

THE J. PAUL GETTY MUSEUM LIBRARY

AN

## ILLUSTRATED WEEKLY MAGAZINE,

FOR THE
ARCHITECT, ENGINEER, ARCHEOLOGIST, CONSTRUCTOR, SANITARY REFORIIER, AND ART-LOVER.

## CONDUCTED BY

GEORGE. GOD WIN, F.R.S., F.S.A.<br>Late vice-president of the royal institute of british architects;<br>Honorary Member of rarious Societies; Author of "History in Ruins," "Town Swamps and Social Bridges," "A nother Blow for Life," de.

"Every man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kinde of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned."
"Architecture can want no commendation, where there are nohle med, or nohle mindes."-Sir Hbnry Wotton.
"Our Euglish word To Buxid is the Anglo-Saxon Bylsan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applieable to all other things as well as to dwelling-places."- Diversions of Porler.
"Art shows us man as he can hy no other means he made known. Art gives us 'nobler loves and nobler cares,' furmishing objects hy the contemplation of which we are taught and exalted, - and so are ultimately led to seek beauty in its highest form, which is Goodsess."

## VOLUME FOR 1873.

## LON DON:

PUBLISHING OFFICE, No. 1, YORK STREET, COVENT GARDEN, W.C.

## A Partial Retrospect.

LANCING backwards, we find the questions involved in the pro. posed decoration of St. Paul's Cathedral havo given rise to the chief architectnral dis. cussion of the year,a discussion, not yet closed, - which has drawn forth expres. sions of a nature very different from the halanced opinions of calm and competent criticism. Of the Law Courts tho pnblic hear nothing: whether or not the ahsolutely no. cessary alteration in the Strand front bas been made in tho design has yet to be learnt. We shall be giad to find that time has enabled the archi. teet to give calm con. sideration to the design, and effect the required revision.

The qnestion of the increasing uso of iron in hnilding, in this country, referred to in our "Prologue" last ycar, has reeeived valuahle elucidation in our pagos during the courso of 1872; and in our last number wo described some very interesting experiments by Professor Calvert, establishing the view as to the nature of the rust of iron which we have on former occasions snggested to be correct.
The great question of the durability of the coal sppply existing in Great Britain, and the charaeter of the report issued by a Royal Com. mission late in the year 1871, formed subjects to the real master-facts of which we endeavoured at tho commonoment of tho year, as well as on previons occasious, to eall attention. The view which we took, strongly condemnatory as it was of the ridioulonsly optimist character of the roport of the Duke of Argyle and his fellow commissioners, received a confirmation more pointed and definite than tho stern logic of facts often accords to the forecasts of a public writer. The rapid and serions rise in the price of coal, and, a little later, the actual importation of foreign coal into English ports, aro among the chief industrial features of the year which has elapsed; and aro events which absolutely verified the predictions on which we had folt that we had a sound basis for ventaring.
The subject of our great fortifications at Ports.
mouth came into prominence early in the year; the details that we were enahled to give of their construction have more than an ephemeral interest, Later in the year, the question of onr floating hatteries eame into conspicuous notice. The duel between penetration and resistance was, and is, still continued; hut with increasing oddain the favour of the former.

The month of Jannary had not elapsed before the engineering world was amnsed by a revival of one of the projects,-not for an aerial, bnt,-for a suhmarine railway. A Freneh gentleman claimed our attention to his plan for multiplying tho perils of our Channel navigation, on the entirely new ground of having been sererely bitten by conger eels. The fact, to which wo were the first to call attention, of the perma. nently water-logged eharacter of the chalk below a certain level, received full illustration, in our pages and elsowhere, from the experience of ongineers engaged in mining and drainage works in the chalk formation.
The construction of the Rogal Albert Hall was deseribed by its architect, Major-general Scott, C.B., at a meeting of the Institute, during the same montl. On the same day, at a meet ing of the Social Science Association, the gene. ral puhlic excitement arising from the narrow escape of the Prince of Wales from falling a rictim to typboid fever was referred to, as afford. ing room for hope that an efficient sanitary measure might he passed. At tho time, the temper of the conntry was altogether favourable for such a proceeding. Unanimous conviction was expressed that to romit this importont question to the discrotion of the local guardians of the expenditnre of the rates, would be simply to burke it. The report of the Sanitary Com. missioners was discussed, and the importance of determining water-shed areas, scientifically laid down, and of obtaining, at a proper rate of remureration, competent inspootion, both medical and engineering, was pointed ont as forming a necessary part of any sound and practical legislation on the subject. Lator in the year we had occasion to refor repoatedly to this im. portant matter; first giving the programme of he Government; then tracing the progress of denudation of most of its useful provisions whicb attended the passage of the Bill through the Honse of Commons; then showing what use, by a minister who was in carnest on the subjeet, might he made of the stunted and crippled mea. sure which finally became law; ther calling attention to that persistent wasto of time, cenial of counsel to those who songht it, and determi. nation to leave the medical local inspectors at the mercy of the Board of Guardians, which have constituted the polioy of the local Government Board; and finally having to clurowicle the angry and despairing ecbo with which the old supporters of sanitary reforin throughout the whole country have responded to, and con-
frmed, our remarls. While referring to this subject, wo may mention those analyses of sewago, on a broad principlo, which have ap. peared exolusively in our columns, and which cannot he neglected with impunity in any future attempts to deal with this complicated question.
A qnestion of so much importance as to attain a national character,-namely, tho regulation of mines,-was dealt with by the Government in a more serious and practieal spirit than characterised their experiments on tho vital subject of the public health. The nsual death.tax on coals has prosed, $u_{p}$ to the pery close of 1872 , the neces. sity for stringent measures to protect the coal. miners from the resnlt of tbeir own and their fellow workmez's criminal reeklessncss. While some of the provisions of tho now law hardly rise to the necessity of the case, much hope is entertained by the different classes most closely interested as to the beneficent resnlts that may be expected from the working of the measure during the ensning ycar. In the most fatal explosion that occurred in 1872 it was found, as usual, that the use of matches, in breach of the laws of the mine, was the cause.
South Kensington added to the attractions of the Museum, with the opening of the year, that of the display of the collcetion of bronzes, faïence, armas, stuffed quadrupeds and birds, ewelry, objects of Japanese axt, and drawings, made by H.R.H. the Duke of Edinhurgh in his cruise round the world in the Galatea. The interest excited was very great,-the rnsb of sight.seers on one occasion overturning one of the models of a fountain that stood in the line of entrance. The exhibition was a great success.
Archroology ancl antique art formed the sub ject of $a$ series of articles in our columns, com. mencing in the month of Fcbrnary. The rude stone monuments of all courtries, described in an illustrated work by Mr. Fergusson, raised no small amount of discussion in antiquarian circles; but the atterapt to bring down to late historic times tho dates of some of tho most famous relics of the megalithie age did not carry with it any amount of conviction. The restoration, in the Lonvre, of the beautiful statue called the Vcrus of Milo led to a very interesting ciscovery of the method in which the figure had heen erroneously repaired by the curators of that mnseum in the first instance.
The restoration of the Chapter bouse of Westroinster claimed the congratnlation of all lovers of architectural beauty, and has proved a per manent addition to those of our noble historic monuments which have latels been rodeemed from neglect and decay. Wo observe that the restoration of the screen and tracery of the socth cloister, which had sunk iuto almost entire dilapi dation, is now quictly proceeding. The chapter. houso and cloisters are now permanently acces. sihle from the prior's entrance into the Abbey,
and the commencement of a local museum has been nade in the former building.

The site of one of the most famous temples of an older worship than that which hallowed the foundation of the Confessor was happity determined by the jndicious persererance of Mr. J. T. Wood. Some cavil was raised against tho first reports of $\mathrm{Mr}_{\text {r }}$. Wood, who revenged himself by sending to the British Museum that noble portion of one of the great columns of the temple of which wo gare on engraving. Later in the year a collection of antique ohjects of great interest from Cyprus, was hrought to the country. A part was purchased for the British Museum ; but the great bulk was secured for America. The very curious collection of antique astronomical, auimal, and phallic worship, made astronomical, auimal, and phallic worship, made by Mr. Stapira, was treated with hostile suspicion by the experts of the British Musemm, and declared to consist of forgeries, nntil the Prussian chaplain at Jorusalem verified the discoveries in situ. Much of this anciont terro. cotta has been burned to make cement. The inability of our scholars to read the iuscriptions (if inscrip. tions they are) in Ploedician letters on somo of this pottery is no excuse for neglect of such a in lcetures at Osford, callod attention to Parker, in lectures at Osford, called attention to tho discoveries made in Rome, which have the signal intercst of proving that the history of Regal
Rome is not the myth to which Nichur and his followers harc only to which Nicbuhr and his followers hasc only songht to reduce it. The history of architecture will owe mueh to these crcavations. While our notice is preparing for the press, we hear of the discorery by the workmaen employed by the Italian Government of the base of the equestrian statue of Domitian, which decides the long.
of the Forma.
The risit of
The risit of the Queen to the City, on the 27th Fehruary, to return thanks in the metropolitan cathedral for the recovery of the Prizce of Walce, was a stirring event, the memory of which is, however, moro grateful to the patriotic than to the professional feelings of those connected with architecture. While the warn feolings of per.
sonal loyalty hurst forth with an unexpected sonalimity from the people, the fact that we have uuanizuity from the people, the fact that we have
no publio huilding fit for the accommodation of the publio huiding fit for the accommodation of monial, without the aid of the carpenter for the monal, without the aid of the carpenter for the
time, cannot be thought creditable to the metropolis. Nearly a quarter of a million of passengers were, on that day, conveyed by the Metropolitan Railway and its effluents
Tho uneasy relations between different classes of the people, which recent legislation has done so much to aggravate, if not to originate, assumed, in the montli of Aptil, proportions in the agrienltural districts which commonded serious attentaugible taugible movement affecting our supply of coal. Our the cntion sras thus necessarily again directed on under our ereg by the agriculture; and to the enormous wastearu to agriculture; and to the enormons wasto attendutilising our ample anmal supply of me of and of irrigating as well as draing of rain-water, an a comprehensice plan uraming the country practicable to expend a sum of wore then practicable to expend a sum of more than
300,000 . per diem (a hundred millions per annumi), on lobour aplilied to the soil, with a return of 300 jer cent., is one of those deductions from plain statistics which cannot be too disenough and to spare for both atteution. There is enough and to spare for both farmer and labourer -something that might at once augment the hardest forms of porerty far to extinguish the hardeat outburst poverty.
bage, in Leicestershire, which epidemio at Bur. bage, in Leicestershire, which was traced with absolute distinetness to poison from neglected sewage, falled to stimulate the Admanistration Parliament which was to the Binl then before parlianacat whel was expected by those who
werniliar with the activity of discase than with that of sanitary reformers in ministerial chairs. sterial chairs.
title of the Intermationsl tou which bore the was opencd by a brillional Exhibition of 1872 Was opencd by a brilliant eveuing party, held at
the nominal incitation of H.F.H. the Duke of Edinburgh, ingitation of H.T.H. the Doke of Edinburgh, as locum tenens for the Prince of Ween precoded 27 th of April. The event had assumed a great degree of acrimony between the promoters of the Exbibition and the tradesmen of London, who objected to the competition
against their highly taxed and rated shops. The result was evident in the falling of of the display, as compared with those of former years; the chief attendances of the year having been that of the country risitors to Town after the close of the proper London senson. Our opinion as to the unadvisahility of the attempt to make an exceptional into a permanent exhibition, was The discorery events of the year.
The discovery of the remains of the original shrine of the proto-martyr of England, St. Alban, walled up bchind certain arches of tho abbey, with the gradual restoration of this ceclesiastical rehic, formed one of the most interesting architectural events of the year. We gavo cuts of some of the details of that charming fourteenth-century work. Amid the richly-foliated canopy-work the founder of the chureh,--prohably Offa himself,-is reprosented seatcd, with the model of the huilding in his hand. At the west end the martyrdom of Alban is figured; and at the east end is a group that may exercise the ingenuity of the observer to crowned henefactors and benefactresses, hallow Architecture the tracery.
Architecture was illastrated by a collection, probably of the highest average merit that has yet been seen in the present quarters of the Royal Academy in the past yoar. The interest of the general collection we found to fall belory The discussion brevious years.
The discussion between the claims of Classical and stedinval taste, as applied to the decoration Mr. Brare Cathedral, led to the nomination of vote of nine memhers of the committee acains eight, one being absent. No result from the appointment has as yct reachod the public. must be anxious that the right steps should he
Tho legislation of 1871 as to education, has Stepuey the exhibition of designs for schools at Stepuey, Limehonse, Whitechapcl, Bromley, Batlersearoad, Iower Hamets, Hatcham, and other places, as to which the eourtesy aswally shown Board. Wo chool Board. Wo have endeavoured, and aro endea. Fouring, to sapply the information which th
Board appeared to desire should be withheld.

The opening of tho Branch Museum in Bethna een is one or the features of 1872 , Which wa attended with the most gratifying results. The nou-architechral character of the building itsolf, wita the exception of the front, and its imperfect illamination, were forgoticn in the delight expe. rienced by the visitors in examining the margnificent collcction of pantings displayed to their riew by the patriotic munificenco of Sir Richard this new mnsenm, which has continued through out tho year, has been most encouraging. Th order of the attendances, and the evident gra-
tification cxpecienced, have formed instractive corments on those sensational articles in certain papers which excited so much indigna. tion among the intellectuals of n part of the metropols who were described, as to habits and manners, as if they had been 80 many newly discovered savages. Notwithstanding tho opeaing of this new centre of attractiou, the attond the year, and a divalend the year, and a dividend twas declared on the
original shares. The fourtl palace of pleasure, hat in Alevandra Park, has atill remainedclosed A fresh addition was mado to the number of onturos that have formed the special distinction of this property, by the appointmont of a committee, for the object of purchasing, with imaginary funds, a sabstautial estate. Meantime the proprietors have all but completed the railway promised opening in the coming spring, when he gracions presence of the Royal Iady whoso namo illustrates the park is hoped for by the By the
By the middle of the summer the prices of coal, iron, and labour had attained so mnprecodented an inflation as seriously to disturh many arrangements and relations of husiness. We had, from professional and economic reasons, pointed out, carly in the year, that the price of
coal must he expected to augiment. Great uneasiness becamo manifest in the relations of the employed and the employers in various occu. pations, mostly among the huilders; and on the
Continent, as well as at home. While in some instances there were positive hardships to remove, the nnderlying cause of dispute in most cases was the endeatour, on the part of the
workmen, to substitute an artificial minimum of
pay and maximnm of work, determined by trade organisation, for the natural effect of supply and demand. In doing this they counted, first on the inability of their employers to resist their follow from then on the pressaro that would The daily the ineouvenience of the pubic. subject untess besitated to spear out on this became probabin the month of November, it to serious pillage, in danger, and perbaps to organised of the on conscquence of the unproroked strike first time, thokers. On this occasion, for the the fact tha public seemea to become alivetual merits of ary, whatever might he the actiato outcome of any strike, the cost must ultimately come out of their own pockets; and not only so, hut that it might prove to be cost impossible to estimate in money alone. The Bench, at length, came to the support of lay and order, by inflicting imprisonment with hard labour on the defaulting workmen, who forgot that there were two sides, as woll as two parties, to every bargain. On the whole, this latest instance of a strike read a salutary lesson to us all.
The important subject of railway amalgamatwo Honses of Hate which a committee of the in the session, was peddled with in the course of tho summer by a report, characterised by the usual want of grasp and oxheustive knowledge that naturaliy occurs when the worls of a single ominent man is committed to the cxertions of a board, committee, or similar irresponsible hody. TVe followed our analysis of the report by an investigation of the probahlo effect of the indus trial movement on the value of railway property, and by an account of what has actually been done in the important matter of small-gange railways, of tho fature development of which wo entertain high expectations.
The dead season of 1872 was unusnally bare of topics of great interest. The happy escape of our noble cathedral at Canterbury, from more than partinl damage by fire, gave a fresh lessou as to tho importance of maintaining not only a in all public buildings. Several of the ancestral glories of England hase suffered the ancestral from the destructive element in the course of the year. 耳et cach new fire scems to add lesson which is mobeeded from the very fact of frequent repetition. The fury attained within
the year, by the ravages of fire in the Cnited the year, by the ravage
States is unparalleled.
Some fresh efforts are being made by the Pales tino Exploration Fund. This society has chauged its plan of opcration, and connined its present fiforts to the sursey of the floly Land. Lient Conder, who was appointed to tho command of the expedition in July, seut home a thousand miles of map iu November. It is much to bo desired that the delicate hill sketching of so monntainous a country as Pafestine should be properly engraved by the fund, and not issued ander the disfiguring smudge of any of the cheaper procosses of reproduction. Although no funds have been placed at the disposal of licat. Con. der for archwological researches, the investiga. tions in this direction have not been prithout cesults. His discoveries comprise (1) part of the original scarped defence of the city of Jebus, to the south of the present wall of Sion; (2) the rypt of one the conclaves in the Court of the Temple, described in the Talinud, and by Maimonides; (3) a very ancient tomb, outside the wall of Agrippa, containing hones so old 0.5 o have become partially fossilised; (i) a tomb near Siloam, with inscribed characters, arranged in vertical lines; (5) a Roman altar, 4 ft . 4 in . high, standing in situ, near tho ruins of a large colonnaded huilding; a sarcophagus and the capital of a Corinthian column lying near. This is near Um-el-Fahm, in the uorth of Palestinc; (6) a Roman aqueduct, near Acre, not laid down in uny map. Money should be provided to enahle this oficer to parsue discoveries which are so promising; although arrived at only as reidental to the main duty of the mapping of the country. 1872 has witnessed much advance our knowledge of ancient Ephesus, Rome, and erasalem. An American expedition sailed, at tho close of the year, to carry on the survey of Syria to the east of the Jordan.
The opening of tho New Library and Museum of the Corporation of Lrondon, on the 5th of Norember, was an erent honourable to that ancient body, and to the energetic chairman of the committee, Dr. Sedgewick Sannders, as well as to Mr. Jones, the City architect. The display
on that occasion of some four 2er cent. of the

