 2,0001 . and $750 l$. per annmm, it was found that 25,000 l. might be expended in the works proposed on economical considerations connected Compiled from the Yapers and Proeedings of the
Royal society of Ts suaniad. By F. Abhott, F.R.M.S. Barnard, Government Fricter, Hobart Town.
with cleansing alone, and altogether apart from other sanitary aspects of the case.

After alluding to the various plans of ventila. tion which had been considered, the engineer gave it as his decided opinion, that the deathrate, so far as it was inflnenced by emnnations from the sewers, would invariably be reduced by opening the sewers freely by shafts in the streets, tius preventing the passage of sewer air into the houses. He recommended that from every soil-pipe connected with water-closets in above there should be carried up to a point 4 in, in roof of th.e house a pipe not less than closets of this kiml pxist, the dranght would closets of this kilus exist, the dranght wound up the soil-pipe slaifts; the private drains ns well as the sewers would be thoroughly ventilated; and the total novement of air would be greater: than could be attained by any other means. Such work would, of course, have to be performed, oo far as the private shafts were concerned, at the cost of the house-ownors. The report concluded with a sumntary of recom.
mendations
The cost of thorough ventilation of the sewer throughout the town is estimated at 18,0001 .

## PROVERBS FOR GENERAL

 CIRCULATION.Tas present age is very much shocked at Galileo's treatment, but another ago will be

## RESISTANCE OF WOODS TO STRAIN.

Professon R. H. Thctston, of the Stevens Institute of Technology (U.S.), communicates to the Joumal of the Fronklin Institute a description f an apparntus derised by him for determining he torsional resistance of materials, and also the results obtained by submitting specimens of different woods to experiment. By mechanism the force prodncing torsion is transmitted through the test-piece, and moves a pencil which traces upon paper a curve the ordinates of which are proportional to the torsional moment, while ts ahscissus represents the amount of torsion to which the specimen has been suhjected, thas ndicatiug the relative stiffness, strength, and resilience of the material experimented upon very perfectly. The test-pieces wero seven. eighthe of an inch in thickness at the middle or smallest part. Some of the conclusions drawn from the resnlts are as follow:-White pine yields quite rapidly as the torsional mornent increases. The maximum strength of the test.
piece was $15 \frac{1}{2}$ foot-pounds, and it was twisted completely off at a total angle of torsion of $130^{\circ}$. The sulustance is thus shown to have little resilience. Yellow pine has much oreater resilience. Yellow pine has much greater
strength, stiffness, and resilience. The sap. wood is equally stiff with the heart-wood, but rood is equas its limit of elasticity. Sprnce is less stiff than white pine even, but possesses less stiff than white pine even, but possesses creater strenthin 18 foot-pounds ant turisting hrough a tatal angle of torsion of $900^{\circ}$. Ash hrough a total angle of torsion of 200. Ash seems to be weaker and less tough than is generally supposed. Its most striking peculiarity is its very rapid loss of strength after parsing its limit of elasticity. Spanish mahogany is very stiff and strong. It is deficient in toughness and resilience, losing its power of resistance very rapidly arter passing the limit of elasticity,
White oak has loss torsionsl strencth than White oak has less torsional strength than cither good mahogany, locust, or hickory, hut is remarkable for its wonderful toughness. passes its limit of elasticity at $15^{\circ}$, but loses its resisting power very slowly. The latter remains unimpaired to a torsion of $70^{\circ}$, and yields completely at $253^{\circ}$. Millwrights are evidently correct in holding this wood in high esteem for strength, tonghness, and power of resisting heary shocks and strains.

THE GOVERNMENT AND IMPROVED DWELLINGS.
Ar the adjonrned discussion by the Special Dwellings Committee of the Charity Organisation Association on Mr. Storr's motion in reference to the State assisting in providiag improved dwellings for the industrial classes, the following modications of the original motion were adopted :-

That is the extensive clearances of late years London, whereby overcrowding has heen so uncb aggravated, have been in a great measure produced by the compulsory powers conferred y hots of Parliament, similar compulsory powers bould he giveu for acquiring sites in districts mainly occupied by the industrial classes, in which the ordinary ganitary reqnirements are ound to be impracticable, in order that they may be laid out for building proper dwellings for the same classes on a comprehensive plan.
That pending the creation of a central municipal Government for London, it is expedient tbat the Corporation of London and the metropolitan Board of Works should be empowered, either separately or conjointly, to collect iuformation as to the parts of London most requiring reconstruction, and to apply to Parliament to acquire sites in such parts compulsorily or others in suitable localities by agreement, and gradually to dispose of them to companies and indi. vidnals, nnder proper restriction, for the erection of dwellings for the industrial classes, and for рower themselves to eroct such dwellines to a imited extent in case it should seem to them expedient.
But that in any Act for the general government of Loudon, provision should he mude for the immediate transfer of all such powers, and of all assets and liabilitios acquired or incurred nnder them to whatever governing body may be constitnted."
The committee then adjonrned over the Whit suntide holidays to Wednesday, June 11th.

PROPOSED STATUE OF SIR WILLIAM TITE.
The Chelsea vestrymen have had under their consideration a proposition from Sir Charles Dilke, bart., the member for the horough, addressed
"Dear Mr. Tivingstone, - I think ihat, as Sir Will lam
ite was the best known of the originat "te was the best hnown of the originators or the idea of
iChelsea Emhankment, some sort of memorial to him
 his public mall acquaioted wrivalth Sir Wirliliam Tite, hoth oither to contribute lool for the coostruction of a mura,
gramite memorial drinking. fountain, if the Chelsea Vest granite memorial drinking. fountain, if the Chelsea Vestry
could find a suitable site, could ind a suitable site, mid decide to erect one, or at tion contemplate replneing the detached fountain which formerly stood at the bottom of Oakley-strect, I woutb
give 1001 , to cover the additional expense which might be give 100 , to cover the additional expense which might b
caused by constructing such detaclied fount an morial shape, and inscribing Sir Wullizm Tites a nank
thercon. A. Livingstone, Esq., Chairman of Chelsea Vostry, The Chairman romarked that the offer of Sir Charles Dilke was a very gencrous one, and he trusted the vestry Fould take action in the matter.
Mr. Birch said a preliminary meeting had already been held upon this subject, and that mecting considered Sir William Tite had done much for the parish and that great improve. Embavkment was entirely due to Sir Willian Tite's exertions, and the meeting ho referred to were nnanimons that a memorial should be crected to so great a benefactor to the parish to move that 100 ruincas be devoted towards memorial of Sir William Tite, and he was quite meady to give his fire cuineas to the same end and ho was confident other members of the vestry would follow bis examplc. He would also more that a reply be sent to Sir Charles Dilke, M.P., thanking him for his offer, and asking him if he wonld allow his sulscription to go with others which would be collected, in order that a
statue should he erected to Sir W. Tite on the statue should he erect
Mr. Cox, builder, seconded the motion; and after an amendment had been proposed and lost the original motion was carried by 27 to 6 ; and Mr. Birch then moved that at the next restry
the sum of 100 guineas should be appropriated the sum of 100 grineas should be appropriated
for a nonnment to Sir William Tite, and a com. mitteo formed to collect farther subscriptions and to carry out the design ; and Mr. Lahce, the vestry olerk, cheerfully consented to aot as hon. secretary.
In connexion with the above, it is stated that Members of the Metropolitan Board of Works are also taking action, so that it is highly probable the late Sir W. Tite will have a statuc,

## THE LEICESTER MUNICIPAL BUILDINGS COMPETITION.

A CERTAN nnmber of architects have condesconded to respond to the second invitation from tho authorities of Leicester for designs for
Munioipal Buildings. We hold to the opinion we havo hefore exprossed, that the author of the design selected in tho original competition ought, iu justice, to lave becu employed to propare designs to moct the altered sito and arrangements. $\qquad$
THE NEW COURTS OF JUSTICE.
Mr. Gregory, in the Commons, has called the attention of the House to the delay in the constraction of the New Courts of Justice, and moved that such delay was prejudicial to tho administration of the law, and to improvemont in procedure.
Mr. Ayrton, in course of a long speech, said it was not nntil the 27th of Fehruary, 1873, that the Ollice of Works was put in a positiou to invite tenders for the parpose of constracting the buildinge. Those tenders were roceived on the 25 th of March last ; and after having been carefully considcred, the very lowest of them was found, in the judgment of the Office of Works, to have groatly exceeded the sum which had becn prescrihed. He conteuded that no time whatsoever had been lost, and that there was no justification for the charge of delay. As estimate until the course intended to he toten had bcen decided upon, any hon member wonld have an opportanity of taking the opinion of the House on the sabject before any expenditure
was incurred. He thought this was the best footing on which to place the question
Mr. Beresford. Hope said the right hon. gen tleman had given the INouse a very discnrsive and interesting lecture, bnt he had not met the point which had been raised. He thought that the architect bad been made a scapegroat of, for the benefit of those who sought, in connexion with the new conrts, only to consult their own convenien ce and comfort.
WHILE munch disappointment is felt in conse quenco of the dclay in providing proper courts of law, the general objection entertained in respect of the design for the principal front pre vents any strong expressiou in favour of imme diate progress. We should be false to our trust as representing the public if wo were to urce the Government immediately to carry out that desiga. Mi. Street, by unwisely persistins retaining an arrangement next the Strand which, if put into stone, could not fail to be unsatis actory in effect, ties the hands of a large number who wonld otherwise gladly aid in en deavouring to preyent injury to the buildin by unwise economy.
We renew our entrenty that a model should pared, submitted to publio scrutiny.

## METROPOLITAN IMPROYEMENTS.

The Vestry of St. Marylebonc are ahout to consnmmate a long-projected improvement at tho east end of the parish by the continuation of treestreet and Thayer.street through James. street, thus clearing away a cul.de-sac in James street, long a squalid dirty locality, and a soure of great nuisance to the neichbonrhood, and opening out a line of thoroughfare from the Regent's Park and Marylehone.road to Oxford street. It is proposed to construct the stree 60 ft . in width, and lay out the snrplus land suitably for private residences of first.cles charactor embracing all tho modern chas ments. The worl-s will be commenced imme diately, under the direction of Mr. Eales architect, and an early completion of this important improfement may now be looked forward to.

Tho vestry havo also under consideration a plan by Mr. Ealos for another very great im provemont at tho west end of the parish, long needed, viz. the levelling np, widcning, andopening out Little James-street,-or "Littlo Hell" as it is more familiarly called in its locality,-also Charles.strcet, Lisson.grove, into Devonshire threet and Salisbury.street, making a continuous thoronghfare from the Marylebone-road to New Church-street, and opening ont the east end of Mranning and Suffolk Placos. This, with tho new schools about to be erccted by the London School Board in Bell-street, will bo a great im provement, morally, socially, and sanitarily, and thercfore most desirable to be carried into effect as speedily as possible.

## ST. MARE'S CHURCH, WALWORTH.

Tris church, of which the foundation stone was laid last wcek, will be built in East-street, Walworth road. The principal entrance to the church will be from the front in East-street, or What would be the west end of the nave if the buidding was placed with the chancel at its cast end; this, however, will not be the case, owing to the shape and position of the site. Orer the entrance will be four lancet windows, and above them a large tracoried rose window, 11 ft . in dia. meter. On the apex of the gable of the roof will be a bell turret for two bells rising to a height of 100 ft . from the ground.
The navo will be 37 ft . wide and 98 ft . long, departure from ordiuary proportions of nave and aisles has been adopted, in order that the stone piers or columns, supporting the archos, may congregation
The new church will contain 600 sittings in the nave and chancel, in benches, with sloping backs, and there is a space for 150 in the that the pulpit can be seen from all.
The chancel will be 32 ft . deep, the choir in part ncarest tho nave will be 37 ft . wide, the organ will be placed in a recess at one side, and at the haok of the instrument will be the vestry, about 12 ft . wide by 17 ft . long.

The sanctnary will be 12 ft . deep and 30 ft wide; over the altar will be a 5 .light tracery window.
The roof over the nave will he wagon-share and hoarded, the beight of its apex will be 50 ft ; the exterior height to the ridge of the roof will he 65 ft . As there will he no clearstory, the aisle walla will be 27 ft . high, in which will be placed lancet windows.
The nave will be separated from the aisles, by octagonal stone piers, 2 ft .4 . in. diameter supporting pointed arches of red brick. The walls will be faced both outside and inside, with yellow stock bricks. The arches to the doors and windows will he of red brick; tho dressings will be of Bath stone.
The style of architecture, of which the dotails will partake, is English Gothic of the Goometric period.
Mie contract has heen taken by Mr. Thomp. son, of Camberwell, for the sum of $4,778 \mathrm{sl}$. and it is anticipated that the total cost of the build ing will not excced 7h. por sitting, including the expenses of hcating apparatus and fittines for lighting. The architects are Messrs. Henry Jarvis \& Son. $\qquad$
ST. MARY THE VIRGIN, OROWN.STREET SOHO.
The new chancel is now completed, and forms the first division of the work of rebuilding the old church, from the designs of Mr. R. Herbert Carpenter and the late William Slater. The proportions have been made as large as the gite would permit, the clear inside width being 36 ft . The east end is in Crown-street, and the sonth side is next a narrow court, while the north side adjoins the lofty elergy-house. The general idea has hcen to support the groining on massive buttresses, with thin walls between, the buttrosses showing both inside and outside, thus gaining an effect of solidity; the hays heing necessarily much narrower than the span, tho groining is sexpartite and domical, constructed of red bricks with stono rils. The heirht from the floor to the crown is 60 ft ., and to the ridere of the high-pitch roof above is ahout 85 ft The walls, hoth insido and outside, are of red brick with stone stringcourses, windows, \&o The eastern group of five lancet.lights are placed at a beirht of 30 ft from the foo and for a reredos on a frand scale, of which tho for a reredos on a grand scale, of wajeh the Tree" is Mise, is being executed in white marble, by iss Grant, twe side wiudown are coupled lancets, will a sexfolied circle over. On號 estries are estries are eulered. A small window in the oratory of the clergy.house is arranged high up in the north-east bay. The altar-table is raised twelve steps above the level of the future nave. The steps and pavement generally are of red Mansfield and Portland stone, but inside the sacrarium the foor is Minton's mosaic; and tho altar itself stands on three steps of Derhyshire and Devoushire marble, with a re-table wall bebind of alabaster and marhlo, executed by Mr. Forsyth, as are also the sedilia. The conractors were Mcssrs. Gibson, of Southall, nader Ir. Boalder, as elerk of works.
The rebuiding of the north side of the navo and the north aisle is already commenced, as well as the schools, which will adjoin the olcrgyhouse and the north aisle. M.r. Gough, of Chelsea, is the contraotor.

## architecture in ceicago.

The rebuilding of Chicago, sinco its destruetion by what the Yankees are pleased to oall the with such rapid strides, that nearly the whole city is already restored. Night has been turned into day in the endeuvour to rebuild the city; and sinee the last flame was extinguished, hardly a moment seems to havo passed when the noise of chisel and hammer, of saw or ase, could not be heard in some of the many vast edifices that have heen erected since the catastrophe.
The Americans are not to be beaten for size in anything. Their continent is the vastest, their xivers are the mightiest, tbeir moantains the highest, their forests the bigcest, their buildings the roomiest in tbe world, and their aspirations are the rapidity with whicb tbey do evergthing is the rapidity with whicb tbey do evergthing is
extraordinary. Surely tbe eartb does not revolvo extraordinary. Surely tbe eartb does not revolvo
more quickly in the new than the old world No sooner is an idea started, than it is carried into execution. Tbey nover seem at a loss in tho gravest emergency. The board which was displayed on the site of one of the burnt houses on the day after the fire, with the words, "All gone but wife and children. Euergy !'" roughly painted on it, is a fair specimen of the dauntless
spirit that zeems to animate every individual bpirit that zeems to animate every individual person in the nation. In one senso originality their efforts to but this is mainly displayed in enterprises. The man who invented "wooden nutmegs," was a genius. Ho wbo makes fresh oysters of flour paste and tapioca and salt water is worthy of a public statue in his honour, it But in matters deserved such arecosocion their "commerce," their supply of originality is very soanty. The style of their buildings will jllustrate our meaning. The first object of an American merchant is to have a house wberein to carry on his hnsiness; his chicf ajm then is to Have it as convenient as possible ; his next abont its arohitectural appearance as matter fulife these two reqnirements few of the more important public buildings, the Americans like to have a little ornamentation, seems pery limited. In the May number of the seems very on Chi In nay number of the teal estate interests," the world is presented
with a series of fourteen of the designs which were sent in by Chicago architects in the competition for the New City Hall and Court Houso, mitted.
Tbe drawings represent merely the perspectires of the varions buildings, so that it is impossible to jndge as to the accommoda. tion afforded inside. In this respeet, bow. perfect. In regard to the lighting, for instance in most of them many of the inner rooms are lighted by corridors, and do not receive an direct window-light. This is a great defect in snch a building as a County Court IIouse and City Hall, and is remedied in one only of the plans submitted, -and this has heen selected as the most suitable. Here the plan of the building is in the form of a Maltese cross, the principa entrances being at the four extremities of the cross. Horein ries, so far as car he ascertained from the fourteen inustrations submitted in the Land Owner, the only original or norel idea in tbe design of any of the buildings. The engrav ings themselves aro, bowover, executed in the worst style of art, and we must charitably snp. poso they do not fairly represent the ideas of the Chicago architects, though such expressions as the following, which are sown broadoast through out the nnmber, would lead to a very different opinion onncerning their merits. Speaking of the plans, the editor says:- "Our artists have on these tbis issue with the first series of them, engraved th great expense, expressly and exclusively for the Land owner. A journal whicb bas never public certainly could not be kept out of Ken tujky block, even if the newspapers of smaller circulation were forbidden to enter. We have no fear that our enterprise will not be appreciated and that our large outlay to enrrave these plan will he amply repaid by the public estimation of our work."
In anotber place we read,-
There is not a buildiug on the Contiuent of Europ Court House-square. And what is Pe Piti Huildiong, on the has seen Mr. Schruoiteer's block, at the corner of Mnd on aud La Salle streets? Buckint amm Palaee is $s$ mere shed in the air, and setrled graduanty to the earth by the

 Torso in the Tatienn, becarse he could not see it, even so
he would burst into tears while picking his way through the marrow doors of this great architoctural wander. .
The woodouts in the $L$ nid Owner are fine, They were The woodouts in the Land Owner are fine, They wor
engraved by masters of the srt, than whom no wors
butchers of costly engraved by masters of the srt, than Whom no wors
butchers of costly box-wood ever lived fin any age, wnd
into whose brains the spirits of all wood-choppers con gregate, as soou as released from earth.
say th positively, thero has never been anything produced
We may be wrong, but we doubt if the majority of the engravings in the Land Owner re woodcuts at all. They look like the produc tion of somo patent Xanbee dodge, which
enables so many pages of paper to be covered enables so many pages of paper to be covered
with "illustrations" in the shortest imaginable spaco of time. If they are really woodouts, tb editor is not far wrong in stigmatising his artist as real "hutchers of costly boxwood." It is impossible to jndge as to the dotail of the archi tecture. The varions styles of the forteen 3 ; the others are to all appearancee on agglome ration of rarious styles, incongruously jumbled together.
The windows are generally arranged in rows, withont the least attempt at ornamentation or variety of design, just like the windows that are placed in so many rectangular holes in tho walle a Birmingham, Sheffield, or Manchester fao tory,-all built to let in an equal amount o ght, and that is all. But, setting aside the the detail as bere repre in any degree what may of them that presents apearance as a whole. Novelty there is none There is hardly a design that does not represt he following leading features - - The fon corners of the sore buildig are in tar orary sur sur burly ore ent smaller additional towe drawings repre ench sullex Half of thers side of each entrance. Half of them havo a tower or dome springing from the centre. In one case a column, surmounted by a winged beast, takes the place of a tower. The rest hare a prineipal
tower, -some two, springing from some other
portion of the building, all meaningless in design, and evidently piled up with the simple objeot of making something high. Several of these towers rosemble an extinguisher, which, in some cases, brs the apex cut off, and railings placed round its upper edge. A gigantic needle protrudes from the summit of one. The solitary Gothic desion presents us with two weak imita tions of the clock-tower of the Honses of Par liament; while the arohitect of one of the Clasio edifices has made a long shot at the dome of St. Pant's Cotbedral aiming the sublime, and rodacine the ridienlons lesirn that dispenseg with the extrinsic aid of howy pinnacles and presents a single tower of ny merit; and this is the only building that is at appra ne arched by or mare hights of steps. eached by two narrow semicircular fircte of teps, mirar whes eos leading from the street into the limited area" of ono of our London houses.
Such is an outline of the general appearance of Chicago buildings, and we are hound to say they are not very satisfactory. Buildings may be run up fast enougb, but architecturo is not to be produced at the same paoo. Our words aro not intended as reproof, but advice.

DROYERS' IALL AND ASYLUM.
The firat portion of this building, which is eing erected on the north side of tbe Cattle Markot at Islington, between the larce hnildings of the corporation now nsed as dwellings, is nearly completed, and will shortly be opened by ho Lor
It will, when finished, consist of fifteen suites, of three rooms each, on two floors, for aged and nfirm drovers, also committee-room, se. ; and in tho rear is a ball, 60 ft . by 33 ft ., and 27 ft . high, intended for a reading and cluoroom, where the men who are oecupied in tbe adjoining market may hold their meetings.
The interior of the hall is lighted by circularheaded windows, under an arcade formed of Pethel's ornamental pressed bricks, resting on coupled pilasters of white hicks, with stone foliated caps and bases, and these arrain resting on a dado of ornamental tiles, executed by the and surectural Pottery Company,
The ceiling is wagou-beaded in stencilled parels, and partly open-timbered, stained and varnished, each trnss resting upon the coupled pilasters. A raised daïs at one end will afford ho opportunity for the delivery of lectures and fellow-creatures, who need it not a little.
The arehitects aro Messrs. Lander \& Bedells, f John-street, Bedford.row ; and the contractors are Messrs. Mansbridge, of Camdon-town.

THE LONDON SCHOOL BOARD.
Mr. Cifarles Reed, M.P., ohairman of the Works Committee, brought up a report to the Board, Muy 21st, wbich was agreed to, including the following as to tenders:-
"The Works Committee inrited Tenders for the erection of a school to provide ncoommodatiou for 1,066 children,
ou the site in Rouls road, Sonthwark. The following were the respective amounts

The Board architect, however, was subsequently instructed to malse certain modifications in the plans, an as to redace been obtained from Mr. B. E. Nightingale, of Albert committee now recommend the Board to accept. Cost of site, 1,6002 . Cost of bnilding per head, 7 L . 4s. 9 d . to accommodate 1,109 children on the site in West-sireet, Hacisoey. Subjoined is a list of the a mounts
 As a tender of Messrs. Parsons, Brothers, however, was
accepted last weelk for the orection of the Old Castle-
street, Bethnal-green, school, and as a previons tender street, Betbnal-green, school, and as a previous tender
hias already been accepred for the enlargement of the Hornsey-road, Holloway, sohool, Messrs. Parsons have
their hands. The committee accordingly recommend the aceptance of the next lowest tender, that of Mr. Thomas
 of bulding per head, 6l, 6s. 212 A : "

At the Board meeting, held at the Guildhall, on the 2Sth of May, Mr. Oharles Reed, M.P. brought op the following report, wbich was accepted :-
"On the 15th Jannary Jast, the Board instrueted the
Works Committee to obtain tenders for the erection o Works Committee to obtain tenders for the erection of
the New Offices to be huilt on the Thames Embankment site. Invitations bavo accordingly been sent out eightecn builders, four of whom have been unahlo

amounting to $18,281 \mathrm{l}$. The timo fixed for the completion of the huilding is the 31st of March 1874. Amount of teuder alrendy accepted for ercavation on the site 617l, for putting in excavation on the site, 617l.; for putting in the

ALEXANDRA PALACE AND PARK
The long-talked-of opening of the Alexandra Palace took place, as we notified it would, on Saturday last, without any ceromonial, and with less hunting than might have been nsed on such a bright day, and, for that part of London, so important an occasion. A very large number of persons were assembled, aud a concort by eminent artists was given, which donioucss afforded pleasure to those who conld hear it.
are bound to say, was not our case, or the case are bound to say, was not our case, or the case
of a very large proportion of those present. In of a rery large proportion of those present. In
time, howerer, the directors mill doubtless time, howerer, the directors will doubtless
find out how to arrange the building for the conveyance of sound. The theatre, whioh we have already desorihed at some length, was not put to nse on the opening day. A flower. show served to brighten up part of tho nare. A
few good pictures and statues have been ool. few good pictures and statues hare been ool. lected; and there seem to be plenty of dining-
rooms and so forth for the refreshment of the rooms and so forth for the refreshment of tho
outer man, -not the inmer, as some folks erroouter man,-not the imer, as some folks erro-
neously say. We may bave opportunitics to look into the arrangements hereafter.
A viow of the exterior of the building will be found in a previons volume of tho Builder, and it is entirely the fanlt of the managers that we do not give a view of the interior in our presen issue.

## AOCIDENT IN MANOHESTER.

 Sir, -A now danger menaces $n g$ in our streets. Timewas when, the Iron Duke leeing in power, and serious Was when, the Iron Duke being in power, and serious
opposition offered to his measures, he threatened to quel
it by placing a cannon in every street of Tt by placing a cannon in every street of the metropolis,
The threcet thus made was, howerer, enough to provole, as
it did, more powerful opposition still, and the Iron Duke was remoyed, "hoist with his own petard." Sivee his peculiar feeling incident to "t ooking into the cannon's
moutb" in the atreets of their own towns. gnd in mouth" in the streets of their own towns; and in the
latest instance even, wbieh I am now ahout ta relate, then "plensure," if one may eall it so, of that operation, was
denied to the spectatory mainly becense they were at the time unasere that the instrument under wotice was
possessed of "cannonical" properties. Those of us wbo happened to be in the principal bnsi,
ness portion of the city of Manehetor about three p. on Tuesday, May 13th, were atartled out of our pauai propriety by the sound of a yiolent explosion of a large piece of ordannee, proceeding from the neighbourhood o collected on the spot where the ", accident" had occurred,
and the first circumstance which clairaed attention was tho remoral in cabos to the infirmary of some nine persons, plamber sixty years of age, and snother, a boy of fourtcen,
have since died of their injuries. On investigatiag the mattar, it appeared thet at the junction of st. Mary"s
gate and Deansgate, where the latter thoroughinre hus bee recently widened and paved, the gasfitters to the corpora. their street main which runs at that point under the
magging of the sidewult. From liagging of the sidewulk. From some fault in the main
itself, water collecrs therein, and to remedy this defect, it was proposed to attach to it a large iron tubo 9 ft. long
and 4 ft. internal dinmeter capped at both onds, and which
is is technically termed e "" gyphon pot," although it appears to partake of neither the charactor of syphon nor pot, but
rather of \& tank or reservoir for the waste water. The hols was dug ready for the "pot," Which lay lengthwise
in the street elongside at a distance of about 10 Ot. from
the he tion, one end being secured by four bolts only, and the
"pot" was then connected with the "main gas-pipe" by means of a $1 \frac{1}{t}$-in. iron pipe, for the purpose of filling and
testing as to the lealrace of the joints. This was a y many of whom focked around as closely to the slender
gingle-rope barrier would permit, ingle-rope barrier would permit, which was very close
indeed. The removal of a screr plug in the unper side indeed. The removal of a screy plug in the upper side
of the "pot" allowed the escape of air, whioh was sup. posed to lee driven out by the inflowing gas; and when this was done to ths satisfaction of the foreman, he
screwed in the plug, and allowed the gas to accumple screwed in the plug, and allowed the gas to accumulate
presure within, when, lighting \& piece of tarred rope, he applied it around the joints of his "eaps," and pro.
nounced them all aatisfactory. Directing a workman to disconnect the supply. pipe from the main, he jumped into
the hole io the grouvd. The workman did as directed, and the instant the pressure was taken off, the explosion I have named takea place, forcing of the four t-in. bolte Which held the cap in position, snd projecting the cap, the strect, and producing the injuries to the persons (a of whom, were spectators) aiready mentioned.
People in Manchester are asting wbere the common sense of the gas euthorities was to permit the testing of
so dangeroma a contripace in the mide of a crowded thoroughfars, at the busiest part of a market-day, to the destruction of humau life and person, when the work
could hase been hetter done after the work was all fixed could have been hetter done after the mork was all fixed
in position. Accidents have oceurred before with the rotk of the same men as were employed here, and this
should bave made all concerned donhly cantious in their
 for "finest steam fire engine in America," read "fir" steam fre-cngine in America."

## CEMENTS.

Sir,--In reply to yonr correspondent's question in your pose, though it is not ultimately so strong as Portland. 1t has, howerer, for special cases, two adrantages over
the latter cenant-namely, that of being very quiciz setting,
period,
The best Roman cement is of a brown colour, the
ordinary flect Roman heing inforior in quality. It
shoula set in about ten minutes shoula set in about ten miuutes,
Xour correspondent should
Xour correspondent should havo nsed elean washod result would have been satiefuctory. Experience.

## LAND LAWS.

Scr, -Whilgt the debntes on the Euglish land laws
oceupy the attention of our Parliamcot, might not Lord Cairas and Lord selborue he plensed to remember that nany highly intelligent and notewortlyy wituesses in labour under consumption, A very general disease is
Great Britain, and nsually dio at the age of thirty-five
yearr, or a hitle later. Should such necessary cridence years, or a hitlle later. Should such necessary cridence two Houses of Parliataent in so important a question of
English melfare, and secrrity for inyested capisil? N
witnesg cun be everliving, or alway found if emigract.

## $\longrightarrow$

## COMPETITION COMMITTEES.

Sir,-If you aro not tired of hearing of the trioks of be posted up with their latest doings. In the beginning of hist year a body of gentlemen advertised for designs for an idiot asylum at 8tarcross, near Exeter, oftering the
munilicent re ward of lot for the best design. I dare say
you mill asy no matter what treatment I receive for taking nny notice of such a tempting hait. However, relying o the known straightforwardness and honour of one of the
committee, I did prepare designs, which obtained the
 Rmong the unsucecssful competitors. Now the building
is ahout to be commenced, this conmittee coolly give my desigas to Mr. Rowell to prepare working drawings, \&e.,
And to earry out, elthough not only was he an unuecegs-

## COMPETITIONS.

School Board, Wellington, Salop. - In a limited competition for the proposed new schools to he orected at Hadley by the Wellington School Board, the plans of Messrs. Bidlake \& Fleeming of Wolverhampton, hase been selected. The plans and epeoification have been approved by the Educational Dopartment, and the architect have been instructed to ohtain tenders.

Schools at Yeovil, Somersetshire.-There were eighteen sets of plans sent in by various archi tects; these were at first reduced to five, and then to two. Eventually the Board decided to adopt the plans marked "Practical," whioh proved to be by Messrs. Reade \& Goodison. The work is, we believe, to be at once carried out under their direction.

National Health Society.-The annna meeting will be held, at 1, Adam-street, Adelphi, on the 12th of June, at three o'clock, to roceive the report of the executive committee, and to After the meeting Dr. R. Lichreich will read a paper on "School Hygiene."

## OFHTCIAL ECONOMY

SIr,- You are aware that the new Home and Colonial Offices aro now rapidly approaching completion, and the masons aro engaged in care Will it be beling and cleaning down the stone front proposos to keep up the honses in Parliament street, which are closely attached to the new building, hat has actnoliy inst relet one for a dininc-room and restantant! The effect, of cours will be that the carving and stone ork will be inevitably choted and atained with aot during the ens wint and valne of rent biaina will bo lost in manent hlackening of the brilding. This is manent hlackening of the
I shonld think the architects would have some thing to say as to the First Commissioner's speech of last Friday in the House of Commons anything more offensive than his expressions towards Sir Gilhert Soott and Mr. Street can
hardly be imagined.

## THE TRADES MOVEMENT.

Bedford.-The carpenters and joiners are agitating for an increase of wages. The prescnt rate of pay is 5d. an hour, or 25s. per week, and it is thought by some of the men that, in view of the increased demand for labour in preparing for the Royal Agricultural Society's show next year, the scale should be raised.
Mriddlesbrough.-The joiners have sent a circular to their cmployers asking for an advance of 3s. per week, and reduction in the hoars of lahour from fifty-three to fifty-two per week, Oswestry.-A strike has talsen place amongst
the stonemasons engaged in the restoration ef tho parish church. They have heen receiving $28 s$, , but now demand 30s. Their hours wer e sixty-seven and a half, and they ask for a reduc. tion of one hour. The contractor declines to accede, and twenty-five hands have left work.
Birkenhead.-The stonemasous of Birkenhead and the neighbourhood have struck work for an adrance or wages from 33s. to 36s. per week. Some of the employers have siace conceded the request of tho men. Host of the builders of Birkenhead are still standing out against the demands of the joiners, who struck for an advance of 4s. 6d. per week. A meeting of employers in the huilding trade (Mr. Henry Fisher in the ohair) has been held in the Park Hotel, Birkenhead, to consider the demand of the masons for an advance of 38 , per week, made hy the master masons' committee of Liver pool and Birkenhead on the lst of May last, viz ${ }_{7 \frac{1}{2}}^{2} \mathrm{~d}$, per hour for fifty-five hours per week in summer, or $1 \mathrm{ll} .14 \mathrm{~s} .4 \frac{1}{2} \mathrm{~d}$. ; 8d. per hoar for fortysix hours per week in winter, or 1l. 10s. 8d. per week. The secretary to the meeting was requested to communicate this decision to the operatives' association. A counter motion, that no advance be made, hat that the wages remain at 33s. per week, as at present, was lost by a majority of ton to five,
Oldhan.-The masons who have been ont on strike for an advance of 3s. per week, have decided to go in on the terms offered by the masters, 1s. 6d. per week advance at once, and nother adrance of a similar amount on the 1st of August. When the whole of the concession
has beon obtained by them, the men's wages has been obtained
will be 33 s . per week
Darlingtona. - A dispute has been for some time pending between the Darlington joiners and their employers. The men asked for fifty hours per week at $7 \frac{1}{2} d$. per hoar, the previons rate being $6_{2}^{3}$ d. The advance was given hy a few firms, hut the majority deolined it, hence a arge numhor of men have struck for the adraw in Davlining trade is just now rery acevosly offered $7^{1}$, it is thonght that the difficulty, considoring the small difference which now exists, will he got over.
Wigan.-An arrangement has been entered into between the carpenters and joiners and their employers, wherehy the wages of the men are to be advanced from $6 \frac{\mathrm{~J}}{\mathrm{~d}}$. to 7 d . per hour all he year rouad, 55 hours to conslil per winter months from 12 th of November to 2 nd of February. For the first four hours' overtime 8d. per hear is to be paid, and afterwards time and $a$ half is to be allowed. The working rales at present in force are to be acoopted with the foregoing alterations, whioh are to date from the 1st of June.

Greenock．－The building trade lahourers of
Greenock and the district have issued to tbeir employers and the district have issued to 1 ．per honr，on and after the 5th proximo． The Brickmakers＇Strike．－At the Clerkenwoll Police－conrt Walter Connor，a brickmaker and moulder，of 9，Victoria－grove，High－street，Stoke Newington，appeared before Mr．Cooke to answer tbe complaint of Messers．Stroud，the well－known brickmakers，of Islington，Brentford，and else． where，for having entered into a contract of service with them，and，having entered upon such service，did，on the 28 th ult．，nnlawfully neglect and refuse，and has ever since neglected and refused，to fulifl the said contract，contrary to the statute，\＆c．After evidence had been taken，Mr．Cooke delivered judgment．
Thus is a summons taken ont by Messrs．Stroud，brick． Act，agninst Walter Connor，whom they allege to have
 pass．By the custom of the trade，n fow days before
Christmas in each yeent the employer and the emplored
metect together，and without any written，or even rerbal，
 varies each season，to be peaid for eate quantity of thick
made through the season．Xhe person made through the season，The person so employed then
forms a gang of men who are engaged，paid and if
necessary，dischurged hy him．This gang worli at digging
the
 winter months
 ship of master and servant there must be a personal con－ tract to serve，and not merely a contract to do specil
work．If there ho a contract to erry，the thet
remuneration being governed by the lahour performed，
 sarrice，payment of wnges，and a contract betreen the
parties．The application of this law to the facts in this
 орі位号．
Mr．Cooke dismissed the complaint，but said he prould be prepared to state a case if called upon to do so，Mr．Mead said he would ask for a case，and would give tho proper notices and sureties in time．

## SETAGE MATTERS．

Trigation at Croydon．－It appears that tbe directors of the Croydon Irrigation and Farming the resuit of any failure in the system of serrace ptilisation there carried out，hnt in consequence of the enormous rent demanded by the Croydon Local Board of Health．The directorg had＂an anxious and protracted negotiation＂with the Board，in order to get a reduction of $1,600 \mathrm{l}$ ．in the annual rent of $3,600 \mathrm{l}$ ．payahle，but without success．The directors say they oxceedinoly regret that the Local Board are so hard and exacting，considering the large amonnt which the shareholders of this company hare spich and which has had the effect of benefiting the ratepayers of the town of Croydon．An approxi－ mate statement of the company＇s assets and liabilities shows an estimated halance of $1,434 l$ ． returnable to sbarebolders on the winding－up of the company，after a fine of 500 l ．to the Local Board on the surrender of the lease has been paid．
Sewage Irijation at Brackley．－Mr．Hope， of the Romford Sewage Farm，has issued a long report respecting the sewage irrigation of Brackley，in wbich be states that with regard to the various methods that have been suggested for purifying sewarge，all hare failed with the one exception of its application to land by sur－ face irrigation，Pumping is evidently a thing Which，in the case of very small towne，must he avoided if it is possihle to do so，because the expense of wages and certain other items is out of all proportion in a small place．Brackley is favourahly situated in this respect as compared Witb many other places；but，in Mr．Hope＇s judgment，after a most careful inspection of the locality，there is only one place where the sew． age can be applied by gravitation，and it is upon what was roughly estimated at ahout 47 acres of land on the right of the Buckingham．road， before passing over the river．When（at a cost probably of $2,000 \mathrm{l}$ ．）the operations have heen carried out，the inhahitants of Brackley will have entirely freed themselves for ever from all
difficulties as difficolties as regarded sewage，and he con． tended that the sewage farm would he a profit． able speculation
Cleckheaton Drainage，－At a special gatherin
of the Board of Healtb at Cleckbeaton，the following resolution，moved by Mr．Arthur advertise for carried：－That we at once Moorhottom，Northyate，Mooorend，Church street，Whitecbapel－lane，and Whitcliffe drains and that we borrow the reqnisite amount of money from the Public Works Loan Commis． sioners，or from any other available source，at the rate of interest not exceeding $4 \frac{1}{3}$ per cent per annum．＇
State of the Nowich Sewerage Works．－Norwicb spent 120,000 ．about the sewerage works；then betwcen 3,0001 ．and 4,0000 ．；and at the last council moeting the mayor said ho was afraid an． other 15,000 l．or 20,000 l．wight be necessary．Tho city engineer has reported upon the new sewers and it seems that one section is very defective，－ ＂in a very had state，＂－＂＂a great quantity of cracks and defective places in the cracks and derective places in the hrics work．＇ It was impossihle for the engineer，Mr．Thwaites， to give an estimate of the cost of the works forward with them，let tho cost be what it may． forward witb them，let tho cost be what it may．
Disposal of Sewage．－A Parliamentary return just issued sbows the progress of the local In forty－two instances the the sewage of towns． In forty－two instances the sewage is disposed of hy means of a farm．Fifty－four localities have adopted filtration，and thirty have used sown
method of precipitation，It would，therefore method of precipitation．It would，therefore， appear that filtration is more generally accept． tion has the fewest instances of practical operation．Among the sewage farms complaital in regard to the＂efluent water＂are reported to have arisen in only three cases．Filtration has not been so successful，complaints having hecn made in twelve instances，Towns should inoffensively consideration，though it seems grievons，and excrets of towus．The return，however，seems to show that sewage can be got rid of de． may rescue our rivers from being made foul and unwbolesome；and if we wish to encourage this process，we must bo carcful not to ask too much，

## CHURCH－BUILDING NEWS

Oltham．－St．Andrew＇s Charch has been con． secrated by the Bishop of Manchester．Its dimen． gions are as follows ：－Nave， 70 ft ．hy 28 ft ． aisles， 12 ft .6 in ．wido ；chanoel， 22 ft ．long and the same width as the nave；south transept， 28 ft ．by 16 ft ．；tower， 9 ft ．square inside placed in the angle between vestry and north aiele． The organ－chamber and vestry are one on cach side of chancel．The roofs areopen to the apex， and are plastered between the principals，the height of nave and chancel heing the same，viz． dressings．The building is of brick with stone dressings．The tower has only heen carried higb enougb to forma porch over the entrance； will permit will permit．Tho total cost of the building as now erected is about 1,4001 ，，a large amount heing expended in foundations，owing to the awkwardness of the site．The pulpit，reading． desk，font，and tiling of chancel，were gifts from various friends．The architect was Mr．John Lowe，of Manchester，and the work was nearly all done by Oldham tradesmen．
Atlow．Tho chief stone of a new cburch has heen laid bere on tbe festival of SS．Philip and James，to whom it is to ho dedicated．The old churoh was a ruin of old limestone and sand． stone，the walls out of the perpendicular and dangerons．The ceiling had partly fallen in，and the damp of the side．walls and floor was so great as to render it very mpleasant for the parishioners to remain in the building．On being advised of tbese matters，the Bishop of Lichfield granted a licenco for the use of the school．rom architects parish for the offices of religion．The \＆Rohinson，of Derby．Mr．Benjamin Buxton of Mayfield，is the contractor．The amount of the original contract was 642l，for walls，roofs， wood flooring and seating，and to this has been font， 30 l ．for the chancel－arch，icc．The pnlpit， tiling for the chancel and aisles，are not included in the contract，and the architects＇and legal expenses bave to he provided for，so that an additional sum of 100 l ．is needed to completo
the work．

Crowthorne．－The church of St．John Baptist Crowthorne，has been consecrated．Crowthorne is in close proximity to Wellington College，and符埌 church has been buift as a chapel of ease St．Diebael＇s Church，Saudhurst，which is about three milles distant．The new church was far bein Mr．Arthar Blomtield，the cost thus and this will cost ahout 8007 ．At present tbere is no pulpit，but a brass cagle lectern bas heen presented by the Rev．A Carr，of Wellington Collego．The building is composed principally of red brick，with Bath stone dressings，and in tho interior there are three arches on either side of tho nave，composed of red and blach brick The arches rest on six pillars，surmounted with stone caps．The seats are open．
irilstead．－The church of this parish，having or some months past heen undergoing restora－ ion，las heen re－consecrated by the bishop of the diocese．The works just completed consist of a new chancel，with a vestry and organ－ hamber on the north sido：a new chaucel arch， and a porcb to the south door，There is also a new pulpit of Ham Hill stone．The whole church has heen re－floored，and seated with open benches of stained and varnished deal，and the stonework throughout has heen cleaned and re． paired．The font has also been cleaned and removed to its original position near to the south door，as well as elevated upon steps and fitted with an ornamental cover．Porritt＇s anderground stove has been adopted for warm－ ing．The new work in the chancel is bsilt of the old materials，and faced like the rest of the church witb local stone of a hrown colour．The dressings are of Ancaster stone．The chancel is fornished with choir．stalls and desks of oak， and there is also a low chancel－screen of the same material．The general works have been carcied ont by Mr．Osiorn，of St．Neots，from the drawings of Mr．Blomfield．The cost bas been mainly defraycd by Lord John Thynne， wbo，hesides contributing largely to the general restoration fund，has added as his own special offerings an east window，representing the Ascension，and a reredos，the centre panel of which，above the altar，represents the Last Supper，whilst the side panels（with special reference to the dedication of the church to All Saints）represents saints departed of all nations， ages，and classes，waiting in faitb and patience for the coming of our Lord．The east window and the reredos were both designed hy Messrs， Clayton \＆Boll．Messrs．Powell，of Whitefriars， executed tho work on opaque glass，in a species of mosaic known as＂opus sectile．＂
Lincoln．－The new charch of St．Martin bas heen consecrated and opened for Divine service It is in tho Early Decorated style，and capahle of bolding 1,000 ，although at present only seated for 650．The church is erected on what was known is＂Burton＇s Show－paddock，＂in New land．It consists of a nave，with north and aouth aisles，chancel，vestiy，organ－chamber， aouth porch，and a tower at tho south－east angle of the church．In the clearstory each bay is pierced with three．light windows，with traceried heads and detached shafts，laving moulded caps and bases．Under the clearstory windows runs a braiding of gas in the evenings，from cnd to end of each side of the nave，round the pillars there are three light burners，whilst the chancel has four brass standards，and the altar two brass pyramids of burners．The aisle windows have three lights，with ceometric tracericd heads，moulded jamhs，and carved caps． The chancel bas an apsidal termination，is ighted hy seven singlc－light windows，with cusped beads，baving both internal and external columns，carved caps and hases．The ground Hoor of the tower forms the organ－chauber，and also one of the entrances to the church．The fave architecture consists of five bays on each side，having circular piers and responds，with moulded and carved caps and hases，the arches beinc double chamfered．The nave has an open－ timbered roof the principals havinor cnrvilinear ribs，with trefoiled hlade The conicher for the building was taten by Mr Geo Johron，of Nottin Mr W Goo Nothes an．Wood herk elerk of works，an
architect．
March．－A public appeal bas heen made for funds to carry out the proposed restoration of the old parish chnrch of March，dedicated te St，Wendreda．A thorougb restoration of the entire fahric is imperatizely necessary．A sub－ soription have just been started；and already rearly 1,000 l．have heen promised．The work，it is estimated，will cost $3,500 \mathrm{l}$ ．

Alton.-The committee for huilding the proosed new district church of All Saints, have st issned a atatement of facts, calling the atontion of the parishioners and inhahitants nodation at the extreme western end of the own, called New Town, which is nearly three. uarters of a mile from the mother.church, and Iready contains ahout 88 houses. The new istrict church, which they propose to erect, will exclasive of the site, which has been given hy ne of the committee), of $2,000 \mathrm{l}$. Suhscriptions are heen already promised, amounting to $1,064 l$. Woodley (Sonming Parish, Oxforl and Berks). he church of St. John the Evangelist, Woodley rafham, near Guildford, was tho architect. The $y$ le is Transition. The material is Hint and one. The cdifice consists of a nave, with one sle, a chancel, organ-chamher, and vestry, pore co supported on columns of dark Forest on ork; in the centre is suspended a decorated coss. Tbere is a recessed and sculptared aredos of Caen stone, comhined with English Cainan akhaster and marble, representing ne side, the Centurion and Roman soldiers, on re other, Joseph of Arimathea and Nicodemus, his is the work of Mr. Nicholl, of London. The irmingham, represents the Ascension, in tho antro; on one side, the Last Suppor, with de other side, tho Angel in the Rovelation show. St. John the heavenly city. There is an arch to the organ chamber, and oalk sereen heare ; but the organ still remains to ho obtained. here are three hells, from Messrs. Mears, Lon. on, and theso, hy machinery made by Jr. G. elobor, will ho rung in the chamher ahove the orch. The sittings throughout the church will as heen fenced in by a hrick and flint wall gainst the road, and an iron paling round the ost of the inclosure. The works have heen arried out hy Messrs. Green, and Cox \& Brown, The clerk of the works was Mr. Cooper, of
roydon. The late Mr. Nobert Palmer, of roydon. ghe late Br. Nobert Paimer, of owing this chureh. Ahout thirty years ago he uilt All Saints' Church in the same parish, and wenty years ago he restored the parish church, hich took a large sum. He paid nearly the hole cost of Earleigh Church, all in Sonning nd erecting six almshouses. Mr. Palmer died ast Decemhor, and loft 5,000l. to the Berkshire Iospital. Mr. Richard Palmer, his hrother, now
olds the estate, and will provide evorything that olds the estate, and will provide evorything that nccessary for finishing and endowing Woodley hnroh. The building and every thing connected ith it cost 4,600 . without the groand, which i lose to Woodley.green
Withycombe, near Exeler.-The church of St ohn the Evangelist, erected some cight or nine $f$ this city, has just had several additions made a its chancel. A new reredos has heen erected, oredos is mainly of fine Painswick stone, and
en a onsists of an arcading of fine bays, springing $m$ polished Devonshire marhle columns and polished capitals. The bases of those column upon a hroad plinth, 2 ft .9 in . in height spandrels hetween the arches are covered vith diaper of a type similar in detail to some if the early diaper over the wall arcading of the shole is sarmonnted hy a moulded and carve ornice, the apex of each gahle over the aroading sing cappod hy an ornamental finial. Th oliage used in the carved work is all of a scrip. he vine, ivy, oak, passion.flower, apple, trefoil . The extreme height of the structure is 9 ft
in the entire width, 22 ft . The reredos in., and the entire width, 22 ft . The reredos ho gift of Mrs. Baldoct, has been cerried out oy Messrs. H. \& F. Barridge, of Exmonth. The sarving is the work of Mr. Harry Hems, of this ity. The marhle work has heen supplied hy Messrs. J. \& E. Goad, of Plymouth, and the painted decoration is hy Mr. Hudson, of London. The east window, immediately ahove the reredos has also heon beautified hy the insertion of painted glass. The window is divided into five lights, and the suhject is the Ascension. The form of our Loord occupies the central light, and
shown in the act of ascending in a vesica of lory, whilst immediately heneath him aro angel shown the Virgin Mary and the eleven apostles, in groups of three figures in each light. In the centre of the tracery, in the upper part of the window is our Lord in the act of pronouncing the Benediction, also the Agnus Dei, and minis. ering angels. The lowermost panels of the window are filled in with sahjects illustrative of arious incidents in connexion with our Lord's e-appearance after his resurrection. The window has heen mado hy Jessrs. Clayton \& Bell, at a cost of 200 l.
Fordwam (Cambs.).-The chnrch here has een further restored. An organ. chamber has been built, the clearstory windows and battlcments restored, the nave gable and chancel arch rehuilt, and a new window inserted, different in
size and shape from the old one, which had heen size and shape from the old one, which had heen
long closed up. This has heen filled with stained glass, at the expense of Mr. Winch, of Potersham, a memory of his wife. The suhject is an angel, lying in the midst of heaven, holding the ever* asting Gospel, \&c., and Was executed hy Mr. Constahle, of Camhridge. The west window has heen restored, and filled with stained glass, and he roof and inner walls and tower arch restored, at a cost of ahout 350l. About 300l. of this sum was given hy the Rev. Tansley Lall, rector of Boylestone. The subject of the window is the Transfiguration, as given by St. Luke, and has private chanel, forming an aisle on the sonth side of the chancel, to corrospond with the organ chamher, has heen built hy the lay rector, Mr. W. Dunn Gardner, with a view to rotain the old symmetry of the church. This, and tho further restoration of the windows, and walls sce, of the chancel cost about 650l. In nuking theso alterations and repairs, some early English work was discovered, sadly matilated, prohably done, or rather nudone, in the time of the rehellion. Many of the old stoncs were found in different parts of tho building undergoing restoration. They consist of three scdilia, gradnated as if for priest, deacon, and suh.dcacon, and two pis. cinae. Sulficient of the old work romained to in imitation of the old work. This cost about 401. The arches of the piscinæ are adornod with he tooth ornament. There is a stained glass window, placed in 1873, at the expense of Mr: Rohert Enghsh, in memory of his daughter, picted aro, the Annunciation, Presentation, and Adoration. This window is placed at the south. east end of the south aisle.

ROMAN CATHOLIC CHURCH BUILDING NEWS.

London.-The fonmdation.stone of a new church has been laid hy Arelibislop Manning in Groat Prescott-strect, Tower-hill. After the religious ceremonial a meeting was held to promote tho erection of the proposed huilding, at of apolory for non attendance and of sympathy for the uudertaking from the Duke of Norfolk was read by the chairman. The principal speakers were Archbishop Banming, the Earl of There the Conutess of Denbigh, the Lady Herbert of Lea, the Hon. Mrs. Porcira, \&c. The new church is destined for a Roman Catholic popula. tion of orer 6,000

Axford. - The Koman Catholic Bishop of Bir mingham (Dr. Ullathorno), assistod by a large number of Roman Catholic priesta, has performed the ceremony of blessing the fonndation. stone of what is intonded to ho a spacious chapel, or the use of the Roman Catholics of Oxford The site of the now huilding is the west sido of St. Giles's-road, within ahout a hundred yards of the Redcliffo Infirmary. By the removal of three houses frouting the streot a large piece of grouud is opened, upon which the new huilding, which is to he dedicated to St. Aloysius, has already heen commenced. The church will, when fully completed, consist of a nave, tran-
sept, sanctuary, and side chapels, with a tower sept, sanctuary, and side chapels, with a tower
and spire. It is only contemplated at present and spire. It is only contemplated at present sanctuary, part of the nave, the transept, and side chapels. Ronnd the sanctrary will run a small aisle, which it is proposed shall eventually pen into five small chapels. The ordinary posi.
altar will he at the west end, and east of the transept will bo threo chapels, one filling each arch of the nave, which in their tirn will be surrounded hy three nore; so that, in fact there will he six chapels ocoupying what wonld most churches be considorad as tho south throughout, and tho internal carving vill ho rioh. The exterior of tho huilding will ho equally imposing, the beight of the ridee of the roof being 80 fcet. Accommodation will now be provided for ahout 400 sittines, ond whon be completed 800 will he the numher of seats. The her of scats. The entire cost of that portion ahont to be comwhose nome is not mentioned.
Stokesley.-The new charch of St. Joseph has heen phenod for Divine service. It is situated at the east end of Stokesley, hehind the Spring Field Villas, and near the Stockton and Mid. dleshro' road ends. The church and preshytery who heen huilt at a cost of $1,500 \mathrm{~L}$. The donor who has presented this gift wishes his name to remain unknown. The architects were Messrs. Goldie \& Child, of Kensington, and Mr. J. F Craggs, of Stockton, was the huilder.

## SCLOOL-BLILDING NEWS

Malton.-The Bower memorial schools at vorton have beon opened. The huilding is dothic in style, and has heen erected from tho dosign of Mr. Smith (Smith \& Broderick), of funl, tu a cost of over 1,300 l. The site cost further sum of 4502 . The hnilding is divided into three sepanate schools,-for hoys, girls, and infants; the largest of which is 76 ft . by 18 ft . and the smallest 58 ft . by 18 ft ., in the interior, and the three will afford accommodation for about 600 scholars. Towards the cost of the schools Government has giver a grant of 500 ? and tho rest has heen partly raised hy suhserip tion, the whole of the cost not yet heing defrayed The contracts for the erection of the building were in tho hands of Mr. George Oldfield, huilder and Mr. Samuel Brotherick, joiner, of Norton and the whole of the plumherg' work has heen done hy Messrs. R. \& J. Read, of Maltor
Ipswich. - The new Board schools are ap. proaching completion, and, according to the Sufjoll Chronicle, are as follow:-Whorstead road, Argyle-street, Tıinity-street, andCalifornia The two first.named are the large schools, each heing designed for the three classes, hoys girls, and infants. Wherstead.road School is the largest school, intonded to aocommodate 800 children of all classes, ahout 300 of which are infants, the remainder of the space heing equally divided hetween boys and girls. Mr. Batter worth's design was selected by the Board as the hest, and the contract was givon to Messrs. E. \& E. C. Gibbons. The work has heen under the superintendence of Mr. Oliver Gihbons. The site is on a portion of the meadow on the west side of the Wherstead.road, near Messrs. Bennett's hrickyard. The schools thas faco Bath-street The front elevation consists of throo gahles cor responding to the three schools, and the hoys and girls' schools, which stand at the north and sontb respectively, come within 10 ft . of the road, and each contains a three.light Gothic headed window, the red brick gahles heing relieved by the introduction of hlack hricks The centre gahle is recessed other 10 ft ., from thich a porch, 10 ft . by $9 \mathrm{ft} .$, projects. Ahove fors are swo small Gothio windows. The total which 116 ft are Wherstead. the shools. The which lla imon foncing, with ontranes and omametn picrs The hoss' and airls' schols aro foc aimilos picrs. The hoys and girls schools are fac-similes $L$ sha ar 20 ft and arr., arrange the corner. The desks, to acommodate 150 , are drranged in three rows, each a little higher than the other, on the outer side of the long leg The rooms are the inner side of the short leg The rooms are both light and lofty, the average
height heing 19 ft . The angle of the $L$ is in height heing 19 ft . The angle of the $L$ is in each case filled np by a class-room, 20 ft . square, and fitted with a gallery, accommodating fifty At the hack of the principal schools is another class.room in each case, with cloak-room, lavatory, porch, \&c. The schools are warmed with hot air, hy an arrangement of stoves, the invontion and patent of Messrs. Wright \& Co., of
Rotherham, as to which Sir William Armstrong,
president of the Society of Engineers, has mad Bome flattering remarks. The ventilation of the scbools is provided for by Arnott's and Sheringham's ventilators ; and the walls are hollow, to secure the better ventilation. The casements in the lanteru of the infants' sobool can be opened and olosed simultaneously, and the opening regulated as desired hy an ingenions patented contrivance. The walle are dadoed 4 ft . np, and the retasinder rough stuecoed and blocked out. From the centre of tho brilding rises a helloturret and spire 70 ft . in height; the turret heing octagonal. The spire is encased with lead. The schools altogether ocegpy something like 100 rods of ground, of which about forty are occupied by the bnildings, the remainder being divided int two playgrounds. The whole of the playground is enclosed hy a wall 6 ft . higb, The total cost is ahout 3,600l.-. The Argyle-street schools have been tarned out hy the same contractors at a cost of from 2,600l to $9,700 \mathrm{l}$, the archers at cost of from 2,600l. to 2,700l, the architect front is monotonons, owine appearance of the entrances, which are at the side. In the cent cable is a three liphted window the head of tre lights being ent aff Surmounting heads of the the building in of Surmounting this part of the building is the bell-tower, octagonal in shape, eight columns of Mansfield stone supported hy gight column of chansfield stone, two of which run partially down the front of the gable, and are supported by a stone corbel. Springing from the columns are small trefoil arches, and the spire is relieved by small gablets. The windows along the rest of the front are all simply square windows, with tho top corners
rounded off, the top part of the arches being rounded off, the top part of the arches being Wherstead-road school, the buildings aro in three blocks, the infants' school being in the centre, the girls ${ }^{3}$ and boys' on the north and and soutb side. Nearest the road in the infant school is a class-room, 30 ft . hy 16 ft ., behind whioh is the infant school-room proper, 30 ft . by 50 fl ., which is fitted with a gallery to accom. modate 120 infants, and two groups of tbree desks, which will accommodate 42 children, at th back of this achool is another class-room, 18 ft by 17 ft .6 in ., which will hold 44 infants, the total acoommodation for infants being somewhere about 200, The boys' schoolroom is, like the Wherstead-road scbool, of an L_shape, being 66 ft . by 20 ft . in the long leg, and 19 ft . hy 20 ft . in the shorter; and in addition there are room is oblong, will accommodat. The girls' and in addition there are class-rooms of the same capacity as those on the hoys' side. three schools are lighted by lanterns in the roof The rooms have all plais opon roofs, and the walls are not plastered or dadoed, but simply coloured. The warming is hy Bacon's patent, a system of small hot-water pipes, whicb ran along where the skirtivg generally is, the place of skirting heing takon by a grating. Tbe desks With which the school will be fitted will be of American birch, and tho moodwork inside tho Trinity-stroct School is the name hy whicb the infant schools in St. Clement's havo heea known by the Board, though the street is named hy the Local Board, Olive-street. The buildings are recessed from the road about 10 ft . Tbe main room is 60 ft , by 20 ft . and there are two classrooms each 18 ft . by 20 ft . Tbe entrance is hy a porch and two lobhies, which are paved with Staffordshire tiles. The inside work is stained and varnished, and tho walls will he colonred a light grey tint. The warming is done by means of two stoves open to the main room, with hot plates at the back to warm tho class-rooms, and there is an arrangement by which the foul ail from the room is drawn off under the floor into the fire. The bnilding has also a turret or spire; the turret is octagonal in shape, and the spire, which is covered with zinc, is relioved hy small grablets. There is a playgronnd attaohed, 83 ft . by 48 ft . The design for the schools was that of Mr. A. Hnhert, and Mr. W. G. Cannold was the contractor; the total cost, inclading extras, will be about 737 C -Californis Seboelsas, from the degigns of Mr. James Bntterbools are Henry Luff heing the contractor Therth, itr. are built on a gite on the left The schools road leaviog the town, and consist of thre spingcipal rooms. The general room, which is prinhy $24 \mathrm{ft}$. , and a clacis-room room, which is 40 ft , 16 ft ., oompose the main hat the back 20 ft . hy class.room for the mouncer infants, while another Class room for the younger infants forms a wiag. and there are two proups fitted with a gallery, hildren who are sufficiently arse for those
writing lessons. The rooms are all lofty, and well lighted and ventilated, and warming appaschools has been adopted
Newcastle.-The plans for the new higb schoo which have boen sent in for competition, have been on private view. The following are the Sal competitora :-Messrs. Lewis \& Son, Messr Scrivener \& Son, Messrs. R. Chapman \& John Mr. John Birch. Plans have also been jent in hy Mr. W. H. Noblo, Sparkbrook, Birmingham $\mathrm{Mr}_{1}$ J. S. Moye, London ; Mr. T. W. Chalmers, Stafford; and Mr. J. Candall, Leamington.

## VARIORUM

"Repors of the Committee on the Treatment and Utilisation of Sewage, re-appointed at Edin burgh, 1871, London: printed by Taylor $\&$ Erancis, Fleet-street." This is a pamphlet re printed from the report of the 42 nd meeting of the British Association for the Advancoment of Science, held at Brighton in August last. It oontains the results of inqniries into varioas methods brought to the notice Among the mittee, that of treating sewnoce by Messre Weare's process at Stoke Union Workhouse, of which we have already spoken; the precipitation and conversion the deposited mattors int tent an appeared ward incation at Merthyr Tyafil, have appeared most important; and they have accordingly been investigated, the results appearing in this report. A process known as Whitthread's patent has heen also oxamined by experiment on a sufficiently large soale, and the result is given. The committee having reported upon the sewagelarms at Tanhridge Wells and Earlswood at the last meeting of the Association, it was thought advisablo to inspect them again, as the works were incomplete when the committee last visited heen. The ohservations at Bretons Farm had descrihed proceoded with unintermptedly, and are ended over These investigations havo now ex. and the experience thns painod from the con inuous records of the flow, and sampling for analysis, of the sewace and eflacnt water, the application of the seware to the varions crops, of the results of such application upon the produce grown, and the degreo of pnrification effected in the sewage, will, it is hoped prove valuable to sower authorities and others interested in the question of sewage farming Being fully impressed with the importance of theso investigations, the committee paid special attention to render them as complete as possible hut it was felt that to perfect them, especially fregards the importaut branch relating to the croct of the application of sewage upon the them, for at hould hom necessary to continu Leisure Hour says, "Railways are well repre sented in the Logislature. In the House of Lords there are 4. , and in the House Commons 122 directors, many of whom are on the boards of two companies, while some shar in the directorate of threo or four companies There are besides many of the other memhers of hoth Houses who are ortensivo shareholders, and are thus interested. With such an army of sup porters the companies have little difficulty in securing the success of the measares brought forward in their interest, while at the same time reform in the pablic favour,",

## Mfisccllamea.

The Terrible Bridge Accident in Illinois The New Fork Times in describing the occurrence says:-
${ }^{2}$ 'There was a sbarp, quick crash, a heary rumbling, an main western stringer of the north span of the the brole like a reed, tipping 300 persons into the stream, an Falling 50 ft . with crushing weight upon them. The fall
dislodged the stays from the abutuenta. The shock ran along the whole length of abutuents. The shock rat electricity, and span after span was drawn from the piers like immense bags holding a bruised, bleeding, frightened There were stretcbers still clinging to the ahnt ments which were not loosened by the fall, and these some grasped to save their lives.

Value of Land in 1688 and 1873. annual value of land in England and Wal estimated to have risen six times sinoe 10 Mr. John Macdonnel, in his reoently publis book on the land question, tells us so, and this rise bas been going on of late is proved glance at the property-tax returns, which sh the rent-bearing area of tho Enited Kingdom creased from 47,559,0007. to 56,540,000l. At same time, even during the present centu here have been wreat fluctrations in re Daring the French wars they rose enormon After the peace they fell 10 to 33 per ce Under the influence of the Coru Laws th again rose, to decline shortly after the
measures had been repealed. From 1852 to measures had been repealed. From 1852 to
present time they have steadily risen. As urban land, a square foot in Victoria-street for 1 l. sterling. A pieco of gronnd in Holb bought in 1552 for 160 t now yields 5,000 2 year. A wharf in Castle Baynard hought 2,000 l. in 1670 lately realised $110,000 l$. An a of land in Sonth Kensington, which was sold $3,200 \mathrm{l}$. in 1852 , fetched $23,350 \mathrm{l}$. in 1860 . are told that tho price of an acre of tbe m valuable nncovered land in the City of Lond after the Great Fire in 1660 was $30,000 \mathrm{l}$. ahout one-third of the value when built up At the present time the bighest rate for such 1 build land may be taken at $1,000,000$ l. an ac and such value constitutes folly three-fourths the valne of the property after it bas huildin upon it.-Land and Water
Building in Vienna,-Prices of honse-p perty have been steadily on the rise, and more than one instance the builder of a sing sumptuous mansion in one of the "Rings" made a profit of seven or eight thonsand poun in the comrse of a year or two. But to any o who knew the Vienna of half a dozen yeas since it has been a standing puzzle whence $t$ population came who pay the fancy rents $f$ houses and apartments in the new quarte which are springing up everywhere. T recent panic gros some way to answering th question: " Vienna was living on gambli gains, and builders were drawing bills on th oxpectant prosperity of the future, as Englis Chancellors of the Excheqner reckon-wi more justice-npon the elasticity of our revenue inas the new building companies that we the other day, threatening to ba them came to the ground altogether, Th shares of others were depreciated in four-anc twenty hours, 20, 30,50 per cent." It is scarcel a secret that some of the best l-nown finarei of Austria have rone so deep into sianci lime, and huilding operations generally that the event of a crash they are libely to orippled, their great resources notwithstanding.
The Iiverpool " Underground Railway The entire of tho tunnel between Brunswi Station and Stanhopestrcet, says the loe Joumal, is in working order, and the three line rails are laid domn to St. James's Statio From that point to the end of the tunnel in Back Bold-street, the whole of tho brickwork roof has heen completed, with the exception about 120 yards; but a considerable amount o hlasting througb the solid rock has still to be done The contractors, bowever, hope to have a loco motive driven right throngh to Ranelagh-street before the end of July, and the tunnel opened or regular traffic before October. The line now eing completed forms only part of the great and its docks by conting Cheshire with Laverpoo The route from whero the new line branches of at Cressington Park is very direct to Manchester and the engineeer of the line guarantees that the journey from Manchester shall be regularly run in about forty-five minutes, thus eclipsing an in about forty-ive minutes, thus eclipsing Railway's fastest trains, The contractors for tailways fastest trains fors London, and Sleaford, Lincolushire, The immediate superintendence of every department of the station, tannel, and line construction is ntrnsted to Mr. Knight, and the engiveerin and designs for the stations directed by Mr. Morton, C.E.

Destruction of the Theatre in MaIta. News of the huruing of this theatro has been received in London. During the rehearsal of new opera, one of the scenes caught fire, an of the building was in flames, The place was completely burnt out.

## A New Chupter in

I may soom hold, if not paradoxical, to annoance the oponing of an entirely new chapter in the history of art; and yet it is an anaouncoment which ap pears to ns to be justified. Rocont discovories, not in one field alono, but in seve. ral, aro at once so novo and startling in themsolvos and so suggostive of the prohability that thoy are only the precursors of more of the same kind, that thoy demand the sorious and mprejudiced attention of thoso who seek to view art from the high stand-point of its relation to ethnology
The first of the recont acquisitions of modern research to which we have refer is the very remarkahlo terra cotte sar ophagus which has just boon addod to the roasnres of the British Musoum. It is ono of he articles purchesod (or rather that wo trus zill be purchased) of the indefatigable colleotor nd discoverer, Signor Castellani. The extra. rdinary poculiarity of this sarcophagus lies ir he fact that it presoryes with great fidelity two ntircly difforent ethnological types, and that it opresents a relationship hetweon the races thus ypified of which we are, as yot, quite at a loss offer any historical explanation.
Of the two cthnological types thus roproducod, no is Grook, and Grock of a period not lator ban that represented hy the Plygaleian marhles he puro classio ontline of the facos is nnmis. akahle. So is tho graceful fall of tho folded oplum. The round shiclds borne by the war. coniliar like thoso with which we are ac amiliar. The helmets are representations of clicate work in metal, and the cuirasscs also ecm to be intonded for bronzo, and not for the rmour of boiled loather, which takos the very adentations of tho human form. The propor. ions of the figuros are squat, the heads are mall, and the drapory resemhles that depicted u carly Groek vasos.
Tho second type wo may porhaps ho justified 1 torming Phoonician, It is, at all events siatio, and, in our opinion, Semitic. Tho nose aquilino, the chin prominent, the mouth nar. ow, hut with protruding and freely opening ps , on which a perpotual smile soems to dwell. The heard and whiskers are so trimmed as to resent a crescont on each side of the face, iving the effect of tho proflo that is sometimes hawn within the dise of tho moon-the moon rod, not crownod with tho crescent, hut woar ing the crescont as a sort of honnot or helmet The figures thus charactorisod are totally or early nude
But tho most remarkahle consideration remains o he notod. It is that the Grcek figures appoan in the suhordinate rants. The noluly-draped romen are standing as if in attendance on the seated Asiatios, who appear to he enjoying thomselves without restraint. If the Groeks are not
lavos, the only explanation that occurs would
he that of honour shown to some foreign visitors of importance; hat in almost cach instance the Phoonicians occupy the post of honour.
On the lid of the sarcophagns a nude, spare, and holdly-modollod man roclines ou cushions, which have licert adornod hy a sort of tesselation in the clay before it was hurnt, as in the Henri Denx ware, A partially-draped fomale, of tho same type, squats, in Indian fashion, by his sido We can bardly douht that we have the portrait of the person for whom the sarcophagns was made, together with, porhaps, that of his wife.
Modellod relievi adom each side of the sarcophagus, and it is in those that the two types, of which we are speaking are brought into relation. At the foot is a modallion, containing six figuros, two of which are armod with the roand shield, and are evidently Grcolk warriors. At tho hack of the sarcoplagus is a representation of two Phcenician figuros, soated on a couch who are apparently the samo as tho full-sized figuros in the round on the lid. On eithor side of the couch stand two draped Greel fomales, holding different implements, and apparently in attendance on tlue feasting Asiatics. On the load of the sarcophagus are four figuros, seated on thrones, and apparently woeping in great distress. These are also Greek. Lastly, on tho frontis a relief containing nnmerons figures, the centre of the group being composod of two warriors, like those at the foot of the sarcophagus, fighting hand to hand. A nearly nude Phoonician malo stands on oach side. The sulijeet of the two last relievi we tako to be the mourning at a funoral, and the porformances of combats, hy way of funereal games. Whether the feasting sceno he a funereal feast or the representation of an apothoosis, or state of happiress after death, may he douhtful; hat the appearance of the nobler type of mankind, engaged eithor as gladiatorial comhatants or as attendants on a feast, and the depiction of these scenes hy artists whose sympathies are evidently with the non. classical type, aro suhjeots of the deopest interest, and oxcite a euriosity whioh it is not easy to gratify.
The sarcophagus was discoverod in a tomh, hut not buried in earth, at Cervetri, the ancient Crere, in Etruria. This city, which had historic relations with $A$ sia Minor, presorved its indepondence until the time of the siege of Rome hy Bromnas, aftor which its people enjored tho privilege of Roman citizens, in gratitude for the hospitality which they offered to the Romans who fled thither, with the sacrod fire. This fact soems to limit the possible latest date of the terre cotta to somo 2,260 years ago, as thero is no ovidenco of any Roman inflneace in the art displayed. The possihlo anterior limit it is moro hard to assign. The lotters aro of a type which it is difficult to know whethor to attrihato to the Pboarician or to the oarly Groek alphahet, the mu and the theta holding most closely to the latter, and the pi to tho former. They are holdly laid on in a sort of hlack paint. The inscriptions havo loon read hy Mr. Murray, a gentloman whose approciative knowledge of Greek art is an honour to tho British Museam, as follows :-(1) DIi vela vesnas the vepe tursi kipa, and (2) Thania Telai Matinai Urata. The preserce of two forms of the $S, M$ : Murray remarks, shows the proseace, in the dialect omployed, of tho Phcenicinn element of a donble sibilant. The othnological peculiaxity, howevor, strikes ns as likely, when explaiuod, to ho more determinative of date than the forms of lettors, which certainly havo a vory wide range, hoth geographically and clironologioally. Some specinl local peculiarity, such as the presonce of a Greek slave, accustomed to the work of the stndio, in Cære, may possibly have hoen the canse of the anomalous reprosentation of types to which we refer. But evea if snol an artist had used portraiture for the principal figures, and added the remaindor of the gronps in a conventional
style, it is hard to understand why he shonld have roprosented his own conntrymen in the inferior position.

A mixturo of aude and drapod figures in the same composition is to he found in many Indian sculptures, of the same date and character as that elahorate gateway of the Sanchi Tope which was exhihited two years ago at South Kensington. In these we are perhaps justifiod in regarding the former as ropresonting gods, or happy souls, and tho latter the living mortals of the conntry. If this ho so, the ahsence of drapory in tho figures we torm Phcenician may possihly have a similar import. But, in any case, the definito portraiture, which is numistakahle is the figares in the romal, marks clearly to which of the two types the monamont properly belonged.
Closcly connoctod with this fact is the vory small size of the sareophagus; the occupant of which mnst havo hocn less than 5 ft , high, if as there is evory roason to conclude, the hody was laid straight in tho rcceptacle hollowod out as if for the purpose. It is suggested that the romaias pyero thoso of a female, and oven that they werc, according to the inscription, thoso of Trnnia Unatia, the daughter of Felius Matinius. This might acconnt for the small size; hut on the othor hand the gauut unde figure reclining on the mattress and cushion forming the lid of the sarcophagus, seems to he naturally regardod as the porson in whose honour it was modellod. We are far from despairing of the solution of the riddlo, hut at presont it is one of great per. plexity. Nor is the fact that the two descrip. tions, which havo appeared in two of the hest. informod of our contemporarios, are altogothor silent as to the peculiar significanee of the physiognomical characters of thowork, calculated to direct that attention to the suhject whioh it nnqnestionahly deserves.

Not directly connectod with the Castellani sarcophagus, hut holonging to the same category of ancient and recently.discorered terra.cotta figures, are to he named the ohjects lately found at Moab, and colloctod hy Mr. Shapira, of Jerusalcm, which lave hoen purchasod hy the Emperor of Gormany for 1,000 t. A rather acrimonious controversy has raged ahout these objects, in which we scarcoly think that the experts of this country hare shown themselvos so mnch alive to the real interosts of art as have those of Germany. Imputations of forgery lave beon very frocly cast upon those who are not in a position readily to dofend themselves. There is no doult that the mannfacture of mock antiquos is a branch of rascal industry that is not confinod to Fhint Jack and his pupils in this country, or to tho dealors in earthen lamps, and hronze symhols of a well-known charactor, in Southern Italy. How hoautifully the antique spoils that have heen rusted hy tho tufa of Pompeii, or presorved in the air-tight emhrace of the lava of Heroulanoum for 1,800 yoare, may he simulated, let those who take an interost in that graceful hranch of art judgo for themselvcs by visit to Mr. Gardner's showroons at Charingcross. There will he fonad manyan ohjoct stampod with the cachet of the Italo-Groek work of the First Christian Century, of which it has all bnt the actual vority. But in all those matters, whother they are arrow.heads, phallio cliarms fahri. cated for tho parpose of deceptivo sale, or classic objects simulated for the elegant adornment of our drawing-rooms, there is to he remarked the constant presence of one characteristic. They all hold to that which is known, and generally to that whioh is well known. The forgor is, eo nomine, a copyist. Ho is neror an invontor. He would, in that case, iadood, he an originel artist. Wo all know the story of Micholangelo and hie Cupid. How he wrought the statue, and thon broke off and huriod the arm; and how, when the earth, porlaps with some aid from sulphurie acid, had giren a falso cir of antiquity to the
fragment, he produced it, sold it as an antique, and afterwards-as in the sic Tos non iobis of some experts tell us, is now to he seen in the Court of the Sonth Kensington Museum. But Michelangelo was $n$ sculptor of the rarest powers.
He studied the antiquo till he was thoroughly He studied the antiquo til he was thoroughy
imbued with its sprivit. He thus prodneed a work in which that spirit breathed, and by moans of which, with the nid of artifice, deceptiou was easy. And even then, when the whole figure is examined, a sculptor would never hesitate as to whether it came from the chisel of the great Florentiue, or from that of a Greek artist. Thus, the experienco that we liave as to plastic forgeries leads to the conclusion that quaint, grim forma, new to orw eyes, such as thoso which have been brought to light in Moab, are tho last things on which a forger would venture. The genius of the man who conld now originate
figures, at once totally dissimilar to any known ype, coarse, rude, and of ten repulsive in appearance, but imbued with the very spirit either of astrological or of phallic worship, would be of a very high order. No such genius would stoop to such barbarie poverty of exeeution, combined with such depths of a religions sentiment, once predominant in the race, but now abhorrent to predominant ideas of the age, as marks the objects pur chased for the Berlin Museum.
Without attempting, with
Without attempting, with the deductive analybis of Comte, to trace back the religion of the earlier tribes of man, first to astrolatry, and ultimately to puro fetichism, it is indubitable of peoples and of districts, two grand clements marked the religious thought of the time, and were constantly reproduced in symbol, and com. were constantly reproduced in symbol, and com.
memorated in worship. How deep a truth, in those rade, wild times, underlay the primary idea of those archaic ohjects of reveronce, we do not now kuow. Perhaps we may never know. But the two main ideas, in themselves, were these : frst, tbat of the constant, ever-prescnt, irre sistible power of the unseen Ruler of tho world, evinced, sometimes, in the destructive energy, as in Typhon, but more generally in the reproductive, of which Indian mythology gives the most literal version; and, second, of the divine wisdom, order, and rule, of which the chief symuols and exponents were the planets. The extreme antiquity of planetary worship becomes more apparent with every fresh message from the long-forgotten past. The antiquity of the woek is very great, and wherever the week is observed we have the evidence of study of the stars. The names now given to the days of the week, which connect them with the planets, are irst mentioned, if we we not in error, hy Dion Cassiug ; but thero is good reason for supposing the connexion to be as ancient as that special division of time itself. It is common to trace the establishment of tho week hack to the Exodus, and to regard it as an institution of the Law of DIoses. But, to say nothing of the very first uhapter of the Book of Gencsis, we find the week referred to as a well-esta, blished mensure of time in the days of Jacob 186 years before the Erodus. Arain, tbe seven amps of the golder condlestick are said by amps of the golden candlestick aro said by Josephns to refer to the seven planets, and ho each,-a matter which is purely astrological. In ach,-a matter which is purely astrological. In the same passage this author conneots the four. ard suructure of the vells of the temple ephod with the trwelve months, or signs of the ephod
The septenary division, not only of time, but of goneral philosophical system, appears to have a direct reference of astrological considerations. Tho order in which the days of the weck, con. secrated to the several planets, follow one another, is far from being arbitrary or casual. It betokens acquaintance with astronomical phenomena, and an attempt to reduce these phenomena to system. It is not inconsistent with, although not a direct evidence of the knowledge of, the Pythagorean system. Archimcdes, 250 years before our era, considered the position of the sun to be intermediate hetween the inferior and superior planets, the earth not being counted amongst eithor. Scaliger gives a complicated series of triangles, by the intersection of which be planetary sequence of the week is arrived at But that idea of the seven-branched candlestick, which places the san as the central lamp, and the three superior and three inferior planets, in the respective orders of their apparent velocity of motion, on the left and on the right, gives the exact sequence of the week, if we take the lamps
in alternate order. Thus the sun is first kindled then the moon, or vearest lamp on the right then Pyrolis, or Mars, the nearest on the left then Stilbon, or Mercury, the second on the right ; then Phaethon, or Jupiter, the second on the left; lastly, Hespera, or Fenus, tbe third on the right ; and Phainon, or Saturn, the last on the left. Regarded in this simplo order, we find the seguenco of the week thoroughly to har. monise with formal, thongh not with physical, astronomy
When we ohserpe that not only the days of the week, but tho series of years, and of weeks of years, are divided hy the radix of seven, at tho same time that the seventh day is specially consecrated hy the religiou that adopts this division of time, a clnso connexion with astro. logical, or at least with astronomical, law becomes apparent. The gravity of the charactor inva. riably assigned to the slowly revolving orb of Saturn, the tint of black which is assigned to it in the scale of colonrs, the connexion between the genius or deity of the planet, and the imper. sonation of Chronos, or Time, the father of Zeus Pater himself,-are in remarkable accordance with the expression "Antiquus diernm," which we find applied to the deity in that ono of the Hebrew sacred books which contains the most direct reference to the doctrine of numbers
A close relationship hetween the early religion of the Jowish people and tho planetary worship is again to be traced in the account given of the times orer on Balarm. The ercction, three of seven altars, and the double offering made upon each, is a distinet instance of planetary worslip. We might therefore rationally expect, if we recorered any trace of the early idol wor ship of Moab, to be able to recognise some sign of planetary powers. This expectation is fully gatisfied by the terra-cotta figures colleeted, and yet in conrse of discovery. In some of them may he recognised symbols of Astarte, Ishtar; many seven stars or seven punctures, or an accontuation of seven features or points upon the human figure, aro notable. One, a female deity, has the smn in place of one arm, and the moon in that of the other.
It is as to the inscriptions, however, that the most uncompromising controversy has raged. These may be divided into three eategories First there are the Hamath inseriptions, originally questioned as to their antheuticity, which is now admitted, but still in doubt as to their ideo. graphic or phonetic character. Mr. Dunbar Heath bas detceted in these ancient sculptures marks closely resembling tho cartouches of eer. leading tian kings; and his patient comparison in different insonion tion, mnst be held to be the first step towards the decspherment of a hieroglyphic character totally distinct from the hieroglyphics of Egypt Hamath, we need hardly
A second pronp of
ars on cortain of sculptured characters ccurs on certain slabs and lintels in Moab. They os blance. But they mainly consist of rude representations of the idols formed in terra cotta; and prohably will be found to he dedicatory or pro. phylactic inscriptions invoking the protection of the planetary powers for the buildiugs of which they formed a portion, or for their builders or wners.
The third group of characters consists of thoso ancient, bnt not nnknown, forms which seem to have been the common ancestors of the Hebrew, Phcenician, Greek, aud modern European alpha. bets. They are found painted on the foundation. course of the Great Temple peribolns at Jerusalem, incised in various rains throughont Palestine, carved on the nufortunate Moabite stone, and impressed on numerons vases of burnt clay. It is as to the authenticity of tho latter that the chief opposition has heen raised; the ground of disbelief being stated to he the different antiquity of the forms of letters found ipon the same object. We are not ahout to step from our chair to become adrocates on either side. Bnt we may remark that it is hardly conceivable that any forgers sbould have taken the trouble to cover rude jars, before baking, with very numerous impressed letters, the number of which must increase both the labour of execution and the risk of detection, while the selling value of the object itself is quite incommensurate with such an amount of misdirected skill. Again, in one of these in.
scriptions which has been condemned, as we think, over hastily, hy one of our most learued authorities, who divided the latters into fore categomes, of diferent dates, wo ourselves ob cred that certain eharacters which oven the magnifying-rylass could not aid us to discriminate rom one auother, were referred to differen ategories. While cantion should be used, it is Fideut that the method adopted by the Germans, of first acquiring objocts which are primb facio f such great interest, and then patiently setting o mork to describo and decipher them, is far preferable to our own cheaper method ouraging discovery by simply denouneing it as forgery
We liave been led to dwell too long on the terra-cotto objects recently diseovered in Etruria and in Syria to speak of the noble and unrivalled ronzes which Signor Castellani has been tho means of enabling our national museum lo cquire. As to the high character both of the at these opportunity of bearing wituess.

## NOTES IN THE INTERNATIONAL EXHIBITION.

pictures, dramings, \&c.
We bave already commented on the collection hich makes the chicf pictorial attraotion of this vear's Exhibition,-the works of Phillip and reswick. Among the other paintings by ritish artistg there is not much pecial remark, a large proportion being of very nediocre merit, and some of the hest too nown, or too recently exhibited, to bear fresh criticism. Among the exceptions may be men ined E. W. Cooke's "Catalan Bay, Gibraltar" (743), certainly one of the hest and most elling works of a painter who has of late ears fallen a little too much into the groove Roman military suhjeet, "Tho Catapult " 758 a), is a good specimen of his treatment f figures in energetio action; and Pettie's "Conspirators" (332) is one of the very hest illustrations of the "peculiar powers of this very mequal artist. "When Leaves fall and Cold Finds come" (917), by G. Mawley, should be looked at as a beautiful unpretending work, full the true poetry of landscape; and, in a con mry view, Storey's "The Children at Break fast" (957), fonr little things perched like spar. rows on a very high bench, painted with a enuine feeling and sympathy for cbild-nature 'be same painter's "The Danaides" $(1,010)$, is fine study of semi.nude figures, very carefully ravn and painted in the slightly conventional tono which this artist adopted in his ouda studies (a class of subject which he seems entirely to hare discontinued of late); the sombre tone of the landscapo of "Hades" monises completely with the expression and ing of tho figures, hat it mast be admitted that the work scercely rises to the imacinative heirht which such a subject demands. Lucas' Antumar" ( 1,017 ) not without power is orer Autumn" ( 1,017 , not without power, is overane, to the cal 1 chiefly for their feeling and composition, two by a 1,09 ) 1,092 ), and one hy J. A. Houston (1,062), ar had" is not one of his best works ; the head and hust hy him, under the title of "Pygmalion" Wife" ( 1,026 ), is splendidsy painted in regard to the texture and reflected liphts on the neek it An Afterglow" (1,077), by J. C Thom, is a small picture, with much of feeling and poetry of light and composition. A representation of "Dr. Guthrie Fishiug in Look Lee" ( 1,097 ), by Sir G. Harvcy, P.R.S.A., is a melancholy specimen indeed of the kind of rubbish which appears to pass for "art" with our canny cousins across the Border.
What is good in the water.colour room (there a good deal that is not) is mostly by well. known hands, in their usual manner. We may remark how uniformly interesting and powerful are Mdme. Bodichon's hroad, freely.handled sketches, rather than drawings, of landscape and sea. One work which must not be passed over, however, is the study, or series of studies, by the late H. Tidey, for a drawing of Pygma. hou and the Statne (186-7-8). The large bize study (in pencil) represents the Fivitied statue over the edge priting forward one delicato loo the enraptured sealptor standing by with hands
clasped over his head; from the two amaller coloured studies it appears that the artist aimed at representing the very moment when the first flush of lifo had bergun to orerspread the cold marble, and had scarcely reached the extremi. which is just turning from snow to gold. Tho subject was one exactly suited to Mc. Tidey's pecaliar powers of execution, and had he lived to coraplete it, he would probably have equalled or surpassed his famous drawing of "Queen Man." While alluding to the water.colours, attention may be drawn to Mr. MacCallum's Sketches in Egypt (1,515-39), to be fonnd in Room XVIII., and which are of much intercst. In Room IX. are placed some works by decensed British artists, including six of the beantiful little works of tho late G. Mason The "Harvest IKome" will be remembered in last year's Academy; but the exquisite little picture called "Erening, Matlock" (765), has not been so recently popularised; nothing could gevius, few thincrs more subtlo and delicate in gevis, than thing more subion ath a sheop coming down from the rpper portion the low foreground. A number of works by the lato Mrs. Carpenter may be passed over in disoreet silence; but some of those of the late A. Rankley (most popularly known hy his rather trnee picture of "Dr. Watts and his Littlc Frionds") snrprise us by a degree of power of
tone and feelios which would seem to warrant a higher place for this artist's name than we are accustomed to hear given to it. "The Doctor's coming," the interior of a Gipsy tent, where mother sits, in a wild paroxysm of grief, at the head of her child; "The Gipsy Mother," a single figure; and "After Work," are all pic. tures decidedly rising ahove the common. place equal to the composition, perhaps, as far at least as variety of texturo is concerned; they are
picturcs on the old chiaroscuro ideal; hut there is no lack of power.
Now as to the foreign pictares. Thero are few interspersed among tho English works, 0 which one by Legat (France) "A Recollcction o is a fine twilight composition of massed trees, with the old grey straggling huilding seen through them. The Meissoniers, too, whioh were recently at Bethnal Green, are cxhibited here on separate screens; an honour of which they are well worthy, and which, indeed, works of such delicaoy of detail almost require. Among the Bolgian paintings in Room XX., but a small pro. The "Undine" of Van Leérius ( 1,635 ), whose "Godiva" has popularised him in England, will hardly add to his roputation; the excontion is not up to the mark of "Godiva"; the poetio $(1,683)$ is inferior oven to this; a total failure as to conception and feeling. "'The Studio," by Sacré ( 1,630 ), showing an artist and his friend discussing some very evcry-day matter amid a
conclave of bronzeand marblo deities, is a clever jilea of which, however, more might have heen made. Of the two or three other figure subjects that are at all worth notice in this room, are Bouree's "Waiting' the Arrival - Beach a Schevening " $(1,741)$, noteworthy for the thought bestowed on the composition and relation of the gromps of figues; and "Dancing the Bolero"
$(1,765)$, by Dillens, wlich is clever, especially in (1, nearly equal to tures. Among landscapes, Roffiaen's "Villago of Mejrivgen and Wetterhorn" (1,616), sustains his reputation as a powerful and studious painter of mountath scencry; Asselherg's two
viows in "The Campiue," "Diorning " and "Evening" ( $1,651-5$ ), are most interesting studies of nearly the same scene under different aspects of light; and Heymans's "Meadow in the a Fool'" ( 1,720 ), are works remarkahle for tone and fceling, und tu total absence of "paintiuess" the latter especially, asmall study of dark ragged woodland scenery, painted very solidly, some what after the manner of Dupre. The "Scheldt near Antwerp,' agaiu ( 1,721 ), shows what Hey. mans can make out of erey water and two hoats. There are other small landscapes worth architectural pictures, as masterly as ever, should he looked at, exp cially the "Moorish Tower on the Tagus" ( 1,670 ), nne of the best thiugs he has ever done of the kind,

Tho most characteristic productions of foreign art, however (mostly in a small way), will be
found in Room VI., dedicated to "Bavaria, Italy Germany, Saxony, and Holland." The Bavarian paintings have a general oommonplace tone which renders them as a mass nninteresting, in spite of an average of good execution. Cohen's "Villa d'Este, Tivoli" (30), is a fine combina. tion of trees and architecture ; and Meermann's "Regensburg" (88), an old "schloss" and moat in deop shadow, with masses of hrown trees reliered agrinst a faint ovening sky, is a work full of poetry. Marc's "Decameron" (16) will have admirere, melodramatic though be ; and Franck's "Wine.honse in South Tyrol " (89), as a study in tho opposite direction, the realistio of low life, -of a "boozy" Auerhach's tavern existenco, - is clever and pointed enough. Among landscapes, Veber's "'Twilight" and Heffner's "Close of Autumn" ( 73 and 78) are good speoimens of imaginative treat ing of coman themes, the former remiad thoughtful and refined, we miss from this Munich (91. 95), and Professor Lange's " Lear Munich (91, 95), and Professor Lange's "Lak of Lowerz" (98), are all landsoapes above the average in feeling and execution: the latter
with red sunlit cliffs standing over a dark lake, though a littlo "painty," is undeniably powerful The small collection of Italian pictares is of some iaterest, if only from the pecaliar idiosyucracies of style and treatment displayed. The littlepictures of Professor Fattori, of Florence are very original in motivo and treatment Evening (121), cows and thin bare trees on dark plain; "Repose" (125), a woodland glade with black swine and the swineherd in varion attitndes of somnolence; "Landscape" (129) with two or throo cows slowly making their wa through long green grass nader the shade of trees. These and one or two others, with manuer of treatment which borders on the originality of style, and show that the Professo has his own way of looking at things. Molinari's "Sappho" is a mistake; hut in his pictures of and "The Punishment" (1.47, 156), School thoroughly original, reminding us a little in manner of some of the Dutch school in paintings of low life; his tumhle.down missliapen lumps of buildings are most charaoteristic. Ciardi's "In the Fields" and "Roturning from the Fields" (113, 157); Ciardello's "Confidantes" (163); De Tivoli's "Luins of the Claudian Aqueducts," standing up red in the sunlight in he foreground (155), are all works interesting their way, and with a nationality of manner nd tendency sufficieutly distinguishing them rom the works of any other nation represented

ere.
The small number of paintings (chielly from Dusseldorf) included under the very large and vagne term, "Germany," contain two works first a note, though for afferent reasons. The trst is a special compliment to ourselves heing a portrait of "The English tourist" (121) in fuli travelling suit, portly and well-fed, stand ing in the midst of a swiss mountan scene, con gcientiously "doing" the mountains, lorgnette is sent over to us hy the kind consideration o the artist (W. Simmler), that we may-

## see oursolves as others see ug is

out the specios portrayed are, we fear, too thick kinned to be reached in this modo. Let us ask, by the way, does no other soil grow the same sind of animal, or its equivalout? The other work referred to, "The Sea Shore" (189), is by E. Dücker, of D usseldorf, whose grand landscape, The Bed of a River, was the finest thing of the kind in last year exhib.tion (where, by an odd mistake, it was classed with the Russian pictures). The tone of this work is peculiar, and the sea is of a perhaps scarcely admissible hrown, but the painting of the shore and shoal water in the foreground is splendid, and the whole thing has that power and unity of feeling which ouly genius can impart to a painting. If this the averarge of his Englaud, has attained the elevation of these two, he is one of the finest landscapc-painters living. "Savony," which us to the next place on "," " Verona" (195) by Choulant, of Dresden: the view is taken from the river, the sluggish turbid water of which forms the foregronnd, crowded with a number of heary black barges, above which rises
conceries of white low.roofed houses in all kiuds of fantastic gronpings, crowned by the tall
Romanesque oathedral. This is one of the Romanesque cathedral. This is one of the finest paintings of an architectural subjcet, on a lurge soale, that we have seen. "Savony" presents nothing of roto besides, and Hollaw small andscapes, of which the best are Fan Boest's Strand at Schercaing" (222), Destréo's "Sunset in Gelderland" (230), Fogel's" Landsoape" (217), nnd Liermur's "On the Sea Shore" 215) : the last curiously reminding us, in feeling and manner, of the works of onr taleated countryman in the same "line," Mr. H. Doore. On the staircase adjoining this gallory is hong, among other thinos, a large painting, hy Baron Gudin of "Byron on the Bricy of Don" near Aberveen (a rreat deal of the "brig," and a very little of Byron, it will be understood), of which we will only say that we regret to 800 such a name to such a work. Some foreign artists seem to think that any "English" subject is sure Fo pavo not all como to that yet, A whim of this Exhihition has heon the Allection of drawings, soulptare, se., hy officers collection of drawings, soulpture, S.e., hy officers
in the army and nary, in Room KYIII. There are very accomplished amateurs among the are very accomplers of these professions, whose works might claim hanging.space auywhere; but might claim hanging-spaco anywhere; but taking the collection as a whola the result is not remarkable : cven in cases where the oxecn. tion is of a high olass there seems to he in the main, as it struck us, a remarkable lack of feel ing for artistio effect, the sirle on which the amateur generally may bo supposed to have the best chance of sucoess. Col. Crealock's sketches of celehrated cavalry ohnrges are spirited enough in intention, hut tho horses' legs are wonderfully put on. The works in statuary by Lient. Col. F Baring, however, aro quite ahove the amaten average. The officers scem to succeed hest, as a rule, in drawings of huildings, of which there are some also in the Alhert Hall Gallery, of unquestionable oxcellence. Among the suhsidiary attractions of the Exhibition are to be found, also in the Gallery, tho collection of etchings, by some of our finest artists in that branch of axecution. There is a whole collection of arr Whistler's, the peculiar excellencies of which aro well known. The small ctchings by Mr Jesse ( 3,220 ) are very powerfnl, and recall in style and handling some of those executed by B.ake as book-illustrations. Mr. E. George otehings of arohitectural suhjects on the Moselle $(3,233)$ are good in another manner ; and Percy's At the Opera" (3,224), a half.length figare shows what delioacy of texture and tint may he attained in this mediuna, more suited as it is in goneral for slightor work The frame of five otchinas by Messrs, Cope, Hook, O'Neil, Millais and slocombe $(3,256)$, is most interesting ; that of Mr. Slocombe, a mastor in this art, is adniranlo for light and atwophere, and shonld end nadion ( $3,2-$ ). Ahe The collection of engravings and photographs The collo here will repay atcention; andectivo firures and some of Mrs. Ca

The show of sculpture this year is small in quantity, aud includes a good deal that is not remarkahle in quality. Torelli's "Young Masac cio" (2,033) is a fuely.fimished statuette in the usnal modern Italian manuer, with all the toxture of the dreas miuutely and elaborately workod npon it. Fontana's two busts, called respectively "Coquetry" and "Summer ( $1,91 \mathrm{l}-15$ ), are very elegant and finely modelled In the latter the full, yet delicate, lips give a peculiar character quite in keeping with the ideal suhject. The same sculptor's figure of the youthful David" $(1,913)$ strikes us as weak and nerveless. Auother very oharming hcad hy Brara che ftalian sculptors seem to have a fancy for $(1,87$ ) a busts) is that calied "Bashfnlness" $(1,878)$, a very sweet face, drooped a little for w. and with kerchief tied round under the chin. The most original work exbibited is cer tainly that hy Mr. Law or, The Itinerant" ( 1,369 ) perthaps suggested by Scott's wondering "glee. nraiden" in the "Fair Maid of Perth": a yoang knee rechnes on the ground, with a mandolin, one expression of ace turned to one side, with an of the figure and the composition of the lines of limbs and drapery have been carefully studied and it looks well from erery point of riew. The scale is about half life-size. 'Tho artist's other

Work, "Artemisis,", though delicately modelled, is not at all equal to this one Ane. Anorg the Italian beads we may notice two moro, Argenti's partiaily succossful, to realise a very momentary aud fleeting expressiou of plensare on tho avd Heeting expressiou of "Player" ( 2,006 ),
eountennace; and Pessina's aips, quite realising the expression sngrested hy lips, quite realisiag the expression sngrested hy
the suhioect. It is worth wriile to look at these Italian lieads (of which there are a good many Italian lieads (or which there are a good many. more), as speciuseus of ideal treatment in sculp.
hure puroly by tlee medium of facial oxpression. uro puroly by the medinm of facial oxpression,
The oxecution of most of thens is very finisbed, Tho oxecutiou of most of thenn is very finisbed,
and hoth in executiou and expression thiey belong and hoth in execatiou and expression thine belong busts which Carrier and others of the French solool have unkappily affected. Among the apecimens of child-sculpture, to which modern
artists seem to liave heen a good deal led, are artists seem to have heen a good deal led, are
somo very protty works,-uotally the ono called "Innocencuce" ( $(1$, s90), hy Dil Xegro, a figure of a little chuhhyl maiden, who, "prodigal cnough
to unmask her beanty," is funnity
quarrelling to unmask her beantry," is funnily quarrelliog with ber only garment, unconscious of any con. pentionalities. Bragu's "La Vergognosa" ( 1,876 ), which might almost baro been intended 38 a companion to the last-uamed, a coquettish little girl, with her head on one side, laughing silily is geareoly so successful, as the sculptor has tried to seize an espressiou of face too pronounced, aud at the same time too momentary, to be quite suited for marble. There aro tiro little works in one of the adjoining calleries worth a word, because each embodics that unusual thing, an
"idea." "Tho Orphan," by Paganncci, is a
in Iittle boy's head and hust, the face thin and sad, looking down, witl one hand on the cheek, and an expression of prematuro care. It is a very touching little work. In tho samo gallery a
small statuette, in terra.cotta, hy Dillems, of Brnssels, gives an ideal represcrntation "Echo." A nymulh, with long hair floating down her back, is standing, with mouth open, and a woaried expression, as if aimlessly and fruit. lessly calling out ahout nothing. This is a very
ittle figure and might ceasily be passed over! but the artist las succeeded in emhodying bis but the artist has succeeded in emhodying bis such cases does not go hy dize.
Such cases does zot go by yize.
Wo havo thus rapidy indicated what there is that is worthy of particular attention among the that is worthy of partic口lar attention amiong the
fueeart works of this year's International ErSue:art works of this year's International Ex-
bibition, and bope that our remarks may hoth awae our readers some trouble in hunting the best things througll a mass of infrior onos, and insure attention to some small and out.of.the. Way works which, nevertheless, do not deserve
to be passed orer. We take this opportunity, horverer, of again orpressing an opinion that to attempt an exhibition of fine art on this scale overy year is a mistake, which can do no good
to art, nor to the phllic taste. nor (in the ond) to the promoters of tho Eshibition. No douht, there is a certain proportion of works Which wo are glad to look nt, but thero is a much larger proportion which aro of no good at ail to any one, and would scarcely ho hung in aus other exhihition; and this stato of things is likely to get worso instead of hetter. The first Exrihitition was talleed down upon hy artists on account of the low average standard of the paintings, though we had in that year those elerer contributions by Italy in sculptnre and paiuting which surprised every one, and the splendid display by Franco of the leading names splene heautiful, if soinewhat narrow, school of landscape art. The next year the averago standard was lower; this yant it is much lower still; and so it will go on, if the oxhibition bo
made an annal slk, what is to he rained hy the mere process o living a long wall every year with so many furlongs of pictaros, good, bud, and indififerent? Let the picture.exhibition he made a triennial one, and duly notified as snch on the Continent, time to derote to somothine worth sending. in suoh 2 case the exhilitition mighte afford the most admirable opportnnity for comparing tho prosress and the respectivo merits of different schools of modern painting.

Institute of Architects.-Tho royal medal aud others will be presonted at the closing moobl ing and in or Monday next, June Health and Compout in House Building," will be

A LOOK THROUGH LOW LEYTON.
Within the last month wo have heen to Low Layton, or Leeston as it is now termed, and we repeated the jonrney to assuro ourselves on one or two matters. This somewhat soattered and straggling town, situated at a slight elevation above the river Lea, or Ley, from which it is of lato years in buildings, and, of conrse, in population. The ancient village, though it must have heen small, fet appears to have heen one of importance, and its history is, in a measure mised up with that of Leytonstone, Stratford Walthamstow, and other adjoining districts Whether Low Leyton has boen the Durolitum of Antoninus is very douhtful, we think, though nrns and other Roman remains have heen nnearthed hero for a centnry hack. The manor helonged nise to the Ahhey of Stratford, hat at the Wriothesley. Since that period dit has passed throuch num rous hands.
Wo must leave notice of its antiquities for ome other occasion, desiring just now to speak matters of more immediate interest.
The almsbonses date hack to 1658, and are the foundation of a worthy citizen of London, named John Smith. Built with red hrick, and roofed with tiles, hacked in their entire length against an arm of the churclyyard, and one end o them abutting the body of that groand, they present, with their little gardens in front, a pic. turesque appearance. Appearances, howaver, in this case, are very doceptive ; for, on closer hut ination of their interiors, each almshouse is front single room, with only ono window in other health is an absence of vontilation and almshouses, so called, and nearly all the inmates of these eight small rooms, who are aged women, were ailiug when we visited them. It can hardly be otherwise. The only " accomma dation" for these eight houses is one small com. partment situated in the centre of the row. The suffer grievonsly from the smell arising. Th trustees of the charity or the vestry are bound to remodel these almshouses, as a matter of decency, sanitary precantion, and improvement. he charity is a small one, and the hereits mall. The sim of ased and infirm in mates are or less coal in the year, are not sufficient. From Advent to Easter a 4 lh . loaf is distrihuted to each inmate weekly. Formerly, we hear, it was givon all the year round; hat some years ago dishen was transferred to an adjoining aistrict. $A$ suspion exists in the onjoyed by tho neesent doy chayrity hy the present.day recipients of his subseonent to is represented that other donors, subsequent to Smitr's death, left sums to he added to the cbarity. The subject is worthy of inquiry, that the trnth may be stated, and sus. picion set at rest; indoed, the whole subject of haritahlo trasts needs another Government Commission, for it is to ho feared that many henefts have heon filched from the poor from ime to time.
In a sanitary direction and with minor improve meuts, the Local Board, or racher the vestry authorities of Low Leyton, have for the last twe or three years been doing something; candidly speakiug, we cannot say they have heen quite successful in what they have attompted. Tho drainarge of the town is imperfect, and of conrse defective ; and the out Fall sewer, anent which some hubibu was created several months since, cution. Prohahly the local engineer's hands were tied, and it is not at all unlikely that his plans were in a measure frustrated, and himself ofdrered by the wise vestrymen, or a inajority correct, a great amount of talk takes place in the vestry.hall, and a very amall amount of practical work. The outfall sc wer and filtering chambers aro not ambitious piecos of sanitary agineoring. We havo come to this conolusion from an examination of them, and their sur. roundings, entrance, filtering.heds, and outfall. he entrance culverto to the fits deposit of course their anmitigated cargo of chage matter, yet after passing throngh several chamber receives more than the efluent water that should pass out clear through the outfall cul. erts. Despite of netting and hallast the other words, Hoating patches of escaned or in
unprecipitated gemage escape through the out. fall culverts. Where, think you, does the eutfal? empty itself? Into an open ditch, -anothor pen fonl sewer, once a running stream, but now stinking oozy ditch. We have not traced it to ness: hut from the eceives an addition to its fith we belv follo the course of this ditch through the field or ont fall water, which is not pery alear, with other foul water, meanders along throngl the low marsh lands of the Lea, towards Temple.
 nills and shat of bel on lis way which carry a portion of tho ontfall drainage ol Loyton into the river Len
If the Festry Board of Low Leyton bave not a high opinion of their own dignity and import. nee wo do not know what othex vestry has rey have comena ther sertio umanity hy daviog an Aberteen granite slal r tahlet inserted in one of the brick piers ol be gateway at tho entrance of the ontiall works. ne ingineer, and all are epitaphed in sunk and gil etters. The tablet lacks one adornment. space shonld have been allowed at top for death's.bead and cross.bones. It wonld then h symbohical of their lahonrs, and in a future age might ho utilised in the village church as polygraphic memorial of the great departed.
Porhaps the members of the Board will grow rise in time. We do not wish to he too haro apon them, hut if they would take an honcs advico lot them at once mend their ways,-road. ways and pathways,-and perfeot the draina of the town, which is very defective. The clase of honses at present erecting in the town are a tho usual cheap speculative huild, though a large ortion of the land is freehold. Many of the nouses of the poor are unsanitary within and withont, and the accommodation is bad. The water supply is mostly from pumps; in the high parts it is cood, hut in the lovit it is unfit to drink The town from its sitnation is liable to periodical attacks or outhreaks of zymotic discase. In the winter months the marsh lands helow the town tretohing each side of the river are cotered rith water and from these rise and fiont thiol istsanfl cientorender a personat fow isihlo 4 and ong periods encer and extends over Low Leyton. The old buildinga and mansions of the gentry in the neirh. nourhood are grood specimens of red hrickwork in he style conmon in the reigm of Anne, showing ood moulded brick ornamentation on the front ome years amo many pergons of title and rich fity merchants resided here, hat the rapid exonsion of East London has driven them more nward to Essex, or attogether away, and the ands they occupied aro now heing intersected With new roads, and are being huilt npon. Low Loytor and netgaboumhood contain at present many nursery gardens, in which tiowers, plants, and shruhs are reared for Covent Garden wants and if there bo auy trade indigenous to the dis diel, nursery gardening wour seera to bo bhe only staple one. Some of these aursery gardens are well worthy of a risit, as a good deal of horticultural craft is displayed in their manage ment. Noar to the town, the well.-known Mr Barclay, of the hanking firm in the City, has very fio gardens, hat of course these aro for private use, and the pleasure affiordod. Ono of the urgent wants of the town is a roady mode of communication with the City. Either hy Stratford or hy the Lea Bridee.road, is a round. ahout jonrney, involving much loss of time. The so called railway station at Leyton is at a distance outsido the town. A new road is required across the marghes and the river, to conmence alongside of Chnroh Farm, and to take the divection of Hackney, or Soath Hackney: and a branch of milway from Hackney trick could he continued to accommodnto the town, pasing on to Snareshrook, and other nnserved villares The tramway lino from Clupton could bo con tinued along the Lon Bride rond, to sarve the turn al other paces and a tran Stratford in tho opposito direction, could meet it in the town.
These low marsh tands already alluded to on either side of the Lea, hetween Hackney and Leyton, are, we helieve, in portions manor, commons, and common lands, and a diffeulty would no doubt be experienced in securing any part futnre of the drainage of Low Leyton and sur. rounding districts, these lands should be drained,
lovelled np, and ntilised at least to somo oxtent by irrigation. The several open ditohes that reccive the ontfall drainage of Leyton slould be covered in, tho river Lea saved froms further
pollution, and a mroper system of main sowerage pollution, and a mroper system of main sowerage
perfected for Low Leyton and surrounding perfected

PUBLIC WORKS IN EGYPT : CAIRO.
A.v official report, just publisbed, upon the puhlic works of Egypt, with more particular reference to Cairo, gives some intercsting infor. sation relative to this subject. Tho present Viceroy of Egypt has dono more, it is stated, for the improvement of his capital during the past four years than was ever done before in so short a space of time; and the many admirable puhlic works which he has carried out aro spoken of with the greatest admiration. Gas has heen laid down in all the principal streets of Cairo, and they are now better lighted than are those of mave also heen laid down in all the principal thoroughfures, from which a plentiful smpply of good water is distribnted to all tho houses whose owners desire it, and are prepared to comply with the neeessary regulations. New streets, of considerahlo width, have been oponed through the most donsely-crowded qnarters, whore formerly the alleys wero so narrow that the promecting lattice-windows from opposite sides nearly tonched each otbor, and where, owing to nearly tonched each otbor, and where, owng the want of ventilation, an epidonic which onco pocurred was not oradicated until the population was decimated. A large open space, called the Was decimated. A large open space, carled the Ezitek, was, firmerly traversed by a seething ditch, city, wisfigured by mounds of rubbish and small Greek and native drinking-hooths. This space has been lately enclosed with iron railings, the
heaps have been cleared away, the ditch is filled heaps have been cleared away, the ditch is flled
in , and a pretty artifcial lake formed, which is in, and a pretty artifcial lake formed, which is
regularly supplied with fresh water from the regularly supplied with fresh water from the
Nile. The remainder of the enclosure is tastefully luid ont with gravel walks, flower-beds, fe., and there nee also in the grounds kiosks for bands of musicians, for theatrioal representations, and entertainments of a similar
ordor. The land outside this enclosuro is ordor. The land outside this enclosuro is
being built apon, in accordance with a nniform being built upon, in accordance with a nniform plan, arcados and shops forming the basemont of handsome houses. A tract of land, bettreen the Ezbekial and Boulac, has been laid out in carriago-drives, and the land has been given by the Viceroy to any applicant who would undortake, within a given term, to erect on it buildings on an approved plan. The German colony has jnst comploted and inangurated a Protestant churcb; and a piece of land has been may erech an Anglioan church. An opera-honse for Italian operas and ballets, a theatre for French playe, and a hippodrome for horse exercise and acrobatic feate have also been built at the oxpenso of the Viceroy. The singers, actors, and perforiners required for these several establishments are :engaged in England, France, and Italy, und during the winter season high alaries are given. Anothor work of considerable importance has hoen the construction of a carriage-roall to the Pyramids, and another to Heliopolis. All tbeso now roads and streets are hordored by neatly-planted trces, ohiefly acacias and sycanaores, and an agreeable honlevard appearnince is thas imparted to them. The conpearnnce is thas imparted to them. The construction of railways is also a work not by any
means noglected in Egypt; in fact, altogether means noglected in Egypt; in fact, altogether there are at present about Soo miles of railroad
working in the country. Shortly after the comworking in the country. Shorty after the coce-
pletion of the Suez Canal, the Egyptian Governpletion of the Suez Conal, the Egyptian Govern-
ment caused a line to be laid down from Benlia ment caused a line to be laid down from Benia
to Sucz , vid Zagazig and Ismaflia, thus running to Surz, viri zagazig and canal, from which the parallel with the new canal, from which the
engines and passongers wore supplicd, and the engines and passongers wore supplicd, and the expenso of sonding water-trains consequently
saved. The rails of tho old lines through the saved. The rails of tho tasen up and utilised. On tho left bank of the Nite, there is a railroad from Cairo and Phoda. The northern terminns is at Einbuba, a place directly opposite Boulac, a suburh of Cairo; and trains are taken across the Nile on a railway ferry. This ferry, how. ever, is only available during a portion of the year, owing to the rise and fall of the waters of the Nile. A large iron bridge has lately been
erceted over the Nile. On the right bank it is ercetod over the Nile. On the right bank it is situated zear to the palace called Kasr-ed-
Dulbara, and on the left hank it lands at Gezirah, a small district which was fornerly an island, but which was lately joined to tho main.
land by tho artificial filling up of tbe left branch of the Nile. It has subserquently been found diverted into one bod, has caused deme by being diverted into one bod, has caused damage to the
hanks, quays, and to some houses, amongst which is the Boulac Musenm. It has, therefore been decided to re-open the former atream. Another bridge has boen constructed on dry land at a convenient spot to connect the futuro island with the mainland again; and a canal will be
dug and mado to pass under this new bridge dug and mado to pase under this new bridge A carriage.rond oonneots thesc two bridgres, which road leads from Cairo to the pyramids, in an almost direct line. It is significant to notice, also, that the Viceroy posseeses a well-conducted work establishment at Boulac, for Arabic from thany valuable puhlications havo issuled large paper-mill in close vicinity to this esta. blishment, at a cost of about 80,000 ,

## ALESSANDRO MANZONI.

All Italy is in mourning. One of her greatest has gone to his rest. Manzoni, whose mind assimilated more than other writers' to that of his great predecossor, threo conturies back, the immortal Dante;-Manzoni, the loved and venerated hy all his countrymen, has after a long life of patient waiting for his country's frcedom, a long life of domestic cares and losses in which he has survived all dear to him, lived to seo the unity of Italia, an event that seemed to him ever as a poetic dream, and at tho adranced age of eighty-nino gone to his gravo
Born in Milan, 1781, he owed his first education to his mother, the daughter of the illustrious Beccaria. His life is learned in bis writings The man to whom Italy owes so much, for his puro, elevating teaching through his works, whose name will he written in golden letters among the regenorators of his country, remained through his long lifo far from public cares, taking no active part in the struggles that occurred; he was not among the imprisoned or exiled when his Lombard compatiots were persecuted, not hecause of any servile suhmission to tho stronger, but becauso his own greatncss stood so conapicuous that he conld not be attacked withont in stron native city, Milan, during the five days pendence fioat religious spirit guided him through all. Ho wrote not much, but the little he wrote was of the best, the most instructive and enlightening. His "Promessi Sposi," read in every land, in every tongne, is his best known worki His "lifo of I'rederick Borromeo is celebrated His love for the French nation was very great. and among his writings will be found many valuable works on tbe history of the French, His retiring modesty eqnalled his genius. His lozing religious spirit shines forth in his great character
His fervent love for his conntry, and his own deeply religious mind, made him always cling deeply religious mind, made him always clivg
to the belief in the existence of the sarue in his conntrymen.

After the publication of his great novel, he ceased writing romances, and even disapproved of that kind of literary work. It may bo re-
marked low few good romance-writers have marked how few good romance-writers have
existed or exist in Italy. Our social habits may require the aid of romances, while those Italy's more favoured inhabitants, by clime and nature, are supplied by the evident romance o overyday life.
Manzoni's works are read and prized ly every Italian who can read. His death occurred on
May 23rd. His last prayer was for his king and country.
Teleg
Telegraphic despatches announcing lis deatl2 were imniediately sent to the King, the loyal Princes, and the Parliament.
The body of Manzoni, which had been emhalmed, was interred on the 29th of May, with great honours. His death, though long expected, has produced a general regret. All seek to do honomr to his memory.

New Town-hall at Wxexham.-Sir Watki Williams Wyun, M.P., has opened a new public balt and corn-exchange at Wrexham, including clab-rooms, a magnificent concert-room, and every convenience.

ORUSHER FOR CONCRETE, CEMLENT, AND ASPIIALTE.
Tras introduction of machinery as a substitate for manual labour has been for generations past a sore subject with many of those more immediately interosted. That the supercession of the one by tho other has caused disturbance in the charneols of industry,-that it has cansed distress an some instances, in many, it may be,-is not to he disputed. On the other hand, however, it would be easy to show tbat the use of machinery has, in many cases, greatly reduoed the prices of divers necessaries and laxaries, has conduced to the welfare of the great body of the people, has originated now induatries, and has openod np and made availahle mines of wealth and sources of advantage that would have remained closed hut for its nso. Many machines, indeed, do their beneficent work without the displacement of any manual labour at all, hat have cansed rather its oreation; as, for instance, the steam road-roller, a comparativcly recent innovation, that produces a result greatly desired, it may he, before its introduction, but a result soarcely droamt of or attompted to be prodaced as within the power of men and borses. Stone-crushing machines for the prodection of "road metal" may be objectod to by "Ludites," if any surthe feat of giving good roads to countrics and districts in wich the roads toro before and istrichs ntroy purne of comme ordiary purpos. Way one will ind the tho by Messre, $\mathrm{J}, \mathrm{C}, \mathrm{Co}$ \& Co are ormble y inessrs. J. Cole do. are onpable doing great deal more than breaking blocks of granite large machine just cornpleted is to be sent to Berlin for employment on the streets in grinding Berlin for employment on the streets in prinding they are pared. It has boen asoertained that hey are pared. It has been asoertained that course of transit, when it is ground in tho quarry, and in Berlin it is to be delivered in blocks, and ground down by one of these machines stationed in or near the street in whith the matcrial is to be used. The machine occupies a very small space; it is 8 ft . long by 5 ft . wide, and 6 ft . high, and my he driven hy either steam or horse power. The disintegrating parts of the machine, whioh aro trong and inple, aro inerent from the arrangerents in any other machine employed ior stoze. crushing. They consist of strong metal teetb of yramidal form, the hases of the pyramids heing ried upon two parallel shafts, and the teeth work. ing into each other, From the crushing-machine the atuff passes by a sloping shoot with a jigging motion to the grinding motal disco, beneath which it is reduced to powder. In the crnshing machine the asplalte is liahle to clog, and serapors are introduced to prevent this cffect. between the grinding dises, curious though it and the asphalto is driven out rapidly at the odges, cool, and in the condition of a fine powder. The nachino reduces twentr-five tons of bitami nous rock asphalte to powder in a day of ten hours. It weighe about six tons.
Another interesting machine has just beon completed in the same works, that diffors in construction, and is destined for quite a different use, from the asphalte-crusher. This is a doubleaction stone-hreaker, for tho production of matorial for making concrete and cement, and reduoes granite, limestonc, quartz, or any other mineral, to pieces of a quarter of an inch irrerular cube, or any other desired size. It has wo hoppers and crashing.chambers, one on each side of the cross central shaft, which has a heavy halance-wheel at each enil, and is driven by a belt. On tho outer sides of the two chilling-chambers there are toothed surfaces of chilled iron, that are acted upon hy the two loothed moviug surfaces atlached to the main shat. Tho at uachment of a cam to the shaft gives an effective eccentric action to the crushing surfaces, that may be best described as a forces applied vertically aud horizontally. The shaft makca from 200 to 220 revolutions per minute, and, as each jav does duty at evcry revolution, it follows that crushing-force is exercised in the two chambers from 400 to 440 times per minute. It was interesting to notice, as evidence of the streugth and simplicity of the machive, the condition of a piece of wronght iron that had accidentally got into it while at work. The iron is deeply masked with the teeth
of the grixding. faces, but could not get through
the narrow egress at the bottom of the crushing chamber, and tho effect was simply that it stopped the machine, and caused the helt to slip until the power could bo turned off, and the innovating suhstance removed

## ON CHURCH RESTORATION.

## rchitectural assoclation

AT the last meeting, held on May 30th,
Mr. W. White, F.S.A., read a paper on "The Mr. W. Mhite, F.S.A., read a paper on "The village is about six miles east of Canterhnry, on the road to Dover. The church is cruciform on plan, with a central tower, and an Farly English Whancel of considerahle size and excel thee, ture of the clurch, and the fresh light gained in the course of the recent restoration under his superintendence. He called attention to the position selected for the pulpit (on the west side of the south.east pier of the crossing). The popular notion that the north side (the gospe
side) is the proper traditional place for the pulpit, Mr. Wbite disputed, urging that the sermon is another matter, and that old pulpits sermonhtedly in situ, as in Devon and clsewhere, aro on the south side. A comparatively modern upper story has heen removed from the tower, and a stcep pyramidal roof constructed, covered with deal shingles Burnettisod. This covering slip, as would plain tiles (used in the other new roofs); and the colour is now very pleasing calling to mind the old shingled roofs of clurches on the Rhinc. A late Medixval segmental pointed arch nnder the pointed east tower arch piers in their places is now performed by an old screen and large oak straining pieces, resulting in an improvement in the view of the chancel, stability without regard to beanty. The large tower piers make the arches comparatively small ( 12 ft .3 in . in the clear). The incon renience from this has been in part overcome by seating the nave (which has no aisles), with fairly wide spaces next the side walls. An old stone bench tahle round the sido walls romaining in a considerahle portion of the nave, is exposed by this arrangement, which was, however, mainly followed in order to keep the seats, as mnch as might he, in the space opposite to the tower arches (the central passage in the nave has not been onitted). The ground on which the church chancel doubt so arranged from motives of convenience and coonomy. After convincing bimself that this whe original, and that the proportions of the church would snffer hy alteration, Mr. White sncceeded in ohtaining the retentiou of the step down eastward, raising, however, the oxtreme enst end hy steps. He expressed an fered greatly in general effect hy the diminution of height in their chancels in the raising of the floor in a way not contemplated in the original design. The position of the good-sized organ on the side of the chancel (not in a recess) was found to carry tho organist's seat nearly to the centre line. This diffculty was got over hy placing the organist at the opposito sido, and the organ is played by trackers under the floor, with adrantage in use, as be can hear the choir without being disturbed by near sound of the instrument. In makiily some general remarks on the subject of clurch restoration, Mr. White adrised under rather than over restoration-the maintenance of ancient features not ahsolntely injurious to the uses of a building, even though not of special beanty in themselves. At the cost of much personal troublo the old timber porch on the north of the nave was got together again, and forms an interesting featnre, though considered quite hopeleas by the workmen. Wcll-intentioned people, anxious to make neat work, require to be carcfully looked after : some early fourteenth. century caps, gray with age, not perfectly trne in form, would have been reworked, and inade geometrically accurate hnt
for imperative orders. for imperative orders. Decayed worls should not he restored, as its authenticity is rendered doubtful. Much of the motive for the preserva. tion of such work will he gone if conflence is taken away in its heing what it was at first For determining the date which should he fol. lowed for new work, such as new roofs, \&c., wo universally applicable rules can be laid down.

The character of the parts of the building to which they will be put must regulate the treatment in each special case. In this restoration the chancel roof follows the character of the
Early English architecture below. In all cases the general effect, the attainment of a religious and solemn character with real harmony in design, should he the great consideration; and witb this the following out of any mochanical rule of mere conformity of styte to that of cer tain old featares might be in confict.

OPRNING OF A NEW STATION ON THE SOUTH-EASTERN LINE.
Os Sunday, Ist Jnne, or more correetly, on Konday last, a new subnrban station was opened for public service, that is situnted abont midway hetween New Cross and Lewisham Junction stations of the South. Eastern system. The new station has nothing pretentious about it in an architectural point of view. It is formed in deep, wide hollow, and has three douhle plat forms, each long enough for the lieaviest pas senger trains, and that accommodate seven lines of rails, tiwo of which are, however, for shunting and engne-turning parposes. The platforms are covered, for ahout balf their length, with very neat and substantial timher roofs, covered, in flat ection, with gal vanised iron, corragated. Access to the platforms is by a bridgo and three stairs all covered), that are, by a happy thought legibly nnmbered $\mathbf{1}, 2$, and 3 at the top of each The booking-office and waiting-rooms are on evel, considerably higher than the platforms and rather lower than the public road. The structure is of timber, but well finished within It, as also the roadway leading to it, is on " made ground"," with which concrete, judiciously applied, is comhined. The new station accommodates ninety trains up and down, per pass tho number of trains up and down that caspected that this station will prove a great convenience to the residents, and a great saving the company, by enahling them to rui "shuttle" trains, and saving the carriare of an enormous proportion of dead weight.

## FRIENDLY RECOGNITION

Mr. Wyatt Papworth, who has given valuable servioes to the Royal Institute of Architecta, bas been wise enough to get married; and some of the memhers, his personal friends, thonght it a good opportunity to recognise those services: so
they made a little suhscription, and on Friday they made a little suhscription, and on Friday
in last week, the testimonial, which had taken in last week, the testimonial, which bad taken
the place of some plate selected in accordance the place of some plate selected in accordance
with Mr. Panworth's wishes, was presented to with Mr. Panworth's wishes, was presentpd to him at the residence of Mr. Chas. Fowler, whio has acted as honorary secretary in the matter

THE ENDOWED SCHOOL COMMISSIONERS AND THE SIR WALTER ST. JOHN'S SCHOOLS, AT BATTERSEA.
The Endowed School Commissioners have just issued a schemo for the futnre management of which Walter St. John's Schools at Battersea, Which, if cventually adopted, will involve the erection of new school buildings at a considerablo
ontlay. Under the proposed scheme there are to be two scbools, viz., an upper school and a public elementary school. The governors of the upper school are to sell the site and hnilding formerly used for the purposes of the school but now let, and apply the procecds, and a
further snm, not exceeding $4,500 l$, to he raised further sum, not exceeding 4,5000 , to he raised out of the capital funds of the trust, in the school hnildi new rite, and in the erection of the scholl is to he a day - school exclusively In addition to a fixed stipend of 1000 . per annum, the head-master is also to receive payment, according to the nnmher of hoys in the achool, at the rate of not less than $2 l$., nor more than $4 . .$, , yearly for each boy. The entrance-fee is not to exceed 11 ., and the minimum tuition-fee is to be 6l, and the maximum 12l. a year. The governors are to hold the present site and buildings for the parposes of the puhlic alementary school, the trition-fees not to exceen Battersea held a meeting in opposition to the schome, as violating the intentions of the
founder, and interfering with the edncation of the children of the poor, for whom alone the schools were intended. A committee was
appointed to consider the scheme, and to draw appointed to consider the scheme, and to draw
up a report for prosentation to another mecting up a report for prosc
of the parishioners.

## BOLTON TOWN HALL.

We publish this week an exterior view of tho new Town-hall in Bolton, of which we gave plans and a description last week. The columns are omitted on the hack (west) olevation ; the hasement, coruico, and other details being, however, carried round with little or no modification; and symmetrical has of the structure are precisely columns square on plan are substitnted for circular ones.
The basement, np to the level of the gronndfloor string (wbich formed the first contract), is of Bolton stone ; the tower is of the same stone; the principal front is of Halifax and Darley Dalo stone, the north and south fronts of Huddersfield, and the west front of Longridge stonc.
The tower, which rises 200 ft . from the ground, will be, owing to its comparatively elevated position, in the highest part of the town, a conspicnons ohject for a considerable distance round the country. The general aspect of the build ing, and the nature and arrangement of the site, are spech as to give an impression of the dignity and importance of the structure and leave 10 doubt on the spectator's mind as to its office as the municipal centre of the town
The realisation of the town-hall scheme is the result of very long struggles and aspiratione, commencing more than half a century ago, on the part of a rising town; though of course the dea of the present huilding was only fairly taken up during a more recent period. The original limit of cost was fixed at 10,0001, -a sam which, as our readers are already aware, has been far exceeded in the execution of the design finally determined on. We may hope that this augmentation of expenditure represents a proportionate increase in the prosperity of Bolton, and typities further progress in the
same ratio. We add to the plans already given, ${ }^{*}$. that of the Basement.

## THE CICERONE FOR ITALY

Dr. Burchmaror, the original anthor of the hook $\dagger$ thus designated, has heen long recognised in Germany as an anthority on the history of art. The presont work, intended as a practical guide for the student of painting in Italy, is now made accessihle to the Enclish prhlic through the translation given to ns by the widow of the ate Arthur Kngh Clough, poet-and something more. In its original form the work was a handhook of arohitecture, sculpture, and painting ; the translation includes the portion devoted to painting. The plan of the hook is to give a concise history of the varions schools of painting in taly up to the close of the seventeenth centary, especially pointing out the characteristics of tha leading painters, their influence on the art and on therr successors, de.; and enumerating their principal works, and the places where they may be seen and studied. The ohject of the worls being something beyond that of a mere guide. hook (as the term is commonly understood), the arrangement of the subject is according to schools, and not accordiug to localities; but a double index, of places and of painters, gives a reference to the page and (by means of marginal letters) the paragraph, where information is to he found as to the locality of any painting mer. tioned, and the paintings of any locality; so that the ordinary office of a guide hook is also fulfilled, at least for those who do not travel d to tourist-doing so many picture galleries in a day. The English edition is printed in douhle columns, in a small hut clear type, and chus a very great amount of information is compressed into a volume small enough to carry conveniently in the pocket. The office of the editor, Dr. Von Zabn, has been exercised in regard to the second edition, the author having been occupied with other duties, and he has supplemented the work by contributions from wther and more recent sources of information,

BOLTON TOWN HALL_-Plan of Basement.
with the view of bringing it up as far as possible to a level with the latest and fallest information der some of the reflections ocurring incion the subject hive in a few on the subject which is available. Among the words, the key to mnch which is habitually mis writers who have thus become coadjutors in the anderstond or left out of consideration in the
work are the lato Herr Mündler, Messes. Crowe popular judgrent on work are the hato Herr Munder, Messrs. Crowe popular judgment on works of art; and, if the editor, the quotations fiom each being intelligent study of painting on the part of che enclosed in brackets, and distingnished (except average of readers who may make part of che enclosed in brackets, and distingnished (except in the case of the editor's own additions) by their respective initials, As indicative of the
full and precise information conveyed, it may he full and precise information conveyed, it may he mentioned, that in many cases, in addition to an analysis of the character and composition of a work, \&e., is added an editorial note of the time of day when the hest light is on it, no nnimpor. tant item of information in the case of many paintings and frescoes placed with littlo regard to facilities of lighting. Mrs. Clough's transla. tion is, with the exception, perhaps, of a few unimportant sentences, characterised by a clear and expressivo English stylo and idiom; does not in other words, read like a translation,-a kind of praise which cannot always be bestowed in such cases.

The volume is, however, as we have hinted, more than a gnide-book; and whilst griving tes timony to its efficacy in this respect, it would be scant justice to mention such a hook at of the higher art.criticism contained in it, which wonld render its perusal a matter of pleasure and profit to many who have not the intention or opportunity of studying Italian painting on its native soil. Dr, Burck. hardt's criticism is very hroad and philosophic in its tone, and based upon serious considerations of the nature aud end of painting as an art, apart from the mere extimate of technic excel-
would be required that he shorld constantly carry hi plete a programme as may be of his individual thought and feeling. But as artist and poet be needs no other his work the greatest possible perfection is oceded to give
It is perhaps almost hopeless to expect the popular mind of England, which seems incapable of rising above the mere moralities of art, to comprehend this view of the subject ; still the oftener is repented the better, especially as in opposition to the overwrought and unreal sentiment shont "art and religion" with which we are perseveringly dosed by certain oritics. On the other hand, "the entire absence of moral eleva. tion" (a very different thing from "moral teaching " in the ggares of Corregio, for example, duly recognised by our author as a distinct and important deficiency in works of art claim. ing the highest ground. "One is tempted to oxclaim,-1 myself conld have conceived this rom a higher artistic point of view." Very sngrestive also are the ohservations on allegrory and symholism in art (p.39), as apropos of the Giottesque school; in the conrse of which it is ohserved that "a work of art ought never to be fonnded on a metaphor; that is, an idea trans ferred to a new fictitions reality, which gives a necessarily false result in a picture" " author recognises, however, to the fall the im portance and Cmanderr of Giotto's symbli portance and syanion between "symbolism" and "allegory" should he noticed.
In his oriticism on, and characterisation of, the greatest names of Italian painting, Dr. Burckhardt is partioularly interesting and comprehensive; and perhaps the nature of the prehensive; and perhaps the nature of the
pover which Titian possesses over us conld
hardly be better stated in a few words than in the following sentence:-
"The divine quality in Titian lies in his power o which should be in themenecording to their natnral gifts or still lives in them, though tronbled and unrecognised as complete, happy, free. This is the universal problem
of art; but no one answers it so calmy, so simply, with
such an experience of absolute confiction' ( $p, 185$ )
This is finely as well as truly said; and we may add the remark further on in regard to a specia
class of suhjects with this great painter ;"Titiau has also in certain nude figures solved other pro-
blems of a lofly existence, and at the same time achie ved "Titiau has also in certain nude figures solved other pro-
bems of a lofy existence, and at the same time achiered a
triumphinthe pictorial representation." After sowe refer-
encee to the two famous "Venus" pictares in the Utizi, triumphinthe pietorial representation." (After some refer-
ences to the tro fromous "Venus "pictures in the Utiki,
the author proceds.) "Fikures of this kind so ofteu
mislead modera, especially French, painters. Why are mislead modern, especially Freach, painters, Why are
these forms eternal, mhile the moderns so rarely produce
anything more than beautiful nude studies? Becaue the anything more than beautiful nude stulies? Becaute tho
motive and impot, and the fiyht and doloure and form, arose
and gren together in the mind of Tition. What is oreated
 hair and white linen, and many other apecial beauties,
here pass stiogether into tho ,hamony of the whole;
nothing obtrudes itself sepatrately" (p. 186).
There is matter here for reflection, botb for those who paint pictures and thoso for whom they are painted. We may add, however, that
some of the modern French painters may be said some of the modorn French painters may be said
to have realised, to some extent, this unity of conception in the embodiment of the poetry of the nude figuro; Ingres, for instance, in his "La Source," so full of delicate sentiment expressed
in delicate form ; Gerôme occasionally, though in delicate form; Gerôme occasionally, though in quite another key; Watta, perhaps we may over, allow his enthosiasm for Titian, "the gigantic figure in the contro of the Venetian echool," to ran away with him; while observing school which he (Titian) does not "somewhere exemplify iu perfection," he adds, with the caution and impartiality belonging to a true limitations."
Dr. Burckhardt's characterisation of Raffaelle comes much nearer to the old orthodos idea of this painter, than to that view of him which a school of earnest but rather narrow criticism among ourselves has to a great oxtent induced, he says, "spreads his boauties before us witb such directness that every one who sees his pictures, can find his way without a guide, and can carry away a lasting impression. The following sugrestions are intended to clear up in somect, indeed, of this clearness of oression. aim, Raffacllo is in painting what Handel is in music ; and it mnst, perhaps, remain always a music; and it mnst, perhaps, remain always a
snhject for difference of opinion in criticism, whether the artist who appcals to the simpler Whether the artist who appcals to the sitapler or he who (like Michelangelo and Bach) gives up his innate grandenr only to more recondite stady, deserves to he called the greater or the more valuable in the world of art. That the permanent popular verdict and feeling in regard to Raffaelle, however, will alwnys be iu the main nearer to that of Dr. Brrekhardt than of Mr Ruskin, is our own decided conviction. Throngh the long and elaborate description and criticism on the unmerous works of Raffaelle we cannot ollow our autbor, bnt may quote the following seutence from his final summing up of this painter's status in the bistory of the art:-
${ }^{2}$ To Raffaelle, of all men, there is lesst occasion to forHe accompliahes taskep of which the intellectual premises not by his fault, lie far removed from un, in a way which seemas quite natural to us. The soul of the modern man ha guardian than he. For the antique has only co
to us as a ruin, and its apirit is never our spirit."
The interesting remarks on Leonardo we must pass over merely with the observation, tbat the author reduces the anthentic (completed) works of this artist to a minimum, considering that Italy contaius (not counting the coloured drawings), only a single genuine fivished picture by Leonardo, the portrait of Isabella of Arragon, wife of Galeazzo Sforza, in the Ambrosiana, at Milan. The whole of the chapter on Michel. angelo is admirable, and should be read with attention. "Of all that makes life dear to us, there lus forms, "no drawing, however crand, no ex. pression of power, can make ns forget tho ex. tain extremes of hreedth of shoulder and other snch forms, are arbitrary, and some. times monstrons. Certainly, when in presence and a
|self." The author does not fail to point on what we noticed in reviewing Mr. Tyrwhitt's work on "Christian Art," some little time since, that Michelangelo, though it has heen a fashion to speak of him as the great "Christian artist" of the Renaissance, had, in fact, "severed him solf from all that may be called ecclesiastical types and religious tone of feeling." "He revels in the Promethean pleasure of calling into ex istenco all the capabilities of movement, position foreshortening, and grouping of the haman form. Afer observing that this artist first of ail bout as an action," it is remarked that "in the whole domain of art there is no other example of such an intellectual living expression of tho super sensual by a perfectly clear and speaking sensuous act," as is embodied in the representa tion of the Oreator giving life to Adan. Dr Burckhardt is not hlind, however, to the ques tionable nature of tho influence which Michelangelo's genius exercised (such as genins of so angelo's genius exercised (such as genims of so
abnormal a character always must exercise) on abnormal a character always must oxercise) on
those who succeeded him. "After his death, all principle in all the different arts was over thrown; every one strove to reach the nucon itioned, hecause tbey did not understand that wat in him appeared uncontrolled in fact took shape from his inmost personality.
We must here take leave of a book remarkably interesting in its class, and replete with information conveyed in a method both systematio and agreeahle to the reader. We are pleasurable thol which we besk in 8 whe the evidence of thoughtful and cultivated mind, and an onthu. siasm tempered by a true spirit of criticism. we can recommend the hook to all who wish to stady intelhgently the relios of the great epoch of panting which remain in Italy, and join with and apthor in wishing "to those who may read panionprove him, and take him as their com. panion across the Alps, tho calm joy of soul whicb comes back to him so powerfully even in looking on the feeble copies of tho great master pieces of art."

SEWAGE AND DRAINAGE WORKS AT WINDSOR CASTLE.
THE " separate system" of drainage, whereby the channels for carrying off the rainfall are distinct from those for conveying the sewage, which appork with Windsor Castle. At the same time further measures have been takenfor equalising the levels measures have been takenfor equalising the evels so as toincrease navigation facilities, and prevert the danger and injury caused hy the annual wooding of the low lands along the banks. The works altogether have taken six years to complete, and have now, under the guidance of Mr. W. Menzies, surveyor of Windsor Park, and Mr. Leach, engineer to the Thames Conservancy, ween brought to a conclusion.
In carrying out the works for regulating the level of the river, it was considered necessary not to alter the general level of the water, but to maintain it at its average summer level. The suhsoil water on each bank is kept at about 5 ft . from the surface, so as to give as much benefit as possihle to the pasturage and trees on the Royal estate. Old Windsor lock and weir have been rebuilt on their old sites, the he sluy of the weir 555 ft to 617 ft for the river to pass through. Its sill, also, is built 1 ft .6 in . lower than formerly, thus giving greater facilities for letting off minter floods. At the same time the sluices and hatches have beev built higher, so as to udmit of the summer level being kept at an increased height of 1 ft . The uniform depth of 5 ft .
Self-acting tumbling-hays have forther been constructed contiguous to the weir and lock, so that whenever the river rises more than 15 in . above the summer level, it can immediately flow off. Similar works have heen carried out at Bell ock and weir, and Romney lock and weir, the result of which is that the river can be main while the . higher than its original summer level, while the floods can be reduced 1 ft .6 in . The lovels formerly varied about 10 ft ; their greatest variation is now 7 ft .6 in : the floods conse. quently which used to cover so large an area of land on each bank of the river wili he controlled
to snch an extent that, as last winter's experience
proved, they will not oxtend over a tenth part of the land they formerly submerge
The orks for the supply of
of the Castle Estate liave been simplte whole execnted. The water is procared from a well sunk near Old Windsor Lock, the spring smpolying which seems to be nnfailing. The water is raised into the cisterns, the lighest of which is $274 . \mathrm{ft}$. above the river, by utilising the water falling over Old Windson look to turn a water. wheel This wor is supplomented water. 8 -horso power ongine to hed in case of acci dent. pply all the houses in and near the park.
But the mont importa b
But the most important, becare the most arri, $f$, heen huildings for the imigation of the lands, and for huildings for the imigation o
Formerly all the sewage and drains ran into the Thames direct, or into the Windsor town sewer. Sinco the Thames Conservancy ordered the diversion of the foul matter from the river, it was determined to utilise the sewage for irriga. ion, and to discharge the surface-drainage into the river direct; and the Crown buildings have now a system of drainage distinct from the town system.
allo equalising reservoir, to contain 20,000 anons, has been constructed to hold this all of 3 ft to carried in 18 in . pipes, with is of about to the mile, to a small piece of land out for irrigrtion acres, which has beeparing of this land were performed at the large cost of 80l. per acre.
The water-snpply of 1,000 persons and 500 cattle is about 150,000 gallons a day, the surplus supply unutilised being directed into the lake at Frogmore.
The principal feature in connexion with these works is the pumping-engine, whicb is thus described by Mr. Menzies :
"The engines were constructed by Mesara. Easton \& Anderaon in such a form that they can bo worked either by compreased air or stèam, a boiler being placed in the engine-honse for the purpose. To supply this compressed air, the purpose. to supply this compressed air, the piston and oylinder, which forces the air into a pipe 2 in. in diameter and 425 jards long, lead. ing up to the sewage pumping station; and great economy is thus ohtained, as cools will not be conomy is thus ohtained, as conls will not be required except in special cases. A solf-acting float in the sewage reserroir siops the air-engines When the tank is empty, ond a safety-valve at the turhine-house then blows off, and at the same time stops the whole compressing machinery, while the pumping of the water for the Great Park goes on as asual. The maximum amount which it was calculated the sewage pumps would ever be called ppon to lift would be 200,000 . gallons a day of twenty-four hours. This was estimated on the supposition that the wholo of the 150,000 gallons of the water supply used at the Crown huildings camo down the fonl drains; that there was a heavy rainfall on the dung and manure-pits and farms at the royal farms, which drain into the system; and that there was a quantity of subsoil water which wonld pass into the main drain when it was suhmerged in flood time, notritbstanding all the precautions we could take to exclude it. Each set of pumps at the sewage reservoir was, therefore, planned to throw 10,000 gallons an hour, whether worked by steam or compressed air, but in a case of emergency doublo the quantity could be lifted by putting steam to work on one set of pumps and air on the other, or the boiler alone at the same place is sufficiently powerful to drive both sets of pumps for the greater part of the day when working at 50 lb . pressure to the inch." When working at 50 lb . pressure to the inch. tion, machinery, embankment, and levelling, part of the charge for rebuilding weir, \&c., is 18, 1192., whioh brings up the total chargo for all the works referred to, to 41,8082 .

The apparently enormous expenditnre is repaid hy the substantial nature of the works, and the lasting benefits that will ensne from their execntion, as well as in the direct profits that will be made by the increased value of the lands and houses in and adjoining the estate, in the proceeds of the irrgation rarm, and the saving of labour in pumping and carting water, to say nothing of the improred sanitary condition, not only of the immediate noighbourhood, tion, not only of the immediate noigh
bat of places further down the river.

thy Messrs. W. Hils and G. Woodyouse, Archiecets.

## IE MEXICAN METHOD OF MAKING HARD LIME FLOOBS.*

ME years since, the writer had occasion to Northern Mexico, to examine and work silver-mines; and, while passing through Mexican villages, noticed the excoedingly es.
village of Salinas, where our party juned some three weeks, the horses passed througb the honse into the inner court. over one of these floors without learing an ntation, or imjuring it in any way. Some after, having occasion to construct some ongs at La guana Momes, an attempt was o to imitate tbese floors and roofs. Attring the peculiar hardness and smoothness of loors to the inherent good qualities of the used, no inquiries were mado as to the
ican method of working. A good quality of ican method of working. A good quality of

Whas selected and calcined in the ordiowder, and afterwards used as required. or was laid with a foundation of about 3 in . roken stone, over which was ovenly spread it 2 in . of mortar, formed of two parts of " swelled greatly in slaking, and was not 1 hydraulic.
ae floor, mude as above, was a total failure. id indent it. As soon the leg surface was aged it began to crumble; and soon hroke It would probably havo been about as hard ordinary lime mortar if allowed to set a oient length of time before heing used. nowing that the Mexioans used the sam orials with better success, their superion orials With better success, their superior Was called into requisition to lay all the aining floors and roof of the rame huilding. uscd the same sort of lime and sand in of foundation. The result was a floor as of foundation. The result was a floor as
and smooth as a piece of polished marhle, a horse conld trot upon without injury. a horse conld trot upon without injur

e floors may not he minteresting.
ae limestono used was a hard, compact blue erial, in some places sufficiently hard to se fire on the drills used in running a drift ugh it for mining purposes. It often cons iron pyrites in amall proportion. This calcined in kilns cut out of a very soft lime. 0 , that likowise is found in that section of atry, and which, on account of its whiteness softress, is called "cal leche." I beliere s never used for making lime by the icans.
fter calcination the lime was removed from kilns, and slaked as soon as cool. Some of as used within a day or two, and some ained a month or more in barrels. All the k made with it seemed to he equally good. $e$, threo four inches thick, was first laid aly over the surfane of the ground, the stone $g$ about the usual size for macadamizing Over this a mortar of about two parts of to one of lime was earefully and evenly ad to the thickness of $1 \frac{1}{2}$ in. to 2 in.; this
allowed to remain for about twenty-fou cs, or until the surface had become quite It would probably tako longer in this ate, where the air possesses a greater amount pisture than in Mexico.
he floor was then thoronghly pounded all - with a tool composed of a hlock of wood at 1 ft . square and 3 in. thick, having ando conld stand while usine it. Tho that an could stand while using it. Tho whole again as soft and maist as when first laid. $s$ operation of ramming hrought the water in mortar to the surface so as to form a layer emi-fluid substance on top
he floor was again allowed to dry, and again ten over each day for about a week, when operation hrought only a slight amount of ture to the smrface.
amediately after the last pounding the whole ce was powdered with a thin layer of red ows :-
smooth, nearly flat, water-worn stone, e larger than the fist, was selected from the of the stream which ran through the place, From From n pepor by Gemeral T. G. Ellis, C.E., read
ting of the American Soeiety of Civil Engineers.
gone over, rubbing down, and leaving the snrface of the lime as smooth as a piece of polished stone, the red of the ochre rendering it of a rich brown colour
In less than a week the floors made in this way were sufficiently hard to bear the weight of a horse without indentation. Roofs were made in the same manner, without the colouring matter, which was added only to give the floors a better tint than the gray of the mortar. These roofs were perfectly waterproof, and were unaffected by snn or rain.
In the city of Monterey, sidewalks in the principal streets are made in the same manner, and some of them have lasted for years, wearing The great durability stone.
The great durability and strengtb of these hoors and roofs are entirely owing to the ponnding operation above described, as the same material
Tho tried in the ordinary way without success.
Tho writer has not had occasion to make use of this process in this climate, hat gives a description, hoping that it may be of value to others who may have occasion to lay floors of limo in architectural or engineering works. He bas never heard of this mothod being employed in this country; although it seems singnlar that it should be used so generally hy a neighhonring nation, and be wholly unknown to our builders.

The following correspondence grew out of the above:
From Estevan A. Fuertes, C.E., Member of the Society.

A paper read before the Society, npon a Mexican extreme consolidating mortars, my mind that perhaps, ita author might be mistaken in attrihuting its main durability and hardness to the slow system of consolidating the road.bed and

My doubts have grown out of the circum stance that the author says (withont seeming to attach much importanco to the fact), that oohre, or a similar pigment, was mixed with the mortar.

I think that the colouring matter, believed to be of secondary importance, is the main ingredient which determines tho superiority of the coment described; and instead of its being ochro it was underhusnt hrickdust.
If I am not tho ono who is mistaken, tho con sideration of this subject will bring up for discussion the method of obtaining a cheap and superior cement, that, I helieve, has not heen Thed mnch in this conntry.
The bydraulic engineer has much need of studying the canses which indnco tho "setting of mortars," beoause it is almost certain that the resistance of such materials as hricks, bimes, and cements, depends upon their conditions of crys.
talliantion. tallisation.
I am aware of only two methods of hardening the silicates usually employed in hydraulic works, viz., the gradual chemical change (crystallisation in the slow, humid way, as in submerged foundations, \&o.), and the quick vitri fication under the influence of intense heat, as employed in briok-making.
It is notorions that under-burnt brick resists very hadly the influence of atruospheric wear, especially noar salt water. I have crumbled in my hand an under-burnt brick, one year after its exposure to sea spray, and gunpowder was upon its porons substance; but tho same clay burned with clialk, making a doublo salt of carbonate of lime and silicate of alumina, or rather a sub-crystalline double silicato of lime and alumina, after heing ground, made a cement susceptible of receiving a splendid lustre, and withstood the action of the spray and of the waves without apparent change.
Both the limestone and the
ased separately as huilding motorick had heen used separately as huilding material in a hurying-
ground near the sea-shore, where the ments were condnoted in 1861 Where the experi of exposure for the stone, and twelve months for the hrich, were sufficient to render hoth material useless; but when burnt, ground, and mixed they stood much better than tho finest and distinctly crystalline marbles.

At the end of three years, or more than the sum of the times of durability of each material I left the place where the experiments were made, and theu the cement had not changed
where the surface had been left rough, nor barnished where it had heen polished.
A cement called "Repocado" by Spanish"
engineers is made by mixing in several proportions fat limes with sand and under-burnt brickdust. The nsual proportions are measured hy equal volnmes of the three materials; but when the cement is to be nsed for stopping roof loats cementing cellars, or where blows upon the ementing cellat, or who the sand is greatly diminished, and even suppressed altogether.
The Spanish learned the componnding of this cement from Biscayans prohably ; and I douht ement from Biscayans prohably; and I douht if the Romans had anything to do with its
introduction iu Spain, because the ruins of
ancient wator-channels with "revocado" exist in the Basque provinces, where neither "exist nor Moors evor penetrated nor Moors evor penetrated. The Biscayans, in heir turn, are the most ancient people with Whom we are acquainted, it heing probahle that hey preceded the Pboenicians.
I have seen Spanish "revocado" in Mexico, and it is natural to suppose that the Spaniards introduced tho art in that country during the Conquest.
Now, may it not be possible that the oohre referred to by Gen. Ellis is only powdered hrick, ased to male the excellent and hard "revocado"? The description given of the method of consolidating the mortar, \&c., and even the employment of wooden compressors, explain accurately tbe process still followed in Spanish countries to form the floorings of plazas, public walks, \&c. In many cases, immediately before the cement necomes set, its surface is polished with a lasting lustre.

## From Gen. Ellis, in reply to the above.

Having read the romarks of Mr. Fuertes npon my recent paper relating to hard lime floors, I apprehend that he did not gire sufficient attention to the process therein described.
In no oase was the red pigment mixed with he lime and sand, as he supposes, but was bardening for a surfaco colouring atter the fardening process was completed. Roofs and idewalks of equal hardness were also made by the same process of successivo ponndings withont tho colouring matter, and finishod hy polishing The same manner as the coloured floors.
The pigment used upon the floors was not brick-dust, but a rod earth found in the vicinity, probably a fine clay coloured with sesgni-oxide of iron. Bricks were not nsed in that part of tho country; "adobes" taking their placo in building.
It will thus be seen that the material of which the described floors and roofs were made was not the same as the "revocado" used in Spain and Southern Mexico, descrihed by Mr. Fuerteb. Is not the term revocado essentially the same in meaning as the moro common Castilian word revorue, one heing the participle and the other the nonn corresponding to the Spanish perh revocor, the nearest English equivalent to which, in an engineering sonse, is to rough cast? This implies an admixtnre of coarse material in the mortar. "Revoque" was known to the Romans as "pariet is linimentum."
Mr. Fuertes is, I think, in error when he attributes any rapidity of setting, greater hardness when set, or improved hydraulic qualities, to the mixture of burnt or under-burnt brick in any proportions with lime. The experiments of meaton show conclasively that the ouly gain is the slight amount of moisture that tho brick will hsorb from the limo and favour its drying
The only way in which hydraulic properties can he given to a compound of silicate of alumina and carthonate of bme is by harning them together after being wized, as in the prodaction dono in the case Mr. Fuertes recount s eloy and ono in the case Nr. Fuertes recounts ; clay and chalk wore burned togecher, and, if in proper proportions, would form an excollent artificial shonld be a good huilding materio that neither shonld be a good huilding material hy itself.
If the "revocado" of the Spanish possesses any quick-setting or hydraulic qualitios, it is prohably not owing to the admixture of common brick, but to some qualities of the lime, or perhaps what Mr. Fnertes has taken to be brick was artificial trass, formerly much used, which was hnrned liko brick, and, when added to mortar, gavo it hyaraulic properties.
I think it highly prohable that the process of pounding ordinary lime-mortar for many successive days in order to give it hardness, and afterwards polishing tho surface, originally eame from Spain to Mexico, and is probably $2 u$
ancient practice. The only matter of surprise
is that it has not become more generally known and used.

## Note by the Printing Committee.

Is this "ponnding process" of the Mexicans anything more than a simple yet effectual method of freeing the mortar of its surplus water, and thereby insuring a condition in which the lime can pass to a crystalline carhonate, at the same time compacting the whole mass int the hest possible state ?

## WATER IN ROME.

In the conrse of a lecture last week on Roman antiquities, delivered at the Royal Institution Alhemarle-street, Mr. J. H. Parker said,-The celehrated Aqua Marcia has recently been again brongbt into Rome, and is rapidly coming into use, being considered the finest drinking. water in the world, always cool even in the hottest
weather. At its sonrce it is so intensely cold weather. At its sonrce it is so in in the cols tnmbler pnt snddenly into it will hreak in the same manner boiling water will hreak a tumbler in frosty weather in London. The company which has now bronght this excellent water again into Rome consisted cbiefly of Englisb capitalists, and the late Mr. James Shepherd, an Englishman, has the chief merit of the direction of adopt the . Td engineers found it expedient to adopt the old plan of the Empire. For the
first ten miles of its course, as far as Tivoli, it is first ten miles of its course, as far as Tivoli, it is necessary, just in the old manner. But after necessary, just in the old manner. But after
descending the hill at Tivoli (avoiding the cas. descending the hill at Tivoli (avoiding the cas. cades hy a considerable détour), where it arrives
at the level of the low hills of Rome, it is at the level of the low hills of Rome, it is
carried in large iron pipes in order to avoid the still greater detour which the old aquednct took to keep clear of the streams that cross the line, and fall into the river Anio. Tbe water of that river, which falls into the Tiher about two miles above Rome, is always distinguished from that of the Tiber itself hy being clear, and con. trasting strongly with the muddy, yellow water of the Tiher. The water of all the early aqueducts was that of springs wbich fell into the Anio, and were intercepted and forced to flow througb Rome.
The earkest was the Aqua Appia, made B.C. 312 , the sonrces of which are in the meadows of Lucullus, ahout seven miles from Rome, at a low level; one of the springs is in the fine old stone quarry on the bank of the Anio, called the caves of Cervaro, from which it is believed that the great tufa blocks for the great wall of Servius Tulkus had been taken. This was, therefore, an old stone quarry made aqneduct was made.
The course of this earlicst aqueduct was entirely subterranean, and at a considerable depth until after it bad entered Rome and bad passed for a mile under the Calian Hill when it bad to he carried across the deep valley from the Crelian to the Aventine, where Mr. Parker found it during his excavations in 1868, carried over the Via Appia upon the Arch of the Porta Capera; and a portion of the specus remaining in one of the towers of that gatc, now a gardencr's cottagc. He traced it again in a snhterranean stono quarry onder Santa Sabha, and from thence nuder the Aventine Hill to its mouth
mear the Marmorata and the Porta Trigimina on the bank of the Tiber
The Aqua Virgo was mado by Agrippa in the time of Augustus, and came from the same meadows about a mile furthcr from Rome, wherc also several springs are collected in a large central reservoir, and then carried in a specus to Rome. Both of these streams hring a great deal of clay with them, the soil of the meadows being clay upon the tufa rock.
The specus of the Appia is filled up with clay to the depth of 2 ft ., or one-third its whole height, as may he seen in tbe stone quarry; this clay is I deposit left by the water, and was probably the cause of its being abandoned, as it was too deep to be destroyed by the Goths or other enemies. The Tirgo was restored to ase by the Popes, and is now called the Aqua di Trevi, having for its mouth the celebrated fonutain of Trevi. The Anio Tetus was another spring that rell into the Anio below Subiaco, and twenty suhterranean, thongh it can we traced by meang of the wella that fall into it. The Marcia also comes from the same neighbourhood below Snbiaco, butt the spring there forms a small lake about balf a mile from the river. The Tepnla
and tbe Julia come from the Alhan Hills, near Marino, and are added to tbe Marcia at tbe great piscinz or filtering-place, where all the earlie aqneducts emerged from the hills at the leve required. From that point the arcades are made o carry them across the Campogra until the onter the wall of Rome. They are then carrie ppon the high hank of the Tarquins as far as th Pretorian Camp, and tbence across the Pome rium to tbe centro of the great Agger of Servius Tullius on the Viminal Hill, wbere the were found with inscriptions relating to them on wo Cippi during the excavations of 1870 made to enlarge the ralway station; there wasa large reservoir at that point from which the wate vas distributed. The Claudia also comes from Subiaco, just above it, and was also a copion pring intercepted. But the Anjo Novus is par of the river Anjo itself, two miles higher up, where a fine cascade falls over the rock in a deep ocky gorce. Here great engineering work vere made in the time of Claudias and Nero. great wall, 12 ft . thick, hnilt of large blocks of tone, was erected across the river at the lowe part of the gorge, forming \& dam of 100 ft . higb nd 12 ft . thick, to cnclose a portion perhap 00 yards long, hetween the dam and the natura escade ; the water was made to fall over the lam, which thos became the coscade; but ne cnd of it a specis was made below the level of the surface of the wat so the the leve minst alwor flow through thet opeous and con ast always fow througb that specus, and con equently through Rome, before any of it conla most useful piece of enginecring continued in use for centuries. It was destroyed in the four teenth century hy an ignorant monk, who was nnoyed hy a temporary flood in the npper annoyed hy a temporary flood in the npper monastery, and, to relieve that, be made a hole at the bottom of the great dam. Tbe force of the water soon carried all before it, and caused a great flood over all the lower country, even to
the Tiber, and did immonse mischief-even the walls of Rome were injured.

## alls of Rome were injured.

Mr. Parker said that he bad not time to describe the tbermae, or great public baths, to supply [wbich most of the aqueducts were made, but he could not conclude witbout mentioning that the opimion commonly entertained, that the ancient Romans were ignorant of the fact that water will rise to its level, is entirely a popular delusion. At every half.mile of the aqueducts, on their course from the foot of the bills o Rome, each aquerinct forms an angle, to reak the force of the water, and at that angle great reservoir is made, with a piscina fltering.place at one end. Each piscina consists of four vaulted chambers, two above and two below. The water enters into the top of the first upper chamber; it then falls through a bole in the vault into the first lower chamber, then passes through small holes in the intermediate wall into the second lower chamher, then rise again through a hole in the vault into the second apper chamher, and then follows its course at the ame icvel as it originally entered, depor. mud in the lower chamher as it passed. Each
piscina is therefore made npon the principle of piscina is therefore
They need the large stone specus insten ordinary pipes, because they could not depend rdinary pipes, because they could not depend either ppon their leaden pipes or their terraof water. Notbing hut tbe concreto stone was strong enough
At the prosent time, the cast.iron pipes of the new company are bursting every day in the streets of Rome to such an extent that the managers of the company fear that this expense will be ruinous to them. This scems to show that the old homans were better engineers than we are.

Rational Gymnastics.-A tract has been ssued by Bailiere \& Co., of King William.street strand, titled tational Gymnastics reviewed in their rclation to tbe Health and Education of he Younger of both Sexes, heing the Subject o Lecture dclivered before the National Healt Society; hy Augustus Georgui, formerly Pro fessor of Anatomy and Sub-director of the Royal Central Institnte for Gymnastics at Stockholm cc." The author proposes that physical, no less than mental, education he equally extended to aud compulsory for hotb scxes; and that normal schools be establisbed for teaching gym with as an art and a science in connexio with suitable anatomical and physiological in

## THE ROYAJ ARCHITECT, "CHADCE

Sir,-Tbe presumed son and family of poet, Geoffrey Chancer, having lately formed subject of an article in the Builder. (No. 1 p. 351), it may possibly be interesting to readers to he told that the poet himself cam near to being formally appointed architec King Richard II. as the language of his age mitted. That is to say (on the authority of life by William Godwin, 4 vols., 1804), tha was in 1389 appointed to the office of Cler the Works; and a Latin docnment is cite which the works at Westminater Palace, Tower of London, and at various other pla specially named, are placed under his together with anotber document in which th is assigned to him "capellamnostram collegio Sanct Georaii infra castrum nostrum de Wy sore, que minatur ruine, \&c
It will be new to somo readers to find not only was St. George's Chapel at Win built, but it was threatening to go to rnin, in fourteenth centry.
The poet did not hold his office, it appear, longer than ahout twenty montbs. W regard to his special qualifications for it, history is silent. He was entitled to the as ance of a depnty, for whom a salary was fided hy the Crown. His own salary was per diem,-eqnivalent, it is reckoned, to 65 ear in modern money. He bad been, previous period, comptroller of the customs the port of Jondon.
With regard to the term Clerk of the Wor may not be generally known that the ar tect to the Corporation of London was officially known as "Clerk of the City's Wor antil within the last thirty years. Previous that time expressions like the following we Ge heard in common nise at the Office of WY Guildhall. "Is the Clerk of the Works i "Tbe Comptroller sends his compliments to Clerk of the Works, and would be ohliged by stepping over if disengaged"; or, perhaps,
thundering tone, "The Clerk of the Work thandering tone, "The Clerk of the Work wanted immediately in tbe Court of Alderra dc. The Royal "Clerk of Works appear the reign of Charles 11. to bare grown ohn Denham, another poet, is described Evelyn.

## A NEW TEMPERANCE HAJIL FOR

 BURY.The teetotallers have now begun to bui new temperanoe.hall in Henry.street, Bu the height of the huilding in front will be 3 It will be 35 ft . wide, and 84 ft . long. It e two stories high, and tbe frontage in Hen street will be of seconds briok, with stock h dressings and Burnley stone cornices, sills, n the upper story in the front will be tw indows, while on the lower floor there will rindow on each side of the main entrance. he ground floor tbere will bo a 1.00 m square, scitahle for " Good Templars" to and it there will be a horso gallery. It will be fitted np with all furnit necessary for conducting meetings. Behind odge-room there will he a room 33 ft . wide 17 ft . long, which it is intended to let off for use of Oddfellows or others as a cluh-room.
the first floor there will be a large assembl the first floor tbere will be a large assembl room, 33 ft . wide by 65 ft . in length, having it a platform at one end, and a gallery at ther. The height of the room will he 22 Under the platform will be a room for the pr
paration of tea, and at the back there will paration of tea, and at the back there will three retiring - rooms. The inside will finisbed plainly, the timber fittings heing sim, varnished; the walls will be coloured and finish with stencilled ornaments.
It will he erected from plans pr
The contracts for the different portions of work have been entered into as follows: rork, Mr. Semuel Smith; joinering, Mr. Char Freen; plumbing Mr. T. Caton; stonework, tames Fill ; slating, Ir. John Kay ; and plaste ng, Messrs. Lomax \& Sons. will be 1,6002 .

The Albion Tavern.-According to the $C$ $P_{i} e s s$, the freebold of the Alhion Tavern jnst been acqnired by the directorg for freeholds of hoth this and the London Tavern

## THE NEW LARGE RESERYOIR AT

 OSWESTRY.This undertaking is now in a fair way of being aced in sucb a position as to justify the addinal expenses to be incurred. The original timates for the work varied from about $800 l$. $1,900 l$., and to runke the "big hole" at tbe

lion gallons of water; and after great pecn. ury loss on the part of one of the contractors, d sacrifice of time to his surety, and after a mal opening two years ago, no sooner was the ator let into it than the steps gave way, and water was of the colour and nearly of the asistency of mud. The wet weather coming the hunks, or "batters," all fell in, and, as eaervoir, it was perfectly useless. It has reheen commenced upon it. Mr. J. Ward has dertaken to make a long puddle wall, to pout the water from the springs and drains tho adjoining land, to remake the dilapidated has and drive pilos into them, and to line it h of September next. A number of men are \% engaged npon it. When this rescrvoir is apleted there will be a storage in the three
ervoirs of ten million gallong of water. Supervoirs of ten million gallons of water. Sup-
hing them to be all full, they would supply ing tbem to be all full, they would supply
$h$ person in Oswestry with ton gallons of O water a-day for twenty weeks. The total thill then be, in round nambers, 3,500\%. On
anlf of the corporation of Oswestry, AI alf of the corporation of Oswestry, Mr.
orge Owen, C.E.; Mr. John Morris, builder; orge Owen, C.E.; Mr. John Morris, builder;
1 Mr . W. H. Spaull, architect, have consentea nspect tho works during their progress.

## MONUMENTAL.

The statue of John Bunyan which Mr. J. E. hm was commissioned hy the Duke of Bed. I to execute for the town of Bedford is far anced towards completion, and promises to fino work. Tbe pose of the figure, which is heroio size, is easy and natural ; the hands d a book; and the face upturned to hoaven gests the inspiration to which Bunyan's arkahlo prodnction is often attributed. The ls of the short cloak of the period, carefully dolled, serve to give variety and olegance of a to the back of the frure. Whon completed,
model will he produced in hronze, and will ad on a pedestal, wbich should not be too $y$, in St. Peter's-green, and will hear relievi three of its sides. Mr. Boehm has just now t, intended for St. George's Cbapel, Windsor, has in progress, amongst other works, an the late Earl of Derby, which has been ented by Mr. Noble, was nnveiled on Tuesday ieston by Colonel Wilson. Patten, M.P. On samo day Lord IIoughton unveiled a statue ed ins St. George's.square, Fuddersfield.

MPLETTON AND OPENING OF THE NEW GLOBE BRIDGE AT PECKHAM.
fre new bridge over the Surrey Canal in the amercial-road, Peckham, which has been for e timo in coarse of erection, and respecting
cb dificulties and misunderstardings have cb diliculties and misunderatandings have
spired, already mentioned in the Buider, apired, already mentioned in the Bulder;, at length being satisiactorily conpleted,
taken over from the contractor by the Cam vell Vestry, who have officially declared it a for trafic
he hidge has been erected on the site of the hridge, wbiob was a narrow, incoavenient k struotnre, only 12 ft . in width, whereas
now bridgo is 40 ft . in widtb. The abutnow bridgo is 40 ft . in widtb. The abata fondation of concrete, carried 2 ft . water-level with red pressed bricks, and te dressinge. The roadway over the bridge aried by nine segmental-arched girders of ught-iron, and is protected on eacb side by a (icon ornamental parapet railing.
he approaches are by easy gradients from 1-street and Cummercinl-road, but the comnications with the tow-path are by sharper icb an ornamental hand-railing is fixed.

The bridge has been erected from designs furnished hy Mr. James Dredge, C.E., of
Buckingham-street, Adelphi ; the contractor Buckingham-street, A
being Mr. S. S. Peach.

## THE TRADES MOVEMENT

London.-A strike is imminent.
Whitehaven.-The journeymen joiners have adressed a circular to their employers, intimating that at a meeting held by them on the 7tb it The following resolution was agreed to,That we solicit you for an advance of 3s. per week on our present rate of wages, knowing all trades of the surronnding country are on the advance, and the prices of victuals and other materials being so high we think it a just expire on the 7ethico for an advance was to wares in Whitehaven for journeymen joiners is wagres in Whiteha

Osivestry.-Tbe stonomasons who have been on atrike at the parish church have gone to work a compromise between the contractor and the men haring been effceted. Twenty-eight of the men demanded a rise from 28s. a week to 30s., and a reduction of one hour a week. The terms on which the men returned are 298. a week, being an increase of 1 s ., while the hours of labour remain unaltered.
Montgomery. - The strike of tho Montgomeryshire joiners at Forden Workhouse has terminated in a compromise. The men demanded an increase of 3 s . and a diminution of two hours in ut no 1 the contractor offerfd them $2 s$. rise, hut they have now noreed to the contractor terms, and work is resumed.

## THE POSSIBLE STRIKE.

Sir, - In a reoent article entitled "Tho Chances of another Building Strike," tbe writer states that we "are acting with a view to enforce another increase of wages." The facts, so far as tho masons are concerned, are these:-We fulfil given the employers six montbs' notice to iz an agreement ontered into last summer, houid it trade was at all good this season, we That was part of the compromise accepted by the masons in settling the dispute of 1872 . Tho description of the demoralisation, mistrust, and suffering of the men certainly does not apply to our trado; for the reanlt of the lock-ont was a gain of over 100 new members to three London odges. Tbeir pay for the time lost was 168.
Again, it is stated that
at "to strike without the Society's approval, we should not be supported hy its funds." I heg to state that should the omployers not fulfil the promise given last the advance on the date tiven in the to obtain the aduction of the mate given in the merial, some two of the socioly having been obtained we have make make up a weekly payment of 1 l. per man. hundreds of masous working overtime, and the societies are powerless to stop them." I defy the writer to prove the case in a single instance, unless they are being paid time and a half.

> Henry Broideurst, Stonemason.

THE COOKERY CLASS AT SOUTH KENSLNGTON.
Sir,-The visit of Sohool Buard girls to the class for Popular Cookery at the Exhibition was noticed in your last number with some kind and udicious remarks. If the children of on poorer riends are to profit much hy the excellent eaching given on such occasions, it will nnlonhtedly be desirable, as you point out, that the viands they are taught to preparo should be, in general, what they will be most likely to meet with in their ordinary life.
But on this first occasion of an organised effort in this direction the object of our visit was rather to test the amount of interest which would be excited, without special provision for the particular andience, and to see how much of attention would he given at the time, and the parted. pas very satisfactory, and the first experiment
of it sinco sent to me by the ten pupil teachers who were present slow tbat our object was fully attained.
Nothing "advertises" so speedily as a num. ber of young girls talking of an event, and 1 am sure that when the next and more mothodical step is taken, whereby selected girls may attend a series of five or six lessons properly arranged, wo shall haro many eager: applicants for this useful education. Bat already enough is anrely evident to prove that a permanent "Sohool of Cookery" should be at once eatablished, whero young women could learn from good teachers, and could then be admitted to practising classes and examinations, and to certificates, and evon diplomas, if such a grave Greek word is proper to denote women who can boil potatoes.
In seven cruises, far away and entirely alone have learned much of cooking, but with dire sufferings sometimes, which a few preliminary lessons would bave saved. J. MacGregor,
lem preliminary
latimes which

## SUDDEN DEATH OF AN ARCIITECT

We regrot to have to record the death of Mr. T. B. Jones, of the firm of Jones \& Solomon, Whitehall-place, which occurred suddenly on Sunday evening last, at the house of a friend M1r. Jones was in company with some profes sional friends on Saturday afternoon, and conversod in his usual manner. Tho writer of this was almost the last person who spoke to him when he left for home between six and seven o'clock. On the Sunday afternoon he went to pass a few hours with a personal friend at Chelsea, and during a conversation, without uttering a word as to the attack, he merely leant back on his chair; closed his cyes, and expired. His atillness was instantly ohserved, and medical aid prooured with all possible haste; but of course with no avail. Mr. Jones had long complained of suffering from disease of the hoart, and at the inquest, which was held on Tueaday, that fact was established; the verdict was therefore, in accordarco with it. He was ahout forty-two years of age, and leaves a widow and four children to lament his loss. At the time of his death be was engaged upon the worling drawings of the large asplura abont to be huild at the expense of Mr. Holloway, at an estimatod cost of 70,0001 . Tho funeral vill tate place in the Brompton oometery on Saturday, the 7th iustant.

## RENOVATION OF ST. GEORGE'S HALL,

 BRADFORD.This hall is nodergoing a "spring cleaning," and is to he repainted and gilded from floor to ceiling. The organ is to he put into a state of efficiency, the ventilation and warming-apparatus is to he improved, and the systom of lighting to be altered. Messrs. Lockwood \& Mawson have prepared the drawing for the decorations, which will be carried ont hy Mr. Henry Briggs, of B1ad ford. Their general character is hased npon the Pompeian atyle, and tho work will be treated in broad, firm tones of colour. Hitherto the painting of the hall has been in light shades, which very soon hecame ohliterated by amoke and dirt. The great object of the present scheme of decoration, has heen to gire the hall an entirely different character, still preserving its architec. tural features.
The wall round the area is to have a dado, 4 ft , in height, in hlack, divided into panels, with gold and small scrolls at the corners, the base below being in maroon. From the top of the dado to the cornice underneath the stalls, the walls will be in Pompeian red, divided into conrses, with fawn-colour lines. This part of the wall also will be divided into panels, in the centre of each of which will be a wreatb enclosing a blue gromid, on which will be inscribed in letters of gold the namea of the great composers. The divisions of theso panels will correspond with the trusses which corry front of the stalls. The gronudwork of the face of the stalls and the cornice bencath will be in cream colour, and the ornamental work will be enriched with pale green bronze, picked out with blue and gold. The partition at the back of tho stalls will be in Pompeian red, as also will be the walls round the galleries and the orchestra. The front of the gallery will be treated in almost exactly tbe same manner as the front of the stalls, and the supporting columns, caps, and brackets will he in pale green bronze relieved with gold. The mouldings round the gallery walls and windows will be in cream colour, with
a blue fret and light maroon rosettes undorneath. The windows and the railings will be bronzed and the seats and woodwork will be painted fawn colour and varnished. The general colour of the great cornice round the hall will be cream, the trusses and moulding in pale green bronze
picked out in gold. Tho coiling will he sinularly treated, the gronndwork of the panels being in blue.grey, and the beams and mouldings in cream colonr relieved with hlue and mold. The pilasters at the orchestra end of the hall will he cream colour, the rroundwork of the panols being blue coluur, the groundwork of the panels being blue and tho rich soroll ornament and surroundiug moulding in gold. The masks in the oentre of capitals will be in bronze, and the figures supcapitals will be in bronze, and the figures sup-
porting the lights will be bronze relieved with porting the lights will be bronze relieved with cream colour. The pipes will be pale green bronze, diapered in gold, and the trellis work in tho panels will be regilded. The cornice and capitals will be picked out in blue. Tho orchestra front will be treated in cream colonr, black, blue, bronze, and gold. Tho saloon, corridors, staircases, veatihule, and ante-rooms will all be hall.

Tho ball will be lighted by fonr large paten ann.burners from Messrs. Strode, of Regent' Park. These will be anrrounded by large npright flues carried directly through the roof, and will bo so disposed that the produots of the ga will pass at once into the open air. Separate flues will also be provided round the centre ono New heating apparatus will be supplied by Mr. Clapham, of Keighley.

## FIRE-PROOF FLOORS.

Str, - I read occasionally the Builder, and have never noticed any romark having heon made on the construction of fire-proof buildings by the uso of Cones. Tbere aro two sizes of these, 9 in . by $4 \frac{1}{2} \mathrm{in}$, and $4 . \frac{1}{2} \mathrm{in}$. by 4 in . They are hollow, like garden-pots, made with pure red earth, and resist heat. They were used at Bnckingham Palace. William Whitehead. ** Some years ago these floors, as coll structed nnder the late Mir. Nash, were described in our pages.

THE BUILDING STONES OF THE NORTH OF IRELAND.
At a mecting of the Belfast Architectural Association, Mr. J. Lanyon in the chair, Mr. W. Gray read a paper on "The Building Stones of tho North of Ireland, geologically onsidered."
Mr. Gray referred to the connexion between geology and architecture, and showed that it was important, if not absolutely necessary, for an architect to know something of geology, so that he might be the hetter prepared to know whero to find and how to nse his materials, so as to secure variety and beauty in his designs, and strength and durability in his stractures. Mr. Gray then gave a general description of the geology of the North of Ireland, and of the various strata exposed, noticing more particnlarly the formations which are capable of yielding building atone, referring to each bed in descending stratagraphical order. The marked peculiarity of the North of Ireland is the occurrence of extensive beds of trap rock, so well known in connexion with the Giant's Causeway. The same rock extends over an area of abont 1,200 square miles, not in one solid bed of rock, bnt in a number of irregular beds, each having been originally poured forth as volcanic lava, mud, ashea, sc., either in the worn snrface of the chalk or under water. Mr. Gray explained that the trap rock usually made damp walls, not because the stone admitted wet throngh ita substance, bat because of the defective mode of jointing the masonry; properly bnilt, the trap wonld be impervions to wet. Below the trap there occorred a whole series of stratified rocks, such as the chalk, greensand, lias, and new red sandstone. Between the greensand and lias is the proper position for stones: bnt in the North of Ireland this series is entirely wanting. The new red sandstone sield the Scrabo and Dandonald stone, which jields represented at vaxions other points, such as the Gas Works, Belfast. Dunmeryts, such as the more, and Moira. ; Dunmer they river, Money. the carhoniferons, Under the new red comes stones of Dungannon, Cookstown, Dungiven,

Donegal, and Ballycastle; all of which come rom tho upper portion of the carboniferous system, the lower portion yielding the limestones of Armagh, Castle Espiu, Tubbermore, Dundalk, sc. The old red aandstones occur below tho carboniferous, and aro possibly represented by the sandstones of Cushendall, and, douhtless, some beds in Trrone. The silurian formation occurs chiefly in County Down, and farnishes tbe com. pact stone of Ballygowan quarries, and tho slate of Greyabbey. Mr. Gray then described the various descriptions of granite, partienlarly the very excellent cxamples from Castlewellan Newry, Bessbrook, Gorawond, and Donegal, and demonstrated that we had in our locality a variety of granite which in quality or quantity are equal, if not snperior, to the granite of any are equal, if not snperior, to

THE NEW FISH MARKET, OLDHAM.
This new Fish Market has just been opened. The Corporation, more than twelve montis aro determined to erect a small market for the retail of fish adjoining the present market, and consequently docided to advertise in competition to architects for drawings, two preminms heing offered. The designa of Messrg. Manonall \& Littlewood, architects, Manchester, were selected, and they were instruoted to prepare the working drawings. The building was commenced in Febrtary, 1572, and is now completed. The size of the market is 80 ft . in length by 40 ft . in width, with ground.floor and basement, the rround-floor heing set apart as the market, which is lighted chicfly from the roof, with north lights. The roof has three bays, the conwroneht iron, and timher. The market is fitted up with stalls formed of polished stone bearers and Sicilian marble tops, with monlded nosings. The framing above the stalls for oerrying the ponltry and game, dc., is of wrought iron, of simple construction. The stalls are divided so that tbey can be let to twenty tenants. The contractors for the construction of the buildings, except ironwork, were BIcssrs. Grcenup \& Watts, of Manchester. Messrs. Mabon \& Co., of Man. chester, were contractors for the ironwork to roof and gates, \&c.; Messra. Wolstenhulme \& Rye, the ironwork for gronnd.foor; tho marble and stone fittings were by Messrs. Pattensons, of
Mlanchester; and the wrought iron in connexion Manchester; and the wrought iron in connexion with fittings, Messrs. Hibbert \& Co., of Manchester. Mr. David Jackson, of Oldham, has carried out the flagging. The total cost of the market has

THE DESTGN FOR NEW SCHOOLS IN OXFORD.
Is a convocation beld on the 23rd ult., Mr Scott's design for the nesy achools to be erected in the High-street was snbmitted for approval.
Mr. Fyffe, of the University, as reported in the local Journal, entered into a lengthy criticism of the plans. He objected to the smallness of the
quadrangle, necessitated by the proposal to erect quadrangle, necessitated by the proposal to erect a complete bnilding on the site now available, rather than providing for gradual completion, The quadrangle would be only one-sixth the size of that at Magdalen, one-half the size of Lincoln quadrangle, and yct the buildings wonld be much higher. The conrts of Whewells buildings at Cambridge showed what would be the gloomy results. The cloisters, too, wonld be both nartheir und lower than those of Magdalen, and reason for a top-heavy elevation. Of details there were more than in all the colleges put together. Not a featnre but was a rednction and a parody of something else in Oxford. to the court, progress from door to door was only possible by "cannoning" off a pillar. The design made no provision for extension. The elevation elements that of a church embraced with other with the other academical buildings of the Ejir street, but faintly only with St. Mary's Mr Fyffe went on to suggest how the ground avail. able might have been more satisfactorily treated his essential point being prospective and not present completeness.

Professor H. Smith warned members of the difficnlties they would incur by the rejection of the design. One architect of name had given as his reason for refusing to compete,-the treat-
ment of the previous design. He urged the
following pointas:-Do not mistrust first impr sions; do not reject ornament because it is a less; do not compare schools with colleges. ther " we live and lounce and smoke: of also the diffioulties of the mround, and of retti more, and the necessity of a front to the His street. Thero is no oomplaint as to tho amos of examining space ; in short, the design is got in itsolf, but there is a stronger reason accopting it,-it would bo difficult to better.

The Principal of St. Mary Hall would against the design, as a "complete plan on incomplete space"

Dr. Acland desired to follow his first impr sion, which was that the desirn was nnwort of the object and of the site. Ho compn it with the Examination Buildings at Burling House. The better way of getting a des would be to select and trust some one m
He criticised tho condition of the High. street All Saints' Church nnspired, the new buildir opposite unworthy of Manchester warehons and a huge gap below to be filled np by a face entirely nnworthy of the external expression the interior work of a university. We sho follow in preference one of our serions, sim unpretending academic fronts.
Mr. Rngers knew nothing about art, ho thankful to say. It was high time to gret ric eminent architects." Oxford bad suffe long enough from them, and from the imbeci which characterised their productions.
The design was rcjected by fifty-fonr $V$ against twenty.

## COMPETITLON.

Deaf and Dumb Asylum, Drargate. - The minms offered in this competition bave b awarded as follows :- 100 guineas, 1st, Mes Drew \& Bower, of Margate; 50 g.
Mr. Thomas Menry Watson, Londor.

## SEWER VENTILATION,

This is an important suhject, often treated of rd with many suggestions, in our colamns, aring the lest thirty years, but still in an ithdrawal of the sower-gases throngh rain or her pipes to the bedroom or npper stories of uses is ono of the many sugrestions referre , as also is the construction of speoial shaft c districts or towns to corry the ease yond the imminent risk of befouline gases up $r$ sleeping-apartments, and even to "consume" em on the way, hy help of furnacessume ust, hy rarifying, them, to hasten their or, at re into the general atmosphere thereby deparoomposition of sewer.gases by deodorisers in 0 sower-gratings is another mode of getting ese suggestions have heen and some or all of ese suggestions have heen tried; hat still the estion how bost to get rid of our sewer rarations is an unsettled one.
A contribution towards this very desirahle c. R. J. Johnend has been recently made hy tented an apparatus for rarifying or consnming wer-gases by means of heat while passing rough iron or other suitable pipes either in unexion with honse-drains, and rurning up hind grates or ranges to the tops of houses ; in conmexion with the sowers, through special afts provided with furnace errangements, on plan of his apparatus.
phonale chat the solution of the prohlem be both mechanical and chomical in com. ation; that some suoh apparatus as Mr. anson's, oombined with proper ohomical means wer-gases while thus nader the favourable quence of adequate leat, may effect the pur. se in view, bnt this would not be rery practic. le in house arrangements, and oould only ply, on the great scale, to diatricts or tomes it be proved that heat applied in tbe way prosed will not merely rarify, but will, chemicall roughty, and without fail, decompose the mol-gases, then no harm might arise from el with houseroofs; bat this is a chemicat
question. That heat in comhination with chemicals can, with fitting apparatus, be mado to thoroughly decomposo, or "consume," such bominations as sulphoretted and phosphoretted hydrogen, \&c., there can he no doabt; but whether any heating apparatus can he so applied to dwellings as practically to decompose, and so destroy, such emanations mast be tried and proved by actail experiment

## BUXTON EXALTED,

Buxton "of the Peak" and its neighbonrhood have found anotber panegyrist. Mr. James cotland as his pointed are as well known in by its wlass, having heen freed "From painful, wrenching misery,"
has filled two columns and a half of the local Advert iser with bis song of admiration. Speaking of Haddon Holl, ho makes a spirited offer to the owner of that interesting domain:-

We pass throngh village snd through town,
Ahere Druids prayed, where Romans fough
And where brave Britons froodora hovght.
And now we reach old Haddon Hall,
A glorious pile heloved hy all;
A glorious pile heloved hy ail;
Alas what pain it muat impart
To every lover of Old Art,
To every lover of Old Art,
To see this pace, once so gay,
Neglected-crumbiling to deeny
The grand oak panels, friezees. Walls,
Treft to the grubs and derastation
Withont attempt at preservation;
The gorgeous tapestries, too, whasting;
Come, wealthy Duke of Rutland, come,
And make this Hall once more your homo And suah a glorious fane yon'll see To luve it for their home again."
Chatsworth delights him, and thus he sings:But come, another Hall we'll seek, -
Chatsworth, the ' Palace of the Peals, Behold it 'mid its vast surronndings, With forest, hill, and river houndings, The vordunt parks, the herds of deer, The Derwent as it rills along, Melting in thoods of liguid song he mountains clothed with forest trees, The gardens,--gems of Paxton's skill. Have no'cr hoen matched, and never will Then enter this rich home of art,
Orowded with gems in every part Anciont and modern works combined Dolight the eye and charm tho mind. As if ocich for ponr love wore suing; Whick should first win your atrore And while on these hright gems you gaze, Vmitting such trangcendent rays,
Yon cannot fuil to love the art That fllls these halls in every part Cailings and walls, and flowars all blending, Each to exch other beauty lending. Wood, jasper, marhle, sityer, gold,
And while from fairer climes they come,
When placed benesth this genial dome
They seem, each in the proper place,
If ever we visit the writer's house, we shall expect to see on his sideboard a wide-spreading salver of silver, legibly inscribed, -

## "From Buxton to Ballantyne."

## TRADES GUILD OF I\&ARNING.

A conference is to he held on Satirday, the 14th of June, at the Sooiety of Arts, Adelphi, for the purpose of establishing this gnidd, and dotermining its constitution; the chair will he taken at cleven a.m. hy Mr. Morley, M.P., and at three p.m. by Mr. Mandella, M.P. It is stated toat a numher of gentlemen have engaged to further will whene movement is carlied working The the conference. The neans proposed are:
${ }^{\text {" }}$. The formation of classes for practical instruction in marigus trades, in art workmansbip, and in scientifleknowtrades. 2. The delivery of courses of lectures, scoompanied with questions to and from the students, and
followed by voluntary exainiuations, 3. The holding 4. The pirinaousions, corversazioni, and socibl mectings rend, reeited, nnd sung at stated festivals of the guild. 5 , The formation of libraries and reading- rooms, halls, and the esto biishment of musenms, exhihitions of conducted) sculpture, industrial exhihitions, art-work shops, so. and the utilisatiou of all such existing agencies. 6. The instiin primary schools, to enahle them to promising pupils achoois, instead of being sent to work at an early and, 10 exceptional cases, to send thom to colloge. 7 , The employment of a risiting or organising ageat,

All these and similar means aro to be ased, as soon 83
possihle, in conjunction with the Department of Science possinie, in conjunetion with the Department of Scionce
and Art, South Kensington; the Society of Arta ; the
Universities of Camhridas and Universities of Camhridge and Oxford; the Working Men's Cluh and Institute Union; the City Companics ;

促
The ohject in view, - the promotion of Technical movement will recuire a rood deal the present about hefore there will be any chance of its being properly carried out.

## GOOD SEED,

Sir,-The Builder has sown much good seed, and people are coatent to eat of the fruit of the plant, withont asking to whom they owe it. The of things in France, reprodnced one on the state proverbs lately published in your pazes,-" "Woe to the nation that forgets it benefactors," You will not mind, I am sure, how often it is said, I hope it may have world-wide ourrency, and so prevent much ovil,-"Woe to the nation that forgets its benefactors." SENEX ${ }_{3}$

LANDSLIPS AND NEW BUILDINGS.
 Turse crose.actions have for a considerahle time past enyrossed the attontion of builders leasing Crown lands
on the hantig of the Regent's Canal
 dinpute becomo, regarding the law of landslip, as to necess.
sitate the two cross actions heing situded in the form of sitate the two oross.actions heing stated in the formof a
special case, for the opinion of the fades in bill specia. ense, for the opinion of the Judges in banco,
the Lord Chiof Juastioe of the Court of Common Pleas
(Bovill)
 Tho direat of the case solimitted to the learned judges
wai, that Mr. Norswortby leased Crown lands abutting on
 of houses with gardcns. As far back ag Febrnary, 1807, landslip of the gardeng oceurred that prepinitated the wall
and part of the earth into the Regents and part of the earth into the Refent' Conal. As the
Regent's Canal Company had nothing to do with the Crown lands aloutting thoir property, and considered they Were in no wise answersble for the mishan, and the cunal

 stip was by the percolstion of rain-water through the
terrace-pardens, and the additional weight imp sed on derrace-pardens, and the additional weight imp sed on
the hanks of the eanal by the nor terrace and the wall the dians of the earal by the now terrac
nid action was takean to recorer damages.
The answer to this olsim wrae an action brought by Mr Nors wor thy against the Canal Company, for shat it was through the peroolation of tho wator from the canal that
the Crown lands had become a water-bed, and rendered nosife to huild upon. An arbitrator haring heen appointed, that official
exnminel praotionl mon produoed on each side, and his exnmined prootion mon produoed on each side, and his
axprrd was " that the damage was not caused by any aot, neglact, or deffult of cither purty," view, and the learnod judges, not liking the case, endes. Voured at an ourly stage of the argument to get the
litignants to agree to a atet processum, iee, an order to stay proceedings.
Having had so mnch expensive law, the builder was averse to this unsatigfactory mode of pettling tho diepute,
and so wore the Canal Company, and caoh side agreed to "hare it out," " Pany, and caul ogreed to Tha Court at length gave judgront for hoth sideg,
holding that neither Mr. Norsworthy nor the Regent's Canal Company har made outiony caso, and confrimed As to the roinons costa, Mr. Norsworthy eun clain his
in the action bronght agsinst him, and the Regent's Canal Coupany can olain theirs in in the action brought
against thema hy against them hy Mr. Norsworthy.
Such is the result of " going to law

NETV PUBLIC SOHOOLS FOR CHESTER. A NEW project is heing matured at Chester for the management and improvement of the King's Solosl, including the erection of new school huildings. The scheme has heen approved of hy the Committee of Council on Education, and hy a puhlio meeting recently held, at which arrangements were made for collecting subscripions.
Upon the tables of the Council Chamber, Where the meeting was held, were copies of the design hy tbo arohitect engaged, Mr. Arthur
Blomfielu, M.A. According to the plans of this Blomfielu, M.A. According to the plans of this genclema, which have met with general ap.
proval, the school huildinge will occupy, almost proval, the school huildinge will occupy, almost erected by Bishop Blomfield ishop Keene, and added to by Bishop Blomtield and others; including the old Gateway of the Abbey, the upper floor of which will bo restored, and converted into a head master's class-roonl. The principal front will he to Northgate-street and St. Werburgh.street; and, while in keeping with the Cathedral itself, will also harmonise, save in the colour of the stone, with tbe new Town-hall on the opposite side of the square. The main ontrance will he at the
angle of the two streets, and the building will he set back at this point, so as to still farther open out the view of the Cathedral from North. gate-street. Supposing the design to be carried ont, thore will be, in passing in to the right under tho groined porch, on the left of the prin. cipal stairease, a class-room, ahout 27 ft . hy 21 ft ,, lighted hy three windows from the open play. ground on the north.east; a lohby on the right of the staircase leading to the sonth wing, where the cap and cloak room and other offices are
sitnate; and thence, by a flight of steps, a descent sitnate; and thence, by a fighit of steps, a descent
to the groined cellar of the late palace, which, to the groined cellar of the late palace, which, being an interesting relic of the ahbot's house, has been retained, and will he appropriated to a lavatory, with the addition of a hoys' yard on the north side. Roturning to the entrance-hall, a lohhy, flanked on the left band hy the porter's rooms, leads into the covered hut well-ventilated playground, measuring ahout 52 f 5 . square; this would he mainly of uso during wet weather, and between lessons for the purification of the class. rooms. The large open playgronnd would form a continuation of the covered one, and occupy a large part of the garden of the old palace bonnded on the north side hy Albley-square, and on the west hy the oloisters and Ahhott's-hall. To the westward of the covered playground would he another room, 27 ft . hy 13 ft ., at present also allotted to the porter, and lighted by one good window to Northgate-street, and by two small opeaings and a doorway through the south wall of the Ahhey-gate. The staircase to the head-master's class-room would be at the sonth-east corner of the old gateway; this would form a commodions room, 32 ft , hy 28 ft . pleasanty lighted hotli from Northgate-street and Ahbey.squarc. Through a door at the top of
this staircase, the head-master would have access to the great school, ahont 82 ft . by $3 \pm \mathrm{ft}$., laving six windows to Northgate-strect, four towards the playground on the east side, and two iu the angie in St. Werburgh-street. A door at the West end of the great school would lead through a lohby to another good class-room, over the one upon the ground floor, and to the south wing, occupied hy a long corridor, and three other convenicnt class-rooms-the great staircase in tho angle leading hack to the eutrance-hall. Mr. Blomfiold's estimate for the huilding is 12,000l. But sinco he gave it, huilding materials have risen in price, and for lahour some. thing must he added. There are $3,000 \mathrm{l}$. for the existing palace, and to tho 15,000 l. may be added 5,000 , so that the sum required is estimated at 20,000 . Towards that there are already $9,000 \mathrm{~L}$, and of this 7,000 . are availahle for huilding, that is, 5,0002, given hy the Ecclesiastical Com. missioners and 2,000l. from Owen Jones's Cliarity. It is thought safe in heginning to huild if $5,000 \mathrm{l}$. more can be added to the amount in hand.

THE PROJECTED SCIENTIFIC COLTEGE FOR THE MIDLAND DISTRICT.
We have stated that Sir Josiall Mason, who has alroady huilt and endowed an orphanage at Erdington, near Birmingham, at a cost of more than a gnarter of a million, has now arranged to erect and endow a scientific college in Birmingham, on which will probably he oxpended at least an eqnal amount. All the arrangements for this munificent gift have heen completed, according to tho Derby Advertiser. The site has enrolled in and the deed of Coury. The firgt clause in the doed furuishes in hrief sketch of the founder's life. Me was horn at Kidderminster (Fehruary, 23, 1795), and from his minster (ruthruary, enaged in earning his livelihood. He was first a shoemaker, then a haker, and then a carpet-weaver at Kidderminster: IIe was introdnced into his present husiness of steel split ring and key-ring making, in Birsteel split ring and key-ring making, in Bir-
mingham, "by his good friend, Samuel Har. mingham, "by his good friend, Samuel "Iaradded to it the mannfacture of steel pens. In added to it the manifacture of steel pens, In
$1 S+2$ he entered inte partnership with Mr. G. R. Eikington, as electro-platers and gilders, G. R. Elkington, as electro. platers and gilders, nnder the Gran of "Elkington \& Hason," and
then in the business of copper smelting, under then in the business of copper smelting, under
the firm of "Mason \& Elkiugton." This partthe firm of "Mason \& Elkiugton." This part-
nership was dissolved in 18j8. During his long nership was dissolved in 1838. During his long became deeply convinced of the want of, and necessity for, "thorough scientific instruction, specially adapted to the practical, mechanical, and artistic requirements " of the Midland district, and this want he has determined to devote
a portion of bis remaining property to supply.

The institution is to be called "Josiah Mason's College," or "Josiah Mason's College for the Study of Practical Science." A proparatory school may he added to the college, and the instruction to he given is strictly conaned to suhjects specially adapted to the "practical, mechanical, and artistic requirements" of the Midland district, more particnlarly the boroughs of Kidderminster and Birmingham. Regular systematic instruction is to he given in mathematics, abstract and applied; physics, hoth mathomatical and experimental; chymistry, theoretical, practical, and applied; the natural sciences, especially geology and mineralogy, with their application to mines and metallargy; hotany and zoology, with special application to manufactures; and physiology, with special reference to the laws of health. The English, French, and German languages will also he taught. The trustees have power to include mechanics, architecture, and all other necessary suhjects. Provisiou is made for lectures and classes, open to all persons, "without distinetiou of age, class, creed, race, or ce.." Preference is to he given to candidates, "othertime inmates of Josiah Mason's Orphanage. The collego will be open to qualified persons of all classes who have to rely on science, art, or wanufacture for a livelihood, "especially the moro intolligent youth of the middlo class." The sito solected for the college is in Edmund-street, Birmingham. It is in the centre of the town, and close to the Townhall, the Central Free Lihraries, the Midland Institute, tho new Post-oflice, and the proposed Corporation huildings. The land therefore is of the greatest valne, and the founder has already
laid out npwards of 20,000 . on the site alone.

AF ORDER OF THE GUARD.
Iv a country whore patriotism is keen, there will always he men on "the watch" in all matters affecting its welfare, and in affairs qnite
distinct and apart, very frequently, from their distinct and apart, very frequently, from their most part, have no desire to enter the arena of politics, but whe are gifted with the genius of prevision in special directions,-"seers" in the trne sense of the word; with the clearer pre.
vision, perhaps, hecause not paid to perform the special duty, or becanse their attention is un hroken hy the calls of routine, and their thoughts are unhampered hy the mass of detail, as the special department of the State inevitably must he. Such men are not unfrequently of grea service to the conntry, hut are nevertheless generally overlooked and neglected hy the ruling powers. No one can predict where this fore. sight, where this spirit listeth, till it manifests itself. It is, therefore, for the recognition of such men, and for the purpose of enrolling them as a corporate hody nnder one banner, ulat journal, to propose an order of "The Guard." I feel convinced that the annals of such an order would be filled with records of great and glorious services to the Stato.

Transactions of the Society of Biblical Archerology.
London: Longmans \& Co. 1872. Vol. I., Londou:

## Part II.

Tus 8econd part of the first volume of the Transactions of the Society of Bihlical Archas. ology contains a numher of interesting papers. The first is ou Cypriote inscriptions, by Samuel Birch, LL.D.; and there are others on Cyrus, the Son of Camhyses, King of Persia. by J. W. Bosanquet, F.R.A.S.; on Assyrian Mythology by H. F. Talbot, D.C.L.; on the Origin of Somitic Civilisatiou, hy the Rev, A. H. Sayce M.A. ; on Jerusalem, hy W. Simpson, F.R.G.S. on the Base Length of the Great Pyranid, and the Dimensions of the Royal Coffer, hy S. M. Drach F.R.A.S. ; on Egypt, before the Reign of Ramses IIL., hy Dr. Eisenlohr; and varions others. Tbe volume is illastrated with map and numerous examples of Cypriote, Egyptian and Assyrian inscriptions, se.

On Coal, at Home and Abroad. By J. R. Leip. Chixd, M.A. London: Longmans.
volume relates to the consumption, cost, This rolume relates to the consumption, cost,
demand, and supply, and other inquiries of pre.
sent interest in reference to coal; and is a re print of three articles contribnted to the Edinburgh Review, with an Appendix. Mr Leifchild is the author of other works on coa and mining. The first article relates to the consumption and cost of coal; the second to the mineral itzelf, and the coal-fields of North America and Great Britain; and the third chiefly to coal minine and its accidents in the North of England. The author also offers forecast as to the future cost and supply of coal of interest to the general puhlic.

## TARIORUM.

The current number of tho British Workman gives an interesting notice of a self.taugh wood-carver, Marshall Georgre Strapps, now aet ing as postman in Wisheacli. It serves to shon what may be done hy perseverance. Ho is en gaged at this time on a very elnborately carve chair, which, judgiug from an engraying of it, superior to what we usually ohtain under suel circumstances, and not to he confounded wit the cathedrals formed out of corks and simila trivialities sometimes put forward hy admirin and ill-instructed neighhours. The chair is 6 ft in height, and includes numerous subjects fron the Nerv Testament illustrating the life of th Saviour. Not the least satisfactory part of th relation is, that Mr. Strapps (though he has har a family of fourteen children, nine of whom ar living) has contrived to save money enough $t$ huy the littie house in which he lives, as well a a plot of building land through a buildin, society,-According to Nature the "Fish Mongers Company hive prosentod to Mr. W. Parker, F.R.S., well known for hie valuable re and sknll in re rominifera, thles, the sum of 502 in addition to an allowance of 20l. a year for th nest three years, in order to ouable him t pursne such parts of his work as relate to th anatomy of fishes." This is a good precoden or other of the great City companies to follop the Royal Astronomical Society, has contribute an article on "Tho Approaching Transits c Venus," to the June nnmher of Cossell's Mrago zine.--Part VI. of Old and New London ocoupied chiefly with St. Panl's, and is a interesting numher.-The Avt Journal says,"The Royal Academy diploma of Sir Joshu Roynolds-then Mr. Joshua Reynolds-was sol last month, and purchased hy Messrs. Graves Co., for 'the small sum' of 61 . Why it was no purchased by the Royal Academy for thei library is a mystery not to he explained. It dated the 15th December, 1793, and is signed $h$ George III. It was sold at the sale of a curiou collection of 'remnants,' the property of Joshu Reynolds Gwatkin, Esq., deceased, the grea nephew of the painter who is England's chiefe glory in art. Messrs. Graves purchased at th same sale a matter even more curious. It is
small book, hound in vellum, containing twent small book, hound in velluma, containing twent pen-and-ink Eketches of much merit, picturio Windsor Castle, Ilolyrood, and other places, an is the note-hook of the secretary of James II then Duke of York, in which were entered th expenses incurred en route from London to Edir burgh-the Royal party, including the Duke' first wife, Anne Hyde, leaving Londou on th 27th Octoher, 1679; the cost of the journeyt Edinhnrgh heing 832l. 11 s. $7^{\frac{1}{2}} \mathrm{~d}$. Iu is pocket © the note-hook was found a lock of hair, of a ligh hrownish tint, and on the paper that encloses $\mathbf{j}$ is written in Sir Joshua's haud, 'Lady Walde grave, -the Lady Waldegrave of whom $h$ ainted a portrait. His pictare of her tare
langhters is his ohef deruve. She was a.ter wards Duchess of Gloucester. It is recorded b Mr. Tom Taylor, that when Sir Joshua wa porking at the portrait, he asked the lady for ook of her hair, that he might get the tru olour with accuracy. She gave it, and after apse of 112 years the identical lock is thu ccidentally discovered."-.." More-street, nor foor-street, Liverpool; its Origin and eanlil ssociations. By Henry Ecroyd smith. Brake rinter, Coos-street, Liverponl. This repria ancoshe Cheshire contains some particu of int in the Liverpool. We thank Mr. H. E. Smith.

Gift of a Church.-Ou Wednesday mornin Earl Fitzwilliam laid the fouudation-stone of
new chnrch, his lordship's own gift, at Went new charch, his lordshi

## P-7 FazakerIey, Liver-

The Sewage Farm at FazakerIey, Liverool. Tho farm of 200 acres acquired by the est Derby Loeal Board, for the ntilisation of wage on the irrigation systom of Mr, William
ope, of the Romford sewage farm, is being cought into operation. The amount paid for to land, compensation to tevants, legal and her charges, was $36,000 l_{\text {. }}$; and the cost of the it of the ground, the bringing the sewage on the farm, and other expenses, was estimated 22,7002 . Borrowing powers for $58,700 l$. were ars, and $4 \frac{1}{2}$ per cent. was paid for the money. bout the middle of last year operations began the farm, andor tbe superintendence of Mr. ope, who was assisted by Mr. Orridge (Buryor to tho local Board) and Mr. Wilham Avis
uperintendent under Mr. Hope). Of the 200 uperintendent under Mr. Hope). Of the 200
res of land, 180 are intonded, at present, for res of land, 180 are intended, at present, for
igation by sewage. About 165 acres are rgation by sewage. Arained, nearly 80 acres have beon relled, and 45 acres bave been cropped with relled, and 45 acres bave been cropped wo bbages. The reniaiuder of the land, with the
ception of the 20 acres, will be cropped as ception of the 20 acres, will be cropped as
on as the levelling is finished, and the 20 acres on as the leveling is rended in time to receive the sewage of the stern or least populous part of the district; t, of conise, additional land will bave to be quired. Garghty men are labouring on the farm is intended utilise the sewage of 17,000 persons.
The Condition and Ventilation of the iverpool Sewers.-A special mceting of the verpool Health Committee has been held for conleal Health Committee has been held for cona condition and ventilation of the sowers. Dr. oylor occupied the chair, and the mayor was to present. Some of the recommendations of o report were adoptec
'That the gystern of drainage in question baving been into good condition, gravinge bo dixed on the manles in the streets; or, in the absence of manholes, that
thlating ebaths in the strecte be constructed at distances greater than 100 yarda."
.Trench, the local oflicer of bealth, was against e recommondation, and stated that Mr. Raw. son and otber well. known scientific mon had ndemned it. The borough engineer, however, id he bad been in comnunication with the
ntlemen named by Dr. Trench, and that the ntlemen named by Dr. Trench, and that the
neral opinion was in favour of the system neral opinion was in favour of the system inion of Mr . Rawlinson is favonr of his pro-
sal, and in course of which Mr. Rawlinson sal , and i
d said,
'In reply to your questions, I beg to say that I con-
er matn semer ventulation of the utmost importance, er mann sewer venthation or the utmost importance, sage. gas retorts, which gas, in its coucentreted form,
deadly. Main sewer ventilators to the opena streets, as
London-one such ventijutor on each 100 yards in gth, - should be provided.
C. Forwood referred to the introduction of chimedian screws, and said that if they were opted throughout Liverpool, 17,600 would be quired, and estimating them at 11. ead, wo 3n adjourned.
The "Opera Comique."-Every now and en the theatrical critics of the daily papors te it into their beads to vary the ordinarily od-natnred style of their notices by "pitch. 5 into" somo piece producod under ciroum. ances that do not happen to please them, with edifying unanimity. This has been the case th the npera bouffe now played here, "The onderful Duck," very cloverly imitated from "Canard it Trois Becs" by Mr. Charles
umb Kcnney. Jntged of from. tho opércu-bouffe int of viow, it deserved better treatment, and
less we are mistaken, this opinion will be stified hy a long rum. It was poorly played, th como exceptions, on the first night, but e cast has been strengtbened, and the actors averne, Miss Rose Bell, and others) aro getting me time to take hold of tho andience. Mr. enney bas executed his part of the business Imirably. Tbero is a good deal of real fun in id is now so some of the music is so eharming, id now so well sung, that the andience are
"The Won. satisfied with hearing it twioe. "o will have a flight, notwitbstanding arrows that were feathered from its wing.

The Twenty-second Annual Report of Amalgamated Society of Engineers, \&cc.The General Secretary, Mr. Allan, states in his remarls that during the year the conncil has opened thirtcen new branches-eleven in England; one in Scotland; one at Kingston, in Canada; and one at San Francisco, California. 351 branches, with 41,075 members, 5,29 . baving been been admitted during the twelve montbs. They have been enabled to add to their previous balance no less than 11,9877., thereby making their total accumulated fund a the end of December last 158,313l. or 37 . I7s. 1d, per member, being the highest amount per 1866 ) since the formation of the of (exccpt total sincome during the the society. Th $105,373 \mathrm{l}$., to which must be added 116,326 l. that being the balance in hand at the commencement of the jear, making a grand total of $221,70.1 \mathrm{l}$, and during the same period the ex penditure amounted to $63,390 l$., thereby leaving penditure amounted to $63,390 l$., thereby leaving
a clear balance of 158,313 l., as stated, in favour a clear balance of $158,313 \mathrm{l}$., as stated, in favour
of the society. The sum of 15,377 . has been paid as donation benefit to unemployed members, including 6,000l. expended in trade disputes In support of sick members 18,5637 . havo been expended. In eleven cases of accident, do., 100 l .
have been paid to each. The funeral benefita have been paid to each. The funeral benefits
have amounted to 6,273 .
Results of the High Price of British Iron.- At tho last weekly moeting of iron. masters in Wolverhampton, it was motified that a consumer of finished iron, carrying on busines district, had made arrangements to import from acrose the Atlantic 1,000 tons of strip-iron made in America; furtber, that the firms who mann. factured railway-axles in America are selling axlos at 34 .per ton nnder the prices, in American markets, of the leading railway-axle companies
of South Staffordshire. In West Yorksbire all sorts of prices have been asked and given diring the past week when any iron could really be met with. The dearth of the metal, however, bas been almost anprecedented. Prices of Cleveland iron are simply nominal, althongh work has been
resumod in tho meantime, with the view of resumod in tho meantime, with the view of
arbitration. In tho Scotch market there is substantially no change as regarde valites, but that is a sign of weakness rather than otherwise. Merchants and consumers fail in obtaining lower prices; for the ironmasters insist on their published quotations, knowing that very soon contions which the state of the supply will admit of
Sanitary Report on Whitechapel.-Tbe Board of Works, Whitecbapel District, report on the sanitary condition of the district for the quarter ending March 29 th, 1873 , by Mr. John Liddle, medical officer of health, has been issued in a printed form. The total area of the Whitocbapel District is 406 acres, or $1,965,040$ square yards; and tbe popnlation at the last census, according to the report, was 76,332 . The water area of the district is 23 acres. The density of the popnlation is therefore 25.7 square yards for each inhabitant. The deaths, excluding those of non-residents and those which were the resnlt of gires a wore, for the quarter, 2,023 , which of mortality, rate of 26.4 per 1,000 . Lhis rate districts. Thus, in a block of buildings, bounded on the nortb by the south side of Royal Mintstrcet; on tho east, by the west side of Dockyard; on the sonth, by tbe north side of logGlasshand on the west, by the east side of por 1,000 ,- a sad difforence. We bear of recent outbreak of illness in the district.
The Whitehall Approaches to the Thames Embankment. - An opinion appears Works, that additional from Whitehall to the Thames Embankment. At a special mocting, a proposition has heen made, having for its object the opening of an approach by way of Derby-street, but after con-
siderable discussion the consideration of the subject was adjourned.
A. Right Suggestion.- We are glad to hear that \& movement is on foot, witb a view to the presentation of a personal testimonial to Mr. Henry Cole, C.B., on his retirement from the Suties he has so long successfully performed at South Kensington. A preliminary meeting of gentlomen interested in the promotion of it is to
be held, this, Friday, June 6th.

Exeter Cathedral. - The Liondon fund towards the restoration of Exeter Catbedral now amounts to about 1,200 l., and it is proposed to close that, as also the Oxford fund. The amount originally required for the restoration was 35,000 l., viz., 25,000 l. for the choir and that part of the edifice east of tbe organ, and 10,000 I. for the nave. The sum promised through the Chapter amounted to 21,1007 ., whieb, witb the clty fund, would make a total of nearly 1,000. Over 4,000 l. are still requice. Lo the 14,7797 has been already paid for work wone than was at first contemplated. The bishop's throne will cost $500 l$. and the organ $800 \%$, double the outlay originally intended. In addition to this, there are special funds for the restoration of the Lady Chapel at the sole cost of Lady Rolle, of Bicton, the four memorial windows to tbe late Bishop Pbillpotts for the Lady Chapol; the memorial wifdow for the east end, and two pulpits, the cost of which will be $1,000 \mathrm{l}$, as a memorial of the we Bishop Patteson. The entire restoration when completed will thus cost about 10,000 .

Ravensthorpe Main Drainage,-On the lo of May an inquiry was beld at Ravensinspect office, for the purpose of receiving evidence touching a proposal for putting into force the Lands Clanses Consolidation Act, witb reference taking abont $1 \frac{1}{2}$ acre of land for sewage outfall purposes. The schome adopted by the Local the district into a receiving-tank, and heuee the eware will be pumped with an, heuce tbe utilisation by irrigation. The natural difficulties cansed by tbe low level of the ground, and liability to floods from the river Calder, have hitborto deterred the board from undertaking the work. The cost of the scheme, including main outfall sewers, tank, overflow, and pumping vorks ${ }^{\text {r }}$ " is estimated at 6,7007 . The engineer, Lr. Malcolm Paterson, of Dewsbury, and others, gave evidence at the inquiry. A provisional order from the local rovernment office, authorising tho purchase of the site, has been recoived by the Board.

Archzological Discoveries at Humbledon Hill.-The summit of Humbledon Hill, about 300 ft . above the level of the sea, about half a milo west of Bishopwearmouth, has been chosen as the gite of a high level reservoir for the nse of the Sunderland and South Shields Water Company, and in the course of the need. ful excavation for tbe works, peveral interesting remains were discovered. Two sun-dried urns have been found, wbicb were in an inverted position, and filled with bones, in fragments. These arns are supposed to be of ancient British rigin, belonging to the Brigantes. The wheel has not beeд used. cepting on tbe neighbouring beights of Tunstall Hills, and at Trimdon, no instances have occurred in the county of Durbam of the finding of urns of a similar kind. The urns have been presented to tbe Borough Museum by the directors of the Water Company.
Drinking-Fountain and Cattle-Trough Associatiou.-The fourteenth anual meeting of this association bas boon beld at Willis's Rooms, with a larger attendance than on any previous occasion. The Marquis of Westminster, president of the association, was in the chair. The committee's report for the past year stated hat the year's subscriptions (annual) amounted o 1,315l. odd, and the donations to something over 2,140 l., hesides a legacy of 500 l. from the executors of the late Mrs. Jane Lyon. The expenditure exceeded 2,9627. Tbe committee have in some cases to pay as mneh as 30 l , a year for the water consumed in a aingle trough; and they point out that, without the liberal support which they solicit-the society depending entirely on for them to sustain and extend a work, the bone. ficent effects of which are experienced hy many millions of human beinge and animals every year."
A. New Memorial Hospital.-The friends and congregation of the late Rev. W. Penne. father baying determined to oreo a memorial of him, it is proposed, if the fund collected sould admit of it, to found a hospital for romen and children, -in other words, to extend and enlarge the plan of the present children's nnrsing-home at Mildmay Park, Islington.-The
Rock. Rock.

Moving a Girder by the Sun.-A girder the bridge now constructing at Kuilenbor (Holland), which rested ahout 2 in , too far on one of its piers, has (according to the Chron. de l'Ind.). been moved into its proper
position by a menn not naknown in this position by a means not nnknown in this the girder, which is about 465 ft . long, $1^{1} \mathrm{C}$., it was found to expand about 1-14th of an inch; the difference of the temperature of the air hy night and by day amounting to $18^{\circ} \mathrm{C}$. In the mornin in the girder was sccurely fastened at the end, where it rested too far forward, and in the evening, when in conseguence of the rise of temperature duxing the day, it had moved for. ward ahout 1 in , at the opposite ond, it was fastened to this, but set free at tho other, so tbat it might contract daring the night. By re peating the proceeding, the girder was got int roper position.

Proposed Press Cable between America and Great Britain.-A large meeting of the members of the New Fork Cotton Exchange was held in Newy York on the 11tb ult., to discuss the proposition of the Joumal of Commerce, that the press of America should combine to lay an devise means for encouracing purposes, and The President of the Exchange occupied the chair. Appropriate resolntions were passed. Mr. Graner said that one million sterling would be gufficient to make and lay a cable, and that amount could be raised in a wreek. Messages could be sent for 25 cents a word, and then pay transact a mueh birger Herchants conld the telegraph and be sure of prome liness

New Fuel.-Mr. L. Banks, of Hall, propose ${ }^{a}$ new manufacture of fuel. The invention relates to the combination of the following matters:-1. The refuse which accumalates ronnd the moaths of coal-pits. 2. Small coal. 3. Turf, peat, or such like matter. 4. Mineral pitch. 5. Coal-tar, 6. The senm or refuse from Tho coal tar and obtaining oil-cake therefrom. Tho coal. tar and the mineral pitcb are prepared by boing mixed whilst hot, and after heing boiled The ordinary maner in equal proportions. The two are then run together; before ase they are rehoiled and mixed with the other ingredients before named. The whole are then compressed together hy steam-power or otherwise, and the composition is then ready for use.
Damaging ths Ruins of Dudley Castle. At the local police-court two boys were sam moned for unlawfully damaging the ruins of Dudley Castle, A watcbman in the employ of the Earl of Ducley stated that he saw the two defendants upor the highest portion of the triple grateway. He called to them, and immediately afterwards he found that a man had heen seriously injured. A large stone, weighing npwards of 20 lb . had struck him and rendered him insensible. As it appeared to have been an accident, a penalty of 5 s , damage 6 d , and oosta, with the alternative of fourteen days' imprison ment, was inficted. It is just such sixpenny damages, however, that canse our interesting historical remains gradually to disappear alto gether.
Shop Architecture in Newcastle.-Now business premises have been erectod in Claytonstreet for Mr. Barrass Grant, hatter. The work has been carried out from designs by Mr. George Lambton, architect, Newcastle, and snperin. tended personally by him. On either side of the shop is a cornice, carried by Corinthian pillars, with carved capitals, the cornice being broken above the pillars, on the top of each o which is a raised chamfered block. Orer the rear of the shop is a gallery, reached by one o Macfarlane's spiral staircases; the balcony railing, by the same maker, is of simple design . The fittings of the windows are of brass,

Report of the Ladies' Sanitary Associa tion. - The fifteenth annual report of this Association has been published at their office 22, Berners-street, Oxford-street, It states tha many ladies have joined the Association during the pask year, and that its puhlications and becoming more extensively 45,500 tracts have been issued, making a allal of 823,340 since 18577 , which much extended the puhlic knowledge on sanitary subjects. The committee earnestly urgo the co-operation of friends in the distrihution of these tracts and the collection of funds.

Society for the Encouragement of the Fine Arts.-Mr. H. C. Selous delivered a lectare on "Form and Motion" before the memhers of this society, on Tharsday evening in last week, when Dr. Doran, F.S.A., presided. The lecture was illnstrated with diagrame, showing the form and action of the various portions of the human body, and considerably intercsted the audience. It is complained, and with some justice, that long speeches, often entirely irrelovant, are made here after the lectures, which only serve to emove the good impressions produced by the turer and chairman.

Attempt to Blow up a Statue.-A Dublin been pondent telegraphs that an attempt has mon made to blow ap the statne erected to the Wenory of the late Visconnt Fitzgihhon, on Fowlesley Bridge, Limerick. A barrel of ganignited by a long fase the statue is happily not much injured, but the explosion displaced the top stone of the pedestal. No arrest has been made. The statue was erected after the Crimean War, Viscount Fitzgibbon having fallen at Balaklava.
Milton Abbas Cottage Hospital - This institution was recently built by Baron Hambro, for the welfare of the peoplo on his estate of Milton Abhey. The hospital gives assistance in case of sickness (not infcctious) and accident, and midwifery cases are admitted. Patients may he rocommended for approval of the medical officer by subscrihers of 10 s ; and those ad. mitted are required to contribute towards their own maintenance. There is no restriction as to religious visitation.
Dover Harbour:-The engineer's report on the Dover breakwater, or western arm of the harbour of refuge, a work whirh he describes as hegun a quarter of a century ago, shows that at the end of March, 1873, the exponditure had reached 671,434 . There had also been $14,6 \cdot 162$. expended npon the substructure of the fort for the War Dcpartment. Will some one who knows be so good as to say when the harbour will be finished, and how much mnst be expended before that consummation will he arrived at?
"Smoking and Thinking."-We are told that the article nnder this herding, which appeared in our last, had already been puhlished lsewhere. The MS. had been in our bands many months, and the author of it now iuforms us, with apologies, that, supposing we had given up the intention of printing it, he sent a duplicate to another journal.

Oxford Arclivectural Society.-Tho members and friends of this Society made an sxcursion on Saturday before last to Rollright Stones, Lyneham Camp, and the churches of Shipton-under.Wychwood, Chipping Norton, \&c.

VOL. XXXI.—No. 158 .

Slafordshire Pottory and Porcelain.

introduction the of small extent and of the rudest type. Tobacco pipes, nrne, glass.house pots, and butter.pots are mentioned in the old county records as tho earliest descriptions of pottery mado in Staf. fordshiro. Dr. Plot, whose account of the infont manufaoture is very elahorate, romarks (A.D. 1650) :--"As for tohacco-pipe olays they are found all over the county, noar Wrottesley House, and Stile Cop, in Cannock Wood, whercof they mako pipes at Armitage and Liohfield, both which, thongh they are greyish dlays, yet ham very white. Thero is tobacoo-pipo clay also found at Darlaston, near Wedncsbury,* hut of late disnsed hecause of better and cheaper found in Monway Field, which is of a whitish colour and makes excellent pipes, as also doth another of the same colour dug near the saltwater pool in Pensnett Chase, ahout a milo and a half sonth of Dudley; and Charlos Riggs, of Nowcastle, makes very good pipos of three sorts of clay, a white and a blew, which ho has from between Shelton and Hanley Green, whereof the blow clay burnes the whitest, but not so fall as the white, i.e., it shrinks more. But the hest sort he has from Grabber's $\Delta$ sh, being whitish mixed with yellow. It is a short britle sort of clay, but burnes fall and white, yet bo some. times mixes it with the blew before mentioned. But the clay that surpasses all others in this connty is that at Amhlecote, on the bank of the Stour, in the parish of Old Swynford, yet in Staffordshiro, in the hands of that jndioious and ohliging gent. (sic) the worshipfull Harry Gray, of Enficld, Esq.

I say the most prefarrable clay of any is that of Amblecote, of a dark blewish colour, whereof they make the best pots for tho glass honses of any in England. Nay, so very good is it for this purpose, that it is sold on the place for sevenpence the bushell, whereof Mr , Gray has sixpence and the work. man ono penny, and so very necessary to ho hail that it is sent as far as London, sometimes hy waggon and sometimes hy land to Beardley [Bewaloy], and so down the Severn to Bristol, and thence to London.

Other potters' clays for the more common waree there are at many other places, particularly at Horseley Heath, in the parish of Tipton; in Monway Field, whero there are two sorts gotten, one of a ycllowish colour mixed with white, and the other blowish.

Of these they make divers serts of vessels at Wodnesbury, which they paint with slip made of a reddish sort of earth gotten at Tipton. $\dagger$ Bat the greatest pottery

[^5]they lave in this county is carried on at Burslem, near Newcastle-undcr.Lyme, where for making their soveral sorta of pots they have as many sorts of clay, all dug round abont the towne within half a mile's distance." The garrulous historian gocs into a most minute account of the process of manofacture, which is very ourious, and would be worth quoting did space allow; hut the extraet given sufficiently answers our present design, hy showing in what parts of the county the pottery trade was at that period located. Tho concentration of tho industry in that part of North Staffordshire to which it gives its name probahly took place ahont the com. mencement of the last century. Burslem was the first centre of the trade which rose to any. thing like importauce. As early as the year 1650 the place was called the Butter Pottery," owing to the erection of a factory of somo pre. tonsions, for making butter-pots. Those pots were cylindrical in form, and, hy tho provisions of an Act of Parliament in $\mathbf{1 6 7 0}$, were required to he 61h. in weight, and to contain not less than 14.1b. of butter. This pieoo of legislation was due to a fraudulent practice by certain makers in the Moorlands, by making these pots thick at the bottom, in order to increase their weight. They were made of tho coarsest olay, and dis. playod tho rudest workmanship. About the year 1670 the rude article was further improved hy a partial glaze, aud soon after the vessels were farther improved hy coarso medal. lions of tho reigning sovereign attached to either side. $\dagger$ At tho close of the seventeenth century, glaze, of salt and leall, had become common in the earthenware manufactures of Staffordshire. At that period, according to Pitt, the historion, a great varicty of nseful and orna. mental articles, in large dishos, jugs, and candle. sticks, wero manufactured at Burslem, exhibiting some protensions to design and work manship. It was not long, however, before a prrer clay from Dorsetshiro and Dovonshiro, was hrought to North Staffordshire; but this was nsed only for washing or lining the insides or ornamenting the ontsides of ware with flowers and fignres of various kinds; and these white ornaments were sometimes founded upon a red body, well glazed with lead ore. The white cleys of Devonshire and Dorsetshire, mixed with a due proportion of calcined flint, were used in the manufacture of "white stonerwaro." This proved an era of somo importance in the history of the Potteries, although at tho time such a resnlt was quite unexpected. The clean appearanco and durablo quality of this white ware soon ensured for it a considerahle demand on the continent of Earope. The first articles produced of this description were circular pieces, or such as were made on the thrower's wheel, and finished in the lathe. Plaster moulde, up to that time, had not heon nsed. The only kind of moulds then known seem to havo been made of brass, or a sort of clay known among potters hy the name of "Tough Tom." Ralph Daniel, a potter of Cobridge, was the first, in conjunction with Aaron Wood, to introduce plaster moulds, the idea having heen borrowed from the potteries of France. The gypsum mines of Derbyshire smpplied the matcrial in ample ahundance, and complete talle services of barleycorn, mosaic, basket-work, and other fanciful patterns were produced. According to Pitt, the introduction of plaster moulds marked an era in the trade, and the variety of produce was very considerably increased. In the year 1815, there were twenty ovens in the parish of Burslem, all of which glazed their wares with salt, an operation usually performed simulta. ncously on Saturdays, at noon, producing an effect which strangers have compared, not inaptly, to the emissions of a volcano. The
Burslem is mnrlied Butter Pottery in sereral old maps
but neither Speed nor Camden gives it that name. but neither Speed nor Camden gives it that namo.

+ Sompe years since a rase was dut up ncar
 and surmounted by a crown.
historian already quotod remarks that various improvements in the body, glaze, and workmanship of the ware immodiately followed the intro. duction of stone.glazing, the mannfaoture of white stoneware having by this time extended itself along the whole range of the line on which the varions strata of coal presented them. selves, at or near Tuustall, Shelton, Cobridge, Hanley, Stoke, Lane.end, and Mere Heath.
The first Staffordshire potters of whose rorks any reliable record has been preserved, were twe Dutchnen, Elers by name, who hronght the art from Holland, and established a small factory at Bradwell, near Burslom, as eanly as the year 1690. Pitt, difforing from most historians, dis. putes the clain of the Elers to this distinction, owing, as he remarks, to the "very improved state of the mannfacture of Crouch ware at Burslem, in the reigns of William and Mary, and Queen Anne, as well as on account of the unfit. ness of their oven at Bradwell from its small dimensions for this mannfaotnre.'": For half a centnxy following the introduction of white stoncware, the lead ore glaze continued to bo used, and small factories sprang up in all parts of tho district. Manganeso rubbed nuder or upon the glaze with a sponge, produced what is called "Tortoise-shell" ware. "Agate" ware was produeed by the application of ground zaffer, and became largely in reqnest for knifehandles, suuff-boses, and other artioles which were sent from the pottories to Birmingham, to be fittod with hinges, hoops, and springe. By an application of calcined copper, iron, and other metals, "Caulillower" and "Mrelon" wares were introduced. Lead ore, with a small proportion of ground flint, delicately applied, produced the celehrated cream.coloured ware. This was originally made hy Edwin Booth, of Tunstall, in 1750 , and in the following year it was improved by Mis. Warburton, of the Hot-lane, near Burslem.
About this period, Thomas and John Wedg. wood, leaving tho employ of their father, as lead or glaze potters, commenced on their own account the manufacture of white stone ware. In this enterprise they achieved marked ancoesa, improving the outline of the articles and the parity of tho ware. A larger manufactory was soon afterwards erected near the Brindleys' famous windmill, where flint stones were refacto by a rapid process to fine powder; This factory was condemned by the populace as being too extensive, and ly some was known as "Wedgwood's folly." It is a suggestive fact that this was the first earthenware factory in the Potteries not roofed with thatch. A considerable improvement in salt glaze was made soon after by Williand Littlor and Aaron Wedg. wood. Littlor, as Pitt observes, Lad noticed how nearly the white stove ware approaohed to porcelain, and abont the year 1750 he left Burslem, and commonced a porcelain mannfac. tory at Longton, near Stoke. He so far snc. ceeded as to excite the astonishunent of the potters; but it proved an unprofitablo article, and the manufacture of it was discontinued. Aaron Wedgwood, who married Littlor's sister, was a manufactarer of white stoneware, and joined his experienco to that of Littlor in the attempt to improve salt glazo. The result of hese experiments was the addition of ingredienta of easy fusibility, with certain proportions of ground zaffer, and the flint and clay of which the hody of the ware was composed, In this componnd, when in a liquid state, the ware was dipped, by which it imbibed a thin coat or covering of the liquid; and this, whon cexposed to the fire in the usnal method of glazing with salt, prodnced a fine, smooth, glassy surfaco, quite freo from the small inequalities which are observable in all the pieces of ware glazod with salt alone.
- In 1796 , some well-preserved speeimens of this Crouch
ware were deg up io the neighbourhood of Burslem,

The comparativo imperfection of the pottery trades down to the midale of the last century is sufficiently indicated hy tho earnings of the to admit of the supposition that tho craft disto admit of the supposition that tho craft dis ployed any conside mhle skil. In the year 1750 , of an experienced journeyman potter, and a modeller was satisfied with a shilling a day. I is clcar from this that the Staffordshire potters at that period were exclusively ocenpied in the production of the cheapest and simplest forms of earthonwarc, making not the slightest pre. tensions to rivalry with Chelsea and Serres But a master.spirit was already matnring the genius, which, to quote the fitly-chosen words of his epitaph, soon "converted a rude and incon. siderable manufacture into an elegant art, and an important branoh of national commerce." For anything like a hiographical sketch of Josiah Wedgrwood, even if space admitted of it,
this is not the place; hat the story of this man's this is not the place; hat the story of this man's
life is so interwoven with the indastry in which ho won his fame, that one or two of the bolder outlines of his career may be given as repre sonting really so many important epochs in the history of his art. Tho son of a potter in humble circumstances, Wedcowood was the yonngest of a family of thirteen. He began soon after, a disease settling its dregs in the lower pat of the leg, rendered ampntation necessary, and he was no longer able to follow his employment. But, as Mr. Gladstone renarks "in the wonderful ways of Providence, that was probably the occesion of his subsequen excellence. . . . It scut his mind infards, and drove him to meditate upon the laws and secrets or his art. The result was that he arrived at a perception and a grasp of them, which might
perhans have been envied, certainly hero beent owned, by an Atheuian potter the works of his earliest youth already heginuing to impress $n$ new character upon his trade: a character of what may bo ealled efficienoy com. hined with tarte, and with the best basis of taste, -a laving docie following of mature."
Soon after attaining his majority, he conmenced Soon after attaining lis majority, he conmenced
business in partnership wilh a practical potter business in partnership wilh a practical potter
named Harrison, and when the tern cxpired he linked his commercial fortuncs with oue Whicldon, hat this did not last long, Wedgwood's expansive mind and energetic spirit rendering the joke unequal. About the year Richard Bentley, a kindred epirit, who excelled especially in the rendering of classical art, and into the service of the new firm came Chisholm, the renowned chemist, and Flaxman, the world famed modeller of plastic art, With such asso ciates, it was no wonder that a new life dawned upon the scene of Wedgwood's laboors, and that a rude attcmpt it ornamentation, whether in ontline or finish, gave place to the highest excel leuce of artistio heauty. From the Etruscan, Portland, or Barherini vase, down to the cheapest article of domestic use, TVedgwood's productions alike exhibited a remarkahle advance in beauty of form and decoration. On this suljeet we caunot do better than quote the beautiful words spoken hy Mr. Gladstone at the opening of the Wedgwood Jnstitnte in the antumin of 1863:- "It would of such of tho works of Wedgwood as bclong to the region of fine art, strictly so oalled, and are not in the common sense commodities for use. To these all the world does justice. Suffice it to say in general terms that they may be considercd partly as imitations, partly as roproductions, of Greck art. As imitations they carry us back to limited to the province of their originals, but are conceived in the genuine and free spirit it is not in happy imitation, it is not in tho sut essfin? preseng of the specialty of Wedgwood really lies. It is in the resuscitation of a principle, -of the principle of Greek art; it is in the perception and grasp of ciple. That principle lies in sessere that prinpropriety, -in the uncompromising adap perfect every material uncompromising adaptation of every material object to its proper end. If that proper end be the presentation of beauty garded, and none but the highost models of it are accepted. If the proper end he the production of a commodity for use, and perishahle, then a plural aim is hefore the designer and producer. The aim is hefore the designer and producer. The
object must first be adapted to its use as closely
as possible ; it must be of material as durable as may be ; it mast be of moderate cost; then made conducire made conducivo or concordant with, the use. and beauty, so easy in the works of nature, is arduous to the frailty of man, it must be ruade the object of special and persevering care. To these principles the works of Wedgwood habi tually conformed." Wedswood's remarkable enterprise not only raised the products of his industry to the highest type of excelleuce, but o it was also due in a great measure the opening up of cheaper aud more direct facilitics of trans. port by means of tho Grand Trunk Canal, which inked the Mersey to the Trent. The effect o. his combined lahours during a quarter of a cenpeople, partially emplored and poorly or 7,000 prosperons and skilled community of 20,000 . The wilderness suddenly transformed into a fruitful ficld Large and well.arranged factories sprang up in all directions, superseding the low, miserable workshops thatched with straw, which had hitherto been characteristic of the trade; and multitndes of intelligent and highty.skilled art workmen flocked to a scene which gave such fair promise of employment to their best alents.
To the experiments of Wedgwood aro due the following species of earthenwore and porcelain for various nseful and ornamental purposes :Torra cotta, basaltes, or hlack ware, white bis. cuit, jnsper, bamboo, and porcelain biscuit, all of wich are capable of receiving a high polish, are proof against acil, and possess high qualities Yeudurance. To each of these materials Wedgwood gare the purest types of art, antiqu Pompeii and Herculaneum afforling in man ostime the mata few years before Wedgwood's denth, in 170 the art of printing npon glazed ware various the art of printing upon glazed ware various an ingenious engrarer, of Liverpool, named Corter, and as an instance of the success of this process, it is stated that from his factory in the Potteries, WedgTrood wns accustomed to send to Livernool "a wacron-load of cream-coloured ware every fortnight to be printed on this new me. now. In a few jenra, however, many en raver's setted in the Potteries, and tho im pressions taken from copper plates upon tlin, sott paper were transferred to the waro on the improved upon this inethod, simplifying the process, and so reducing the cost as to bring reach of the humhler classes.
Josinh Spode, of Stoke, who, in Wedgwood's ays, was a successful prodncer of blue.printed and other earthenwares, commenoed, in the ree 1500, the manufacture of porcelain, which was once pronounced superior in quality to an previously mado in England, and which even urpassed in transparency the world-famed Sovres ware. The material of this new ware contained a large admixture of bone and feldspar. His enameller, Henry Daniel, introduced, in 1802 , the present method of ornamenting chin ractoryed unhurnished gold. In 1806 Spodes went of the kind in Europe. At Mason's factor in Delph-lane, ironstone china was first produced and in the early part of the century it wos ver arcely worked up into j1109, jars, pases dinner ervices, and other kiudred wares, Enoch TVood of Burslem, whose works occupied the site of fis old factories, established, in connexion with his factory, a museum filled with specimens illustra tive of the rise and development of the potter' did much to prometo labour of lore, whic dustry, and won for him the petrinctal titlo father of the Staffordshire potteries." Other prominent mannfacturers of that period who, in various wass, advauced the excellence of the indastrial products of the district, and whose names still survive in connexion with the trade may be mentionod:-Ridgway, of Shelton Davenport, of Longport; Bourne, of Fenton Dimmock, of Hanley ; Hicks, of Shelton; Minton of Stoke; Meigh, of Hanley; and Copeland, of Stoke ; to some of whose works I shall refer
more fully by-and.by. nore fully by-and by
The present number of potteries in Stafford hire is as fullows:-Burslem, 61; Fenton, 16 Hanley, 56 ; Longton, 71 ; Stoke, 12 ; and Tun stall, 24 ; being a total of 210 . At a moderate
computation these factories employ in the agore.
gate 2 h,000 workpeople, of whom over 10,000 pottery district affords a sufficient indication of the grow th of the trade. In 1738 the inhaibitants of the potteries numbered 4,000 ; in 181, , the and in 1861 , to 193,000 . The estimated value of the earthenware productions of the potteries is the earthenware productions of the potteries is ,50,00. per anam, flo sul is dishurscd in wages. Tho quantity of prepared clay annually consumed is nearly 260,000 tons. Mr. II. Coghill gives the follotring statistics respect.

The anuual consumption of coals in the trade may be computed at 450,000 tons. To stain the clay, and print the warc, about $67,000 \mathrm{lb}$. oxid cobalt are used, about 1,100 tous of borax and boracic acid to glaze it, and $12,000 \mathrm{oz}$. of gold to gild and emhellish it. The mannfacture of china in the potteries annually requires 4,500 tons of calcined bone, the greater part of which is im. ported from South America. The exports in 1850, according to the Board of Trade returns, amounted to 994 , 4.182 ., being an increase of 50 per cent, since the year 10ab. The,subseqment four. teen years showed a proportionate advance. In 1864 the total exports amounted to $1,422,130 \mathrm{l}$. and the home market absorbed $1,4,87,870 \mathrm{l}$. The French treaty has henefited this trade only to a very slight extent, the annual requirements of nat market being only some $50,000 \mathrm{l}$. in value aud it has bcen well observed hy a local pro. ducer, that the French potteries are too ex. shape of almit of any great reçu in country A detailed account of one or two of the leading epresentative establishmenis will afford a more accurate iden of tho existing importanco and characteristics of the ceramic art in the Stafford. shire pottcries than could be given by mere statistics or by general observations. We wiil commencc with a sketch of the great house of Minton \& Co., at Stoke-upon-Trent.*
These works were established in the year 1789 by tho late Mr. Thomas Minton, a native of Shrewsbury. Hr. Hinton practical work in etcliing and engraving recontly found hear ample testimony. His conumencement was at a time very favourable for progress. The lahours of Wedgrood had paved the way to success, and called for increased production, for in import trade had heen converted into an export one. English pottery then commanded a high range of prices, and it may be interesting to remark that the old "willow pattern," copied from an old Chinese plate, was first introduced at these wolks, and was then sold at 5s. Gd. per dozou plates, whereas the present frice avcrages about 2s. The productions of this honse were for a number of years principally confined to useful articles, and, being of a good, durable materia!, without muca reference to artistio lecoration, soon commanded a good position in the home market. Mr. Minton died in 1836, and was succeeded by his second son, Herbert, who achievod great eminence as a potter. Ho inroked tho best aid at his command, both English and foreion, and the specimens in almost every variety of style shown at the Exhibition of 1851 may be referred to as proofs of his success. On that occasion the first specimens of Minton's "majolica" ware, now so justly celebrated, were shown, and also, for the first time, a conhination of Parian statuary with docorated porcelain for deasert.services. The ser. vioe of this class attracted universal admiration, and was purchased by her Majesty, as a present to the emperor of Austria. Mr. Horhert Minton was commissioned hy her Majesty to make the presentation, but as great coolness had arisen etween the two courts, on account of a speech nade by Lord Pamerston, some delay and int was at lenth satigetorily meomplished, the resent present was gracionsly roceived, and cordiad Mr. Minton the public is indebted for the revival

* For many interesting details here giren we aro ndelted to the courtegy of Mesirs, Minton, through
their representutive, Mr. J, Stringer, of Stoke upon. the:r
Trent.
of the art of making eneaustic parements, now n such general demand for churches and other oublic buildings, and without whioh even ordinary Ifellings of any pratensions are scarcely considered complete. It will illustrate the character of the man if we state that for many years he pursned this branch of business at a very eouiderable loss; and when on one occasion he was arged by his partnel to give it $u_{p}$, his characteristic reply was, "I will make encaustic tiles if hey eost me a guinea a piece." Mr. Miuton rereived duriag tho Paris Eshibition, at tho hands If the Emperor of the French, the insignia of he "Grand Cross of tho Legion of Honour." Щe Ir. Colin Minton Campbell and Mr. Daiutry Hollins, who, however, in 1868 dissolved partnerhip, the encaustic tile department devolving on Ir. Hollins, all the other hranches heing earried on as usual hy Mr. Camphell in conjunction with ais cousins, Mr. T. W. and Mr. Herbert Minton, 30 that the old uamo is not likely to become bxtinct. The manufactures of the firm emhrace axary every artiele of the potter's art so muct nearly every artiele of the potter's art, so mach
so that any ono emharking in the retail trado night from these works alone completoly furnish ais shop, from the richest ornament to the ais shop, from the richest ornament to the n perfecting theso varied mannfactarers has been enormous, and tho annual value of the ware produced averacres $10 \widetilde{0}, 000 t$. The number of hands employed is between 1,600 and 1,700 , and mongst them there are upwards of 600 females, Che latter heing largoly encrated in enamelling and "transferring." There is only one larly lesigner in tho establishment, and she hold!y Shallenges competition with the sterner sex.
There are two clever Gerwan painters. All the There are two clever German painters. All the rest are English, some of them superior artists, who derived much advantage from their comrse of study at the school of art conducted at the building erected as a memorial to the late
Herbert Minton. Among tho chefs d'ceuvre Herbert Minton. Among tho cluefs chcouve
of this eatablishment may he noted: a pair of large vases, tarquoise pround, decorated with hirds and flowers, purchased by Baron Rothschild. A pair of candolabra, with figures f Hichlandors supporting hunting troplies, fountain, ander ono of tho domes of the Exhibjtion (1862) huilding; candelabra, 8 ft . high, in the same material ; and several great artistic works in parian.
The late William Taylor Copeland, founder of the famous houso whicb beary his name, commenced business at Stoke in 1833, succeeding the spode farnily at the factory estahlished by present firm of W. T. Copeland \& Sons produce articles in every branch of ceramic manuface ture:-porcelain, china, earthenware, majolica, encaustic tiles, slubs for murd decoration, and parian. The last-narned material was invented have been produced many raro and heautiful works of ort. Gibson, Foley, Durham, Marshall, works of art. Gioson, Foley, Durham, Marshall,
and other eminont seulptors have, from time to time, modelled for Mossrs. Copeland, and the reproductions have faithfully reflected in almost every instance, the true spirit of the artist's
design. Classic subjocts largely enter into this design, Classic suhjocts largely enter into this
description of manufacture, the Greek Slave, the tinted Venus, Cupid, and Paris, being among the more widely-kuown representations. mimiature hust of the Princess of Wales, for the Art Uniou of London, is perhaps greatest success achieved by Messrs. cate deliueation of outline, yand the delinaturalness and beauty of expression being re markahle evidences of the perfection attained in this description of art-workmanship. The number of hands employed by this firm is
upwards of 850 . The annual prodnce upwards of 850 . The annual produce is
7,500 packages, varying in value from 57 . to 7,500 packages, varying in value from 5l. to
$50 l$. each, exclusive of the more elaborate and costly works of art.

The High Price of Steel.-One of the leadiag firms in the steel trade bas within the last few days received letters from the Tnited States countermanding a large numher of orders on account of the high prices which now prevail here. These orders are being replaced it America, and hoth mananfacturers and workmen in Hinglaud are likely to feel the effects of the grasping and idling policy whieln has been recently parsued, with sucb insane hcedlessness hoth in the coal and in the iron trade.

TIIE DESTRUCTION OF AEEXANDRA PaLACE.
Wherever plumbers are employed on roof of important edifices, a watch ought to be set over them: there are such reckless men among
them, that wherever they are so employed, thero is the utmost danger to the edifice. At twelve o'cloek, wben dropping work and dinnei aro the sole ideas in the head of the work-
man, down he throws his liot iron, as if it man, down he throws his hot iron, as if it were burning him, and off he goes from his brazicr, leaving everything to eliance. So must it have been in tho present instance; and from twelve o'clock at moon on Monday last we must date the origin of the fire at the Alexandra Palace, which, in one short hour-the workmeu's dinuer hour,-destroyed half a unillion of money' worth, and many pleasant hopes in the North of London.
The dome roof-the very centre and key of lumbers builang-was the spot nhere the ingly, where the fire originated. It is said to have been first observed about Lalf-past twelve but this we camot understand; for tho writer of this, about half-past twelve, saw great Folumes of smoke already pouring up high into be sky from the direction of the Palace, whil ho was in Holloway, fuur or five miles away nd by half-past one nearly all hat clisappeared rom his view, and the Alexandra Palace wo n uuroofed ruin. Thero was a want of wator nd the beight of the dume (some 150 ft , or 80 above tho floor) was too great for the ascent of hat water thero was.
The valuable tapestry and lent pietures were all saved, but the eollection of rare and valuable pottery, and porcelain, it is said, and Mcessrs. Defries's eostly crystal chandelier, \&c., have We exhibitors have suffered sadly.
The fire was still hurning when Messrs. Kelk Lucas, and two or tbree other direetors, toge ther with Mr. Griining, held a neeting in the afternoou, and decided to carry out their proramme of the season as far as the out-door Jetes go, and to rebuild the Palace as quickly as practicable; and next day a meeting of the company was held, when their architoct (Mr. Johnson, of Meesom \& Johnson) was instructell to provide a new design for the re-building, which, we hear, the directors are resolved to bav completed within a year.
Only one death is as jet knowr to have ccurred, but two or three persons are missing nd several have heen injured.
Tho deopost sympathy is felt generally for the directors and the company, while the inhabitants of the northern district consider the deatruction of the Palace a national disaster. The palace, we learn, was insured to the cxient o 0,0002. only ou Thursday or Friday in last

Within the main walls of the gables or pedinents are 9 -inch brick wails. Several of thes have lately fallen, causing much dismay, and down also, possihly throngh the hehaviour of the iron rods, which, if we mistake not, tie tbem to the outer wails.

## A I.ESSON FROM THE FIRE

Tre directors of the Alexandra Palace hare paid a heavy penalty for their economising the salary of an engiueer,-man officer who should have had the responsible charge of the water supply of the edifice, as well as of the communicarons of the ostablishment, and of other engineering details. It has been a penny-wise that the manager is a professional mun to say hat the manager is a professional mun. The onerous duties proper to that office are ample to such as to render attention of one man, and are should exercise the out of the question that he honli exercise the entire refective vigilanco of in officer who has only professional duties to tischarge. The manager of such an establish ment is, in fact, the person who has chargo of of mind involved hy such a function are not smail. Three weeks is stated, hy some of those who have the largest experience in these matters, as the average life of a new attraction. The novelties have to he not only provided, as far as torethought and research go, hut to be placed en scone. The general supervision of staff, aud maintenance of the wbole coucern in going order, so fally occupy the tbought as to leave no room
for the discharge of the enlirely independent functions of the engiveer. The confusion which ttended the railway arrangements on the open. ing of the palace is anotber instanee of the want $f$ a proper officer:
We may ho asked if we are not regarding a disaster, whieh all of us deplore, from a too oxclusively professional point of view. We reply that wo coneeive the safety of the public o depend, in no small degree, upou the greneral enforcement of the proper status of professional men. People constantly endcavour to Eave tangible payments, in the shape of fees or salary. But they do so, on the brond average, at a heavy cost to themselvos. We znow the adage that the man who is his own lawyer has a fool for a elient. How mayy thousands, spent anurally in litigation, might havo been saved hy the expenditure of perhaps a less number of six-and. eightpenny fees? What is the result, -on temper, health, and length of life, -of the saving of the fee that should have gono to tho medieal man? It is the same in the two sister professions of the architcet and the engineer. People constantly think that they can sare money wbich, it seems to tbem, is so easily earned by the professional man. Tbey are little aware of tbo long course of study and experience that enables "the man of ") in wherer linc at once put his finger on the weak place. Of late years there has heen more disposition to dispense with the proper responsibility of tho architect and he proper responsibily tho architect and the doctor.
The misfortunes thence arising have been numerous and great; and we are not jet, it may be, at an end of the dangers to publio safety that of the of the Brigade expressed to the reporter of one of the daily papers his astonislment that so large a building should have heen erected in sueh a situation without hetter provision for a supply of water. We donbt if there has lueen in this cose, any professional may so thoroughly in the position of architect or engineer of tba buisding, in the first instance, as to he fow oxposed to the coudemation thins uttered, or to he liable to be asked the questiou how he camo to construct, of papier miclué and wood, an anormous fire-trap that wonld ignite with a
aing . The way the fire spread in the dome was a maryel
TVe do not deserve the title of civilised men if wo allow such great disasters as the fre at the Crystal Palaoe and the fire at the Alex. audra Park to succeed one another without de. riving some henefit from lessons written in sucb characters of flame. Who is to blame? is the frst question. After a little fuss tho reply is generally, Providence. It has been all tnaroid. cause to be inquired into, namely, ahsence o proper professional responsibility. Will it be the same in the next great fire? If so, we may bg said, indeed, to tempt misfortune.

THE NEW ST. STEPHEN'S CLUB BUILDING.
Tre new building for the St. Steplen's Cluh opposite the clock tower of the Houses of Parliament, and which has for some moaths been in conrse of erection, is now beginning to display its architectural featares, the principal elevation at the angle of the Embankment and Now Bridgestreet baving already heen carricd up to the extreme heigbt of the ground floor, and within the last few days the iron columns abore andicating the lofty height of the first floor, hare bcen fixed in their places. Before the ground level of the Embankment and New Bridge-atreet was reached tho works in the basement and suhhasement, which are carried to a great depth below the strcet level, occupied a considerable fime. These portions of the strncture are not the least interesting features in it. The sub-basement will contain extensive cellars, together with a steward s-room, and several other apartments, whilst in tho upper hasement there will bo clerks rooms, dressibg.rooms, committeeroom, and lavatories, and in connexion with tbis upper basement there will also he a subterracan commuvication with the Houses of Parliament, passing under New Bridge.strect, and a similar communication with the Metropolitan District Railway and with the steam-boat pier.

The style of architectare selected for the building is the Freuch Renaissance, and the clevation, carried aloug the Enbonkment and into New Bridge-street, is about 160 ft . in length,
the building extonding backwarls to a depth of 80 ft . The clevation will consist of the groundfloor, and first, second, and third floors, with dormers, the materials used in tho frontage being Portlaud stone, with bases and shafting of red and grey polished granite, and similar polished granite columns will also be freely introdueed in the ground.floor and severnl floors of the elevation. The principal central entranco on the grouud-floor on the Emhankment portion of the frontage will be 20 ft . in width. On the first-floor over the main entrance there will bo a large central window, with a niche on either side for the reception of a statne. The mindows on the first-floor are unusually lofty, being 13 ft . in height. The elevation will have a bold and massive main oornice, and above there will be a lofty mansard roof, with ornamental irou casting.
The prineipal entrance from the Embankment leads into an entrance.ball nearly 70 ft . in longth, at the rear of which is the main stair. case, circular in form, and which leads up from the ground-floor to tho several stories above, The ground.floor contaius the library, a spacious apartment ahout 60 ft . by 20 ft ; a morningsquave in form, being 49 ft . by 46 ft .; square in form, being 19 ft . by 16 ft .
together with a small reception.roon. At the together with a mall reception-rooni. At the northern angle of this floor a range of arches gives access to the District Railway. The
first.floor contains a large coffee-room, and members' and strangers' rooms; on the second; mombers are the members' hilliard.room, strangers' billiarl.room, smoking-room, and card-roonis; whilst the thivd floor contains the kitchens, and apartmonts for tho employsés of the clabs; and above are a nimbor of bedrooms. Tho kitchen floor on tho third story is intended to bofiro. proof.
The building, wbich is being erected for a new club, consisting of several members of Parlia. ment and others, is expected to bo ready for opening by the commencement of next year's Parliamentary session.
Mr. J. Whichcord is the architect; and Messrs.
Peto, Brothers, are the huilders.
PUBLIC WORES IN EGYPT-SUEZ. A short report has been pullished onon this subject, and is prefaced by a description of the
chief pnblic buildings of Suez. One of the most chief pnblic buildings of Suez. One of the rost inportant is tho "suez Hote,", a large, square,
whitewashed building, cousisting of a groundfloor and mpeer story, and measuring oxternally 200 ft . by 120 ft . The first Europeaubuilt houso is occupied by the agrent for the Peninsular and Oriental Steam Navigation Com. pany, which is built much upou the model of the frontage of 110 feet, and running back 100 ft . frontage of 110 feet, and running back 100 ft . with a contral court, these promises, is the British post-office, which
was allso built hy Europeans: while the next was also huilt hy Europeans; while the next couspicuous huilding is the Egyptian post-office, a modoratoly largo structure, 50 ft . square, though neither rery imposing in appearance nor commodious in design. $A$ uew and handsome Govermment Ilouse has also been built in Suez for the Ecryptian Government, at a cost of orer $30,000 \mathrm{~L}$, by Mesers. Dussnud Freres. This building, in size and style, thongh somewhat namred, it is mentioned, in external effect, by want of elevation, and perhaps, too decidedly French in style for tho locality, is tho most im. posing edifice that Suez has yet seen. It cansists of two large wings, nnited hy offices, and a 3 spacions entrecourt, covering in all a space of 83 ft ., and consists of two stories, connting as one of them the gronad-floor. The western wing is appropriated to the personal accoramodation of thie governor, and the eastern wing to that of the Divan and Government offices. The Khedire, some time siuce, granted a concession for the distrihution to the town of fresh water from the fresh-water canal to a company under Fronch management, which erected, for the purposes of its concession, at a distance of abourt a poses of its concession, at a distance of about a with filters and steam-pumps for hioh rworks, tho cost of such works lueing, it is stated, about 30,000 t. The water company, however, has not proved a success, financially speaking, owing to proved a success, financially speaking, owing to necessary charges. This, it is to be hoped the becessary cemared. The construction of importani docks has also been a woik of of importani Snez; aud in a report to which we rofer, a ful
description is given of the construction of a large dey dook at Suez, although, as the
matter is now rather old, there is no necessity matter is now rather old, there is no necessity
for ns to go over the ground acain. It may be meutioned, howerer, that the studies and examiuation of the ground for this dook were
hegun somo yeurs ago by MI. Strecklin, an hegun somo years ago by M, Strecklin,
"Ingénieur des Ponts et Chanssées" of Franc Ingéniear des Ponts et Chanssiés" of Franco. After tho plans bad been prepared by this genViceroy, and approved of by the authorities, the $V$ iceroy contraotod with the Messageries Impí riales Company to build the dook for $7,000,000$. The lattor company employed as their sub.con. tractors Messrs. Dussaud Firres; and in the was of the work a further snm of $1,500,000$. of native to the suh-oontractors in commutation to them labonr, wrich was to have been supptied to answor practically. With some other items this sum mado tho whole eost of the dock to amount to about 350,000 l. Tho dook is 110 ft . long, by 90 ft . wide at the top, and 400 ft . hy 70 ft . on its floor. Tho width between tho entrance piers is 80 ft . Subsecquently, by committed a design for a port capable of receiving an unlimited expansion withont interference with the use of the completed portion of it whilo a now portiou was heing added. The design for this port-row in courso of oxecution hy Mossrs. Dussaud Bros.--includes the forma. tion of a large quay on the south, for Govern. ment parposes, and a jetty on tho north, of "molo" "his wate of the present central acres of This extent of port will afford 102 acres of water surface, nud nearly 50 acres of quays. The leugt li of the quay front, iucluding the eastern quay, will he 3,250 metros ( $10,650 \mathrm{ft}$ ), which will afford twonty-five borths of 400 ft . eack for ships to lie broulside on, and leave
600 ft . over for atairs, lighters, and small craft. It is stated that the question of protecting the new port hy hatteries has heen before the Khedire, but for the prescnt left undecided. As European ships of force wiich could cope with shore hatteries of war, it is not improbante that time to the port who added in the conrse of ing of cover for the men for manniug the bat teries and the protecting of the liue of railway communication with the town.

HE PURCIISE OF SITES AND BUIXD. INGS FOR ISPPROVED DWELLINGS FOR THE POOR.
Tre Special Dwellings Committee of the Charity Organisation Conmmitteo resmmed its weekly sittings on Wednesday, after the Whit. The suhject for considoration was that of "sites," dividod under four hends. The first portion discussed was "the desirahility of recom mending improvement associations to apply for oompulsory powers for the purchase of sites.' Mr. Vigers obscrved that, from his experienc and knowledge as a surveyor and a purchaser of land and property for rehuilding upon, and for other purposes, he could say it was altogether impracticahle for improvement associations to apply for such compulsory powers with respect to sites on which iuferior property already stood. The wisest courso to pursue in lis judgment was for the associntions to look out merely for vacar He on which to erect dwelliugs for the poor He was perfoctly satisfied that they wonld have trial classes an mp houses for the indns foot, and, without endearouring to purchase sites compulsorily on which buildings at present stood, he was convinced that cligible land was to be purchased in varions parts say the mctropolis. In proof of this he might friars for 4 s . per foot, and in tho neid in Black. of Grosenor por pir On the other hand, if the for 2s. 6d. per foot. these compulsery, if the fortions ohtained chase compulsory powers, and attempted to purwas was persuaded they would have to pay a mnch higher rate for the land, heoause, in the first in stance, a jury would take into consideration the rental received for the property, however in. 10 per oent. allowed for that twould be the nsual 10 per oent. allowed for compulsory purchase, nnd therofore with the value of the land itself, chey would have to pay a mnch higher price
than 5s. per foot. He at once admitted, that in than 5s. per foot. He at once admitted, that in
the eveut of these powers being obtained, he
should advise auy client of his to aske for the amount juvolved in a compulsory purchase, and ing fing these views, ho thought the obtainof tho objowers would be collowed hy a ailure the hich jre which they had in view, and tha for land on which to erect huildings, would not be compensated by the low rate of interest to ho paid for the borrowed money,
Dr. Greenhill, on the contrary, was of opinion that if the Government would allow the improve. ment associations to borrow money at a low rate they would he enabled to purchaso sites with inferior buildings upon them, on adrantageona terms.
The Rev. Mr. Simpson thought, after the explanation given by the first epeaker, that if the owners of this class of property, who wer grinders of the poor, insisted upon an artificial price heing paid for houses unfit to live in, fol which they ohtainod such high rents, it would not be practicable for the improvement associa. tions to press for theso compulsory powers of purchase. At the same time he thought it onght to be placed on rccord that if there orere din culties in the way the purchase of such property hy private improvement associations was desirahlo.
Mr. Storr agreed with Mr. Vigers that they ought not to givo more than 5s, per foot for land on which to erect workmen's dwellings, whereas if they bonght up rows of inferior honses they would have to pay at loast at the rate of 10 s por foot. His notion was that it was altogethe
impracticable for private associations to he armed public bodies shors, although he thought that public bodies shonld possess them.*
Mr. Bosanquet thought that the only way of preventing the ormers of this inferior class of property from placing an artiticial value upon it would be by enforcing the provisions of Mr . Torrens's Act,
Mr. Blake Humfrey was opposed to private ho thoin being armed with these powers, hut say not only bo compeled to property, You shall it without pnetting an artificial value upon it."
The following resolntion on the suhject was ultimately adopted: - "That this committee having already approved of the polioy of conferring compulsory powers on the Corporation of London and the Metropolitan Board of Works, or other municipal anthority, for the purchase of sites for the erection of dwellings, do not rocognise the expediency of extending similar powers to private associations, except in special ,
The following hends were next discrassed, at to $\overline{\text { codnable length, hut ultimately adjourned }}$ McCullarh Tarron's Amendments $\mathrm{Mr}^{2}$ introduction of omitted clauses, compelling local anthoritios to rehuild; Rescrvation of Sites in Railyay and improvement Bills; Powers to imited owners to sell lands for dwellings for limited ow
labourers.

THE PRESTON STATUE TO TIE LATE EARL OF DERBT
Trie statne of the late Earl of Derby, which has just been placed in tho Millor Park, at Preston (advantageously situated in a sloping
position on the banks of the river Rihble), was position on the banks
The statue is made from a block of Sicilian or Campatella marble. The narblo base is about 1 ft . in height, and the figare itself 11 ft , the Fhole weighing hetween a and 6 tons. The original block from which the statue has heen cut weighed 18 tons. The attitude assumed is well adapted for giving full expression to the countcrance of the doceased, and the form and features of tho Earl are represented with considerable aractness. He is dressed in his nsual attire in the House of Lords, and depicted in the act of taking part in a dehate. His right hand contains scroll, and his robe of rauk, as an earl, is covarin carelessly behind him, and forms a literary works three volnmes in which his cost represents his translations from Horace and other Classical autbors, whilst the other and volumes contain his translations of Homer's "lliad," and the words on these may bo seeu by the spectator at a distance.
*Whother desirsble or not it is tolerebly ortain that Parliament would not grant the recuired compuisory
porrers to prixate associations,-ED.

ARCII LLCLS AND SANITARY SCIENCE. Wither ppresent last ovening at the Royal Instikutell of British Arohitects, aftor a length. onod ${ }^{4}$ hasquce from England, the plensure afforded mo by wifnessing tho presentation of the Royal Goul Medal by tho hands of ono long and greatly ostemed friend to anothor who has won the rcspect of all his colleagues, was followed by the opportmity of hearing the instractive paper "Wion on "Warming and Vontilation," read by Dr.
Inyward, which I listened to w th peculiar intcrest, the suloject being akin to that treated of in my paper on "The Essentials of a Healthy Divelling," read before the Iustitute, Jan. 30, 1862, and, partially 80, to another, previously widely circulated in Frnnce, by order of the Covernment of that country, with a prefatory introduction, which in many respects is so con. firmatory of Dr. Inayward's remark on the ims portance of his suhject, that it may intere some to read tho following qnotation:-
"Cet onvrage sadresse it tous hes hommes do bien, A
tous les anis du puys. Tl leur est oifert comme un signe
 comme un asemple dout ils sauront stiuspiver. Quel est lo médecein quit ignore pourtuie que le dofaut sate sont nutant do enuues qui sepparées et an allus rorte
 Rui fy exposent d'une foule dinfrnites personnolles ou

 The observations made by Mr. Wyatt, refer. xing to some romaxks in Dr. Hayward's paper Which wero derogntoxy to architcets, on the dilficulty which thcy freqnently experienco in obtuining that consiueration for sanitary silbjects
which their groat importance demands, has recolled to my rememhrance a resolution which I had the opportunity of proposing at a Congrés in 1856, when tbo representatives of about
twenty different conntries, convened under Royal authority, unanimously declared
it to be of public utility that the working clasges be
onllghtened by all possible means in regard to the in rrovement nnd the poeping of their houges in tood order.
that the instruction of the yount in the That the instrastion of the younh, in tha lathouring classes,
ought to compriee all which relites to tho cleanliness of ought to comprise enll which relates to tho elcanalicess of
thoir porsona and their droillings, to tho boncefits resal tiug from good ventilation, and the evils resulting from
humidity. Lastly, thet the study of the seionos of prohumidity. Lastly, that tho study of the seienos of pro-
serving henlth is one wilich ought to bo rendered siccossiblo to all:"
In order to the camring out of this resolution, the inportance of aanitary science as an essen. tial hranch of a complete eduoation, and most raluable to all classes, has been nrged in this and other eountries whero edneation is felt to be of primary importance.

## TIIE POSSIBLE STRTKE.

We are requested by the Central Association of Master Builders to state that the assertion made by Mr. Broadhurst in our last impression
$(\mathrm{p} .451)$ that 9 d . per hour had heen promised to (p. 451) that 9 d . per hour had heen promised to
the masons, and "was part of tho cormpromise accepted of 1872," is utterly aud entirvly without foundation.

On Wednesday last a very large ineeting of maater builders from all parts of the country was held at the Westninster Palaco Fotel, for the purpose of forming an association of the resist tho throughont tho kingdom, in order to nu incrense of wayos of $\frac{5}{2} d$ per hour. The meeting was presided over by Mr. Hannen, of London. Iu referenco to a statement lately issuod by tho masons as to alleged promiscs on the masters' part to grant tbe rise asked for this year, not true. Some of tho employors urged that, if the masons of London calied tho men out from nuy firms, and conmenced partial strikes as they did last year, the only way of mceting them and resisting the evil was to resort to a general lock-ont simultaneously thronghout tho Thole country. In consecuence or the ahsence of some of the provincial firms thronghaccident, the gencral opinion of tho trade was taken. was therefore resolved to call another meoting in about a fortnight's time
In the crouing of tho same day, a crowied mecting of operative unasons was held at tho Falstaff Mrusio-hall, Old-streot, St. Luke's; Mrr. Spencer in the chair, and eventally the follow. ing resolntion was unauimonsly adopted:-
" That this meeting of tho masons of Lonton "That this meeting of tho masons of London having considered the letter receired from tho Master Bnildcres Association, desires to express
its rogret at tho propositions therrin contained, its rogret at tho propositions therrin contained, stan plages itself nover, under any eiremmdayse, to return to tho oas eclock on savin tion to firmly sent in by the "cornmittec." The effect of tho adoption of the ahovo resolution is thant nuless tho matter builders concedo the half-lienny per budy of masons will ceaso work on that day.

THE TRADES MOTEMENT.
Bristol.-The carpenters' strike is likely to assume a moro extensive forn, it a recent resolution:-
"Thunt in the oront of the employers, at their meeting tory to our united committee, they glanli be empowerce to call soetiety men out of those Ehops mhero tho em.
ployers hare only given a partial aitsinco. The masters met at the Athenmanu, and after talking the matter over for upwards of an hour separater without arriving at any clecision, the only resolution passed being to adjourn the meetiug for a fortnight.--The Rev, Prebendary Percival has given a decision as umpirc between the opcrative labourers of Bristol in all branches of the building tiade and their emplojers, in reference to the rate of wages paid them. The men asked for an increase on the present pay, in consequence of the rise in the Mr. Crosin necessaries of life. Mr. T. Kelly aud the labourers, who were stated to bumber 2,800 ; nnd Mr . J. Foster, Mr. Brook, and Mr Yalland for the masters. Mr. Foster said that
the state of tho building trado was extremely dull at the present time, and bo anticipated this dulness would coutinus. Mr. Percival's award is to romain in force for a twelvemonth. The decision is as follows :-
 Cho matter in disputo betwoen tho master buidecrs of Bristol and the operativo ahburors employed in tho
Iristol huilding trade, so fur as they have been made accessiblo to me, I have come to tho conclusion that,
Whilst on the ono hand tho labourers may fairly ciaim a
 anything bejond a halfpenny.
Consequeitly, I I
leroly give it as my hward that from the present date the lobourcras should receive an advance of a half peuny por hour npon tho rata of paymon
which whs current on the tho f Ferruary last
(Sigued)
Sheffield.-The Sheffold branch of tho Amal. gamated Society of Engineers have addressed a
circular to their omplogers, stating that thoy circular to their omployers, stating that thoy valuo upon their labour, and thoy desire that the minimum rate of wares should he advanced from 32s., as at prosent, to $31 \mathrm{s.s}$ a week, with the condition tbat those workmen who are now roceiving 31s. or upwards per week sbould mutnally arrange with their respectivo employers as to their future rate of payment. They also roquest that ordiuary overtimo should bo paid ab the rate of time and quarter for tho first two hours, and timo and halr tor all worked aftor hut in the event of working all night, timo and bale for the total numbor of hours worked as overtinc. Should a workman bo renuired to work on Laster Monday, Whit Mondny and Tuesday, and the day following Chistmas-day ho should be paid at the rato of time and hali for each hour worked. Shonld any workman ealled away from home between tbe hours of 10 p.m. and 6 a.m. on the followince morning, bo shonld be paid at the rate of donble time for cach hour' worsed; and if required to work between $12 \mathrm{p} . \mathrm{m}$. on Saturday night and 6 a m . on Mondar morning, be sholld be paid at the rato of time and three quarters for each hour worked. Tho code of terms also sets forth that in the commutation of timo each should be considored by sball be paid Gd. per day extra, if within two miles; if opcr two miles, and can retwom home nimats per dey extra if required to out, shall receive ?s, per day extra, Sundeys included; and where night-shifts are necessary, forty five hours shold constitn a weld work at the same rate of wages paid to day-men for filty-four hours. The men wish the concessions to take effect from Saturlay, tho 28 th instant, and ask for a reply to their communication by and ask ior a reply to their communcation by will tako place if their demands are not eonceded.

## TUE NEW WORKHOUSE FOR

## WHARFEDALE UNION

The ecremony of opening tho netv workhouso for this extensivo union has just taken place. The new huilding has been orected on ahout six acres of land, sitnated in the Newall Caxr-road, about half a mile to the north of Otley. The b.ock of buildings forms a con spicuous feature in the tandscape for many miles round. In the centro of the site stands the main block, two stories high, and upwards of 150 ft long, with a clock-
towce surmountine the principal entranco. The towcr surmounting the principal entranoo. The
entrance-ball divides tho building into two wingo, occupied respectively by the males and females, and on ench sido are the requisite apartments and rooms for the master and matron. From end to end of this block runs a entra corridor, from which the valions wards are readily renched. The aged and infirm inmates occupy the front portion, the children aro placed in the two enta, and we ordinary able. bodied mon and women have their rooms at the back. Opposito the principal entrance, and in tho rear of the chief block of bnildings, is a dining-hall, sorving also as a chapel. Imme. diately adjoining are the cooking litcheng, larlers, and other domestic offices. At the back of the buiding aro paved yards, where the inmates may take exercise, and also sundry workshops, wash-kitchens, \& C.; and still further in the rear stands the infirmary, also treo storios in height, and upwards of 110 ft . long. In tho contre of this block are the necessary officer. and administrative rooms, and on each sido respectively are the male and femonoris tho whole boing well lighted and ventilated with wiudows on both sides. Ranning parallel with
the Nemall Carr-road, and at right angles to the buildings already described, staud the entrance block of buildings, one story in height, and upwards of 160 ft . long. The group is set back some littlo distance from the road, and broken up in outline. The general entrauce is through an archway, filled in with mrought-iron gates. Here are the porters ${ }^{2}$ yooins, offices and rooms for the aceommodation of the hoard of guardians on the one side and for male and female on the one side, and for and prohationers' wards, fc., on the vagrants and prohationers wards, sc., on the other. The whole of tho works in connezion with the new workhouse will cntail an expendifor the suildinge for the bor $10,000 \cdot$., hut to this mnst he added the cost of the boundary-walls, entrance-gates, and railings, tho formation of a large culvere to convey the contents of a tributary of the Wharfe which flowed throagh the site, and sundry articles in connoxion with the fittings and furnishing. The bnildings throughout are erccted of local sandstone, quarried from the Farnloy Hall estates. The architects were Messrs. C. S. \& A. J. Nelson, Teeeds and Derby ; and the contractors for tho general works, Messrs. Boothman \& Broomhead, of Leeds and Nowcastle. The stoves and chimneypieces we
supplicd by Mesers. Heaps \& Rohinson, Leeds, who also fitted up the cooking apparatns The entrance.gates and railings were tho work of Mr'. J. Exley, of Otley; and Mr. MI. Hohson, of Bramhope, acted as clerk of works.

## SANITAIRY MATTERS.

Bradford-on-Avon.-A "report on the Drainage of Bradford-on-Avon, Wilts," by Mr. A. W Estridge, C.E., Thas been issued iu a printed form, by order of the local cosumissioners. (Day, printer, Bradford). Mr. Estridge gives an account of the existing drainage and sanitary condition of the town, which are very had, although the town stands on clevated gronod, Tho old midden and cesspool system prevails, and the nuisance is excessive. Sewage distribotes itself in open channels, and saturates the ground. One closet for three, fonr, or fire houses, is a common occurrence, and houses with hat one closet for all. Mr. Estridge proposes a scheme of improvement for the inter. ception of all refuse from the river; the collection of all sewage iuto one outlet; the obtainment of means for flushing; and the ventilation of the sewers; all at a total eost of $3,2502$. , to he borrowed of the Pubito Works Loan Commis190l., for thirty years.
Dtilisation of Town Refuse, - A reprint from the "Journal of the Liverpool Polytechnic Society," March 17th and May 26th, 1873, has been issued, "On the Utiliantion of Town Refuse, hy G. F. Cbantrell, Hon. Sec. of the Microscopical Society of liverpoal, It contains an acconnt of Mr. Chantrell's Patent Refuso Collecting System, with diagrams of Mr. Chantrell's patent is to do away with open mir. Chantrells patent is to do away with open middens, substitnting portable receptacles, reducing the weight of refuse
related to the Roch dale system.

MEMORIAL CHAPEL AT CHLSELIIURST. AFTER the funeral of the late Emperor of the French, the Empress determined upon having a mortuary chapel bnilt, wherein to deposit his reinains until tho place where they shall finally rest lias been selected. Tho plans of the proposed new hailding having been prepared by Mr. M. Clutton, architect, and approved of, some progress has been made in tho work, which is heing done by Mr. Brass, builder. The site of the chapel is immediately adjoining the Roman Catholic Church of St. Mary, at Chiselhurst, in a south-west direction. The Empress has just now privately laid the fondation-stone of the building; Prinee Louis Napoleon accompanying his mother. The new chapel will be in tho Medioval style, the outer walls heing composed of Bath stone, and the interior of Caen stonc. The dimensions of the interior will he $12 \mathrm{ft}$. by 24 ft , the height heing 18 ft . There will be three windows at the side, and one at the end, groined arches heing employed in the construction of the roof. At one end of the chapel made at the side for the recention of a mo he ment, or other purpose, at any future time.

Immediately in front of the recess referred to and in the centre of the building, the sarcophagus, - the gift of her Majesty Queen Tictoria -which will contain the body of the Emperor, will he huilt. The tomb will he of polished Peterhead granito, hearing the inscription, Napoleon III, R.I.P." The parement will be esselated, and hy eutting amay a portion of the wall of St. Mary's Church au entrance is to he nade to the chapel for the special use of the mpress, who will bear the entire cost of the new building. The granite to be used in tho arrive till Aucust. The to "Our Lady."
The collin of the late Emperor now lies almost bscurcd by the floral decorations and other pontes of affection that continue to bo placed upon it; among the more noticeable of which
are somo palm decorations recently sent from Italy hy Cardinal Buonaporte.

## OPENLNG OF THE NEYY PIER AT

 REDCAR.THE new pier which has just been completed at Redcar has been formally opened. The structure runs out from the shore at the east end of the town, in an east-north-east direction, a distance of 1,300 yards, and is directly in a line with Graffeoberg-street. At the ghore end are collectors' oflices-one on each side,-it heinc intended that those who walk on the pier shal pay toll; under their roofs aro ladies' and gentlemen's waiting-rooms. The width of the pier is 20 ft ., with the exception of some forty yards or so at tho extreme end, where it is considorably wider, the additional spaee being taken ap with sents, which run round the end in a seats row in the shape of a horse-shoe. These are screened from the wind. They 1 mo ronnd on the outside of the screen as well as the inside. The pier itself is supported on cast-irou piles 9 in , in liameter, and the rock into which they aro driven gives a good foundatiou. To these piles are attached iron columns, placed in pairs 30 ft . apart ; and, slanting inwards, an additional stahility is given by strong wrought-iron bracing Upon the top of the piles are cast.iron spandrels connected transversely by the flooring timher joists. Along each side of the pier is a wroughtron palisading, with recesseb at incervals for ions, ank at aigh in wo lighted wit eighteen lamps. A landing-stage, to be avail constrnction in eomexiou with the pier, for the constrnction in eonnexiou with the pier, for the
use of passengers by the steamboats which ply use of passengers by the steamboats which ply
along the coast, or those who engrage the pleasure. along the coast, or those who engage the pleasure-
boats. The original contract mas $6,250 l$., but boats. The original contract was $6,250 l$., but the wind-screens and other extras will involvo
an additional expenditure of 1,000 . The capital of the company was $10,000 \mathrm{l}$
Messr8. J. E. \& A. Dowson, of London, were the engincors ; and Messrs. Head, Wrightson, \& Co., of Teesdale Ironwoiks, South Stockton were the contraetors.

UNVEIIING OF SIR ROBERT PEET'S STATUE AT HUDDERSFIELD
The ceremony of unveiling the statue of Si Rohcrt Peel, in 8 t. George's-square, Huddersfield, already alluded to, was performed, hy
Lord Houghton, undcr most farourable cirLord Houghton, undcr nost favourable circumstances. It should be stated that the money was snbscribed for this statue more than tweuty ycars ago, and that, in consehabitent matters of detail he funds had remained in the hands of the ankers, being substautially increased from time time. In I869 the committee offered the crection of the statue to competition. Fou London sculptors of emineuce sent in estimates, including Mr. Theed, and the work was even tually intrusted to Mr. Theed at the sum of 9502 for the statue and 50l. for the pedestal. The tatue, which in itself is 9 ft . high, is cut out o Sicilian marble, single block, and weighs $3 \frac{1}{2}$ tons, The likeness has heen considered, hoth hy the present Sir Robert Peel and Mr. Cardwell, to he hy the Chancellor hand the deceascd statesman holds a scioll to which he is pointing with the right. Including the pedestal, the statue is 20 ft . high. The pedestal has heen executed by Messrs. Macdonald \& Shield, of Aberdecn, in grey Aberdeen marble,
and some two or three Yorkshire stone stepa have boer alded hy M1. Cocking, architect, Huddersfield, to increase its elesation. In front of the periestal there is a brouze relicf of Feeding the Hungry," also from a design by Ir. Theed, which is u referencc to the benefit conferred npon the working classes by the repeal of the Corn Laws. At the back of the statue is the celebrated extract from a speech by Sir Robert Pecl:-
"It may be that I shall leave a namo sometimes rehose whose mith expressions of goodwill in the abodes of the oweat of floeir brow, when they shall recruit their exlausted strength vith abundant and untaxed food, the meeter becuuso it is no longer learened with a sense of
The ceremony of unveiling was made the took place with the most successfal result.

SCHOOL BOARD FOR LONDON
tho Board meeting, held in the Sewers Court, at the Guildhall, on the Ilth inst., Mr. Charles Reed, M.P., chairman of the Works Committee, hrought up the following report, which was agreed to:-

The Works Committee have invited tenders or the erection of a school, to provide accommodation for I, 136 children, on the site in Lower Mansfield-place, Narylebonc. The following wore the rcanective amounts:-

The Board architect, however, was subse uently instracted to make certain modifications the plans, bo as to reduce the cost of the bilding, and a revised tender has hov been btained from Messis. 'T. Niblett \& Sod, of No. 37, Birk beck-road, Hornser-rise, N., amountnot to $9,556 \mathrm{l}$. , which the committce recommend ho Board to accept. Cost of site, 2,780l. eost of bnilding per head, 87.8 s . 2d. 7
2. Tenders have also been invited for the rection of a school, to accommodate 566 chil ren, or the site in Gearce-street, 1 rarylebone

In this case, also, it was considered necessary. milding, and the committeo now rocommend he acceptance of the reduced tender of BLessrs. . Niblett \& Son, of 37 , Birkheck-road, Mornseyise, amounting to $4,790 \mathrm{l}$. [Cost of interests aheady purchased, 4,7032. 5s. ; cost of building, per head, 8l. 9s. 3d.]
Mr. E. R. Robson is architect of both theser schools.

DR. LANKESTER AND THE DEMOLITLON OF DFFELLINGS.
At the last meeting of the Camherwell estry, according to the South London Chronicle, report of the Sanitary Committoe of the estry was read, which recommended,-
"That the vestry clerk be instructed to write to the hat the medical olficer of heallh for that pariah regret have given evidence agningt the vestry's order for the omohation of houses uefit for human habsitation, and in opposition to the testimony of three other medicat officers
health, and which order was confirmed by the dismissal of the appeal with costs."
The houses in question were in Berkeley-court and Alpha-strcet.
After somo discassion, in the midst of which Dr. Lankester, the officer of health for St. ames's, was not without his defonders, the recommendation was agreed to with fire dis sentients.
There mast surely be some misunderstanding here, as we do not think it likely that anthorities sach as Dr. Lankester, Dr. Liddell, Dr. Lliff, and Or. Bristowe, wonld so vitally differ in opinion on a smbject, fairiy and equally laid before each nd all of them. Mr. Reynolds, the Camherwell surveyor, went with the majority in the casc.

RESTORATION OF AN EGYPTIAN TEMPLE.
A

| :---: | :---: |

Н怆ГГГГГГ

## C <br> 

Sketch Elevation of Temple, and Plan of Front.

A sculptnre on the inner face of the intercolumnar wall lately brought to Eugland by Miss Harris.
B Section of an intercolumnar wall, measured and drawn from those in the Britigh Museum. The white line Shows the fracture that was occasioned by an attermpt to divide the stone into two pieces. The part on the right of the white line does not exist in Miss Harris's lab. The lighter margin of the contour of this ection shows the extent of the smooth surface, the darker shade the surface worked with the pick, proving that these stones were most aceurately joined to the columms, the probable width of which is indicated by the dottnd line.

C Shows the appearance of the cobra snakes in the front riew, taken from the intercolumnars in the 13ritish Museum.
This intercolumnar wall is precisely the same height and section as those in the Britisb Museum, Nos. 20 and 22.

RESTORATION OF AN EGYPTLAN TEMPLE.
Oun drawing reprosents a slab of hmod stone, porhaps basalt, latoly brouglit to Enoland by Miss Harris, of Alexandria. It is $2 \mathrm{ft} .7^{\frac{1}{4}}$ in Miss Harris, of Alexandria.
mide aud 4 ft . $0_{2}^{1} \mathrm{in}$. high. At the top is a row of mide and
eleven vultures. $\mathrm{O}_{2}^{2} \mathrm{~m}$. high . At the top is a row is $a$ single line of heroglyphics, which may be translated, "The hieroglyphics, which may be translated, "The king s prenomen, living for ever; king of Cpper
and Lower Iggypt, lord of the land, lord of the buildings, Nectanebo, living for ever, beloved of aull the gods." Ender this insoription is the figure of the king on his knees, looking towalds igure of the king on his knees, looking towards
clie spectator's right hand, presenting some Che spectator's right hand, presenting some
offering, which is no longer visible. Under the place where the offering was once ropresented are a few hieroglyphics, the name of the offering,
probably frankincense. Holow the king is a probably frankincense. Bolow the king is a
brond ormamental border. brond ornamental border:

This slab, from its shape and scu'pture, lets us
understand that it was made for a dwarf inter- the surface towards the interior, while the snakes columnar wall, and was part of a small temple, are always on the outside as guardians of the which, from the known proportions of the temple. From this circumstance, and that the egyptian temples, we may suppose was ahout figure of the king is looking towards the right, 11 ft . high. Our interest in the slab is increased it is quite certain that the Harris slab occupied hy the knowledge that we have in the British the intercolumnar space marked $H$ on the plan, Museam two other slabs or inter-colnmar walls, or the right-hand corner of the portico viewed which probably belonged to the same diminntive from the outside. Of the tro slabs in the tomple, while there is a fourth now in Bologna, British Museum, the one marked 22 occupied but found in Rome, 1709, of which there is an the next intercolumnar space, that on the rightngravinct in Ficorori's "Yestigia di Bome" hhlished at Rome, 1744
The Harrs the left.hand of the entrance. The slah marked and $y$ on the plan, on the left.hand corner of the hose in the B itio have senlpture on hoth faces. From them we of the door; and if we snppose that this little learn that we exhihit the back of the slah $H$, temple had four columns, it will have had, with which faced towards the interior of the huilding; its two side walls, five intercolumnar spaces; hecause in all cases where the rows of valtures
and of cobra or hooded snakes are represented filled with the fon the doorway, and four were and of cobra or hooded snakes are represented filled with the fonr above-mentioned slabs.
on these dwarf walls, the valtures appear on

The temple, as we have said, was about $14 . \mathrm{ft}$.
bigh, as it stood on a floor, or base, and with its
lateral walls, nearly 25 ft , wide. lateral walls, nearly 28 ft. wide. Now Hero. dotus (ii., 175) tells us that he saw at Sais a small monolith temple, of whicb the ontside
front measure was 14 cubits in widtb, and 8 cubits in height, and that the inside mensure was 12 cubits wide by 5 cubits high; or, if we turn theso measures into English feet at 21 in. the royal or longer cnbit, then the outside measure will be $24 \frac{1}{3} \mathrm{ft}$. by 14 ft ., and the inside measure 21 ft . by 8 ft .9 in . Herodotus thonght this little temple of one single stone, as it was deelared to be, was as remarkahle a work of ait as any of the great temples of Egypt. From the measures furnished by Herodotus we learn the thickness of the outside walls, which were of 1 cubit each, and also the thickness of the ontahlature and foor united, which were togeif the temple seemed to Herodatos to be of single block, it mast hare stood on a floor of its own. Let us, therefore, drav the front of a templo nccording to the known proportions of those in Egypt, giving to it Herodotns's mea. suroments, witb four columns and an entabla. tare, all of saitable thickness, and giving to the door what remains of its height which will bo storation of a temple, wo shall then find tliat our four slabs supply us with the four inter. our four slabs supply us with the four inter.
columnar spaces of the required size, and we columnar spaces of the required size, and we
may say with confidence that they formed part of the eruall temple descrihed by Herodotus. It was not, indeod, a monolith temple, as he was told, but each wall and each column may have been of a single stone, and the wholy so squared and fitted together that the joints were not seen.
The earliest namo on these slahs or inter. The earliest namo on these slahs or inter.
columnar walls is that of Pharaoh Hophar, or columnar walls is that of Pharaoh Hophra, or
Psammetichus III., who reigned about B.C. 591 Psammetichus III., wio reigned about B.C. 591. 566 , about 100 years before Herodotus risited
Egypt. Hophra, we mnst suppose, left tho Egypt. Hophra, we mnst suppose, left tho
ornamental sculpture unfinished. This was very often the case with the Egyptian buildings. Hophra's reigu was followed by civil war, then by the Porsian occupation of tho conntry, and it was not intil 100 years after Herodotus's visit that the sculptares on the other slabs were finisbed in Nectanebo's quiet and prosperous reign of eighteen years.
The Musenm has also two small obelisks of black bastlt, which, when perfect, may have would bo of the right heighen set on pecestals ments in front of this temple. They bear the name of Amyrtacus, a king who was reigniag when Herodotas was in Egypt, during an interval when Herodotas was in Egfpt, during an in
Our restoration of the temple has the stones whicb are now in Enrope distinguished by a dark shade.

Texas.-The most delightful work, next to a surey on tho London, Chatham, and Dover Railway in England, has been to the writer-a
short trip in Texas. The natives semi.civilised short trip in Texas. The natives semi.civilised;
the conntry filled with soperstitions legends, hut abounding with some of the most beantiful scenery that can be imacined or wished; the land fertile; the climate in the antumn must in. vigorating. Tbe towns are laid out on the Spanish system-a plazza, or a broad green; a town-
hall, court-house, and in the centre a ruol. Magnificent trees shade the whole square, and the singing. birds render the scene most deligbtful. Tho streets are lined with teaus laden and gold to handle,-a pleasant thing after the ragged, greasy greenbacks. But the sceues ou the square are varions. On one corver a group of niggers singing, beavily lacken with the eurse boys" selling lides, and swearing in a manuer a Texan alone can do. Then the never speculating mauner, percher the foslion of sheffing in a John. Gambthen seems to be in commercial pursnit, and a hell is fitted up gorgeously: the drinking bar, with its "clemist" retailing the gambler; the roulette.table, the wheel of fortune, which wheedles the nigger's money to tho last cent.; the faro bank and other card.tables loaded with gold and silr
investing in
gamos which the speculators nvesting in games whicl your writer never
heard of, and none the worse for not knowing and all the time a harp and violia are scratching
forth music. But emigration, it is hoped, will eradicate all these evils, and allow the country to he pcopled with a respeet for the Supreme milk and honey, if labour a conntry, indeed, of merciall honey, if labour be properly and comabout 30 applied. Waco is a county town of the writer has visited, full of enterprise. A neat suspension.bridgo of nearly 600 ft . has heen erected across the Brazos River; four chnrches, good school-buildings, fine stores, and several banks; also a railway terminus. Louis and Chicago are about building two bines of railway for tle purpose of carrying the cotton from Toxas ; and Texas, I think, will he the real commercial State of the southern United states.

Iansas.-Timber is very sarce in these prairie countries, and is only found near streams stituto the : so fuel make a fine glowing fire. In the musettled portions of the prairies, far away from the settle. ments, aro "trails" running it every conceivable region along the "divides "worn tbrough the tall grass by the hoofs of the bisons; and by watehing theso ugly-lookiog animals from a distance, they cau bo seen travelling like a sintgle file of dairy
cows retarniog home at night from pasture cows returniog home at night from pasture. are now built, whicli nt the time of the A merican War were nothing bat prairic lands. The minsets are most heautiful, and can hardly be pictured hy pen. The balmy nights!-but the loueliness is terrible. And, oh, the wind in an open prairie! it ean bo only likened to a storm at
sea. The richest timbered country is Soutlien Kansas buchest timbered country is sontiern and So the est watered arens to farm: but better protections is military for the settlers from depredations of the Indians.

MEMORLAL BRONZE STATUES OF THIRTEENTH, SIXTEENTH, AND Nineteenth century scotchmen. Sir, -It is a curious fact that we have at this time three bronze statues in embryo intended to honoor the memory of three representative of the three. The last and most likely to he soon erected in Edioborgh is that of the present period, in which Liviagstone so praphically illus. andes the "derring do" of the heroic Brnee, feared the face of ${ }^{2}$ ",
The artistic skill man.
The artistic skill of Mrs. D. O. Hill has enabled Ner in to produce snch a statne of Living. stone as rolls the three three-century divided Scotchmen into one. This life-like statue, now proposed to be cast in bronzo, is truly suggestive of all that is good and great in this most heroie of the Scottish kingg, -horn 127. , and died 1329. And thero is also vividly shown the fiory zeal of the great Scotch Reformer, for enlightening his rudo barbaric countrymen of the period in which he lived, $-1505-1572$. Even viowed in such a light, this graphic Scottish statne of tho great missionary explorer of Afican wilds cannot aatisfy either the Scottish peoplo or their visitors, when they gazo upon the questionable tower reared to honour the memory of Wallaco, and when they too plainly see the unquestiou. able dishonour doue to the memory of Knox at bis very grave, where the grin sarcastic leaden statue of Clarles II. on horsehack rides rough. shod over all the associations of the spot Statuesque memorials of botls Bruce and Knox will yet be erected iu tho stylo and costume of their respective periods. Dr. M'Crie, in his Life of Knox, saye, -" 1 Popislu author has informed us that Knox was gratified with having his portrait drawn, and has expressed macb horror he this, seeing ho had caused all the images of byterians of our day who There are cven Pres. idolatry is our day who bold that "Protestant to John Knox in Edinby this, desiro for a statue to John Knox in Ldinbargh," yet sucb bave not

The taper opire that points to heaven
over the stanted floreal pimacles of the Knox Kirk, built some twenty years ago, alongside the old house of Knox, so prominently jutting into the grand vista east and west of the old historic Knox street. Surely, if the house and kirk of Lirk sbould be ornmere they are, the modern sared from its venerable uncleanlizess.

Natural bistory museum.
I bave only just seen in the Builder of the dth of January Last Mr. Waterhouse's design for this huilding, and I regret to learn, by your editorial nociee, that from motives of economy the t Twa They appear to mo façade are to be omitted. They appear to mo a principal feature of the design, and to omit them will destroy the symmetry of what promised to be a laudsome and anceessfat building.
I presume it is not suggested that Mr. Water house's lesign is of an nnusnally costly character, but heeause the price of work has risen (I sup. pose froun the natural laws of supply and demand) We are told some thes thet the rise in prices is an evidence of our wealth. At all events, we are the wealthiest nation in the world, and were wever more prosperous than at the present time But, Bir, a parsimonions policy is not alway eheapest in the end. On this very same site ten years since we erected a building, very suhstantially, on a chean plan, but which was so in veterately ugly that the puhlic would not stand it, and the Government was compelled, though resisting to their utmost, to pull it down.
tbe unforain, wrchitect was so piny, wher hampered ahout cost that he could only give us (no fault of his) a building that wo are asliamed of, and which we have long ago deeided must come down.
But, sir, here is a consoling reflection for the anthorities, and which I hope will weigh with them, regarding the matter from a \&. s. d. point or vien.
that the me twenty years ago that we found that the British Museum was full to running over,
aud that an aldditional building nust he provided to hold our collections. For twenty years we lave been dehating and discussing abouts thi additional building, and at last we liave decided
adis aduitional building, and at last we lave decided years' interest on our outlay? Say only at 3 per cent. per annum, there is a saving of 60 per oent. I am sure, sir, that the authorities will appreciate this, and I yet hope that (accepting the fact of
the rise in prices which the rest of the com. the rise in prices which the rest of the com.
munity are compelled to accept), they will talke 15 per cent. Out the 60 savept), they will take building as designed by saved, aud give us the lated.

Ond Kexsinctos.
A GiCANTIC bRidge over the forth. Asrovast the several railway and other Bills mittees durine the peresent Pulliamentary Comnexion with the construction of a stupendous railway bridge over the Firth of Forth, at Queensferty, at a proposed ontlay (including the railway), of $1,250,000 \mathrm{l}$, heing something more than four times the cost of the bridge and which tay, now in course of constrnction, regarded as the to the present time has been As the Bill for the the bridge in tho world. As the bill for the proposed hridge over mittee mitee of the House of Commons last week, is notico of some of its chief features becomes in. teresting. The proposed bridge, which has been designed by Mr. Tbomas Bouch, will be no less than 150 ft . in height, and will contain nearly 100 spans. The largest span in the centre will be $1,550 \mathrm{ft}$. in width, or nearly a third of a mile in extent, dimensions which are witbout a ponstrel any similar plece of architcetural will all be, and tue smaller openings or spans ably beyond the average dimensions of the largest spans in ordinary bridges. The highest hefineering evidence on the design was laid the engineers of comentary Comittce, and amongst in favour of the eminence who bore testimony

Hawksbaw, Mr. Barlow, and Mr. Harribon, all of whom deposed as to the practicability of its construction, the sufficiency of the estimates, and as to its safety and suitability for carrying railway trattic. On these points, a joint report, laid before the Committee in engineers, was that having examined the plans of the proposed bridge, in connexion with storms of wind, as well as the effects of passing loads over it, and also in regard to tomperature, they all agree in a ccording to the desigus and when completed with the to the desigus and dimensions, aud found amply anfficient not only for the safety of
tho ordinary traffic, but also to meet the strains due to extreme gales of wind. As to construetion, the engineors in question state that the most important point is the sufficiency of the foundation and anchorago, and in reference to that question tho information afforded them gives them complete confdence; whilst having regard to the varied and powerful means which are now at command for the crection of such structures, thoy beliere that the execution of
this bridge, aluhourh of unusual mngnitude, is quite practicable, and capable of heing carried uut with success by modom skill.

## TIKE PUBLIC BUILDINGS OF BUCHAREST (TURKEX).

An interosting roport has just been published, legarding the improvements made in the public
buildinge of Buchnrest, also giving information relative to other improvements effected in tho vity. Bucharest covers a space of more than oity. Bucharest covers a space of more than twenty English square nally built haphazard, every man having placed nis house as he pleased, without the
elightest regard to the position of the dwellings elightest regard to the position of the dwellings
of his neighbours. This neglect of the anities of of his neighbours. This neglect of the anties of
construction has formed an agglomeration of construction has formed an agglomeration of
buildings which is certainly peculiar. Con siderable progress has heen made of late in paving the strocts of tho city, and the principal street is now pared with Aberdeen granite, and well watered in snmmer. This street (called the Podo Mogochoi) contains tho principal shops and hotela, many of the best private houses, the Prince's residence, and the Nutional Theatre, one of tho largest bnildings in tho town, the whole being interspersed with hovels and unbuilt spaces, the effect of which is anything but seemly. Of late years great progress has heon made in huilding new houses in Bucharest, but this has scarcely kept pace with the incroase of the population. What is termed "The Paloco," was built nearly half a century ago, and wa sold to the Governwent, having heen originally intended for a private residence. Its only re. deeming feature is said to be the thonc-100n Pince Charles of Hohenzollern has dono much fortable by introducing improvensents from tim to timo ; but at best it is not a very regal residence. It has beon attenpted to couvert a monastery on the outskicts of the city into a summer residence for the court, but hitherto this attempt has not been altogether successful. I'hero aro 100 bnildings in Bucharest wbich aro nsed as churches, but none have any pretensions to arehitcctural beanty, or even to much antiquity. There aro ten synagogues, of which the largest is a modern huilding erected at considerable expense, and decorated in a somewhat preexpense, and decorated in a somewhat pre-
ientious forhion insido and out, after the sentious fashion insicio and out, after the
Saralo of the new Jewish temples of Westemic Europo. The Acadeny is tho most
Went Western Europo. The Acadeny is tho most
imposing of the modern huildings of Bucharest. imposing of the modern huiddigs of Bucharest.
It forms one sido of the commencement of a boulevard, which it is proposed to carry through the town from east to west. This odifice con. tains the university, which is divided into four faculties, -philosophy, law, medicine, and the sciences; and possesses a good laboratory and colloction of physical apparatus. The large theatre of the uriversity is ocenpied by the senate during tho Parliamentary session. The Academy also contains a public ruseum of antiquities and natural history. Bucharest bonsts two public gardens of considerable size, which aro of comparatively recent constrnction. Ono is in the centre of the town, is about a mile in circumference, and is principally resortod to hy the tomnspeople who have no carriages. The other public garden is just outside the town, and is tho fashionable drive. Amongst tho new buildings, a landsome edifico has been erected on the boulererd for a hotel, which will eclipse all its rivals in point of size and imposing nppear. ance. Bucharest has lately heon lirhted by gas. partly puinped hy steam, and distributed through ron pipes to some public fountains and private dwellings ; but for the most part it is doled out by small curts in a filthy state, aud at considerable expensc. The municipality, however; companics for au anlimited supaly of fitered water, the want of which is much felt. The sanitary state of the city is far from satisfactory, sanitary state of the city is far fromsatisfactory, might be iu introducing improvements in this dightion.

## ST. MARY'S SCHOOL, HULME,

 MANCHESTER.The foundation-stone of this selool was laid on the 6th inst. The achool will have accommo. dation for 131 scholars. The building consists of a school-100m, 36 ft . by 19 ft .6 in . ; and two class-rooms, 18 ft . by 1 ift ; also lavatory and cloak-room, \&c. The elevations have a hipped gable to tho class-room, and a hipped gablet over the centre bay, the windows in both these rising higher than the others. All the windows have arched heads; and buttrosses divide the cleva. tion into bays. The principal elevation has a hipped gable, from the centre of which rises an ornamental chimncy-stack having an inseription stone in the centre of rable. The whole of the walls are faced extermally with white header brieks, with arches, string-courses, and other dressings of stook bricks. The interior is of selected bricks. The rooms are warmed by open fireplaces, and the alternate windows have part oponing for admitting fresh air, while the vitiated air has its exit through openings in the ridere the roof heing a high-piteh open to the aper, and plastered betweon the principals. Mrr. George Napier Hulme is the contractor, under the superintendence of the architect, Mr. J. Lowe, Manchester. The total cost, including bonndary walle, will bo ahont 8302.

THE VENTILATION OF THE SEWERS OF LIVERPOOL.
Sin,-In a recent issue you favoured us with an extract from the report of the borough encineer on the ventilation of the Tiverpool sewers recommending " the introduction of open gratings a the streets, and the carrying up of a pipo not ess than $i$ in. diameter, from every soil-pipe, to a point above the roofs of the houses, so that in he districts where these water-closeta exist, the raught may be down the street ventilator's and ap the soil-pipe shafts."
In a laige borough like Liverpool, it is intportant tlat tho scheme adopted should be effectual, as small horougls may bo induced to follow the example of their larger brother;
The open propose to discuss its merits
The open gratings will provido for the intro. act as outlets, according to levels and other local circumstances.

The proposed oatlots by tho housedrains are however open to very serions objections
1 st. The gases from the sewers will take the shortest route, and rush into the honses, when the pan or valve elosets are used, instead of passing up the t-in. outlots as proposed. end. By this scheme every house will be in connexion with every other house, as now.
3rd. It will have a tendency to invite the entry of sower gases into the badly-drained than diminisls it.
In most schemes for veutilation, the chief object has heen to disconnect tho house-drains (for ventilatiny purposes) from the main sewers, and to provent the sewer gases from entering the houses ; hut in the scheme proposed, there is an ingenious but expensive attempt to do that which most sanitary anthorities have condemned. The rreat objection always raised against sewers, that there is no isolation, will by this of the be still further increased, as the curren houses from the serers the ditection of the bo the slightest defect in the house-drains or the soil-pipes (a vary common thing), they with sewers. Further the houses from the main main gewers by the ponsedreins is vadiceg wrong, ad should in 10 ase bo adically Sewer should bo ade
Now in thave heen the house-drains.

House-drains shonld also be ventilated, separate and distinct from mann sewers, by t-in pipes from the soil-pipes, or by other means.
We are told that 18,0007 are to on ventilation, hat I 18,000 l are to be expended on ventilation, hut I trust, in tho iuterest of sanitary seience, the proposed scheme will not
be adopred.

Jines Lpyon
Burough Eugineer; Southampton.
Ieicester MIunicipal Buildings. . . The drawings submitted are now on view. We are asked to mention that the author of the design under motto "Siuplicity " gave no address, a
therefore could not ve communicated with.

## LONDON SCHOOL BOARD SCHOOLS, OLD FORD-ROAD

TAESE schools, which have been built near the Ford Station, will shortly be opened. The nominal accommodation is for 720 children, but the actual number which conld be accommodated is 841 , allowing 8 ft . superficial of floor-space for each infant, and 9 ft . for each girl or boy.

Owing to the position of the site the entrances to all the divisions of the schools were obliged to be from the same road, but they are separated as far as possible from one anotber

Tho general schoolrooms are 22 ft . wide and 45 ft , long, with windows on each side, which allows a current of air across the rooms and ano equal distribution of light. The window-backs in the wall opposite the desks are 8 ft , high, to allow of maps, \&c., heing huag below them. The windows behind the desks are the usual height above the floor.
level surface, no beams being visible plastored to a level surface, no beams being visible.
The general arraugement of the ground floor will be seen by the accompanying plan. The frst and secoud floors, for the boys' and girls schools respectively, are similarly arranged, with the exception that tbore are two class-rooms at the ends of the general rooms, each 20 ft . by 18 ft .
Cap and bonnet rooms and lavatorics are placed at the entrances to each department, or a level with tho general schoolroom.
I classroom for drawing is on the second hoor, entered by the girls from thoir schoolroom, and by the boys from their staircase.
There is a room for the master or mistress on the first floor, immediately over the managers ruom.
The staircases are of Yorkshire stono, with wrought-iron handrails.
The dcaks and seats for the cbildren will be arranged in pairs. The infants' and habies joons each have galleries with low backs to the seats
The mpper parts of the doors hetween the school nad class rooms are glazed, to enable the head teachers to supervise the whole of their respective departmeuts

Captain Douglass Galton's ventilating stoves are placed in the gencial sohool-rooms ; cach story is 14 ft . high from floor to ceiling, and tho walls are coloured a light green tint. All tho windows have straight heads with sashes donble hung.

Thore is a covered play-shed in the infant's playground, paved with Wright's tarred paring which is laid in all tho playgronnds. The building is faced with picked stooks, with red brick arches and diapered patterns of red, white, and yellow bricks to the gable-ends, and Bath-stonc dressings are used in the window and door heads.
The contract for the building, including fittings by heating and lighting, was taken for 4,987. Mr. Turrant of the New Kent-road; this accommodation at $8 \pm .1$ children.
The architects aro Messra. Henry Jarr is \& Son, of Trinity-square, Southwark.

## USEFUL NOTICE

Dr. DuDEIELD, the medical officer of health of the parish of St. Mary Abbott's, Kensington, has issned tho following sanitary notico, which may bo usofuliy read elsewhere :-
"Parikhioners aro earnestly requested not to deposit
animal or vegetable refuse in their dast-bins, the decap ol such materas especially in bot weather, when fem asthes
are made, causiog oftensive smells injurions to health are made, causing oftensive stzells injurions to health. Al sustiblu in ordiuary grates, maEy and should be burned, small quantities being placed on the fire at a timo. Parishioners are 1 urther requested to hatre their watar-
eisterns cleansed frequenty, and particularly during the eisterns cleansed frequently, and particularly during the
summer months. The waste-pipe, if connected with a bumamer months. The whate-pipe, if connected with a
drain or soil-pip, should be effectailly trapped, other-
wise the water will become polluted by foul air, to tho wise the water vill become polluted by foup air, to the
 an oferflow or warning pipe subbitituled. Cisterns should
be carefnlly covered, to exclade dither be carefnlly covered, to exclade dirt. Water-closet
should havo an independent water-sapply. A ventiloter should have an independent water-supply. A rentilating-
pipe, tent leat in in diameter, should be arranged so pipe, at least lin. ill diameter, should be arranged so ls
io carry off juto the open air the gas generated in the
anil-pipe of the soin-pipe of the water-closet and the wasterated in the of the sink. The main drain of the house should also be ventipart of the house of sewer-gas. Impure air and polinted water
disease, especially of diarrhow, which is so fatalin surumer

## STRENGTII OF CEMENT.

Mropessor Bausctingere, of tho Polytechnic School of Munchen, bas lately made oxperiments (in the tecbnical laboratory of that institution)
with mortar of Perimosen Portland with mortar of Perimosen Portland coment and water lime ; and ho publiskes his reesulte in the Teitschrift des Bayer. Ingen.- und Arch. Fereins.
Cubes of pure cement, as well as of mistnres Cabes of pure cement, as well as of mistares
ono part cement witb sand or rubble up to ive parte, were suhmitted to pressnre. The reistance of pare cement was found to be gxeater
ban the mixture of the proportion of $1: 5$ it liminishes very slowly, evon if as muoh as threo parts sand (even coarse rubble) are added. Yabes of water-lime and coarso rubile were ound to resist pressure best, mixed in the proortions of $1: 2$ or $1: 3$; pure water-lime offeraye tho least resistance. Tbe resistance to ressurc in a mixture of the proport
$y$ uearly as great as in that of 1 ?
Cubos of brickwork, made of common bricks nd mortar of one part water-lime and three arts fine sand, after hardening for ninety days,
 Slabs of one part coment and two parts fine ind, about 1 \& in. thick, also, after setting for yinety days, wero likowise experimented upon, nd tho results showed tbat tho strengtb per quare unit increases witb tbe dimensions of toe ross section, but it is also detcrmined by its
arm, and diminishes somewhat with the thick. rim, and dimini
Siinilar experiments witb cement prisms like. ise showed that the strength of rupture of ament incroases if it is mixed with sand in the roportion of $1: 3$, aud even that of mortar ixed in the proportion of $1: 4$ is greater tban In the pure cement.
In the trial with slabs made of one part ment and two parts fine sand it was found Int thoy posBe日s equal strength whether they st on all four corners or only on two edges, rd that tho resistance was nearly proportional the square of thickness of the slabs. The slabs re tried after bardening for 105 days; the isme after 90 days.
Professor Bauschinger intends publishing an hapirical formula as soon as a sufficient numb experiments are available for the purpose.

## IE STORY OF A GEEST OF DRAWERS

 bi a cabraitt-hisher.
## - Irade is the golden girdle that encircles the glote,'

During the past tweuty years the attention tures of all hinds. One result bas beon that ring that timo marked progrees bas been de in tasto. The producers in tho different des lave been stimulated to greater variety
1 excellence in thoir designs, and their ex. ns aro receiving substantial appreciation and touragement. This intorest appreciation and in to the raw and uuinviting materials, and the processes of manufactire, and hence our ling, we proposo briefly to trace the bistory an ordinary cbest of drawere, made of maly yany and fir
set us glance at the procuring of the materials. rumber of wood-cutters have tracked their Iy into a derse forest of the West Indies, and re at the river-side they have reared their le but. Around them the scene is one of at life sand beanty. Bright birds and flowers, 1 rainbors hues, the sercied tranks of stately feathery palm-tree, -"a forest above est. The wood at times resounds witb the amon stillness prevails. Amid all the wood. ters resolutely proceed with their arduous 1.. Tbey first solect a good mahogany tree neal riversido, and by tbo aid of axe and saw and ing arm they lop oir tho branches and cut ough tho compact trunk, which is genorally n 12 ft . to 15 ft . in circumference. Tbe logs then flonted down the river to the nearest t, and theu the lumberer or wood-cutter can nt his gains. If the shippers purchase them Britain, they are sent to liverpool, the prin4. market in this conntry for mabogany and der woods. Here a brisk and profitable hogany logs are assorted into lots, catalogese sent throughout the kingdom, and in a wees a compaly of tradesmen from the various
towus gather ronnd the jovial, bearty auctionoer, and soon the treo which but a few short montbs ago waved iu grace and beauty in the primeval forest, has beoomo the prized possession of the cabinet-maker.
The parchasc of mahogany is very much of a lottery, and uo sooner has the manufacturer got bis logs into his wood-yard than be is anxious to see if be has secured a bargain. The log from of excellent calut of drawers was made was foun into veneers, and the rest was of rood quality and colonr.
The other weod nsed insido of tho drawers. This was or fir for the shores of the Balric; but instead of enlargiug on his, let us look at tho workman.
In general the cabinet-maker is a harduorking as antelligent tradesman. He passed six years as an appenticeship, and entertaius a bigh opinion of the requirements of bis craft. requires to he neat-handed, and interested in bis
work. He has ans excellent stinules work. He has an excellent stimulus to activity time he labours, bat for owch piece of firnitur he produces.
When our chest of drawers was commenced slip of paper givinc a ron had banded to bim a wip of paper giving a rough sketch of the article, witb the sizes and mouldings marked on it. He able woods, and this ont shed for the suit macbinery is the roughest and most oxhansting part of the cabinet-maker's work. Next followed the smoothing or planing, shaping, dove-tailing, and, not least, tho veneering. To an ordinary and uninstrmeted spectator, fol. some days littlo progress seemed to be mado; bat this was uot so for the disjointed piecos, when all prepared, were Boou glued together, and thoy assumed tho fimiliar and useful form of a chest of drawers, and required bat a coating of polisb and a hearty rubbing to fit thom for their adventures in the rorld. It would ho au interesting task, in fancy, but this is beyond our provine bomes and uses;

## CIVIL AND MECHANICAL ENGINEERS SOCIETY

THE annual meeting of tho abovo Society was held on Friday, the Gth inst., at the Board-room, 7, Westminster-chambors. The report showed that the Society had been working successfuily daring the past session, and that the numher of members was still increasing. Cordial rutes of thanks wore passed to the president, Mr. C. W. Whitaker, and tbe other officors; and tho ful. lowing members were elected office bearers for Session 1873-7.

PROPOSED SANITARY AND EDUCA. TIONAL EXHIBITION
Is connexion with the Social Science Con. gress, to be held at Norwich, from the 1 st to the of Ed October next, there will be an Exhibition ances, bational, Sanitary, and Domestic Appli. successful at Leeds in 187l. The proved so Drill Hall has been placed at the service of the Association. The object of the exbibition the bring under the notice of tbe pnblic generally, and particnlarly those who are interested in latest scientific appliances for questions, tho public bealsh and promoting education these may be mentioned:- All mation. Amoug to bouse constroctione - Al matters relating buildiner materials, connected with which are and interior stoves, hoilers furnace, fues, fireplaces, terns, baths pipiaraces, gas apparatus; cisand il thin, pio, use of trougbs, diougos, closets, nrinals, filters, and all plans, scwagres, sections, models, and specimens of sorts of and drainage contrivances; in fact, all sorts of appliances, appertaining to the advancement of sanitary science, the promotion of edudomestic come mprovement of the bealth and domestic comfort of the community at larre.

## FROM ADSTRALIA

Mellowne.- One of the landmarks of the city of Melbourne in its early history bas been removed by the pulling down of the Scots' Church, which the the corner of Collins and Russell streets. In tbe beginaing of 1869 the necessity for additional accommodation, supgested that a new chnreh should he built. Steps ware accordingly taken whicb resulted in the design of Mossrs. Reed \& Barnes being accepted, and the subscription list already shows a sum of 12,000 l. towards tbe necessary expenses. The Australian Illustrated News presente its readers with a fair engrasing of the bnilding, which is of rood design, thourb the tower and spire are rather attenuted The site is one of the finest in Melbonme Being at the top of a hill, the hrilding will Being striking feature is any distent view of the city. Tho style is Early English. The church is cruciform in plan. It consists of a nave, 42 ft . in 102 ft , and two narrow side aisles, 10 ft . 18 ft .6 in. the transepts are 30 ft . wide, and the north. eud p. There is an apse formed at the minister's platform. An organ-chamber is projected from the west trangept, which is to be fitted up for the oboir. The sitting aro all contained within the nave, the side aisles being used only as passages. A tower $211 \mathrm{ft} . \mathrm{in}$. by 22 ft .6 in., and with a spire church will, stands at the salient angle. The church will seat 950 or 1,000 preople, and of tho cost abont 20,0001. - Ahout the close of tho year 1871, a nomber of gentlomen, having investigated the sty?e of accommo. ation afforded in the cheap lodging-houses Helboume, resolved upon azadertaking the erection of a model lodging-hoase for the poorer class of citizens. Tbe Society for the Promotion of Morality cordially gavo their sapport, and a suh-committee having heen appointed to act, steps were taken to form a company, having a capital of $5,000 \mathrm{l}$. in 400 shares of $12 l$. los. each, for the purpose of erecting and furnisbiug a house for men exclusively, haring 200 beds, batbs, readincoroon, smoking-rooms, and other appurtenances. Tbe whole of the shares bave been taken up. Tho Goverument of the day granted a sitc for a building. It is intended that the scheme shall be self-snppostiug, the that on the paid-np capital being limited to 10 per cent. The plans for the buildiag, furnished por Messra. Crouch \& Wilson, were adoptod. fur by Eastern Areade in Molbourne It The complation. Six month purio upprowbing on which tho ercade etands and and débris from the was destroyed by firo some twelve montlis be fore. At this time the services of Mr. George R. Johnsou, architect, were called in, and be prepared the plans of this structure, wbich was commenced in July. The frontage to Bourkestreet will comprise a hotel and shop on the ground floor, with extevsive cellarage underneath, and a large 1all, 83 ft . and 40 ft ., on the first floor, suitahlo for* drawing.room entertain. ments or public meetiags. On the second floor will be the hedrooms, kitchen, \&c., reqnired for the hotel, and a pbotographic studio. The front bourke-street. In the arcade proper will , on the ground-floor, thirty-six sbops, with eellars underneath, 22 ft . by 12 ft ., and on the rst floor or gallery level will be twenty-eight sbops, 18 ft . by 12 ft ., two of whicb are fitted pespecially for florists, having glass roofs. The fallery will be 9 ft . wide, with light ornamental ron ruling. This will form a promenade, and is 80 constructed as not to ohscure the light to the shops ou the ground. Hoor. All round the gallory are Doric columns and entablature, from wbich prings toe larte oirchlar roof of the arcade Tbis is carried on laminated girders, steamed and bent, similar to what Mr. Johnson introduced in the Princo of Wales Opera Honee There lantern light the wbole length of the ereade 14 ft . wide, the sides of which are filled in tass lourres, sixing hoth light and The uuder side of the circnlar roof is panelled and flled witb five-pointed roof is panelled stained glass. The gallery is approached by four wide staircases, leading from cither corner of the arcade, whore there will be also drinkine fountains for the accommodation of visitors frontage to Little Collins-street will comprise a hotel and restanrant, and an extensive photo grapbic studio, constracted specially for Mayall \& Sons. The restanrant is approachable from tho gallery floor for the convenience of the tenants The total cost of the building will be abocit

17,000l. The contractor is Mr. George Corn. well, who also built the Ilayn
which formorly occupied the site.
Kew.一The first stone of the Catholic College Kew. -The first stone of the Catholio College of St, Francis Xavier, Kew ${ }_{1}$ was laid on the Sth of Decemher. The site of the college is a sbort distance outside the village of Kow, off the road hetwoen that manicipality and Hawthorn. It is
in the midst of a beantiful park of 70 acres purchased for $10,000 l$, on easy terms, from Mr. Patrick Mornane, of Melbourne. The archi teot is Mr. T. A. Kelly. The main block will he a parallologram, and projecting central and sid blooks will complete the design.
Fitzroy,-Building is spreading rapidly in the suburbs as well as in town. The National Bank of Australasia, which is hoing built at the corner of Smith and Wobh streets, Fitrroy, was to be opened for husiness in a few days. It has a frontage of 46 ft . to Smitb-street, and of 67 ft . to Wehh.street 1 and from the footpath in Smithstreet to the top of the parapet is 39 ft . The front of the main building to both streets is of the same stone as tbat nsed at the Melbourne
Town.hall, and is of uniform colour. The style of architectnce is that used in the palacos of Rome. The lower story has rusticated joints, with semicircular heads to the windows. The with monlded architraves and cornices. The lower portion of the building is rook-faced hlue stone shlor surmounted hy a well.finished deep flated string of Malmeshury stone. The size theded stric oflice is 34 ft , by 24 ft and is 17 f the puht The ceibing is divided by iron girders high. The celbng is divined into three com. partments. The floor in front of the countors partments. The foor in front of the The strong room is laroe and lofty, and fireproof. For the room is large and lory, and 12 ft. are allotted Mr, Mre the architect.
Geelong.-When tho gas-mains were laid in Goelong, some ten or twelve years since, a mile or two of paper pipes were pnt down as an experiment. On Decemuer on a service.pipe for Mr. Gale's halloon some of them wore nnearthed, and found to he in as good coudition as when first laid down, while the iron pipes near the same place were noarly corrodod throush.
Ballarat. - The Town-hall at Ballarat bids fair to be more costly to the city than was thought would he the casc. Tbe Conrier states that delay occosioned as be alleges, during the pro. gress of the oontract. Tho city council has a claim for a very large amount - somo 1,500 l., $_{2}$ - against Mr. Cowland for fines and penalties due on foot of said contract; and, on the suggestion of the mayor and the ex.mayor tho matter has been refored conncil's arhitrator, and Mr. R. Tunbridge arbitrator for Mr. Cowland.
Brunswick.-The Wosleyan denomination in Bronswick have just completod a new edifice, an engraving of which appears in the Illustrated Augraving of which News. Mr. Percy Oakden, of Bal. larat, was the arehitoct. The church was formally opened on the Gth of Fehruary only calculated to seat 800 porsons, tbough attended hy nearly 1,200 at each service. The hailding is of brick, on a stone foundation Dark red hricks, of which the front is principally composed, harmonize with those as a in the archos over the openings. Externally, the front is divided into throe compartments, the centre one corresponding with the widt of the main building, rising to the height of 53 ft . the gable being filled with a large window pierced with four lights, with quatrefoil opening ahove. The nortborn division of the front is a porcb, also gabled, with an open arcade of two arches. The soutbern division is occupied by bell-tower square at the hase, and hecoming
octagonal in form as it rises. The upper portion is open, the roof heing sustained by arches springing from iron colamns. It mses to a height of 90 ft ., and is finished with a wrought. iron fivial. The intorior of the church measure 72 ft . hy 63 ft . The floor slopes for about two thirds of the distance from the front tomards tbe pulpit, the remainder heing level, so that the seats, which are disposed in curve Tbe church internally is dividod into nave and north and south aibles, the aisles heing separated from the nave hy arcbes of coloured hricks rising from iron columns witb bronzed foliated capitals.
These arches support the clearstory wall, which
is pierced on either side with circular windows at a high elevation, thas providing for ample ven ilation. The contractor was Mr. Robert Roborts and the clerks of works ${ }_{1}$ Messrs. Boaso \& Stanton. Tbe total cost of the bailding is $5,000 l_{.1}$ of which the concregation have raised $3,000 \mathrm{l}$.
Adelaide.-In the illustrated paper already named there is an engraving of the central hal of the new Post.office, Adelaide. The two entrances to $\mathrm{it}_{1}$ the one from King William. treet and tho otber from Victoria.square, are rched with pilasters on gither side, and hare loeply cuffered ceilines. There are five steps of hintaro slate each in one length , leading from the paremont into a small lohby and then rom the pain hy four steps into the pnhlic all itse Th This 00 ft long by 35 ft , wide ball itself. The loog by 35 . Wide aud rans the beight of two stories and portion of ther to colling. It is paved wits caustic tiles in simple palf-dome roof f $_{1}$ the sidos of which y a half-come formed of glase, framed in light iron-work The frimed of glass, framed are of large boiler-plate girders, and the ceiling is sumk and emiched with panels and centro-pieces containing vontilators. Th room will be ligbted at night by two ornamenta lamp-pillars of four burnors eaoh. The balcony gives access to the whole of the uppor story there being fourteen frencb-polished ceder door opening into it from the various offices and rooms. A basement, 8 ft . 6 in . in heigbu, extends under the wbole of the huilding, and is divided into storerooms, workrooms, lavatories reading-roons for the letter-carriors, and a residence for the keeper. Mrr. M. S. Thomas is the architect for the building and he estimates the total cost at 56,000 . The whole of the contract Messrs. Brown \& Thompson.