## MEMORIALS OF LIVERPOOL.

If Chailes II. bad deoided to land at Liverpool on his restoration, the chances are that not Majesty's vessel, would bave known where he was going; so small, and comparatively nnimportant was this great port in the Merry Monareln's time. It was so small, and comparatively unimportant in the days of Queen Elizabeth, that when the Duko of Norfolk hoped to rescue Mary, Queen of Scots, from her uncousinly keeping, he arranged tbat tho ship the iwas intended to carry the beautiful captive away, sbould lie carry the beautiful captive away, sbould lie who represented the town in Parliament then, who represented the town in Parliament then,
petitioned Qucen Elizabeth not to allow her petitioned Qucen Elizabeth not to allow her
subjects to be utterly castarray, as he conceived subjects to be utterly cast anray, as he conceived
they were, owing to the decay of the town, but to relicve them " "like a mother." " Liverpool is your own town," bo wroto in the supplication which he put into "the Queen's hand in the Par. liament House. "Your Majesty hath is castle and two chantries clear; tho fec-farms of the town, the ferry-boat, two windmills, the custom of the ducly, the new custom of the tonnage and poundage, which was never paid in Liverpool Lefore your time; and the commodity thereof is
your Majesty's. For your own sake, saffer us not utterly to be cast away in your grace's time, but reliere us like a mothcr." But, though in this lowly condition in Elizabethan days, Liverpool had given some promise of its ultimate prosperity at an earlier period in its history. In much thither, as to a rood Haven " and in the fourteenth centurythero were 168 burgages in the lown, whercas, according to the census of 1565 the number of inhabitcd housee was 138.
The story of the rise and progress of Liverpool from this small and fluctuating beginning, is now told to the world by a good authority, Mr. J. A. Pictou, in two suhstantial volumes.* He has looked well about him, and mado bis own ohser vations for information coucerning the busy por of to-day, and he has examined ancient sounces of particulare relating to the tow u in times past,
including the corporation records, which are including the corporation records, which are
completo fcom the year 1551 . Ono of the volumes tells the history and the other speaks of

the topography. Both are pleasantly written
and likely to interest more thas local readers; and likely to interest more than local readers; for those who have not scen the peopled streets,
and recognised their dasb of American character, and recogmised theirdasb of Americauncharacter,
or looked upon the wide Mersey quick witb English and American shipping, have yet hcard English and American shipping, have yet heard
of Liverpoos men whose names have left an after.glow that sheds an interest over tho scene of their labours. "The man of letters," wrote Washington Irving, in one of his amiable an appreciative sketches,-" the man of letters who speaks of Liverpool, apeaks of it as the residence of Roscoe. The intelligent traveller who visits it inquires where Roscoe is to be seen. He is he literary landmark of the place, indicating its c.istence to the distant scholar. He is, like Pompey's column of Alexandria, towering alone in classic dignity." The more modern man of letters will also call to mind Harriet and James Martineau and Felicia Hemans. In the artworld Liverpool must always be associated witb the memory of Gibson, the sculptor, and Lonsdale Elmes, the architect ; for tboughi it was not the birthplace of either, it was the starting-place of the first, and contains tbc masterpiece of the of this li. Picton adds to onr list of ass cencrally of this kind. Aroong other facts not gencrally that Lord Francis Bacon represented Liverpool in Parliament at the commencement of bis great and useful carcer. Later, in 1670 , Sir William Temple was a candidate for the seat. The succossivo mayors and members of Parliament furnisb more figures that are followed with pleasure through their respective lives.
Ralph Sekerton was both mayor and member We refer to him again to ontline a procceding in which lie took part tbat was of considerable in fluence on the fortunes of Liverpool. On Sunday Nor. 9, 1561, Robert Corbett, then mayor, callea the wholo town together, to take counsol con cerning the advisability of making a new haven and turving the water out of the old pool inte it; and before the meeting separated he put down a "pistole of gold" towards the expensen ontributcrtaking; then Nr. Sekerston mation followed his example, when there was tho sum of 13s. 9d. current collected. The corporation record contiunes, - On tho Monday morning then nest, Mr. Mayor, and of every house in the and there begau and enterprised digging, ditch ing, and busily labouring upon the foundation of the new haven; and so the Tuesday, of every honse in the Castle-street wras a labourer sent to the samo work. Wednesday next then after the said new laven, a lahourer gratis. Thursday then next after the Juggler-strcet; with the More-strcet, Mylne-street, Chapell-street, every house sending a labourer, and this order continued until St. Nicbolas-day then next after gratis." Thens with 13s. 90. did these stout hearts commence their croat task. Mr. Selserton, who was mayor in 1550 , and again in 1560 before be was chosen as the Parliamentary re presentative, was accustomed to say in all troublous times, - "Save me and mine, and the good town of Liverpool and theirs, and then to thi nobles kill wbom they please," and up to this mark be continued to act all the days of his life.
Ife and his and "the good town of Lirerpool and theirg" were indeed identical at most times and never less than in 1574, when war with Spain was expected, for, with fire othere, he undertook the expense of fortifying the town for defence. We feel sorry, whex all mention of him ceases in the records, that Mr. Picton is no able to add that we may see his monument rad recumbent effigy, with ruffs, counhlet, trubk hose and rapier, in the old parish church. His contemporary, Robert Corbett, who put down tho the expenses of the new haven, was one of the fivo who oinced him in the dofence of the town and tbe richest mercbant and sbipowner of his time.
The family of Mores, or Moores, who built a manor-house, in the thirteenth century, known a Bank Hall, and occupied leading positions for 500 years, were also bencfactors to the tow Richard Blome in his "Magoa Britannia," pub. lisbed in 1673 , speaks of their influence upon its prosperity. Ho says it was at their charge and industry that it was beautificd with many goorly divers streets tbat hore their name, which had so enlarged the town that the church was no longer large enongh to hold the inhabitants.
that Lyrpoole, with its one church and divers streets, would be unknown to most of the sailors who brought King Charles to "his own." - But a more prominent. figure than either of the Hoores a ppeared upon the scene in the reign of Queen Anne. This was Thomas Johnson, afterwards Sir Thomas Johnson, who, bke Sekerton, was both mayor and member. In his day the population of the town was about 10,000 , and there was the grcat excitement consequent upon the Revolution and Hanoverian snccession. Jobnson was a stout supporter of Queen Anue, in opposition to the claims of the Pretender, a he was subsequently of ber Hanoverian suc eessor ; and was knighted by her on the occasio of presenting a loyal address from his constituents, in 1708, when an invasion was threat ened by her hrother. Mr. Picton sums up tbat he filled a prominent place in the town's affairs for more than thirty years, and scrved as member in seven Parliaments. Under his auspices Liver pool was created a distinct parish from Walton, of which it bad hitberto been a district, two new churches were built in it, the first dock was made, and many distant aciventures wero nuder taken in the way of trade by his contemporary morchnnts, tbat resulted in new sourcos of wealth for tbe town. Johnson engaged largely in tho tolnceo trado with Virginia, then a novelty, sinco a great succoss. But no monument cxists to his memory no street is called after his name, save on opening leading from Dale-strect to White chanel, which was formerly lined with bnildings by him, and honcocalled Sir Tbomas's.building as atal mater of ownship, and but for as eniog literary trihute to his memory he occasi be formotten as his distant wravo on the banks of the Rappabannock River Virginia.
The Liverpool men, liko many others, appear to have resented any proposal of improvement that of their wealth mborked in sipping it is much of their weakin embarke in shipping it is, exception to this rule in favour of the propoexception to this rule in favour of theprop But when, in the year 1670, a Mr. Reading applicd for a patent to empower him to erect
liohthouses and lovy a toll for their maintenance lighthouses and levy a toll for their maintenanon, they opposed him, beaded by Thomar Johnson,
and succeeded in preventing him from czecnting his scheme. They wrote to their repres Sir Gilbert Ireland, and insisted that he should statc their case to the committee for grievances when it met to consider Reading s patent: "In egard those lighthouses will be no benefit to our mariners, but a hart, and expose tbem to moro dancer, if trust to them, and also to be a very great and unnecessary burden and charge to them." But what one generation dreaded avother courted; and in 1762 tho merchants promoted "an Act which procured them the present lighthouses on the Cheshire coast.
But there were improvemeuts to come that Sir Thomas Johnson might, perhaps, also bavo opposed, notwithstanding to real and bearty bencfit the town,-paring, gas, and steam locobeneion notion. The frst quar nearly passed away centors had, however, nearly passed away betore liverpool was properly paved, Mauy were paved with houlders as late as 1818. But were paved with hou drressing his constituents, Sir Francis Burdett dining with the Reformers, and Thomas Campbell delivering a course of lectures at tho Royal Institution, the authorities bestirred themselves, and paring, lighting, and postal communication wers perfected. in the following year, 1819, the first steamer tbat
crossed tbe Atlantic arrived in Liverpool.
Within tbo last half-century Liverpool has seen more cbauges than in any other period Neither Robert Corbett nor Ralph Sekerton, in their most sangniue moments, could bave hoped that their 13s.9. would tum out to be so splondidly iuvested. The number of vessels belonging to their port was twelve; and when they were all manned, they could count but seventy-fire souls on board them all. Tho ncome of the corporation was under 21. Whe the Mersemas Jobuson first loont fur vessel that belonged to the port. In 1784, altbough there were between 3,000 and 4,000 vessels in the river, the number belonging to tho port wa only 44. In those days Erskine, in one of his impassioned speechos, likencd it to anothe Venice, overflowing with riches. To what would he compare it now that upwards of 20,000 vessel enter the port annually, and the docks extend in
a continuous line of sea-wall for six miles, with a water area of $255 \frac{1}{3}$ aeres, giving a quay margin
$18 \frac{1}{3}$ miles in extent on the Liverpool side, and $18 \frac{1}{3}$ miles in extent on the Liverpool side, and
of $16 \overline{\mathrm{~b}}$ aeres on the Birkenhend side? "Tho im. provements and changes in the Liverpool strects and buiddings hare been so great, and the exten. sion of the suburbs so enormons," says Mr. Picton, "that the very aspeet of the towz and peigh, that the very aspect of the town and Which grow up in every locality, and impart a
flavour and raeiness to its associations, are in flavour and raeiness to its associations, are in
danger of being forgotten." If any one who had left Liverpool as a boy returned to it a man, in 1870, he would have found forests of masts Fbero he left a quict shore, and lahyrinths of densely.erowded streets where he left fields from which he may havo watched tho sun set far array in the sea.
It is said Liverpool has always hoen loyal, and Liverpool has always lored a lord. The mayors wo have seen ; but thourh the eonsisteney, as less, benefited from it, too, it has involved a prieo. "Trustio and well.heloved, wee greet
fou well," wrote Charles I. to John Walker, "maior of Liverpoole," encouraging his loyalty, but in this instance the Liverpool people trans. ferred their allegiance to Cromiwell, aud suffered for it nuder Prinee Rupert. They came right again, however, aftee the Restoration, and of prinees and of men. The eorporation has always been ready with soldiers and gailors for the national service, in all emergeneies. 1715 there was a battalion raised. In 1778 a regiment was raised and equipped in the town, and called after the battalion, "the Liverpool
Blues." There wero 1100 Lis Blues.") There wero 1,100 men in it, who were ordered out for aetive serviee, and redueed to eighty.four individnals before they returned and laid down their colours in the Exchange. In
1779 the corporation gave a bonnty of ten guineas 1759 the corporation gave a bonnty of ten guineas to overy able seaman, and five guineas to every
ordinary seaman, who entered the King's serviee. ordinary seaman, who entered the Kinds serrice.
In 1795 the authorities were assessed to furnish 1,711 men for the navy, whieh they did, at a cost of 41,2062 ., immediately, the mayor heading a proeession, with drums beating and colours llying, to stinulate the enlistment.
It would have been well if Mr. Picton had furnished his work with a map. Unless resident in a plaec, it is diffieult to keep more than the lines of leading streets in remembrance; henee, without a map, we have to hurry after the anthor in his perambulations without knowing exactly whieh way we are going. When wo eome to a public huilding wo get hold of a elue, of course, bnt only to lose it as we pass on again,
Wo have described Sir William Brown Wo have described Sir William Brown's great
pift to the town, so that we need not refer to it further. We shall, perhaps, be doing as much justice to Mr. Picton's lahours if we show our readers specimens of lisis information with which they may not be so well acquainted. Speaking of Gibson, for instanee, Mr.
Picton, who has travelled considerably, re. lates that he called upon him at Rome, and was received hy him in hed, as ho was indis. posed, and conversed with him for an hour and a lalel. "Conversation, indeed, it could hardly be called, for Gibon was almost as great a monolognist as Coleridge. His talk was delight.
ful, poured out from the full stores of a richly. ful, poured out from the full stores of a richly.
eudowed imacination, and rendered racy by hi eudirwly imagination, and rendered racy by his sach as 'Yes, sure,' which he had hrought from the Principality. Ho talked about Greek art in all its phases; discoursed on tinted statues, on
which he was enthusiastic ; entered into remi. niscences of old Liverpool friends; told anecdotes of the Queen and Royal family, and of his interconrso with them, to which he was always proud to allude. It was an interview to be
remembered and treasured up." Of his fellow student, William Spence, we are also told severa] particulars which hear npon the important query as to whether art is a better pay-mistress when treated in a manufacturing sense than when follotred as a professiou. Of theso trolads who Gihson becamo an artist, and Spence remained a.manufacturer. Gibson's fame and skill hrought him fortune. Spence's untiring industry enahled him to bring np a large family, and send a son to Rome; hut on bis decease his estahlishment was broken up, the premises used for other purposes, and every, sign of his occupation
obliterated. The yonnger Spence was received kindly by Gibson, but he died of pulmonary consumption at too early an age to have accom. plished much work. His widow presented casts
of his ehief pieces to his uative town, and thns ended the deferred hopes and aspirations that swelled the heart of one of Messrs. Francey's most able assistants.
"It is a remarkable fact," observes Mr. Mieton, with manch zatisfaction, 'that of the four great Parliarnentary orators of recent times-Lord
Derby and Messra. Disraeli Bright and Messrs. Disraeli, Gtadstone, and two of these to Liverpool, or its elose vicinity ", And then he stops before a house that is only a few doors bcyond Lceee.street, in Hardman. strect, numhered 62. It is a large house whieh,
when first built, had a when first built, had a wing on either side of it, Whereof one has sinco becn turned into a separate dwelling; but be bids us look at it, for it is the Gladstoue. Horse after honse he points out as the residences of the rich old West. India mer. elants, who deait in sugar, molasses, rum, and slaves. These were chiefly sodate, portly, business offiees mansions, that has rincer chant down to the latter end of the last century had his eounting-houso under his own roof, at. tended "Chango" solemnly every day, and exeented his busiuess slowly, methodieally, and proftably, without a thought of the horvors of mamientl trade that inereased his wealth so with great convivinlity, be evidenee, loved his neighbours as himself.
As onr author approaehes modern times in his historical survey, his notes hecome mueh more dequeribe and diffuse. Whereas a paro sinflices to annals, it takes a liundred pages to relate tho ovents of a mueh shorter period as time pro. gresscs. But he has read, and secn, and knows has seen what he has read, and say what he He has the clever smooth and checrful manner. people enrich his book with their says and saws. The squibs, songs, poems relating to local sulhbills, often better than preserved in his work, are quoto here. We have no donbt hut that the "Liverpoldons" will say, if ouly for their sake, ever swrrey Pieree said of another work, "Live that should have heen mentioned. There is the large Welsh element in tho population duly kisson on the is the fatal accident to Mr, Hnschester railway was opened duly recorded. Ther are the performances of all the musical celebrities who have ever visited the town also chroicled; all the elections descrihed; the starting adoption of starge.coach in 1760 noted, the tailed; visitations of sickness mentioned; the Queen's progress dwelt upon; receptions giveu to public men, sueh as Sir Charles Napier, Iivingstone, Lord Brougham, Rajah Brooke, the nd and in tine every incident mentioned of a pnblic oo the $\begin{aligned} & \text { in which the town has taken part, down }\end{aligned}$ mayor's wife in 1858, or the getting up of a faney ball in aid of the new hospi
The history of the Dock estate will have more interest to some minds than theso varions social particulars. It was in this port, it will ho originated. Mr. Picton traces the experiments that led to their perfection, which now, he considers, "leaves the hoasted canals of Venice far behind, and whieh in structure, capacity, and The natnral material upon which successive engineers have had to deal was, in the first place, but a small creek, fed hy a small stream. This humble haven was exposed to the currents of an 30 ft . at the full. Prubahly a breakwater existed before Robert Crosse and Ralph Sekerton began their enterprising ditchingand digging; and $t$ is supposed that their work must have been of a isappeared and its site is traces of it have mnst hare done groad service, for an old authonity states that Liverpool was considered the best harbour and port betweeu Mylforthe and Scotand. But, in 1635, a bridge was ordered to be sonth side of the town, with a "lkey and harhour" for the snccour of slipping within the tons burthen, and had the largest vessel was forty
boy. Hitherto shallow water was safficient for che size of the vessels, but as the trado of the place improved the enterprising merchants the ed their attention to deeponing the water in when Pool. At the end of the seventeenth eentury, were the loading person, Coveland, and many counsels were held as to the best mode of improving the port. They first thonght of a canal that could be cut from the pool inwards along the line of Paradise-street. But they ultimately decided to empower their Parliamentary representatives to treat with some qualified and to come to the town and advise. . They seleeted Mr. Thomas Stoers as their engineer, who reeommended the ahandonment of the eanal and the eonversion of the pool into a wet dock, This was to he done, be showed, by impoundine the water in the pool with floodgates. For this suggestion, Mr. Picton urges, there should be more praise given to Steers than be has reeeived. "The idea of dealing with a tidal estuary so as to nentralise its ebbs and flows, and to afford a placid and sheltered haven at a uniform floating evel, was altogether new." And ho contends that Steers, in eontriving the first floatiug dock, did as much for the commercial marine of England as Stephenson did for the railway system. However, we do not hear that Steers reaped any particular distinction by bis applieation of the principle. He sottled in Liverpool, we knows prohably to carry it out under his own eyc, 1709 the scheme was sufficiently adraneed to request anthority to commenco the works which, after some opposition from the cheesemongers of London, whose dealings with Cheshire in. terested them in the question, and made them fear they would have to pay dues to meet the charges, was "granted; and the mayor, bailiffs, and common conncil were constitnted trastees. It was estimated that the cost would be 6,000t. Bat after six years' labour, and an expeuditare. of 47,0001 ., the 'works wero still incomplete. Fresh powers to borrow an ndditional sum were given the land ronnd the doels was leased for huildine purposes, and at length the work was accomplished. In the year 1721 , a ressel was carried over the pier from the dock in an unusnally high tide, the record of whieh corious eircumstance is the only clue to the date of the completion of it. After a time, the entraneo was considered too narrow, and the onter basin two small. and it was resolved that Mr. Steers shonld make an addition to it, bnild a pier, and construct a dry or tidal basin, contain ing a water space of 4 acres 376 yords to form an onter harhour to the old dock with threoraving.doeks on the west side of it, This lost graring.docks on the west side of it. This last nd named the Caninc Dock in honon of that nd named the canns Docs, in fononr or that for the borongh. A few more years brought uch a large cxtension of traffic and the vessols were of so maclh tofore that another and larger dock here. puired. This wos constyucted on land was re he cormomision and named in land given by Dock, in honour of the king. A lighthonse weas now no loncer thought a "hurt" to mariners and one was built at Bidston, commanding the town, and an extensive view of oeean. Those lown, and an extensive riew of ocean. Those own sigral, and up by the lighthouse wero nam bers of flarstaffs, upor which the look ont man oistal his officun what ho haon.out man hoisted his notification that ho had reeognised any particular, slip in the offing; and standing chants ${ }^{3}$ Coffeehonse adjoining, were anxions ingnirers, whose looks were always directed to this sorrce of early intelligence of arrivals. But the somaphore suporseded this arrangement, and now the electric telegraph has made it utterly obsolete, and the flagztafts have been allowed to rot and fall.
When Erskine looked upon Liverpool, aud pronounced his rapturous praise of it, two addi. tional docks had been constructed, named rcspectively the King's and the Queen's ; and the Duke of Bridgewater, in the execution of his canal seheme, had also constructed a doek with an outer channe]. "I was astonished and astornded," the great orator declared, "when I was told hy my guide, 'All you see spread out beneath yon-that immense place which stands like another Venice upon the waters-which is intersected by thoso numerons docks-which glitters with those cheerfal habitations of well. protected men, which is the begy seat of
trade, and the gay scene of elegaint amuse-
ments growing out of its prosperity, - where there is the most cheerful face of industry, where there are ricbes overtowing, and every. thing which oan delight a man who wishes to see mpire; all this has been executed by the industry and well-disciplined management of a small number of men since you were a boy,' I must have been a stock or a stone, not to have been affected by such a picture." Since then, however, snch an cnormous extension of docks, traffic, trade, and town has takien place that, if We ontlined on a map the scene that filled bim with astonishment, we showlt probably smile Enormous warehonses speedily arose on all sides, chiefly built by private enterprise. On the east side of the Kiug's Dock a large building was in 1795 . About fifteon years after, a much larger warehouse was raised on the west side, that cost 140,000 . In 1799 powers were ob. tained to build two more docks; but owing to the circumstances of the times, the intention stood over. Mr. John Rennie was consulted, who reconmended that a dock of seven acres should be construcicd north of George's Dook, capable to contain seventy sail of ressels. mentioned that extra accommodation conld bo obtained at the south end of the town, in less time, and at half the cost, was not acted nipon. After a long delay the old dock was filled in, and the new north dock com. were constantly being efficted northwards and southwards, and smail docks united; but larger undertalings brought into the field a now man, esse IIartley, one who would have been called in old tirucs "a whole man," ablo to form "reat projects, and work them out into the bargain. He wronght out his ideas in granite with a simplo grandeur that has not been hitherto surpassod. HIe built tho Brunswick Dock, for the timher trade, with two large graving.docks oplening out of it; the Clarence Dock, the Waterloo Dock, the Victoria Dook, and the Trafalgar Dock, in tapid succession, but so solidly that not a stone has required to be reset. He changed the system upon which his predecessors acted, and placed the narrow ends of his works to the river margin, thus securing greater qnay-space upon smaller frontage, gheds, for the protection of the goods that were to be loaded or disclarged. The Alhert Dock was a later work, executed with the same strength
and solidity, and with the same disregard for and solidity, and with the same disregard for
beauty. Mr. Pioton characterises tho pile of wareliouses built in connexion with it, on a large scale thau the Pyramid of Cheops, as a hideons pilo of naked brickwork, and rightly expresses his regret that some effort was not made to ally the bcantiful with the useful on this occasion. Still the trnstecs bonglt more land north and south, for additional docks, basins, and works. The opposito side of the river threatened to come ands thesc last, however, aud were finally beguiled into selling them again, when they were imme. diately turned into the threatened docks, and a great contest bergan between the two shores o the Mersey, which raged for twelve years, an fearfully imporerished the dock estate. I oapital expended on the Birkenhead Dook pro perty was nearly six millions sterling. Mr. Rendel was the leading engineer employed, whose portrait is thns sketched:-
"Mr. C. . F. Rendel, the engineer of the Birkenhead
Docks, was a wonderfull clever und specions man, with Bocks, was a wonderfully clever and specions man, with
fine procenee and on antractive manner, the very man to
impress a comnituo et ine presence and an atitractive manner, the very man to
impress a commitue, to turn the corner of dificulty,
and makie the beet of his canse. In this reespect there could not be a greator oontrase than that tespoct theen the
 aearly the whole of the work of his more thowy com potitor has had to be talken down and roplaced by the so