THE CONTRACTS FOR BOLTON TOWN HALL.
We add to the particulars of the new Town Hall, Bolton, already given tho following list from the Bolton TVeekly Joumal, showing the amount of each contract. It may serve as gride to some extent in $_{1}$ dotermining on simila undertakings:

Description of Contract.

LIGHT AND AIR AND THE LONTDON SCHOOL BOARD
The. Vice.Chancellor, Sir R. Maling, at the suth Mr. J. H. Clarke, against the London school Board, th
estrain that body from building, so as not to interfere With his ancient lights to certsin small tenements in
Winchester-court, Fentonvillo, of which Mr. Clarke is Winchester-court, Yentonsille,
lessee, has given a judgraeut,
The bill filed hy Mr. Clarke against the School Board which the School Board is constituted, incorporates the Lands Clauses Consolidution Act, 1845, and kives to the Board the power of taking lands compulsorily, with order of the Education Department of compulsury powers iu force, and that no orler so made should
unless onfirmed by Act of Parliament.
The Board had duly put in force their compulsory nowers by taking s pincheort, and wete about 63 yurls square, a schoolhouse upon it, fart of the schoolhouse-wall was honses, and it ras not disputed that the effect of this would be to hlock up and darken the plaintitt"s light. It whs urged, however, on the part of the Board that
they had already purchased the freetold interest in tho plaintiff's houses, and that it was only the exorbitant
price asken br Mr. Clarke which prevented their price nsked by Mr. Clarke which prevented their coming necessary steps to obtain powers to parchaso his interest conpulsorily, and mennwhile they maintained they were
entitled to build estitled to build upon the land, which they had aequired pay Mr. Clarite the piaintifi, a compensation to which pay Mr. Clarke, the piaintit, a compensa,
alone be was entitled, and not in injunction.
In giving judgment, the Vice-Chancellor, Malins, sadd
the case involved questions of very great inportance Tveryhody knew the important public prarposes tor which the school Board had been constituted. In order to earry out these purposes, compulsory porers had been
green them, which, however, were to he exercised with certain resurrictions. Now, it conld not be contended that an adjoining owner, who was a prisato individual, would "auclent ligbts;" it was, howerer, maintained by the Board that vhey could do anythingr upon the land which they had duly acquired, short of tonching the neighbour'
soil, and that his remedy was ouly in compensation. It they conld build within 4 f.t. they conld build within 4 in., and
their risht of blouking up a man's, that, by exercisin they
practically turn him out of his house, though they could not take it. To that proposition he, the Viec-Chnncollor could not agree. In Hutton of South- Western Railway
Company, and other cases which had heen cited by learned council in support of this contention, the damage eomplsined of was sustained in consequence of tw1 Ac
expressly made lamful by Purliamentary powera, of th expressly made lawful by Parliamentary powera, of the
application to the Legistature, for which the public had
notiee, -and to the grinting of which they might have notice, - and to the grinting of which they might have o the thing complained the defevdauts had the right to better ascertained after it was done, the injunction shoul not be granted. But in this case he (the Vice. Chancellor could not hold that a man practich1y turned

must wait until the lengthy proceedings for the | ment of compensation under the 68th section of the Land |
| :--- |
| Clause $C o n s o l i d a t i o n ~ A c t ~$ | Clauses Consolidation Act, 18 k , wero worked out, and rights in this manner. The School Board were to exercise their powers in a reasunahle manner, and were to fix upon property where those powers could be exercised with

doing injury to ajjoining ownera. It was important thu puhic bodies shoula be cept within the strict cxercise might ultimately acquire this land, and had alread
offered a reasonable sum for it, the plaintiff was entitlel to iasist upon his rights; and, considering that the Schoo dealing with adjoining owners, he (the judge) was bound to give the plantiff the protectiou he legally demanded. School Board.

OWNERSHIP OF LAND.
A verr suggestive question, in respect to the acquivitou of lands and houses by churcharardens, orerseers, of the Solicitor of the Treasury, Mr. Gray, Q.C., brought the Milecend Town Board of Guardians, and the case the following very extraordinary oue,
In 184 -47, representatives of the several northeastern
parishes of London were delegated to provide a join district asylum for ragrants, and to earry out that idea
they got a loan from the Government Worlis Loan Com. missionerg and parchaseds huilding in White Horse-Isne
mut which fell through, although Mile-end Old Town advanced money to carry out the scheme. The joint com.
mittec ceased to exist nfler a ter years' sittiug, and al mittee ceased to exist hiter a ter years bat no portion o the money horrow
since heen paid.
A gentlem an of the name of helday, one of the presen
churchwardens of Hackuey, acted as secretary or clert churchwardens of Hackuey, acted as secretary or cler
the above comittee, and has yet up a claim to the pro perty intended to be purchased, or purchasen,
vagrantá asylum, on the ground that he has held puted pascasion of it for more than twenty years
of the fand, it appears, has heen let hy Mr. Ke
lease, and ncw huildings bave been ereeted on it.
The Mile-end parish now contend, and the Gorernment
too, it seems, that it is a strange thing that an individua too, it seems, that it is a strange laing that an an scre
shonld be allowed to take pobsession of half an
lnd and use it as his own priqate property, in defianee no lnod and use it as his own private property, in deflanee no
only of the parishes on whose behalf he mas eruploged only of tho parishes on
hut also of the Government zuthorities from whom t
mone whe obtained to purchase it. They further con
tend that the mere fact of the legal ducuments relating tend that the mere fact of thands of the secretary to th
the land being lotit in the hand committee do not confar upon Mr. Kelday any title to th
land, and that his possession of it , or leasing it, is no
legal. legal.
In the meantime the hailding lessees of the ground ar
as it may he supposed, in serious jeopardy and a fix.

AIIR VAPOUR OR GAS FOR GENERATING STEAM.
Mr. R. Walker has obtainod letters paten or the invention of a new mothod of applying itmosphcric gas, spirituous vapour or gas, and mpregnated combustiblo vapour or gas as a reating modium for tho gencration of steam or
ther purposos. II motlo of manufacturine the ,ther purposos. II is motle of manufacturing the ir vaponr or gas is by means of pumps or other
ippliances, hy which the air or atmosphere is orecd through a perforated or inlet pipe placed a a recciver, which is partially charged or filled naphtha, petroleum, methylated spirit, or i, requisite for increasing or lesseniug the trength and volume of the vapour or gas. In bis receiver is placed an certain plate or plates, 1 a position relative to the perforated or inlet ipe, and to the level of the liqnid. Tho air, he receiver into ono or more expanding and ontractigg vessels or regulators, which are ach elastic substance. By tho contraction of hese regulators or vesscis it is forced into the ipes, and thence regularly through the burnors or ignition. The clain includes the combination
"air-forcing," "air-impregnating," "impreg-ated-air dolivering," and "impregnated-air onsuming (or utilising)," contrivances or appaad application of the invention to tho furnaces boilers of marine, loconiotive, and stationary ggines.

NEIV METHOD FOR TEE UTILISATCON OF SEWAGE.
A meeting has been beld of gentlemon aterested in tho promotion of a compady in roland for the purpose of carrying into elfect . Anderson's process of defacation of sowe ompany, Iimited, at Nuneaton, Warwictertire nd other places in England. Lord Talbot de Ialahide ocorpied the chair. The Chairman stated that the question of the ad riven much ago was not new to him. He ad given much attention to it, and had felt ience would lead to some method of deriving aluable products from sewage. Heretofore a ast number of schemes had been started for the urpose, almost all of which had proved failures. Dr. Cameron said that he might state, hoth ere first called on to investigate the process in uestion they wero prejudicod against it. They ud very gloomy forebodings, and thought that ncy should havo to report adversely. However, ter they had made their investigations, thoy rived at tho conclusion which thoy had alroady ported to the directors of the company, that 10 process afforded every probability of a comercial success. The quantity of sewage proused in a city like Dublin, with a population of quarter of a million, was enormous. By means the process in question this sewage coutd he ado to yield an immense quantity of manure. o had calculated the actual money-valuo of the wage of Dublin at 100,000 . There was reason heme for the purnosc of apply sowace as a anure to the soil on a large scale, and, that sing so, they were bound to render it as insuous as possihle. He holieved that the prent process afforded every probahility of success tho way of rendering sewago innocuous. The ist of producing the manure wonld he about s. a ton. This would be sold by retail vendors from 17. to $1 l$. 5 s . per ton, and its moner luo to farmers would he about, 1 l . 10 s , a ton. Dr. Reynolds said the process consisted in applying to sewage clay trated with oil of vitriol, and nuped with
ittle water, in the proportion of $6 \frac{1}{2}$ erft. of the vitriol 1 sed
 ling the sewage, leaving a clear figuid nt the top.
precipitation is the manure, and hoth it and tho may be used for irrigating land, ard nollowed to cscape his siatement, by applying to a reasel hilltal illmstri-
with fuid of the prepared elay. The clarifying of the fluid and mation of tho precipitate at the bottom hecaure visihte
ile the proceodiags were going on, thongh not completo their terpuination. at he had seen on the Canecasion to piro an account of
as visit with Dr rhs at Nuneaton. rhs at Nuneaton,
Dr. Cameron said, that the only difference between
at they saw there and what had been now shown experi-
process was dr. Karried on with was, that at Nuncaton lhe scale. The flaid there whs used for the irrigalion o
fields. It was proposed that wir helds. It was proposed that when it wras not reqnired
for that purposo it should be discharged into a rivicr or the sea,
that tho Board of of the Blackronk Commissioners, stated Boines, C.E., to report he was a member had sent Mr. Mr. Barnes was present, aud would be happy to afford his Mr. Barncs gave a most farourable account of the efficacy of the process in producing resulth ntogether nnocuous in a sanitnry point of view. The water propurc. The machanieal arrangements at Nuneaton Trere
not as perfet as he thoaght they might be, bat that was was any thine buit The sewrge prodnced at that placo Tras perfictly sutisficed that the process was one capnble of bring succesfinly appled, In repiy to a qucstion,
Mr. Rrnes said that if Duid, such as was tho residnum after the deposit of the precipitato formed by the process, in the least degree injurions to the hathing.
Came Chairman said they were decply indehted to Dr. and he was sure he was only acting in accordance with,
the wishes of the meeting in olfering them their very best
thent thanlis.

UNVEILING THE NEW REREDOS IN GLOUCESTER CATHEDRAL.
Tire ceremony of unveiling the new reredos presented to Gloucester Cathedral by the Freemasons of the province, at a cost of 1,000 We have already ( on Thursdry in last week. riew and doscription of the reredos; birt a may repeat, that it was designed by Sir Gilbert Scott, the cathedral architect; is 17 ft .5 in . in width; and contains seven niches, filled alternately with statues and sculptured groups, the suhjects heing - "Moses hearing tho Tablets of "The A ceension," "St, Panl," "1 Tho Petor; ment of the Saviour :" "David hearincomb Tharp." The central group, "The hearing tho is 5 ft . in heirht, and thoup, "The Ascension, 4 ft .3 in high Over the g ares a . re fin. high. Over the figares and groups three hree open pinacles, with statues and angels, 27 ft from the vore by Dir. J. H. Redfern, groups and statues wore by Bir. J. H. Redfern, sculptor. The other portions of the work were executed by Messrs. Tho \& Brindley.
Tho Rev. C. Raikes Davy, P.C., tho Froemasonic Grand Chaplain of England, preachea the sormon. His text was from Psalm xe. I7, Let the boanty of the Lord our God he upon ; and establish Thou the work of our hand pon us; yea, tho work of our hands, establish thou it. The Rev. gentleman excited tho curiosity of the ladies by propounding for his own reply the question, "What is Freemasonry? But he went on to say,-Our ceremonics are only the keys to our treasuro, From the lessons which they inculcate the well-informed Masor deripes instruction. The teachings of our lodses likethe Adyta of the ancient temples, are hidden rom the eyes of the uninjitiater. But as to the possession of a secret nuknown to the rest of tho world, we profess nothing of the kiud. Tt is true that all our affairs and transactions aro conducted in secret, hut we do not on that account pretend to be better or wiser than our state of creatures. Let us look at the present knowledge is a remarkable fcature of the times Literature, taste, and art, and philosophy and science, may elovate and enrich the intellect minds wield an almost magic sway over the heart of men; hut they will not sanctify the heart, nor chango the natural disposition. So to build for eternisure rofoundation on which no man lay than that is laid, which is Jeans Christ." From the huilding of Solomon's Tomple its woudrons architecture and its magnificent strncture, we are led to the foundation.stone of that Spiritual Temple-Josus Christ himself,-bronght health and salva star, whose rising light to those that gat in dalmess and and the shadow of death. Xes, Christ is set hefore as as the fonadation-stone, tho corner-stone, the topstone, of our Masonic structure. We are
taught to look to Jesus as the captain of our salvation; to look to Ifim ns our incarnate God and Saviour; to look to Him as Christ our Prophet, Christ our Priest, and Christ our King. Such are Freemasonry, its Eprinciples, and its teaching. Tho heart of the true Christian is the abode in which God delights to dwell. To turn human souls to bocome this dwelling place is one principal 1880 of the Church material. By the Word preached within its walls is unfolded and displayed the great atoly of tho Cfoss on which the Prince of Glory died. By it is infusod into the minds of the people the love of Christ. They are made to know the power of his death and resmarection. This is the work of human prenching with the power of the Holy Ghost sent down from heaven Let us rejoice heartily that this materinl house this palaco of the Tord God -hes been thus 80 greatly beautified. Tet 118 pray God to mate a spixitual horse, house of living stous, the inner palace may also crows stotes, that teaching of the Foly Ghast the Corf under tho us remember how it is that the stone is shaped before it is fitted for' the builder's use, -

## By the hammer rade prepared."

May we be built up in the walls of the hearenly Jerusalem, and there abide for ever. "Let the heanty of the Lord our God be apon us; and establish Thou the work of our hands npon us yea, tho work of our hands, estahlish Thon it " Some of tho Masonio brethren, deep in the implying that the ventured upon a citicis, were dirwn from sentiments of the preacher than from the broad remplar dorree, rather bat the general publio know nothing of the distinction.

CARCASSES, NON.PRODECTIVE
BUILDINGS, AND PAROCHLAL BUILDERS Tus gubnrban boundaries of London, that hare been Battersea, so.,- for soreral years past hare heen 1 mam, much dilliculty in regard to the assessment and collection mont, and other parochial burdenss, for new roads, paveThat very large buildings, burdens; in the it is well parnown doors for non-payment of rates. In sorue parts. at
 premises. The roads, howeser, being actually impacempied the fout, parse, or carriage traflic, "- yet "dudieated "to tho "parish erushed the littie
the tho "parisi,"-and the "parish" crushed the littio
builders by domands for roads never made, and, what was
Forse, for roads made impassable to reach the ner The parish of Fulham has been "wise in time," and lask
week a shrewd committes of the vestry sars sightedncss of their neighbour, Kensington, and shortveying the large extent of noun-pproductive property, have recommended "that rates should not be charged npon
unfinished houscs, cotnmonly lanown hy the antinished houscs, commonly known hy the name of
carcasaes.
The restry sdopted this report, and the carcasses." The restry sdoptod this report, and the
brilders bare at once sot to worls to finish some handreds of houses, unroofed.
Rattersea parish
Rattersea parish has no loss than 3,000 erapty houses, ow rent of 2ale. a year to take eight-roomed honses at the Pimlico, Westminster, and Chelsen are overcrowded, Fimalico, Westminster, and Chelsen are orercrowded,
aud cannot, for the above causes, supuly tenants.

## ACCIDENTS,

Gas Euplosion in Manchester.-At the Pleasant Inn beer-house, Jork-street, Chectham, Mazchester, an escape of gas being suspected, the landlord incautiously toois a light to tho gaselior han tho sooner done so han the gas instantly ignited at tho bottom, and uxning up tho pipe, a volume of flame filled The room, and a terrible explosion took place. tered, tho windows building twas entirely shatthed, tho mindows and walls heing thrown into Telvill a distanco of several jards. Mr. Melville turned off the gas at, the meter while were much wero in flames. His wife and he bete mate the damage is estimated at etween 100 c , covered by insurance tho surn offico
ricklarg of a Full at Manchester.-Two ricklayers were employed in pulling down a wall at Batterworth's Mill, Manchester, where a arge fine had ocenred a day or two previously one was on a ladder, a second was undermining wall, and a third was watchince ready to sive an alarm; hit before he could do so tho Wall fell, aud tbe two men who were working on it were killed.
Destruction of a Afansion by Fire.-Alderdale Stalybridge, and situate about threy, Bf.P. fo

Ashton-under. Lyure, has been dostroyed hy fire. The gardener had taken a light into the cellar to discover a leakage of gas, and an explosion building, ond setting fire to the house. The fire brigade, who were quickly on the spot, conld do ne more than save the offces. The damage will amount to several thousand pounds the neighloourhood of Cupar Fife, Miss Laird daughter of the Ror. John Laird, minister of the Free Church in that town, went along with brother and a cousin to a monument, 100 ft higb, erected to tho memory of the late Earl o Hopetown, on the top of a hill. The column is pierced by a spiral staircase, and surmounted by a cupola, about 15 ft. in height. The footing at this eleration consists of a square stone slab, and is protected by a stone perapet only 3 ft . bigh which parapet, being circularly built, leaves the four corners of the rectangular slab jutting outwards for several feet beyond the eircula column. Haring noticed some aeqnaintances coming up in tho direction of two tower, the attention of the party was for a moment diverted from each other, and on Niss Laird's brother tnrning ronnd he was horrified on seeing his sister standing on the outside of the parapet, on cried to ber to come hack, but the poor gir seemed snddenly to become giddy, and made a clutch at the edge of the parapet, She" missed clutehlding and foll over and down to the ground below. The poor yonne lady never recovered below. She poor yond without nttering syllable. To leave it possible even for careless ness to meet with such a fate seems onlpable.

Accident in the Vienna Exhibition.- $\AA$ portion of the staircaso to the baloony of the Resssian Pavilion lans fallen iu, injuring four persons, inclading two Austrian officers.

## COMPETITLONS.

Mountain Chapels.-The snb-committeo ap pointed by the Carisle Diocesau Church Exten sion Society to adjudge the preminms nuder the ahove scheme, have awnaded the first (twenty cruineas) to the designs of Messrs. Paley is Austin, of Lancaster, hearing the motto "In montibus," and tho second (fiftecn guinens) to those of Mr. C. J. Ferguson, of Carlisle, bearing the motto "Delta."
Leicester: - The design of Mr. Tait, of fition for a ncy Nonconformist limited compe. erected at Belgrave, the northern suburh of this erecte
Westeyan Chapel ana Schools, Peterborough.In a limited competition for the ahove huildiag, the plans suhmitted by Mr. John Johason, Lon. don, have heen selected. The proposed chapel will accommodate upwards of 1,000 adults, and the schools 550 children. The cost of the works will be about 4,500 . The style of the building $^{2}$ is Italian.
. designs (Neva Bridge), at St. Petersburg, is decided. The commission have awarded the first premium, 6,000 ronhlee, to "Westminster" (supposed to be Mr. Page: arched design); second preminm, 3,000 ronbles, to R. M. Ordish "Max Am" Ende" ; third premium, 1,500 rouhles, to "B. S.
(a Rassian). Eighteen dosigns were sent in.

## A Water-Tiget cellar.flap.

 Iv reply to "Inquirer,"-his ohjeet may be accomplished thus:- Let the section of the curb he 6 in. high hy 4 in. wide. Let it hare a rebato izside underneath, say 1 in. high by 2 in. wide. Let the curb, when made, be properly bedded on rood brickwork with Portland cement, and so that the nnder-rebate shall he made good with the cemeut. To effect this, sereed may have to he nsed. When this shall be done, no water will he able to pass under tho curb into the hasement.The top of tho enrh will have to be robated for the fap $2^{\frac{1}{2}} \mathrm{in}$. deep hy $1 \frac{1}{3}$ in. wide. Let the inner angle of the rehate have a tin. water. channel all round, $\frac{1}{2}$ in. deep, with plenty of $\frac{3}{3}$.in. holes to convey the water from the channel to the outside of the carb. Let the top of the curb he weathered $\frac{1}{4} \mathrm{in}$. and its lower outer edge be $\frac{1}{\frac{1}{8}}$ in. or perhaps $\frac{1}{4}$ in, above the gronnd level; then the water cannot re-enter the rehate, but will run away through a small draiu-pipe laid all round the carh below the level of the $\frac{1}{i}$.in.
water-chamnel, and having an outlet discharge.
pipe laid with a proper fall. Tho bottom of tho rebato to receive the flap will then havo a $\frac{3}{4}$-in fhilet, wenthered towards
Tho flap would be best made of $1 \frac{1}{4}$.in. hoardin propery prepared, ploumhed, and toncued, an in two thicknesscs, erossing each other at righ angles, and serewed together from the underside with stont $2 . \mathrm{in}$. Berews, and the under.side of the flap when cleaned off shonld be covered with galvanised iron turned ap round the edges of the flap, which should be reted 11 in h5 ${ }^{\text {b }}$
 in the odre of the Hap, and also propenly nailed all round the edges.
If made by a competent Wrorkman the resu will bo success[al.

Henry Aybrose.

## MONCMENTAL.

A memorisl of Sir Joseph Paxton has been nveiled on the terrace at the Crystal Palace. The memorin, which has heen erected by privato ubscription, consists of a colossal marhle bust 8 ft . high and 4 ft .6 in . at the base, carved in Carrara marble by Mrr, W. F. Woodington. The pedestal is 11 ft . square at the base, and 31 ft . high, making the total height 39 ft . from the ground. The lower part of the pedestal is in Cortland stone; the upper part in Portland cement, in imitation of red porphyry. In the base four incised slabs of Cornish serpentine will bo inserted, the first containing a diagram of the principle on which the huilding of the Crystal Palace is constructed and the other the follossing ascriptions: " Joseph Pexton, hom at Vilton. Bryant Bede 3rd Ausust 1803, died at Took. Bryant, Bods, 4 A 1865 "; "Tied at Took
 Piacta Victoria on Jur louk lice" The whole monu merta quared by arected nder the mentis desig do bected an of Mr. ©wo. Jons. the carving on the base are by Mr. Charles Bool and Mr. Enoch Bool.

## ARCHITECT TO THE OHILLIN

 GOV ERNMENT.Sir, - Whoever the successful candidate may e, I feel sure he will not ebject to giving "the profession " a ferw particnlars of his experionce in Chili, through the modiam of your columns. The construction of bnildings, in conntrios subject to volcanic eruptions, has occupied my attention for several years, and if I mistake not it is an ordeal that many of the "successfiul candidato's " buildings may have to go through. Thope, therefore, that wo may have the pleasure of reading a little of his experience in due timo, and I am sure the profession at large will feel greatly interested.
H. T. P.,

## CONTRACTS

## wayt re. STathmbass.

According to the Lays Joumal, this was an action to recover 300l. deposit paid on a contract for the purchass of an estate sold hy auction subject to conditions, among others-1. That the vendor should doliver an abstract of his title in seven days, all requisitions not delivered within fourteen doys after delivery of the abstract to be considered as waived; and 2. That if the purchaser made defanlt in the conditions, his deposit should be forfeited. An abstract was delivered, showing that the property had been derised to trustees (of whom the defendant was the survivor), upon trust to pay the income ta Frederick Stallibrass for life; and aftor his death to sell, and divide the proceeds among his children. The abstract also showed that Frederick Stallibrass was still alive. The purchaser made no requisition within the fourtee doys. At the trial of the action the verdict was ontered for the plaintili,. A rule laving been obtainod to set aside this verdiet,
The Court held that the condition as to waiver requisitions and to corcciture applied to the case of 0 defective title, the defects in which could be supplied on requisition, but had n reference to suoh a case as this, whero thero wa dischorged the rule accordingly.

## CHUROH. BUILDING NEWS.

Liverpool.-Tbe church of St. James. the. Less Stanley-road, has been consecrated. Thi building was erected some ten or trvelve year ago, and consisted of a south aisle \%o ft. long hy 20 ft , wide, and a chancel 20 ft . square. Fo some time this has heen found to le inconve uiently small, and the accommodation has bee increased from abont 250 to 750 kneelings b the enlargement of the edifice according to th original design. This has heen done by th erection of a nave 30 ft . wide, and chancel 35 ft loug hy $21 . \mathrm{ft}$. wide, organ-chamher and vestries and small west gallery. The whole area of th hurch is paved with red and black tiles, ant eated with rusb.hottom chairs except a portio of the south aisle, which stinl contains some o the old open benches. The roof to the nave an an the lesser width of the chancel. Thero is ni hancel erch ar of ehstrnct the view, ho he junction will be morked by means of a rood creen f arched opcniugs, filled in with open tracer The lower part of this screen is alrendy fixed and the centre opening protected by wrougl ron gates. Tho chancel is divided into threc bay he first two having an aroade of moulded brich on each side, resting on polished red gramitopillara and filled in with screens of open tracery wor The third, or eastern hay, forming the sacrariun vithin the altar-rail, having three sedilim an piscinzo on the Epistle side. The sediliaj aro con structed in the thickness of the wall, of Caes tone, with red marble shafts and carved cap. and bosses. The chancel is raised three step. above the nave, and the altar is set upon a dail of three steps, with one more at the al tar.rail. This chancel is furnished with stalls returned agains. we wood screcn, with suhselles for the choin The eastern wall of the chancel affords a ground vork for a reredos. 1nstead of there being single large window there are two two.ligh vindows with pier hetween, and a pentagona circular window in the apex. The bosses to thi hancel arcado are carved with emblems of thin Passion, and upon the caps of the two principa
grauite pillars are carved representations of the
ntomhment and the Reanrection. Nucb of earved work is at prosent only in hlock neoaled for tho occasion under a profasion of atural foliage and flowers arranged and applied.
to arcade of the nave is of moulded red and aek brick of two orders, resting on red atone aek brick The inner arches to all the windows athor openinga are of red pressed hriek, as oll as the lower part of tho walls and the bands wall heads and apring of windows. The nave It be lighted by means of wrought iron coronce, spended from the pointa of the hammor-beams, $d$ the chancel by three floriated hracketa on ch side. The only portion of the exterior ancel, with a niche in the centre end of the reption of a figure of St. James-tbc-Less. rk has beer executed by Mr. Burrones m the deaigns, and under the supervision, of isars. igned by Mr. W. S. Barber, of Halifax, will in the Perpendicular style. The ground plan es nave, elisles, chancel, with side aislos and an-chapel, and sacristies on the nortb, bap-
rery opeaing from the second bay on the rery opening from the second bay on the
th; and nortb-west tower. The ravo, in fivo ra , is to be $71 \mathrm{ft} .3 \mathrm{in}, \mathrm{long}$, and 23 ft .9 in . ncel, $32 \mathrm{ft}, \mathrm{G}$ in. The tower, which is 12 ft .
are, rises to a lheight of 7.4 ft ., and bas an are, rises to a leight of 7.4 ft ., and bas an
agonal turret at ita north-wost corner. :our stages, the first having a two-light winfacing west, and the eutrance-door (which a earved niohe over it) on the north face, belfry stage has coupled two-light windows aneb face. It is to hold a poal of eight bells. great west window is a four-light one, with it and two-light ones. On the south side the tistery is 12 ft . by 8 ft ., and is lighted by two. it windows. The cast window is in five iu oncaustic tile-work. The roofs are openbered, that to the chancel having a carved aice. The shafts to the nare arches are thing bas yet been done as to the introduc. of stained glass. The foundations of the work of its erection will be praided are long cost of tho building itself is borne by Major ter, of Cliffe Hill.
reh has been laid in the villare of parish reh has been laid in tbe village of Poulton, W. Batterfield, of London, is the architect, W. Butterfield, of London, is the architect,
the contract has heen taken by Mr. Reatall, lisloy, the huilder of the schools. The ehurch ch will be dedicated to St. Michael and ali cels, will, we understaud, be a $\nabla$ cry plain chure, and will not cost more than 2,0002 ., of scribed.
beengtey.-The restoration of the church boeu proceeded witb so far as tho funds at ent availiable will permit. The works already ated include new open-timber roofs to the
and aisle, facing with stone the clearstory on nortb sido; rebuilding a portion of aisle, adding battlements to same; allo restoring nsiderahle portion of the stonework gencrally. works have been carried out by Mr. Jobn ley, of Camhridge, arobitect, the contractors Mosers, Joseph Worboys, of Comberton, Tomson, of Crmbridge. Tho plamber's
s was exeeutad hy Messers. Fhe a was exeeuted hy Messers. Favell, Ellis, be in courso of restoration in a short time ysall. -The ancient charch bere bas recently one considerable repair, and has been re. for Divine worship. The church bad awed to fall into a dilapidated condition, so the it was considered unsafe to out of plumh, and would probably hare 3 down at no very distant date had not proings been taken to prevent this. The work 1. Somo few alterations have heen of Hazlenterior of the churcb. The old perss have removed, and chairs smbstituted, and addi. ing the old schoolroom near the belfry. A
new pulpit has also been obtained, together witb old porch, ateps, has been much improved, and tho floor of tho church has been rellagged. The whole of the sittings are now free, and accommodation is pro vided for about 200 people.
chancel to $S t$ it is proposed to build a new At present there is only a shallow this town. At present there is only a shallow apse, and wholo of the enough seata for the choir, and the venjently dark. chancel, together with the warming of the whole cburch, is ahout 500 l ., of which nearly $1.00 l$, are cburch, is ahout
already promised.
has beof (near Rugby).-St. Petcr's chareb has been entirely rebuilt from desigas by tho late Mr. William Slater, and by Mr. R. Herbort Carpenter. With the exception of the Norman doorway, tho north arcade, and two curious lancets in the ohancel, there was notbing of of the naro and cburch, excepting the timbers ropaired and ren chancel roof, which bave been five bays, witb north and south aisles, a long chancel, with organ-chamber and vestry, on the soutb side. It seats 300 persons. The walls are built in conrsed Attleborongh stone, with Attleborougb stone dressings. Thotomer stands at the west end, and is of entirely new desion, the former one being bat late and poor in character; the parapet and turret are of the asual mbattled Warwickahire type. The oontractore Thom Hebsrr. Law, of Lutterworth, undor Mrr been executed by Mr. been execated by Mr. Harry Heme.
of the now parish churcb of St of the towor laid by tbe bishop of tho diocese. Thartin bas been now being restored by Messrs. Goddard, of Farnbam. Tho hon, sec. of the present building committee was also secretary to the restoration committee in 1835, when the late parish cbnreh was built, and the two churehwardens under whom the present work of rebuilding is being carried out filled the same office (thourh at dif. feront periods) wbile the chancel wes being restored in tho years 1806-68. Tho rebuilding of Dorking parisb church was commenced on tho 1st of Angust, 1872, the cost being defrayed by public subscription. Mr. Menry Woodyer is the architedt, and Mr. Willians Davidson the clerk of works
Hyde, The fonndation stone of Boly Trinity Chureh, Gee-cross, Hyde, has been laid. The church, which will cost about $1,800 \mathrm{l}$., is estimated to seat comfortably 300 persons. About $1,100 t$, have alueady been subscribed. It will be bnils of alone, with mullioned and traceried windowe, and will be, of course, provided with a cliancel, nave, transept, organ-chamber, vestry, \&c. $A$ between tho chere and situated the building will be the Decorated Gothic. The site was given some years since by Mr. T. W. latton, of Wythensliawe, and is almost on the lop of the alope going ap to Wernetb Low. Tbe architect is Mr. Medland Taylor, Manchester.
Grindale, Bridlington.-The foundation-stone of a new church has been laid hero by the Rev. Y. Lloyd Greame, of Sewerby House, patron of , hoo ,000l., which the bailding will cost. Tbe church is to be ercoted on the sito of what was really a 830 . church, having been built so recently as Pointed atyle of architecture, and will consist of navo, cbancel, vestry, porch, and wil consist of wo bells. It will be built of whith gable for will seat abont 750 berso heing erected from the desions of building is it Brodrici, of Frull and Bridington Quayth Mr. John Renard, of Brid Bridlington Quay, by Ashbourn.-At a meeting of thany.
bas been unanimously resolved that the spire and parapet of the tower of Ashbourn Church be repaired, and that a oommittce he appointed to collect subscriptions for the purpose, and com. manicato witb Mr. Frith, of Coventry, who has recently repaired the tower and steeple of Stratford-on-AvonChurch, and has examined the apire of Ashbourn Church, and has examined the apire or Ashourn Church, and sent in an estimate of tho probable cost ; and to submit Mr. Frith's petent the opimon of some other person com. petent to jnage of the matter; and ohtain such aud report thereon to a future mecting necessary, mittee has been appointed. It is estimated that and this will include only such repairs as are
necessary for the safoty of the chnrch and spire. when several liberal sums were promised.

## roman catholic citrofi bulldiza NEWS.

Wednesbury.- The forndation stone of a new church for Wedneabury has bcen laid. The building will occupy a aite adjoiniag the parish church, on Chnrch-bill, a portion of the old o make room for the new bildin whicb will be in the Early English style of architecturo, faced with red brick. The windows will bo re, lieved with box-grainod stone, and the colnmns of the arcbes and outside the nave and ohancel will be of Painswick stone. The roof will be open groined. The huilding, when completed, will recommodates 7700 persons, being sitting. room for nearly 500 more than the old one. Chero will be no perss, and the fittinge will be ory plain. Mr. Gilbert R, Blunt, of London, is mingbam, are the buildera; and \& Sons, Birthe clerk of tho works. Until thr. Carew is is erect the works. Until the new church portion of the scrvice will be conducted in the portion of the cburch that has not been pulled down. The Rev. Mr. Bathurst, the pastor, we of the edifico, which wreater portion of the coat the edilice, which will amonnt to $5,000 \mathrm{l}$.
Harrogate.- A new chnreh has been opened here for divine service. The edifice is dedicated St. Robert. The new church adjoins St. Robert's Presbytery and Soboolroom, It is bnilt of brick, with an almixture of stone. The style observed is that whicb prevailed in the thirteenth century. The principal front is in St. Rohert's-street. The doorway is deeply recessed, with a circular window in the pediment displaying an ornamental oross, and this is snecounted by a pronp of four lancets, with shafte red Rainton atone. From amidst these, from a sculptured corbel, rises an enbanced shaft terminating some feet below the apex of a pable in a bracket to support a statue, which in its tarn is surmonted by a canopy lifted con siderably ahovo the roof. The aemi-octaconal Daptistery projects on the one side, and the bell uarret, containing the stoirs to the organ loft on the other. By this means additional brondtb is given to the facado. Tho chureb condin of wido nave, flanked by aisles, and a phoncol the same heimht and width as the nave the columns of the nope are of light red and The and carry arches, finished in brick. Above theso and conneeting the corbels of the roof, runs a continuous string-course of brick and stone, and a clearstory of unadorned lancets, placed two in cach bay, whicb light the entire giructnre. In the treatment of the altar end, under deeply. reoessed arcbes, resting on pilastors with carved capitals, are two windows, each of two lights, the heads pierced witb quatrefoils, while above dosism ween them is a circular window of rioh dosign, all three being symmetrically nuited central pilarioaded arch. The capital of the central pilaster supports a cross of large dimen sions, its arms extended in front of the rose figuro of Christ thas encircles the conspicuous figuro of Christ crucified. The plain corhela of the nave give place in the chancel to others of ornamental design, from which spring shafts of Rainton stone to meet the principals of the roof, which throaghout are arched and coupled with ie-beams. The aisles are lighted with lancets similar to those in the clearstory. Eacb aisle is terminated with side chapels, whicb are entered nuder lorty arches, and are half octagon in plan. The three stone altars were presented to the church. The architect is Mr. George Goldie, of Loncton, who was also arcbitect of the Church of St. Wilfrid. Tbo estimated cost, exelusive of the altars and internal fittings, was $3,500 l$.; but the total cost will be much more. The church will seat $600 . \mathrm{Mr}$. John Wood, of Leeds, high altar the oontractor for the whole. The Leeds. It is exeeuted in Caen stone, Baillie, of with polished granite shafte, and slahs of Devon, abire marhle. In the centre of the reredos rises canopy, surmounting too tahernacle, which is of metal, enamelied and set with precious stones. The extremities of the reredos are ornamented witb statues of ancels eare groups of candles. The whole rises to the beigbt of about 20 ft . Rising above the lofty oonopy of tho tahernacle is the representation of the Crncifizion. The design is in the meantime marred by the powerful ligbt from the
adjacent wbite windows, and especially the rosewindow behind it,-a defect which the heads of tbe church hope may be remedied hy some generous henefaetor filling the windows with stained glass. The altar on the right of the bigh altar is dedicated to St. Joseph, a statre of which saint, sculptured in wool, and executed at Munich, fills the niche in the centre. Sculptured Caen stone and marbles complete the design. This altar is the gift of Mrs. Jackson, late of Leeds. The altar on the left of the high altar is dedicatod to "Oor Lord of the Sacred Heart," and is somewhat similarly treated in Caen stone, with inlays of English alabaster and Devonshire marbles, and a statue (in colours) of our Lord in the upper portion. A small carved tabernacle of alabaster fills the centre of the altar. This altar is tho gift of Mr. Swales, of Rud Farlington. The floors of the sanctaary and side chapels are laid with mosaic tiles, and tho whole of the church is floored with hlack, white, and red tiles, in patterns. The carving of the chancel has heen completed; hut tbe remaining portion of the completed; hut tbe remaining portion of the chnrch is left in hlock. The windows throughout alternating in colour with tinted green and creamy white.

DISSENTLNG CHURCH.BUILDING NEIVS.
Pechham.-Four momorial stones have been laid in connexion with a new Wesleyan chapel Which is heing bnilt in Lordship-lane.
Humley.-The new Wesleyan chapel here has ho $n$ opened for divine sorvice. The building, whioh is Gotbio iu character, was designed by M :ssrs. Sorivener \& Son, architects, Hanley. Tuere is accommodation for 300 persons. The leugth is 60 ft. , and the hreadth is 33 ft ., with schoolroom nnderneath of the same proportions. The huilding is of blne and red brichs, withstone dressings, and the roof is covered with blue and red tiles ornamentally arranged. The chapel is seated throughont with open benching, stained fnd varnisbed. The roof is open timbered, and there is a gallery at ono end of the cbapel. The rostium is of pitch pine, with a polished oak rail, and the panols, tike thoso in front of the windows, forteen in number, are of tinted crlass. Windows, fourteen in number, are of tinted glass.
There are also two vestries, and a porch entrance fhere Mre also two vestries, and a porch entrance from heeling s. ane. Mr. R. Haumersley, of Bucknall.road,
was for 1,35 ?
Fenton.-The new Wesleyan chapel, the foun. dation-stone of which was laid in April last year, has heen opened for divine service. The new has heen opened for divine service. The new accommodated the Wesleyans for abont sixty years. The style of the luilding is Italian. It ed brick, with bricks sparingly introduced for selief, and Hollington
stone dressings. The accommodation is for stone dressings. The accommodation is for about 700 persous, and a portron of the sittings
are free. The ground. Hoor is approached throngh are free. The ground. Hoor is approached throngh inner and outer vestibules, fitted with 8 wing
doors to avoid dranghts; and the galleries, which doors to avoiddranghts; and the galleries, which staircases from the inner vestibules in front, and a staircase at the back, inteuded more especially for the choir and school cbildren. At the rear of the chapel there are a spacions class.room and a minister's vestry. The central portion of the front gable contains the two entrance doorways, and a five.light window with traceried head. The interior is arranged so as to secure ample light and ventilation, and the acoustic properties of the huilding are said to he good. The gronnd. Hoor and galleries are fitted up with open pews with inclined hacks. The interior woodwork is of pitch pine and red deal, stained and rarnished. The hnilding is warmed by hot air. It has heen erected hy Mr. Newbon, of Longton, from the design of Mr. G. B. Ford, architect, Burslem. The stonework has heen executcd hy Mr. Sherratt, of Lougton ; and the gasfitting, plumhing, glazing, and painting, by Mr. Peake, of Fenton. The cost of the building has been $2,185 \mathrm{l}$. 14 s . inclu. ding lighting and heating apparatus.

A Public Hall for Tonbridge. - It has heen resolved, at a pnblic meeting, to establish limited company, with a capital of $5,000 \mathrm{l}$., in 52 shares, for the purchase of a site and erection of a puhlic-hall for 500 persons. The site has a frontage of 46 ft ., and the hall will be 35 ft . wide and 70 ft . to 90 ft . long. A committee has
heen appointed, and nearly 600 shares have been appointed, and nea
already been guaranteed.

## SCHOOL.BUTLUING NEIVS.

Torthing. - The fondation -stone of the Broad. water sekools has been laid by the Bishop of Chichester. The contractor is Mr. W. Softly. schools for Broadwater and Worthing will cost nearly $3,000 \%$., towards which the sum of 2,5002 . has already heen obtained.
1Theatlumpstead.-In order to meet the re qnirements of the Education Department to provide additional accommodation for eighty children, a new school is in course of erection at Gustard TYood, aud the first stone has heen laid The building will contain accommodation for 100 children, and will be similar in construction and design to the existing national schools. Tho plans lave been prepared by Mr. Edward Browning, of stamiord, architect, who inade the
plans for the national schools, and for restoring plans for the
the church.
Ross.-The
Ross.-The foundation-stone of the new Board schools, in Canteluperoad, has been laid by Mr. Thomas Blake, chairman of the Schoo Board. Numerous articles were deposited beneath the stone, among whieh was a copy of the Hereforl Jowwal, Uereford Times, School
Boord Chronicle, and other papers; also a dupli. Board Chronicle, and other papers; also a dupli. cato of the Board's seal, a list of the workmen employed, and two coins, one of very ancient
date. Def
ened here. It is situated between the two villages of Defford and Besford, and is capablo of affording accommodation for 100 scholars. Iu connexion with it is a teacher's residence. Mr. Mr. Hins, of Worcester, was the arclitect; and work, however, has not heon thoroughly com plated for want of funds. A fence is needed against the road, and on the west side of the school; and to complete the work it is estimated that $a$ further sum of 602 . is required.

The Art of Grafting and Budling. By Cearles Baltet. London: Robinson, Southampton strect.
Tre rolumo under notice is a trauslation of M. Charles Baltet's French work " 'L'Art de Greffer," and is said to emhody all that is known on the suh. ject. The variousmethods of grafting and buda ing are descrihed at length, with numerous illustra. which each mode of operation is hest applied and other information. Tho art of grafting and budding has for many years heen so extensively and successfully practised in France tbat French gardeners are now far in advance of all others in this branch of horticulture.
The Torkmar's Mfagazine. Edited by Hexm
Sotur. No. G. June, 1873. Kent \& Co., Paternoster-row, London.
Tris now sixpeany monthly magazine appears to he going on well. The present issue contains a paper on "Wages," by H. Shaen Solly, and others on "The State Mapagement of Railways," "Common Sense about Mealth," "Erugland in besides intelligence as to workmen's questions, reviews, correspondence, \&o.

## FARIORUDI.

Is the Contemporary Reviev (King \& Co.) which, hy the way, is odited by an architect, Mr. Herhert Spencer comments valuahly on the want of common sense in minch every day work :take pp a phial containing a tonic, of which a little has been prescribed for you; but after the first few drops have heen counted, succeeding drops run down the side of the phial-all hecanso the lip is shaped withont regard to the requiremeat. Yet millions of such phials are annually made ly glass makers, and sent out by thousands of druggists : so small being the amount of sens hronght to hear on busincss. Now, turaing to the looking.glass, you find that, if not of the best make, it fails to preserve the attitude in Which you putit; or, if what is called a "hox" looking.glass, you see that the maintenance of its position is insured hy an expensive appliance that would have been superfluous had a little reason been used. Were the adjustment such that the centre of gravity of the glass came in tho line joining the points of support (which
would be quite as easy an adjustment), the glass
would remain steady in whatever attitude you gave it. Iet year after year tens of thousands of looking-glasses are made wilhont regard to so simple a need. Presently you go down to hreakfast, and taking some Harvey or other sance with your fish, find the bottle has a defect like that which you found in the phial: it is aticky from the drops which trickle duwn and oocasionally stain the tahle.cloth. Here are other groups of traders similarly so economical of thought, that they do nothing to rectify this obvions incon. venieace. Having breakfasted, you take up the paper, aud, before sitting down, wish to put some coal on the fire. Bat the lump you seiza with the toags slips out of then, and if large you make several attempts before you succeed in liftiug it-all hecause the ends of the tongs are smooth. Makers and vendors of fire-iron go on, reneration after generation, without meeting this evil by simply giving to these smouth exds some projecting points, or eve roughening thom by a few burrs with a chisel.' A writer in the People's Magazine describes Japanese bridge:-" When we came in sight of the Fuji-kawa (river), we found wo had te cross it by a suspension-hridge built entirely of bamboo. The Japauese are naturally very prond of this work; and they may well be so. It is the ouly ono of the kind in the conntry, th river heing too hroad and swift to allow of bridges heing built, except at enormous cost At this place their angenutty is displayed to per ection, andit is a sight well worth seeing. The surrounding scenery is very pretty, the river running down a lovely valley, the hills corered with trees on each sille, of great height, risiog abruptly from the banks. One featire connected witb tho sceaery of Japan is worth mentioning viz., that the foliage does not strike European as strange or tropical; they would generally recognise all the traes, the most notable pecu liarity being the barnboo growing amongst our whllknown trees, with occasionally $\Omega$ palm lime, and beech aro plentiful, but tho way-tre is very tropical in appearance. The bridge wr is very tropical in appearance. abo the river had its width a single span of 60 ft . It is mads ney the and a single plank is laid on it to wall ove na a sime pridge shakes and sways very mue poa. Lo go shakes an says wary sany one cross, au, thera bers no railigg ny sor at in is ross than it really is. The best mothod o getting over is to look straight to your front and walk quickly; to douthle across is perhaps better hough, of course, nothing oan prevent waying from side bo side in ander a disagree able manner. The hridge is ahout 4 ft . wide, ose his lhead, as the river ruslies below over hur acks in a very uninviting way."-_Chambers foumal says: "We have mo e than nuco mad known that stone in quarries and coal in mine could he 'got' out hy machinery with grea
economy of time and labour. Eren advantageous improvements, it seems, cannot bo adopted al at once; but a beginning has been made, as for 80 me months past a machine worked bj compressed air has cut ont the coal in a collier near Glasgow. This machino is to be intro duced into the mines of Northumherland an Durlam; and should it pass into geueral use the mines would heoomo less unwholesome tha: at present, tbrough the escape of the compresse ir, and the greater part of the coal-miner would have to find some other employmen Theve are 360,000 men and boys employed in British coal-mines; not more than 60,000 wil he wanted when overy mine has its machine nhicher acrantage is the aval is dug by hand this waste at present amounts to ahout $15,000,000$ tons a year. With the machinc, the waste would not be mora than f. per cent. of the whole quan. tity of coal produced."

Compensation to Workmen, - Mr. II
almer, in the House of Commons, asked th President of the Board of Trade when he in ended to introduce his promised Bill respecting compensation to worlsmon for injuries in the employment. Mr. C. Fortescue admitted tha the suhject demanded early attention, but conle not promise a Bull this session. The question the liability of shipowners for injuries done heir seamen was emhraced in the reforen ships he Royal Commission on unseaworthy shis that Commission

## 

A Substitute for Church Bells.-At a time hen offorts are being made in different parts the country to raise peals of church bells suggestion on the sumeet in the of Mair is pouse, South Hackney, writes suggesting the of of steel bars as a suhstitute for east hells hey aro, be says, introduced in the ourted
tates and Germany with great success, and ould form a nevy hranch of industry should the anufacture of them be taken up in this country.
hero is not only a large area for them in Eng. horo is not only a large area ho expected from flourishing colonies of Canada, Australia ow Zealand, and India, as soon as they are
town in those regions. Tho following outlines ill explain their partieular merits, combined th cheapness of production:-Steol bars proco a very pure, distinct, and particularly
olodious sound, with many other great adran. ges over chareh bells of moderate sizo. The wer of a elear and sonorous sound can be ob. ined equally woll, if not superior, to that ist from bell-metal, or stcel. Their weight will oductions. They will not harden the steeple much, and, conaequently, will givo more scope avelitectural design, and have the merit o c-sounding. Their winding and hanging ung oy are not liable to crack, as is often the ocrrenco with bells, and are therefore adapted ruse in any climate. By a simple and nie aniea. The cost, comparcd with marafnctured
tion. Tin st hells, is so trivial that small churches and apols, and eapecially mission stations ahrond, 301 hare, forming a peal whose weight would 301 hars, forming a peal whose weight would
$t$ exceed 100 lh ., could be manufacturcd for l. or 122 ., whereas only three cast bells of tho -e power would at least amount to $50 l$. or 602 ley caul be made of any dimension, weight, and Wer of sound. Every note or harmony can he
oduced more easily, and the tuning in ohtained ore precisely than in cast bells. In addition their being a cheap and offective snhstituto r church bells, they are also equally applicable
places where large bolls are required, such as places where large bolls are required, such as
ckyards, on hoard of ressels, steam-boat piers, ilways, und manufactorices.

A Box-making Machine.-Mr. Wormersley, tho Carrow Works, of Messrs. Colman's gantic mustard and starch business, has in. nted and patented a pieco of mechanism for iproving and facilitating the manufacture of
zall wooden hoxes, varsing from 9 in , to 24 in . length, witb a proportionate depth. Of sueh res an enormous number are required in the uryow husiness. By the now machine there is touly a great saving in time and labour, hut red air-tight. The machine cuts transversely to a wooden hoard, of a width and length tlant $x y$ for different-sizod boxes, three rather deep grooves, and at the same time hevels the aygh ends of the board. This done, the hoard close, with or hent together until the groove produce or without gluo added, when ther ttom and a lid heing wanted to complete it. ails are knocked in crosswise at each of the itrod corners, a hottons and a lid are quickly thout any gaping cracks at tho corners. The aohine was made at Carrow, hy Mr. Keymer, hihited in the London International Exhi. tion.
Wells Cathedral-The restoration of the sst front of this oathedral is progressing. The uth.west side, up to the small north-west door, ay ho said to he finished, and hos much the pearance of a now huilding, though not a bit youd that which was absolntoly necessary. 10 eonstant attention of Mr. J. T. Irrine (who so superintends the work of restoration going on Bath Ahhey Churel) is given to insuro careful ith Mr. White for completing the restoration at ells inelndes the remaining portion of the west ont, and the whole of the sculptured work reept the figures), with the small lias columns the north and eastern sides of the hnse of the orth-west tower, and tbo tower itself.

The Widening of Eristol Bridge.-The present extreme width of the structure is $55 \mathrm{ft}$. .,
and it is proposed to widen it 11 ft . The extra and it is proposed to widen it 11 ft . The extra width will be on the Welsh-baek side. For the purpose of these improvementa, the city has purehased the row of shops at the Welslib back corner of the hridge, and the toll-bonse at the other end near tho Redeliffocstreet corner, and the contractors have heen engaged since April in removing these premises, and malking pre. The work is under the direction of Mr. F. Ashmead, the city engincer, and the contractors for the masonry are Messrs. Brock \& Bruce, of Temple.meads. The masonry work, according to our authority, the loeal Times, is well advanced, hut the iron work is not yet commenced. effeet the alterations, coffer-dams have been sunk at the four piers, and it is expectod that the vork will he finished in about six months from tho present time. The netv side of the hridge will correspond with that opposito. The columns are to be of granite, and there are to he wroughtiron girders, and cast-iron cantilevers for carrying the footway. A wrought-iron girder will be hrown across the corner where the fighmarket is now lield, and an increased width of approach will he secured at this spot.
The new Rexedos for Exeter Cathedral. - The new reredos for tho eloir of this oathedral is now in course of completion from the design hy Sir Gilbert Scott, at an estimatod cost of 1,6252 ., by Messrs. Farmer \& Brindley, soulptors, London. The exponse will be defrayed by Dr. Blackall and the Rer. Chaneellor 11 arington conjointly. The sammit of the reredos rises to nh height of 22 ft . nhovo the floor of the choir, the materials used in its construction eonsisting of marble and Derbyshire alahnster, with precious stones. Tho centre compartment of the reredos is oceupied by a sculptured gronp in alahaster representing the A secnsion, the figure of the Saviour heing $3 \frac{1}{\mathrm{I}} \mathrm{ft}$. in height. The figure of St. Peter, to whom the position, whis ans positu, whilo an hio sid of the the Holy Spirit on the day of Pentecost are also represented. The reredos ocenpies ahout a
third of the apaco at the east end of the choir. The untrol and it bas been found that the ostimate of and it bas been found that the ostimate of
1,6252 . for the whole work will ho considerahly exeeeded.

Healthy Tymemouth.-The pnblic health of this horongh is said to be 80 good that, for fees tolme since its cemetery was openca the equal to meat the oreinast monting werpenses The Newcastle Daily Chronicle sars:-"There is no douht hat North Shields is one of the healthiest seaports in the kingdom. It is actand heing sluiced in dry weather, and the sewers washed ont with salt water. The middens are cleared out regularly hy a staff of men employed under the superintendent of police and the inspector of nuisances. The result of this is that the public health is hrought up to the highest standard amongst seaports in the kingdom, and tho town is kept clear of epidemics. True, a young ones of the household are rates, but the dancer, hetter resulis out of their own lives by being hetter results out of their own lives by being
enabled to carry on their employment more enabled to

Fire Detectors.-An experimental dieplay of some of Professor Grechi's instruments for signalling the commencoment of fires in any been, or in interspaces difficult of aciss, the Machinery Court at the Interwational Exhihition at South Kensington. Small straw fires, inflamed with petroloum, were ignited, when the instru ments caused the alarm-hells to ring, and notified the particular locality by the fall of a numbered disc. A lautern was also lighted in one compart. ment hy the falling of a small weight upon glass globulcs of sulpharic acid. The prineiple of the apparatus is this: a double spiral of zine and platinum is soldered to a dise carrying an index and a small wire contact-maker. When the spiral expands hy the heat the contact-maker is tursed by the motion of the spiral, thus patting in action a curtent from an eleetrical battery hy which the alarum-bells and signal apparatus are put in actiou. The instruments are very roughly made, and eost ahout 2s. a-piece.

Utilisation of Coal-dust.-A now building material is found in coal-dust. The mixtnre is eomposed of one-sixth coment and five-sixths coal.dust. In the Waverley hydropathic esta blishment at Melrose the experiment was tried A series of thick sheet-iron plates aro stiffened at the edges with angle iron, the plates being attached to upriglits of $T$ iron, and heing kopt in the proper position hy pins, the plates are fixed so as to ho readily raised 28 tbe huilding progresses. After the requisite proportions of mine-dust and cement have heen mixed togetber, and the whole thoroughly saturated with water, the mixtare is flung in hetween the plates, and largo pieces of slag or
stone bedded in it thereafter another hed of保 the larger pieces, and thorounhly fixes them another layer of stones or slay is then added and so on, till the space betixeen tho plates ail round the huilding is filled. After beiner allowed to stand for a nioht the Ancrete will afowed enough to allow of the plates being lifted in the morning.

## Ancient Wall-painting at Henstridge.

 curious old painting bas been discovered on the north wati of the parish church of Henstridge, undcr innumerahle coats of whitewash and has hecn lail bare as well as was possible. The picture occopies a space of 8 ft . by 9 ft . 6 in., and exhibits a gigantic figure of St. Christopher, bearing on his shoulder a small figure of the Saviour, whose hand is raised in the aet of hlossing. The fcet of St. Christopher are in water, and around them are fishes. In the hackground are a windmill, packhorse laden with corn, and a dog, with a man carrying or surmented by a shureh is also a lofy rock ledge stands a monk with" girdle and rosary, holding ont over the wator a lantern hung to the head of a stick. The whole picture is surrounded by a border of lotus leaves. It is said to he too much injured to bo preserved, lut itA Mental Almanac.- Witl the title of "An Infallible and Instantaneous Mental Almanac for any Year in any Century of the Cliristian
Era. By W. Relton, Insurance Secretary," a pamphlet has bien, Insurance Secretary," a Paternoster-row. This is an ingenious and curious "method of finding by in process, and without referring to tables, the day of the week corresponding to any day of the month, or the day of the month corresponding to any day of the week, throughout any
year" of 5,$000 ;$ in short, a calendar carried in the head, hy learning and rememhering only ess thaz tbirty common words, significant of a fev fixed uumhers. We givo an example:gueen victoria ascended the throne on the 20th June, 1837: what was the day of the week ?

```

Cast the sevens out of $2 t=3$, or Tuesday.
MIonte Video Harbour and Land Recla-mation.-Mr. Charles Burn, C. Th., has pahlished pround the south and east sides of a sea.wall commencing at the Gasporks and ouding at the Aduana. The euclosed space between the sea. wall and the shore will be filled np, and by this means about 450,000 square raras of brilling land will be reelaimed from the sea, estimated to he worth 5,250,000 dols. Along that portion tho sea-wall on the south side, facing the sea, will he a road and promenade, planted with rees, at present much wanted in Montevideo, and along the promenade will be huilt first-class residences. At the and of the sea.wall, opno. site the Calle 25 de Mayo, will be run out a solid tono pier, with fise landing jetties. Mr. Barn is known as the anthor of a treatise on the Construction of Breakwaters, and was the projector and engizeer of the Amsterdam Harbour and Ships Canal.
American Engineering. - An elahorato Trade Circular has been sent us, oonsisting of something like a treatise on Bridge Fingineerinc profusely illustrated, and titled "Phocnisvillo Bridge Works: Clarke, Reeves, \& Co. Office, o. 40, Walnut-street, Philadelphin. Second llustrated Album of Designs. Philadelyhia: J. B. Lippeneott \& Co. Is73." It is sompthin nore than a mere trade circular, this, and con tains matter of use to English engineors and thors with reference to Ameriean modes of orking.

Opening of Wrexham Public Frall and Corn Exchange. The new Public Hall and Corn Erchange, Wrexham, which has heen con. verted ont of the old Torkshire.hall at a cost of about 5,000 l., has hcen opened. The new hall will seat over 1,500 people. The larger hall is 80 ft . long by nearly 50 ft . wide, and lighted from the top. A halconyruns all ronnd, eapahlo of holding 400. A stage is erected at one end, and behind are green-rooms, lavatories, eloakrooms, and other conveniences. Running round the hall on the gronnd.floor are suites of offices and store.rooms; on the first floor are also offices and refreshment. rooms; while on the third floor is a suite of rooms, including billiard.roome, reading. room, \&c., which will be takon by a gentlemen's cluh ahout to he formed in Wrexham. Thero is on this story a small concert-room. The arehitects wero Messrs. Holden \& Co., Manchester ; and eontractor is Mr. W. E. Samnel, Wrexham.
Sugar a Test for Potable Water.-From an artiele on "The Discrimination of Good Ceutical Joumal and Transactions, we find the following simple directions given for testing water, whether it is good and drinkahle :"Good water shonld be free from colonr, un. pleasant odour, and taste, and should cuickly afford a good lather with a small proportion of soap. If half a pint of the water he placed in a perfeetly clean, eolourless, glass-stoppered hottle, a few grains of the best white lump sugar added, and the bottle freely exposed to the daylight in the window of a warm room, the liquid should not become turhid, even after exposure for a week or ten days. If the water become turbid it is open to grave snspicion of sewage contami. aation; but if it remain clear, it is almost eerainly safe. We owe to Heisch tbis simple,

The Gas Supply of the Metropolis.-A a recent meeting of the London Gas Consumers Assoeiation, tho report of the balf-yoorly meetin of the Sonth Metropohitan Gas Company, which has for tho last twelve months supplied 16 -candle gas, free of meter rent, at 3E., heing a net-charge of $2 \mathrm{~s}, 10 \mathrm{~d}$. per $1,000 \mathrm{ft}$., was read. It stated that,-
notwithstanding the rednction in the prico of gas last Year to 3s, per 2,000 ft, and the incre ased cost or coals
and all other materials and labour, the profita of the half.
 haring been mat by extra reeeipte for coloo during the hall-gear under reviem:
It ras contended that all the London compnnies conld afford to supply gas at the South Metro. politan rate, a saving in the eost of gas to con. sumers amonnting to $715,520 l$, a ycar.

Cookery.-An experiment for the purpose of practically testing a system for the preparation and expeditious distrihution of meals reads for cooking, is about heing made at the Anstralian Meat Agency Company's Department of th International Exhibition, South Kensington trhen several hundred meals will bo prepor and despatched uncooked to various parts of the metropolis previously agreed npon. The object is to enable good and nutritive meals to he placed at tho disposal of working mon at their respective homes, or places of employ. mitteo is being formed, for the purpose of oh. Berving and reporting on the proposed ex periment.
Cost of Fiitering Sewage.-The cost o fitering town sewage is shown in a retorn pre sented to the House of Commons as follows:Melton Mowhray, parish and Local Bcard, popn lation 5,000 , fitter heds of gravel, surplus water being passed through charcoal hefore put into the river. Cost of works, 5151 . 3s. 1d., viz, 215l. 3s. for the parchase of land, and 300 l . for making tanks and huilding offices at the same Other expenditure, - hesides 179l. interest annually, on cost of new sewer, for thirty years,-11\%. 15s. for clearing out the tanks Receipts during the year, nil; numher of year in operation, nine. No noisance has arise from effluent water.

The Architect of the Royal Exchange. We have received some letters from Mr. H. M Grellier, reiterating his statement that Sir Wil liam Tite "merely adapted his father's designs to the reqnirements of the Gresham committee," and calling ppon ns to pnblish the letters. We have already expressed onr opinion on the solject, and do not consider it necessary to
zeturn to it.

The Camden Society.-The report of th council of this society, read at the general meet ing on the 4th of June, 1873, has heen issued in a printed form. It announces the hooks pro. posed for issue during the present year, which Parlisee,-a military memoir of Col. Birch, the from poten London to Sir Josept Williamson, Pleni potentiary at the Congress in Cologne in 1673 to Elizabeth a memoix of Bedell, Bishop of Kilmore ; Mayo of Bristol's Calendar, temp. Edward 1 V ., and con tinuation; and Dehates in the House of Common in 1625. The Society is prospering.

## Worcestershire Architectural Society.-

 It is in eontemplation to have an excursion of in this month, or on the 3rd of July, when it is proposed to visit the churehes, and other ohjects of interest, at Preston, Much Jarcle Kempect Dymock, and Dounington, starting from and twarning to Ledbury Much Marcle is fo chareh, with rood sepulchral effie; and Kempley chureh the walls ene govered and at tho most valuable examole of eovered with wall paintin hitherto diserged in Fatury They phe vicar, who removed the whitewash with his own hands.Proposed Visit of the Shah to the Iuternational Exhibition.-A eommittee, consisting of the Prince of Wales, the Duke of Edinburgh, the Duke of Sutherland, Earl of Carnarvon, Viseount Syduey, and Sir Thomas Bid. dulph, met on Saturday at Marlhorough House to eonsider as to the fete to be giron to the Shah of Persia. It was deeided that the entertainment shonld consist of an inspection of parts of the International Exhibition, and of a prand con. cert at the Royal Albort Hall, and that the admission to the Exhibition should bo by season tickets only.
A Writing Machine.-Among the noveltios to bc seen just now in London is a "writing machine," of American invention, which, it is confidently predieted, will eome very shortly into general use. It is made in the shapo of a small pianoforto, with three rows of koys, and the person using it "plays" it with both hands. A serics of hammers strike against a hand of riband, so preparcd that an impression of the letter used is produced on the roll of papor
which passes over the rihand. The price of the machine is at present 25 l.

A New and Powerful Magnet.-A magnet of extraordinary carrying power has been con. structed by the well.known Freneh physicist, M. Jamin. Whilst artificial magnets have not hithorto been made to carry more than four or five times their own weight, this magnet is able to sustain npwards of truentretwo times its veicht. It is constructed of a reat number of thin well-magnetised plates, instead of the thick plates geverally employed.

The Discovery of Remains at the Railway Excavations, Yorls.-A collcction of skulls has been ohtained from the excarations made by the North-Eastern Railway Company. There are about a dozen skulls obtained from that sonrce already in the Museum of the Yorkshire Phitosophical Society; and it is proposed to add the recent find to this collection. The skalls are evidently very ancient.

An Open Space in the City.-1n the centre of Old Smithfield an open space or park has becn laid out and opened at the expense of the Corporation of the City of London, who uave, in addition, erected there a costly drinking. fonntain. The open space is called Smithfield Park. Though not large, it is well laid out with plants and flowers. A riow of the drioking fountain we have already published.

Metropolitan Water Supply.-In reply to Mr. Agar-Ellis, in the Commons, Mr. Stangfold said it rested in the first instance with the Metropolitan Board of Works to enforce a constant sripply of water to the metropolis, and if hey failed, the Local Govermment Board would then take the mattor in hand. No steps had ret been taken in the matter

Literary Fund Diuner.-The total recoipts at the recent dinner presided over hy the Right Hon. W. E. Gladstone were 1,408l, and loave a

The Royal Forticultural Society. -TI annual exhibition of this society has heen he in their gardens at South Kensiugton. II assemblage was a large one, as also were $t$ nomber of flower cxhilitors and the variety specimens. The flowers and fruits were arrang in a large teat at the hottom of the grounds. nnmber of prizes were awarded.

Cameo Cutting. - We are glad to hear tha her Majesty the Queen has eommissioned M James Ronca to execnte four cameos for th Viotoria and Albert Order : two will be on ony: and the others shell. Oux readers may remembr that Mir. Fonca recently executed a fine came on onyx for the Art Union of London.
New Cattle Market at Windsor.-A ne cattlo.market has been opened at Windso under tho auspices of Mr. W. Mason. The sil the Great Wostern Ron, near the terminus, Grent Wostern Railway. A good catth market in the royal horongh has long bee ranted
Health. - A course of six lessons on health 1 rorking women is about to be given by Mi, Hoardon, on hehalf of tho National Healt Society, at the Portlaud British schools, Litt Titchfield-street, Great Portland-street. Worl ing women applying at the schools can has tickets gratis; and they should apply.

VOL. XXXI-No. 1585.

dicester Municinal Buillings Competition.

HE Competition for the proposed new Municipal Buildings in Leioester affords one of those in. teresting proofs, which wo so often see at present, of the long-suffering, sangnine, and hope. ful character of the architectural profession generally, and of the very unsatisfactory and donbtful nefit, to either side, presented by the compeion system. In the first instanoe no less than ty designe were sont in, and a selection was de, but circumstances haring led to a cbange site, a second competition was invited, with. $t$ any regard to the fact that an architect had
en already chosen. Te this there have been enty.five respondents; sorne of the designs went in being entirely new, others (by mor competitors) being rodifications of their at plans and designs; but in all cases, as far we observed, involving entirely new drawings. nsidering the number and elaborate character some of tho drawings which ge to show a gle design, there has beon an amount of work ae on epeculation in this instance, which, viewed proportion to the amonnt of the "prize" offered oo limit of cost of the building is 30,0002 .), it somewhat melancholy to contemplate. The ntributions of these latter twenty-fivo rivals ve been reduced by selection to the number of a, which have been hung for exhibition in a om in the Free Pablic Library in Leicester; e fifteen rejected sets of drawings forming a apeless mass piled against the wall opposite. 10 fortunate (?) ten it is proposed further to educe" by the aid of a professional reducer ccially invited for the occasion; and when ey have been cat down by this agreeable ocess to tho number of either fivo or three edid not quite gather which, for on this point inions seemed to differ), the corporate wisdom Leicester will proceed to disentangle the rtunate one from among the survivors. So much for the molus operandi. The site wf fixed upon is a fairly good one, though not immediate contigaity to uny one of the prin. pal thoroughfares; if a town so quiet and imassive. looking in its aspect and street traffic as eicester can be rightly snid to have "thorongh. res" at all. The sito is bonnded on the west Bowling.greon-streat, on the nortb and soulh Y Horsefair-street and Bishop-street respec. vely : a trio of street titles of charaoteristically aried associations. Indeed, it may be noticed nat among towns with any history at all there generally some leading principle to be detected tho naming of streets; sometimes, as here, connexion with ocoupation carried on in their icinity, sometimes from associations of locality xisting long before the land was bnilt on, or any treet formed at all. The threc above men. ioned are all secondary streets; Horsefair. treet, howeyer, is dignified by the small shabby heatre with its classic "oompe." front and roken panes, close opposite to the north.west oruer of the new site. A proposed new street, - be driven through from Horsefair-street to rill, therefore, give the aspect for the principal
front of the bnilding, more especially as the ground falls in that direction; and the buildings adjoining the site en this side are of such a nature as to encourage the idea of their being possibly removed altogether shortly, and something like a square or place formed. Until tbis is done, there is no effective point of view, in any direotion, from which the new building could be seen to advantage; and the tower and other aecessories contemplated by most of the oom. petitors would require some snch extended open ground before them to be proporly seon.
We will take the ten designs in the order in which they were hung on the walls, the numbers being those with which they were first labelled when the whole were sent in. It should be premised that the competitors had the option of sending in either under their own names or by motto, a system which has a good deal to recom. mend it. The first design we notice is No. 1 , signed "Simplicity." This is in most respects a very meritorious one, both in regard to plan and architectural treatment. The required neconumodation for the new building may be classed under three heads,-first, the courts and thoir accessories, judges', barristers', and witnesses' rooms, \&c. ; secondly, the roome for mnnicipal business, in. cluding council. chamber,mayor's and town elerk's apartments, and other offices; and thirdly, tho police departmont, including, besides othor ac. oommodation, a oonstable's house, with separate entrance, and an open or partially open parade. ground for the police. It is in the various ways of disposing, on the site, the courts, manicipal offices, and the parade-ground that tho main dis. tinction of the various plans lies. In the plan under notice tho building forms three sides of a qnadrangle, the courts occupying the south wing and the offices the more northern portion of the building. The Borough Court is kept well within the building, and the accessory rooms are for the most part conveniently placed and arranged. The room for witnesses, lowever, should suroly have been on the same level as the court, instend of being on the first-floor. The whole of the plan is well and completely arranged, in snch a way as to make the most of the space, and with little regard to minute symmetry; it is in fact an cntirely Gothic plan in prinoiple, and this character is oompletely carried out in the architectural design, in which each portion is treated separately and characteristically, so that any one knowing the contents of the building might distingnish from a glance at tho exterior the disposition of tho yarious departments. Such a mode of treat. ment, if even moderately well carried out in dotail, almost ensures au interesting and picturesque result, wbich is certainly the cape with this design, especially in regard to its principal front, the predominent feature in which is a large and boldy-treated, though simple, square tower at the north-east angle, marking the entrauce to the municipal offices. The stylo is Geometric Gothic, remarkable rather for correct. ness and good taste than for any novelty in the treatment of detail. There is an ample supply of entrances and staircases; the stairoase lead iug to the public grallery of the council-chamber opeus out of tho corner of the parade.gronnd (facing west), not a very convenient position; and the ground.floor corridor, which at first sight appears to give a communication all round the three wings, is practically intercepted by a portion being cut off as a private corridor in oonnesion with the courts. This is not a very good principle, and the private corridor has been better managed in some other plans; but on the whole there is little to find fault with in this plan, and the elevations and perspective view which are rather slightly and ineffectively drawn, show, ncvertheless, a true perception of archi. lectural treatment, combined with an entire absence of any straining aftor effect, which is unhappily rare in competition drawings.

No. 4, by Messrs. Goddard \& Spiers, is a plan of a more symmetrical and palatial tendency, with a "grand entrance" in the centre of the east side, and a wide corridor ranning the whole length of the front, the legal department occupy. ing the nortbern, and the business department the southern balf. The principal court is well situated, and the judges' room, reached by a private passage from the main corridor, running behind the court and interfered with by nothing else, is very well placed. The grand-jnry room occupies tho north.west angle, witb an angle bay forming a feature in the design; the couneilchamber and mayor's room are also well marked on the external design; the plan in tho main is a good one of its kind, and possesses tbe advan. tage of one decidedly principal and dignified entrance for the judge and attendante, which is rather a want in the last-named plan. Two alterantive designs, Gothic and Classic, are given; the former, a simple treatment of "plato tracery" Gothic, is the best, excepting the central tower, which is by ne means grood; the Classic design has a tower which is an improvement on its Guthio companion.

No. 8, "Bosworth," covers a great desl of the site with building, leaving only a somembat small and eramped parade-ground at the south end of the site. The principal entrance is in the centre of the east front, and lends to an entrance-hall and principal stairease, to the municipal rooms, immediatoly adjoined by another octagon staircase "for the offices"; thero is 』 waste of room in all this, and as the two staircases epen out of tho game corridor on the ground floor, and land in the same corridor above, in close proximity to one another, one of them is manifestly unnecossary, or at least wrongly placed : the two courts are gituated in the centro with a closed corridor between them, and tho judyce' rooms, at the other extremity of the largo eourt, also separated by a private corridor: the arrangement of this portion is good. The public corridor oonmunication is continued right ronnd tho building, an arrauge ment almays best in such a building where the site will admit of it, but which generally is not eoonomical in regard to spaoe, nad has been obtained at some saorince in the present case. The plan in the main is one that nould work well, though there is what may be called a lack of "spocialty" about it: the dosign is Gothic, of red briok, with white stone dressings; tho angles are emphasised by pavilions, with rather exaggerated angle turvets corbelled out; the details are not refined; the composition is entirely symmetrioal, with little regard to the disposition of the plan; the windows of the nayor's parlour, for instance, balancing those of the School Board offices, with not tbo slightest variety in design.
No. 13, "Contranando Incrementum," is a very elaborately got up design, or rather two desigus, marked $\triangle$ and $B$, presenting alternative plans, and Gothic and Classic designs respec. tively, the drawings being numerous, and prepared with much labour. Design $A$, exidently intended as the preferahle one, shows in the main a good plan, syminetrically disposed to a certain extent, with tho different departments well arxanged and disposed, and the entrances and staircases very well placed and distinguished. The courts are placed internally, and everything connected with them is woll planned, excepting the judges' room, which is so placed that tho judge would have to cross the public comidor from his room to the court. The plan is, how ever, somewhat wasteful of space, and in con. sequence the parade.ground is disproportionntely small. The design is Gothic, of the usual "Early" variety, rather heavily treated; the ornament consists chielly of horizontal lines of panelling; tho conncil-ehamber (on the east front, first floor) is well marked in the external design by fenestration ; the north east corner is
ocenpied by a largo tower, the lowor three storics of which are atilised as "strong-rooms,",
which furnisbes a valid motire for mansire plan Which furnisbes a ralid motive for massive plain
treatment, and small windows in this portion treatment, and small windows in this portion;
the upper portion, with snire, is disproportionately decorated in relation to the rest of the building, and is more claborate than artistic or original. Design B chiefly differs from the other in reversing the relative positions of tho large and small courts, and in a somcWhat more palatial arrangement of the firstfloor plan; but it is not so good as the other, us as decidedly poor. The author descrves credit for lris plan, and bas been most industrious in getting up his drawings. The frame of small skectches, partly of interiors of the principal rooms, is good; but in the main the design cannot claim tho lighest rank.
plete quadrangle, the parnde hero is a comenclosed in the centre; the arrancement of strircase entrances and architectural features generally heing entirely aymmetrical. This is just the stylo of plauning which looks exceedingly for bnildings for very monumental or ceremonial purposes, and where there is ample space at disposal. In the light of getting the greatest uo style of plan in general can be more masteful than this; and the present plan is no exception: besides which, the over-effort after symmetry has resnlted in inconverient placing of many of the rooms in regard to one another, and the quac. rangular arrangement throws both tho courts to
the outtide. Tho plan, considered as a plan for the outside. Tho plan, considered as a plan for
effect, is a fure one, but fails from a practical eficet, is a fine
No. 17, by Messrs. G. G. Scott, jan., and J. o Scott, is on the whole a very compact and well. arranged plan, covering tho ground to the east
and north sides; the paradegronnd ocouning and north sides; the parade-gronnd ocoupying
the south.west quarter of the site. The courts the south.west quarter of the site. The courts
adjoin tho parade-ground, with the judges' epartment placed between them with bay projecting into the parade.gromnd. The principal entrances are from tho new street, in tho centre of the east front, nearly opposito tho judgos' private corridor, and from near the north-oast angle. The mayor's and town clerk's rooms are on the
first floor, and well . placed, and the council chamber, tho position of whiol is also woll marked on tho external design. The treatment of the roofs at the augles is effective, bnt the tower near the rorth-east angle is unhappy in outline and composition. The style dressings, a combination requiring much refinement of treatment to prevent it becoming vulgar in effect. There is one odd discrepancy hotweon plan and design; the perspective shows apparently a deeply-recessed arcade or arcaded portico in the centro of tho cast front, carried on detachiod piers; ont on refering to the plan theso piers but attached to it, and the apparent portico is a more wall arcade.
No. 25, by DIr. R. S. Wilkinson (Torquay), is a peculiar and somoshat douhtfullooking plan. ment of some of tho neeessory rooms for pit. nesses, fc., shows originality in planning; but generally a little labyrinthine in arrangement: generally a little lahyrinthine in arrangement:
the ronte from the principal entranco to the judge's retiring-room is curiousl $y$ circuitons. As a plan, it could scareely be recommended; and tbe design (Gothic), thongh woll and effectively heary in treatment, and presents no features of any special interest.
compact, by Mr. F. J. Hames, thongh appearing compact, and making the most of the space, is a defective plan in detail: tho judge's room is
small and meanly placed, and lighted only from the top; the town clerl's and mayor's rooms are not well placed, and the rooms belonging to the former are divided from one another by one of the pnblic corridors. The conrts are conveniently placed near the privcipal entrance (which is in are roomy and well discriminated staircases design there is no lititle merit. It is in the Queen Anne style, which, corrupt and ansatisfactory as it is in many ways, has a character of ciated and consistently worked ont. The mate. rials are brick and stone. The design is, for the most part, symmetrical, and the repetition of the rather plain and bald type of window is not very
interesting, though a certain breadth of result is ohtained. The angles are entirely unaccentuated But the treatment of the centre portion is very
clever and picturesque, the main entranco a lofty and deeply-recessed arohway with what profusely decorated with the details he. louging to tho style; the harristers' entrance and the municipal staircase-window forming suhsidiary features to left and right, each with portion characteristic treatment; this centre projecting balcony carried on very heavy stone hrackets. A low squars tower, with an open stage in tho roof, marks the entry to the municipal huildings, near the worth-east angle The author sends a very grond drawing also of the interior of tho conncil-chamber, a wainseoted roons with a semicircular arched ceiling, decorated in panel-work. We should scarcoly wish to see so important a building erected in this
style. It may be urged that it harmonises with the character of the Leicester streets; hut that perhaps, should be rather a reason a arainst than or it ; for the town sadly wants endivening in egard to its architecturo; and if this design were carried ont, something should, at all
events, be done, by a more striking treatment of eventa, be done, by a more striking treatment of the anglos, to tako away a little of the work.
house look which from some points it would inevitably present. Nevertheless, we must con gratulato Mr. Hames on his generally able treatcent of tho style he has selected, and on the excellence of his drawings.
No. 22, by Mr r. F. W. Roper, is a good plan,
neither above nor below the average suhmitted (the pione in this competit of those have perhaps inferred, are in tho main as wo better than the architectural treatment). The lesign is cortainly the most original here, taking riginality to mean "successful novelty." The walls are divided into solid broad masses of pier rnament the windows, scarcely broken ap hy any those between each pier are combined noder arch and gable springing from and mniting the appor portion of the pior; the motive is not new and effective. The tower in the centro of the east front is well eomposed, and a grent deal of dignity is added to it , by combinjug it in the lower stages with what is really a portion of the lower building, carricd slightly up, and wivl? high This is a mode sf care to aroid an mpicturesqua effect, but it has anpicturesqne umpiness of Tho defects of tho building lie in the details. which are a kind of mixtore of Jacobenn and Gotlic, and in some instances ought certainly to he reconsidered. If this huilding is ever ont, we should suggest to the architect to try nother perspective of his principal front at a considerally sharper angle, when he will perbaps fow that the vertical gronping of piers and win-
dows requires some modification to insure an agreeable result from all points of view.
No. 9, by Mesars. Ordish \& Traylen, of Leicester, is a very elaborately-prepared design, with a good deal to recommend it, at all events as far as the plan is concerned. One feature is peculiar to it-tiat of a wide principal entrance corridor cunning across from front to back of meant as tho seltance in the enst front beiug vest front as thaministrative," that in the narrower public corridor bramches to this and left, running longitudinally along the build. ing. The town cleck's entrance is placed near borough east angle on the north front; the angle. Tho plan, entrance near the sonth-east arranged one,-one of the best of tho set. The design is atherer a medley, presenting a cross cences Elizabetaan and Jacobean, with reminihappy. The tower is set back from the front, and could not from nay (at present) araikol, point group with the lower composition, as it does in the perspective view exhilited. It is peculiar towor, and is clever and charac eristic, but not very pleasing, especially in sky ho large hink better suited to ittle too odd and piquant to be doner ; it is a cale. There are tquant to be done on a large ketches ier are tho sight bat effective little court and the council al tho interiors of the certainly deserve credit for this design, which, with decided drawhacks, shows also decided with decided drawhacks, shows also decided

On the whole, we are inclined to think th the ten designs so fax selected, none wonld carried out, answer the purpose better on whole, and give more equal gatisfaction to a tects and laity, than the one first mentio "Simplicity," - so far, at least, as general de gronping, and claracter, aro concerned plan would require some modifications, and drawings are not full enough or finished eno to enahlo us to judge well of the proposed tr ment of the architectural detail. Some oti show moro orginality, and in particular hhonla be very grad to sce 80 original and c) a design as Ao. 22 carried out, and perhaps would be the next best for a election, the one or two others are better in plan.
dosign, however, it must be adinitted very probalbly be rather iuteresting to archi a clever oxperiment in character and position than pleasing to the general One or two of the best plans are uufortuna accompanied by elevations which it is imposs to wish to seo built; and the one we have in tioned abovo (No. 1) seems the only one wh combines excollence of plan and design in nes qual proportion, and wich would ho a buito likely to please all partics.
Anong tho less fortmanto fifteen is a Bod Gothic desigu marked "F.R.I.B.A.," , from its beantiful drawing, the work the fised hand, and much superior to mosi heen rejectod on the scors of expense design marked "Sirius" shows in the persp ive viev a picturesque treatment of Gothic ho modern manner; and "Comme il faut in many points a good design. The rest, as special excellence of arclitectural treatment. On the whole, however, the averago of mi the drawings sent in for this competit sems to us to be, in proportion to numb igher than in some more important cow regard to plan this is decidedly tho case.

NEW MERCHANT TATLORS' SCHOOL
The first stone of a new bailding, to rected within the precinct of the Charterhon for the Merchant 'Taylors' School, was laid
Monday last by the Duke of Edinburch), in resence of co Duke of Edinburgh, ia mong whom clerical and City magnotes most conspicnous of for conspicnous. The occasion was mado a cation a great deal of unjustifinble seli-glon undeserved ene part of the Company, and of of Yorved sneer at architects by the Archbish that from who, in replying to a toast, romark teots' estimates therience wo had had of ara proposed now buildings and alterations might set down at the least at 150,000 . Tho nety estimate for tho new buildings and alteration was stated to bo $10,000 \mathrm{l}$., and even taking in gecount the cost of the ground, the tot expendituro wonld not reacli the amount mea tioned by tho archbishop. The clergy are as body prono to ahnse their privilege of immunit from public contradiction ly makinc loose stato ments. As a rule their utterances can do bu little harm ; but when a high Church dignitar on a pallic occasion assails the character of of professional men, and by implicatio buil good raith of the architect of a particula building, it is incumbent upon the profession $t$ resent the
Merchant
mersazat Taylors' School (which will br superseded by the new builhing, of which the inst stone was laid on Monday last), is situatec Canuon-street and Upper Thames-street, in the parish of St. Laurence Ponntney. It formed a parish of Sarge house or palace, called tho Mano of the Rose, otherwise Pultency's Inn, originally built hy Sir JohnPoultney, five times lord mayor, in the reign of Edward III., and successively Che residence of the noble families of Exeter, Suffolk (whence the name of Suffolk-lane), Buckingham, and Sussex. It is chiefly memorahle, however, as having been the scene of the alleged treason of William do la Pole, Doke of Suffolk, in 1417 , as rolated by Holingshed, and aramatised by Skakspeare in "Henry VIII." barles Knevet, the perfidions surveyor to the Duke of Buckinglam, who had "lost his office on the complaint o' the tenants," heing, 1 as Holingsled relates, "partly provoked with desire
to be revenged, and partly mored with hope of
rard," at the instigation of Cardina enly accused the duke of treason. in interrogating him as to his knowledge of the ke's designs upon the succession, the surveyor Hies in Shakspcare's word

Not long before your highaess sped to France, The duko being at the Rose, within the parish
gaint Lawreace Ponltuey, did of me demand What was the spech amongst the Londoners
Concerning the Fronch journey: I replicd Cancerning the Fronch journey: I rephied,
Men fear'd the French would prove perfidious, On the attainder of the Duke of Buckingham, Manor of the Rose was forfeited to the ' Manol of the rose was forleited to the own; but four years afteer the dike's excenHonry Courtonay, Earl of Devon, who bad Honry Courtonay, Earl of Devon, who bad en recontly oreated Darquis of exeter, and vour was not of long continuance. In 1538 , nrtenay was suspected of biga treason, and in
39 was bohended on Tower-hill, and his pro. ty fell to the Crown. In the following year estate in tbe parish of St. Laurence Pountmey is granted to Robert Radcliffe, Earl of Sussex,
whose family it continued natil the yeur 1561, ion the earl's grandson sold it to John Hethe, izon and cooper, who divided tho ostate into o moieties, ono of which was purchased by
chard Botyl, and the othor by William Beswick. tyl was agent for tho Merchant Taylors' Com ny, and he conveyed his purchase to them on 0 1st of May, 1561 . The other portion iunded tho site of Nos. $3, \cdot 4$, and 5 , Lourence
nuatuey-hill, and the buildings known as vurence Pountuey-place, situate in a quadranglo murence Pountuey-pace, si's School and Duck's
tween Merchant 'Taylors'
jot-lane. All trace of the ancient building upon the site Morchant Taylors' School has disnppeared; o present school and master's houso were coted, in all probability, the architect, as ho as cinployed by the Company about this time, ud huilt for them the almshouses and chapel
unded by Bohun, otherwise Boone, at Lee, ncar andod beath. There are, however, remains of - hasement story of a part of the manor of o Rose under the house No. 3, Laurence very good prescrvation; thero is also anothon artion to the westward under a honse in Suffolkane. In the erypt under No. 3, Lanrenoe onntney-hil, boarders at the Berchant Taylors
chool were accustomed, at the begiuning of this ontni'y, to perform plays at Christmas.
In the huilating in Suffolk-lane Merchant aylors' School has been carried on siuce its astitution in the reign of Elizaboth. The original uilding was destroyed in the Great Fire, hut it as rebuitt, as aiready montioned, in 1675, and nly alterations of any moment loeing the addimon, in 1829 , of two ro ms , formed out of part riting and mathematioal masters, aud the sub. titution, a few years ago, of iron easements and late-glass to the windows of the apper school. ranes of Wren's timo. There is an excellent xtorior and interior view, in water-colohrs, of
he school, hy J. D. Harding, the former of which as becu re-produced in chromo lithography. The present sohool-hnilding heing found in
dequate to moet the requirements of the moder dequate to meet the requirernents of the modern ystem of tuition, and being moreover unpro.
fided with a playground, the company eutered fided with a playground, the company eutered
nto an arrangement with the governors of the Charterhouse to parchase a portion of the Cliar erhouse estate in Goswell-street, on the removal of Charterhouse School to Godalming, for the purpose of tran-ferriug their school to that site, of providing ampler means of instrnction, and incressing tho number of the soholars. The
rround thus aoquired consists of about five acres, and cost the company 90,0002 . The frontages at Goswoll-street and Whlderness.row have mpany a portion of this expenditure. One efiect of this utilisation of the ground is the widening of Wilderness-row 20 ft ., which will enable it to be used for carriage traffic, for
which it was hefore nodapted. A now roadway will also he formed across tho northern Old street, which will afford a sensible relief the traffic proceeding westward at this point. Taylor's Company consists of the Upper Grcent or play-ground used by the elder boyg, with the school which stands on the north side of the
green, the schoomaster's house (so ealled to distinguish it from the master's honse), and the aniddings in the school-master's court, The purchase also includes the assistant master's house and day-hoys' lodge, in Rutlaud-place, Charter-honse-square.
The Schoolmaster's house was robuilt in 1825 hy Mr. Edsard Blore, at the same timo as the residences of the Poor Brethren of Charter house, in the Preachers and Peasis, with stone dressiugs, and is Perpendicular in style, as ar tho rest of the buildiags. Adjoining the School master's bouse, on the south, was tho oldest portion of the school, which has heen pulled down, and upon the site of which the new buitding for Merchant Taylors, School will be erccted The old school was divided on the round-floor into twe portions, the nerthern part being appro. priated to tho head-master's boys, and the priated to portion boiog used as a writing-school and day-room for the juvior hoys. It is probahle that this formed part of the buildings erected hy Thomas Sutton; but it had been so frequently repaired and added to, that it had lost all its distinctive character, at least externally. The wall next the Schoolmastor's Court had heen cased with brickwork some timo in the las century, an new dormers were a few years ago added by
Mr. I. C. Hardwick. On tho wall over the fire. place in the head-master's school-room ar the arms of James I., worked upon the wall in wet plaster, which have been preserved.
The writing-school was a equare room, with four The writing-school was a square room, with four
columns supporting the floor above, singularly columns supporting the Hoor above, singularly ill-adapted to its parpose, being lighted only great height from tho of plaster, and contained the arms of varion wenefactors ; it had, however, been restored at various times, and all its iuterest destroyed. In the rear of the writing-school, and lighted by windows looking into the Preachers' garden was the Hall, which was used by Charter-honse hoys for all meals except dinner, and as a sitting room for the senior boys. It had heen modernised by Mr. Hardwick, and contained two massive chimncypieces, one apparently belouging to the original fabric, but of inferion design; and the other copied from an
At right angies to the school, and ocenpying the south side of the schoolmaster's court, is the builing known as "Gowna-boys", from its having distinguished from the other hoys by wearin gorns. This is a handsome building erected gome twenty years ago, by Mr. P. C. Jardwiok, and will be converted into class-rooms in con nexion with the new school. The School master's house will also he nsed for the eame purpose, with some additions to form a librury and lecture theatre. The mew hilling,
The first stone was aid on Mondty last, will occupy a site abont prin fl . long by ft . Wide, add will bave it principal froata on the cast tomards the uper Grcen. It will he approached by a fight of steps, and will consiat, ou the gronvd- toor, of spacions entrance-hall in the centre, 26 . vide, with a school-room on each side, 62 ft . by 0 ft . A cornidor on the west side of the new buildiog will connect the lecture-thertre and the class-rooms to be formed in the Schoolmaster's house, with those in the building known as "Guwn logs"." On the ppper floor will he a
hall, 93 ft . long by 50 ft . wide, for the purpose of assembling the whole school, and oocupying the entire extent of the new building. This hal will have an open-timhered roof, carrzed upon principals continued down to the floor, and "ithout buttresses or horizontal ties. Exter. nally, the new huilding will he faced with red bricks, with Porthand stone dressings, and small panels of terra-cotta. The roof, which will be covered with greou slate, will have a central Léche rising 50 ft . above the ridge, of oak, and the upper part covered with shiugle.
The estimated cost of the new buildings, and of the altcrations to the existing buildinge, is 10,0007.
The architect is Mr. Edward I'Anson, the surveyor to the Merchant Taylors' Company.

Mr. Henry Shaw.--The death is announced Mr. Henry Shaw, F.S.A., of No. 103, South. ampton-row, aged seventy-two. It towk place was an able draughtaman, and several of his works on antiquarian subjeots are well known.

EASTERN ART: ITS VALUE AS AN INDIVIDUALITY
Now that what is generally cailed the "East" is being "opened out," nod macle more or less amiliar to this Western world, so difforeut rom it, there may bo some interest in a thought $r$ two on the art of two such entirely different individualities,-80 opposito in natural instinct nd tendencies. It Frould certitulaly bo a very lifficnlt thing indeed to fix upon a sulject faller of matorials for tbought aud epeculation than bis intercliange of the "East and TVest" of the vorld. The difficulty is to see best where to begin, and what to select in a short space most ypioal of diversity, whese all is umlik. But without waiting for perfection of method may wo not affirm tliat the first and most strikiog item of difference between the East and the West in these modern daye, is in the prosenoe and almost complete domination of metinery, and the power of intermediato mechanism in almost powerything armolly in art verything, especially in art, in curopean, or wailised communitios, -liko Furland, or France or Germany ; while in Easterr countie; such as Hindostan, Chiua, and Persia, there is an almost total absence of native machinery: there is nothing between the hand of man and the material he works apon, lut the all hut indis. pensable tools with whiel the work is dove. No one can well paint a picture, however skilful he may bo, with his finger; a brash or tool is necessary, something for tho band, imperfect for all phrposes, and tho object wrouglit upon. It is he samo with weaviug. A machiue, if formed but of two sticks and a few strings, and a shuttle, is absolutely needed for the work to be done. But in both theso cases, bo it observed, and they are fairly typical examples, the hand of the workman operates directly on the ohject to be worked on. It is not, therefore, that in the Kast there are no tools nor machinery, but that the intermediate machivory is guided directly by the hand of the oporative and executive workman, whatever he may he, and whatever the degree of his skill. But in this Western and more highly.favoured half of the world this mere tool machinery has grown up into an almost living and self-working monster. In the simple luom of the East the workman nsing it acts throngh it directly with is hand on the fabric prodaced, while in ono of those "miracles of mechanism," a Lancashire cotton-loom, the workman has but to stand by it o see it do its work, almost like a thing of life, and to occasionally join a broken thread. The very shuttle itself, that second hand, is moved hy the machine. It would be impossible to draw a wider line between two thing both designed for the same purpose and meant to do the same work. In the ove caso the machine is a help, and a help emly; in the other, it is the norliman In the ene, the workman is still there at his work; in the other, he may be, and sometimes really is, away altogether, so perfectly selfacting is the machine.
It may, perhaps, he diffionlt to make the significance of this power of the machine, as taking the place of the human hand, quite visiblo to many who havo not gonc a little into the suhjeot, but if any such will look with a kittle attention in any such will look with abtle attention into the Eastarn fahrics, as they may so readily be seen at the S uth kensington the fine ollo in the fine collection in the Hndia House museum, they may be convinced of it beyoud all possibility of douht or dispnte. It will ha recollected that sor I or the were collected together hy Dr. hoyle for the pnrposo of teachias our Western mana facturers what it really is that the vast popnations of Inda wadil the tent are of the staff whether of cotton or silk, the colours used, and how comoined, adlastly, the patherns or Inestigns Musenm ; and we ouce met a representative of a great Manchester printed cotton firm for whom expressly these splecimens of Eastern work wer got together, and he assured us, strange as it Will sound to some, that a number of the most bcautifnl of these Hindon fahrics cosld not by any possihility be wrought hy mere machinery, however complicated aud perfect in miraculous-
ness of mechanism; "for," he said, "it is in eality hand work, and shows he said, "it is in and eynud rork, and shows, as you look at it maname it, mind in it." This, he said, lis noninery, perfect as it was, would not and Will not do. What a lesson, then, is here! Western man be wholly and in every way a gain? Is there mothing to be said for the necessity of
hand work? Machinery and the power of it is now adrancing at a pace never hefore dreamed of,- it seoms to hid fair to do protty nanrly all
things. But is that wholly ask. Nay, so far did this man go,--and he thoronghly mnderstood the matter, as namufac. turer and salesman, - that he afirmed that tbe whole of the finer and costlicr work in the Eshihition was quite useless as "prccedent" to go It wre the abely nothing conld he done with it. profitubly manufactured here for the Indion marrkot, and the price quoted day by day hy margiot tolegrapb! Brice still all this time, and in spite of all, the East, as we are assured, is gradually and most sarrely heing "openeed out." We are getting to know more and more about it and the multitudos of peoples who live in it, and in time these East mann maces day by day, so that
 Japanese, and eren the and even the Klisites,- - mill and must know soinetining azout us, and mast take our goods,roads or no roads, -and become, in spite of But still it is esternised, in art, as elsewhere hittle below the all gold that glitters; go a hitte below the surface, and things change, not a bitle strangely. Like the claracters on the miraculous sabres, they chango while yon are looking at them. Even Cobden himself, who travelled far to knock down barriers, and to open roads all the worlu over, was sometimes, in spite of himsclf, taken quite aback by the great fair or market in the confines of and Asis, he was not a little struck by the intense pictarcsqueness of things. All sorts of peoples, costumes, and tongues, the spirit of trade and harter manifested, satiafied even him; but so strona was his "Manchester" instinct that he could not bnt regret that this vast hose was not snpplied from hence with "cottons." If it had been so, as we must suppose it one day will be, then all this almost infinite rariety will bo at an end,-all must hecome alike; for these printed fabrics are run out from the magic machinery not by the yard, but the mile, and it is samoness and quantity that do the work the " market."
It would, porhaps, he useless to arguo for a moment against such a courso of things and such a prospect, lut nothing is to be got with. out paying for it one way or another. In these molltitudes of Eastern races there is almost an infinite variety, and a prolific power of design, as the Indian fabries testify, coming from the hrains and hauds of widely separated indivi. dualities. But run the work through a maching by the mile, and all this is destroyed in precise proportion as the "trade" is successful precise matter of mere hnsiness and anccessful. As a siou and modern progress, the prospect is indeed almost boundless, and there would seem to be little doubt that the power of prodaction of so industrious a community as oxists in England conld supply, as Cohulen hoped, the whole world. But what becomes of the fiuo faculties of those races who
themselves?
There is anotber very singular merit in these prodactions of the Eustern mind and hand well worth more than a passing thought, and it is the more interesting just at the presont moment, when a great representative of the for East is on a risit here to see, it may he presumed, what it is we can teach him. We refer to the really maryollous way in which the Oriontal mind, from whatever canse, works in colours. No matter what the object may he, or for what purpose, or how plain and simple the colonrs or the "design." The softiness and harmony of The very hrightest colours may he employed, The very hrightest colours may he employed, hut the result is the same. There is no expreseise term; - the colonr, heaety, and Larmony are complete. And this is not the cesalt of an elaborate systern of teaching, or a fancied krowledge of what are termed "prin. cipless of oclour. The Oriental has a natural cye for colour, and the arrangement and har. mony of colours. It is really tho gift of nature, and would almost seem to be the result in part of his life under the bright and heantiful skies of the perpetnally sus. lighted countries iu which ho has heen placed. The sun does balf the work, and colonrs all things round and about
him, He lives in it. Night, as well as holps him. He may, witliliteral truth, be said, in, the language of advancedscience, to grow up and

May we not, therefore, in the face of tbose he adduced, question the many more that migh he adduced, question the wisdom of a good deal provement." Are we not stifling some fine facnlties and powers of work hy putting all facnlties and powers of work hy putting all And not only doing the the rollers of a machive? And not only doing that ourselves, bnt compelling everybody else all the world over to do so too, as far as it is possible to them. Mr. Carlyle
once affirmed that the future "epic" of once affirmed that the future "epic" of the modern man mast and would be "Tools and the
Man,"-i.e., tools frst, and then the man after Man,"-i.e., tools first, and then the man after shem; and thas it really and litorally is. The snbstitution of the word machine for tool world be more correctly descriptive, perhaps; for it is not he mero simple saw, or hammer, tho tool in the hand of the man, that is doing all, hut the eclf. moving aew, and the self-guiding saw or saws, epic must commemorate. Nay, we may almos ask, in some pootic wronder, where is the mon, wherever you look for him? IFe has been there for he mado the machine, and has supplied it with materials to work on ; but where is he, in tho work or the final result? The man of the East, whother wise or no, does not come here to teach ns anything: he comes here to pick up as much "Westernism" as he possibly, in the time, can; but not, let is hope, to forget, in its glories, himself

## THE QUESTION ON STTES

FOR LABOURERS' DWELLINGS IN THE METROPOLIS.
TEts subject was again discussed at the weekly meeting of the Spocial Dwcllings Com mittee, on Wodnesday last. General Cavanual took the chair, in the temporary absence of Lord Napier, the chairman.
detropolitan improvements and ratlway acts.
Mr. Vigers brought forward the following pedient that all or railway Acts involving the removal of large numhers of the poorer classes, shall contain special clauses providing that all persons havin the power vested in thew under such Act shall be bound to clear sites to a conresponding er tent, to be set out in sucb Acts, for the erection of dwellings for the poorer classes, and that such sites shall he purchased, cleared of brild. iggs, aud offered for sale, hefore any part of the and for such improvemonts or railway is cleared of its huildings." He did not desire that the porticular numher of houses or the number of stated in the were to be displaced should he stated in the clause which he introduced intoany particular Act, hat onls the area of the site cor. esponding with that to be taken for any metro.
The Rev. R. J. Simper sec
The Rev. R. J. Simpson seconded the resolnion, stating that he agreed with Mr. Vigers that Whas not desirable to fir any hard.and-fast line What they wished was to ennnciate a certai principle. Withont stating anything as to the exact number of persons to be removed hy any particular improvement, he thought it desirahle displaced provision should persons were to be displaced provision should be made for t
The the improvemonts were oommenced.
did not rev. Jir. Deaton thought the resolution in which railway companios had displaced thousands upon thousands of persons, and ye had not made provision for even a thonsand. He thought that wbere so mauy persons were displaced hy railway works or improvements, pro vision shouid he made for them on sites adjoining The Rev. R. J. Simpson said it mast he borne in mind that in the immediate locality of these improvements there was of ten inconveuient over crowding, and therefore it would, in many casea be impossible to provide sites adjoining.
Mr. Liddell thonght the resolation was vagne He wished to ask who were to erect the dwelling ? Certainly not the railway companies themselves for they conld not be expected to do so. The resolution also stated that "snoh sites shall he purchased and cleared." Ho should like to know outside wonld $\begin{gathered}\text { did not think that the public }\end{gathered}$ uess in proposing that sucb sood men of busishould he introduced into any a for Parlinane Mi. Figers observed, that all lie wished was that the clause shonld he gezoral in any futare improvement or railway affecting the metropolis.

It was not for them to particnlarise the clang inasmuch as it was altogether impracticahl The exact wording of the clanse could only drawn in reference to any special railway and that would have to be settled he Parliamen fo Adverting to the made againet Mr. Donton, that they did not giv compensation to poor persons whom tbey di placed for new worlss, Mr. Vigers observed tha he diffcred from Mr. Denton in that respec He conld state from his own experience that th. only persons who did not pay compensation wa: the Metropolitan Bonrd of Works, their ple being, that in the jmprovements which the made they were dealing with the public money As regarded the railway companies, it wa within his knowledge that the railway com panies did pay compensation to the poorer classe whom they displaced, and beyond that, they has heen the means of conferring great henefite apon them, hy removiag them from houses anc localities not fit to live in, and whero they hac heen oppr
The Rov. Mr. Denton, on the other hand, stated that he, too, had had some considerable oxperience of railway companies in his ueigh. Figrbood, and ho could not agree with Mr of the He knew of an iastance in the case upwards of 2,000 poor persons were displaced upwards of 2,000 poor persons were displaced,
and he (Mr. Denton) had great difficulty in and he (Mr. Denton) had great difficulty in pany.
The disenssion was continned for some time, in he course of which it was urged by several memhers present that the resolution was not ufficieutly exphicit. It was also nrged by Mr. Lidde and others that it was most unwise to attempt to compel railway companies or other dwes ar dwellings in the neighbourhood of such railways or improvements.
Col, Gardner strongly nrged the importance of the clause exprossly stating that sites should
be provided, and houses huilt upon them, and made ready for occupation, hefore the railway companies or tho Nexpation, hetore the railway permitted to proceed with the worl sould bo would displace any particular number of persons.

Lord Napier and Ettrick (who bad now arrived) 日aid he quite agreed with the last apcaker. Ho had always held that constraction ought to precedo demolition, and the fact of its not having done so hitherto had led to large numbers of persons in the metropolis heing yearly thrown out of their homes. The houses to he hilt on acquired sites, in lieu of those to he demolished, ought to he ready for ocoupation before demolition commenced. This might he hard upon railway companies or other public bodies, hut, in the interests of tho poorer classes,

## it ought to be insisted upon.

Dr. Ross observed that all they could ask for was that the railway compauies or other pnhlic bodies should he compelled to provide sites and offer them for aale for huilding upon. They oould not oxpect railway boards or others to stop their works until
The resolution, morlified as follows, was ultimately adopted:-"That the committee doem it expedient that all persons empowered to remove dwellings of the poorer classes under metropolitan improvement, railway, or other Acts, shall be required to clear sites to an extent proportiouate to the namher of persons proposed to he removed, for the erection of new dwellings for the said classes, and that such sites shall he purchased, cleared of huildings, and offered for ale* hefore any part of the land for such mprorements or railway is oleared of inhahited dwellings."
POVERS TO LIMITED OWNERS OR LAND TO SELL for berldings.
M1: Wilkinson next brought forward the following resolution, which, after some discus sion, was carried :-" That associations or companies formed for the purpose of evecting labourers' dwelling-honses, should he enabled to purchase land from limited owners under the agreement clanses of the Lands Clanses Con. solidation Act, with appropriate provision for securing the charavter and purpose of the dwellings to be oreated."
The committee adjourned to Wednesday next.

## STATIONERS-ALL

He dimer given by the Lord Mayor wellow), as master of the Stationers' Com$y$, on Saturday creuing last, was remarkahle, mastor having gathcred aronnd him men literature, sereral of whom madc excellent ches. The quaint, post fire, hall, with two hree good pietures, and a magnificent tra
ts nuiet garden, nevor dreamt of hy the aming erowd up and down Ludgate. hill, rested greatly many who were visitors for tho
timo. The tree was amusingly alluded to he Master when he wolcomcd as their prinI grost the patron of their Company. Archh'shops of Canterhury have been
ons of this Company ever since its first incor. ation, more than two centuries ago. "In year' 1400 ", said Sir Sidnoy, " a society was ters, or Stationerg, and in 1556 a clarter nerporation was granted to the company colled the Stationers' Company. But with ocharter and its attendant privileges were control of the printing-presses, not only They wero required to aseertain every so in which there was n press, and to keep a ster of them, besides learning the nature of
pnhlications printed at it. At the time of the pnhlications printed at it. At the time of the
Chamher, the Arehhishop of Canterhury was Chamher, the Arehhishop of Canterhury was
of its most important and aetive memhers ; our rcoords show, that during the existof that hody, the arehbishop connstantly Stationcrs' Company, reauring thardens tho stationcrs ${ }^{\circ}$ Company, requiring them, alties from the Church, and punishment hy State, to soize the publications whieh were med to ho seditions, to hring them into the den which yon see ontside those windows, and oh is now flourishing with snch heantifal on leaves was very mueh strengthened and nt."
The Archbishop replied with much hnmour 1 snch eommand of face as would make the trine of an aetor,-withont a smile or a movent to show that he knew he was saying any, ing tanny. The best speech of the evening, nster, who, responding for the House of Lords nted out where the company resembled that ly, and alluded gracefully to the fact that, ile other guilds had changed their "charaeter, one was admitted a meraher of the Stationers mpauy who was not in some degree connceted the craft. When we say, trusting to rd Mayor, Sir Arthur Helps, Lord Hoaghton, Arehhishop of York, Sir John Gillbert, Sir nry Thompson, Messrs. John Walter, E. M. ard, Joseph Darham, Sidney Cuoper, Honry e, F. Lei chtoa, Calder Marshall, J. G. Niehols, orgo Lesile, Moss, Hughes, Harrison Ains-
rth, Winter Jones, E. B. Stephens, John array, Shirley Brooks, Scrjt. Parry, Dr. Doran, Editor of the Edinburgh, the Editor of the arterly, and several other distinguished men, shall have justified the assertion with which began those remarks,

## THE TRADES' GUILD ON LEARNING

 CONTERENCE.On Saturdny last there wero two confercnces, nvened by the prorisional eommittee for the tahlishment of a "Trades' Guild of Learning," a the purposo of determining the basis and nstitution apon which such an institution ould be establishod. The morning sitting as presided over by Mr. Samuel Morloy, M.P., a eonsiderablo number of representativos
working elass organisations and cluhs ere present, as also many other supporters, nongst whom were Mr. Mindelln, M.P., Lord yttelton, Lord Edward Fitzmaurioe, M.P., Sir ntonio Brady, Mr. Joseph Dodds, M.P., Mr. homas Hughos, Q.C., M.P., Mr. Alexander rogden, M.P., Mr. Wh. M'Arthur, M.P., Mr. hin Whitwell, M.P., the Lord Mayor, the Right on. W. Cowper-Temple, M.P., Lord Goorge
anmilton, M.P., Sir John Bemett, the Rev. anon Rohinson, the Rev. Canon Ridgway, the CV. Henry Solly. The ehairman ohserved that to ohjeet sought to bo ohtained hy this Trades
of extending the advantages of university edueation, not only to the working classes, but to all classes; and he helierod that if there was was the middleed this more than another was adopted, "That a Trados" Guild of Learnin be now estahlished, and that the persons present pledge themselves to render it the best support in their power. Mr. Mundella, M.P., presided at the afternoon sitting, which was well attended.

Our strongest sympathies boing in the diroo tion advocated at the conference held on Saturday last, at the Society of Arts, wo slould ho What we could find more enoouragement in That took place than wo did. There seeme derful diversity of notions,--wo nse the word in entindistinction to what wo would term idens, mong those called on to piest, or roluntecrin mong It strikes us that some of the pro moters of the Trades' Guild of Learning havo moters of the Thar f . Learng have desire to estahlish, and carry into effect. The trade representation at the conference was very small, the representatives attending connected with trade societiea heing the few who are generally prominent in every new movement, no atter what may ho its naturo.
A Trades' Guild of Learning, in the opinion of one of the speakers, who wished the movement suceess, though he was afraid they would and hound to ho a grild in the Mediwval sense, and hound together by solemn pledges, and enjoying some exclusive privileges. ln fact,
the gentleman believed that a tio was required, the gentleman believed that a tio was required, on oath, or its approsimate, similar to that Freemasons, Odd Fellows, Good Templara, and Freomasons, Odd Fellows, Good Templara, an so on.
Another advocate proposed a ashemo which, possible, wonld have the effeet of relieving the country of its school hoards and manaraeturing skilled artizans, without maoh cost or troublo. As the detail of this schenne was not given, we are left to conjeeture how it could be accomplished. Oue speaser proposed that the power of the new guild stould be hrought to bear upon the youth particularly, idle hanging around enr street corners, and in other open places, and to compel or drive them. into the elasses opened for their instrnotion. The grown youth who is not desirous of ohtaining that knowledge which will make him more skilled in his trade, will hardly he improved by any driving procoss. The speaker who said that with the workshop, eame the nearest to the mark, with some modifications, if the seheme of technical instruction is to be ever successfully School out. "Make every workskop a normal moreth an mend the ohservation made by Mr. Webster, " 1 t is as necessary, or nearly so, to learn to draw as it is to learn to write"; and he saw no reason why "every lad at school, or receiving instraction, should not be tanght drawing as well as writing;" we commend thing for these twenty years past. A good gronnwork is ina. tion ineludes drawnng. Make your protige or trade stadent thoronghly understand the example, and practieally apply it himself,
if enly hy the nse of a model : then trao teehnieal instrnetion will be imparted, and skilled labour made manifest. To carry out this in respect to all branehes needs something more than talking and lecturing to young men,-it needs toachers and workers, oducated workers who ean teach and not meroly talk. Wo have hat few good leetarers in our midst, in the Faraday sense, leennrer whose every essay was a practical lesson of instruetion that became riveted in the mind of his hearers. To make technieal instrnetion really useful a fair elementary education is a first necessity. Among some of the speakers at the conferenee it seemed to he taken as grauted that a trados guild of learning would make artizans in general masters of a nuiversal knowledge in technical matters. This is a somewhat absurd idea. As there is an orgauisation and a division of labour, there must also be an orgraisation of technieal instruction suited to the if ever established in connexion with the work-
shop aystem or apart, will have to be eonfined Nith a special view to the one branch of trade to developed by a higher iustruction in teehnical ours. A high degree of excellence ean never of skilled lahour os far na the manipulating processes are oonoorned, though he may theoretically oquire $\Omega$ knowledre of the practice of several. The objects as specified in the draft constitution of the guild, as suhmitted to the conferenee, were good; hat the means hy whioh these ohjects are to he ohtained opens a very wido field, through which wo do not see at presont a very Wlat the guild proposes by the aid of ereral existiog institution attempted to he done, hy these same hodies. For instance, the Department of Soience and Art at Kensington are doing, in connexion with their numerous sehools of art in affiliation, mach useful lahour throughout the three kingdoms. due mechanks hsing something in this mens eluhs have hoen doing something in this way for years. The City companies are hoginning to how bigus or aiang in teenimeal education and simple, the the pand simple, are doing nothing. The universities can only he meaus to an end oy a system of lectures, or perlaps affording degrees for a fow hishly educated, who will probahly ahandon trade instead of being an acquisition to their fellows. Next arises the financial difficulty. Will there he available funds rortheoming to hooy np the great experiment untin it is nemly rooted in the soil as an iustitution? Will braneh gnilds spring up rapidly to aid the pareat body? Will the different trade and other organisations appealed to devote a per-contage of their funds to earry out the ohjects songht? Theso and other germane questions wo would like to ask; but we know it would at present he impossible to get answers. We fear the trade-unions in gezeral will render very little aid. They lave not as yet shown any interest in the movement. There are, however, one or two legitimately expected firatly City companies, with their enormous wealth, the bona fide aceumulation of trades' guilds. Instead of heing auxiliaries, they onght to be the chief promoters of a trades' guild of a proper nature We havo sketched out already what the City companies could and shonld do, and perhaps it would he wiser for them to do it at once, than allow the thin end of the wedge to he driven by another party, who may possibly succeed in oh taining a portion of their funds without their grecable consent. We should be glad to find the Trades' Guild of Learning succeed in perfecting the institution they have launched. Bat thero aro immenso diffioulties in tho way, and our impression still is, as we said a few days ago tbat it will need muoh moro talkine and working before the guild is a living and healthy reality.

TrADES GUILD OF LEARNING.
Sir, - Abl have for so many years heen an drocate of education, and more especially of tho edueation of the workman, $\mathbf{I}$ am not likely to be suspected of any sinister motive, in opposing the present project. I have a strong eonviction tuat, notwithstanding the good intentions of tho promoters of his schemo, foundin and a confounding of purposes. We do not appear in England to bave a faeulty for organising, diseriminating, and rightly dividing functions. It is at one timo all physieal training, now all seience, then all tecbrieal edueation. The hog, the whole hog, and nothing hat the hog. Now the trades' guilds of old had speeial funetions, and immenso advantages would, doubt, aeerue to all crafts if the ancient and speeinl functions of these guilds were revived,-viz, that of eollecting all information having referenco to the teohmenlities of the rarions erafts and providing for their improvo. meut, hy the appointment of fit persons to investigate processes, to commanieate the results of these inquiries, and to answer questions snh. nitted to them. The guilds might also gradually hecomo tribunals to which diaputes between masters and workmen could be referred. These functions were allotted to tho guilds in ony paper on tho Organisation of Edncation which appeared some twelvo months sinee in these numns. The educationa. function shonld be proposed in that paper that the art-schools of
tho Science and Art Department should he cxpanded to working men's culleges. The
special functions of special fuactions of general cdication and teohnical inquiry and study would then be
distinctly divided, and each would be better aistinctly divided, and to and performed.
Charles Barton clearly pointed out in his articles on "Techmical Education," which ap. peared in "Art, Pictorial and Industrial", that technical education and technical institutions on
an extensive scale were moro a necessily of an extensive scale wore moro a necessity of
foreoign conntries than ourt own. For other foreign conntries than onrr own. For other
nations, -to emulate the industry of England, and being comparatively withont workshops, had to improviso workshops. Eugland has, and has
liad for centuries, the hest of all technical had for centuries, the hest of all technical
eolleges,- her great workshops. He also pointed ont in that jonrnnl the mischief that is likely to ensue from an indiscriminate provision for technical edrucation. There are degrees and special functions even in the rarious crafts, a
wholosome division of duties. The science and hoolosome division of duties. The science and Skill of hand and eye, of handicratt, is another and distinct function, and belongs to the workman. You are lanstening, by your misdirected efforts, to confound these separate and distinct rocetions, and to iucrease the causes of bickering botween master and man.
Another curious inconsistency appear's to me to crop up in the discussions on these manters, viz., the solicitnde erinced to confer the advan. tages of a university elucation on the workman,has long since heen pronounced unsrtisfactory, and quite out of barmony with the times. No, sir, the education of the workman must he some. thing quite different from that, not only for his own, but for the conntry's, sake, in which it is predicted he is to take more prominent political eudeavoured to set forth in a lecturo delivered believe, fully reported in the Ruidder.
W. Cave Tromas.

HEALTHFDL DOINGS IN DUBLIN.
Ir is an augury for good to find men of all shades of political opinion, and of all creeds, mating for the promotion of a asefal and legitimato object, and oue cssential to the well-being, morally as well as physically, of a nation.
comere 18 no law to prevent a combination acrainst dirt, and that the law officers of the State cannot prosecute for such, is the opinion of the Irish Chief Justice. This is simple justice, hut this does not state the whole case reform in all. their relations with society, for actions have been actually threatened against memhers of the Dublin Sanitary Association for their efforts towards the common good.
Fortunately for theso geutlomen, their oppo. oents were not quite assured that they had law on their side, or probably
been followed by actions.
The experience of this, the first, year of the existence of tho Dublin Sanitary Association shows the necessity for carrying out the recom. mendations of the working committee of that body, -nemely, to give the medical officers of all districts, in town and country, the legal statns of sanitary or health officers at all times, not alone, as at presont, during the existence of epidemic disease, or daring tbreatenings of such visitations.
The opportunities afforded to the district medical officers of Ireland for the acquirement of information as to the beginning of cpidemic disoase, as well as of the prevalence of endemic
disease, is mnequalled hy anything in other parts of the United Kingdom, or prohably in other countries.
In Ireland, the district modical officer is well acquaiuted with the poople, is to a very large extent their medical attendant, and is in most the local registrar of births and deaths. We are not rar of births and deaths. the late Irish Poor-Lsw Commerefore, that very fiavonrahle to the union of duties of were ventive medicine with those of a curative naturein the person of the Irish District Medical Oficer; and the Local Government Board of the present day have, we nnderstand, recom. the present day have, we nuderstand, reoom. mended to the Legislature that such a union of proposed for Ireland.
The Royal Dublin Society and the Dublin The Royal Dublin Society and the Dublin
Sanitary Association have given the pubke the
opportunity of hearingsereval important matters connected with public health, treated, by medica and other professional men, in a popular way during the early monthe of the presont year, in the Lectnre Theatre of the Duhlin Society.

This ono fact comes ont in strong relief, viz., that wherever sanitary defects exist there are also to bo fonnd demoralisation and degradation, and there will also ho found a people ready to revenge themselves on those who are hetter off than they are, for wrongs real or imacinary. To meet
this evil two things are needful;-first, a firm attitudo by those in anthority, and a determina tion to pat the law risforously in force against all transgressors; and, secondly, a determined and contiuuous support of those who are striving to hring modern calture, thonght, and science, o hear on the acknowledged sanitary defects Duder which th
It is, therefore, with the best hope for tho cuture that we have reccived accounts of the first annual meeting of the Dublin Sinitary Association, held in that city on the Ilt lof June and we will now only express the hope that Parliament may notice the admonitions and act on the suggestious of the several speakers on great difion referred to, who, in tho fico of considerahlo attention to the physical -and therefore the moral,-degradation of the in. habitants of the very parts of Dublin that poured forth itz thousands on Saturday niglit and Sunday morning last, as regardless of the day that then dawned as they were of tho lives and property of their fellow-citizens.
The Dublin Sanitary Association, though in its infancy as to time, has already enlisted nnder its hanners the county and university memhers Darlianent and ono of the city membera of Dublin, many leading members of tho medion and legal professions, and a large anmber of the chief mercantile men, with, also, some member's f the fair sex.
Some carious facts havo come out at the meeting * just held; amongst others it appears that the amount devoted to expenditnre under Sanitary Acts in Ireland, when compared with
tho raluation, was represented by onevighth of ho valuation, was
forthing in 1871.

## TIIE NEW PUBLIC BUILDINGS AT

 BILSTONThese new buildings liave been formally opened. They are in the Italian style of archi. tecture, having a frontage to Lichfield.street of 95 ft , and to Church-street of $7 \not \ddagger \mathrm{ft}$. They have heen erected in hrick, stone faced. Tho Town. hall will afford accommodation on the ground floor for the Town Commissioners, consisting of board and committee rooms, waiting-room, town clerk's, sarveyor's, and collectors' offices. On the first floor is a large room, 72 ft . by 43 ft ., for public meetings, with orclestia gallery at the west eud, and several retiring rooms. The public entrance to the Town-hall has heen carried appron a tower, forming a prominent featnre on The Free Library huildings, though nniform in rontage with the Town.hall huildings, distinct therefrom. The entrance is from Lich field.street, and the accommodation on the gronnd.floor comprises a reading.room, 26 ft . by 20 ft ; and library, 22 ft . by $17 \mathrm{ft} .6 \mathrm{it} .$, with reference librnry on the first fioor, the second residenoe is provided in conmexion A porter's Town.hall huildiugs. The entrance-halls are laid with Minton tiles, and the assembly-rooms heated with a hot-air apparatus.
eated with a hot-air apparatus.
The total cost of the buildings
asclusive of the price paid for is about 5,000l. exclusive of tho price paid for the land. That portion appropriated for the Free Library has heen paid for by the Free Library Auxiliary
Committee, they having sncceeded in raising Committee, they having sncceeded in raising
$1,000 \mathrm{l}$. by voluntary suhscriptions, and the pro1,000l. by voluntary suhbcriptions, and the proceeds of a bazaar held last year, in addition to which the committee is now fitting up the Free
Lihrary bnildiugs at a cost of about 300 . The Lihrary bnildings at a cost of about 300 . The
fittings are niade of oak and mahogany, all fittings aro nuad
Frencl polished.

The works have heen carried ont by Mr. Nolson, huilder, Dudley, from the designs and under the snperintendence of Messrs. Bidlake \& Fleeming, of Wolverhnmpton, architeets.

- An Analysis of the Population. Acreage, Enpenditure unser gumary Acts, and Medical Charities Aet, foc, in
Irelund, by D. T, T. Mauncell, M.B., M.E.I.A. Dublin:

1873. 

THE CASTLE OF BARNARD CASTLE. Barxard, or Bernard'e, Castle, so called fro its fonnder, Bernard de Bnliol, stands in a con mauding position on the loft bank of the Tee bero the boandary between Durham and Yor shire. It is a large castle, and was long a rer froutier of th, the preat barons Tho castle crowns the summit of a s'eep an in part precipitous shelf of rock, which rise aboat 100 ft . above the river, and has a pro westerg shoulder, by means of which tho nort +estern quarter of the fortress is protecte
natorally by a cliff. The remainder of the was corered by a deep and broad artificinl ditol now mostly filled ap, which intervened betwee the east and north sides of the costle and contiguons town, to which it gavo nome, and th people of which, in the times when the cast? was maintajned, looked to its lords for prote tion. The north front of both tory and received a further defence from the Percy.beck, stream which flows into the Toes about 450 yard higher up.
The area of the castle, within the walls, rather above 8 acres. Iu plan it is oblong 293 four muequal sides, averagiog abon 293 yards north and south by 133 yards east an west. slightly convex, and nleasures 336 yards; th
west, or that mpon the river, 245 yards; th north end, 160 yards; and the south end, 11 yards. The Toes Bridge springs from the rock bank, below the eer springs from the roc was commanded from the hattlements.
The area is divided into four wards, of whicl "outer" covers rather more than its sonther haln, quarter, is again smbdisided pretty equally int " middlo" ward, and a northern or "inner" ward. The whole area and the several ward are protected, where necessary, by walls an litches. The curtain along the cliff seems t aave been a mere parapet, save where, as in the inner ward, it supported interior buildings. Th, walls generally vary up to 30 ft . in height, and
from 4 ft to 5 ft . in thickness. The outer ditch from 4 ft . to 5 ft . in thickness. The onter ditel of the place, also the town ditch, commenced iu a deep ravine close north of the keep, was carme along the north frout, skirting what are calle "tbe Flats"; thence along the east front between the wall.and the town, and thence ronnd the sonth end, and so boneath a part of the west front, antil it is lost in the steep ground near the bridge, having been altogether nearly yards in length. From this ditch branched a rom, which traversed tho place east and west which, placed to the south of a cross.wall, was ho defence of the three northern wards from the outer ward.
Another ditch, commencing in the ravine below he keep, rans north and south, and joined the and middle wards from the town ward. Finally, rom this branched another and still shorter litch, which ran east and west into the river ank, and formed the defence of the inner from he middle ward ; so that each curtain had its eparate ditch. All the ditches are shown in Grose's plan, hat the town ditch though in raced, has heen filled up and built mpon. The leepest and broadest of the whole and it is a formidable excavation, is the ditch proper to the ianer ward, something of the elevation of which is due to the heaping np here of its contents. Theso ditches seem all to have heen dry. They are traversed at their ends by the cnrtains, and in three plaees, where the north curtain oloses he end of the iunerward ditch, and where the ther end ran out upon the river slope, and Fhero the east ourtain closes the great cross fitch, are arched openings in the ourtain at the evel of the hottom of the diteh. Grose also hows a foarth arch in the wall of tho middle vard. These were either drains or posterna. They aro so nearly haried that only the tops of lome of them are secn. Grose calls them doors, and they may be so. They seem original The enceinte of the onter ward seems to have een a mere buttressed and emhattled wall, of o very great strength. This ward could oaly have heen held by a very strong garrison. It was prohahly desigued, like the Scottish harmkin, to afford a refage for tho townfolk and their cattle, supposing the town to he taken hy an enemy. In the event of a serious siege it
would probahly have been abaudoned. Leland

BARNARD CASTLE.

eales of a fair chapel and two chantries in the stance Norman, from whence the onrtain, of ast area, with monuments said to be of tho groat height and strongth, closing the north end aliols, They wero probably in this ward. of the ditch, runs up to the keep. In its base, here was a gate from the town in the east in the bottom of the ditch, is scen the upper ont, opposite tho market-place, probably at part of one of the rownd-headed openings already so prosent entrance, and an inner gate, at the orth-west corner, of which some traces remain, nd which led into the middlo ward. The drawridgo of this gate is replaced by a causeway of kitchen-garden, and part of it is locked up, and , closing the end of tho ditch. The slight entry refused. The curtains seem suhstantially elence of this outer ward is consistent with the forth":

## That Raron to his castle fled,

Tho uttermost walles were eathe to win,
The Earlea bare won thempresentlie.
The uttermost walles were lime and bricke;
But thoughe they wan them soon enone,
Long eier they wan the innermost walles, For they were cut in roclie of stone."

The Baron was Sir George Bowes, who held the estle for eleven days against the Earls o Yorthumberland and Wostmoreland in T569, and hen, according to some accounts, oapitulated on air tex
The town ward, occupying tho north-east and uarter of the area, much less extensive than he outer ward, was more strongly fortified, pon its east curtain are the remains of a octangular huilding, projecting inwards from he wall, and known as Brackenbury's Tower. There was also a square tower at the north-east
angle. On the north front is a half-round ower, projecting from the wall, and serving to lanis a large round-headed doorway, evidently a naiu entrance from the north, independent of he town. The arch of this portal is composed of three rings of voussoirs, set in ohamfers, of excellent ashlar, but without ornament. The iamhs are also chamfered. They have a plain impost also chamfered, but with a sort of headmoulding anderneath. Thore is no portenilis. This seems to have been the middle or inner doorway of a regular rectangular gatehouse, the lines of the side walls of which are indicated by toothings on eaoh side of the door. There are remains of similar lateral walls within, With the gatelouse, the drawbridge is, of course, rrone, and the ditch has heen flled up
West of this Norman gate, and standing on the counterscarp of the ditch of the inner ward, opposite to the keep, a shoulder in the cartain is ocrmpind ly a small rectangular tower, in sub-
ndications of a bretasche. Thongh circnlar above and towards the field, the interior face is capped hy a bold spur, a pyramid cat diagonally, with tho apex dying into tho round wall about four.fifths of the way up. This spar contains a mural chamber. It is much shattered.
Tho keep is cylindrical within, and has a hasement and threo upper floors. All its original openings seem to have heen oithor flat or round. headed. There is no original pointed arch; that over the man door is olearly an inscrtion. The basement is on the ground level, about 20 ft . diameter, the walls about 10 ft . thick, and it is covered in with a flattisli dome of inferior rubble but prohably original. On the sonth side are traces of a fireplace, of which the vertical tunnel remains in the wall. The entrance-door is on the west side, and so also is the main door. It is much hroken, and has at present a late flat pointed aroh, but it geems to hare been round ponded It opened not, 0 now from the conrt, hut from the rasnoeroom leading to the pos hut from the passage-room leading to the pos to the rith of the door is a recess yards to the re in the a sepureho in tha atone colin, probably found in the onter ward The reess have has no portoullis. In its left jamb a flat-topped mural passage, 3 ft . wide, leads into a garderobe which projects outwards between tho keep and the ourtaiu, and has a short exterior loop. The shaft of a garderohe in the floor ahove so drops that it is evident that liere, as at Corfe, there was a wooden partition.

Entering the keep, on the right a door leads up half a dozen steps into the north side of what is called the guard-chamber, a barrel vaulted room, 14 ft . east and west, hy 7 ft ., with a loop to the south. This looks very much like an oratory, though it is a passageroom. It is contained partly within the spur buttress, and is ovidently the canso of that appendage. From near the west end of the chamber a second doo leads by a muxal stair, 3 ft . hroad, to the firs Hoor, a circular chamher, 21 ft . diameter, with walls ahout 8 ft .6 in . thick. This stair opens by a narrow, round-headed door in the jamb of a doorway, also round-headed, which seems to have led from this floor into the "great chamber," the withdrawing.room of the hall. In the oppo sito door jamh, a similar door leads hy a mural passage to a parderobe above that already mentioned.
The first floor was evidently the state-room,

It has traces of a fircplace to the sonth side, but tho bood is gone, and opposite to it is a round. headed window of $4 . \mathrm{ft}$. opening, looking up the leos. Arother window, probably of the same has heen altered to suit a Tudor five-light, flattopped window. This seems to bave been called In Lhe Ly's Chamber."
In the left-hand jamb of the north window, a mural stair, 2 ft. 6 in. broad bor dopens on a mural stair, 2 tt . 6 in . broad, which, following loops, led up to the battlements, opening, on the way, upon the second floor, of which tho floor and roof, both of timber, are uow gone. This floor also had a freplace, and a sort of nagne. Thifed loop, which did duty as a door, and openagn upon the battlements of the hall, and led also to a third this has au open vent, while the shaft of the this has au open vent, while the shaft of the the arehed mouth of which is just visible at the the arched mouth of which is just visible at th
foot of the wall, outside. fher the wall, outside.
There seems also to have been a square-headed opeming in the stair, to give a way to the ram.
parts of the ward-curtain, which was 2 ft .6 in wide, baving a parapet of 3 ft ., and a revewall of 2 ft . As tbe parapet of the keep is gone, the stair terminates abruptly at the level of the rampart wall, where the wall is 7 ft .6 in. thick; and from hence is a good view of tho castlo and town, and of one of the most lovely reaches of the Tees. In 1592 this keep was roofed with lead. The roof was probably always flat.
Hortban Tower capped the nortb-west angle of the ward, rising from the rock bigh above the river. It is a mero fragment. It seems to the hollow bend of an existing wailt to fit on to saas built, it was thought pradeut to strengthen the wall by stout exterior hutiresses. Theorivina wall is Norman. The first built part of the sina seems to have been Early English, and its completion Decorated.
The space betwcen Mortbam Tower and the keep was occupied by the hall and withdrawingroons, the latter being next the keep. The hall waw on the first floor, as shown by its two wiuwith a transom, and trefoiled hoo two lights, quatrefoil in tbe head. They are placed in recesses quatre plain zegmental hey are placed in recesses will. plain zegmental arches, and side seats of
stone. They are of the best Decorated period, stone. They are of the best Decorated period, has also heen strengthened with wecorated has also
Between the ball and the keep were, on the ground.floor, passages leading on the left to wbat was probably a cellar below the hall, and on the right into the keep, while at its end is a small square-headed postern in the curtain, still in
use. Ahove tbis passace was the witbdrawing use. Above tbis passage was the witbdrawing. room, placed between the ball and the state floor of the keep; and the window of this room, in plays in its soffit the "bristly bary" which dis. III. The window is projected over the postera, upon bold corbels, and is mainly of good Perpendicular date, but the superstructnre has been altered and debased by some very poor Tador work, similar to the window in the keep, and possibly due to Sir George Bowes. This was called "The Great Chamber" in 159.
Its gate-house occupied the south-west augle cliff. The , and was built on the edge of the curtain between it and Mortham Tomer sce. The have been a mere parapet, eresting the cliff.
The curved curtain connecting the gatehous Waces of keep, and covering the two landward strengtbened hy an is tolerably perfect. It is tower. This latter, which is placed as small angle of the curtain, towards the keep, coutain a basement aud upper chamber, both vaulted, though of the latter, whicb was at the rampart is rectangular, hat the angles are chanfered oft. It has no internal projection, and outside, against. each of its tbree faces, is applied a Decorated hattress of 2 ft .6 in. breadtt, by 3 ft .6 in. pro jection at the base. Eack is of three stages, jection at the base. Fach is of tbree stages,
and dies into the wall near its summit. Between this tower and the keep is a large buttresseen this tower and the keep is a large buttress, ap.
parently hollow, possibly for the pipe of a gardoparently hullow, possibly for the pipe of a garicrobe. This also is a Decorated addition. Near but of three stazes. but of three stages. It is 4 ft , broad, and
diminishea from 18 in. to 6 in. diminishes from 18 in. to 6 in projection. also dies into the wall near the top.
It is not unlikely from the aspect It is not unlikely from the aspect of the inne
ward that this was a fortress of the tenth cen the otber two, and a cliff on two sides, a ditch on circular, and artificially sontred or less uearly upon which stood the original stronghold motte, outer ditches may be of the same date but from their figure and plan they aro more likely to bave been a later, probably a Norman addition. Their contents are thrown inward so as to form a ramp behind the wall.
It is evident that the whole area of the castle, as it now stands, was inclosed by the Normans, and the walls throughont and nearly all the towers are latish in that style. Here and thero, spread over tbe whole enceinte, are remains of Norman work. The pilaster strips on tbe inner curtain, the arches in the several ditebes, the square tower and gate on the nortb curtain, towards the town are original. In the inee war the base of Mortbam Tower, and the half-round mural tower near the north gate, are probably English. The keop, the fragments of the hall, the south-east tower of the inner ward, and most of the remains of other bnildings ase evidently Decorated. The original walls were mostly of sound rubble, with ashlar dressings. In the Decortad work ashlar was more freely used.
The castle must have undergone alnost rehuilding in the Decorated period. The Norman architect evidently treated the whole inner ward as a shell keep. Later bnilders added part of Mortham Tower, and tho Decorated artist, moro aubitions, raised the round tower as a keep, added,--probably rebuilding,-the hall, and completed Dortham Tower, and strengthoned or restored the curtain in various places
Here, as was much the practice in the Nortb he round-headed arch ausd the flat lintel wer hargely employed in the Decorated period. The general style of the work is much to he admired. Strong, sonnd, massive, very plain, of escellent
execution, it is in admirablo taste, and in mood keeping with a military structure. The keep though not one of the larsest, is one of the fines round towers in Encland. Its proportions are good, its materials of proper size aud rich colour and its rery plainness is indicative of strength.
There is but little Perpendicular work; pro bably it was of a lighter character, and has fallen and been removed.
Whatever may be regarded as the value of tbe material evidence of its carthworks, the notion of Bernard Castle occupying thesite of au carlier stronghold is unsupported by records. The present town is thonglit to have risen on the fall of Marwood, a placo the very site of which is now forgotten; ncither is it a parish, being cburch of wbich is cight miles distent. Ftom Domesday no aid is to be derived, seeing that this valuable record does not include Durham nor is there eny inention of either Marwood or Gainford, still less of the castle, in Hagh Pudsey's Donuesday of Durlam, the Boldon Book, compiled in 1133, for this is coufined to the bishopric, within whicb the Baliol fee was not at that time included.

Guy de Baliol received from William Rufns tbe Barony of Bywell, in Northumherland, and eithor from that king, or bis father, the lordship of Gainford, of which he gave the church to St.
Pu
Bernard, his son and successor, was a distin. guighed adherent of Stephen, but lived into the reign of Henry II., and was one of those who broze up the siege of Alnwick, hy the Scots, in nard Castle. He also seems to bave hnilt the nard Castle. He also seems to bave hailt the church, or rather chapel, of Barnard Castle town, and gave it also to St. Mary's. He was
succeeded by anotber Bernard, father of Hosh father of $y$ anotwer Bernara, father of Hagh College, Oxford, and of St. Jounder of Balio Barnard Castle town, and regent of Scotland He was born in the castle. He married Devor. goil, a co-heir of Alan, Lord of Gallowray, from whom their son, another John, inherited the deadly claim to the throne of Scotland, which he made good, atter a fasbion, in 1292. He lost his English estates, and died at Châtean Gaillara in 1314.
Edward, his son, became King of Scotland, 1332 , but was expelled in 13 11 , and died cloild less in 1363.
on the attainder of John de Baliol, Bishop Bes claimed Barnard Castlo, probably unjustly, had seized upon the belt as re and to bis tenure
other additions in tbe style prevailing at period. Edward I., however, granted it to Beauchamp, Earl of Warwick, who cared lit for episcopal claims, which took the form of tests from several successive bishops.
The castle remained in the Earls of Warw Beauchamps, and Nevilles, for five descents, hero Thomas Beauchanp founded an Augus Priory abont 1381. How it came to bo held a time by the Earls of Westmoreland of other line of the Nevilles does not appear. inally, however, rested in Richard Duke Gloncester, who repaired it, and left cognizance upon it, as has been stated. On death it remained in the Crown until it was s perty It was dismantled in 1630, when the spoil of great ball was carricd to Raby
The bridge across the To
two lofty rebuilt in the last centary. The arches moulded in three sets-off, and beneath each is snpported by five bold ribs. If modern, old type is well followed.
In the adjacent church there are some parts. There is a good ornate south door w aanking columns and capitals, round-beade With a chevron moulding on the arch. Th
opening is wider than usual. The style is opening is wider than usual. The style is la Norman. The base of the tower is sot round wit several short Early English buttresses. 12 ft . West of the tower, in the churchyard, a aid several large blne gravestones of a quali not now used. They seern to bave carried brasse from the interior of this chncel becn remove chapel. Ender of thas chnireb or the cast -her one, on Which remains Baron of the Exchequer, who died Inly 31 S29, and his wife, who died Noyember 18 th 1852.

A WOODEN HOUSE FOR NORWAY.
A bour the close of tbe year, -Christmas.day, the readers of the Times had the advantage of long acconnt of a certain wooden honse erecte in Devonshire, which had been imported from Norway; and a. great deal was said in reco
In our present number we give, for the sal oomparison, illustrations of a bouso designed a fer years ago, by an English architect ful. gentleman, the owner of timber farms, and intended to be erected for his own occupation on one of his estatcs near Chris tiania. The drawings wero made onder his sonal superintendence as to details; and the arrangements of plan are therefore similar t what would be necessary ordinarily in a simila sutuation. But the architect is chicfly respon siblo for the double beight of veraudah and the top room, or belvedero, and other architectital reatures. The construction was to be of local materials, - that is, the tiruber of the estate and the chimneys of brick; but as it was to be carried out by local workmen entirely, the cost is not known.
It must hardly be assamed, liowever, as mas assumed by the writer in the Times, that a wooden house is so great a novelty in England as Tonk it necessary for geutlemen to go to thavay to get tbem designed or huitt, any more mau to wis necessary for the Norwegian of a large timber angish architoct. Wo knom English architect in Cornwall,* at a cost muct less than the same would have been in stone. and onc, larger still, is being built in Gloncestershire by another architect, Mr. Christian. It is but the partial revival of a good old English style which had died out from various canses, ftor having achieved some fine resnlts, many partiples yet remaining in the midland counte particularly; but elsewhere it whas and is a
common method of house-building, whether for mere shelter or for ornamental purposes.
The architect of this Norwegian design
Forster Hatect of this Norwegian design is M Forster Hayward, F.S.A.

NATIONAL PROVINCLAL BANK OF ENGLAND: ST. JAMES'S BRANCH, PICCADILLY. Mr. Joen Gibson, Architect.

VATIONAL PROVINCIAL BANK OF ENGLAND, ST. JAMES'S BRANCH, No. 212, PICCADILLY. The present premises of this branch in
Waterloo.place having becone Waterlo-place having becomo too small for tbe
increasing business, the directors aecided to erect a new building, noticod witb commendation at page 378, ante, and of which we now give
an illustration. It has been recently finished an illnstration. It has been recently finished
and was opened for the transaction of business and was opened for the transaction of business
on the 16 tb instant. It is situated on the on the l6tb instant. It is situated on the
zonthern side of Piccadilly, a few doors from Regent.circas
Tbe front, which is of Portland stonc, has a width of 31 ft. towards Piccadilly, and is about
59 ft . high. The ground and basement stories rre devoted to the purposes of the hank. Tho anking-room is 60 ft . long, 25 ft . Wide, and ft . bigh, the back portion heing lighted by a
uare sky light, having an inner liglit glazed vitb specially.designed matted sheet. glass. The oublic space is paved witb Minton's tiles. The counter, desks, screens, and so forth of Spanjeh and pioked Honduras mahogany; and he glass in the screens, as also in the front madows, swing-door, and fanligbts, is British oom and desk are screened. The manager's be banking-room. The entrance. lobby is of one, the doors being of Konduras mahogany, he swing spanish, a night-door closiog ove annication with the bank from the ont obby. The principal strong-room is on the groand. 9 secured witb an iron door and and below, an olt communicating witb the resident's night. lbe inside of tho strong-room is fitted with an oner iron-room, deed.cupboards, de., and tho ardened wroughtironghout witb half - inch ardened wrought-iron plating, the walls having Arwork built longitudinally into their thickbich are the book-rooms (one 25 ft . long hy 1 ft. wide), which will also be used for the sception of customers'
thate, \&c. These are
twith iren doors, gates, and shelving, which ork was contracted for by Messrs. Chabh. The clerse lavatory and cloak-rooms are in The hasement arcbed The ground-story are brick and eating-apparatus and coils, executed by Mr mipson, and tbe artificial lighting is hy standards a the counter and desks, the two ornamental arners in tho ceiling being intended mevely to eate a current for tho purpose of vontilation, portion of tbe upper part of the building is to The building has heen carried rest frome. signs of Mr. John Gilson, of Westminster, by essrs. George Myers \& Sous, wbo have also secuted the banking-room fithings. The total ho works have exceeded one carving was executed by Mr. Day
r. James Dowey was clerk of the works

## DRAINS, CHINNEYS, AND WATER. SUPPLY.*

Ir is not my intention to enter into a pronged dissertation upon any of tho subjects to hich I have now tho pleasure to refer, believing at two object of our meeting will ho better ing iofore his colleagncs the result of bis perience, wbether successful or otherwise, in y department of our art with which be may ve had opportunity to make himself mar. ularly conversant. Our failures may even ve to point out to those who come after us the well as those laws of Xaturive becn wrecked, ure fully investigated by the patient searcher er her divino trutbs. As our health, our ppiness, and our very vitality depend mainly on the air we breathe, it is all-jmportant tbat
eur dwellings, while we scek to be protected our dwellings, while we scek to be protected th warmoth and shelter, have a plentiful supply air unpolluted by the exhalations arising ay tho mispensable outlets which discharge ay the foul water from the site of our abodes. The question of house-drains claims our first
ention, and it is a singular fact that, simple tho subject of diains may appear to the
Paper read by Mr. Charles Geoghegan, at a meeting
the Arbite 3. Mr. R. \&, BTan in the chair.
goneral public, less attention bas been bestowed other. It is true the designer of a noble edifice may pain no ertre dore may gain no extra laurels, from tbe fact of the abundantly sufficicnt foee from smcll, and abundantly sufficicnt to carry off all refuse matter from the property; that the chimneys draw, and toat the service of water is abnodant. But let it only ho whispered that tho nasal organs are offerded as you enter the vestibule that smoke is nol in the ascendant, or tha water finds its level, and the unbappy designer may bind his brow with willow, and pursue his professional career under the shade of tbe ilighting upas. The effects of had drainage are so various and deceptive, and the causes so numerous and subtle, tbat I will oonfine myself to such points as may appocar to he sufficient to represent in tbo main tho leading principlos on which drains should be constructed, and the exects most commonly to be met with in their by cution, leaving the rcsults to be dealt with by al who bare
domestic cirele

Presuming that the site of the intended build. ing has bcen sufficiently provided witb land drains, to carry off all water from the founda. noture a proper outlet, - no roatter of what clay, loam, or rock. Any drain jutended to carry of fonl water from scullery, closet, or sink, should be formed of impervious and srootb materials, and circular in form when tiles, glazed, carefully stanched in the fire-ciay nd laid to can shets, 10 ft ., altbongh a greater of at least 1 in . in 10 rl , altbongh a greater inclination should be preferre. The junction with the main outlet or sewer should ho formed with a stench-trap at oxious gases into the dwelling ; and as a trap of this description, no matter of what dimeu. ronient cleaning cover bill up at times, a convenient cleaning cover should always be provided for remoring obstructions without disturhing the drains at any of the joints. For this pur. pose the dip stone trap or syphon may he used; but 1 havo roand more satisfaction in adopting trap formed as a sketcb whicb I bare fre. quently used, being less likely to get out utlec being corered by in is cozatiction, tho The seullery trough should be outside the honse, and any connexion therowith should also be provided with a water.trap, 一the circular cast metal Ordnance trap, with strong hinged corer, having many advantages over the ordinary bell trup, boing easdy cleaned, and preventing saud or otbor matters from passing into tho drain, and the cover being capable of lifting without remoral.
It is desirable, in all cases, to provide that the
draing sbould not communicate with scul. lery drains, or any others, in order that the flow leakage, deposits of soap, greasc, or vegetable refuse, the great object being to remove the soil as quickly and effeotually as possihle from the closet. All bends in soil-pipes are to be avoided, practicable. practicable. A bell crank driven into tbe wall has of then been found to pierce the pipe, and cause the house to smell. In no case should a it can be aroided to pass under a building where it can be avoided, experience having shown the The most trifing leakage of bad water from tho Toints wost trill ing leakage of bad water from tbo it surchargod, to exhale its noxions fumes into the the superstructure, or to find its way into the foundations, which are usually laid dry, proceeding along until it drops into the spring well, which not unfrequently is placed under one of tbe garder walle, for the convenieuce of smpporting the pump. If the building he erected on rock, the fissures hecome filled with the foul matter; and impregnate the well; and to this cause alone many cases of fatal consequences have been justly attributed during the prevalence of cholera. Many of us have been the witnesses of tho sad resnits of such apparently triting criors. And the medical profession bave lately deeried the system which leaves so pital a subject in the hands of unskilled or careless operatives. I would, thereforc, for the honour of our noble art, ask my bearers this evening to consider nothing beneatb their noticc, witb which it has heen shown that their professional reputation may bo called in question, before valuable lives are sometimes improperd to the neglect of what are sometimes improperly called litulc things.

One of the most common errors in ordinary Lonsebailan to the drains position of the well with relation to the drains and foundations. Let us suppose too conrse of footings laid dry without wortar, the well placed for convenience under the centre of a garden wall dividing two bouses, and the drains laid above the lerel of first course of footings, the joints being seldom vater.tight, and we have then being seldom duit in the foundations, depositing the lenkage of drains into the well. Many of us have be required to report apen defoctive lrane where this system had been pare and orme cases, I recret to sour pot dotil scrious results had called for a professional opinion on the property.
The lead suction-pipe, from the pump to the well, bas often beon found the means of escape of servage from the drains into the well, the water running in the bed of the pipe, which it is difficult to stanch round with clay so as to pre. vent escape
barce into the drater pipes are allowed to dis. cbarge iuto the drains, they act as foul-air shafts which, if confined, gastes generated therein which, if confined, often force the water up. ward out of the metal trap, and so give admission into the dwellings. In all cases joints should be stanched; upright pipes
should be carried up bigh above windows and roof, as any aperture in the windows and behind parapets, will be the means of allor or the bad air to enter the slecping apartments. A vory novel and ingenious means of ventilating a foul drain bas been resorted to by a non-pro fessional friend witb success. Ho simplr made a communication from the drain to the kitchen chimuey, by a small pipe inserted under the ceiling of the kitchen, and tho drancht of the driving off from the drain the foal air, and being carried away with the smoko, acted as a very perfect disinfector.
It is a singular fact that the sense of smell cannot always be depended upon where the presence of a foul drain is suspected. One member of a family may become the vietirn of its fearful elfocts, while others aro utteriy un affected by it ; and of this many instances must ave been met with in the ordinary practice of architects and medical men. It is not for ns to enter into the subtic causes of tho extrome finement of some naturcs as compared to others. Let the peet sing:-

## so fne? <br> A kick that enearoe cotld move a horse, may kill a sound Divine."

The exception proves the rule ; and we should cgard such sensitive mortals as warning beacons dangers.
Houses wbich for years had been perfectly free from the effect of drains have been suddenly cund to be completely uninhabitable from causes bittle suspected hy the inmates. A rice hole made by a rat throngb the old brick drain has been the means of forming a communioation into the foul deposit of many years lying beneath tbe house, while the inmates were ignorant of the very existence of such a disagreeablo neighbour; and even in the publio footpaths of certain fushionable localities the abominable smell coming up throngh rat holes leading into the common sewers have been for years a positive nuisance to the inbabitants wbile no proper means havo been taken to remedy so claring a defcet
No foul drain should be allowed to cross a whero the rain watt water to a tank, as in cases here the raia.wat wad become foul it has beeu of the foul drain, aud thus delivered into the tank.
The lndicrous array of capricions forms of himoney-pots in all conntries exhibit a lament abe want of attention to all the fundaniental the $V$ oich reguate the draught of smoke. From he venetian trumpet,--an inverted bell-shape,-
 openings, of the north of Italy and Switzerland the London cowls and elbows, the French rig.zag tinbes, the thish mitred slate pots, we have ai assemhly of interesting objects, anl for the same purpose, but widely differing in their developfrom lively to severe:" half the boy days revum; therefore atus homo qui nescit causas origin of the failure should be made in all the before applying a remedy. It is mell here to
observe that the defects of chimneys arise as frequently from natural as from material or conatructive impediments, and I shall endeavour to place beforo you somo of the most ordinary errors to be met with in domestic cbimaneys, practice, and such suggestions as to a remedy as have been found most valuablo in execution.
A chimney may be expected to smoke if an nbundant supply of freeh air be not provided for the fireplace, a down-draught being created by down the flue, to the serious obstruction of the down the tue, to the serious obstruction of the smoke while making its way in the opposite
direction. A strong wind crossing the top of a flue whicre the draught is feeble will prevent a fue whore the draught is feeble will prevent
the exit of smoke, and induce puffing at times. the exit of smoke, and induce puffing at times. Adjacent high buildings or hills divert the course
of the wind corrents, and cause them to strike of the wind corrents, and cause them to strike
down upon the top of the chimney, and render down upon tischarge intermittent. The draught is the discharge intermittent sluggish by soot lodgiug in the flues, rough or damp surfaces, slates lying across birds' nests, or other trifing casualties
The altitude almost invariably determines the power of the draught. The atmosphere becoming more rarefied as we ascend from the earth s
surface, the pressure therefore is diminished in surface, the pressure therefore is diminished in proportion as tbe top of the chimney becomes
elevated. A bigh chimney in a building will cause a lower shalt to smoke, the air being drawn down the latter to supply the former; and if this fact be borne in mind, we need not he surprised to bear of the usual complaints of return buildings smoking, their flues being generally lower than those of the main building: the action in this instance reserables that of tho syphon, if we regard the latter as inverted in order to establish the theory
It somotimes happens that the smoke from a back cbimney will ascend, and be deliverod freely from the top, and imnediately form a curve, and descend down the front fue of the accounted for simply by a little knowledge of the scieuce of house ventilation. Any opening in the chimney hetween the hottom and the top the smoke. Many chimueys owe their failures to careless workmanship, projecting stones in the flue ancles, or being wide in one part and the flue angles, or being whde in one part and places should be specially attended to. Kitchen places should climneys are frequently injured by inattention to this important provision. Damp and foggy weather will affect a flue, the atmosphere being moro charged with moisturo at such times, and rapours will therefore ascend with difficulty. Drafts across a room from doors to windows injure the effectivo power of the fluc, and too
much fuel will cause tho chimney to be overmuch fuel will cause tho chimney to be over
loaded, and the suroke canuot get away quick enongh. External chimneys, or those in outside walls, waste a great deal of caloric, and do not succecd as well as tbose within a building. When fresh air is let in from the outside under the fireplace, a powerful draught is experienced; but the consumption of fuel hecomcs too rapid. Flues formed round on section are better than square or ohloug, the angles forming deposits for soot, which reduces the smoke-area.
Horizontal flues deposit soot very freely, the particles being found attached to the upper surface, which fall upon the hottom in fakes as they become heavier. The draught heing slug. gish, such flnos are not to he depended upon, and when a descending flue must be resorted to, rarcfier to expel the cold air should be provided and for this purpose a jet of gas has been found best for the purpose and least troublesome Metallic surfaces attract the particles of soot, und walls or divisions across flues have the same uffect in a lcsser degrce, and to this may be uffect in a lcsser degrce, and to this may be constructed to contain the deposits of chimneys rom lead and silver mines hy wbich a vas from lead and silver mines is annually saved Confint the mouth of the fue will improve the Conners the will prove. A fire-place draught, as the blower will prove. A ire-place the same wial as the fle plining the back of current apwards, and by inclining the back of the grate into the room instead of forming the slope in the opposite direction, with a very narrow aperture for smoke, the heating power of the fire is sreatly increased. Each grate should have a separate flue, and all hohs or other wide grates are objectionable, as the air escapes up the chimney at each side without catching the
smoke in the carrent. smoke in the current.
I need not here ohserve that the open fire-
place is perhaps the most luxurious and least
economical mode of warming an apartment, greater anount of actual heat may he obtained by one-fourtb the consumption of coals if burnt in a woll-designed close stove, and when the external sides of metal stoves are lined with glazed ornamental tiles (as is custonary in Germany) the atmosphere is not affected by contact with the iron.
A fire of wood or turf will require a grate of larger dimensions than one, of coal, and the chimney should he properly proportioned thercto. The tops of chimneys should be curved nutwards to assist the exit of the smoke, a flat top heing found injurious when tho wind is blowing across the A basement or ground-floor may he made bouso, if the flues are made to pass backward and forward under the paring in a similar way to those of the flues hearing a Turkish bath. The lower strata of air beincr heated will ascend, and each succeeding body of cold air, in like manner, nntil the entire cubical contents of the building becomes generally warmed. If this system were commonly resortcd to we should find a corre sponding reduction in the amount of the coal expenditure, which has lately been a matter ou rather serious consideration. Fiactory caimsey will require special provision in proportion
the power of the machinery, the consumption of the power of the madinery, he consumption of 6 lb . per horse power.
It has of late years been the custom to form these flues wider at the top internally than at bottom, and with very good results. The reason for so doing has not been fully investigated; but it is evident that the friction of the smoke becomes diminished in ascending against the sides of the chimney. If we consider that in a well constructed marine engine the draught is powerful enough to maintain perfect combustion and expel the sraoke while a vessel may be going against a head wind at the rate of twenty miles an hour, it will at once he erident to onr common sonse that a moky chimney must mean a clumsy and ill.contrived means of wasting fuel, and rendering our hahitations any thing but hahitable. The science of combustion is understood, hat the dotails of working out the principles aro usually left to the care of unthinking or incompetent bands.
Domestic TFater Supply..-The cistern whick purposes should never he allowed to sapply the pan of a w. C. clirect or to overtlow into a soi pipe, even if a trap be provided at the outlet, the foul air being known to escape up the pipe as tho water descends, and lying on the top of tho water, will bccome absorhed by its poisoning the water. Of this a familiar instance occurs where tohncoo-smoke bas been found to he conconsed on the surface of water, and singini irds poisoned hy and cistern, if lirect srop the main, may be where the con tant high pressure is laid on. ta high pressure is haid on
n cases whe cisteros bave been allowed supply closets, the hest means of overllow is to let the pipe discharge out on the roor, or int from the valve to the nan, a small air-pipe from the former shonld be carried outside the hous and a large floating ball cbained to the valve may then he mado the means of overfow, when the excess of water lifts the ball and allows the surcharge to escape without allowing the bad air to retnrn from the pan or soil-pipo.
For cold water, a slatc, stone, or cement cistem is preferabie to one of lead, copper, or iron. The water wben very soft decomposes the iron; hard, it often destroys tbe lead, and the copper may he affected in either case, and requires to be kept particularly clean. It has becn found that when soft water is admitted into a cistern which formeriy was used for hard water, the calcareous deposit lcft on the sides and hottom hy the former is dis solved by the latter, and this fact will account for tho old pipes and boilers becoming foul where a cbange is made in the supply from bard to soft.

All the cocks for high-pressure service should he made self-closing to prevent waste, and it seldom happens that the ball is made large enough to have floating power to shut off in cisterns, the result heing that a constant rnnming may he noticed in most cisterns causing enormous nary nade in somo arter If water companies tookmeans to prevent snch reckless extravagance, the poor could have the benefit of having a plentiful supply at lower rates. A ligh-pressure
safety-cock sbould he supplied outside of each house, worked by a chain and lever, in case of
accidents from leakage or bursting. The supplypipe for ordinary dwellings must not exceed क् in diameter where the service is constant; and all external pipes shonld be protected from frost by felt, sawdust, bemp, or other casing
Kitchen boilers should have their circulating cistorns made of galvanised iron, or have lining of tin, copper, or lead-the hot water acting upon the cast iron it becomes charged with rust, and unfit for drinking or for haths. A safetyvalve should in all cases be provided for the kitchen boiler where closed in, and for this purpose I would suggest a small piece of sheet-lead bolted with plate and washer on the top of the cistern, in order that any pressure from within should cause the lead to bulge, and open before extreme expansion hy steanm conld occur. The supply-cocks from the boiler should be made to work two ways, so that if cut off from one service, the other should be left open, as it frequently happens tbat hathe and conservatories are heated from the one house-hoiler. Tho supply for the house shonld he taken from a pine ahove the hoiler, so that it could not be leff empty at any time, And the cold-water service should never dip in the top of the boilor so as to leave any air space beve the water, this being the commen cause of noises and reports.

All water for drinking purposes should he filtered unless when taken from a perfect spring, river water containing organic matter largely, the well being seldom free from contamination, and the roof water tainted by the soot iu the gutters. For this pnrpose a very simple and in cenious apparatus bas been sent here for your inspection, which I consider will meet with general approval from the public. I am also glad to have to notice a very simple and effective v.c. apparatns, with supply-cistern attached which can be set up at a very moderate cost, and which has the advantage of being perfectly ree from all connexions with medal which materials shonld vever be allowed to come in contact with water or soil from a house closel In stables also, all metal troughs aud drains sould he avoided, the waste water gencrating ammonia when allowed to lie in metal, from whick canse horses bavo been known to become blind.
The invention now exhibited for allowing only certain quantity of water to ho let of every ime a closct is used, appears to answer its purpose well, and has heen designed to meet we ention of waste, the modes of adopting the apparatus to existing cistcrns being extremely ingonions and simple.
I have also here o fall-size working model of the inyention whicl I have patented for proecting the old lead pipes from bristiub hy after being three years in operation, has proved o be of extreme palue for its purpose, and eerfectly self.acting, and is known as "Georhegan's Patent Regriator.'
This apparatus admits the high-pressure water upply into the highest story of any building, filling the cistern or tank, and instantly causiog hy its own action the main inlet situate inside the house to be perfectly closed, the cock operng as the water is used tbrough any of the losets or cocks throughout, thus saving the alteration of all existing low-pressure pipes, cocks, \&c., in old huildings, and preventing the Waste of water hy moderating and regausted
the pressure. The supply-pipo being eshaus the pressure. The supply-pipo veing es austal cis-
by means of a self-acting valve when the by means of a self-acting valve when the cis.
tern has heen filled, no damage can occur to tern has heen filled, no
The water at high pressure heing admitted througb the valvo of the apparatus, passes up to the highest cistern to he supplied, from which all other branch pipes may he taken at ordinary pressure. An air-hoz, 11 in. by 11 in., is placed in this cistern, inverted and firmly secured by straps and screws to the top of the cistern, the warming pipe being united to the air-box, is carried down and attached to the lower cham. ber of the regalator, which is divided from the upper by a diapliram, a tuhe being fixed in the centre for the guidance of tbe spindle to which the hall is secared, and which also allows the water to pass from lower to upper chamber under floating hall. As the cistern bccomes filled, the air confined in the inverted box being condensed by tbe pressnre of the head of water rising 4 in. or 5 in. above the open bottom, is
forced down the warming-pipe into the lower chamber of the apparatus, depressing the water in
samo, and cansing it to ascend in upher chamber, in which the ball floats conuected with the high-pressure valvo. As this cock eloses, it raises the balance tube charged with mercury above the Liorizontal position, allowing the mer. oury to fall over to the other end of tho tubo, the monentura of which acting apon the lever of tho cxhanst, canses it to open after the main inlet is closed, and thus cmpties tho rising main from the regulator up to the cistern.
As water is drawn off frorn the cistern, the condonsed air beoomes liberated, the hall again
loscends, the exbaust cock closes by weight of lescends, the exhaust cock closes by weight of ever, and the inlet opens as before.

## A GUNPOWDER PILE.DRTVER.

AT a meeting of the American Society of aper "On Shaw's Gumpowder Pile driver,"' by snmuel TR.
This pile-fltiver was set at wort in October 872, on a line of slicet piles for a reservoir-dam n tho valley of Parsonarso Creok, Long 1sland. Cho material to he penotrated was sand and fine ravel, comented together in ploces, so as to bo ard and difficult to move with a piok, and like hard pan." Clay was found below the water. 5 ft . helow the surface. The lower stratum ras tough and tenacions, and the whole material vas under water. The machine in form resembles a ordinary pile-driver : a cast-irou hlock, called "g口n," resting on the head of tho pile, is prought-iron biston attached to another cost ron block, called the "ram, which is lifted by ron block, called the rem, which is lifted by eaves the gun, a cartridge is thiown in, which, sploded by tho heat freed by the piston in its leseent, throws the ram spward agrain, and orces the pile downward. The area of the pishich also is adjusted to the work to be done. Sodth powder cartridges, in cylinders of $1 \frac{1}{6} \mathrm{oz}$. to $\frac{1}{2}$ oz., coated with black lend and paraffine, are owdor dry, lubrioate the gun, preserve the the uisito tightness, prevent escape of the re. ause the ontire force to be excrted on the base f tho piston. Tho piston is made a little maller than the bore of the gin, and has on \& lower end a steel ring which fits the bore t first soveral explosions were necossary to luricate the gun, which leaked gas so that the an would not go to the requisite height to move te pile. After a few shots tbo piston moved oreiag tho pile down and itself upward.
When the resistance is slight, this machine tay be economical, but when, as in this case, $1 g{ }^{\frac{1}{2}}$ conts. cach, to force a pile down 5 ft . or 16 ft ., it cannot be called so. The is from the explosious out passages in the ssened the power of the maoline. The gan ecame hot from the rapid discharges, and the ore eularged, whereby more ghs escaped. Seven piles were driven with it, -cach conting t place, -when the machine refused to work. On ramination, the steel ring was found forrowed $y$ the powder, and the piston (diameter, 5 in. yent by striking the bottom of the gin as to o useless. The nir-cushion relied upon to pre. ent this was lost by the furrowing of the ring. The inventor, on being consulted, decided that 10 excessive consmmption of plowder was due the piston being to
eighing over $1,700 \mathrm{lb}$.
The bore of tho gan was then enlarged to oeive a piston of 7 in . in diameter, rad ten les more were driven, when the nachine was ynirs laid aside.
The resnlt of this trial was similar to the first, scept that the piston was not bont. The gun ached its place. Altogether, sevent the ram ero drivon to a depth of from 14 ft . to 19 ft . quiring from 200 to 300 blows of $1 \frac{1}{2} \mathrm{oz}$. car. -idres. An ordinary pile.driver was then em. lling 8 ft to 10 ft . 1 l weighing $1,800 \mathrm{lh}$, and ere pitt down, 10 ft . 1 fr this way eleven piles ile no more than 100 blows from the powdermoline. These 100 blows from the powder- best would put
in mole 10 10 pilo down but 10 ft .

The piling was spruce, from 10 in . by 10 in . to 10 in . by 14 in ., 20 ft . long, with 2 in. square tongue nind groorc.
The piles wrere bevelled at the point on three sides, leaving the grooved side untouched. The groove was ariven on the tongue of the prolight band. Seven piles were driven without shocing; the eighth split, and showed the neces. sity of protection at the point. A cast-iron cup. and weighing about 40 lb ., with a groove in $1 t$ was found to stand the worl
The tendoney of the tongue of the pile to Frork up was obviated by twisting a chain tightly about the pile and tongue; a lever, with rope attached, was uscd for this purpose, the forco hoing applied as tho blow was delivered. Seventy-fire piles Tvere driven in this way to a depth has been $\mathrm{f}_{2} \mathrm{ft}$. By experience, 6 in, more maximum and this can only be done with the best of sound, dry spruce.

THE DRAINAGE OF WINDSOR. Sir,-In an article in your impression of last the public the Windsor Castle Drainage Works, of the alterations to the weire the consequence are now sufficiontly under control, and great satisfuction is expressed at the success of the arrangements made for regalating the height of the water. As an inhabitant of the district a much higher level once flooded last season to many jears (sce a sketch at the time published in tho Illustrated Iondon Vews, "Windsor" and the Floods "), may I bo allowed to suggest to tulate themselves upon the success of their wolks until they have at least so far regulated the height of the rives as to keep the water out of properos, and our roads and lines open for their proper traflio, and not for punts and beats ?

Oxpord Roso.

PROPOSED MEMORIAL OF THE LATE SIR WILLIAM TITE.

This project is making progress. A committoe of the Chelsea Vestry has been appointed to informed that ars arraugements, and wo are suggestions and promises of monetary aid from the prblic and private frienda of the deceased. Sir Charles Dilke, the member for the borough of Chelsea, who, as well as his father, was a personal friend of Sir William, has taken the subject up warmly, and has proraised a contribu. tion of 1002 . Mr. C. Laheo, the vestry clerk of Chelsea, acts as honorary secretary, and will be glad to receive communjeations addressed to him at the Vestry-hall, King's-road, S.W. We will gladly do anything we can to advarce the object in view. $\qquad$
COAL AND IRON.
Mr. J. Lotuian Bele, prosident of the Iron and Stoel Institute, in the course of Supply Committee, said the sole cause was the extraordinary domand the sole cause was labeurers obtained sisted upon working a shorter nes, and, they inwhioh then working a shorter number of hours, getting higher wares. By consequence of getting higher wages. By opening out now more industriously, the those shlready existing more industriously, the conloonners were able in 1850 pace with the demnad for a time, but and some time aftend ironleld was discovered nded some time afterwards it was fonnd to ex tend close to Middlesbrough, and a railmay was The production of iron it with South Durham. The production of iron went on increasing at a $1850,111,000$ tons of pitself felt. Antorior to 1850, 111,000 tons of pig-iron were made in the arth of England, and the total consumption of coal for iron purposes was under half a million tons a jear. In 1858 the amonnt of pig-iron manniactured was 512,000 tons; in 1863 838,$100 ; 1867,1,156,953 ; 1870,1,695,377$; and $1872,1,968,972$. The number of pudaling fur. naces in 1850 was 250 . It increased in 1861 to i46; 1863, 662; 1866, 1,168; 1868, 1,215 ; and as low as 1s. 5 d . per tom, and of coke $7 \mathrm{~s}, 4 \mathrm{~d}$. ; in

1S65, small coal fetched 1s. I. $1 \frac{1}{2} \mathrm{~d}$., and coke 8s. S. 1 d. $p$ to the end of 1871 coke only munity 10s. Gr, a ton. No portion of the comchange which then took place in the enormons coal than the coal-ownors themselves. This is shown by the fact that some of them arreed to sell coke for a period of which three yenrg hor yet to rnn, at 11s, on that befure the and of $188^{\circ}$. ig at 203 a 1 on In 1872 . a tom, and 155. of Durham vos now demauds of tho not anfficient to reet the that large quantities of and it is actually a fact Neweastle. The whole ontput of imported into falf as laree as thate of tput of France is not Durham. The Frencl of Northumberland and in number, and difficule to worl small, fer Europethe and difficule to work. All over here, but they raising coal as cheaply as we are quantities they are raising it in rauch smaller fear from foren com the tre have anything to cear from foreign competition either in reference to coal or iron.
At a recent meeting, is was stated hy Mr. Landale, manaçing partner of the Lochgelly Iron and Coai Works, Fifeshire, that the men worked from four to four and a balf days a Weok. For some yenrs, as a rule, they had always had one idlo day a fontnight-the Monday after pay.day. Latterly they lad taken anothen day, in order to prevent the coal owners from accumulating stook. A considerahle number of tho men, about two-serenths, declined to work more twan three days a weok. The restriction upontio output of conl mas due party to the action of the men themselfcs, and partly to the miners' associations.

## ARCHITECTURAL ASSOCIATION

At the meeting lield on Friday evening, June 13th, attention was called to the fact, that all the prizes awarded this year at the Institute had heen won by members of the Association,the Soane Medalion and 1rstitute Medal, and medals of merit for essay, drawings, and designs. The Pugin studentship and medals of merit in the competition for it, and oertificates of honourable mention, are alse all held by members of the Association, who have furmshed all the success ful cancidates in this rear's architectoral exnmination (proficiency - hoth artistic and scientific sections) : seemingly a proof that the Association contains a good share of the goung men of the profession who are likely to be eren better known bereafter. Visits hare recentls boen made to manufacturing premises, to see the processes of girder buidding, and other encineer ing matters at Messre. Moreland \& Sons worle in Old-street, and to see crlas blowing ared glass painting, and class mosnic worling at Nessrs. Powell's, Tomple sert This, a Both these large establishments Whitefriars, worls when the visits were made, by a goodly number of members. A paper was read by Mr . F. Chambers, at the meeting (13th inst.), to which wo shall return.

## LIGHT AND AIR.

## DTCKINSON $v$, HARBOTLLE

Iv this case, hefore Vioc-Clancellor Malins, the plaintill and defendant (according to the Law Journat were owners of adjoining houses in a streot in Newcastle-ou-Tync, the plaintifif carrying on the husincss of a tobacconist. At the top or his house Inas a garret, having at one end a window looking eastward over the defendant's roof, and at the other a window looking westrard. This room had formerly been used by the plaintif for drying tobecco, a throurh araught being created oy opening the two windows. Tha derendant recently commenced re-building bis house, and proceeded to erect a gable roof, the top of which would he consider. ibly above the plaintiff's east window; but the part faong the window was intended to be sloped downwards, so as to join the plaintiff's wall a little below the window. It was admitted by the defendant that the roof, when so raisen, would interfere, though not materially, with the plaintiff's east window, and tho defendent offered to place two dormer wivdows in the plaintiff's roof at his (the defendandrs) expense The plaintiff declined the offer, and filed this Bill, to restrain the defendant from proceeding vith his building in soch a manner as to interfere with the light and air as theretofore enjoyed
by the plaintiff tbrougb his east window. The cause now catme on upon a motion for au injunction.
Mr. Glasse and Mr. Medd for the plaintifir ; Mr. Cotton and Mr. A. G. Marten for the defendant.
Vice-Chancellor Malins said it whs well settled in all these cases that the Court wonld not interfero by injnnction, unless there was a materia diminution of light and air. Here the plaintiff would have a sufficient quantity of light for any parpose for which the room was likely to be nsod, and he could create just as strong a dranght of air as formerly. It was important that the owners of bouses in towns should have a reasonable power of improving their property, and a man bad no right to prevent bis neighbour exercising such a power. Where the Court was satisfed that the interference with the plaintiff's light and air was tritiog, and could be compon. sated for by damages, it wonld not prevent the improvement of property by granting an injunction. In the present case, there was no snch diminution as would justify an injunction and therefore the motion ruust be rofused.

THE CHANCES OF ANOTHER STRIKE.
Sir, -On paces 125 and 127 of the Nerbatin report of onr interview with the cmployers las July will be found the Etatement to which I alluded in my letter. In answer to one of the depntation, Mr. Lucas says:-" Yes, you shall, if the trade will admit of it. You will bave any price you tike.
Other paragraphs aro equally clear, and still stronger was the promise implied througb ont the whole of the discussion on that point.
h, Broadhurst, Stonemason,
*** The masters are eqnally positive that n sucb promise was given.

In reply to an application on the part Associntion that their Maste Bulders Association, that their delegates might he permitted an interview, in the hope of satis factorily adjusting the dispute, Mr. Matkin, the secretary of the Carpenters ${ }^{3}$ Association, has re ceived a reply from the Masters' Association, stating "that the mastcrs are determined to adhere to their refasal to comply with themen's derands for the extra halfpenny per bour, and that, therefore, any meeting between them wonld be useless.

## SETER VENTILATION.

Sir,-As much attention is now being given o sanitary scionce, I was pleased to see in your last issne a proposition, by the borongh ongineer of Southampton, to disonss the merits of sewer ventilation as proposed by the borongh ongineer of Liverpool, therefore I shonld like to make a fow remarks upon the snhject. House ventila. tion in districts where bonses aro of uniform height is certainly recommendahle; hat whero tbis system of bouce-hnilding is deviated from, I consider the ventilation of honse-drainage, as proposed in Liverpool, bighly objectionahle, from the nuisance arising by the sewer gas escaping from tho ventilating-shaft of a lower house entering into a dormitory or other window (which are often fonnd) in the gahle.end of an adjoining and higher bouse; bat where this evil can he avoided (which could he done hy carrying the ventilating.pipe along the roof and no the chimney-stack), ventilation of honse-drains ought to be indispensahlo; and I am of opinion bat, instead of having a ventilator to every soil. pipe, as proposed, and thus cntailing great ex pense, one pipo wonld be sufficient, provided its ore be at least equal to half that of the one it ventilates, with the additional proviso that it bo inserted at the end of the drain, or at the end of the ramification of the drain. From experi. ence of, and attention given to, snch matters, I Dever found the indraft of a sewer, by means of etrect-ventilators, so rreat as the outdraught Referring to the ohjectionsstated by Mr Lamo that "tho cases from the sewers will take the hortest roate, and rosh into the houses the pan or ralve-closets anto tbe houses when passing np the tu-in, ontlets, as proposed. I fail passing np the fain. ontlets, as proposed. I fail entirely to concur with the reason of such argu. ment, for it may fairly be assumed that no having a syphon placod immediately beneat tirst having a syphon placod immediately beneath it, gas into the bouse, and find its exit by the ren-
tilator applied for the purpose. Tho objection raised by Mr. Lemon wonld entirely be avoided by a system of trapping ; and if tbe diaphragm of every trap commanicating with a bonse.drai had a dip of at least 2 in. in water, it would b sufficient to prevent an escape of sewer.gas into the house, espeoially as the prossure would bo greatly diminisishod by the ventilators. For my own part, I tbink it advisahle to prevent the gas from the sewers having access to the houseIrains, allowing the sewers to bave ventilating sbafts to the street-surface at distances of 100 yards apart, and cutting off the connexion, as ar as the gas is concerved, between the sewer and house-draing, which could be done by insert ing a syphon in the latter with inlet pipo attacbed. At a convenient distance from the house-frontage, by adopting this method, both the houses would be disconneoted in ventilation is well as free from the inhalation of their neighhours' gases.

SEWER VENTILATION AT LIVERPOOL
At an adjourned special meeting of the local healtb committee for tho purpose of further considering the report of the horoagh and water engineer upon the condition and ventilation of the sewors in Liverpool, Dr. Trencb, the medical officer of health, adrocated the archimedean screw principle as the best for venti ating sewers.

## Mr. Forwood moved:-

Thato the system of drainare in anestion having heen put ioto good condition, gratings be fixed on the mau-
poles in the streeta, or, in the absence of mantioles , Coles in the streets, or, in the abrence of manholes, that
ventiativg-shafts in the streets be construnted ances not greater than streets be construated at dis taken where practicable, of any tall slafts as up-enst speoial difficulties in connexion witb the condition of the ewer, mephitio air is expected to accumulate niduly Archimedean serew ventlating shatts of the largest size,
and similar shafts without the serew, be used if cahle.'
This was seconded and carricd. It was also agreed:-
"That the manufecturers bo required to abate the nuiss nee arising from tha discharge of bot water into the gystem of semers in qnestion, and that manufacturers ba prohinited from injecting steam,
After a brief disenssion, the committeo agreed to adopt the following recommendations:
"That immediste consideration be given to the practilate their drains by pipes carried up to the tops of ronse that the regulation with respect to compeling owners o
property about to be bnilt to wet-trap their drains, and property about to be bnilt to wet.trap their drains, and
thus cut off air communication with the sewers if they refuse to ventilate them, he added to the form of permis sion for draingge at present in use; that, in conjunetion
with the remoral of all draing from the interior of cellars in courthouses, and the change from intermittent to con adjacent to such conrts, ho cut off, when tha owners are
nilling to dispense with the water suphly within the willing to dispense with the water supply within the cellars; and that the influence on the sawers bs taken
into consideration wheneter the repaving of a atreet pre sents an opportunity of rendering the pavement imper--
The report of the borongb and water engineer Mr. George F. Deacon, tpon the condition and ventilation of the sowers, ordered by the Healtb Committee to be printed, bas heen issned in a printed form (Benson \& Holme, printers, Castle. street
us.

## BRICKMAKERS' PRICES

Sir,- Will some correspondent gend you the price given to brrelusive or exclusive of cosls, $s t a$ pipes, prices at which bricks and draining-pipes are sold in
$\mathrm{X}_{\mathrm{n}}$ the present pueertain state of lahonr, and also of prices of coals, the ownera of private yards ara quis

## COLOUR OF GAS TAR.

Srs,-I should feel obliged if any of yonr oorre spondents would recommend me something to mix with
gas tar, so sa to change its colour. I wish to corer gas tar, so as to change its colour. I wish to cover
quantity of rough deal fencing with tha tar, but do no
like the colour.

## IRON NETTING FOR PLUMBERS

 FIRE.POTSSir, - With reference to the late Alexandra Palace calamity, a lady friond of mine suggested yesterday the possibility of the said brazicrs or fire-pots being covered with an iron netting, on the Davy safoty-lamp principle, whilst the men are away at meals, so as to prevent any sparks or pieces of charcoal, \&c., falling on the inflammahle roof. Why is not a call. man retained to summon the men to dinner, and watch the said fire.pots till they return, and not trust to boys, who naturally look rather to the passing amusements beneatb the roof than attend to the destructive agent

## ARCHITEOTS AND COMMITTEES.

rr, - What is the proper comrse to take under the following circumstances? The Bolton School Board advertise a competition for two Board schools, on selected sites, offering a premium of 10 l for the hest, and 5 . for the secoud hest. The plans are sent in (ive architects competing), desigue are selected, a premium of 102. to be given to each, as they were considered of equal merit; resolution passed that each of the successful competitors shonld carry out his design at tbo nsual commission. Suddenly, opposition is organised to prevent schools being huit, which ceems, at present at all eveuts, likely to succeed Have 1, as the snccessful competitor, any Not apon the Board heyond the premium whether or not said in the conditions as to architect, but still would employ the successful that they would, and that was the object of the comperition, so that, heing a public hody, they could not ho considered to be showing any favonr or partiality.

THE ROYAL ARCHITECT, GEOFFREY CHAUCER
Per3ir me to remark that tbe St. Georgo' Chapel at Windsor repaired in the reign of Richard II. was not the same huilding as we now have it, but a previons structure, the pro sent edifice having heen built hy Edward IV.' I shomld say that the buildiug which Cbaucer worked on was that built by Henry III., in 1216-1255.
Geoffrey Cbancer, as clerk of the works, had 2s. a day; but his predecessor, William of Wy yke bam, who bas left his name on Wiuchester tower, bad hut 1s. a day when he filled the same office in the previous reign.

A PATENT STONE.POLISHING MACBINE
A large numher of the principal builderg, architects, and engineers of Scotland mot re. contly in lie works of tha North British Patent stone-Polishing Coropany, Dalry, Edinburgh, in order to witness the trial of a paient machine,
invented by Mr . Wm. Adams, for the workiug and polishing of freestone, marble, and granite. About eiphty persons assembled. The invention of Mr. Adams, it is explained by the Weekhy Scotsman, was purchased about threo years ago by an American company, and has siace been at ork with the most successful results in the United States. It was tried upos freestone, ranite, and marble, says our eutbority, with he the best machine yet introduced for working the surface of stones.
A limited liability company has heen formed in Edinhurgh, who bave acquired the pateat. ight for Sootlond, and have erected premises at Dalry.
Mr. Adams's machine consists of two platforms or tables, standing parallel to each other, and esting at either end poon a donble crauk shaft. These shafts aro joined hy strong connecting. hese shartts aro joined hy strong connecting.
eam-engine or other driving power. The ean-engine or other drivig power. The
ones are laid on edge, faco to face, upon each the platforms, and as the machine works the atforins are alternately raised and depressed ith a motion like that of the engines of a ddlle.wheel steamer. Tho stonos are thas ust delicate polish, Each platform has an up-
und ust delicate polish. Wach platform has an up-
sht back, which can he moved baokwards aud wht back, which can he moved baokwards and
wards hy means of screws to suit the thick. wards hy means of screws to suit the thick-
sses of the various stones, besides heing proled with adjasting sorews, in viow of the ighness and inequalitios of the stone. Sand
d water are supplied frem above hy means of d water are supplied frem above hy means of
imple apparatus invented by Mr.Wm. Beattio, chite apparatus invented by Mr. Wm. Beattio, hitect, Edinburgh, and fall betweeu the sur. rough portions, and reducing them to a ooth and uniform surfece. The ineqnalitics one stone cerrect the iuequalities in the other, in a short time, varying according to the face almost mathematically true is imparted both the rows of stones. The advantages imed for this invention are its extreme sim. city and the fact of its requiring no steel tools
other implements which would necessarily uire to he frequently sharpened and nphold much expense. The operation is so rapid ary face to a fincly-polished surface in a co of time varying from ton to twenty iutes, according to the hardness of the stone nite and marble can, it is soid, he worked in nt one-third of the time taken by the ma aes presently in use. The mandine is also of ght and simple deseription, and can be fitted 1 Wheols so as to be moved ahont from place paco. Plean quardy stones, which were forer after the lapse of about twolve minutes, 1 a trine and polished surface. Another pair tones from Polmaise Quarry, in Stirkingshire quality of the worls excited tho admiration il presont. At the close of the proceediags amber of gentlemen expressed their entire faction with the working of the machine, united in according a vote of thanks to the nter, Mr. Adams. Orders for machines
an fy firns in Glasgow and Aherdeen.

NEW WINDOW IN WESTMINSTER ABBEY.
Essrs. Clafton \& Bell hare just now pleted the fixing of a wiudow in the north sept of Westminster Ahboy, in memory of officers, men, and hoys who perished in the tain. The following is a list of the suhjects uled:-
De Sca giving up its Doad; Building the ; tho Passage throngli the Red Sea ; the t of Solomon; Building the Ships of Tyre; he delivered from the Whale; Christ stilling Tempest; Christ walking on the Sea; st teaching from the Ship; the Miraculo ogh ; and the Shipwreck of St. Panl. biass plate is in preparation, to he laid in memorial brasses, hy the same artists -ding the namess of all who wero drowned 20 occasion, will shortly he fixed in St. Paul's edral. The plate in the Abbey will be

10 Poet Cowper's Windew.-The memo. vindow to the poet Cowper has heen placed reat Berkhampstead church. The public criptions fell short of the cost hy more than but this was made up hy some ef the inants, including Mr. William Longman, 1, to whose exertions the success of the
ne is mainly due.

## CHURCH.BUITDING NEWS.

Rishton, near Accrington,-The ceremony o laying the corucr-stoue of "a new Obarch England," has been laid at Rishton, a thriving
township near Accrington, ky Mr. F. W. Grafton, of Hcysham Hall, Lancaster. The church is estimated te cost 5,000 l., towards which Mr Grafton has given the donatiou of $1,200 \mathrm{l}$, and the other promised subscriptions make the amount into 3,0002 . The Rev. Canon Birch, of Grafton ; and that gentleman, in addressing the Grafton ; and that gentleman, in addressing the spectators, said that his sympathies had heen Allott, the minister inface through the Rev. J. of the members who wero masons bad huilt large portion of their schoolroom free. He pished the Church of Eagland to he free from the cx. treme parties within it, and that it would become more the church of the people and a true national church. He also hoped that tho church would he opened free from deht, and that they would not have to resort to a hazaar to accomplish that end. The architects of the now church, which will he dedicated to St. Peter, are Messrs. May. cook \& Bell, of Manchester.
Littlebury. - The first stone of the chancel of the church here has heen laid hy Lady Brayarchite, wife ef the patron of the living. The and the is Mr. Edward Barr, of Saffion Walden, Jaoklin, of Reyston. The whole cost of the chancel is horne hy the patron, as also of the new vestry, and half the cost of the organho the gift of Lady Braybrooke, together with the reredos.
Olney.- It is proposed to continue the work of restoring the parish church, commenced by the Earl of Dartmonth in the chancel, on a liheral work nndertaken. The estimate the first including the westerm the estimate for this, hutuding the western hay of the nave and aisles, at exclusive of the seating and of the enclosure and onclosnre wonld cost ah 365 l. The aeating veuld he restored cost ahout 175l. The roof would be restored with the rest of the roof of accordance with estimate for the whole work, in Scott, if done at pian furnished hy Sir Gilbert cott, if done at once, is 4,000 l.
Collingridge.-St. John's Church, situato in Wellington-street, Newmarket-road, has been dedicated: The huilding is to serve the douhle purpose of a children's and mission chnroh. The gahle ahuts upon the street named. There is accommodation within ita walls for some 300 persons. The building consists of a navo, 44 ft . hy 26 ft . olear of walls; chancel, 21 ft . hy 14 ft .; and on the south side ancel is the organ-chamher walls arc 12 ft , from floor to plate; the roof is of Memel timber, trussed with iron ties to collarbeam, with ring, rod, \&o.; the ceiling line is on in the olen , with four lancet hurch is lighted en each side the edifice is giraple, showing os roef rannin through at the same level from east to west; the front elevation consists of porch on either side, and one three.light plain lancet window in the centre, ever which there is a small hell-turret, terminating with a cross; the total height from style adopted throp of cross hoing 45 ft . The huilding is of white hrick, prith red arches and Bath stone sills and weatherings. The floer of aisle and seats ; weod, with coooa matting in the hot-air hy Messrs. Blake \& Co is warmed with The cost of the fahric and fittings is ahout 8001 The plans and specifications were ahout 800 l . Day, of Bedford, huilder (brother in.law of th vicar's churchwarden, Mr Cawres of the work was carried out by Messrs. Hioks, of Came filled with He windows, which are at prescnt with stained glass the gift of Mr. F. Leech. The organ, whioh is of ample scope for the huilding, East Rudhan. Trustam, of Bedford.
He ancient towor of Enst Rndham Octoher, 1870, had long given symptonis of decay foll which and rendercd the edifice, which was fell down, and rendercd tho edifice, which was also in a purposes of Divine service. The chancel has een supplied with a new roof, hut not having recunseral, it was not considered neoessary to the restorate tho church. It is unfortunate that not been in some way under the direction of an
archroologist. It was one anongst the most interesting of Norfolk churches, and was worthy of a true restoration. As it is, the fine proporwo are, fortunately, not lost, but many details oof sone aitogether, and the scantlings of the hurch mestre, thin, and nnsatisfactory. The old and heen made for trappearance. No provision has bas been made in the roof for ventilation. The cost of now fitting up a warming appnratus will he fully one.third more than if it had heen erected during the re-hnilding of the church. Huntington,-The vicar and churehwardens have formally deposited in the north.west angle of the wall ef the new nave of their parish church a parchnent record of the work of restoration which is now heing carried on to completion. At the foot of the docmment are given the names of the conimitteo, architects, masters, and men engragod in the work. Iast year the edifice consisted of chancel, nave (with a wooden hell turret on the roof), sonth porch and a hrick vestry recently added. The restoration com-prises-rehnilding the nave; a new north aisle the rehuilding of a side chapel on the north ; the rehancel, of the side chapel on the north of evidence was found ormer existence of which which was found on taking down the nave, which will provide an organ-ohamher es well as a vestry; and huilding the hasoment portion of porw tower and spire, which forms the south porch and entrance to the church. The cemplefand of the tower and spire, inless sufficient future can be ohtained, will have to he left te coture ellorts. The chancel, which is fiftcenthcenthry work grafted npon thirteenth.centary as shown hy the sedilia in its sonth wall and arcade of the former chapet which was discovered retained, hat lengthened.
Hatifax. - The chief stone of St. Angnstine's ceremonipl The has heen laid with Masonic Mr. Richard The huilding has heer dcsigned hy style is to ho Gotho London, architect, and the teenth century. The dave will he 83 ft in length and 27 ft . in width, and the aisles, 11 ft . 10. wide, with slightly projecting transepts, 21 ft . wide. The church is to he 41 ft . long hy 23 ft . wide, with an apsidal east end, having chapels and vestry on either side. A tower, corn. square, is to be placed on the south-west hody ef the sonth aisle. The material of the stone fre charch will he of hammer-dressed dressinge the quarrios of Northowram, and the fucings of the be Ringhy stone. The internal white hricks, in patterns. The with red and stained deal, framed with panels fill he of roof will also he of the same material, and all the seats will bo open. It is proposed to bare lofty windows in the olearstory, as heing suitahle for a town chureh, to insure sufficient light in the nave. The nave, aisles, and transents are only proposed to he orocted at present at a cost fffcion., leaving the chancel and tower nutil Southsea. with are roceived for their eroction. Southsea- with- Mrurrow. - Emmanuel Church has heen consecrated by the Bishop of Ely. The lay of last pear. The was laid on Whit Tuesars or for the work whs Dr. Bernett, of Lyon, for 2,000l. It is estimated that the sittings will hold ahout 100 persons.
Onford.-St. Mary Hall chapel has heen re. opened, having heen, sinee Midsummer last, in process of repair and improvement, undor the The east and sonth windows Buckler, of Oxford. he east and south windows have heen repaired, and a reredos added of Painswick stone. The aast window has been filled with painted glass y Mr. C. E. Clutterhack, of Stratford, London. coutrins fifteen small ropresentations of events illustrative of the life of the Virgin Mary, from the Annunciation to the Aacension. The south windows have painted quarries, hy Messrs. Lavers, Barrand, \& Westlake, London; and the orth hy Messi's. Powell, London. New gents and a sereen, in English oak, were furnished hy Messrs. Rattee \& Kett, of Camhridge. The roof has been boarded through the entire length, with intersecting rihs over the enstern part, and carved hosses, hy Messrs. Rattee \& Kett. By the removal of two sets of rooms (one of which was in the roof), space bas heen gained for an organ gallery. The organ is by Messrs, Gray \& Davison, Lendon. The whole hlock of building, of which the chapel forms the top story, was huilt chiefly at the expense of Jobn Sapla Prineipal of the Hall, from 1632 to 1644 and Provost of Oriel, from 1644 to 1653 . Th, expended has beon hetween $1,100 l$. and 1,2001 .
rather more than a third having been (bitherto) met by subseriptions of Aularians past and
prosent. Tbe builder was the late Mr. J. Fisber, of Oxford.

## STAINED GLASS.

Corvent, Mill Hill.-Mr. Thomson, of South wark, has been execnting some stained glass windows, under the direction of Mr. Goldie, archi. tect, for the chapel of an oxtensive Franciscan convent, after Medesigns of Hill, Midlesex. Eschewing positive at Jili Hill, Middlesex. Lscheming positive of varied rolled cathedral glass. The subjects, of varied rolled cathedral glass. great saints of the Franciscan order, being the great sants of the Franciscan order,
aro drawn with conventional grace and beauty, are drawn with conventional grace and beauty, combined Early Italian artists, who in tbeir time the Early Italian artists, who in tbeir time
worked so thoroughly, and have no shading, the Worked so thoroughty, and have no ghading, the
requisite amount of form being obtained by requisite amount of form being obtained by
delicate hatching. Canopy.work is wlolly delicate hatching. Canopy.work is wholly ignored, and the fignres are
ground of diapered quarries.

## FROM SCOTLAXD.

Edinburgh. The public borlies interested in the restoration of St. Giles's Church bave concurred in nominating a committee, to whom have been delegated full powers in reference to the procuring of stored choir. The committee consists of the restored choir. The committee consists of the Whairman of the Restoration Committce; Dr. Justice-General, the Lord Provost, Dr. Arnot and Sheriff Thoms.- Tbere seems now to be a prospect of the completion of the national mounment to Prince Alhert. Some delay was occasioned by a change of plan in reference to the pedestal, aud the consequent recessity of raising a supplementary subscription to mee the extra cost of Peterhead granite. There was also the question of the most suitable site for the monussent. The Wreekly Scotsman under. stands that the foundations of the strncture are to be commenced immediately. From the nature of the ground in Charlotte. square, it will ho necessary to go sonze 11 ft . or 12 ft . helow tho surface, and to put in a mass of curport for the superincumbent weight. The pedestal itself has heen for somo timo in course of formation at Macdonald's G'anite Works, Aherdeen. It will consist of enormous hlocks of polished red granite, some of them the largest ever produced from tho works. The erection of the sculptures will follow in due time after the podestal is placed. The subsidiary groups the hronze, Ir Steell lias meantime been touching aud re. touching the great equestrian statue which is to form the centre. piece of the memorial. Ile expects to bo ready with this figure as soon as the pedestal is ready to receive it.-Mr. Steell Burve for the Central Park, Nery York. The proposel to have such a memorial thus follows clusely nopo the erection of tbe Scott statue The committee, it is said, were influenced in their selection by the genoral admiration which Mr. Steell's Scott statue has excited in New York. Tho new statue is to be executed in hroaze; the price, exclusive of pedestal, to be 2,000 guineas. This offer, communicated through Mr. Dincan, of the Crown Office, Edinburgh, was aocepted by Hir. Steell. The statne is to he on a colossal scale, but the sculptor is left entirely to his own discretion in regard to posture and style of treatment. Tbere is no restriction aver a grave in the south east corner of the Grance Cometery, a monumental memorial of the Jutc Mir. Juhn Mitchell, for many years superintendent of the Edinburgh Firc-Brigade. The monument, which has heen executed by Mr. T. M'Ewen, sculptor, Lothian.road, is in the form of an obelisk, 8 ft , in height. The whole structure-base, die, and needle alike, is
worked in red Peterhead granite, highly polished. Greenoct.--The new Garvel Park Graving
Dock bas been formally inspected by the Hatbour Trust of Greenally inspected by the beivg opened. This dock is said to be the largest worls of the kind in Scotland, and is expected to have the effect of attracting addi. tional ships requiring repairs to the Clyde, while preventing in fature the necessity of large

Grecnock-bnilt and other steam vessels having to leare the Clyde for Leitb, London, and other ports. The length of floor of the new dock is 80 ft . ; the entrance is 60 ft . wide at the coping with a depth of 20 ft . of water at hightide. The dock is formed on an improved principle com. pared with the present docks of Greenock, and the caisson for the entrance, which is the patent swing bridges and expensive opening and closing wachinery, and has incroased facilitios, only one man being needed, iastead of fifteen or twenty as at Laith, to set the machinery in motion. It may bo opened or closed at all times of the tide, aud although weighing 250 tons is so ballasted ns to bave a gravity only of a few tons, being vearly iu a Hoating stato. The caisson when in its phac serves as a bridge, 15 ft . wide, and provents th necessity of a cofferdam. The water can bc dock mor any level, and thes a dock may at any time be formed of sufficient size to accommodate six ordinary-sized vesscl The whole works will cost ofer 60,000 . The dock will be opened to receive shipping within a few weuks. It is the first of a series of docks, parchased in 1868 for 80,0002 .

Atthough, in plan trath, a directory and trade book, this smart volume, smilinc in green and outline acconnt of pobat there con a usec the metropolis by the passing visitor, and a number of views of the public buildings.

## VARIORUM,

Collins's Elementary Science Series. Prac. tical Plane and Solid Geometry. By Henry Angel. London: Collins \& Co." This small treatise is prepared specially for students in and Art Department, hy the science.master of the Islington School of Science and Art, who has tanght the suhject for several years to large classes of artizars. The aim of the writer has been to show the principles npon which constructions are based, thereby holping tho student to avoid the cram system of which examiners justly complain. "Cook's Continental Time Mables and Tonrists' Inandbook, with Sectional tonrists time.tablo, fot up hy tho w. usefa? Cook \& Son, of Ludgate-circus. The more immediato purpose of the present issue is immediate purpose of the present issue is for distribution among railway ofncials and before issuing a second edition. "The Waste of Wealth. By William Hoyle. London: Simplin, of Wealth. By Wiliam Hoyle. London: Simplin, Marshall, \& Co." This is a paper read before the Statistical Society of Manchester in January last. The author estimates the national waste or loss from fullics of fashion, extravagian Government expenditure, costliness of law, waste of servage, game laws, excess and luxury in food, tobacco, and drink, at $491,000,0002$. per annum. He shows what conld be done with such a sum in the way of savitary and other improsements and remanks that the first thing to do is to mak the public farailiar with the subject.-Ther has been prepared and printed for the Irisl Puor-Law Medical Offeers' Association, by th Hon. Seo., D. Toler T. Maunsell, M.B. Dib If.I.A., "An Analysis of the Population Acreage, Expenditare nnder Sanitary Acts and

Modical Charitics Act, in tbe various Pro vinces, Connties, Rural and Urban Districts in Ircland; along with the average Salmies of bo Medical Offiocrs, Poor-law Valuation, total Poandage on Taluation, and Pouudage on Medicol Salaries." This Analysis was prepared in anticipation of the introduction of a Public Hoalth Bill this sossion for Irelaud, and has been obtained from the latest available retaras, -"Criminal Returns : Metropolitan Police." These returns (for last year), show as usual the induenco of education in excluding the people rom the crimioal lists. It is remarkablo, horever, that the most numerous class are not those Who can neither read nor crite, but those whe can read only, or read and write imperfectly. Of the latter, 1,387 males, and 436 females, were ried and convicted, and of the former, only 329 males, and 176 females. Duubtless, the fact that very large proportion of the whole population can now bo classed with the latter, and a rela. tively small one with the former, belps to explain this. Only 113 males and 8 females, tried and convicted, could read and write well. and only males and I fomale bad superior instructan

## Miscllamea.

The Eradford Waterworks. The two reervoirs which are to be constructed at Oxenhope, -the one on tho bed of the Leeming aud the other on that of the Leeshaw strean, -for storing compensation-wwater to keep the mills in the Worth Valloy going, are now in progress, hut will not bo completed, it is believed, for two years fet; and uuder the Act no water from this quarter can be seut to Bradford till theso two reservoirs are certified as finished. The high level servico of Bradford has beeu, and will he, until these works are completed, wholly dependent upon a comparatively surall drainage area, tho water from which is stored in Stubder Reservoir and in that at Horton Bamk. A catch. water conduit will ho constracted between Haworth Moor and Sawood, along the hill-side, for a distance of four and a half or five miles. The water so collected will he conreyed in the conduit to the mouth of a tunnel which is being constructed through tho hill which divides the valley of the Heweaden Beck from that of the Worth, and will thus be conveyed to Stubden Reservoir, It is to provide compensation-water to the Worth Vulley mill.owners that the two huge reservoirs at Leeming and Leeshaw are being constructed. The contract for the two amounts to 60,0007 , and has been taken by The tunnel, which is known as Oxenhone T'onnel, has now hecu in course of constractiou by Messrs. Pearson, of Bradford, for nearly two vears, and is a large madertaking. It is $4,000 \mathrm{ft}$. in length, and passes chiefly through rock.

The Reredos in Gloucester Cathedral.correspondence between the Rov. Thomas C. Price, vicar of St. Augustino twe Less, Bistol, and the Bishop of Gloucester and Bristol, on the subject of the new reredos just erected in day. Mr. Price espresses his sorrow that the Freemasons hare been permitted to erect a reredos filled with images, of which the central and principal one is "a representation of our blessed Lord Jesus Christ, God and man," and that the bishop is to be "one of the performers in the solemy romp and ceremony of its un. veiling thereby giviur publicly before the veling, thereby giving pubicly betore the desecration of the house of God." In support of his views, Mr. Price refers to the homily acrainst his views, Mr. Price refers to the homily against peril of iwolatry, wad quotes a passage from Vulens an, and the decree of the emperor ulems and Theodosius, in aid of his earnest entreaty to the bishop to refuse to take any prit from all complicity in such a so free himsel from all complicity in such a Hagrant violation of the second Cmmmadment, and in the scauda and offence which will be caused thronghout the dincese." The bishop, in his reply, says, "I coucur with you and the renemble homilist in a sincere disappraval of all idolatry. As, however, I have no reasou for thiuking either (a) that the Freemasons or the Dram and Clapter entertain the purpose of worshipping and bonouring the stuary to which yon allude, or (b) tbat the figures will be provacative of idolaty in others,
I do not feel it necessary to refuse to take part I do not feel it neces
in tho ceremonial."

Decorations of the Pump-room, Bath. Tho Baths and Pump-room Committee of the Bath Town Counci] "in viow of the approaching exbilition of the Royal INortienltural Society," Laving some timo since recommended that tho various works comprised in the specification of the surveyor of works for deeorating the Grand Pamp-room and filling the windows with plate ine Committee's roport. Tho amount asked for was 230l. Tho work bas been done. The whole suilding, ineluding the vestibules, has been Jainted, tho interior walls heing coloured cobalt
olue, as woll as the core and ceiling. The cornice and columns are pointed in an antign vory colour. The frieze is a brighter bluo, with arahesque pattern and chocolate, the arehiectural portions being coloured red and blue. The eapitals and abroi are gilded, and the lower oortions of the columns are of a darkex colour,
10 as to assimilate with the oak dado. The uclitravo monlding is of ivory tint, as also is the ornice, beneath which is a pattern in light hlue. The panels contain, or will do so, patterns with lesigns sarronnding them. The alcove is to be iled with Minton's tiles, to correspond with the falls, The designs of the decorations are hy
Mr. C. E. Davis, the surveyor of works to the Jorporation, and the work is being executed

The Excavations in Rome.-Mr. John enry Tarker, C.B., gavo bis fourth and last Royal Institution, London, on the 3rd instant. Tho excarations formed tho subject of this eeture, and Ar. Parker allnded to the vigorous mander in which the Italian Government is
marying ou excevations in the Form Romanum, n the Palatine Till, and in severa! other places, a conformity with the anvions desire of Parlia-
aent, whieh votes $1,200 \mathrm{l}$ a yenr for the purpose, fith the ullimate intention of making a second ?ompoii in the middle of the city. Mr. Tarker are a dotailed aceount of some of the chiof
xeavations reoently made. Among othor dis. oreries, ho said that under the areh of Sopimius Severus two marble walls bad been found, vith senlptures of the time of Hadrian, repreimperox, supposed to bc iu honour of his canelling the immense debt of the city; and on the omb of a hoy, aged eleven, who livod in the imo of the later Republic or early Empire, are nseribed some Latin and Greck verses, for thich he obtained a prize at school, in free cometition, as statect in an aecount of his lif ppended by his sorrowing parents.
Tlie proposed Public Hall and Street mprovemerts in Stafford.-At a recen teetigg of the town counei, it was reported that ittee, held on tho Treasury Memorial Comarveyor submitted another plan for tho erection a puhlio hall. The surveyor's idea was to I. T. Turner, whioh has a frontace to the main reet, and adjoins the Grildhall, and make a joroughfare direct from the Market.square to Tbion-place. St. Mrary's-lane would be couonght for that pmrpose. Tpon part of the lan 1 acquired would be built the proposcd public all and the butohers' market. The committee, onsequence of the now plan produced hy the rough surveyor, the committee do not con. dinall subes prepared to report on the plan ad beg to refer tho matter hack for further structions." The conncil bad some discussion I the subjoct, and it is understood that the

## The Mretropolitan Water Supply. -

 port of the examination made during the month May of tho water supplied by the Metropolitan mpanies, hefore and after filtration, at their ate of tho river sapply is said to have heen grod, be wator companies stato that they have preured their mains for constant supply, and bave Jw 900 miles of such mains continually charged bole course. Hydrants, however, as preferable fire-plngs for fires, with constant supply, have yet been in auy case supplied.The New Synagogue, Manchester:-Tho foundation-stone of a new "Portngere Synagogue" in Manchester has heen laid. The Portugucse comnunity of Manchestcr comprises about thirty families, and thirty unmarried members. The synagrogue is intended to afford in case of fion to 200 men and 100 womon, aud extension. Its site is in the Cheetham Hill road where, when completed, it will bave its frontage. The cost of tho bnilding is estimated to ereecd 3,0002., exclusive of any outlay on the school, which it is eontemplated shortly to build. The stylo of arobitecture adopted is Mooresque, the principal feature in the front heing the entranee in briekwork and stone, ornamented with vitified marhle hosses; the remainder of the elevation is of brickwork, with stone dressings. Tho interior has an open wooden roof, with galleries sup portod on marble columns. The reading-desk is in the ceutre. The ark", in the east, and in a recess, witb largo circular window above, will be filled with stainod glass. The whole of the
interior is especially designed for future painted interior is especially designed for future painted
deeorations. Mr. E. Salomon is the architect, deeorations. Mr. E. Salomon is the architect,
and Mr. S. Warburton, the builder.

Safety of Mines.-In 1871, Mr. Hermon, the senior member for Proston, fecling the deeided to offer 200 , for the mining population, means of preventin. for the best essays on the for the first prize, and 502, for the seophes, - $\mathbf{1 5 0 t}$ result was that about 300 . for the second. The Mr. Staveley Mill, Q.C., M.P., Mr. T. Hughes, Q. C., M.P., and MTr. Rupert Kettle, accopted the post of judges, and they havo just completed their task. agreed apon hraekoting as of equal merit for the first prize the essays by Mr. Robert Eloin, ef 63, West-street, Sheffield, and Mr. William Galloway, of 3 , Duke-sitrect, Portland-place, by Mr. Hopton, of St. Melent ane an essay opinion that the essay by Mr. Buinbrid of the Duke of Norfolk's Colliery Offioe, Sheffield, is entitled to high eommendation. Mr. Tiermon has increased the amount to be distributed to $2701 .$, - that is to say, two first prizes of 1002. sach, one second prize of 502 , and one thisd prizo of $25 l$.
The Rosario Railway. - The first sod of the most important railway that has been projeetod in the states of the River Plato has been aid by the Governor of Bnenos Ayres, at the Rosnrio Railway, near Buenos Ayrcs. The represent a total of 500 miles. The line will start from Almagro, and rnpning through the little town of San Martin, close to Pilar, Tear to Capilla del Seủor, and thence, in a straight line, will make Rosario the second city in the Argentine Repuhlic in eommercial importance, at a distance from Buenos Ayres of about 186 miles. By have terms of the concession, this trank line will on either side of the route. Tho country through which the trunk and hranches will pass is ad. mitted to he the richest and most thickly popuThe line, with hranches, has of Buenos Agres. perged ont. The following geutlemen compriso the engineoring staff that cffected this part of the work:-Mr. Jolim Robinson, chief of the staffi, Mr. Malcolm Graliaro, O.E., Mr. George hortrede, C.E., Mr. Arthur Henry Lo Breton .f., Mr. Henry Hoggar, C.E
Carlisle New Post-office.-The Carlisle thenoum, which was some time ago sold to of conversion into a nost.office new work is begun, says the local Journat, the building is to be completely gutted, and nothing but the bare walls left standing. The lecture room is to be the fature sorting-office, a room $46 \mathrm{ft} .6 \mathrm{in} . \mathrm{hy} 56 \mathrm{ft} .4 \mathrm{in}$. The floor will he raised to the level of the entrance passage. The rooms used as a museum will be formed into telegraph and instrument room, open to the roof and lighted there with landing lights. This will do away with the large salexoom at present The entron front of that will be the public offico with all the mail-hags, will be at the back of the building. Messrs. Hutton \& Bell, of Carisle, are the contractors for the whole of the work Mr. Rowland is clerk of the works, which aro being execnted under the general superiu. tendence of Mr. James Williams, architect to

Proposed Lecture Hall and School of Art for Leicester, - At a recent meeting of the Leioester town couneil, a roport was read from the Musetrm Extension Committeo appointed to on the 27 th of January last, and cordially corn. mending to publie support a proposal to raise he sum of 3,000 . towards tho expense of proFiding, in connexion with the museum, a large lecturo-hall and suitable aceommodation for tho School of Art, such sum to be offered to tho corporation of Leicester on condition that they expend an additional sum of at least an equal amount on the aceomplisbment of the two sub-
jeets. The eommitteo rcoommended the conncil ontertain the proposal of the public meeting, and to inform tho proposed subseribers that as oon as the sum of 3,000 l. has heen deposited with the borough treasurer, application will he made by the couneil to the Lords of Treasury for their sanction to tho council contributing the foe sum towards the proposed museum oxtenson, and that permission be asked to provido ach sum out of moneys arising from the sale of real estate. The couneil, after some diseussion,
adopted the committeo's report by a majority.

Technical Education: Museum of Trado Patterns.-Some years ago a capital plan was suggested by Mr. William II. Ablett, for the furtherance of techmical edueation, in the forma. tion of Maseums of Trado Patterns, the estahlishment of which would servo as a connecting link between teehnieal educationandits praetical application to manufacturing indostry. Assistance of the most valuable kind could be affordod to both artizans and mannfacturers by the Musenm of Trade Patterns, which would give an opportunity to all interested in any particular branch of manufacture to inspect samples of goods made abroad and elsewhere, slowing where we aro excelled by our foreign eompetitors, and whero onr own weakness lies. Thousands of workmen in this country see nothing else but their own productions and those of their fellows from one year's end to another. Mr. Ablett's idea anpears to he that it would be desirable to estapish Musenm of Trade Patterns in London, with the view of serving as a model, and of rendering assistance to tho provincial towns which might be inelined to adopt the plan,-Abridged from the Macclesfield Oourier.
Society of Arts general Examinations 1873.-Among the prizes and certificates awarded to candidates, the Prinee Consort's Richard Clarlsuineas was awarded to Thomas Workinm Mren, aged 21, formerly of the Saliord Literary and Scielege, and now of the Birkweek c.erk, who obtained the fistitution, aecolant tifeates in the present and three preceding yoars:--1870. Arithmetic, first-elass eertificate: geography, first-class certificate, with first prize histoyal Geographieal Society's prize; English aysty, first-class certifieato. 1571, Metric 1872 . first prize. Fincligh rst-class certificate, wifl cato, 1873 . Lovie first-class certificato, with second prize; politioal cconomy, first-class certilicate, with second prize.
Eaths and Washhonses for Paddington. The foundation stone of the intended haths and washbouses for Paddington has heen laid in the Queen's-road, Bayswater. The new building has been designed by Mr. L. H. Isaacs, of Thos. Elkington, of Golden-lane. The contract price, exclusive of the machinery, is 22,595t, wimminut wrimming-wath, a second and thrd class mend about swimminchath, and to this the iding accommedation for sixty washers, and for the necessary operations in connexion with drying and ironing. These departments are exclusive of the Board-room and offices, which will be erected for the commissioners and the servants of the establishmeut.
Baths for Deroby.-On Saturday last, new publio baths, the gift of Mr. Bass, which have beon orected at a cost of $5,000 \mathrm{l}$., were formally presented by him to the mayor and corporation faths are as representatives of the town. The haths are situated in the Recreation Ground, which was also the gift of Mr. Bass. Mr. Bass as also offered to give 5,0002 . towards huilding a free library if the town will provide a site.

Proposed Tunnel through the Rocky Mountains.-A scheme is now on foot for run. ming a tunnel through the Rocky Mountains. Thisg a tunuel through the Rocky hountains. projectors are sanguine of the most complete projector's are sanguine of the most complete from point to point ahout oze mile helow Black Hawk to the Middle Park, rumizer in a westerly direction. The tunnel to be run will westerly direction. The tunnel to be run will, it is presumed, out many rich reins of gold and silver, and thas a great mining interest he deworks will he furnished by Enalish capitalist Works will he furnished hy English capitalists, Who are sangune or the altizate sacesa of the enterprise. Tho tuuzel, if completed, will h
twolve miles in length.

The Stats Purchase of Railways.-A special meoting of the Society for the Encouragement of Arts, Manufactures, and Commorce has been held in the Society's chamhers, John Galt, "On the Wurchase of hy Mr. William Galt, "On the Purchase of Railways hy the State," was read, and partly discussed. After the reading of the paper, which was a long and elahorate one, advocating the State purchase of railways, Lord Derhy expressed douhts $0 s$ to the prudence of hurthening the State with some thing like six or eight handred millions more deht, and of placing such a vast amount of additional patronage in their hauds. The dis. cussion was adjourned, and afterwards continued on a suhsequent day
Essays for the Encouragement of Thrift Sir Joseph Whitworth has offered prizes of the Falue of LOOL., to he ohtained tbrough the Sooiety of Arts, for the heat essays on the Advantages that would he likely to arise if railway companies and limited companies generally were eaob to estahlish a savinge-hank this offer herg classes in their employ." With tions as to has transmitted a series of ohserva tions as to the principal subjects which the essayists sbould consider. The conncil have accepted this offer, and appointed a committee to arrange the details for ohtaining the essays.
The Royal Italian Opera.-If crowded houses may he taken as proof, Mr. Gye must have reason to he satisfied with the season of state visit in honovr of ther emphasised hy a state visit in honour of the Shah of Persia, on this, Saturday night, when the house will present (we remomber two previous occasions of Royal Box will be formed in the seez. The Royal Box will be formed in the centre, and nunfors and ourt dresses will make colou general. has heen provided for a large numher of visitors will also present a brillinat scene.
A. New Gaol for Bristol.-At a special meeting of the Bristol torm council to consider a communication from the Home Secretary calling apon the corporation to provide a new gaol for the city it bas heen resolved, by a large majority, "That in the opinion of this council acting as the prison anthority, it is expedient that a new prison, adapted to the purposes as well of the city gaol as of the house of correc tion, he forthwith hailt upon a new site."
New Reservoir at Pontefract. - The Pontefract Town Council here resolved to con strnct a new reservoir connected with the Corporation Waterworks in that town, capahle of containing one million gallons, for the furtber supply of the inhahitaits. It is to he situated on Park Hill, a gliort distance from the town The reservoirs will ho constructed according to plans and specifications which have heen drawn ap by Mr. George Malcolm, C.E

Eridge over the Neva.-In a paragraph in our last as to this competition, it was stated that the first premium of 6,000 ronhles was awarded to "Westminster," "supposed to be Mr. Page ; No. 23, Ahing don-street, Westminster \& Pertett that they sent in the wrched design marked "Weatminster."

Burnley Survejorship. - Foux geatlemen were selected from seventy-six candidates for personal interview with the committee for the ahove office, vacated hy Mr. Edward M. S Escott, on bis appointment to the office of borongh engizeer of Halifax, namely Mr. W. B Bryan, of Nottingbam ; Mr. Bell, of Bolton Mr. Dawson, of Salford : and Mr. Richards, of Wolverhampton. Mr, Bryan ohtained the ap. dointment

London School Board.-A new echool for the accommodation of 750 children is to he erected by the School Board in Stanhope-street, Harylehone, and the teader of Messra, Scrireners \& White has heen accepted for

Cleansing in Westminster.-The Board of Works for the Westminster District (St. Margaret and St. John) have accepted the tender of Mr. Cooksoz for street cleansing, watering, dusting, ac., for three jears, at the sum of 6,800l. per annum.
The Widening of Eond-street. - An pportanity for begirning this on the site of the Clarendon Hotel has offered itself, hut has not heen taken पp, we are told, hy the Vestry in the manner that might have heen expected. This is to be
now.

The Alexandra Palace Company, - A n advertisement in our present issue shows the terms on which the directors are willing to admit a certain number of new shareholders, and may he worth attention.
St. Stephen's Club. - With reference to our recent noice of this huilding, it may save trouble if we add that the carving and statues aro in the hands of Mx. E. Wyon, the sculptor.

VOL XXXI.-No. 158G:

The Thrce Cathedrals Dedicated to N"t. Paul in London.*
$F$ the members Financo Commiltoo for the completion of St. Paul's had held a conncil to oonsider the best mode of popularising their great scbeme, they conld scareely have determined upon an
undertaking moro likely undertaking moro likely to forward their ohject than that which the ehair. man has justaccomplished, unassistod by their deliberations. We allude to the publication of a new and intoresting volume on the eathedral and its pre. decoesors, by Mr. William Longuan, entitled "The Three Cathedrals dedicated to St. Paul, in Loondon." This work, by bringing into prominenco Old St. Paul's, or Paules, or Powilk'
s it was sometimos written in old times, ives the present struetare on its site a mach loser assoeiation with the worthy citizens of ae days of yore tban it posscsses, in itself, for eost minds. In looking upon fren's bailding, to tbink, only, of those merchant rinces who, so to speak, "came orer" with harles II. We are apt to forget tbat those who came over" with William the Conqueror found Sason church on the same spot, diviling onours, indeed, with the Saxon cdifice at Frestunster; and that in Plantagenet, Laneastrian, ork, and Tudor times, the London citizens re. nicod in a fabric that was more lofty by 50 ft , an Salisbury Cathedral, and that, with its
radual enrichments, became more beautiful in meo of its details, especially in its robe.window, $t$ in the eastorn end, than any other that could e named. But Mr. Longman rcminds us cinntely of theso faets, and of many more: so innutely, in truth, tbat whoso lingers over his olnme is a at likely to look at St. Paul's other. ise, again, than as closely linked with the emory of all the old worthies, whose footsteps ore away the stones of its predecessors. This is gain to the interests of the fabric, in its pre. ant noed of pecuniary aid; for wbile ouly the pect, that of Mediæralists, if the unwise divi. on is to he kept up in terme, will he attracted mards it by the recital of its ancient rcality, isfortunes, and associations.
Five times has fire attacked the aathedral aurch of old London ; and thrioe that fro has esoended from the heavens above. The first axon church was destroyed by fire "in the ime of the Conqueror's reign." The Norman burch that slowly began to rise up during the piscopate of Bishop Manrice, was still in conrse $f$ erection when it was ravaged by fire. Not ntil two centrries had passed array was the

the wide range in the architecture this interval involved, the national progress of ideas demanded varinusaltcrations, which weregradnally effected. When tbus perfected, tho spire was struck by lightning in 1H4. Leland records against this date, "This year Paule's steple was sot on fier with lightening on Candilmas Evon, hut after quenchid by the Morow Messo Prest of Bow,'" or priest from Bow who said the early morning mass. Stow, mentioning this same calamity, says tho fire was put out hy the labour of many well-disposed people," the same, to appearance, quenched with vinegar;" but when they had all returned to their houses, "praising Gol," it burst out again, more fervently than bofore, destroying both timber and lead, till it was more effectually extingnished by the mayor and people. Eightoen years elapsed beforo all the damage was repained. The fourth fire took plaee in 1561. It occurred in a tremendous storm. The chureh of St. Martiu, Ludgate.hill, was first struck, and then the ligltning was seen to flash into an opening in tbe spire of the cathedral. For fou: hours the fire blazed, running along the roofs, devouring the timbers, molting the hells and lead, crumbling the stones, and filling Elizalls with a mass of smoking ruin, Queen Elizabeth gave a thousand marks out of her own pnrse towards the re.roofing of the edifiee, as well as warrants for a thousand loads of timb r from her woods, or elsewhere; but no attempt was mado to restore the spiro, King James found the fabric in an indifferent condition, and placed it in the hands of Inigo Jones, as we know; and after a timo came the fifth great fire, that resuled in its total destruction, and the ereetion of Wren's building.
Mr. Longman has pieked out a new path for hirusels in his acconnt of tho fabrio, white he has not neglected to avail himself of the efforts of previons historians. One of his first steps in a new direction is to challenge tho correctness of tho old views of the bailding (inolading Hollar's), and of the dimensions generally quroted. And another is to furnish a set of drawings representing the cathedrol as it really existed before tho last fire. The cost of the snccossive huildings, and the modes in which the noeessary sums heve been got together also furnish him with special aims. All this is not done withont the assistance of scveral collaborateurs. Mr. Edmand B. Ferrey has drawn up a list of the discrepancies in Hollar's plates to Dugdale's "Old St. Paul's." He points ont that one viow of the choir shows the outer mouldings of the arches almost touehing the triforium floor, and another leaves a considerable distance betwecn them; that eleven lays are slown in views of the ohoir, and twelve in the plan; thet the fignre of Thoras Kempe and the tomb of Roger Niger are placed in different positions on the ground plan to those in which they are shown in the viows ; that whoreas in the view of the north side of the choir, St. Feith's Cburch has but four win. dows shown, the ground.plan gives seven on the same side; that tho buttresses of St. Faith's aro made to project 9 ft .6 in . from the wall, while those of the cathedral above project 12 ft .; tbat six steps are shown in tho ground-plan as leading to the presbytery over. St. Faith's, white the interior viow gives but five; and so on through half a dozen further disagreements. The warden and fellows of All Souls' Colliege, Oxford, have permitted the publication of copies of Sir Christopher Wren's original drawings; and Mr. Gardner, of St. John's Wood, has ren. ercd service by placing his remarkable collec. tion of prints and drawings of London at tbo author's disposal. Out of this mass of informa. tion, and with the aid of all this scratiny, Mrs Longman gives a minnte deseription of "Panles" -not the Saxon church, bnt the second edifico, the old St. Paul's, in a word, that Mr. Harrison Ainsworth has shown us so attractively in the world of fiction, and that most persons thought

Hollar and Dugdalo had shown them faithfuly in reality. It was surronnded by a wall furnished with six gate-houses opening ont into Lnagate. street, Paternoster-row, Canon-alley, Cheapside, TVatling-street, and Carter-lanc. Within this boundary, north.west of the cathedral, stood the Bishop's Palaco; and on the sonth sido of the ohief building was the chapter honse. The preaehing cross was also within the eharchyard, as well as a charnel-bouse, with a chapel over it. The east and west sides of the enelosure wero claimed by the citizens as places of assembly for various parposes connected with their "folkmotes," and the defence of the city. The eatho. dral, which consisted of a nave, choir, and lady. elapel, all with north and south aisles, and tran. septs with aisles on the western and eastern sides, measnred about 596 ft . in length, aocord. ing to Mollar, bat 690 feet, aceording to Dug. dale and Stow, the latter of whom takes his statement from a survey made in the timo of Edward II., to whieh he had access. Probably the caligraphy of the scribes of those old times, which wo know to haro been often full of the most pazzling flourishes, may have led to the scoidental suhstitution of the figure 6 for 5 ; for, taking the lower estimate as the eorrect one, the bnilding would still havo hoen 66 ft . longer than Winchoster Cathedral, whieb is the longest in the kingdom. It measurcd $101 . \mathrm{ft}$. in breadth, including the aisles. The external height from the ground to ridge of onter roof to choir was 142 feet, aud to the top of the steeple 285 ft . The spire measured 208 ft ., or 204 ft ., if taken from the top of the parapet of the tower. Mr. Edmnnd Ferroy, who is the autbority for theso figures, bringe forward a new statemont. Io thinks that the height of the choir must have been greater than that of the nave. His reason for this assumption is thus stated:-
"Taking the diameters of the piers to the pare and cboir as data where the Ground.plan (the only plato
showing the cathedral, whiel is drawn to ceale) atided me, I eudenvared to build up tho 'levrations, $=0$, , using the ciammeters of the piers (ns aiso other approxizate mouns)
in the same way as classicists calculate their proportions by modules, Assorming tho talertable correct ness oi Hallar' $5=$ repreesentutions, the result of these recearches
Was to prove that the was to prove that the choir was higher than tho
nave.
 proporions indioated in Hicllar's interval views, it is
 above that of the wail. ribs. 1 If the raulting had been
treated in the more ustal English manner, the choir mout treated in the more usual English manner, the choir muntt
bayo been made eren bigher than shown."
The argument is not very conclusive, but wo let it stand for what it is worth.

Built close against the cathodral, on the sonth. west side, was the parish ehurch of St. Gregory. Under the cloir was the Chureh of St. Faith, and adjoining tlis was Jesus Clapel. Theso two estahlishments were in tho first instance above-ground, like St. Gregory's, but were transferred to the crypt, to admit of the enlargement of the cathedral in 1256, whioh arrangement caused Fuller to descriho St. Pan?'s as "truly the mother church, baving one babo in her body,-St. Faith's, and another in ber arms,--St. Gregory's." Besides these churchos, there were several ebapels in or near the cathodral. Two were in the building, on tho north side:; ono of whicb was known as Sherrington's Cbapel, because founded by him; and the other the chapel of the Holy Ghost. Another-wns in a cloister on tho north sido of the chnroh, called Pardon Chyrohyard. From the fact that the ereetion of tho fabric had procecded slowly, through two centuries, indoed,-the style of architecture, which was Norman to begin with, gradually changed to Early English, and theace to Decorated. Standing at the west end, and looking eastwards, the cye was captivated, on the right hand and on the left, by on arcade of tweaty.five arches, whereof twelve were in the nave, sppported on Norman pillars, and twelve were in the choir and lady-chapel, supported on clustered columns; and standing between the piers of the central tower, the cyo conld follow northwards and southwards, on the right hand
and on the left, arcades of five arches. Orer each arcade wero a triforium and clearstory. Across the choir, at the west end, was a rich, screen; and high in the gable of the east exd was the beautiful rose. Window wo bave mentioned. Around were the tombs and monuments of many illustrious persons
One chapter of Mr. Longman's work is devoted so curions custouns and incidents connected with Old St . Paul's. TVe are thus reminded of the horse that climbed up to the top of the steeple, nmong other matters; of rope-dancing on the hattlements ; of a Dutchman on the weathersock; of a man whose car was nailed to a post elose to the bishop's palace, and then cut off, because he had made "a fray in Powlles Chyrche"; of lawyers conferring with their elients at the varions piltars; of lotterios; of assignations; gossipinga; bravvings ; and pickpoeketings without number. Mr. Longman is prolably wrong, however, when he thinks the froor was laid out in walks,-" the soutb allcy foor was laid out in walks, " the soutb allcy for one purpose, the north for another,"-for,
thongh, douhtless, desecrated in the manner described, they must have been laid out with described, tbey must have been laid out with
very different intentions. Dean Stanley's recent very diffcrent intentions. Dean Stanlcy's recent

oxpression, "middle tread," for a central disoxpression, mardie tread, for a central dis(inguishing mark in an anbonatory, for the pur-
pose of aiding the regularity of a procession; put no evidence is brought formard as to the axistence of any thing of the sort hicre. Tho
whole of the nive is spoken of as the "middle whole of the nare is spoken of as the "middle
aisle," and called Paul's.walk. It appears to have becn used, after the Reformation, as an exchange for the transaction of business, and promenade for the dissemination of news. A dozen old writers concur in picturing it as the
resort of half the idlers in the metropolis, in. resort of half the idlers in the metropolis, in. oluding those nirrors of the times, Shals speare
aud Ben Jonson. In and Ben Jonson. In 1658 , Francis Osborr, writing of the reign of King James, said, - "It was the fashion of those times, and did so con. tinue to these, for the principal gentry, lords, commons, and men of all prufessions, not meerely meechanick, to meet in St. Paul's Church by eleven, and walk in the middle ile till twelve, and after dinner from three to six, during which time zome discoursed of husinesse, others o newes." Weeter, in bis "Funeral Monuments," ponld not refrain from complaining of the walking in the midalo aisle during service. Bors, nursemaids, and children mado it a regular playground, expecially on Sundays, when they kept the fun ap till dark. Proclamations appcar to lave had no result in abating tho nuisance. S unlike a Christian cathedral had the bailding become, that a proposal was set on foot to con. sert it into a synagoguc.
It is carious to note the effect of this disrcgard, combined with the change of taste in architco. tural matters, as time went on. One Master Farley importuned King Jomes for eight years before he could inducc lim to take any measare forits preservation, and then another bight years elapsed hefore mnch was done. Charles I . issued a new commission, which was more popnlar. Sir Paul Pindar, a London merohant, who had heen sent as ambassador to Constantinople in the preceding reign, contributed as mnch as $10,000 \mathrm{l}$. towards the repair of tho fabric, and
subscriptions flowed in subscriptions llowed in from all parts of the
ceuntry. In seren years, the sum of 89,4890 . ceuntry. In seven years, the sum of 89,4806 .
was collected, of which nemly 10,0001 . were was collected, of which nenly 10,0001 . Were
awarded to persons whose housces were too close to the cathiedral, and were consequently demolished, and about 68,000\% expended upon the nave, choir, and west end. But the national troubles soon caused the cessntion of this liberality; and the emall Eum of $15 l$. ouly was Chaceired for the restorations in 1Gi4.3. When Charles II. ascended the throne, the edifice was fonnd in absolute ruin, and fresh steps were taken in its behalf, Another subscription was started, aud a book prepared to makc record of the promises and pasments, as in the previous reigos, which book is still prescrved in the Jihrary of the cathedral. King Charles, we may read in it, pronised 1,000 . a year, to he paid quarterly. Mr. Longman quotes a dozen of the most interesting signatures; but we must pass Gothick rudeness of the old design" When "the mas appointed architect to the fobric, bo did hot nt first propose to take it all down ; but at very early stage of the proceedings he sumgested that it would be well to cut off the inner coered of the cross, and "reduce this midale part into hemispherical roof,", and place with a cupola or 3 lantern with a spiring top. Before anything
was done, however, oame the Creat Fire, and when Pepys went out to see the extent of the calamity, he saw, the " body of the quire fallen into St. Fuith's." In his surveys of the doomed building, Wren speaks of some of its features as a heap of deformities, and of the fabric generally as ill-designed and ill.unilit. However the old masons were speedily avenged; for came under the fire of adrerse critics, Strype in his edition of Stow's Survey discharced of the first shots. "Let ansholy thro one of St, Paul's from of tho neichlbourio hills," he says, "and he rill instantly discern that the huilding is defective, and that the form of a cross is more favonrable to superstition than to beauty; he will easily see, at lenst, that the dome, in its present circumstance, is alundant? est more splendid decorations than the east." We splendia decorations the eas
We large sums tho mode of gathering togetber the large sums of money acquired for the cae cation of the successive buildings takes a special place. The Soxon church was endowed hy its founder with the Manor of Tillinghan, in Essex, Which still furnisbes fonds for the repair of the present edifico; but there is no record that there were any means taken to defray the cost founder, Ethelbert, King of Kent. The funds for the second edifice were contribnted by "good people,", whose bounty was stimnlated by letters of indulgence. Bishops wrote letters to the clergy under their charge, recommending the work to their congregations, and granting indul. gences to those who persuaded others to contrihute, as well as to those who contrihated themselves. A whole boxful of these letters is preserved in the library; hut there is no account of the sums raised. The means for the tions, penance, proportion of the commintations of pounds before their consecration, and a similar sum, instead of glove-money. The king's pro. nised 1,000 . per annum appears to have dwindled down to two sums, viz., 52\%t. 1s. 3d., ont of fines aud forfeitures, and 1,627l. 9s . 8d ut of arrears of impropriations
Mr. Longmau has a word or so for the future of St. Paul's, or, as he expresses it, following the wording of the documents of Wren's day, the "adornment" of the huilding. He adrocates variety of colour, and gilding. The variety of colour should he produced in the come, and in the cupolas of the side aisles with mosaic work. He adds, cautiously, "whether the form of marhle incrustation introduced by Baron de Triqueti, which seems admirahly adapted to fat and even surfaces, under certain circumstances, would he suited to St. Paul's Cathedral, is a question for the architect; but it can hardly be douhted that deserves his consideration," No extravagance norshign representing peculiar ideas as to pavement will forme will be approved. The general treatnient The question of scolpture is not gone into, nothing but a slipht general glance at the materials at command heing given The recovery of the Prommand heing given. national thanksgiving in consequence of it, gave kirth to the feeling that it was desirable to make some permanent record of the puhlic joy. Hence the renerral of the long dormant sclieme to pro. ceed with the adoranent of the national cathe. dral. The amount suhscribed for this purposo up to March of the present year is quoted by Mr. Longman as about 56,000 ?
Tbere are upwards of fifty illustrations in the book, some of whicb are taken from prints in the Cardner collcetion, and others from Wren's drawings, as we have hinted. Wo reproduc two as specimens,* and we may look at Mr Longman's volume on another occasion from different point of sight.

Sanitary Matters in Bedfordshire.-At recent meeting of the rural sanitary authorit Bedford, fully reported in the local Times, boronch analyst, rrior, the officer of health and borongh analyst, was read, disclosing a bad stat or matters in several cottages infested by enteric or typhoid fever. They are situated heside raveyard, and it is feared the well-water snplying thens percolates partly at least from the graveyard. The rcporter was requested to analyse the water and report again.

## ARCHITECTS AT DINNER.

The annual dinner of the Institate of Britis Architects took place on Saturday last at Willis Rooms, King-street, St. James's. Sir C. Cilbe Scott, R. A., presided, and amongst the gentleme present were Lord Elcho, M.P.; Col. Hogg, M. (Chairman of the Metropolitan Board of Works) Francis Crant, P.R.A.; Sir J. Cilher Messrs. A. Waterhouse, C. Barry, T. H. Wyat B. Ferrey, Hawkslcy, C.E., G. Vulliamy, ] C. Penrose, E. Sharpe, H. Currey, D. Brando E. Christian, E. P'Anson, Horace Jones, C. Easthke (secretary), J. Turner, R. J. Wither P. Cockerell, Matthew Wyatt, \&c. M yrton, M.P. (hise Commissioner of as unde to fulder his promise to attend.
The chairman, after grace, said,-The fir toast among loyal Englishmen is, and alway was, and always will be, the same-our Sovi
reign; and if this is constantly aud enthi siastically drunk in erery company, how muc more onght it to be so drunk by a societ ike ours, which, hy the special permission of t Qucen, calls itself the Royal Institute of Bitis rchitects,-hy a society which is commissione by the Qucen annually to advise her as to th appropriation of an bonour which she herse has a warded to those who are considered by thi Institute most worthy of it in connexion wit our own art. I therefore proposo to you th health of our great and gracions patron, th Qucen.