The Birkenhead works did not pay; and i 1818 tho Commissioners made an offer to th Liverpool Dock Committee to make over the whole undertaking to them. But it was de-
clinod. In 1855 , however, the Liverpool corpo. clinod. In 1855 , however, the Liverpool corpo.
ration reconsidcred this matter, and purchased tho property for $1,1 \cdot 13,000$. Moanwhile, Mr Josse Hartley was bringing out his finest works Five nev dooks, authorised hy an Act in 1811, were opened in Augast, 1848, and nanned, re. spectively, Salishury, Collingwood, Stanley, Dock and Haif.tido Basin was openod in the following year. But even this was not suff
cient. The cry was always for more space. And another enormons dock, with a fine range
of warehousos, was constructed. This was called the Wapping Dock. Tho year 1851 aaw th Sandon Dock added to tho list ; and in 1852 th Huskisson Dock, 500 yards in length, with it water space of nearly fifteen acres, was opened which area was incrcased afterwards by a cut extending eastward, which afforded nearly eigh additional acres of water space. In 1851, a for of this dock. About this time the management of the dock property was transferred from the corporation to a new hody, consisting of twenty members, who were to be clected by the dock ratepayers, with tho exception of three, who were to be nominated by the Government. This body now represonts a capital of fifteen millions, and a revenue of nearly a million per amnuin The first task it undertook was the completion of the works at Birkenhead, which, with the hydranlic machinery exeeuted by Sir William Armstrong, are reckoned among the wonders of he kingdom.
Before the list of docks is complete, we must mention the Canada Dock and the Heroulancum Dock. The first is a very extensive work, con taining a water area of upwards of seventecn acres, with a wide landing-quay on the east side corumunicating with groat timber.yards tha stretch out till they join the railway. It ha also becn furnished with a half.tide basin, with tbree sets of gates on the west side, and two cuts or docks on the east side. The Herculaueum Dock is smaller. It consists of a floating-doc azd tiro graving docks. There are eighteen graving docks in Liverpool and three in Birken. head. Nor have the Liverpool merchants yet of their pluck, conergy, and enterpriso, was that could be learnt from Mr. Picton's hook, the price would he a very profitable investment. But there is even more. Wo may sce, and wo may take heaxt from seeing it, that thongh deed, like a seed, may not bear fruit immediately, it may yet, in some after time, lead to great results: "a pistole of gold" and other small sums, amountiner in all to 13 s . 9 d ., if well laid out, may eventually rcalise a million per annom, and give employment and the sneaus of happs existenco to many gencrations.

ORIENTAL WORK AND THE LIVERPOOL ART CLUB.
Tee members of tho elnb receutly formed in iverpool nnder the above title (on tho model is to be supposed, of the similar institution in Ianover-square), hare inaugurated its existence by an exhibition of objects of Oriental art, lent or tho occasion, and filling two rooms in the premises in Sandon.terrace, Liverpool. Con sidering the nature of the majority of the object on view, perbaps it might more correctly be ermed au exhihition of "Oriental pottcry," we beg pardon, "faicnce", of course we meant to say. The most important portion of this is the colloction of Japancse cloisonné enamel jars, some of unusual size, beanty, and rarity, lent by Mr. J. L. Bowes, a local dilettante who appears to have dovoted himself to collecting articies of nd ctass. The peculiar characteristics of cesig na veauty of coloar and workmansbup, belote have probably never been so well and so fall illustrated in any collection in this country. The unnental art of Tapen is represented in three ther branches the satuma ware ohoracterised by decorations of figrres, hirds, and flowors, freely and unsymmetrically delineated on a (generally) faint buff ground, and occasionally (generally) faint bofr grouna, and ocossoma ware, not differing vory muoh from the lastnamed sometimes, in genoral character of design, but painted chiefly in red and gold, aud with a higher glaze; and the lacquer work, exhibited on small rases, caskets, 80 ., and which in its way is as finished and delicate in workman-
ship, and almost as unique, as the cloisomn ship, and almost as unique, as the cloisonne
work. There is besides a collection of Persian porcelain work, of Chinese ditto, and sundry objects of various kinds, including specimens of Japanese cahinots, of carving and metal work, and of Chinese and Japanese embroidery. Tho catalogue, which is edited by Mr. G. A. Audsley oxhibited, as well as sketches of the history, so far as it is known (which in some cases is not raxious classes of work.

The collection is, as we have inferred, a good and in some points an exceptional one, se far aa it illustrates a certain class of orvamental art and has already been praised in ether quarter qnite as much as is necessary. Considered in relation to the special occasion which gave rise to the exhibition, the natnre of it suggests certain considerations. The fact that a clnh professedly institnted for the promotion of a taste for art, in large town, should inangurate itself by an exhibition of this particnlar class of works, is an infortunate illnstration of the tendency of what is called "artistic taste" in the present day to degenerate into a disproportionate love of mere workmanship and prettinoss, or workman. ship withont prettiness. We used to think of "art" as something appcaling especially to our higher intellectual perceptions and sympathies, something of which the mental effcct was the end, the finish of execution only the means. It may be accident; but we fear it is rather significant fact that such a club as we are refer ring to should commence its efforta in the cause of art by an exhibition of works which are catirely devoid of intellectual interest, of which some are admired purely from fashion, some for delicacy of workmanship only, and of which considerable proportion are wat can only bo classed as sarbaric ant,interesting as inus trating the characteristic taste of this or that nation, but, per se, simply ugly. The celobrate cloisonné enamel vases are really marvels o patient and elaborated workmanship; but it is certainly a quostion whether the result is worth the labour expended; and although, as studie of harmony in colour, these prodactions are most soggestive, it is impossible, alter seeing a grod many of them, not to be struck with the general sameness of effect and treatment, even in the diaper-work, nt to speak of the wear some repetition of dragons, and serpent and storks, which form the staple of the anima ornamentation. The forms, too, of noss unrofind charncteristic always marking arto a semibarbaric character, in which form is neg lcoted or treated as quite secondary to colou and surface elaboration. Then, if we look at the vaunted Satsnma ware, what do we find? Beaztiful workmanship, in so far as surface, tone of colour (in some cases), and elaboration are con oerned; but, except as curiosities, why are we to admire the grotesque, misshapen figures, the fearful conventional landscapes with which these jarg are odorned? Why is it that, in the nam of "art" people are to bo invited to study hideons forms of grotescue monsters and dracons, or attempts at statuettes of the human figur which are only fit to amuse childron? Why ar we to go into ecstasics orer litule ivory carritg of figures, stunted and misshapen, because they are executed with that kind of dexterous
handling of the tools which might be achieved handling of tho tools which might be achieve a platecovered with the effigy of a kind of glorified harn door Ho-ho? To call such things art," is merely to pander to a passing fashion. They are interest ing and characteristic, no doubl, naice elforts of children in drawing what they see are interesting and characteristic. If wo look at the lacquer.work of Japan, acain, wo find an absolute want of perception as to what the material is snited for artistically, and what it is not suited for. Some of the works in this closs are exquisite; for instance, the cold lacquered vase (No. 431 in the catalogue), wit its raised flowers of imbedded mother.of. pear and coral; and the quaint, fanciful little leat shaped box, with the firure of a monkey on (No. 437). But we find in the catalogne elo quent praises bestowed upon lacquered writing cases, decorated with trees and rivers; the interior of the lid of one "is heautifully orma neted with chryanthemums, bamboo fences, flowing river, and a mass of clonds, from which silver moon appears to be emerging," \&c That is to say, it is a clumsy attempt to repre sent landsenpe in a material and in a situatio totally unfittod for such treatment. This is bad art; and its heing done in Japan makes it better. When we see a pianoforte with the top and sides painted over with landscape, or a hearthrug worked into a picture, we say is ba taste,-"rulgar, in fact; and such things aro valgar, whether done in Paris, London, or Yoko haina. It is just on this very point, as to the relation of material to design, that the English pnblic want educating and impreving, instead of being confirmed in their bad taste by examples from other climates. The oddest thing is that

THE BUILDER.
[Jux. 4, 1873.
whilst we, or our "art-elnbs," aro thus holding up every thing Japaneso for admiration, tbose wort by and ambitious people are equally bent upon copying and admiring us in our costumes and customs; thus illustrating in an amusing manncr the influenee of fashion in both hemi. spheres. Among the most really artistic objects exhibited by the Art Club are the Persian poreclain dishes; in which there is a remarkably bold free, and at the same timo sufficieutly conventionalised treatment of foliage ornameut, well worthethe attention of students of arcbitectural ornament of this description, an
great deal of variety of design.
great deal of variety of design.
We shall be glad to bear of the Lirerpool Art Club doing something to encourage interest in thoso forms of art whieh appeal more directly to the intellects of edrated persons rather than to the tastos of tho mero connoisseur in artistic bric-c-brac. One drawing by a great artist, Japanese pots, and requires a much higher degree of mental education for its appreciation.

## the fatlure of the saugor

 BARRACKS, INDTA.Even if tho Indian Public Works Department be rightly organised and properly nianaged, it that even able men eannot succeed is the system good, and the mon in command unfit for their position? Something wrong there surely must be, or such failures of work as we often hear of could scarcely oeeur. The most reeent soandal of whicb information has reached us is as to tivo failure of the Saugor Barracks, which have been in coarse of eonstruetion during four years, at the eost of 166,0002 , and are now abandoned.
Wo havo received a number of commnica tions on it, but, fearing to commit injustice bave withbeld comment nntil now. An official roport on the subject, however, puts the matter tbe "most signal instanco of the waste of public money which has taken place of late yenrs in the construction of barracks." The executive engineer, Captain Faber, and several of the superintending enginecrs, have becn reprimanded
and reduced. The following resolution is Buggestive:-
"The offcers who hare been hiamed by the Committee were furnished with copies of the report, and innited to
submiit
siny
explanation with respect to their couduct which they might desire to offre. Those explantions
hare now been received. It is obvious that sufficient

 the bar rackes would have been remedied beforeracthoy had
becomie irretricrable. It is important that the then

 peruniry emolumentso of the omeers from whom they
bave to make their selection,"
Tho writer of a pampilet entitled "Nar. cissus," published at Allahabad,* condermns the transfer of Military Works to a Central Depart. partment, and shows the enormous cost of tho
change. The writer says:change. The writer says:-
F There are now three bodies of men in the Punjab
drawiug hitg salaries nad doing the same lind of work-
the the Engineers of the State Rail wasks, , , Mnlilitrad Work, and
Prorincial Public Worls. Rerer the majority of these the

 and specially paid to neglect the wrork which he his. hawn,
trained to perlorm, and which be has ample time to suen

 haro not cost aitogetherfas much as his salary. At 9.30

 wil probaily pecupy him onty, though his own dutic
 garding the road over which he has passed."
He speaks of useless expenditure, to an im. mense extent, at Peshawur, aud points to the seerabad, though tinese, if we mistake not occurred under a different order of thincs, Whother he be correct or not in lis views, some
wise steps seem to bo imperatively required to prevent the possibility of a repetition of sueh
enormons w2ste of public money as has occurred enormons waste of public money as has occurred
in India during the last ten years,-to go no further back.

## the healthfulivess of CEISELBOROUGE.

The rector of Chiselborough has had his say in answer to a statement in our pages respecting In his letter to this journal he asked leare to modify the severity of some of our rcmarks; but the reverend rector, in his fetter to the Times, assamed a more demonstrative attitudc, and of inspection to show tho highl state of cultiration that exists under his pastoral care. We did not allude in our notice of Cliselbourh to the school question at all, but confined our remarks to the housing of the labourers and tho sanitary state of the village. The reetor exclaims, lite Byron, that be and his parishioners bave awaked aud found themselves famous, in consequcnce of onr certainly not illttimed notice. Jarnous, forsooth! the riltage of Chiselborough las long been fanons throngoout the lo bave been, and are, an afflicted race of human beiuge admits of no doubt, ybether goitre or not exista among them. The rector says that there areo nly fonr eases of goitre existing, to his know. ledge; but he strangely omits to mention aught of tbat other malady which is generally found accompanying the former. Let us say once soveral cases of poitro and Cretinism in the four or five villages we visited in the neighbour hood of Chiselborough, and, as far as we conld ascertain, these unhappy beings were formerly natives of Chiselborongh, or the cbil. dren of parents belonging originally to that villaro. Goitre, as mosit people know, is a swcling of the throat, beginning first in a hardening , is soft and elnstic, bat eventually Cretivigm in its worst form is perfect jaioo arising from an imperfect development of the brain, and it is accompaniod with bodily de formity. The individual affected by goitre alone may bo handsome and iutelligent; but the profile of his cranium belies the possession intelligenco. The rector of Chiselborough should not feel offended at the trutb being known; and it may be some consolation to him stand that his "ill.fated village" does not may possibly divide the honour-or, rather, the orime,-with some villages amonr tho hill Derbyshire, where the malady is known as the "Derbyshire Nock."
We hold these frightful maladies to be partly endemie, aud to have a local origin; and our ob notiee, is for the parposo of leading to thei eradication wherever they may still exist whether in Somerset or Derbyshire. When healthy iavourer is properly housed, his body in a some if not nourisling food, when ho en afford warm clothing, and can resort to frequent bathing, and when the water he drinks, and the ir lie breathes, is no longer poisoned or impure, the goitre and Cretinism will disappear from has increased the evil in those districts where gotîe and Cretinism have oxisted. We rould remind the rector of Chiselborongh that our had to make as to the condition of first we have cent rillages.
Two years ago we had occasion to point out of state of the rillages, when, we helieve, cases neighbourhood.
In 1851, Dr. Guggenbühl, in a letter to Lord beings,", and desaribition to these "umhappy feet high, eorpnlent, and blonted, with German heads, turgid lips, and nosos flatened like the egros." At that time there were many cases instead of the mythical "four eases," which hare not inereased, aceording to the reetor's snowledge, for the last fifty years. Now let us put borough. Is it a fact that a rector not long siuce refused to live in the old rectory-house
because it was situated in au unbealtby part of the village, and that ho in eonsequence removed a distanco from the "ill-fated" village, until such thmes when a new rectory eould be erected, with the latest mprovocens, his parishoners, however, had only Hobson's choice; they neither could build new dwellings for themselves, nor mould their landiords assist thems. They had to stay and add to tbo "general healthiness of tho popmation by their presence,--What other better provided-for folk felt indisposed to do.
friendly society anestiol, lothing-club, and glad indeed to qeestions are concerned, we are ment settio in intact. In conolusion we remark, with all good feeliug, that the rector's cougregation will awake and find themsel ves more fomous tham ever, the day after they are able to disprove what we Chise written as to the sanitary coudition of Chiselborougl

## -

DEATI OF PROFESSOR J. W. MCQUORN RANKINE.
We nuth regret to have to announce the death Civil Pessor Rankine, LL.D., F.R.S., Professor of sity Angineering and Mechanics in the Univerhis Glasgow, in the 53rd year of his age, at Glas residence, 8 , Albion-crescont, Dowanhill, Glasgow, on the night of Decenber 21th. For health was prosessor Rankiness state of medical adrisers; but no immincnt danger was anticipated. On Sunday, however, he was stricken with apoplexy, and nevor rallied. It loss Proferh the scientific world has sustained. matlosor Rabkine was known and valued for his thermodynauics sumee nlone to place him in the first rank as a man of scienee. Professor Ran. kine was not a profuse writer, but he possessed unusual powers of expression. His works aro essontially safo.

TIIE TALUATION OF LOUSE PROPERTY in london.*
The value of land varies with timo; at one time becoming stagমant, or apparently retrograding in value. Only a few years ago, priox 10 the memorablo day in November, 1866 , when Co. steat discount bouse of Overena, Curney naximum palue had been reachod, but immediately after that, City land could hardly be dispozed of at any price. There can be no doubt that those speoulators who had invested in City land or buildings were losers temporarily; bat 1 felt then, and my constant advice was, that the value of land bad not diminished, but only depressed for a time on the sulden cessation of lemand for it. Sobsequent events have, in my opinion, justifiod the impression I then formed, for at the present moment City property is realizing the full value it had attained prior to the orisis of 1866.
Assuming, however, that the valner is in pos. session of all the requisite facts as regards recent deall ggs with any particular plot of ground, din requires considerablo judgment to forotel Hrat may be the realizable solling or actual alue, and I believe it must always be, to a ertain extent, speeulative and dependent upon the skill with which the arelitect adapts his locality.
Of this adaptation of the building to the wants of a locality, the numerous City offices offer a good illustration. When I first began to brild on the new London Bridge appronches, previous to 18.10, City offices as now constructed were not hought of; the houses were built as shops and awellings, or as warehouses, and it was the same in Moorgate-street. Since that time, however, a distinet type of eonstraction has been evolved, which is now, perhaps, nearly perfect. In this hare oom, Mr. Richard Bell, Mr. Whicheord, Mr. E. N Clifton, Mr Francis, Mr Edward Fillis, Mr Gruning, and others, have all produced practical buildings of this elass, as havo also Messrs. Innes in the Colonial Market, with the assistane of ir. Crockett, and IIr. R. B. Marsll. In these buildings the areatot otten in these size of the rooms, so that the grentest numher

may be ohtained in the smallest space, and that they may be ahundantly lighted : convenience of access, the positiou of doors, stairs, fireplaces, and water and gas supply are all carofully studied.

There is, however, another method of determining the value of land, and that is by ascer taining the letting volue of the building put upon it when erected, and after deducting a certain anount for interest on the outlay to repay the builder, and allowing for all outgoings in the shape of rent, taxes, insurance, maintenance and repairs, management, loss of ront from portions of tho building unlet (called "empties") the residue capitalized will represent the valae of the land.

This method of calculation also requires a kuowledge of many local eircumstances, the rates and taxes, for example, varying in different dis. tricts, as does especially the chanco of "ernpties." In the lowest class of property (that whieb is let weekly), it is hardly safe to reckon upon a less deduction than one-half of the gross rent to arrive at the net rent. This is rather an extreme case, hut the rate of deduction for outgoings does actually vary betweeд ono.half and one-fifth.

To illustrate this mode of calculation let us say that-

I only offer this (which I will call example A) as an ilustration: when tho buildings are very speculative and slightly built, so as not to be durable, 7 per cent. interest will not pay the buitder, because to a large extent speculative buildinge are erected with borrowed money, and as money is seldom obtainable for less than 5 per cent., the builder has not only to provide a sufficient margin for a profit for himself, but to set asido a yearly sum as a sinking fund to accumulate to repay the borrowed capital. Again, as before remarked, the outgoings depend very much upon the rate of taxation in the looality, some parishes being more heavil
n
this medooted in endenrouring to to a great extent adopted in endeavouring to prove the value of land taken compulsorily for pnblic mprovements; and if the rentals, which might hercafter be obtained in new ncighbourhoods, could bo forctold with actual certainty, as it is comparatively easy to ascertain what deduction should be made for Parliamentary and local mposts; then, after making due allowance for empties and management, and a proper interest to the builder for his investing capital, the uet result would be shown in the most legitimate manner, and that would be the value of the ground.
The futnre rent must, however, still be to a great extent matter of opiniou; as are also to some extent the question of what is a fair profit or the builder, how long that profit will be deferred, and oven what would be the actual cost of the buildiug. If all these thines were matters of mathematical certainty, here would he a certain process of solution; but even when this rational principle is agreed upon, the views of buyer and scller are influeluced by their conquestions are frequently decided by reference to an arbitrator, or the judgment of the Sheriffs' Court, where evidence of the niost opposite eharneter bewilders the jury, who have to estaoharacter bewilders the jury,
The wonder, indeed, is that juries can at all balance the various kinds of evidence addaced before them, and enforcod by the speeches of eminent counsel, and that they so frequently arrive at results whicb are very nearly just. There can be no donbt, however, that the ver. dicts of jurics are speculative and uncertain: crring, I think, nsually in favour of the claimant. Trial by jury is, however, spcedy in its action, most cases being decided in the course of a ingle sitting.
Reference to arbitration before a skilled refcree is slower, but mistake in exaggeration is eliminated; and althougle excessive damages are seldom obtained, I believe that claimants are as justly compensated in this manner as it is possible for them to bc.
It is pretty generally agreed that in valuing
freehold house property; that is to say, a house, together with the land upon which it stands, that after firding its actual net value, that is, the value or reutal at wbich it would let without premium for a term of twenty-ono years to a tenant paying a net rent, witbout deduction for land-tax, insaranco or any other charges or imposts (property.tax excepted), that such annual ralue slould he capitalised upon tbe 5 per cent. table, which is equal to twenty years' purchase, thus a house or other bulding producing a net rental to the owner of 100l. per annum, is worth twenty years' purchase, or $2,000 \mathrm{l}$.
This is a generally adnitted preliminary or starting point, but only a starting point; for if the building is old, and likely to require rebuild. ing, then the valne of the land must be found apart from the house, and each valued separately.
Thus, assuming the land and building together to be, as before, of the annual value of $100 l_{\text {s }}$, and the annual value of the land or gronud-rent is one-fourth of the whole rent, or 25 l ., and that the building is so far decayed as to necessitate its robuilding in twonty-one years, it is evident that the calculation must be difforent.

You have, first, the annual value for tweuty-one years, at 1001 .
a year, and this is worth, upon
years' purchase, or
$£ 1,2 \mathrm{~S} 20$
To this you must add the value of the ground.rent of $25 l$., at
the cxpiration of twenty-one
the 4 per cont. table (and this
is the tahlo menally adopted), the value of the land will be 25l. x twenty five fears' purclase, or 6252. ; but the realisation of this sum is de. ferred twenty-one years, and it must be disconnted by that number of yoars, and discounting also upon the per cent. principle, you mul-
tiply by $438 . . .625 l$, $438 l_{\text {. }}=$ 273150

Which gives a total of
£1,555 $15 \quad 0$
This example for further reference I will call example B.
There is another way of stating tho question which I will call example C, and probably the more correct way, whicb produces a slightly dfferent, but more
rendor in caso of sale
Taking the value of the land, first in fec or in perpetuity, we
shall have 2sl. x wenty-five
years purchase, or as we have
Then wo have the assumed annnal value for twenty-one jears of 1002. per annum; hut as the gronnd-rent has already during that period been accounted for, we minst doduct $25 t$. from 100 l., which leaves 75l. Now this for twenty-one years, at the 5 per cent. table, is worth, as before found, 12.82 years' purchase, or 96180
$£ 1,586 \quad 8 \quad 0$
As before observed, this gives a little more than the first method of calculation, and it evidontly arises from capitalising the ground, in the last calculation for the first twenty-on years at the 5 per cont. instead of the 4 per cent, table.

Tho value of the old materials upon the ground in either calculation may be disregarded. Whatever their value at the end of tweuty.one years, that must also be discounted, and it is considered a balance or set-off against any loss of rent that may accrue at the ond of twenty one years.
Now these calculations givo rise to more ques tions than one. Upon the first mode, example A, the principal question which presents itsel is, what deduction must be made to arcive at a net rental, the rate of deduction, as I have already explained, varying considerably. On the second and third valuations, $B$ and $C$, tivo questions at least arise, which must materially affect the result arrived at. Now the first question is, as to the number of years' purchase a which the ground-rent should be capitalised. I lave said that the rule is tiventy-five years ever, more, hecause ground-rents are, I consider, the
hest secured and safest description of secnrity and constantly increase in value; that is, of eourse, assuming that the land is let for a term of years, expiring at no very remote period, such as a lease for from sixty to ninety. nine years, in which case there is always a certain value attaching to the reversion at the end of the term.

It was only the other day that certain City cund-rents were soid hy public auetion at but a niade a few months previously at twenty-seven and five-eigbths years' purchase. I had a pro fessional interest in the matter, and advised on the offer made. I know that it was worth while or the parties who made the ofer to five that rice which I I price, which is, I contend, a proor or tho valio roun whe was carred sold by auction groud the it wos one old auction, Was, that it was one of the conditions of purchase that the title of the endors sbould be approved by the Court of Chancery. I may incidentally mention that this condition often occasions a serions difficulty in the transfer of property, as the Court of Charcery, in investing trust money, requires such absolnte certainty as to title, that it practically excludes many good but not absolutely unimpeachable titles; and I believe it is very mnch on this account that large sums of trust money remain in the hands of tho Accountant-General whick inight be much more profitably invested ban in Consols.
The first question, then, is, npon what table should the ground-rent be capitalised? My own experience is, twenty-five years' purchase is the miniraum, and probably twenty-eight years' purchase is the maximum ; but even this must not be considered a fixed rule, for thero aro certain exceptions.
In a recent arreement for letting land [certainly not in the best part of the City], in whiob I was concerned, it was a oondition of the agreement tbat if the rent were redeomed within four years from tho date of the acreement, it might be redeemed at twenty-six years parchase, but within a limited period after that, at twenty.seven years' purchase, and the whole ground-rent has actually been redeemed, partly t twenty-six years' parchase, and partly at In one instonce I purchase.
In one instonce 1 offered as much as twenty. eight years' purchese for a ground-rent in New Soutliwark.street, which offer was declined, and it actually sold by public tender for thirty and five-sixths years' purchase. This I consider, however, an exceptional case. The average of one of these public sales in Southwark-street round-rents was twenty-seven years' purchase, and the maximum was thirty-one and six-sevenths years' purchase, and I have very recontly offered, as before mentioned, for one of the corporations for which I am professionally concorned, twenty. seven and five.eighths years' purchaso for a City ground.rent.
The value of City ground-rents has for some years declined; but still I consider a really good ground-rent to be worth twenty-scren and a.half years' purcbase
There are, however, considerations affecting this value; for example, the proportion of the round-rent to the gross or rack rent. Now, as it very frequently occurs that the ground.rent in the City is as much as one.half of the rack-rent it is very clear that in sucb a case the reversion is of comparatively small valuo oompared to what it would be were the ground-rent one-sixth or one-serenth, as it is in less valuable localities It sometimes happens, as alrcady referred to, that ground-rents are sold, the title to which, although good hoiding title, is not absolutely perfect, and that also dopreciates the value.
Moreover, recent legislation has materially extended the powers of trustees, enabling thom to invest in the bonds of some of the great mil. way companies, Government debentures and sinnlar securities, and ground.rents, are conse. quently less sought for. Govermment stocks and lauded estates do not yield a return of more than 3 por cent., which represents twenty-eight years' purchase, while railway debentores and guaranteed stock yield 4 per cent. interest, equal to twenty-five years' purchase; so that ground. rents, which in the early part of my professional experience used to exceed thirty years' purchase in value, at the present timo, from one or some of the causes I have mentioned, do not realise, as a rule, more than from twenty-five to twenty seven or twenty-eight years' purchase.
Of coarse there are exceptional cases. Some-
times it happens that a lessec of a Large estate will manage so as to have very small ground. rents upon some of his honses, and such gronnd rents I have known to realise as much as fort years' purchase. I recollect one large estate the north.west of London where the groand. thirty years' parchase, plus ono year's rack rent, thirty years parchase, plus ono year's rack rent
equal, probably to thirty-six or thirty-sover years' purchase
It not unfrequently occurs that a prico may be obtained for property far heyond its intrinsic or marketable value to anybody bnt the purchaser For instance, where a piece of land is surrounded by the property of an adjoining owner, and the acquisition of the piece of land would enable the adjoining owner to free himself from restrictions acquired ovcr his pronerty which prevented him actuired over his property which prevented him to the fullest extent. The alility to obtain a frontage upon a street, river, or canal, or the suhstitution of a frontage of a superior nature for that hitherto enjoyed, or similar advantages, all confer additional value. In these cases, it seems to mo, that it is perfectly fair cases, the owner should reap the adrantage due tó tho exceptional position of his property; bat no safe rule caa be laid down for the guidance of the valuer. I have a caso present in my mind where a payment of from 2,000l, to 3,0007 . (being nearly 25 per cent. beyond the admitted market price on hoth sides) was cheerfnlly paid for the price on hoth sides) was cheerfnlly paid for the and the transaction was made with the sanction of a Government department.
Assuming, however, that we have arrived at a fair conclusion as to the table on which the pur. chasing of a ground-rent should be valued, there年 yet another question arising out of the third method of compntation of the value of land let example C), and that is upon what tahle should you disconnt the deferred value, i.e., the value at the expiration of the term ; and this is, as you will see, a problem not easy of solation. We rill, for the sake of argument, assumo that the eferred value is an ahsolutely fixed quantity (say 1,000.), payable at the end of fifty years, and that you are to receive such a sum of money the interest every year, or every half-year, a capital snm of $1,000 \mathrm{l}$, at the end of the fifty ears
You will see hy the table that very much depends upon the rate of interest you assume can be obtanaed for your moncy. If you assum discount upon the 3 per cent. tablo, you should in present money

Upon the $3 \frac{1}{5}$ per cont. table
$£ 228$
179
140
110
It is assumed that if" you do not part with the property, you or your successor will, without any fity years 1 oxpenditure, recelve at the end of fifty years $1,000 \mathrm{l}$; bat in order to obtain that result yon must go punctually overy half.year the Bank of England, or else inere, ha reccive the interest npon your caprual as in becomes due and whea you have invested that interest you mast attena to receive tho interest upon that interest, and so on for fifty years. Each one of these operations involves a certain amount of lime, which must have some value, and the difficulty of finding an inmediate and secure investment for the interest as it accrues is almost ssumes the the the berne in mind the table corves with antomatic remplnrity coses with antomatic regalnrity, and no allow. n receivine $o r$ loss by want of punctuality mestment or investing the interest, or from vestment in a bad socarty.
Assuming that 5 per cent. is a fair rate of interest npon which the compensation shonld be sssessed ior a reversion to 1,000t, at the end of ifty years, you would have, as we see hy the ables, $1,000 \mathrm{c} \times \mathrm{x}$. You must now endeavonr to place this money (the $8 \%$.) at interest, and it is just possihle that, y your solicitor's assistance, and in eonsidera tion of a fee for investigating the nature of the security, instrneting a surveyor to report upon the ralue, pernsing the abstract of title, conferring with counsel, drawing mortgace.deed, c., dc., you may find an investment for yon $87 l$. at the rate of 5 per cent. per annum. You will have paid the solicitor's and surveyor's charges, and at the end of the year you will got for the money invested 5 per cent. interest, or 4 l. 7 s . Now what can you do with this sum o
2. 78. You cannot get another mortgage for il. 7s. If the smm were larger you might pos expenses and loss of interest by delay in obtaining another investment. Now this would be a constantly recurring difficulty, and contrasts strongly with the former position we have assumed yourself to be in, when you would ouly have to wait patiently, do nothing, and at the ond of fifty years you would receive your 1,0001 Now, suppose, instead of your reversionary interest being a fixed sum of money, it were piece of land, who can say, with the constantly decreasing valne of gold, and consequont in. falue of the piece of land at the cud of fift years? So that you not only have the risk, expense, and trouble of re.investmont, but you lso lose the chance indeed I may say the cer sinty, of tomn land increasing in value.
I think, therefore, you will feel you make bn poor bargain in parting with your reversionary interest at a price to pay yon 5 per ceut., and yon will, I am sure, discover that it is exces ively difficult to find a means of accumulating secure the full value of the reversion; indeed, the the presant time the only means arailable to invest in Forcign Government Bonds, upon Thich you will have to pay a commission of at least $\frac{1}{8}$ per cent. npon every purchase. And this is not all, hecause in the courso of fifty years (if wo aro to he guided hy past experience) here can he no donbt that the value of securi ies, and Government securities of all kinds especially, will constantly iucrease in value; so hat even assuming you are paid in the ratio o the present price of Consols, and Consols wer is that you would suffer in the course of fifty years even by this arrangement. Now these considerations you will find have a very practical influence upon the valuo of real property, and I ill give you a caso in point, which occurred ithin my own knowledge. A certain nobleman was possessed of some very fine house property, magnificent horses,-palaces they might lied anywhere but in Gigland,- Mith unusual low ground-rents, let on leaso for a long term severed from it a certain railway recpuined th severed from it. A certain railway reguired the Act of Parliament, and of course the owner had to bo compensated. Upon the part of the railway conpany it was contended that if such sum were paid as wonld purchase similar ground-rents, secured by similar property, that would be a fair measure of compensation. The difficulty in this particular case, however, wa that, having reference to the class of house, the ground-real was exceplotaly s pronty was extrely an property of an caccly simila class. th reartion was admitted by the owner's agents to be fair wa reasonable.
Now, what the owner's surveyor contended for was, first, that however long tho term apon which it might be let, house property never deteriorated in value in London, no natter however dilapidated it might become on owever tho fashion of the locanly might aver, but would be just as valuable a century lence at present, in consequence of the decrease the value of money and other causes. do not rememher hat this proposion was disputed by the railway company's agents. It keeping an integral estate to being ohliged to wapthy yearly the increment of the present money to he paid for compensation for the reversionary value, and that such an arrangement was less favonrablo to him than the retention of the property as part of his estato. It was also pointed out that the rate of interest atwhich the deferred raluo was discounted was an important element in the ealculation, inasmuch as the greater part of the compound interest accrues in the latter part of the term. If the calculation were made as we anticipated, the railway company would make it on the 4 per cent. table, or on the $2 \frac{3}{4}$ per cent. table, at what latter rate the claimant's surveyors valned the owner's interest, it would make diff crence as between $13 \cdot 2$ and $5 \cdot 6$, entirely arising out of the question as to what should he the snm of money to be paid which, accumulated at compound interest, wonld he sufficient to reconp the owner at the end of a number of years, when he would become entitled to the reversion. The matter was reterred to the ar bitration of a barrister. I did not hear the argu-
ments on behalf of the railwaycompany, but the result was, that the sum awarded was consider. ably below the amount claimet, being in the proportion of $7 \cdot 8$ to $13 \cdot 2$. Notwithstanding this, think that the clajmant's view was perfectly legitimate, and the ground of claim entirely easonable
There often exists what is called a dormant value in property. Assuming a lessee has pos. ession of land in the euvirons of London, for nstance, at Clapham, upon a leaso granted eighty orninety yearsago, when Clapham wasa suburian Fillage, the rent paid would be, perhaps, at the rate of 102 . per acre, but the land wonld now he more if it could be used or huilding purposes at the lessee cannot so dit him to do lessor cannot deal with the land as ho is not in possession, therefore the value of the land is lormant or midereloped os case laste, and althouch it moy bo snid the purchaser might compensate the lessor for his espected interest by payment of such a sum of money, as being accumulated at compond inte est during the residue of the term, woald eqnal he future value of the estate. Practically, this ccumulation never does take place; and a pur chaser having bourht both interests, enters into mmediate possession of the land, and rcaps hrge advantage by the transaction.
As an illustration, let ns suppose a case in Thion a lessoo holds an estate of fifty acres at 0l. per acre, for a residue of ten years. This, a well-secured rent, would, to the owner in ee, be worth, on the 4 per cent. table, $8 \cdot 1$ ycars urchase, or 81l., and a reversion to a rental of 206. per acre (the cstimated value at the end of en years), being an uurealised ground-rent, is worth say twenty years' purchase, and deforred rears, valued mpon the 4 per cent. table, would work out thns:-

$$
\begin{array}{rlrl}
70 \times 20 \times 6756 & =£ 945 & 16 & 0 \\
10 \times 8 \cdot 1 & =\begin{array}{rrr}
81 & 0 & 0 \\
\text { Total value......... } £ 1,02616 & 0
\end{array} \\
\hline
\end{array}
$$