Tho toast baving been enthusiastically bowourec the chairman proposed the healtb of H.R.H. th Heir Apparent, of tbe Princess of Wales, whor everghody loves, and of all the Royal Family doast was also heartily received.
Mr. Horace Jones proposed "The Army, th Nary, and the Volunteers." Whilst giving t their neighhours and friends full credit for thei and valonr, Englishmen held that Fame ha written upon her roll no greater deeds of ski and valour than our army and navy had acbievec There was a third force which claimed a shar in the toast, in connexion with which many o them could perhaps recollect having played part in fruitless campaigns at Wiwhledon or th Surrey hills. Nor was it to that alone that the: owed the "fellow-feeling" that "made then wondrous kind." There was amongst the volun teers a system of almost fervent competition and be honestly and earnestly dcsired tha the system of competition amongst architect migbt produce no more heart-burnings than i had produced amongst volunteers. He referrec as an illustration to the competition betreen the three kingdoms for a well.known shield, whicl he trusted pight this yenr again return to the metropolis ; and in conclusion compled with th toast the name of the donor of that shield-Lore Elcho.
Lord Elcho, M.P., in responding to the toast aid he was not aware until a few minutes pre viously that he shonla have to return thanks for say, that he of all men later in the evening would base to fill men later in the evening than a the Hows of conmes and rcturn cluded his name wase of Commons. He con. because name was coupled with the army not in cons he was a member of that protession, but day cusequence of the fact that he had heen that personal review at Woolwich; and from hes one brauch of thon bo conld say that at leask was in a state of extreme good health and thorougb efficiency. Nothing could have been more perfect than tbat review; and he hoped the castern Potentate who witnessed it mould elurn to ais own country greatly impressed with Artillery of the army, and cspecially of tho Antery, of England. At the close of the review, the Shah had tbo cboice of thirty-six. Horse Artillery, offered him, and he close of them, which would return with him to Teheran. Many persons thonght that a great deal remained to he done to make the arny! perfect, but as regarded the Artillery, the country might congratulate itself, not only on its cfficiency, hut also on the increase which had, taken place daring tbe last twenty years. Without wishing to do any injnstice to the efforts Which had been made hy the Secretary of State for War, be must say that he considered every. thing to be extremely uneatisfactory, and more espccially whi reg ad bersion eervice of Which be bad been for fourteen years a memher. There were at the present noment
2,000 volunteer commissions vacant, and tbere 2,000 volunteer commissions racant, and tbere
were 11,000 ferter rolunteers tban tbere were
st ycar: He was not sorry for this, becanse bolieved the first thing that would teach this ation that there was something rotten in our ilitary organisation, was a falling off to a very oxtent in the volunteer force. Architects ho had to design a heautiful huilding knew at it must not only be heautiful, but suitahle
 ation, the stones must he kept together hy ortar or cement, and the building must have es in various parts of it to keep it together
rell, our system of military organisation mas heautiful, but he knew that in the opinion of ilitary men, this new structure which was boing ised, had no fonndation, no cemont, no mortar, uld give foundation to the huilding, hut the ald give foundation to the huiding, hat the ommons for it, viz., somo form or other of com. lliory service. Having " a streak of silver "a" botweon ns and our neighhours, we could ot require compulsory service for the army, peoially as the men were sent out to India,
amaica, or the Cape. But something of the amaica, or the Cape. But something of the ad was reqnired for the reserve forces to cheak ad to make the volunteer foree what it is not aw, -a foree upon which the country could a moment's notice
Mr. C. Barry proposed the toast of "Art and cience," conplod with the namos of Sir F. rant and Mr. Fawksley. Few words were eception, hut the toast itself, and the names ssociated with it, demanded some few words
om him, which it would he almoet disspectful for him not to utter. Taking Art first 3 the greatest, which it would naturally in that room, he could not help allndiag to position wheh Sir Francis Grant so worthily $t$, in this country, and by virtue of his office of resident of the Roynd Academy, as the representive of art everywhere, Having the plea o knew that although he was a painter he al also sympathies with architecture, which ould especially reoommend him as the respon ery parallol character to that of the late pre dent of that Institute, Mr. T. H. Wyatt. That arallel consisted in the kindness and nrhanity, igh positions to get over all the difficul. es of those positions, which preventod them om losing any friends, hut, on the contrary, anded thom to gain fricnds, and thereby to ossibly have in the exercise of their art-the tempt to make that art more perfect, more mo more genial. The other hranch of the ast was worthily counectod with the name of fr. Hawksley, who not only was a man of minent science and an ougineer, but who ranch of his profersion, which was of that reatest possiblo ntility, viz., that of supplying 10 people with pure water, and securing for nem good drainacro; and therefore they owed or his labours. He (Mr. Barry) had the lonour $f$ entertaining Mr. Hawksloy a fow nights ago nd that gentleman was called npon to return ankis for the tonst of science and art; hut core diffident, and expressed a sentiment upon hich many gentlemen in that room would feel trongly, viz., that hoth science and art onght ti aily life and professional studies than they eemed to have heen. When he lookod upon he grand opportunities which the engineers in d and other countries had, and must have, ude of works they had to deal with, and the omparatively unlimited means to which they, imple architects, were almost strangers, he ould not hut regret that the study of art as
uoh was not more recognised in the early ducation of men who had to fill posts such a hat of Mr. Hawksley, and did not form greater art of the contiunous study of their lives with which thry were at present identified.
Sir Francis Grant, in acknowledging the toast rid: - I assure you I feel very highly flattored lame with art, and that compliment is especiall aluahle as coming from a hody of arehitects
for I feel that we are brethren and fellow. labourers in art. Mr. Barry has very jnstly said that althongh I am a painter I can appreciato architecture. I honestly confess that I think there is no department of art more important than,-perhaps nono so important as,-archi ture. The painter may paint upon a piece of canvas a fino pioture to adorn a gallery; tho portrait-painter may band down to posterity the likenesses of the illustrions men of his day, and the landscape painter, if he has something of the genius of the famous Constable, can represent the heanty of the green fields of dear old Eugland which must he so refreshing for the eye of the wearied man of husiness to look poon as it hance on his walls. The sonlptor, if he be a cleve man, may give life to inanimate marhle, ani may create a heantiful figure to adorn some corridor or gallery which has already heen corridor or gallery which has already heen
rendered chaste and heantiful hy the geuins of the architect. But when wo contemplate great works of architecture, for instance, Westminster Abhey or St. Paul's Cathedral, or any of tho other great works whicb are well known to exist in this conntry, we eannot hut feel that the hest exertions of the painter and sculptor are dwarfed into insignificance in the presence of those mighty and magnificent nomuments. I am glad to be allowed to the vast improvoment which is now taking place in the architecture of the metropolis. A few cars aro it was a reproach that London was mily a huge assemblage of hrick houses and warehouses. Now, wherever we go, whether to the City or to tho West End, wo sce noble structures whicb do honour to the conntry, and Ifirmly believe that in twenty or thirty years through the exertions of the architects of this country, London will bo a city of which the country may well be proud.
Mr. Hawksley returned thanks on hehalf of scionce, atd, after some himorous remarks, stated that he had never heen alple to sce any eason why cngineering should be dirorced from architccture. He hel-eved that by-and-by the ocoupation of the engineer wonld again he anited to that of the arohitect. He looked upon his profossion and the gentlemen engrared in it as the ephemerisms of the hour. They were called into existence simply hecause science had discovered something of which the archi ects of the fommer ages had no knowledre, and in which up to the prosent hoar they had taken prohably vory little iuterest. New modes of construction had heen discovered by engiteers because metallurgists had been able to prosent hem with materiuls which architects had hee wonly not accustomed to use, bat even almon po to the present period disinclined to use. Mad rchitects heen disposed to work otherwise than in hricks and stove, or with coment and mortar sprung zo as a separats and distinct body of scientific men, and architects wonld have been the great bridge-builders of the day. Ho was obitects would only pay attontion o what chemistry had done for the metallurgic arts, and would apply themselves along wit the sew matearials and thes, to the uses to whic manship conld he anplise new modes of work manship could he applied, there would then he no long $r$ any distinction hetween the occupa. honoured art in its every hranch, and, althongl 0 was no artist bimself, yet in tbe execution any works which he might he called upon to perform his first thought was how to do those works so that they might not be a disgrace to artistic taste. It had been well said that it was he husimess of the architect to beautify the own, and that it had hecome the business of the engineer not to heautify bat to "uglify" the country. He hoped engineers had far removed themselves from that disgraceful position; hat as they removed farther from it the closer they vould get to the arohitects, and he hoped the time was not far distant, -and he was convinced it would ultimately come, -when the engineers and the architects would no longer he distinct races of professional men.
Mr. Vulliamy next proposed "Tbe Two Honses of Parliament," coupled with the name of
Lord Elcho, who, in returning thanks, observed that ho helieved be was taking the place of one of her Majesty's Ministers, the right hon. sentleman who wase at the head of the art of this country, viz., Mr. Ayrton, and perhaps he ought therefore to speak a little as Mr. Ayrton would do. Now, some
that the gentleman who held the office of First Commissioner of Works should hare some know. redge of art, and that the appointment to that officc shonld not be made a matter of miere party or political convenience. He ahsolutely disputed such a doctrine, and if they would look to the result of what had occurred of late years, they must he satisfied that he was righth in holding tbat position. Some people held that it wonld be desirable to have competition, that architects should be invited to send in designs for puhlic buildings, and that the publie should have an opportuuity of judging of such designs when they wero settled and arranged. He absolately hisputcd such a propositiou as that. In the case of the Natural History Museum, atter the design ina been adopted, subsequent to a c nation by Mr. Fergussou aud other distinguished intontects, the architect died, and it was put nto the hands of anoluer genleman. Tuo public apporturity of seing the bad hey had no pportumity of seeins de subtituted one; for at the only exhibited iu che hose di comniona plained : he thought the public was unjuat. But priccs had altered, and tbo design bad to be ameuded, and now a building wes going to be crected, the design of which none of the public had seen. He knew that there were complaints, hut ho did not think it was desirahle that the pub. hic, who had no right to furm an opinion upon such matters, shoald have an opportumity of judging of tuis huilding. ("Question.") Upon the Now Pust-oftice large sums werc being expended, yet neither the pahlic nor the Honse of Commone had scen the design. That was tre way which there questions had to he dealt with by the present First Commissioner of Works. A memorial had been prepared hy thie In=titute of British Architects-in every word of which ho cordially agreed,-aud presented to tlie Fir:t por derahle upon these questions of theat public works, whether by corporate bodies who had to go to Parliament for Parliamentary powers, or works requiriug grants of puhic choose the designs, should not he left to political or party convenience or interest, but that there hould be a permanent hody in this country which e adviser of the person to art. That he helicued to be a sound and in dispntahlo position. The Royal Institute of Arhitects was so sensible of theaboninations thas were perpetrated in the metropolis in the way fyrchitecture-whether by railway bridges, or Cannontly stations, such as chartug-cross or necessan hould yat somebling liko the oreign system there slould he exercised orer great puhlic here shoald he exercised over great puhtic arks some syte of Parkentary control such Select Commone select Committee in 1869, and that there shonld be models and designs exhibited for the public executet in hrick or stone. ""No" ") If were were such a hody, composed of the president of that Institute, the President of the Society of Eugineers, the President of the Royal Aeademy the Chairman of the Metropolitan Board of Works, and a represontative of the Ciry, he would ask his dissenting friend whether he was orepared to say that such a hody would not be ikely to bring ahont a better state of things than he haphazard happy.go-lucky, ramshackle stule of things which exissed at present. If Nurthamberland House was to he pulled down, was in a great measure owing to the evidenco given hy this Institute of Architects, for be was hhle to say, as a prelude to hetter things, and in hope that the memorial to which he had referred would he adopted, that what weighed most with the committee was the evidence given before thom hy such men as the late President of the Institnte and Mr. C. Burty. He considered that good had been done hy the agitation, and he hoped that not only Committees of the House of Commons, hut Her Majestr's ministers, mirflit be inducod in future, upon questions affoctions the architecture and the heanty of the metio polis, to consult intelligent, enlightened, and alle men, such as those whom he saw arouta liza is regarded the House of Commons generally, he hauked them for having drunk its healtl? Nthough that body was diffident in its opiniun ipon art, and eccentric in its action,

The readers of the Builder, at any rate, are acgnainte
asked to rote upon tho question, he bel eved it
wonld decide in faronn of tho establishment of some snch course as was sucgested hy the me. morial of tho Institute

The Chairman noxt proposed "The Visitors," and said he had hoped that the Firat Commis. sioner of Works, who had been perhaps some. what harshly treated in the last speech, would have been prosent. He shonld then have divided the visitors into two classes,- Mr. Ayrton, as the reprosentatire of the Executive; Lord Eleho, as representative of the House of Commons; and Col. Hogrg, as representative of tho Motropolitan Board of Works, wonld have symholised the autherities of this conntry. Mr. Ayrton being however absent, he (tho ohairman) did not ventare to say anything upon that subjeot, except this, that in all ages of tho world the remains of the architecture of every great period and of every great country had become representative of the Governments, the authorities, and the potentates of that country and that rities, and the potentates of that country and that
time; and he woald venture to express a bope that the existing authorities would take care that this reign of Queen Victoria, and the presen perioul especially, should be handed down to fatareages, to glory and honour, by the imperish able and noble works of architecture whioh it should produce. The second olass of visitors to whom be would refer were those who represented very eminent and important hodies,--the presi dent of the Royal Academy, as representingart Sir John Gilbert, as another representative of art he being the president of the Society of Puinters in Water-colonrs; and Mr. Hawksley, as tbo representative of the constructive portion of art. He earnestly hoped tbat those in authonity as guide in carrying it out, would make it their great object and study tbat the architecture, the ant ard the constructive power of this country should hand down our age to futrico generations to bowonr, as represented by tho prorks whioh be trusted tbis geveration would be the means of creating. With the toast ho coupled the namo of Col. Hogg, M.P
Colonel Hogg, in responding to tho toast, expressed the pleasure which he, in common with the othor visitors, experienced in being present on that occasion. He had been done tho high honour of being asked to propose tho Bert toast, "Prosperity to the Royal Inskitute of the distinguished president, Sir G. Gisbert Scott mav who had preseminently Gade the natt of the British architect famous thro the name world, and who had devoted his genius and taleuts to the great and noble work of restoring to their pristino state of beanty tbose great and to their pristino state of beanty tbose'great and mrand old catbedrals, which were ereeted by the piety of our ancestors to the honour aud glory f God. Great and noble were sucb whas any arcbitect to bo employed apon; but to come down to humbler subjects, what would the infabitants of a oivilised conutry be without arehitects? They might have to wander ove the oountry like Bedouins, or havo notling but wigwams to live in. There was a peculiar connecting link between the Board orer whom he presidorl aud architects, especially in London; for that Bonnd had to effect inprorements which they thought might conduce to the benefit of the citizens at large, of course with due regard to coonomy and to the preservation of ancient monumenta, which no mar revered more than himself. Animated as he was by constitutional feolings, be would never be the man to lay sacrilegrions hands upon ary old manument if he did not think tbe public convenience imperatively demanded it. With regard to the Select Committce of the House of Commons whicly had been referred to, he trusted tho architects sonls that their evidevce alone oariod the Bill; for it was the comhined aud valuable testimony which was given from all cuarters that made a hostile committee give a rerdict in favour of the 1 sith . A clanse had been inserted which required that tho elevations in the new street should be submitted to the Council of that Iustitute; and he filt bound to say that be considered thant olanso uttenly unnecessary, that it was put in with very whatever, The Metropoijtin Board would however, carry out that provision loyally the two bodies, ho bolieved, woald so fulfil the duties imposen upon them as to mako them ereditable to London. One of bis reasons for entertaining a decided ohjection to this clanse
was that the arcbitect to the Doard was a memabe
of the Institnte, and was a man renowned in his forbear paying due tribute to the deart. Amonos their ranks they had had ono $\mathbf{x}$ ho was a valuahie collengo of his own at the Motropolitan Board und he was sure he was not doing wrong in saying how deeply they all deplored tho loss of Sir William Tite. Ho was rlad to congratrlate the Institnte on its incrensing nombers, and he hoped that tbey might continue to increase.
The Chairman (who was loudly cheered) saic I rise most sincerely to thank you, Colonel Hogg I rise most sincerely to thank you, Colonel Hogg,
for the kind may in which yon have conpled my health with this tonst. I would say very little on this score, for the moro any ono knows of his Institute the more convinced he will b rts. I thinl. I need hordly var, 一to raise the misht apperr like boastiny say any more, as it might appenr like boasting of ourselves, nearly hauk Colonel Heseng mers of tho Irstitnte. I hauk Colonel Hogg very much for having spoken in such laudatory terms of the president of the sister Institnte to that which has sigualised itself by some extraordinary works. may mention the donble work of purifying ou reat river and making it a great ornament to Ins metropolis. Had I been president of this Instituto at the time when tho qnestion of Northumherland Illonse was brnught forward, should not have agreed with Colonel Hogg. regret very much the decision that has been arived at, for we bave few enough publi buildings in this country to bear the loss of ono, though it may not be in itself a building of very xtrmordinary merit. I tbink the great object wo slould have in view is to presorve anything ike a puhlic building in this metropolis, and I would destroy none unless compelled by great nocessity. Beyond that I would add nothing, int having said very little about the visitors it One thing that I would say is this, that whatever faults onr Government may have fallen into i respect of public haildings, tbey are not all to be saddled upon onr present First Commissioner building of the Post Office; it whs all arranged I belisve, entirely by lis predecessors; aud I think a great many othor things have come from the Treasnry and otber sources, througb him as their representative, which havo not been his own acts. So far as I am concerned myself, must say that I owe him a debt of gra
his urhanity, conrtesy, and kinduess. his urhanity, conrtesy, and kindness.
kindred provincial socied the health of the kindred provincial sociotios, which were effec tually aiding the Institute in raising the statn mend prorossion. He wisbed also to recom mend tho Arcbitects Benerolent Society

> tention of the members of the Tustituto Mr. I'Anson briefly replied on bohalf provincial sonetiety replied on bohalf of the clams of tho Benevolent Society, detailing one or two pitiable coses in which assistance bad Mr. Ewan for nud granted.
Mr. Ewnn Christinn also oppealed on bebalf of the Benevolent Society, urging that its sphere ant of funds.
Tho Chairman said he thronght all present could not do botter than rospond to the sugges tiens of Mr. I'Aason and Mrr. E. Christiau. Ho would suggest that each member of the Institute should inorease lis suhscription to the Bemevolent Society in proportion to his ability rio 80.
The proceediggs then torminated.

FROM THE TIENNA INTERNATIONAL EXBIBITION.
AFTER spending twelve days in carefully study. ing the various wronks sliown in this great Exhibiion (and great and consequently tiring to ono vho has to study its contents it is), I commence o fulfil the duty for which you bavo sent mo here; namely, that of calliag the attention of onr readers to whatever I regard as of interest importance to my fellow architects.
The day was when the arcbitect designod not only the plans for a building, but also the pat. terns of the various housebold ntensi's-of fur. niture aud brass work, of vessels of clay and of iron, and of haugings and rngs, -and while that day bas long sinco passed, it is yet again recuring, and bonses in which the taste of the archinot nuw unkuown amongst us, and their number ot nuw unkuofn amongst us, and their number
fanailiar with whatever is new and artistic in the way of furniture, hangings, floor-coveringe and whateve
In this, my first report, I sball call attention to a series of lictle things that-appear suggestive of improvements rather than attempt a roviow of what is offered in competition for hononrs in any one class; and my own feeling leads me to shun the erdinary methed of review in most cases, and that for many reasons, but notably for these :-First, a review should be instructive to tboso who have not speciadly stadied the class of objects considered. Secondly, the re iewer shonld give a reason for the faith that is in him ; and, Thirdly, reviews are beooming such hsard nonsense that to all tbinking persons they are often worse than displays of folly But reviewers are only human. A men in a strango land, withont friendly, gladly forms an acqnaintarce with a fellow-countryman; a friendship springs np; it becomes strong after dinner; and as the reviewer (a)thongb generally a man of great literary ability, and witb the marvellous quality of being able to writo an interesting articlo aliko on anything or nothingr ) is often trangely ignorant of tho snbject of which he has to treat, the undue and anwarrantable influence to which the has heen subjected leads praise (in some cases lavishand oft repeatod) heing hemped mpon displays of manufactured goods whioh are mevetricions mathor than meriorious in character, while tboso which are new and of geat excellerce are passed unnoticed.
I am obliged to make tbese remaris, for may bservations will at times appear so contrary to hose made in some instances by the daily press hat they conld scarcely be remarded as correct, vere I not to say what I havesaid. Withont for moment insinuating that undae pressnre, or anything but just motives, brought about such remarks as, " Mr . - has a carpet or two at would be obliged to anybody wbo will norm them where they can meet witb their match." Speaking of quite an ordinary and common-place Brassels carpet, sucb as can be equalled, if not surpassed, in almost every shop in London, a reviewer says,-" The carpet in this room is a contrihution from the atelier vay." A crain, spena is a chef.derere in its ne oxhibiting firm which the reviemer plenses o coll rooms, "In one of these call roor hi han n inluid oaninet,-cheap, vary cheap,-only our tbonean guneas! bat neverth of he modern wouders of the world. Austrian, talian, and French cabinetmakers, past-masters of their chit, co it s, Suchly, and finally take off their hats to
such overdone reviows as these can only have an injurious influence both upon the indus. trinl arts of England,
who are thus noticed.
ho are thus noticed.
One notable instance of ignorance on the part a reviewer occurs in the expressions bestowed upon manufactures exbihited hy a small English manufacturer, in such a manner 0.6 to lead any porson pisiting the Exhibition to regard them a. 3 home productions, while they are the finest works of the East. Not only so, but I learn from reliable authority that nearly every one of these bearLiful Eastern carpets was professionally selocted for the Exhihition by a well-known oramentist, at recent International Exhibitions. Unless our reviews are of a different character from some that have already appeared, the progress of our art manufactares will be diffienlt, if not impos. aihle. If a mannfacturer can employ an eminent ornamentist to seleot, and, by his influ. ence procure, the finest works of India, Persia, and Turkey; and these are to be brought into competition with Euglish works, and our reviewers aro to lavish praise upon them as native productions, all competition mnst oome to an ond.
I have been obliged to make tbese observa. tions, as I have before said, or I should appear so contradictory in my remarks as to be perplexing to tbose who have read some of the current reviews of what I am to write of; and I ask that it be borne in mind that 1 write as an architect, and not as an ordinary correspondent, nor as a manafactarer. My observations will bave reference, almost exclusively, to the art and atility of the object; for utility must always he combined witb heanty in the case of articles of furniture, ratber than to any other merits that the works reviemed may possess; and I ehall not especially consider the method or perfection of the manufactnre
I have said that tbis paper shall be general

It where shall I commenco in an Exhibition so git at the east, or the wcst? Entering at the stern end of tho building, at my left is Turkey, my right Japan. In Japan I find intercsting binets, and many objects of many kinds; but
lat hero attracts me is the simplicity and stuess of stucturo which these cabinets pro-nt,- their picturesqueness being duo rather to naint disposal
Most of these cabinets consist of only straight eces of wood, - a treatment by which a uximum amount of streagth is gained with the ust possible cxpenditure of material; for wool ren cut with the grain can be mach more no strencth is required. But besidne the aplicity and justness of construction displayed many of these works, I cronot help admiring 3 total abscrico of polish on most of these lished, yet a few have been renderen bright, ordor to meet tho caprice of a European te. The treatment of some of thoso oinets is strange to us , but quaint, intesting, and, in most cascs, beautiful. Iulays an irregular character are inserted into 3 work, and, especially barks of various
1ds, Sraooth barks, as those of tho beech, ids, Sramoth barks, as those of tho beech,-
th the common and the silver beech, - $u n d$ igh harks, both dark and grey, as that of tho ang oak, and of analogous trees, and these, icu nsed in combination with a just framing, oduco a very artistic and desirable result. Some of the plain wood cabinots are mounted th orvarment brass, -with large hinges, clabo-corner- pleces to the doors, -with attractive elests me is one of plain wood, of well-marked ain, with ornamental brass hinges, corues sces, and escutcheons, and also a serios of brass the surfuco of the work. Into thesocirenlar mositions, which chiefly consist of couvennally treatod flowers, little birds aro iutroced, sud these little birds aro tenderly wrought born, stone, pearl, or whatever is appropriate the colour desired: yet these are not strong ury, nre so snbdued in their treatment that yor look at the work closely before they are parent.
In another case $I$ observo a work in unpolished oll with open grain, laving the spray of a ant in gold laquer clinging to it in a truly namental manner. Mark, the treatmont is anmental; tho plant is "displayed," and that ado at jroducing an imitative rendering of the ant ; it is not naturalistic, ncither is it coarse; is teuder, relined, oruamental, and yet it clings the surface as a convolvulus to its stem. This is curious, that in Japanese work tho anifest zerain of certain woods is very pleasant a some casces the Japanese render the graiu peciblly apparent by eating away the pareuyman of the wood), while in our furnituro it is ierally to mo unpleasant; but tho reason of is is wo so use wood of strobg grain as cruse tbe form of the object to be hidden or parently destroyed, whilo the Japaneso never
so; wo use a figured wood thronghont, while so; wo use a figured mood thronghont, while
ey almost invariably frame a wood of strong ain with a wood of homogeneous character, aloss the ohject has a simple shapc-as a cube parallelogram.
The Jupranese also exhibit soveral works in rod of close grain, with a pattern, or fower, cut on them in the most simplo intaglio. There no elaborate ontting RTway of the gronnd so as leave the figure in relief, and no sacrifice of ion detail which should be cxpended upon the sembie of the object as a whole; but, on tho mplo cut, having the soctional form of the ter
an only groing to touch snbjects in this letter a butterily tonches the flowers,--I can only tial remarks.
In qoing through the Turkish Conrt, I was rminated in a hand spoon, the handle of which rminated in a hand with two fingers raised, and -mbolising the hlessing of the Deity as por. mbolising the hlessing of the Deity as por.
ayel in old Medicral rindows and manuscripts. t the centre of the spoon.handle are two Bjzan, no lilins, and theso rest upon a circular diso om which glory-rays procecd. In the Exhibi.
tion of 1862 in London, I belicco that every yooden spoon sent by Turkey, -and thero were the sym, -was of this gymbolic character, and is ropresented hy the lilies, and whose plory by tho rays, blesess tho food partaken of when the spoon is nsed. Bint here is the remarkable fact Constantinople, from whence they aro sent, bas been Mohammedan for centuries, and this aym. holic sppon must have origibated in Christian Byzantine art. This shows, in a most intevesting manner, how a traditional form may descend even through many generations, when the spirit of tho form has been not only lost, bat wonld not be-allowed to exist were tho significanco of not be-allowed to exist
In going through the European courta, Isce many fabrics, vasos, ive., bearing circular ore very beautiful ; but their crimin is of thesu are very lseautifnl; but their origin is traceshlo to a known bouroe. Eivery Japanese prince
has a crost or hadge, which is not only wronght upon articles in bis personal nse, but Which all his retainors are obliged to wear. The gardenors lere at the Exhihition, the carpenters the paperhangers, and, indced, all the Japanese workmen that I have seen licre, have a bndge of this description on their backs, and these badges are olmost invariably circular. The love of the heraldic insignia would engender in the wealthy admirntion for circular compositions; and a desiro on tho part of tho poor to possess what in its distant offect, at least, would appear like a crest, would canse them to give prefcrence to circalar compasitions, of an ornamental claafor the ir this way believe we can acconn Japanese portion of the Exlihition, and w Europeans have cop"ed from the Japaneec.
The Japaneso show metal vases and teapots of intorcsting charactor, but rotably vases, Which consist of belts of warious metals. 1 has bronzc, with silver inlay; then a band of tea-ur-n bronze; then comes green bronze,-like richly. corroded copper, in which verchirris is argely tone; then whito motal, and so on; and all these bands are carefully rivcterl torether, the rivets hoing of whito metal, and conspicans yot small, and thus colour-hnimony is nchiored in tho formation of a metal rase, Tho form o Spanish onion, surmonntel with a wiclely. Spanish onion, surmonntel
spreading funnol-ehaped orifice.
I am lengthy and discarsive, but I liko to writo of objoots from which wo can learn nothing

## THE ROYAL GOLD MEDAL

On presonting the Royal Gold Medal for Architectnro to Mr. T. IT. Wyatt, Sir Gilbert Scott expressed the great satisfaction he felt in
heing present. FLe was glad it happened that the award, sanotionod by her Majesty, ooincided with tho retirement of NIr. Wyatt from tho office of president. Mr. Wyatt's family, as all know, had supplied members to their own profession as well as to the art of sculpture for at least a century, There wero ten, to his own knowledge, wha had thus distinguished themselves; and he and lis hrother Sir Dighy Wyatt had worthily main tained the repatation of their fanaly. Another generation was beforo them, and he hoped that
their name minht be handed down to future renerations with, if possible, greater homon's Tho one characteristic which particularly distimcuished Mr. Wyatt, he considered to bo lis higli bearing and gentlcmanly fceling, by which hononr and dignity wero imparted to the profession. His works, tho presilent continued, comprise numerous churches and restorations of churches. In the former class I will only monthon one example, viza, tho church at Witon work which has the merit of introducing into this country the early style of Lombardy, with all its magnificence of matcrial and workman slip. The other work I would refer to is a restoration of the nohle minster or Wr. Wyate has also erected public buildings and institn. tions, including the fine Exclange in Liverpool and four assize courts, hesi ios lunatic usylnms, hospitals, and grals. After some further ob=erva the to the samo effect, the president expressed hand of the Institute in presentine to Mr. Wyatt this mark of their reartl ond admiration.

Mr. Wyatt, in reply, said,-Sir Gilber $\hbar$ Scott and Genticmen,-Though I certainly have had considerable practice during the last threo years in expressing my gratitude to the members of bill institute for acts and expressions of good ill and approval, yet I do not feel that on this occasion words come to my aid as I should wish most gonerous act - the bestowal of the highost profession home it in your or to to professional honour it is in your powor to give. But, gentlemea, if words fail me, I am not the pecioly pecally indebted for tho personally kind and ooks ond then have spocen of my orks, and the partiad and generous interpretaton you have put upon my actions, I know he how hitle these works in thenselrcs deserve the honour, and no one cark know so well as I ho how much I an indebted to others for what here is of merit in theso works,-I may, I believe, say with truth to faithful and attached assistants who have been long with me. In
judging these works, howevor, critics shonld bear in mind the rclative advantages thrat the younger architect of the preseut day has had over us of a passing generation. Bat, sir, if I annot conscientiousiy claim merit on the scoro of realised works, 1 can and do claim it on tho rouud of an carnest attachment to my proession, and a constant desire to raise in public estimation tho charactor of that profession. Like one of my predecessors in this honour (Mr. Fergusson), I was inteoded to be a merchant, and spent two or three of my early years in the Iediterranesu, tryins to learn tho beauties of cottons, coffees, and calicoes! I utterly failed in the attempt, and then my father sanctioned my trying my hand at that profes-ion which had always been my ambition. I need hardly say that a lengtbencd journey home through Italy and France confirmed my wishes and aspirations. From the first, sir, I felt that if it was ot in my power to realise great and meritorious vorks, it might be in my power to win the confdeuce and personal regard of my clients, of hose who entrustcd their interests to my care. further helieved that I might, by consistent and honourable condinct, also win the approval and goodwill of my professioual brethren. I am haukfnl to sny that in the first of these objects havo fully succeeded, and am proud to fecl hat in your award of this medal I have not filed in tho last. You have been good enough, Sir Gilhert Scott, to speak of the numerous members of my family who lave been archicets and sculptors. I cannot but feel a pride a being a member of a family whose tastes and pursuits had assocrated ficm with art in any form. Tho works of some of these (one in particular') have been critioised with much virulence, and little consideration for the thaste and fashion of the doy, which may have dictated much that he did. I can only hope that in somo futzre generation, when our works are measured hy some other tandard than our omn approval, and our own prejudioes, thoy may bo moro mercifully deatt with. One word more, sir, and I have firished. It has been thought by some, I believe, (by one t any rate) that as president I shoald not have accepted this medal so kindly proposed by tho council for your approval. Independently of there being abnndent precenent for such a repass pass the ordeal of the apyrovni of the Institute penaly; aod that I had no right to suppose I har by a safer guaraian of my own hat Fnstitute, and not of the council merels, and if tho Institnte confirmed that proposal, I mnst be relieved from all responsibility. Gentlemen, it dicl meet with your cordial and generons approval, na I have now only to say how fratefaly I graciously sanctioned by Her Majosty.

We mist mention an interesting supplement to the incidont just now deacribed. Ahont fifty fir. T. H. Wyatte personal and professional friends made a sranll eubscription, and purchased ome plate, which, after being properly inscrihed, was prosented to him on Saturday last. Sir expressed the kindly feelinges it was intended to conver and Mr. Wrett in 1 m masonec, shower how fully bo appreciated them M, 0 Nelson, who is alvars roeds to rire his time for Neison, who amays ready to give his time for friendly pare, he on the occasion, besides those already mentioned,

Mossrs. Christian, I'Anson, H. Currey, E. Sharpe Geo. Godwin, Cockerell, Horace Jones, Hansard Boulnois, Charles Barry, and others.

## GOLDSMITHS' WORE

The gold casket containing the address from the City of London to the Shah of Persia is of oblong octaron form, with a raised domical top, surmounted by tle ciric arms. "At the four corners of the base are knecting camels, on and lid are composed of pierced work in Persian and lid are composed of pierced work in Persian grounds, ornamented with flowers come back pearlsand other precions stones. Noopportunity pearls and other precions stones. No opportunity
to see the casket was given us, and we decline informing the puhlic on the authority of the informing the puhlic on the anthority of the finest work of the kind that has ever been presented by the corporation on any similar. occasion." The notion of employing four camels to carry on
otherwise.

## PROPOSED NEW RAILWAY ACROSS

 LONDON.In addition to the several railways which already intersect almost every part of the metropolis, a new project is broached of another line to extend across the middle of Londou from the eastern to the western districts. It is pro. ciple. Unlike the Metropolitan and the Metro politan District Railways, it is not to he an underground line, but to be carried oyer and level, on a priaciple which it is calculated will not in volve more than a third of the cost of the a viaduct on lines. The proposal is to construc screw piles, hy which a very small quantity of land will he required. The lencth of the propoect line is six miles strep the metropolis fiom east acrose the centre of mated cost of the Mr. Hamilton Fulton i: the engineer who bns designed the line.

## SCEOOL BOARDS.

hondon, - At the nsmal weekly meeting \& E. Howard, of $3 t$, Upper Gloucester. place, Marylebone, amountiag to 5,3057 , for tbe erection of a school to provide accommo dation for 570 children, Grove-road, Forest.hill, was nocepted, and also the tender of Mir. J. Tyerman, of 27 , Cranmer-rond, Brixton, amount. ing to 5,200 . for the erection of a ecliool to pro. vido accommodation for 802 children, Orange. street, Southwark.
Sheffield.- A report has been presented by the architect and auryeyor to the Board, show. ing the progress made in the building of the twated that the Attercliffo and Newhall schools wero completed, oxcept colonr-whshing. The Notherthorpe school was roo'ed, and in a for ward state. Thero was on difficulty at first in ward state. Thero was R difficulty at first in
getting wall stone. The Philadelphia school was getting wall stone. The Philadelphia school was of slaters. The Walkley scholl was progressing of slaters. Tho Walkley schonl was progressing
satisfactorily, the walls having been oarried ap to satisfactorily, the walls having been carried up to
the window-sills. Mlhere had been some delay in commencing the Atterolifies School, on account of the street drainage, and the depth of the foundations. At Grimesthorpe the masons were waiting until the level of the streets shall be determined. The Darnall, Lowfeld, Crookes. moor, and Carbrook schools have been com. monced, and the one at Pye.hank wonld be proceeded with shortly. Tbe report was ordered to be entered upon the ninates.
Leicester:-The architeots' committee report that they hare received the following tenders for the erection of the school in Elbow.lane, and they recommended the Board to accept the lowest tender (that of Mr. H. Bland), subject to the sanction of the Education Department:

The tender of Mr. Bland was accepted. The
diate steps, hy advertisement or otherwise, t abtain a suitable site in the neighbourhood of Majnard-strect. Mr. Barrs said that unless school was soon built on that site, they would have exceeded the accommodation for the 6,000 which they agreed for on one side of the town. The population on the Maynard-street side was increasing very fast.
Derty. The clerk reported that the Edacation Department had expressed their approval of the plans for the new schools in Nun-strect, forwarded to them for their inspection. Ho also "eported that he had advertised in the Derby papers, and in the Builder, for tenders for the erection of the schools. The clerk slso reported that the opening of the new Gerard-street schools had beon fixed for the 14th of July

THE ARCHITECIURAL ASSOCIATION IN THE TOWER OF LONDON.
Tha last visit of tho session was made on Saturday afternoon, thes bringing to a close the public bay inspections of important works and beginning of the year. The Toser of London was visited by one of the largest musters of the session, and the reserved sighte, not seen by the ordinary sight-seer, were shown. The party was guided by Mr. Iepworth Dixon, and farnished by him with historieal allusions as each notable spot was reached. The White Tower, from roof to basement, ivoluding, of course, the round. arched, barrel-vaulted chapel; the Bell Tower the Council-chamber; Raleigh's Walk; the new sadly hepewed and hegalleried ohurch, with its fino Blount Monament (now being cleaned) and ts Cholmondeley tomb (deserving carefal restor2 ron), and many another bit of hoyal ward ame in for a share of notice. The armour was inspected under the guidance of Mr. Planché, Somerset Herald, who followed through the ehronolorical series that owes its present in.
structive form,-indeed, a large part of its structive form,-indeed, a large part of its confused storerooms.
The collection, - not too rich anywhere, and very meagrely furnished in tho early portions, traces rouglly the main clingess iu plate armour adopted in order to repel the faried weapons that are here grouped round the conts they sought to deface, - the whole cartied down to the daye when metal amonr of all kiuds became ont of date. Mr. Plunché lad reason to Iament at each step the poverty of our national collec. tious in these illusirations of our nationa history,-alladiog to the dispersion of the Mey. rick collection with much regret. The highly combustible annexe, liable any day to complete destruction, brobalsy involving the rmin of all possess, was limits, which will not properly contain the suit in their regular reries. Notwithstanding all the defects and fallings short of what it miglit he there are too many precions things bere to allop any one to contemplate with an easy mind the ruinous risk ran day hy day. Sanguine people may indeed he comforted by concluding that so devious a hlunder must, in the nature of things, after so many recent warningr, bo corrected a

THE FREE PUBLIC BATHS, DERBY.
The Free Publio Swimminghaths given b Mr. Bass, as we have already annonnced, have been opened, after presentation to the Mayor on behalf of the town. There are two haths, which are hoth swimming-baths-one for men and the other fur boys. They are coustructed at th south-enst point of the Holmes, at the junction
of the Blill Fleam and the River Derwent. The of the Dill Fleam and the River Derwent. The haths are each 100 ft . long and 50 ft . wide, the depth of the maen's bath heing 4 ft . at the
shallow end, and graduating to $5 \mathrm{ft}, 6 \mathrm{in}$, at the shallow end, and graduating to $5 \mathrm{ft}, 6 \mathrm{in}$, at the
deepest end; the boys' bath being 3 ft , at the deepest end; the boys bath being 3 ft . at the
shallow end, and griduating to 4 ft .6 in , at th deepest end. Attached to the men's batk there are fifty-seven covered dressing-hoxes made partly to close, and other offices and con-
veniences, ench box being fittod with seats and veniences, ench hox being fittod with seats and
peg.rails. The boys' bath has covered hathing sheds to accommodate serenty-two boys, fittec with seata and pegrails, and the customar offices. The whole of the bathing.sheds ant dressing.hoxes are of cast-iron, panelled, wit the munogram M. T. B. on each panel. Tb haths are entirely separated from each other.
The attendant's office is at the north. Fest end,
and cominands a view of both baths from windows looking on to each. The building and the entrances and walls in the front are constracted There will ho bivo in an ornamental manner There will he two mural drinking-fonntains at the entrance to eaoh bath, and a clock with twa dials, one facing the playground, and the othen the new hatbs, will bo fixed in the attendant's
office. The swimming.baths are each lined with offce. The swimming. baths are each lined with white glezed bricks set in Portland cement, anc the bottoms are laid with Seyasel asplalte. A foundation of concrete is laid under the whole of the baths and baildings. The margins round the batha ure 8 ft .6 in , wide, and are laid with wate fork stone. The original scheme for "basin" at the Lone Bridge by \& 9.in. conduit through a filter into the haths, which are built at such a level that the water would run in at one end at the bottom and out of the opposite evd at the top, thus ensuring a constant supply and chaugo of wator, but owing to the inter. vention of the Canal Company, who considered their interests would he affected, the scheme was abandoned, aud each bath is now filled ance a wouk with clean filtered water, which the Derby Waterworks Company, owing to the extension of their works at Little Eaton, are coabled to do at a mere nomiual rate. The tire baths hold, together, abont 260,000 gallons.
The whole of the works bave been desigaed hy Mr. Geo. Thompson, the borough engineer ayd sarveyor, and carried ont under his super. andeudence, the entire cost being about $2,500 \mathrm{~F}$. Mr. Rubert Bridgart, of Dorby, was the cons Mr. Rubert Bridgart, of Dorby, Thas the cond
tractor for the whole of tho works, excepting tho ironwork, which was performed hy Messrs: Staces, Davis, \& Co, of the Pheenix Foundry: Derby

## STRIEES IN GERMANY.

A currous symptom of the present social cono dition of Germany is that to the many sub diviaions which aro distinctive of German news papers, another lias lately been added, that
called "Srike Ners." The space deroted te this subject is generally pretty considerable Amoncst the latest cessation of work we notice that of the workmen of the glasa manufuctory of F. Siemeus, in Dresden, who demanded a rise of 15 per cent., whiclı was refased. The naila smiths in Räbenar (Saxony), ceased work aboub six weeks ago. The masters have been obliged to grant a rise of 20 per cent.

PROPOSED TRSTIMONIAL TO MR, HENRY COLE, C.B.

A precrainary meeting of gentlemen, inte. esed in the promotion of art and tho industries of this country, desirous of recognising in some personal form the services of Mr. Heury Cole on his retirement from the direction of the Sonth Kousington Museum, has been held. There were present Sir M. Digby IV yatt (in the chair) ; Messrg. John G. Crace ; J. M. Dodd ; P. Le Neve Foster ; George Godwin; P. Graham (Jackson \& Graham) W. Holland (Holland \& Sons); J. C. Horsley, R.A.; H. A. Hunt, C.B.; T. Peard (Hart, Peard, \& Co.) ; J. Scott Russel!, C.E. ; G. Trollope (Trollope \& Sons) ; H. Woollams (W. Woollams © Co.) ; and letters of adhesion were received rom Earl Cowley; Mr. Edwin Chadwick; Mr. E. WT. Cooke, R.A.; Lord Elcho ; Professor Huxler: Mr. Beresford Hope; Lord Henry Lennox; Sii Stafford Northcote; Sir Richar'ă Wallace; Lord Clarence Paget; Marquis of Westminster ; Sir G. G. Scott : Sir W. Erirbairn; Sir Sarmel Morton Peto; Sir Titus S.lit; Sir Joseph Whitworth; Messrs, Eata Campleell (Minton \& Co.); J. Fowler, C.E. S. M. Hubert; J. Hawkshaw, C.E. Lewis \& Allenby; A. J. Slundella, M.P. John Penn; John Webb; Emington © Co. C. \& T. Lucas ; J. C. Macdonald; E. J. Puynter, A. R.A. ; George Smith; and many others.

It was Gearge Smith; and many others.
It was agreed that the gentlemen present, and hose in the above list, should form a provisiona Mr. J. G. Crace was requested to act as honorary secretary; and it was unanimonsly resolved:
"That baring learnt that Mr. Heary Cole has resigne the direction of the South Keasington Musexum, rhis recognition of his useful, enerfetic, and saried laboura, nd of th
A meeting will prohibly soon he held so as to bring the propozal before the public.

BIRD'S.EYE VIEN OF OLD ST. PALL'S, SHOWING THE SURROUNDING WALL, GATES, AND STREETS

INTERIOR OF WREN'S FIRST DESIGN (AFTER THE GREAT FIRE) FOR ST, PAUL'S CATHEDRAL.

TEE POPULAR ESTIMATE OF ARCHITECTURE.
On this subject, Mr. F. Chambers lectured at the Arcbitectural Association of few days argo. We give some portious of his very ncute address, and put them under headings, in place of their 1. As to Doctors and Architects.-Tbere is and that of architecture. They profess to preserfe the sound mind in a sound and healthy hody; we, to fit that body with a dwelling suited to its wante, and to adorn it as far as it is capable of ornament. They aim at repairing the ravages of time and diseaso upon the earthly hody; we desire to preserve and con.
serve the dwelling we hare desioned, that it shall endure and increase in beauty as in age. The doctor is au expert, - he has immost know. ledge of the details of the construction he has to work upon; for ns, also, a knowledge of the The medicus is not the chief workman, he deals with a thing created. The architect is, as far as man can be, a creator. Tho lonse first conceived in the nuind grows into being at the tonch of his wand, - a thing of beanty perhaps, bnt possibly a Frankenstein, - an abortive monster, to hurt and pain him ycars after its birth, to remain an
incubus upen him, haunting him, mpbraiding him even in his dreams. He cannot seratch it out, erase it : not even a recording angel can blot it ont, unless it fall of its own instability, or the mercifnl firespirit destroy it. The medicus guesses where he cannot sec, and if he makes mistakes lee slifts the hlame; the architect dare not guess, - a folse step once minde is fatal to his fame. The doctor blinders and stumbles in the dark recesses of viscera and cloncre, the patient dies, hut the much.cnduring Mother Nature bears the blamo. Not 80 with us; for architect that is dragged prisoner to the bar. It is on our defenceless profession that the favonr Wh the press has a specin tendency to burst. roofs, percolnting the slates, and spoiling the pipes bursting from the late bard frost, and inundating the bedroom in the pleasant darvo of a dark December morning; of the sararm of a dark Decemher morning; of the surarm of
saltatory parasites that detract from the mid. summer night's repose of Broadstairs summer nights repose of Broadstairs or of or the gas flickers ; if hrick walls on clay fom. dations crack; if the cook has caucht cold from slecping too soon in the now wing, or the groom
has typloid fever, probably from sleeping in an has typloid fever, probably from sleeping in an
anderground closet about the size of a cistem, underground closet about the aize of a cistem,
it is always the architeot that is transfixed by the spasmodic sentences of the irato pater. familias. It certainly is the popular impression that erery dwolling. honse has been designed by an architcet, and therefore that ho is the proper victim to erucify for every ovil that befalls a hosse. Ife it is that stands like
an evil genius behind the plumber mending an evil genius behind the plumber mending
a pipe, and guides bis hand to give a dig nit an. other near it that shall soon develope into a burst. He pats the pipes where frost assails them ; arranges the roof to retain the snow as it melts, in a sort of bopper, from which its only escape is throngh the cailing; or imitates nature by contriving a series of slopes that resnlt in an awalanche on the conservatory just as the azaleas are in bloom. It is the architect who places the ninrsery orer the best hedroom, in order that the pattering of pink feet may oncourage in our risitors the cood bahit of enrly rising. He locates the kitchen so that the preliminary smiff of cookery may give the guests that general prophecy of the nemu so provocative of appetite, tho boudoir, and its aurer add a perfarue to the staircase. Whoso fanlt but his that the coal cellar is well lighted and rentilated, and the larder: is a reritable black hole; that the kitchener makes a torrid zone of the kitchen; that the staircase compels a single file? Now these thedgs have no counterpart in the profession of medicine. The doctor is accepted as a sort of priest. He is suprome; he dictates. If he is omniscient, -he did his best. Who can avoid the inevitahle? His position is firmly taken: laity in physiology raises him; they look up to him, and his decrees have tbe force of a fint But everybody is the critic of the arehitect.
Dan is a building animal; the instinet of build.
ing is strong in him, as in the beaver or the ant His earliest play in infancy is to build a mud hut, his first toy a box of bricks. His latest aim, if be prospers, no matter what his ocoupasiasm to build biuself a dwelling. Fis enthu siasm takes tho form of huilding, from the hage
stones piled op in uncoutb circle to stones piled up in uncoutb circle to mark the body of the dead chieftain, to the college which commemorates Keble, or the gigantic sewver ington proposed to make his namer of Well. immortal. fully satisfies itself in building a slurine, $a$ temple, or a tomb. Sacrifice to God has done more to cover the ear-th with works of beauty tho temples, cathedines to build. Destroy shrines andes, cathedrals, the churches, the shrines and crosses in the market-place and the wayside, and you may walk through the rumed cities as in a garden where the first frost of winter has swept each blossom from its stalk. And this religious zeal makes of its devotees
students and art critics. It is the fashion to students and art critics. It is the fashion to assume a knowledge if they have it not, to affect goad the victim woseur, and vex and worry and church or the rillage school, until he envies the peaceful life and calm dignity of the parish besdle. The doctor bas his assured position; the architect has none,
2. As to a Client's Appreciation of Sempices.Ware you the consciousaess of having done your utmost for a client, of having really succeeded to Jonr own satisfaction, in fulfilling even the ex. actions of your own over-sensitiveness, and then opening the letter which you hlindly expect is weight to the hardly. earmed cornmission: Dear Sir, - In the house which I have built at so much cost and trouble, under your dirco. tion, I at lenst expected not to have been onnoyed as I have been in the first month of my distance at which you bave placed of the great of the draught in the larder, wishe dust.hin; cold whenever she has to feteb the meat. One of the large plate-rlass sashes in meat. One room is smashed to atoms by the wind dramngthe door. The W.C. on bedroom floor hns becu choked with a scrubbing-hrash, which was accidently thrown down it ; but surely you
should have guarded me against sueh a casualty The painters' work is positively scamped. find they hare not tonobed the inside of the keyboles, and have left that part of the window. rames where the sashes slide, and which they supposed out of sight, Without a trace of paint. annoyances, and must confess to some dis appointment. I hope sou will at once come
3. Why Architects are not of thoir unrecognised status,-their imperfect irregular training, - the want of appreciation on the part of the publio of their art and of their sorvioes, and the want of division of lahour amongst them. The contrast between the ature of the several distinct and very different works which they profess simultaneously to undertake.
4. As to Emaceation of Architects. - What car be more promisouous, more uncertain, tban the change which directs most hoys into tbat groove of whioh the architect's office is the first station? What decides the eventful question, Shall the boy be anl architect? Rarely the bent of bis asto and fancy; more rarely some evident proclivity and aptitude; generally, mucb as a f a made a priest, because there is the canance the living to be had : so the hoy is destined t looming in the future, or the interesting draw ings duly sent home at the holidays, -swee studies of deeayed barns and waterbutts, -show such taste for drowing; or, "My son bas some fancy for carpentering, sir, so I have thought of making him an architect. There is not one in the family." A month's trial to see how the ooy likes it. A new experience,--such fun in the office,--the mannging clerk, a comical fellow ho sings such capital songs when the governo out,-it is all fresh to him, and the work so mium is mium is paid, and the thing done. Alas! wil he be an architect? There is the rub! He will cations, and no more read them than if they were sermons. Go forth unto the buildings that are rising, and as a traditional joke say to tho foreman of bricklayers, - "That's not bond." He will see stock bricks and iron girders in all

Fariety, and to him they will remain stock bri and nought besides. The principles of constr and nought besides. The principles of constr

5. As to the constannly creating.

Are architects lowered in the tion:-degraded, so to speak, of the bigh esta which of course we all think they are entitl to, hy reason of the maltiplicity of their callin of their undertaking to do so many things different, so contridictory
character and dignity? A man has his brain fu of visions of the best form of ceiling for $t$ hall, the wall.surface of the nevy staircase, that delicious bit of masonry which is to be t now drawing-roout bay.window; he receives note like this:-" Dear Sir, -The smell we ha noticed once before in our library certainly creases ; it is evident there is something wron in the drainage. Knowing the multiplicity your engagemonts, I hesitate to trouble you wi this matter, bat if you are unable to conie doy at once and thorouchly investigate the who system of dwanage, I manst apply elsewhere $f$ that assistance which I feel, de., \&c. P.S. It not the slighteat use your scading Mr. - (yov In his judcrment You all know what th means. It means that you must give up, no one day perhaps, hut many days, to an in teresting investigation of the ancient consurno tions of our forefathers in the shape of drain under a country-house, whose every owner fo. two hundred years has added a cesspool or tro to the ring, which, like the pearls around thi emerald, encircle the ancient dwelling. You ge down, at every sacrifioc, hat with the certainty hat you can rever inabe a charge which wili a all repay you for the work; that may bo utterly disastrous and unsatisfactory devastation of rats, -may elude you like the will-of-the-wisp, and, beaten in the lihrary, eappear, -horror of horrors ?-in the nursery or ho boudoir ; and yet you must do it, or you may find some other mon has stepped into your hoes. He will (nnder cover of the swell) proceed to tlirow out the bay.window, to add the and ard-room, and the beautiful new stainease and those charning creations you han su han that, in sir monthe spective, and, in the ity press :- "We bear that Messrs, X. \& Co X. being the drain.persecuted olient aforesaid) have purchased a largo plot of land in Nem Fictoria-street, and are about to huild new premises on a truly magnificent scale, which will prove a great ornament to our oity. Wo nader stand the designs have been prepared hy Mr . Mralaria, the architect, whose sanitary investiga. tions are so well known, wo., do. Where are the limits of our knowledge to bo fixed? An architect is indeed in theory the representative
omniscience, - called upon to build a brewery rinting-honse, a eollege, a hospital. He must primed at once with the varied requirements d internal organisations of each building ; a Ilt in detail is a fault indeed. I built a large ovision-warehouse a few years ago. My client d, "I want my smoking-room to he the best London." I thought at first, -having a akness that way, of parquetry floors and ad walls, oak bench-ends, deep ingles tileed, and all the accessories that would tell up oking-room. Utterly wrong; it bad nevor oning-room. it was not a room for the smoking his loisure hours of Partagas and Intinidads his loisure hours of Partagas and Intinidads hors, hut for the smoking of bacon ant hams: nors, a new study and exploration of all sorts haunts, dim with the fumes of oak-shavings d the scent of salt pork. How strangely ose diversities accrue! You pass from an hour

NEW WORKHODSE AND INFIRMARY BUILDINGS AT BURNLEY.
Lange new workhouse and infirmary buildings o ahout to bo erected at Bumley, and thi andation-stone has been laid with cercmony - local authorities taking part in the proedings. Burnley, which is ono of the most ing manufacturing towns in Lancashire, is uated in the north-easteru portion of the
unty, on the horders of Yorkshire. It now unty, on the horders of Yorkshire. It now
utains a population of nearly 100,000 , and its jutains a population of nearly 100,000 , and its
habitants have inoreased to tho oxtent of ,000 within the last fifteen years.
The now buildings and grounds in connexion 11 occupy an aree of ten acres. Tho buildings emselves will consist of three distinct blocks, mely, the entrance block, the main workhouse dilding, and the infirmary building. The several chitecture, will form a prominent structure. ic entrance block, which consists of ono story Iy, is at tbe cost, and contains the porter's lge, also recciving wards for both sexes, grether witb clothing-rooms, furnishing-rooms, d windows have arched heads, the windows ntaining shafts, with foliated capitals. At oh angle of the elevation there are two turrets, fieh form the bath.rooms, having pyramidal ofs.
a main blook is throe stories in heigbt ie eleration of the block contains a projecting ntre, with a square tower rising to the height

The ecntral portion contains the Iministrative department, whilst the right and it wings are intended for the male and femalo mates reespectively. Immediately around the istanco-hall, in the central portion of the block, o the committee-room, the master's offices, and oms for paupers' clothing, togetber with a ntral staircase leading to the upper portions
the bailding. Beyond the entrance-hall is the building. Beyond the entrance-hall is a dining-room, which is also intended to be ied as a chapel, witll separate entrances for ales and females; and corridors connect it
itls the kitchen, fcallery, store. roons, and kehouse, which aro in the rcar. Riglst and ft of the entrance, in front of the huilding, on Is ground-floor, are day-rooms for the aged and aluecile of hoth sexes, whilst the day-rooms laced at the bank. At the rear there are also ark-youds, and airing and exercise grounds.

A together, tbere are eight staircases to the first and second floors, leading from the several wards, and all projecting from the main building. The centre of the first floor contains the raaster's and matron's 'bedrooms, whilst the dormitories for the different classes of inmates are placed ontire length of rive wards. Corridors ran the contain pratines for light and ventilation. There are also screcn-gates to ensure a proper separa. tion of tho sexes, and glazed openings in the corridor walls to allow of complete supervision of the wards
The infirmary block is at the west side of the site, and consists of two stories. It contaius on the ground-floor, kitchen and nurses' room in the ccntre, and sick wards for males and females to the rigbt and left. There is also a dead-house at the north-east angle. Tho elevatiou contains a gabled projecting centre and wings, and generally eorresponds witb the main block.
The workhonse includes
The workhouse includes accommodation for 500 inmates. Tho whole of the builaings are of stono, supplied from the Tubber-hill and Burnleylano quarries. The estimated cost of the build. ing, exclusive of land and boundary-walls, is 17,000l.
Mr. Waddington, of Burnley, is the architect; and tho contractors are Mossrs. Heup, of Burnley, for the masonry; Mr, Roberts, of Ravitenstall, for tho joiner's and carponter's work; Mr. John Shuttleworth, the plastering; Mrr. Stanthe painting and plumbing

THE PEST HOUSES IN THE NORTH AND PITMEN'S HONES.
THe North-country papers, in their advertising colvmas, evidence the pleasing fact that mine berland have at last determined to Northumberland have at last determined to improve the state of the pitmen's bomes, and tho worse than barbarous condition of colliory villages. Tenders aro now wanied for building a great number
of workmen's cottages; and the following graphic of workmen's cottarges; and the following graphic
description of the atate of colliers' homes, by a description of the state of colliers' homes, by a
speaker at the late Dliuers' Conference, baroly sets forth the disgraceful tenure of minors houses:-

We can get a house and firing in tho county of Durban for Gd. a fortniglat, but that was simply the मame of it. He conld take them to pitmen's honses where there was more than 50 ? worth of furuitare standing, and if tbere ing, they might possibly fall into a holo that would bary them. He knew of a boy lying in bed with a broken leg, and an unbrella had to be put up to keep the rain off him; and men bad to rise of a night to bale the water ont of their bouses. These wore the kind of houses thousands of miners, their wives, and children He trusted the day was not far off when there would be decent dwellings for the pitmen, which the men would be too happy to pay a fair rental or.
Another miner said "that the houses given by the employers liad heen a eurso to the porkmen of Durham. They were of such a character that it was impossible for a man or woman to set a sato alone, the herochildren, and, for morality' sako alone, the system ought to be altered at unsatisfactory, and mostly the manner in which unsatisfactory, and mostly the manner in which
the tenancy was used influenced the independence of tho working men."

Some time simce the Builder called attention to the state of tho Ihicensed Victuallers' houses in this quarter, that were, in the majority of cases, as reported by the police, unprovided even with w.c., and in a dilapidated condition, This was not only in villages, but in towns, and strangers from decent districts would bo horrified to find tenements in so deplorably wretehed a condition as to be totally unfit for human habitation. lrish cabins are palatial buildings compared to Durham's indecont lovels. All the laws of bealth appcar to be set at defiance. No provision for drainage, or ventilation, and uo convenience of any claracter supplied.

The medical men, mndertakors, and cburchyards reap a harvest from this violation of depend; and it is no secret in Durham that thousands who might have roached on average agre bave been cut off in childhood, and hundreds by discases.

The mortality amongst chidren is somothin rightful, from the poisonous atmosphere. During the last three months no less than 1,373 children under the age of one year have died in tho county! The average duration of bfe amongst the minors thomselves is 26 years, as agrainst 10 years amongst mechanios and agriculturists. The Homo Secretary has at last taken action against the capitular city of Darham itself by ordering tho removal ashes and night-soil deposited together from time immemorial in the but the citizens are actually coly seems credible, out the citizens are actually complaining of the fith filth, and having to do away with cesspools and rovide decont conveniences.

## NOMIOUS BUSINESSES.

A select committee of the House of Commons sat last woek for the pmpose of taking evidonce with regard to the subject of noxious businesses in relation to the health of the people, more partioular reference being made to the metropolis.
Mr.
for Mr. Whitmore, the medical officer of health for Marylebone, was the first witness examined. He had inquired into the snbject of public slaughter-houses, and what was their effect upon the bealth of those who lived in proximity to them. Judging from the statistics referring to the matter, he found that disease was not more prevalent in the immediate vicinity of these slaughter-houses than in other localities, and his own opinion was that those husinesses were not necessarily injurions to health. They did not bring about them any deleterious husinesses. The offal of the animals from these slaughterhouses was sold to the poor for food, aud it was great boon to them. Balloch's liver, for instance, was a very nutritivo food. There were some slaughter-houses in Marylebone which were not quite situated with a due recard to sanitary regulation. Sometimes these slaughterhouses were placed too near dwelling-houses, and the Act passed in 184\% with regard to this smbject was not generally complied with Where there was not a distance of 50 ft . between the slanghter-house and tho dwellinc-house he generally" enforced more stringent samitary regulations. From a sanitary point of view, he shonld rearari the existence of tell or twelve public abattoirs as a greater nmisance to the parish than the present system of slaughterhouses.
The medical officer of the Fulham district stated that he did not consider any alterations in the present system were desirable. He was not awre that disease was caused to the people who lived near the slaughter-houses. He had anly heard of one or two complaints of the langhter-houses during in experience of nearly wenty years, He usually inspected these places at the time of slaughter. His official position did not render it necessary that be should givo up his private practice, and be devoted to the performance of bis public dutios sncl time as was requisite, The local authorities did not sanction the licensing of the slaughter-house unless it was oertified by him to he a fit and proper place for that purpose, In sanitary Works Whas the Fulham District Board of not sp. What they called noxious trades did wore forg up around slanghter-houses. There of Fulh-uree slaughter-honses in the district hose injuriously affected.
Mr. C. Legg, member of the Metropolitan Board of Works for Bermondsey, tben gave evidence as to whother fellmongering, leatherdressing, and tanning could be considered Ir Koxis businesses. He put in a report from none of the operations of fellmongering \& sere attended with any disgrusting or obnovions smell. The trade was not a noxions one. Mr. Legg stated that of late years great improve. ments had been made in fellmongering, with the viow to bring it still further from tho possibility of being classed in the category of a noxious rade.
One might suppose that there were no noxious businesses.

Antiquarian Relics near Whitby.-Re. eaty several fino specimens of Ronan weapons, the morg implements have been dug up on highroad.

UPSALL CASTLE.-PIan of Ground Floor.

## UPSALL CASTLE.

Our engravings illustrate this mansion, now in process of eroction for Captain Edmund Turton, on the slopes of the chain of hills forming the northern boundary of the great vale of York, and commanding a view at once of great beauty, variety, and extent. The siie is on the actual emplacement of old Upsall Castle. The owner had long entertained the project of reconstructing a residence on this spot, combining the charms of position with the memories of the past, and has gradually prepared the way by the erection of extensive farm-buildings, bailif's and labonrers' cottages, and lodges, and hy laying out a garden. The hailding, as now erected, is constructed of hammer-dressed conrsed wallstone of a warm.coloured sand. stone, from qnarries on the estate, with ashlar dressings, from the Leybourn and Whithy quarries, and grey granite aills, \&c., from Dalbeatie. The great archway forming the pincipal entrance is a noble and massive work, entirely in and arches in grey. Granite is to be used in the internal arches of the hall and staircase, and the internat arches of the ball and staircase, and carved with heraldic newels. The joiners' worl carved with heraldic newels. The joiners work walnut, and oal rooms will he of pitch pine, wainut, and oak combined. The farm.buildings, bailiff's lodge, \&c., were carried out under Mr. present is being executed hy Messrs. Weatherby present is being executed hy Messrs. Weatherby $\&$ Rymer, of York, bnilders, nnder the direction of Hesers. Goldie \& Child, of London.
present contract amounts to about 7,000 .
Upsall Castle has many historical recoll
tions. Whether the first castle was huilt by Roger do Mowbray or Hugh, lord of Upsali, remains a mooted point; Hugh, at all events, was lord of Upsall, and was succeeded (1297)
hy Hugh. We then come to the ownerships of died in 1857, and was succeeded by his son, the Lords Scroope, of Upsall and Masham, a late an officer in the 3rd Dragoon Gnards, who younger branch of those of Bolton, who for up. married tho Lady Cecilia, elder daughter of the Wards of 200 years lived here in feudal grandeur. 4 th Earl of $\$$ rilltown.

We may ennmerate two earls and twenty barons, one premier, one chancellor, one archbighop, Ionr treasurers, two chief justices, two bishops, and five knights of the garter. Of these we may mention William, created Earl of Wiltshire, who was heheaded at Bristol for being connected with the rebellion when Henry of Lancastor landed, September, 1399. In the reign of Henry V. we have another Henry Lord Scroope immortalised hy Shakspeare (see Henry 1 act ii., scene 2) :-
"What shall I sny to thee, Lorad Scroopp p"
He was the key of tho king's council, and knew ay bothom of his soul, thoug several historians Richard, Earl real cause Then Archhisho Scroope, who was beheaded and buried in York Miuster; and afterwards Thomas le Scroope fifth baron, 1459. He left three sons, who d.s.p., and three daughters. Mary, who, 9th Henry VII., 1.193, married Sir Charles Danby, bart., succeeded to Cpsall. From her it went to her sister, Elizaheth, wife of Ralph Fitz Randolph; and from her to her aister Agnee, wife of Sir Marmaduke Wyville, of Burton Constahle. We now find Upsall Castle in the possession of the Constahles How it came so we have no record to hring Corward. John de Constable fived hore, and being a firm Royalist, bad to flee to Holland when the castle fell into decay, whilst tho estate afterwards came, at the Restoration, to Willian Constable, Tiscount Dunbar, who left it to his nephew, Cuthbert Tunstall, who sold it to Dr John Turton, Physician in Ordinary to the King, 1797. He died in 1806, hequeathing this estate

Several coins have been found on the ancient site. A silver penny, Edward III.; a lead coin, of the Empress Plautilla; several copper coins of Carausius, the founder of the British fleet; several coins of Charles I. and II. ; sixpence of Queen Elizabeth; silver penny of Henry V.; and a copper halipenny of William and Mary. In the ruins were stones bearing masons' narks, already noticed in the Builder.
The grounds and gardens have been laid out under the surveillance of Mr. Broderick Thomes.

MANOHESTER SOCIETY OF ARCHITEOTS The rinth annual meeting of this Society was held at the Royal Institution, on Monday, June 16th. The report of the retiring council was ead, referring to the work done hy the Society uring the past session, the more prominent natters boing the efforts made to promote the education of architectural stndents, and the echaical education of the workmen of the build. ug trades, the arrangement of huilding contracts, and the endeavours that are being made o induce the City Council to adopt sach haildng regulations as would have the effect of a Building Act sc. The thanks of the Society were tendered to the Hon. Secretary, Mr. J. Margatroyd (on his retirement from, for is valuable services sinco the formation of the Society. The following gentlemen were elected fficerg for the ensuing session:-President Ir. J. Mrratrens Vice President Mr W Corson: Hon. Secratary Mr Jon Holden Concil :- Tesss Isac Holden, A TV Kills G. T. Redmayne, E. Salomons, and T. Wor-

NOTES ON FOREIGN PUBLIC WORKS.
From soveral official reports which have beeu issued concerning inportant places abroad, we glean a good doal of interesting information epitomised, will not be devoid of interest to the Englisb reader. From Königsberg (Germany) we learn that a new Excbango hnilding on th south side of the river Pregel has been built, the
estimated oxpease of its construction being aboat estimated oxpense of its construction being aboat
75,0002 ., which has been raised by the mercantile community. Waterworks for supplying Königs. community. Waterworks for supplying königs. have hecn commenced, and it is hoped, by this moans, the frequent reappearance of the oholcra
will be prevented. It is stated that in the con will be prevented. It is stated that in the con-
struction of these waterworks thero is a great struction of these waterworks thero is a great
want of cngineering osperience, and even a cilforence of opinion as to the moro advantageous uso of clay or iron pipes for the purpose. The esti-
mate of the expense was originally $90,000 \mathrm{~L}$, but subsequently it has hecome evident that as much as $150,000 \mathrm{l}$. will be required. It is hoped, hossever, that these waterworks, when finished, will
bccome nn additional source of revenuo to the town. Other publio works of Königsberg are town elinics and other buiddings for medical sive nilitary harracks harbour works at Pillan is being gradually carried out, but the pregress is slow. Chaussées are being coustructed all over the provinco, and there are sevcral important railway extension mentioned, mnny difficulties in the way of mentioned, many difficulties in the way of
private companies who undertake to build railways, cepecially in the Russian dominions; ond although tho East Prussian South Railway is able to pay its expenses and the intercst on its obligations, it is not able to pay dividends to the as soon as the Gragewo-Brest line, which will as soon as the Gragewo.Brest line, which will
branch off to Odessa and Moscow, is flnished, brailch of to Odessa and Moscow, is flnished,
this railway will pay well. The population of Königsberg lins greatly incroascd of late of Königsberg lins greatly increascd of late
years, and there is a corresponding contiunal increaso in house-rent. Königsberg being a
tirst.rate fortrcss, the dificulty of buiding first.rate fortrcss, the dilliculty of building
housce outside the gates, -within tho range of houscs outside the gates, -within tho range or
the fortress, -is extreme, and, in fact, permission from the military anthorities to erect any species of building is most difficnlt to obtain, the condjtion being always laid on the buildcr that on
requisition from the authorities such building requisition from the authorities such building must bo immediately pulled down, Fow are incliued to risk such ant undertaking; and tho
space of ground within tho walls, althougb large, becomes less arailable for new buildings; the consequence heing that the ivhabitants aro inconveniently cramped up, to the serious detri ment of their liealth
The next report refers to Guatemala, Whenco wo learn that the present Government is very anxious to construct a railway between the capital and the port on tho Pacific coast (San Jose), and has entered iuto a contract with a bout eiglity miles purpose. Tho lino will be bo of eiguty miles long, and country. Arrangements have bcen made for connecting the prinoipal citics and towns of Guatemala by telegraph, which will also extend to the frontier of the neigbbouring republic of Salvodor, where for more than a year past tbey have been in possession of this indispensablo con. and work in perfect health in Guateans can lise siderable portion of that Republic consisting of elevated table-lands; while property is sccuro and elevated table.lands; while property is sccuro and the roads aro safe. For all articles of taste and
lurury, Guatemala sends to France or Cermany. Fronz syra (Creece) wo learn that public The streets are for mucb wanted in that town. The streets are for the most part irregularly and hadly paved, and hitherto the system or building pirsued has beeu vcry careless. Latterly, however, a plan of the town has beet drawn by
the Goverument engineors, which the native the Goverument engineors, which the native builders are now obliged to follow ; but great difficulties are experienced in any attempt at improving the appearanco of the town in regard to its buildings, owing to the negligent system heretofore adopted. There are some tolerablo ronds leading from the town to a fow small villages in the viciuity, where nany residents of - Syin have country-houses, whither they repair during the hot beason. At present the town is very poorly lighted with petroleunt lamps. A contract, howcver, has been entered into by the municipality witl a Frencl company for
lighting it with gas, and the necessary
works for this purpose worss for tbis purpose were quickly com nenced. The water-supply is occasionall very scarce, the town chiefly dcpending on rainwater collected in cisterns from the roofs and terraces of tho houses. Water of good qualit for drinking is hrought into the placo in jars
from springs at a considerahle distance. from springs at a considerahle distance. Th
harbour of Syra is in need of improvement. A harbour of Syra is in need of improvement. At present it is tolorably well sheltered from all
winds, except from the sonth.east, and a moleor breakwater for the protection of the port agains his wind 7 for the protection of the port against many years is made towards the completion of this work Plans for the improvement of Syra are being continually mooted. Recently an eminoni Prencb engineer was consulted by the Govern mont on tho subject, and more especially as to tho best method of building quays terminatin the mole or hreakwater already commenced, and he construction of a dock; but there appeats bo little prohability of these works beinc carried practically into effect for some time to come.
At Palermo (Italy) several important puhlic works are being carried out. Prominentamonget these is the breakwater, which, with the exten ion of the mole, will give great additional space and seourity to tho port. Another important work is the construction of a short railroad con necting tho prescnt railway termiuus on the sonth of the city with the port on the rorth. It will run round the walls, and will be about thre kilomè tres in length. This is deseribed as a wor fcial great publio utility, which will have a hene ficial influence upon the trade of the port. The port of Palerino, it is stated, is quite inadoquate
to meet the requirements of its actaal commorce. To remedy this, the molo, which is alroady 190 mètres in length, is to be extended alout 100 mdtres; and to increase the space for anchorago a breakwatel is also in course of con-
struction in a line with the mole. The break water is to he 230 motres in length, and it is intcnded to connect it at its southern extremity with the city by a bridge of stone abont 200 mètres in length, which will require a considerable time for its construction. From Italy tho next report takes us to Spain. We noto that tion panish Government has granted a conces. Chat an English firm of contractors, Messrs. harbour Adamson, \& Coleix, to construct accordnce with the plans of Mri. C. B. Yirnoles the English cngineer
It may be stated generally that the plan con. ists in constructing two vast breakwaters, on running from a point near Santuno, on the south wortern, and the other from Algorta, on the siderably outside tho "bar" "the both being conwbich would thus be effected, and a harbour formed whose dimensions aud position would render $i \mathrm{t}$, according to the opiuion of autborities ou the subject, one of the finest ports of refuge in the world. In the whole extent of the Bay of Biscay there is no existing port which can fairly be considered a harbour of refige. The conoes. sion for that in tho Bay of Bilbao includes no ment, and leaves the cost the spanisb Government, and leaves hecost and risk of construction other hand, the terms of tho concession are of the amplest description. Fiftcon yeare are allowed for the execution of the work. Still cont Tenciff remarks about Spain, we learn rom Teneriffo (Canary Islands) that considorabe improvements ju the roads of that district have been effected of lato, tho macadamising system being adopted. Some ycars since an Tencriffe was establishod at Santa Cruz, honses for the purpose of building dwellingmost active iu itert classos, and has this object. Numerous small, neat, and oonvenient houses have been constructed; larger odifices have also been erected, and, being not devoid of arcbitectural nonit, have greatly added to the appearance of the town. The labours of this association liave, in fact, been of the greatest bencfit in the construction of commodions houses. A suciety has been for some timo past engagech in tho Islaud of Palma, in bringing supplios of water from the mountain springs to La Behesa and as mucb as 4,000l. has been expended in the work, It is siguificant also to noto that in this sland what is described as on rather bentiful building has been constructed "for cock'.fighting nd for balls," - a queer, conjunction, cortoinly, and 2
sions.

THE BUILDING TRADE AND THE NEW YORKSHIRE COLLIERIES.
Tre building trade at the present time is perhaps receiving more benefit from the opening out of the numerous new coal-fields than any other branch of industry, excopting, of conrse, the business of mining and sinking. Building operations are in many instances greatly retarded by the high price of labour and material; and thero can be no doubt that investors as a rule are turning their attention to other modes of utilising their capital than laying it out in cottago property. Another matter highly favour. able to building operations is the opening out of new coal.fields which are removed from the existr the population or in localities where the existing cottage property is fully taxed with in South Yorkshire, whero cspecially the case are boing projected then miore new schemes in the history of the coal trade. It is, perhaps, also worthy of remark that the engine-houses, offices, and other uecessary exections are now huilt in a style which a few years ago was almost foreign to the surface. plant of most of the largest colkeries. In what may he termed the midland coal-field, which comprises an area of hoing 500 square miles, new sinkings are hoing nade in large nuubers, which will provide a good deal of work for operatives ngaged in the building trades. A glanco at fow of the most promivent and largest of these ndertakings say hol be willout interest. At Wath-upon.Dearne, about six miles from Barnsloy, a large colliery, which, wheu opened out, will be second to none in the district, is in the course of being sunk. The Barnsley hed is the one proposed to he worked, at a depth of 300 yards from the surfaco, and an average thickness of 8 ft. 6 in. Three shafts are being sunk, viz., wo drawing and ventilating shafte, each 15 ft in diametcr, and a pumping shaft 10 ft . in dianeter. In addition to the lining of the shafts, anding operations havo already begun, and a ange of buildings 90 yards in length, consistnd offices, a residence for the under viewer, rection buildings aro in the course of is obtained from Newhill of stone which he company have purchased. A huge which bed, to take in eight voilers, 30 ft . in length and 7 ft . in diancter, is fast approachiug completion. A chimney, 156 ft . in height, is plso nhout to be erected hy the firm, which is to bo termed "The Wathoupon-Dearne Main Colliery Company." The outlay will be very great, as the surface plant is heing constructed to raiso 1,000 tons por day when the colliery is in full working miles Near to Wombwoll, about two or threc mas nearer Barnsley, fair progress is being Made with the sinking at the Mitchell's Maid Coliery, where a fine engiue.bouse and surfaceplant has been pat down. An additional shait is also heing put down by the Manvers Main Company, and also by the Holmes Colliery Com pany, near Rotherham, in all of which districts the building trade is very active. During the past weels, Messrs. Newton, Chamhers, \& Co. the owners of the Thorncliffo and Chapeltown Colberies, where the serious riots occerred few years ago, have vegun to sink two of the largest shafts in the South Yorkshire district to the silkstone coal. Already a number of houses are in the coarso of erection, and it is said the company intend to build between 100 and 200 in all. The Barrow Hematite Company, who recently purchased a large arca of coal, bare commenced sinking operations at Worsboroanh near Barnsloy, and intend running the Silkstone seam, which underlies the Barnsley bed at a depth of 380 yards. A good deal of work for builders will be found at and near Worsborougb, as the property in that district is all fully occupied. Hany other largo collieries will shortly he opened out on estates wbere the coal has recontly been secured. In the West Riding with. In the nowly-developed coalfells around Pontefract and Featherstone, a good population is being got together in a district wbich a few years ago was only known as an agricnltural country. Cottage houses havo spruyc up rery rapidy, and will doubsless do so for many years to come.
Loscoe Messrs. H. Briggs, Son, \& Co whited, have recently opened a ncw colliery, Which was christoned about two years ago by the "D Porkshire, the "Don Pedro Colliery." The pit will require
from 300 to 100 men and hoys to wort it, and

Mr. Tadman, of Wakefield, is now engaged in the erection of a batch of houses which, when completed, will amonat to 108 . The company have now five colheries at work, which are capable of raising from 12,000 to 13,000 tons of coal per week. The colliories which bave heen at work for some time, have of late made considerable extensions in their premises. newly.formed Dodwarth and Silkstone Coal and Iron Company are erecting a new engine-house and chimney at Dodwarth Station Colliery, in addition to which over 100 new coke-ovens are either in the course of erection, or are ahout to be huilt. Several batches are finished, or nearly so. At the new colliery helonging to Messrs. Craik \& Co., at Suithies, near Barnsley, a large outlay has recently taken place. A suhstantial engine-house and other buildings bave beeu erected, in addition to nearly forty new coke ovens. The well.known Oaks Colliery Company have recently lighted a larce row of new ovens, whilst the Blackie Main Colliery Company, the Higb Royd Company, the Silkstone Fall Com. pany, Limited, have all just added largely to their uumerous coke.ovens, as have also one furnaces.

ANOTHER LESSON FRON THE FIRF.
Sir,-It is a matter of general tbankfulness that the rapid comhustion of the late Alexand Palace did not in the loss of a colossal property involve moro hideous calamity in the shape of a proportionate loss of life. It has now becn seen proportionate loss of life. It has now becn seen in preparing a fools' Paradise, to he transformed into " a veritablo Pandemonium" at shortest notice, in broad day, and with no better sceneshifter than a careless plumber. The lesson has been costly; thank Heaven! not so costly ns it well might have heen.
With deep regret for the heavy loss sustained by the proprietors, with admiration of the true British pluck that has moved the directors to restore the rains, mingles a painful concern for far the building is to be simply replaced as it was (that is to say, laid ready for a second fire) ; bow far the lurid light of recent disaster will detor those responsihle from making another cage of dry fuel for 20,000 pleasure-seekers.
Besides want of water (remarked on in your a his fire out of a siaall one, plenty of air, and plenty of combustibles. As to air, the large area, beigbt, and broad surfaces of an Exhihition hailding must always give facilities that the first breach in the roof can but render perfect. As to comhustibles, certainly wood and paper are what we generally use for lighting our
fires. But when kindling is the thing of all otbers to avoid, common prudence requires that such substances (if employed), sbould be pro. tected, so far at least as not to become ready agents of destruction
Had the floor on whicb the burning staff from flammahle by Been of planking rendered unitu. served as fuel to the flames. Had the wood hare of the dome itself been similarly prepared, the fire, we may be morally certain, would never have happened. Entertainments might be going on within the building at this moment, and the ghastly "Illumination of the Ruins" need have fonnd no place in the programme. I neention I ametising as the process I happen to keow of. I am concers.
Of course, the old, old question crops up. The "ha'p'orth o' tar" question. Confessing to my own opinion that snch a qnestion is hut secondary, where hundreds, -thousands, - of lives may be examination from a strictly commercial point of view. Conld the proprietors componnd with some conjuror for the restoration of their palace as it stood some fortnight since, immediately on receipt of the sum it would have cost to fire. proof every stick and rag in it in 1862, with could wo for a moment imagine such a contract duly fulfilled on both sides,-how different would be the financial position! Alas! no magic can change the past; but sharp experience should change the fature. With property of enormous value, ordinary precaution dictates either ade. quate policies (if to he had) in the regular offices, or else something equivalent to self.insurance The difficulty of insuring so bnge and costly a building is of course increased tenfold by its
heing the only one of its class. At the present stage of matters, it seems premature to specu. late how far what was a difficulty may prove to have become utterly impracticable. Still, if anything could smooth the way for insurance, or lessen rates of preminm which at best must be exceptionally high, it would be the exclusive use f uninflammable stuff in the reconstruction. Indeed, it is quito conceivable that the annual interest on any consequent additional ontlay might be more than met hy reduction in pre miums. Should insurance companies not afford adequate protection, the imprudeace of replacin hardly he poine with combustible matter need

## THE THREATENED STILKE

Srr,-In your last week's impression, Mr. Broadhurst sceks to justify his assertion that the master builders had promised an increase of wages to the masons this year by quoting a remark of Mr. Lucas at tho conference of last
summer, to the effect that the masons should summer, to the effect that the masons should
have "any price they like." How is it that Mr. Broadhurst does not ask for a shilling an hou for the masons on the same authority, as Mr ucas had said a minute before, "Yon had bette have a shilling an hour:"? The masters might laim that a reduction of wages had heen notified or the sentence quoted did not end as Mr Broadharst would lead jou to suppose. Lucas added,-"but if terra-cotta is used instead of stone, you will not get your present wages." After this not much reliance can be slaced on Mr. Broadhurst's statement that other paragraphs are "equally clear." The " othor paragraphs" relating to this question are, in fact, point-blank refusals on the part of the masters to entertain the constantly-repeated at tempt of the masons to extract a promise of a ris in the spring. The chairman said,- "How can we Mr. wages for next summer? Who can do it? Mr. Crollope said, on another occasion, " "F March, it is simply impossihle;" ond a few minutes later he repeated, "we cannot bind the futare as to a rise of wages." Mr. Lncas, also said, in reply to a further appeal, "How is it possible for ns to settle wages for a future timo

Mr. Broadhurst, however, once more returned o the charge, and I regret to have to trouble said,--"What is the extract. Mr. Broadhnrst that we will pay you, to save aay deputation, or any circular, or anything of that kiud, nest any circular, or anything of that spring the 9 d . from the lst of March?

The Chairman: I can only say, that if yon asked for 9 d . in March, knowing the trade that is heing done in London, it is simply prepos.
terous . . . . and, of course, we are not asking you to recommend that that shall be the proposition for the next six months (that is, the roduced hours and the S td.). That would be an utter waste of time ou our part. We are asking you to accept that fiankly, as one that is to guide us until somo considerable change takes place in the huidding trade, justifying any advance or reduction. That is what we expect in meeting you in this way, and that you will say frankly bat poll will not allow n8 to werte our time in imagining we have made a proposition which you are only going to accept for a few weeks or few months.
As this is the last occasion on which the subject is mentioned during the interview, I will leave it for your readers to say whether it would charge of want of faith on the part of the masons in demanding a rise so soon, than to pretend that they imply a promise so strong as to have been the inducement to accept the terms ollered.
In justice to the masons, it should he added, that Mr. Broadhurst's statement, made in your impression of the 7 th inst., that the notice to fulfil an agreement entered into last notice to fulfil an agreement entered into last summer, viz., that if trade was at all good this
season, we should have one halfpenny per hour season, we should have one halfpenny per hoar
advance," is entirely incorrect. The masons have given notice that they reqnire a rise of one halfpenny an hour, and have based the demand on the increased cost of living, without any reference whatever to at agroement which they suew perfectly well had never heen made.

Bens. Hannex, Chairman.
The Central Associntion of Master Builders

THE GOVERNMENT OF LONDON.
Mr. J. S. Storr has contrihuted a paper to the carrent number of the Fortnightly Review entitled "The Anarchy of London," which will selp on the coming change in the government of the metropolis. Come it must ; it is hat a question of time, hat nnfortumately circum. stances coucur to make that time long. We quote a portion of the paper:-

If nothing else can he done, and if Mr. and and Bruce are incapable of Londong a now and efficient scheme for , they might at least make an effort to Improvement metropolis the Glasgon such beneficial results, social, sanitary and moral, in that city. Ep to the rassing of this Act the population of Glasgow had been liviou huddled torether in masses, 50,000 persons being crowded into sirthty acres. Mayy of the bouses were built withont regard to lisht air, or decency, and naturally had become mere dens of thieves, paupers, and prostitutes. The muuicipal autborities came to the conclusion that it was necessary to root out the ovil. They applied to Parliament, under the above-mentioned Act, to borrow a million and a quarter; scheduled the bad parts of the city, and ohtained powers to pull down and rebuild, or sell coy portion, as circuzastances surgested. In order to provide the necessary funds for theso improvements, they ohtained liberty to levy ar rate of 6d. in the ound. At the end of the first year this was educed to 4 d . for tro following years ; then to d., and is now on the point of being reduced to 2d. Instead of advertising pnhlicly the districts hey intended to demolish, with Scotch canniness they employed a surveyor to huy up 'quietly' a large amount of property before they did any. thing, and tbus aroided having to pay the iucreased prices which would have been de. manded by the owners had they hegun to mprove before completing the purchases. They thus succeeded, with scarcely any litigation, in buying to the amount of ono million sterling, property, of which they subsequently resold, ander restrictions, nearly 400,0002 . worth at a considerable profit upon its orisinal cost. Having secured the fee simple of the plots required, they oramenced by removing fever dens, and oher idenineswarming, disease -breeding colonies, ares throngh the blind couring new of their ucient city. At tho outset the corporation built wo blocks of dwellings for the expropunted amilics; but it wos not found necessary proceed further in this direction. Bnilders, proceed farther in this direction. Bmlders, rant leases for 500 vears at moderate annual round $22!$ yerss 2 years purchase, during the frso three years, be plan lid down by the municipl surses on Te plan haid domn by the municipal sur reyor ion, ono for males an on, ono for ma na 50 and 150 respectively, had paid them 10 per loing more was their acie to the corporation doing more was their ohjection to hecominur
landlords. Before the passing of the Act of landlords. 865, although under their general Acts the corporation had power to demolish honses which were unsafc, tlsey were precladed from condemang dwellings in a had sanitary condition, and could have done nothing withont the powers of compulsory purchnse they therehy obtained. The result was, in its filuncial, sanitary, and moral aspects, alike successful; hrothels hat een redaced 15 per cent., the hannts of thieves and chronic disease were broken up, and even the whisky. shops were lessened in numbers.
The example thas set by Glasgow was, two years later (1867), followed by Edinhurgh. Au det was hrought in mapping out the portions of the city to be relloved, laying down new lines of thoroughfares, sweeping away whole streets f hoases, 200 to 300 years old, and empowering the cornoration to horrow 350,000 , on the security of a mate of 4 d . in the pound for twenty. one vears. Like the Glasgow Act, it had clause limiting the number of poor to he remored t one time to 500. An adequate provision was uss made hut 00 antil wen were clearances ffected. The work was thus pradial in its peration, and the inconvenience conseglent on removal was therehy mitigrated, if not rendered quite inappreciahle.
If we turn from the two largest cities of Scot and to our own metropolis, what do we find? A few semi-charitable associations, fonnded by private enterprise, or by the monificence of a
stranger, to whom the miseries of our London stranger, to whom the miseries of our hondon
poor wore nearer at heart than they would seem to be to our great landowners and employers of labour. These institutions may bo briely ennmerated. With a popnlation rapidly approach ing four millions, of which, as wo have seen, one
million has, in the space of twenty years, been million has, in the space of twenty years, been other improvements, wo have the authority of the Lord Mayor for stating that decent accom-
modation has been provided for only 20,000 persons

Tho Peahody gifts to tlee Poor of Loudon, amounting in all to $100,000 \mathrm{~L}$., by means of which blocks of buildings have been ereeted in various parts of London and tho suburbs, have, up to the present time, provided accommodation for 81.7
families, consisting of 3,107 persons, oceupying families, consisting of 3,107 persons, oceupying
3,328 rooms, at an avcrage charge of 1 s . Lod. per 3,328 rooms, at
3. The Metropolitan Association for Improving tho Dwellings of tho Industrial Classes erected, in the most crowdod parts of London, six blocks of baildingz, accommodating 507 families, consisting of about 2,000 persons. This society does not coufine its operation to London and the suburbs, but has erected cottages and dwollings at Ramsgate and Bristol. Its Ginancial guccess has beon uninterruptcd. Last year sum added to the cunrantee fund c. The Tmproved Industrial Dwellings Com pany, under tho able direction of Sir Syduey Waterlow, Mr. Walter Morrison, M.P., and
others, has already invested 250,0002 ., and provides accommodation for 9,000 persons. This
vine vides accommodation for 9,000 persons. This
socicty, whioh offers a favourablo example of management to othors, pays its sharebolders a guaranteed interest of 5 per oent. per annum, and might with advantnge be
moters of similar undertakings.
d. Tho Artisans, Labonrers, and Genera Dwellings Company, under the presidency o the Dean of Westninster, lias now been in
existence six ycars. Its sharocapital is upwards existence six ycars. Its sharo capital is upwards
of $52,000 \mathrm{l}$, whilst more than $13,000 \mathrm{l}$. have heen deposited at a fixed rate of intorest of 5 per cent. The shareholders reccived for the past year 6 per cent. This company also extends its its most important act has been the purchase of Iand in the neighb urhood of Clapham Junction Station, where Lord Shaftesbury last year laid 'workmeu's city.' The directors in their report draw attention to the fact that the averago doath-rate in the houses erected by them was only 6 per 1,000 , whilst it averaged in surrounding districts 25 per 1,000 , and in some instances more. This is in a great measurc to be attributed to the absence of cesspools from, and tho carefal drainage of, theso newly-ereoted buildings.
If to these offorts wo add those of the Marquis of Westminster, Miss Octavia Hill, and Mrr Bullock Hall, which are all the more deserving of admiration and praise becanso they havo been carried on so unobstrusivcly and so sytematically, we come to the end of our short list of the of our timos

ENGLISH wORKMEN AND PERSIAN securities: a oaution
Tre visit of the Shah of Persig to England is of more signifionnco than idlo curiosity, par ticularly as affecting the interests of our skilled
artisans, for it appears that tho Persian Monerch artisans, for it appears that tho Persian Monarch and his Ministers intend profiting by the ex-
ample of the Khedive of Eurpt and the Sultan mple of the Khedive of Eyypt and the Sultan Turkey, by extracting from this country a rumber of our hest workmen, in order to in struct his unskilled subjects in our staplo iudustries, arts, and mysteries. Already agents have felt their way, and are hasy in taking steps to enlist meelanics by
seductive offers of wagos and golden promises of seductive offers of wagos and golden promises of
speedy fortunes in a land "flowing with nuilk speedy fortunes in a land "flowing with milk" and honey.
Like nuto the engagements entered into with
Erypt, Turkey, and Russia, binding eoutracts for almost an, apprents, added to the signing away of English nation. ality, and agreeing to foreign naturalisation will be exacted; and if the Anglo-Persian workmea reap the like whirlwind their foremnners in Egypt, Turkey, and Russia did, their engage. ments with our distinguished visitor will afford ample leisure to regret ever leaving the English shores.

As littlo is known of Persia, we open np the conntry by a digest from authentic documents sent by English consuls in Teheran, Bushire Bagdad, and Tabreez, in the shnpe of replies to inquiries made by the Earl of Clarendon, Secretary of Foreign Affairs, respecting the condition flo Persian Empire, and its indastrial classes, and moro oshaustive and trustworthy particulars could not he found on these subjects. Englisls workmen wonld do well to ponder over tho consuls' information, both with respect to Asiatic and other foreign states.
Mr. Jenner, the consul at Teheran, givos five reports from Ispohan, Shiraz, Koum, Hamadan and Kermanshah, drawn up for him by inteligent natives, as well as Europeans. He is molined to infer from Lord Clarendon's despatch that tho information sought for is requircd with a viow to ascertaining whicli are the countries best adapted for the reception of an immigration of the surplus of the working classes of Great Britain, in so far as tho term "working classes" applies to that portion of the population which earns its livelisood by manual labour.
[It may be advisab'o here to ohserve, that ther consuls take tho liko view of Lord Clarendou's object; and the diplomatic investigations ender tho reports still more valuahle to the Forking classes of Great Britain.
In the mannfacture of carpets and shawls, the Persian workmen excel tho English. One or two sucoed workmon from each english craft might duce Persian emplosers to dozen or two would glut the pay them; but a gration composed of workmen the met. No immigration composed of workmen seeking employ. ment as indiriduals, would lead to anything bat
disnppointment and ruin. Tisnppointment and ruin
Tho cost of living upon the pittinco which atisfies tho Persian workman is so small, and the rate of warres, which is proportionately even
analler, so muremunerative, that no British workman could for a moment compete with tha ative labourer. One way in which a suocossful emigration to Persia might be possiblo to thoso engraged in it, would be "self-sufficing colonies," composed of from 500 to 1,000 , or wore, mem. bers of both sexes. Theso might thrive, if engaged either in working some of the numerous mines to be tound scattered all over Persia; or in manufacturing cotton staffs, of a quality corresponding to that of the chintzes which form the chief articles of importation to Persia or silk stuffs for nse and exportation, for both of which manufactures the ras material could be pronured in abundance, and at cheap rate upon tho spot.
Colonios engrared in the ahove, or othor pursuits, and so constituted, like thoso of Germans in Odessa, or of Swedes and Norwegians in tho United States, as to be euabled to till their own land, make their own roads, and provide in every respect for thoir own wants, would, in the opinion of many persons qualified to judge, meet with success. But before such a colony could established in Persia, it would be necessary overcome many prejudices on the part of it to render success almost hopeless. The winter diet of a workman consists almos andirely of broad, rico, and bad cheese, with and quantity of a decoction summer produee, i.e., melons, cucumbers, vegetable marrows, erg plants, and various forms of edible gourds. The arerage wages clanged to English money, are abont $9 \frac{1}{2} \mathrm{~d}$. a day, and the workman can just manage to keep body and soul togethor.
As to dwellings. In Persian towns, large caravanserais, huilt in former times to accum modate a far more numerous population, are generally to be found. These buildings, though mostly in a moro or less rninous condition can still furnish shelter for a large number of workmen, who are lodged at the rato of from 18 . to 3 s . a month. As for furniture, a rough relt for sloeping, and a oooking-pot, sulfice for their requirements. The courtyards of mosques, and sheltered comers, form refuges for a large number of the still poorerclasses. Of the werkmen who are married, some possess a smnll pieco of tand, which helps them to maintain their families, and in some cases the wives and children ada a tritie to the family pittance by sewing, or by, more firqueutly, oarpet-making or rough weaving. Alms to tho poor gire further aid, and ouee a year, for a period of three dnys, the poorest man may sit down to a comfortable dimer, which is furnished by the devotees of "Hassan and Hossein," which is equivalent, in

Persia, to saying, "By all who can afiord it." "In short," the Consul says, "though the oxist ence of tho working classes in Persia is, accord ing to Anglish ideas, miserable in the extreme, still I have no reason to believe that there is anything like the suffering they are exposed to at home (in England).

Tho air of Persia is constantly pure, and the sun aimost always brigat. Drainago is most imperfeet. Dead animals are cast upon tho road to bo deodorised by the influence of the sun and the prblic streets are made the receptacles for everything that is not wanted in the houses. Cbolera, small-pos, and typhus forer are the chief epidomics; but as a rale they onlo moke their appearance when everything has beon dono to give birth to them, and "they cannot be attributed to the visitation of God, but to the mbecility of man.

In the manufacture of shawls and carpets, in hrasswork, in enamol on gold and silver, in every spccies of omamental work where a good effect is sought for rather than excollency of finish, the Persian work may be said to be good. Every. thing is dono by hand, and left unfinished, rather from an iguorance of the higher principles of artistic work, than from any real incapacity save in respect to the shaw ls and carnets, which combine an artiatic sense of the harmony of colours with a wonderfal perfection of finisl and durability. The above remark may almost always be applied to the work of Persian artizans. The ignorance of the workmen is not tunities of ine resal of their want of oppor is very strongrend is very strong, and the only change to be noted deterioration which produced by the gradual deterioration which, by a universal law, comes apon nations which do not progress. What is thus said upon tho higher brazehes of work, applies equally to tho lower. Everything in persia follows a geometrical ratio, in its decay. There is, however, one numerous and power ul fraternity which is never tired of attempting to surpass. hose who helong to it-and they form, in two or three instances, tho population of eutire districts-aro ever striving to excol They derote every leisuro moment to this purpose, and are stimulated to constant ondcerour hy the fame of those who have attained to eminence in their diffieult art. Few Pursians of any position but have arrived at a certain skill in this accomplishment, and prime ministers and even sovereigns have owod the greater portion in this celebrity to their extraordinary aptitude firzas respect, - that is, "penmanship. The who take a pride in their work, and ondeavour to excel from the seuso of honour they have in executing it
During "Bushiro" no work is ever done, and Forkmen only roceivo rations on these days rom their employers.
There are also ton entire holidays in the foar on which neither salaries nor rations arc drawn. The hours of labour are from about one hour after sunriso to noon, when men break off to dine and rest for ahout a couple of hours, when they resume till sunget. All classes of labourers live very moh alike, in the most frugal manner, and a man who earns his half kran may be taken as an avorage specimen. His food will bo a lump of dates before going to work, some bread (unleavened) and salt fish for dinner, and some boiled rice for supper. The men who earn higher wages possibly wear a better shirt and turban, but nothing more; whatever thoy
sare is usually converted into ornaments for thoir
Mr. Surgeon Makin, witing at Lingah, soys, men remunerative opening for British workmen, unskilled, or the reverse, - to cominence could at all Europeans, I do not think they now ruling for native in the market at the rates season I much donbt if they could continuo work for any length of time withont injurious ffects to their health.
In regard to skilled workmon, there may ventrally be openings for men in the boiler epairing and engineering line, where, as superintendents and foremen they wonld pcrhaps be ble to make a fair living, as they would not be likely - for a long time at least-to meet with ative competition."
Mr. Hakeem, surgeon, of Bussadore, states that the ouly articles of food obtainnble are neat, rice, fish, wheat, dates, and "dholl." But o meat is generally of an inferior quality. to scanty pasturage
With regard to the question of healtby lodg-
ings tho scanty population of Bassadoro live in small houses made of sandstone and mud, and huts made of date.leaves. These houses and huts stand at considerable distanco from eanb other. There are always breozes blowing from one direction or another. Those coming from the former blowing in the mornings and the latter in the evenings. At times the north east or nort $l_{1}$. west winds keep blowing for days together (varying from three to seven) in a strong gale. The gronnd is elevated, and the soil is in some parts rocky, in others calcareons and Gandy; so that, as far as drainage and ventila. tion are concerned, thoy are in the most satis. tion are concerned, thoy are in the most satis. factory condition; but to find hero a place free from malarions poison is almost an impossibility. The port of Lingah is most filthy. The honses are crowded torether, without any regularity, leaving very narrow, dirty, and sharp-winding lanes, most of which allow one man to walk through tbem. The walls of the surrounding
houses closing in these lanes are very high, houses closing in these lanes are very high,
and give to the honses an appearance of dun. and give to the honses an appearance of dun.
geons for prisoners. These high walls cot oft, to a great extent, the excess of fresh air; and there are no arrangements for the removal of the night-soil, \&c.: each house, especially thoso
further removed from the sea, has a hollow dag further removed from the sea, has a hollow dag in the privy, in which the dirt collects year
after year, and clarges the atmosphero with various noxious and poisonous effluvia, which prove a fertile sonrce of the different low forms of fever, outbreaks of cholera, \&o.
The dangers attending the action of theso miasmatic and poisomous efflupia are, that persons who bave resided nuinterruptedly for several years in such regions become anremic and sallow in countenance, weal, and emnciated; they lose all onergy and freshness of mind and intellect; becomo liable to congestions and cnlargement of the internal organs, especially the liver and spleen; and, if not removed in due time to healthier regions, they are apt to succumb to the fatal effeets of fehrilo and other low diseases.
Consul-Goveral Herbert, at Bagdad, gives valnable information on all points, and states that the artizans and indnstrial classes hear the proportion of about 60 per cent. to the other Governmente latter may he said to comprise Government employes, nlemss (i. c.-professors of rehgion and law), landholders, merohants, petty
traders, dependants, and beggars,

The houses occapied by the artize
int classes rary in accordance with and labonring classes vary in accordance with their means. Some are comfortahle, but all aro hadly ven-
tikated, and those of the poorer people are very inferior. All houses are built on the ammo prininferior. All houses are bnilt on the amme prin-
ciple, whether of stone, brick, or mud. The ciple, whether of stone, brick, or mud. The
form of the house is a square, or parallelogram, surroundiag a court into which the rooms open, and there is seldom any opening to the ontside of the building except the entrance.door. The roofs are flat, and on these the ocenpants sleep in the summer, whilst they also nse them for the parpose of spreading on them any article or prudace which they desire to dry in the snn. In the ceutre of tho court-yard is a sank and covered cesspool, into which the refuse-water
and off-sconrings of the honse are permitted to and off-sconrings of the honse are permitted to
snn through a gmall hole in the ground, and snn through a small hole in the ground, and
most houses are provided with a well, from which, however, the people seldom drink. The houses consist of only oue floor, none having an apper story.
As regards the aature of their engagements with their employers, there is no investment of capital in their case, and no mannfactories. A master artizan works himself with his journeymen and apprentices. The labonr market is well supplied, and artizans arc, for tho most part, so conifortably provided, that they are indifferent to extra work, and are content They are unwilling on an mast come to them. themselves, or put themeelves ont of their way to accommodate a customer. The consul is of opinion that there is no opening in this country at present for the introdnction of foreign labonr, and that English artizans and workmen shonld not he encouraged to come independently to this country

But the conntry offers the most promising openings for capitalists, both agricultural aud commercial ; and should it he possible to attract to it the attention of such, tbeir services wond offer occasions for the einployment of Englishmen, as snperintendents, engineers, overseers, and skilled workmen, and prohably in the conrse of time for that of snbordinate workmen and time for that of snbordinate workmen and
labourers.

The purchase power of money, as compared with England, is very difficult to estimate ; but the consul is of opinion that, in the bands of people foreign to the country, it is not greater than in England, if so great.
In the present state of the country a foreign workman coming to Bagdad would find difficnlty in obtaining lodging, nuless in a position to bire a house for himself, and this could be done in 302 principal tomns at the rate of from $10 l$. to 30l. a year. The honses are ill ventilated, the drainage is very bad, and miasmatic dirt, overcrowding, and air-poisoning are the rnle throughEren in Bagdad, the Capital Arabia in Porsia. Eren in Bagdad, the capital of the province, the state of the streets is disgracefnl, and the lanes in the more rcinote parts of
in a most disgustiag state.
Enropean piece goods are in great demand. Hany nseful articles in copper and tin are produced, bnt their finigh is bad. So also with goldsmiths' and jowelry work. Embroidery, in gold and silver, is admirably done and is very endaring. Great quantities of elegantly formed vessels in porous eartbenware, which are very nsefulin a hot climate, are made, but they are So also with a certain kiud of glass hottles. The stato of the field labourers is very wretched. They aro almost invariably overwhelmed with debt to the farmers or landowners for advances, and are cousequently miserably poor, and indeed but little removed from the condition

Th
The consul says :--" Still, this conatry offers commercial and apening for tho employment of as forming an opening for Enclish artizans and ndustrials, and the improvement of the condition of native labourers, I would wish to lay great stress.'
The country, soil, and climate are well adapted to the produce of wheat, barley, and all kinds of cereals, -cotton, jute, bemp, the surillower plant, and fibre-producing plants generally,-sugar ndigo, and opium.
Persons or corporate bodies investing money arily wonld need machinery, and would neces. advanced, the nuraher of these would fincrease Sclecting those trades likely to mold increase. from England, the rate of wages to be recruited Blackemiths, 11 $1 \frac{1}{4} \mathrm{~d}_{\text {. }}$; bricklayers 11 d per day Blacksmiths, $11 \frac{1}{4} \mathrm{~d}$.; bricklayers, 11 d. to 1 s .6 d . carpenters, 1s. 6d.; goldsmiths, 2s. 10d.; and coppersmiths, 1 s . 10 d . Other huilding, iron, or to average half London prine kno

Almost every Pcrsian is married before he reaches the age of twenty years. The women's apartments aro separated from the rest. Water is scarce, hat the religious law allows all rnaning water to be considered pure which is a span in deptli, "and flows sufficiently'rapidly to carry away handful of straw strewn on the surface.
Apprentices commence to learn their trade at eleven yoars old and remain with their masters to sunset, less two hoars for moals and prayers. Wages:-Masons, 6d. per day ; carpenters, 6d.; blacksmitlis, 6d.; painters, 6u.
The labonring classes strictly follow the ordinonces of their religion by abstaining from wine or other intoxicating heverages, forming in this respect a strong contrast to the upper classes, spirits are much given rood. Strangers on arrival are attacked hy low fever. Lodgings are found with difficulty, and rents have nearly donbled dnring the last five years. Ventilation, cleanli. ness, and drainage are nnknown.
Persians at Tabreez are capahle of turning out Food and creditable work, hut slovenly and nomsy. Being paid hy tho day, they protract men prefer cheapness to every other quality, and Whoever works for lower wages will recei mployment in preference to superior skill.
is seen in erstworthness or tho Persian character although the lahour is low priced, had workmanship and waste of timo make it nearly as dear as it is in Europe. The only occasion when they endeavonr to display soperior skill is wher employed by some anthority from whom they hope to receive a reward mnch in excess of the
valne of their labour. valne of their labour.
The tools they nso are all hronght from Rnssia, they are of a had and cheap description, and would hardly find purchasers in anyother part of the world. None of the modern fahrics of Persia
times. The carpets, felts, aud silks have very mach deteriorated, -the bandsome enamelled bronzes of Ispahan are no longer to be found. The inhabitants of the cities of Persia are relieved of many of the Government imposts levied on the villare communities, The carpenters, masons, and silversmiths are eacl under their owa chief, who is usually in the employment of the governor and nominated by him; any dispntes among the members are sub mitted to bis decision, from which there is uo appoal. In general, a Persian prefers to suffer any injustice rather than appeal to the Govern ment tribunals.
Pcrsia offers no field for Europesn workmen, least of all for English, who are, as a rule, the most indisposed to adapt themselves to the manners and habits of other nations. Some few Germans have from time to time endeavoured to exercise their trade at Tabree\%; bnt notwith. standing their thrifty habits and modest expec. tations, they seldorn sneceeded in gaining more than a bare livelihood. The natives prefer to cheaper and sufficiently well for their require ments.

Since the above was written every one has heard that, tbrongh Baron Reuter, vast undertakings will shortly commence in Persia, in which English capital, as well as an army of English abour, will he required. Shareholders will do to look forward a little, aud learn wha their secu
sorereign.

## SANITARY PRECAUTIONS IN

## WESTMLNSTER

Thl Westminster District Board of works have adopted a rejort from their surveyor, Mr . R. R. Arntz, with respect to hoase drainage, which contains the following valnable sngges. the main sewer to house.drains and outlets to the main sewer to be thoronghly trapped; soil pipes with only inlets to draint ${ }^{\prime}$ olear of the topinost windows (they are Tushaped in the plans submitted by Mr. Arntz to the Board) ; all othor inlets are to bo trapped, sc drains coul air oan enter the bouse from the rain-p; all drains to be tight-jointed; neitho used os verater-pipes, nor soil-pipes are to be oisterne, sinks, or baths, shell discharge into the open air; if at the too of the honse into rain water pipes, All dwains shall have fall of not less than 1 in 60 ( 1 such in 5 ft ), all dmino shat be of stoneware or terra-cotte pipes laid in con crete and jointed, branch drains shall be 5 in is diame jointer ; bras if rains shall he 5 in not 9 in. if they are of a greater length. Iu comd hined drainago the main draia shall bo 9 in wide at least, if the lenath is betweon 10 ft . and 20 ft ., and over that distance 12 in . wide. Nc drain shall go under a dwelling. The surveyor' plans provide that "it shall not he possible to draw water from any cistern or pipe supplying a water-closet for any other parposo then th supply of such water-closet.

## LARGE CASTING AT KIRKSTALL FORGE.

Tife Kirkstall Forge Company have just madea large casting for the establishment of Messrs. Cammell \& Co., Sheffeld. At these works was erected some years ago one of the hydraulic forging presses invented by Mr. Haswell, of Vicnna, engineer, and made at the Kirkstall Forge. The power of this press is 1,250 tons, and it has latterly been used for the pnrpose of bending armour-plates. Under the enormons force that was used a short time aro in bending a plate 12 in. in thickness, the top cross of the press was broken, and it is to replace the broken: cross that a new and stronger casting has been mado. The now cross is about 11 ft . in length from centre to centre of the pillars, the body boing 9 ft .6 in . long by 6 ft . hroad. The thickness thronghout is 4 ft ., or 9 in . more than thati
of the old cross. For five weeks the men, working overtime, were occupied in making the moulcl in loam. For the casting abont 45 tons of metal wore prepared. The melting of tho pig iron occupied five hours. An extra fan had also to be erected. Tho metal was:
ponred simpltancously out of two furnaces, a:
eservoir, and three ladles, and this operation ras completed in fifteen minutes, When finished, lo casting will weigh 38 tons, $01^{\circ}$ abont 8 ton aoro than the cross it is intended to replace.

## THE CITY EXTENSION OF THE

 METROPOLITAN RAILTVAY.THe works for the extension of the Dotroolitan extension from Moorgate-street to Ald ate are immediately to be commenced, The lready been boarded off, and a number of men re employed in excavating. The railway wil lso pass under Blomfield.street, and Finshury. bapel and MCoorfields Roman Catholic Chapel, hich stand at the two opposito corners of the ircus; hat it is siated that noither of these ill be affected by the works. A larte number t houses and other buildings will, however, have , be removed in order to sumit of the line eing carried moder Bishopseate.street. In rese are included the Londor Provident Insti. ation Savings Bank, and in anticipation of the moval of tho building new premises for tho asiness of tho bank have been erected in St fartin's-lane, t description of which has already ppeared in the Builder

## THE "TABARD," SOUTHWARK.

Aithougir every one interested in antiquitios ust regret the proposed destruction of the old Tabard Inn," yet that act would not bo such a nted by ono or two of the daily papers, which wre described that huilding as heine "pretty uch wbat it was in Chaucer's time; "whereas fact is, no portion of the existing ina is of an er date than the time of Charles II., tho fire in Southavark heen destruyed by the if ample teetimony to this fact did not the architecture of the "Tabard Inn" wil self convinco anybody who will carofully cmine it that it is not of an earlior date than oreigrs of Charles II.
We said the same thing in May, 1865, when e property was about to he sold as now, " and hon the time for tho removal of the old buid hon the time for tho removal of the old build ill be made to tell all comers that here stood, Tho Tabard" immnrtalised by Chaucer.

## GEIVER TENTILATION

Sir,-I cononr in the main with your corre. nondont, "Oxford;" but he has misundorstood y meaning. It was because the house drains whl not be trapped, if the Liverpool scheme d been adopted, that I objected to it. In the Builder of tho 30 h ult. an extract of o ongineer's repor't was given as follows:In districts where water.closets of this kind ist, the draught would then he entirely down $\theta$ strect ventilators, and up the soil.pipe .
at the house.drains should be disconnected, fo ntilating purposes, from the msin sewers"; mure that onn only be done by trapping them. During the time I was engaged on the Metro. litan Main Drainage Work, I spent many days the main sewers, and thus had every oppor. nity of observing the working of the street intilators, and from the exporience thus and beequently grined I make the following recom. Hions:-

1. That open gratings may bo used in the reets, without any nuisance whatever, in oper
2. That in severs of demosit, similar to some Liverpool, special means of destroying or Issing away tho noxious gases thus generated ruld be adopted either by the use of charcoal. ays in the up-cast shafts; or by archimedian row ventilators; or, by conuecting the sewers
ith existing tall chimney.shafts, with open atings as inlets at tho lower levels in each Fe.
Fouse-drains eliould also be trapped ontside o houses. Soil-pipes should he placed outside Yol, xxiii. $p$. 370 . The history of the place we
re in an carlicr rolume.
tilated. Waste.wator and rain.water pipes should discharge on open gratings with a sy phonwap under, and thus all continuous connesion with tho drains would he cut off.
These ara very simple precautions, and if properly carried out, sewor-gases may be effec tually kept out of our houses.

Jayes Lemon, C.E.

Sin,-The importance of this question is a suffient
pology for any discussion on the merita of propent Malogy
The make the drains of every house answer the engineer to enerral principla, is as a new idea; but I think, as a meane as any scheme yet proposed. It must he borne in mind that, lowever noxious the gases generated and con ned in the sewers may be, a coustant mesns of essasp
renders them practically harmosess; simply becanse ast as the gaseous products arise they are liberated. It othe continement in tidel-locked sud other syatems of awers which is the evil. It follows, therefore, that the
greater the proportion of ontlet is, the more effectian io the remedy; and it is olso obvious that a distributed number of small openings, as the egress nillorded by every house soil-pipe is miore effectnal than a few large ventiranin line of sewers; in which latter case large areas drained by secondary soners and pipes, are little a ffented by the main draught through the principal sewers to the
shafts. It think this is a snticient reason why any system, shafts. Iftrink this is a snticient reason why any system,
to be effectual, should afford a weli.distributed number of outlets.
Again: sulphuretted hydrogen, and all the lighter
gasees, ascend to the higher dietriets; and if the draught gasea, ascend to the higher distriets; and if the draught
orented by shaft, and other means of anction, is couffined rented by shafs, and other means of anction, is coufined
to the main eswers, only a large portion of confined gas at the higher levels must remain,
But the means propased lyy the Liverpool eugineer are
far from heing the best. The borougb anrveyor of South frar from heing the best. The borough anrveyor of south-
umpton, Br. Lemon, is rigit in questioning the mode mapton, 1 ir. Lemon, is right in questioning the mode
retarest the esenpe of friction of a long, and a great portion would would retard the esenpe of gas, and a great portion rould rush I wif simply obs
fom soil-pipes, are practicelly unneceasary, from thp priaciplo elfove, urged, and that evary soil or wasto pipe
shonld be siraply disconnected externuly to the housces by seans of ventilating ayphons. I agree with Mr. Lemon,
however, that the severs also should be ventilated sepa.
rately,

## WATER: WATER

Mr. Fred. Rictiard Wilson, who has been appointed sanitary inspector of Alnwick, under the Public Health Act, has divided the union into twelve districts, and has just presented his report on the first of them, "Amble." The following paragraph from it shows that 700 people are badly off for water :
"The crying want of this place is water. One source is the ajjacent unirn, into which part of the sewage of the
place goes. This hurn is dry in summer, snd reccise3 internitienily the pumpage of Togston Pit, higher up.
The poor people think it pretty pure when they get the
water fron this burn at a point giove where their sew discharges into it; but in poillowing the course or the burn I find that higher up it is fouled iy sheep and cattle as it traverses the inldy ais a ditch, and that it receives the
sewage from Togston Hall and Togston House. This latter
fact is, I believe, pot toown. n the water' ' 'Nothing but dirt ; a ' We We have settling
the holes of cows' feet-marcs to get it'; 'It must he
bad ' 'Ye can bad "; ' We can get slop-water for clarting on here, hut
not to make any ues ot' ' 'I're seen us not mile dakseant $]$ at use oren ' ' ' I've seen us go to Bondient the burn when it in bodity dry in sumarer; wore some of the straits these poor people are put to for water. laborious worlk of convering water fur tise whole of thi
pit vilage is mninly done, it all weathers, by children."
We described the miserable shortcomings of parts of this district in 1865.*

ARCHITECT'S CHARGES FOR PLANS, \& In toe Halifax County Court, Mr. William Heary Howarth, architect and smrreyor, Halifas, brought an
action to recover from Mesars, Etott, Hrothers, manufac turers, Brighouse and Dailifi Bridge, the sum of 48b. Ba lor preparing plang, \&e., for the erection of a mill. The particulars of the cose as atated for the plaintiff, were
that, having heard that Heasrs. Stott intended to build nill, plaintiti went to see them, ou 28th October, 1871
One of tho partners told him that Mr. Bull was thei architect genernlly, but they were not going to employ bim
any noro. He was asked what he would charge, and plaintiff replied that he would do it as reasonaly as any the plans and specifcations, and to superintend the wrork, at $1 \frac{1}{2}$ per cent, on the tolal cost. Be afterwards waited
on defeadants with the plans, and one of them said, "Oh, I "lidn"t think you had gone so far asa that: Bull has to us intely, bat we bave not engaged any oue yet." defendants strting that they had never given him an to he pusting the matter upon them, they would have nothing further to do with him. This action was there The plaintiff having been examined in the done. The plaintili hasing been examined in support of the
statement, Ifesssa. B. W. Jackon, W, Gray, and M. H
Wardle architects, were called to prove that the char were fuir and moderate.
Mr. Willinm Holdstrorth, contractor, Bradford, said that
on one Thursday in December, 1871, he met the defendant

James, aud on sakint him who whs the architect of thei
mill, James replied that Howarth was the architect. The defence was a denial of any agreement with the
plaintiff. He was distinctly toll that Mr. Bull was the plaintif. Ho was distinctly told that Mr. Bull was the architect for the mill. They never heard suything more
of the affir until the plaintiff nent in the plans on the i8th of November. Mr. Bull, arehitect, Hslifax, ssid he was employed to
prepare plans for the mill in November, 1871 , and he first prep some conversation with the defendanta about the plans on the 25 th October.
The jury returned a verdict for the plaintiff for the full The jury return

## APPRENTICESHIP SERVICES

 ston Adamson, of Gainford, heilders, to recover 22l, 10 a from the defendant, a farmer and iznikeeper of 8 nmmer for loss of the defondant's aonis services as an apprentice It appeared that the apprenticeship.deed wap not made as between the parties, although it was signed by them alp
apprentice was liable by the whether the father of the fusal to serve the plaintiffs. The Court declined to hold that nay parson not nazned or described in the commence ment could bo oonsidered as a party, and held the deed defendant in this action bornd hy general words, when the appoared that the defendant would have no remedy arainst the plaintiffs for any damage, however serious which might have resulted to him from a breach of the was in farour of the defendant, giviag the plaintiff the option of a nonsuit.

## BOX. DEAKING MACHINERX.

Rgading lately the description of a box-maling machiue Wornersley, of the Carrou Works of Mcsars. Coleman's mustard and starch business, is no more than wa made and fitted up nearly twelve years ago by mysoll Works, Belvedere-road, who had the manulacturing of conveyance of watches, photographs, jewelg, or, for the article by post or otherwise. The boxes and outgide first experiment was tried by G. Greenshields in a common wood-turuing lathe. Afterwards it was placed in my hands to improve and at up the machinery for the cutting of the hoxes The machine consists of nt least from
twenty to thirty euttere, iriven by orerhead motion with gutta-perchn straps, and arranged to be ot to cut nny gize bor, of any length, Wridth, or depth, as
might be required, The Food, after heing cut down in wecsanary, is passed tranveraely through the machine cutting its $V$ groorss, aud berelling its ends, severing it
from the long length, the two sides and two ends ther in each piece one after the other afterarards toge. cach ed a second machine, preparing similar groores on oucsides are cocive top and bottom. This dove, tho shape required, the tops and bottoms cut and herelled ready by the manchine atso of the size required. The box is box is sealed up life an ordinary they may be, and the machine is once set to ite proper eize twrelope. After the particulars of the gross of boxes per day. Drawings and particulars of
to the naker. $\qquad$ an quition

## WORKING PATENTED INTENTIONS

## in austria.

8ir,-We have just received the following sommanicsworlinem onr agents at Vienna, regarding the time for "Please notice, that althongh the Ninistry of Commerce sion of working time for a aecond and for a for extenthey have now suddenly a a aecond and or a third year, graating third year" grace, to grant second year's graco only in exceptional cases, and not to grant any extensions The above is on patents now being issued,
many patented inventions being within the walks of the Exhibition bailding wheh were not made in that country, although patented ther

Rodertson, Broomars, \& Co.

## LIGHT AND AIR CASE AT THT

 CRITERION.Tar last edition of the many digputes which havo dilly, for Messra, Spiers $\&$ Poad, is an action brought
against the owners of the building on the muoh-yered question of obstruction of light, and came mefore sir. Baran Bras
Exchequer.
The plaintiff, Mrr. Adams, resides next door to the Criterion," and is lessee of a picture-gallery. the About four yeare back Masars. Spiers \& Pond, the gallery, as diming sind refreshment rooms, and, desirous of enlarging and improning their premises, they built a ion of the picture- allery, and this cut aff ene eleva. the light from the picture gallery, so as to make it, as whe eged, zearly ralueless for exhibiting piorures or painting
thenl.
The plaiutiff" was onpported by a number of witnesses.
The defendant's counsel did pot deoy the darlness anse, but contended that the plaintill had failed to prove that he had had ticenty years enjoyment of the light in
question, and which proof was necessary to establish his Wht to the light, or to recover in this uction.
dams's tenarore called to prove that, previons to Mr Adams's tenancy of the , premises, they had hoen used as
the "Piceadilly Saloon," and that up to 1860 the slylight
over the present picture-gallery was only a small one of
8 ft., and had nreviously been corered with cauras; and
Mre A Anass bad eularied it to lit it dimensions: and
 that since 1860 the plaintiff bad made mayy other altera.
tions in the building, both in respect to the aspect and
size of the windows.
The jury, having gone over both buildinga, answered
sereral leggal questious put by the judge, and they ulti-
mately, on points of law found for the sereral legal questions put by the judge, nad they ult
mately, on points of laws, found for the defendant, and
the judge granted leave to phaintifl's counsel to more to the judge granted leare to phintifis counsel to more to nearly where it stood at first.

## THE TRADES MOVEMENT

Bath.--The masons and labourers are engaged in a dispute with their emplogers. The masons ask for on halfpenuy per hour and a reduction of the honrs of tabour by one honr and a half. The lahourors demand an increase of a halfpenny per hour. The masterg offer an adrance of a farthing per hour, and a reduction of the hours of lahour. If a striko takes place some 2,000 operatives will he thrown out of employment. Bedford.-At a conference meeting of the carpenters and jomers, as reported in the loca C. Day, Mr. Johu Hnil, Mr. R, Carter, Mr. T Spencer, Mr. Cunvin, Mr. Foster, Mr. L. B. Moore, dic. Mr. Cunvin, Mr. Foster, Mr, L. B. Moore, di., B. Adams take the cliair, which was agreed to. Mr. Carter also proposed that 6d. an hour bo assed for; that the that and three months' notice be given. Mi: S. Lnmh seconded thiz. Mr. T. Crowther moved as an ameadment that they ask for $5 \frac{3}{2} \mathrm{~d}$. an hour at ovee, retaining the present time of $5 S_{\frac{1}{2}}$ honrs, and at the card o thred months 6 d . per honr for $56 \frac{1}{2}$ homrs, leaving
off work at one on Saturdays. Mr. E. Eheasey uff work at one on Saturdays. Mr. E. Dheasey
seconded the amendinent, which was carried withont any npposition. It was tliem resolred that this resolution should he forwarded to the masters, and that another meeting sbould be auswer

PATENTED APPARATUS AND ROYALTIES. OODTHIN $v$. TALL \& COMP.INY (Lhmited)
Sir,-In 1868 I bought a patent apparatus of Mr. Tall for erecting haildings in concrete which cost me over 200l. I continued building with this apparatus in different parts of the country
till $18 \% 2$, when Mr. Tall sold his husiness to company. I continued to supply Tall \& Co, with iron work as I had done Mr. Tall I spplied to them for payment of an acconnt of $71 l$. for work them for payment of an acconnt of $71 l$. for work for huldings erected in Fing-street, Borough, for huilangs erected asked for such a thing beforo. thus the action.
Judge Bramwell ruled that such a demand could not stand good unless a written document could he produced signed by the purchaser; and contended that if a person purchased a patented articlo he did so with the expectation of being allowed to use it. Tho plea of royalties was orer ruled, and a verdict for the plaintiff returned, on the 2nd inst., at Queen's Bench Court, West
What makes the action of so much importance to the ahove company is, if they had succeeded in gaining a verdiet they would have had a claim upon all persons vsing tho same machines and who have been doing so for years, the same as myself.
H. Coodmin.

## SCHOOL-BUILUING NEWS.

Holborn, London.-The foundation stone of a new school in connexion with the church of St. Alhan the Martyr, Hohhorn, has heen laid by Lord Eliot, on a site which had been selected in Buldwin's Cardens. These schools are heing built in the midst of a dense population of ahout 8,300 , almost cntirely poor: they will be the only frechold school premises in the parish, the area of which is ahont 500 by 200 yarls. The total cost will exceed $6,500 \mathrm{l}$, when completely fitted, of which the site, including conveyance, cont 2,0002 . work already done, $1,000 \mathrm{l}$, leaving ahout 3,500\%. to he provi'ed within the next six months. The architects of the hnilding are Messrs. Mileham \& Kennedy, and the work will he carried out by Messrs. Cubitt \& C 0 .

Gloucester.-St. Mark's Dew schools, erected of the diocese for the two-fold purpose of meet
ing the educational requirements of the populous and destitute district of St. Mark, and to avoid the necessity of a school hoard in this city, have been formally opened. The schools, according to the local Chronicle, lave been erected on the Heathville Estate, at the junction of Sweetbriar and Sherborne streets. Accommodation is provided for 500 children, - 200 infants, 150 boys, and 150 crirls, -in three separate schoolrooms, attached a class-room, 20 ft . by 20 ft . The rooms aro lofty, those for the infants being $[4 \mathrm{ft}$. high, and those for the boys and girls an average height of 16 ft . The girls and infants' rooms are grouped together (that for the infunts on tho ground floor, and that for the girls above), access being obtained from $n$ large playground by an entrance-hall common to hoth. The boys rooms are approached from the street by a roarlway 12 ft . Widc, enclosed on each side by a dwarf wall with iron palisading, thus keeping them separate rom the girls and infants. The hoys' school and class.room stand in the centre of the byys ${ }^{2}$ playground, part of which it is contemplated to 1 ise for gardening purposes. The schools aro uitt entirely of red hrick, are covered with hragwater tiles of a dun colour, and havo not the slightest pretension to architectural effect, the rooms have boarded floors and plistered ceilings, the main timhers of the roofs being ceilings, the main timhers of the roofs being
stained and varnished. The internal walls are stained and varnished. The internal walls are The windows and colonted of a straw coloar. The windows are constructed with cast-iron frames and casements. In each schoolroom there aro two, and in each class-room ono, of Mr. J. Carter Hyde's warming and ventilating grates, the principle of which is to admit a supply of warm fresh air, the cold sir being admitted hy pipes to tho chambers at the back and sides of the grate, warmed by contact therewith, and admitted into the rooms from apertures at the sides of the grato. Ilio foul air is conducted by pipes from gratings in the foors to the ashpit, and by passing through the fire is consumed. No fittings are as jet provided. The contract price fur the huildings and boundary acre, was 1,4137 . The contract las heen carried out hy Mr. J. Meredith, from the designs and under the smperintendence of Messrs. Medland $\&$ Son, architects.

## FARIORUM.

A paper on tho Ventilation of Builings, by Mir. W. F. Butler, read before the Society of Civil and Mechanical Engincers, has heen pnhlished contributing to the discussion any thine actuall hew, it includes a discussion anylung act infor mation, and may he usefully circulated.

## 触iscellamea.

The Fire at Alexandra Palace.-The inquest has heen held on the hody of the man who had the charge of the zincworkers on the roof of the dome, hut was not himself on the roof on the diy of the fire, and was struck hy a piece of barning timher helow, which bad been wafted to a distance hy the wind, on falling on the spot where he was standing looking. No light whatever seems to have heen shed on the actial cause or origin of the fire. Only one witness examived (Muore, a police-sergeant, who gave the alarm) seems to have seen the smake so early as bnlf-past twelve, alsout which time it was witnessed at Holloway by the writer of this, as we stated hefore the inquest tonk place. A flower-woman on her way to Finchley, as she tells ug, saw the smoke at twenty minntes past. asked. The architect, Mr. Meeson, was the firetwers of She surday honrs hefore, could have set fire to the doma to which bo replied in the negative. Two zinc-; workers said, of course, that they conld not have done it. They took their red.bot irons ont of the fire at the dinner-how (twelve o'clock), and the fender of the firepot, hat where the other pint his does not appear to have heen asked him They say they first saw the fire from the fields, ahout tweuty minutes or a quarter to one o'clock Tho coroner's jary in their verdict state that "show the said huilding took fire there was nut sufficient evidence to show."

A Step in the Right Direction.-At th ast sitings of tho Cheleat Vestiy, a committe reported that they had riesed the house Nos. 119, 121, 123, Walton-street; and, onde the powers of the Al'tizans' and Labonrerg' Dwo lings Act, 1808 , they recommended the vestr to order the demolition of the whole of thos tenements, as heing totally unfit for huma hahitation. Mr. Bird said ho never conceive such discraceful places evisted in Chelsea or an other for and phere order their heiug razed to the ground. Repair ing or patehing rould be useless. Mr. Jacksosid or pane of the house the dust hole was in said in midale of the flom, aud
most filthy condition.

The Figh Price of Coal and Labour.At the annual general meetings of John Brow \& Co, and Charles Cammell \& Co., Sheffielc Mr. Ellis, chairman of the former, stated tha the extra cost lasc year from coal and wage alone amounted to no leas than 120,000 . Fros the rise in wages here Continental makers wors able to undersell ns; and daring the last si monthe he livd found it utterly impossible $t$ ohtain orders for steel forgings, springs, \&o on the Continent, at prices which wrould leav any profit. The bigh rate of wages had almos shut thom out of the Continental and America. markets.

Archeological Discovery.-An intorcstin iscovery has recently been made on Barbarr Hill, hetween Devizes and Swindon, in refereno to the antiquity of "the Druidical camp" $\varepsilon$ that place. Daring some excarations a lahoure turned up what appeared to the uninitiated round aud clumsy circle of stone. Nir. Helho an archeologist, rocognised in it the shape of com-nill, thought to he of the third century. Thi stone, it is said, bears a close rosemblance to th Fusrician Stone of the Chaldcans. Mr. Helbe is to presont it to the Devizes museum.

Self-acting Preserver-Valve in Fires. Mr. Stewart's selfoacting preserver-valve, for th protection of life and property from firo, is constructed with fusible motal, that when fixe in ceilings, or elsewherd, the heat of an incipier fire melts the fusihle metal, aud opens the valve 80 that streams of water phinr out npon the fu to quench it, while the action of the water set alarum-bells in motion. Tho object is the pro
tection of buildings of overy description, $\varepsilon$ well as ships.

Letting Down a Shaft. The shaft, $125 \mathrm{fi}_{\mathrm{i}}$ high, connected with Messrs. Farmer's lat vitriol factory, at the rear of Kennington Parl having taken the whole of this property fi building purposes, it was found necessary to tab down this glaft, which was effected by unde: minine, and carried ont, we aro told, withoutan mining, and carried ont, we aro thad boey lowere acciklent, an
with a rove.
A. Monster Tent, -Mr. D.vid Dwies, $c$ Lhadinam, principal proprietor of tho Ocea Collieries in the Rhondda Valley, South Wale has just entertained 3,070 colliers and thei wives at Llandinam to dinner and tea, on th oceasion of his son, Mr. Edward Davies, attair ing his majority. The party altogether nam bered ahout 6,000. The entertainment took plad in a tent, 250 ft . by 80 ft . It contained thre quarters of a mile of tahles, aud a mile and. quarters of a

The National Gallery.-In reply to M Bowringr, in the Commons, Mr. Ayrton said tha there had heen some differenco of opinion betwee the trustees and the architect as to whether th covering of the iron flooring in the new huilding of tho Naifonal Gallery should he of tiles or c mod. The arclitect was iu favone of orna mental tiles, bat the trustees preferred wood and as the latter werc to have the care of th buildings it was decided that the covering shoul be of wood.
Hyde Pazk-cormer, - Complaints havin seen made hy Lord Longford nnd others to th Metropolitan Board of Works (as well as Park-corner, and the danger there to life an limb, the Board, at the suggestion of th Chairman, who said he was prepared with plan to relieve the evil, refer ed tho matter the Works Committee, with a view to the cor ruestion.

The Girard Avenue Bridge, Philadelphia. bridge is to be built over the Schuylkill, Girard Avenue, which will, when completed, . orm the chief highway to that portion of Fairnount Park in which it is intended to place the unildings of the Intornational Exhihition of 1876. Pennsylyania Engineer and Manufacturer. The sontract for the work has been given to the hoenix Ironworks, at Phenixville, Philadelphia, the bridge will be 100 ft . wide, which is stated o be wider than any bridge yet constructed. It Hlows of seven lines of carriages driving abreast In the roadway, and has two lines of side-walks, o porishable matcrial shall enter into the contruction of the now bridge, it is specified that pon the iron floor-joists shall be laid corrugated ron plates, and that these be covered with sphalte concrote, which, while forming a per-
ectly water-tight surface, shall yet be tolerably ectly water-tight surface, shall yet be tolerably
lastic. Upon this is to come a pavement of lastic. Upon this is to come a pavement of inll consist of slate or flags, laid in cement, and
ordered with bright.coloured tiles. Between he side-walks aud the rondways will be placed ron railings of ornamental design, secured to
The balustrade in the ihe granite curb-stone. The balustrade in the ater line of the side-walks will have bronze
anols worked with elaborate designs. The niers and abutments will be constructed of -Laine granite. The dressed work abutments rill be constructed of such stone as will give ontrast of colour.
The Exlibition Commissioners and their and at South Kensington.-In answer to iir H. Hoare in the Comnions, Mr. Ayrton said, hat bcing ex officio one of the commissioners, he ad made inquiries with respect to the leasing ronting Kousington-gardens, and lying between Jueen's-gate and the Albert Hall. The comiission, in tho exerciso of their discretion, adverised the land in question, and it appeared that, a doing so, they had acted entirely within their uthority. It was quite a misapprehension to uppose that they had specifically dedicated, or bledged thomselves to dediente, the land to any ublie purpose, They had let land for tho Alhert Hall, for the Horticultural Gardens, and or Government parposes ; and in doing so they General said he had no acquaintance with the charters, hut it was his duty to know the Act of arliament, into which he liad looked, and from ioners had acted under their authority. I lopended on whether they had discharged cerain liahilitics preseribed by the Aot. As to intimated that ho should take the opinion of the Iouse on this matter.
Exhibition of Leather-work at North-impton.-The construction of the huilding for he forthcoming exhibition of leather-work at Jurtbampton is being rapidly procecded with. Er. Dankley has the contract for erocting the uilding on the site offered by the Corporation; hat is, on the south side within the cattle.market nelosure. The design prepared by Mr. A.
Lilne, and acoepted by the committee, is for a vooden building 364 ft . long, or from the oast to reight of walls, 15 ft ; and to ridge of open oof, 25 ft . On the outside the roof will be bitewashed and pricked with stencilling Che iuside walls will be cancassed and corored vith paper. The building will be lighted hy a ontinuous lantern-light in the roof, and artiicially by gas, and will also ho veutilated by luelinod openings in the woodwork of the roof, uranged to admit a froe current of air, loor, part of which is already down, will The joists placed crosswise, and will be thus aisod from the earth
New Turkish Baths, Leicester.-These ouths, which have been recentiy built in tho riar lane hy a company, have been thrown pen for public inspection, The floors are made and coloured hrioks, with polished pillar's and arved stonework. Thero are separate dressing und cooling rooms, nad four heated rooms of lifferent degrees of hoat, the highost of which hower-baths, In an adjoining room are two rature, including a bath of cold water.

Safe Travelling 100 Miles anl Hour. promised by Messrs. J. H. \& J. Reynolds, of Briston, should the various railway companies adopt an invention just patented by them in England, and for which hey are obtaining a patent in the United State A Amerioa. This invention is an addition to engines, carriages, and permanent way, to enable two-thirds to one-half of tha, timo usually occupied. A part of the invention consists of a middle ruide of wrourht-iron, supported ou trong standards or brackets. This mid-line is to stop the encine or carriares from roin off to the right or left or moving upward or downward, and even in a collision the carriages are not to he heaped on each other, but kept on the line. The gronter security would, they say, enable its staff to ron trains at a much higher rate of speed than is possible at present. This invention, they add, in no way resembles the Mont Cenis line, in which the contre rail was for the sole purpose of euabling trains to pull themselves up an exceedingly steep incline,
Opening of the New Town Hall and Bank Park, Warrington.-Warrington has been er fête on the occasion of the pullic open-
ing of the New Town Hall and Bank Park. The purchase of Bank Hall (lately the Warrington residence of Colonel Wilson-Fatteu, M.P.), and surrounding grounds, was effected hy the corporation more than twelvo months ago. A private gentleman (Mr. George Crosfield), conributed 9,500l. towards the purchase of the property, and the corporation of Warxington enterd into negotiations, and the lind, 13 acres n extent, was sold to them for 13,000 ., and the mansion and grounds for 9,000 . Colonel Patten agrced to deduct from the parchase money the sum of $3,000 \mathrm{l}$., and this, with the sums contributed by Mr. George Crosfiold, evabled the corporation to purchase the park, or recreation groand, without cost to the town. Nothing has as jet boen done with the old menced, but alterations will shortly bo com. a town-hall and offices

Derhy Masonic Fill.-The Marquis Gariggton, M.P., Proviucial Giand Master er Gower-stroet, Gall in courso of crection in quating room on the ground floor is .15 ft . hy otiring in front of which are commitee and with necessary offices A stone staircaso leads to tho hall on the first floor, which is 58 ft . by 30 ft . ; at the end there wil! be a semicircular recess, with a balf-domed ceiling, to receive the organ. The ceiling is flat, divided into enriched bajs, being coned at the sidos and enda; in the contre there will be a counter dome, with stained glass allegorically illustrated. The front of the huilding is of white stone, broken up with red Mansfield pilasters and Corinthian caps. The top is finished of with a halustrade and carved soroln Mr. Shefield, Oerhy, is the architect, nuder whose superintendence the work is heing: builder.
Excursion of the Yorkshire Architectural Seciety.-The membors of this society have had an excursion to Doncaster and its Arksey, lately restored by chureh visited was party thon went to Kirk Sandal, where they also inspected the church, with its Norman remains Barnby Dun, whore the north-wcst mortuary chapel, with its sercens, were inspected. The noxt stopping-place was Fishlake. The vicar, the luev. G. Ornsby, kiudly receivod the memhors chanch.eon. They afterwards inspected the spected that church. The oxpedition, they inturned to Doncaster, when a cold collation was served at the Angel Inn. Doncaster parish church was then visited. The vicar gnided the party over it. This concluded the day's pro-
coodings, the party retuming to York in tho evening.
Lord Leicester and Agricalture.-At the noiversary dimper of the Norfolk Agricultural Society, the Earl of Leicester, lord-lieutenant best ossay upon the improvements which have taken place in the agriculturo of the eastern l district during the last twenty years.

Prevention of Floods.-The object of the Patent Self.acting Flood-ggates (invented by Mr. J. F. Smith, of Leicester, arcliztect) is the prevention of lloods cansed by the stanking up, of the water-course by permanont weirs for mill, navigation, and other purposes, and the intention is to remove the weirs and place in lieu thereof a row of these gates right across the river, and so make a movahle and self-acting weir. Where the current is very rapid, by increasing the number of gates any amount of water mar be allowed to rum a way as fast as it comes. A mong the advantages of this invention are said to he its small cost and its simplieits, and its not interfering with mill ownara' or the navization of wiver, ad souring cleansing the beds of the rivers Floats cleanth ble the
 ton times the rolune of will for the gates in thane the ef ef the top water suasides,

The Sheffield Architectural and Archæological Society.-A joint excursion of this Society and tho Sheffiold Naturalists' Club to Bolsteratone and Bradfield has taken place. Bolsterstone Charch, which is being built by Mr. Fawcett, was visited, then Broomhead Hall and the moors above the hall, where several intercsting archrological remains occur. Time did not allow of these being risitod; lut the party managed to see the Bardyko, which marks the site of a hattle between the ancient Britom and the Romane, and aso the supposed remain of an ancient Druidical circle. Bradfield Chureh was inspocted, aud the old Saxon camp near it explored It is supposed to heve furmpan post of the is supposed to have formed an out The partp ancient kingtom of Northumbria. Mr. Bedford and Mr. Fawcott were the conductors of the excursion.

## St. Saviour's Church for the Deaf and Dumb.-This church, which has recently been

 hnilt in Oxford-streot, has hecn opened for Divine service. The huilding is of briok, with Bath stone facings. We gave a view and par ticulars of it in our volnme for I871, page 726. Mr. Arthur Blomfield was the architect. The principal portion of the congregation were deaf mutes, and the service was interpreted to them by sigus by the Rev. S. Smith, the chaplain. The Bishop of Carlisle preached a sormon which was translated hy means of the nimhlo fingers and expressive pestures of Mr. Smith Among those present were the Princess Louise and the Marquis of Lorne, to witness the in. teresting and curious scene. The amonnt re quired to complote the chapel and build a residence for the minister is 2,000l.Improved Cabs for Iondon.-The jndges appointed to award the prizes given hy the Society of Arts for the improvement of London cabs met at the International Exhibition. There were present the Duke of Beanfort, Lord Arthur Somerset, Lord Alfred Churchill, General Eardley Wilmot, Mr. Cole, Mr. Cassels, and Mr P. Le Neve Foster. The judges inspected the various cabs exhibitod, and agreed to the following course of proceeding, viz., that the cabs ahould be tried in competition in their various fcatures and in motion in the West annexe of the Exbibition, on Fridny, Juno 27th On a future day after this tria!, the cabs will go in procossion to the City and back; they will then he exlibitod in Palaco-yard, and evidence of their merits and defects will be taken publicly at the house of the Society of Arts.
Will of Sir William Tite.- The will, with one codicil, of the late Sir W. Tite, K.C.B., M.P.; was proved, on the 7th inst., by Damo Emily Fre, the relicy, Robert Farre Dalrymple, and Francis James, the executors, the personal ostate boing swern under $400,000 l$, Tho only legaey of public intcrest is one of $1,000 \mathrm{l}$. to the Institute of British Architects (as we gaid would be the case), to be investod aud the income "applied yearly in such manner as the presidont and conncil for the time being of the said Society shall doem bost calculated to promote the study in Englaud of Italian architecture."
Society for the Encouragement of the Fine Arts.-The fourth and concluding conver sazione of the session took place on Tharsday June 26th, at the Gnllery of tho Society of
British Artists, Suffolk-street, Papll British Artists, Suffolk-street, Pall-mall Enst and a pleasant ovening was spent. The six.
teenth session will commence in January, $187 \%$.

Accident. - Whilst some workmen were engaged in pulling down buildings to make extended dock quay-room at Middleton, near Manchester, a sad acoident occurred. Two of them were getting up the foundations of a demolisbed house, when owing to the oscillation caused by a passing coal-truin, the gahlo of a shop fell out apon them, killing one on the spot nd seriously injaring the other. Two working with them in the shopescaped unhurt.
Restoration of St. Nicholas's Church, Newcastle.-Sir Gilbert Scott has reported on this subject to a local meeting. He proposes to alter as little as possible the architectural chaacter of the edifice, and to hring it into a state of repair with the smallest loss of original work manship and material. He suggested the division of the work into sections, Resolutions in accordance with this report were unanimously passed, and an executive committee appointed.

Sussex Archeologioal Society.-At the committee meeting of this society, held ou the 19 th of June, the place of the annual rreeting was decided to be at Winchelsea, on Thursday Angust 14th. By the kind consideration of the general manager of the South Coast Railway, a train will ran specially to Winchelsea, as the station there is beyond the limits of the South Coast traffio.

Excavations in Lincolnshire. - Tho re. mains of the church and conven'ional buildings of Lonth Park Abbey have been disinterred by Mr. W. Allison, who has laid hare the entire plan of the church, chapter-honse, cloister-court, and other buildings. The abbey nsed to helong to the Cistercian roonks. The chnreh proves to have been 249 ft . in length, only 20 ft . shorter than the parent abbey of Fountains.

Trades' Guild of Learning.-The Conncil appointed at the Conferenco lecently held at the Society of Arts, met on Saturday at the rooms of the Working Mens Club and Institute Union at No. 150, Strand. There was a large attend ance of memhers. Mr. H. R. King, bookbinder, treasurer of the London Trades Conncil, was in the chair.
Royal Horticultural Society.--The pro. rincial exbibition of the above society is opered at Bath, and, notwithstanding the faet that the city is engaged in an election contest of unnsual intercat and severity, tho arradgements are carriod with dus celat. The citizens have subscribed 1,900 l for a prize fund

## Sanitary Engineering.

has always seemed to us that everything conneeted with this snhjeet slonld he of the best quality, whother papers, reports, or books; and when a hook is written with the title of "Sanitary Engineering," we look es peeially to see whether it is worthy of the occasion, and whether it will in overy way in whieh it deals with the suljeet tend to promote the publio health, so that future generutions nay be enahled to live more healthily than it is possible for us to do under present arrangements. In Mr. Latham's books,* the physiological data upon whieh all sanitary engineer ing onght to be hased are woll stated by tho author Tho oxygen contained in the air wo hreathe combines with s eloments of the blood, and, so long as life iols the air and blood are continually flowing rards each other. "Tho produets of the idation of the blood aro expelled hy the lungs d akin as carhonie aeid and water. A portion, 0 , of tho iuspired oxygen comhines with the rogen and other eloments of the aniraa sue; and, after this combination, the prodncta eliminated from the system in the excre. s. It is the oxygen of the atmosphere alone whas the power of oxidising aud removing waste of animal life. The nitrogen is merely asont as a diluent, which nodifies the stima. ing effeet of the orygen. Air onee used loses vitality, and heeomes unfit to sustain life c, too, that is loaded with decomposing matter not sustain life in health, beenuse the ygen of the air is ahsorhed or used up by the janie matters which are present when uuder. ng decomposition. Air, earrying decomposing ther and the germs of cisease, is niso directly urious, leooause it boeomes the vehiele which areys into the human system the organio ments nudergoing decomposition. ater is the agent nsed for eoureying nutrition Arling this mission, it becomes the vehicle for nveying away all those solabio compounds ich havo subserved their purpose in the mal eeonomy.

Deloterions matters sent in water, as a rule, aet more speedily nthose presont in tho air, because, when eoned in water, they pass at onee hy tho rapid

If the varions procen into the system.
If the varions processes carried on in vegetable lingdom are now eonsidered, we Il find, when studying the physiology of ictallo life, that oxygen, which is of such ply as oxygen, of no speeial service to the retable kingdom; hat it has heen arranged, the good order of Providence, that all the rats, whether air, water, or food, that have promote animal life, have, hy this very

Sanitary Engineering: a Guido to the Construction
Yoiks of
hame

proeess, heen made fit agents for the support of some parts somewhat vague; a.s, for instanee, vegetable lifo. The vergetahle kingdom utilises those waste elements which have heen cast off by the animal kingdom, and, after utilising them, retains only those substanees which the air or water had originally taken up from the animal, and in its turn again gives up the air, water, and food, in a fit and healthful state for the use of animals," and so the eycle is eomplete. "The preservation of tho health of every elass in a community is equally important to the rieh and poor. It is important to the wealthy that the poor should be kept in health, for tho influene of infection, onee introdueed into the dwellings of the poor, often spreads far and wide, and is no respeeter of persons. It is important to the poor man, as his health is his wealth.
Sanitary laws and regnlations are intonded to give power to communities which single indivikuals cannot possess, viz., the power to promoto general measures ealcnlated to seeure or improve the state of puhlie hoalth, hut loeal anthorities aro not always imhned with the true spirit of humanity; money eonsiderations are with them often of greater inportanee than the qnestion of life and health, and it not nnfre. quently happens that politieal eapital is made out of sanitary agitation. The advocates of filth and dirt appeal to the breeehes-poeset, $t 00$ often with sneeess.

The authori. ties in many towns appear to overlook the hard fact, that while they remain innetive, disease and death do not.'
The author quotes from the ninth report of the Medieal Dopartment of the Pripy Counci! the results of sanitary works in twelve (why only twelvo? towns in England, in which tho reduction of typhoid fever and of consumption sinee sanitary works have heen carried out has been vory eonsiderahle. Summing up the popalations of these towns given in the table we find them to he 301,800 , or an average of 25,400 each. The reduetion of typhoid fever rate has varied in these twelve towns from 10 per cent. (at Rughy) to To per eent. (at Salishary), tho average of the whole having heen $47 \frac{1}{\frac{1}{2}}$ per eent. ; and the reduction in tho rate of phthisis has varied from 11 per eent. (at Merthyr) to 49 per cent. (at Salishury), and has been on the average 30 per cont. The doath.rate, however, whatever it is, does not mark the ehief henefit of sanitary works: it is the prevention of sickness which is the ehief thing, and for every person who dies from a preventible disease, like typhoid fever twonty-eight other persons (on tho authority of Dr. Lyon Playfair) suffer siekness fronn whiel they recover. The author ostimates the prohalle effeet of sanitary works in this way :- Tirst, the saving in the eost of funerals, which he sets down at 5l. each; sceondly, the saving hy reason of the eseape from sickness, with its cost, ineluding the value of the lahour lost, whieh he estimates at $1 l$. each ease ; thirdly, the value of the lahour saved to the country hy the prevention of prematuro death, for cevery adult malo 10 s . per week, and for cvery adult fermale 5s. per week, or a mean of 7 s . Gd., ovor and ahovo the eost of maintenance. The anthor made sueh a calculation in the year 1868, talking the town of the year 1867, 196,000l. had heen expended in sanitary works, viz., 70,000l. for water, 75,0001 . for sewers and irrigation works (ineluding pallie haths, ahattoirs, and general improvements), and 50,000 . for land. By taking the differenee in ho rato of moriality lefore and after the works vere carried out the author extimates that the expense of 2, 439 funerals had been saved, making 12,195l.; 60,975 cases of siekness prevented, $60,975 l$; and as mneh as $166,929 l$, in value of lahour, making altogether in the thirteen years previous to 1868 a saving of 240,0992 ., whieh exeeeds, very considerably, the whole amount of
money expended. money expended.
The practical part of the book, however, is in
"In all eases in whieh rainfall is admitted into sewers, it is found hy experienee that only a eertain pereentage of the rainfall finds its way into the sewers, the other portion heing either ovaporated or absorbed.

In experiments made some years sinee hy Mr. Diekenson, on the rainfall in the distriet of the Colne, lie found, on an average of seven years, that from April to Septemher, inelusive, 93 per eent. of rainfall was evaporated, and 7 per eent. ah. sorhed, eqnal to 1,192 tons of water por acro evaporated, while hat 91 tons per acre were ahsorhed or filtered into the ground; and from Octoher to Mareh $25 \frac{1}{2}$ por eent. of water was evaporated, equal to 360 tons of water per acre, and 1,052 tons per aere were ahsorhed." Noss, Mr. Diekinson did not find any quantity of water or pereentage of rainfall that was evaporated, at all. What he did was to fix a Dalton's rain. gauge in a loamy soil containing a considerahle quantity of sand and gravel, and to find the quantity of water that percolated to the depth of 3 ft . What heeamo of the remainder is matter of speeulation. Probahly most of it was evaporated, hat in seientific affairs it is prefer ahlo to state faets, and leave it open to indi viduals to make their own dednctions from them, the author pointing the way if he pleases As there is more than one river Colne in England it would have guided persons interested in this question if it had heen stated that theso experiments were made at Waiford. In the same vague way the author says that "in a district in Warwiekshire" he made provision to lead off a raiufall of 1 in , in 2.1 hours, together with one. half the maximnm quantity of sewage in 6 hours, taken at 5 enbie feet per head in 2.1 hours, and that the sowers were found to he by no means too largo. Considering that he had stated on the previous page that the metropolitan intercepting sewers are eonstrueted to eouvey rainfall at the rate of $\frac{1}{4} \mathrm{in}$. in 24 honrs, it would have heen of some interest to know what were the anthor's reasons for making the sewer sufficient to carry off a rainfall of 1 in. in 24 hours: whether it was hecause there was no opportunity of making storm-overflows, as is done in the London sewers; and if so, whether the sewer has heen in use for a sufficiont length of time to prove that that is a suffieiont eapaeity for sewers (at least in that locelity) intended to earry off all rainwatcr as well as sewage, and if not, what provision, if any, was made for the remainder, It appears that Mr. Latham has carried ont sewerage works at Dantzie, and wo are told that tho "goologieal formation" is prineipally sand, and the distriot very flat, and that the author made provision for carrying off $\frac{1}{2}$ in. of rainfall in 21 Lours, together with 2 cuhic feet of sewage, per head, in 8 hours.
As to the quantity of water supplied to towns, "taking an average of 120 towns in this conntry, the anthor found that the volume of water sap. plied for publie pnrposes averaged 35 gallons per head. In some eases the quantity was greatly in execss of this average, for as much as 56 gallons per head was supplied, while in some towns it did not exeeed 10 gallons per head.'" The supply of water to towns in this eountry is divided into that supplied for domestic purposes, that for rades pnrposes, and that for public purposes, the wholo of which together amounts to about what the author states. As to the 56 gallons per head, we were not previously aware that more than 50 gallons are anywhere snpplied-the Glaggow supply heing, we believe, ahout 50; hut in a tahle showing the volnme of sewage of towns tho author states that at Croydon the "dry.weather flow" is " 56 gallons per head, due to water snpply." Considering how Croydon is supplied with water,-thatis, by pumping, we helievc, ehietly if not wholly,-this seeras a very large supply, and as water.closets are there in general use it might mislead some persons into
the supposition that so mucls water is required for
he water-closet system.
The author has fonud that in small sewers and drains, such as those of 6 in, and 9 in. diameter, a mean velocity of not less than 3 ft . per second should be produced. Sewers of from 12 in to $2 . t$ in. diauzeter should have a veloeity of not less than $2_{2}^{2} \mathrm{ft}$. per second; and the velocity he lees than 2 ft . per second. Having stated this, he eays :- "But in practice it is found that relocity inoreases in a current as the fiund paror bed : cousequently the velocity at the hottom of acd: consequenky the velocity at or over the invert of a sewer, is the velocity which is really effectivo in scouriug the velocity which is really effectivo in scouriug
it, and suck a velocity is always less than the it, and such a voloeity is always less than the
mean velocity." That is so, except that in such mean relocitg." That is so, except that in such a case as this there is no "practice" as distinct
from theory. But what follows seems to be wrong. from theory. But what follows seems to be wrong.
"For all practical purposes, in the case of sewers, the velocity along the invert of the
вewer will be fonr-fifths of the surface velocity, Bewer will be fonr-fifths of the surface velocity,
or nine-tenths of the mean velocity given in the t.illes. ${ }^{\text {. }}$

Wo do not esuppose the author moans to shy that, in respect of surfaco, mean, aud hottom velocities, the velocities in semers differ from the velocitios in similar channels con-
vering water; if so, the antbor should have veying water; if so, the antbor should have
risen us some explanation of that; and the given us some explanation of that; and the
experiments and deductions most to he relicd npon show that in ordinary cases the least, mean, and greatest velocities may he taken as bcaring to each otlier nearly the preportions of thrce, four, and fire. These proportions hold good for relocities from 1 ft . to 4 ft . per second. So that instead of the hottom relocily heing four-fifths of the surface velocity, it is only three-fifths, and instead of heing nine-tenthe of the moan velocity, it is only three-fourths of it. If the author had understated the bottom velocity, instead of overstating it, the error might have passed unnoticed; hut as the hottom relocity is that upon which the scour depends, it should be pointed out. Besides, the author's own figures are inconsistent with each other the surfaco velocity, it could not be at the same the surfaco velocity, it could not he at the same eight-ninths of it.
A table of experimenta made by the author on the quaytity of water absorhed by sewer-pipes is given, and another table of the "bursting pressure and teusile strain" of carthenware pipes. If for tensile strain we read tonsile strength, we see the very great rariation in the
tensile strength of tho material of 21.4 lb . per tensile strength of tho material of 21.4 lb . per equare inch in one casc, and 429.5 lb . in another, a range, says the anthor truly, sumeient
to show its nocertaiuty and variablenes.
to show its nocertaiuty and variableness
In laying sewer-pipes it is essential that they should be solidly bedded, and to this end "a recess should he cut in the floor of every pipesenter trenoh in order to receive the socket, or
otherriso each pipe is merely supported from socket to socket?
In jointing sewer-pipes with cement, it is very important to prevent it getting into the interior of the pipes, and "the best mode of joiuting socket-pipes, under all circumstances, the anthor has found to consist in forcing into the socket of every pipe seceral strands of tarred gaskin, of sufficient dinmeter to fill the socket tightly.
An extremely interesting table is given of of absorption and the strength of bricks," and it is stated, although it does not appear in the tahle, that'a common stock brick, with frog, made at Croydon, had an original thickness of 2.58 in . but was compressed in tho hydraulic press to another, a pieked stock hrick, with frog, made at Reigate, had an original thickness of 2.62 in . and was compressed to $1 \cdot 14 \mathrm{in}$. and a perforated pressed white ganlt hrick, with froc mado at pressed was from $2 \cdot 60$ in. in thickness to 1-23 in. "hefore it failcd." The pliability of these hricks is remarkable.
Timber used in sewer-work is treated of as to the manner of using it, and the strength of timber in general is quoted from the experi. ments and formnlæe of Barlow, but the second case is misstated.
Iron and otlicr metals aro also treated of, and a very fair description is given of the characteristics of cast iron of various kinds. Speaking of the difficulty of casting pipes as thin as is reqnired merely to resist the internal pressure to which they are to he subjected, the author
says" it will he found that any pipe which can
he cast sound in the foundry will bear the ordinary pressure to which it may be subjected in practice," and that "all pipes are made of considerably greater thickness than that requircd to
insure their stahility when subjected to a given insure their stahility Then subjected to a given bursting pressure." But this is true only of pipes small pipes, 3 in . and 4 in . diameter; large to resist constantily cast of thicknesses adequato which they are to be subjected, according to the situations in which they are to be placed, and with reference to these requirements only, there heing no difficulty in the fonndry.work in complying with the demand of the engiuoer in this respect. For instance,-passing ofer intermediate sizes and thickuesses of metal, and pipe 3 ft . diameter can be and has been cast in. thick. The use of such extremely thin pipes in ordinary cases cannot he commended, of course (althourh the thickness was quite suitablo for the situation in this case) hecrnse sometime large pipes are under more risk of injury from the external pressure than from the internal pressure they have to hear. Notwithstandine pressure they have have just quoted from this euthor, he goes on to lay down arnlo for the thickuess of pipes to bear internal pressure, in the following fashion. He assames the tensile strength of cast iron to bo $5,000 \mathrm{lb}$. per square inch, and says the weight of water is 63449 lb . per crinic foot. Then follows the formula, involving theso two elements,
one of which is a round number, which, although ne of which is a round number, which, although sufficient for the occasion, is not even near the exact strength in many cases, and the other is an over.rcfincd statement of the exact weight of water, which is by nearly all engineers reckoned to be $62 \frac{1}{z} \mathrm{lb}$. per cuhic foot, that being suficieutly near for all practical purposes. ncongruity of the thiug is striking.
In descrihing a planked foundation for a sewer in had gronnd, the author says that three ines of "clie square" timber, $5 \frac{1}{\lambda}$ in. square, were laid longitudinally in the trench, upon which were laid closely wattled hardles, and iu some parts of the work $3-\mathrm{in}$. planking, which was proper enough, perhaps, under the circum. stances; hut yo advise those who require guid. timbers such matters never to speciry thare, if square they must he, for which, however, there is no necessity. There seems to have heen o good deal of water in the ground in which this somer was laid, and the method of gettiug rid of it was a crood one. Upon tho plankinco sewerpipes were set vertically, at intervals alonts tho trench, and filled in with clean gravel, their tops heing a little above the level of the invert of tho sewer. Concrete was then filled in upon the planking, and round about the pipes. The open gravel in the pipes afforded a more oper way for the water, and it rose throngh the pipes iustead of forcing its way throng the from the tops of these vertical pipes into the invert of the sewer the water was in that way carried off, leaving the sand behiud. This was at Redhill, a work done noder tho author's direction.
Square junctions of severs are bad, and it is shown that by cliecking the velocity of the fiow of sewage, deposit takes place at or near the junction, and chicfly on the upper side. The several kiuds of apparatus for flushing sewers, described by the author, are very ingenions, but we cannot help thinkin! that there is some thing radically wrong in a system of sewers that require artificial flusbing. Either that is ad mitted into them which ought to he kept out, or they are too large, or of a wrong form, or are hadly laid; but franting that sewers require flushing, from whatever cause, the author gives the ventilation of sewers Mr. Latham is known to havo paid great attention, and be goes fully into the sukject here; but we recommend all persons who may contemplate the nse of char. coal, or other ahsorbent of sewer gas, in veuti of sewer gas into the atmosplaere are not ob structed hy its use, hecause if in any case that results from the uso of charcoal or other substance, more harm than good will be done hy it.
Gullies and traps are fully illustrated by the anthor, and tide valves, penstocks, and inverted syphons are treated of, and there is an excellent chapter on the suhsoil drainage of the sites of towns. House drainage, the erowaing point of a systern of sewers," and water-closet apparatus
complete the book.

FROM THE YIENNA EXHIBITION
Muce of our British farnituro, and a large portion of that from foreign countries, is ituated that the most casual observer canno ail to see it. For the most part it is arrange ato groups occupying the centre of the nave am soryy to say that in my opiuion but littl progress bas been made by our cahinot-maker ince the last International Exhihition in Paris out of this $I$ am neverthelcss certain, that tha British furniture will favourably compare witE that from any other nation. Yet in much 0 his there is a great want of true structura qualities, and in many objects are features whiol are only consistent in works formed of stone. Wood is a material having a "grain." Th resence of grain in a material gives strength i no particular direction, If wood is cut wit the grain it is relatively strong; if across th grain it is weak in comparison. In order, thes that the uaximum strength he attained with $t$. smallest exponditure of material, wood shoul always he "worked" with the grain.
ven if in small pieces, can be so arranged as spau larce spaccs, the arch affording a moans our so doing ; but if an arch is cutiu wood it essentially weak, and can only he satisfactori scd with the riew of civing form to s space, ascd a decorative feature. It must ncver appe as a part of the structure. Columns an pilasters, with their capitals, are hetter reserve for worts in stone. Thatever is of mood shoul or works stone Whal hy its very appearance, reveal tho material wooden model of work intended for fabricatid of stone.

## of stone.

Furniture that appears otherwise than wooden formation, can never be satisfactory and in considering the various oxhibits in th class in the present Exhribition, I shall rega them as works which ought, hy their form, al by the treatment and arrangement of their par to manifest the material of which they a formed. It is not vecessary that tho structul he in all cases as apparent as in "Pinned" Gotb furniture; yet, on tho other hand, all "hrokon structural members inust be condemued as a satisfactory, I cannot admit the aryumes when considering works in reference to mation progress, that they aro in a style that requires false expression of structural qualities; for w work iu the style? It is no exense for a h act that it has been done hefore, and that sor prefer evil to good. It is no excuse for thi many having stolen before. It is our privile to study the works of the past; hut it is that is had cull all that is good, andicovered works of the past both what is good and what had, we must not then blindly eopy what c forefuthers created; for our wants are not theirs, and our knowledgo of materials, a methods of working them, should be greater th those of our ancestors.
Our failures in nearly all mannfactures which art is comhined with industry, result fn want of simplicity in the resalt achieved. I lo too much. We confound together the ide of complexity and beanty. Wheroas that whis is beautiful is generally of simple appearan In furniture, in carpets, in hrass works, in alm. very branch of mannfacture, indeed, we sr titute complexity for bcanty; whoreas extrer plainness wonld nore nearly aohieve the resula wich in the Iittle Japane colony" here there is a flagpole of considerab" beight, and one or two little erections, - 0 being' a sort of small house or temple, the otk covered dilis for the performance of mus To me it appears that much is to he learn from theso; for in each caso we have a mo imple atilitarian strncture of plain light-colonr anpolished wood; hat on the ends of project afcers or heams, or on parts of the legitim and necessary structure there are spariugly d ersed little hits of the most exquisito carvi which act as enrichments of a rightly construct fork in the happiest manner possible. I lag-pole is a simple well-finished, clean-look plain pole; tut ahont 5 ft . from the base p eets a raemher to which the flag-ropes a attached, this member heiug a splendid hit? bold carving.
In many works in the Exhihition I nots excess of finish, and respecting finish also : moy learo fiom the Japanese treatment of wo A pieco of furniture should he an ohject of ut tarian value, properly constructed, and so treat as to contribnte to the general pleasing effect. the room. If detail is excessive in the work,
general effect is almost sure to be sacrificed, and the object will do little towards furnishing tho room. What is wanted is a certain spirited whereby the work sball be vigorous and heautifu when viewed closely, and yet an effective adjunct when viewed closely, and yet an effective adjuuct
to the room when vicwed as an article of furni. ture. Wo can, $l$ feel sure, loarn from the ture. We can, l feel sure, loarn from the enriching woodwork witb appropriate and effecenriching wod
tive carving.

I cannot but thinla that the elaborato carvin of pictorial figure-subjects in wood, especially if the wood has even a slightly percoptible "grain," is simply folly. Wood is a bad naterial for the display of tho sculptor's art; be should work in marble, in stone, or in bronze. Wood is soft, and especially liahle to injury, and besides this, works of great finish and delicacy do not accord with the gencral purpose of household farniture, which consists of objects to be nsed, and not simply looked at, and these sculptured works o excessive finish certainly do not contrihute to tho desirable general effect of the piece of furni. ture of which they form a part. Were I to bo the possossor of certain cahinets in which exqni. sito carving is supreme, I should take the panels out of the doors and frame these as I shonld marble bas.reliefs, and hang them upon the wall sumbtituting panels, either plain or of simpl treatment for thoso which were but misplaced displays of the soulptor's art
The enrichment of furniture may often be materially aided by the application of well.contrived hinges, lock plates, and metal corner. pieces; but these should be placed on plain memhers, and serve as enrichments to them To the painting of subjects or suructare the sunken panels of cabibets and other works of farniture, I seo no objection. On the con trary, they may convert a work of furniture into ment muet be conventionght ; but the treat mener that it conventional, bold, and flat, in purpose wich it has to accordant with the purpose which it has to serve. Tho picture mast not usurp a primary plaoe, as it is here secondary to the general effect of a work of Which it forms but a part. The good decorator ind the true will always avoid ohtroding that Which should be secondary upon primary notice. If a wall is to bo huug with pictures, it must be seoondary to the pictures which are to be placed upon it, and it should also be secondary to all works of firniture which are to stand in front of it. In like manner, a work of furniture as a whole, should he secondary to the paintings, and the parts of the piece should be secondary to tho ontire work. I do not much like the introduction of porcelain plaques into works in wood, especially into those intended for general lomostio use. Eartbenware ncyer looks like part of the structure; it is too obviously a somehing applied which is beyond utility, and is too separate from it. All orvament is unnecessary and useless from a strictly utilitarian point of View; but art, grace, beauty commence where atility ends. Art, when applied to utilitarian rorks is most satisfactory when it bripgs es not apply beauty in the form of something is apparently altogether superadded to tho in. It is for this reason that I do not quito the introduction of slahs of earthenware aowever well treatod, into furniture.
For the same reason, I ohject to ormolu orna. weats when applied to furniture. These are aever satisfactory, and are rarely good specilapidly consumed, and yot much is is heing which consumed, and yet much is nowritten which ought to he written before I cornthe works of furnitare shown in the Exhibition. Yet we may, perhaps, let these remarks suffice, for they tonch on the leading poiuts whioh demand attention when awarding merit or demerit to works of furniture, and I bave expressed these my opinions in order that
ceaders may judge of the sounduess of my censures or praise. I have no confidence whatever for his opinions I come opinions. constructive tions of what qualities in furnitnre, as illustrawould namot is fairly correct and trathfal, I Lock, the display of Battam, Heywood, \& Hanks, and a suite of Gothio bedroom furniture hy Jaekof \& Graham; bat I mast oxcept the hedstead of this latter suite, as it is strncturally wrong.
Ihe canopy is large and heapy, and, owing to
the mode of support, looks as though it would drop upon the sleepers, and in construction the canopy is very faulty. There is very much that is grood in the way of structure albout a suite of hedroom furniture by Morant, Boyd, \& Blanford; but the projocting moulded portions below the larger panels should be removed, as they are only a drag on the structure, and achieve no oruamental effect.
For excellence of inlaying, the place of highest merit must unquestionably ho given to Jackson \& Graham; yet even their most elaborate pieces show a littlo feebleness in effoct, although ex. qnisite in detail, or are overdone. The attain. ment of repose should bo the chief effort of the designer. Where there is nothing but enrich. ment, even if the ornament is of the best, tho eye fails to liud rest or the mind repose. There is but little inlaid furnitnre in the Exhibition that I could point out as of just treatment and desirable quantity.
I am obliged
espectivg carved to express myself similarly especting carved furniture from almost every country. The elaborate work of Fourdinois is to misplacement of raro talent and in mo of the nstance do find justress of stru combined witl the hold and structnre skilfully of such parts of a judicious and nccessary structure as aro calculatod to prodaco desirable cnrichments,
As many exhibits oconpy such conspicuous positions in the Exhibition as to command notice, I should perhaps say a word upon them. As a display of articles possessing the grcatest number of dosirable qualities, I should give good places to Collinson \& Lock, and Battam, Leywood, \& Hanks. The former firm shows a chimney piece formed of wood, into which panels are introdaced, with little snbjects in colour, painted on a gold ground. This work is ood, and while there are little faults in some parts of tho exnibit, there are many excellont qualities. There is nothing garish, nothine outrusire, nothing overdouc. In Jackson \& Graham's furniture, tho presence of the arch hreken in the manner of the Redaissance is to he regretted; hat for delicacy of inlay, this exhibit is matchless. I like the unpolished wood of which tho furnitnre hy Morant, Boyd, \& Blanford is formed, and the application of brass attings; but to the porcelain plaques in the oors I take some exception, and I do not think hat the cold grey slah of tho washstand accords with the cool indigo colourine of tho earthe plaques. Cooper \& Holt ahow one or two hings, but the Gothic sidehoard is retho goo done in every way, and is somewhat too archi. tectural.
The furniture exbibited by France is altogether wo architectural, and is generally overdone with excessive carving. It is, for the most part, nearly all cxamples structure is ignored, and detail nsurps a primary place.

The Austrian furnitare is no hetter than that of France, and it is much to be regretted that hero also a meretricions prettiness takes the Italy sends onls he qualities.
that is good. Ond what is bad; Russia littl that is good. Oar own display is far in advance qualities, and yet it is country in true art qualities, and yet it is hehind what might reasonably have becn expected, some of
best firms being altogether unrepresented.

THE HOURS OA LABOUR AND A WORD ABOUT CAPITAL.
Three colrespondents addressed us last week on the suhject of lahour and capital. One signing "G. E." says:- "I fiud the masters want the men to resurue work until one o'clock en Saturdays, as it docs not pay to open the time as at present. Now, sir, would it not be more heneficial to both parties for the working hours to be $10 \frac{1}{2}$ per day for five days of the week and Saturday to be a whole-day holiday"
The twoother writers, - one a mason, thesecond a joincr,-take higher ground, and urge that they ought to have Saturday as a whole holiday without aly increase in the hours of work on other days. They add that they could get any nnmber of their mates to pass a strong resolu. We have very little at any time, it It seems to as that it would be very arreeable indeed to bave a whole holiday overy Saturday. In fact, if our friendly correspondents were to say that
if they began work ou Tuesday morning and left off on Tharsilay afternoon it might bo even pleasanter still, we should scarcely feel called in to contractict. Bat can we aftori it? Or oing nothing tho same as if pay men for work, could the country afford it? How would $r$ people who amu ed themselves half the wook atand, in the long run, in competition with a pcoplo who felt it necessary to attend to the injunction, "Six days shalt thou labonr"? We are not preaching. We do not want to contra. It is amazingly pleasant to do nothing at times and get paid for doing it; but wo fear at times scarcely be reasouably bopod for by the bulls of tho popnlation,-at presont
Our joincr correspondent, who mentions that he has $16 l$. in the Savings Bank, and is there. fore himself a capitalist, makos a foolish obserration. He says, "If what the workmen want cannot be bad otherwise, the masters must give $u p$ some of their capital." This reminds us of a little fairy tale which we onco dreamt. It ran somewhat thus:-Thero was onco a nico old gentleman, who, through the cleverness of limself when here him, and hy dint of hard work hiraself when lio was youngor, had managed $t$ obtain a wondorful plant that produced every
week a certain numher of loaves of liread. But this wonderful plant, which was in a required to be watered, and manured, and trimmed, and otherwise attended to, in a manner which was beyoud the strength of tho old gen tienan himsolf: so be called in sonnc of the people living near, who had never bech ahle to get such a troe for themselves, and offered half dozen of them a loaf a.piece each week if they would cultivate the tree under his direction. The loaves that remained sntisficd him ${ }_{;}$and so thiogs went on very smoothly and pleasantly some time. One day, howover, it occurred yell fed, and theople that thicy were not very each have two lonves a weck; and the old gen. leman, when he was teld of this, quito arreed with them as to tho desirahility of what they asked for, and told them he was very sorry they conld not have it, hecanse the tree did not produce so many loaves as would be noeded. However, his helpers were yery resolnte abont it, and one of them said, if the plant dil not produce loaves enough to meet this demand, he must hand over them the tree: or, to use tho words of our correspondeut, tho joiner, must give up some of his capital. But the old gentleman was rather a sturdy fellow, and was not disposed to let others take away what belonged to him, and what he and his father lind worked for: so he nade some inquiries, and finding there was nother country where the people wore quite able and willing to cultivate his plant fer him, and let him keep some of the loaves himself, he one night quietly packed up his tnb, and carricd it right away with him, and for a long time the
poor people who bad frightencd him and his poor people who bad frightened him and his
bread. giving plant away, m ssed very sndly the one loaf each which he liad been able to let them one loat each which he lad been ahlo
have for what they did to help him.
If our correspondent will think over the matter again, he will probably arrice at the conclusion with us that it is a risky thing to tell persons they "must give ap some of their capital., People are not usually disposed to give it up: and to urge that it must be taken away from them withont their will is to adrocate nothing less than robbery.

## SOUTHWARK INNS AND THE EARLY DRAMA.

We have hoen looking with some care into the mysteries, past and present, of the old Tahard Inn, Southwark, and liare taken note of the anside and the inside of it, all ronnd and everypen. Wo pried into all the little quaine red nd 0 out from the galleries, and loosed int more, went into the subject on the spot of the rehitectural details and chimneypieco mould ings. We have alrcady asscrted that old Geofing Chaucer with hodily eyc never saw this deofrey now stands. Chaucer dated from 1398 to 1400 Shas speare from 1564 to 1616; Sir Christopher Wren laid the first stone of St. Paul's Cathedral in the year of grace 1675, so that we may fairly ake that rate as a well.defined and accurately elled Renaissance art date. There is no evi this inn, Renaissance or Gothic, older than this
last-named date. Tho handrail and balusters
ronnd the gallery, ont of which the small quaint ronnd the gillery, ont of which the small quain their square moulded frames above, and with other mouldings visiblo here and there, cannou possibly be older than Wren's timo. Chaucer, possibly be older than wron's timo. Chaucer, Tabard in its present, or even past and more pabard in its present, or eren past and more perfect architectural state. In the old days of
stage coaches and ponderous wagons, before railways werc thonght of, this place and others like Tays were thonght of, this place and others like it had a real use and parpose, and were in their days just what a railway.station is in ours.
That the veritable Tahard might havestood, and did stand, on this very spot is more than likely, and that tho arrangements and plan of the inn may have been the same is also probable enougl, so that we have here a ghostly sort of
idea of what the Old Tabard was in Chaucer's idea of what the Old Tabard was in Chancer's day, and certainly we may here see the "ground plan" of his Canterbury Pilprin starting-place. The over-memorable "ride" then started from this very spot, so that it is worth note, and remombrauce, and memorial. The original house,-a Gothic house it mnst noeds have becn, and there is no vestige of Gothic of any date there now, -is said to bave been huilt by the Erery trace of his building has certainly dis appearod long cnough ago.
Fo have said that we wandered into all the rooms, passares, and nooks and corners of the place, and could but wonder at what "improverooms, wioh goes on, will do. Somo of the are now covered over with tawdry, Fulgar, are now covered over with tawary, vilga, and common oil-colour as usum, so that the idea of the rooms is quite gone.
This inn and others like it have another interest well worth a thought. It is to be re. membered that they were, in days of yore, the acenes not unfrequently of the "Miracle and Morality" plays, and of tho first representations of the great plays of Shakspeare. It soems, now-a-days, difficult to realise such scenes; but there can be but little doubt that, in the yard of
this very Tabard Inn, the strolling companies of this very Tabard Inn, the strolling companies of great tragedies and comedies of Shakspeare. N scenery was thought of ; the actors did all the work. The npper ten thousand ocenpied those galleries, from which they looked down on the strange scene below them; while the common people, the "groundlings" occupied the court-
yard immediately in front of, and on a level yard immediately in front of, and on a level
with, the actors. A slightly raised platform, with, the actors. A slightly raised platform,
even, must have been a rality from the difficulty of moving it and fixing it. Indeed, to veuture on a practical and plain explanation of the matter, it conld have been hat littlo more than an ordinary street performance, such as wo now see it, with \& carpet or cloth, or even atrany, for the porformers, and payment roquired of the andience.