Which is all the purchaser would pay. Now, assuming it were in hand, taking the same nnual value as before, viz., 70 l , worth as unrealised gronnd.rent twenty years ${ }^{2}$ purchase, his would give as the value, $1,400 \mathrm{l}$., so that the purchaser who conld utilise the pround at once rould appear to realise 373l. by this transaction, because he extinguishes the dormant value. It is true he would have to corapensate the lessor for his leasehold interest of ten years; but as on years is not a building torm, the ntmost profit rent the lessor could claim would be probably double the rent paid of 10l. a year, or say 202 ., being a profit rent for ten years; but this Fould be capitalised at the best at the 5 per cent. tahle, or $10 l$. per annum for ten years, on this table worth $7 \cdot 2$ vears' purchase, or 727 . which, deducted from the profit of 3731 ., still leaves over 300t. profit.
but is customary to valuo land which is unlet, but has a fair prospect of an early letting at twenty years parchase, as an unreaized groundreber for agreement for letting is signed, it is a proof that he value is real and no longer spockay and hat, authough the ground.rent may not he secured by the erection of any bmiding npon the land, it is worth more than lwenty years pur. chase. When once a bnilding is ted the land attains its full value, becanse the ground.rent is hencefor th secure
Time does not allow me now to do more than ref to one point I noticed at the commence. ment of this paper, namely, tho rate of profit to be allowed to the builder:-Evidently this will vary according to the skill with whieh the huild. ing is designed and erected, and its perfect suitability for tho locabity it is placed in. Obvionsly an inl-smited building will realise a less rent or less profit than one that is well suited to the locality, assuming both to be built on land of the same actnal value. Any return beyond the current rate of interest for money (which is practically 5 per eent.) is a profit to the builder. Sometimes the profit is added to the gronnd. rent, and what is called an improved ground. rent is created, which is saleable at a greater number of years' purchase than a rack-rent.
It would no douht have added to the roality of this paper it I conld have given the names of some of the parties concerned in the cases to which I have referred, but 1 have refrained from doing so, fearing lest I might in some way prejudice their interest in their property.
?

THE PROPOSED NATURAL HISTORY MUSEUM,

SINGTON.-Mr. Alfred Waterhouse, Architect.

## THE NEW NATURAL IISTORY MUSEUMS

 AT SOUTII KENSINGTON.$W_{\mathrm{E}}$ publish in our present numaher a perspec tive view of thenew Museums for Natmral History as the design was completed hy the architect, Mr. Waterhouse, hefore the receipt of the tenders, in October last.
We regret to say that, owing to the lowest tender heing higher than was anticipated, in consequence of the then exceptionally high prices in certain portions of the hnilding trade, the design has had to be sboru of some of its more salient featurcs; as, for anstance, the central towers and tho
of tbe internal courts.

The execution of tho worl has becn intrusted to Messrs. George Baker \& Son, who will immediately commenoe operations, and who havo midertakcn to complete the building within three years and a the site of the thereror Exhinhition of 1862 , which luas so long remained an eyesore to the neighhourhood, assume an eyesore to

It will be in the rememhrance of our readers that some eight or ten years ago a competition was invited for designs for this huilding, in connexion with masenms for other purposes. The unfortunately died without seeing the commence ment of his worl

In January, 1866, the then First Commissionor of Works, Mr. Comper, placed the work in the
hayds of Mr. Watcrhouse, with a view to his carrying out so much of Capt. Fowke's design as wonld meet the requirements of the trustees of the Britiah Mnsoum. As so often happens, however, with designs which are the result of competition, it was found that much of tho in. genuity which had heen displayed in this dosign had heen thrown away, in consequenco of the arrangements heing incompatihle with the ahsolute requirements of the authorities, and tbat to meet those reqnirements it was impossihle to rotain any large portion of it.
Without narrating in detail the history of the Psent design, which has suffercd but hittle in. erruption, though many vicissitudes, since the year 1866 , it may suffice to say that it has heen clahorated with every endeavour to meet the views of those who are likely to know mosi cessful arrancement ; and althonch in, its snccesssul arrangement; and althongh, from the
monetary exigencies of the ease, the huilding has had to he modified in some of its details, no has had to he moditied in some of its details, no
interference has heen made with the arrange. ment finally determined upon, nor with the ment finally determined upon
amoount of floor space required.
What is now to be erected
What is now to be erected is only a portion of a larger huilding, which will sometime ocenpy the site of toe Exhihition of 1862. It consists of the southern façade, 675 ft . in length (set hack 100 ft . from Cromwoll-road, and about 250 ft ,
from Eshihition-road and Queen's Gate), and of certain portions of the interior hehind it.
It was the architect's intention to erect the huilding entirely of terra-cottia, both within and withont. Its power of resisting the atmosphero of London, and its fitness for a huilding in which tbere is nccessarily great repetition of parts, ure proved hy its sucoessful use in the Government and other haildings adjoining. But this intention has had to he in some measure modi, is and the internal courts will be faced with intcrior of all the galleries, as originally designed, in terra-cotta.
The entire site will be at onco inclosed on the three sides fronting tbe surrounding streets, with and Portland stone piers; and the iron railing required for huilding purposes the spaces not required for huilding purposes laid out in orna-
mental gronnds, with turf and trees at intervals. We purpose in our next producing the ground. plan of the huilding, and desorihing the interior arrangement of the building.

The Chelsea Embanlment.-Tho claim of Messrs. Rosher, lime and cement merchants, of Cbeyne-walk, for compensation, was heard and decided hy Mr. Under-sheriff Burchell and a special jury. The amount claimed from the Netropolitan Board of Works was 16,7412.; hut after viewing the premaises, the jury gave, hy arrangement hotween the parties, a verdict for $8,000 \mathrm{l}$., of which $4,500 \mathrm{l}$. Was for the leasehold interest in the property, and 3,500l, compensation, together with
for the claimants.

THE PARISI CHURCH, THERFIELD.
On Saturday, tho 14th ult., the plamber had occasion to goo on to the roof of tho chancel of this church for the purpose of repairing the lead. It was found necessary to raise somo of it, when it was discovered that one of the principal
heams was completely rotied about 2 ft. from the heams was completely rotied about 2 ft . from the
wall, and that the roof had sank 3 in with the wall, and that the roof had sank $3 \mathrm{in}$. with the
weight of the workmen npon it. Finding the weight of the workmen apon it. Finding the
roof in this dangerons condition, the rector, the roof in this dangerons conditiou, the rector, the
Rev. J. G. Hale, gave directions that the work should he stopped, and telegraphed to Mr. G. E. Pritchott, arohiteet, Bishop Stortford, to come as soon as he could. The chancel was shut up, and at the commencoment of the next service a heavy piece of plaster fell with a crash into one of the pews. Mr. Pritchett visited the church, and fond two other heams in an equally dangerons condition. In his opinion the whole roof was in the samo state, and the whole of it might have fallen at any time. During tbe examination hy the architect the roof samk other 2 in . Tbe lato wet season seems to have put tho finish. ing-stroke to the church. There is scarcely a sound wall, window, or angle in the cburch. The whole of tbe tower must come down and be rebuilt. The wall of the south aisle is 14. in. out of the perpendicular. The architect has not yet made his formal report, althougli there seems mittle doabt that the church is heyond repair, and will have to he entirely rehuilt. On removing will have to he entirely rehuilt. On removing
the panelling at the east eud, an ancient piscina and sedilia were found.

## LINCOLN SCHOOL OF ART.

The annuel exbihition of works by the masters and students was open for ten days, during last month, and was well attonded. The meeting for receiving the reports and the distribution of prizes, was held on Decemher 18th, wader the presidency of tho mayor of Lincoln, and the prizes were distributed by Dr. Blakesley, the fromy-appointed Dean of Lincoln. We gather from the reports of the committee and tbo vears ago under the present ruaster (Mr. E. R years ago ander the present master (Mr. E. R. sent rooms were huilt, heing considered ample for any prohable roquirements of a Scbool of Art in Lincoln. For two years past the attend-
ance, especially in the evening classes, has been such as to cause eveat inconvenience to the students to cause great inconvenience to the acoommodation heing intended for half the number now attending. The studenta numher 259, exclusive of those in institutions taught from the school of Art. The school is selfsupporting. The Government awards for the of last year.

PROPOSED REBUIIDING OF ST. GLLES'S CHURCH, NEWCASTLE.
A vestry meeting has heen held for tho pnr pose of deciding upon applying for a faculty for carrying out the contemplated rehuilding of the panish church, and altering the churchyard.
The vestry was full, and every resolution slih. mitted to the meeting, contrary to anticipation, was carried with entire unanimity. The rector (the Rev. E. Veale) presided. Seven reso Intions were proposed, seconded, and carried nnanimonsly to the following effoct:-That Six Gi hert Scott's plans he approved and carried out
hy voluntary subscription; that the rector and hy voluntary subscription; that the rector and Charchwardens he authorised to apply to the Chancellor's Court of the Bishop for a faculty to carry out the plan for rehuilding the church; to the rehuilding pleted in conformity with the plans; to take down a portion of the sonth wall of the church wall; dispose of a portion of the land for widen ing Church-street, on terms to he agreed upon with the Local Board of Health; to disinter any remains found in any area required for the foundations of the new huilding, or whicb should interfere with the due carrying out of the plan, ground, to level the rurais of consecrated and re-arrange the tomhstones in a purchyard suitable manner, to mako path, divort existing patbs, any necessary new houndary walls. The rector and chect snitable were empowered to rector and churchwardens were empowered to purchase out of any volun.
tary funds in hand any land ahutting on the charchyard which might he considered necessary charchyard which might he considered necessary

A NEF SXNAGOGUE IN LIVERPOOL.
The foundation stone of a new Synagogue has bcen laid in Prince's -road, Liverpool. The edifice will cost hetween 10,000l. and 12,000l. Tbe style is Saracenic, freely troated, with the introduction of both Classic and Gothic forms. The principal materials to be used in tho exterior are red sandstone, red and grey bricks, and red granite. The façade to Prinoe's-road will present an imposing appearance; its dimensions are to be 97 ft . wide by 83 ft . lhigh. This large frontage will be divided into five features, the three main ones being flarked by octagonal and square tuxrets terminating in domed tahernacles. The centre feature is the gahlo terminating the nave of the building westward, and is to be carried np to the height of 70 ft ., including the terminal oanopy, in whicb are to bo carved the initial words of the Decalogue. The principul entrance to the synarogue is to be in this gahle. Ovor the portal is to he a largo wboel-window, richly monlded and carved, and recessed under a cusped arcb. Twe octagonal turrets are to flank this gahle, finishing above the roof in arcaded and domed tahernacles of stone. On either side of the centre feature aro to he two wings, gabled north and south, and finished at their angles with four square turrets with domed canopies of stone ahove the roofs. From tbe gahles of theso wings are to be projected semi. circular staircases. The wings and staircases are to be richly ornamented in their windows, strings, and parapots. The sides of the bnilding are to be treated in keeping with the façade, hut in a simpler style.
The interior, when dccorated in the manner suggested by tho architects, will, it is thought, he hy far tbe finest feature of the structure. nave synagogue is to he divided into a centre or the ground faral aisles of six hays in length. On faco north and south, leare to he arranged to unoccupiod by sittings througbout the spaco length of the interior. At the eastern end of port nave, and under a lofty cusped arch, supported upon groups of red and green marble columns, is to he placed the arl, construeted of of marthaterials and richly decorated. A flight of marhle steps will lead up to the marble floor upon which the ark is to be placed. Behind the ark will he erected a lofty screen, and over it is tho nave choristers' gallery. The columns of tho nare are to ho 23 ft . high, and are to be surmounted hy lofty pointed arches carrying a
clearstory of thirty-sis arched windows. The clearstory of thirty-sis arched windows. The
ceiling is to be semi-circular, richly moulded and ceiling is to be semi-circular, richly moulded and paneled, and ultimately docorated in groid and glazed withe windows throughout are to be end of the ornamental glass. At the eastern rooms for the choristers and congregation, mini ter's room, \&c. The whole building is to be warmed with hot water and lighted with gas. The internal dimensions of the edifice are to be 120 ft . long by 60 ft . wide, and it is to be seated for about 700 persons. The height of the interior is to he ahont 50 ft . Tho whole is to ho carriod out under the superintendenoe and from tbe plans of Messrs. W. \& G. Audsley, arochitects. Liverpool; the hnilders being Messrs. Jones, Brothers.

## BATHS AT WHITELAVEN.

Sir,-On the 26th of Octoher, 1872, an adverisement appeared in the Buitder, asking for pplied, designs, and stating terms, dc. We and commenced moking ground and particulars, There was no time stated for plans to he sent in, but on Novemher 16th we rectived a note from Mr. Jackson, saying that the time was extended to Novemher 30th. With our ordinary work somewhat pressing us, and these plans heing almost completed, we pushed them on, finished and sent them to Mr. Jackson on Novemher 22nd, in order to make room for other things.
On Novemher 25th Mr. Jackson writes and acknowledges reccipt of our designs; hut most singularly he adds, "I regret to say that at a meeting to-day the harhour engineer requires he land on which I proposed to build tbe haths," ic. We reply on Novemher 26 th , Baying that it seemed to ns very peculiar, dc. Wo have one the work. We will refer the matter to the editor of the Builder, \&e. Mr. Jackson replies on Novemher 27th, asking what we think we are entitled to, de. The Harhonr Cormission approved of his scheme. On Novemher 30th,
Mr. Jackson writes and says, "f with respect to
your alleged claim," \&e. On December 4 th, Mr Jackson writes, in reply to a letter from us, "I you will kindly send your claim for work done, opinion.
On December $5 t h, 18 \mathrm{I}_{2}$, we write and sny that "You do not do as you ougbt when you withhold from us tbe names of architects who have sent in plans. You have our terms. Your
clarque for 75 . ( 24 per cent. on 3,0001 .) will cleque for $75 \%$. ( 24.4 per cent. on 3,0001 .) will oblige, or instruct your solicitor to communicate with onrs," \&c. On December 11th we wrote a
similar letter. Mr. Jackson replies, and says
len similar letter. Mr. Jackson replies, and says
the delay is caused by his solicitor not hnving a the delay is caused by his solicitor not hnving a copy of the advertisement, and we send him a correct copy in reply. On Dccember 24th,
Mr. Jackson writes, " His solicitor says he is not liable, but says he had better offer us something for our trouble; and he offers va 10l., witbout prejudice."
To sum np, we say, "If architects are to be swindled into making and sending plans, ant then, from no matter what eause, are coolly told that the employer is not going to carry out the work, and that he is not going to pay a right cbarge 'for work done,' and that he is not liable, then tho time and talents of architects can be trifled with nt any one's pleasure." In this
matter we ask and seek assistance. How shall matter we ask
If we had received any notice before sending our plans, then, perhaps, it might bave altcred the case ; but our task was finished and completed, and "work done," before any such thing remarks, thinling it might he a "pablic" good if the "laws on competition" were more gene rally understood, and what remuneration axchi. tects ought to have in such cases as ours.

For Dyson \& Dyson,
Richard Derson.

PADDINGTON BATHS AND WASH-hoÚSES. Sis, I am indebted to you for the information that my
plane arrived a dyy farer the time sppointed. In euch
case, one would liave thought the proper couree would Case, one would have thoupht the
hase been not to have reeeived therm. As, however, I arm excluded, I may, perhapg, bo perextraordinary competition.
I have devoted a great deal of attention, not altogether without success, to the sulyect of bathe nod wash. Bouses;

## ACCIDENTS.

Pontefract.-A large stone wall, some 12 ft or 14 fit high, at a curre in the road leading from Tansbelf to Coplar's Hill, Pontefract, has fallen, burying completely the much-frequented canse. way with earth and large pieces of stone. The continued wet reacbing the foundation accounts or the occurrace
Jarrow.-As three men were at work erecting a houso in Grey-street, Jarrow, the chimney, gable-end, and part of the side-walls gave way, precipitating the workmen, who were on the top, to the bottow, and underneath the rnins.
One of them was so mucb hurt that great fars are entertained whether he will survive. It is alleged that the continuous wet weather keeping the work from setting was the cause of the accident.
Leeds. The coroner for the borough of Leeds has beld an inquiry relative to the death of John1 Kelley, aged 40, a bricklayer's labourer. Addi-
tions were being made to the building of the

Little Sisters of the Poor Institution, in Belle-Vue-road, and the deceased was eroployed upon Wilworks. Whilst he and a bricklayer, namel pricht supports boce nad they foll to the pright supports broke, Filled on the spot, and Wilson was conveyed home in a precarious state. The jury gravely horee in a precarous stave. The jucy gravely worked upon the erections, and wbose daty it was to have seen that the scaffolding was pro. perly fised. The verdict returned was ono of "Accidentally killed."
Salford.-At a tea-meeting in the Christian Mission-ronm, 153, Ordsal-lane, Salford, about 200 persons had partaken of tea, when efforts vere mado to clear the room preparatory to a relicious meeting. The room had been about alf cleared of those who bad sat down to tea when the floor gave way, and about luo people -mostly women and children-fell a distance保 Sixteen ar persons were injured, and those who bad been he most seriously hurt wero conveyed in cabs o tho Salford Dispensary. The others, after heir rescue, were enabled to proceed to the homes. A subsequent examination. showed that he the twow in acosed state, and had he hooing was il a thate, and hal broken was 15 hy 12 , hod whe meisures 15 yards hy 12 yards, was formerly licensed as a dancing
America. Tlie Philadelphia correspondent o He Times telegraphs that on Christmas night the floor of a church at Williamsport, Pennsyl. vania, gave way, precipitatince 500 persons into he cellars. Fourteen were killed, and forty injured.