It is a curious subject this of tho early and literally "spare was a travelling actor, could. In the inn.yards, as in this Tabard Iun, all was ready prepared,-man audienco almos certain, and as much of a hnilding as was needful the performances takin place, be it observed by daylight. Shakspeare's imaginative powers were cousiderable, that is quite certain; hut it have iman dined, indeed, worse ont of the Tabaud Inn ground and galleries!

It is impossible to speak of this Tabard Inn without noticing the fact, not porhaps generally the Southrwark High.street like it, and anm in the so in wret more perfect state, There is the them in a yet more perfect state. There is the ond the and the now filled ap with rallay vans, and ond buin corered more or less with huge bills and posters not a lictle surprising to can forget the present, and live in the past in these fast disappearing places. tre wonld here call attention to one inn, especially, in Commercial. so that things iu it rest a while. Here, th bnilding is in preciscly the same state it was in when frat built. The gallery is complete on three sides of its little courtyard, and it would bo dificalt to select a place more convenient for the parposes of the strolling actor than it is It gires a far better idea of such a place in its
complete state than the Tahard Inn, with its complete state th
There is another inn of this old build in Aldersgate-street, -the Four Swans, we think it
is,- -also in very complete and nurestored condi. hon, witb its galleries complete, and its court or by market gardeners and other country folk the railway has not as yet quite plonghed it up It is a little out of the way
To return for a moment to the Old Tabard, so pazzling to tho restoring architect. Two of its ides only remain, as wo have said. We were told that the gallery once ran round the back of the in, bat if so it disappared long ago. There is a econd yard at the back of the huilding, wherein new bnildings are fast pnshing the old out of xistence. The sonth side of the inn is modern, out some of the old quaint rooms remann, and co into the little "parlour," the like of whic Dickens so dolighted to paint, shows no smal crrast to the moder fe " rrangement. If comfort" he the one thing reedful in English existence, then commend $n$ the the warm dark wainscoted room, with a least the possibility of avoiding the multitude of draughts for which the modern arrangement is so remarkable and ahominable. These of quaint rooms are worth visiting, if not study hy the architectaral stndent, as they evidence what a "comfortable" room is, and how it should be. The chimner-piecos are remartably good and well designed, whoever did them, and are put into proper corners, and the windows are not toe arge. It is possible, of course, to make a room too dark, bat it is also qnite possible to make it too light and garish.
There is onc other itom connected with this inn, old.fashioned and out of date as it is, that may serve as a lesson to perhaps not a few. It my he impossible to find a building or roup of bnildings, more "picturesque." Stand. tile roof opposito, a true picture of a building is before you, quite roady for the painter. imarination is required : it is all hefore you, the architeat or buildor of the strnctnre has built $n p$ a pictnre ready for the canvass. He probably never heard of picturesque architectnre, or knew cren of the word "picturesque" but, novertheless, he accomplished a great artistic feat, for ho produced, without, perhaps, nowing it, a built up picture. There is littlo or no architecture left : it all lies in the mere nasses of quaint building, for, with the excop. tion of the galleries, and a supporting Tuscan colamn or two, there is no architectural feature or detail left. It is a something curious to dream ahout as to what a Dutch painter would do here, with nothing but, the building as it now , a hroken-down cart, a few fowls,-of which, y the bye, there is herc a splendid collcetion, real fine farmyard condition, and a quaintly rossed woman or two. What a pioture, we say he would make of it all, and what a sum it wous bring! But then it takes a Dutchman to do it. So the poor old Tabard must needs, all things considered, die out, leaving not a "sign bchind!

## ITALIAN COLOURED DECORATION.

## mCHitectulal assoch

AT the last meeting of the session, held on June 27th, the following mombers were elected as officers for tho session 1873-4:-

## President- - Edward J, Tarver. Tize.Preesidents, -John S. Qailter, E. C. Lee <br> Conmittee,-G. M. Birch, T. Blaghilh, I. C. Boyes,

 roft, R. P. Spiers, J. sulman, A oton Wobb,Honorory Tressurer. - J. Douglass Matherws, Hoxorary Solicitor.-Francia Truefitt.

## Libitors--E. D. Anson, H. Stannus.

Asuitant Librarizus.-R. E. Pownall, L. A. Shaffrey. Monorary, Regiskrard - John S . Quilter.
Collector, -E deaund Marshall.

At the same mcoting the names were announced of the suocessful applicauts for the five.guinea money prizes offered as an encouragethat the committee of the A ssociation determind that the " "pirn f" furn o expend the small prize fund faruished hy members and their frienas this session, to be distributed in any way that might seem to pro-
mise good results. Messrs. E. C. Yates, R. C. Page, and E. J. May have been presented with the prizes, whioh are given with the understand ing that the recipients will spend their holidays in sketching, and exhibit tho sketches at the October conversasione.
A paper was read by, Mr. E.C. Lee on "Italian Colonred Decoration," treating of the Early Greek work in Italy, and the method and
manner of the decorations at Pompeii ; also the Early Christian art in mosaics at Rom mosaic Palermo. The paner was illostrated hy th drawings mado during an active student's tim in the south of Errope last year, and entire the fruit of personal study of the works question. After the reading of the paper
Mr. Ionsdale said that the mosaics at Monreal excel those in the Royal Chapcl at Palermo, it omphasis, and especially in what may bo calle architectural expression. For instance, ther is a broad archipolt indicated at Monrealo tho pier arches; at tho chapel, the mosaic suh jects are hroucht olose down on the are moulding The mosnics in a mosgre in C a stantinople (called "The Mosque of Lament tion," situated at the far end of Stamboul, nea tho Water.gatc), he, however, thonght super crea to thase in sily and They are probably of the thirteenth contu With good and spirited drawing in the fignr There are some little domes, subdividca, wit lines carved on plan, having the appearance
shells, and in cach cove is a figure, - the who shells, and in cach cove is a figure, -the who effect being rery charming. These mosaics w not long be seen hy the traveller, for a Crce oollector is obtaining by parts the subjects th please him (particularly the beads), bribing the purpose the priests who have the charge the huilding. Such works, 80 rare and in suc langer, and neediny carefnl drawing, shouk one would think, he prblishod by the Arunds Society, or in some similar way.
Mr. Crace, having carefnlly studied tho mosen 'eferred to by Mr. Lonsdale, conld hear test mony to the beanty of its mosaics, and th destruction being wronght npon them. Ru marking on the matiter of ontines to mosaic the best examplcs. the warmth of flesh tint, oxamplo, is given even more by the warm re margins than by the tone of the surface. The go gronnds at St. Paul's are chitled by the margin with much loss of general effect O tlined wik red, the general tone will he warm. with indi, hlue, the very sympathetic gold assnmes cold, smoky tone. Turning to another subjec he sal in thinking of Pompeii, it is often forgotten that it was a mere holiday cits often forgotten that it was a with casi for seekers, and formed (probably for the most par their temporary aboaes. The trif acconnt the trilling treat men in the dorans, the al sence of gravity and dignity, tho whimsicalitio the odd perspoctiva, apparent houndaries of rooms by calling in the al of illusions, adding to the provalent sensation ife lived as much in the open air as poss ble. It is not to he concluded from thit that the houses in the other cities of th
time necessarily contained wholly simile time necessarily contained wholly simils
features. The large use of white lines amon? the cronly, balanced strong colonrs indulge? in by the docorating artists of Pompe
served a two.fold purpose. They rendere possible the use of thesc masses of strong colont that oould not otherwise have heen brought s nearly iuto contact, and they were also useral defining. The knowledge shown of handlin the brush should not escape the student o Pompcian work. Here, in the actual exeoutio. (the handwork of d-sign), are to be see emphasis and sharp precision, adjustmen throaghout of the handing to the colours and their part in the design, sometimes almost is relief, and with little blonded shading any where;-indications of the trained eye and miae and hand driving home the idea of the desig with force so different from that or a
execution. Mr. Stannns reforred to the probable sug adopted at Pompcii by an arrangement found $\mathrm{iz}^{2}$ the Ptolemaic temples of E.fypt (as Dendera ant Philx), where the spaces between the columnio are filled by low screons. These sereens wodlo borm a dado in the inside ; the opon sparo whe sky and buildinge He instanced modern Enrlish housh where this idea has furnished the motive for the where then whe bit of near and distont landscape that miothi the bits of ar in alana seren meet the cye in glanco pirced irall. Thil micht, he aaid, be looked upon as Pompeiia, might, he said,

This mentiner brought the busimess of prosperous session to a close.

SHAH NOTES.
Tine Shah has not had two finer sights than those provided for him at the Royal Italia llass reception-room, and at the Royal Alher Hall, in both casos withont cost to the country The appearanco of the Floral Hall, during the gathering of the guests, and the appearance of
the house from the stagc, werc sigbts to he the house from the stagc, were sigbts to he
rememberod. The Lord Chamberlain has renemberod. The Lord Chamberlain has Mr. Gye for the successful evening. As to the Albert Hall, it never looked so well. The sight, indeed, was so overpowering that tho Shanh, who had brought in tho Princess of TVales, lot her arm drop, and was obviously, to those near, "taken
aback," stumbline afterwards to his sent as best aback, stumbling afterwards to his seat as best
he might. The military bands which filled the he might. The military bands which filled the
orchestra and the pretty uniformity of the orchestra and the protty uniformity of the female chorus (who by the way did not sing
qnito so well as they looked), added much to the boanty of the remarkablo scene. Bad woather quenched somo of the external clories of the Crystal Pulace; but there was still mnoh that must have delighted him. It is to be hoped for tho diamonds of tho Shal and his suite will not tend to increase amongst Englishmen thie manly and barbaric custom of wearing jewels and gowgaws. Dress is already frightfuily overdone by the fairer half of creation, ofteu to the ruin of thoso they depond on: in fact, in this rospect we have nearly reached the state into which France had fallen just before the late tre. mendous colitapse of that country, from which it has so marvellously recovered. The derivation of has so marvellously recovcrcd. The derivaioa of
the title Shah is still matter for speculation. An examination of tho whole class of titles to which
it belongs,-Cæosar, Czar, Kriser, A1-cazar, and it belongs, -Casar, Car, Kaiser, Al-cazar, and
so on, with probably Jar, or Jehorah, at tho end, -would give interesting matter.

TEE NEW CHUROH, LECTURE-HALL, AND SCHOOLS, IN WESTMINSTER bridge road.
Trie foundation of the new church and sohools at tho angle of Westmioster Bridge-road and Kennington-road, intended as the perpetuation
of Rowland Hill's Chapel, in the Blackfriars. of Rowland Hill's Chapel, in the Blackfriars. laid on Thursday week. The new buildings, which will oocapy a site covering 2,680 superficial yards, will insolve an outlay of 25,0002 . The church is to bo called Christ Church, and, in addition to the charch itself, the hlock will includo scbools, class-rooms, and lecture-hall. The buildings will covor the entire area of the junction of tho two roads, and near this point will rise an imposing towor and spire, 21 ft . 220 ft . in height, which has becn designed as an Aoglo-Amcrican international monnment, commemorative of the abolition of slavery, and oneThalf of the estimated oost of this portion of the Thuilding has been subsoribed in America. The church itself will stand upon the central and ohief part of tho land, occupying nearly the Whole of the frontago in Westminster BridgeKoad, and a considerable portion of that in the Kennington-road. The structure may be generally describod as an irregular octaronal centre,
of 55 ft . iuternal span, with four cruciforin of 5 ft iuternal span, witls four cruciforin
larms, eaeh arm consisting of a lofty central roof, with side-roofs, in the nsual form of clear root, with side-roofs, isles. Tho arm frontivg tho Eennington-road is the longest, and enntains the ipriacipal entravce. The octagon is carried in. terally by eight stono pillars and arches, and is continued upwards with corresponding external gables. In eaoh of the lesser sides or faces of
the octagon two oonpled clearstory windows are the octagon two oonpled clearstory windows are
shown, cach containing three lifhits. These shown, cach containing three lights. These
eight windows will light the internal central space of the church. At the apex of the roof, abovo the octagon, oak timberwork, covered with oaks shingles, will rise to the height of 140 ft . from the ground, and this will serre as a ventilation-turret, in connexisn with the openThes in tho groined wood
Internally, tho monlded piers supporting the arches of the central ootagon will be of white Mansfield stone, with moulded hases 4, ft. high of polished blue stone. In front of each pier will be a detached shaft of Purbeek marble, carried rib to the roof, and these will support the wallribs of the groined wood ceiling, covering over
the contral octagon, already alluded to. The beight from the floor of the charch to the aper of this groined ceiling will be 60 ft . There will be galleries in the nave and transeptarms of tho the entro will be 6 ft distant from the piors of the octagon, so that the complcte proportions of the latter, together with the moulded arches ahove, may be freely seen. Spacious stone staircuses wil be provided for tho galleries, and the walls onclosing them will be carried up extcrually with ctagonal-pointed roofs. The communion floor will be $4 . \frac{2}{2} \mathrm{ft}$. above the levcl of the main body polished interior, ascended by a central flight of be the pulpit and prayer-dosk, standin will stone bases, with a similar projection in on centre as a base for a lectern. The splace for the choir will be arranged for with stopped platforms, and together with tho organ will be screened from the church by perforated stone tracery about 3 f . or 4 ft ft abovo the oommunion floor level. The church will accommodate 2,500 rsons
The lecture-hall and schools will he erected on the Kennington-road portion of the site, with clasy-rooms nuderneath the schools, and tho everal apartments in this blook will be adapted not only for day and Sunday schools, but also for tea-mcetings, lectures, exhibitions, concerts,
and publio meetivgs. There are also retiring. and publio meetivgs. There are also retiring. rooms and other accommodation in various parts of the buildings.
Messrs. Taull \& Biekerdiko are the arohitects, and tio contractor for the foundations of the contract is Mr. W. Higgs, of Lumbeth. The has not yot been entered into ; but tenders will be very shortly invited, to include, we understand, alteriative quotations of prices for Bath and Portland stone.

THE STATE PURCHASE OF RALLWAYS.
Tae discussion on Mr. William Gater paper On the Purchase of Railways by tho State,". Arts, woek.
Tho Margnis of Clanricarte presided, and in opening tho proceedings expressed bis gencral concurrenco in the scheme of Mr. Galt, not withstanding all that had been urced against it by Lord Derby, and by others, whose opinions were justly entitlod to weirht. Ho felt con rinced that the transfer of railways to the Stat ronld result in groat benefit to the country, and he agreed with those who argued that asy, and alleged financial dificulties in the matter they could ensily be removed. He could not coincid with Lord Derby in thinkin that eren in a of national depression the possession of tho ways would be either a burden or a loss to the Statc, for ho helieved they would always be of the highest value to the oouutry. He thought foreign Governments had amply shown to the wigdon of assuming the management of tho mounted, and the result would be highly bene ficial to the conntry.
Mr. Saywell spoke against the schemo of Mr Calt, bat admitted that many reforms in railwa management were needed, and that somo hovernment coutrol over tho companies was ighly necessary and advisahle.
Mr. Hyde Claike, on the other hand, contended that the cormpanies had altogether failed a tho proper administration of the lines. He described the financial cperation as the sinsplest matter existing, and he argued that State pur Chase could not be mnch longer dislayed.
Other speakers fullowed, among whom
Mr. Brooke argned in support of Mr. Galt's plan, urging, among other things, that the pre0 the pesire provisions we the companie or the earriage of goods.
The discussion was then again adjaurnod.

The Late Mr. Macready. - The sale of the property of the late William Cbarles Macready, consisting of his hooke, pictures, objects in other articles, will take place furniture, and Tuesday and Wedneaday next, the Sth and 2th July. Among the hooks are many presentation marked for the stage by Mr and copies of plays marked for the stage by Mr. Macready.

SOMETHING $A B O U T$ SOHO.
TaE old proverb, "Birds of a feather flock together," is constantly illustratod by the in. hahitants of a large city, who usually oongregate in different districts according to their position in life. In London the lawyers havo settled in Lincolu's Inn and the Temple, the booksellers in Patornoster-row and its neighbourhood, the weavors in Spitalfields, and the watchmakers in Clorkenwell. Districts of privato are given over to difietsert of privato houses, too, are given over to difierent classes of inhabitants: man squares wero at of Cavendish and PortBengal," from the at one timo called "Little Bengal," from the large number of retired There is alvays
There is always a floating population of foreigners in London. The Germans turn to the east eod; the Spaniards, Portuguese, Russians, Norwegians, Swedes, Danes, and Asiatics to the neighbourhood of tho Docks; and the French and Italians to Soho. For two centuries Soho has bsen the foreigu quarter par eacellence of London. It is the spot to which. French and Itailans first come on thoir arrival in this country; for as London is tho centre of England, so they lo.k on Soho as the centre of Londou. When it was a tashionable part of town, foresmers lived there, and now that its glory has departed, they are there still. The earliest foreign sottlement was mado by a Greek colony ahont the year 1680, who founded the Greek chnrch in Crown-street, which, after passing throngh many vicissitudes, is now being rehuid for the service of the Church of England. The subsequent waves of colonisation have beon French, the chicf of these boing the arrivel the Muguenots in 1085, after the rerocation o the Edict of Nantes; of the Émigrés in 1789 atter the Reign of Terror; and, lastly, of the Communists in 1871. The late tronhlos of Frace have been largely felt in Soho, and the parish has now a grcater Frenoh population than it has had for ycars. The chances that successively took place in Paris were all representod in this district of Londou. When the Empire fell, its frieuds sought an asylum here; when Trochu turned ont of Puris tho aged and isform, and the dissolute women, many of these useless Souths came here; when Paris capitulated ants were anzions to loarn news of their inhalitwhich the sill do when the Communists wear hear; and lastly, succeeded in escaping foudd here a place of succeed
safety.
Naitland, writing oarly in the eighteenth century, says:-"Many parts of this parish abouod with Fronch, that it is an casy matter for a stranger to imagine bimself in France", and the same words might be used now, for it is still a sort of petty France. Most of the shops are thoroughly French, and they have evidently been established solely for the supply of the foreign colony. Here are French schools for the education of the young, and wine-sliops and restaurants where an Englisliman who entered would be looken npon with surprise. The newsyendors sell Frencli maners and fill their windows with the Petit Joumal pour Rive The names of the shopkeepors are many of them French, and the names of their trades are written np in that language, so that when walking through the streets, and seeing around us boulangers, bottiors, coifferrs, de., we may easily fincy we are no longer in Eugland. It is eaid that the orgon-men find here that tho "Marseillaise" is the tune that Lriugs the most coppers, and it is ground ont aocordingly for the edifioar tion of the inhabitants. Joln Thomas Smith, in his "Life of Nollekens," desoribes the Ftench Chanye as "an old bouso with pillars before it, hon standing on the site of tho entrarice to the reseut chapel in Moor-street. It was a place much frequented and indeed surrounded by natives of Franco who came to Englind after he Edict of Nantz. Here tbey nuet, and oommanicated with cach other upon their several concerns; and kence arose the estzblishmont of the numerons ì la.mode beef slops for the conrenionce of the noighbiminoor.". Now the restaurants answer the jorpjense of the "Clange" and many of them are the rendizvons of
various parties. Hero have heen arrnged a large various paities. Hero have been arranged a large nmber of the piots that have slanken the Conninent, and here if anywhere the cxile may ancy himself again in his mitivo land, for here verything is arranged in the way he is used to, nd no kuglish notions are allowed to intrude There are few tahles d'hôte at these hotels anid rostaurants, and dinners are mostly served
a la carte. In consequence, the varions ocen. pations of eating, driuking, smoking, card. playing, and animated talking are all carried on at the same time. The natives of dif. ferent countries vociferato and gesticulate
in their respective tongues, so that at first in their rospectivo tongues, so that at first entranco the room appears a very modern
Bahel. Four years ago (in the autumn of 1869 ) Bahel. Four years ago (in the antumn of 1869) a correspondent of the dimes, had fonnd what he sought at one of tbesc restaurants, and, in conse. quence, wrote a very appreciative account of a
dinner, which, he said, was hetter than he could have ohtained at a West-end cluh, and which cost him a considerahly less amount than he wonld bave paid at his clah. It is doubtful whether tbe concomitants of smoke and noise would he agrecable to many Englishmen, but, at all events, Mr. Kettner, of Church-street, has had the letter reprinted in large letters, and has placed two copies of it in his window. The French quarter is chiefly confined to Soho, hut it extends northwards to Rathbone-place and Charlottestreet, and southwards to 亡eicester-square, where the inhabitants sun themselves and fancy they are walking on the Bonlevards or in the Champs Elysées. Foreigners are found as far west as Regent-street, and on tbe east as far as Drury lane. Tlie population consists chiefly of a fixed French colony, who are employed in hnsinesses and workshops of various kinds, and hesides these are a large number of eyer. changing inhabitants. The Italians who greatly frequent this district are principally operasingers, artists, couriers, we., and these are Italian peasants from the neighhorrhood of Monte Casino who sit to our painters as models for Madonnas and hrigands, till their faces become too well known. Besides those who live here, most of the foreigners who lodge in ther parts of the town are pretty sure at some of the population are industrious and well. disposed, but the district is a centre to which resort large numbers of the dangerous classes. Disreputahle women pour out in the afternoon and evening from the different strcets into Coventry-street, Regent.street, the Haymarket, and Leicester-square. "Petrolenses" whose doings have caused the deepest horror to he
felt wherever they have been heard of, and Com. felt wherever they have been heard of, and Com.
mpnists whose hands are dyed in blood, have mound a shelter here, and here is printed the nfamous paper Pere Duckène. Soho has heen a city of refage for the promoters and sufferers in every Enropean revolution for the last halfcentury or more, and, like the Cave of Adallun, it shelters "every one that is in distress, and every ore that is in debt, and every one that is disconterted." All these elements, however, are dangcrous to the well-being of the country, and the London City Mission havo commenced a good work hy opening in Creck-street a Suton ressed fnreigner may ohtain help and counsel. Sissionaries visit the restanrants and attempt to counteract the poison that is prevalent. One of the means adopted for hringing ahout a good pirit among these foreigners is the arrangement of social meetings. At one of these for Italians had been condemned to death for political offences. In Aurgst, 1571, an entertainment ras given to forefgners attending the services of the Foreion London City Missionaries hy Mr the Foreign London City Missionaries hy Mr. Leaf, at Park-bill, Streathan, at whicb sixteen ment was ennsed in the neirhbourhood of Sohe ren ards of invitation were handed round to when cas of the community Pepubican and Monarchist Orleanist and roperialist and Monarchist, Orleanist and Imperialist, Comand one the Ttalians had been imprisones and one of the Italians had been imprisoned death for politieal ffences During the da to death for political offences. During the day Italians danced the tarantella and other national dances. When the day was nearly done, and the party, who had thoroughly enjoyed them. celves, were ahout to separate, Mr. Leaf said a few words, which were received with great entbusiasm. "Shonts of every description rang ont on all sidcs: the hochs of the Germans, the bravos of the Freuch and Italians, with indescritable yells of delight from the Marilla men, mingled with the Eaglish hurrah, made up a most extraordinary medley of sound." Before leaving, each person received from Liss Leaf, at the hall.door, a bonquet of flowers and a book; the ball.door, a bonquet of towers and a hook;
hrotherly love in the midst of the discordant dements which were all at hand.
We will now pass from the present to the past state of the district. In the middle of the seven teenth century it consisted of a snccession of fields called Kempe's-fielde, Coleman's Hedgefields, and Dog House-fields, and the place was known by the name of Soho as early as the year 1632 , and in 1636 some people were living at the "hrick-kilns near Sohoe." These dates dispose of Penmants assor that, on the d of the Duke of Monmonth the admirers of that unfortunate man changed the name of King's square to Soho, or So.hoc, hecause that was the word of the day at the hattle of Sedgemoor
(1687). The fact prohably heing, that Soho was taken as the watchword on that field hecause it was the name of the place where the Duke lived. Soho secms, for many yoars to have been estcemed a vulgar designation; hut at last, like Piccadilly, which encronched upon and finally pushed Portugal-strect out of existence, it became the only recognised name. The etymology of the word is diffical, "Soho" " old equivalent of "Tally.ho," and the Soho-fields prohably took their name from the fact that they were the commencement of open country after passing St. Giles's.pound, where the hunters met on their way to Marylehone, Bayswater, \&c. This view seems to bo corrohorated hy the name hecanse if the konnels fiolds, viz., Dog-house, was so likely as that the neighhourhood should ohtain the hunting name of "Soho."
The parisb was carved out of that of St Martin's.ia.the. Fields in I678, the thirtieth year of Charles II.'s reign ; hut the church was not erected until some years after. The inhabitants had previonsly laid the foundation of a the formation in kempes-fields, which, after as a church. The building occupied some years, and at last it was consecrated in a hurry, hefore everything was finished, by Bishop Compton, on March 21, 1655-6. It was dedicated to St. Anne, the mother of the Virgin Mary, in honour of the Princess Anne, daughter of the reigning sovereign. It is not known who was the archi tect of the church; but it is helieved to have been the work of one of the papils of Sir Christopher Wren. The oxterior is poculiarly ansightly, and it has heen said that the steeple was chnrch, to do honour to the Princess Anne, who was Princess of Denmark. The present tower is not the original one, hit was erected by Cockerell in the year 1806. The interior is not without merit, and the ceiling is remarkable for its rich tracery. A year or two ago on entrance was
made to the church from Princes-street hy the reduction of the tion of a dight of steps. One of the first seatholders was Catherino Sedley, the mistress of James II. who, in this same year 1686, wa croated Countess of Dorchestor, and had a In 1756 the unfortunato Theodore, ex-king Corsica, was buried in the churebyard under the name of Baron de Newhoff, of Chapel-street, at the expense of an oilman, who said "he would for once hary a king. Horaco Walpole erected stone in the charehyard to William Hazlitt, who died in Frith-street, with a hombastic in seription, written hy an nowise admirer of the great critic. There is an interesting view of "King's or Soho square," hy Sutton Nicholls, dated 1720 , in which Rathhone-place is marked as Rawhone-place, and a wiadmill is sbown at the top, where Wiadmillsstreet is now. When Nollekens, the sculptor, was a little boy ti mother often took him to walk hy the side of long pond near this windmill, and a halfpenny was then paid by every person at a hate helonging to the miller, for the privilege of walking in his grounds. Percy Chapel, which has lately heen pulled down, was huilt on the site of the windmill, and the spring, which sup plied the long pond before it, was lidden in the cellar of a honse behind the chapel. Percy Chapel was huilt for the Rev. Henry Mathew afternoon preacher at St. Martin's, who lived in Rathhone-place. This gentleman was a patron of artists, and many celehrities were to be me with at his bonse. William Blake, the artist would read and sing his poems there, and he was always listened to with profond silence. Flaxman decorated Mr. Mathews's lihrary with models of figares in niches, and Oram, the
assistant of Loutherbonrg, painted the window
initation of stained glass. It is said tha the three rebel lords, Lovat, Kilmarnock, and Balmerino, resided in Rathbone-place at different times. The north side of the Oxford-road was then unhuilt upon, and hetween Hanway-yard and St. Giles's there were thirteen large and fiue walnut trees. Pcovant gives a very had account of the neighibourhood. Ife says, "I remember it a deep hollow road, and full of sloughs: with here and there a ragged house, the lurking-place of cut-throats : insomuch as was never taken that way hy night, in my ackney coach, to a worthy uncle's who gave m odgings at his house in George street hut I went in dread the whole way,

Between the years 167.4 and 1681 the district f Soho was survejed by Gregory King, an minent architect of those days, who projected he square aud adjacent streets, and Rimbault suggests, with much show of reason, that the old name of the square, viz., King's. square, was given to it by this architect, and not n honour of the sorereign. The reserved porion of the square was originally laid out witb reat care, and in the centre was a foumtain, ith figures at the hase emblematical of the ivers chames, Treut, Humber, and Severn, the vork of Caius Gahriel Cibher, Nollekens said hat he "often stood for hours together to see ae water rua out of the jurs of the old riven rods . . . hat the water never mould ran out of heir jugs but when the windmill was going round at the top of Rathbone-place." The statue represents Charies IL., hut has heen claimed for James II, and the Duke of Moned nonth. When the square was first built, and or somo years after, it was one of the most four ambassadors lived in it. In 1681 there ere oint inhabitants, of which sir were the Duke of Monmonth, Coloncl Rumsey, Mr. Pilcher Mr. Broughton, Sir Henry Ingleshy, and the Ear Stamf The Dite of Monmonth's mansion ras on the ooth as on south sidc, and sorne way hack fron ase impork supported hy stone piers, sur asion with the was apacions " The spacious ourtsard for carringes. The house, whica thus descubed in smilw sollekens and The panes of the were The panols of the wall were elaborately carved as were the chimney-pieces. "The staircase as of places were tesselated with woods of light and dark colours." The house was purchased hy Sir James Bateman, and his son Lord Bateman let it to the Comte de Guerchy, the French ambassador. Afterwards, the place was let on
building leases, and Bateman-hnildings were building leases, and Bateman-hnidings were his family "to winter at Soho, in the great square"; and Addison makes his friend, or ather everyhody's friend, Sir Roger de Coverey, the Worcestershire haronet, live in Sohosquare, "when be is in Town." The great adniral, Sir Clouderley Shovel, was lost off the Rocks of Scilly on the night of October 22nd, 705. His body was found, and huried by the sherman, but was afterwards hrought to London, and lay in state at his house in this quare previously to its heing interred in West ninster Abbey. Gilbert Barnet, Bishop of Salishury, lived here in the year 1709, and tho: notorious Duke de Ripperda, who was horn a. German, was for a time Prime Minister of Spaiby ad died a Mussulman, lived here in 1728. Wo ave already mentioned how fashionahle a place Soho-square formerly was, the following is a list f some of the nohlemen who lived there ia the seventeenth century :-Lords Berkeley, Byron, Carlisle, Falconhridge, Foley, Gainshorougbs, Grimestone, Howard, Leicester, Macclesfield, Lansel, Morpeth, Nottingham, Onslon, Petorporough, Pierrepoint, and Pigot. Alderman, 3eckford, twice Lord Mayor of London, lived in house at the east corner of Greek.street, aadu o the occasion of his second mayoralty, bs easted the poor of the parish at his honse. Field-Marshal Conway, Horace Walpole's corre* spondent, occupied a house which is descrihed s on the south side of the equare, and at the ight-hand corner from Creek-street. A houso the south-east corner of the square kas a taircase with noticeahle railings. Geor man the elder lived at the corner or Batemaa. ouildings. Carlisle House, originally the Lown uansion of the Earl of Curise, and afterwards ceapied hy the notorious Mrs. Cornelys, was originally of considerable size, and has siaooi
been divided into two or three houses, and the hanqueting-room at the hack, with its figares of Minerva, and other heather deities, is now a chapel, Patriok s Roman Catholic Chapel, senlptor, attended on fine Sunday mornings. Mrs. Cornelys was a German, who came over to England ahout 1756, and a few years afterwards commenced her carcer at this house. She seems thoroughly to have understood the requirements some yoars she catered for them with success. Her first move seems, nccording to the following newspaper cutting, dnted Felornary 18th, 1763 to have been an attempt to conciliato tho scr Mrs. Cornelys gave a ball at Carlisle House to the upper servants of persons of fashion, as a token of the sense she has of her obligations to tho nobility and gentry, for their generous sub-
seription to her assembly. The company oonseription to her assembly. The company oon-
sisted of 220 persons, who made up fonrseore couple in country dances ; and as scarccanseore couple in country dances; and as searce anylody cards." Balls, masquerades, and concerts were cards. Balls, masquerades, and concerts were hilliant companies attended them. On the hrilliant companies attended them. On the querade was piven by the a magnificent masquerade was given hy the gentlemen of the
Inesday Night's Cluh at Carlisle House Thesday Night's Cluh at Carlisle House.
The Dake of Gloucester was there, as were The Dake of Gloucester was there, as were
nearly half the peerage. The colehrated Miss Monckton, known to some of tho present generation as Old Lady Cork, "appeared in the character of an Indian sultana, in a robe of cloth of gold and a rich veil. The seams of her hahit were emhroidered with precious stones, and she had a magnificent cluster of diamonds on her head. The jewels she wore were valued at $30,000 l$." Mrs. Cornclys decorated her house alterations should ho described in the puhlic pape Shat . . . performing hy Messrs. Phillips and
 Cornolys, will this year alone thereto hy Mrs loss then 2,000l., and that, when finished, it will be hy far tho most magnificent plnce of puhlic entertainment in Earope" (1765). Another paragraph reads, - We are told that Mrs. Cornelys, amongst her other elegant alterations,
lias devised the most superh ceiling to one of curious, singular, and executed, or even thoneht rooms that ever was Soho-square," as she was called, occasionall got into trouble, and in I'7l she was indieted got into trouhle, and in 1771 she was indicted
before the grand jury for keeping a disorderly before the grand jury for keeping a disorderly
honse; yet in this same year she had devoted a portion of the profits of her first harmonic meeting to the purchase of coals for the poor of the parish. The opening of the Pantheon took oft many of her chief patrons, and in 1772 she
was made a bankrupt. She was still, however, giving her entertainments in 1777; hat her visitors had greatly fallen off, and in 1779 the estahlishment was managed by Mr. Ioffmann, a confectioner of Bishopsgate-street. For nearly twenty years it strnggled on as a "Temple of
Eloqnence," and 25 a "Town Ranelagh." Mrs. Cornelys retired for a time into ohscurity, then appeared as a "vendor of asses' milh," at Knightsbridge, and at last died in the Fleet Prison, on August 19th, 1797.
On the opposite side of Sutton-street stood Falconberg IFouse, aftorwards the infamous White Honse, and now occupied as a portion of Messrs. Crosse \& Blackwell's large establish. ment. Here lived Mary Cromwell Lady Falcon. berg, Oliver Cromwell's third danghter. She died on Mavch I4th, 1712, and left this house and all other property in her power, away from lier hushand's relatives. Sutton-street takes its name from Sutton Court, Chiswick, the countryseat of the Falconberg family. Tho White IIouse and one of its chief a notractions for many years, consisted in its having a courtyard within the large gates, so that visitors migkt drive in and Might nnsecu.
Next door to the old White House is a large and handsomo mansion, till lately occupied hy Messrs. D'Almaiue, the pianoforte-makers, and
now helonging to Messrs. Crosse now helonging to Dessrs. Crosse \& Blackwell.
It was formerly tenanted hy a Duke of Argyll, It was formerly tenanted hy a Duke of Argyll,
afterwards by an Earl of Bradford, and then hy Speaker Onslow, who held his Parliamontary
Sten bat of Bradford and speaker Onslow, who held his Parliamentary
levés in the principal drawing-room. The ceilings of this noble honso were painted by Perhaps the house Ferhaps the house with the most pleasin
associations is the one with large windows in the occupied hy the Dental Hobpital. (No. It was the chief rallying point of the scientific men of the world for the many years that Sir Joseph Banks occupied it. Georgo III. was nover more the roughly King of England than Banks was thoof English geience during the forty-one yenrs e was President of the Royal Socicty. Joseph, like his royal moster, had a will of his he gave inp his whole having his own way; but he grve up his whole life to the advancement of cience, and heartily welcomed all distinguished orgners under his hospitable roof. Whepever Omai, the Tabitian, who was hronght to England on the return of Captain Cook's second expedition, lost himself in the London streets, he used to call out "Sir Joseph Banks ! take mo to Sir Joseph Branks !" and some passer-by was sure to know the worthy baronet's residence. Miss Banks, Sir Joseph's sister, lived with him and his wife, and she was woll known in society as a character. Two anecdotes of her cnable us to appearance. Her aress fashion, and sho frequently told the followis story of herself:- Vanting a partioular sons, was told hy the woman who vended hor stocl halfpenny hallads at the Middleser Hospital gates, that if she went to a printer in Long-lane, required. She would probably obtain what she the printer maye tridged to Smithfield, where of songs. Upon her expressinging a number when the man returncd bersing her surprise her shilling), at the number ejghtpence out of money, the man said, "What, then, are for the one of our chanters? I heg ynar pardon." mnch for her appearance out of doors; the other Banks and Lady Joseph, whot Lo Sir of wool, had their riding-hahits mado of that material, and wore their hahits on all occasions They went to visit a fiend in on all occasions. had invited a large dinner-party to mect them and sat down in their riding-habits. The next costumo, and till their visit wast in the same olways appeared, to every ons was ended they theso hahits. Miss Bank one's astonishment, in tylo of dress, that she gavo her hahit-maler orclers for three habits at a time, which were called Hightum, Tightnm, and Scruh. The first hird here the nest her eecond hest, and the little every-day one. Miss Banks could he ccasion, when a disting put ont, and on one Sohoson, when a distinguished man came to ime, and a quarter of an hour hefore dinner. he ade gave him a very sharp answer. The visito ma'am," to whien ris a fine day nothing about it ; you must speak to my hnow apon that subject when you see at dinner" hiother Joseph Banks possessed a very fine library, and unequalled botanical collections, which are now in the British Museum. His librarians were, first, Dr. Solander (whose chief property was number of dress waistcoats) then of a larg number of dress waistcoats), then Dr. Dryander
usually Robert Brown (the Botanicorim," and, laite Princens of Alexander von Humboldt), to whom Baok left a life interest in his library and collections. then was, moved to this honse from German street ahout the year 1822, and continned in until 1857, when they transferred themselves to their present quarters at Burlington House. At the northarters at Burlington House. world-famed Soho Bazaar, which owes its is the success to the husiness-like habits of great Trotter, the hrother of Sir Coutts Trotter. The hnilding was previonsly used as a huge store Trotter had Trotter had under his care when he held extenAfter the great with the commissary-general. to such great war, tho commissariat had grown special Government that it was formed into a houses wovernment department, and these storemgrested to emptied. Trotter's active mind house a haznar the idea of establishing in the in Earope, and was then an cntire norelty turn it to henevolent purnare heart made him lations. The bazaar turned out a murh regur. success than was expected. We must now dis. miss the square, and pass on to the considera. tion of the claims to our interest of some of the
streets of Soho.

Peter Cunningham chides Pennant for stating street; bnt there was originally called Grigsreet; bnt there is no douht that it so appears Dr. Pimhanlt thinks it probable engravings, and called after thinks it probable that it was so the surveror Christian name of Gregory king, K.B., who had a house here from 1655 to 1694 describes it in his Autohiography as "Greekestreet in the Soho." The name is supposed to he derived from the Greek Church in Hog-lane, now and since 1762 called Crown-street; but there does not seem cyer to have been any entrance to the Church from Greek street, so it must remain a moot point whether Greek is a was a corrnption of Greek. The church in Crown-street was originally raised by the Greek refugees, who settled in Soho-fields about 1680 under the leadership of the Archbishop of Samos. Bishop Compton took grest interest in che little colony, and under his auspices the chnrch was dedicated to the bonour of St . it fell into the hands of the French Protestants ith whom it remained for French Protestants, Hogarth has represented for abont thirty years. Hogarth has represented the old charch in his pictare of "Noon," and the figure coming from is said to have been a good likeness of the Rev. Thomas Hervé, who was minister from rer to 1731 . After the Huguenots left the ourch it passed sucoessively into the possession of several sects. In 1819 it was on the point of happily was purchased by the Rector of hut Anne's, refitted, and solemnly dedicated in honour of St. Mary the Virgin. It is now being rebnilt from the desigus of Mr. R. Herhert Carpenter and the late Mr. William Slater. Peunant observes that "Mr. Wedgwood vindicates the propricty" of tho name Greek-street, "hy nnaking it the repository of his figuline wh founded on the chastest Grecian models, and executed in the truest Attic tasto" Sir Th, and Lawrence lived in the street from 1799 to 1801 and Gainshorough's "Rlue Boy" was the pon of a wealthy iromonger who lived at the cornor of Greek and King streets. Jonathan Buttall, father and son, wore friends of Gainshoroush, and after mnch controversy, which is still going on in the pages of Notes and Queries, therc is reason to as snpposed, from yous portrait was not taken, victnre, as well as many buttall, although the drawings, was in his possession Gainshorough's Buttall ran through his father's property and was made a hankrupt in 1796, in which year his possessions were sold, with the exception of the "Blue Boy," which was withdrawn beoause no one would give sixty guineas for it. Frith-street takes its name from Mr. Fryth, a huilder ; hut in an old engraving it is called Thrift-street hut Carlisle-street Carlisle-street was originally called Merry
Andrew - street, then Denmark. street, then King's-squarc-street, and lastly streat, then present name from the Howards, earls of Car. isle. King's-square-conrt, a little passace eading out of Carlisle-street, still retains its old name. At the corner of this court Agostino Carlini, the scnlptor and keeper of the Royal Academy, lived and died. Giuseppe Ceracchi, Mrs. Damer's master in sculpture, worked in Carlini's studio, when he first came to England, He ended his career under tho guillotine in Paris in 1801. Tho paiuter David, with whom he had lived iu intimacy, was called to speak to his character, hut declayed that he knew nothing of him heyond his fame as a seulptor.
Dean and Compton streets were both named in compliment to Henry Compton, Bishop of London and Dean of the Chepel Royal. At the house afterwards divided into 42 and 43, Dean-street ived and cied Francis Hayman, one of the first members of the Royal Academy, and well known for his designs in illustration of Don Quisote Hayman and Quin the actor were inseparahle friends, and were frequently drank together. One night in attempting, arm-in-arm to cross the road, they hoth fell into the keunel. After truy hiere a minute or two, Hayman began strucrgling. "Hollo! what are you at now?" stattered Quin. "At? Why endeavouring to
get up, to he sure," replied the painter, "for this doesn't suit my palate." "Poh!" replied Quin; "remain where you are. The watchman will come by shortly, and he will take us both \& William Wilson, wholesale tin-plate workert was formerly the residence of Sir James, Thornhill. This is a noble of house, with handsome rooms and a fine staircaso, the floor of
which is laid down with marhle. Tho walls are painted to reprosent columns, with figures lcaning orer a halustrade. These are supposed to have heen the work of Hogarth, and the figure of a lady to represont Jane Thornhill, to whom Hograrth was manried at Paddington on Warch 23, 1729, when she ran uway from her father's liouse, then in Covent-garden. The staircase is now floored over, and serves as a store.room. George Henry Harlow, the painter of the memorable picture of the Kemble family, died at No. 83, on the 1th of Fehruary, 1819, in his thinty.second year. Another artist who lived in this street was old Nollekens, the father of the Royal Academician. The little theatre, which wos lately so successfully managed by Miss Oliver, has passed through many vicissi tudes. It was long known as Miss Kelly' Theatre, and has siuce horne the names of Sohe and New Royalty.

Wardour-street is supposed to have received ts name from Lord Arundel of Wardour. Its who lived at No. 27, from 1781 to 1787. The went scnlptor was chosen as a parish officer, and Saw him, as one of John Thomas Smith olten saw with ink-bottle the collcctors Morland's father, who was a clever painter of Morlands heads in crays, from our.stroch mitror mas when when Prince Heary's military garden, situated near where the surcet take their names from Newport House, the residence of Montjoy Blount, created Karl of Ne wport hy Charlcs 1. Sir Joshua Resnolds, before he weut to Leiccster. "Fguare, lived on the north side of symer on the sonth side. Carte, the historian, lived at "Mr. Kcr's, at the Golden Head." Horne, the poulterer, or "Turkey mercbant," according to his son, Horne Tooke bad a shop in Newport-maket; and Orator Henley" orated"
The last place that we liave to mention is Gerrard.street, which has many pleasant associa tions. It takes its name from Charles Gerard, the first Earl of Macclesfield, who died in 169 t. When Prince Fenry's military garden was closed Lord Macclesfield obtained possession of it, and after erecting himself a honse he let the rest o the ground for others to huitd a strcet. The disreputable Lord Mobun was living at Maceles. field House when he fought his famous duel with the Duke of Hamilton, a duel in which hoth principals were killed. Oue of the earliest of principals were men to inhahit the street was Dryden. His house was on the south side, and Drywn numhered 13. The Society of Arts have placed one their tahlets on the front of the house to point it out to passers-by. In Dryden's deuse to poln Leicester of "Don Sehastian" he calls himself a poor inhahitant of his lord he cals himsel whose hest prospect is on the ship's suaurbs, whose hest prosen of Leicester House. The house now occupied by the Westminster General Dispensary (No. 9) was once the Turk's Head, where Johnson and his literary frends the "I Literary 1764," The Club," known as the Literary Cluh" since Garrick's death. The memhers met every Monday evening at seven oclock for snpper. In 1772 the day of meeting was changed to Friday, and dimner took the place of sapper. The club remained at tois house until 1783, when the landlord died, and the tavern was discontinned. Edmund Burke, one of the memhers, lived in this street. J. T. Smith often looked down from his window at dawn of day to see whether the great orator had left his drawingroom, where night after night after he had left the House of Commons he was scen seated at a tahle covered with papers, attended
amannensis, who sat opposite to him. Gerrard-street takes us out of the parish of St. Anne's, Soho ; therefore we will here end our notices of a district which has been famous for nearly two centuries, during a portion of the time as a fashionuble neighbourhood, and during the whole time as the chief foreign quarter of London.

Death-rate, St. George's, Manover-square r. Corfield, the medical officer of St. George's Hanover-square, reports that for the week ending the 17 th ult., the death.rate in the parish was only $9 \cdot 2$ per 1,000 . Dnring the five weeks ending the 1,000 .

## THE NEW RECTORY HOUSE BULLDINGS,

 NEWINGTONDurina the last few months the erection of a new rectory-house in connexion with the parish church of Newington has been in progress, aud the huilding has so far advanced that it is now ready for covering in, which will bo effected in the course of next week.
It is situated in Kennington Park-road, the site heing that formerly occupied hy Canterbury House. The new structure, which partakes of a mixed Gothic style of architecture, is a prominent feature an1ongst the huildings in that proroughfare. It is huilt of red Farelham hrick, with Bath stone dressings. The Kennington Park-road elevation is 48 ft . in width, and 35 ft . in height to the cornice, ahove which there is a lofty central pointed dormer or gahle, 19 ft . in hoifht, terminating with a cross, with a smaller dormer of similar clharacter on each side, the extreme height of the elevation being 54 fit. The central portion or ha cire in pals in with Minton's encaustio files in panela, and the other portions of tie corice of a similor tbere are also encaustio ties or aind character, hut of smaller diamond-shaped. The principal entrance to the building, which is at the nortu-west angle of the elcyation, has stone piers on each side, fome which springe a Gothic aroh, also in stone, over tho doorway, with an outer arch abovo it of red hrick. Over the entranco there is a projecting cornice, in brick, with a hand or ornamens are all ruming across the centre. The winaws ansors tiplet, with stone heads, mullions, a arched ore with brickwork. Thare are two other principal clevations, uniform in their general character with that just descrihed, that on the north side having two promiucnt gahles, whilst flat over lookin the grounds of the huilding, at the pposite side of the Keunington Park.roai frontage, has prominent hay windows at the south.east angle, projecting from the main body ont ent huilding.
The inte
The intorior of the building is spacious, and ontains several large and handsome apart. ments. The basement is devoted to the lomestic offices, and contains a commodious kitcben, butler's pantry, larder, dc., together with man. servant's hedroom, sol found floor contains convenienocs. room, 24 ft . by 16 ft , and a spacious dining-room, 1 , corridor, 8 ft . in wiath, separates the trom the rawing.room, 2, , 14 fo which there is a stuay, together with several owher baroms, dressing. frst.floor contains several divided hy a corridor rooms, and hath-roons, the rround-floor. The nniform with that on the ground - 1 drooms second-floor contains the seryants Christian; The architect is Mr. Ewan Christian; and Messrs. Downs \& Co., of Enion-street, Borongh, are the contractors. The
The intended new parish cburch, in licn the old one, which is ahout to he taken down for the widening of Newington.hutts, will be erected on a site on the north side of the nen rectory, aud immediately adjoining it, three houses in Kennington Pars-road, with the har gardens attached thereto, haring heon purcoased for the purpose. The pr the Kenningtor Park.road and the edifice will he unusually large, covering an area of 192 ft . in length by 73 ft in width. Mr. Christian is the architect for the chrich, 0 s well as the new rectory. house.

## S TO LABOURERS' COTTAGES.

Recentiy Dr. Acland, the Regius Professor of Medicine, Oxford, delivered azother of bis lecture: on Public Health, in the large theatre or the Uni versity Museum, the special suhject of which was "Lahourers' Cottages in Town and Country, Past and Present." In commencing his lecture Dr. Acland said he should hetray the trust which was imposed npon the Professor of Medicine-a trust probahly at no period so gravo as at the present-if he were not to say at once that was his firm conviction that the pature of the hodily frame of man, and the care of that hod the rame was scarcely second to hut the casket Reverting to the further consideration of the ques. tion of the prevention of damp in cottages, Dr. Ac. land shored a specimen of a Chinese hrick sent
him from a palaco in Pekin, and he regretted tlat the expense attending the carriage, as well as the manufacture, woill requont use in England of the aricks with glazed surfaces, some of which be exhiotwa aud explained. He spoke of the quantity of water that was absorbed hy hricks, and illustrated the statement with in interesting experiment and the detailing of an anecdote. The effiect of the aneodote was that a woman once told him that if she threw water upon her hricks to wash them, it never came off again. That was, he said, hecause it was ahsorhed in the brick; and he remarked that often it was evaporates there. from, and entered into the lungs of all who were in the house. He enforced that nearly all the water that was absorhed in the bricks of a floor often came out again, and was injurious to the health of the inmates of a house. Anuther puhlic source of disease was lead-poisoning cansed hy reason of water heing made to pass through lead pipes. He showed and explained what he said was an admirahle iuvention for doinc away with this cril in covering the interio of the pipe with a coating of tin. Dr. Acland aid thol this showed the importance of small and tbat all whole suhject was mado up of de details. It who showed them that there were ertain thi uilding for whe had spoken existed, wa he on of nd the inattention of the Lecislature, and, he ould ould add, the nuwis. o learn. The journals had found great fault in this matter, hut he had not set one jour al with sufficient intelisgence to appreciate he facts. Great fault had bcen found with the Government, who had heel charged suator iness in Banitary matlers. The Royal Sauitary Commission had been blamed because scnd assistant commissioner's into every town and district to inquiro into the existing state of things which was well known to all. hey hau Governmen at doue something to produce a Government had doue sometheole would use emedy, which, if only the people woa end in a short time. The population of this conntry required air ; they were a free.brenthiug people. Witbin the last century six.million acres had heen enclosed-land upon which the whole of the puhlic had a right to assemile for recreaion. Whilst the population had trehlea, an the operations of the Enclosure Conmissioners. We were becrinning too late to understand that these puh ic acres were not for individuals or individnal corporations, but for the people at large. That matter now restad with the people. In the year 1871 a Bill passed through Parliament, which was so little noticed, that the fact of its third reading was not even mentioned when it passed through the Honse of Lords, hy hich all the chief offices in relation to the puhlic health were united in the Local Govern nsent Board, and in the following year, hy ar Act only fonnd fault with for its pettiness and narrowness, by which medical officers of heaitl were appointed for the whole country. By tba Act every portion of tbe country, every cottare every hamlet, every village, and every town was necessarily under the sanitary supervio the inticn manedical 0fcer of health unde he Pahli 4 medical $18{ }^{2}$, the learuet ecturer said we were going tlurough a grea crolntion in eanitary matters, Things weri radually sinking into the hands of the people cow it was the people's husiness, and those whic had for was the peopie's husiness, ang the people for their own sakes, to seek these matters on mighlt now hold their peace. The matter rester with the people themselves.

The Chapter Honse at Westminster.-I the Commons Mr. B. Cochrane asked the complete the Chapter Honse at Westminster and to indows wained closs, and restoring som $f$ the whils, In the paintings Grastowe said wite answer on the poin Whe to give a che malk Hen the dean hernment the whole of his known to the Goverhe Ahbey, they wonld receir the earnest considcration of the Government.

IURCH OF ST. PHILIP NERI, ARUNDEL Tuis remarkahle church, erected for bis Grace e Duke of Norfolk, E.M., and of wicb we give engraving in our present number, is com ised of a nave, 97 ft . long and 33 ft . broad; o aisles 12 ft . broad, and the same length as
o nave, transepts 94 ft . across by 27 ft .; a rge chancel, three side chapels, sacristies Hicient to accommodate easily 200 persons;
ree confessionals, baptistery, and a tower ree confessionals, baptistery, and a tower
hich is evcntually to be surmounted by a ire, rising to a height of 280 ft . It is devoted, o need bardly add, to the lioman Catholic faith.
Entering at the fine west door, we find ourlves nuder the organ gallery, which occupies te westernmost bay of the nave and aisles, or a eadtb of 57 ft . To onr left is the tower itrance, and to the right the baptistery, an taronal structure. The remaining five bays the soath aisle communicate alternately with
rree confessionals. The aisles axe lighted by Lee-light tracery windows, at present devoid stained glass. The south transept contains the gable wall a niche and canopy, 32 ft . bigh, liding a statue of St. Philip, the patron of the lurch; and on eitber band a two-ligot window, te and death of the Saint. In the south-east rrner of this transept is the door leading to re eacristies, which are singularly complete.
roesing tho transept, and to the - it, are the chancel and three side prth side. Tbe clustered columns and arches in the entire round of the chancel, the space bhind form an he spandrels are twenty-two medallion beads of htrinrchs and high priests of the old and new w, commencing with Adam, and ending with ins IX. Above are eleven two-ligbt windows,
presenting the nino eboirs of angele. When e say that eacb figure in these windows is 9 ft gh, and that their magnitude is not percepole without carefully comparing sizes, som ea of the general dimensions of the structure
ay bo gained. At present the altar in the nancel is only of a temporary character; but is intended to erect one in the chancel, ancl ith the cburch. In the north transept is a five Fht tracery wiadow, depicting tho principa ents in the life of tho Virgin Mary. Looking om the chancel steps westward, tho oye is 7 ft . in dianceter, intended to commemorat be mysteries of the Rosary. Below this is an gran, which is spoken of as one of the finoet in ogland. 1h:0 spandrels of the nave contain edalion heads of twenty-four Englisb saints ae clearstory windows bave double tracery, it at present they are ouly glazed with plain uthedral glass, and this applies to all the
indows except those in the chnncel and two ansepts. Tho west end and tower doorways orich in carving and scnlpture. Tbero naller and simpler ones in the transepts.
A view of the exterior, with its pinancles Ang huttresses, gables, and fieche rising to ight of 140 ft., we lave already given.* posing effect, from many points appearing th incipal object in the landscape. There are er sixty niches outsido tbo hailding; but at cesent none of them contain statues. Tbe hole of the church is groined with Bath stone ad chalk, and we may add that tbe effect of lestminster Abbey oan testify, is most pleasing bewalls are exteriorly of Box Hill, and interiorl? Corsbam Down stone, with a brick core. Messrs. Joseph A. Hansom \& Son, of London, ce the arohitects; and Messrs. Myers \& Sons 1e contractors. Tbe stained glass and metal ork are by Messrs. Hardman \& Co., of Birmingam; the sculpture is by Messrs. Farmer \& rindley; and tbe organ by Messrs. Hill \& Son. a the fleche is a fine-toned bell, weigbing half a
on, by Messrs. Taylor, of Lourhboroumb. Mr. J. on, by Messrs. Taylor, of Loughborougb. Mr. re huilders' foreman.

New Theatre in New York.-A 200,000 . allar theatre it is reported, is being hnilt o roadway, New York, of which Mr. Dion Bouciunt takes a ten years
5,000 doll

THE JERSEY BANEINC COMPANY'S NEW PREMISES AT ST. HELIER'S.
Turs building is heing erected by Messrs. Fallaize and Tostevin, of St. Helier's, Jersey. It occupies an excellent site, at the corzers of New-street, and Library-place, and has been designed by Mr. John Hayward, of Exeter architect, who carried ont the restoration of St Onen's and Trinity churches, Jersoy. Tbe style of architecture chosen by the designer is new to Che island, as applied to secular buildinge, and is Early Ccometrical, with a deal of Early French Cothic in its type.
The building as a wbole is of native granite, the walls being of the pint, and the quoins of the gray variety. All the decssings to the windows, the cornices, vo., are of Portland stone, and the whole of the carved and sculp. ured work will bo exceuted in the same mate. rial. The columns in front of the mullions of the various windows are of polished red Abcr. deen granite, but which the Jersey Express does granite.
All the capitals npon these columas will be carred, and the labul moulds stopped by carved bosses and corbels. The treatment of dows will ho similar to the upper ones, excepting that the foliago upon the capitals will be somewhat more ornate npon the lower row. Between the two floors there will he carved and enriched cornices running the entire length of toe build ing. This, when executed, will be a prominent feature npon the two fronts. Inmediately overthe doorway is a tympanum, within wbich will be carved a sbield, hearing npou its field tho arms of Jerscy, with bunches of emblematic foliage, the rose, shamrock, and thistie springing
from eitber side. The carved work is in the rom eitber side. The carved work is in the bands of Mr. Harry Hems, of Exete

## TEMPLE RELICS FROM GOLGOI

The enormous collections made by General Di Cesnola for the Mctropolitan Museam, New York, are heing gradually unpacked and ex. hihited in temporary quarters, and are exciting wonler, incomplete as the arrangement yet is. The Nation (N.Y.), in hringing the exbibition ofore its readers, reminds them that on tho night of Marcb 6, 1570, the American Consul was informed of the unearthing of a colossus athionau (an inland town at the environs of thionan (an inland town at the back of Larnaca), where the French antiquary De fogute
had already dug witb slight result. Immediately leasing the ground in the name of bis chief ragoman, onr rcpresentotive beran his explora ions, and hy excavating towards tbe valley, instoad of uphill, from the trenches of De Vogue, he quickly struck the foundations of the ancient temple. This sanctuary soon yielded its whole contents to the lacky explorer, amons which werc a thousand statues. It was a smail sbrine, only 30 ft . hy 100 ft . in the lengtb of its sides, onried abont two yards deep in a hard clay apparently partly formed from its own walls of unburat brick; no part of the building above the foundations was preserved, and bases of columns were found only at the doorways; its arthen walls, wooden pillars, and perhans wattled roof, had decayed, while the statuary harply broken as if by an earthquake or ndden iconoclasm, was mostly adjustable witl ease, and perfectly fresh in surface. Into this limited quadrangle the hieratic art of Phenicia, Egypt, Crecce, Assyria, and probably Persia had settled through an iucaleulable period of time, sometimes sharp in type and definition, sometimes mutually mingled, witb the most ncalculable inflections aud disturbances. This populace of images now bodily in Now York is figure distinart of the booty from Cyprus. No chief has heen found; the supreme cannot has heeu roud, the supreme patron hing points to tbe worship of aphrolite every. remaing conjoct of the statuary are borne off by the hononr divine, but those of brne off by figures no Upon these, differing as they do from all scnlp pon these, differing as they do from all scnlp ture elsewherc obtained, and of periods incal culably remote, the attention is fixed, in a perfec mazo of curiosity, study, comparison, snggestion reminiscence, and surmiso.
One bead, that of the colossus par excellence, especially excites wonder and conjectnre. From its enormous almond eyes, which, if properl
placed, would bang in tbe air between 30 ft . or 30 ft . above the ground, it is hard to say how many centuries look down upon to-day. Tbe frag ments of tbe statue to which it belonged have not been identified with certainty, and it is seen as the enormous capital to a
very modest shaft. Its necessary altitude would seem almost too great for the height of so small a hoilding, and although it was found within the walls, it may possibly have been before reversal a watcber withont the door. In this liead the Cypriote type, wibl we soon learn to trace hy a compurison of the otbor sculptures, is seen in its blankest distinetness and most has lorated measure. Tibe colossus in question facial tat cyes, receding forehead, and acute by the ange, the weakness of the chin disguised covered ample fall of a beard, wbich, thono locks in which it is divided; the nose is swelled, slightly aquiline, and pointed ; Assyrian curl appear under the edge of tho cap, which is that of a large number of tho statuos, and sinilar tbe one worn in Cyprus to this day. It is a close bonnet, fitting to the bead, and ranning up to a point; in this case, the jugular flaps, which might be drawn down over the ears, are retnrned closcly over the cap; in other statues tho same jugularies are tied in front with an omamental knot, and the point is often decorated with the head of an animal. The month of tbe giant in fixed in a half-moon smile, common to most of lip on ataluary. This eternal rictus of a thin flat lip on all tho archaic faces present hegins, after the mind the mind. From its rigidity it is, even when anmalicious, not reassuring. It bears a slight sculpture; hut what is pary in archaio Greek a perfect correspondence we must over to the early art of Italy. It is Etruria, in figures such as those mortuary recliniag ones from Cervetri, proserved in the Campana room of the Lonvre, which yields us these receding forebeads, acnto profiles, and all-promising amiability. This correspondence is an item of evidence in the theory skilfully maintained by Mr. Stillman, of the identity of the Etrascans with an apcient race of builders and scnlptors, who cartied the tide of primitive art eastward through Creece, tbe otber Mediterrancan islands, and Asia Minor.

THE WORES ON THE RAILWAY TUNNEL NDER THE MERSEY.
The important railway engineering works for onnecting Liverpool directly with Birkenhead by means of a railway under the Morsey, are now actively in progress, and when the works now going forward are completed, tbere will be railway communica tion between Cheshire, Wales, and Liverpool, via the sub-marine route across the Mersey, without change of carriase, which may be regarded as an important achievenient in railway engincering. This is, indeed, tho first nstance of a railway being carried under the hed of a wide navigable river on any large scale and the tunnel now in course of construction may therefore be regarded as the pioneer of ritway submarine engineering. When this project was first hroached, strong doubts were expressed as to the possibility of its being carried ont with safety in consequence of the immense volnme of water flowing into and out of the Mersey, and it was believed by many that there wonld be in. snperahle engineering difficulties in driving the tunnel at a sufficient deptb helow the bed of the fiver, hut these doubts bave been proved to be groundless. The crown of the tannel will he at an average depth of 30 ft . of solid rock below the bed of the river. On the Birkenhead side of the river a working sbait 37 ft . in length, and $8 \mathrm{ft}$. , width, has heen sunk to the iutended depth of the railway level of the tunnel, whiok is Birke helow high-water mark. The tunuel from tbo Birkenhead station to the sbaft on the margin of the river, will contain two lines of rails; bat under the river there are to be two single tunnels with oue line of rain in each. The ohject of this is to promote hetrer means of ventiation; and it has also this further advantage, that it gives greater space hetween the crown of the tunnelarch and the riverbed than would he otherwise secured. Each of the tunnels will he a mile in length from shaft to shaft; bat tho actual widtb of the submarine tannels will be three-quarters of a mile in length, being the breadth of the Mersey at that point where the tunnel will cross under the river from the Cheshire to the Lan.
cashiro sbore. Tbe tnanels will be 15 ft . high from the railway level to the crown under the river's bed. Althongh, as has already heen stated, the tnnnel will pass throngh very hard sandstone-rock, of which there will he an average depth of 30 ft . hetween the bed of the river and the crown of the tumnel itself, it will he faced witb Staffordshire blue bricks set in Portland cement, in order to prevent tbe possihle percolation of river-water; and whilst tle works are in progress pumps will he kept going on both sides of the river. As the tunnel passes entirely through the sandstone-rock the excavating opera tions nnder the river will necessarily be heavy, and theso are intended to he carried ont hy tbe Diamond Boring Machine Company. Tlis apparatus is said to be capanie of excavating ahout 16 yards per week, and it is expected that a heading 9 ft . higb and 9 ft , wide, will he driven witbin the river to the extent of 1,300 ysrds the suh-river tunnels will loe completed and ready for traffic in tbe summer of 1875. On the Lan. cashire side at Liverpool, the tunnels, hy menns of the Mersey live under the town, will he connected with the new joint Midland and Great Nortbern station about to be opened in Liverpool. Tbe engineers under whose snperintendence the project is heing carried out, are Messrs. C. D. Fox and J. Branlees.

## SELF.TUITION <br> \section*{by a sonyre.}

Scarcely any one ever resorts to the practice of self.instruction who can command the means to employ a tutor and the time to take advantage of his assistance. It is very agreeable to be taught by a competent instructor, and pleasant, When one is puzzled by a difficult prohlem, to turn for assistance to one who can explain it
satisfactorily. Still, the pupil whom the scbool. satisfactorily. Still, the pupil whom the scboolmaster generally finds easiest to teach is the one who applies himself to nastcr the why and the Wherefore of bis exercises; and therefore we
mnst come to the conclusion that self. tuition imprints more lastingly on the mind that which we take npon ourselves to learn. The student who bas no person to help him over his difficulties must give his snbject more attention, and, having once mastered it, retains it for ever. What we bave explained to us evaporates soonest from our minds; hut wbat we find out for onr. selves will obviously remain with us, to he ready at memory's beck, hecause we were compelled, in order to master it, to give it the necessary repetition, withont which there will be no lasting. There is a close resemhlance between the nccumnlation of wealth and the attainment of both. But to most men have a yearning for of patience and perseverance,-virtues indis. pensable to those wbo desire wealth or know. ledge, and with many seemingly very difficult to attain. Our store of knowledge, as of wealth, will he in proportion to the amount of our patient industry. How many will gay that their want of snccess in attaining knowledge is to he attriof intelligence? Many exhibit a landahle desire manly and honest, to learn some favourite art, mat have a great dislike to the drudgery necessary to go throngh in order to accomplish their sary to go throngh in order to accomplish their object. Some taire ap a book witb great deter.
mination, but after a little while begin to lose patience, and throw it down in despair. It would patience, and throwit at snch a time to call to mind the maxim "That which is easily gained is geuerally "That which is easily ,gained is geuerally have a wish to add to tbeir knowledge by means of self.tnition shonld bear in mind what has been accomplished by tbose whose names are to be found in the foremost ranks, and should take a lesson from the biographies of those of whom it bas been proved that they raised tbemselves in the world, in wealth and honours, by simply teaching themselves. It has beeu said that one needs only to know tbe alphabet to learn what. ever else one wisbes. If this be so, a man who knows how to read well may feel assured that a great power is at his disposal for
the attainment of information. It is in the reading and careful digestion of what a person has read that the whole secret lies. Many who would make excellent progress by reading sparingly and carefully skim over the pages as if their solo ohject was to got to the end of the book as soon as possible. Tbey are satisfied with an idea of what has heen written. They never stay to consider the point of a sentence,
even though the words where the pitb of it lies are in italics before them. A dictionary should
he consulted on crery occasion where the mean ing of a word was only partly understood, and the Greek or Latin roots songht out, and th knowledge thus obtained applied to the passag ander consideration. One of the chief difficulties to bo got over is the freqnent repetition of har echnical words which necessarily occur in hooks of self-instruction, but these can only be mastered dy patience and the practice I have just mentioned. An impatient, careless reader is sure t get tired and disheartened over such words ; but let snch a one recollect that a very important tep will be made in adrance by the proper comprehending of a single page or even a paragraph If it take a weck to master a page or a para ask himself what prorress te has made. take a year to attain a tborough knowled ro wished-for ncoomplisbment he shonld let it have a year's constant study. Words derived from foreign sources will leave but a slight improssion on the mind if their origin as well as thei meaning have not been soucht after history of one word will often tbrow such light upon what the student is studying that will hoth please and gratify him, and stimulate him to exertions increasing and anbogradged. The stem or termination of one word is the stem or termination of many, and the study of words themselves, their origin, transformation, corruphoo, and the tracing of them to their several sources will be found invariably as pleasant an occupation as the reading of a romance. I might say, more pleasant, becanse it would lack excitement and yet contain as much novelty.
l'filosopbers have thought it worth their rbile rolnmes 1 pon wo in his stndies will passa single one satisfied with the sound of it and what he has understood from the context will find it impossible to sncceed in self-tuition, and he will lose some of the inquire all about it
Men who work by the aid of rules wbich they have picked up, and who pnt them into practice the inday wihout inquiring into the why and they arefore of such rules, are never sure that they are rigbt; and when by the aid of tbese are fare accomplished their allotted task, they the rules known to express surprise at how true of the why and the wherefore of the rules pre viously, they wonld never tremble for fear of not applying them exactly as they had heen tanght How often do we hear the superficial mechanic exclaim, when something comes his way tbat he had partially learned, hat never cave a single sion,-" Wait, now the first effort at comprehen. makes of now. Let no sec. so-and-so showed me how to do it "? two or thrce attempts to recall the words in which it was explained, he has to confess that he has forgoten them, and excnses himself with the sighing remark that he has very bad in hundreds is not tho memory that is at fault occars throngh the nes like this. Tbe failure over it the mind until the why the the prohlem fore of the mind until the why and the wherefore of its construction are thocoughly under-
stood. One wbo will never rcst satisfied until stood. One wbo will never rcst satisfied until burthen his memory with the exact words which explained it; for lowing exact words whel densonstrate it in words of his ovm, which will be sure to recar to him on recollecting the trutb alone.
The husiness of an instructor is to simplify technicalities, and by oral demonstration, attitude, gesture, and constant repetition, canse bis papis to comprebend what he is trying to explaid. If he be clear and explicit, and we is ten to one thedge of the fact with him, which we were expecting, and for which we paid money, and a notion takes possession of 18 that this is a natural consequence, and that we are under no ohlication to the tutor or to the us cas he used for our knowledge. This makes as careless, and prevents us from setting the our moner ne on what we have just received for perhaps a trifle knowledge as of the trifing sum expended upon it and although the snbject may be a most important one to remember, it is often lost sight because it seemed to ns so easily obtained. conclusion to try wbat be can learn from to tue
alone, be must feel tbat words only must be hi guide. Yet that they are but words must als on liner rcfection; but to make these wor facts (which ther will surely do if examine properly) wbich they are meant to demonstrate one bas to follow the course which a teacber otbers is obliged to follow. He mnst "read mark, learn, and inwardly digest." He mns adopt the repetitions of the tutor, fancy th attitndes and gestnres the writer would emplo it he were demonstrating his lessons hy word o mouth, and when through all this he succeeds solving the problem, and looks back at all hi tronble, he will think somethiny abont what has attained. This is self-tuition, and witbon t, to a preat extent, no person will advance knowledre even hy the aid of a tutor. Th ntor's dnty is to explain that of the pupil, if his explanations. compare, and re.examin until no douht remains. But the great advan ages of cotire self-trition are, tbat it will mak as confident,-sure of wbat we direct. It wil ead us to he batisfied tiat the course we hav dopted in carrying out this or that plan correct. We are cnahled to handle the rules and, if necessary, make new ones, for hy self nition the mind is made as sharp as a needle point, and the will rebels against advancin nless everything is clear hefore it, new ideas ar formed according as we understand tbe old, an as wo undermine the darkness witb which we are struxgling, volurnes of light wil tamble i apon us in periodical avalanches, if I may use he word, whicb will canse witbin ns a tnmul. tuons joy, the more gratifying becanse our know ledge has been achieved by our own individua sertions
But apart from these advantages, derived from elf.instruction, it points ont the path whic eads to a commendable life, by giving hene fial and bealthy employment to the mind Also, when we compare the little we know wit the much the writer of the lessons has lai heforo us, we are sure to hecome more humble and solf.conceit will not fail to get a wholeso check whenever it rises to the surface. It wil also make us lay more ralue upon our leisnre time, and teach us to economise it, and utilise every spare hour or half-hour. I once read of a man who hoasted tbat he added thousands ou words to his vocabulary, hy stndying them on the way between his residence and the place where he did business. There are numhers of working men who get by beart useless and vulgar songs and airs, which tbeykeepsinging and whistling ot their work to the great annoyance often of their mates, when they conld have tbeir minds occmpied with the contemplation of som usefpl prolian the contemplation of som who has not his mind unocenpied or laboure every day, which could be turned to the improve ment of his mind, without retarding bis It is easy for a joiner to try np his stuff and think, and not very difficult for a mason to work moulding, or square a block of stone, and do the same. I need not point out the advantages derived from this practice, in a moral sense; for he who is generally in a state of mind bent upon self-improvement will find that he cannot spare any for the purpose of thinking ill of his neigh. bour.
Tbose who carn a living by daily mental labour will, I believe, find it more difficult to follow the plan of self-tuition than tbose engaged in a mechanical calling. The constant drag npon the hrain day after day, and the monotonons repetitions required in most commercial occipations, create a distaste for the resumption of brainwork during leisure bours; and many have : dispositions so constructed that a single irregu. larity or thought of an existing error in their hooks or calculations will occupy tbeir aftention, to tbe exclusion of what they may have a wish to stndy. But there are men who can leave their husiness heads at their respective offices, and resnme their stadions ones without the difficnlties I hnve mentioned, and thus triumph over the olstacles which would dare har their advancenient. There are hondreds of examples in history of men who, althongh following a mental occupation, were nevertheless successfal in self-tnition. The consequent inscribing of their names upon the rolls of fame, and the attainment of wealth and honours, were the results of patient application perseveringly parsued.
Foon the ranks of manual lahourers, too, mecbanics and others have sprung,-men who lave heen successful in self.tnition. and whose
tisfied hecause knowledge will not tumble in pon them hy merely flancing at a book. all take one for example, and in order to sonomiso space, lave the reader to seek for hers in their biographios. Ben Jonson, it is id, worked at the building of Lincoln's lnn ith at. This is very suggestive. The ifnorant se the idle of that time 2,4 of to.day, sneered unaps at his thoughtful oonntenance, and rought light of his stuulions hahita; but his ume lives to he honoured by his conntrymen as sweet recompense for labour done. While ang on the expressive exclamation which for epitaph is inscribed on his tomb, I thought
myself that the life of this great man was an myself that the life of this great man was an :amplo of pationce and persevernuce; that heat allow his mind to dwell upon tho beanties literature, and direct it so as to benefit hy the ift of his thought, cven though employod in o not very congenial ocenpation of laying headers aud strotchers." To ho smre, he was sseessed of geuias, but genius has been dofined Mach laas been said on the subject of providing abs where working men could meet to have a rat together, read tho nowspapers, play baga. lle, eards, Se., daring their leisure-time; but though I an not altogether opposed to sach aces of resort, still I am of opinion that much Inahlo time can be wasted in thera. $\Lambda$ coursu self-tuition will answor more elfectively
urposes which it is supposed these will achieve to learn, one must study attentively, and 's own home. The most that can be done for sung men at suoh places will he to supply thom ith periodicals, nowspapers, and often frivolous mpany seeping whioh loere no solid heaefits zhind. Periodical reading is novol reading, and instant newsponer readine not much hetter he former details the romance of days gone by, id tho latter records that of to-day. Wading rough the horrid details of a murder aotually rongit the hormid details of a murder actually o utmost, and the report of a scandal cund its tendant gossip takes up valuablo time-at ust, vanable to all working meu, who havo so teful purposes. Novel reading excites the taste mystory, and leads us to view mankind as asely intended to bo incorrect; and the more reposterons it would seem, the hetter for the le of the hook. He who is persistent in novel eading will find it will not lead to cither appy or beneficial results, and unless for ositivo relaxation, feasting upon the works even our hest writers is ahsolnte waste
time. If one's obsorvation be close (and selfition will make it so), one can imagine novelty aongh by stndying for rocreation the acts 0 1080 with whom ono comes in contact. City zoroughfares will supply us with vanity, arolity, mendicancy, profig ignorance, on the industry onesty, perseverance, tact, modesty, and all the hor ingrodients that go to ennpose a novel, on
ie othor. A coaple of liourg' ride or walk into 10 country will introduce a man seeking recreaon to a rural scene and rastic life, if he be fond f suoh scenes. A gentleman's demesre, with ill and dale, will sapply him with materials for descriptive sketch; and after ho has conteunlated these, he car then start with his pair of jvers, lordly or lowly, his villain, honest man, lown, sago, and all the tag, rag, and bobtail hat go to make up tho small fry of a novel; nd before a writer would have time almost to f a hundred similar scenes such as a writer of ction could lay open to his view, And all this ashioned from peoplo and places which one man men and tave met and scen. Fom the people specially mann oould choose charace um, and, by the aid of his mimieking powers, tage until satisficd. tage until satisficd. And this without the hrough a novel with his brain on fire and big reath in his mouth.

Tramways in Erompton.- A strong oppo ition is organisel, and with good reason, loainst the proposed formation of a tramway of the projected Bill shonld hecome law, the and in parls will he impassahle.

THE LEEDS SCHOOL-BOARD SCHOOLS.
AT a ree nt meeting of this Board, Mr. Woolley read the report of the Sitos and Buildings Com mittoe, which revommended acceptance of the following tenders for the school haildings and boundary walls of tho Burley-road school:Excarators', bricklayers', masons' work, and carenters ${ }^{\prime}$ and joiners ${ }^{\prime}$ work, Mossre. Longloy rothers, 4, ,9,l. 9 s. ; smiths', founders', and 366l. slaters' work, Mr. Y P Pocock, 3201 plasterers ${ }^{3}$ work, Mr. W. Garlick, 1.45l.; plnmbers', gas.fitters', glaziers', and paintors ${ }^{3}$ work, 317 l . 18s. 9d. ; total, 5, 880 l . 8s. 3d. The committeo also recommended inerease of the clerk of works' salary from 2l. 2s. to 2l. 10s. per fres, and confirmation of tho appointment of ar. W. H. Thorp, architect's assistant, at a to a question, said the accommodation at the Buley-road school would bo for 505 children and the average cost per head, including architect's commission, would be 81.15 s .1 d ., whieh was lest than any of their other schools, excepting ack-lane. Tho report was adopted.
At a subsequent stage of the proceedings, as
reported by the Yorkshire Post, the chairman asked Mc. Woolley for some particalars respect. ing the progress of the new schools. He said that he had been at Saltaire in the present week, when he wert over tae fery fine schools there, and ho ohserved that the school-rooms were long and very narrow. The schoolmaster told him that ho was very glad that the Leeds Sehool Board had made such a stand in favour of hroader schools, for lie felt the inconvenience of ho narrow system.
Mr. Woolley said that the Board would be glad to hear that their action in regard to the width of schools was apmreciated by a teacher at Saltaira, who had had practical experience of the narcow sehools. With regard to the thee schools that were heiver erceted, be was olad to say they wonld be ready for ocenpation in a hort tima The Bewelley street School, he hourht, would he a model school both with regard to architeoture, workmanship, material and acommolution and it would be at a reason hio cost as lo wond be whlo to thom by Ggares. From statement which had been drawn wi with regard to the cost of theen chools actually haidion on entracted for and which was partly read by Mr. Woolley, the following is given:

| School. | $\begin{gathered} \text { Children } \\ \text { accomma- } \\ \text { dated. } \end{gathered}$ | Total cost of buildings. | Tutal cost per child, including commis feet per chit. | Tolal cost of school and site. | Total cost per child at 10 square feet. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Bewerley-strcet, Hunslet District | 851 | $\begin{array}{ccc} \hline \text { £. } & \text { s. } & \text { d. } \\ 9,083 & 15 & 8 \end{array}$ | $\begin{array}{lll}\text { £. } & \text { s. } & \text { d. } \\ 10 & 12 & 8\end{array}$ | $\begin{array}{ccc\|} \hline e . & \text { s. } & \text { d. } \\ 10,461 & 9 & 8 \\ \hline \end{array}$ | $\begin{array}{ll}\text { £. } & 5 \\ 12 & 5\end{array}$ |

THE NEW BOARD SCHOOLS IN ROSS.
The ceremony of laying tho memorial stone of the new Board schools for the parish of Ross Herefordshire, has taken place in the presence of a large number of spectators. The stono was presented by Mr. George Pearson, architect to tho Board. After the Education Department had approved of the plans drawn up by Mr. Pearson, twelve contracts were sent in, the lowest that of Mr. William Boners, of Hereford, a 4,697l., being accepted. The money for erecting tho building and parehasing the site will he borrowed at $3 \frac{1}{2}$ percent. iuterest, payable in equal bormal instalments spreading over fifty jcars Some time in March the contractor commenced tho work, and the foundations have been put in and the work fairly adranced. The site is in Cantilupe-road, and comprises an area of 3,200 square yards, purchased for 1,000l. The surface was much out of level, the diferenc hetween the levels in the Cantilupe-road and Henry-street heing $12 \frac{3}{} \mathrm{ft}$. The site having heen guarried a fos years ago necessifated a porto of the foundations heing carried a depth of 17 ft . beint more than the herght of the schools to the wall-plato at tho Cantiluperoad level. Tho foundations aro in concrete. The walling is of local stono with shoddy face, and pointed with black mortar. The dressings are to be or cor sham Down Bath stone. A tracery window to the hoard-room will add to the ornate appearance of the edifice, and there is a bell-cot 60 ft . 1 height. The dimensions and accommodations are as follow :-

Utal, at 12 ft . superficial area for each
child ........................................ 420
The hoys' and girla' halls, nsed as clook-rooms, will be 20 ft . hy 18 ft . There will be retiring. rooms, lavatories, and the usual out-offices, with sanitary arrangements. The open spaces wil bo appropriated for playgrounds, and there will be corered sheds for open-air recreation.

English Artizans and the Vienna Exhibition. -Ten artizans, representing varions trades of the town, and sclected hy the Birming hom Chamber of Commerce to report upon their espectivo industries at the Tienna Exbibition, have left for Vienna.

DEFECTIVE DRAINAGE OF PENGE.

## flooding or houses.

\|'The inhabitants of Penge have, for some time, been in a state of mncb consternation arising oeen in a state of macb consternation arising which several of the bonses bavo been flooded, Which sevoral of the bonses bavo been flooded,
doing considerable damage; and last week a doing considerable damage; and last week a publio meoting of the ratepayers was beld on traceable to the misconstruction of the sewers. Amongst those present were several members of tho Lewisbam Board of Works, in whose district Penge is situated.
Mr. Elkington, one of the members present and who stated that be laid down the sewers in the National Freehold Company's estate, near Penge, observed tbat as the sowers were now constructed, it seemed as if there was an attompt on the part of tbe designer to oppose tbe nni. versal laws imposed by nature. He had been trying, for instance, to mako a quart go into a pint-pot, and attempting two or three times to nake water go mp a hill. The semers had not been laid down on a right principle.
On the part of many present a strong hope was expressed that an improved state of things rapidly increasing, and already the lower part contributed a large amount of money to the Lewisbam Board of Works. In answer to an iu. qniry, it was stated that an independent snrveyor who bad been appointed to examine the sewers had already commenced the duties, and was now at work.

## TAILS AND FLOORS OF RACKET COURTS.

Sir, - In answer to yonr correspondent, "H. D. E.," respecting the best materials to plaster the walls and floor of a closed racket court, I beg to suggest trowelled Portland cement for the walls, and the same material, ased this to the whole of the internal walls of the New Standard Theatre, Bishopsgate, six years ago; and I have no douht the worthy proprietor, cor r. . Donglass, will allow your opinion as to its suitability. D. J. Tuney.

Sir,-In answer to "H. D. E.," as to walls of a racket conrt, good Portland cement,- Messrs. Bazley, White, \& Co.s best special,-rendered in one coat; fine sand, trowelled to a fair surface, half and half in ono coat, thoronghly saturating the brickwork beforo applying the cement; and for specimens of same done by me, eight open courts and one olosed, at college, Harrow-on-theHill; six open courts, Hailybury Collega, Hertford Heath, and other courts; Prince's Club, Hans-place, Sloano-street,-all good specimens : they have atood tho hard balls these twelve years, a good test

William Puliay.

## SEWER VENTILATION.

Sir,-Tho question of sewer and bouse drainage ventilation is a matter of grave importance. It bas not hitherto receirod that amount of attention and anxions inquiry which it fairly demands, and I am glad to find a disonssion opened in your colnmons by a gentleman of Mr. Lemon's standing, who must bave had con. siderablo experience in this subjeot. Mrany towns are quite at a stand, and the great evil of non- or badly-ventilated sewers and drains is in full foroe, in conseqnence of there being no satisfactory solution of the difficulty.
Respecting sewer ventilation, I am in a position to record a successfal experiment by a gentleman in the midland connties, who owns a large factory in a populons town. A connexion was formod from the main sewer to a factoryshaft, 80 ft . high, by about 200 ft . of 6 - in. stonewaro pipes, the joints being in coment; and When I tested it, it was producing marked effects, by withdrawing at least 100,000 cubic feet of air
every twenty-fonr honrs. The result is eminently snccessful, and the action is energetic and constant, as proved by the "test-pipe." Such a volume withdrawn contiznally must canse a great change of air in the sewer in the locality of the connexion. The action of the chimney shaft does not cease with the closing of the factory, but is continued (of conrse with diminished power), not only daring the night, nt for days after, which action is proved by a
simple test. So long as the temperation of the simple test. So long as the temperature of the oxternal air, so long will thore be a circulation resnlting from the different densities of warm and cold air.
I believo there are now some balf-dozen or more of these shafts in operation in the same town, and they aro all equally offective, and work without interruption.
Objections have been made to this system Some allege that these gases are not destroyed and that they will descend and again prove a nuisance. This is a mistaken idea; for the beat of tbe air in the base of tbo chimney would destroy much of the noxious quality of the gases,
and the smoke, which is principally carbon, would absorb a great deal; but, independently of these agencies, the bigh temperature of the ascending air of the shaft causes so great a rarefi. cation that it acquires a buoyancy whicb causes it to rise so high that it is carried "clean away," and then the oxygen of the air soon converts the noxious gases into perfectly inert compounds. The provisions for the disposal of such emanations are so complete that we need not fear any evil consequences when so discbarged into the mixed with the vast ocean of air, and so diluted and changed in its propertios, as to hecome quit barmless. Ggo, H. Stayton,

Borough Engineer, Ryde

## NEW DOCKS AT SHARPNESS.

A brier description of these docks will be interesting. The new entrance to the docks will be at what is known as Holly Hazel Pill, and outside the entrance will be a conplo of open timber piers, running ont nearly to the lowwater line, the lreais of which will be about 400 ft . apart. The entrance itself will be 60 ft wide. Next to the entrance is the tidal basin 550 ft . long and 300 ft . wide. Then comes a lock 320 ft . long, with three pairs of 60 ft . gates; the sills of the two next the tidal basin being at the same level as the entrance, and the other 24 ft . below the top water of the canal. The large mado of such a length as to enable the having three pairs of gates, the ordinary sized oraft will pass throngh with a considerable saving of water. Next to the lock is the discharging dock, 2,200 feet in lengtb, of varying The denth of to 24 ft , but will remain at one level. The dock gradually narrows towards the swingbridge, connecting the rails and roads on both sides; beyond this is tho out to join the existing canal, which will be about 720 ft . in length For the accommodation of vessels requiring repairs at Sharpness, a graving dock is also being constructed, This will be about 350 ft . lon
with a varying width of from 50 ft . to 80 ft .

INTERESTING DISCOVERY IN WOROESTER OATHEDRAL.
A dascovery, which is likely to prove interest. ing and instrnctive, has just been made within the ancient precincts of the College-hall, known to archæologists and antiquaries as having been the refectory or dining-room of the monas. tery formerly connected with the cathedral, and in modern times appropriated as a school.room for the college boys. The cathedral authorities, anxious to enlarge the accommodation of the school, had given directions for tho removal of the somewhat unsightly orchestra at the east end of the hall, and during tho progress of the work, as described by the local Herald, some of the plaster having fallen off, a small piece of moulding was observed anderneath, which led to the discorery of a reredos of great antiquity and magnificence. To remore the whole of the plaster was a work of some delicacy, great care monldingessarily required not to injure the central panel in the form of a quatrefoil, is a 6 in. in height, containing, it is believed, the figure of onr Saviour, but it is in so mutilated a condition that this cannot with certainty be ascertained. On one side of the fignre there is a shaft in the later Normen style, with canita? and hase, but on the other side the npper por tion of the corresponding column is gone. The spandrels appear to have contained emblems of the four Evargelists, their ontlines heing sufficiently revealed to lead to that conclusion. The whole of the emblems, as well as the central
figure, bave been chipped flush with the wai that is, the reredos has been sacrificed by sol Vandal plasterer, who wished to make a smoo wall. On each side of the contral panel there a two niches with groined canopies in a good stec of preservation, but the figures, for whicb th were clearly intended, bave disappeared. Abol these nicbes, again, there aro indications ricbly - crocketed canopies, with pinnacles a hatiresses, the whole indicating elaborate paj and costly workmanship. It is thonght pt bable from the patcbes of colonring and t tarnished lustre of tbe gilding, which still st vives the destroying hand of time, and the si s ore of considerd of man, that the discove logical and historio importance in an arch one of the earbiest and most splendid sperim of art connected with tho cathedral
It should be a
on the south sidel he reredos there is an aumbry or recontacle wall containing an oak sholf curions

## TME MANCHESTER TOWN.HALL

 CONTRACTS.Tre question of the Town-ball contracts E been considered at some length by the $\mathrm{Ms}_{8}$ chester City Council. The town-hall sub-co mittee reported that tenders for the completi of toe town-hall had been receired as follow; G. Smith \& Co., London, 131,3717. ; Mal
Foggatt, Cheetlam-hill, 105,8336.; R. Neill Foggatt, Cheetlam-hill, 105,8336 .; R. Neill
Sons, Manchester, 97,8020 . ; and T. Clay \& Sc Droylsden, 93,500l. Mr. Waterbouse, the arcl ect, reported that his estimates for furnishi tho building in accordance with bis designs, a the summary of specification already read them (except tbat for tho windows red deal substituted for teak), amonnts to 11. 4,05 Before the quantities were taken, in fact, August, 1870 , bis rongb calculations for tl work amounted to $91,370 \mathrm{l}$. 7 s .10 d ., which, owi to the rise in labonr and material, would pu bably be represented by 103,000 l. at the prese time. This showed a discrepancy of 11,00 between his prosent and former rough calcn. tions. The oommittee resolved to recomme lay \& adopted nnaniznously.

THE PROPOSRD TESTLIONIAL TO NR. HENRT COLF, C.B.
Sir,-The proposed testimonial to Mr. Hon Cole seems to me of such excoptional interest own very cordial cxpression of approval. For own very cordial cxpression of approval. For factures that his influence las been so lod potent, but, as it seems to mo, his indomitak energ' and thoroughness havo beneficini affected evers branch of art, sciezce, and comme affected every bra
school ednoation.

No one familiar with my name in connexic with the institntion of which Mr. Cole is tl head will suspect me of erediting the manag ment with infallihility; bat whilst I am awa that many of the positions originally and do, matically assumed lavo, in the light of it creased knowloflge and experience, been sue cesaively abandoned as untenable, so much ha been accomplished in other and nower direction that these early failures most count as nothim in comparison with the magnitnde of later sut cesses. The South Kenington Musenm br been brought to its present magnificent pronor tions in the teeth of sach virulent oppositio and persistent ridicule as wonld have discour aged and disgusted most men, and againsi which no ordinary man could have snccessfull worked. It is now in itself a monmment fo. national pride, which should ever be assoointe: with the namo of its founder, and in the pre sence of which all personal enyy malio pri uncharitablencss (and there has boen too, ancl of each) must for ever stand abashed. Thi cause of popular art has triumphed, and art it the narrow sense of architectre painting ant sculptnre - the nobility, the art which is alone tho great man'a nobility, the art which is alone tho grcat man'
possession-no longer proudly claims its falsi pre-eminence.
By the labonrs of more than twenty yeare Mr. Cole has proved that the true mission or art is not to minister to the linxury of the fewl but to ameliorate the condition of the many.
at it should enter into the hamblest life, and deem poverty itself from some of its most rolting and squalid wrotchedness. Therofore, trust that whatever form the proposed testionial may ho mado to take, it will bo limited no class restrictions, but be at once an aphatic, unanimous, and adequato expression tho nation's gratitude through the voice of e peoplo.
C. Heniy Whimaker,

We wisb to draw attention to the fact tbat a eeting will be held at Willis's Rooms on Friday e 11th inst., at tbroo o'clock, to consider tbe bjeot. Tho Marquis of Wostminster will

## ROPOSED INCREASE OF DOCK $\triangle C C O M$

 MODATION AT CARDIFI.A speciat meeting of the Cbambor of Com erce, says the Bristol Times, has been held fo - purpose of considering the desirability of oreasing the dock accommodation of the port Cardiff. Mr. Batcholor read a paper, in which elaborately detailed a scheme for constructing $?$ docks on the waste land between Cardiff 1d Penarth. To oarry out this scheme, ho Itimated that a sum of about 750,0007 . Wonld - oposed should be supplicd by the various rail. ay and other companies laving an interest tho devolopment of the port. Tbe remainder, ont $250,000 \mathrm{l}$., he suggested, could bo raised apressed tbeir concarronce in the schomo, and zpreascd tbeir concurronce in the schomo, and was thanimously agrced that the present nato. The chairman, howover, thoucht tbe nato hat not yet arrived for increasine the scommodation to the extent proposed by Mr atcbolor's scheme, and he expressed his opinion rat tho new basin in course of construction onld meet the presout requirements. Ulti. tately, the following resolntion was carriod is absolutely necessary that additional doch commodation shonld be provided with the "ast possiblo delay."

TRADE DISPUTE ANENT BACK.DAT MONEY.
On Tuesday the whole of tho masous em loyed by Messrs. Robson \& Son, of Durham, icked up their tools from the now works of the fale Training Colloge, and their stated griovance that employors have no right whatever to tain what is known in tho North as "a running-a-day-invand." The "Dorum" masons conmat whatever the custom may be in other sunties it is not in accordanco with trade usage 3sist its introduotion.
Messrs, Robson, having received the legal otice from their men, determined on their side maintain the principle of a back day in hand, ad the men have since got work elsewhere ad times! $\qquad$
HE METROPOLITAN BOARD OF WORKS AND COMPENSATION
Is the Sheriffs' Coart for the connty of Midlesex, a two days' protracted inquiry has occuied the attention of a special jury and a armidable array of Q.C.s to determine what
ompensation should be allotted for nearly the ompensation should be allot
The evidence and argaments mould occapy early the fall space of the Builder, hut the ollowing digest of the caso contains tho facts Is elicited.
Messrs. Tubbs \& Lowis, the plaintiffs, are lastic web manufacturers, in Old-street and Vilderness-row, and tbeir warehousos are of reat magnitude, employing some 500 hands, ad the Mctropolitan Board of Works required lie claimants' premises for a new street, cutting hrough the line of warehonses. The plaintiffs daimed no less than $70,000 \mathrm{l}$. for damages and 'alue of their loase, and tho surveyors for the 4etropolitan Board of Works endeavoured to at down the claim to the lowest valuation, 9,8226 . As usual in cases of this nature, sur romewhat differently from the defendants, and issessed it at abont 63,741
The jury went over the property, and the
assessor, Mr. Manisty, Q.C., very oonsiderately left the valuation in the lauds of the jury, who, after a deliberation of nearly an bour, awarded the sum of 45,0542 . as compensation for tho buildings.

## DECLINE OF IRON SHIPBUILDING IN

 ENGLAND.The unmitigated rise in the prices of iron, coke, and coal, addod to tho extra wage abour and reduction of hours, is being felt.
Tbo employers in the iron shipbuilding trade at Sunderland, on tho Wear, havo been com pelled to give notico to their hands for a reduc. on of rrages to tbe extent of 10 per cent. o the different classes of "iron men, and sixpenco per week on the wages of shipwrights
and joiners. It is a fortnigbt's notice expiring and joiners. It is
Tho trade, usually so hrisk on the "TFear,"
Tho trade, usually so hrisk on the "Wear,
now in a very depressed stato, tbere being is now in a very depressed stato, tbere bein
few orders for now steamers in the market.
That this altered state of the shipbuilding ards in the North will speedily reach tbe Sontbern and Western ports seems likoly; for n Monday morning last Blackwall and the Isle of Dogs were far from being so active as of late, and there has been a rumonr in tbis quarter that shipowners are finding iron ships too expensive to charter or freight, and intend returning to tho wooden vessels and ancient masts and rigering.

## the trades movement.

Eveter. -The carpentors and joiners have reumed work, aftor having been on strike for two mont bs, for a reduction of tho hours of labour from 58 to 54 por week, and an increaso of $5 \frac{1}{2} d$. per hour in wagos. They now go in to work for $0_{2}^{\frac{1}{2}}$ hours per week, and each man is to bo paid acoording to his skill.
Bristot. The operative labonrers employed at the extensive huildings of the Midland Railway sheds, Barton-hill, have struck work, the reason finged that ono man employed by the firm re. Union.
Leamington. - The Leamington Builders' Association mot to consider whether a confedssociation mot to consider whether a conference should be beld witb the operatives, who demand that 54 instead of $56 \frac{1}{2}$ honrs should condemand that 54 instead of $56 \frac{1}{2}$ honrs should conThe meeting was opposed to a conference.
Sheffetd.-A mass mesed to a conference.
Shapha,- $A$ mass meeting of engineers, trb are agitating for an adranco of 29. per woek and a certain provision in the scale of payment the vertimo das passed a resolition, declining the masters' suggestion that arbitration should be resorted to. A strike was the inevitable result.
Lydbrook. -- Tbe masons working on the Severn and Wye branch of railway, now in course of construction at this village, sent in a formal demand fur an adrance of wagcs to tbo extent of 6d. per day. The present wages are 5s. a day, or 30s. per week. Tbe rise, if granted, wid bring them up to 33s, per week. They day they will then ceaso to work on the bne.

## THREATENED STRIKE

Trie Master Builders' Association, in defor on earnest appeal from the Lahour and Capita Department of the Social Science Association, have issued a circnlar to the committees the masons and carpentors, consenting to ceeve a depatation from the men, with tbo o avert, if possible, the matters in dispute, 80 a between capital and labour. The members the Social Science Association have addressed circulars also to the committees of the men as well as to the masters, inviting them, in the interests of all parties, to use every effort to endeavour to sottlo tbe dispnte, cither by arbi tration or mutual compromiso. Wo warmly endorse the recommendation

Sin,-I bave a particular aversion to contro. rersy by corrospondence, but it is nocessary for me to trouble you once more in order to clear myself from what would appear to be a gross isstatement. I fully exonerate Mr. Hannen tion to committee of employers from any inten
occurred at our interview in July last, and I will gure Mr. Hannen and the other gentlemen will give me credit for equal respect for the trutb. I do not think Mr. Hannen has damaged my quatation by giving tbe remainder of the paragraph; for if, since last July, terra-cotta had taken the place of stone, masons wonld not be seeking an advanoe of wages, but would most probahly be searcbing for otber sources of employment; but inasmuch as terra-cotta has not taken the place of stone, I might fairly be excused for holding the promise groad. Permit me to give in full one other paragraph to which I have previonsly referred. Iu reply to question, Mr. Lucas says, .." When you make a demand on me for 9 d . in March, I sbould try to get a few of those fellows that are working for 6d, down in the north. Witl all your power, yon will not keep men at 6d, in one part of tho country, within a few honrs by rail off London, when they can get $8 \frac{2}{2}$. or 9 d. here, if it ann be [shown] they will be fairly treated; brt if they increase larcely tbere, and there is plenty of work hero you will wat an increase there is no donbt" Mr. Hennen snpplisd a quotation for me I will Mr. wes happen in low. ritivo promi 0 as tho morcial prom morcia prosperity, and instanced the promise made to the building operatives in 1865 for an 1866, and the difficulty they in the spring of 1866, and the difficulty they (the employers) axperienced in making good tbeir promise through the financial failnres of tbat memor able year. Myself and colleagues saw the force of Mr. Trollopes roasoning, and were content to bido our time; bnt, happily for ns, the spring of 1873 has not witnessed commercial calamities like those of 1S66. Terra-cotta bas not super seded stone; the men of the north aro still clinging to their native districts; in many instances they bare (this summer) had thoir wages increased and working hours redncod, nnmbers of the towns working forty-eight hour and a half weekly for waros varying from 30s. upwards. If the above facts do not constitute promise, it is strongly implied. Our improssion of tboir meaning was this :--" Do not insist on absolute promises, but should trade be grood, no doubt you will get the advance." Personally, I would willingly submit to the decision of any impartial porson whetber or not I can be cbarged witb misrepresentation. For myself, I am deeply pained tbat any misunderstandine shonld have occurred. Still more grieved am I that up to tbo present time no peaceful sulution of opr differences has been found, knowing tbat the best interest of both partios is seriously menaced by the prospect of a strike.
H. Broaphurst, Stonomason.

## SCHOOL BOARDS

Newcastle.-The Snow-street School-Building Committee recommended the acceptance of Mr Whichello's tender for 9,6002. for the erection of the Snow.street Schools. In reply to Mrr. Luckley, it was explained that Mr. Wbiohello had originally tendered for 9,4502 ., hut had afterwarls discovered that he had made a mistake of 1,0001 . On tbe architoct (Mr. Johnson) having effected certain altorations in the plans, Mr. Whichollo had submitted tho presont tonder. The tender was accepted,

## ARCHITEOTURAL ASSOCLATION OF

 TRELAND.An ordinary general meoting was held at the Rooms of the Assooiation, 212, Great Brunswick street, Dublin, on Thursday evening, the 26 th ultimo, the president, Mr. J. J. O'Callaghan, in the ohair.
Mr. R. C. Millar read a paper on "Levelling," explainiag tbe level, and mode of osing the instrnment. In tbo discussion which followed, Mr. J. Longfield, C.E., described a field-book very much in use in America, in wbich tbere are but three columns in place of five, and tho reduction of the levels is done as the survey proceeds.

As this was the final meeting of the session, a ballot then took place for the election of a committee and officers for next session, Messrs Allen and Swan being scrutineers, whicb resulted as follows:-
President,-Mr. J. J. O'Callaohan
Vice-President.-Mr. W. M. Mitchell.

Committee.-Messrs. Chas. H. Brien, Thos. II Longfield, Daniel J. Freeman, R. S. Swan, J. L. Rongfing, Damel J. Greeman, R. S. Swan, Ju. L. W. G. Doolin, and R. D. O'Bricn.

The members of the committee so appointed, who were present, then retired, and on returning whowere present, then retired, and on returning
snbmitted the following list of officers to the general meeting, wbicb unanimously confirmed their election:-

Treasurer.-Mr. Daniel J. Frocman.
Librarian--Mr. W. G. Doolin.
Auditors.-Messra. J. Holmes and W. Fennell. Hon. Secs.-Messrs. Thos. H. Longfeld and John L. Robinson.

## CHCRCH.BUILDING NEWS.

Hastings and St. Leonards.-The ohief stone of the new church to be crected in Priory-road, on the West.hill, has been laid. Mrs. Mendham, (sister of the Rev. W. T. Turner, Ore), has purchased a site, and completed arrangements for the erection, at her own cost. The spot chosen is just north of Belle-yue-terrace, at the point whero
the new Plynlimmon-road joins Priory-road. Messra, Jeffery \& Skiller, the architects, desioned a building in the Larly English style, comprising nave, aisles, chancel, towel, and vestry, and
affording seats for 310 persons. Mr. John Howell was chosen builder, and his men commenced work in January last. The walls had reached the floor-level about Easter, and it was then intended to lay the memorial stone; but a legal diffculty haviog arisen as to the patronage of the new church, a delay occurred until the matter was satisfactorily settled. Tho walls, meanwhile, fad bcen proceeded with, and have
now attained a considerable height. At the east now attained a considerable height. At the east rative stone was placed just above the floor-line of the chanccl, below the enst window.
Winkleigh.-Covsiderable progress has been made this year with the restoration of All Saints' Church, nuder the architect, Mr. J. F. Gould, of Barnstaple, and his clerk of works. Exteriorly, the church is almost complete, little requires to be done, and already a greater part of the glazing is put into the new windows; the glass being supplied by Mr. Pepper, of London. Some time, however, must elapse before the interior is thoroughly restored; but a good deal of the work is in a forward state, and although no seats are yet to bo scen, and the marble and alabaster pulpit is not in position, nerertheless nuch of the heavy constructional work has been got over. The oak work of the various roofs appenrs to be nearly complete. The roofs are rich in carred
work, some of it old, but much new, and these work, some of it old, but much new, and these are being made more elaborate by the chromatic is now in the hands of Mr. J. Thorne, of Crediton, decorator. The carved bosses, wall-plates, orest ings, angels, and the front faces of the ribs, these lay very close to each other,-are painted, whilst the body of the roof is left plain. The and the Loosedown aisle is now in the hands of The floors are all laid ready to bake the seating and the tiles for the aveoues, supplied by Messis Minton, Holling, \& Co of Stokc.ppon. Trent here arrived. Most of the carped wood and stone work in connexion with the ontside and inside of the church is complete; and the carving of the selection of desirns, - scarcely is an whbounded selection or detigns, -scarcely any of the bench The decorative treatment the inside walls ar undergoing is a revival of ancient sgraffiti work The colours nsed in this ornamental plastering, at Winkloigh, are Spanish brown, for the gronnd with light grey Bridgwater lias lime surface This work upon the north aisle walls, and the north wall of the nave, is finished, the ornamentation taking the form of running bands of varied designas. Tbe architect has been assisted in the manipulation by his clerk of works, Mr. George Vickery. The sculpture of the tympanum, over the south-west doorway, is now under consideration, and the subject having been decided upon, we believe it is to be at once proceeded with. The bells, by Messrs. Mears \& Stainhank, of Wbitechapel, arrived several months ago, and, to the number of six, were hung in the places they are to occupy in the tower. It is deemed advisable, however, not to ring them until the church is finished, and the new work has had time to settle. Mr. J. Dendle, builder, of Barn-
staple, has the whole of the carperter's joiner's work in hand; and the seating is being
made principally at bis workshops in that tomn, and under the eye of the architect, who also has offices at Barnstaple. Mr. Harry Hems has in land the oontract for the sculpture and the carving, in wood and stone. Mr. Pinckard, the donor of the funds for carrying out this work, is represented by the Rer. W. T, A. Ralford, M.A. of Down St. Mary.
Wentworth. -The foundation-stone of a new church, to be erected by Earl Fitzwilliam, in memory of his lordship's parents, has been laid at Wentworth. Mr. J. L. Pearson, of London, is tho arcbitect, and the contractor, Mr. W. G.
Booth, of London. The edifice will be t 40 yards Booth, of London. The edifice will be 10 yards
in length, and will be built of Dunford Bridge and Darfield stone. At the west end will be a porch leading into the nave, which is 46 ft . wide. There will be north and south transepts aud two side aisles. At the east end of the ohurch will be the chancel, 19 ft . by 25 ft .; and a vestry, 12 ft . by 17 ft . The space between the nare and the cbancel will be occapied by the organ and choir on one side, and on the other by the pew of the Fiťwilliam family. Over that portion of the church between the nave and chancel a tower will be raised to the height of 57 ft . frour the tower a spire will be carried to the height of 96 ft ., maliing the total height from the floor-line 103 ft . There will be a large cloct on the north side of the tower. The stonework inside will be of dressed ashlar.
Great Gransden. The old churoh of Great Gransdicn has been reopened after restoration. The roofs thronghout (excepting that of the outh porch) have been taken off, repaired, and newly leaded; the old north porch has been replaced by a new one, with provision for the reating-chamber; and a new organ-chamber and vestry are added on the north side of the liancel, with a large arch opening into the organcel, the vestry being separated from the rindows of the aisles old rood-8crcen. The repaived and are clearstory have been repaired, aud reglazed with glass of agreeable ints, and ample provision is made for ventila rol is added arch is added for the lingers, and lighted by new guatreson windows on the north, sonth, and wast sides of the tower. The tower, now no longer needed as a vestry, has been thrown open to the church; the arch is the original one, and nnder it is placed the font. The whole of the internal stomework has been cleaned and re. aced. A new stome string-conrse is added the whole leagth of the nave on both sides, and noulded stome corvers to the nare roof. The internal walls have been faced anew with stncco. Original oak open seats have been utilised, and nw ones made to corrcapond. The seats and are piers up to the springing of the arches had at some time or other roccived a coat of thick black paint; this neceesitated in the case of the eats the stceping of every portion in strong solntions to effect its removal, aud in the case of the piers the actual reworking of the stome Round the walls of the aisles is a panelled dado or wainscot. It has a monlded and battlemented capping about a foot above the ton of the seat The floor of the ware is parod throuthout with red and blue tiles, in various patems; the chancel being paved with Maw \& Co's tessed pavement, and the altar-space of tho same material, but more costly. The entrance to the boundary-wall heing brouglit ncaver to the road, and new stone piers, witl dwarf stone wall and ow ornamental fencing fixed upon ir. The hole of the works bavo been carried out (nude Loudon) by Mr. Brown, of. Vinlls, architect Loudon) by Mr. Brown, of Lynn; the stone Nork having been exccuted by Mr. Waxle, of St Neot's. The original contract cxceeded 2,500\%. but as the work proceeded it was found that considerable additions would have to be made ont of wer the restoration complete, the carrying out of which brought the total cost up to
3,187 ?

sided. Nr. Thomas Lidstone, of Dartmout liocesan snryeyor is the architect and th Messars. Winsor, Numn, \& tors. The cost of the buildings, after deductin the value of some old materials re-used, 1,637l. 14s. The buildings are to be complete in six monthe.

## 

Effective Sections of Girders. By A. D. Dawnd LC.E. No. 25, Walbrook. 1873. Architects liave offen felt the want of ready calculated sections of girders, suitable for a spans and all kinds of building. Mr. A. I Dawnay, to meet this want, has just now issueul ound equal tof. The icon used is anposer koua inch, and the giruers are designed with th plates and angles most readily obtainable.

Plan of the Temple Cliurch, London. By I Goodmax, Cliff-town, Southend, 1873 Mr. Thoses Goodman has published a plan the Tcmple Church, as the first of an intonden
series of illustrations of the round churches handed down to ng from the Order of Kajrht Templar

Tbo plan has been executed b actual masurement, so as to distinguish th more ancient portions of the church from th rest, and also to afford a comparison of th building with others of the same class. Th author says it has bean "prepared with grear
care," and, ufter some examination, we fall ilding.

The Leisure Howr has some pertinent obsortions on "The Spirit of Unrest."- "There is a orisb spirit about which, while it seems to mote a kind of activity which somo admire, a of healthy growtb. It is well to be wakehut there is a wakefulness which is a symp. n of disorder. It is well to pursue an occupan, but there is an eagerness of pursuit which light the candle, hat it is unwise to hurn it at light the candle, hat it is unwise to hurn it at
thends. It is well to work, lut it is possible thends. It is work to pass into such a strain to toil that o workman is consumed hefore he has any lit to be worn out. And is not the spirit of ese times one of unrest ? The temper in aich men live and work seems to beeome more uportunate, and to spread its contagion. It vades cren those places which have long joyed repose. There is, no doubt, atill some frerence hetween the pulse of life in town and
the country; but the difference is gradually the country ; but the difference is gradually sappoaring. We take pride to ourselves rill ays, and by means of the wire brought remote stricts into immediate communication with e metropolis and each other. riving to be masters everywhere, we make irselves universal scrvants. And our hoast - slaves. We are ground by the machinery ith which we affect to supersede or assis bour, and wear ourselves out in the prosecuon of the

Trial of Street Cabs at the Internaional Exlibition.- A trial of the street cahs hich have entered the competition set on foot y the Soeiety of Arts, has taken place at the atcrnational Exhibition, in the vacant ground onducted by the committeo by which the wards are to he mado. The trial was morcly reliminary to othors that are to follow. Im. rovement of tho Hansom seems to have heon
he object on which most of the competitors he objcct on which most of their hearts, though why this should he o wo can hardly see. To get rid of the twovheelcd cab in all its forms as a dangerous
uisance would be more desirable. Tho writer uisance would bo more desirable. Tho writer
$f$ this has several times seen the cabman, and nce the passonger, pitched out of it headforemost ver tho horse, on occasions when the animal nddenly stnmhled and camo down, throwing np ehind and forward round the whecls the body tho cranky and dangerous, it is either insufferahy dranghty, or close und stufly. No doubt as a close hos the pitching ant of the window-glass, -and of the victim ace; but the whole thing is an ahomination. I Le compotition there are hut few four-wheeled s. The most noteworthy example possesses, ised, open or closed, witb scrurcely any trouhle, and without any complicated mechanism likely o get out of order. Tho judges will give their mards on a this, the wltimate decision will rest witb the public.

Ships' Lights and Board of 'Trade.-Mr. Harvie, manufacturer of ships' lights, has had printed at the Glascrow City Steam Printing Works, and circulated, a lctter to Mr. T. Gray,
assistant secretary, Darine Department, Board of Trade, showing how the ahortive results of the recent ship light competition were petency of the Board of Trade regarding ship petency of this letter Mr. Harvie shows why he declines from solf-respect to take any part in the rencwed competition which has been called
for. As we have here only one side of the for. As we have here only one side or the express any opinion on it.

Dorchester Borough Surveyorship.is stated on good authority, says the Dorset Chronicle, that Mr. John Wood has relinquished the office of surroyor under the Town Council. Several of the former candidates for the post hare been communicated witb.

Outbreak of Fever at Wrington. - An Wrington, according to the Bristol Times. The Wrington, according to Cherdical officer of the Chardary Anthority medical officer of the Chard Sanitary And during says, that when residing at Wrington, and during
the years 1868,1869 , and 1870 , the vestry, at the years 1868, 1869 , and 1870 , the vestry, at that time tho sewer authority, defeated cvery attempt he made to put the villare in them that
condition. In vain be pointed out to the condition. In vain be pointed out to thothed of the wbole village was a snbterraneoustle stimnlus to cause it to again break fortb into a severe epidenic, such as the one wbicb visited it in 1866, in 1868, in 1870, and from whicb it is now snffering. Alout 150 cesspits and the cleansing of two slaughter-bouses ran into the water. courses, and the efluvium at times was sicken ing and pestiferous. The very village pamp, which is now supposed to he tbe cause of some of the fever, in 1870 had sewage soaking into it, and the same may be said of many of the wells. Mr. Scarth, the present rector, who came into the living in 1871, would not reside at the rectory until he bad succeeded in obtaining a perfect system of pipe drainage. This was finished in November, 1872 , hut np to the present timever few of the houses have heen connccted with it, and a honse drain cven conuected witb a sewer, if improporly trapped, is a ccrtain producer of fever-a mere distillery of poison. This is only en of mony villares, in a most unsanitary state, in the Axbridge Union. An independent officer in the Axbridge Union. An in
of healtb should bo appointed.

## Society for Improving the Condition of

 the Labouring Classes. - Tho annual meeting of this society has heen held at Willis's Rooms, ne Earl of Shafteshury in the chair. Payne stated that the socioty had heen exceedingly stated that the socioty had heen exceedingly successful iu all its operations. The chairman aid the socied that houses could he erected at had proved that houses could ho ornd live in cortain cost, in which the poor andle had heen comfort and decency. Their example had heen Fallowed by the Peabody trnstees, sir sycieties. It had been found that the adaptation of houses was a cheap way of providing good rooms for be poor, enabling them to live in tencments without discase, disorder, or overcrowding. The great muss of the people desired improved dwellings, and he was cortain that wholesome houscs enabled the poor to earn more moncy, as they were less liahlo to illness. This sociey lone, much good, hut he felt they had scarcely commenced, and certainly had hardly touched the great evil of overerowding. What was wanted were dwellings for the very poor, wbose incomes wore about 10 s. or 12s. a week, The well-paid artisan had plenty of hotso accommodation, but the very poor were crowded together in ill-rentilated rooms-two, three, aud even four families in one room. The Rigot Ho addressed the meeting.Public Abattoirs for Lrondon.-Dr. Lethehy, mecical officer for the City of London, was of the House of Commons on noxious husiof the House of Commons on noxions husiof the abolition of private slaughter-houses and the suhstitntion of puhlic ahattoirs similar to those of Paris, Berlin, Edinhurgh, and Glasgow. He recommended tbat the Wbitechapel butcher's should repair to Deptford, where the Corporation of London had plenty of space, and he suggested that the north-western and western portions of the metropolis might for the present be served hy the ahattoirs in the neighbourbood of the asked whether the metropolitan hntchers wonld not feel tbat a certain resposihility was taken off their shoulders if animals were slaughtered at puhlio abattoirs, he replied that the most respectahle men in the trade now dealt largely at tho Dead Meat-market. Dr. Lethehy added that be saw no reason why an immediate sani. tary reform might not bo carried ont hy utilising Deptford and Copenhagcn-fields until ahattoirs in the outskirts of the metropolis could be provided.
The North Cambridgeshire Cottage Hospital. - Miss Trafford southwell has jnst announced an additional gift to this hospital of $5,000 \mathrm{l}$, to the oudowment furd, and an annuity well has contributed in all 16,000 . to the hospital hesides her annual suhscription.

An Order of Merit, Scientific, Artistic, and Triterary. - Earl Staphope, in the House of Lords, on Friday in last wrek, moved an address, praying her Majesty to institute an order of merit for tbose who had deserved vell of their country in literature, art, or cience. The order of the Bath, his lordhip remarked, had no doubt been greatly oxtended, hut its ciril deparment was cond not persons in the public service. It had not his day receivod tho red ribhon. The absurdity is day received tho red hon. The absurdity f the present rule might he shown by a single lustration. The Qucen had been advised to grant the Bath to Professor Owen, becane ha eld a salaried appointment nnder the Crown; but he apprehended that it would not be in her power, under existing rules, to confer a similar distinction upon an equally eminent man, Sir Charles Iyell. As for the contempt which was ometimes poured upon stars and rihbous, he could only say that similar language might just as well he applied to the flag of England. Earl Granville, while very mueh agreeing witb the nohle earl, saw great practical difficulties in the way of carrying his motion into effect, and adduced a few weak arguments against the notion, which was negatived withont a division, aftor Lord Honghton, as ib sort of compromise, had urged the further extension of the Order of tho Bath.
The Musical Eiducation of the Blind.-An thmsiasticand crowded meeting, on behalf of the Royal Normal Acedemy of Musie for the Blind, bas becn held in the Mansion House, nnder the presidency of the Lord Mayor. Amongst those present were the MKarquis of Westminster, Lord Shaftesbury, Sir Rutherford Alcock, Sir T, Gladstone, Sir II. Johnstone, M.P., Mr. Alfred do Rotbschild, and varions other influential gentlemen. Letters of apology for non-attend ance were received from Mr. Edwards, M.P. who enclosed 1001., the firm of MCessrs. Roths. child enclosing 3006 , and others, enclosing sub scriptions. The Lord Mayor, in course of his address, remarked that the experiment was not a new one, as for some time a small college had been established at Sydenhem, and he entirely agreed with those who had watched the growth of the college that it should he so enlarged as to be able to accommodate those who applied to it throughont the United Kingdom. It was hoped that when the college was out of debt it would be made almost self-supporting by the payments of the scholars. Appropriate resolutions were unanimously passed in favour of tbe object in view, the opening of a mhseription-list, and aiding the oommittee to raiso 25,000 . required for the estahlishment of the college on a perma nent and enlarged basis for the h gher and musical education of the blind. The committee have already collected $6,000 \mathrm{l}$., and ahout 1,000 l. more were collected at the meeting.

## The Fracture of Cast-iron Pier Cylinders. [1. J C Trontwine in a commuication to the

 Joumal of the Frankin Institute on the fracture of cast-iron pier cylinders, says:- "It is not, perhaps, gencrally known to the profession that cast-iron cylinders, composed of sections holted together tbrough inside horizontal flanges, and filled with concrete, as is usual when employing them for bridge-picrs, \&c., have, in several instances in the United States, split or cracked asunder cutirely around the circumference under the influence of severo cold weather. The reason of this, I presume, is that the outcr and more exposed cylinder tends to coutract to a greater degree than the inside and more sheltered concrete, and that the hold wbich the inside Hanges have upon the solidified concrete in which they are embedded, provents the contraction from taking placo without rupture of the cylinder. Unlcss suitable means he applied to prevent this, tbe efficiency of such cylinders may he much impaired. It las heen surgested that an inside lining of vertical wooden staves, projecting inward as far as tho flanges do, will bo an effective remedy. Other methods will no doubt present themselves. My ohject is merely to give creater puhlicity to an important fact."Devon New Police Offices and Barracks, to he used as the head quarters of the Devon Constahulary, have jnst heen completed at Exeter, at a cost of about $5,000 \mathrm{l}$. TVe entire building, as well as the exterual fittings, have
been carried out from the desigus of Mr. E. H. been carried out from the desigus of Mr. E. H. Harbottle, of County Chambers, Exeter, archiect. The clenk of works was Mr. James Jerman, of Exeter. The builders mere Messrs. Moass, of Exeter.

Greetland and West Vale Mechanics' Hall.-The foundation-stono of a Mechanies Institate has heen laid here. The work was com. menced in March last, and has progressod rapidly. The total eost, ineluding land, is estimated at 2,900 l., and the building is to comprise a large hall for public entertainments on the first floor, baving an orcbestra, gallery, and waiting-room accommodation. The ground-floor is set apart for news-rooms, elass-rooms, offices, and other conveniences. On the lower level of tho basement are to be the keeper's residence, fire-engino rooms, and cellaring. The lower end of the structure will be left uufinishod for the present, but it is intended at some future time to erect a shop and dwelling-honse at this point. The style of architecture is Italian, freely treated, and the difice is being carried out from tho designs of Messrs. Horsfall, Wardle, \& Patchett, Halifiax.

The Royal Academy.-The conversanione on Wedncsday evening last was a brilliant gathering, and a great success. A list of the persons presentknownin the ranks of art, science, Friends of yealth, and fashion, wowal for the result of the look with some interest Amongst the candidates, we hear a secretary. Araongst the candidates, we hear of Mr. John Piggott, jun., Mr. W. Lererton Donaldson, Mr. J. Leighton, and Mr. Critchett. The arehitec. tural class appears to be making fair progress as to numbers. Some of our student readers shonld inquire into the regulations and scope of the class, and see to what extent it might be usefol to them. When facilities are provided, and not taken advantage of as they shonld be, the ardour of those who wonld strive to increase such facilities is repressed, and harm is done.
Chester Cathedral.-The Dean and Chapter beld, as usual, a Chapter meeting last week, When, in consequence of the ahsence of their architect, Sir Gilbert Scott, their deliberations in regard to the futuro work of restoring the eathedral were considerably limited, but the following resolutions were agrecd to, and orders given:- That the present roof of the choir sbonld be decorated according to designs sub. mitted hy Messrs. Clayton \& Bell, and approved by Sir Gilbert Scott ; and that the walls of tho cboir sbould be scraped. No decision as to the position of the screen separating the ehoir from the nave was come to, but it is understood that the dean and chaptor are unanimonsly in favoul of restoring the scroen to its original position, and romoving the present hcary and unsightly structure.
Building Accident at New Reservoir, Malvern. - At the last Local Board meeting tho snrveyor gave an account of an accident at the new reservoir to an arch, from the too quick trikned of the centre, the arch not having been tarned forty-eight hours. More contres to carry on the work were on their way from Warwick to Malvern at tho time of tho accicent. He had no iea that the centre would be struck so quickly by the contractor, or certainly would not have allowed it. He considercd the materials used were of a first-class nature. Mr. Haddon, architect, and a member of the Board, said he fonnd the design perfect, Ho tbought the eontractor deserving of censure for not properly centreing the arches. There was not sufticient eoncrete nsed, bat that did not affect the cnuse of the accident. Mr. Archer thought the mortar was not of snfficient strength, nor the concrete properly made.
Proposed New Midland Institute and Coal Exchange for Yorleshire. The members of the Midland Institute of Mining Eugineere, says hio shejreld indeperident, have been desirous that a building large enongh to aecomnodate a number of persous, should he ereeted in some part of the Yorkshire coal-field. The council of tho Association or Instituto have he matter nadel consideration, and it is not unlikely that on appeal will be made to the district coal-owners for the parpose of erecting a building which will also act as a sort of cog exchange, with officcs, \&c., at which the representatives of the varions collieries can meet and transact their bnsiness. At present there is no publie building to represent the trade, and ansiness has chiefy to be transacted at hotela and inns in the ratious towns.

Large Bricks. - Colonel Andrew Derrom, of Paterson, U.S., has taken out a patent for forming bricks into yery large bloeks, to be used in the erection of buildings in sections,

A Water-Saw.-In a report on the meehanical inventions shown at the International Exhibition, a propos of the sand blest the Rer A. Rigg, says the Newcastle Courant sumgest that there may be a property in water which bas not been utilised "While standince" romarks, "near a rew sterm boiler whioh was being tested under water presere and men the load was mear its meximam amall an (exceptwhen the san shope mon it a0 that the lipht wos decomposed) impereptle jet geard ap across it ond was about to pase that it ho b 1 , Don't do of those jets.' Might not a jet of water be nsed of those jets.

The Recent Conviction of Carpenters for Conspiracy.-A memorial has been addressed to the Home Secretary asking him to take steps to procnre the release of the three earpenters convicted at the Central Criminal Court for intimidating a fellow workman in the employ of Messra. Jackson \& Shaw, builders but a reply bas been reocised to the effect that the right hon. gentlcman rerrets that there is not safficient ground to justify him in acceding to tbe prayer of the memorial.

The Palace of the Mikado of Japan destsoyed by Fire. -The New Tork Trilume, of June 13th, describes the burning of the great parace of tbo Mikado of Japan. It was causod having which foll on t10 Fmpern's ber encoal, estroping on tio Emperod bed, and a fir was the re dolls. at band, and preserved order, but could do little else.

Kensington Vestry-hall.-It is proposed o make certain alterations and additions to this buiding, to form new board and committoe rooms, and generally to improve the office acoommodation. The veatry, at their ordinary meoting n Wednesday last, issued instructious to Mr Alfred Williams to prepare plans, \&e., for the contemplated works.

The Statue of Sir James Ontram for India. -The hronze eqnestrian statue, by Mr . H. Folcy, R.A., of Sir James Outram, com missioned for India, has been set up on a tem. porary wooden pedestal in Waterloo-place all-mall. It weighs seven tons. In a few weeks it will be shipped for Indim

Ancient Pottery.

## REAT is the antiqnity

 of the potter's art ; too great, indeed, for com. putation. Thore wero potters at work in ancient Romo; in olden Etruia; in horoic Greece; and be. fore those dim old times in Babylonia, Assgria, and Egypt. They were busy with their clay, and whecl, and clever hands, when Alexander was con. quoring the world; when Cyins sat in his chariot, victorious; whilst tho fifty Greek princes were building the grod ship Argo, by the side of the blae sea at Yoloos; whilst Nebuchadnozzar browsed in the fields ; when the Queen of Sheba carne to Solo. mon, with her spices, and gold, and precious atones; whilst Job sat shaven, with his mantlo rent, on the ashes, discoursing with Eliphaz, Bildad, and Zophar; when Samson showed Delilah "all his heart"; when Jael put her left hand to tho mail, and her right to the workman's hammer ; whilst Joseph wore Pharaolis ring on his hand, and ruled all tho land of Egypt; whilst Rebeeca stood at the well, dipping hor pitchor into tho water for the steward and his camols; in a word, long before thoso peaceful, pastoral days, when Abraham sat at the door of bis tent, in the heat of the day, looking out upon the radiant plains of Mamre, dotedwith his flocks and herds, men-servants and maid-servants, oamels and asses. In all this time, and in all these places, scarecly two potters worked alike. The Soriptures make frequent mention of theso industrial artists, and always as though thoy were free to fashion their clay as they chose, to finish thoir work or throw it away, to make vessels of hononr or dishonour, to form them or hreak them. Jercmiah tells us he was commanded to go down to the honse of the potter, and continues, "Then I went down to the pottcr's honse, and, behold, he wrought a work on the wheels. And the vessol that he made of clay was marred in tho land of the potter; so he made it again another vessel, as seemed good to the potter to mako it. Then the word of the Lord came to me, saying, " o Honso of Israel, cannot I do with you as this
potter ?" saith the Lord. "Behold, as tho clay potter ?" saith the Lord. "Behold, as tho clay
is in the poiter's hand, 80 are ye in mine." In consequence of the licence thus given by the natare of the material, every man's work must have been, in somo slight particular, idiocratical. At this distant day, keramic oritics can not only diatinguish the pottery of one anoient people from that of another, but, in the case of Roman and Greek work, assisted by insoriptions, they ean occasionally name the pottery in whioh it was esecuted; and, though still more rarely, the name of the artist who made a particular speoimen. We. will follow one of these
s'ilful critics, Dr. Birch, through a work on keramic prodncts, which he first issued a few years ago, but has now enlarged and revised, ontitled "A Fistory of Ancient Pottery."* We must follow him warily, however, hecause ho has to take for his premises the insufficient, and sometimes inaccnrate, descriptions given hy travel. lers, English, French, and German, snpplemented by references to piles and piles of arehæological journals in various languages, only verified occasionally by the sight of specimens in availablc mnseums.
Dr. Birch's first chapter groups together Egyptian and Oxiental pottery. After dedacting a somewhat lengthy account of brick and briokmaking, of terra-cotta sarcophacri, and inscribed oones, wo may obtain a tolerably clear idea of the diversity of parposes for which the ancient Egyptians employed pottery, and of the nmes. rous forms it assumed to meet tho colls upon its services. Where we should take a cask, the ancient Egyptian thought of a vase; and where we should require a casket, he thought only of another vase of another form. Where we should employ a hacket, or a hod, or a pot, or a pan, or a pail, he took always his vase or clay vessel. Half-baried in the floor of his cellar stood the great jars that held his supply of salted greese, salted fish, or meats; and resting in stands, or rings, stood open-mouthed vases for oil, honoy, and wine. In conical jars he kept his dates and figs; in cylindrical jars his paints. He made vases to hold the mnmmies of his sacred birds, and to hold the entrails of the dead; and he formed toy-vases, two inches high, for playthings for his children. Amphorw, or two-handed vases, he ased for incense, or matters to be carried in procession, or as offerings to the gods; three-handled vases for water; and jugs with one handle for milk, and water. His daughters kept the cosmetics for their wheat-coloured skin in a jug with a spout to it ; but we will not look beyond this sacred mystery. We foel, as the Doctor evidently wishes his readers to feel, that every purpose had its specially-shaped vessel ; Wut wo also feel, as all his readers will do, that the illustrations should have been selected and arranged so as to show the different forms and assist the inquirer in distinguishing them. We are told, too, of doep dishes for bread, roast meats, and water-fowl; of pots for ointments or salves ; jars for spices and drugs; drinking cups; but they all remain, like dissolving views, blended with one another, for want of more definite illustration. There aro, it is true, several speoimens figured, some singly and some in groups; but they do not convey the special information that a student first wants, and without which he must grope about in the dark. Hero and there, too, a note adds to the confusion of ideas, instead of explaining diffioulties. Still describing Egyptian pottory, Dr. Birch says, "Different clays wero applied to particular nses. The crnse, or ancient Egyptian lecythns, a vaso adapted for holding a small quantity of liquid probably oil to feed lamps, or medicaments, of which only a small quantity was required, was of a brown or black paste. These vases seem to have been in use in Palestine, one having been found amidst the rnins of Tyre ; and their clay and varnish enahlo ns to comprehend the nature of tho Semitio potteries. Some are of a light red-coloured paste. . . . . Other rases, as woll as juge or bottles, with oval bodies and narrow neeks, are made of a black clay; and one specimen, with a compressed globular body, has a lustre indistinguishable from the lastrous glazes of Nola, and Valci." And then, as we think we have mastered these facts, our eye is attracted to a note which contradicts all we might infer from the mention of this last specially-glazed

* History of Ancient Pottery, Efyptian, Asyrian,
Greck, Etruscan, and Roman. By
By

Eggyptian vaso, saying, "This maique vase is probably Greek." To the seasoned archrologist, of courso, such stambling-blocks would be mere pebbles in the path. We speak only in the interest of inquirers.
In the chapter on Assyrian Pottery we come once more npon the glowing acoonnts Mr. Layard brought home from Nineveh concerning the terra-ootta tablets, cylinders, and prisms of the Aseyrians, telling the history of the groat monarch, Tigleth-Pileser, or detailing the campaign of Sennacherib against the Kiug of Judah, or the dedioation of the Birs Nimrud, by Nebuchadnezzar, to the seven planets. Here, again, we have lengthy mention of bricks and brickmaking. All that Sir H. Rawlinson, Rich, and Porter observed in the conrse of their respective travels is set down anew, with reference to the potter's gradual progress. "The state of the arts in Baby louand Egypt,"' the Doctor remarks, "helps to elucidate some obscure points in the history of brickwork. At the large temple at Warka, Mr. Loftus fond an edifice huilt of cones $3 \frac{1}{2} \mathrm{in}$. long, laid horizontally, apox and basealternately and embedded in a cement of mud and straw. Some of the concs dug $n_{p}$ on the platform had straw still adhering to their sides. The clay o these bricks was of a dingy yollow, but many had their bases dipped in black or red paint. By means of these colours they were arranged in ornamental patterns of diamonds, stripes, and zigzags." Of Assyriau pottery proper, thero is a group figured, as well as the small hoartshaped vasc Mr. Layard found built into the back of a wall at Nimrud, and a bowl found in the ame great centre; and that is all.
Greek pottery is the real stronghold of the Doetor. Ho devotes half his substantial volnme to its.history, and gives it upwards of seventy illustrations. There are 20,000 specimens of Greek vases ranged on the shelves of Enropean mnseums for him to handle; or, as some reckoners have it, 50,000 . Of those 2,000 are in the British Museum, ready to hand. Here, again, a few illustrations to the poiut would have been of service. It is not enongh that he has told us of the great tubs, or casks, called pithoi; of amphoreis, or casks of a small er sizo of phialai, or saucers; of pinakes, or plates; of chytroi, or pots; of oinochoai, or jugs. He should have shown spccimens of all these articles of pottery. To be enro thore is a pithos figured; but it is only a rcpresentation of that to which Diogenos retired, found figured on a fragment of a lamp. Only a handle of an amphora is illustrated, and so on. We feel the real raluelessuess of all classifications when we come upon such a passage as this, albeit it is illustrated with a very attractive group of vases:-" The next style has been designated by various names, as Carthaginian, Corinthian, Egyptian, Phœenician, and Doric. It is, however, better to comprise all theso varieties in the general term of Archaic Greek." Perhaps it is hotter to bo clear of the possibility of a wrong guess; out is this the measnre of our discernment in these matters? A Rickman, ready with "An Attempt to Discriminate " \&c., is clearly wanted in this department of antiquities. Howover, not to dwell on weak places, we pass on to hear what Dr. Bitch has to tell us of the patchings and mendings of the numerous vasos found in ancient tombs in Sonthern Ytaly:-
"Almost all those in the minesams of Earope have heen mended, and the most skilfal workmen at Naples and ine perfication. Their iied re-joined, and supplied with paitsees tre been sorneed, or else completed in plaster of Paris, orer which coacting nd restored portions are painted in appropriste calours, But, either through careeceive the mexperienced eye. ditference of process, the restorations have ong to in techricul defect: the iner ines are not of the glossy hae of the ancient tlazed ones, and there is no indication of a Chick raised line, which follows the origitalo outline in the Old painingg. Sometimes the restorer has pared aw2y
the uncient nocruatation, and ent down to the dull-coloured paste of the body of the vase. In some rare instances, a Igure has been painted in a light red or orange oil pa'nt on the black ground, or in black paint of the same lind
on en orange ground. But in all these frauds, the dull
tone of colour, ihe inf rior style of art, sud the wide dif-
fercnee between modern and ancient drawing and treat-
ment of subject, disclose the deception."
All this is sad. Pietro Fondi manufactured sham ancient vases at Venice and Corfo. The Vasari family, in Venice, followed suite. Evon Wodgwood is impeached. There is a "Flint Jack," it appears, in this department of antiquities, as in most others. But are we sure that more than
Considerable pains have been taken to arrive at tho correct age of Greek vases, by comparing them with paintings on the walls of tombs, coins, and other phases of art. Vases of the Doric style, with maroon fgures apon yellow grounds, are ascrihed hy different authorities to the three or five centuries, B.C. Black-figured vasos are indicated, by the subjects represented on them, as helonging to the sixth century B.C. Those with red figures are ascribed to the same date. Vases with monochrome paintings, in which there is no distinction of sox, have heen assigned o the ninth century B.C., after which date the pointer Eumarus made the innovation of distinnishing the sexes, Vases with three-quarter Pericles, B.C. 464 ; those with full the age of time of Alexander of Pherw, B.C. $369-1$, becano full faces appear on coins of that date. Those full faces appear on coins of that date. Those exhihiting expression of conntenance are as-
signed to the days of Apelles, B.C. 313. Transparent draperies are supposed to indicate the ago of Polygrotus, or B.C. 436 . But all these dates are dispnted. The Duc de Luynes, without committing himself to figures, adopts this anccession : First, the Dorio or Phomician vases; then those that are corered with a coating or eugobe, like these, of which the black is false, and the glaze pale; next, those with vigorous, massive, archaic, black figures; then imitations of these, more brilliant and better finished; after these, those with red figures, black outlines, and figures on a white ground; and lastly the bizarre imitations by the potters of Lucania, Messapia, and the Bruttii. And, of course, this classification is equally open to qases, much of this uncertainty ranishes because the characters are almost conclusive testimony. The dialect is another gaide With these aide, then, if we cannot distinguish the actnal gohlet from which Heraclos quaffed his "solemn draught of true religious wine," before he set out to rescure Alcestis, or the cap Jason, or those that Hebe filled with "nectarous mnomel," we may, at least, withont fear of error, refresh onr eyes weast, withont ear years B.C. showing the hunt of the made Kalydon or the nuptial hance the hoar of Kalyon, the comhat over the body of Achilles, and hunreds placed anywhere-on the legs of figures, on the rarions ohjects represented, or over or nuder them, or on the handles, or foot, of the vessel. Instead of writing on a vase, as a Staffordshire potter might do, "Fror a good boy," the Creek potter wrote, "The boy is handsome", and in. sead of "A present from Bargate," be wrote on the prize rases, "I am a prize from Athens." Che artist put bis name often to his work; so did the potter. "Such never made Eaphronios," wrote a potter depreciatingly of a rival. "The son of Ergotimus, Eucherus, made it," wrote another, more reverently bringing in bis father's name. "Hail, and drink this," is written on a cup. "Drink, and do nut lay me down,' is on a boat-shaped vessel fonud at Valci. Another, with foliage painted on it, says, "Nicko. laos is handsome; Dorotheos is handsome; seems to me that the one and the other is handsome. Memnon to me is handsome and dear." One vessel is inscribed "The most beantiful female." May we set this down as an offering to a bride olect? "I ame the cap of Kephisophon; if any of Xenokrates," wrote a careful potter, at the dictation, probahly, of a more careful purchaser. About fifty names of potters have been observed. Sometimes the potter was also the painter. But as a rule, after the potter had formed a vase on the wheel, an artist took it in hand, who traced the subject to he painted in ontline, and then handed it to the painter, who, Dr. Birch thinks, executed the whole subjeot in outline, and returned it to the artist whon incised lines were required. Then it was given to a modeller, who
added such parts as were moulded. Then to a
fireman, who took it to the furnace, and bronght it back perfected. I fireman, for the furnace and packers, to pack up ressels for exportation were also employed, it is supposed, in large estahlishments. There were potteries in several places in Asia Minor, in the Grecian islunde, Corfu, Achens, Korinth, Delphi, Patrai, Megara, Coriu, Achens, Korinth, Delphi, Patrai, Merara, of Greece, and in several of the old dities of Italy. To the last part of this section of his work we must admit, to be fair, Dr. Birch has given exactly tbe kind of illustration we require for those portions previously mentioned. From twenty to thirty small diagrams make clear, to
any capacity, the difference between, wo will say, a prochoos and a hotyliskos, or an olpe; or verbal description conld do Hoytios, which no verbal description conld do. He has given exactly the kind, wo repeat, but not a snfficient quantity. There are still many vessels alluded to in the text, as mentioned by ancient writers, the forms of which must remain hopelessly obscure in the minds of most readers, for the want of illustration. Some pases are illustrated, we must add, without sufficient reference to them in the text, to pormit of their identification.
Concerning Etruscan pottery there is not 80 much to be said. The remains are scarcer; the Geld smaller. $A s$ in the Greek examples, it is the silent tomb that has treasured up most of the specimens that have come to light. We are sepulchres wero h -ing deposited in them, for it is clear that they were simply bnried with them as part of national custom. There are four colours fonnd,-brown-ware, hlack-ware, red-ware, and yellowware. But the Etrnscans never attained th excellence in pottery that they aohieved in goldmitr's work and engraving on gems.
In a mnch more copions and oertain fashion is ap to the dainty treated. From bricks and tile "Let us drink piousily," or AMO TE CON PIF "I love thee, 0 stored One," the suhject is well investigated. Here, as in the Greek section, the Doctor can speak with authority ont of his own scholarship and knowledge, instead of merely standing at the stirrup of a traveller, as it were, and gleaning from his talk such ohserva tions as relate to the pottery he has seen in th distant lands he has visited. There are as many tiles mentioned as would pare a palace-court as many lamps as would bo required in a triumphal procession; snfficient vases to serve banquet, or stock a villa; and so on, in equally wholesale quantities, through the various forms of pottery. Homely, indecd, read some of the inscriptions fonad on the amphorx mentioned,
"The best Dripping," "Piekle," "Grease," \&ce "The best Dripping," "Piekle," "Grease," \&o Pleasanter to read is a legend on the neck of one
found on the A ventine Hill, Fabriles Marcellce, [ostre] ad felicitutem, "The workmen of our Marcella to wish her joy"; or on that of another found in the gardens of the Filla Farnese, Hamertine wine from the cellar of L. Parellus Gemellus." Far from being prized in Imperial Rome, earthenware was looked down upon ns a
very inferior article. "Gold," says the satirist rery inferior article. "Gold," says the satirist, has driven away the vases of Numa, and the brass vessels of saturn the nins of the vestals
and Etruscan earchenware." The bright coral. coloured ware we admire so much went "out of fashion" in Rome. "In tbe early times of the r -pnblic," the Doctor summarizes, "even persons of wealh used only pottery at their meals, as increase of weal h . made for many uses for which pottery had been formerly deemed sufficient. In warmth and comfort, however, homely earthenware must have far surpassed the frigid magnificence of used, even by the Under the Empire, glass was the rich disdained poenner drimking-cups, whil precions motals, moulded or engraved glass. Earthenware was left for the service of the gods, and the tables of the poor." This was not very respectful towards the celestials, but perhaps it was prudent; and perhaps, also, incorrect
pottery are four varieties of unglazed Roman pottery,-yellow, red, grey, and black; and in hese such wide difierences of colour as to con stitute a fifth variety, if not a sixth. The yollow varies from almost a greyish. white to a reddish
hue; and the red from a salmon-colour to coral. Pliny mentions eight seats of the manufacture The services used at a Roman entertainment," continnes Dr. Birch, "presented the same spco taste at the present day, to which the potteries
of Staffordshire, of Sèvres, Dresden, and China contribnte their respective portions. The most exquisite enjoyment was derived from tho con emplation of a variety of the products of the buman mind and hand, which please by thei association and improve hy their presence." We aro tempted to pass along the tables and lift up some of the chief vases to discern the potters names. Perhaps, we think, we may find one mado by the father of Virgil, who was a potter mado by the father of Virgil, who was a potte Here, let ns say, is a howl of red Samian ware, fignre holding a cap. Celtic, Teutonic, and Scandinnvian vessole hold a very different place in the author's regards. Three illuatrations, and less than a score of pages of letter.press, suffice for all the oo ice that is accorded them. They have come o the front within the last few yoars, and, as et, have made themselves no place in the steem of an antiqnary whose sympathies are ac entirely with the South. A gallant hero, in corthern story, boasted that neither the wife ther man. And the same might he said of his: pottery. Northorn vases are urns, low, wide mouthed, and sturdy. They have no long graceful necks, no inviting handles, no ready lip; no story, nor legend. At the most they arts orned with a herring borforted with holas onple of clumsy ears, or perforated with holes or thongs, hy which they were slung up in the those who stand hy at the opening of the olc graves on the moors and hills, whence these urns are chiely obtained, ns far as onr owr country is concerned, view them with as muck apture as a Roman antiquary would pour oni ver a fiud in a cata Palestin Palestine. The southern pottery ably represent he southern sunny life, spent in gardens anc and the crude northern ware is equally commu, and the crude northern ware is equally commus nicative concerning the rarle lifo of its owners,
their strong rough hands and ways. As we look heir strong rough hands and ways. As we lool
upon the last we realise the cold, the miste, the rogs, the sunless forests our Celtic ancestors aed to deal with, and in its want of beauty see the reflection of their homes in their embauked camps, their continual defence, and poor re.
sources. We can find in it neither pride of sources. We can find in it neither pride of
work, nor possession, nor indeed any knowledge f letters, for neither potter nor proprietor has placed his name upon any specimen that has jef heen found.
In conclusion, Dr. Birch says truly that the pottery of a race may he compared with those he remains hy which man endeavonrs to leanal vidence of the strator it bears with it itece to hich it helongs. "A due knowledgo of the great distinction of the various products of the art of pottcry amongst the ancients is essential to a perfect knowledge of the relative antiquity of races and sites. The use of letters is com naratively recent, the glyptio and graphio arts anperishahle materials; but in every quarter of the world fictile fragments of the earliest efforts: of the human race lie beneath the soil, fragileii but enduring remains of the time when ths world was in its youth." And so he sets us lown in the far-off days "when all the world as young, in the centuries anterior to those Mediæval pottery take us up. More method, and a more systematic selection of the illustra. and a more systematic selection or have made the work perfect. As it is, a multiplicity of facts are gathcred together, much as a heap of shards might be preserved y a careful curator, certain that all are valu hle, hut having no special place for them to he cen to advantage in. Nevertheless, it woula on the subject.

The Corne Abbas Highway Surveyor-ship.-There were ten candidates for this vacant surveyorship, and at the last meeting of the
Highway Board, Mr. Richard Hawkins, of Piddle. Highway Board, Mr. Richa
trenthide, was appointed.

## LECTURES AND LESSONS ON ART.

Mr. F. W. Moodr is as the voicc of ono crying the wilderness. In the midst of an age sunk n Gothic barharity, worshipping the grossest 1 rtistic materialism, and overrun and bewildered oy swarms of ignorant and self - confident rritice, blind leadors of tho blind, who rejoice in yliness and abortion for their own sake, one pro-
shet, at least, is to he found who has not howed thet, at least, is to he found who has not howed
he knee to Bual, and who, true to his high he knee

## "Among the faithless, faithful only he,"

holds aloft the light which will guide us to all irtistic truth. If wo are betrayed into speaking omewhat "in Cambyscs' vein," this must he fooked on with indulgence as a humble and very ossibly unsucecssful atterapt to omulate the tone nd style of our enthusiastic anthor. Mr. Moody's irst volume of lectures,* delivered at the South Kensington Museum, now Jaid before the public, night in fact bo shortly descrihed as an asserion of the superior excellonce, boauty, and renement of cuery branch of art of the Cinque. ento period, accumpanied hy a general onslaught pon everything and every body else, inters persed fith rules for drawing the acanthns-leaf. This s, at least, tho general impression likely to be aade upon weak minds by a perusal of the nount above the rest is, that all "eritics" are idiots. Indeed, the wrath of Mr. Moody gainst all persons whom ho comprehends under
his term has in it something of the suhlime, in ts intensity and persistence. We should he sorry th intensity and persistence. We should he sorry
o have to connt how often the ohnoxious term $s$ flonrished before the reader's cyes: we only emember it cornes wherever the hard words emember it comes wherever the hard words

Moody, Insirucwr in Derorative Art at South Kensington
Museum. Lundon: Bull \& Daldy.
figures, of no special character or race, however noble in expression and composition. The mistako of those who have been termed "pre-Raffaellites" (in word which might as well he dropped, now that the most distinctive and ohjectionable mamerisms which disfigured the movement have been dropped also hy all its ablest adherents) lies in regarding this realism, a very important and powerfal element in a certain class of paintings, as the "be-all and ond-all here," and ignoring the fact that there is a hipher ideal of paintiog, appealing entirely to the imagination and feeling of intellectual people, and in which facts are of quite secondary consequence, or are only mado nse of as tho bare material or occa sion for the display of a great idea. In regard to this highest ideal nrt mere correctness of accidental facts is of no consequence; and Thorwaldsen retorted with perfect justice agninst those who objceted to his being employod to carro saints and apostles, because ho did not belicve in them, "' Neither do I helieve in tho kods of Greece," whose imaginary heing had furvished motive for some of his finest works. Regarding the ideal and the realistic as the two opposite poles of art, Mr. Moody gives us in the coninuation of this chapter a " Bcale of art," in which the various characteristics of each of these opposite branchcs are tahulatef, with a certain degroe of tuth, but with a bias which is amusingly displayed in the lino devoted to colour, which is described on the "realistic" side in the words "tondency to he poor" accidental and staring": a description whe in clutcs Russetci pint Mndox Bromn! And this bia is still moro pronounced when we are told (page 35) that "if a pre-Raffacllite says his system is true, and all others false, yon havt but at once see that he will he of no nee to you, for he can teach you nothing." We have an idea that some of the artists includrd under that awkward title could teach Mr. Moody a good deal. In the remarks as to the supremacy and mportance of the human figure as tho hivhest which tho expression in art, and the inflaence ahove any mere pecnliarities of fashion in art (page 30,, we are, on the other hand, entirely with him; and we must quote also with satis. faction the note $(\mathrm{pag}+28)$ in which referenco is faction the note (pag+28) in which referenco i of the realistic school in landscape claiming Turner as of their school, and classing his of critical blindness which is almost inconceivable on the part of persons poseessed of ordinary senses and perceptions.
Lecture III., on "Eduoation," is, to a great extent, an atrack on what is tormed "the academic system," and contains a good deal of not very new, but perhaps not the less nocessary,
truth, especiailly as to the tellizent directy as to the general want of the consequent waste of time on the part of multi tudes of pupils in stippling up drawings to a bigh finish for mere show, learning really nosugg, and doing no valuahlo art. work. It is kind which we had occasion to notice came from a disciple of the opposite school * from Mr. Moody.
The lecture No. IV., on ornamental art, is a symmetry and of the value and importance of point on which a protest is much wanted, as a balanco to the erroneons declamation of the which it worshippers of Japauese art, concerning no intellect to design in this that "it require true enough; but an eye and fceling for colour it doos require to emulate the effect of Oriental mornament in this respoct; and it is anfurtunate the shibboleth of one artistic set thos attacks same time ready with a shibboleth of his own, with as little reason. Even granting it to be true that we are to "dismiss from our minds all notion that it is necessary or desirable that ornament should hive an illustrative or didactic parpose" (which is rather ton swceping a prinaple, it by no mpans foliows that "to con"emn pirce of noment becanse it is made up of ruffins, ayd make invele, and winged asscmblage, shows that the critic has not yet ammenced the stury of art." We suppose it it
*rt." The Rev, St. Jokn Tyrwhitt, in his "Lectures on
in pursuanee of the predilectinns here hinted at that Mr. Moody has tagged his own buok with ornamental head and tail pieces of griffins with he corners of towels in their montlis, and such other things, of which we must say roundly that we never saw such trash admitted as decorative adjuncts into a book published by a professed oramentist. We do "condemn" euch weak, commonplace "motives" in design, and are prepared to " make jokes" on them, in defiance of Mr. Moody. It is on the same principle that he panels on the wall of the School of Science have heen decigned; and we must aay that we ave seldom be $n$ a large amount of oruament pread overa wall with sonitle of novelly, inven. qual interest as in this case. It might with equire, no intellect to design in that strle," for is nothing more than the working up of old and incongruous details of cinqneceuto ornament. Mr. Moody, in denouncing the narroweess and prejudice of a school of designers in pposition to himself (among whour are some very ablo mon) shows to the full as mueli arrowness and prejudice in his turn, and witl? nst as littlc reason.
The suggreations on the treatment of drapery rnament in Lecture YI on the elenens or cesivo as atarting.points for yonng deeigners to ork from ; and perhaps etarting-points are all that can he usefully given in snch matters; for all that is to be of any value must be worked out from the student's own feeling, on the hasis suggested to him. A disproportionate inuportance scems to ns to be attached to the correct drawing of the acanthus.leaf in Lecture VI., several pages being devotel to it. It would be more germane to the matter to have surgested ome broad principles as to the invention and reatment of conventional leaf.ornameut of a ew type; but the author rightly recognises that he Greek aoanthos.leaf is no mere initation of nature, bnt a peneralised symbol of a clase of egetation. We may, however, have mauy such ymbols, derived from many different types in the veguperior excellcnce of It italian suppose, of he superior excellcuce italian and Classic rnament, we are told in one of these lectures secnte Italian ornament to get workmen to secnte Italian ornament wel, whicreas plenty an bo found to execute Gothic orumnent. difrerent story; hut it is odd that the dillerent story; hut it is odd that the
autlior really cannot seo that tho fact, if it is one, is aimply due to the present prevalent asto for Gothic, which leads the mijority of art-workmon to study its fortres iu prefercnco to others. Twenty or thirty years ago The conclusion of Lecture j jutt the reverse. hings that a ornamental design, and a pretty box of thys it s; as "tools, musical instruments, arms, mukks, ceptres, fasces, ribhons," and a great deal more, with the concluding observation that "the hyrsus and ornamental details all form orna ment of a very hight order in Roman, Cinque. cento, and, I mny add, in Oriental art, as well." grunst which last passage is appended a defiant hinge, critirs gravely asset hat such o be represented at all. We seem to reached a climax in the philosophy of art," \&c., rohitectnel details in some king especialty stained plase we have ofter " asserted," and we gravely assert again, that uch a trentment is an entire misipplication, nd we will jndge Mr. Moody from no worse orks than his own. The chapter on
rrament" (Len "Proper Distribution of atset with an illnstration presphts ins at the dyanced architustration an exmiapio of madest haw hecture, in order to sluwf the distributed wa where ornament slonld be his specien to sce auced architectore" is reongoix a ha "atl. of them would cortainly sympathise with one felings on rending in the same paracraph of a sercies of lectnres" form the suhject rives, let us trust that Mr. Metre that time to what constitotes "advancu-d archi.
arrive at a truer perceptiou also of the genesis of Gothic architecture than to deseribe it as a style which "discarded square, massive forms for those wisco completely at variance ramification,-qualities complety which implies ahout as total a misapprehension of the subject as contd well be compressed into a siagle senas conld well be compressedters in this and the tence. In some other matiensin of elaborate next lecture, as to the painting of eat be properly viewed, for instance, and as to the imitaperly viewed, for instance, and as to then on then suitable tion in one buaterial of constrachonooly saitable for another material (arches in wow, pancling in stone, w.), it seemat all artists in all ayes, argument to say that all artists, in all ayes, have done it; which, if trae (and it surely is not), only proves that there has beeu a deal of bad taste and had art in the world.
We fear the result of a pernsil of theso lectnres mut be tho conclasion that their author, while making violent and in some respects just attacks upon the prejudiops of a certain school, is himself possessed by prejudices as strong, and antipathies as narrow, as any of the momhers of that school. It was charged against one of our chief historians that he was "too sure of everything"; the chief Govern ment Instructor in Art seems to us open to the saune charge; and he would be likely to do more for his pripils, and encourage a hroader and deeper feeling for art, if he conld only believe that there are genius and excellence in other schools than the cinque.cento, and if ho wer not quite so cortain that he is right and overy budy else is wroug.
nOVELTIES AT THE INTERNATLONAL ExHibition
Recently a very interesting nddition was mede to the Exhibition at Sonth Kensiugton in the opening of the Queensland Annexe, which is in itself a completo and compact, although a small exposition. The products of this rich and fertile section of our Australasian Colonies have been admirably arranged in a court opening from Room XIf., on the eastern side of the Exhibi. tion bnildings, in close proximity to the School of Cookery. In describing the locality, the throught occurs that it is scarcely craditable that the daily "Key" should refain, to the embarrassment of Thisitors, the "Belgium Supplementary Court," improporly so catled, is this year approprinted in threc divisions to the colonies of South
Australia, New Sonth Wales, and Vietoria, a small space in the central room being derotod to New Zealaud. Tho Queensland Exhibicion is located in what was formerly the entrance to th "East Machinery Annexe.
To Mr. Duintree, Agent-Gencral for the colony of Queenslaud, praise is due for the collection and arrangenemt of colonial products in this court ; and credit must also he given to his ablo lieutenant, Mr. Kenncdy, for his ready politeues in communicating all the information that inquiring visitors may desire.

The first class of exhihits to attract attention on entering the Queensland Annexe are the varieties of indigenous timber produced by the as heiog in a sense peculiar. They include woorls that may be usefu! for scantlings is land buildings, or in shipbnildings ; mnny of them, of fine adnpted to cabinet-making purposes; but, on th whole, they rive the idea of beiog rather in trantahle, and of heing all hard to work. There is nothing among them that comes near in quality, for tho purposes to wbich sach woods pine, piteh pine, Dantzic, or Nemel. The Queensland timbers bave, notwithstanding this objection, a variety of decided merits. The conntry, from its vast area and the diversity of soil, climate, and altitude of its lands, has a ereater tribo is now established as well ontitled to confidence, when applied to building purposes, for its hardness, toughness, and darability. The Lucalyptus 24 in . to 40 in , and a height of from 60 ft . to 80 ft . It furniskes excellent timber for house of from 2 ft . to 4 ft ., and grows to about 90 ft . in height. It furnishes first-class timber for shiphuilding and wheelwrights' purposes. Nu shiphus other trees of the same family give good
timber for various uses, some of them being ver durable underground and in water. The conifero inclutio some very fino trees, of the real oha ranter of which, however, a trate idea cannot be conveyed from specimens in a small exhilbition. The Araucaria Bidwillii (Hook), or native Bunya Bunya, has a diameter of from $2 \frac{1}{2} \mathrm{ft}$. to 4 ft ., and reaches a height of more than 200 ft . The wood is strong and good, and full of heautiful veins and is capable, it is stated, of beng worked and polished with great facility. The conce, that grow with their apex downwards, are very large and are used as food by the natives. Another tree of the same species, the Araucaria Cuning and attains a height of 200 ft . This treo cover iumense tracts of land, both aloug the coast and in the interior. The timber it prodaces is nse extensively in the colony for bnilding and other purposes. Sawyers get from 65s. to 70 s . per purposes. Sawyers get from thos. to 7os. per , mucl as $20,000 \mathrm{ft}$ of saleable timber. Vame rous ous trees, or sections of them, are shown in the Queensland Room that are suitable for house or shiphuilding, or for railway timber, or for ormamental purposes. The Qaeensland Ex. hibition contains a large number of admirably executed photographs, some of them colourcd Lhat give an excellent idea of the sccnery of the country, and of the habitations of the colonists, and many of their pursuits. The Exhibition acludes an excellent selection of examples of he productions of the colony in cotton, maize, wheat, and other cereals, sucrar (ihirty.two samples), capital manufactured tobncco, silk, hides, hoots and shoes, - a very interesting well. filled case, wool, Angora goat's wool, gums, rocks, soils, including numerous varieties from cretaceous rocks and alluvial soils; a fine show of serpentines, rough and polished; varieties of copper and tin ores; metamorphic ores; palsezoic marbles, various in vein and colour, 8 me of them very beaatiful; lead ore; Devonian slate f very ; Queensland coal, mezozode condition, meralds, rubies, and other nems; numerons large agates, that are almost as common in Qucens. land as pebbles are in some other places. There is also a good display of preserved meats, wine, ont disp products of the colony, and an birds. Amoug the varieties of Qneensland coal, the Allora seam is gotat ouly 45 ft . from the sarface, and requires no pumping. It contains 6931 per ceut. of carbon. Amgng other curiosities the Exhibition has some beartiful coral accretions emus' eggs, \&c.
As apology for the lateness in completion of the Australian Exhibition, the proverh may be quated, that "it is a far cry to Loch Awe." Good though the apology may be, it daes not poutralise regret that our colonists should ouly make their display when the exhihition is half

Queensland, as we have stated, is on iew. Sonth Anstralia is in a forward state, and, if we mistake not, Victoria is ready for the public; but New south Wales, alleged to bo th still in a very backward, unfinished condition. Thill in a very backward, unfisi, and money The manifest cost in time, labour, and money that haw been incurred by the colonists iod been naturally, great regret that they have not been
better up to time. Thousands of visitors to the Exhibition have paid their first and lnst visite, withont our Australasian colonies are capablo of doing, and of examining their marvellously rich pro ductions.
We bave heen faroured with a private view of the space devoted to Sonth A1rstralia, New South Wales, and Victoria, and transcribe a fow notes, made on the occasion of the visit.
In the South Australima department there is a ery fine display of metalic prodndts, particularly in copper, hismuth, tin, and the native ores, from which these metals are extracted. The Hoonti mines exhihit great wealth in purpleand guavt ore, bell-mietal ore, parple sulpme, whioh pieces will be shown above a ton weight. The Sunth Australian exhibit shows also an abundunca of iron ore, red brown, and homatite specular and micaceous, with a quite wonderful variety of wines, spirits, liquenrs, and even beer. They mate also a pood show of tallow, as may be supposed, and their show of wool, in fleece be in cases, cannot, wo venture to think, be surpsesed in the world. One of thoir exhibits, of urpassed infernt is a drewhincorom tahle of mosaic inluid marblo work rery retarkable from the rariety and number of the
pieces, and marvellously beatiful in the combination of the varied specimens. The fleeces shown hy Mr. C. B. Fisher are well worth attention, as are also the cases of dried apricots and raisins, and, especially, the wheat and flour, which are very fine indeed. The panoramic viow of the cicy of Adelaide is an interesting bject in this Exhibition.
Passing from South Anstralia, the middle compertmont, devoted to New South Wales, with a small corner to New Zealand, is not yet ready for iuspection. New Zealand is so far well repre. seated in the cases that show the uses to which the Phormium tenax, or New Zealand flax, can damplied. The case has specimens of cloths, heets, towels, ropes, cords, twine, thread, and almost everything, indeed, that can be made out of a fibrous product; they are of such excellent character as should incite Belfast to look to its laurels.
In the Victorian section visitors will find one of the most interesting objects in the whole Exhibition in the cahinet exhibited by Mr. Peter M'Lean, cabinet-maker, formerly of Dumfries, now of Melbourne. Mr. M‘Lean has expended many years of his life upon this elaborate buffet. It has five compartments immediately over the base, and three compartments above these, each ouriched with carvings in alto-relievo. The nork is a pictorial history of the founclation and progress of the colony of Victoria. The extreme pals of the under portion replef ginal inhabitants : at one end achief ef Yal Yarra trine, ensconced in a shield pario of decayed gum.trees, native birds and animals, suakes, iguanas or lizards, and wombats; tho other end-panel contains a female native, carry The a piccaninny, and is enriched like the other The pilasters at the outer corners represent native trees. On the two receding doors, on each side of the centre parel, are representa. tions of an emu on the one, aud of a kangaroo on the other. The priucipal panel in the centre represents the first step in the civilisation aud settlement of the colony, by a tableau depicting the encampment of Mr. Batman and party about 1835, and their meeting with Buckley, a oastaway seaman, who had heen many years with the natives, of whom a group is shown en. camped in the distance. The mouldings are enriched with entwined Eaglish and native ivy which is also carried ronad the outline of the upper portion. The pedestals at the ends of the upper portion have a carved figure of Peace at one end, and of Plenty at tho other. Each figure is ensconced in a panel enriched with fraits and flowers, ant the iusides are veneered with native woods. The pilasters of the sloors are also en riched with fruits and flowers, and the friozes of the cornices with native flowers, surmonnted by full-sized cockatoos in position, playing with wreaths of ivy. The centre, between composite colanns in carved w $r k$, represents tho progrese of civilisation in the development of pastoral mining, agricultoral, and hortioultural interests, art, and commerce; and above there is a semi. circular panel, in which a solar oclipso is repre seuted by a variety of native woods, inlaid. ch is surmounted by a native eagle. hawk. Iwe line arts are as yet too yountr in Australia to posess anmeroas re has its fine-art section, which includes landsoapos in oil, photographs, lithographs, chromo-litho graphs, water colonr drawing=, pen-and.ink slietches, specimens of heraldic painting \&o In miscellaneous art there are numerous exhihits of great merit in maps, ongravinga, book.binding, of first-rate character ; priuting, colonialmade paper, electrotyping, stereotyping, clocks, die-siuking, aud other departments. In the sectivn for wood, and manufactures from wood, there is a very large number of oxhihits, the raw material inclading imported as wetl as oative timber, but the furnitnre, pianofortes, casks, blinds, fishing-rocs, drawing-boards, do., are all of colonia! manufacture. In metals and minerals a rich display is mude ; the varicties, includiug ison ores, potter's clay, tin, antimony, copper, lead, bluestone, granite, freestone, limastone, flagring slate and coal, with specimeus of pottery ware, bricks, tilcs, terra cotta, eco Numerous specimens are also shown of gold and tin ore, quartz, carbonates of copper, with cases of native diamonds, sapphires, rabies, topazes, emeralds, garnets, aynamarines, and numerous other gems.
During the last week the Russian Court opposito the entrance to tho Weboo of Cookery, lias been opened to tho public. The
assian collcetion of oxbibits is quite a multum parvo. If they had heen arranged strictiy cording to their respective classes, they would wo heen disporsed to various remote parts of e Exhibition buildings. Bronght together into they are, in a sories of little groups, they raish an interestiog epitome, and command a gree of concentrated attention that could not ve heen
Under the first division, fine arts, there is me excellont statuary, including a numher of ry spirited hronze statuettes, e mhracing pasral, sporting, equestrian, and other subjects

Belonging to the second division, manuctures, the Russian Court contains a numhe suporh examples of gold hrocado, silver
ocade, gold brocade with silver lilies, silk ocade, gold brocade with silver lilies, silk
ocado in ancieut and modern Russian. and in zantine and other styles; military ornaments dress, shouldex.straps, sword-knots, girdles,
decorations. In ono caso the ribhons of decorations. In ono caso the ribhons of aplets with prayers beautifully interwoven. In e same division there is a fine display of iron and ecl, of catlery and edge tocls, files, arms, and of irgical instraments, equal in finish to the proactions of Shefliold and Birmingham. Class 12, bstances used as food, is well represented by trophy of potato grit, samples of wheat, flour, - , harlcy, sugar, dried and crystallized fruits, ney broads, mansect that produces it, groats tato-flonr, dried fish, chsese, rapeseed oilcake, aseed oil, turnip oil, tobacco, and numerous her carions products
The Exhibition ivcludes some speoimens of t-metal work in cbased hoxes, cups, caskets, ad vessels of various kivds, alike beantiful aud id delicately chased, is a very fine example of t-metal work. Reverting to anothor class, here is a great display of wiues, spirits, liquours, uit essencer, preserves, and other products. Soientific inventions include a very dolicate iferentind
This littlo assemblage of products is well orth a visit. The room is docorated with favoy's patent felted fabric.

FROM CAMBRIDGE.
THe little semi antiquarian club, the Noviomagians, of which onr readers have hefore now eurd, apent $n$ joyful day or two in Cambridge

font and Mr. Waterhouse have cach had a loog fontt and Mr. Waterhouse have cach had a long ininges, and are still carrying on, t "Keys," by Mr. Waterho se, one front of which illnetrated in our present numbor, are amongst
heir best works. Portions of the latter, especially heir best works. Portions of the latter, especially a the Tree Court (a capital picture altogether), emind one of Chumbord \& Blois. There is a very rood window by Heatoo, Butler, \& Baynes, in the hapel here ; hut of the reredos, with ite mosincs, we oan scarcely speak so warmly. Tho now lodge, s the mastor's residonce is called, a commodis ags of the same architect, is nearly faished, at e cost of somo $10,000 \mathrm{l}$, The interior decora. elrver window, though a little over-green, e work of Morris, Moore, \& Co., has beeu set in the Chapel of Peterhoase Coligge, in 11 from his horse, and was killed a year or so spel is not benefited by the contrast. Some ther glass in this same college, also by Messrs. Morris, is very agrecable in colour and sentiment. Amongst the MS. treasures of Peterreigning king, Charlemagne, snd with a hlank for the name of the queen, which serves to date it, as nearly as may be, A.D. 775 . The illus. headed openings, straight-lined arches, so to heared openings, stright-fined arches, so to
fpenk, as well as gemi-circular arches, and are ppenk, as well as semi-circular arches, and are
Fery interenting. Trinity College, of conrse, ocFry interenting. Triuity College, of conrse, oo-
oupied the visitors some time, aud several of its
arities were overhanled. Wbat a noble gallery $i$ is, nearly 200 ft . in length, and well proportioned as to height and width. It is cnrious to notice here that Milton commenced "Paradise Lost," down at the head of the DIS. The IIS "Lycidas" is also bere. In this library to hangs a plan of the Oreat Court of the oollege, holieved to havo heen made in the time of Henry VIlI. The walls aro shown hy double lines, not colonred in, and the references are in Tatin. Thorwaldsen's atatue of Byron, with its over largely-developed feet and ankles, as if in bravado against the real circumstances, and several very fine busts, had to be looked at in this library. Bacon, Newton, and Barrow are three of the great names of Trinity. The ceiling of the Iall has heen decorated in colour, in parts a little vildiy, and the deooration of the walls is to follow The specimens for the latter already exeonted promise well. Here Mr. Arthur Blomfeld has Ir. Holidar, will aid the generaleffer desigus hy Mr. Holiday, will aid the generaleffect. Amongst the old glass is a portrait of the ill-treated Richard III., damoed to everlasting fame by one Willian Shakspeare. The new buildings at Trinity Hall (quite distinet from Trinity College) are making good progress, under Mr. Waterhonse, and will probably he less criticised than those of King's, where in astone-fronted huilding Sir G. G. Scott has jutroduced Hampton Conrt chimney-shalts, very well executed, by the way, wholly of red hrick, producing a little disagreement of effect.
The chapel here, of world-wide fame, the Saxon work at St. Benedict's, and the Norman vork at St. Sepulchre's, were duly exanmed; Conduit. of Hobson's ohoice was told at his ciated with the deoaying mulherry-tree asso and then all were glad of rest and refreshment The dinner which naturally follows these utiogs was held at tho ancientest of Cambridge hostels, the Bull, with its print-covered walls. Mr. Chas. Hill, F.S.A., presided, and was helped by Mr. Francis Bennoch, Di. Diamond, Mr. Godwin, Mr. Henry Stevons, and other mombers of the club, in his endeavours to thank their good guides who had ecabled them to sce so much in a short time ; and it was explained that Mr. S. C. Hall, Mr. Josoph Durham, A.R.A., Mr. Lawrence, Mr. Buttorworth, and somo other
stanch supporters of the State of Noviomagos, had been kept by other calls from their accus. had been kept
tomed places.

THE GLASCOW BARRACKS AGATN.
Thas ill-starred contract has at length, it is hoped, reached its proparatory stage towards muck-desired oblivion. A court of arhitration is now sitiug at the Wegtrminster Palace Hotel, worsbipper by book and pen was only permitted,
"With 'bated breath and whispering humbleness,"
a gazo upon it for a moment, and then disappear, confounded, among the heathen nonarbitrating world. The Giangow "no or-do-wcel" is an epic in itself. Look at its rising, its cnimination, and its deoline. It first began with a
squabble in a contractor's office ; then went into a squabble in a contractor's office ; then went into a court of law; then inco the surveyor's department of the War Office, to disturb tbe dolce jar niente of the Olympio deities there; then into the War Minister; and finally inta the "thremenjous" Star-chamber of arbitration!
Tho arbitrators are Mr. Horace Lloyd, representing the jus civile, Mr. Henry Arthur Hunt, and Mr. R. M1, Ordish, C.E. The question which they have to try is the dispute betwoen the Seoretary of State for War, as advi-erl, and Mr. John Kirk, of Woolwich, respecting the contract for orecting barracks at Maryhill, near Clasgow. As the proceedings were about to commence, On. Cinulow, from the solicitor's side of the Har strongly object to any person taking notos as the representative of the professional press. Iis dislike, he said, was founded on the ciroumstance that "he once grave a reporling gentloman some facilities" which that.grace-forsakeu outcast "misused," and, oouseqrently, he, Mr. Clulow, had "made up his mind to never again allow a reporter to be present at any arbitration in whioh he was conoerned if he could possibly ling accenta, that the much humiliated, half. frightened being who was then quivering beneath his storndaden frown, then quivering beneath
to do with the ungrateful wretch who lad so scandalously " misusod" the omnipotent lawy yer's 'facilities ;" and earnestly beqged that Mr. Clulow wonld he merciful. With himall reporters must in future professionally die. Upon re-entering the room, after a few minutes' ahsence, Mr. Clulow had nsed the "misussd" to some purr poso. Mr, Lloyd told the writer that, "one of the parties had ohjected to him; and, when that was tho case, he always allowed tho ohjection: so that the gentleman would have to retire, as no reporting would be permitted." He did retire and, in retiring, reflected upon the grandear of power, and the strong temptation to "misuse" it, as Mr. Clnlow's unraannerly reporter did. If the powers of the earth had carried out the lex talionis all round, after Mr. Clulow's draconic fashion, what an angelic profession the law would now be. Mr. Kirk's represeutative did not object; and one would think that, if any side had anything to conceal it would be tho contractor's. But the contractor blows through the other end of the speaking-trumpet, "Let day light well into it," says be. "Oh, no; not for the world," says Mr. Clulow; and Mr. Clulow is tho legal representative of the public in the War Department
On Tuesday, the 24.th ult., Colonel Barttelot, himself an old dragoon, complained to the Secretary of State for War, in the Hous, of Commons, of the neglected state of the unfinished harracks. Mr. Cardwell, iu an answer that must havo heen humorons, replied that the harracks " was one of the properties which, having falleu into Chaucery had hecome an eyesoro. The contractor failed to do his duty, and that led to suits in Chancery The litigation, however, had now come to an end and arrangements were heing made for a new contract."
These Glasgow harrackswere intended to he the model infautry barracke of the day. Everything had heen studied and worked out with the greatest care; and, the contract once signed, all was confidently lonked forward to, to go as merrily as a marriage-hell. 'The Governmsut had purchased thirty acres of ground at Garioch, by Maryhill, near the song. Famed Kelvin-grove, about two miles and a half north-west of Glasgow Of this quantity eight acres were to be built upon to afford accommodation for between 600 and 700 rank and filo, with a full complement of officors, married meu's wives and children officers' servanta, \&o. Thero wero also to be staff - sergeanta' quarters, married quarters, chapel-school, and an entively new feature in barrack life, an out-pensionerg' department. The conteen was to he very complete, and to partake partly of the charactor of the co operativo store, with regard to quantity and
prices. There was to be a gyninasinn well prices. There was to be a gymnasimm, well with it, a racket. court, a fives.conrt, and a skittle-alley. The married people were to he entirely by themselvos, with an infant-school close to them; whilst the serjeants were, also to be "liable" to very snperior lodgiug and amusements. Thero was, furthermore, to he a prison,- the home of the dirtaded "Provo.,"small but compact, with offices, detontion-room, a labonr-yard, and a flozen cells. Tbe walls were to be of local sandsione, except the dress ings, do., which wore to be of freestune. Asplaite was to be used whenever practionble, together with fire-proofing and rollod.icom joists. There was to he a hospital, too, as perfect in ita way a such a huilding could be made, whilst the wholo of the ground was to be enolosed by a rubble-stone wall, turreted for external defence. The whole of the buildings were designerl under the dirction of Lient..Gol, Murruy, RE E, aud his branch Comenitico Daking charere the Atmy Shnitary ventilating part. The comtiact was firmup and and ground was broki:3 in 1869, tho intention being to have had the barracks ready for ocsupa tion sometime in the summer of $18^{-2}$

The firat great. "split" was upon "rubhle." What is rubble? C.iptain Peroy Suath, R.E. the officer in charge, beld one opinion, Mr. Kirk ather and this is a cnestim the arbitrators will have to settle,-with several ollzers.

The Alterations in the Shire-hall, Trere-ford.-Sir Jehu Walsham rnised a knarh at the Presteign Quarter Sossions, hy rhaerving that althougn somo 400l. or 500l, hud lecen spunt in altering the Crown Court of the II ereford Shire. hall, with a view of imporing its acoustio pro pertica, they werc now fund as bad us ever.

CHESTER WORKHOUSE COMPETITION. AT a meeting of the Chester Board of guardians on the 5th, the design sent by Messrs Perkin \& Sons, of ILeeds ("Castrnm"), was selected. The ohairmar said, in proposing it,"In reply to our advertisements, we recei ved hetween
thirty and forty different aets of plans. The huilding committee went throngh those plans, and reduced the numher to thirtuen. Thase were atterwards handed ore
to Mr. Colebham for his decision as to the three beat plans

 pnens the comzaittee were naturaily
anited that they should win. ployed Mr. Culzhaw, nd we were bound to hanever, em
decisiun. Mr. Littler, Mr. Certer, Mr. Parry to and
der
 selected is by far the hest. The speciflention is moot
strict, and is as much against the builder as any $I$ have ever gone through.
We fail, by the way, to recognise auy merit in the last-named fact. The specification should no more ho "against the bailder" than against the committce.

## A CHLRCH OVER A RALLWAY.

Tre Margais of Westminster and the Hon and Rev. Rohert Liddle, the incumbent of St . Panl's, Knightsbridge, with fall Masonic honours, on Wednesday in last week, laid the fonndation of a charch immediately over the Metropolitan Victoria Station.
It may not be ont of place to here observe that the andergronnd railway has left the "cuttings" in a very nnsightly and dangerons oondition, and forced to sell streets of honges for the lines, have forced Loself streets of honses for the lines, have, tbrough, been left with tenements suggesting a "siege in chancery." The late Marquis of Wost. minster learnt too late the mischief to his minster learnt too late the mischief to his end Jnnction Railways that were to destroy some 4,000 houses on tho Grosvenor estate, and some tens of thousands of houses from Soho up to the East End, witb a destroyal of Cbrist's Hospital for a central terminus, rcached a committee of the House of Commons, did the new Marquis take steps to hack up the remonstrances of his tenants. One clanse in the West-end Railway Bill empowered tho company to pull down a Whole city of honses, on condition of a oorre. sponding number being erected. The railway committeo were so befogged as to believe that the railway engineers intended building op the same number of houses they would pull down
ere the turn ont of some 10,000 Grosvenor tenants ere the turn-ont of some 10,000 Grosvenor tenants
and lodgers. A slirht history of that which was and lodgers. A slight history of that which was in store for London reveals the fact, that Christ's
Hospital was aotually sold for over one million of ponnds, and the House of Commons committee agreed that the East End of Londou should be demolished. And, moreover, the Government supported this slaughter.
Tho "West.Enders" now stepped in, and with a help that saved their Eastern brethren. Mr. Boodle, the solicitor to the Marquis of West. minster, took steps to prevent the destroval of the Grosvenor estate, reaching from the Marble Arch to Regent-street; and the Marquis, in the Honse of Lords, assisted by Lord Cairns and Oxford.strect. A million of money, hard coin was offered to the Margnis of Westminster for his interest in the razing of the bonses. Mr Boodle and the parishioners requested their saperior landlord to make a clave in the Rail. way Act that before one liouse was pulled down another should be provided for the oatgoing another should be provided for the oatcoing oconpiers. This provision was a "nailer." hnilding sites to be found? The way being hnilding sites to be found? The way being and by the side of the Metropolitas Diatrict and by the eide of the Motropolitan Diatric line has taken place, and the Marquis of West minster has purchased the npper gronnd, and
is giving it away for the foundation of churches.
Mew chn. J. Whiteherns, the architect of the new chnrch, and Mr. Laidler, the clerk of the works, as well as the bnilders, Messrs. Cowlands have had a bad foundation to surmount. The concrete is 20 ft . below tho pavement line, and the nearest depth to the crown of the railway arch from the floor line is 13 ft .
If ever the railway company have occasion to section, the architect of the new chareb of

St. Paul's has placed a rock against the future engineer
The Nrarquis of Westminster, in a pithy tion of affairs, and said be belained the posi. worahinpers in the new church wolld that the the vibpers from the conreh wonld not feel first charch bnilt upon a railsay, he hoped other sites might be ntilised for the like good parpose.
The contract for the sbell of the church is for $6,000 \mathrm{l}$, and Mr . Liddell has promises of large sums for tbe interior.

## SCHOOL BOARDS.

Realing.--The committee recommended that the snm of $5,540 l .9 \mathrm{~s}$. 6d. be expended in providing a nevy school - house in Coley - street, including the purehase-money of the site, architect's commission, and other expenses. The conwas received for accoptance, subject to a deduc tion of 47l., if local tiles were used. They also recommended that a sum not exceeding 5,4197 . 15s. 6d., he expended in providing a new school money for the site, the architect's commission and other expenses. The plans had been approved hy the Edncation Department, and the borrowing of the money sanctioned as pro posed. The report was unanimously adopted. Dronfiell. - It was resolved that the followin contracts for tbe erection of schools and master's house at Cross-lane, Dronfield Woodhoase, be accepted. The Cross-lane school, Dronfield :Masons and hricklayer's work, Messrs. Clubley \& Stringfellow, $3,100 l_{\text {. ; joinering, Mr. J. Budger }}$ 1,081l.; slating and plastering, Messrs. Harriso \& Ctadwick, 3502.; plambing and glazimg, Mr J. B. Corrie, $430 l$, ; making a total of $4,964 l$
The Dronfield Woodhouse schnol and master's honse: - Masonry and bricklaying, MLessrs. honse: - Masonry and bricklaging, Messrs.
Clibley \& Stringfellow, $1,560 l$. ; joinering, Mr. J. Badger, 4897.; slating and plastering, Messrs Harrison \& Chadwick, 160l.; plumbing and glazing, Mr. J. B. Corrie, 163l.; making a total of 2,3721 .

## THE TRADES MOVEMENT.

London.- At a meeting of the committee of Master Buildera, held on Wednesday, the 9th inst., four members were balloted for to mect the masons at cleven o'clock on Monday next, and the joiners at three o'clock on the same
day, to discass the proposal for an arrance. day, to discass the proposal for an arrange. Science Association. The same four masters who met the masons last ycar were appoinod. masons a crowded meeting of jonrneymen stated tbat they had received a very importan commnnication frum the Master Builders' Asso. ciation, which he hoped would lead to a peaceable settlement of the present disprite. He then read a letter from the Master Builders' Associa. tion, staring that they had reocived communica. tions from the Labour and C.ipital Departanent of the Sucial Science Association, and also from the carpenters, asking that a conference might take placa between the masters and the men, so In to evcrt, if possible, the threatened strike. willing to receive deputations buth from the carpenters and masons. Mr. Spencer said he thought they onght to ho very thankful to the Social Science Association and tho Master Builders' Assnciation for the kindly spirit they bad shown, and he moved, "That a depatation be appointed from the mecting to wait puon the empliyers." Mr. Nisbet suid that the employers' etter was an invitation to mpet to consider the reconmendation of the Social Science Assuciation that the question be settled by arbitrarion. t world be pery important, therefure, for the meethit tudraw a distinction between sending tion, which wonld bo very different from sending then, which wonl bary ding then to discuss the question on its merits, and he points in aispate. Tho chairman said the communications provided for a ifndly settle. ment, if penssible, before falling bask on arbitra. ion. Mr. Kinuaird and other rpeakers addressed the meeting, atrongly opposing any power being iven to a depatation to go and agree to a settlement by arbitration. it was the resolved that a depuatation of five be appointed to wait. ron the Empliyers' Ansnciation. Is Was further ceolved that The powers encruated to the delegates he reserved." The names of the
delegates were Messrs. Broadharst, Nisbet Kinnaird, Spencer, and Bowman.

Bristol.-The operative labourers havo ap pointed a sub.committee to draw up a general code of working rales for the future guidanes of the men and masters; the rules are to bo Bedford to the Master Builders Association. Bedford.-The carpenters and juiners, reports offered by the employers, viz., a rise of a half. penny per bour, with an hour for hreak fast, nc unch-time, and learo at one on Saturdays. The mon arreed to accept the terms, with the excep. ion of the extension of the breakfast hour from alf an bonr to an hour, as they prefer leaving vork at 5.30 to 6 in the evening. They alsd give notice tbat another halfpenny per hour wil he asked for in tho spring of 1874, as it is considered that the advance already conceded is aot sufficient now that the namber of hours foi work has heen reduced from $58 \frac{1}{3}$ to 56 . The atonemasons of tho town have recontly held a meeting, at which it was resolved to apply te their cmployers for a rise of a penny per hour lso intend moving ing sid. The bricklayere wages boinm oaid to the carpenterg, so that each branch of ho huilding trado will he affected in turn $\mathrm{h}_{\mathrm{y}}$ be new movement on the part of the workmen

## WATER AS FUEL.

A patent for "An improved method or process and apparatus for securivg the combustion o! nol and the utilisation of the gases arising Rerser of Liglteliff amsden, of Laglstelfe. His apparatas is nom Holifazt Ouardian:-Mr. Ramsden hurns steam and the means used to effect its combustion are and the means used to effect its combustion are
very simple. As the appliances aro 80 far merely very simple. As the appliances aro 80 far morely

ture tare desoription. stands a small double-oylinder steam-engite of
ordinary construction. The boiler which supplies tho motive.power is a mere toy, being about 2 ft .6 in . long and 15 in . or 16 ini diameter, of the single Alued Cornish puttern; the floe heing about 6 in. dianeter. Instead of the ordinary furnace fire hars for hurning coal, here is a coil of small iron-piping which take hree tnens round the inside of tho furnace on flue. In this pipe are drilled eigliteon smalt holes of about one-sixteenth of an inch diameter. These holes are so arranged that when steans is admitted to the coil it rushes out through them, forming a circle of jets which meet in tho centre. of the furnace. Across the front of the fire-hole or furnace rnus another snall pipe with two more jets dirceted into the flue. Immediately in front of these two latter jets are two brass nozzles, the orifices of which are scarcely discernible, connected with a vessol containing petroleum. There are cacks to regulate the supply of petroleum and steam. As the boiler must neccssarily be cold to begin with, and as steam is tho fnel to be burned, recourse is bad a small auxilial'y boiler in which a little steam is generated by ordinary mean*. This gemerator furnace out of the jets. At the same time another tap is turned, and the petroleum issues from the nozzles. A light is then applied to the petroleum, and instantly the steam is decomposed and ignited, and the furuaco is a roaring blast of flume. In a fow minutes scram is up in the boile", and hecomes independent of the generator first used. The resalt is starcling and wonderful. The effect of the rush of steam fom the jets is to draw the petroleum through the nozzles, and petroleum or any other hydrocarb on having the power tu decompose steam, the interior of the lue becomes a furnace of great heat. So intense is this heat that, although steam rushes throing the coil, it becomea almost white hut in a very few minntes. A not less important feature of this invention is its adaptabiliry to "lluminating purposes. The large quantity of inflammablo gas generated wonld, if not intercepted, escape nuconsamed. To utilise this waste Mr. Ramsden bringe the steam-engine into nperation, geared to a smull rotary fan, sending it iutu a ch sed vessel coutaining petrolenm. From this receptacle it
is conilucted to a gasometer, and uned ovactly it the same manner as ordinary ras. ar smell, manner as ordinary gas. This gas has our anen, and literally no smoke. Its crist, hdds ontends, and with s show of reason, tbat it aso contends, and with a show of reason
not cost more tian 9d. a thousand.

THE TEMPLE OF JERUSALEM AND TREE WORSHIP.*
After the text of my work on "Tree and arpent Worship" had beon completely printed I, and the sheets were in tho hands of tho nder, it occurred to mo that I had once dreamt sing connected with the Temple at Jerusalem. $\dagger$ consequently turnod back to the passares in psephns and the Talmnd bearing on the subject, ad them with more care than I had hitherto ae, and having protracted these descriptions ine, and having protracted these descriptions soon frrived at the conclusion a paper, I very soon arrived at the conclusion at I was not mistaken. An erection very front of the Templo as reerected by Herod, d was meant to have been a reprodnction of te hrazen arrangements of Solomon's Porch, as secuted hy Hiram of Tyie +
The passages in Josephus hearing on the hject aro the following :-
${ }^{19}$ The Temple had doors at the entrance, with lintels ore, extending to a beight equill to that of the Temple,
rey were adorncd with coloured veils or curtaine, on rey were adorned with porple flowers, with trellis-rorle, were embroidered, non purp, buti lower than the crowning mouldiag of the ull, a golden wine was spread out, with ita branches anging down from a great height, and executed with th astonishment, as well from the art disployed as from " magnitude."§
The corresponding paragraph in the "Wars of 10 Jews " is as follows :-
"The first gate of the Templo was 70 cubits high by ued the heavens, espry may open and every whero visiblea front was covered with gold and every whero vigh ond through it
eflrst part of the house itself, which was the largeat as everywbere visible, as well as those parts about the ner doors which were also covered with gold. at the gate of this Temple, ns already mentioned, was nil
orered with gold, as was the whole wall about it. It vered with gold, as was in whole wall about it. It
so had golden vincs upon it, from which elusters of sapes hung down equal in beight to that of a man." $\|$ These passactes are too rhetorical for the puroses of n restoration, and tho heights, as usual ith Joscphins, arc very much oxaggerated. ho Talmud is, in this instance, at least, much oro exact
's The gates of the propylon were 40 cubits in height and eams of ash or oak. The lowest of these exterided cubit either way beyond the gillars of the doorway,
hile the one next above this was 1 euhit longer mither hile the one next above this was I euhit longer mifher
ay than that below it, so that the upper beam of all exay than that below it, so that the upper beam of all excourse of stones.
Transverse benms of cedar (in the Venctian edition of Ell of the Temple to this portico, or propylon, to suport it -literally that it might not start from the perendicular. "Golden chains were buaft to the beams of
he portico, by which the candidates for the pricsthood
 i. 14. And the crowns shall he to Helem, sc., for a " Aemorial in the Temple of the Lord,"
A golden vine was spread over this gateway of the Yhoever rowed a leaf, or grape. or hunch of grapeq, rought and suspended it from it [the vine]. Eliezer, the on of Zadol, says, it thus happened the 300 priests were old off aa
cmoved.
From these paragraphs it seems perfectly rident that the ohiect therein described was not door or cateway in the ordinary sense of the dorm, but a frontispiece or propre partly erm, hut a frontispiece or propylon, partly in rood, an pary whe with the dimensions given in the Talmud it does hot, seem that it could in any essential respect be lifferent from the representation of it in the ninexed woodcut. In so far as the restoration $s$ concerned, it is not of the least consequence whethcr the transverse heams of support were of stone, as the Venetian copy has it, or of wood, as they are said to have been in all the more modern editions I have had access to. If of wood, they wonld have been mortised into the five beams. If of stone, the ende of them are the square blocks over the pillars secn between the beams.
The pillars were certainly in stone, and it is probable that the square block represeuted as

* Forming Appendir $I$. to the second edition of my wort on "Tree and Serpent Worship.
n. 295. $\ddagger$ The trauslators of the Vulgate, and of our English version of the Bible, were so entirely gnorant of archi-
tecture or of architectura! terms that it is impossible to restore 8olomon's Porch from their translations. Our
knowledge of the subject has so immensely increased of 4 knowledge of the subject has so immensely increased o
 with great conldence of success. § Autiquities of the Jews, xy. 3 .

Diagram of the Gateway of Herod's Temple at Jerusalem.
the contre of them was also carried hack to the wall. Indced, without those constantly recurring noints of support, the whole could not only have been, but would lave looked frail and unstable difficulty either in the construction or in artistic effect.
The golden chains that hung from the heams are easily understood. Their forms are repeated so often and in such variety in the stone archi. lecture of the East, that many other varieties might have heeu chosen besides bose repre culty the diagran the in culty. As, however, the drawing is meant to oxplais tho construction, not do inustrate the realist or the oud, 1 have represe ho reanistically and withont leaves, thoug nwar and la and leaves an ina would, however, be easy to add thesc, and to douhle the numher of bunches of grapes if necessary; but, as it stands, the dagram is pro hably sufficient to explain the form and con strnction, and to show that it really was only a gigantic and elaborately-adorned trellis placed in front of the Teraple to support the Sacred Vine.*
From various indications it is easy to perceive

* The vine fs used roalistically, as in this diagram, as on arcaitectural ormamont to the doorway of the Temple (De Vogut ", Syrie Coatrale,' Flates II. and III.), end both realistically and conventionally in the reeently-
discovered Palace of Chosroes at Meshita ("Land of Moal," by Dr. Tristram, woodcuts 22, 38, and 39). Where are the conuecting liulis between the two ${ }^{\text {a }}$
that such a form of architecture must have heen familiar to the Jews at the age of Herod, even supposing that the frontispiece of Solomon's Temple was not of a similar construction. There re, for instance, in the British Museum, a series of imperial coins of Cyprus, all of which represent, with more or less distinctness, just such a gateway, as forming the entrance to the Temple of the tutelary goddess of that island. The

Coin of Septimiks Seterus.
ven more like the gateways at Sanchi than that at Jerusalem, inasmuch as it is attached to a circular enclosure, which, making allowances for the defects of coin representations of architecture, may fairly be assumed to he intended for a
In this instance there seem to have been five hearas, as at Jerusalem, but the two upper and two lower are joined together without any intermediate blocks, and it is only the centre one
which is separated from the others by these cha racteristic features whether in wood or stone. The interest of this form of gateway with reference to the present work arises, in the first instance, from finding an almost forgotten form Cypras, which attained its highest development at Sanchi, but which now prevails in China and Japan and the Indo-Chinese countries to an almost unlimited extent, thourch long ago for. gotten in the West.
The form is alono snfficient to prove that these
The grateways were originally always execnted in wood, bnt we have also numerous representa. tions of them in the has-reliefs at Sanchi and tions of them in the has-reliefs at sanchi and Amravati, which are unmistakably wooden erec-
tions, without any admisture of the more pertions, without any admisture of the more per-
manent material. The example at Jerusalem manent matelial. may thus be regarded as a transitional example,
being composed partly of wood and partly of being composed partly of wood and partiy of maintain their positions ns tho first examples known to have been wholly ovecuted in stone.
It is also curions to ohserve how nearly the
Syrian and Indian examples approach each other Syrian and Indian examples approach each other
in date. Herod began to rebuild the Temple in. in date. Herod began to rebuild the Temple in the eleventh year of his reign, nineteen years
hefore the Christian era, and finished it in eight hefore the Christian era, and finished it in eight years. This gateway would certainly have been one of the last adornments added, if, indeed, it is not wholly suhsequent; lut at all events wo may assume that it helongs to the tenth or twelfth year preceding our era. The Sonth Gateway at Sanchi, as explained in the text, was eroctell during the reign of the first Sata Karni, A.D. 10 to 28 . The two oxamples are conse. quently certainly within forty years of one
another. They may be even more nearly cenemporary.
The great interest, however, of this Gateway, as connected with our present subject, is rather inythological than architectural. At all events, it certainly does not seem to he stretching the argument too far to say that the Sacred Vine, a reminiscence of that Tree Worship which, under the name of tho Asheerah or Groves, played so jmportant a part in early Jewish history anterior to the time of Mezekiah. Whatever its meaning may have been, this Vino cerof the worshipper on approaching the Temple of Jerusalem, and it was for its display that this richly-adormed Gateway was erected. Nor can richly-adormed Gateway was erected. Nor can
it be said that an image, to which it was considered a meritorions religious act "to vow a leaf, or a grape, or bunch of grapes," and which leaf, or a grape, or bunch of grapes," and which
was entrusted to the charge of 300 priests, "Fas was entrusted to the charge of 300 priests, was
ib mere architectnral adornment. Whether it symbolized the heavens, as Josephns seems to insinnate, $\dagger$ or whether it had any deeper or
more recondite meaning may be left for future more recondite meaning may be left for future
investigations. In the meanwhile, however, investigations. In the meanwhile, however,
there is certainly more in it than has hitherto there is certainly more in it than
heen "dreamt of in our philosophy.

Jayres Fergusson.

OFFICIAL REPORT UPON BRTCKMAKING. Some interesting information is contained in the reports, just issned, of the fastory inspectors with regard to brickmaking, which, until the passiag of tho Act of 1871, did not come under the supervision of these inspectors. Brickfields in England, it is stated, are for tho most part
small; hut near the banks of the Thames, as small; hut near the banks of the Thames, as far down as the mouth of the Medway, and np that river to Maidstone, there are a nearly continuous series of larger fields, in which the Factory Act Extension Act has for some time past been satisfactorily ohserved, Several instances of hardships suffered by childrou are mentioned, and amongst them that of one gentleman, now managing director of important works, who computes that, working from fivo a.m. to nine p.m., he, while under nine years of age, lifted 45,000 bricks per week, each hrick weighing ten pounds, or over three tons per 1,000. He was frequently so exhausted that he had to be carried on the "moulder's" hack to and from his home, three miles' distance. Objec. tion was taken to the operation of tho Factory
> *Tho commentators are generally agreed in consideriug this expression as by herbolical, and auggeet 30 instead od
$30 h$. There is. however, no mistake in the words of the sext, nor, so far waver, no mistale in the words of the
tean any improbability in the uumber assigned.
> + The expression in the "Wars of the Jows," v. 4
it must he confeased, scems to refer rather to the eurtain which hung from it than to the strueture itself, buttain the
words quoted ahore from the "Ansiquitiea" scem to
refer to the gatemay.

Act in regard to the hrickfields, on the groand that this was an open-air occupation, carried on daring only part of the year, and liable to con. stant interruptions by wet weather; and the weight of the objection founded upon the effect nised by yielding a concession to hrickmakers to work occasional overtimo. The factory in. spector, however, states that the wonder is tha ficient. On a fine day the work is carried on with almost feverish activity. Sunhnrnt men desperately ran their top-heavy barrow-loads hour after honr under the heat of the sun; the little barrow-loader (happily now not a ehild of seven or eight years of age) is busily at work clay, and supply the moulders next to them clay, and supply the moulders next to them.
On a wot day, however, all is changed. Tho scene is desolate. Not a brick is made. Beforc the application of factory.law, the custom was to make up for this enforced idleness during we days hy some fifteen or sixteen hours hard word when the weather was fine; and the questio was, could brickmaking he profitahly carried on if these hours were cut down to those which
constitute a Factory Act day. Apparently the answer has been given in the anmative, it being shown that when work was thas pressed forward it was not simply to make up for bad weather, hut for sheer idleness and time wasted in dissipation. The "hrickies," it appears, are not the most scrnpulously steady class of men and possess a lively appreciation of the delights of "heer and skittles." The amount of beer they consume seeras almosi fabulous. One master has allowed ten pints of heer a day to makers are publicans and some even hase public-housos in their own fields, in order that they may extract profit out of the idle loours of their men. With regard to the usual length of authority that $10^{\frac{1}{2}}$ hours will get out of a man all the good work that is in him; and this is suggested by the fact that a large brick company in the Kent district are erecting a great numher. of cottages on their ground, rather than impair the efficiency of their operatives by allowing them to travel some distance to and from their homes. A large brickfield is not a place which facilitates inspection by the officer appointed under the Act. The huts or "stools" may perhaps ho miscellaneously situated on some tawny Hat, in or around which a greater part these js, practically speaking, a separate "factory," in which the gang, possihly composed chiefly of the family of the "moulder," is lired, paid, and controlled by him. He, in his turn, receives so much per 1,000 for the bricks, and is obliged to get his profit as be can. All husiness is transacted at a central hat, called the " office," through the "stools," and here the moulders attend, shonld they hare to hring children to he registered, or school.hooks to he inspected. With regard to the brickfields of Eissex, Suffolk, and Noriolk, they do not appear to he of sufficient dimensions to rank under the Act as "factories." The inspector who visited them states that he found labour "in its undisguised form," severe for men, and cruel for children. The youngest child he fonnd was a boy six years of age, who worked in July from 4 a.m. to 8 p.m.! Pugearth is trodiden by children, who aro kept to work tomperiug a heap of clay from morving till night. Thoy also serve tho maker with clay, being ohliged to lift quantities nearly equal to their own weight. They have also to wheel and the inspector states that he has seen douhlemade harrows, capable of talingr off fifty hricto at a time, wheeled away hy two children, one in the shafts, the other acting as leader, and vigourously pulling, harnessed like a little donkey. It is very unsatisfactory also to note in connexion with these hricktields, that the wages are paid in the public.house. The laudlady calls out each man's score, the week's earnings simply changhands from landord and hrickmaker to the landlady, and the poor children have to wait for their small portion autil a balance is struck. Hahits of drunkonness are thus fustered at a very early fre. Winh regard to the excessive int emperance of these hrickmakers generally, a remarkable statement is made, viz., that as muoh as 15 s , a reek is מaid by one man for drink, whilst 5 s . support of the housebold.

## ST. PAUL'S CATHEDRAL.

SPECHENS OF TIE MROX WORK.
Gexeral views of St. Paul's are numorou enougb, hat representations of its raried and multitarious details are scarco. We propose fron time to time to give a few specimens which wil serve to show the beauty of many of them. Th ravines, illustrated by the accompanying en St. Paul's Crom drawings from the original hrated Smith M. Tijoue, who executed all th heantiful iromwork in the cathedral. It is to b regretted that we have so little information of his artist. Both in desigu and workmanshit he wrought-iron work hero as a whole is no urpassed in this country. It seems more thar prohable that Sir C. Wren himself gave sketche surgestions for this work, as be did for th other details in the cathedral.
Tho larger drawing represents one quarter panel, filling the rpper part of one of th doors to stalls, and drawn to one-third full size the smaller one ropresouts a portion of th chancel railings : a scale is shown to this las for convonience.

## GONVILLE AND CAIUS COLLEGE, CAMBRIDGE.

Tue new buildings at Gonville and Caius which we give an illustration of the King' Parade front, were completed ahout three jears ago, and consist principally of follows' and undergraduates' rooms on taree sides of the first court, with frontages to King's Parade Trumpington-street, and Trinity-lane.
For tho benefit of the general architectura offect of the new buildinge inside the court, the fellows relinquished the retirement of thei private garden, which is now surrounded hy low halustrailed wall. The first court, or Tree court as it is sometimes called, is thns made twice as wide as it would otherwiso have been twice as wide as it would otherwiso have been
with great advantage to the hnildings; the general effect of which is very grood.
The external walls are huilt of Casterton stone, with dressings of Anctster. The style adopted may be callod Jacobean, with the addi tion of a French clement or two.
The demolition of the old huildings which occupied the site, involved the disagreeable necessity of removing one of the three cele hrated old gates of the college, the Gate of Fumility." A new doorway, howerer, ocoupies the exact position of the old gate, and, it must bu said, the antiquarian interest of the latter had been so greatly destroyed hy successive reparations iu compo that very little of the original work remained.
The new buildings were carried out ander Mr. Waterhouse, whoso work included a partia renoration of the mastcr's lodge, and an addition to the chapel of an apsidal end. The glass by of the latter are fllod with stained cartoons by Mr. Henry Holiday, and the reredos has lately been enrichod with mosatic frguresubjects by the same firm. The general consuactors were Messrs. Trollope.

## SEWER VENTILATION

Ste, While practical men are debating what is the
best way to ventilate sewers mod draias, it may be well to ask s question
in their thoughts.
Dues not the vent-lation of sewers and drsins increase sery con*iderubly, and to a dangerokn extent, the amount or evaporation and evolution of noxious gases? retort producing foul gases, surely it is much more so when not only is free egreas, siforded to those gases, but increased means are given for their formation, No doubt the stagnant atwosphere of saturated with its vapour, but a
frvourable to era with vaple to eraporation, and
to be trusted to issue trom shat, it is ovidently thought, is elear this agstem of diluting \& peisont by mindows). It the air we breathe cetnot be trasted too far. 0 ang it in years siaco we thought we could difluse safely is our rivers all the liqnid alid solid contents of onr sewers, but
who will advocate that plan now? The Thames wns Who Fill advocate that plan now? The Thames was a
notahie exnmple ro be aruided, but did not the fact of its notaile exnmpie to be avoided, but did not the fact of its
being so well ventalated contribute much to the obnoxious
condition of the surroundiog atraospliere? condtion of the nurrounding atzasosphere?
I have an opinion as to the direction in whin
I have an opinion as to the direction in which the sola-
tion of the whole problem may be found, but as it does and of the whole problem may be found, but as it does
not assurne a practical form I refitain from occupying

## VILLAGE CHURCHES.*

I mad the honour, last October, of rcading Ieforo the Church Congrcss at Leeds, a paper "Modern Town Churchcs." The suhject en which I have heen requested to address you, lthough it follows naturally as a sequel, must lecossarily be of a narrower compass, and of
ess vivid interest. I shall, therefore, I trust, pardoned if the remarks I have to make npon he present occasion aro somowbat desultory in heir character; that they will also ho in part
emewbat technical will not, I hope, nccd an emewbat technical will not, I hope,
pology hefore an Architectural Society. But althought the churches of our great towns orm a subject of more esoiting interest; lthougb the neglect from which our city popuitions are suffering renders the theme one of he widest practical importance, and the oppor: unities which such huildings afford for grand Ceets, stimulate strongly the architectnral magioations, thare is yet a point of vicw from
thicb the villago church has an interest all its wn.
It is not therefore unnatural that our village lurches should be the especial pride of
ational architecture. Our cathedrals, ational architecture. Our cathedrals, with ume noble exceptions, are surpassed hy the
reat churches of Continental cities ; our abheys, hemselves contres of agricultural life, which ;ere once the glories of Tingland, bavo passed way, hint the village churches still remain, so ar ard them, as the finest monuments of the rchitectural genius and the practical piety of he past gencrations of Englishmen. The village ; next to the fauily, the simplcst and least rtificial of all the forms of social organisation, nd it has continued on, througlı all the changes hich religion and politics have undergone, in ially of the same cleinents which constituted to little primitive community from which it id at the frrst, the unit of all political associa. ion. There is, moreover, as far as I know, no
ion ountry in Europe where the village has retaiued o much of its primitive importazce as Evgland. Vowhere has tho influence of the great towns
eon uutil quite recently so little felt. Tho luglishman is after all essentially a conntry. mon, and couutry life is not more the birth. ight of the gentileman than it is tho aspiration t' the successful man of business.
Tho villago olureh has, hesides, a peculiar uterest of its own. It is the only public huild. ng which a village, as a rulo, possesses. It is he central poiut of the common lifé, the building
hich typifies the oneness of the littlo com. hich typifies the oueness of the littlo com. ir their cathedral, their town.halls, thoir market alls, their assize coucts, their theatres, all con. ected in different ways with the common life to 'hich they minister and which they symbolise, at the village has only its clurch and its urchs, and with an eqnal right, as members of no littlo society, of which tho church forms aturaily the centre
These reflections may serve to iuvest our ubject with a proper dignity. Thiey are coniderations which wero never absent from thi ar ancieut parish churches. Thoy are not Iways, - I regret to say,-so prominently in at minds of thoir saccessors ; and this will lead onee to a consideration of a very practical wuked. I mean the great importance of the loice of site. Tho old hailders placed their harches with wonderful skinl. In the flattest to least accentnated country, they alway ucceeded in giving their building something of haracter and importance, from a judicious
elention of tho ground. They almost always nd some little kroull, some slight elovation, -hich might give to the churce an advantage orthy of its character, and impart a certaiu
urount of dignity to the simplest epection urount of dignity to the simplest erection. his point is far too much neglected now
judge of such matters, is not called te able judge of such maticrs, is not called in until e sito has been secured, and he has thon to
ake the best he can of it. The sito is too often usoless corner, which can be bought cheep, e presented without sacrifico. The archi. dily, too, I aun bound to say, fall in only too From a paper read by Mr. G. G. Scott, M.A., at the
ting of the Lincola Diocesan Arubitectural Sooiety, Ieting
buildings as if evcry site was an absolate plane. Shonld the site possess a decided slope, or any earth is to be remored from the elevated portious, and deposited to fill up the lower ground Tho building so crected has the effect of a toy. church, set down upon a little tray prepared for t. Yown feel that the designer wonld have set it down upen the level if he could, or you may very easily fancy that the whole thing has been bourcht, as it stands, from a wholesale dealer in ready-made churches. The look of au old
villago clurch is something quito different ; the villago church is something quito different; the
building and the site here beloge to each other building and the site here bologg to each other;
the church scems to grow upon the hill side of the luoll, grasping, as it were, the ground with its great buttresses, hiko tbe spreading roots of n old trce. You could not readily imagine it on any other site; it belongs to the place just as much as the aged yenfs which grow boside it. Much may he dono by help of $a$ wcll.chosen site, even with a poor huilding, and this is one point which I would urge, especially upon those who do me the favour to listen to me te-lay, because the choice of site rests in most cases with the and yentry rather than with the architectergy is perfectly astouishing what a difference may he which a jadicions choico of sito in the effect his so building will produce, and in no case is we have no imposing dimensions to give diguity of themselves, and where nevertheless the inuportance of the building, as the centre of the vhole village, renders it necessary to give to it ho utwost nccentuntion that
A central tower placed at the intersection of he transepts is seldoru advisable in a village church, excopt where, frorn sonno peculiar cirprecedence the monnmental character takcs precedence of tho practical consideration of convenience, yct that form of it, which is fre-
quently found in Normandy, where the tower stands oper the chancel, and the sanctnar proper lies east of it, is often very suitahle, aud always heautiful, if only one point bo attended o, tho eastern limh must not he too short.
ndced, our sanctnaries aro generally made too short: they are too often crampod to the mini hum which the bare neccssities of administrating the communion require, and uven the clorgy, if there are soreral, have often great
difficulty in avoiding au nnseemly jostling. This and many other faults of our moderu chnrches aro encouraged, I na sorry to say, by the Church Building Societies; and until they alter heir system, aud give their grauts on the total of fixed pews which can he squeezed into thom, it is, I fcar, useless to preach inprovement in this respect. It is none the less our duty, as more pert, to protest against a system to which factory character of any thing clse, here uusathe attributcd. It may be laid down as a general wo, hat our modern chancels are too short: too short for a, well-proportioned architectaral the ceremonies, and it is certsinly the the of possiblo policy to curtail them still further, both in appearance and in actual arca, hy adopting what is called the apsidal terminatiou. I should bothe last to deny the marvelloas beauty of complete cheret, with its processional path swecping round it, and its radiating chapel Bat there are several thiners to tho Lady Chapel. buen ore are several thinys to be horne in mind One is the comest dificulty of rion or sinal apres. One ioll. preat dificuly of rookng them salisactorily. They really require groining. Ido ou think that even those French oucs which the attompts which have been made to accom nodate english types of roofing to apses, are in yy opinion great fanlures. Then, again, you equire very much greater height to givo dignity the interior. Tho great cast winuows of our English type may spring at the level of the root eaves, and sweep holdy into the gable; the highest point of the windows of the apse must bo somerway below the eaves. Unless, therefore the height is very much greater, the effent has nothing like the dignity of the square eud. The internal appearance, too, is always meagre where tho light is admutted, as necossarily in an apso with a wooden roof, at a much lower level than hat of the highest part of the interior. I know tbat considerations of artistic effect weigh hut little with architects who are thinking of the gracefal swcep of their compasses upun the plan, and clicnts to whose ears "apse" and
"apsidal" have a pretty ecelcsiological jingle beight, and the fact that you require greater hivght, and therefore greater expense, to pro duce an equal result, ought at least to appea to our common sense. It should further be rememhered that in an opsidal chancel, the apse mist he ia daition to the length, not in deduc tion of $i t$. The chancel should most certainly be as long as a square-ended one, with the apse in addition.
In refitting an old church the high sercen is, new bnilding imperatively required than in a may often be allowed whurch convenience There wonld be less ohjection artistically to low screen if we vere allowed to erect ahove it a rood-beam aud rood. By itsclf a low screen looks insignificant and wantince in aipnity, a is hant a very poor and enfeebled descendont the Iconostasis and the Jubé There is notwh the cbancel-screens had in all $n$ ase a practiol purpose-the protection of the chancel from thonghtless or profune intrusion. This, too, was bishop Laud, of altar-rails and gates. were ordered to he sufficiently gates. These tho cntrance in to the senetury of do prevent if we may judge from picturcs, were as frequently to he seen in English chnrches as they still are in some Hichland kirk?. We have alnost abandoned the use of close and gated altar-rails, and no ono will regret the change hut this makes it only the more neccssary to have an effectual fence at the chancel does, the sanctueey dy to see, as one often ladies the sanctury havaded by a party of ladies and gentlemen, howeser ecclesiological, criticising the reredus, and handling cariously the emhroidery of the frontal ; hringivg to mind the lino which ends, "whero angels fear to the chancel will beconse mure felt as our chure to become moro used. I hope the day is not very far distant when it will be quite the exception to find a parish church locked up. It is told of Thomas a Becket that when ho was withdrawing iuto his cathodral followed hy the murderons bauds, the clang of whose armour was andihle along the cloisters, a monk who was with him closal the door by which the Archbishop ha eatercd tho church, and begnn to lock and bar Thomas stopped him at once, "Tho churcln," suid ho, "is uot a enstle ; it shall nevor be hared up upon my acconut," and ordered the bolts to be unfastered. Upon what trivial grounds, for what paltry considerations, is that too generally done now which St. T'homas, even in the extreme necessity of self-defence, forbade. It is pleasing this corve that the nurnher of churches, even in everywhere upon the increase hut it is open is undesirable to leave the ohancel and coptainly wholly umpoty eren worn. it fur carcless murusion, or naves of churches muy bo to bo loped that the serviceable for ther purpose the and more direct wardis I wasposes than thoso of sion at a misionary meeting licld in the nave of felt felt that the surroundings gave a toue of dignity room of an hotel, woind a concert-hall or the hallif the an hotel, wond not have supplied, And in the elucation of this country slould unfortutrue religious tenching, I do not think from any true religious tenching, I do not think that anyhe children has ine naves our churches covid ian instruction which the for thaticschools had ceased to supply. The iuftnence of the place wonld go long way to take off from the dryness of school. work, and would he the hest possible set-off gainst the obvious disadvantage of the divore becular and religious edncation.
Thero are somo principles common to all periods of art which modern architects, in mero Capice, or in fretfil striving after novelty, sometimes venture to depart from. Ever sinco civilisation commenced it has been the rule to finish anterior of the huilding with all possihle care. Grery ancient building, whether of Egyptian, Greek, Rorman, or Medioval times, was carcfully aced internally with wrought stone or plaster with marbles and mor, or it might he encruste tho iuterior of the huilding as rough aud rugged as the exterior generally must he, has, from n very early date, been abaaduned by civilised man. It has now heen revived. The fashion to which gnorunce and necessity obliyed our rude foreathers, is now adlopted hy many of us of choice. This queer renction against modern refinemen

RAIN-WATER TANKS.
wonld perhaps he intelligible as a mere reaction, if it were not oddly enough confined to church architecture. It is very difficult to see why the interior of a church shonld be made, as it often is, to resemble an ancient cairn, or a modern grotto. We see new churehes whose interiors are faced with rough stock brickwork, relieved, perlaps, by lines of red and black, after the marmer of theso-called Turkish1 Baths, and others where the radest rubhle is pointed with the blackest of artificial mortar, ingeniously combining the harshness of harbarism with the disingennousuess of civilisation. It is a duty to protest against making onr churches the field for the exhibition of such ragaries. Let those who satisfied with feeble refinement, can find no relief, hat in still weaker affectation of har. barity, confine their tastes to thoir own drawing rooms. Let them build their own rooms with rough brick or uncoursed rabhle if they like it hut let our churches be spared. Unfortunately, the evil is not confined to new huildings. Numbers of fine old churches have been stripped internally, and reduced to a nakedness comprue with which Puritan whitewasb is decency.
In many small churches the stained glass must always be tho principal point of the decoration, but so much is spent at the present day upon reredoses, that it is evident that there is room painting admits of. The money which is spent painting admits of. The money which is spent churches, would have procured a real work of churches, would have procured a real work of art full of instruction as well as of beauty, neither of which is generally aftorded by the altar-pieces at present in fashion. Indeed, the aim of most rererloses seems to me to be, to ex. press as little as possihle with as much parade as possible, with most of them it is as bard to describe of what they consist, as it is to ascertain what idea they are intended to convey. They are not exactly arcades, and not exactly panels, not exactly walls, and not exactly niches. They have about them something of the shrine, and something of the sidcboard, something of a tomb, and something of a mantelpiece; somctimes yon are surprised by a little bit of half Byzantine Mosaic, and sometimes by an ingenions arrangement of Minton's paving tiles. Nothing comes amiss provided it makes a certain amount of show, does not hide any part of the enst window, and expresses nothing in particular

## LEAKAGES IN WATER.PIPES.

american society of civil exgneers.
Ar a meeting of this bociety, held in New York on Marcb 19th, Mr. Joseph Whitney, C.E. of Cambridge, Mass., presented the subject of "Leakagcs in Water-pipes," illustrated hy specimens of defective water-pipes from the Camhridge Waterworks. He desired to make a simple statement of his own operations and experiments. The great and growing increase in the consumption of water is a matter of tho first importance in the management of waterworks. Scarcely a report relating to waterworks is issued which does not refer to it, and as something quite unaccountahle, still no systematic effort is mado to ascertain its caase. Some years since his attention was called to the snh. ject in Cambridge, where, for three years preceding the water-pressure had been growing less,
duas cansing marh inconvenience and insecnrity In case of fire. This was ascribed to the great numher of users from one main, an 8 -in. pipe. in a particnlar honse : the water scarcely rose to the second story, by night or day. After inquiry, a series of observations were made with syphon-pipe and pressure-gauge, to dctermine the canse. These were made in the morn. ing, whon the consumption was nearly nothing; and in one case by shutting off certain sections from the main, say a 4-in. or 6.ia, pipe, a large leak was revealed where the pipe, laid in a street filled with oyster.shells, had parted. In another case, when tho gate was closed, the water in the syphon at once rose 16 ft ., equal to about two stories of an ordinary house, + the pipe, about 600 ft . long, and laid upon a marsh, was examined, and the leak fornd in a joint, where the two parts had been enticely separated hy a setticment of one section. Thesc and other lenks dotected similarly were closed, and thas, with. ont any increase of size in the main, an additional head was secured of 35 ft ., which gave a full bupply to each house in that locality. Obbervations were afterwards made upon the wator in the reservoir, in the night-timo which showed still a leakage. By continued experiments upon the pipes throughout the city, nearly 200 leaks of from 1,000 to 2,000 gallons each per bour wero found. The neces gary repairs per bour wero found. The necesdaily consnmption per head was rednced from 85 to 35 gallons, which is not more than one half that in most citics. Leakage of this character may exist a long time without being known; thns, it may start when the water is first let on, and the water find a passago through some blind channcl into the sewer ; it will not be seen at the smface, unless thus upward and tward is the easiest course
It is quite prohable that this subject concerns other cities than Camhridge, and furnishes a satisfactory reason for the great increase in the consumption of water, and the corresponding growing demand for supply, which more or less embarrasses puhlic authorities. It is said that in the city of New York, the consumption is about one hundred milliou gallons per diem; if so, be was sure at least fifty millions were waste through unrecognised leaks into the sewers and surrounding rivers. In Boston, more than seventeen millions of gallons are supplied, where eight millions shonld suffice. It is a fair presumption that one half these great amounts being bnt waste, its corresponding cost in the construction and operation of water-works, may he saved: surely examination, complete and exhaustive, should he made to determine whether this is presumption or fact.

Refreshments at Public Places.-Perhaps the biggest price ever paid for a refreshment contract has just been given by the restanra teur of the Crybtal Palace, who has commnted the payment of 2 id. a head on every visitor to the Palace into a fixed annual sum of $25,000 \mathrm{l}$, As this must, of course, come out of the pockets of the refreshed, the question, after all, arises whether the inducement to the public to go to a place where they would be well and reasonably fed, world not bring a greater return to proprietors than an anдual subsidy such as that mentioned.

## RAIN-WATER TANKS.

If you think tbe above illustrations of a rain-water tank, with filtering compartment, which I am now constructing, of any scrvice to your correspondents on this suhject, they are at your disposal. I believe the principle of its construction is not an uncommon one, althongh I know no example of its application

Thos. Diswidny.
THE ORUOIFORM
SUN TEMPLE AT CALLERXISH, ISLAND OF LEWIS.
The perfect preservation of this curious and remote prehistoric circle of standing stones, with its avenue from the north and its rows of standing stones towards the east, south, and west, afford as graphic an illustration as Stonchonge of sun worship in these islands of the sea; and mas not such a perfect cruciform erection throw " dim religious light" on the present "orienta tion" of our Christian worship and symholism in church architecture?
The following description, with measure ments and observations made on the spot, may be of some interest to tho tourist and the arobzologist. "These phantom forms of anti diluvian giants," from their dread weird. like character, scem to have heen left untouched by the many generations of islanders who have passed away. Since the ancient heathen wor shippers left this "high place," - a bed of pcat moss 5 ft . thick, only recently cleared away by tho proprietor, Sir James Matheson, had grown ycar by year around the base of these standing stones. From a measurement made 150 years ago, by Martin, it would seem that less than the sixteenth part of an inch was about the yearly growth of this peat-moss; but many years may have elapsed before the formation of moss beran upon this knoll, after it was left desolate.
The only relics of the forgotten worshippere found when the peat moss was entirely removed were two carious, built, sunk altar-chambers on the east side of the great gromon or centre stone of a circle, having a built drain also from the same flowing towards the east. The standing stones are not hewn or dressed in any way, but ars great upright blocks of greiss, the prevailing rock from Butt of Lewis to Barra Head. The dimensions of the great stone gnomon are 16 ft .2 in. high, hy 4 ft . broad, and 1 ft . thich placed in the centre of a circle 40 ft . in diameter, formed of twelve stones averaming from 10 ft t to 13 ft . high. From this circle a row of stones projects eastward 38 ft ; another row southward 69 ft ., and another towards the west 43 ft . Then we find the grand meridian avenue from the north, extending in that direction from the circle 270 ft ., formed of a. donble row of stand ing stones 27 ft . apart. Walking up this avenue at twelve o'clock noon, and looking towards the groat centre stone while the meridian sun throws is rays right athwart it , one can hardly fail to ee the great object for which this rade memorial was erected. Whatever aspirations may have attonded the use of the curious built chambers with their drain towards the rising sun, they certainly convey a graphic idea of what the Bihle tells us ahout the sacrificial rorsbip pai to Baal.
Martin gives an acconnt of the extinction
the fires in the Western Islands, as in Ireland, - Baaltine-day, i.e., the day of Bual's fire: only I payment of the tithes to the Druids were thM es rekindled in ench family, and nover till en. man to be in a great strait they weuld say, Ie is between two fires of Bel,' wbieh in their ograge they express thns, Eldir da hin beaul, Bel. Those contigeous fires were also used or purifientions and expiatory punishments. artin's Westem Istanls of Scotland, p. 105. are we bave an idea of the use to which thes 'o sunk aldar-ehambers might hove heen pa prehistorie times. Their position and con Edinburgh, $\qquad$ Jayes Kerr.

ROPOSED AQUARIUM FOR BASTINCS. At the monthly meoting of the town conncil Hastings, on the 4th inst., an important yommondation, presented hy the Roads Com.
ittee, was adopted. Owing to the increased afio to and from the pier, it has heen thought cessary to widen the roadway nad parado, by teading the sea-wall to take in the recess now isting epposite White Reck.place, within two
indred yards of the pier. A report, prepared - the borough survoyor, Mr. W. Andrews, put e eost of a wall of stone and concrete at pool. As a triangulnr space, about 630 ft . arg by 50 ft . wide (tapering to 10 ft .) would he do the westward noder the oxisting parade, r. Alderman Howell sugrested that a base ont floor-space might be created, in wbich en uarinm, tepid salt.water haths, or aimilar
quisites for a marine resort, might bo formed. te proposal having met with tho unanimaus sent of the corporation, the cominittee recom. ered for the bosi design for utilising the aee, whilat providing for the widening of the aoe, whilst providing for discussion arose as to e restrictions which should be put upon the
mpetitors. It was stated that the comnittee mpetitors. It was stated that tho comnittee
sired to leave the matter entirely open, the uneil itself forming an opinion whether the on would he likely to cause damago, by cowing the sea on the adjacent parade, or huld he injurious to the lodging houses oppoe, by the adoption of any erection which ould be higher than the present level of
o parade. The preparation of details was mitted to the surveyor, with instructions to vertise in the Builder and other jouraals for signs and plans.

## RAILWAY WASTE LANDS,

e Metropolitan Railwny Company bave at hgth begun to dispose of that portion of their ste land which lies along the Kiug's-crossanre, and the steps leading ap to GrauvilieHare, has been taken hy Mr. Kellond, builder, Puddington, and the workmen are "putting foundations in." That expression in this $t$; for, instead of putting "in," it is putting in" that is being done. All this ground was oken up to make the tunnel for the railway, it has been lying wraste for the last fifteen, sixteen years. It has long served as a play. ound for the juvenile street.arab and king-no-man's land, the police declining to interfere one side, becanse it was "private property;" the company's servants declining, on the rer aide, to moddle, hecanse it "was the busiss of the police to maintain order for the blis." In the onner immedintely adjnining Del.ventilating shaft for the railway wharf arel. ventilating shaft for the railway, whid
l1 have to bo curried np as the housea rise. Tbe first batch will consist of five eight-roome Tbe first batch will consist of five eight-roomed
uses on the south side of Granville-square, to slace those that were removed for the railiray. ore are to be ahout forty honses in all, mostly the small tenement chavacter, with the excep.
n of the eight-roomed ones, which are intender n of the eight-roomed ones, which are intended be let for 50 l . a year. This rehuilding will Cranvills-pluos, which, on aecount of thee Cranville-pluct, which, on aecount of the owds of dikorderly idie boys, have long been It is satisfuctora to
It is satisfactory to find that a cbango for the fter has come over the policy that so long
led the land management of the Metropolitand

Railway Company. All along from opposite Clerkenwell workhonse, - that worn-out, decrepit disgrace of the parish, -a well.built line of houses and shops is arising. In some of the front elevations a jjoining the eorner of Exmouth. street variegated courses of brickwork und a ittle ornamental setting may bo observed. This is more espeoially the ca e opposite the nowly. erected fire-engine station at the onrner facing the House of Currection, Celdhath.fields. Along the north-eastern front of the prison wall semo houses have heen huilt, and preparations fer more are in progress.
There is an opening bere for a very serviceable improvement. It must bo mentiened that there is a large carriage traffic from the West, along Cuildford-atreet Ringe from the West, along cildford-stre of the western side of tbe prison wall, up Baker-atreet, Lioyd square, to the roads converging at the Angel, Islington. When angthing special is
going on at the Agricaltural Hall, the steep going on at the Agricaltural Hall, the steep the carringes of all the world the carriages of all tho world of London, royalty of Kiug's Cress-road, opposite the and crossing fing's Cress road, opposite the Union Tavern, there is a very nasty dog's hind.leg tnen, which often eapsizes unmindful eahs. Whereas, if a eurve were taken from the prison corner, over the jutting tongue of Baker-strcet, the danger of the place as it is at present would be entirely done away with. The ground is at prosent uncovered, the railway company having erected a monster boarding, and let it out as a pictured advertisigg station.

## THE TUNNELS IN THE MERSEY.

Sir,-In the "Tunnels under the Mergey described in yonr paper of the 5 th, would it not he an improvement if the two tunnels were o enable the trains to ran hy their own weicht withnit steam, or even without an engine attached, and so keep the tuanels clear of

METROPOLITAN BOARD OF WORKS.
At the meeting of the Board held last week, a report was presented from the Building Act Committee, on it letter sent to them by Mr. fitlds, distriet surveyor of St. Martin-in.the. rection and st. Anue, Sino, in rospect to the for advertising purposes in Wost-struet, Upper St. Martin's.lane. The committee recommended that the necessary proceedings be taken to test the question of the legality of such erections. Mr. F. Fowler moved the adoption of the report, considering it highly dangerous that for adrertising purposes.
Dir. Linwreace said these boards wero very influmable, and might lead to serions conse. quenees.
Afler a discussion, the report was adopted and proceedings ordered to he taken.
St. Paut's.-A letter from Mr . Daw, of the Sewers Office, Cuildhall, was read, containing
tbe following :-
" 1 forng:-
City on Lirected by tho Commissioners of Sowers of the

 and widening of the puhlic wayg nt the north.wnst and
soulh-west enतs of the charehyard, by laying into the publio way anl the land shown oa the ply, and which on al
present enclosed hy the cathedral railing. This railing will he remived from around the opon area, and a line of mentul granite posts, will be placed around hith part no laid into the poblice, way, thus attording not only at lurge
additional aecocemodation for the carriage trallic, hul additional aecocomodation for the oarringe tratio, hul
also gixing increased opportunily fur viewing the splendid
westery westery frout. of this metropolitan church. This inperoveFenience of tie pablie, the Commisiorsmers consider can he
scarculy overrated, is settled to he complered fir tho sum acurcuty overrated, is settled the completed fir
of $15,000 \%$, exclusive of professional expenses."
'BOXMAKINC BY MACHINERY.'
Sir,--Hariny seen a sotter signed "James Brewer" in
your papre of the 2 Sth nttimo, wilh reference to Machinery lor 3ux-Making, hinting that be had iovented something sinilar to my machine lwelve years ago, will you do me
the farour to inurt the following fuct? I immediately toolk sleps tisg facts?
Was such a muchins to be seen, sid seat to Mr. Brewer to hear where it was. This Mr. Brewer conuld not fell,
neithwr could he show the party any drawing of the muchine ay stated.
I beg, in couclusion, to say that I shall protect ms
patent rights to the lulest exteut.
Joshes Womergley.

## THE CITY CUILDS

THE Educational Officer of the Society of Arts (Mr C. Critehett) in his report to tho Conneil on proeeedings in connesion witb educa. tion during the past year, says:-
"One of the principal objects of the canference held
fact year was to eurlearour to enlist the aid of puhlic bodies, notably of the ancient and powerfut City compantes, or Trade Gnilds, of London in this undor-
akking. It was known that many, these companies possessed large rovenues, Bnd it had heen ohserved, especially of late years, that most laudablo
anxilety bad been shown by those to whom the respongi bility of admlaistering these revenues had been com. mitted, that they bhould be mude use of, to a considerable extent, for the public adrantage, and particularly for encournging, in aome mode, the trado or cratt which was
now, or had heen at some recent period, the occupation of most of the members: * Under these circnmstances, and loowing the carnoest desire felt hy the conrts of some for really landahle objects, and not to squander it, as had been too ofter done in former and unenlightened time in useless if not injurious charities, the Council made an appeal to these guilds to aid them in this undertaking. I now. and that notwithstanding every effort to make it public, it is as yet hut little known; Ihat, moreover, it is, or was till recently, perfectly untried, and that, conses quently its success had not been assured, - I Mry, con-
sidering all these circumstances, I think the City com-
panies bave, on the whole. very fairly reeponded to the appesl made to them. The Fishmongers' Company Always amongst the first in every truly liberal under-
taking, has given uq a donation of fity guizean, and the
Mercers, Druper Mercors, Drapery, Vintners, Salters, Coschmakers, Spec tacle-malkers, and Cloth-workers have sil given contri-
hutions. The last-named conipany an Clothe hutions. The inst-named conipany, the Cloth-workers, tave it in contemplation to take a much more important
step and to establibh scholarships in their own branoh of manufacture, but as the details have not yet been sottled I am anuhle to say exactly what will be done, hut $I$
beliere it has heen determined that the Society's teohnological examiontions shall ho made use of as the megno
of deciding upoa the meritg of the of deciding upon the merits of the respective candidates
for these echolaralips."

## EITT'S COTY HOUSE.

For the firgt timo, on the evening of the 6th of May,-when the Ancient Monnments Bill was accopted by the House of Commons,-I happened to visit this ancient relic, a kistvaen, as Dr. Borlase believed it to be, on a hill about a mile north-east of Aylesford, in Kent. It is engraved in Dr. Stakeloy's "Itinorarium Curiosum," second edition, folio, and in Figgins's "Celtic Druids"; also, more aceurately, in the London Arcbæologia, page 116, where the large stone, seen by Stow, the antiquary, A.D. 1590 , re.
curabent seventy paces north-west of this relic, is engraved also. This stone has dis. appeared, but the four stones of the monument remain intact. In Stukeley's plan this recumbent stone is described as the general's grave, and Dr. Stukeley also referred to another stone in the vicinity, marked in his plan as the coffin stone. The writer in the "Archæologia," vol. ii., descrihes the covering stone of Kitt's Coty as being 11 ft . long and 7 ft . wide. It rests on three stones, about 6 ft .6 in . from the gronnd. The two side stones are described as being respectively $8\{$. Wide and 2 ft. thick. The centre stone, placed ahout 6 ft . 6 in . high, 2 ft . 10 in . wide, near the top $6 \mathrm{ft} .6 \mathrm{in}$. high, 2 ft .10 in . wide, near the top ; 5 ft .6 in . in the middle; and 5 ft . at the bottom. It touches the covering stone and the side stones
alan. The recumbent stone may have heen a fourth supporter, or, perhaps, an upright pillar standing apart.
The "Iter Curinsnm" contains a view also of the fallun cromlech of Kitt's Coty, wbich I saw in a field near the road. It is not engraved in this rolume of "Archrologia," hut the stones at Addington, some miles westward, which I saw,
are engraved in it accurately, and these relics are engraved in it accurately, and these relics
are descrihed also.
Crb. Cooke.

## CHURCH-BUILDING NEWS.

Chesterton.--The need of a chnrch in St. Luke's district is so urgent that a committee decided to commence building at once, and to continne as funds come in. Tho lowest tender, thut of Mr.Thoday, of Cambridge,-was accepted, The chancel and three bays of the nave (omitling the nurtio sisle) are to be built for $2,880 \mathrm{l}$, in white Cambridge brick, with stone dressings. The nuruher of sittings will be about 480. This is, of conrse, only a first instalment. It is desirable thit tho north aisle shonld he built with this first portion, and the number of sittiugs thus grearly increased. The estimate for the entire church, omitting tower and spire, is under 5,5001 . Stuford. - The work selected sone time ago for a memorial of the late Mr. Thomas Salt was further restoration of the Norman Chnrch of St . Chad, Stafford, which the late Mr. Salt desired to see completed, as he had hiuself promuted and greatly aided its comraencement. Phane for the parpose have been farnished by Sir G. Gilhert Scott, who restored St. Mary's and Castle Church some thirty years ago. Ther has been mach delay in maturing the arrange.
ments for commencing the work. Sir G. G Scote's principal clerk, Mr. King, attended recently on behalf of the architect, who has lately sultation once to proceed with the work as soon as tenders can be obtained, thongh, from the limited amonnt of the funds in hand, only a portion of it can be undertaken at present. This portion will consist of a thorongh restoration of the nave, outside and in, with the removal of two houses which now from the street, and the erection of a suitable entrance.gateway. These works will, according entrance-gateway. These works will, according
to the architeot's estimate, quite exhaust the money in hand, which at present scarcely ex ceeds 7001 . The committee are desirous, if they had the means, to include in the restoration the re.erection of simles which formerly existed, and without which the effect of the restored nave will lose moro than half its power, because it will be necessary, when the arches and pillars have been renewed, as at present intended, to block up the openings again with temporary hrickwork. This would be avoided if further contrib
Cooltham. - The new church at Cooklam Union is in the Early English Gothic style of arohitec ture, and is dedicated to St. Mark, and designed to seat about 200 persons. It consists of a nave,
nortb and south transept, and chancel. The nortb and south transept, and chancel. The dressings. The roofs are covered with plain tiles, relieved by ridge crests. The walls inter. nally aro stuccoed. The roof is of open timber
work. The seats in the body of the chnrch are of stained deal, whilst the furniture of the chancel is of oak. The windows are filled with catheriral glass, of two tints. The west end of the church is furished with a bell.cot of Bath Weat Brome organ is built by Mr. H. Jones, o heating apparatus by Mr. W. Blowfield Maidenhead. The ironwork of the Communion rails and elsewhere was executed by Mr Tuck of Maidenhead. The church was erected from the design of Mr. C. Cooper ; and Mr. W. Food. bridge was the builder. The sole cost has been horne by Mr. Hihbert, who also gave the organ. Cheam.-The foundation.stone of the new church of St. Philip, Cheam.coramon, has been laid. The site was liherally presented by Mr. H. Lindsay Antrobus, and the plans were prepared by Mr. R. H. Carpenter, architect. Th Dorking) has heen accepted. Thambury. - Littleton Church, Thornbury,
baving become unsafe for nse through age and having become unsafe for nse through age and disrepair, it has been resolved to take it down
and huild another. The now church will he built on similar plans to the old one, under the directinn of Mr. Pope; indeed, the materials of the old buildine will be used in the construction of the new, whilst the seats and internal fittings of the place will be used most probably as they
are. It is ostimated that the rebuilding will are. It is
cost 1,2001 .
Greenhithe.-Steps are about to be taken for the restoration of the tower and nave of Swans. combe old parish church. The cost of restoration, ammunting to $1,761 \mathrm{l}$, is defrayed hy Pro. fessor Errasmus Wilson, formerly of Greenhithe A memorial window, designed by Mesers. Wailes, of Newcastle-nn.Tyne, will be inserted in the east end of the north aisle by the committee The architect is, Mr. Jabez Bignell, of London and the huilder, Mr. W. Gnmbrell, of Dartford. Baleombe.-The chnrch bere has been re. been erected by Mr. Dancr, huilder, from designs supplied by Mr. Ewan Christian, at acost of ahout $2,300 \mathrm{~L}$, including fitings. To provide sufficient accommodation the architect has cansed he north aisle to be turned into the nave the width but the length of tho church. A new north aisle and vestry have also been built the restry being separated from the chancel by an organ chamher, and the old organ baving been removed from the west gallery nader the tower This gallery has also been removed, and in it place is the font, the tower being now mad into a bantistery. The seats which are open henches, are partly new, and are of stained deal ont the seats for the choir, in the chancel, are of nak. Tho chancel is paved with encanstic tile of a dark colnar, while the aives are of ordinary
red paring.tiles with a black horder. The new work is all in the early fourteenth-centrry style
sandstone dug frora the quarries in the neigh hourhood. In the chancel arch the small shafts are of red Devonshire marble, and the corhels are finished with carrings and crowned heads The centre has the simple old roof, but both the new nisle and the chancel are of open timber with trussed rafters, sealed with plaster in the aisle, and with board over the chanoel. The chnroh is now calculated to soat about 300 peop'e, and is heated in winter by means of Hayden's patent warm-air apparatus. The rere dus has been enlarged in character with the new chancel by having let in a centre panel. This reredos was the cift of Mr. J. Hankey, who also presented tho additional centre panel. This panel is of rnsset marble, with a border of labaster and colonred marbles. On it is a cross f Italian alabaster and a gold mosaio circlo in nimbus. An additionnl pieco of burial.ground taken from the adjoining park, has been given by Mr. John Hankey
Easturick.-The small church of Eastwick has been rebuilt and reopened. It was at first intended to restore tho old fabrio only, but a the preliminary work of restoration progresso it was discovered that certain portions of the church were so mnch decayed as to render th entire reconstruction necessary, and bence th church, with the exeeption of the tower (whick has been nowly faced) was rebuitt, throngh the liherality of Mr. J. Hodgson, of Gilston Park, al cost of something like 3,000 l., from designs o Mr. A. W. Blomfield. The cbarch, which it built of \#lint, with Casterton stone dressing outside, and Ancaster stone ingide, is 50 ft . long by 20 ft . wide iu the nave; the ohancel is 34 ft by 14 ft .6 in . wide, and the tower reaches the height of 50 ft . The whole of the woodwork is of plain Euglish oak, growa within twenty mile of the churoh. The sittings are made to accom modate 135 persons. A new coloured east win. dow bas been placed in the church by the reetor the Rev. John Reeves Purcell, in meraory of hi mother. The suhjects illus rated are the Crnci fixion, the Resnrrection, and the Ascension. Th font is of Caen stone, with red Mansfielc columns, and the pulpit is built of Ancaste stone, with Mansfeld dressings. A new obance organ, by Beverley, of London, bas also beer organ, by beverify, of Loncon, has also beer The whole of the work bas been done by Messrs Green \& Son, builders, of Stanstead.
Butterton.-The new charch of Butterto ear Leek, has been opened for divine service The order of architecture is Modern Gothic, an there is one side aisle. The stained east windo s the gift of Mrs. Byrom, of Leek. Mr. Christia
 f Sheen were the huilders. The contract, in luding bells and other oxtras a conouted abont 1 , 700 ?
Beckington.-The Church of St. Gregory, a Beckington, has indergone a restoration, an
bas been reonened for divine worship. Th as f plaster and whitewash, and bave bee "pointed" throughont. The old windows hav riven place to new tracery ones, which, witl wo exceptions, have been filled with tinte athedral glass. Tbe north aisle roof, which was formerly fiat, is a new and open one, whil the other partions of the roof are repaired an retiled, and the flor, doors, and benches an entirely new. There is a new pulpit of Bath stone, simply carved. The tower, whioh ha een closed for a considerable time, has heer pened, and the groined roof renovated. Th organ has been remored to a chapel on the soutl side of the chancel. Over the tawer or wey enfrance thera is a new painted window, the pil ights, reprosenting incidents in the life of thr Sivionr, commencing with the Nativity and ending with the Ascension, with figares of angel a the tracery. A new four.light paintet side of the chancel. It cortains figures of thi Gur erangelists. Both windows are the worl of Messrs. Horwond, Brothers, of Fimme. Thi atter window, together with a reredos in thre danels, has been presented by the rector, thi Rev. Sxinsbury Lnagford Sainabury. The eredos is the work of Mr. Earp, of Kennington he certre panel contains an alabaster cross on groundwork of mosaic, and the other panels ntain enerel monograms. The ebancel ron as been divided into panels and illuminated by Mesara. Horwond, Brothers, from designs anp mied by the arahiteet, Mr. James St. Auhyn, London. Fonr hmps have been pracel Ther
chancel, by Mr. J. W. Singer, of Frome. The
new heating apparatus by Messrs. Riming. \& Son, of Skipton. The contractors were srs. F. P. \& G. Brown, of Frome. The tata The organ has been rebuilt and enlarged Ir. H. J. Prosser, of Road. The instrament been illiminated by Messrs. Grant, Brotbers, hapmanslade.

three small spirelets. The chapel, which is to acommodate between 500 and 600 people, will nowell lighted in every part. The architects are Messrs. T. Horsfield \& Sons, Halifiax, and the puilders are Messry. Burrows \& Moseley, Mac. lesfield.

## SCHOOL-BULLDING NEWS.

Bradford.-Tbe new haitdings of the Bradford Grammar Sohool have boen opened hy Mr. W. E. Forster, vice president of the Council. The cost of the structure has been aboat 8,0002 ., and acconmmodation has been provided for 400 boys. Alr. Forster, in the coursc of his remarks, said ho believed the work of the Endowed Schools Commission wonld he found to have been muob more successful than was anticipated. He referred to Eton as an institution having a tendency to abolisb class distinctions, at any rate in edncation. He rejoiced in the provision fradford teaching of religious subjects in the Bradford Grammar School, and thought the religious difficulty bad been dealt with by the Government in the hest way, viz., that such instructions should be confined to lessons from the Bible, white at the same time parents were at liberty to withdraw their children from sacb instruction if they so desired.
Tibberton. -The now parish school, whicb has just been built from tbe desicns hy Mr. W. J. Hopicins, architect, bas been opened for use.
Ipswich.-The formal inauguration of the achools which have been erected by tbe Ipswich School Board took place last wreek, when the achools on the Wherstead.road and in Argyllther were visitcd in state hy the members of the School Board, and of other public bodies. Tbey have beci crected, as we bave hefore described them, by Messra. E. \& E. C. Gibhons, from the designs of Mr. Butterworth; Mr. Oliver Gibbons having the superintendence of the work. The oost of the block of schools was about $3,600 \mathrm{l}$., and the number of children they are intended to accommodate is 800, -boys, girls, and infants.

Caterham.-The new schools at Caterham, which have been built nnder the School Board, bave heen opened. They consist of a boys' and girls' scbool, to accommodate 135 in eaoh, with class.rooms attached. Residences for the master and mistresses adjoin. The whole cost was ahout 2,5002. The architect was Mr. R. Martin Caterham.
Corrington. -The School Board scbool build. ings have been opened. The site is a piece of ground in the centre of the town, in oontinua. Okohampton Building Compary, and facing the Otehampton Building Compary, and facing the newly-erected villas on the Rolle property. The
style of the elevation is simple and of an Early style of the elevation is simple and of an Early
Englisb treatement, and the buildings comprise an infunt sobool to and the buildings comprise one side by a sebool for hoys, and on the other side by a school for girls, each of the latter giving accommodation for 120 children, making a total provision for 310. The exterior facing of too walls is or looal stone, and the dressings are of stone procured at Hamden Hill. The slate on the roofs is partly Delabole and partly Welsh, laid in alternate longitudinal rows, the ligbter hue of the one relieving the somhre dulness of the other. The building is sarmonnted by a bellturret at the junction of tbe roofs, containing a well.toned hell. Theextreme point of thisstractare is at least 40 ft . from the ground. The infants' room is lighted by two large four.light windows, and the boys' and girls' schools by three-light wiudows in the gables, with side windows over pine, are ranged longitudinally with the hailding, and have a very neat appearance There is gallery also fitted with desks. The dimensions are as follows :-1nfants' school, $40 \mathrm{ft} . \mathrm{hy} 20 \mathrm{ft}$. girls' and boys' schools, each 44 ft . by 18 ft . The total coss of the buildings, exclusive of the land, for wbich alone 170l, were paid, has been aboit 1,300L. The architect was Mr. Alexander Lauder; the encineers, Messrs. Garton \& King, f Exeter; and the hailders, Messrs. Medland, Grant, \& Eastmond, of Torrington.
Mfarston.-The South Marston new National Schools bave been opened. They are huilt iu the Early English style, of local stone; aud have a bell-turiet rising to a beight of 40 ft . The a clasaroom, $14 \mathrm{ft}$.hy 14 ft ., with a gallery for the infants.
Stokesley.-New schools have been opened at skinningrove. The site was given by the late Eirl of Zetland, and the Messrs. Pease instracted Mr. France, of Mr. Marske, to design schools to accommodate abont 300 children. The total cost of the schools will be abont $1,500 t$.
Tenbatry-The foundation.stone of a new
school and school.honse at Burforil bas heen shid. The edifice, wbicb is to be erected from
designs by Mr. Ernest A. Day, of Worcester,
will comprise a school.room, 32 ft , by $18 \mathrm{ft.}$, will comprise a school-room, 32 ft . by 18 ft ., and a class-room, 16 ft . by 12 ft ., witb a suitable honse for master and mistress; foe whole, whal o playground and garden, oond Nortbwick (at whose sole ground, wich hor will he huilt and maintained) has purchased from the rector of Burford, hesides a portion of half an acre of glebe land on the Lockyey, which his lordsbip has also given. Mr. Page Manson, of Tenbury, is the contractor for the brick, stone, and plaster work; the wood.work will be executed by his lordslip's carpenters, under the superintendenco of the foreman, Mr. S. Dorery. The site is central and convenicat, being close to tho rectory and the church.
Nottingham. - The memorial-stone of new chool and class rooms in connexion with Addison. treet Congregational Cburch has hecn laid. The pared hy Mr Gion pared hy Mr. Gilbert, and will consist of a main rooms. There will also be rooms for coffee and rooms. There will also be rooms for coffee and of Bulwell stone, with dressings of Ancaster of Bulwell stone, with dressings of Ancaster stonc, is intended to form part of a group of which it is intended at some future time a new chapel shall constitu
present iron edifice. f England school at Jump, near Wentworth, has heen laid. The building, which is to be erected at the sole cost of Mr. George Dawes, will, when complete, accommodate ahout 220 children, and the expenditnre will amount to ahout 600l., inclading tho cost of the school itself and the master's residence. The erection will be of rabble.stone. Mr. V. Broadbent, of Hoyland, is the builder

## STAINED GLASS.

Holywell Church.-A now east window, oon. structed by Messis. Mardman, of Birmingbam, hew just heen placed in this church, to the memory of the late vioar, the Rev. II. B. Walton. The subject is "The Cracifision," and the cost of the window, which has been defrayed by suhscription, was 110 guineas. Tbe glass from the old window will he utilised at the west end of tbe church.
St. Saviour's, Eastboume. - A stained.glass window has recently been put up in the north aisle of this cbarch. Tho design illustrates the scene described in St. Luke, z. 38-42: "Josus answered and said," Martha, Martha, thou art careful and troubled about many things ; but ono thing is needful, and Mary has chosen that good part, which shall not be taken awuy from her." The work has heen executed by Messrs. Clayton \& Bell, of Loudon.
Church of Alvechurch.-A memorial window his heen placed in the east end of the chancel of the parish cburch, to perpetuate the memory of the late Venerahle Arehdencon Sandford, rector of this parish. It comprises three lights, and the subject chosen for delincation is the Passion the central portrays tho Crucifiviou and Ascen. sion. The work was executed by Mr. Gibbs, of London.
Donyatt Church.-The east window of this church has just been filled with painted glase, as a memorial to the Rev. Win. Hyde, a late rector. It consists of four lights, divided by a transom in the upper tier. The snbjects are the Adoration of Chriat by the Shepherds and the Baptism of onr Lurd by St. Johu, each subject ombracing two ligbts. Through the lower lights runa one subject ouly, that of the Last Supper. In the centre tracery. light is the esontcheon of Hyde, and in the sides are angels with scrolla Tbe ornamental portion of the windon consists of canopy-work, suitable to the snbjects, and in harmony with the architecture of the window. The work has been executed by Messis. Bell \& Son.
St. Mrory's, Beverlcy.-A stained.glass window has been placed in the south side of the nave aisle of this church, hy the widow and three son: of the late Mr. T. F. Champney, solicitor. It consists of three lights and tracery, of th, Perpendicalar or fifreenth century style ol arohirecture. The dexter light contains t.lit subject of the Adiration of the Magi. Tlı. centre light represeuts the departure of thi. mother of Jesus, weeping, from the scene of the Cracifixion, supported by the helored dis. ciple St. John, and followed by other spectatore

The third or sinister light illustrates tho Saviour in the Temple expounding the law to the loctors. The work has been carried out by Messrs. Hardman \& Co., of Birmingham.
Chagford Clurch, Devon.- A stained-glass window has just been added to tbe parish church of Chagford. The window was designed and The suj by Messrs E. \& S. Beer, of Exeter Michael and treated are, in the first light St. George and the Drayon, both being ander decorated canopies, whilst in the principal opening is a cross interlaced with the seored monogram. It is a memorial window put op at the cost ot Mr. E. S. Baily, of Whiddon Park.
Linslade Church, Buekinghamshire.-The east window of this church has heen filled with stained glass, the gift of Mr. Jomes Hudley, of Watford, former'y a parishioner and ohuroh warden. The wiudow is one of four lights, with one large tracery piece and several much smaller. The suhfects are four principal event in the life of our Lord, with their types above They run thus, beginning on the dexter side, the "Nativity," with the "Finding of Moses" Lord" with Then follows the "Baptism of our Lord," with its figure above, the "Passage o the Israelites through the Red Sea." The next subject is the "Crucifixion," whioh is made to balance in its drawings with the other subjects Its type is "The Brazen Serpent in the Wilder ness." The last subjects are tbe " Resurrection," and over this Abrabam's sacrifioe, and the ram eaught in the thicket hy his horns. The large tracery-piece has a figure of St. Cecilia, attended hy angels. The colouring througbout is quiet, and non-architectural canopies are placed over the subjects. It is the work of Messers. Heaton, Butler, \& Bayne, of London, the artists who staived the west window of Berkhampstead Cluurch. There is no dedicatory inscription on the window, as there ought not to be in that part of the charch. The inscription is written on a white marble slah below the chancel, in the hody of the church, and runs thas:- "The stained gluss in the east window of this Chureh of St. Barnabas was set up by Jemes Hadley, to the glory of God, and in affectionate remem. orance of his only daughter, Elizabeth Sarah aced 16 years, and Watford, Octno. 16th, 18, Blessed are the pure in heart."
Sheepstor Churche Dartmorr. - A memorial window to the late Rajah Sir James Brooke hes heen opeuod in this charob. The rajuh's last Sbeopstor, and in the chnmele of thet moorland village his body lies.

## VARIORCM.

"Tee Trial of Sir Jasper," by Mr. S. C. Hall, F.S.A., is the title of a tomperanco tale in verse, announced to bo publisher hy virtue \& gravings frospectus promises twenty.ive enR.A., Mrs. E. M. Ward, Alfred Elmore, R.A. Thomas Faed, R.A., W. C. T. Dubson, R.A. Sir Nuel Paton, R.S.A., Sir Jılhn Gilbert, A.R.A. George Cruikshank, John Temuiel, W. Cave Thomas, Gustave Doré, Birkett Foster, G. H Allen, H. R. Rubertson, E. Shwrard Kuenedy Jinlin Morcan, Jarues Orrock, H. Auelay, and F. D. Hendy. This alone will make the book a remarkable shilling's-wortb, The author writes,-

Mr. Hall has andertaken a good work. A wrirer in the Garden gives some iustrar rions for forming a small out.donr fernary. H ays, bere are fow emall gridens where a pheturpguo hardy furnery Ofren if there no hetter place, the rubbish hule or nusuli mas be rurned to good acconnt. If there be nothine Hlse, a space behind the burher, nud betworn recifal. Sead a little walk by inn of the large nasher iuro one of these anscen places; make: riny windiag valley, letring the walk throurh i mergh at another convenient point. The mai point I wish to show by my skotch is, tbat in
this tiny vale a good effect may be obtaine without resorting to the masses of hrick rub bish, \&o., that one sees in so many gardens Stoep flarks of impossible rock are hy no mean ecessary for ferns; on the contrary, they not thrive so well on such stractures as udeed, perfectly here ropresented. They are soil be suitable, and the on lowish racks an tones used to keep the fround moist wher needful. A more picturescue effect is secure y a few well-cbosen balt buried stones than the quantities of ill-chosen or ugly ones the are so frequently used. Indeed, if the choie lies between the common style of rocky ferner and the level gronnd, it is much hetter to choos the latter. In the hardy fernery it is too mud the fasbion to plint ferns alono, as if they onl njoyed sucb a position. There are many lovel harely flowers wbich are wood-heuuters ani shade-lovers as well as ferns, and by plantin these among the ferns, a much more interestin result, and a minch higher beanty, are produced tban if we only plant ferus. Sisch noble plant as Cypripodium spectabile and Trillium grandi florum thrive better in the moist free coil ar the partial shado suited for ferns than is ordinary horders. Sazifrages, primroses, lily o the valley, snowfiskes, and hardy oyclameus ar few of the many plants that will assuciat beautifully witb ferus, and that will lend a hig degree of interest at all seasons to this miniatur garden.-Wo get from Cassell's Popula Educator for July, a few lines about the extrac tion and refiuing of copper:-"The extraction i effected by exposing the ore heated on th earth of a reverberatory furnace to the action f the air. The copper bocomes a sulphide hilst the iron hecomes an oxide. This oxide i emoved with the quartz, as a fusible slag rring this process the furmaces emit a dens oud, known as copper smoke. It contains fume arsenious, sulphurous, sulpharic, and hy ro loric acids, and is consequently extremel leterions. After the oro has been bube hea rais calciniag process for somo tie determined The copper sulpbide, mived with some iron sul hide, siuks to the hotton of tho furnace, form ng tbe mutt, wbich is then drawn off into water by which means it is granulated. This coors metal is nomin ronsted, and the remaiuiner iro hus ovided, ore rich in silice is added her cxhe fused The oxide of ilica form a siag and the cepper in the form f a subue phin fff end in it $\left.\mathrm{Cu}_{2} \mathrm{~S}\right)$, is draw are hy submitu the pige on hat in Euverbura furn ly firnace just ing the when fusion takes place this action occurs - an

## $\mathrm{Cn}_{2} \mathrm{~S}+2 \mathrm{CuO}=\mathrm{SO}_{2}+4 \mathrm{Cu}$

Thus the copper is obtained. It sti 1 require to be refined. For this end it is again fired in order to oxidate the last traces of fureig metals, which are removed as slags ; tud to re ducc any oxide of copper, the trunk of a yount ree is thrust inte she molten mass, the gafe iberated from it deprive the oxide of amper o its oxygen, and thus the metal is prucurd in it pure state; this last process is termed poling The appearauce of copper is well kuwnn, bu when pare, as produced by the elcetrutyping
process, it possesses a beatiful piak enlons. I procoss, it possesses a beautifut pink cnsons. I 18 rery tenucinua, ructile, and mallrable. I
melts at abuat $1,090^{\circ}$ Cent., and is capable o melts at abuut $1,090^{\circ}$ Cent., and is caprable o sume volatilisarion, inparting a green tilst to the tamp. At urdivary temperatures air has ar action upi I oopper, but if heated a cupric osid is formed, whoh, as io contaces nore clow than the metal beneath, comes uff in soaks. I ignived, fincly divided copper will burn like ander into the black oxide.

The Mill Memorial. - The Mill Memoria Committey hrve resulved-" That a statue o itoanen or buitcing in the metropolis. and tha he fund be further devited the the funda ion o chalarahipe, open to the carnpetition of but exes, in tuental science and political ecmomy $r$ otberwish in the promition of mustal an coial science, subscribers beiser at liburty t objects their donatums shall be ap..lierl to." Th xpentive canmit.tse, includes Mr. Sransfelil II.P., Sir Juhn Latbock (hon. treasuler), anc otber men of inducnce.

## 踇xstellamea.

The Discovery at Worceeter College Hall - Noake, the historian of Worcester, says of s discovery that after a close examination of
details, he is inclined to agreo with Mr. Mopas, the architeot, that it is not a reredos at 1. In the first place, he supposes that the stelco of a reredos and altar in a monastic ectory would he unique. Sccondly, there is trace of an altar there. Thirdly, there are ther sedilia nor a piscina, hoth of which hally accompany an altar. It is truo there is aumhry, or cupboard, with a basin-like exration at the hottom of it, which at first view it seems that the hasin had heen roughly oped out after the removal of one of the tiles ich cover the hottom of the cuphoard. For at parpose this was done does not appear, 1 if ever there was a hole commnnicating re heen a piscina, though not necessarily for lesiastical purposcs. There is, therefore, no id reason, he thinks, for snpposing that an hr ever stood in the college hall, or that the untiful and interesting relic just discovered is toration, designed to grace and adorn that is the apartment at which the prior, sub. or, and chief officers of the monastery sat, on or, and chief officers of the monastery sat, on
igher level or dais, raised some fect ahove igher level or dais, raised some fect ahove
, rest of the floor. The entire thing is Early glish, in which somo features of a transitional rracter may be traced. It is to he hoped $t$ in the wholesale destruction of antiquities ich has heen made of late, and is still taking ce at the cathedral, this fine old relic is not e may he left alone, just as it is-neither

Dpening of the IsIe of Man Narrow uge Railway.-There are at present in uge Railway.- Nhere are at present in
struction in the Isle of Man two lines of struction in the Isle of Man two lines of
way, ono leading from Douglas to Peel, and way, ono leading from Douglas to Peel, and nd, leading to Castletown, and one to Port n. These lincs are of peculiar interest at present time, from the fact that they conit the largest, syatems of railway commanica. constructed on the narrow gauge system. a constructed on the narrow gauge system.
ntracts were entered into hy Messrs. Watson Smith, for the constrnction of lines from Smith, for the constrnctiou of lines from
arlas to Peel, and from Duhlin to Castletown Port Erin, undertaking to complete the line 1 Port Erin, undertaking to complet Accordm Donglas to Pcel by the lst of mally opened. The day was observed as one holidey and rejoioing throughout the whole d. Amongst tho well-known persons who ierland, the Hon. Francis Stanley and Lady slog, Mr. H. E. Loch (Lieutenant-Governor
the island), Mr. John Pender, M.P., Mr. the Stand), Ar. John Pender, M.P., Mr. cials and memhers of the legislature in the ind.
The Easter Island Idols.- A hlock of from Enster Island, Polynesia, has heen from Easter Island, Polynesia, has heen
osited in the Jardin des Plantes at Paris. It esents the head of an idol, rudely carved, esents the head of an idol, rudely carved,
weighs 3,000 kilogrammes. The nose e is a yard in length. This must he one of the Buidder for 1870, p. 10 . Mr. Martin pper, it may he remcmhered, with reference ihese gigantic stone figares, surgcsted the idea such figures, on a small island in the midst wide ocean, where no similar stone appears ls thereabouts formed but the tops of the of a submerged continent, which at one
existed there as dry land. In onr own misphere we seem to have something like the ferse of this, the present continental land ring been recovered from the ocean which wed over it in the glacial or winter era, as we
call it, to a height of many hundreds of y call it, to a height of many hundreds of it, leaving only island highlands above water, e a perpetinal summer, the Pacific islands stud cean which covers an ancient continent.
Mr. Hodgkin. - We mention with great et the death of Mr. Modghin, who has enaved for many years illustrations for the ilder. Ho died last week, of consumption, at a a very estimahle man, always to be relied on.

Mremorial Chapel for Trent College. On the "speech day" at Trent College the foundation stone was laid of a new chapel, in memory of the late Mr. Francis Wricht, who was the principal founder of the college. Durinr the five years that the college has been open the church accommodation for masters and hoys has heen only of a temporary character. The new chapel will he built to correspond with the archi tecture of the coll ornament 2,5002 have Plans of the proposed adifie hare oren hy Mr. Rohion of Derby hut the prepare hy Mr. Rohinson, of Derhy, hut the huilder have not jet heen appointed, nor has it been definitely deteronined what amount it will be jndicious to expend; hut the total cost will prohahly he not less than 3,0002 . It is proposed that the bnilding shall be 73 ft . long and 30 ft . wide. There will be an entrance-corridor and north and sonth corridors, a library or vestry, an organ.chamber, and two transepts, The nave will he in one span. There will he open benches of pino. The huilding itself will he of red brick, to correspond with the college, with stone dressings and tile roof, ribbed and hoarded, and will accommodate about 300 persons.
The Cadger'e Iatch.-The house yard.gate here is fastened with a common latch, droppin into the common figure 4 hasp. It was the cnstom of hawkers, beggars, and other species of the genus Cadger to lift the latch, walk into the kitchen, and have all the game to themselves. I interfered with the procession of cadgers throngh the gate. A second figure 4 hasp is
drivon in ahove the original, with the face downward, and so far distant that there is just room, and no more than room, for the latter to slide out hetwoen them. The latch goes np and down furiously, the gate is kicked and thrust but never opened, for not one of the cunning rogucs has cunning onough to lift the latch very gently, so as to slide it out from between the a hair's breadth too far.-Ahridged from Th Gardener's Maguzine.
Rhayader Workhouse Competition.-A the last meeting of the local Board of Grardians, the report of the Local Government Board's archi teot was received ujon plans delivered in com petition for the new workhouse hnildings by Messrs. Haddon, Broth-rs, Mr. E. H. Lingen Barker, and Mr. Stephen W. Williams. The matter had formed the subject of discussion at the meeting held on the 4 th ult., but was post. Government Board as the opinion of the three plans, Mr. Lingen-Barker's plans were placed first, it heing scated that they were not only better arranged, hut capahle of being carried out for less money than either of the others. The design. After some discnssion, the Williams again postponed.

Hiram Powere.-This well-known sculptor has died at Florence. He was born at Wood. stook, Vermont, U.S., July 29th, 1805, was waiter at a hotel, traveller for a tradcsman, and apprentice to a clookmaker at Cincinuati. He received his first instruction in modelling from a Prussian sculptor, and in a short time learned Mr. Lorm husts and medallions. At Washington for Florence. He produced, in 1838, his figure of "Ere," followed hy the "Greek Slare," exAmong Mr. Powers* ${ }^{\circ}$ ther works may he named "Il Penseroso," "The Fisher Boy," California," America," statues of Washington and Calhoun husts of Chief Justioe Marshall, Adams, Wobster, Van Buren, and others.
Mrr. A. O'Connor. - We are sorry to hear painter, is, through long mental and bodily ill painter, is, through long mental and bodily illness, in very distressed circumstances. Several O'Connor's painful position arestances of Mr formed themselves into a committee for the purpose of receiving subscriptions in aid of Mr. O'Connor and his family. Mr. Stanley Lucas 81, New Bond-street, acts as hon. secretary.
Wood Pavement.-A movement has heen set on foot to cover the whole of Pall-mall with the Improved Wood Pavement recently laid in the Strand, on Ludgate-hill, Chelsea Suspension
Bridge, St. James's.square, and King William s reet. Neighbouring inhabitante appreciate its quietude.

Story'e Statue of "Jeruealem."-Mr. W. W. Story, the American seulptor, whose stndio has for many years bcen one of the things to he scen in Rome, recently deposited for a short time, at Holloway's Galleries in Bedford-street, Strand, a figure of "Jerusalem." The statne is on its way to Philadelphia, where it is to he placed in the new huilding of the Pennsylvania Academy of Fine Arts. It is cut in a fine hlook of white Carrara marble, slightly toned, and stands on a pedestal of grey marhle from the same extensive quarries. The city is ropresented hy a female fignre clothed in flowing drapery, having the phylactery on her head with a letter on it which, perhaps, was used heoause it is the initial Shiloh.

Organe for Clifton.-The great transept organ at St. Peul's Cathedral is now heing removed by Messrs. Bryceson, Brothers, \& Morten, previonsly to completion at their factory and re-erection in the Victoria Assemhly Rooms, Clifton, Bristol. London will, therefore, lose one of its largest organe, and this instmment will again be devoted to orchestral mnsio, as at she Panoptioon, for which Institution it was con. Chureh Clifton, joty largo organ in Chiet alling of the pinmales from the tow durime alling of the pinaces from the considerably enlarged hy the same frm, who considerably enlarged hy the same frm, who Emmannel Church, Clifton.

A Government Mining Engineer for Central India.-After making upwards of twenty hore-holes, and sinking two shafts, the Government has heen successful in finding coal of an excellent quality for locomotive purposes, in the central provinces of India. One shaft has proved 52 ft . of coal at a depth of 149 ft . nd the other, 32 ft , at a depth of 180 ft. whilst every one of tho hore holes has revealed as much 60 miles in leng ay from 15 ara as much as 60 miles in length, hy from 15 to 20 miles iu hreadth. Todevelop and saporintend the working of this wide district the Indian he their mining enginecr.
Accidents.-During a very heary storm and pale recently, a partially erected house at Bryn. hyfryd, Pentre, fell to the ground. The walle were up ready to receivo the roof. The loss is bout 50t.-.Five men have heen somewhat serionsly injured at tho Clippens Shale Oil Forks, near Johnetone, in Scotland, hy the ziln. The huilding was searcely completed. The men were seated at their meal inside when the catastrophe oceurred. The walls stand intact. The accident is attributed to the state of the weather and the softness of the mortar.

Relief for London 'Bue Koreee. - Some ciever mochanic has invented a drag by which he can stop in a vory short time a vehicle petus and renders it availahle for starting the rehicle again so soon as the drag is removed, omething on tho same principle as Captain Moncrieff nses the recoil of the gun to restore it o its proper position. The inventor deserve the medal of the Society for the Prevention of Cruelty to Animals.

Deetruction of a Synagogue by Fire.It is announced in the Jewish World that the synagogne at Bordeanx, one of the finest possessed hy the Jews of France, has heen totally destroyed hy fire. Some neighbonring bouses were attacked. The damage done, some consider, will amount to several hundred thonsand francs. The temple was repaired and redecorated thrce years ago, at a cost of 190,000 francs. The uilding was insured for 140,000 fra

Removal of a City Church.-A vestry of the parish of St. Hartin Outwich has heen held, to consider a letter from tho Bishop of London, having referenco to tho removal of tho church, the henefice being nnited to that of st. Helen Bishopsgate. The hishop requirod that the hodies under the church should he romorod and the charch taken dowa. It was resolved to olose tho charch at once.
The Conversazione of the Royal Institute of Britioh Architects, held on Thursday evening in last week, passed off very agreeahly Sir G. G. Scott, as President, received the visitors. There was a fair collection of worke of ant and indnstry.

New Dock Works at Stockton.-The in. creasing trade and shipping at Stockton-aponTees have led the Town Conncil of that borough e determine $n$ pon the construotion of a ne to determine npon the construotion of a new instrnct on encisee to report upon seyerat hole whit hore hera proper for making lock at Portraik Slate, asuman distriet on the banks of the Tees, ahout a mile from the the ba

Worcester Diocesan Architectural So-ciety.-The first excursion for the season of his society has taken place in the neighbourhood of Ledbary. The programme included the chnrches of Preston, Muoh Marcle, Kempley, Dymock, and Donnington, with the entree to Homme Honse and its gronnds, as also to the parsonage house at Much Marcle, hy permission Colonel Money. Kyrle and the Rev. A. W. Chatfield.

Hardsning the Surface of Steel.-Hr. G. Hes, of Noche Sur, New York State, ha shown that the surface of steel may he hardened, withont hardening the mass of the metal, by placing the ateel,-a cylinder for example,-upon an engine-lathe, and, while it is in motion, bring ing into contact with it an emery wheel, rotating at a velocity of above 1,800 revolutions minute.

The Coal Famine.-The continnous strikes and dearness of labour have led in the mines of Blanzy (Nord) to the adoption of a self. acting conl.horing machine, which excavates the same quantity as twenty men. The inventor is, we believe, Mr. Rohert Winstanley, the younger, who patented his invention two or three years ago. The machine is reported to work ad. mirahly.

The Sewerags of Pemberton.-The local Board have approved of the sewerage scheme snbmitted by their engineer, Mr. Williams, and resolved to apply to the Local Government Board for power to horrow 18, 100 l . to carry the same into effect; and that the engineer he instructed to proceed with the detail plans and sections to be submitted for the approval of the Local Government Board.
Rebuilding of the Church of St. Nicholas, Newcastle-upon Tyne.-It has heen resolred to rehuild St. Nicholas's Church, Newoastie, on the old site, if funds to the amount of $5,000 \mathrm{l}$. can be guaranteed. Already upwards of 4,0001 . have been realised, exclusive of the old materials. Mr. Drewett voted against the old church heing pulled down.
Tha Port of London Sanitary Committee. In the Court of Common Council a report has been adopted, at the recommendation of the Port of Loudon Sanitary Committee, suggesting the appointment of a medical officer at a salary of 400l. per annom, and an inspector at a of 400 . per
salary of 120 .

Whitechapel Baths and Washhouses. The comnittee have reason to believe that the veatry of Whitechspel will andertake the futnre management and maintenance of the baths, if handed over free from debt, and in thorough repair. Upwards of 1,3001 . have already been subscribed.

Wesleyan Schools and Chapel for Clap ham.-Mesers. J. Nutt \& Co., buildera, are erecting new schools (Wosleyan), to be connected with a chapel to ho erected hereafter in the High-street, Clapham, and the foundation. stone was to be laid on Thursday by the Earl of Shafteshury.

Stained-Glass Memorial for St. Cuthbert's, Darlington.-One or more stained windows (including the east window), are to he erected in St. Cuthbert's Church, Darlington, as a memorial of the late vicar.

## VOL. XXXI-No. 1589.

The Iocal Government Board and possible Disease.

- irmportant Minute has just been issued under the signature of Mr. John Simon, the medi call officer of the Local Goverument Board calliug attention to the march of the Asiatic cholera towards our shores, and containing snggestions as to the itary precantions which are most incumben n us in the contemplation of such a calamity ts arrival. The Minute is extremely full and $r$ in indicating tho one main element of danger nfection from cholera. But it may be said to sen moro oloquent in Its silence than in its sch. While spenking iu tho name of the Local rernment Board, it contaios a more incisive demnation of the waste of time, waste of ortunity, and neglect of legislative action for ch the intelligent part of the community oudly called a year and a half ago, than even repented remonstrances contained in our 1 pages have implicd.
he responsibility for local defences agains lera, both as regards water.sapply and as ards local oleanliness and refuse removal, is ted, Mr. Simon remarks, in the local sanitary horities, urban and rural. "Theso autho. es are all by law so constituted as to repre. $t$, in their respective areas of jurisdiction, will of the local ratepaying population; and h such population has bad almost absolute ns of deciding for itself whether tbe district ch it inhabits should be wholosomely or rholesomely kopt."
n this instance, grave witb tbe weight oi rial nutholity, is snmmed up the main defect the action of tho Local Government Boara measure of national defence has been dealt b by throwing an infinitesimal responsibility earob indcpendent district. If disoase were rable of such distinct local rostriction that th sanitary district would be alone the sufferer m its own neglect, somotbing, though very le, might he said in defence of this principle. ch Union might be said to have a sort of right pay too penalty of its own disease, if it chos 1 is gencrally the casc) rathor to run that at risk than to augment its local rates. Bat, fortunatels, no such cordon can be drawn e black sheep could infect the wholo flock, - if all the other shoep were white, which is - from being the case in the present instance county, or great engineering district, nine. thes of whicb were in a carefully protected , would be exposed to great and possibl atb, left as a seed-bed of disease. The evil, we have hefore stated, lies in the treatment sanitary measures on non-sanitary principles. ie health of the country has been postponed
to the political viows of a certain school. It is tittle to the purpose to discuss how far those views aro xight or wrong. They are matters of speculative policy, embraced, by those who bold them, with a mild and self.contented fanaticism; and the main argumeuts in their favour are vither luased on metaphysical statements whice are opon to endless contention, or supported by predictions of good results which yet remain altogether in the cloudy regions of unfulflled prophecy. But let that pass. It is precisely because of the controversial uature of these views that we insist on the practical folly of their application in a case of the present urgency. It is to act in the same way as if, on the threat of an invasion, the Ministry were to omit the items of army and navy from the estimates of the year, to save that great ontlay on their budget, and to intrust to every parish the duty of orgnaisiog its own local defenco. It is a return from the organisation of our police force to the old system of "Charlies,"-रcnerable watch. mon, provided with lanthorns and rattles, -and private patrols for those who chose to afford them. This is what, in other words, Mr. Simon points out as the result of the legislation of 1872, as regards the protection of the public health.
"It is greatly to be wished," the Minute continuee, "that the former of theso alternatives," that is, the wholesome lecping of each district, "had, from long ago, been the desire of every local constituency in the country:" no sentiment can be more irreproachable. It does not, however, strike ns as one that is altogether novel. We have heard somothing like it before We have some faint idea of having echoed snch a sentiment, in one pliraso or another, for at least a quarter of a century. We feel a sorrowful and rospectful sympathy for the writer who, aware on the one hand of the great dangor which be has to face, and knowing, hetter than most men, how tbe precautions which science suggests have been persistently and wilfully neglected, is yet precluded, by official decorum, from doing more than indicate tho ineffective state of tho law. "It is greatly to be wished," wo may add, that the President of the Local Government Board had realised, " long ago," the fact that thore is such a danger as pestilence, and that the heary rosponsibility of Minister who professes to take measuros in protection of the publio health, is not to be sbuffed off on to the shoulders of 600 or 700 local "autborities," to wboru new "titles have been given, but to whose ever slnggish action Government has refosed to apply that stimulus which would have been at once so simple and so crtain.
No one who is familiar with the subject can dombt that, by the introduction into tho Act of 1872 of the principle of reporting, not to local authorities, who only care to save money, but to an official superior, who, iu his turn, sbould have been placed in relation with the medical officer of the Local Government Board, a constant, steady, intelligently-directed pressare would bave been brought to hear on the local authorities through. out the country ; the result of which would bave becn a very different state of preparation for the reception of the Asiatio contagion, or any other sconrge with which wo may he visited. "It is certain," says the Minute, "that in very many places the conditions of security are wholly, or almost wholly, absent." That is the judgment of the Local Government Board, expressed in the Mrinnte which it issues for the guidance of tho public, as to the results of Mr. Stansfeld's Bill! Wo had the unustral advantage of the thorough arousal of the public of the country to the danger of our sanitary condition. We bad the advantage of a state of opinion which would the choicest dialognes of Plato, in the original have welcomed any efficient measure, and would Greek
have sanctioned any necessary outlay. We were The statement of the medical oflicers of the begred to leave the matter to the Minister, on, Local Government Board is of value in another
respect. It tends to diminish, so far a.s the roice of experience can do so, ono formidable cande of dauger in cases of epidemic diseases, panic. One great eril attending the discussion of tho subject is, that the statements which ought to lead people to be wise in time, too freqnently only cause them to be foolish when it is too late. Panic is the natural seqnol of negligent and stupid confidence; and the arguoften haro no other effect than to increase the often haro no other effect than to increase the
former. But it is well to baro it distinctly stated, with all the antbority of modern science and of official statns, that "cholera in England shows itself so little contagious, in the sense in
which smallpox and scarlatina are Thich smallpox and scarlatina are commonly called contagious, that, if reasonable caro be
taken where it is present, there is almost taken where it is present, there is almost no risk that the discase will spread to personss who nurse and otherwisc daily attend upon the sick." Adrice of this kind is of scrious value. It tends to prevent that demoralisation which is so ofton the accompaniment of pestilence, The tro
lifighly contagions discases named by Mr. Simon may te called, the latter the terror of the parent, and the former the terror of the pliy. sician. They differ in this respect, -contagion in scarlatina, is of the most subtle kind. It may be cunveyed, and in our own knowledge no donht bas been conpeyed, in a letter from a house containing a patient. But it appears to depend exclusively on the transmission of some particle, lowever invisibly minute, of the skin thrown off by the patient during recovery. If
this be prevented, no infection,-using the terms as distinct from contagion,--or trans. mission of distinct particles of matter need togion does not arise in the early starcs of the disease. Small-pox, on the other hand, though practically less contagious or infectious than scarlet fever, is comminnicated no one knows how, or, at least, no one knows exhaus. the inedical man, because he does not know how to make himself secure against its sprcad. But he does know an almost certain proventive to its fatal virulence, and he can tell when this preventive- Small-pox, too, like scarlet been rarely recurs The patient who has farely recurs. The patient who has once snf. Choleta has no such self-compensating power. It recnrs has no such self-compensating power. It recnrs again and again, perhaps with increased facility of attack. But we bave the advantage of knowing that, in this country, the contagion of its very destrnctive spread may be
prevented by sanitary neasures, Tbere are certain canses which, especially when the Weather is hot and closo, and fruit is abundant and cheap, tend to prodace self-generated cholera. In some seasons the predisposition to this form of disturbanco secms to be far moro active than at others. The absence of ozone in the air and a low electrical tension are so
closely conrected with the virulent activity of cholera as to suggest certain precautionary of remedial mensurcs. Thus the wearing of sill which oonfines the clectricity of the body, and raises its tension, is a valunble safegnard. But the one great infective power of ebolera is found to reside in any fluid that passes from the per son of the patient, or in any water that is in any way contaminated by sneh fluid. It is here that the infection of eholera is so directly The use of the precautions of sanitary scicnce. the drains and in be contaminated as ohore mentioned, is the first point. The careful watching of the source from which any water used for domestic consumption is derived is the scoond, and is oue of equal importance. Those unsuspected filtra. tions from drains, sewers and dust-heaps, which so often make their way to the spring, the well, or the pamp-cistern are the sure earriers of state of medical science no doubt the present That peculiar danger of the cholif tion against as suecessfully as are the watchod methods of contassiunly as are the different propagated. But the care wict scarlatina is and minute in the one case as in the other.
With regard to disinfeetants, we can hardly take upon ourselves a responsibility which is studiously avoided hy the Minute of the Local
Government Board. We are at a loss to Government Board. We are at a loss to under. stand why, in sncb a paper, the question which
every one who reads it with care will first put ghould bo leff entirely nuanswered. The authority miolt he which a central medical public wonld be, ono would think, to name the most effective, most certain, least costly, and most accessible disinfectants. We may mention, in raising our voices to deniand efficient informa. tion on this point, ono great advantage which is possessed hy tho old. fashioned and somewhat cumbrons disinfectont, chloride of lime, namely, cumbrons disinfectant, chloride of lime, namely,
that its pnngent and wholesome smell is of that its pnngent and wholesome smen is of groat advantage in proving its presence. It is
ne of tbose chemical articles which are con. spicuous by their ahsence. It is of no nse to say it is used when it is not, and, iu nine cases out of ten, this is a matter of very great import. ance. Condy's disinfecting fluid is an article of obstacle to testimony to the use, but we are ablo to bea. stated to noers Tho tho porer Which it is again, has most rapidy spread, as a disinfeotin, agent of great power,-and one which, certain circumstances, -and one whicb, under medical direction, can be used on, and with in the living subject with success. Chlorine, the gas used in heaching, and erolved from chloride of lime, is a nowerful disinfectant. Dr. Domett Stone has just puhlished a rery simple recipe for its production, which cannot be too generally known. It may bo made by mixing in a bottle two tabiespoonfuls of common salt, two tea. spoonfuls of red lead, half a wincglassful of bottle to be kept tightly stopped, in the cool, and in the dark. A littlo of the fluid exposed in a saucer, sprinkled about, or soaked in sheets of old linen and hung up, rapidly destroys offensive or dangerous effluvia. A new disinfectant has lately been introduced, and is highly spoken of by the same authority, under the name of chlorozone, which is a permanganato from which oxygen and chlorine are simultaneously liberated, in the nascent state. The action of these two porwerful gases is thas combined, and it is stated that, botb for deodorising and disinfecting, it is sustained for a considerable time. This flaid is in use in several hospitals, and has the great is said, in of being the cheapest disinfectant, o prononte on minion tare not atterpting of these several safeguards to human life. Eaci of these several sateguards to human life. Each is good, and reliable, and we bardly like to bring Local Governument Board has tlus given them to ake care of themselres, without at least indicating in what manner they may be ahle to oso.
It is, indeed, one thing to make snch proper provision for tho sanitary condition of the country as can only be eliected by a certain amoant of nitiation on tho part of the Government, and another baldy to recommend tho purchase and I2se of disinfectants. That any serions effort to perform the first urgent duty will be mado by the present members of the Local Government Board experience forbids us to hope. If any. thing conld induce the adopting of the sound motto, "Sanitary reform must be conducted on sanitary principles, and not as a matter of clec. tioneering politics," it might be thought to be the ntterance of such a note of alarm as that to whicb we are now calling attention. But we lear, from the experienco of the last eighteen montlis, that it is far more likely that the Minister will be content witb the issue of this Minute and may even regard it as a meritorions public serviee, rather than read in it, as a clear-sighted man must do, his own condemnation for occasion rasted and opportunitios neglected. Such as it is, however, we desire to give evory aid in our pawer to its jublicity. And thero is this to be paid further, that no sanitary arrangernents of a public nature ean be adequate to allow any one to sanitury arrange caution First caro of private rantary arrangements. First among the latter be the order of water supply and of sewage, chemical agency must always be requisite unde, chemical ageacy must always be requisite under
certain conditions. That chemical agency can be hest applied by the householder; and if such be the geveral rule of sanitary appliances, the need becomes tenfold argent when any infectious disease appears or is likely to appear. Had all our local poor-rate gnardians suddenly become converted into sanitary reformers; had they號 had the medical profession furnished a well ordered and hierarchical body of inspectors, and
engineers and arehitects beeu consulted with a liberal wisdom throughont the land, still would it be noedful to cry,-Disinfect. We commend Mr. Simon's Minute to the thonght full reflection of all serious and prudent men.

THE NEW CURRIERS' HALL BUILDINGS.
The new hail and buildinge for the Carriers Company, in London Wall, which are now in course of erection, will, when completed, be a striking feature in tho neighbourhooxi. The materials nsed are stock.briok with Bath spacions bascment, with two stories above and dormers, and the entiro height of the principal elevation to the ton of the dormers will be 40 ft , from the street.level the width of tho elevation being 50 ft . The principal entrance, as well the elevation gencraily, will have an imposing appenrance. The entrance is sapported on ench side by massive piers, with stone bases and capitals. The inner part of the arch over the entrance is of stoge, with on onter arch above of brick, tho wholo surmonnted by a pediment, containing tho arms of the compnny in the centre. Ou cach side of the entranco there are ornamental lamps. There are two double and two sinolo windows in the right sido of the ground-floor entrance, and one single window on tho left side, atl baving brick arched boadings, witb stono mullions and jambs. The upper windows aro very lofty, those in the first story being 10 ft. in height, divided into compartments A large central oriel window projects 18 in.
beyond the main frontage. It is divided inte fifteen compartments, and is formed in combination with the two contral windows on the ground floor.
Tho interior of the building is very commodious. The basement contains the bouse keoper's apartments, wino and other cellars, and domestic offices. The gronnd-floor will consist of tho oler'ss' offices, waiting-rooms, and otber apartments. The "hall" itself, which is, of conrse, the principal apartment in the bailding, is on the first floor. It is approached by an ornamental staircase 9 ft . in width, and formed chi hy of carved and twisted oak, witl a massive 33 hand-rail. The dimensions of the hall are T. by 20 ft ., with retiring-rooms on each side the filled in with stained slasa of tho company, together with those of the several masters and benefactors of the company. The chimney-piece will be a special feature in he apartment, consisting chiefly of old carved and twisted oak, and in the bigher central portion will be placed the arms of tho company, consisting actually of those which were dug up after the Great Fire of London. On each side of the company's arms there will be twisted columns in oak, and above theso an ornamental cornice, snrmounted by a Gothic termination, with small carved oak colums and finials on each side. There are also double colnwns in oak in the lower portion, on each side of the fireplace. Surronnding the walls of the apartment there is an oak dado, and the ceiling is in panels con. sisting of ceometric patterns. It may be stated that the furnishing of the hall is intended to harmonise with its interior artistic decorations, and that the designs for the furniture have been supplied hy the arcbitects. The second floor will contain the apartments of the hallkeeper or beadle of the compan
The vacant ground in front of the ball, which contains an area of about 5,200 snperficial fect, is intended to be covcred with bnildings larmonising in their architectural cbaracter with the bailding now in progress, and when these are completed the entire block will highly improve the architectural character of the neigh. bonrhood. Messrs. J. \& J. Belcher, of Adelaide. place, London Bridge, are the architects, and Messrs. Perry, Brothers, the contractors.

Fall of York Station Roof.-A train of carriages was boing shunted into York Station, when, owing to dofective eoupling, a horse hos eft the metals and came into contact witb forr of the pillars, knocking them down and breaking down a portion of tho roof to the extent of 50 yards by 30 yards, which bad covered the
departure.platform of the station. A portion of the roof alighted npon a train standing witb carriages, but no persons were injured.

## THE TENDOME COLUMN, PARIS.

The average Gaul is apt to consider his decoration,-Order of the Rouge et Noir of Monaco, or Golden Scimitar of Tunis, -as of more importance in society than his coat. Were Paris to be engulphed to-day in some great cataclysm, it is probable that the Parisians would first erect an Arch of Triumplh on the morrove, and then think of lodgings. At any rate, they have houscd a few public servicce in
barns, left tho ruins of the Commune painfurly barns, left tho ruins of the Commune painfully apparcnt in nearly every outskirt, hoarded up the heap of stones that was the Alinistere des Finances, made the Tuilcries more unsightly than the petroleurs left it, and concentrate their energics on the uselcss oclumn whioh every welling prido and patriotism. Scarcely was swering prido and patriotism. Scarcely was of the Place Vendòme was screened from public of the Place Vendome was scrcened from public upwards of 100 masons and engineers. By the courtcsy of an official supcrintendent the writer of this was admitted within the penetralia, and furnished with some notes relating to the re.odification of the column, which may possibly be of some interest to Euglish readers.
The masonry work is only just commenced. There are more dilficulties in the way of this part of tho mndertaking than moat uniuitiated
outsiders imagine. It is imagiued that the foundation and pedestal base can be buitt like foundation and pedestal base can be buitt like
an ordinary wall. This is impossihle. From an ordinary wall. This is impossilhle. From
motives of economy it is intended to utilise the motivcs of economy it is intendod to atilise the
stonework of tho old columu, at least all those stonework of tho old columu, at least all those
portions of it which have not heen excessively portions of it which have not heen excessively
attenuated or dcformed by the demolition. Two. attcnuated or deformed by the demolition. Two.
thirds of tho materials can be so used; the thirds of tho materials can be so used; the
romaining portion of the work will have to be romaining portion of the work will have to be
executed as at the first erection of the column. executed as at the first erection of the column.
But eren among the two-thirds judged serviceable there are only two steps absolutely intact. The others require to be repaired, and will be replaced or rejointed hy means of coment in the Place
Vendome itself. But this reparation is not the Vendome itself. But this reparation is not the
most difficult operation. The interior of the most difficult operation. The interior of the pierced at intervale with larye holes, into which are soldercd cramp-icons that hook the outer hronzo plates by a species of horseshoe eyelet attached to the inmost surfaco of the plates in the foundry. The problem to be solved now is one that requires the nicest precision. The masonry of the colnmn must be reconstructed in such a manner that every hole in every block of stone shall correspond with the eyelet of the bronze plate which is to cover it. To render errors all but impossible it has been decided that the raising of the stone frame and the fitting of the metal cover shall proceed at the same time. Thus the column will rise clothed, not as before, first naked stone, then dressed in the legends of the Napoleonic cra. M. Normand, one of the architects emploged on the reeedification, has succeeded in disinterring the plans which served in 1810 for the primitive construction of the monument. This gride indicater many processes monument.
to be aroided, their results being proved hy experience to have rendered the old column less stable than it might havo been. Thus the dilatation of the metal was not sufficiently allowed for in 1810. In 1873 another method is allowed for in has alroady been said that every adopted. It bas alroady been said that every three ledges pierced vertically, and thus forming eyelets. In raising the columns brass tenons eyelets. In raising the columns brass tenons with the eyelets; and each tenon will he pierced with the eyelets; and each tenon will he pierced
vcrtically to correppond with tho holes in tho vertically to correspond will be haped orally,
metal ledges. These holes will be so that the bolt which passes through both may be moved hy the dilatation of the metal without endangering the monument. The tenons will be in close contact with the column; therefore in
order to pass the boit through their holes and order to pass the bot through their holes and
those of the metal ledges a small groove will be cut in the stone, thus leaving the corresponding holes uncovered. In this wise all soldering, \&c., will be avoided, and the expansion, which in a
spizal circnmference of 268 metres mi spiral circnmference of 268 mètres might amount to 30 ccntimetres, will he reduced to the smallest
possible figure, by this fractioning of the metal possible figure, by this fractioning of the metal
coat and its disposal. At this moment the coat and its disposal. At this moment the
architects are studying the quality of the architects are studying the quality of the
materials already amassed, in order that the complement may be as far as possihle identical in nature. It is prohable that the quarry used sixty-three years ago is now exhausted; but this matter is of slight importance.

The completed column will be surmounted not
by the little bare-legged Cessar placed there in ISG $\ddagger$-65, but by the old statue, relegated to Courbevoic, of the Emperor in grey redingote and jack-boots, with the arms crossed in the legcudary attitude. The statue is considerahly injured, hut not irreparahly. The now column is not likely Peris.

COMPETITIVE DESIGNS FOR MIUNICIPAL BUILDINGS FOZ THE BOROUGII OF LEICESTER.
Mr. T. H. Whatr bas reported on the ten designs referred to him, and has selected five of them "for tho ultimate choice of thrce hy tho
conucil," having special roference to this clamse council," baving special roference to this clamse
in the instructions :- "The coancil heg to reiterate that the practical every-day corrernience of the building arrangements should bo the principal consideration in jadging of the merit of each set of plana, the limited ontlay preclud. ing excessive architectural display." inr. Wyatt says :-

divided into parcels, and sent off to the yarions jobs, and there again divided for each individual. In many cases, as we are assured, it simply ean. not be done by twelve oclock. An obvious But this involves leaving large sums,-in some cases thousaude,-all night at the place of bnsiness, and the masters, naturally enough, object to the risk.
A meeting of the masters is to he held on this Friday, 19th, and the sub-committec will report the result of the conference held with the rnasons' and carpenters' depatations, and will recommend the line of action to be taken thercou by the cmployers. It has heen decided by the committce that they will receive no more depucommittce that they will receive no more depu-
tations from the men, unless they como prepared tations from the men, unloss they come prepared
either to settle points in disputs or to hape the whole qquestion referred to arbitiation.

On Wednesday last, a meeting of the Landon and Provincial master huilders was held at tha Westainster Palace Hotel, Mr. Hannen in tho chair. Nearly 100 provincial associntions of master huilders were represented either permanally or hy letter.
The immediate object of the meeting was the estahlishment of a general association of tho master huilders throughout the country, having for its object the protection of its members against all nnjust demands of the workmen. A long discussion ensued, resulting in the establishment of a General Association of Ens. estabers in the Bnitdiug Trade for the esscmitial protection of its members; the adoption of a code of rules for the government of the associa. tion; and tho appointment of a council.
the proposed moseum and free LIBRARY IN SOUTH LONDON
The preliminary steps for the erection of a museum and free library in Sonth London are now heing taken, and on Thureday, the 3rd instant, a meeting was leld at the Westriuster Palace Hotel to take into consideration and determine upon the purchase of a site in tho Netermine upon, the purchase of a site in tho having a froutage of about $250 \mathrm{ft}$. , and a depth of 400 ft ., thns occupying zun area of nearly tro of 400 ft ,., thns oc
Mr. Samuel Morley, M.P., treasurer of the land fund, presided, and said that he was very much interested in the undertaking, and shoold contrihute towards the funds for the erection * Our reviem of the ten desigrs will be found p. 177,
of the bnilding. He observed that the museum and free library would, of course, cost a large sum of money, but it would tell morally, socially, politically, and in other ways on tho socially, politically, and in other ways on th
mass of the population in the midst of which wass proposed to ereet it.
The proceodings at the meeting were confined chiefly to the suitahility of the site which had cheen offered, and it appearod from the state. heen offered, and it appearod from the statements made that the gentleman who owns the
land docs not care to part with it, except on the land docs not care to part with it, except on the
understunding that it is required in the interests understanding that it is required in the interests of the people of South Londou, and that for that
purpose he is willing to part with it for 8,000 . It was agreed that no site in South London could be more contral or convemiont, inasmuch as the Elephant and Castle was the converging point
aliko for omnibnses, tram.cars, and railway trains, and sitnate ahout a mile from the river, it had right and left of it the densely. populated portion of South London. Several spoakers urged that, as it possessed these advantages, hoy conld not do better than purchaso it, hat it Fas ultimatoly agroed that a numher of influen. tial and practical gentlemen should pay a visit to the proposed site, and give their candid opinion as to its desirahility for the purposes o musenm and free library hefore any final decision was come to for ite purchase. The chairman, accompanied hy a namber of other gentlemon, agreed to inspect the site with the object named. It was incidentally stated at the meeting that it had heon roughly esti. mated that the huilding to he crected on the proposed site would cost $50,000 \mathrm{l}$.; and Mr . Clements, the honorary secretary to tho uudertaking, said he had not mach fear but that they would be able to huild the nuseum for Soun built the Bethnal-green museum.

GISIT OF BUILDNG OPERATIVES TO WESTMINSTER ABBEY,
Ov Saturday, July 12th, the workmen of 3 Mr , V. Hibhins, of Surbiton, were conducted over Westminster Abhey hy Dean Stanley and Lady Augusta Stanley. The party were shown the huilding in which Parliament first assemhled,
then, hy Poets' Corner, through the several then, hy Poets' Corner, through the several
chapels, and back by the main huilding to the chapels, and back by the main huilding to the
Jerusalem Clamber, halting frequently ou their way at thc tombs of monarchs, statesmen, and ports, listening with evident attention to the short but pithy dissertations on the lives of
those enslirined thercin. Tea was afterwards those enslirined thercin.

## DWELLINGS FOR UNSKILLED labourerrs.

At a recent meeting of the Speoial Divellings Committeo of the Charity Organisation Society Di. Greenhill said, that the question of providing suitahle dwellings for mechanics might be considered to he in great measure solved, but no sufficient answer bad yet been fond in this case. Benevolent individuals had done something, aud wero on no account to he discouraged, especially as they were never likely to ho numerous. Building societies had suc to prevail to any great oxtent, or to provide for the lowest class; indeed, it was often anything bat a boon for a poor man to he the owner o helieved that theso were the hest accency. Com. panies, charging rents of $\overline{2}$. to 10 s . per week could he carried on mpon a, atrictly commercial basis; but when the rents were from 18 , to 5 it was almost impossihle to make now buiidings answer commercially. He know of no instance as yet. Some encourngement shonld he held
out to them, In France, the late emperol exempted improved dwellings below a certain He thom rates and taxes, for a term of years. mioht he done something of the samet kind indiriduals might be further enconraged by loans on favourahle terms. In 1865 he had haan interview with Mr. Gladstone, then Chancellor of the Exchequer, and had heen enconraged to hop that money would be advanced hy Government at $3 \frac{1}{2}$ per cent., for this purpose, but tho interest ultimately required was it per cent. Govern. ment might givo norere encouragement than this. There should he a power of calling in the money with six months' notice at any time, if the Government was not satisfied with the way in Which it was boing applied,
trary, but was really only a proper security for trary but was realy only a proper security for
the right nsc of the money, and the power would not be exercised withont real occasion. Then, too, the legal expenses of a loan might he made as small as possible. At present the conditions were, he would not say vexations, hut very tedious, complicated, and expensive. It was necessary to apply to three difforent Govern.
ment offices,--the Public Worls Loan Commis. ment offices,--the Public Works Loan Corurais sioners, tho Board of Works, and the Treasury The fees and legal charges, too, were so uumerous, that the cost was certainly made a maximnm, instead of heing, as he thought the special circumstances warranted, reduced to a miniuum Ho would like to $80 \theta$ the loans available either for ropair and acaptation of existing premises, regnlation erection of new ones, under suitahle perly done and be maintained. No doubt there were objections, and some very valid ones, to such encouragements; hut the case was 80 of politid exceptional that the ordinary rules It political economy ought not to he pressed. bocas, no doubt, possible to provido tenements, bocauso the people were now living somewhere something that would not disgrace a Christian country. He would move "That it is expedient that encouragement be given by Government for providing proper tenements for the poorer classes (1), hy the exemption from rates of enements helow the rent of 4 s . or 5 s . per week (2) by giving greater facilities for ohtaiuing providing the Government for building or providing tenements at 2 s s. or ls . Gd. pcr week. distinct movement to provide for this class of persons. The cost of huilding under the Metro. politan Building Act was such that it could not de done to pay commercially; hat from his barcholders for the with upwalds of 500 sure that there the last thirty years, he felt sould he content wero penty of persons who funds he cont wid the saine iaterest as the unds paid if their noney was employed for this purpose. Ho agreed that the Government aight he called ou to lend at less than their present rate. The prasent terms were $\%$ per cont. and forty years to repay. 11. 1s. Gd. per ceat. per annum was required to pay of the principal in that time; it was necessary, there. oro, to earn more than o per cent. with the money on these terms. The exemption from rates, he thought, wonld be strongly opposed from all sides. The Baroness Burdett Coutts had invested 100,0001 . in this work, and the Peahody trustoes lad $500,000 \mathrm{l}$. to spend, the yearly roturns from which were to he devoted to the same ohject; if, then, only the poorest class were admitted to their houses, they would form a nucleus for the movement, and would not come into competition with more purely commercial schemes, A client of his, at Hammersmith, lad ried providing single rooms for the occupation of families. Ho bad huilt them about 15 ft . square, four rooms on a foor, with washing accommodation on the landing. Fach room was provided with kitchen.range, gas two irom hodsteads, and two berths in the wall for children; hut he was obliged to charge 3s 3d per room to get 11 per cent. on the ontlay, and as this was nhore the average rent for a single room in the neighbourhood, though the accom. modation was far superior, they had not let. Improved accommodation was not appreciated.
Mr. Bosanquet stated that, under the 35 \& 36 Yict., c. 79, the Public Works Loan Commis sioners were authorised to make loans to sani tary authorities at the rate of not less than jud per cent., or at suoh other rate as in the judgment of the Treasury might be necessary, Exchequer, on the scourity of nny fund or rate applicable to sanitnry purposes.

Mr, Cowper Temple said that it was vain to expect any exemption from rates for such wellings. Exemption would only establish a celing against these dwellings in any district, ould desire their favour, as thororant thet hero wes a precedent for Governmont lonns at hero was a preco sontary lonas at $3 \frac{1}{2}$ per cent. for sanata purposes. This was sanitary work of the host dind; they conld, The tediousuess of the present one same footing. The teciousness of the present process might Government for improvement.
After further discussion, Dr. Greeuhill coald not acree with Mr. Gatliff as to the expediency f companies restricting their dividend. IIo eared it would ouly prejudico the morement He was prepared to withdraw the first part of is motion
The resolution was then pat and agreel to in he following form:-"That in the opinion of this committco it is expedient that encourage. ment be given by Goyernment for providing proper dwellings for the occupation of lahourers oarning wages not exceeding 20 s . per week, by giving greater facilities than now exist for obtaining money from the Public Works Loan Commissioners for huilding or providing such dwellings."

THE SHRINES OF THE HOLY LAND. Lasr Monday evening the Marquis of Bute
lectured at the Tower-bill Catholic Schools, Chamher street, Great Preseof street, Minorica The subject chosen was "The Shrines of the Holy Land." The \#on, the Master of Herries took the chair, and, in introdncing the lectarer, said that the object was to inaugirate the More, and Fisher Institute, whioh had been fonndod for the improvement of young men in the neigh hourhood of the Docks and Tower.hill, which namo was talen after that of the Bishop hochester and Thomas More. The subject chosen for the lectare was of no second.hand ance with the Marquis of Bute but was result of personal ohservation of the countries he was about to descrihe.
The Narquis of Bute,
ne whate, who rising was londly cheered, said he was sure that in speaking to a Catholic nudience about the Holy Land he would stand cxcused if he confined himself to one side of it, about which little was heard in this country, namely, the actual appearance which the places presented to the pilgrims who resorted there. He would not enter into any of the discussions or contro. versies which had heen raised about particular places or events, or into any matters of that kind, historical, suhlime, or ennobling; or the reason why it was called the Holy Land. Ho would rery briefly describe the appearance of the slirines to which pilgrims resorted, and would keep himself to the three chief holy places in tho Holy Land,-Nazareth, where
our hlessed Lord was conceived and lived as and Jerasnlem, which He selected in order to work reT, which He selected in order earth. redemption in the midst of the meat As concerning Nazareth, athough the passed part of Christ's most divine life was was a there, it was now least resorted to. It which trazoly in the North of Palestine throagh Jerusalem. The town of Nazareth was perfectly small and quiet, and had lost all the fame which was formerly attached to it. In that town, he helieved, the chief of the inhahitants were Christians. The Chnrch of the Annunciation was huilt like an old castle, in order to keep off the attacks of unhelievers. It was a great square huilding, with windows high np, and
rather handsomely decorated within in the Italian manner. The roof was supported by fonr great pillars. The shrine of the Annumcia. tion was in a sort of cave or cellar. The walls were covered with silk, and the floor was pavel, on the lef milar broten was and onc of the rubhishing traditions asserted and one of the thas asserted ancel, on the ground benenth the altar was cross to be hea by cross, this thot on this spot tha the piessed wrgin shood at the anspeakalo mo mowher of ons Los. ©od on the the wer three little lamps fastened on the table, and Godfrey do B illon, who rofused to Rin of Godfrey de Bonillon, who refused to King of Jerusalem, hecanse, as he said, Christ, was the
only Son of Zion; five golden crossas on a silver only Son of Zion; five golden crosas on a silver
gro:nd; the Order of the Cross and St. Ftancis;
situated abont two hours' walk south of Jerasalem. The road leading to it was, in the estimation of all Clristians, holy, becanse of the Virgin having passed over it so many times, carrying our lord, and for this reason but walked. The Chmreh of the Nativity wa ono of the most magnificent in the Moly Land, the last work of restoration having been done at the last work of rostoration having been done at
the expense of Edward I. It had an enormons convent like a citadel attached to it, which was convent like a citadel attached to it, which was Grided between the Roman Cathelics, the
Greeks, and the Armenians. Pilgrims had to Greeks, and the Armenians. Pilgrims had to
enter, as was usmal in snch places, through a low door covered with iron plates. The Catholic altar and tabernacle wore most gorgeously decorated. Perhaps of all the places in the Holy Land this was approached with the greatest dovotion, bocause it was the one whicb excited people the most. Jorusalem was esscntially the Huly City,
Most of the pilgrims cancht their first plance Most of the pilgrims canght their first glance at it from the north, and it was thore that King unable to deliver it from the becanse he was nable to deliver it from the pollution of the unhelievers. The Church of the Assamption, remarkahle as the place where the Virgin was raised from the dead, seemed to be a matter of little importance, so groat wero the other things that were round about it. At the Chnrch
of the Holy Sopulchre, the large square hefore it was paved withstones, which were all cracked, owing to the number of Christians who had becn barned alive upon them. Immediately opposito the chnrch was the mother-honse of the Knights of St. Jobn, a building in a state of great ruin. In shape it was like the Temple Church, in the motropolis, wbich was built in imitation of it. The sepulchre was a little ngly hniding with itgelf, the actual and real tomb of Christ, from which Me rose, was in the inner part, and was a place nhout 6 ft . square, the ceiling of whicl wos ontirely covered with gold and silver lamps, couch or localis upon which the body of Ohrist lay, Christians knelt and proyed. This was continually being washed with ottar of roses, or rosowater, and there wero in it little drills throught which tho tears of helievers trickled. This was the great centre towards which Christendom
had turned, and it was there that ocenrred the gnickening of His body, of which the Scripture gave no degeription, aud of which man could form wo conception,

COMPLETION OF THE WANDSWORTH AND FULHAM BRIDGE.
PRDGE COMPANY.

The Fandsworth and Fulham new hridge which has already been deseribed in the Buitder is now completed, and will shortly ho opencd for traffic, along with the new roads connecting it with Chelsea and Fulham on tho north, and York-road, Battersea, on the sonth. At last
week's meeting of the Wandswortb Board of Week's meeting of the Wandswortb Board of
Works a letcer was read from Mr. Jennings, Works a letter was read from Mr. Jennings,
secretary to the Bridge Company, submitting a secretary to the Bridge Company, submitting a
proposal to the Board to tho effect that it would proposal to tho Board to tho effect that it would
be a great convenience to the public if notieeboards indicating that the route by the bridge was tho direct one to Chelsea, Brompton, and
the West End, were afixed to some of the lamp the West End, were affixed to some of the lampposts at a few of the principal corners, and the lotter expressed the willingness of the Bridge Company to place only notice-boards of such size and design as the Board might approve. It appears that the local committee saw no ohjection to this heing done; hut on the matter
coming hefore the Board last week, the chaircoming hefore the Board last week, tho chairman and one or two othor memhers strongly opposed the lamps being used for any such purpose, the chairman remarking that it was not altogether out of regard for the public that the application was made, but rather that the hridge toll bridge, and if the Board acceded to the application, he did not seo how they could refnse a similar application from any tradesman who might desiro to exteud his trade by directing penple to his sbop hy notioes on the lamp-posts. It resolved itself into a question of prineiple whether it was desirable to allow the lamps to
he used for any such purpose. Somo memhers prosent conteuded that the application onght to be granted to nueet the pablic convanience, bat the Board nitimately resolved that the permission nsked for be not granted.

ENJORE CHURCI, NEAR BRIDGWATER Thrs church bas recently becn re-opened, afte the whole of it, with the exception of the tower, had been rehuilt. A north aislo, 15 ft . wide and 38 ft .6 in . long, has been added, a sufficient portion at the west end being divided off by an ornamental wood screen, to serve for a vestry and erganu-ohamber. The lofty tower, of the Perpendicular period, has heen substantially repaired at the expense of Mr. Broadmead, o Enmore Park. As thore was evidence to show that the top of tho angle stair turrot was incom. plete, and had originally possessed pinnacles, those have been restored, and the other pinnacles of the tower made good. The chancel arch has not been disturbed, althongb the rest of the body of the edifice has been entirely rebuilt. The old Perpendicular windows, and many of the ancient oak benches, have been re-used, and the rod.sorcen ropaired and rcinstated, The beauiful south porch doorway has been re-inserted, and its missing base replaced. The new nave, with porcb, and the chancel, are on the old foundations, bnilt of rough local stone, and Ham Hitl dressings. The new roofs are of the Somersetshiretype, having pointod barrel-boardel changs, with moulded ribs at intervals. The architect. The Jacobean pulpit desirned by the architect. The Jacobean pnlpit las been cleapen and fixed on a plain Ham Hill base. The chancel enches are of oak, with monlded and shaped nads. The reredos is of Corsham Down stone, the cost of it being jointly borno hy the rector and by Mr. Jaggars, of Enmore. There is also a now font, of Corsham Down stone. The marming of the church is contrived by means of ouc Therrit' 8 underground stoves.
The total cost will probably be about 1,5007. considerable portion of whicb has been dcfrayed by Mr. Broadmend ; the rector also contributed handsomely to the cost of rebnilding the chancel.
The architect is Mr. Fetrcy, F.S.A. ; and the contirnctor
Somerset.

FEMALE TEACHERS OF DRAWING. PaRIS.
Tue first examination of female candilates took place last week at the Etole des BeanxArts. The tests are severe, and the computition lasts more than a week. In the first place, they are required to execute in six honrs, including lancheon-time, a piece of ornament from the plaster, and their succees or nou-succoss deter. mines their admission to compete this year.
Those admitted are required to produce an entire figure after the antique, such as the "Diane Chasseresse," the "Diane de Gabie" or the "Venus de Milo," thrce sittings of six hours each being allowed for each work. After lbis proof of tho aspirants' classical attainmenta, they are required to prodace an ornament terved from rams of tho regetable kingdom. The trials terminate with oral examinations, the pupils beiog requirod to correct a given design, pomit out its good and had features, and quote the principles of art in eacb case, and rules observed or violated, before a jury. The suc-
cessful candidates are assured of employment.

THE FIRE-RESISTING QUALITIES OF BUILDING STONES.
In a paper on the "Fire-withstanding Qualities of Building Stones," Dr. Adolph Ott, of New York, who has paid mach attention to this sub. ject, remarks : -
As a class, limestones, from this point of view, are the worst building material of any of the natural stones, as thoy calcine with great rapidity when exposed to a high temporature,- - a firmatiob has lately received ahundant conlimeston at Boston and Chicago. Amongst ties known too, it sheuld be observed, the rariethe presence of the magnesia in them lowers the degree of temperature requisite to the accomplishment of the calcination and disintegration of the stone.
Referring to tho property of granite, gneciss, and other nearly-related primitive rocks to craok and fly when exposed to the radiant heat of $1 a$ neighhouring fire, a fact whicb has aleo received in in America, Dr. Ott attribntes the peculiarity these rocks

Amongst uatural stones, Dr. Ott gives the highest place in regard to fire-withstanding qualities to the sandstones, which are composed
 stones,-such os those formed of port stones, - such as those formed of Portland and purposes in this rospcet, as ceny bigh for building silicates of lime and alnmina chiefly, renders silicates of lime and alumina chiefly, renders
thera quite as capmblo of resisting the action of fire as the sandstones themselves.

STETfIELD CONGRESS OF THE BRITISII ARCHASOLOGIOAL ASSOOIATION.
Thr following will be the proceedings of the Congress :-Mfonday, August 18th.-Assemblo at tho Cutiers' Hall at 230 p.m. ; reception hy the Hayor and Corporation with an address; visit to the Shrewshury Monuments in the parish chuch, to Sheffeld Manor, and to Bronmhall; his Grace the Duko of Norfolk entertains the Congress at dinner at the Cutlers' Hall, at Pro p.m. Tuesday.-By milway to Peruchief Wrory and return to Sheffield; hy railwny to Thorpe Salvin, Wed drive to steetley and Roche Salvin. Wednesday. - Esearsion to Lorthe Abley, the Church of Laughten-en-leClanrell and tho Bridge Chinpel. ThuesdayExcarsion hy special train to Berry Bridge for the Roman Station at Stark, thence hy road through Madderefield to Almondhury, Castlckill, Woodsonte Hall, aud Kirkhurton, and return hy Shipley Station, Friday.-By railway to Ton, to view the Castle and church; drive oo Edington and Tickhill Castle, and thence to Earor excarsion to the neal Boltersione to , morley Baltersione to Wort ey and Wharnclite Lodge
and Clasc.

CONDITLON OF THE METROPOLITAN POLICE CELLS.
Tre report of a sul-committee of the Social Scienco Association on this subjest has been issued in a printed form. It states that the total namber of police stations in the neCity opinion that, with the important excention of the dariness of the cells, which does not apply in the district of the City proper the condition and arrangements of the Metpopolitan police.cells do not require matarina olteration, and that they are, as a matter of fact for les apen to unfavourable amadrersions than recent statements in the pulic prists hare in plied. The want of light (except iu the City) is the ono main defect which the committeo commend to the attention of the anthorities con. cerned. Except in this respeet, the general management of the police stations appeneral tho committee to be creditable to all parties couccrned.

OPENING OF THE FIPST LONDON BOARD SCHOOL.
Ox Saturday last, at Old Castle-street, Whitechapel, the formal opening and handing over of the first school actually bnilt by the London Sohool Buard took place. The Board hud previously ndopted and taken under its auspices upwards of soventy schools of varions magnitn but the Old Castle-street School was the first of which tho sitc had actually been bought and the building erected by the Board itself.
Immediately after Lord Lawrence's arrival, Mr. Clariles Reed, M.P., led his lordship over the interior of the new building for a carcful and tberough inspection.
Mr. Charles Reed then opened the formal business hy informing his lordship that it was his (JI'. Reed's) duty, as chairman of the Committee of Works, to hand to him the koy of this selool, the first of 73 now building, and rising rapid! to completion. These schools were being built under the provisions of the Elementary Edu eation Act of 1870, for the reception of 102, 1,00 children, - the number which was declared to be in immediate need of the polis. The heal hestrion in the metro poliso. The Board had at the present time 150 schouts, witb an ample staff of teachers and
prpil.teachers, ready to occupy the new school buildings, and all the children of theso schools were paying a weekly fee. The Finarice Com. mittee had reported the cost of theso operations to be up to the present time not quite five. eighths of a penny in the pound in each year, spread orer 50 years; the money raised bearing interest at the rate of $3 \frac{1}{3}$ per cent. por annum. Tbis particular school was intended to moet the wants of a most densely.populated part of the metropolis, situated, bo might say, on the metropolis, situated, be might say, on the houndets. It had heen built hy Mr. High, upon the design of Mr. Biven, and was capahlo of the design of Mr. Biven, and was capahle of
accommodating 396 boys, 396 girls, and 480 accommodating 306 boys, 396 girls, and 480
infants. Mr. Rece, in conclusion, congratulated Lord Lawronce upon his being able, after three Lord Lawrence upon his being able, after three
years of laborious work, to witness the accom. jlishment, so far, of a groat educational plishment,

## SCHOOL BOARDS.

London.-IIr. C. Reed, M.P., brought np the eport of the Works Conmittce, which was re. ceived, and which stated, in reference to the transfer of the Shakspeare-walk Fomale Chaity School, York.place, Ratcliff Highway, that on the 11th June last a resolution was passed for the purchase of a site for a school in Brewhouse. lane, Wapping, into whicb the chitdren at present in the Shakspeare.walk School could bo transferred. Tenders had now heen invited by accommodate 32 .children, the amounts of which are as follows :-

Some slight alterations in the plans have since been made which will reduce the cost of the building by 360 l ., and as a prorision of 300 l . is made in the contract for the crection of a house for the mistress, the net amount of the reduced tender of Mr. W. Crockett, of King's.road, St. Pancras, will thus he $3,060 l$. The committee recommend the acceptance of this tender, a further provision of 3001 . being made for the erection of a honse for the mistress. Cost of site 1,400l.; cost of hnilding per head, 9l. Ss. 10 d .
Tenders have been invited for the erection of a school to scommodate 707 chillren, on the
site in Richard-strect, Poplar, the amounts of whicb are as follows :-

The committee considered it dcsirable to make certain alterations in the plans of this scbool which will reduce the cost of tbe building hy 5102 , and an amended lender bas now been obtained from Mr. J. Kirk, of Warren-lane Wharf, Woolwich, amounting to 5,3002., which the committee recommend the Board to accept.
Cost of site, $4,089 l .0 \mathrm{a}$. 4.; cost of bilding per Cost of site, 4,088
head, 77 . 9 s . 11d.
Tenders have also been invited for the erection of a scbool to accommodate 58 S children, on the site in James-street, Camberwell, the amounts if which are as follow

## Newman $\&$ Mann Dove, Brothers <br> $\qquad$ $\begin{array}{lll}16,933 & 0 & 0 \\ 6.875 & 0 & 0 \\ 6.819 & 0 & 0 \\ 6,655 & 0 & 0 \\ 6,29 & 0 & 0 \\ 6,529 & 0 & 0\end{array}$

In this case also the committee have reduced the cost of the scbool hy 560l., and they now recommend the acceptance of the tender of Mr. G. Stephenson, of Beaufort.street, Chelsea, amounting to $4,962 l$. Cost of interests already purchased, 1,4222 . 168 ; ; cost of building per head, 8l. Ss. 9 d .
Oa the 18th December last, Mr. M. P. Manning was appointed architect for the school to be
built on the site in Cottage-row, Bermondsey,
upon the nsual terms of payment, viz, a com. mission of 5 per cent. on the cost of the huilding The school was originally designcd to accommodate 1,500 children, but in consequence of a reduction in the deficiency of the school accommodation in the district, it was subsequently decired to build for 1,000 children onty, and the accordingly. A furd was also necessitated hy the discovery of a sewer runnin across the sito. The committee accord ingly recommend that a fee of 50 ruiness be clowed to Mr Manning in ailition to the nemal commission for tho setra labour ingured in commission, for the extra labour
On the 12 th Jume 1872 the Board
On the 12th June, 1872, the Board approved the amonded "rules for the planning and fitting up of boar "schoos. Fard 10 prontas that Elemords, School Board for London-Public Elementar'y School," and the name of the school, shall be placed in a permanent and legible manner on the faco of cach school. house. The commaittee considor that the words "Puhlic Elementary School " are unnecessary, as it may be then for granted that evary school provided by the Board is a public elementary school. They "Rules" be sanctioned by the Board.
The committec also recommended the appoint. ment of Mr. C. W. Stephens, as a sevior raughtsian in tho meritct's departmeni. (io lieu of Mr. H. W. Dale, resigned), at the same salary, viz., 140t. per annum.
The committee lastly recommend that the calaries of the undermentioned officers in the architect's department he increased as follow:Chief d
Senior
Sunior

The committes's recommendations were ac. cepted. At a suhsequent meeting of the Board, t was resolped that the tender of Messrs, Aitchison \& Walker, amounting to 6,070l., for the erection of a school to provide accommoda. tion for 822 chililren, in Bell-street, Marylehone, he accopted; and that the tenders of Messra. Sidehottom, Edwards, Coleman, \& Co., and Hammer, for the supply of 15,000 desks, at prices varying from 175.6d. to 1 l . 1s. each, be accepted.
Glaisdale.-The Local Board appointed Mr. E. Smales, architect, to prepare plans for the new school and snperintend the works in connexion sith its erection; the architect to do the work for $2 \frac{1}{2}$ per cent., as he had agreed to do. The appointment stood between him and Mr. Arm. Geld, architect, who named 5 per cent. as his commission, and it was decided in Mr. Smales's favour hy the casting vote of the chairman.
Northampton.-The tendera for the erection of the Spring lane Schools were received. There were eight in all, viz., Messrs. J. Ireson, W. Redshaw, D. Ireson, Dunkley, H. Martin, J. Wathin, and Claridge (Bauhury). The highest was for 5,207 l., and the lowest (accepted) tbat of Mr. Joseph Ireson, 4,0501 . Mr. Walker, the architect for these schools, in auswer to a question, eaid be supposed that they would be completed in six months. With respect to the Vernon-terrace Schools complaint was made of stood Mr. Bland would advertise in the local paoers and the luilder in the current week for tenders. Mr. Wright proposed that the matter sbould he referred to the sites and building com. mittees to take the earliest steps to obtain tenders, and to make any communication to the tenders, and to nake any commu
Stainland.-The Board proceeded to the selection of plans, four sets of which had been ent in, for tbe proposed new Board soliool at Bowling Green. The Clbairman mored that the one signed "lncognito" be arceepted. This was seconded by Mr. Mellor. Mr. Sykes ohserved tbat it was certainly the best in its internal arrangements. The plan was passed without opp isition. Mr. Ainley then obscrved that it the plan was passed by the Educational Depart. ment he supposed it was proposed to build a 300 children, at a cost of $1,500 \mathrm{t}$. On examinin 300 children, at a cost of 1,500 . On examining the plans, he did not thins for a moment tbat school to accommodate that number conld be huilt for that sum. One architect in his specification sail the materia's were to come eitber rom Elland Edge or Crossland Moor. If the tone were brought from those places, instead of being 1,5001 ., it would be double.

THE NEW COURTS OF JUSTICE.
Mr. Wart, in the House of Commons, asked the First Commissioner of Works whether the evised designs and plans prepared hy Mr. treet for the New Courts of Justice had heen recived and approved; and whether he antici pated heing in a position to announce to the House hefore the close of the session that the contract had heen signed and the huilding handed over to the architect
Mr. Ayrton said tbat the Treasury had aproved of the contract entered into to carry out the revised designs and plans proposed by Mr Street; but he was not prepared to state the eract time when the contract would he signed Ho was not able to fix the day when the building would be handed over to the contractor, and sti less would he be able to fix a day when the Bession would be bronght to a close, so that he could not state whother he should be able the intimate before the close of the session that th building had been lianded over to tho contractor The best opimion that he conld form, however was that the contract would bo signed in about month from that day

CHESTER WORKHOUSE COMPETITLON, $8_{18,}$ - Having recently carried out a eontract nuder one

ANTIQUARIAN VISIT TO BERKHAMSTEAD.

Tris town, which possesses mach that is interesting to archwologists, has boen visited by an excursion party of gentlemen froms London. The party proceeded to the Castle walk the top Mr. C. T. Clark gave a discourse on the rains.
Mr. Parker, C. B., made a few remarks suppleThey to wbat Mr. Clark had said.
The party then accompanied the Marquis of Humiton to his mansion, where his lordship and Countess pointed out many objects of had bological intcrest, one of which, dated 1611, there made. Mr. Parker said the honse was of the Elizabethan style, and it conld he made very good Elizahethan house. The rector, hy request, also read in the ball an extract from his hook, the "Antiquities of Borkhamstead," descriptive of the honse, as given by Camden, the historian, who called it "Berkhamstead House."
The company thence repaired to the King's Arms Hotel, where Inncheon was provided. Mr. Clark presided. Mr. Cohh invited the company to the Rectory, where there might be seen Cowper's well, and a painting of his birth-place Mr. Wm. Claridge, of Berkhamstead. The company thereupon visited the Rectory and ronnds which were very intoresting
II. Parker, the church was next visited. Many of the changes made in the restoration by Mr. Butterfield were strongly condemned hy Mr. Parker, as out of keeping with proper restoration. The rector gave information in reference to the hrasses and tombs, and pointed out the tablet in memory of the poet Cowper in the chancel, on which are lines by Lady Walsingham. On the invitation of the Rev. E. Bartrum, the Grammar School, which was founded hy Dean lncent in the reign of Henry VIII., was visited.
The party then soparated, baving spent a very interesting day.

MESSRS. TRÜBNER'S PREMISES, LUDGATE HILL, LONDON.*

LWOEFTE HILL
PLAN OF GALLERY

Nef warehouse in ludgater hll. The new promiscs of Messrs. Trühner \& Co ccupy a site purchased from the City Sewers ommission, boing part of the surplus land amaning in the hands of the Commission after idening Ludgate - hill. A large building rcted somo years ago for the purposes or the ilton Club, and which is at che rear of this a extensive range of premises laid out as ablishing and bookselling establishment. The shop on the ground floor of the nev uilding, and which is dovoted to the ordinary holesale and retail trade, is 16 ft. high, and has gallery rumning round at the height of 8 ft ., so 8 to divide the wall-space into two cqual parts, very portion of which can he reached without aperance where the stock of books arranged aportance where the stock of books arranged 'bo fittings generally are of Hondoras mahodo fitings generally are of Hondoras mahosposed is finished in Parian cement. The sposed is tinished in Parran cement. The
sbby, giving access to the gromed floor from sbby, giving access to the gronad floor from dudgate-hill, has a pavement of white marhle,
rith a centrepiece in enceustic tiles hy Messrs. rith a cent
1aviv $\&$ Co.
The hasement walls are built in Portland rement, and the floor is of Barnett's asphalke, aid on concrete in order to secare dryness, as his story was required to he used at ouce for he storago of books, whioh occupy the whole pace except that used as a receiving depart. neut, which has an entrance in Littie Bridge. treat. Nearly every portion of the hasement is well lighted by means of Hyatt's illominating rratiag (an Amcrican invention which is used to orer the front area) and hy glass slabs ia the loor of the shop.
The departments for Goverument contracts und for foreign and American exports occuyy the ground Hoor of the rear premises, the tepartment for hooks in the Oricntal languages being on the gallery of the shop hefore illaded to.
The counting-house, with the office of the Belgian Consulat-General, is on the first floor above these departments. The stories ahove
are fitted up for the storage of bound and and Lancashire and Yorkshire Companies, who anhound hooks.

All the several stories lave communication by of departments to the staircases, had other and with the connting-house hy means of peaking-tubes.
Tho front elevation towards Ludgate-hill Suffists chiefly of Portland stone and white The ground story has pilasters of red mortar. tone, on plinths of hlue Forest of Dean stone and surmounted hy figures of olephents, whieh arry the corbels that stop the onds of the cornice. The cast-iron story-posts are flated, and form the reveals to window end doorway, The shop front is recessed 2 ft . from the line of rontave in order to afond space for persons standing, and to give hetter means of lighting the hasement. The iron rovolving shatters are The in the transome helow the upper light. The general character of the design is ronnd-
arched Gothic, with an Oriental tendency in several of its parts. The octagonal shafts to the windows are of red Mansfield stone, hollowed on each face. No cornice, in the ordinary sense, is designed, but the upper story is marked by coupled windows and projectingoctagonal shafts carried on corbels and supporting pinnacles with domical caps, an ornamental parapet ranning Tween them.

The works have heon carried out from the esigns and under the superintendence of Mr . Slashill, of Old Jewry-chambers, architect, hy the contractors, Messrs, Ashford \& Brightmore. The carving was executed by Messrs. Farmer \& Briadley.

THE NEW RAILWAY STATION AT PRESTON.
Prestony, which is perhaps the most important town on the railway ronte between London and the North, as regards the traffic which converges there, has bitherto possessed a most inconvenient station, altogether inadequate to the large num. her of rrains belonging to the London and North-Western and other lcading companies which arrive at, and are despatched from it bo made A change, bowever, is at length about to
are the joint owners of the station, and the several lines radiating in different direction from it, have determined upon the constraction of a new and greatly enlarged terminas and huildings in connexion therewith, which, when completed, will make the Preston Station one of the largest and most important in the country. The plans for the new station and buildings, which include the erection of a hotel, have heen prepared hy Mr. Baker, engineer in chief of the tondon and North.Westeru Company, and the works will becarried out under the superintendence of Mr. Carr, the resident engineer at Preston. The works, which in their entirety are of considerahle magnitude, were commenced on Monday last by Messrs. Cooper \& Tullis, the contractors; and here it may he stated that Messrs. Cooper \& Co. were not the original contrackors. The works were to have heen cou structed hy Messrs. Brooks \& Garside, of Bolton hat circamstances led to new tenders heing invited, and it is understood that the fresh contraot is oonsiderahly in excess of the former one, in consequence of the cost of lahour, and buildings of every kind having augmented in value in every direction.
The station, as enlarged, will occnpy an area of upwards of six acres in extent, and will be carried under and across Fishergate, the principal street in the town, hy a stupendous fron gitder bridge stretching along that street over the railway. The enlargement of the station involves the removal of the engine and carriage sheds to the west of the approach to the present station from the south, together with other buildings helonging to the company as well as to privato owners, which will he demohished for the purpose of widening the line, and providing the required space for the enlarged station. The earliest portion of the work will consist of tho demolition of the existing hridge or tunnel hy which the railway is at present carried under Fishergate in a northerly direction; and when this is done, the line will be widened at this point by the construction of eight lines, instead of only two, as at present, together with the erectiun of the large bridge over the railso already referred to. Mr. C. D, Burgh who is at present executing the great irou-girder hride orer the 'Toys at Dondes, two miles and a
length, is also the contractor for the bridge at the Preston station. The girders of the bridge will measure $125 \mathrm{ft}$. long, 8 ft . deep, and 2 ft . thick, and will weigh about 80 tons each, and
six of them will bo recuired in the construction six of them will be required in the construction
of the bridge, the piers of which will be of solid of the bridge, the piers of which will be of solid
masoury. There will be separate and distinct masoury. There will be separate and distinct
booking offices, with waiting-rooms, refreshment. booking offices, with waiting.rooms, refreshment. rooms, and other offices on the east and west sides of the lino respectively, the passing traffic north and south being divided from each other. There will be a main central platform $1,100 \mathrm{ft}$. long and 24 ft . Wide, running the entire length of the area of the station, together with four other platforms rumning parallel with it. There at the north and the south. The station will be covered in hy an elliptical roof, in several divi. sions, consisting chiefly of iron and glass. This roor will be about 700 ft . in leugth, or nearl twoothirds the length of the entire station aren. Tho hotel will be a prominent feature amongs situated on a plot of ground belonging to the company at the south-wrest andele of the entrance to the station with which it will be directly conto tect the prineipl forade being ou the south accto, the phathal facha side of portion of which will be ornamentally laid out is a garden, wbilst the remaining portion will bo set apart 2 a a cabstand. The building will bo in the Italian style of architecture, tho materials being red briok, with stone dressings.
It will be large and commodious, and has been designed to contain accommodation for more than 200 visitors.
The entire cost of the station, including the buildings and hotel, will bo about 120,000 .

## THE DOCTOR AND THE AROHITECT.

Sir,-In your impression of Jwe 28 th you print some portions of a paper on "The Popular Lstimate of Architecture," which, although it seems to be in a popular style, and somewhat funny, yet deviates a little from exactness in one respect. With your cnstomary fairness I know you will allow me to say a word or two allont Mr. F. Cbambers's reference to a profes sion equally honourable as his own, although it always scems to please the public to fling a jest or sarcasm at it, and any one is sure to raiso a laugh if he crack a joke at tbe Doctor's cxnense. The analogy Mr. Chambers draws design is rather a lame one, and will not brav discussion; but it is to his bold description of What he considers the science of medicine that I wish to take special exception. He says, "The medicus guesses where he cannot see, and if he makes mistakes he shifts the blanno ; the archi. feet dares not guess,--a falso step once made is fatal to his faine. The doctor bluuders and stumbles in the dark recesses of viscera and cloaca; the patient dies ; but the nuch.enduring Mother Nature bears the blame." I put it to the candonr of your readers, sir, whetber these ure not, speaking gently, rather thoughtless words?" "Tbo medicus guesses where he cannot see" conveys the idea that in Mr. Cbambers's pinion medicine is a very uncertain art, because, porliaps, ho thinks physicians are not active nongh in their treatment. They leave too ruch to Nature, he believes, as he afterwards gays she bears the blamo of their errors. Mr. Chambers has never heard the motto nf one of our oldest physicians, -" Nimia
diligentia,"- or he would not find the fault he does. Sydenham, the great English Hip. pocrates, says, "I often think that we forget the good rule 'Festina lente,' that we move more quickly than we ought to do, and that Hore could be left to Nature than we are in de habit of leaving to her." Io imagine that Nature always needs the aid of ait, is an error, and an unlearned one too. If it were so, she would have not provided for the human race as much as its preservation demands. Sir John Forbes, in his work on "Natare aud Axt in the cure or Diseuse," insists on this vien, wbich may oo need tor. Chambers why the physician has Fhat is often the highest point of art in the treatment of disease; viz., a masterly inactivity which declines all uncalled-for interference wich .be operations of Nature, yet guides and directs hem towards the desired end. This is apt under the istluence of reason, and not mere "his or , as Mr. Chambers evidently imagines.
stumbles in the dark recesses of viscera and loacre, the patient dies," dce. (is this inevitable?) his 15 at once untiuthrul, and needless coarse. A well.educated physician cannot b said to "blunder and stumble," guided as he is by the over-increasing ${ }^{1 \mathrm{ight}}$ of science and modern discovery. He cannot always be bril lant. Ho is compellod often to "make hast slowly". We have not yet arrived at the pitch of catting off heads and putting them on again oor can the most skilful "Medicus," as Mr Chambers chooses to call a plain doctor, snpply brains to those who do not possess them, a lin practice which would be rather remunerativ What Mr. Chambers exactly means by medical man "stumbling in the dark recesses o iscera and cloacs" I cannot precisely fathom ont he should know that medical men do not in invariably diagnose from the excreta of thei patients, and that the "ars urinarum" is an extinct ono now. Anyhow, the idea pervading Mr. Chambers's sentences is one which prove him to have a very low estimate of the science of mediciue, and that his respect nud courtes for its practitioners is very small indeed. Why does he imitate Menenius, in the play of "Corioanus"? Has he "arl estate of seven years of sealth," that he will "make a lip at the physicaus"? (Act ii., scene I.) I sincerely hope he dogs", but suroly ho noed not wish to send the loctor sfer it No ono dismesionatoly com
 paring architectur wich on con could wh to tho meave aptid to ererthís ought to be tho measure applied to everything real good and pormanent serrice, wo had better not live at all. With Mr. Cbambers's remanks about the cducation of architects I fully concur. It is, as he says, "promiscuous" nnd "uncer. tain"; but still I am inclined to think that in the exercise of an art pnee and simple, -snch a architecture, poetry, painting, or the like,-a learned training is unnecessary. Inherent talent is the , artist's best pass; but for the "nedicus" remains tho plodding, hard work, the wear and tear of brain (men's lives bein of greater worth than any building) belong. omind a learned protession. I would fually an Chaumbers that to a physician of subsequent slil occurrence which no amount shift tbe blame, or throw all the onus ou to nature. The doctor has bis assnred position, says Mr. Chambers; and it he had not, hom coald he have the confidence of his patients? A good arohitecs has the confidonce of his clients, and rightly; but the smatteror in either art or medicine, of conrse, has nome. Bat medi cine secures fit men for practical work by searching examinations, and grants to thein only licences and diplomas. Were this system of test applied to our architects in emhryo we should hear less of failures and mistakes. I trust I have not said too much, but the subject is a very interesting one. I have not either intended to be unjust or unkind in my estimate of Mr. Cbambers's remarks. I read them as a casual reader, bnt if I have offended in the letter, he must beliere the spirit of my aninad versions is frieudly. If he turns to liis Goetie he will read :-

Der gaist der med ecin ist leieht du fossen;

## THE NETV SCHOOL BUILDINGS AT

 RUGBY.The chapel and gymnasinm buildings are the result of the tate tercentenary, when subscrip lions were raised amoug old Rugbeians fo improving the school buildings. The racket. court and the new schools had already been built,-the former by a general special subscription in the school, the latter at the cost of the masters under Dr. Tomple, chielly on the site of down. 30 ft . higla to tbe plate, with five courts against tbree of its outside walls, and an open gallery above an entrance.porch and dressing-room o 45 ft ., and 23 . The gymoasium 18100 fl . by crypt beueath it for workshops. An entrance porch, dressing-rooms, and two staircases to galleries which run round three sides of the
brilding aro placed together at ono end. glazed lantern in the centre of the roof receiv the climbing.mast. The fittings of the interi are by Mr. Maclaren, of Osford. The chape which had already beon soveral times onlarge and altered, was chiefly the work of Mr. Penros who has built the school infirmary. As it quirod farther enlargement, it was yesolver take down the greater part of it, and to rebui it on a larger scale. The two western bays an porch of tbe old chapol have been retnined, wit slight alteration. The whole of the two.ligh windows, as well as the three-light east windo in the new part, aro fentures from the old chape They have been preserved and built into th new walls on acconnt of their containing m morial and other stained glass. Tho building avo been designed by Mr. William Butternel architect. The original Rugby school bril. ones are of red brick and stone, and of whil and red brick and stone intermixed.

PROPOSED NETV DOCKS AT CARDIFF. A Protect has just been brought forward the construction of new docks at Cardiff, whic are stated to be uryently necessary, in cons quence of the inconvenience arising from th insufficiency of the present dock accommodatio Another reason for their construction is, that so nuany additional collieries are opening in tl district, tho output of coal will shortly be muc larger than it has been during the past few year At a meeting of the Chamber of Commerce he last week on the subject, Mr. Bachelor, one the members, explained the plans for construc ing these new docks on a quantity of waste lan on tho margin of tho river, situated botwee Cardiff and Penarth, in the neighbourhood the new railway uow making between those tm places. It appears that to carry out this proje capital of abont 700,000 , will be required, ar it is proposed that the bulk of this amonnt, the extent of $500,000 \mathrm{l}$., should be raised by t several railway coropamies interested in the d velopment of tho port, and that the remaini $250,000 \mathrm{l}$, should de raised by the publio. Seven niembers of the chamber warmily supported $t$ proposal as explajued by Mr. Batchelor, it bein admitted that the existing dook accommodatic is totally inadequate to the requirements of ti port. It was ultimately resolved that, in th opinion of the mecting, it was absolately nece ary that additional dock accommodation shon e provided with the least possible dolay. Th plans submitted by Mr. Batchelor were tho which the chamber thought it was dosimble ave carried out, and a committee was appointe to carry ont that object.

## VENTLFATION OUTLETS

Sir,-In answer to your correspondent seekin information on the above subject in your column few weeks azo, I beg to extract the followin Dr. Parkes

## od., p. 117 :-

m. lace for the ontle is a mos mportant consideration, as it will determine in great measure the position of the inlets. I tbere are no means of heating the air passin through them, they should be at the top of th room; if tbero are means of heating them, they the highest cutlet tnbe is nsually the point o teat disclure and sometines the pily one (a.) Outlet Tubes without Attifeial Heat.ney should be placed at the highest pointo the room; should be enclosed as far as possib. witbin walls, so as to prevent the air beius covled; should be straight, and with perfectly mooth internal surfaces, so that friction may b educed to a mimimum. In shape they may be round or square, and they must be covered abor witb some apparatus (the cowl, hexagon tnbe sc.), which may aid the aspirating power of tb wiad, and pravent the passago of rain into the sbaft. The louvred openings are not the best." Hy own opinion is, that they should be at the that there is no subject more important for the hyysical prevention of tulbercular diseases in particular,-the consumption that decimates on popnlation, than the sotisfactory solution the problem of ventilation and warming, and it enforcement where control cau be exercised.

BUSINESS PREMiSES ON LUDGATE HILL--Mr. Beashill, Architect.

IN AND ABOJT TUE REGENT'S PARK.
IT was a hapry thourht of the man who first Doran relates, in his "Lady of the Last Century, alled the parks the lungs of Lundon; without that hefore the dancing began the ladies' fan hem this great city would have but poor means of oxygerating its life-hlood for the sustaining si the ceasoless throhhings and muscular exerions of its miglaty heart; and it is therefore mpossible to over-estimate their value to those if its inhabitants whe can jo them alone obtain vorked hodies and minds so mrech need. Regent's Park is now situated in he town, and yet it is only a thing of yesterd of -a creation of the first quarter of the nineeenth contury. It is easentially a poople's park, ad has newer heen a fastionable Jounge, like ark is and bas always been. The inbabitants $t$ Loudon owe to George IV. the groatest ius. rovement of their city that has ever been fected, hardly excepting the more recout and nposing improvement of the embankment of heir river, and it is right for his famo that
fegent-street and Regent's Park should benr is name, and perpetuate his claim to their ratitude in this particular.
The great borough of Marylehone takes its ame, not,y as might be supposed, from "Mrury he Goo,' but from the litulo brook, which once an from Hampstend by Prinnose-hill through Iarylebone Park to Marylehone-lave, erossed pear Hay-hill, and then ran throutg St. James's Park by Buckingham Palace to Tothill-fields nd fell into the Thamos at a place called his was the Tybourn, and the manor was some inles called hy the same name, hut the church cing dedicated to the Virgin in the year llu0, t came to be spoken of as St. Mary-le-bourne nonymons writer in the Gentleman's Mapazin or 1809 rashly affirms that the chureh is called n old writings Santa Maricu de Ossibus, but the opographer Lysons proves this assertion to be ncorvect, and shows that in the Valor of Pope a called Ecclesia de Tyborne, and in records of he reigns of Fienry VII. and Edward VI, it is ournc. In the last century this place wary mall village cut off from London, and in 1728 he Daily Journal iuformed the public that 'many porsons have arrived in Loudon from heir country-houses in liarylebone., Lowever, ras reason to fear that all fields around would a course of time he swallowed ap, and divided mongst the builders. The first sign of this
hingre was tho proposed plan of a mew road hinge was two proposed plan of a new road
rom Islington to Paddington through Marsle. one Field, which was made in the year 1756 , ad ahout twenty years after Marylebone Gar-
lens wero closed, the sito being now occupied by jcanmont-street, part of Devoushire street, and rart of Devonshire-place. John Thomas Smith tates that the orchestra stood on the site of the touse No. 17, Deroushire-place. When the Mary. ebone-gardous were closed in 1777 or 1788 they ad been occupied as a place of publis entertainnent for considerably more than a oentury. Pepys's Diary, under date 1668 , thers olowing notice of the place: "Then we abroad .o Marrowboue, and thero walked in the garden. he first time I ever was there, and a pretty lace it is." Balls were given by the uobility at hese gardens; and Elizabeth Robinson, afterhe gayest and fairest of the revetlers. Dr
were thrown upon the table, and the men then drew them for partncre, each taking for his own he lady to whom the fan whicb he had drawn The manderd which ho again presented to her. very different society in tho last century were things strike us now as more odd than the general practice muong our ancestors of fregeneral practice mong our arcestors of fre-
quenting puhlie gardens, and tho easy abandom they adoptod there. In tho Marylebonc-gardens there was a large plunging - bath used hy fashionable nalads, who, donning a bathing dress took headers and gamholled in the waters. Lord Dupplin wrote a couple of verses on Miss Robinson's acbievements in this way. T T Smith, in his "Book for a Rainy Diy," gives a chronological account of the doings at tho gardens, and prefaces it with the following information. "The carriage and principal entrunce was in High -street; the back entrance was from the fields, beyond which, north, was a narrow wiuding passage, with garden-palings on
cither side, leading into Hirgh either Eide, leading into High-street. In this gardens, divided for tho recreation of sarious Cockney floriste, their wives, children, and Sunday amoking visitor's. These were called the French gardens, in consequence of having been after tho hy refugees who fled their country grandmother taking mo throngh rememher. my raryleboner taking mo throngh this passage to thinking them prodigiously fine " Persons were accommodated in these Prench gardens with tea equiparge and hot water at Id. per head.
When James I. granted the manor of Marylebone to Eulward Forset in IG]I he reselved the park in his own hands, and here be entertained orcign ambersadors with a day's hunting, as Qucen Elizabeth had done before him. In the ment "for malkinctof two new standings in paybone and Hide Parkes for the Oueenes in Mare. and tho Hernen of inge." In IG16 Charles I. grated Mo uarl to Sir George Sirode granted Marylebono bik to sir George Strode and John Wandeeford, for a detbers of 2,3187 . II 9 , May 6, as sccurity supplying the king with arms, due to them for upplying the king with arms and ammunition. to the whs sold hys of these gentlemen, but the park Wis sold hy the Parriment to John Sponcer on helaal of Culonel Thomas Harrison's regiment pay. ncluding money paid was $13,2102.6 \mathrm{~s} .8 \mathrm{~d}$., of sereral imber, onts) and $1,771 \mathrm{l}$. 8s. for the the nary. At this time Marylebone Park for disparked, and it was never again atocked with deer. At tho Restoration, Sir George Strode Nand Wandesford obtained possession of the park (with the exception of the great lodge and ixty acres of land, which had been granted for term of years to Sir William Clarke, secretary to the Duke of Albemarle), and held it until their debt was discliarged. The park was sub sequently leased to Henry, Earl of Arlincton, in 1668, and to Charles Bertie and others, in trust or the Duko or Leeds, in 1696. Several new leases were granted, and the last of these to fall in was that of the Duke of Portland, which expired in 181I. A survey of the estate, then alled Marylebone Park Farm, was made in the direction of arder of the Tressury, under th
found to contain 543 acres and 17 perches. It was at first intended to huild entirely over the open fields, hut we owe the Regent's Park to the admirable suggestion of Mr. White, of Devon-shire-place. This gentleman drew op a plan for Mr. Fordyce, the surveyor-general of the Crown lands, in which be proposed tbat only the lower part of the site of Marylehone Park sbould be built mpon; that the brildings should terminete northwards with a grand crescent of bolf a mil in spar, in the centre of which, fronting the ond of Harley-street, should he prected the en parish charch of Marylebone, to which there shonld be an approach by a streat continued from Harley-street, that tho ground should be restored to its oricina the pose, and converted into part- of thriel purpose, aud converted into a park of three miles modified, but the. This scheme was afterkards modified, but the thonsands who enjoy the ruts in white of the Regent"s Park should remember that all honour is due to "Mr. White, of Devon-shire-place," at whose suggestion a healthful resort was provided for the inhabitants of Bondon in place of rows of hricks and inortar. Before passing from tho old to the new park, it manor-liouse aud the old something ahout the manor-louse aud the old church of Marylebone The manor-house stood at the south eud of the park, near the site of Devonshire-mews, and was used in olden timo as a palace where those dis tinguished persons who were invited hy the king toassist at a stag-hunt wereentertained. It went out of the possession of the Crown when the manor was granted by Jomes 1. to Edward Forset and was probably then in part rebuilt, although Then it was pulled down, in 1791 , it retained traces of the arohitecture of Queen Elizaheth's time. It was wholly of brick and was sur mounted by a large tarret containing a clock and bell. There are four drawings of the house in tho "Crowle Illustrated Pennant" at the British Museum, hy Rooker. The first of the series is a view of the principal front, which consisted of a very large body with wins consisted jecting porch, and a deep dormer roof pro second slows the back or garden ; the which was flat, with a bay-window at cad, and five cahles to the roof. The each drawing taken from the hall shows thir staircase and the balpsters decornted grand richly-carved folinge; and the fourth with the tesselated focorations the fourth exhibits For mauy years previonsly of the staircase itself. house was occupied ha a school, who boys Place, which was kept first by Monsieur De la Rov. Mr. Fonntapne by his son-in-law, tho man of some note in. Mr. Fountayne was a Dean of Yort Dean of york. He was a. frjend of Handel and other eelehrities, and it is told of him that he once nuade a very mal a propos speech to the great composer. He was walking round Marylebone Gardens some music which be could not understand, he ohserved, "This is d- stuff." Handel at once answered, "Tt nay be d-- stuff, but it is mine." Mirs. Fountayne was little esteemed hy J. T. Smith, whlio speaks of her in his "Book for a Rainy Day" in the following uncomplimentary terms:- "She was a vain, dashing woman, oxtremely fond of appearing at Court, for which purpose she horrowed Lady Harcington's jewels. Indeed, her passion for display was carried to such an extreme that she kept her carriage, and that without the knowledge of her husband, by the following artful mancenvre. As the scholars were mostly sons of persons of titlo and large furtunes, she professed to have many favourites, who had behaved so well that she was ofter tempted to take them to the play, which so pleased the parents that they liberally reim. bursed her in the coach and theatrical expenses, though she actually ohtained orders upon those cccasions from her friend, Mrs. Yates, by which contrivance she was enabled to keep the vehicle in whicb they were conveyed to the theatres. Mrs. Yates, however, was amply repaid for ber orders by the number of tickets which Mrs. Fountayne prevailed on the parents of the scholars to take at her henefits." Mrs. Fonn. tayne had an old parrot, clad in a flannel jacket, which was so accustomed to hear its mistress's general invitation to strangers who called to nquire after the hoarders, that it hegan erging ont, as soon as they entered, "Do, pray, walk it ofto parour and take a glass of wme ; hut inviting showed a want of discrmination hy inviting all comers alike to regale themselves in
he parlour
The old cbnreh of Tyhourn, dedicated to St. ohn, stood in a lonely place near the bigliway,
close by the site of ti:e present Stratford place. It was suhject to the depredations of rohher who frequently stole the imagee, bells, and orna ments, so that, in the year $\mathbf{I} 400$, Bishop Bray hrooke granted a licence to remove the church farther north, to the High-street, opposite the present Benumont-street. The new church was dedicated to the Virgiu, and was then called St. Mary-le.bourne. Its interior is shown in one of Hogarth's plates of the "Rake's Progress," where the rake is introduced at the altar with the rich old maid. This church, being in a rain. ous condition, was taken down, and a new one huilt in its place in 1743, which, in 1857, on the day of the consecration of the new church in the New-roxd, was con
Regent's Park occupies 372 acres (and its terraces and canal 80 acres additional) out of 543 acres of the old Marglebone Park. When the now park was laid out, much expense was enclosure and by the letting some part of she tand to certain gentlemen who were willing to huild villas for theroselves within the rround huid villas for the the Royal Botanic Society and the Zoological the Royal Botanic Society and the Zoological Society do not injare the general of

Soon after the expiry of the Duke ry to do something with Marylehone parl, the huilding of the now Marylehoue church in the New-road, opposite York-gate, was commenced.
The first stone was lajd on July 5 th, IS13 The first stone was laid on July 5 th, IS13, and the church was consecrated on Feh. 4th, I817. 60,000 l. The interior, though spacious, is not eqnal in architeotural design to what the portico and general externul appearanoe would lead a visitor to expect. Cornwall-terrace was huilt hy Decimus Burton, in 1823, and Hanover-terrace by John Nash, in 1825. The Colosseum, which is now empty and falling to decay, was built by
D. Burton, in $182 f$, for Mr. Hornor, a land sur veyor, who made sketeles for the panorama of London from the top of St. Paul's, waich were afterwards carried out hy Mr. E. T. Parris and This assistants onl 16,000 square feet of canvas. the Swiss cottage, and the mountains seen from its windows; the stalactite carerns, the diorama of Lishon, and numerous other attractions, made the Colosseum, for many years, one of the most favourite resorts of the sightseer. Unfortnnately it was an ill-paying speculation $t$ The hospital of St. Katherine's, at the Tower, founded circ. 1118 by Matildus, wife of King Stephen, and augmented by Eleanor, Queen of Edward I., and by Plilippa, Queen of Ed. whe construction of the St. Katherine's Docks the consurnt hospital and colleriate church was the present built in 1827 from the designs of Mr. Anbrose Poynter. The to $1=$ ) Exeter (who a pulpit of wood, a gift of Sir Julius Cæsar, were hoth removed from the old hospital. Great complaints have been made at various times on poor neighbourhood to a rich one. Does it do its fall amount of good ?
Practical zoology bas alwaya been popular mong all classes of the community, and few places are so thronged on a public holiday as the Zoological Cardens. Upwards of $20,(00$ persons visit them on Easter and Whit Mondaye. On these occasions there is a great press at all the gates, and at Easter of the present year a new entrance wis openod opposite Primrose hill. The Zoological Society was instituted in 1826 , and two of its principal founders were Sir Humphry Davy and Sir Stamford Raffles. The innor circle of the park surrounds the Botavic Gardens founded hy the Royal Botanic Society, which was incorporated in 1839. The conservatory in these gardens was designed hy Mr. Decimus Burton, and has lately heen enlarged oy the addition of an east wing. The west wing is not yet pat in hand for want of sufficient funds. The groands are very tastefully laid out so as to deceive the ere into the belief that they are mnoh larger than they really are.
The Royal Toxophilite Society have a ground for practice at the Archer's lodge; and in the winter the London Skating Club are allowed to flood this ground, so as to form a shallow lake of ice for skating on. The various villes dotted abont the park are Holford House, St. Dunstan's, St.
John's Lodge, The Holme, and South Villa.

Holford House formerly belonged to Mr. James Hulford, but is now a Baptint College. St Dunstan's Villa was built loy Mr. Decimns Bur tou, for the Marquis of Hertford, who, when a boy was taken hy his nurse to see the figures of Gog and Magog, at Old St. Dunstan's Church in Fleet-street. At the sale of the old material of this charch, the marquis hought for old acquaintance' sake the clock and these two figures, which strack the hours and quarters, and placed them in his new home, which be called in their honour St. Dunstan's. The ornamental water in the park is very prettily arranged, and those who make nse of the boats that are now prorided for them, find it pleasant thongh circuinscribed. It has heen long favourite resort of skaters, and on Janaary 15, 1867, a fearful accident occurred through the breaking of the ice, hy which about 200 persona were immersed, and nearly forty of them lost tbeir lives. The depth of the water has since heen reduced to about 4 feet
O\& late years the park has been, in common ith the other metropolitan parts, considerably improved. It has been thoroughly drained so that the dampness of the clayey soil is greatly phviated Mounds have heen raised in varions parts, and shrubs planted upon them. A portion parts, and shribs planded apon hem. A portion or the cenlral avenue has alo lad ts sides opened, ar laik oul frardens, which care well suppled with lowers of the season, and keplin order wish Geatest elegance and taste. He but gmall, and need attending to that their growth may ho increased. Tlie soil is probably poor, hut some means should be tried in order to see whether is finer growth of tree may not be ohtained. There are no fine trees in the park, and in many places the
avenues require thioning. Furest pardeniug is mnch neglected in this country, and when a tree dies, or is blown down, a stripling of the feeblest description replaces it to grow to its fnll size long after all who saw it planted are dead and huried.
This park is always full, but on Sundays and holidays it really swarms with pleasure-seekers, who find in its trees, grass, and flowers a very fair substitute for the fields of the country. Still the numbers that are now to he fonnd there are not unesampled in the same place, for it is on record that 50,000 persons have been at one time in the Marylebone Fields, on a tine Sunc

STALNED GLASS.
St. Margaret's, Liverpool.-This church, sitw. ated in Prince's-road, has just heen enriched by the addition of three more stained.glass windows, from Messrs. Clayton \& Bell, of London. Thir. teen of the tweuty.six windows in the chareh
are now filled in this manner; and as another are now filled in this manner; and as another has been already promised, there is good reason may he in like manner completed. Two of the new windows are over the choir, and contain figures of the Evangelists; the third is in the north aisle, and consists of figures of St. Hilda St. Werrburga, and St. Ebba. The funds for this window have heen raised by subscriptions, and it has heen placed in the church in memory of Sister Alice, who died of fever nearly a year ago, contracted white visiting the poor in the district of St. James.the. Less. The printing of the roof, nave, and aisles in St . Margaret's is to Horsfall the found inmediately, hr. mised 2,0002. for this purpose.
Bamptor Church.- A memorial window has just heen placed in the east window of the Southby and Mrs. Southby, of Bampton. The
subjects are various scenes in the life of onr Savionr, including the Crncifxion and Resurrection, executed hy Messrs. Lavers, Barraud, \& Westlake, of Bloomsbary. From the ohancel the window is seen to great advantage, bnt from the western portion of the nave the effect is marred by the Norman arch at tho entrauce to the church.
Ross Church.- The Ogilsie Memorial-window fund amounts to 220 L, , and it is expected will reach 300 l. The principal suhjects of the present window will he re.composed, with additions, so as to cover the whole window. The work is being executed by Messrs. Baillie \& Mayer, that design of the tracery heing gratuitously supplied by Mr. R. E. Purchas, of London. Mr. Hards, of Tioss, mason, has controcted to complete the work. The reredos has, for the present, been ahandoned, on account of the insufficiency of the funds.
Rothbury Church.-The east chancel window of this church has heen flled with stained glass, by the directions, and at the expense of, Irr. Common, Surrey. The window is of the early period, and is in three lights. The design com. prises the following suhjects:-In the centre opening is represented in the upper part the Lamb and fluc, below which is the resur. rection of our Saviour, with the disturher Poman guard, an angel in a panel bearing is soroll, "I am the reaurrection and the life." Then folloss a group illnstrating the orucifixion, with the three Marys, St. John, and Mary Mandalene at the foot of the cross, finishing with an ornamental panel of rich design. This opening, like the other two, is enclosed by a horder of foliage. In the dexter is represented the raisiog of Lazarns, in the npper gronp, the angol under which is hearing a scroll, "Thy brother slall rise again." In the lower group is shown the Nativity, with text, "Unto us a child is horn." A panel similar to the centre one fitishes this opening, which is enclosed within a foliage border. In the sinister side opening is shown, in the apper panel, the raising of the widow's son at the gate of the city of Nain, the text below, borne by an angel, "Young man, I say unto thee, arise." The lower panel contains the Adoration of the Magi, or wiso men's offerings, with text, "We have seen his star in the Enst," finisling with a panel corresponding with the other two. The inscription across the three openings at the base of the window, reads, "Dedicated as n thank.offering to the glory of God. Amen. By James William Dixon; A.D. 1873." The work is hy Messrs. Baillie \& Mayer, London.
Paijnton Church. The four-light window at the west end of this chnrch has just been filled cano sies, glass, instrating, met are angels bearing scrolls. It is tho work o Mr. Pepper, of Easton-road
St. Mary's, Halifas. - The east window of this church has now been filled with stained riass from the works of Nessrs. James Ballontine \& Son, Edinburerh at the cost of Major Stocks, of Upper Shihder Hall. The window is to the Upper Shider Hall. the founder of St. Mary's Chnrch; and the subject is the angel announcing to the shepherds the birth of Cbrist. The window is in five lights. The centre light contains the figure of lights. The centre light contains the figure on
the angel, which, of course, is the prominent the angel, which, of course, is the prominent
feature of the window, whilst helow, on either feature of the window, whilst below, on einer
hand, are five shepherds with their flocks. This is the fourth stained wiodow which has been inserted in this church, two haring heen placed in the north aisle, and one at the west end of the south aislo. It is also in contemplation to fill the west wiodow
Bristol Cathedral.-The south transept window
of this cathedral lias of this cathedral has just been filled with painted glass, a memorial of the late Mr. T. O. Tyndall, of the Fort, Clifton. It is a window of six lights and tracery. In the latter has been represented a suhject illustrative of Rev. vii. 9,the Lord in majesty, with adoring stints and angels; and in the main lights six scenes from our Lord's life,-uamely, the Nativity, "Consider the Lilies," the Lnst Sapper, Bearing the Cross, the Eutombment, and the Angel and Mary at the Tomh. The panels are formed in canopy work. In the smaller tracery pieces have heen introduced the shields of Tyndall and Elton, and the two coats impaled. The work has heen carried out hy Messrs. Boll \& Son, of Bristol.

Tamworth Church. -Mr. F. Willington bas placed three stained-glass windows in the clear. story of this church. The stone work has been
no by Messrs. Mitchell, of Tanworth, under 10 direction of Messrs. Mileham \& Kennedy, of ondon. The glass has been made at the works Mesers. Morris. The first window from the ust ond of the church represents the marriage Edith, the foundress aud patron saint of tho ureh, with Sigtrig, King of Northnmbria. In two inside compartmonts are seen Sigtrig d Edith : tho former is puttiug the ring on her ft hand. In the outer compartments are scen thelstan tuking Edith hy the right hand to ve her away; and Ella, Bishop of Lichfield, in s the brother of Edith. The scoond window presents Edith, whose numery was (according Speed) in the Castle of Tamworth, as a lacty bess, with a crozic in her hand, her nums
ound her, and the Virgin and Child, the Vircin ing the patroncss of the Benedictine order. re third wiudow has a double subject - William e Conqueror, resting on a mighty sword, prents the Castle of Tamworth to Marmion; his nd is stretched across the window to present rtments represent Marmion aslcep, and Edith riking him with ber crozier in revenge for the iuries done by him to the nunnery. At the $p$ of each window is a pavel having reforence the design. In the easternmost, a gallery, the the design. In the easternmost, a gallery, the
ahlem of Sigtrig; in the second, the tower of lith's Jinnnery; in the westernmost, the Castlo Tamworth. On tho canopies are written tho mes of the persons represented below. In the nare compartments bencath aro the shields, or ars connected with the connty and place.
[HE WORKMEN'S CLUB MOVEMENT. The med Pimico. be Marquis of Westminster presided on ednesday in last week at the formal opening
an institution the cstablishment of which is derstood to be the first attempt in this country derscood to be the first attempt in this country a medium of a club, in such a way as to enlist influence of the clurch in support of the ab without patronising it or in any way com. omising its independenco. The institation is George-street, North Audley-street, in the ternal commanication. The Marquis of West ternal commanication. The Marquis of West.
nster offered the ground at $a$ low dent, to be nster offered the ground at a low rent, to be
id in trust for tho bencfit of the parish and ighbourhood, making it a condition that there ould be erceted a building to contain rooms for ssion purposes, for the use of working men, as er civilising ohjects.
On the site offered, which has a frontage of ft ., with a depth of 64 ft ., there has heen acted in brick, with some stone mouldings, a ty huilding with Gothio facado, which is re.
ved by two oriels embracing windows of the ved by two oriels embracing windows of the
and second floors. The building, designed Mr. Withers, has cost 6,0002., of which $1,000 \mathrm{l}$. ve yet to be raised. This new institution, ellings crected largely through the exertions the Rev. J. W. Ayre, the vicar, containg a ge numher of rooms. In the basement is a chen which it is intended to atiliso, not only connexion with the club, but in effort to prole the poor with good and cieap mid-day als. On the ground floor is a large rom for ssion services, mothers' meetings, and other t-floor is a still larger room, a club-room, ich is divisible by three movable partitions o four compartments,-for papers, refreshnos, bagratelle, do. There are several smaller banefit-olabs, while others are arranged tes for occupation by persons employed in work of the Chnreh and the schools; and at top are two large rooms, lighted from the , snitable for class-rooms. It is hoped that m the letting of the rooms will club, and aual chargo upon the building. meet the ee eqnally prominent entrances to the façade one of these is reserved exclusively for the one of these is reserved exclasively for the ernal acraugements; and the other two rances give access to the church rooms and Wo may here tenants. the memhers of the Working annual meeting and

Society of Arts, John-street, Adelphi. The mecting was not very numeronsly attonded, but anongst those who did attend were a number on ladies, and a sprinkling of working men. The Marquis of Lorne occupied the chair, and on the platform were Lord Lyyttelton, $\mathrm{Sir} \mathrm{H}_{2}$ Johnstone M.P., Mr. Mondella, M.P., Mr. T. Hughes, M.P and Mr. W. Johnston, M.P. Mr. Hodgson Prat read an abstract of the report, from which appeared that $7 t$ now clups had bcen reported to the conncil during the year, raising the tota number to 535. In London the number had increased from 52 to 76 , and 15 of the new clabs had affiliated thomselves to the Union. As regarded the metropolis, the principal event of the year had heen the opening of tho Grosvenor Cluh in Pimlico, which had its origin in tho liberality of tho late Marquis of Westminster It has about a thousand members, so that it quite self-sapporting.

ST. JOHN'S GATE, CLERKENWELL.
Sir,-About thirty years ago thie first appeal to the puhlic for the preservation and restora tion of this memento of former times was pub lished in sour journal. The Times, Athenceum, Gentleman's Mrayazine, and other leading organ of tho press kindly urged the claims of the structure, on historioal and architectural grounds During the whole of the period, to the present time, the protection of the gate has hcen under my care, and each occupicr, impressed with the
importance of not mutilating its remains, has avoided injuin not mutilating its remains, ha aroided injuring its ancient character. result has heen, that the interest in the huilding has heen increased, - hot only its associations, but pecuniary value, - and the press and the publio will he gratified to learn that their endea vours for its preservation have not been without reward. The Englich order of the Knights of St. John have, by purchase, regained possession of the frechold, and the gate will no longer be humiliated as a tavorn, so that-

Gin and beer long eold here,
Will be disearded without a tear."
The modern knights, imbued with the same love of order and charity as their ancestors, will complete the restoration of the old cate; and the public gaze, but face an important thorongh. fare, viz., the new street now being formed from Old-strect to Oxford-strect. Permit me to thank you, sir, the press, and the public, for the energeticand disinterested assistance in rescuing this building from spoliation, if not from destruc. tion. The success of the a lesson to all lovers of early history, that by fighting for the maintenance of British relics, Kghting for the maintenance of British relics,
the time may come when they will he, if not restored to their former uscs, at least preserved for ages yet to come.
W. Petrit Griffita, F.S.A.

## PROTESSIONAL INQUIRICS.

Sir,-The committee alluded to by "Inquirer," having entered into a contraet the provisions of Which are unusual, one can hardly say what is wsuat nnder such provisions. The following roplies may, however, meet his object :-