## NEW THEATRE, ABERDEEN

The new theatro which has heen in course of erection since May last was opened on the 19th nit., in presence of one of the largest and most intuential audiences that dave for some time assembled in Aberdeen, several of the county amilies coming in spec. 1
The architect was Mr. C. J. Phipps, of London. The theatre occupies a site facing 75 ft . wide cowards Guild-street, and extending 100 ft . in depth to Trinity-street. The frontage has a series of seven pointed arches on the gronnd-story, supported by polished rod granite shains. Four of thesc arches give acce日s to the several parts of the auditory, white the three centre ones are occupied by a shop.
Above are two tiers of seven windows, the arches of which are alternately of white granite and red sandstone, tbe wbole heing surmounted hy a cornice overbanging about 3 ft., supported on a series of massive granite corbels, between
which are panels with perforations giving light to the gallery.
The main part of tbe frontage is of white and bue granite, with string courses and capitals of Newton freestone
The interior of the theatre is arranged to seat 1,650 persons in the pit, balcony, hack circle or boxes behind balcony, amphitheatre, and yallery, but nearly 200 more can stand in open corridors and promenades behind the pit and boxes. The arrangement of the audience is like the Vaudeville, in London, while the design and size are like the Gaiety, with the addition of an arch over the proscenium. With the excoption of the frontage wall, the whole of the other walls and partitions, as well as the gallery staircase and the arching of the cellars under the pit bave been executed in cement concretc, by Messrs. Drake, of London; the sun-burner and stage gas.work were done by Strode, of London; the decorations and act-drop, by Mr. George Gordon, of London; and, with these exceptions all the work was accomplished by local tradesmen in Aberdeen:--Bisset, mason; Daniel, carpenter; Garvil, ironfounder; Lamb, plumber; Davidson, slater ; Morrison, plasterer ; Stepheas, painter and glazier; and Thompson, gasfitter; Mr. Browne, from London, being the architect's clerk of works. The costs have been about 8,000 ?

## Survegor for the County of Montgomery.

 The correspondent who stated last weel that Ir. Swettenham had been appos misis the ofice, writes to say that he was misinformed, selected by the committee, with two others, for after election.
## PROFESSIONAL PRACTICE OF ARCHITECTS.

We give in a condensed form tho snbstance of two lectures on this suhject delivered by Mr. students at the Architectnral Association. The introductory lecture was noticed at p. 923 of our follow.
(1). In dealing with "Men."
I. Clients.-It is gencrally bettor that the olient on his orm monition should come to the architect, and instract him (say iu the architect's office). Get,-if, and as soon as, possiblo,-information as to character, tastes, connexions, moncy, \&c. If a man has strongly formed views, well thonght and worked out, do not attempt to disturb them; if geveral ideas only are supplied, your opinions,--giving way however if neoessary, except perlaps on very vital points. Let your excpt periaps on very vital points. Let your either a rough model, or a plan to scale, or a list of accommodation, or dircetions to submit your ideas. Waste, if need be, somo sketches and ideas. Waste, if need be, some sketches and
interviews; endcavour to seo very soon bow far the consideration of cost is dominant, aud then give what you find is roally wanted, or get the requirements modified accordingly. Take down instructions in writing, and when anything is fairly fixed write a letter of record, and see if heing thas tested the elient considers hisdirections
rightly interproted. Be clear abont tho disagree righty interproted. Be clear abont tho disagree-
ables of huilding:-- settle carly the times of comables of huilding:-- settle carly the times of com-
pletion, arrango as to the amount of discomfort to pletion, alrango as to the amount of discomfort to
be looked for during the works; point out all risks of litigation on the part of adj oining owners
(rights of limbt, \&c.). Give fall information as (rights of ligbt, \&c.). Give full information as extras, and tho like:-building matters are ofter a profound mystery to a very intelligent man. Especially propare him from time to time if there are many extras. For a good client, with means and some taste, - a man of husiness with proper confidence in his architect,-spare no pains. For a man who thinks he understands a good deal about luilding, and buys goods himself, and orders many extras and alterations, kopp things as straight as he will let you, and definite orders in writing. With any oue who likes to suppose he is going to do a building and never does it, arrange beforehand that you shall be well paid for all drawings. With committoes, get resolations passed; thoy will express something really (and finally) settled; take ordors from one person only, the secretary or the ohairman; of course make no enemies; from the first find who has weigbt in council and act witb him, see him privately if possible aud bring bim to your view if you cau before a mocting. Indulge a fidgety member in much consideration of some comparatively unimportant subjoct: you may
thus get important matters quietly approved. thus get important matters quietly approved.
When tenders are obtained, and are highor than When tenders are obtained, and are highor than
the oricinal estimate, be prepared to state good the original estiraate, be prcpared to state good
and sufticient reasons for the difference. In the course of execution maintain your position as director of the works; get all orders passed through you; warn tho client against paying any money without authorisation. If an interest is taken by the proprietor in the progress of the building it will lighten the nrcbitect's responsibility, though it may add to his work. Make a client nuderstand clenrly his personal responsibility for matters of doubtful expedicncy; prepare him also for his disappointmeuts, e.g., for the apparent smalluess of the rooms when partly carcassed, for their dariness before being outsido and in. Leave your client in good hunour, not charging him too many extras; if off yonr account, put it on first. [In all stages of your work remember that if there is a lady who must be consulted and who wants her own way, sle must be allowed to havo it.]
II. Builders. -1 tender from one builder, without competition, is usually a very satisfac.
tory arrangement, promoting tory arrangement, promoting a friendly feeling and pride in the work. If he furnishes a detaited estimate, do not recognise his qnan-
tities beyond the negotiations, but accept a lumpsum tender. If it is left entirely to yon, and seems desirable, do not hesitate to name a man
for the work in whom you have confidence. As a precantion, however, it may be usefal to furmish tbe clicnt with your own independent estimate before you apply to the huilder. Entirely open
competitions are really very limited in practice.

The men who would be selected for limited cornpetition send in,-often witb the addition of an undesirable tradesman, wbo probably gets the work. Men known to be anxious for fresh work, and of about the same standing in trade, should be asked to give in tenders. In a committee, where each membernominates one or twe builders, every one should understand that he is respon. sible for the character of his nominees. nsually be bettor not to let builders know with whom they are competing. Perhaps the worst kind of builder is the man who has not been accustomed to work under an architect. He will make friends with the client, and try to slirk your control. A bad type is the man not used o good work or able to do it. Yon can only try What can be dono througb the personal prido of foresight will canso much A builder with bitlo see hig wilin youso much amnoyance. Wher you for him. Builders sliout of moner monst be toil or him. Builders sliot or money must be wel watched; but they are not hopeless, and may bo made to alter their work, and push it on, in rder to get their certificates. For many works, he best class of tradesmen are men whe have raised themselves from the workshop, and become little masters. They will manage their men well, take a real prido in their work, carry it on steadily and quickly, be content witb a wroderate profit, and settle accounts at the end without contest. Such men must not, however, be too heavily taxed. Builders in a large way (the great London firms, for instance) will give most satisfaction in suitable works. It will he folnd, howevor, that the skill and good service of tbcir clerks will often lead to unexpected claims for extras, and the clerzs will nsually be supported by their employers. Try to hold a tory, hut strict. Note the first mistake at enco and firmly. Bo very careful as to your first cortificate, and stand to the opinion you have formod, making thas good precedents to act on the mind of a new man.

If the builder's foreman is not a fit man, get him changed. He will usmally be proud, and somewhat vain, thercfore you had better mention to him any thing you find unsatisfactory, even when yom clerls of works is worse than nono. He should have good knowlodgo of building, and be sober,-and incorruptible. He should he eyes to the architcct, and enrs to him, and mouth to a certain extent. It should be thoroughly understood that he canuot order extras. He should check work continually, but not set it out. If he draws too much, he will neglect tho works, and not notice architect should always support him if possible advising him to the fure if he has not acto quito wisely. He must not be quar2elsome, nor too tenacions of his anthority. Usually the arehimontb send the him each week, and once a for a chequo. From wortmen the architect should get opixions and explanations, and, in return, take somo pains to give personal gnidance to those in cbarge of special works. As to other tradesmen executing their specialities (baths, hoating apparatus, decorators, \&ce.), nover apply any but the best men.
III, Architects (and other Professional Men) principal, and arrange with him always see the stand tho matter in hand most thoroughly in all its bearings when you have to meet older men; get a friend to coach you if you do not feel confidonce. Let yonr client know about tho quantity-surveyor, and your reasous for selecting is you will be deemed morally man you know, him, and you will also run no risk of his at tempting to take the work ont of your hands.

## (2.) In dealing with " Drawings."

I. Design.-First, specially study good precedents, old examples and the best modern Works; get to know thoroughly what has heen done hefore of the same sort. The first sketches will probably only show the nature of the problems aud bring clearly in view what ought to be done. Work out if possible the main ntercuption. a design in complete security from mind and at tho fingers' ends, keep at it. Of course begin with the plan : ase sectional paper, or for a difficult site cut out the rooms and fit them about; draw with ease, using good paper, pencil, and judia-rubber. A small scale, $\frac{1}{10}$ in. buildings. Get every part into form : work ont
portions to one-eighth scale. See that all can he executed,-and properly. Generally submit one design only,-hie hest produced ater considerable work and thonght. If you thus trust your own judgment, yon may bope that it will also have weight with others.
II. Explanation, or Evhibition (the drwings required to show a design).-Chients want assistance, frequently very mach assistance, before they can understand a building on paper. Arcbitects themselves mostly are assisted by perspectives. All drawings for this purpose should he tastefully got up; the plans without too many colours; withont visible erasures (not suggesting want of due consideration or of deci. sion of judgment). Generally the drawings should be the same way of the paper ; kept flat (on millboards or strainers); the writing very neat and legible. Perspectives slowing genera effect, and interesting or difficult portions, will froquently crable a man to whom a plan by itself is quite unintelligible to follow all-from the idca to the dotails of a design. An isometrical drawing of the plan (the walls 3 ft . or 4 ft . high) and in important buildings, a model, and, either rough or detailed, may bo useful or even indispensalle. Some people take in readily the idca of an elevation; explained as an upright map,a diagram, and so on. Indeed, always explain personally if you can; prepare on occasion a concise written description, nnd read it, anc leave it with a client (in tho case of a competition, tako great pains with a report, as it cannot be supplemented or shortened iu porsonal explanation). Spare no tronble to compel those for whom your aro working to see, as fnlly as possihle, what their huilding will be when you have erected it. If every ot her way fails, select some bnilding of a similar kind, and explain the similarities and differences on the spot.
III. Final (contract and working drawings. to bc used in the actnal construction of a build ing).-Tho drawings prepared for explanation of a desigu can rarely be used for this purpose A set of contract drawings should comprise complete general drawings, and suflicient details to explain the method of construction. All shonld be in ink carefully bent and not. All wards worked mpon or tonchod in any way The ground.plan should he well figared for setting-out, with all the dimensions on principal ines given from the starting.points. The prin. cipal heights on sections, and a seale placed vintically beside the elovations, will be uscful. Dimensions may, however, bo too 111 merous on drawings. The minor working details should be all grappled with, and well oxpressed : the flues, for instance, followed, and where complicated shown by special diagrams. All down-pipes and drains, water-supply pipes, apcoking trabes, \&c. should find their places;-in arranging for such the structure may have to reccive modifications, -made with little difficulty while the drawings only are in progress. Profiles, stoppings, carring, sc., all well drawn, will belp you to realise yone building. The general drawings should, however be made as few and as compact as possible; in riew of the lahour and expense of the numerons copies often wanted. Alterations made before the final acceptance of the contract should be in red : labour is thus saved, and the parts modified can be seen on future reference if necessary. Have the nsual drawings, even in such a case as repeating the existing upper story to a house: For tho builder or the architect may die during the execution : in case of dispute, the drawings may be called for : and points"may show themselves in making the drawing wbich you would otherwise everlook till yon saw them by chance in the work. Scales had hetter be such as a workman's 2 -foot rule, divided into inches and eighths, will apply to. Avoid for this reason $\frac{1}{6}$ in., $\frac{1}{12}$ in., $\frac{1}{10}$ in., $\frac{9}{10}$ in., to a foot ; and the like. Use $\frac{1}{1}$ in. or $\frac{1}{8} \mathrm{in}$. for general drawings ; $\frac{1}{2}$ in. for dificult plan, or portion of plan,
and show such with extreme accuracy; also for and show such with extreme accuracy; also for important architectural treatment (a completo set of $\frac{1}{3}$ in. scale drawings will generally be ex-
travacant and cumbersome). A travagent and cumborsome). A $\frac{1}{3}$ in. scale shonld be used for dotails, especially for parts that are to he repeated; 1 in . for individual features, such as doors sbown in detail ; $1 \frac{1}{2}$ in. (0ne-eightb full sizo) is very handy for tase, and gives a little more size when needod. Avoid half fall-size as decentive (suro to make your worl clumsy and coarse) hat give full size every profile that rou ar anxious about. Colours used on drawings should bo something like the actual colours of the materials, e. g. brick,-on scetions lake,-on el vations, the real colour, or the joints roled in :

Stone,-on sections, sepia,--on elevations, raw sienna, \&c.: sectional timher,- burnt sienna, and sarfaces light sienna or yellow ochre: iron,indigo; soctional plaster,-dark nentral tint. Windows may be tinted darkish indigo or neutral tint, when fooking at them; light hlue, when looking throngh them. Keep together on drawings things relating to tho samo part of a building, e.g. full-size details of jamh, base, cap, arch, \&c., of a doorway, and put them in position with reference to cach other. Never back-jine working drawings. Mix perspective sketches with geome-
trical dotails, to show anything that nust be trical dotails, to show anything that must be seon on two sides at once, hefore it is compre. honsible. A careful drawing, to a small scale, for senlptare, as a guide to yonr intentions, will generally be suffcient. The builder, when the accounts are sctticd, should return every drawing, dc., and keen well worth the trouble and oxpense, to bind drevinge of tecutcd and oxpense, to bind drawings of execrtcd works in and by his father and grandfather before him. Druwings (including part of office-rent, assistants ${ }^{3}$ time, paper, and other expcnses) should
cost not more than one-third of the commission, cost not more than one- ind of the commission, in order that a work may he fairly remunorative A calculation, giving three acres as the super-
ficies of drawings for a very largo modern London brilding, shows that economy (wiso spending and sparing of superlluitios) may often be of essential importance.

CITY AND WEST END RATLWAY.
It is already known concerning some of the proposed to petition Parliament in the approsch ing session, that thcy will not bo heard of ach for at lenst another wenr. The survers lave been made, notices have heen puhlished in the Gazette and other papers, plans, and sections Gazelte and ocher papers, plans, and sections lodged in the Privato Bill oftces of Parliament printed, and duly deposited, hut the projects havo been abortive or premature, and have been already abandoned. Nill probable that there among the private bills of the coming session than has heen prosented for many years past Hitherto the deposit moncy of five per cont, of the estimated cost of a scheme which the pro moters are required to deposit in the Court of Chancery in accordance with the Standing Charers of Parliant as a bility and good faith, has at the worst only been locked np for at time. By a new Standing Order, which comes into operation in 1873 for the first time, the deposit will be forfeited, and transforred to the Consolidated Fund, in the ovent of the promoters failing to obtain their bill. The time for making the deposit cxtends to the 15th of January, and immedintely after that date the Examiners proceod to the dis. charge of their duties, and after examination endorse the rolls of documents subritted to their scrutiny; "-"Standing Orders complied with," or "not" complied with, as the case may the deposit is, of course, an important item among the papers.
The projectors of the City and West End Railway, from anything that appears to the contrary, intend to proceed with their bill,
although it has been whispered that it although it has been whispered that it is a mauceuvrc, or fighting hill, rather than a
scheme intended to ho carried out. Howscheme intended to he carried out. However thius may he it is incontestably tho most important

## ondon.

Parliamentary draft bills aro litcrary curiosities, and the City and West End Railvay Bill is a curiosity cren among its class. It has been said, perhaps cynically, that punctnation is dispensed with in these documents that counsel ever this may be, it is certainly scope. However this may be, it is certainly a strange thing to come upon a string of nearly 700 words following oach other withont the interposition of any point whatever, from the first to the last. Lindley Murray lays down eightcen rules for tho use of the comma. Few writers, if any, are likcly to embarass themselves with such a bewildering directory, but there are some uses
of the comma to which even the draftsman of bill shonld be equal, and upon which he should focl hound to condescend, as, for instance, when a group of names are brought together. The
47 th section of the City and West End Bill gives 4ith section of the City and West End Bill gives
the names of the first directors thus: "Sir

Edward William Watkin Joseph Shuttleworth Androw Cassels John Rowson Lingard George Shepherd." The reader may make sure that there are at least two directors' names in the list, thanks to the coniunction, hat the last namo i the only one concerning which he can be abso lutely certain.
A good many weeks since it was stated confidentially that the deposit-money for the City and West End Bill was already subscrihed. If this be so, it is conclusive evidcuce of the bona jides of the promoters, who will he called upon to risk the loss of a sum exceeding a hundred thousand pounds.
The proposed line is to be for the most part underground, from South Kensington station of the Metropolitan District Railway, along the Brompton-road, Knightshridge, part of the Circus, and thence throulh Soho, Bloomshury and Lincoln's Tnn Fields, to join the Motro and Lincoin's Inn Fields, to join the Motropointan Rail way at the Faringdon--oad station, tho Metropolitan District line, which must sufer sevorely in its troffic if the proposed lino is made the Bill propes that powers shoull be cade. Tho bin propostwen companies havin torminal stations in London, incluting the Lon. erroinal stalions in Lon the Nitung the Lon Northa Northe Westorn and South Coast Coask, Che ma Torer, the South Eastern, the Great Eastern, the East London, and the Londou Central.
The poposed railway will be in two sections, and will be in all 3 miles, 5 furlongs, 8 chains, and 75 links in length. Tho proposed capital is powers The works, it is proposed sholl includ making certain new streets, and widening others. One new strect, it is proposed, is to commence on the northern side of Tichborne-street, abon west of the junction of Tichborne minst with Great Windmil-street, aud eo ter its junction with Coventry-street. It also pro. poses to widen Richmond-street and Kiug-stroet, from Rupert-strect to Troor-street, and also to widen Dudley-street from Moor-street to Broad street, St. Giles's. I new street is proposed in St. Giles's, commencing near the junction of High Hollorn and Drury-lane, and termi nating near the north-western angle of Great Queen-strect. It is also proposed to wide coln's Inn Fields to High Trolborn. The nam coln's mm tords
The coropany take powers, sulject to notices to underpin or otherwiso strengthon houses near the railway, and to make suhways, and openings vertile railmay in tho strect venciation. .he ime tho compulsory pur chase of lands is lime the line to yrars; aud Ther deposit.money is not to be repaid until the line is opened, or half the capital has been paid up and oxpended. If the the deposit-money is to be applied in compensa. been interfored with, or made less valuable by becn interford when or ahandon tho commenceriu, ar ortion of it the mentinder of the deposit will be forfeited, and carried to the Consolidated Fund
Workmon's trains, colling at all the stations, will he run at farcs not exceeding one penny per passenger for each journey; such trains to rnn not later than soven in the morning, have for six months continuously carried less thau 100 passengers in each train, they may be discontinned, on proof of that fact to the satisfaction of the Board of Tradc. The ordinary fares will be :--first class, under two miles, 4.d.,
over two miles, 8 d .; second class, 3 d . and 6 dl ; and third class, 2d, and 4 d .
Whether tho promoters will be able to with stand the opposition they will donhtlessly provoke from the owners of propcrly in the
neighbourhood of Piccadilly and elsowhere along tho route, and whether, assnming that they get their hill, they will he able to raise the capital to make the line, are prohematical; bnt it must So confessed that neither the traffic returns of the Metropolitan companies that have made lines and opened them, nor the no-progress of the companies that have got their brls-tho Loudon Central, and the Mid London - are
very encouraging for projects of $a$ similar cha very encouraging for projects of a similar cha-
racter.