Question 1.-"Is it usual for the committee to get the bills of quantities attached to the contract whioh they could at all times see, or 8 it the enstom to leave them altogether in the rchitect's hands?
Answer.-It is not usual for a committee to have access to the contractor's priced bills, but this contract expressly states that they "are to he taken conjointly with the drawings and are, moreover, to te seut hack estimate. for settlines, the ertras and pissions. as a basie or settling the extras and omissions. They are, ings and speifor par of arawogs and specification; and, in the absence of any stipulation that they are to be deposited with the claim to
Claim to have access to them.
Question 2.-" When a schedule of prices is givon is it usual to put the price of the material at per foot or per yard only, or carry out the prices in full ?"
Answer.-Prices in a schedule are pnt at per foot or yard only,-to carry them out, "adding them up at the end of each column," would be 0 make a priced hill of quantities, which is not he same thing as a schedule of prices.
Qnestion 3.-"Supposing a tender sent in for lump sum, would the contractor, assumine
there be an error in quantities in his favour, have to make a deduction from his tender?"
Answer.-Usually no cognisance would be taken, as between committeo and contractor, of crors on either side, bat here the quantities are made part of the cuntract, and in the absence of clause providing for the case of discrepancies betweon drawings, specification, and quantities, there is a fue opening for a dispute. I have no donht that the contractor could claim full pay. ment for all errors that are against him, and must allow the amount of errors in his favour ess a fair profit on each itom.

## THE CHAPTER-HOUSE AT WESTMINSTER

Sin, - With referenco to the question lately addressed by Mr. Baillie Cochrane to the Primo Minister on the suhject of the decoration of tle Festminster Chapter-house, will you allow me to ask whether, in the opinion of those competent to judge in the matter, it would be reelly advisuble, taking the Captain and "Rogers" windows recently placed in the Ahhey as indicating the point which the revival of the art of glass-painting has reached in this country, to aunch into any expenditure for the prezent on this particular head of decoration? For my part, seeing what consequencos have already resulted from the introduction into the church of modern staised glass, I cannot conceal from myself the fact that the effect of such expenditure would be not only disappointing but positively disastrous.
The subject is really deserving of the most sorions and prompt attention; as regards the nterior of the Abhey itself, it is a vital question. Confident, therefore, that Sir G. Giibert cott can never approve of the sight of those rich mouldings, with which the Ahhey abounds, being suatched from us one hy one by shutting ut daylicht, I cannot but hope that the attention of the Dean and Cbapter will he directed, with the view to a remedy, to those terrible losses of the effects of light and shadow, which the true artist larnents, that have heen alrcady ffected by the introduction of modern memorial windows.

Somerirus.
ARCHITECTS AND TEEOLOGY.
Sir,-The other day I heard Mr. G. G. Scott read, at the Lincoln Architectural Society, bis paper on "Village Churches," part of which was published in last week's Builder, and I wish to be informed if Mr. Scott is a Roman Catholic, or Auglicau? I have not the slightest prejudice gainst the former, and shall think just as well of Mr. Soott whatever the roply may he; but I think the truth might as well he known. Mr. Scott wants higb chancel screens to fence off the clorgy and their chancel from the laity, arges the sacreduess of the ohancel, and advo. cates the setting up of the rood. The rood, I need scarcely say, consists of the body of Christ upon the oross, with hgures of saints at the foot, a group which, baving become a banner of the Romanists, our bishops will not allow to be raised in our churches. Mr. Scott said,-" "Pugin somewhere lays it down that the man who says he likes Gothic architecture and does not approve of high screens, is simply a liar. The expression is forcible, but true." I can scarcely
helieve that Pugiu ever "laid down" such thorough stupidity; and on the other hand, I am unwilling to give up the helief that, if Mr. Scott reads it a second time, by the light of the logic he learnt at college, he will withdraw his endorsement.

Profegtant.

## PROVINCIAL CHURCHYARDS.

Sir,-Whether I am of a melancholy disposition or not, I like to wander amongst the graves in old church-yards, there to chew the cnd of Teflection over the ashes of departed worthies. The northern counties of England possess many suoh sacred precincts,-Lanoashire especially,Where lie the remains of many whose nancs no Englishman would "willingly let die." Bat what shall bo said,-what language ought to he used,-to characterise the condition of many of these graves, shamefully neglected and befouled as some are? I strolled the other day into Rocll. dale Churchyard to find the grave of is Tin Bobhin" heaped upon with ashes from a neigh. houring cottage, from which issned ragged ard dirty children asking "largesse." In some chnrch garde, 一the one facing tbe Town-hall, Oldham,
ior instance,-there was, when I was there last, every inch of the surface covered over with cinders, not a blade of grass, a tree, shrub, or any living specimen of the vegetable world, to be sean. This fashion of covering up all walking surfaces with cinders has been adopted in the varions new schools recently built, where children playing easily kick it np, and thereby become so dirty in a short time that their mothers scarcely know them. If the managers would add to the ciuders some good Portland cement, a garface might be made which would be clean, w.terproof, and pleasant.
"STORY'S STATUE OF JERUSALEJI."
Str,-Referring to your paragrapb as above in last week's Builder, I take tbo liherty of informing yon that the letter which is placed on the phylactery on the bead of Mr. Story's beautiful gtatue of "Jerusalom" is the Hebrew equivalent to $s h$; is termed "shin"; it is the initial of the word "Shadie," meaning " Al. mighty," and does not refer to Shiloh (as you suggest). This "shin" is placed upon overy phylactery nsed by tbe Jows during the racitaton of our morning prayers, to remind as of the omnipresence of God. Josefil Lambert.

CONCRETE SYPHONS ON THE CANAL QUINTURO SELLA."
In conseqnence of the short time (four months) which was allowed for the construction of the extension of the branch canal, Quinturo Sella, from Mortara to San Georgia, and the scareity of bricks, the Canal Cavonr Company determined to accept the proposal of Signor Giuseppe Frattini (who has successfnlly intro. duced his uso of conerete into Italy for the construction of hydranlio works) to bnild all the syphons for the passnge of existing irrigation channels under the new canal in cement con. crete. The Joumal of the Society of Arts says, these syphons, which vary in diameter from 0.22 to $1 \cdot 00$, are circalar in section, and are monlded is drawn forward as the work proceeds. Which syphons, of oval section, 2.00 in width by 1.60 in height and 20 metres in length, have also been constructed by Signor Frattini, and are prohably the largest works of this class which prohably the largest

The cement uged is tbat known as "Ciment de la Porte de Franca," made at Grenoble, the qnick-sotting (a prise prompte) boing mixed with the alower-setting quality, in certain proportions, acording as it is required to hasten the setting of the work. The hallast and sand
should be clean, and when easily obtained, the should be clean, and when easily obtained, the
granite chips from a atone.cutter's yard add granite chips from a stone.cutter's yard add considerably to the strength of the work. A few
hours after completion, such work, struck ligbtly hours after completion, such work, atruok ligbt

## A gigantic tip.

Notming to do with horse-racing. No quiet intimation of the winner of any "coming event." Nothing to do with bribery, from the new "Nondlit o' t' sooart." The "tip" policeman. Lancashire for "Ruhbish may be shot here," and is sitnated adjoining the Queon's-road, Man. cbester, where it crosses a little valley near the cbcster, where it crosses a little valley near the
Rochdale-road. The road here was first formed by making it on the nsmal embankment, and railed in, learing the valley some 20 ft . to 30 ft . deep on either side. The land belonga to the corporation, and they invite the delivery of al kinds of ruhbisb: literally, every kind is re. ceived, -the contents of middens, night-soil garbage from the markets, road. scrapings builderg rnhhish, old tid-ware, -anything which has bulk, no matter what, for the purpose of levelling op this valley, which is of very con siderable area, so as to make it "good building. gronend for working people's cottages." As soon street, a street is built, and tenanted; but many of the tenants do not stay in them long, nor do tbey leave of their own accord, heing in auch cases carried out. They go to "that bourne whence no traveller returna." I visited the spot on Snnday, July 13th; and as I approached it hy the Queen's-road, the wind,
which blew over it towards me, filled my month and nostrils with one of the most abominable
stenches it was ever my misfortno to come in contact with. I became ill, with romiting and purging, and was glad to gat away again as quickly as possihle. I stayed there, however, nates who live in observe that the poor unfortn. sorry time of it , and to believe that the medical men had no sinecures there. What onght to be said, however, in deprecation of the conduct of a deliberately set sanitary law the sake of gain, make an otherwise healthy district a hot-hed of disease, - at a time, too, when cholera is approad ing ns from the Continent? Pray, sir, five 18 your powerful help towards remedying this great evil, and heg of the Government,-if necesaary, a sanitary commission,-to investigato and determine, as some time since in Liverpool.
$\qquad$

## THE COLE TESTMONIAL.

The meeting at Willis's Rooms, on the 11th was entirely successful. The Marquis of West minater, who presided, gave a pithy accunnt of Mr. Cole's career. Lord Honchton moved, with his nsual skill, and Lord Granville seconded the first reaolution, Mr. Colin Minton Campbel] supporting it:1etirement of Mr. Cole from tho direction of the South Kensington Museum, to recognise in some permanent form his great services to the public.
Lord Clarence Paget proposed, and Mr . Godwin seconded, a motion,- "That pnblic aubscriptions be invited to carry ont the foregoing resolu tion." Botb were caried unanimously; and then, on the motion of the Duke of Sutherland, seconded hy Mr. J. G. Crace, a largo committee was appointed. A well-dozerved voio of thanks to the chairman, moved by Sir Dighy Wyatt, and seconded by Mr. Horsley, R.A., closed the proceedings. Several large aubscrip. tions wero annonnced in the room, including Mr. C. J. Freake, 100l. ; Mr. H. A. Hunt, C.B. 1001.; Sir Joseph Whitworth, 100 l . ; but it was clearly nnderstood that even shilling subscrip. tions would be gladly accepted.
That no time might be lost, the committee held a meating immediately after the close of the general meeting, and elected an executive committee of eighteen.
A mecting of the executive committee was held at Grosvenor Mouse on Tnesday last, when inr. Crneo was elected hon. secretary, and it was determined to invite co.operation in all th already promised amount to about 900 l .

## NEWTON'S OBSERVATORX.

Sir,-I do not know whether yon have noted the removal of the observatory from the top of Sir Isaac Newton's house, near Leicester-square, it hos I believe, in all material points but this, intact We reproach the now conntries with a want of veneration, but snrely the seeds of this failin must have been sown in Old England. Would not snch a relic have been preserved, reve rently proserved, hy any other people Enope? $\qquad$ Vigilaxs.
THE NEW BRIDGE HALL, BARNSTAPLE
Tee Barnstablebridge Trust, having funda, considered it adviaahle to buy the adjacent property ranning down the Strand, upon the eft-hand aide of the bridge on entering the 0 ft ; demolished the miserable some 140 ft . by $0 \mathrm{ft}_{\mathrm{t}}$, demolished the miserable old honses that occupied the site, and have, in their stead, erected a pile of buildings, affording a river front. the edilice is intended to supply a wan ong felt in Barnstaple for convenient municipal offices; Mesars. Gould \& Son, architects and borough survegors of Barnstaple, prepared the plans embodying the ideas of the Trust. The contract was let to Mr. J. W. Hunt, huilder Exeter. The contractor commenced the work in November, 1862, and the edifice is now so far complete that the scaffolding has all been taken down, and the hoarding removed. The interior is in a forward state. The style of the building may be termed Early Geometrical, and the river rontage consists of a façade some forty yarda in length, broken by four gables of varied height and pitch, and by a small tarret of teak, covered with lead. The angle of the building at the
corner, adjacent to the bridge and strand, facing the square, is semicircnlar. The Stra front comes flush up with the parement, and imilar in elevation, although varied in detail ho river front. The materials used in the co truction are mainly Bridgwater brick, relie hroughont with dressings of Bath atone. material loge basement is of Pilton stone are slated. The principal hall is 50 ft . lor 25 ft . wide, by 50 ft . high, and has an ope timbered roof, varnished and stained. The to part of the building, at the west end, is used ouded cellars, and for this pnrpose fonr ext sive vaults are provided. Upon the exterior sive vaults are provided. Upon the exterior
the building there is a fair sprinkling of carvi he bunding there is a fair sprinkling of carvi in the theryy river front, and upon the side of buildisg next to the bridge, is complete; that upon the Strand elevation, and npon ancle towards the scuare, is, we believe, to left in blook nntil funds admit of its be carried out. The carying has been executed Mr. Harry Hems, of Exeter.

## FALL OF BUILDINGS.

Fall of a London Warehouse.-Great ala vas recently created in Watling-street and nei ourhood, hy a loud report proceeding fr No. 7, Watling-street. It was found that ack floors of the huilding, stored with a la uautity of valuable woollen goods, had fallen rom roof to basement. Fortunately no one upon the premises at the time. The bo hich is a very old one, was undergoing repa and some interference, with the foundations, beliered, led to the accident
Falling of Vaults at the Ma,ket-hall, Birm am.-For some time past a namber of wo men have been engaged in constrating vaults, and enlarging the old ones, underne the Market-ball, Birmingham, Disfort eems to have attended the progress of work; for, a week or two ago, some of arches of the vaults gave way. These were paired, and the ordinary work was continu Three of the new arches near to the Worces street end of the hall, however, have since gi way, and the roof of the vaults, which forme portion of the Hoor of the hall, about 30 square, fell in. Fortunately there was no injnred, the workmen having previonsly left

## CHURCH－BUILDING NEWS．

Marlborough．－Oghourn St．Andrew＇s charch in the hamlet of Rookley，has been opened for divino gervice．It is built of Sarsen stone and fint，with Bath stone breastwork，and hollow walls， 14 in．thick，at a cost of $1,300 \mathrm{l}$ ；the con． was given，and a lart，of sinuon． found hy $\mathrm{Mr}_{1}$ W．Tanner，of Rockley House；the interior decorations heing primoipally tho work of Mrs．Tanner．
Mitcham．－The chief stone of a new church， Christ Church，Singlegate，Mitoham，has been laid by Mrs．Harris，of Gorringe Park，Mitcham． Mr．and Mrs．Harris having expreased their in－ tention to huild a permanont church，the vicar， with other gentlomen，formed themselves into a committee，and in Decemher，1871，passed re solutions to co－operate in the erection of a per－ mand charch＂capable of enlargoment．＂Ir $r$ Mr．Mre．Harris then，throngh their surveyor respondence with Messrs，F，Fere put into col－ architects，who suhmitted plans，one of which was selected，the estimate of cost heing 2，600l．， inclading heating and lighting，and to accom． medate 100 adilts and 150 children．Ground belonging to Emmanuel College，Cambridge， witb adjoining land，forms the site．A preli－ with adjoining land，forms the site．A preli－
minary statement was issued by the committoo， minary statement was issued by the committoo，
dated the $14 t h$ May， 1873 ，showing a balance in excess of cost over aubscriptions of $5891.158 .$, excess of cost over aubscriptions of $589 l .15 s$ ．， this heing attributable to the difference between
the estimated building cost of 1872 and the pre－ the estimated building cost of 1872 and the pre－ sont，the formor being 2，600l，and the latter
3,2251 ，exclusivo of lighting and heating．All preliminaries being arranged，the obief stone，as we havo said，has been laid．
Altor．－The Lord Chancellor lias laid the fonndation－stone of a new church at Alton， Hants．His lordship on tho occasion said，that the outward fahric of a chnrch shonld be as good and as beautiful as it was possihle to make it－ not for the aake of such onter beauty，but for the sake of the symbol represented in the work they were seeking to acoomplisb hy the erection of such a building．
Kingtor．－Some excitement has heen caused in Kington，on account of the apparently dangerous condlition of the parish church．Tbe north part of the cdifice has been taken down in order to enlarge it，and from the appearance of the north side，especially the pillar which supports the chancel arcb，it was tbourcht that it wonld be nnanfe to hold public worship in it．The state of the pillar and fonadation had not been noticed till about ten o＇clock on Sunday moming，and the congregation were coming np to cbnrch， whon tboy were told by the viear and chnreh． wardens that there would be no sorvice that day．Workmen were at once engaged to pre－ vent the wall from settling down any fartber． After examination by the builders，and by Mr W．A．Coombes，one of the arohitects of the Royal Ecclesiastical Commissioners，it was con－ fidently stated by them that there wonld he no more settlement，and that the ohurch will be perfectly safe and fit for puhlic worship
drew＇s church enacol Barnwell st．An． rew＇s church bas been re－opened，after under． of thg repairs and alterationg，under the direction Mr．Rev．G．W．Hantingford，tbe rector ；and Th．La ward Browning，architeot，Stamford． We foor has heen concreted and re－paved with faws encaustic tiles；a new stone screen bas cencel with，dividing the church from the chancel，with perforated crosses，and sarmounted with brass ornaments and rails；in the centre of the screen are two hrass gates，and in the anctuary part of the chancel are two brass standards，each containing eleven lighta；in the hoir part are some hrass standards for lights in the centre of the communion tahle is a brass cross，inlaid with a topaz set in gold，and on each side of the cross are two candlesticks，filled with large wax caudles．The reredos is hung witb drapery，and part of the floor carpeted The old monament which stood in the cbancel， to tho memory of Nicholas Latham，the founder of many charities，has been removed and restored．In taking down the monnment，a piscina was discovered，which has been restored Ou the north side of the chancel，a new chapel is hnilt，which is called the Latham Chapel．It is divided from the chancel with an oak screen \＆Care， and car or Willis，of Birmingham；the painting，graining， \＆c．，hy Mr．Daniel Sterens，of Barawoll．

## SCHOOL－BULLDING NEWS

Stanford－on－Teme．－The new school for the united district of Standford and Orleton has been opened for the scholarg．The school was built from the designs of Mr．E．Day，of Worcester， architect；the masonry and carpenter＇s work being done by Measrs，Bradhourne \＆Lewis，of Clifton．on－Teme，and the ornamontal stomes， hy Mr．Forsyth，sculptor，Worcester．
Highroorth．－The now national schools at South Marston bave been opened．Sonth Maraton is a district chapelry of the parish of Highworth， containing about 100 inhahitants，and tbree miles from Highworth．The new sohools bare been erected on a plot of land forming one corner of Mr．Bell＇s Park，near to the old achool，and in about the centre of the village fachoo the Shri－ about the centre of the village facing the Shri－ tho Early English siyle The form a gronp in tho Early English gtyle．The walls are built of tbe local stone，faced with Swindon stone，the chimings of the doors，windows，bell turret，and chimney shafts boing of Corsham Down Batly stone．The internal arrangroments consist of a school－room， 37 ft .6 in ．long，by 18 ft ．broad， with a class－room， 14 ft ．square ；the height of both rooms being 15 ft .6 in ．to the ceiling． There are distinct entrance－porches for the boys and girls，with cap and bonnet rooms attached， The school and class rooms are fittod up with Colman \＆Glendinning＇s Eastorn Counties patent desks，which aro contrived to allow of their heing used as desks，oither flat for working，or sloping for writing and drawing，or they mas bo convorted into a backed seat，or two of them placed together form a convenient tahle for tea－ meetings，\＆c．The desks stand on a stepped platform，and on their being removed and placed against the side walls，by means of hinged flaps in the lloor of the platforms，an infants＇gallery is provided，the flaps forming the backs of the scata．Cutting．ont tahles， mistress＇s desk，cupboards for work，books，music， \＆c．，black－boards，and other modern applianees for teaching ane provided，including a box of models formiag a small museum of natural and artificial objects．The works have been carried out hy Messrs．William Drew \＆Sons，of High． worth，from the designs and under the superin tendence of Mr．James Sohofield，of London and bave been erected and completely farnished， at considerable cost，by Mr．Bell．They aro designed for 120 children，reokoning 8 ft ．super for each child，acoording to the requirement of the Committee of the Privy Conncil on Education．
Bescot．－New schools for Darlaston and Wedneshary are proposed to be erected．They are intended to previde eduoation for the population of Fallings Heath and portiong of Wednesbury King＇s Hill，and Darlaston，and will materially lessen the need for a School Board for Darlaston The new huildings，when completad are ort mated to cost $1,200 \mathrm{l}$ ，of which 980 l ，have been already subscribed，inclading a donation of 5007 ． from the Mille family．

Ipswich．The schools whioh have been erected by the Looal Board，and described in the Buitder have been inangarated by the opening of the schools on the Wherstead－road and in Argyll． street，which were visited in atate hy the Mayo and other members of tho Corporation，the members of tbe School Board，and of other pnblic bodies．
Torrington（Devonshire）．－The new school ereoted by the Local Board has heen opened． The aite is a piece of gronnd in the centre of the town，in continnation of the new terrace recently bnilt by the Okehampton Building Company， and focing the newly－erected villas on the Rolle property．The style of the elevation is simple， comply English treatment，and the buildings flanked on mideschool to accommodato 10 ， the otber side by a school for girls，each of the风九ter giving aocommodation for 120 children making a total provision for 340．The exterior facing of the walls is of local stone，and the drossings are of stone procured at Hamden hill The slato on the roofs is partly Dolabolo and partly Welsh，laid in alternate longitudinal row the lighter hne of the one relieving the somhre dulness of the other．The building is sur－ mounted hy a bell－turret at the junction of the roofs．The extreme point of this structure is at least 40 ft ．from the ground．The dimensions are as follows ：－Infants＇school， 40 ft ．by 20 ft ．； The and hoys schools，each 44 ft ．by 18 ft land，for which alone 170 z were paid，of the ahout $1,300 l$ ．The architects were Mesgrs．

Garton \& King, of Exeter; and the huilders,
Messrs. Medland, Grant, \& Eastmond, of Tor. rington.

## FROM SCOTLAND.

Elinburgh. - At a conference which the Cbalnuers Memorial Committce have had with Mr. Steell, that gentleman explained that tbe delay in the execution of the statue had arisen from his attention baving been very much occr. piedtely on that work heing sent to the foundry, which it would be in a very short time, thie monument would bavo his first and undivided attention. The committeo had sulumitted to them designs for the pedestal, and expressed a farourahle opiuion of one whicb, in the plain massiveness of its character, seemed to be in kecping with the object in view. As tending to enhance the appearance of the statuc, it was
resolved to obtain estimates for the execution resolved to obtain estimates for the execution of the pedestal in Peterheal granite. At a recent meeting of the Edinburgh and Leith Engineers' Society, Professor Fleeming Jenkin was unanimously appointed president, and Mr. Alan Brebner, C.E., and Mr. Alexander Leslie, C.E., vice-presidents for the eusuing year. The secretary at a suhsequent meeting read the tbird annual report, which stated that the condition of the sooiety generally during the past year had been very satisfactory, giving the council good hopes of continned prosperity in the future. Fifteen members had joined duriug the year, and six lad resigued, so that the total number on the roll at present was sisty.four, as compared with fifty-Give at the corresponding date last year. The financial statement showed a halance in favour of the society of 3.4 lt . 10s. 9 d , The report was approved. The chairman delivered the elosiug address, He then proceeded to read a paper on "Our Lirhthouse bystem. Ander of modicing that the brst light. tbe Garonne, which was erected hy the French in 1581 , he gave an interestipy building of many of the Scotcb lighthouses, and stated that there were now sixty. four of tbese, stated that there were now sixty.four of tbese, which had been raised at a cost of 900,000 . He also described the different refecting and refraling ligbts in use, the various burners aud oils employed, and gay
lighthonse apparatus. lighthonse apparatus.
Glasgow. - The Kib
Royal Botanic Cardens Crystal Palace, in the Royal Botanic Cardens, bas been opened as a placo of public amusement. The palace will anpply a want long felt in the city. Not
only will it be devoted to orchestral concerte, only will it be devoted to orchestral concerte,
but it will also he used for lectares, flower but it will also he used for lectares, flower
and other sbews, -and, in short, everything and other sbews,-and, in short, everything that appertains to the amusement of the proriding suitable hall accommodation for the ase of the organised trades, was before the Glasgow Trades Council, but in consequence of varions otber important matters coming np, was not pusbed forward. Another effort is to be made to raise the necessary amount of money17,0002 or $20,000 \mathrm{~L}$, Which it is estimated will be requisite to complete the proposed bailding. Should the funds be procnred, it is intended to bave a ball eqnal in size to tbe City Hall, two smaller halls suitable for labour excbange, refer. ence library, and reading-room, and a suite of aheut twenty rooms, in which committees of the varions trades could hold their meetings.
$J e d b u r g h$.-It is understood that the Marquis of Lothian, acting on the recommendation of Mr. Anderson, arohitect, Edinburgh, has further resolved to remove the belfry from the tower of Jedburgh Abbey, for tbe safety of that part of the building, and it is expected that butcresses will be put up to support the north wall of the tower. The octagonal part of the belfry is of a mucb earlier style of arcbitecture tban the greater portion of tbe tower, and seems not to occupy its original position.
Dundee-The chief stone in commemoration of the restoration of tbe Old Tower, Dnndee, and the presentation of a peal of hells just erected in tbe structnre, was laid on the 24th of May, in the presence of a large assemblage. The restoraago nuder Sir Gilbert Scott, and the oririnal ago nnder Sir Gilbert Scott, and the original details of the architecture bare been reprodnced. The cost of the restoration, which will amount to abont 8,000 l., has been defrayed chielly by the inhe Town Council. In a donce is to be paid hy ibe Town Council. In a document placed in the founded in 1189 by David, Earl of Huntirgdou,
in commemoration of his beiug saved from sbip wreck in sight of Dundee when returning from
the Holy Land, where be had been on a third crusade witb Richard I. of England. The new crusade witb Richard I. of England. The new
bells required were provided by six local gentle bells required were provided by six local gentle.
men, the cost being about 720 l. The memorial men, the cost being about 720 l. The memorial
stone was laid by Provost Cox, and the bells wer stone was laid by Provost Cox, and the bells were then set a.ringing in bonour of her Majosty's Monument, which is intended to occupy a pro minent position in front of the Dundee Exchange was intrasted, after a competition, to Mr. John Hutcbison, R.S.A. The design on which the selection proceeded was a statue under life-size and, as the work is intended to be executed on a colossal scale, the artist is now about to com mence the large model from which tbe bronze castings will have to he made. In representing the old engineer, Mr. Hutchison has aimed at heing tboroughly realistio. He has not thought to invest the plain, bomely Scotsman with any artificial graces of classic drapery, but has reproduced him in such attire as he was accus tomed to go about in, and in connexion with objects suggestive of his special claims to public Etooping, with head bent forward, and eye gazing right in front, with an intent expression. indicative of menthl pre-occupation. expression is to he placed on a pedestal of red granite.

Aberfoyle. - The fondation-stone of a merworia cottage, to the memory of William Glen, author of the well-known Scottisb song, "Waes me for Prince Charlie," has heen laid at Craigmuck Aberfoyle, for the benefit of the poet's widow and daugliter. Mr. Simpson, architect, Stirling bas given his services gratuitously
rathie.-A Anemorial window bas heen put in at the parisin charch of Crathie, by direction of her Majesty, in honour of the late Dr. Norman
Maclcod. The window is opposite the royal macled. The window is opposite the royal Wew. The stained glass, according to the present position, and the figures are too large for the small hillside church, besides earkening the interior to a very inconvenient derree. It is
believed that the preseut glass will be replaced believed that the preseut glass will be replaced
by some other desirn, and that a lighter and brighter style of decoratiou will be adopted.

## FARIORUM

Hodge Podge" (Williams \& Norgate), is a newspaper in rhyine, so to speak. Advertise ments, hocients, formed into a continnous poem. The work displays a considerable amount of clevermess and some boldness of thought. if A $10 l$. Tour with Sketches of Travel and Sport. By Gairn Sorgh (Wyman \& Sons, Great Queen-street)," shows how an agreeable of the Ardennes, and shows how an agreeable month can be spent at small cost, by those who choose to "manage." Some notes of fishing and shooting are intro. duced, and the whole is very pleasantly written. By Mrs. G. Linnæus Banks. London : H. S. King \& Co." has now taken the shape of one compact volume in the Cornbill Library of Fiction. This of itself shows that the story has already passed the ordeal of criticism, and we can of our own knowledge add that it is a pery clever and interesting book, superior to the
ordinary run of novels. The scene is laid in and ordinary run of novels. The scene is laid in and racters quaint old civy of and the interest of the story is maintained from heginning to end. -"Sewage: Intermittent Downward Filtration separately or is combination with Edinbe Irrigation. By J. Bailey Denton, C.E reprint of : Dimonston \& Douglas. This is Purification," held at Edinburgh in January last. In reference to the trial of Mr . Bailey Denton's process at Merthyr, at the instance of the Lord
says:-
> "Firse results of intermittent filtration at Mertbyr show can be grown on the surface of the agiticultoral character same lime that the serage is applied to them; second, amount of woney expented in the mecessary toarkg, exceeds
that derived from any instance of surface irin recorded; and, third, that the process mayy be carried out Without nuisance, or, in fact, without the eseape of any objectionaole odour recognisable twenty yards frem the
place of application. Heuce the otjections anticipated by the Rivers Pollation Commissioners have been sere-
rally met and refated. I should also atate that the years, and that the purifyivg power of the soll rema

Mr. Denton states that, comparing ora surface sewage irrigation, per se, with a
bined system of irrigation and iutern bined system of irrigation and iutermi filtration, in the way explained, the or ontlay will bo found to be somerhat great the latter case than when either proce adopted by itself; bat the retarn per acrei case of the combined system will be fou filtration alone.

## Hiscellamea

Serious Explesion of Gas at Halif The residents in Colbeck.street, Hanson genr Pellon-lane, Fulifax, were lately st by a sharp explosion at ahout half-past 'clock at uirht, and mucb excirement caused theros. It fas fornd that onent of gas had occurred at the honse $N$ ho damage done was serious. The hon qestion lad stood empty for nearly and the main being and the main boing not turnod off, and the not plugged, hence tho escape. A mato heen struck, and the gas, which had perme hrough the house ignited, and a terribl plosion occurred. The force of the expl was upwards, and the result was that the of the windews to the two front hedrooms blown out. The stonework was sent flyiz all directions, the spouting and cornice whirled into the street, and portions of the kin of the walls to tho adjaining houses stripped off. By the fall of the heavy he area railiugs were bent and battered directions, and the head stone over the doon broken. The roof, of grey slate, judging ts disjointed and broken condition, appea have been lifted bodily up, and then to allen back again into its old position. ouses on either side were much shaken had the plaster linocked off the walls in pa places. Workmen wera employed to make the damare, but so shaken was the frout that it became recessary to take part down, in order to re-build it io a firmer

Opening of a New Reservoir at Darl ton.-The new reservoir helonging to the S aud Diddlesbrough Waterworks Com has been opened by Mr. H. Pease (cbairm the company), at Fighting Cocks. The quantity of land covered hy the reservoir reres and a balf; the length at water 500 ft ., breadth 310 ft ., giving a water ar three acres and a half. The mean dep I. f ., and the greatest depth of the pr trench is 31 ft ., being 17 ft . below the na surface or land, tlie height of the ombank being 17 ft . Provision was made for reservoir storing $11,036,000$ gallons of $w$ the weight of which is 50,000 tons. The has to be raised from the Tees at Darlingt the reservoir, which is 50 ft . above the le the river ; but tho fall from Fighting Cocl Liddlesbrougb is 160 ft . The pumping eng which aro sitnated above Darlington, near Grange, are four in number, each of 100 . porrer. The water is conveyed to Fighting C by three mains, the pipes being 12 in ., 1 l and 24 in. in diameter. The new reservoir bold a little more than double the quantit the two old ones. Mr. Robinson, of the fie Robinson \& I'Anson, has been the engine the work, the contractors being Messers. Robi Marshall, and Mr. Hawksley the consa engineer.

Hyde Park-cormer,-The solicitors to Marquis of Westminster have suggested to Metropolitan Board of Works tbat the wide of the npper part of Grosvenor.place at junction with Piccadilly would form a com scheme in connexion witb that now under consideration of the Board, for improving traffic accommodation in the neighbourho Hyde Park-corner and Hamilton-place; state that his lordship is prepared to ande at bis own cost, to tbe extent of $2,000 \mathrm{c}$., widening of Grosvenor-place, provided a for the deposit of the escarations be riven of cost in the Green Park within a reaso distance.
New Hospital at Beccles.-The fourda stone of this new building has been laid. R. King is the builder, and Mr. J. L. Clem the architect.

Works at Alderney. - The Duke of nerset has called attention in tbe House
Lords to the report of the seleet committec Lords to the report of the seleet committec
last session on the works iu Alderney, and last sesstor on the works in Alderney, and lain the intention of the Government regard to the maintenance of these
lks. The question, he said, was whether ks. The question, he said, was whether
se works were to be given np, and tbe $s e$ works were to be given np, and tbe
0,000 . already spent on them entirely lost, whether they were to be repaired in some Fiscount Halifax, in reply, said ho was py to be able to inform the noble duke that, 1 duly considering the report wbich had n drawn up by the engineer of tho Admi. $y$, the ongineer of the War Uffice, and the 1 engineer, who had inspected the works in ation, the Government had come to the con. ion that Alderney might, in case of war, be ood place of ohservation, and that it would be well for our commerce if it fell into the
ds of the French, or into the possossion of other foreign nation, and they had therefore ided to maintain these works. He had been in to understand that the works could be that the necessary repairs could bo carried for hetween 100,000 l, and 150,000 l. The :e of Oumbridge suggested that the repairs hit bo carried out to a great extent by means reatly reduced.
Iachine-laid Roadways and Fire-proof hdings. - Mr. R. Stone, the pateutee, arranged to lay down, hy a solf-acting
hine, a specimen of his wood pavement and hine, a specimen of his wood pavement and leadingrions King him-street process, as described by the pateutee, as the gravel and cement direct from the s, lifting them 20 ft . in the air, wbence fall into a ganging hopper, under whicb is a passes ixes them. From thence the material through a feeder into a working oer, and by a leveller is brought under Her carryiag a pressure-power of 200 lb . to
square incb. While in a fluid square incb. White in a fluid state the able, he says, than stone, warranted water. of and never to crack or give way. The cost aid to he 35 per cent. less than the ordinary ; of laying roads, hesides heing laid in less 10 one.eighth the time. The pateutee's comtion roalways, mixed with chemieals and matain and fint stone, lajd plain or flated, noiseless and not slippery, exceeds granite ays, in durability, and at less than half tbe Fire.proof floors and ceilings are laid itchingham Country Hospital, Bungay. Hallows Country Hospital has been opeued a large block of buildings situated near the station at Ditchingham, and has been parish, and nader the auspices, and by the cxertions, of the rector of the , the Rev. W. E. Scudamore, and his coad. sh, the Rev. W. Scudamore, and his coad. he extorior presents no very inposing apance, being built entirely on the grouud. Ced nud ventilated. There are two larg jed and ventilated. There are two large ents-containing six beds each. Between beds are screens, on which tbe artistic s displayed. Tbe walls of the room are her adorned with suitable prints and illu Thexis; shelves of books are also to he There are couches and easy ctairs for the he room is spread with scrap-hooks and rials for rarious games. Besides these la there is the surgical ward, the surgeon's 1, the dispensary, the oporating-room, lava. s, private rooms for the nurses and sisters, estic offices, and the hospital chapel.
i. Giles's, Newcastle.under-Lyne.-Tbe olition of the late structure bas disclosed the that there have been alrcady three edifices ted to the tower,-one, of course, contemis to wet the it. In removing the ruhbish, It get the level of the floor for the new
ling, some specimens of tiles, supposed to ling, some specimens of tiles, supposed to
is old as the twelftb century, were taken

National Health Society. - The first annual report of this Societs, read at its general printed form (Oflee, 9 , Adam.street, Adelpli) printed form (Offee, 9 , Adam.street, Adelphi) Tis sooiety was begur in July, 1871 , by a few Eizabetb Blackwell istore at the house of Dr Enzabetb Blackwell, to consider the propriety of forming an Association for promoting Sanitary Knowledge," and a resolution was passed to form "A National Hoalth Society, whose object shall he the promotion of health amongst all classes of the population." Mr. Toulmin Smith is the secretary. The society has already been engaged in useful work, and the committee hope to arrange, for the coming autumn, sets of Lee. tures at Islington, Kensington, St. John's.wood, and Stamford-hill, or where they may find that circumstances render it advisahle. They invite assistance from all intercsted in this wide field of work, whetber as lecturens or teachers, hy the reading of papers, the teaching of classes, or the formation of teaching centres in different neighbourhoods, and will thankfully receive gifts of books, reports, and appliances for the library, and for teaching.

Rotherham. - A numerously.attended publio meeting has been beld in the lecture-hall of the Rotherham Mechanics' Institute, for the purpose of considering wbat measures should he adopted to carry out the projected restoration of the parish cburch in this town. The chairman eaid that the objeet of the alterations in the church was increased accommodation,-the making present tbe nere as would be around foor accommodated just 800 persons, but if tho plang of Sir Gilhert Scott were adopted they would be able to find accommodation for 130 a 1 ts The cost of the alteretions would amount 5,000l., exclusive of the arcbitect's charges and the "inevitable extras," which would no dond increase that sum to 6,000 . Sir Gilbert Scott was down last week, and he fousd that much more must be spent upon the extcrior of the edifice than upon the seats, and he also found that the spire had very mucls decayed in the interior. The exterior was repaired some ten ears aro, and was now in very good condition. Resolutions in snpport of the object of the meet
ing Frero adopted.

St. IXelen's Town-hall.-A meeting of the St. Helen's Improvement Committee was held on the 10 th inst., in order to receive tenders for the erection of a local town-hall. Oar readers will doubtless remember that Mr. Urmson, of liver. pool, who originally tendered for the work, and chose tender was sccepted, was eventually obliged, in consequence of the delay in com. the price of bailding materials, to advance in he price of builang matcrials, to decline the tender unless an advanced price was giren. The corporation, however, were indisposed to gire fresh tenders for the work were solicited. Thes resh tenders for the work were solicited. These wero opened at the meeting. Nine builders endered, viz., Messra. Grindrod \& Hargreaves Tomkinson \& Son, G. Rome, Jones \& Son, Roberts \& Robinson, T. Urnson, Burroughs \& Son, all of Liverpool; and W. Harrison and G. Harris \& Sons, of St. Heleu's. The tenders ranged in aggregate cost from about 30,758\%. to 28,316l. It was viltimately decided to recom. mend the council to accept the lowest tender, that of Bir. C. Rome, of Liverpool, the sum being 28,3162.
York-gate.-In compliance with a resolution of the Metropolitan Board of Works of the 16 th of May last, their Works Committee have con sidered the letter from Mr. J. R. Plancbe Somerset Herald, on hehalf of the British Ar desirability Assooiation, calling attention to the desirability of the preservation of York.gate, Victoria Embanliment, and of its ntilisation as an aditional means of communication with the that the Board should refrain from touchin the gate. Tbey therefore recommend "That Mr . Planché be informed, in reply to his letter, that the Board are not prepared to take any action with reference to the gate." The repor
was agreed to without discussion.
Fegulations of Honse Drainage- The under therk for surveyor gave ance of Mr. K. R. Arnta, their surveyor, have issued a useful paper of conditions for the regulation of bouse drainage, and Mr. Arntz sup
sections.

The New Theservoir at North Malvern. The Maivern Local Board have writton to Mr Hawksley, C.L., asking bim to give lis opinion as to the future seeurity of the new reservoir at North Malvern, when constructed according to the plans of the town surfeyor. Mr. Hawksley stated his terms to be ten guineas per day and travelling expenses. Tbe contractor of the tank Mr. J. II. Olark, of Warwick, has stated to the Local Board that be has sorveyed the reservoi works, and, "setting asido the whole company of amateur builders, and that angust body, the Britisb public, to neither of whom be addressed himself on huilding suhjects," ho states that, so far as thirty years' experience gives meight to confidence, he had not the slightest doubt of the structure, wher finished, fulalling all the inten tions and expectations it was desioned to Ho was glad to bear that they proposed calling in Mr. Hawksley to give bis opinion.

Mahogany.-The official statistios which record our trade in mahogrny of late years are
not devoid of interest. Referring to tho imports of this article, we find tbat in 1818 the amonn imported into this country was 31,668 tons; and in 1852, 41,090 tons. The imports for the following years are steadily maintained, and indeed, the trade seems to be characterised by an ahsence of fluctuation. In 1861 tho amount imported was 53,798 tons, whieh is the highest amount we note as heing received in this country in one year; for subsequently to 1861 the im. ports appear to have somewhat declined. With regard to the sterling value of these imports, we
find that the amount was in $1856,419,9366$, and in 1861, 568,9162 . From these figares it will be seen that the import trade in mahogang is rather valuahle ono.
Wisheach.-The Wesleyan Chapel, a large structure erected about forty years back, has been re-opened, after nndergoing a complete renoration of its interior. New pewing and other fittings have been prorided, and the large galleries which formed a complete amphitheatre int the chapel, have been removed and lower only tectaral new end wall, with appropriate archi. pulpit. Thenures, being erected behind the tinted cathedral with grisaille glass. The ceilings and walls have been decorated in distemper, from the designs of the architect, Mr. Tait, of Lcicester The public hall, a large huilding in the Greek style of architecture, is about to be renovated, under the direction of the same architect.
St. Luke's, Chesterton, Cambridge.-We mentioned in our last that this chureh was about to be proceeded with. The mode of selecting There was a large committee, consiating of about There was a large committee, consisting of about forty members. Six architects were named, but instead of giving all these architects the trouble to make special dravings for the proposed new portfolio of drawings of seme of their works, and it was then left to a sub-committee to examine and report as to whose style of work they preferred. MI. W. Smith, of the Adelphi was ultimately sclected. If a committee cannot agree npon any one name, the above course seems a sensible one. At any rate, a great deal of lost labour was avoided by it.
Worles at Harrow.-The contractors commenced excavating for the foundations of the pnblic hall on Tuesday last, and must get it finished by Christmas next.-We learn from tho Harrow Gazette that the first of the Lyon tercentenary commemoration buildings has jnst heen begun,-the gymnasium, which is to he erected in the rear of the old school buildings, and quite close to the racket-courts. The builders are Messrs. Kindell \& Lander. -The Nataral Science Schools will be hegun very shortly, on the plot of ground to the north.east of the new schools. We understand the contract of Messrs. Woodbridge \& Lauder has been accepted.
New Cemetery for Darlington.-Owing to the increasing population and development of this borough, the town council have fomnd it necessary to provide a new cemetery at the north end of the town, a site for which has been prosented to the town by the Messrs. Pease. At a conncil mecting held on the 10 th inst. a resolution was passed appointing Mr. G. G. Hoskins, of Darlington, architect for tbe
chapels and lodges.

Stockholm Wood Trade.-We learn from Stockholm that the rise which has taken place there of late in tho price of charcoal must necessarily affect the exportation of wood goods; while another not inconsiderahle in fluence on this hranch of export must he the operation of several large steam works established in Stockholm for the manufacture of carpentry goods. This manufactnre is hecoming chiefly made are mouldings, panelling, door and window sills, window.sashes, doors, entire dwelling-houses, and other buildings. In this manufactnre many parts of the raw material which would otherwise he wasted are utilised.

Connexion of Workmen's Questions with Politics in Spain.-A meeting of 3,000 work mon was held at Alcoy, an important manu facturing town in the province of Alicante. The mon resolved apon a strike. The next day they proclaimed the Commune. Piots ensued, and some manufactories were reported to have been bornt, as well as the town-hall and other hnild. ings, and the mayor of Alcoy and other officials killed and wounded,-the bodies of the dead being dragged through the streets, and other attempt was made hy workmen to imitate the Alcoy morement hy hurning the churches and other puhlic edifices, hut it was scouted by the mass of the workmen themsolves

Fire at Whitechapel.-Tho estensive work of Mr. Little, builder, situato in Size-yard High-street, Whitechapel, have been on Gre, Owing to the large quantities of timber that becarae ignited, the reflection was visible in all parts of the metropolis. On the arrival of the engines, the attention of the firemen was directed not rearge stack of timber that the flames had dostruction were successful. wise, the fire must have extended to the prewise, the fire must have extended to the pre.
mises of a wholesale rag and waste-paper merchant, in which caso the houses in old merchant, in which caso the houses in old
Montague-street would have been placed ingreat langer
The Bradford Sewage Works. - Thes works are ahout to he handed over, according to previous arrangement, hy the Bradford Corpora. tion to the Peat Engineering Company for the defecation of the serrage by that oompany for twenty.one years, without cost to the Corpora. tion. The system adopted to purify the sewage or said to ho that of filtration through charcoal peat burnt together and after wards pulverised. The works are now practically completed, and Mr. Neill, the contractor, has handed them over to the Corporation.
"Steam Superseded."-"Wo have spoken, in a preceding numher," says the Journal du nounced hy an extraordinary discovery an, it being nothing less than an acent destine to entirely replace steaw. agent destined of this process are MM. Brachign inventors Deschamps, domiciled at Rouen, 9 , Rue de Sotterille. They pretend, hy the aid of their apparatus, which works without coal or any other comhustihle, to replace the present machines, whatever he their power. Their in vention, they say, is equally apphicahle to land dushy and to navigation.
Gallery of Illustration.- The tenancy of Mr. and Mrs. German Reed is abont to expire at of the present month, will chich, after the 31s place of puhlic month, will cease to exist as a are glad to hear, will resume her entertaiumen as usnal next season, and has already had severa offers of premises situated in the centre of town and better adapted to give effect to her admir able productions. Fe may add, that on the 31 st instant, the last day of performance at the Gallery, "Mildred's Well," "Our Garden Party," and "Very Catching," will he given twiee.
The Princess Mary's Village Home.-A Addlestone, in Surrey, the foundation- stones have Village Home whire ada heen found d in the patronage of the Princess Mary of Teck as a refuge for little girls, -the children of conviote The home is bnilt in a large field bought hetween two and three years ago hy Miss Cavendish The home now accommodates seventy children ont of 300 , to whom it is intended to extend the
benefit of the ingtitution.

Surrey Archæological Society. - Tho anual excursion of this society has been held the route selected being a fresh one to th majority of the members. The reudearous wa Wallington Station, near Croydon, and the order of the day was to proceed thence, in wagonettes provided for the purpose, to Carshaton Church rom there, by Merton Ahhey, to Merton Church and then to Cæsar's Camp at Wimhledon, wind gg np with a risit to the residence of $\mathrm{Mr}_{\mathrm{r}}$ Peek, M.P. This programme was faithfnlly carried out, and, in the result, afforded a day's excellent entertainment.
Proposed Restoration of Reigate Parish Church.-An influcntial meeting has heen hela in Reigate to consider the proprety of restorin the parish church, and to hear the report of the architect, Sir G. Gilbert Soott, on the subject The Bishop of Winchester presided. The arohitect's report, which estimated the cost of the various necessary works at $6,300 \mathrm{~L}$, was read, and appropriate resolntions promotive of the object of tho mceting were unanimously passed, including the appointment of a committee to collect subscriptions and carry out the work o restoration.
Extension of Railways.-A company has just heen registered under influential auspices, to assist tho Frencn in coustructing certain public works of Emropean otility. It is named "Th French Railways Geveral Extension Company Limited," and has heen founded with a capita of one million, of which three-fifths have been subscrihed hy the founders. It is proposed to hnild a railway direct from Calais to Marseilles, for which concessions and subsidies have heen ohtained from the departments traversed, and hereafter to engage in other enterprises.
Chimney Sweeping.-The following may he of use to persons living in the country :- $A$ chimney, with a sharp bend, for many years
cansed great inconvenience. As it conld not he swept from the hottom with the ordinary countr apparatns, a cord was attached to the rod, jus selow the brnsh, and passed through the ring of 20 lb . weight, placed on the roor, and it was swept with the greatest facility. The weigh was placed so as to make the required cn

Northamptonshire Architectural Society On the 22 nd and 23 rd inst. this architectnra ociety will hold its yearly meeting, in oonjunc County of Leicester atectural Society of th County of Leicester, at the town of Coventry During the two days there will be a public The programme of the Mary's Hall, Coventry The programme of the proccedings includes a public meeting at St. Mary's Hall on the 22 ad inst. in the morning, with a paper hy Mr: retton on the antiquities of Coventry.
Opening of the New Leels Bridge.The mayor of Leeds, on the 19th inst., formally opened the new Leeds Bridge, at the bottom of Briggato, erected in place of the old and dan erous one, which for many years occupied the ite. With its approaches, the new structurecost of 15,000 .

Sculptures for Newcastle. - Mr. D. W Sterenson, of tdinburgh, has completed fon colossal figures, which are to be erected in front of the new police courts, in Pilgrim-street Newcastle-on.Tyne. The figures represent Jus ice, Truth, Mercy, and Peace. They are each $T_{\frac{1}{2}} \mathrm{ft}$. high, and carved in freestone.
Persian Railways.-The English engineer have completed the survey of the first fifty miles-viz., from Teheran to Kasvin-of the proposed line of railway from Teheran to Resht on the Caspian, far of them have left for Resht, to commence surveying thence towards Kasvin.

Silbury Kill. The Bristol Times reports that Silbury Hill, Wilts, a mound of little value except in an archacological point of view, althongh covering an area of 7 a .3 p , with a height of 135 ft ., has heen bonght by Sir John Luhhock for $500 l$.

VOL. XXXI.-No. 1590.

The Past Session of the Institutes.

HE printed reports of the proccedingsat the meetings of the Royal Institute of British Archi. tects during the Sesbion 1872-3, comprise fifteen communi. oations, "papers," on variousclasses of subjects connectod with architec ture, withont counting the prosiden-
address at the commencement of the session hay bo suggestive to glance at the general ing of these communications, and the indions which the Instituto reports in general rey in regard to its relation to nodern aroliiural progress.
he first consideration which suggests itself is o the proportion of timo devoted to different ises of subjects; and here we find the prederance greatly in favour of what may be ed specially "practical papers." Out of the aber of communioations ahove quoted, eight 10 under this class; two belong to what may bermed tho "literary" type of paper, one is ely arehoological, and the remaining four 10 deal with architecture as an art. In the ceding session, it may he observed, the pracI was still moro markedly prominent; zine ers out of fifteen coming under that category,
the sessional proceedings only presenting ee papers which oould fairly bo olassed as rchitectural" in the sense here used; two of ich, again, being the essays on Barking Conit and Manor Honse, which gained the Peek ze, might ho as correctly termed "archæo; a classincation which leaves ont one rely architectural paper for that session (that
Mr. Brewer, on "The Revival of Gothic Architare in Germany and Holland"). This tenacy towards the purely practical and engineerside of the profession in tho Institute papers, 11 appear satisfactory or otherwise, in propor. un as we regard architectnre in the light of a siness carried on by persons whose duty it is insure the converience, comfort, and health of eir clients and the publio, or as an art the joot of whioh is to produce beautiful ornament d impressive corps deail in our streets and uares. Business men, and writers of newsper articles, will no doubt take tho former ew of the matter, for whioh there is mnch be said; the more so inasmnch actual knowdge and experience in practical mattor are ore easily formulated and communicated to hers than talent or originality in artistic degn. Neverthelcess, we are inclined to think hat the scale has dipped a little too mnch on he practical side of late in the Institute pro. rammes; and that a somewhat larger propor-
tion of papers in relation to architecture as an art, either in its past or its possible future developments (especially of illustrated papers), might be of value in elioiting new ideas, as well as in giving a greater intcrest to meetings, the tendency of which of late has been to become rather "dry:"
Of the practical commnnications, fonr have dealt with the important anbject of the warming and vontilation of buildings. M. Pauli's remarks on the ventilation of hospitals, dpropos especially of the hospitals at Ghent, planned under his direction, went to advocate the nse of the system of impulsion of pure air into buildings, in place of the more ordinary ventilation by the exhaustion or escape of vitiated air. This paper called forth a critical notice by Mr. Barber (engineer), in whioh the morits of the impulsion syatem, especially in obviating draughta from crevices, doers, \&c., were admitted, while it was contended that the system of exhanstion or "aspiration," must, from its comparatively simple and economical oharaoter, form in general the most ready and obvious means of ventilation. Mr. Barber's own paper "On the warming of public buildings," discnased the merits of four classes of warming systems,hot.water, stcam, stores, and gas-stoves; tho peculiar advantages and difficulties of each system were shortly and comprehensively stated, and \& plea was put forward, hased on what the lecturer had seen carried out in Denmark, in favour of a more extended trial being given to gas as a bcating agent for private dwellings, and its possihle advantages in point of economy as well as convenionce. This is a suggestive and sen. sihly-written paper, and worth the attention of those interested in the subject; a plirase which may be said to inclnde all who bnild honses for themsolves or others. The paper by Dr. Hay. ward, of Liverpool, which in its complete form is not yet in the hands of members, was a protest in favour of the systematio ventilation of all dwelling-houses by air passed from the ontside, througla heated ohamber, eonveyed theuce to the several apartments, and then collected into a general exit shaft. There is much that is ingenious in the details of Dr. Hayward's plan, and it is satisfactory to find a medical man giving such practical attention to a snbject so intimately oonnected with the healthfalness of dwollings; hut his scheme, oomplete and symmetrical as it is, was felt to be open to practical objections, and savoured somewhat too much of sacrificing every thing else in a house to the ventilation. Any one, however, who has a "hobby" of this kind, is likely to do good rather than the reverse by drawing attention to it ; and it must ho admitted that an over-attention to ventilation is not the besetting sin of modern domestic architectural practice.
The papers on "The Valnation of Honso Property in London," by Mr. I'Anson, and on "Arbitration," by Mr. Banister Fletcher, will have a permanent value in regard to the subjects of which they treat, as the opinions and experiences of gentlemen well up in their respeotive suhjects. In the latter paper and the discussion following it, the desirability of referring disputes connected with tho profession or the building trado to those who are ahle to anderstand the details of the case themselves, rather than to those who can only give a legal opinion npon facts supplied to them, and which they only imporfectly understand, is well hrought out. The two xcmaining practical papers approach noarer to the subject of architectural practice properly so called : that read by Mr. Statham on "Architecture practically considered in reference to Music" points out the unsuitable construction and plan of many of our large halls and other buildings for music, and offers suggestions for a new treatment of these in some cases; at the samo time admitting the difficalty which might be experienced in com.
lining satisfactory architcetural effect with practical suitability in such cases. The practice, it may bo remarked in passing, of taking some one class of bnildings intended for a special parpose, and going systematically through its requirements, is one which might be advantageonsly carried ont oftener than it is; and we might have valuable papers on snch suhjecta as picture-galleries, theatres, conservatories, or any other class of structure requiring apecial treatment for a special end, hy those whose attention had been particnlarly directed to it; and it may be observed that novelty and originality of architectural treatment might very well result from a more intimate consideration of what is really required in any particular class of building. The last on the list of prectical papers is Mr. Seddon's on "The Shoring of Grosmont Church Tower," a very usefnl contribution, giving the methods employed in dealing with special difficulties in one of the most responsiblo tasks in which an architect can be engaged,-the preservation and reconstruction of an old and interesting but decaying edifioe.
Of tho two contribntions of what wo call the literary type, Mr. Roger Smith's paper, which meets us first in the list, "On Professional Esprit de Corps," is quite ap to the mark of the literary papor in point of style, and has the merit (not always helonging to papers of this class) of dealing with a subject which has not been much handlod, and on which there was a good deal to be said. That the feeling referred to in the paper is by no moans as prominent in the architectural as could be wished, and as we see it in some other liberal professions, is unquestionable; and the rcasons in favour of a change in this respect were brought forward in a forcible and, at the sanse time, tomporate spirit. One point especially, that was touched дpon, deserves consideration from overy architect anxiens for the honour and dignity of his profession, -the duty of oxercising a careful discrimination in regard to the choioe of papils who intend ultimately to follow that profession. Much of the nusatisfactory status of the profession in England, when we get below the firstrank of eminent men, may he traced to the readiness of too many architects to accept any pupil with whom an adequate premium is offered, regardless of the consideration whether he is one likely to become a credit to tho profession, or to prove in any way snited for it. A hint thrown ont in tho discussion on this paper also deserves consideration; that an architect who wants an opinion on a special sub ject, such as iron constrnction, should be able to suhmit his caloulations, just as a solicitor sulumits a case to oounsol, endorsed with tho amount of fee, to some professiozal brother competent to give a definite opinion. Snch a division of intellectnal lahour might be of the highest advantage in the carrying ont of great works: in faet, it is resorted to occasionally at present, but only in an " nder-the-rose" kind of way, and not as part of a professional aystem. The other paper which we class among the "literary" contributions, though its author, perhaps, would not concur with ng, is that of Mr. J. B. Waring, on "The Laying Ont of Cities." This is partly in relation to somesuggestions offered by the author in regard to the rebuilding of Chicago, on a plan of concentrio circles: to which were also added some general principles in regard to design in architecture. Tho "concentric circle" scheme is not new; and as to tho principles of deaign nohody can say that they are not perfectly trne; hut when we meet with snch vague sentences as that "convcnience and utility depend mainly on the whole hlock of bnilding, and inelude atten. tion to comfort, facility of access to varions parts, sound and light," we must say this is about as true (and as profitable) as to say in a word "that a hnilding onght to be conveniently planned," which no one will dispute. We must
regard this as one of those ncatly expressed collections of truisms which may serve to pass away an evening pleasantly, and he described as "an elegantly pritten papcr," hut which cannot claim nuch real value as contributions to the study of architecture.
The one archreological paper of tho session, by Mr. J. S. Phenè, "On the Result of a recent Investigation into Ancient Monnments and Relics," is one of some interest, referving chiefly to remains illustrating ancient rites of sepul. tare, de., in Great Britain, chiefly in Scotland and on the border.
Coming to the papers on strictly architectural snbjects, we may characterise as a contribution Heathcote's paper on "Old Halls in the Neigh. hourhood of Manchester," which gives us infor. mation, in a very readable form, concerning some specimens of domestic architecture posscssing much local character and interest, with which the author has himself become acquainted, and which are probably not very much known to architects whose practico lies mostly in the sonth of Eiogland. The paper is illustrated by a map of the locality, showing the relative positions of the buildings referred to, and by one or two neat and pleasing lithographic views, which remind us of a wish we have before felt, that the illustrative element found a larger place in the printed reports of the Institute proceed. ings. One drawing is generally worth pages of description in relation to any architectural snbject; and we should presume the Institute are not so near the margin of their fands or are not so near the margin of their fands or trate a paper of this kind a little more fully than is commonly the case. Mr. Cole's paper on sorato Decoration was a communication also of a class of which we would gladly see applying ornamont to buidings are so infinite applying ornamont to buildings are so infinite (we may say), and every competent illustration
or surgesstion as to the practical process or the or surgesstion as to the practical process or the
aesthetic treatment of ornamental work is so aesthetic treatment of ornamental work is so
certain to be interesting, that it is surprising this certain to be interesting, that it is surprising this
element of ornamental design should havo heen element of ornamental design should havo heen kept so monch in the background during recent
sessions. Without admitting all that was said in sessions. Without admitting all that was said in
favour of sgraffito on this occasion, and without favour of sgraffito on this occasion, and without by any means giving our adhesion to the peculiar
type of ornament brought forward, we must cha type of ornament brought forward, we must characteriso this as one of the most interosting papers
of the session, and hope that snhjects of this of the session, and hope that snhjects of this
fascinating description will find more place in future programmes. An interest of auother kind, but as purely related to the artistio side of architectnre, belonged to the paper read by the veteran honorary member, the lato Mr. Taylor, who came forward,-a representative of the past generation of Classic architects,-to give anew his impressions and facts as to the buildings in Rome, which he was one of the first to familiarise English stadents with. To the Fonnger men of the present generation, bred up
almost exclusively to Gothic work, some of the information in this paper must have been as oew as when it was first given to the world. Mr. Chowers fall and well-written paper on "The dealing with masterpieces of Gothic as class, Taylor dcalt with those of Classic, architectnro: but here, again, we canoot but feel that, to those Who may have neither visited the country, nor lecture, a few illustrative sketches would the centnpled its value in the printed proceedings, and it would have been hettor worth while to have condensed the paper itself for tho salie of getting these in, than to have printed at full the architectnral reader's mouth water, and which a few lines with the pencil wonld have illustrated better than a page of print.

Takiug the past session in the main, wo find its contributions characteriscd by practical com. mon sense, and an absence of pretension for the most part, which is as it shonld be. We may be allowed to express a hopo that in the forth. coming session these qualities may bo equally conspicuolle, in combination with a somowhat larger and fuller attention to, and illustration of the artistic side of the noble art of architectural
design. Two other points design. Two other points may be noticed as calling for improvement: it would be well if the distribution of the papers to members followod more closely upou the date of their being read. The paper of Mr. Phenè, for instance (the last one printed), read on the 19th May, does not the same time in July. Two monthe are cer
tainly a longer time than need be occupied in getting out a paper of these dimensions; but
wo may snmise that the fault mo may snrmise that the fault often rests as much with the anthors, who are tardy in fur. nishing illustrations, revising mannscripts, and correcting proofs, as with any one else. The other point, which we have frequently noticed foroo of rrate deficiency in correctness an the wording of the reports of debates, \&c. These are necessarily, in most cases, much abridged, and we are conscious of having read very eurions English in not a few cases in these reports, and have caught sentences innocent of nominatives, or varied hy involntions of conoccur. The character of architects allowed to of English composition does not, we masters rule, stand very high ; at all events, the central institution should set a good example in these respects, and pay due regard to purity of style point the late the Inglish language. In this reproche, and his address at the opening of the session, thongh propounding no very striking and original vews, was expressed, like overy well composed and idiomatio as it was direct and to the point

## COAL AND THE COMMITTEE

The report of the committee on coal may bo regarded under two aspects: one is, that of its of tho consumer as bearing upon the protection a nature at all similar to that which price, of nature at all similar to that which occurred dest wiutor; the other is the simpler view of the and record of facts. It is unds the accumalation and record of facts. it is under the latter aspect We now desire to regard the subject.
We may mention, in the first place, that one in the course of tho evidence has been elicited it, that wo confirmation of its accuracs so, because it would show a far-sighted wisdom, and a real appreciation of the ultimate interests of their class, on the part of the working colliers, which is very sharply contrasted with their adhereoce to other views of a directly opposite endency
The point to which we refer is the expression of the opinion that the men, as well as the masters, hope for the introdaction of coal-cutting ma. cublio for masters to do so, and for the he men co so, is just, wise, and natural ; for het it is for less no no less just and no less wise, astice, that the hardest, most painfinl and most dangerons labour, is the "boleing" or" of the coal. This is, in fact, the forlorn gepe the attack on the fortress of which we seck the spoil. In all mining, including railway tunnel work, the piercing of the headway or first opening is the part of tho operation, which the cost, of the operation. But in collierigulates exists tho special feature of the collieries there the hed of material which it the Bhallowness of As the thicker and is casy, are successively eshousted it mining early, are successiyely exhausted, it becomes early more and more important to work those duction of the hody of the miner hetween the roof auction of the hody of the muser hetween the roo deposit The deposit. Here, therefore, the labour become wkward and paintul, the miner often actually im on his side and Horking out the coal befor im by horizontal hows of his pick. To intro uce a machine which should perform this very painful duty is thus, mechanically and financially considered, a very great desideratum. For the
industry of the collieries, considered as a o desideratum can be more important. By faking off the pressure from the throttle-valy of tho work, all the other hraoches of the industry of the colliery will be stimulated, and the genera utcome of the exterprise can be increased lmost at will.
But it is precisely against any improvements of this nature that the face of the working man f this country has hitherto been most firmly and constantly set. From a national point of ew no error can be more lamentahle. But wo pear, not of what ought to be, bnt of what is. Britil be a hright day for the whale fied of Branch industry when the main hody of any sider or class of workmen shall come to con the limiting work of that industry, learing to
hnman toil only the portion of the labonr whi demands, at tho same tiene, human skill, practised judgment. But no oue can be practica very familiar with English workmen with oing aware how thoroughly exceptional suc tate of things would be. It is the most d gerous part of the work which is generally $m$ eatonsly claimed hy the workman as pecial task. Not only so, but in very ma nstances improvements which have the bject of diminishing risk, or even of certai verting danger to human life, are most str ionsly resisted by those whose lives would be, all human probahility, prolonged hy the afety.lamp as an unuecessary
fety lamp as an example. Not an explos cours in a colliery withont evidence, or at events suspicion, of a careless and wilful negle the well-known rules of self-preservation a part of the miners. In some cases injudicious use of powder canses explosio ut, in the great majority of instances an op ight, or an nalocked safety-lamp, betrays cua, murderous neglect which has clad a trict in mourniag. This tampering with dang or rather conrting of danger, as a protector the rate of wages paid to him who faces itthis is the real explanation of the strange ph nomenon-is not confined to the coal miner. existed, within onr own experience, in the less hazardous profession of the diver. Wh the metal helmet, supplied with air hy means an air pump, was first introduced, it rested the shoulders of the divor. It formed, in fact, sort of portable diving-bell, under the protectio of which this workman could walk about on $t]$ bottom of tho sea, without being confined to $t$ small area covered hy the actual bell. So long: he remained upright, he mas safe, and evjoyed great convenience. But if, by any chance, shonld fall, the water would rush in, the would be oxpolled, and the helmet, intended $f$ his safety, wonid become the instrument of death. It was, we believe, the work, either whole or in part, of that worthy and oonscicutio public sorvant, the late Major.Gen SirC. Pasle R.E., to introduce a srent improvement on original divinc-helmet; and to insure the life tho diver under almost any continceney Th improvement consisted in a water.tight macinto dress for the diver, which terminated in co tinuous boots or stockings for the feet, was bout tightly round the wrists, and was acrewod, hy set of fange pieces, under the neek-piece of th helmet. The diver, thus attired, conld assum any attitude under water. Two of Sir Charl Pasley's divers, engaged on the wreck of $t]$ Royal Qeorge, at Gosport, actually came to blow on the suhject of some spoil they were rescui from the wreck, and ono of them knocked t other down, at the bottom of the sea, he ancerstood,-without any ill results. With $t$ origidal helmet it would have been all over with
the diver in such a case. To the introduction so obvious a means, not only of comfort hat security, the professional civil divers kind of opposition in their power. They foun out that any man could dive in Pasley's helme They felt that their craft was thus thrown ope to a considerab!e exient. And they preferred t kcep it close,-life in hand.
A similar opposition was raised to the intro duction of certain safeguards, mechanical in on instance, and electromagnetic in anothe against the inhalation of the minute particle that aro produced by a certain process of grind ing steel tools. The grinders formed a specia class, readily to he recognised hy their unhealth appearance, no member of which was said eve to exceed the age of forty. Limited in thi stem method, they enjoyed a comparatively hig. ate of wages; and they steadily resisted thos cfforts to remove the deadly character of their occupation, which would have had the effect of throwing
We have no donbt that the special experience of many of our readers will suggest paralle cases of danger. The special ditticnlty of his craft is often the point most cherished by the craftsman. He rejects the offer of insurance, not of what we call life insurance, or the pay. ment of a sum at death, hut actual prevention of danger,-because it removes that grim entinel who stande at the door of the trade and thus, in the opini
From this wages.

th in the head of the living man can need hing but certitudo of remaneration in ordel hing but certitndo of "emaneration inco a mechanical "getter" for coal. verting from that part of the report which enar, is too good to be true, to the earlies ments, we find omly four merchants enume. re the oommittco. Of the rest, fourtenn wero rnment inspectors or official witnesses, nine sented collicry proprietors, seven repre.
ad the working colliers, and one witness o as to the iron and ateol trade. From the of witnessob, which thas includes no carrier ailway manarer, and no member of any
of persons specially interested in direct ibution, it would appoar a priori what d be the nature of the facts likely to be
ded. We do not oonceal our opinion that tho $y$ has thas been giren to the special branch hqniry in which the family consumer is directly interested. The general state. ts which such a body of witnesses was able ve may he of great value, but they are not e which directly go to the explanation of as len and disproportioned a rise in price as
winter witnessed. The out-put of coal in winter witnessed. The out-put of coal in nee of that in 1871, the latter being now at $117,186,278$ tons. This is very close 1, although not quito amounting to, the out. which, in 1865, Mr. Jevons estimatod would hat for the then future year 1871. For 1872 . od at $123,386,758$ tone, which is somewha kcess of Mr. Jevons's estimate for that year. n we find so close a coincidence, ove amount, we cannot hut remark that it is hordinary that we should have been taken ares. the coal Commissioners of to prodnce a confidence hi the result shows to be, as we predicted at time, a falss confirlonce. Year after year the ed romarkably close on the trnth. All that learn, then, from this part of tho labours ho committeo is, that a well.known rate e. Persous to whom the subject is new may ider that tho statistics now put forward aro ing aud novel, and explaratory, to somo of the pauic of last year. But our their memory, aud carry their observation furtber than our later articles on the ons of tons. The rise to 123 millions in 1872 wis foresecn, foretold, and ourht been expected. All that we are told of
and of new districts, such as that of Cleveland; liability of interruptions to our snpply by al or by physical causes, was well known
re. It is aunsmed up in the rate of increase mioled and predicted in our pages. Why it 1d have led to the trebling of the price of selold coal in London last winter is the part
Io atory where the connexion fails, and as to ch we are all deeply interested in ohtaining rmation. Te Inust not blink the ugly facts, that all the
on which any prudent eugiueer can feel
that we are authorised to count as existing within pratical reach in our known coal.beds, going down to a dep th of $2,700 \mathrm{ft}$., at which total of 39.000 millions of tons of available, and 22,000 millions of possibly or partially available coal; and that, in the event of the maintenance of that rate of increase of consumption as to which Mr. Jevons's calculation has been so remarkably vorified, the last ton of the 39,000 millions would bo extracted in seventy-three years from the present time.
As against that menaced exhaustion of our supply may be set the probability of the limita tion of supply hy the increaso of cost. Botween these two limits, we showod some time back, the ratio of price and quantity must adjust itself. This, no doubt, is what it is now doing. But the point which it chiefly concorns us to understand s, how it should he by such violent and sudden takements that a foresoen compensatiou shonl sudden results. But thero have been no nnforeseen canse日 at work. On tho contrary, everfthing has been clearly seen boforehand. Some of us may havo had the misfortuno to be called Cassandra.like in our prodictions. It may hare been hoped everywhere that there was a screw loose in the calculations. Unfortunately they have not proved to bo excessive. This is all
that can bo urged, and this is no reply to tho that can be urged, and this is no reply to tho
inquiry why the disturbances should have been so violent
Mr. Elliot, who, as a memher of the Coal Commission must have heen fully aware not ouly of the faets of tho caso, hat of the extent to which they wore foreseen, urges that the strike of thirteou weeks in Wales threw the supply in arrear of the domand, and that it has never since been able to overtake it. Mr. Bell
tho President of the Iron and Steel Tnsititute tho President of the Iron and Steel Insititutc, ou the contrary, attributes the entire rise to the
development of the demand for iron manufac tures, and for of these gentlemen it should he remembered is derived from rather different sources. But with regard to the effect of the strike, it alould bo horno in mind that it was, to a certain extent, solf-compensating. The great demand for the Wouth Wales coal was that mado by tho South other industry stopped. We all remember how tho furnaces were hlown out. Indeed, tho great strongth of the strike consisted in the fact that some ten thonsand colliers, hy abstaining from work, could keep four or five times that number of ironworkers idle. This was the great ele. nent of pressuro which the leadors of the conntry. The connexion of this bith on the snpply of London is extremely ohscure. We say that it is not dixect. But we do say that if so, it is of extreme importance that it should he detected ; and it is most unfortunate that it is just this point of connerion between known facts, as to
The coal taken for domestic cousumption in 1869 was ostimatod in round numbers at 18 millions of tons. If wo add the consumption for gas and water works, and for railways, wo brigg the amonnt up to 28 millions of tons. Th ten millions of which were exported, and the halance wont to ironworke, smelting, manufac. tures and steam navigation. At tho same rato tures and steam navigation. At tho same rate
of distribution, tho demand for house ooal in 1873 would have been under 21 millions of tons and as the rate of increase for domestio con sumption will rather follow the ratio of increase of population than that of increase of activity of manufacture, we may safely say that 20 millions of last year. This coal, for the most part, is supplied by certain well known heds; it oomes fron sources specially work-d for the domestic consmmer; it is sent to London and the other great centres of consumption by definitivoly organised services, and is taken to our doors hy a epecially arranged and gonerally a very eco It is mechanism.
It is with this special mecbanism, - this pro dution and distribution of less than 20 per cent of the produce of our coal-fields, -that the
alarmed houscholdor is chiefly concerned. What reply is it to bin to tell him how the iron of the Cleveland district is increased in production
Does the manufacture of that irou demand Does the manufacture of that irou demand
the Wall's Find or the Silkstone coal that the citizeu burns to cock his dinner or to warm
his drawing room? Ilas the iron-master oal. oal-marchant es to undice him to leave his regular customers in the lurch? We are not assnming that such is not the case; but, if so, onght to bo known. As far as our own oxpether gill onal differ among themselvos. All coal will burn, but that which hurns in one furnace, or for one purpose, will not, withont sumption of suam coal indeed, has a rela. tion to tho production of house coal, is prim $\hat{2}$ facie to he expected. What we want to know is, what that pelation is The comparatively emall mount of coal ased fordomestio cousumption ia sush as to render sach an inquiry imperatire if not asy ' 1 nd it is haro we canot too dis tinetly repeat, that London has heen looking to the committee for special information, white the committeo has been only hasied in collectino general information, which is anything bat new.
Mr. Robert Tonnant, who offers the thoroughly sound advoe to the coal-dealers that they are kil. ling the goose for sake of the golden egg, gives evidence as to rise in prices at the pit's mouth hows a riso from 5 s . 8 d . in 1871 to 13 s . Id. in shows a riso from 5 s .8 d . in 1871 to 13 s . Id. in
1873. The Durham average rises from 7 s .5 d . 1873. The Durham average rises from 7 s .5 d . in 1870 to 15 s . in the month of June in tho a me period, rose from 18 s .6 d . to 15 s. , and we are far from admittiog the latter to be the highest rice paid last wiuter. But take it as sich. In 1870, we may take it that the conveyance and istribation of coal bought at the prico paid ath the pit's mouth in Durham cost, including coalmerchant's profit, 11s. Id. In 1872 and 1873 , the sum left for these purposes, after paying a fact price to the coal.owner, was sos. This is gronnds of the continued activity of British commerce; and ncither we, nor the consmmer. of ooal, nor the British public at large, will be content, or ought to be coutent, till this part of the case is cxplained.

THE FUTURE OF SOUTH KENSINGTON MUSEUM.
A Ruxour reaches us that Mr. Lowe intends to place Sonth Kcnsington in the bands of the governing body of the British Museum! If解e he any truth in this alarming statement, made. This would be a step backward with a vengeance. The British Museum is a grand institntion, with noblemen, gentlemes, and which bas ruled, and does rule, thero, is entirely opposite to that which has marle South Ken. sington the most nseful, delightfnl, and popular institation in the kingdom. At the British Museum, the inquiry apparently always uppermost in the minds of its managers is, how soldoun can we let tho public in, bow can we keep them away? Moliday.time is coming, can't we close the doors for a wash.np? Tho reading-room is getting very popnlar; can't we diggast aud drive off by amoying regulations some of those who are nsing it? At the Sonth Kensincton, on the other band, it is impossihle to dony that the one ruling lesire displayed is to attract and interest the public. The work has been done, not as if by Government officials at fixed salaries, whether they worked much or little, hut as if by private peculatore, whose sole chaoce or payment dcpended on he populaily or tho oxtablishment. pen th overy pay: bel a constan succession of ne lainga. Wh, cannot get well, then, open it at night: and at night it is well, to bepenithat and advantare of thousands open, to the delight and advantare of orn
The writer of this, when a boy, once, with tho emerity of ignorance, entered the British Museum, ou a Saturday which he had eet apart
Cor it. Sir Henry Ellis, who was then for it. Sir Henry Ellis, who was then the Chief there, very speedily came up to him with, "Hosy
dare you, sir, enter our house on a Siturdny ?" and the intruder with a whispered protest against the pronoun, was glad to escape from he threats of the irato knight. We do nut suppose that the expulsion would be effected in the same hrasque manner now; bat the priv. ciple of exolusiveness and personal considoration still rules in Great Russell-street, and it will a a sad day when that is bronght to bear on Sonth Konsington, and puts out the lights.

NOTES ON FOREIGY PUBLIC WORKS.
Ir the Builder of June 28 tb , wo gave som interesting information nnder this bead, which may usefully be supplemented by fartber facts of a similar character. Thiss, from a report on the state of Algiers during the past year, we learn that $3 \frac{2}{2}$ millions from the war contribution have been allowed for public works, of whicb the most important are tho routes from Algiers to Constantine, traversing the south of Kabylia, which will be of grent service both as a military road and as a means of opening out tbe country also the ronte from Bougio to Sétif, through the gorge of the Cnabet.el.Akhir; from Bougie to fore.ouzon, nniting the great and little Kabyhes bours of Oran and Pbillippoville. From Cher bourg, wo learn tbat public works may be said to be at a standstill; even those which had been voted not baving been commenced. The con. struction of a lino contemplated for important strategic commnnication between Cherhourg and Brest, has not even been traced, and, in fact, spirit of enterprise in carrying out puhlic im provements seems much wanted. It is stated, bowever, that tbe labourer has no difficulty in finding employment here, and bis wages, as well as those of the artizan, bave materially increased Referring to another Fronch port,-Harre, -wo note tbat no change bas yet takon place with regard to the improvement of the port. The Want of fuuds bas prevented the works fo Widening the entrance of the barhour and com. ploting the quays which bave been commenced; and altbough the new Bassin de la Citadelle bas been of great service, additioual quay accommo dation is much needed, Other improvements are also required. The docks, some of which are in the centre of the town, are quite anpro-
tected; and it is mentioned tbat bardly a nigh passes without some one being accidentall drowned thorein. Again, hardly any portion o tbe quays is prorided with covered sheds, and valuable goods bave to lie out exposed to the wet. Considerable bnilding operations are taking place in the town, and the quarter nearest the gea, which was formerly ocoupied by fortifica tions, is heing quiokly covered with dwelling hoases, most of which are of a greatly improved character, arcbitecturally speaking. The erec tion of a new English churcb, the foundations of which were laid before the late disastrons war, is being actively carried ont, and it is
anticipated that the building will bo completed by the end of the year
Oar next remarks will refer to Italy. From Venice we learn that, with regard to the improvement of the port, the works for deepening and widening the channel leading from tbe harbour to the sea at Malanocco proceed regularly and the large steam-ships which now come up to the port can reach the oity writbout the necessity of lightening. A Bill will also be to Parliament, for the construction of a second graving.dock of lesser dimensions than one in construction for ships of war, but capable of receiving corvettes. As it is proposed to construot it with the savings from $11,000,000$ of livres which have been voted for works reqnired to improve the arsenal, there is little of Pprlinment. This wot will be pron fur the of Parliamont. Mriantships as well for the roception of merclant-stips as well as ships of war, which will be of great henefit to the port, as merchant-ships requiring the nse of such a dock to cflect their repairs are ohliged to be taken for that purpose to Trieste or to Malta. Railway works are also being actively projected lines of railway from Venice, Castel. franco, Basseno, and Trent, by which the distance of Yenice from the Brenner will b slortened by 58 kilom., and a new line from Venice to Portoguaro will no doubt be approved by tho Minister of Public Works; and, con sidering that the constraction of these new lines will be honeficial to commercial and public interests, thero is little fear of thei
being thoronghly carried being thoronghly carried out.
We get some information as to public work in Peru. With regard to the National Ezhi bition building at Limm, the plan of this wa saactioned by vote of Congress in 1869, and subsequently the foundation stone was laid The Eshibition palace is described as one o the most graceful and stately buildings in the enpital of Pera. It stands at the distance o ainout a mile from the Plaza Principal, or
principal sqnare, where are also the Cathedral
and the Government House. The latter was the first palace built by Pizarro after his sattlement in Lima. The Exbibition gronuds and garden bebind the palace stretch for a. length of above 600 yards alougside tbe Lima railway track, In front of the palace is a large space, 225 metres long by $172 \frac{1}{2}$ metres wide, to which there are tbree entrances. Gene. rally speaking, the Exhibition palace and grounds are very fine. Of Callao (Pern), we learn that the sanitary condition of that city is anytbing but perfect, and to remedy this imperfection a sewerage scheme bas been drawn up by Mr. T C. Clarke, C.E. Mr. Clarke's plan consists of first, a main outlet for seweraco; sccond, pump. ing station for lifting the seware; 3rd, line of main seware; fourth, branch sewrage; fitt flushing and reutilation of sewers. The erpense of carrying out these works is estimated 92,0002. odd. The station for pmmping (to be worked hy a windmill, with an auxiliary so encine) is to be placed at the Calian side of the river Runac : and by this prorision is mande for 750000 crallons of water per diem for the inhabitants of Callao, which cannot fail to prove highly beneficial, as an adequate water-supply bas hitberto been greatly needed. Mr. Clarke's plan generally bas been received with favour by the municipality of Callao, who will doubtless barry it into practicnl effect Dook constrnction is also a feature of the public works of Callao A largo mole and dock are being constracted nnder the superintendence of Mr. J. Hodges, C.E., nearly 1,000 men being employed apion tbe work. Railway enterprise, again, in Peru, $i s$ mnst active. It is estimated that now lines aro now in course of constrnction in the country to the length of nearly 1,500 miles, costing, on rough estimate, about $30,000,000$. Many of those lines are being constructed hy Govern. ment, and crunot fail to prove of great beneit to the trade and commerce of tho country. There are alrendy working a few English rail. ways in Pern, but vieir aperations cannot bo said to be of much importance. It is calcolated that tbere are now in the conntry railways traced with an agrregate length of 2,979 Engish miles, and a total value of $71,671,8750$., and that to every ten square miles, and for each thousand nlabitants, there is one English mile of line. This certainly speaks well of railway entorprise in Pera. Not only does the state take a most active interest in the matter, but private indi. riduals aro also suffimiently enterprising to engage in the construction of new railways, and n immeuse amount of capital is invested in

## bia way.

sweden, as we all know, is chiefly renowned or its mining industry; but it appears that fow or no prblic works of auy importance are being carried ont in that country. It may be noted, however, as interesting to the building trade, that of late years a profitable trade has been carried on in Sweden by exporting wood in a manufactured state, such as prepared flooring, window and door frames, \&o., wlich bare been in great demand, and not only shipped to the nited Kingdom, but to Australia, and tbese acturo of remunerative prices.
 ions pant as an ind the onts. Daring the in the
 tion, tropers, the rices given being by. In onsequence tbe high prices bing for bome firerion in conla has also heen directed of lato to the desirability of ntilising the peat, which is found in great guantities in certain districts of the country. In ne district, not far from tho oapital, a bog sstimated to contain $15,000,000$ oubic feet of peat, is abont to be worked as fuel. The carried on with a moderate degreo of activity in Sweden, and great national improvements are nticipated to ensme from the greater conve niences afforded to trade by improved means of transport and communication

Rominey Marsh.-The appointment of ex penditor and engineer of tois level las bee obtained by Mr. H. D. Good, for several year ne of the principal assistants to tho borong urveyot of Brighton. There were 75 candidates. the late expenditor, Mr. J. Elliott, retires on cconnt of ill health, on a superannuation allo कance of 200l. per annum.

THE PROPOSED MUSEUM IN SOUTH I.ONDON.

In the Builder of last week we gave tbe pa ticulars of a preliminary meeting beld at $t$ Westminster Palace Hotel respecting the p whed Muselum and Free Library in Soutb Kested pay a nisit of gentlenen been offered New Kent-road, near the "Elephant and Castl for $8,000 \mathrm{l}$. On Thursday the 17th instant, site in question was visited by the gentlem appointed at the meeting to ascertain if it w suitable for the propose. Amongst them wr Clements Sey, M.P., and Messrs. Bavingte and Mr. Kerr, the secretary. Sibbsequently meeting was beld at the $\mathbf{r}$-sidence of the $\mathbf{R}$ Mr . Thompson, when matters of finance a other general subjects in connexion with $t$ proposed institntion wero discassed, and it w nitimately resolved that to purchase of la shonld be entered upon until a fand of 10,00 has been promised, and that tho donors sb decide upon the site. A sub-committee was a appointed at the meoting to arrange for a
construction of tbe committee, witb tho view carry out the above.named resolations.

## THE DRATNAGE OF DUBLIN.

THE national poet of Ireland never mro more trinly tban when he chnracterised the fa or freland as a wayward fate, weaving ever web of discord. Without politically speaking bate, tycanta, who were said to bave joined we miobt point out that the only tyrants Irelan has at present to contend against are nativ horn prests who opposing or obstructing measures designed fo her sanitary and social elevatinn. When no actnally engaged in opposing measures of refor and city improvoment, a number of her civi representatives are carrying on a partisan wa fare, in which tho cause of the quarrel is that hnge jobbing transaction is intender, ead Eventully on fter of puent publ Eventually one after another of argent pabla an indefinite time, to he taken tup again at a an indefinite time, to
An "astounding discovery" was made a fe daye since by the Main Drainage Committee, opening the tenders of the different concractor who proposed to execute the Dublin mai drainage works. The engineers who furnishe the Dublin corporation with statement estimated the cost sometime since at abou
$300,000 \mathrm{l}$. A pernsal of $300,000 \mathrm{l}$. A perasal of the diff-rent tender will be instructive; they include well know

gheat tender, or we may say tenders, reach to arly a million, and the lowest to three-quarters arly a million, and the lowest to three.quarters
that sum. The lowest is more than double that sum. The lowest is more than double nount.
The projected main drainage works of Dublin ve been determined on for several years, and e amonnt of progress made might almost be
citten down as nil. As soon as the model cor. citten down as ril. As soon as the model cor. ration of the British empiro made the rocent
goovery, through their main drainare comacovery, through their main drainage come "Thnt in the opinion of the committee these tenders, - lowest of which is very nearly threo times the eatiate, are so excessive, aud beyond the capacity of the
izens to beer, that we ruake a mecial report to the
uncil, hut, before uncil ; hut, before doing so, we call on the engineers to
ance such reports as they may think fit in explation o extreordinary coat,"
The upshot most likely will be, the adjourn ent of the work sine die The engineers will, of conrso, report to the mmittiee ; and the Main Drainage Committee ill report again, and all concerned will keep
1 roporting, and the ratepayers will havo occa. 1 roporting, and the ratepayers will havo occa. on to report, in view of an increase of taxa.
on ; but the most serions report of all will ost likely be the mortality report in the egistrar-General's returns.

THE CHESTER WORKHOUSE COMPETITION

We continue to receive letters of complaint on ais matter, but cannot give them space. Messrs. olson, of Leeda, anthore of "Alpha," urge ith somo justice that "the building commithee ' 'Castrum' about a month or fivo woeks after hey had got those of 'Alpha,' gave the authors $f$ 'Castrum' an opportunity of getting to now on what grounds the Board applied to hom for a speoification after having already htained and examined a specification from the uthors of 'Alpha,' and tlius placed the specioation first obtained by the Board at a very reat disadvantage." The author of tho design narked "Simplicity" has sent a protest to the oard, as might natucally be expocted.

## ACCIDENTS.

Fall of Three Houses at Abergavenny.-A ortion of three large houses, rccently crected 7 Frogmore. street, have fallen. Luckily her, at work on tho huildins. They fell ho cre fortunately extricated withont any serious ojury. The portion of the building which foll ras made of concrete, and it is thought that it ain mot heoome sufficiently comented, and from ain must have got looso in the body. The uilder, Mr. White, has thns incurred a loss of rer 500 t .
Accident ors a Railway Embankment at ortsmouth Docltvard Ewtension Works.- A tem. porary line of rails has heen constructed across he entrance from the steam basin to the float. og hasin at a height of ahout 25 ft . It is to oused for the conveyance of material from me side of the basin to the other, is ahout 100 ards in length, and is supportod hy woodon ailos with iron girders, with the exception of some 30 fk . from one side of the emhankment. The line has never before been used, and a ques. ion will necessartily ariso as to the right of the men employed at the works to use it until it bad heen properly tested and certified. A train, consisting of an engine and five trucks, loaded with earth, hacked on to the line, passing safely orer that portion whioh was properly supported, but when abont 15 ft . from the side of the em. bankment, and on that part heneath which there were neither timhers nor girding, tho line sud. donly gave way. Two of the tracks, whieh,
witli their contents, weighed about five tons
each, foll with it, and dragged the otber three track with the engine. Fonr men were on the driving-box of the engine, two of whom either jumped or were tbrown on one side, and so escapod with serious injuries. The engine-driver and the roperunner, however, fell heneath the engine, and were so frightfully injured that when remored from the débris they were quit

## FOREWARNED, FOREARMED

"A』 important minute has just been isgued by the attention to the march of the Asiatic cholera towards our shores, and contaiviug suggestions as to the samitary precautions incumbent upon us in the oontemplation of such a calamity, " ${ }^{1}$ uilder, July 19, 1873
How to escape tho foul discase
That is surely travelling oser the seas,
Is a thonght for men to ponder.
Ouce planted, forsooth, -the foul plague spot, 一
Conditions of life aro heeded not,
And the world looks on in wonder,
In wonder, aghast! and pain and woe, osoe the ricb with the poor laid lowThe Weat with the Last-ender; And to feel that the curse which thans begins To punish Society for its sins,

Is from God-that He is the sender.
Stir! stir! There is work for all to do,The thriving many, the pampered few

And the heads of the State, - don't doubt it,—
If they can hit act with resolute will o check the dominant growth of ill,
In order to utterly rout it.
There are lepers and lazars ahont the town, Dragging hamanity down and down,
$10 \curvearrowleft$ lower and lower condition;
And they may not he cured hy virtnons freaks
Of vestrics, or higots, or dreamers, or "beaks," In however high a position.
There are sowers to cleanse and lands to drain,
An incubus now upon health and brain,And fields to be sown for tho reaping And refuse to clenr and horels to raze, Whero men never see the light of the days, Liko vermin in darkness crooping.
There are shoeless urchins, and dirt-grimed swarma,
Endowed with graces might rival tho charms Of many a titled heauty
That a little Christianly thought could save From fell disease, and an early graye,
If Society did its duty If Society did its duty.
Oh, yes; there is work to be done, God knows!
In diminishing human tlls and woes,
But tho "hauds" are few in number
It is so much moro pleasant to loll at ono's ease,-
To herd with the drones, than strive witb tbe bees, -
In acmi-unconscious slumber.
Infatuate dullards ! Soon or late
A wail on the air, a hlast at the gate, Will soatter yonr pillow of roses ;
And tho heaving rocks move to and fro, And the pont-up waters gush and flow,
But not at the tonch of Bloses:

They will come when lcast dreame of with tumntt and roar,
To wither your hopes, and surge round your door,
In the hour of your pleasure and riot;
And, the prophets despised that came to warn There'll be gaashing of teeth on that fatal of
Of the Lord's avenging fiat !
G. Linnéus Banks.

## SCLOOL BOARDS.

London.-Mr. C. Roed, M.P., on a former roport of the Works Committeo, moved :-
${ }^{\text {"Thast a sum of } 100 \text { quipess (in addition to the usua }}$ commission) be paid to Mr. M M. Manning, the architect
for the Cottaga-row (Bermundser) Sohool, for the extre lahour involved in replannine the school.
He explained the circomstances which had nvolved the extra work; and the resolution was then agreed to. Mr. Reed then brought up a roport of the Works Committee, which was received, and which contained thefollowing as to opening of permanent achools:-
Contracts.-On the 13th of November lust, the Board aceepted the tander of Mr. John High, amounting to chapel) Schaol. Aeting undor the resolution of the Board of the 6th of Novenber last, the committee have
 theso extras be confirmed by the Board:-
 On the 28 th of Narch lust the Board accepted the
tender of Mr. W. Higga, amounting to $3 \dot{3} \%$. 10s., for the erection of a wood and lron building on land adjoining the Rarwood-road (Fulham) site. Extras have been
say the committee, smouutiag to 331. I5s., for strengthening the structure with iron tics, and also for
extra foundations, which were necessary in order to mako extra foundations, which were necessary in order to make

the hnilding aceure. The committee recommend that | the hniding accure. The committee recommand that |
| :--- |
| these orders for extras be confirmed by the Boird. | reeommendations were agreed to.]

Ipswich. - Mr. Weathorp said the committee as to the St. Mary Elms School had examined the plang and specification. He was not quito had not conferred with the architet as had not conferred with the architect, as they were waiting for the return to Ipswich of the chairman, Mr. Ransome. The matter stood
over. A certificate that 53l. 19s. 3d, was due over. A certificate that 53l. 19s. 3d. was due on tho Trinity School was presented by the architect, Mr. Hubert, at the last meeting ; MIr. Cowell, who had examined the hills, \&o., moved that that amount he paid to Mr. Cunnold, the contractor : carried. Thero now remains due on the school 392. It was alao resolved that Mr. Hubert's commiasion, amounting to $37 l, 7$ s should be paid.
Carlisle. -The plans committee reported that they met the arohitect on the 7th inst., and instructed him to reduce as far as possiblo the cost of the proposed new sohools hy changiug the material to he used and altering the elevation. It appeared that the total cost might he so reduced as to he about $3,000 \mathrm{l}$. The architect also suggested that it the committee desired to reduce the cost atill farther, they might build of ooncrete instead of hrick. Tho committee then instructed him to examine huildinga of this kind at Workington, and to report to this meetine of the Board. Mr. Birkett presented tho followins report:-

In roply to members the clerks said that tho original price, nocording to the tender, would he $4,450 l$, and the firat reduclions made hy the architect amonnted to 1,4312 ., leaving the cost about 3,000 , After a hrief conversation it was decided to consider the items of reduction in detail. First was the suhstitution of machine made red brick in the interior for white fire. brick. This rednction was riewed with favour and its consideration raised the question whether
brick or concrete should he the material used in
building. Mr. Hannah expressed bimself in
favonr of concrete, cemented with Portland cement and painted. Buth Mr. James and Canon Prescott ohjeeted to concrete, hoth on acconnt of the annual expenditure which would be required, the inferior appearance which the school wonld have, and the undurable nature of the material. After some disoussion it was deoided that the whole matter should be considered in committee.
Caldbeck.-A letterfrom tho Education Department was read, approving of the sites of the Schools. It was resolved to advertise for plans for the respective schools. Steps were ordered放 School site The other sites are free Fewing to School sile. Whe other siles are rree, owing to lands belonging to the parish.

The principal entrance to the market is be. tween two lodges on the north side, the one for offices, and the other as a residence for a market attendant. Between these are two sliding gate.
ways, each 20 ft . long, divided in the centre by ways, each 20 ft . long, divided in the centre by
a large pier, which is surmounted by a gis. staudard. Inside, to the right, on the wost side, are tho covered pig-market and large beast. sheds, and behind these, close to the boundarywall, are the horse.stand and horse.ran. The extreme left side, to the enst, is wholly ocoupied with sbods for bcasts. In the open area aro tho pens for beasts and sheep; roads run from north to sonth and from cast to west. A central object is a largo fountain, and hehind it, in a straight line, is the entrance-tent of the Leather. Work Exhibition, the building for which extends from east to west of the inclosure. The exact area of the market is five acres. The ordinary level of the land has been raised between 3 ft . and 4 . ft , and snrfaced to form a foundation for the payement, with local stone and gand. All the roads have heen made in a stone, courses of stone and slag were laid; them a course of Hartshill granite, and finally of gravel. For the ground-work of the pens asphalte was intended to be used, hut jits durability was qnestioned, and blue bricks were sahstituted. They are bedded in mortar and grouted in Portlaud cement; in the sheep-pens they are laid flat, and in the beast-pens on cdge, of a herring-bone pattern. The pig-market is paved the same as the sheep-pens. The ironwork of the sheep-pens is 2 ft .8 in . higb, and are of two different sizes, two.thirds of the entire numher heing 10 ft . by 9 in ., and the remainder 18 ft . by 10 in . They occupy a total space of 128 ft . by 90 ft ., are divided into 24.1 pens, and afford accommodation for 5,250 animals. The ironwork of the tion for 5,250 animals. The ironwork of the
beast.pens is of course of a much stouter descrip. tion. The main pillars aro 4 ft .8 in . high, and the size of the pens 18 ft . square, and 18 ft . hy 12 ft . size of the pens 18 ft . sqnare, and 18 ft . hy 12 ft Thoy ocoupy $a$ total space of 144 ft by 76 ft , are divided into sorenty-two pens, and will
accommodate 1,296 hod of oattle. The pig accommodate 1,296 head of oattle. The pig
market is 208 ft . by 30 ft ., and is divided into market is 208 ft . by 30 ft ., and is divided into forty pens of similar construction as those
for sheep, and gives space for 500 pigs. for sheep, and gives space for 500 pigs.
There are a numher of shods for beasts and horses on the east and west sides, averaging 35 ft . by 16 ft ., and 35 ft . by 12 ft . respectively. The beast.sheds will acoommodate about I50 animals, and the horse-sheds between fifty and sisty. Loose horse-boxes are also provided at each corner of the market. The horse-rnn on the west side, hehind the pig-market, is 382 ft . by 62 ft . It was pitchod frst of all with local stone 9 in. thick; then followed 3 in . of brolen stone, a quantity of slag, and topped with 3 in. of sharp gravel. The horsc.tie, 30 t ft. long, is fixed on the west boundary wall; the standing place between it and the ran is 12 ft , wide, and is pitched with 4-in. granite cubes. In the oentre of the market is the large fountain, which is constructed of Mansfield stone, with red granite polished columns. It stands 9 ft . high, and will throw a jet to an altitnde o between 15 ft , and 20 ft . Six of Macfarlane's
self-acting drinking trougbs, from 25 ft . to 30 ft . long, are also to be placed at differont points of the markets. Gas is laid in, posts for lamps baving been fised both in the open and covered markets. Besides the entrance at the nortb Within also entrances from the east and west. tho market proper does not quite cover the whole, as the space at the sonthern extremity on which the Exhibition building stands, about fourth or fifth of the total area, has been left for future appropriation if required. The surveyor, Mr. E. F. Law, prepared the plans for the construction of tho market. The tenders for the construction were as follows:Messrs. Halliday \& Cave, Greetham, Oakham 15,800. ; Richard Dankley, Blisworth, 11,44l Edmund Roberts, Weedon, 12,550l. 143.; Law rence D. Moore, Harpur-street, Bedford, 13,670l. St Georme's-street, Northe 11,770l.; T.\& R. Cosford, Northampton, 12,600l Mr. Dunkley's tender was chosen. Previonsly eight tenders were received for making the new roads and iron fences, and the lown, Mr. R Dunkley's, at 2,4112, was accepted, on condition "nat that portion of the rond marked on tho plan not to ho construeted" be made hy Mr. Dunkley at any time, if required, at the same tender. The market is rinished iucluded in the tender. The market is finished acoording to the original plan, the only departnre from it
being the substitution of blue bricks for the being the substitution of blu

ARCHITECTURAL EXAMINATIONS
AT tho last meeting of the Institute of British Architects, the secretary etated that, of the twenty candidates who bad presented themselves for examination in the proficiency and prelimi nary classes of the architectural examination the following gentlemen had passed,
In the Proficiency Examination (Artistic S tion), H. G. McLachlan, F. P. Jolnson, H. H Stannus, and J. V. Rounthwaite. (Scientifio Section),-Josinh Conder, F. P. Johuson, H. H. Stannns, ad J. W. Rounthwaite
In the Preliminary Examination,-W. C. Field H. Branch, John Cowell, C. T. Holnes, H. M. Mavor, W. W. Roberts, I. T. Conder, H. W. Moore, W. J. N. Millard, H. R. Perry, L. T. Waller, and W. S. Jackson

PROJECTED PIERCING OF MONTMARTRE,
Residents in Paris, making mountains of most of their mole-hills, after the approved Chaurin fashion, have long hoen in the bahit of regarding the steep north-western slope of Montmartre as a very perilous precipice indeed, albeit, the deelivity is in reality far less abrapt than was that of Holborn-hill. Many schemos have heen at difterent times set on foot for piercing tbe miniature Cenis. The Communist Wedel, shot at Satory, had spent his life perfeoting a plan, according to which the railroad was to have for points of departure the square Montholon, pass nuder the butte Montmartre, and abut on the Bois de Bonlogne. Another project, framed by the committees of the ninth and eirhteenth arrondissements, consists in the establishment of a line which shall commence at the Place Pigalle, plunging nnder the butte, after few hundred yards, and terminate in the centre of the plain of Clignancourt. The advantage of this latter scheme is that it could than the first. There is yet another project, elaborated by M. Bandier, C.E., and for the adoption of which the Montmartre quarter is now petitioning. The line wonld commence at the lower level of the Rne du Martyrs, and the sta ion would be established in the Rue Lebas, whence the tnnnel would extend under the whole length of ths Montmartre slope to appear on the other side beyond Clignancourt Church, and thence continue to St. Ouen. Communications in this quarter of Paris are scarce and primitive, and it is expected that the Municipal Council will not decline to do something for so democratic quarter. Some of the narrow streets built on the side of the butte would disgrace the worst part of a third.rate fisbing town.

Hambledon.-The sohools at Frieth, in the parish of Hambledon, Bucks, have just been considerably enlarged and improved, under the directions of Mr. H. Lovegrove, of London. Mr T. Corhy, of Great Harlow, was the builder.

## A VISIT TO THE SCHOOL BOARD SCHOOLS AT DEPTFORD

The London School Boaril had not heen many months elected before mitterings both loud and deep were heard because of their alleged do nothing policy. Reports of their discussion were palpable enough in the newspapers, but there were no signs for a time of schools being built, or of the children that needed the inter position of the Board being sent to school. We will not ask now whether this impatienco was reasonable. The Board had a great work before them, and considered it neoessary to hestow thought and care upon the foundation of their work. Theso preliminaries disposed of the Board has entered, after due inquiry as to the most desirable sites, \&ce., upon the important work of providing the additional school accom modation required in the rarious educational divisions within the scope of the Loudon Board These divisions are ten in numher, the operation in which are directed, under the supervision of the Board, by as many divisional committees The ten divisions are further subdivided into sab. distriots, and, ultimately, into 450 blooks. Thero are now in progress, under the orders of tho London School Board, 73 new sohool-buildings, for the recommodation of 100,600 scholars. The
divisional committees have in their employment divisional committees have in their employment 117 visitors to carry out the purposes of the Act
The School Board division of Creenwioh ie much more extensive in area and population than even the far-reaching Parliamentary horough Tho educational division extends from the Thames ou the north, to Penge, Sydenharn, an Eltham, on the sont $h$, and from Hatcham, on the west, to Plumstead, on the east. The complete division is, for administrative purposes, parcelle out into five subdivisions. One of these, the Western, to which the following notes mainly rerc, embraces the town of Deptford, and the istricts of New Cross and Hatcham. For the Greenwich division chere are ten visitors em loged; three of these are eugaged in the western suhdivision exclusivety. This sub division is further separatec into nine blocks
duly set out upon the London Board's office maps.
Tho following, according to the educationat Schus, taken under the direction of tho Londor Scoool Board, are some of the principal fact bearing upon the additional elementary schoo comprised in the London School district. The total number of children in the district from three to thirteen years of age is 681,101; of these that are not attending scliool, there aro 176,014, and that have not ralid exouses for not attending, there are 60,940 ; half of the childrem represented to be at work, or 19,099 , should be at school; the total number requiring accommo dation is computed at 478,718 ; there is existing and projected aceommodation for 350,920 children, and it is proprosed to provide schools for 100,600 additional, or for 451,520 in all. In some sahdivisions there is an excess of school accommodation that is not available for the adjoining suhdivisions in which there are delf. ciencies, more or less. The City of London division is the only one of the ten that has an aggregate excess of accommodation (for 1,418), in all the suhdivisions, taken torether. Notwithstanding this it is thought desirable, the distribution being nnequal, to provide accommo dation for 500 additional childron in the City of London division
In the Greenwich division there are $52,32 \mathrm{t}$ children from three to thirteen. Of these 10,767 are attending schools at which the fees are at the rate of 9 d . per week or npwards ; 1,196 are attending public institutions, 10,358 require accommodation in eleruentary schools; 29,320 are attending such schnols, and 11,028 are ill, disabled, ; ater dedaction of those who are of residue, working, or in the country, there is a sch guardians it neglect or inabinty of pareits onal guardians. It is proposed to provide additional 6,650 children.
The School Board has now been fairly at work in the western subdivision for twolve months past. In a general way the Board schools are each of a triplicate character, the three divisions being respectively for boys, girls, and infants and babies, the last olass beinir of children from three to five years of age. On reaching the age of five years the babies are promoted, and
become "infants." On attaining the age of
en years, they aro again promoted, and arated into "boys" and "girls," and tanght rean and to their attaioments and capahilitics. 'he Board has now established in the western Jeptiford subdivision three of these complete nentary schools, and has cither alroady huilt, resolved to build, five school-houses for tho ommodation and instruction of the boys 5, infants and bahies, they have olready hered together, and that may hereafter scel aission, or he required, under the provisions of Act, to attend school. Two of the new
ool-houses are roofed in, and will be ready ool-houses are roofed in, and will be ready occupation in a few weeks; another, at er-street, tatcham, is prof eessing; , a laid; and the arrangements for the erectio chools at Tanner's-hill, Wotton-road, and in or localitios, are in a forward state. These ools, supplemented by the existing schoo ial, and private schools only in view, will, it xpeoted, suffice for tho edncational wants of tiford, New
a the beginoing the School Board has comaced the orranisation of schools in anticipation the ercetion of suitahle huildings, and have mion it of real work, waiving for a time the sine non, under Article 51A of the Government eation Department, that each child sloonld as square feet of floor space, and a minimum 80 cunical feet of rpace. These prope uirements the Board is hastening to provide, he Deptford, or western, subdistrict of the enwich division, are a fair sample of others s satisfactory to be able to state that a ral allowance of floor, and certainly of cubical
ce, is to be provided for the children in the relomentary scbools
ne of the new schools in the western suh fion is in the Creek-roal, Deptiord, and is irst, wo heliove, that will be opened that is
from the dosigns of $\mathbb{M r}$. E. I. Rohson, bitect to the London School Board. Messrs. ctors and the of southwark, are the con bot. The the cost will be somewhere ahout atince ho style is intended to harmouise with oenred that formerly abounded near tho riye of Deptford, that wero crected ahout the External appearance or swed to hamper or interfero in any way with venimee or nccommodation. The principal ade, 90 ft . in length, faces tho Creek-road to uorth; the buildings also include a sido Creek-roal front. The anouth aud west sides the school grounds are inclosed by bonudary. the space between such walls and the oo, haing devoted to separato playgrounds, tions of which are in each case covered, for is, girls infants, and bahies. The playgrounds also supplied with cap and cloak rooms, is, and lavitories, for each class. The accominfants and bobies - fronting Creek-road, has the hoys' covered ygronnd on the ground floor, communicating archod oponings with the opens air play; boolroom, 56 ft .5 in . by $2!\mathrm{ft}$., and two scnior ssrooms, 24 ft .6 in . by 22 ft ., and 22 ft . by ft. 6 in . Tho accomnodation for girls on the ond floor is precizely similar in extent. On giound floor thero are towards the north
nt a living-room and hedroom, with other seniences, for the care-taker, and a mana's. room. Behind these, in tho side wing, are babios'-room, for clildren from three to five ars of are, 30 ft . hy 26 ft .6 in.; next to it
0 infunts' schoolroom, 40 ft . by $26 \mathrm{ft}$.6 in . d heyond that nn iufants' classroons, ahont ft. 6 in. square. The infauts and bahies will altogether ou the gromnd floor, which will laid with wooden hlocks, th. in. square, end the principal noth firout, and the cirls d infants' entrances, ench separate, are from $\theta$ east front. The rooms are fitted with yyds pateut ventilators, that operate by the
at of tho stove. The vitiated air is carried separato fluo and disclarged from an iron ating wnder the neck of the climney.stacks buildings are not pretentious in ornamenta
tion, but nre sightly and sulstantial, huilt of food stock brick relieved witlo picked red brick. The principal front has double ogee gahles, and an appropriate cornice is carried round hetween its
first and second floors. The roof is relieved hy first and second floors. The roof is relieved hy
dormer windows at the front and tympanum windows on the inner side
The children of each class may be said to be already collected and under instruction, that are occupy these spacious rooms. In two of the classes,-boys and girle,-the full complement are ready, and in the class of iofants in rood nuclcus. Mr. Richmond, an efficient School Poard master, with an assistant and five pupil tenchers, is now conducting, with much success, hoys' Board school that oceupies temporarily tho sclsoolrooms connected with the CongregationalChurch, High-stieet, Deptford. This may be called a "tirst-class" school, the maximum fees of 3d. and 4n. per week heing paid. There are 270 hoys on the hooks, and no room for any more in the premises now occupied. The average attendance is more than sufficient for the full occupation of tho boys portion of the new premisee. Miss Baird, an accomplished trained teacher, from Oundee, assisted by four pupil teachers, con. ducts a hoard school for tho cirls that are to he transferred to tho new huilding in Creck-road Applicants for admission to this school have to be gent away every week, from inahility accommodnte them in the "Alliance Hall."
aumber of the girls are taught in the rooms of an adjacent private louse, tliat are, in a sanitary point of view, totally nusuited to the pmrposc There are 216 scholars on the hooks, the fees are 2d. and 3d. per week, books heiog also pro vided hy the Board in this as in all the other Board schools. Miss Buird will nearly, if not quite, fill her rooms in the new building from its
opening. The
remaining school from which the opening. The remaining school from which the cuildren will be transferred to Creek-road, is the properly bo culted bavies nursery, as it may Miss (iray, assisted by four punil teachers. temporary premises occupied by this school were the druacing and retiring-rooms of an old pnblic-house iu Copperas-lane. Miss Gray's present premises aro totally inadequate for th sion is askied. She has 187 on the books, and an average attendanco of 145, which is higher than in somo of the other schools.
Of an entirely different class to any of the schools referred to, and tho most important and interestivg of any scliool establizliod in the western subdivision of Greenwich is that opened for boys, in Halcs-street, Hich-street, Dentford Tho temporary premises occupied are in close proximity to some of the most disrepntahlo quarters, and the lowest class of the populatior of the town. The school is kept in a large below othar Vricht, the converted hurcler les rious sorvices and conducta , who holds relithe roow. The permauent home of the Board sehool for this special cluss of botll boys and girls will prohnhly ho in the new hnildings in Mnghes's-fields. There are 18 f boys on the books, out of whom an average attendance of 106 is obtrined. The most slender attendances are on Monday-tho pence day-and Friday The fee is one penuy per week. The boys are ahly worse than neqlected class. opened with 82 hogs of wham only nine know their letters. Anyone who saw those 82 boys every one poorly clad, some nearly naked, most of them bare-headed, hare-footed, unkempt, and dirty, wheu they were admitted, might have
heen termpted to uso the despairing strophe:-

Con hopo look forward to a manhood raised
nyone visiting the school now will answer the inquiry by a confident aftirmative. Mr. Run. ciman, the master, is a fine young Sontsman, Who has utterly lost his native accent, full of life, zeal, and encrgy "to the manner horn" for the important work he has in hand. In less than boys from learning their on many of these poos expression, writing neatly, casting out hills of parcels quiekly aud eurrectly, singing sweetly, with light and shade well man'sed, and to other humanising and civilising attainments. This school is, in fact, the beginning of the work of civilisatiou aunong the class of children that attend it. The School Board has no hetter work they more hopeful and inpere
which to operate than here. This class of hoys is, indeed, almost preternaturally acute, and renind one of the declaratious of the overlooker at the Chatham Dockyard, -"We can mik clever skilled lahourers of these mens (tho conricts), in hall the time we could of the men who never go wrong. At the jirst lessonia drile tha they received from Sergeant-Major Sheflield the Boards arill instructor, out of above 160 boys there were not hall a dozen that eithe movosed the order to "all ont "for misconduct or to he relerated to an awkward squad for cumsiness. With the greatest alacrity and pre cision they took open order in four files, the "frout rank man"" "covering" the throe hohind him. First moveraent, as you were; second movcrient, atcention : stan ater chauges were gone through with rapidity and neatness, the sergeant acting as fugleman.
fisitors to the Hales-strect School, or other of its class, will have littlo difficulty in making up their minds on the moot point as to free schools or fees. Both classes of school ar needed in a cormplete system. A great minority of the scholars in the ordinary Board schools are not of the neolected class. Thes have-fin th greater part, heen drawn from private, and some rom puhlic, schools, many of such schools being nefficient alike in accommodation and teaching The Board is improving greatly, indisputably, the general character and efficicuoy of elementary instruction, hut very many of the scliolars that bevo beu hrought togetlicr in their soluls ave unanifestly, from their appearance, the children of parents in fairly comfortahle circumstances Who live in cleany homes, and are surrounde hy wholesome family intluences. It would be riding the principle of human equality to deatl to insist upon the Board schools heing "com children of either sox that belong to the clas taught at Haless-street that belong to the clas into the ordinary Board schoois. Whe class is speem, al demanar wo venture to thiok, special treatment, in separate free schools. The association of such children with the other classes referred to, mero instinct pronounce most unbefitting

The question of fees and arrears of fees, is no in a a atisfactory stato in the Deptford, nyy more than in otber of the selool districts. Master fees, and do so at their owu risk. Some of tirem whi ono faith hearts thano that they will whe and arrears rood to tolso upon themselves the rist aud also take in children ander three yerso age on the generous and lumane cons years o that one or other of the elder children funcily could not atrend school niess the wo allowed to briug the younger with them. The ordinary or legal mode of dealing with cliildreu whose school pence are not paid is to send the child home on tho second week: The Board visitor finds the child at home, and it may be that a summons issues orainst the parent for not endine the child to school. The child may he sent back, and the same process he rone througl
finitum, unless the Board exercises the powors conferred by the much-vered 25th scc tion, of remittiog fees, or the powers conferred The othor Dection of proviaing free schrools. The othor Deptford school erected by tho London Board is a Gothic structure, from the designs of Messrs. Elliot \& Warren, of Westminster. Mr. W. Shepherd, of Bermondsey, is contractor for tbis school ; and Mr. Nicol is clerk of the works to the Board for it, and also for the Creck-road school. This school will accommo dato the western part of Deptforl, ald a portion of the New Cross district. The principal front is to the east, and facoo, at a short distance from it, tho North Kent railwny, near tho entrance to the New Cross station. Herc, as at girlsisprecisely similar. Their roons are situnted in the prinoipal hlock of the buildiug, the boy on the first, and the girls on the second floor The infants' and baties rooms are on the gronnd floor, in a hnck wing rumning along Waward-street, to a point pear its junction wit ench ecker-road. The boys and girls have 38 ft . $4^{3}$ in by 21 sthool-room in the cencre at the ends, one 37 ft .3 in . hy 20 ft , the othe 27 ft .3 in by 20 ft The infonts., the othe is 60 ft , hy 38 ft , with a clas roon 88 ft by 18 ft The commula 1 , is a the an school Tlo corered plagroend of
cccupies the ground floor of the maiu huildings, and is 10 ft .6 in . in height; the boys' rooms are 16 ft .6 in. from floor to ceiling, and the girla 15 ft . The different classes of school are well supphed with lavatories, cloak and cap rooms, and otber necessary oonvenienees, and spacious covered and open playgrounds are provided sepa. rately, one for the hoys, the other for girls and
infants together. The principal front is agreeahly relieved by tho two staircases which project ahly relieved by the two staircases which project from the front; the boys' staircase, to the west,
is in a rectangular tower, the girls' staircase has is in a rectangular tower, the girls' staircase has roof, with motal fiuials. The front has some very good ornamental brickwork, in dog's.tootb cornice, tartan pancls, and friezes, in which quatrefoil panels of freestone are introdnced. cast-iron eave gutter is moulded, and does duty effectively as part of the cornice. The bead master and manager have roons in the western wing.
The teacbers and scholars that are to take pessession of this bnilding also in the course of next month are now at work in the vieinity iu cemporary premises. The hoys' and girls schools are carried on at present in the large room under the new Wesleyan chapel in New Cross.road. Mr. Collins, the indefatigahle and accomplisbed master of the boys' school, will have occasion, on the day he takes possession of the new school, to write npon the lintel, as is done upon the Paris omnihuses when they are fnll, "complet." Ho bas 350 scholars upon his books now, and an average attendance of rooms. Many of his scholars, however, come from the direetions of Old Kent.road, Hatcham, and Peckham, and if the new Board sehool in progress at Hatcham achieves onythinc like the proprutation that Mr. Collins's school has done the pressure upon him He has an assistant-miaster and six pupil ieachers. He has an assistant-master and six pupil teachers.
The fees are 2 d , and 3 d . per week, in this and the adjoining gills' school, which is under the management of a very zealons, persevering, and management of a very zealons, persevering, and
painstaking young lady, Miss Simpson, who uails Miss Simpson, like Mr. Collins, is "cabined, cribhed, confined," aud, in the new premises, will
have her discomforts greatly diminished, and he surrounded by circumatances much more con ducive to suecess in ber work. Miss Simpson las 250 scholars on the books, and an averago attendance of 160 . Sho kas the help of an assistant-mistress and four pupil.teachers. The third division of the new scbool, the infants and halies, is at present located in an erection close to the entrance to the new schools from Wood pecker-road. This sobool occupies the most suitable of any of tho temporary premisesthat we bave seen. The rooms are light and airy (they were put up for a wire-worker), but have the disad. rautage of a thin front wall, and too much glass, which make them cold in winter. One of the rooms is, moreover, on an upper floor, which is, a serious disadrantage in premises oceupied by infants and babies. Miss Xonng, the elever bead of this department, will, doubtless, be very pleased in removing her interesting charge to nore eligible premises, and in heing ahle to dimit the little applicants whom she has now to reject most nawillingly, from want of space to accommodate them. Miss Youncr bas 250 children on her books, and an average attend. children on her books, and an average attend. pupil teachers. The fees are Id. per week. From a tour of inspection and inquiry, and the collection of much trastworthy evidence, we have excellent reasons for believing that in Deptford the London School Board are doing some good work, wisely and well.

POSITION $\triangle N D$ PROGRESS OF APCHITECTURE.
Now there is a lull in the storm of adverse criticism so recently directed against English architects and architectare in some sections of the periodieal press, it soerns desirahle to endeavour to present a fair and anbiassed view of the matter, such as can be freely accepted hy all not determined to abide hy foregone conelnsions. It is difficult to arrive at the motives wbich have actuated these attacks, the speeial features of which are well known to readers of the
Builder. Nothing new has been said, hat what to a less perverted and less exaggerated form, and in a triendly generous spirit, migbt bave been welcomed as a contrihution to a hetter order of things; but wbat has marked these
criticisms throughout, has been an offensiveness
and bostility whicb, in their persistence, mirght almost have deen doemed organised, tbeir cbief ohject appearing to be the desire to ereate opprohrinm iu the pnblic mind against a profes. sion upon which the dignity of a country so much depends as represented hy its architec. tare. The at all times easy task of fault.finding and nltra-criticism seems to have been one qnite cons amore, and accomplished with great zenl and satisfaction; hut what bas been the gain to Eatisfaction; hut what bas boen the gain to decide. Indeed, we shall not bo going too far in saying that, hut for the usuel result of all orer stated cases in failing to produce the impression intended, the one conviction sought to he prodaced was that Englisb art, as seen in its arcbi teeture (though other branches have not been spared) had reached a point of "degradation" and effeteness which indicated that the time bad arrived to write " ielenda est." We leave, how ever, these critics for the more immediate purpose of this article, with the one remark, that in nothing is the nnfaimess and want of generosity in their motives more seeu than in the fact that the numerous rejoinders to which architects heve from time to time addressed themselves, as sech 80 abundantly in the been wholly ignored!
What, then, are the real facts of the case as to the present status of architectural art in England, and the past conditions which have produced it. The question is not whether modern English architecture has failed to reach a point satisfying the highest expectations, and equal to the art. excollonce of past periods, bnt whether, looking at the steps of its development, it has been equa to the opportunities presented. Historically, it must be rememhered that our modem architeo turo dates its growth from a period of almos not cven yet he said to have had a half.century's existence. The reign of Georgo IV. witnessed the first attempt at the "revivals" by which architecture in England has since been chiefly eharacterised. The actual study of ancient Revett's "Athens" gave the impetus to an Revetf's "Athens" gave the impetus to an for purity of spirit and tho love and reverence manifested for Greek art of the purest type, and not as given to us throngh Roman and Reuais.
sance forms, gave a promise whieh it is greatly sance forms, gave a promise which it is greatly be regrotted,-looking at the ahility and genius it croked in minds of the finest temper, -was
not encouraged to its duej fulfilment either as to architectare or sculpture. Then came the "Gothic revival," which, with far more vigorous and, in a sense, natural chances of adaptation and snccess, soon attained great hold, and has left an impress upon Enchish art which cannot die ont, but which cannot altogether he regarded as having solved all the problems demanded hy modern, as contrmsted with Mediæval, requirements. It cannot ho denied, however, that these revivals have carried English art int many successful and beautiful resnlts, such as had not for a long time appeared as products of native genius. A third movement may now termed an "Eclectie revival," in which, while neither Classic nor Gothio forms, - mike and simple, - havo ceased to competo for public favonr, the vast extension of modern art. knowledge bas brought ahout a possession with astonishing and the most elastic adaptation have appeared in recent architectare; enough to puzzle the future arehwologist as to our precise period in history, and mneh of whieh might he classed mader the lieading of "Curiosities of Arehitectare." Nevertheless, the fact remain that there has been a rapid growth in all art matters, and if results htive not heen altogether admiration and congratulation, looking at the circumgtances of the case, far ontweigh those o censnreand dissstisfaetion; and staguation, much less retrogression, is tho last cbarge that can be made. Under the conditions which have pre-
vailed throaghout these developments of modern English arghout these developmen is not that results are so can it, we think, be safely contended that the arehitects of the present time are jnferior to those of the prowious generation now passing away, and if scemingly so, it is due rather to the ripening cvils of a bad system, than any laek of ahility; for in extended art knowledge, facility of picturesque design, and in a decora-
tive skill till recently all but untried, our arch tects, in tho new buildings of all sorts whic have sprang np in all parts of the country, bav shown no falling off, hut quite the reverse. An it may he added that in other parts of the worl English architects hare been to the fore, an more than held their own
But onr arohitects would be the last to affir that past progress and results have been wholl atisfactory to the lover of art, or for the entir honour of tbe conntry, or that present tendencie re likely to prove moreso. To none are the evil which have afflicted the development of their ar so patent as to themselves : none are less anxiou avoid a healthy criticisn, and none woul more thoroughly welcome such changes in ou whole system of art-cnlturo as wonld promiso iddance from influences which may be said have choked mucb truc art, and which have gon a long way in producing tho failures which hav attended our art-progress.
The unanimity which now marks the cou clusions of thoughtful men in the profession to tho one thing needful to give architecture it true status among us is a hopofnlsign that movement

LODGESS, ROLSDON, DEVON
In our present nnmber we give illustration of two pairs of cottages, erected to form lodge tho cast and
Each pair of cottages is arranged under on roof, covering the road and forming a sheltere gateway at each end of the grounds. Th approachea.
The rooms
The rooms are large and the accommodatio ery complete. Tho walls of the lower stor Bath stone flints (quarried on the estate), wit Bath stone aressings. All the external woo rork is oak. The roofs are of red tiles, and th apper story is weather.tiled in the old Englis
manner. manner.
Mr. Moass, builder, of Exeter, has carried ou four lodges for 2,8002
Messrs. George \& Vanglan, the arcbitect have erected, at the cost of Mr. Peek, the paxis church of St. Panciut, IRonsdon, ad
site to he occupied by the mansion.

## ST. MCIAEL'S BUILDINGS, CURNHILI

 Tais property belongs to the city of Londo Real Property Company. Some very old house arel. ule excavating for the foundations, a very curiou Iu excavating for the foundations, a very curiouold erypt, and some Early Noman areadia old erypt, and some Early Norman arcadim There were also evidences of a very severo fir on the cromins of tbe old arcbes, and no donb his must have been "the "great fire o London," as the building then heing pulle The mews have dated back to that period.
The new hlock of buildings has three fronts, the ne represented in the accompanying engraving being in St. Michael's - alley, Corahill. The other fronts aro in Bell.yard and Corbett-court They are in red Suffolk brick, with bands o olue Staftordshire hricks, and Portland stome with terra-cotta cornices and dressinge. The Corbett-court front is sapported on piers of polished red and grey granite, and the Bell. yard front on piers of the same material, and mas ive iron columes. The huilding consists of twe tiers of vaults formed of iron and brickwork, anc vur floors of offees, with honsekeeper's roome, ron enters very largely into its construction and tho laudings and passages are all of York hire stone, carried on cast .iron ornamental bearers. The staircase is of ironwork, with handsome balustrade, and bas stone treads, and s so constructed that eaeh step can be taken and replaced, withont the slightest inter ruption to t
coustruction.
The building is being erected from the designs and nudor the snperintendence of Mr. Edwin $A$ Crockett, at an estimated cost of ahoat of 13,000l. Tho builders are Measrs. W. Henghar \& Co.; and the clerk of works is Mr. C. J Jones.

Repaving Blackfriars-road.-The Metro $3,000 \mathrm{l}$. to the St. Saviour's Board of Works for the parpose of reparing Blackfricrs-road.

## But

But, on account of the derastation of the * Reports of tho Goological Survey of Indiuna. B3 By obis, and Warder, and Dr. Levette. Indianonpolis §tat
for conversion into grood charcoal, this fuel, soon aftcr the year I85y, proved insufficient for the large production of spiegeleisen wanted; therefore, they were compelled to molso grent efforts
in replaciar the clancoonl by cole well-prepared bituminous by coke maje from afont, there not being in the iron-mannfactariv egiou coal sufficicutly free from sulphur and oiher deleterious materials to allow its uso in crude statc. The spiegeleisen made with ch coal was a very valuatle metal, duo to the purity of tho ores, entirely free from sulpbur and phos. phorue, and wo all know that no metallurgic erioas thus far bcen ahle to expol these deleprevent them from passiug into the or coke,
The first development of the spiegeleisen manufacturing, by means of coke, was attended by many difficulties, whicb at times seemed almost insurmonntable. The first trials of all wero met with many and great difficulties, calling ton same highest skill of the engineers, aud at and when at last it wasy expressions of doubt; the science of metallurgy had overcome the greatest ohstaoles, there still remained iu the minds of ironuasters an aversion to the ne metal. The iron had to be iutroduced into the market, and its merits maje kuown, and ironmasters, reluctant to experiment with a material
of sucl different quality from that they had been aconstomed to use must be inducod to try tho new motal. The first thing was to test itg ralue, and bring it to the favourable notice of proved that its freedom from sulphur made, nud phorus, on the ono hand and tho aud phos. nancanese the ono hand, and the presence of nenualled in the otber, produced a metal except the small ay any suown to commore charcoul. Unautities of the new iron were soon introduced into the rolling-zaills and other works, and the unanimous verdict of all who tried it was to the effect that it was prectrahle to tho best irou previously known, and the only and wish would enablo Bessemer stcel manll. mauners to bring into oxecution his (Bcssemer's) the demand has exceedod the supply.
In clescribing the millstone grit district of the coal country iu Indiana, the reporter desoribes n curions production of nature appareutly, called the "Jug Rock," from its supposed resomblance to a jug, an illustration of which is given ns millstone grit terminates within of ro the East Fork of White River, from thy yards which there is a projecting mass of conglomerate sandstone, oalled the " "innacole," which stands $1 \% 0 \mathrm{ft}$. abore the level of the stream. Oyclopean blocks that have broken off lie around the foo of the ridge in every conceivable position. On has boith sido or chis ridge, the conglomerato has been cut through by disintegrating forces, abe lell, all some astance from the man Rock" Rock." 1 t is 4 ft . high, and supports, on its
top, a flat projecting layer, which is called the stoper,", arojecting layer, which is called the stopper." Just ahove the bulgo of the jog are bedding. The lower part is thickly sct with quartz pelibles.

THE BROMPTON AND FULHAM ROAD. As a continuation of the grcat central east and west houlevard of Piccadilly, this leuding route runs on to knightsbridge, in a s out h-wost direction, alongzide the Greex Purk, and by Hyde Park-comer, so far as Wilton-place. The open oxpanse is all that could be desired; but at this point, nod as far as Albert-grate, it is constricted hy the advancc of six or seren shops, on the south sido, as far as Cbarles street. Thence to Brompton-sqnare the mean width is over Io0 ft., having on the north side a raised terrace, formerly planted with fine trees, lately and ruthlesdy cut down. Opposite the Oratory the "Bell aud Horms" public-house divides the noble Cromwell-road continuntion from the Fulham. road, which latter at this juncture is reduced to 30 ft . of driftway and 18 ft . of footway, and here the road takes a due sonth teudency, for ohout 300 yarde, in a serpentine form, as far as Marl. boro'road. Private houses aud forecourt gardens form the border on the south side, and two square) our tho north side (halled Alerander square) our tho north side, the mean width o roadway being 30 ., and of the two side foot war half a anile, agaiu iu a sonth.west dircetion,
the width of the roal and footways average ar. The only constrictions of free thorongh are that or toprovement are those noted points, and which are bordered, except at two Now uothing could be ensier than to rectify the narrow juncture at this point by simply excising from the projecting front my simply width of 10 ft., to be added to the straightened road, commencing and determining vith an acute abgle, 011 the salient sido there all eighteen houses, which night be comen sated for a roduction of 10 ft at opposite nott side the publio sque ; the dealt with in a similar pire suare nboula be pallic thoray for for width. In $\quad$ int there need be in reality no apparent diminutiou of extent ; for the external range of trees migh be presersed, and a footivay of 10 ft . formed hounded by the present railing, thu forming, as in Piccadilly (which was done able promenado tar) an umbrageous and agreeIt promenado.
It does appear strange that an open and great leading thoroughtare should be spoiled by so hort a strait. We know that the capacity of a pipo or tuhe is linited to its uarrowest oon. striction; and so of the angusta via adjacent to ho "Bell and Horns.
Now it must ho taken into account that all the ront gardens along the Brompton and Falham roads have been oovered with shops in advance of tho bouses, and that the sixteen frontages herein referred to, with perhaps not a dozen more along the whole range of two miles, remain unappropriated. If left much longer shese also will be shopped, and no improperert of roul can bo mado afterwords.
Some of us can remember the Erompton and Fulbam roads shrubbed and wooded suburhan outlets; ay, evon the New and St. Pancras roads to tho City (about forty years back) a imbered and sylvan rural boulevard. Wow it is coutinuous street of five miles from Bdyware to Moorrate-street, tho border cardens being wholly utilised and huilt over. $Q$.

## BRISTOL SETVAGE WORKS

Mr. R. Rawhinsov, C.E., beld an inquiry on ment Board reative to bo lio Bristol Board of Heall to applartion of tho Bistol Board of Heallil to horrow 20,0000., the Bristol. Many dificulties beinging bewers in Bristor. Many difficulties being incurred in the execution of the work, the origioal estimate was exceeded, and the sum of 20,000 . was needed Mr. to mect the cxtra cost.
Mr. Ashmead, surveyor, handed in a report as to the making of the estimate and the carryiug it out by the coutractors. In March, 1867, it wit estimated liat the sewerage works for the city would cost 27,000 , the works were not proceeded with natil 1571, and then the cost of materials was ligher than previously. The fondations for the drains were also found to be had in some places, and extra work had to be done under the order of the sirveror, the result being that hy the timo the walls were completed the original cstimated cost had heen eureeded hy $20,000 \mathrm{l}$, the sum it was desired to borrow: Mr. Rawhison remarked that it was not a 20,000 that the money had heen improperly spen It appeared tbat, with the exception of wort the extent of 200 l , or 2502 , the whole of the work was according to coutract. There we the orders in writing given by the survejor to the contractor for the performance of extras, as they bould have been, according to the contract
Mr. Rawlinson said that no doubt these extras might he litigated to nny extent, but whetber be town council or the contractor would better, or whether they would be both plunged quagmire togrether, he was not propared and He bad been an ougineer all his life, and ho rught look at one side of the question while amother-person regarded it differently ho the coldo were nld bo held hard tron conisact, if would be sovere upon the trong ores, while the weak ones would entirely ail, and the security would have to be called pon. Mr. Rawlinson further stated that he thola recola sanction be given to the borrowing of the money, for hc had seard nothing nake wo adverse to it. If the sorveyor fely bat he bad not reported the matter sufficiently the comalles, no doubt be wonld do so in the future. Tbe inquiry thon closed.

Vertical Section-Tentiation of Severs.

VENTILATION OF SEWERS.
The diagram represents one of a series of frns placed in the line of a sewer, with an airpipe from it, supposed to he in conuexion with
tho atmosphere above the houses. By causing tho atmosphere above the houses. By causing
the scwage to fall into the fans on one sile near the scwage to fall into the fans on one sile near
the top, and to escape on the other side at the botton, they are made to rotate, draw air ont of the sewer, and force it up the pines into the atmosphere. The fans, thcrefore, are self acting; and, if properly constructed and fixed will not get out of order. If, in addition to tho usual drain communications, pipes are laid from the open air into tho sewer, at points unidway or ncarly so between the faus, it is evident that the air-currents, established along the server hy the rotation of the fans, will rewovo the gases as of tho water flowing sewage. Thus che power carrics off the ecwage, hut by falling into the tans, with air-pipes to and from the sewers in connexion with the atmosphere, it is made available fur ventilating the sewers as well.

TUE ENORMOUS GROWTH OF HACKNEY, AND FTS SANITAPY COXDITION. The nnmal report, for $1 s / 2$, of Dr. Tripe, the medical ufficer of bealth for Hackney, whicl has just beeu issued, gives some interesting statistics as to the great increase in building and the population of Hackney, as well as its present sanitary condition. The statements contained in the report may be regarded as the noore authoritative, from the fact that Dr. Tripe is also Presideut of tho Meteorological Society: It appears from tho report that an enormous increase has takes place in the population of the district of late sears, and that whereas in 1801 there were only 11,102 inhabitants, the population had increased to 121,951 when the census was taken in 1871. These returns show that during each of the seven decades up to 1871, the population bas increased, witbin the respec tive ten years of each decade, to the extent ot ahout 40 per cent. since most nnexampled rate, showing that the cxpan sion and increase of the ponulation in this portion of the east of the metropolis is still rapidly going forward The chicf sauitary work performed forwa her in sccorlance with the Saniury aurt consisted of the cxamination of tbe rooms Act, yards, onthuildings and cistoras, or water-butts, wo or more familics, or by persons helongiug two or more familics, or by persons helongiug to the poorer classes. In these 6,126 houses in which 8,812 families resided, and $45,65^{2} 2$ persons. The numher of houses in which nuisances were discovered was 2,517 , whicb was nibout 42 per cent. of the numher of boases inspected, and 3,290 of these houses required some works to be effected, or disinfection to be performed, to render them safely habitable.
The report next refers to the writer's com munications with Mr, Ayrton and other partics respecting the lakes in Fictoria Park, and the inproved regulations for bathing, and states that inftre a rood deal of correspondence, the lakes
have heen elennsed, and are no longer iujurious to health. It also further states that the medical officer had had nu interview and correspondence with the secretnry of the Regent's Canal Com pany ns to the cleansing of the cannl and hasins leading thereto. Tho medical officers of Shore ditch and Bethnal.green joined him in the applieation, and the resnlt was that tho caual and basins had heen cleansed. During the past year the mortality had becn mnusmally sumall. The
sanitary state of the parish generally was sanitary state of the parish generally was good,
several prosecutions for cnirying on offensive zeveral prosecutions for rarying on offensive
trades having led to their mitigation or abolition.

NEIV WESLEYAN CHAPELS FOR THE AETROPOLIS

1. New Wealeyan chapel is abont to be huilt in Oakley-terrace, Old Kent-road, Canherwell, and the inemorial stones, two in number, were hid on Thursday, the 17 th, by Sir Francis bycett and Mr. Lightfont respectively, The will be built of yellow stock hrick, interspersad with red, and with oruamental stono capitals. A flight of stuno steps leads up to the entrance, and over the doorway, which has a massive cir. cular projecting lueading, will be a bandsome
arched window. Galleries will ran all round arched window, Galleries will rum all round and a platform pulpit. The building vill hold 1,000 persons. spacions schoolronm with ten-room and super. intendent's room adjoining. The entire cost of tho building, including the site, will be 6,500t. Ar. C. Bill, of the Strand, is tho architect, and Heesis. Wright \& Goodehild, of Croydon, nre the bnilders, the ir contract amonnting to 1,5151 .
Sir Francis Lyectt incidentally stated daring the proccedines that the Metropulitan Chape Building Fund, aided by other ginuts, was about to be mado use of for the purnose of erect. ing fifty chapels in the metropolis within en jears, and that witlin the last three years eleven chapels hitd been built, and sites had been secured for twenty additional chapels in different parts of London, soveral of whioh would shortly be proceedod with. The sum of $170,000 \mathrm{l}$. had already heen spent in the erection of theso chapels and the purchase of sites for

NEW POLISH NATIONAL MESEUM.
Tear the little town of Rapperswyl, on the Lake of Zürich, rises the sicep rock whose ammit is crowned by the ruined castle, the rade of the house of Halbsbirg. It has lately undergone complcte restoration, and is intended o be the kcat of the new Plisin Nationa yard an iron and bronzed monumental column, surmonnted by the Polish eagle, las been crected, o indicate to the visitor the futare destination the building, and to denote likewise the fac that Polish " nationality" has fonnd an asylum ou the hospitable soil of Switzerlaud. In a long succession of halls and rooms is arranged a collection of aroluovological and numismatical mementos of Polish listory-sculpture, paintings, weapons, old manuscripts of kings and distinguisbed men of the Polish1 11ation; amongst the
latter of which we find the correspondence and testament of Kosciusko, and the monster testament of Kosciusko, and with $100,0 \mathrm{no}$ nddress ( 120 ft . long, and covered with $100,0 \mathrm{nn}$
signatures) of the Enclish neople to tho Poles in signatures) of the English people to tho Poles in
the vear 1831. The collection also contains the year 1831. The collection also contains
Polish standards and colours of different agef, Polish standards and colours of different agef,
the glass drinking-cup presented by the city of the glass drinking-cup presented by the city nf
Dantzio to King John Sobieski, and otbor equally Dantzig to King John Sobieski, and otbor equally valaable ohjects. The catalogue numhers $n t$ present bat 500 different articles, nearly half of
them relating to tho revolution of $1 \$ 30$; but them relating to the revolution of 1830 ; but
relice of Polish history continne to flow in almost duily from all parts of the world.

PRESENTATION TO THE CHAPEL OF
THE NEW LAMBETH WORKHOUSE.
The new Lambeth workhouse, which has now for a considerable time been in course of erection, has been at length completed, and is in. tended to be opened slortly. At the meeting of the guardians last week, a letter was read from Mr. Henry Doalton, son of the lato Mr. Doulton, who had heen chairman of the Board for many years, and who died recently, to tho cffort that tho family were desirous of placing an organ in tho chapel of the new worklouse as a memorial of the deceased. Tbe offer was unanimously accepted, and the orgnn will at once be erected, and placed in the chapel in anticipation of its opeting.

STATUE OF SIR JAMES OUTRAM. A fixe equestrian statue, in bronze, by J. II. Foley, R.A., has been erected temporarily in naterloo.place, between' the Duke of York's Columa. The monnand the Duke of York's Columa. The monh-
ment represents Sir Jaues in tho act of suddenly ment represents Sir Jaues in tho act of suddenly
reininc in his charger, and leaning with his reining in his charger, and leaning with his right linnd on the horse's quarter, looking back, as in a moment of excitement, gazing eagerly at some object that has attracted his attention behind him.
The expression of his face is very fine, aud the attitude most effective, being pustrained, bohl, and life-like. The liorso is finely modelled, too; the neck continoted, and the head curbed quiebly in, the partially.open month and expauding nostrils heing particularly true to nature.
The general rppearance of the statue is extremely grod from all points of viow, and that is rery bigh praise. The wrok is cast liv Mesers. Masefeld \& Co., and is sharply defined, he veins on the horso's neck, fir instnnce, avi ought to be, bold, and ret unobtrusive.

> RAIN-WATER TANKS.

Su, -I have had rain-water tanks with filter beda on the principle described and delineated hy Mr. Dinwiddy, constrncted and in use for many years, but instead of the small receptach or the unfiltered water, I provide a space of arger size, equal to, if not greater than, tbat pro. ided for the filtered supply. Mr. Dinwiddy wonld find his receptaclo fill fastor in a heary shower of rain than the water coald get through rood compact filter. nnd thus be linhlo to overflow. I divide an ohlons tank into two nearly equal divisions, that for receicing the ain immediately from the pipes hing the argest. Across the hattom is a trench sunk in the floor, and filled with sand nud rravel : from the bottom of tbis trench, or filter. bed, rises the martition which seprates the two ounlities of water heving small bele close to the bottom through which the water gets from one side of hrough which the wion gets the one side o made to ravel ase side of tho martition and asend grough a similar bil on the othe is the hrot a mater depends otly on the prrity of the water depends greatly on the slow tho unfiltered water is tlus a great advantage, and alsu prevents disturbance of the filter-beds, and also prevents disturbance of the aiter-beds,
which would ineritally occur in a narrow, con. fined space, suoh as that shown in Xr. Dinwides, plan.

PROFESSIONAL INQUIRIES.
Sin,-Will any of your readers inform mo if there is
anything unreasonable, or out of the usual course of this profession in an archilect providiag bills of quantities fur certain warks, and notifying the survegor's fee st the enit of the said bill?
Also, provided the boilder requires a pecond 8 set of drawings and specitication, is the arecuiteet justifed in zasaina
an extra charre for same, or notifying the same on the
bills of gunatilins?
"ARCHITECTS AND THEOLOGY." IIr, -It appears to me that the criticisms made yonr correspondent " Protestant Buizder on Mr G G Scote's paper rast ore the Lincoln Architectural Society (where t gentloman alludes to chancel-screens), are lo of tho mark. Mr. Scott most carefnlly olained his reasons for protecting the chancel on profanation by a high screen, and added
t" there would be less objeotion, artistioally, t" there would be less objeotion, artistioally,
a low screen, if we wore allowed to erect over a low screen, if we wore allowed to erect over
a rood-beam and a rood." Mr. Scott may ssibly have roforred to the rood complete, hut ir correspondent has assumed the term neces. ilg to imply the representation of the Cruci-
en with the figares of St. John and St. Mary en with the figures of St. John and St. Mary
the sides. Whereas, a broader meaning for term is simply a cross (Saxon, rode), and re are many churches in Eugland where so have been erected within the laat twenty urs either over the chancel-screen or on a
mm ; so there is no novelty here. With respect the crucifex and the attendant fignres, it is icult, perhaps, to got over the prejudice sting in many minds on account of their use that Catholie charches. I fail, however, to option of tho rood complete, and nothing can e greater dignity and impressiveness to the e greater dignity and impressiveness to the son, and from a common-sonse point of view, nigh chancel-screen, designod so as to bo as $n$ as possible, is most desirahlo. Scrcens are uahle aids to the architect: they afford scale other, and, in the case of the rood-screen, tainly give the appearance of extra length to chnrch. There is no room for donbt on this or point, because in those cathedrals where y have been swept away (Durlam, a notahle fance) the buxiding appears shorter than tance) the huilding appears shorter than
ore the alteration. I am, of course, awaro these oathedral screens were not perated : still, the same principlo holds grod.
ere is a successful modern chancol-screen of ere is a successful modern chancol.screen of
iss to Mr. Street's nohle church of All Saints, fton, which is surmonnted hy a floriated cross ; but, considering the elahorate character accessories, the crucifix, \&c., would, architurally speaking, he an improvement. Really, rchitects of the Englisl communion aro to ho dred in the narrow grooves dictated hy ra-Protestantism, they will have to dispense ogethor with many heautiful ornaments to arches perfectly harmless in themsolves, and ose only fanlt (if fault it he) is that they are o nsed in Roman Catholic churehes. Pugin, a his characteristio acuteness, rendily saw artistic valuo of high screens.

Eomund B. Ferrey.

## THE BOROUGI SURVEYORSHIP OF

 SOUTHAMPTONChe special committee, te whom Mr. Lemon' er requesting that his position for the future hit bo considered, with the viow of making
h mntual concessions, without increase of h mntual concessions, without increase of ary, as would satisty the counoil and himself,
s referred, has repirted that, at a meotiog of committee, the following propositions were mitted hy the surveyor

The surveyor added the following reasons why said his applications should he acceded to:Ist. The executinn of oapital works to the value of

 ies; th. Larpe and importhat works at Portswood in in
in
future ; Th. Large saving hy privato improvements. The committee saw no reason for departing m the existing arrangements made upon Mr. mon's applointment as to private practice, At
urther meeting of the committee Mr. Lemon de the following propositions:-
The borough serreyor may lhere oonsulting practice of the horough, the neeessary taff for official work
to he provided by the hoard. 2 . To go back to the lo arrangement us with ny predecosoors, viz, 250L, per un salary; to he paid extra. For all new works and all
tora in oonnection therewith, with privato practice
 nt in every cesse."
The committee resolved unanimously that, on condition Mr. Lemon would agree to conue in his office as at present for three years
at least, from the present time, they recommend the Crban Sanitary Authority to increase his salary 100t. per annum. It was also resolved wnanimously to recommend the increase of Mr 307. per argan's (the assistant surveyor) salary the duties in the and, further, having regard recommended that Mr. Lemon be anthorised to employ a clerk in his office at a salary not ez ceeding 30t. per annmm. Mr. Lemon stated that he accopted tho condition referred to in the resolvtion relative to himself.

THE DISPUTE IN THE BUILDING TRADE.
Antrover it is by this time a twice-told tale we must record that at a general meeting of the members of the Central Associntion of Master Builders, held last week, at 2 , Westminsterchamhers, Mr. B. Hannen in the chair, the by a majority of the meeting
rado, the that, considering all the eircumstanioes of the
 oin suturdays; and at out.door jobs, the payment ot ©uges
to take place as soon after that hour as practicble, aceording to distance.
2. That wages at the rate of $\theta d$, per hour be paid from and after the first Saturdsy in August next.": The adoption of the ahove resolutions con the threatened numher of letters which serve to show that tho action of the Association is not remarded with very friendly feelinge throughout the country The following will serve as an example.

## "SAVE ME FROM MY FRIENDS.

## Sir,

" Ill fares the trade, to threat'ning ills a prey,
I have ventnred slightly to altor Goldsmithcondition of a large class kng the present huilders" 1 a large class known as "smal! and have Y unfortumately belong to that class, my soul hen laying hathering unction to my soul, that the frater Buiders Association ral, hut I haro suddenly ayole to the in gene that they haro suddenly awoke to the great fact in particular $r_{1}$ in other words, of the "wealth" in particular, in
which increases.
It now transpires that these gentlemen who get all the cream of the trade and of the priccs, finding themselves too busy to resist the demand of the men, without arhitration accede to their of work -a request which they, with the class of work and the prices they are fortunate enough to obtinn, can perhaps afford to pay, bnt which, with the hard-fought competition of
small works among a class who do not always amall works among a class who do not always pay 20s. in the pound, is simply ruin to che man Who tries to conduct a respectahle hubiness, paying a full price for the labour ho employs, rather than be suspected of "oppressing the
hireling in his wages."

An Enemy to Combinations.
buIlders and their men.
Kissr week, Jamee Fitzeithons, a la bonror, residing at

 statute, so. Complainant proved dhat dhe wasingt the
contractor under Messrs. Weltourne, the builders to to do certain brictwork st Kilbura, and that bo emploged
defendant, Jne 25, when the men were going to brealfiat they came in a body and asked for an Increase of a hallpeuny per
hour upon wbat they had proviously hour upon what they had proviously received, malking in
the whole bd., which he refused to ant, with others, said they had worls in the country and Wunted their money, which Fas not given tbem, and that
on the next morning the defend on the next morning the defendant and fuur or five others clume about ten o' cock and again asked the complainant
for their money, which he refused to pive them of the Mesesss, Welbourne refurned. to pive them nutil one
somes, atter usiog
some threats, went away,
 station, and the ine pecter raftused was taken to the police-
advised a summe thens charge hut elicited that tho men ony came for nonery that was
betually dae to them, that they hatually due to them, that they wero employed only by the
hoor, and that he had a right t, discblarge them at any moment hy paying nip to the end of the hergur them broken
into, and tliat on the 26 h, whon defandunt and came, complainant told them to wait unarit ond of the
Messrs. Welbourne came, and that they asked for money
 getad to Mre. Pain that he had carried his cross, examina. ion quite far enough, asd as it was andmitted the men
could he dismissed at any moment
uothing bat fair the men should hase the same privilege, nithouat there oupht then to have heen paid. And that thinit that this was a cose to which the Act applied, and.
dismissed tbe summona.

## CHURCHES OVER RAILYAYS.

Sir, I qee in your journal of the 12 tb instant that tho
Marquis of Westminster, on the occasion of laying the
 reported to have stated that this wans the first instance of of
a church huilt over a railway. Will you allow me to state a church huilt over a railway. Will you allow me to state
that such is not the case, , is myelf watehed with much
interest simila diticuities interest similar ditticulties clevery overcome ome four or
five tears lack, on the buitding of $S$ 隹 five Tears lack, on the buitdiog of St. Paul's Chureb
St. Leonard's.on-Sea, immediately over the Tunnel, - this in rera, shilly, bad soil. The deptb from the bottom of the foundations to the crown of the tunnei must be abont tho simme as in the ease you referrod to. The

oxperienced, and no settleusent has oceurred.
$\mathbf{K}$.

AN ARCHITECT'S CHARGES

 tect residing at Briphton, atsanst a surceon practising and on un account stated. The plaintifif, Mr. Jobp Hill,
 refercnce to what he meant to do with it. Io Scoterember,
1880 , be wrote to him a letter (prodnced), in which be oficred to prepare plans and speciffentioes, take out quantities, and generally to superintend the work, for a comby the profesaion being 5 per cent. Dr. Money subsequently brought him a sketch for a single bouso, on which he prcpared plans and specifications, which wero
approved. The Doctor then brouglat bim frosh
sletches of buildings to occupy the land, from which plans were prepared, which wero als approred
of. The Doctor afterwards said he would have threo
oren houses erected in caronse, and for these witness got out plans, specifications, nad quantities, snd andvertised for
tenders. The lowest tender was $2 . \sigma 82$ ne inhich defendant thought was too mueh, and then instructe defendant thought was too mueh, and then instructed the heipht of tho rooms to be reduced, and the charreter, of the buildings to he altered genorally, so as to diminizh
the cost of ercetion. This necesritated an entirely news the cost of erection. This necersitated an entirely news were prepared, a Mr. Kemp, a builder, of Brighton, toong tho contract at $3,8.4 \mathrm{id}$., to he paid hy acceptances. He had to employ Druke's Concrete Company, of London, to
do the walls ; but as they required ea 3 h , ifessrs. Drake arranged direct with Dr. Moquired and tracinga were supplied to them, for which ha charged 1ut. los. Crosso examined by Mr. Duy: Had been in business nearly a ncyer gate him nyy idea that he was only propared to ingly. Nesars that the plins must he prepared accordingly. Messrs. Drake commenced their portion of the in the naccount D. Naning been adiaited or mitho minor itcms
in the learned by the learned gentlemen enpargited in or withdramn charges in dispute were resolved into two, viz., 102.10 s .
for the traciags gupplied to Messrs. Drale 35t. 15 s , heing at tho rate of 1 per cent., or tro-thirds of
the commission originaly acreed upon, thrce houses whicb plaus had been aboundoned hy defens.
ant. Mr. Heuson ant, Mr. Heuson, an architeot, with olfices in Brighton,
said ho had heard the evidence of the plaintiff. charge of $1 \frac{1}{3}$ peardent. Was very of the plaintiff. Wis the profession was, that if plans were prepared by an architect and not approved of, they wero not charged for,
if be carried out the work on subatituted plans : but client brought aketehes from wbich an architcet prepared plans, he wuld certainly charge for them. The charge of teu guineas for the tracings supplied to ite ssrs. Drake
was rather high; half that sumu pould hase heen Mr. Day, in a caustic speceh, ridiculed the idea augh Mr. Day, in a caustic specch, ridiculed the idea of the to do what he liked with a piece of grouad, witbout
saying how much ho intended to spend; or of an architect, who understood his business, preparing plans
and being quita ignorant of the limit of cost was to go to. He slso eondemned in strong termg
the conduct of tho pluintiff iu serving Dr. Money with a dehtor's summons, knowing full well that a gentlema any compromise rather than he made a bankrupt, As regarded the tracings mppplied to Drake and Co., the
fact was they never required them, and tho plaintif could Miro no date or evidence that he had ever stupplied them. Mrarrs. Drake simply continued the work ou the $\begin{aligned} & \text { mame }\end{aligned}$ drawings rith which they commenced, looking afteru ardg
however, to $D$. Monef for pamme however, to Dr. Money for payment instead of to Kimp
The different plans were prepured by pinintiff suggestion, he being. as was perhaps patural antious ow get bnsinesa, The defendant was ealled, and deposed that the raricus alterations made in the plaus were proposed ay the piaintilf. When the worly was about LwoDrake direet, and there warano necessity for fresh pisans When he was spred, with a debtor summons, he pidid 51 l ,
gave a bill for 1002 , and agreed to leave the halance for pape a bill for $100 L_{\text {, }}$, and agreed to leave the halance for
reference. The lcarned judge said that this water those cases which ought never to be brought hefore juries for sottlement. The jury, after a shori consulsation, returned a verdiet for the plaintiff for 25l. 15s, but
disadowed the itcm of 10. 10s. Harou Pigott percme disalloned the itcm of 106 . 10s. Harou Pigott percma-
torily declined to cortify for oosts.

St. Alban's Abbey.-The restoration o ${ }^{\text {o }} \mathrm{st}$ Alban's Abhey, hefore long, it is said, will hare to he suspended, as the grcater pirt of tho expended any collected repair, has heen expended, and subscriptions ec me in u.ore sowly
than was hoped by its promoters.

## THE TUNNELS UNDER THE

 MERSEY."$S_{\text {mb, }}$-In your issne of the 12 th a correspondent suggests it would be an improvement if the tunnels nuder the Mersey were made inclined in opposite directions, and I suggest in furtberauce of that object, and for its successfnl application, and free from all objections, tbat at a distance of ahont 200 yards from the end of each tunnel at tbe lowest level, there be a reverse gradient to overoomo the difference in levels at each terminos, bctween the arrival and departure
polatforms, and thereby obviating the necessity of steps between tbose platforms.

Srum. Inst. C.E.

## CHURCH-BUILDING NEWS.

Pipe.and-Lyde.-Tbo dilapidated, hat interest. sing old parish charcb of Pipe-and-Lyde has boen undergoing almost total demolition, in pre. paration for a robuilding or restoration, The nave and tower have been entirely razed to the be made availablo in the bnilding which is to he pat up, and in which all the original features pnt up, and in which all the original features
will be reproduced. Tbe corner stone of the new tower has been formally laid hy the bishop new tower has been formaly laid hy the bishop out from plans propared by Mr. Kempson, archi. out from plans prepared by Mr. Kempson, archi. tect, hy skilled work men, under tbe immediate personal supervision and direction of the vicar, lately heen hnilt in the parish at tho cost of Mr. Havergal.
Lindow.-The foundation-stono of St. John's Church, Lindow, has been laid. Tho church, which will be hnilt from tho desigus of Mr. J. W. Beaumont, of Manchester and of Wilmslow, will consist of a nave, 52 ft . long, 30 ft . wide, and ahout 37 ft . bigh to the ridgo inside. The entrance to the nave will be hy a porch at tbe
south-west corner, and in oonnesion with this south-west corner, and in oonnesion with this porch there will he a bell.-turret with wooden belfry, ahout 42 ft . bigb. The chancel will be
18 ft . long by 16 ft . wide, raised two steps above the nave, and on the south side of the cbancel there will be an organ-cbamber and pestry, under which will he a vault for tbe heating apparatus. Tbe nave will be divided by a central passage, ${ }^{4} \mathrm{ft}$. wide, with benches on either side, containing sittings for 224 adults and 22 cbildren. The building will he of the Early English style. The roof of the nave will be and the space hetween the spars plastered. The chancel will bave a boarded roof. The exterior facing will he of Kerridge parpoints, with Aldey stone dressings, and the interior will building will be about 2,000 . Tbe contractor is Mr. Benjamin Haywood, of Alderley Edge.
Walsall. - Tbe building comnnittee interested in the orection of St. Georye's Cburch have have accepted tbe tender of Mr. Adkins, of tbis town, for the erection of the nave and aisles, and the putting in of the complete fonndations, for 5,160\%. For the erection of the entire bnilding, less the tower, there were originally 7,3752 , and the hirbest 90002 . Adeins) being contributions promised is now nearly 4,000 .
Helperthorpo.-St. Peter's, Helperthorpe,
the Yorksbire Wolds, has been opened for divine service. Tho cburcb is one more addition to the numerous list of charches fonnded, rebuilt, or restored at the sole cost of Sir Tatton Sykes, Bart., of wbich two others, Latton and Kirby. Grindalytbe, are in progress, and a new one is to in tbe Early Englisb sty. in tbe Early Englisb style, and elaborately decorated, is from the pencil of Mr. G. W. Street, R.A., and consists of tower (with steople and stair, bearing the effigy of St. Poter), porch, nave, chancel, and vestry, tbe whole of the windows
being filled with painted glass, by Clayton Bell. The editice, which is very prominently situated, is approached by a lytch.grate (at the entrance to a graveyard, not yet conseorated),
and sarmounted hy a Latin cross. Foliated crosses also mark the pahles of the nere and chancel. The nave hoth north and south has two two.ligbt windows, and the chancel on the eonth has tbe same, and on the north one two.
light window. The bright red tiles make the chnrch a conspicuous object in the landscape The interior is of ashlar work of Whitby stone, the open roofs of chancel (pauelled) and nave, with the panelled floor of the belfry, being de.
corated in every part. Tbe charch is warmed hy hot air. Tbe floors are paved with coloured tiles. The builder was Mr. Bootb, of London, but tbo wall surrounding tbe cburcbyard was by Messrs. Simpson \& Malone, of Hull.
Longford, near Coventry. - The foundation stone of a new cburch at Longford, to be called M. Thomas's, has been laid by Mr. H. W. Eaton, N.P. Tbe cburch is to be built from designs snpplied by Mr. Jobn Cotton, of Birmingham, and will bo bnilt by Mr. W. Nelson of Dudley It will comprise nave, with aisle on tbe nortb side; chancel, with organ-cbamber and vestry, and spire at tbe north west ande of the bnilding the lower portion of wis ng orme building, tbe lower portion of whicb will form the porch being of buff-oolonred pressed bricks, obtained being of buff.colonred pressed bricks, obtained
from Nuneaton. Tbe stone dressings are heing executed partly in Attleborough and partly in Box-ground Batb stono. Tbe roof, which will he open, will be covered with brindled.colonred plain tiles, and tbe accommodation will he for 300 persons. The cost of the building will be nearly 3,000 .
brackley.-Tbe parish chnreb bas heen re opened. The chief featnre of the restoration, whicb, so far has only been partial, is the entire re-seating of the cburcb, with open seats of intch pine, in place of the old fashioned pews. In removing the old flooring, it was discovered that dry rot provailed from the porch to the altar, and that fungi had flonrished beneath it to a great extent. Upon the opening of the flooring tbe odour was offensive, and it must bavo heen very unhealt by beforo tbo alteration was made. Tho tower arch, an example of Early Eaglisb work, which bad beon obscured by the double disfigurement of plaster and a west gallery, has been opened up by the re moval of hoth. Tbeadvantago of tbis improve. ment is cnhanced by its revealing the deeply. splayed siugle-light tower window, wbicb has been filled in witb stained glass representing St. Peter, tbe patron saint of the charch. The oak roof of the tower obamber is also shown. Tbe masonry of the arches and pillars bas heon uncovered and scraped. The walls of the churcb, whicb are plastered, bave been cleaned Tbe reredos is the work of Mrs. Thicknesse It is applique work in imitation of marble and encaustio title work. The d -sign was furnisbed oy the arcbitect of the restoration, Mr. C Bather, Sbrewshury. Tbe western window of the south aisle has been filled in with stained glass. The design is Christ hlessing little tween 500 l . and 6002 the restoration is be carried out, under the snperintendence boen Bather, by Mr. William Kawkins, of Brackley. Moseley. - Tbe new church, at Park-hill, Moseley, whicb is being huilt by Mrs. Anderton, 50 in the north 400 persons, -254 in tbe nave 0 ni 30 in the phate, vestry aro a dorid An organ-chamber and chancel The esterion of the suilding of the with red Hampstend for the is faced are worked out of and gray But of gray Otabersley, Box ground the interior aro formed stane. The dressing of gray Onorerey and ont gray Onmberaley, and gray Bromsgrove stone be walls being plastered. All the arches, re spouds, and piers of arcad ${ }^{\text {Doss are }}$ and Corsbam Dowa and gray Ombersley stone. The two prin cipal entranoes are in the tower, which is sitnated on the nortb-west side of the buiding and the west wall of the nave. Tbe parapeto the tower rises to a height of 80 ftu, from he floor of tbe nave, and will be completed without a spire. An octagonal turrot, with circular steps, is provided for access to tbe tower, and it will he finishod with a spiral turret, rising to a heigbt of aboat 100 ft . from the ground level. The roofs will bo tilod. Tbe brilding was commonced last October, and when completed, will cost about $6,000 \mathrm{l}$. Tho architect is Mr. F. Preedy, London; the contractor, Messrs. J. Wilson \& Son, Birmingham and the clert of the works, Mr. C. Noble Sparkbrook.
Cheshunt.-The parish cbarch of St. Mary's, Cbesbnat, which for the last nine montbs bas been nadergoing an extensive procoss of repair, restoration, and enlargement, has heen reoponed The work of restoration has necessarily been of an extensive cbaracter. The galleries hare heen done away with. A modern tloor in tbe lower part of the tower has also heen removed. The west window, which had been hricked op $f$ centaries, is now restored, and the contre ligh
is filled in with atained glass presented by Miss: Hardell. Tbe subject is Jobn tbe Baptist. The other parts of tbe window are filled in with cathedral glass. Two other windows in the north and south sides of the tower are stili bricked np. Tbe tower aud cbancel arches and tbe arcbes and colnmns of the nave, bave been restored. Tbe ancient rood-loft bas beer opened out. Tbe nave and ais'es bavo been re plastered. Tbe nave roof bas been taken of and all the decayed parts replaced with sonnd timber. Tbe roofs, wbich were formerly concealed by a plaster ceiling, are now exposee to view. The old oak rafters were used again but all the tie-beams, ridges, and intermediate are new. Tbe deficiency caused in the uumber of sittings by the removal of the galleries ba been made up by the addition of a new soutl hancel aisle, containing open sittince for pards of 100 persons The uew aisle contain four windows. The cbancel roof, which is en tirely new, has been raised, and a clearstory ba heen added, containing six two.light windowe Tbe east window has heen restored and enlarged A north arcade has heen opeued out in antioipa ho of an extension corresponding with that os he south side of the cbancel. There is a net pulpit, by Hitcb, of London, of carved oak, o. hase of Caen stone. All the other new carvio as heen done by Mr. Ruddock, of Loudon. Th organ has been enlarged and improved b Measrs. Speechly \& Ingram, of London, at cost of ahout 260 l . It now stands at the ens nd of the north aislo of the nave, hitt the pro posed north chancel aisle is designed as its ulti ate resting.place. The works have bee arried out by the contrictor, Mr. Bell, c Saftron Walden. Mr. Thomas Booth was cler the works. Tho total amount expended bout 3,650l. Tbere is a dobt of between 900 and 1,000l. on tbe present contract, whicb: etributed to the great rise in materials an vages, and also to the dilapidated condition o the churcb hefore tho restoration.
Leatherhead. - The parisb church, after havin been olosed for siz weeks, bas been reopene aving undergone some alterations and repain be noper west pallory, wbere the orcan for nerly stood, bas beon done away with, and th rgan itself baving beon rebuilt and eningo oy Walker \& Son, of London, has been placed i new chamber on tbe north side of , chance The old vestry bas heen pullod down and a ne ne built, and a new noth entrance hes boo ade in place of the old porch. The vest arde ipla of tbe old porcb. The vestry balting stone dressings Sereral obber par the ll 1 lig bat nd all tbe old high-backed pews bave give lace to oak seat or tho wom ponatern Goddard \& Son, of Farnham, at a cost of aloo ,300l. Meating apparatus has been supplie Mr. Green, of Epsom. The chancel has hee eseated, and paved with Godwin's tiles. Ther a new reredos erccted, at the cost of th arisbioners, to the memiory of the Rev. E Clapson, M.A., thirty-five years vicar of th hurch. The reredos, which was designed b Ar. A. Blomfield of Cavendish.scquare, aud reoted hy Messrs. Earp, is in alabsster an marble, with mosaic hackground. There is entral fignro of onr Lord between the tw isciples of Emmaus, and on each side ar gares of two angels bearing emblems of th Passion.
Couna - A now chnreh bas been consectrile at Coundon, near Bishop Auckiand. The edifici Is built of stone, obtained from Westerton Quarry in tbe immediate neighbourhond. 'The buildioy is situated on an eminence. Tbe archirect wa Ir. Ewan Christian, of London, and tbe con ractor, Mr. Ralph Sanderson, of Durliam. Th syle of architecture audopted is that of the Ear! Englisb, and the edifice consists of a nave ant nortb aisle, and a chancel, which is apsinal wil vestry, and a largo poroh at tho north-wes ide. Five small lancet windows in the chaves have been filled in with stained glass, hy 32 Wailes, of Newoastio, the subi+cts being th seenes of tbe Passion of onr Lord. The cust ha beon defrayed by Mr. Collingwood L. Wood, addition to bis liberal subscription. The churo will seat 530 persons; 200 of the sittings appri priated, and 330 free. The cast of the ereotio of tbe chureb, which is dedicated to St. Jame: has been upwards of 3,000 t
Cheltenhan.-A vestry meeting has been heh 10 receive a report of a com rnitte日 appointed ? restoration. The oommittee had called in th

Isistance of Mr. Ewan Christian, architect to (1) Ecclesiastical Cowmissioners, wbo had gorted on tbo snbject of the parish oburoh
storation, strongly discountenancing any exten. storation, strongly discountenancing any exten-
jn of the building, but recommending the on the building, bot recommending the pair and restoration of the anciont fabric at a晾 of about $4,200 l$, and tbe erection of a new areb on anotber sito if furtber accommodation 38 required. Tbe oommittee's report was in
sordance with tbat of tbe architect, and recomeuded the accoptance of Mr. Christian's ppecit. tions for the restoration and the erection of a rge ohurch on a site to bo hereafter decided
Tbe report of the committee was approved in its entirety. As the new church is expected oost from $12,000 \mathrm{l}$. to 15,0002 ., the total amount quired to carry out the proposal of the com. ittee will he little less tban $20,000 \mathrm{l}$.
Bere Regis.-Wintorhoarae Kiugston Church is been reopened for divine servioe after a storation. The ontire work has involved the ease," as Iutchias designates the building, is nstructed of flint with stone dressings. It nstructed of fint with stone dressings. It msists of a nave, chancel, western tower, north sle, vestry, and porch, tho work embracing the
ection of the now aisle and vestry, the restoramoction of the masonry of tho old walls, tower, \&e., e building of new buttresses, the clearing away the old roofs, pews, and galleries, and the
ibstitution of plain deal sittings in the nave, ibstitution of plain deal sittings in the nave,
oak in tbo chancel. The removal of the old ows and replacing tbem with couvenient open ats has been effected at a gain of eighty-six
lditional sittings. The roof has been raised 1d the tower repaired, whereby, together with rycture and the addition of the north aisle and estry, St. Nicolas has been rendered more oon nient. Tbe stone used both for the old and 3w works is Ham-hill. The aisle is divided
om tho nave by a stone arcado. The reredos, gether with a painted glass window, tho latter presenting the subject of the Resurrection, is tribute to the memory of the late Mrs. Michel. two-light window has also beon erected by the esent family. The east window of tbe aisle ill also he filled in witb stained glass, to mark position of the Muston aisle, wbich belonged the Rev. N. Bond, the proprietor of that poron of tbe parish. The cbanoel stalls are of
oglish oak, and have carved ends. The chancel ch has moulded caps and bosses. The old alpit and the font hare been retained, but the olls in tbe tower have been rehang, and a new ower roof and floor fixed, resting on stone
orbels. The doors of the clumeh are of oak, in nall panels. Two curions Purheck marble mos, prohably of tho thirteonth centary, on of the tower. Tbey were in the fonnda. ound. Five others can bo traced in the undation of the sonth wall, which is still er two remain in the vestry, were discovered nongat the rubhle in the wall. There also rned up during the progress of the exeavations cnrions holed stone, the use of which is uch disputed by antiquaries. A similar one sssession of Mr. E. J. Weld, of Lulworth Cnatle. r. Gordon Hills expressod an opinion that this one was used for the purpase of receiving oil id wick, ligbted in honour of some saint on sen carriod out, according to plans preparod by r. G. E. Street, R.A., who designed the London aw Courts ; and Messrs. Wellspring \& Son, iilders, Dorchester, were the contractors.
essrs. Olayton \& Bell filled in the east window essrs. Clay glass, aud they will fix similar azing in a window of tbe nave, besides that in 10 aiste. The remainder of the glazing is of
whedral glass with a tinted bordor. Tbe Whedral glass with a tinted bordor. secuted by Mr. B. Grassby, ecclesiastioal
Heighington. - At a public meoting, steps have
sen taken to restoro the parish church of Heigh $30 n$ taken to restoro the parish church of Heigh gton. A committee has boon appointed, and
ans, by Mr. Fiwan Christian, approved of. ho estimated cost was $1,878 l$. but, it was stated lat at least 15 per cont. would require to be te cbairman very much donated its sufficioncy bout $1,400 l$. have been conditionally promised. ne restoration of the tower, at a cost of 1661 . Was thougbt, would have to be postponed. Cigh pews and galleries are to be removed scording to the plan, and a new north aisle rected.

Bugsworth - Tbe chief stone of St. James's The building Burth, Derhyshire, bas been laid. The building occupies a cormmanding site upon the turnpike road, situated near the Midland Railway Station. The cburch stands due east and weat, and comprisos nave, cbancel, organcbamber (on tbo north side of tbe chancel), and vestry on tbe south side. Tbe chancel finishes with a semi-octagonal end. The total lengtb cbancel. Tbe widtb of both nave and cbancel is 24 ft .9 iu . inside, and the heigbt to the ridge of tbe roof, 35 ft . The roof is open inside to the ridge, the principals and purlins being stained aud varnished, while tbe bays between are plastered nnder the spars. Tbe whole is covered with slates of varied tints, with enriched ridge tiles. The roof of tbe chancel is more elaborate than that of the nave. The chancel floor is well elevated above the nave floor, and will be laid with encaustic tiles. All the seats (numbering 190) are to be free. The walls are built of stone the dressings to the doors and windows are of Darler Dale to the doors and windows are of Dariey Dale stone. Tho mindows in tbe nave are coupled lancets, and the west and east with battresses to the chancel have tracery, with bantresses to the sevoral walls. A smail boll-cot crowns the west gable. Tbe entrance the church is by an ornamental woodon porch on the south side of the nave. The whole is estimated to cost about 1,400l. Tho oontract is taken by Mr. Geo. Napier, Manchester, ander the superintendence of the arohitect, Mr. John Lowe, Manchester.
Barnard Castle.-The foundation stone of a new tower to St. Mary's church has been laid. Such was the dilapidated state of tbe towor tbat it was dangerous to cing tbe bells, consequently, for the past three years they havo been only chimed. It was found nocessary to pall down tbe old tower altogetber, and to erect anotber on its the contract for the work heing taken by Mr. Kyle, of Barnard Castlo. The new tower will be similar in design to the old one, and will contain a muniment chamber, baptistry, and belfry. Woodbridge.-It has been resolved to rebeneh the church, and remove as much of the calleries as the increased accommodetion provided on the ground-floor will allow
Brighton.-St. Paul's Cburcb tower is shortly o be completed by the addition of a lantern story, pire, covered with the roof of whioh will be a by an ornamental finial and vane. The present height from the ground is about 80 ft ., and the total beight of the ebarcb, when completed, will be about 150 ft . The architect is Mr. R. Herhert Cupenter, of London, and tho contractors are Messrs. G. Cheesman \& Co., of Brighton. Four Mew bells have arrived from the foundry of a peal of eight bells, independently of the large ono.
St. Che Cormitteo for the restoration of Mr . Fads Church have accepted tbe tender of Mr. Fast, bnilder, Melton Mowhray, for the proving the approaches thereto inch, and imvith the approaches thereto, in acoordance Tho amount of the Sir Gibbert Soott, architect. The amount of the contrant is $967 l$.
Playforl, - Tbrough the liberality of the Marquis of Bristol the chancel of tbis chnroh is about to be rebailt from plans propared by
Mr. R. Makilwaine Phipson, the diocesan arohi. Mr. R. Makilwaine Phipson, the diocesan arohi.
tect. It will be in tbe Early Decoratod style of tect. It will be in tbe Early Docorated style of architecture, with single liglits on the sonth side, and a threo-light east window. There will be a moulded south doorway and onk door, and at the angles of tbe east end hattresses. The roof will
bo of open timber, and of a similar desien to tbe bo of open timber, and of a similar design to tbe present, wbich is much decayed and plastered ovor. It will be covered with tiles. The enst gable will have a stone coping and a cross. The
benching will be carved oak. An organ-chamber and vestry will be built on the north side, also at tbe Marquis's expense. This will communicate with the chancel through a stone arch. The it is to bo hoped that Lord Bristol's gonerosity will induce the parishiouers to put them in good
order.

Tottenham Surveyorship.-Mr. John A Clements, C.E., of Great Queen-street, Westminster, and formerly surveyor of the western mously elected oncineer and anrveyor to the Tottenham Local Board of Ifealth.

## DISSENTING CHURCH-BUILDING NEWS.

Nottingham,-Memorialstones, four in number, bave been laid of a new Wesleyan cbapel, to be erected in Tennyson-street, Burn-street. It will be capable of seating 1,000 persons, good pro. Vision being made for free sittings; ample also secured. The committes bave selected Mr J. Collyer, of Nottingbam, as tbeir architect, and contract for tbe building has beem signed for $4,610 \mathrm{k}$, witb Mr. Henry Viokers, of Nottingham The cntire cost will be npwards of 5,0001 and towards this amont 3,0007 bare bean prow Tbo site of the bailding is at the junction Tennyson-street and Larkdale-street. Tbe style of architecture adopted is Talin. The style walls of tbe onber walls bee bats built of rock faced Bulwell-stone, and the remainder is to be ings. The front is divided into centre and side wings. The central portion contains tbree en. trances, which are approached by a flight of terrace-steps. The sub-story will contain a 25 ft . by 20 ft ; fin. by 35 ft . ; bandroom 13 ft . by 20 ft ; four vestries, eacb 14 ft . by 13 ft ; and rooms for cooking purposes, heat-
ing apparatus, \&c. These rooms are 13 ft . bigh. The internal dimensions of the cbapel are 100 ft . by 59 ft . The ground floor will geat 800 persons. The pews are arranged
in the amphitheatre form, the pnlpit being tbe in the amphitheatre form, the pnlpit being tbe centre of, and being divided by, four aisles, giving good space for ingress and egress. The pews
will have reclining backs, book-boards, and hat. will have reclining backs, book-boards, and hat. rails.
Dedham.-A new Congregational cbapel bas been opened for divine service in the village of Dedham, in the valley of the Stonr. The new building, wbich stands upon the old site, is in red brick; and consists of a ebapel, 60 ft . by $39 \mathrm{ft} .6 \mathrm{ia} . ;$ and a schoolroom, 37 ft . by 19 ft . 6 in., wbich opens iuto the chapel by three withed arcbes, supported on Bath stone columas from carved capitals. The scbool is separated fom the chapel ordinarily by curtains, so as to There is for use when the latter is crowded. access is obtained by a stone staircase in the tower. In tbe rear are a class-room, minister's vestry, \&c., and an organ chamher recessed from the obapel, with a boarded roof to assist sond Tbe chapel is lighted by two-light windows in the side and a rose window in tbe sonth gable. It is benched throughout with open benches, stained and varnished, and the side seats are radiated, so that the entire congregation faces tbe minister. The roof is open to the collar and plastered, allowing a ventilating space above That in the ohrpel is of hammer-heam oon. struction, and the principal beams, which show are stained and rarnisbed; the school roof has arcbed ribs. The bnilding is lighted with gas Tbe chapel stands in the main street of the village, next tbe Grammar-school. The walls are of red brick with points of black brick, tbe tracery of the windows, coping, and otber dressings being of Bath stone; the roofs are covered with blue and green slates alternately withornamental ridges. Tbe front elevation is gabled, and there is one central entrance, and Messers. Sulman \& Rbodes, London; and the Messrs. Sulman \& Rbodes, London; and the contractors were Messrs. Saunders \& Son, of
Dedham. Tbe contract price was 1,588 . 16s.6d., but there were heavy extras, a stroamlot having to bo diverted, and a enlvert and bridge bailt, so bat alogether the cost bas boen ebout 2,1006. In addition, the organ bas been onlarged, et a cost of about 100l,, by Mr. Bullen, of Ipswiob. of the ginga's have raised 200 . for the repair fund nearister's house, and towards the building bxilding y 1,950l. havo been contributed. The has been conducted in it since, bat it has only just reaohed completion.
Tunstall--The memorial stones of a new Wealeyan Chapel bave been laid at Newchapel. The chapel is to be erected in a central position in tbe village, tho gift of Mr. Robert Heath. The dimensions of the chapel internally are 45 ft . by 36 ft ., in addition to which there is to be a vestibule in front, and a vestry witb orcbestra over at the opposite end behind the rostrum. Tbe accommodation is for 820 sittings, a portion of which will be free; but at any future time the accommodation can boincreased by a gallery across the entrance end. The style of the huilding will be of Italian character; the mateotber colours introduced for relief. The rostrum
and orchestra front will be of pitch-pine, and the remaindar of tbe woodwork will be of red deal, stained and varuished. The whole of the chapel will have pews with doors, with sloping backs, book-boards, and hat-rails, except those which are to be free, which will not have doors. Tbe roof will be covered with slates, ornamentally arranged. The windows will be glazed with ground glass with coloured margins.
warming will be by bot air. The cost warming will be by bot air. The cost of the building wil Ford, of Borslem, is the architect; and Messrs. Brindley
builders.
Brunswick.r.-The New Baptist Chapel, in bruilding had long been inadequate to The old of the congregation, and it was decided to pull down the adjacont achool-room and enlarge the chapel. Designs were prepared by Messrs. Serle \& Son, architects, of London, and the contract was taken by Messrs. King \& Godwin, builders, of Gloucester. The cstimated cost of the building is $3,000 \mathrm{l}$, and the work was commenced when scarcely $2,000 \mathrm{~L}$. had been promised. The building is now complete. A portion of the façade of the old building has been utilised, and relief is given to the stonework hy some carving executed by Mr. Henry Frith, of Barton-street. The edifice is 67 ft . in length and 61 ft . wide, being an increase on the dimensions of the old chapel of 6 ft . in length by 22 ft . in wiath. Tbere are galleries on three sides; and the organ is placed in its former position. The
Hillhouse (Huddersficld). -The oorner-stone of the Hillbouse Freo Wesleyan Chapel bas been laid. The site of the chapel abnts upon the old Halifax and Huddersfeld turnpike-road and the road leading from Edgerton to Fartown, and within a fow yards of the small chapel that has been used up to the present timo. The plans have been prepared by Mesers. John Kirk \& Sons, architects, Huddersfield and Dowsbnry, and the works are being carried ont under their superintendence. The style of architecture adopted is Italian. The front will consist of two doorways, with arched beads, sapported by donblo stono pilasters on monlded pedestals, Above these doorways will be a largo tbree-light window, tbo two side-lights haviog moulded square heads, and the centre one a moulded circular head. On each side of this window there will be an asllar pilaster, carrying two circular pediments, the upper one being finished in the centre with a carved and moulded nrn. On each side of these doorways and three light windows there will be four wallstone pilasters from the plinth to the main cornice, with a single-light wiodow between each. The base ment of the chapel will be formed into a Sunday. school, and will consist of three class-rooms assembly-room to hold 350 children, kitchen, coal-place, and heating-apparatus room. This school will be approached by an ontsice entrance
and a staircase from the vestibule of tho chapel. and a staircase from the restibule of tho chapel. right and left hand entrances into the aisles, and will for the present have no gallories. The chapel is calcnlated to seat 300 people on th ground-tloor, and when the galleries are put in 500. The roof of the cbapel will be an open timbered one. There will be a rentilating chamber formed on the top of the collar-beams The chapel and school will be warmed with ho water and lighted with gas. It will be inclosed with boundary walls and palisadee, and will have wo entrancergateways. The total cost of the building, inclnding the laying ont of the grounde will be $3000 \%$. The names of the contractor are as follow:-For the masons' work, Messrs, Rothery and Sykes ; ioiners' work, Thos. Walker plasterers' work, David Tunnacliffo \& Sons; plambers' and glaziers ${ }^{2}$ work, Lidister \& Armit age ; painters' work, J. H. Stuttard; slaters work, William Goodwin \& Sons; ironwork Genrge
Hanley. The corner stone of the new welsh Presbyterian Clapel St, John-street, Honley, intended for the pee of the Woleh residenter the district has been laid by the meror. The difice is sitnated on the west side of St. Tohn dreet The plan is a pallelogram the John treet. The plan is a parallogr, ho insia 10 ft fr 10 ft the rom itlings for persons. The pews are to be made of the best pitch-pine, and constructed apon the most approved modern principle. The tbe tarret at the nortb-east angle, the other at
the sontl-east,-and there will be also commini cation internally with the schoolroom. The palpit is to be a combination of rostrum and pulpit, all made of pitch-pine, with perforated panels, and the communion will be made to panels, The style adopted is the reometrical Gothic. The side elevations, beivg hidden to a great extent by other buildings, are deroid of any ornament, each having fonr windows with pointed leads. Tbe front elevation will be carricd out with best red pressed hrick, and Hollington stone drussings and tracery. The central part of the front will have a large triple winaow, aud another double-light window on one side, botl with ornamental tracery in the head.