THE ECONOMIC LIFE ASSURANCE COMPANY'S NEW BUTLDINGS.

## ras block of buidangs is in conrse of

 ercction in New Bridge-street, Blackriars, for ste Economic Lite Assurance Company. it mels on tho site of the old one, and is im. mediately opposite to the Ludgate-ber Railxay Company. The New Bridge-street elevation presents a mixed style of Gothic architectare, and is massive and bold in appearanco, the ad stone granite and monarhle. The building has a largo hasement, and the height from the street-level to the hase of the cornice is 50 ft., above which there is a frieze, and panels with cantilevers, and ahove those again the elovation is sne stono ; the entiro height of the structure to the roof boing 54 ft. $6 \mathrm{in} .$, and its widll 35 ft . The main entrance to the building, in the centre of the ground-丸oor, consists of a large and handsomo porch, projecting several feet beyond the main eleration. On cach side of this there are circulars columons of polished granite, with land stone, whilst inmediately above it a broad and elaborately-worked hand in terra-cotta stretchcs across the elevation. On each side of the main entranco there aro two large circnlarhended windows, uniform, in the massiveness of their design and detail, with the gencral charactor of the elevation. A hroad horcier of terra-cot a with a monogram in the centre, whilst inside this is a gaugod arch in red brick, rolioved at short intervals hy the insertion of green tiles. The windlows have traceried heads in Portland stone, and are snpported by red brick jamhs, with groen and red serpentine columns on cach side, and polished granite colnmis in the centre of the windowe, and red Manstield sills, with an enriched string at tho base. The first floor contains three large circular headed windows, esembling in their dimensions aud claboration of detail, those just described. These wind the wich are 13 it. in height to the crown of the arch, and 10 ft . in wiath, are unitod hy tiree continuous arches or semicircular headngs in arra.cotta, with enriched hood-mouldings and panels of Cupids running round the arches. columans in terindows the end rope columnar mouldings in red hrick. At the base of the windows there are panels in red Mansfield stone, and the columns aro also supported hy the came material. All the windows will have polished mahogany frames and sashes. Above the firstfloor windows a hroad string of terra-cotta uns across tho clevation uniform with that above are niform in. The second-staty with those in the rest of tho elevation, but their dimensions are not so large.We have already stated that the portion of is elevation ahove tho second-story windows sunk panels ahove the lower cornico and frieze, with projecting cantilevers, are in terra-cotta, whilst the mrin cornico surmounting the elevation, in red Mansfield stone, is very elaborate hoth in design and execution. Therc is a third story or attic, bnt this is concealed from view hya cornice and parapet xising considerahly abovo the roof.
The interior of the building will incince a contain the clerks' dining-room, muniment-room, together with stationery and other offices the ground.floor, entered through tho porchway, will he the geueral office, 33 ft . by 26 ft ., together with the secretury's office, the actuar $y^{\prime}$ 's office, and the actuarial office. On the south side of the gronnd-floor is the main staircase leading to the apartmonts above. The first floor contains the hoard.room ohlon and horse-shoe in form, 36 ft . long hy 20 ft . wide. This portion of the interior will be handsomely decorated. The borders of the floor, to the extent of three feet all round, will be composed of ornamental coloured trood in diamond form, and the ceiling will he in compartments. A corridor seven feet in width pared with ornamental tilcs, divides the board-roons from the physicians' room, the waiting-room, and the luncleon-room, which are on the romosite filo of the lloor. The second story contains a converient residence, consist-
ing of commodious sitting rooms facing New [Bourke-street is huilt of brick, with bluestone Bridge.strect, togcther with butler's pantry, kitchen, and other domestic ollices, as well as a lift; whilst tho third stor'y, in the roof, contains soveral bed.rooms and store-roums.
The estimated cost of the building is about 8,000l. The architect is Mr. E. Christian, and Mr. C. Greaves being the clerk of works, and Mr. C. Greaves being the clerk of

## CONCRETE MODEL DWELLTNGS AT HASTINGS.

Thovgir there has long heen a deficiency of habitations for working mon in the old cinque port of Hastings, it is only mithin the past twelve montlis that any experimental cffor has boen made to supply the want. The Hastings Cottago Improvement Sooiety, which has done a good deal in the special field for which it was originated, has (after overcoming numorons difficulties), stepped out of its ordinary track, to entor upon a donble cxperiment. The society has nearly completed a large building, tho walls of which are cntirely of concrete, and which is
the first structure of the kind iu the borough. The flan (designed hy Mr. G. Friend, Maidstone), comprises three separate blocks of dwellings, which are connectod together by means of two openstaircases, and hy galleries along one front
of each "houso." Tho arrangement of the of each "houso." Tho arrangement of the
apartments is managed so as to form nine dwel. lings, with four rooms each; five have three rooms; fifteen consist of two rooms only; and an odd place gives a one-room tenement. In every separate dwelling one room is supplied
with a range, with oven and boiler, and water is with a range, with ovon and boiler, and water is
drown from a tap, over a Staffordshire glazed ware sink. The roome, of course, oounect with onch other, and are on tho same floor. In the tenoments oonsisting of four apartments, one is lery, 6 ft . by 10 ft . ; and two bedrooms, 9 ft . by 9 ft .6 in . each. An ordinary grate is placed iu the bedrooms, except in somo six or eight cascs, Where a self-acting ventilator takes the place of
the chimney. Two ash.ehoots on each thuee floors lead to common receptacles; and therc are convenionces on each landing,oighteen for the thirty frmilies who will be located
in the model dwellings. The tenements are virtually self.contained, and aroid the necessity of going ap or down stairs for any domestic need. land at the foot of the East सill, in the midst of the lahouring popalation. As they are directly aben to the sea, at an elevation of about 150 ft . above tho shore, a plentiful supply of fresh air will he unfailing. The middlo block faoos to the south; whilst the other hlocks are at oither end, looking east and west. There are large open
yards on each side of the central lilock. yards on each side of the central hlock. Tho concreto was in proportion of 8 of shingle
from the beach, to 1 of coment. The floors and roofs are constrncted in the ordinary manner, crecpt that the floor-hoards aro tongued. A coat of stucco gives the oxterior a smooth surface, and the inside of the tenements is rendered in ploster. The staircases and galleries are formed of slato slabs, supported on iron pillars, and girders. A fence of corrngated galvanised sheet iron protects the passages.
Arard, of Maids were constructed by Mr. R contract for the orection of the first Board school contract for the orection of the first.
in this borough, at a cost of 1,300 ?

TEE NEW THEATRE ROYAL, MELBOURNE.

- The new Theatre Royal, and hotel premises comected therewith, are built npon the site of
tho old Theatro Royal, Bourke.street East. The frontago to Bourke-street is used as cafó and hotel premises. The entire building has a depth of 313 ft . from Bourke-strcet to Littlo Bourke. street, and a frontage of 66 ft . Tho theatre portion of tho brilding embraces a depth of depth of 80 ft ., leaving 120 ft . for stage, dress-ing-rooms, and offices. The whole of the external wartitions are of brick. The approaches, conri.
parter dors, staircases, landings, with all saloons, corushand waiting-rooms throughout the building, have All openings are formed hy means of iron Ald openings are formed hy means of iron
girders or arches, wood being ntterly dispensed girders or arches, wood being ntterly dispensed
with in the superstructure. The frontage to

Bourke-street is huilt of brick, with bluestone landings, moulded to the balconettes, the whole boing finished in cement. The windows to the first floor are circular-headed, and finished with frst fioor are circular-headed, and finished with pressed cement columus, enriched architraves, caps and hases, and ornamental keystones. Ahove the windows is a row of mezzaninc lights. These also aro finished with small columns, cironlar corners and chamfered arrises. The mindows to the second floor are segmental. headod and finished similar to the windows below. The top of the building is finished with a cornice and open balustrade, terminating in a pediment (which is very ugly, by the way) with the Royal arms inserted. There are three entrances from Bourke-strcet, the centre one being the main grand entrance, leading throngh a large vesti. bule, from which is obtained access to stalls, pit, and upper circle, with modes of egress, in case of fire, from all parts of the house. On the oast side is an entrance doorway, with a flight of stone steps 10 ft . wide, leads to the café, billiard.room, and saloon. On the west side is the dress-circle entrance, which opens into a large hall. From this hall a stone staircase leads to a corridor over the vostilule. At the north end of this corridor are folding-doors, which open into a spacions crash.roorm.
The anditorium consists of pit, stalls, and oolumns. It is lighted witheted upon cast.iron oolumns. It is lighted with a suspended sun. light from the ceiling, which is formed into an extensive dome in panels, richly decorated above the sunlight, and is ornamentally perforated for ventilation. At each side of the proscenium is an escape staircase, fromiall parts of the honse, and silo flios. At the rear of the stage are the dressing.rooms, painting, property, manager ${ }^{2}$,
and other rooms connected with tho stage. and other rooms connected with tho stage. Lavatories are provided on the ground, dress-
circle, and npper.circlo levels. At each end of the theatre are larce circnlar each end whioh canse a are large circnlar ventilators, through and over the ceiling of the bailding By way of loxtra precaution in caso of fre, Yan rean water supply-pipes, with hose attached, will be laid ou to all parts of the house.
Mr. Geo. Browne, architect, who is a native of Melhourne, made the designs, which were ap. officials by the Boards of Health and othe , previous to the signing of the The contractor for the theatre proper is Mr premises, Mr. Chas. Browne.
The estimated cost for the crection, completion finishing, and furnishing of the whole premises 22,000l. sterling.

THE HOUSE ON THE CIVIL ENGINEERS.
The rooms of the Institution of Civil Engineers have been painted and decorated under the dircction of Mr.T. H. Wyatt, by Messrs. J. G. Crace \& Son, of Wigmorestreet, witly their nsual taste and skill. The theatre or meeting.room is the only part in which coloured decoration has been attemptcd, and tho architectural treat. ment of tho room lias rendered decision as to the best modo not an easy problem. Bearing in mind the contingency of having at some future period to provido gallerics at the ends of the room, the architect introduced two distinct orders. In the lower one the busts of distingtished members aro introduced, carried by brackots on trusses, and in the upper division portraits are hnng. The difference between these two portions of the room is atrongly marked. The upper panels paper. The with a delicate green flook paper. The lower ground for the busts. The pilasters, cornices, and other architectnral features of the room are treated in stone colour. The apper cornice and tho ceiling are so coloured as to mark and separate the panels and the enrichments, pink and bluo predominating. The introduction of cloth in the predominating. The introduction of cloth in the wer compartments of the walls has contribnted sist from the resonance, which was found to exist from the previous hard snrface; but from art point of view the effect is questionable, the brackets and busts having the effect of being Addition to loose cloth curtains.
Additional room for books has heen provided in the hihrary, a fine apartment, which now con. tains about 11,000 polnmes.
The nembers of the Institution have reason to quarters.

## REBUILDING THE SURREY SESSIONS.

 HOUSE.Tae Surrey Sessions . honse, in Newington. canservay, has for some time been found to be too small, and altogether unsuited for its pur posc, and rocently the county magistrates ap pointed a committee to take into consideration the question of rebuilding it. At the meeting of the magistrates on Treesday last, the com mitteo presented the Sessions.house shonld be rebnilt and that tenders should at once be ob een for carryin ont the reconstruction of the report gave rise to sore the building, the adoption of the to some discnssion, and the build the premicommittee's suggestion to re Locke King ooises having been moved, Mir. ground the whole about to be cole question of local taxation was further contended thered by Parliamont; and he sufficient for all required purposes. He mored as an amendment, that the qrestion of robuild. ing the courts be adjourned for twelve months. In answer to these objeotions, it was shown that the existing building was in a dilapidated condition, and in every respect inconvenient for the transaction of the business of the sessions. The proposal to reluild the premises was carried with only a few dissentionts, and the committee ere instructed to obtain tenders for the erec tion of the new structnre. We maderstand that the plans of the intended new building provide for large new courts and offices.

## THE FALL OF A WAREHOUSE IN

 BRISTOL.The warehonse opposite the Railway Ter minus in Bristol, built by Messrs. Brock \& Bruce, at which a disaster recently occurred, has a rontage of about $\%$ ft., with a depth from front o back of about 120 ft . It is three stories in height, and covered with a flat roof, intended for tho purpose of seasoning timber. The roof was formed of concrete, covered with asphalte, altogether 9 in . or 10 in . thiek, and this being supported on squaro uprights of timber, tha centre part fell throngh, carrying everything bcfore it. The portion remaining around the walls seems to he in a bad state, and will have to come down. The great weight of the rool soems to have been the main cause of the accident, though one of our correspendents ascribes it partly to the contraction of the asphalte.

## THE NEW INFIRMARY

IN ST. GEORGE'S.IN.THE.EAST AND THE CHARITY COMMSSIONERS.

## a dippiculty.

The guardians of St. George's-in.the. Fast have just been placed in a difficalt and un. pleasant position as regarls the news infirmary which they are now building, in consequence of the conree which is being adopterl by tbe Charity Commissioncrs. It appears that the new infirmary huildings derkened sonre of the windorss of that portion of the workhonso which they hold on leaso from the trnstees of Raine's Charities, at a rental of $\mathbf{1 3 0}$. per annum. This fact led the trustces to complain that the damaged honse, and they threatened the guardians with an action for obscuring the lights unless they agreed to purchase the workhouse premises entirely. The guardians ultimately agreed to pay as much in Consols as would prodnce the amount of the rental, and within the last fers weeks thoy have givon instructions to their solicitor to proceed with the purchase, but the Charity Commissioners, whose sanction is, appears, required to complete the bargain, are interposing 0 pro allege canned our. The Comassioners sumply allege that the bargain is a bad one, and state that in the interests of the charity they decline to. give their sauction to tho arrangement. The trustees of Raine's Charities are thnsignored by tho Charity Commissioners, whilst the St. George's-in. the. East guardians have beforo them the prospect of legal proceedings unless thoy by some means completo the purchase, or, on the other hand, malke suoh alterations in the new injury to the future value of the workhonse premises.

ASHTON COURT, NEAR BRISTOL.
Consideriable alterations, improvements, and additions have taken place at Ashton Court, the princely seat of Sir Greville Snyyth. The western wing has been rearranged, but the principal part of the works have been concentrated part central portion of the buildings. part has been raised considerably and in a great measure rebuilt, and is surnounted by two octagonal towers, which rise to the height of 72 ft . A clock has also been fixed upon the inner front facing the conrtyard, at au altitude of 56 ft . Between the two towers, on the front elevation and upon the crow-step, is carved the crest of the owner, a large eagle rith angy the head. There is a covered passage runniug the length of the south side of the courtyard, which opens out into the court by an arcading of five bays. The capitals and corbels of these are carved, birds and anmals being largely ned amongst the ornament. The style of worl, hiko tho rest of the building, is Tudor, and Bath stone, of the Box.ground rariety, has boen uscd throughout. Br. B. Ferrey is the architect. The contractors for the whole of the works are Messrs. Herbert \& Frederick Burridge, of Harry Fems, of Exeter. Dir. Thomas Clout. Harry Hems, of Exeter:
maur was the clerk of works.

## THEATRICAT MEANAGEMENT

Sir, -It is diflicult to fiad a medium through which to express disapproval of the proceedings of theatrical managers, such is the connexion setwcen them and the majority of the proteslike permission to address a few prords to the pubbic; but my present dosire is to complain of a dodge practised by the persons managing unde tho manager at Drury lave Theatre. The praelice is, to allow bome hnudreds of persons to pay at the pit coors after the pit is full, and they are then drafted off to other parts of the house at inereased prices, or offered tickets for another night. On Boxing-night, when the uproar became too great to be resisted, the moncy was
returned to thoso who wero disposed to sacrifice their evening in fighting their way to a pay-place in tho lall. The wholo arrange nnent for admitting the public on these occastons, when a crowd is sure to be assembled for what is called the Baleony, no queve is formed, and the fighting and struggling to get tickets, when there is any crowd, often with the loss of watch or purse, rould scarcely bo believed by those who have not seen the struggle. At tho north pit-entrance, nothing would be easier than to form a queve under part of the colonnade, next the wall of the theatre, and so prevent the unseemly and dangerous crushing that always takes place at holiday-time; and yot, year after year, this is allowed to go on This, howerer, is but stupidity: what I am reali complaining of just uow was sheer imposition. A Phagoer,

## FIREPROOF FLOORS

Sir,-As a practical plasterer, of thirty years' experience, I can thoroughly endorse the opivion of your corrcspondent "Y,", and I will give jou facture. The pypsum, beins submitted to the freture. The gypstum, being submitted to the action of the heat in baking or boiling, after being gronnd to dast, and after being ganged, beor sponcy, and when dry absorbs a large porous or spongy, and when dry absorbs a large amount of water; and, upon the appication of heat, steam plosion and calcination.

Wileriar Puetrish.

## STANDON, HERTS

NEF schools have been opened here. Tiwo. thinds of the ontlay being raised by subscription and a grant, the remainder by a voluntary rate They comprise a new school for girls, 42 ft . by 18 ft. ; with lobby, 12 ft . by 10 ft ., built of red brick, with moulded string.courses, and pointed black. The boys' and infants' sohools, with master's and mistress's residence, Were re.
modelled; the brilding of which is balf-timbered modelled; the bwilding of which is balf-timbered bave been erected by the Knights Templar, and bave been erected by the Knights Templar, and
is 105 ft in length. This was covered with lath
and plaster; in removing this, the timbers wer found to be grood old oak, and have been cleaned and oiled and filled in with red brick, black pointed. The boys' school is $3 \pm \mathrm{ft}$. by $17 \mathrm{ft}$. ; with lobby, 17 ft . by 13 ft .; the infants' roo 27 ft . by 17 ft . The works have been carried out by Messrs. Whitaker \& Sons, of Standon. Mr. G. E. Pritchett was the architect. Mr Warner, of Stortford, supplied tbe school desks.

A memorial window has just beeu put in the chancel of the parish church by the Rev. D. D. Sadlier, whose family gravo is at the south sido of the chancel,-the subject being the stoning of St. Stephen, executed by Ward \& Hughes, London,*

MEDIEVAL MONUMENTAI, MEMORTALS. IT is a wise thing, I think, when many of the institutions of this country are in a transition state, to foster a national sentiment, by building imposing symbols of our veneration for the heroic characters that formed so much of that historic worth that shed, as it were, a halo on the present. There cannot be too many of these monuments: they rebuke the ignoble spirit of Hammon worship; they help to nake higher manhood and womanhood. "Jittle Scotland," says an American writer," has conquered the respect of the would by insisting on the claims of its great dead to be for ever remembered." Visitors to Edinbnrgh have for a long time won dered at tho absence of a national memorial to Finox. The discordaut factions of the kirk, awaking to a higher sense of duty, are now seeing the Jesuitical tendency of their sectariar party delusions, and are nniting to honour the memory of John Knox, as the champion of sound principles, after the same manner as tho Pro. estants of Germany have done in erecting a memorial to tho noble Lather and his compeers at Worme. Tho proposed erection of a brouze statue to Jobn Bunyan, at Bradford, showing the great dreamer of two hundred years ago in the style and costume of that day, and a repre sentation of some of the characters in his world ronowned allegory, has at last convinced many a canny Scot, who doubted the propriety of a statuesque Scottish memorial to the great image breaker of three centuries ago, that such an erection, in tho style and taste of Medireval art would not be out of place near tho grave of Knox, at the weat entrance to St. Giles's Chureh.

Within the ancient city's very heart,
T'eeming nith old historic memories rife."
No huge architectural pile can vie in taste with gem of art here as a memorial. In fact, the ite proposed by Dr. Divid Laing (oue of the ew remaining literary friends of Scott) is a the very " lleart of Mid Lothian." Where there is an open space sulficiently hargo mpon which due bronze stabue of knos may stant, heised surmounted prestal on canopy, and having other statues of famous Scotchmen of that period at the base, the whole forming a gem of art, for which prize desigus are wanted.
J.lues Kers.

ST. PETER'S CHDRCE, DRAYTON, BERKS.
THE chancel of this church having become very dilapidated, and having been "restored" some few years ago, and deprived of vearly a its interest, it was deeided last year to rebuil it ; and this has now been done, together with a new chancel aisle on the north side.
The old triplet cast window has been restored to its original position, and the new side windows lave been made to correspond. The walls have been constructed of local wall.stone, the new roof is of pitch pine, the outer stone dressings are of Ham Hill stone, and the roof is covered with the old plain tiles.
The chanoel aisle is of Perpendicular character, to correspond with the northaisle of tbe chureh It is lighted by three-light windows, filled with glazing of tro tints in patterns. The roof is flat, of oak and chesmut, has an ornamental cornice and tio beams, after the manner of the old roofs, and is covered with lead; the tile parements are from the manufactory of Mr. Godwin, of Lugwardine; the stone carving bas been executed by Mr. Farp; and the ornamental iron.work by Mr. Lucy, of Oxford. The architcet

* Au interior riew of this church, as restored hy Mesgrs,
Godwin, will be found in an earlice rolunco of tho Builder,
was Mr. Edwin Dolby, of Abingdon; and the cost, $1,100 \mathrm{l}$.

There are some alabaster figures in this church, which were discovered a fow years ago while dirgine for a vault, and they would well repay a visit of inspection, the church being within an easy wall of either Steventon or Abingdon stations. Tho figures appear to be early fifteenth century work, and represent the betrayal, the scourgiag, the crucifixion, and the entombment of our Lord, also the Adoration and Annmeiation. They have traces of the original colouring, whieh appears to have been chiefly ce, green, and grold.
Huch more remains to be done to this church, and if funds should permit, it is proposed to repair the Lady Chapel, and to restore the figures with a new framework, to what is sup posed to have been their original position, viz.,
the rerctos of the Lady Chapel. the rercdos of the Lady Chapel.
llat schools this village from the designs of the same architect,
and a scheme for building a viearage-bouse is also on foot.

THE IIODGSON MEMORIAE IN BEADDONT CHURCH.

## archeological discoveries

Tee personal friends of the late Mr. Thomas Hodgson, of the Carlisle and Cumberland Bank, resolved to erect a monnment to his memory in the church at Beaumont, his native place. The original intention of the subscribers was to place a new window, filled with colonrod glass, in bome part of the old church, the features of which are very plain and simple, and with it at consent of the vicar it was decided to place it at this object. Birkett, of Carlisle, some old masonry was dis. covered, of carhisle, some old the original east window of a still older church, belonging to the window of astill older church, belonging to the end of the twelfth or leginning of the thirteenth triplet. In the interior the three lights are supet. In the interior the three lights are superimposed by an atcado cxtending nearly of three massive pointed arches, resting on of toree massive pointed arches, resting on pillars with plain capitais and bases. The capt. masonry, which is very solid, -the whole thick ness of the wall being over three fect,-cost $41 \tau$. The south and west walls of the church appacar to sout the wase date as the east window. The to be or the sar whew has orth wal is wourch seass by Tesser Scott een filled wilk colour glass bessrs. Scot ion for the subject The centmal licht contains fir their subjeb. The che ach is a simple inscription.

## ceivable that any heat all affect these bricks.

The foldapar of the which the chief constituent of froms lhe bicks is derived, has lost in the decomposing process the alkalies which maike pare alumina, it with the other chief and, practically, only other constituent of thi
purposes, perfectly infusible. purposes, perfectly infusible. very absortent, and render a haper built of them damp At present this is, doubtless, just, for all the works are aiming at ralking only a good firo brick. An error is
committed in selecting the one which is proved to be the dewt fore brick. It ray be accepted generally that a good
fire brick will make a bad tuilding brick, so far as damp i concerved, and vicc versât.

## SCHOOL BOARDS.

Bradford.-The Works and General Purpose Committce recommended the acceptance of the tender of Mr. B. Dixon for plastering work in the erection of Bowliug Back-lane School, the amount boing 1237. They also recommended
that Mr. Squire Moldswortb's tender for tho erection of schools in Park-lane, according to the altered plans, amounting to 9,8661 ., be ac. cepted. It was agreed to. A resolution was passed autborising tbe Works and General Purposes Committee to engage, subject to the ho erection of schools.
Driffeld. -The seal of the Board was affixed to the contract for the erection of the new schools and sigued by the chairman and by Messrs. Hewson Brothers, tho centractors, a nd the time for completion was fixed for the 21st October. Messrs. Hayton's tender for supplying the heating apparatus to the schools by warm water for 1952 ,., was acceptod. The arclistect in a letter stated that he lad arranged for a clerk
of the works at 3\%, a week. The chairman of the works at 3 a week. The chairman
thought it would not do to pay 3 l a week until they got some hickss and mortar together. Mr. they got some himicks and mortar together. Mr. servicea in the town for less, and Mr. Whitaker considered it rather an exorlitant charge. The architect asked for a cheque on account of his commission of $2 \frac{1}{2}$ per cont. on the contract. The contractors stated that they would at once pro. ceed with the buildings.

## CHORCH-BULLDING NEWS.

Llanelly.--The foundation-stone of a new English Church has been laid in Goring-road, Lianelly. Tho contractor is Mr. Thomas
Williams, of Llandaff. Tho newr edifico is named Williams, of Llandaff. Tho new edifice is named All Sainta' Church, and is estimated to cost from Mr. Rees Goring Thomas, of Llannon.
March. - Active progress is being made towards restoring and altering St. Wendreda' Church. The removal of the north gallery support the buildinge on that side. pilars which window at the west end, formerly lidden by the gallery stairease, is now fully exposed to view Some of the pews have been taken down, and open benches substituted in their stead. A now
pavement of Minton tiles is to supersede the present flooring of flagstone, the south gallery present flooring of flagstone, the south gallery built, so as to correspond, in an arohitectural point of view, with the rest of the buitding floor for the belfry, a new door for the pringipal
for entrance, a new pulpit, reredos, anà Lord's table are also in contemplation. All monuments and memorial stories which may be interfered with in carrying out the proposed alterations
will be re-fxed under the dircetion of the Rev J. W. Green, Rector of Mareb. The plans and specifications are to be prepared by Mr. William Smith, architect, London. Altogether, the esti. mated cost of the work is 4,t00l,, which is to be raised by voluntary suhscription.
Glossop.-The foundation-stone of a new churcb for the district of Madield, in the borough o Glossop, has heen laid. The new edifice, which dedicated to St. Audrew, is estimated to cost promised wich 1,500. bave been contributed on with a spire 60 ft . high, and is calculated to acconmodate 500 persons. The architect is Mr. Medland Taylor, of Manehester. Oxford-A new tower and spire, 160 ft . high Christopher, of London, is thete's Church. Mrr Symm, of Oxford, the builder, and the wort has already heen commenced.- The spire of all Saints' Church, in this city, being in an unsafe
condition, preparations are being made for takin a portion of it down.
Trinity, being a district new church of Holy Trinity, being a district church for the hamle of Peuge, has been consecrated by Bishop Claughton, acting for tho Bishop of Winchester Accommodation for 1,000 persons is provided in the nave and aisles. The chancel is groined in brick with moulded stone rihs. The facings, both internally and externally, are of red brick the dressings being of Bath stone. The work including the first stage of the tower, bas been carried out by Messrs. Dore Brothers, at a cost of $7,000 \mathrm{~L}$, nnder the superintendenco of Messrs. Newman \& Billing, of Soutbwark, architects.
Oclley.-The new church of St. Jobn the Evangelist, Ockley Green, has been conscerated by the Bishop of Wincbester. The architect was Mr. G. R. Clariee, of Bedford-row. Tbo edifico has been erected to meet the needs of tho southern portion of Ockley, and consists of a nave, 53 ft . long, and 24 ft . wide, with a north porch and cbancel, 24 ft .6 in . long, and 18 ft . wide, witb a veatry on the north, and an organ. chamber in the south side, forming a cross in plan. The accommodation is nominally for 20.4 but 220 can easily bo seated. The walls are of rickwork, worked fair inside and out, 12 ft . to the springing of the roof of the nave, and 15 ft . in the cbancel. The windows, crosses, \&c., are of Bath stone. The general character is Early English. The ridge of the roof runs throughoout in an unbroken line, the division of the nave and chancel being marked by an open bell-turrot,
roofed with oak sbingle. There is no chancel roofed with oak shingle. There is no chancel arch in the ordinary sense of tho term, but brick piers and stone corbels receive an ornamental The cast window is a three-light lancet, onclosed The east window is a three-light lancet, crolosed with label and crosses. The west "wiudow is a fonr-light plate tracery one, and the:nave windows are tro-light, square-headed, with corbels. The xoof is all opon, with eight framed principals. The font is octagonal, a clnstered shaft, witl capitals of water-lily, carved by Mr. Purday, of London. The seats and stalls aro open bencbes, with plain ends. The flooring is of Godwin's Lugwardine tiles. The work bas heen executed by Mr. John Ansell, of Ockiey, builder, at a cost of about $900 \%$. All fittings and ex peuses included, the total cost of the mnder taking will be nearly 1,2002 . This, with the exception of four donations, amounting to 340 l . Laverved by the rector. A window, by Messers of the, Barraud, $\&$ Westlake, on the north side by parishioners and frieuds. The east window, shortly to be inserted, will be the result of a memorial fund. The lectern is of oak, carved and is the design and in great part the execution of Mr. James Ansell and Mr. Kett, who jointly presented it to tho church
Bradford. -The new chnrch erected in Hall ane, Ripleyville, Bradford, has heen consecrated hy the Bishop of Ripon. Twelve years ago an
association of churchmen in Bradford determined association of churchmen in Bradiord determined to erect ten new charches in neighbourhoods This the borongl where they were required. Clisis church, Which is dedicated to St. Bartholo. mew, is the ninth that has been huilt, and is Hardy who as a memorial of the lateMr. Charles the origio was president of the association and difice The buildiug contributed by desioned and executed from plans prepared by Messrs. T. II. \& F. Healey, of Bradford, and forms a feature in the locality in which it is situated. It is in the Gothic style of architecture, and stands upon an eminence. The structure is composite, the exterior walls being of stone, lined in the interior side pressed brick. The edifice consists of nave, is 86 ft . long by 2 l.ft ride, and 50 ft from to ceiliug. The chancel, which is garnished with apsidal terminations, is 41 ft .6 in . long and 23 ft wide. The Hardy Chapel is on tho north side. There are two restries on the south The principal entrance is by a porch at the highhe principal entrance is by a porch at the sonth. a flight of steps to lead to the somewhat high fre of the nave floor. The nave is divided into ire bays, witb circular stone columns and moulded capitals varying in design. The arches, hand-pressed brick, with bands of coloured brick and stone. The west end has four-leaved lance windows, surmounted by rose windows in the fables. Between the lancets is an elahorate niche for a statue of the patron saint. The end of the
chancel contains three large lancet-windows, and on the other side is an arcade pierced with windows. The turret, which is partily completed, occupies the south-west corner of the chancel, and in the absence of this feature the building somewhat incomplete; but that part will onbtless soon be added. There are open benches of red deal, slightly stained and varnished. The passages of the nave are pared with ordinary brick and red and black tiles; bnt the chancel pavement is more elahorate. The stalls are of oak, and the mpper part of the pulpit and the font are of Caen stone, designed by Mr. Mawer, of Leeds. The lower portion of the chancel wall and part of the nare are intended to receive mosaic tiles or frescoes instend of their present lining There is bross ealo lectern The chancel is lighted by polished brass standards, and the nave by standards of wrought-iron, There are sittings in the church for 750 people, and the total cost will be shout 7500 , this sum 1,8001 . have still to be raised.

## SCHOOL-BUILDING NEWS

Stafford.-Tho Wésleyan now Sunday School has been formally opened. The building is 51 ft long by $40 \frac{1}{\mathrm{f}} \mathrm{ft}$. in breadth, with a small yard and ont.offices on tbe side nearest the gas company', reserve gasometer. It is a somowhat plain brick Trentbam. Trom designs by Mr. T. Roberts, of Trentbam. The Committee's aim to make the erection useful and convenient rather than ornamental has been carried out. On the ground floor are two rooms, 17 ft .6 in. by 13 ft .6 in . for semior or adult olasses; a large infant class. room, with gallery, $40 \mathrm{ft} .6 \mathrm{in} . \mathrm{by} 20 \mathrm{ft}$.; and two other class-rooms and library, each room heing 12 ft . high. Tho largo room, extending by the whole of the rooms beneath, is entered by two flights of stono steps, - one for the boys and the other for the girls. The roof is light and lofty, tho principals and parlins being oongthened with tie-rods, painted blue. The portio well lighted by 19 windows, the principa Leyton, of them having one of Stock Bros. \& rentilationatent glass loarres, and additiona six gas pendants, each haviug nino jets, afford ample light for the whole room, which is the most spacious in the town. The cost of the building, including the laud and internal fittings, has been fully 1,300 .
Leighton.- The committees of the Boys' and Infants' British Schools resolved to supply the educational deficiency of Leighton by building a new girls' school of tho requisito dimensions, to comply with the requirements of the Education De partment. A deputation from those committees, aving, in the first place, waited apou the com mittces of the Pulford and St. Andrew's Schools, ave now attended conferences of members representing the Wesleyan, Baptist, and Primiive Methodist bodies, for the purpose of ascer daining the general public feeling upon the question. The school will be of an undenomina. tional claracter, and subscriptions have already
been promised. been promised.

## variorem.

Tre first number of the TVorman's Maga zine, edited by Mr. H. Solhy, has been published. We shall have to see more of it before we can say that it is likely to supply a want. At any "The Gentleman's Annual," being the Christmas Supplement to the Gentleman's Magazine and containing a review of the year-its politics literature, art, sports, and so on,-is above the average, and makes a little book that will no be destroyed. - The Temple Church, London Mr. Thomas Goodman announces the publication hy photo-lithography of a plan of this church, as the first of an intended serics of acenrate down to down to us from the Order of Knights Templars.

New Gallery of Piue Art at Brighton. The opening of an oxhihition of pictures, lent
for tho occasion by Mr. W. Webster, of Brighton is about to take place. The exhibition contaius some choice works, and, says the local Herald, may be said to represent the preseut adrance of the English school of art better than any collection that has ever appeared in Brighton,

## 解tiscellanca.

Down by the rhames.- Ifr. Dillon Croker, continuing his interesting sketches in the Southe
Iondorn Press, writes:- At the corner of Lonion Pross, writes : - At the corner of
Cremorne-lane (formerly known as Hob-lane) stands the TVorid's End, as noted house of enter. tainment in the reign of Charles II., and mentioned by Congrevo in his oomedy of "Love for Love." Wo read that in 1825 tho sign was represented loy a fractured clobe in a dark background with fire and smoke bursting through the rents. The third turning on the right leading to the river is Milman-street, known until lately as MCilman.row, so called after Sir William Milman, who died in 1713 (his monnment is in the old churoh), and who had possession of the estate for some years. It has quite lately with much reason heen changed from row to street, which it really is. Beaufort-strect, a strect facing Battersea Bridge, was some years ago similarly renamed. At the north end of Milman-strect (18, Kings-place), and forming part of tho King's.road, adjoining the entrance to the Moravian Chapel and burial-ground, might have been lately seen the clock placed by Mr. Howard, a cleckraaker, in front of his house; whenoc the name of "Clock House," as gencrally applied to whioh stands on the site of the old stables of Beaufort House, is now occupied as a schonlroom ; the burial-ground attached, some two acres in extent, contains many curions tomb. stones, including that of an Esquimaux Indian. Here, amongst others, James Gilliray lies buried, the rather of the celebrated caricaturist, and for forty years sexton at this cemetery. Facing the
Thames between Milman-street and Battersea Bridge is Lindsey-row, the principal portion of which belonged to Hyde, Earl of Clarendon. Here, pleasantly situated in front of the river, stood Lindsey House, erected by the Earl of Lindsey in the reign of Charles II., and subsequently inhabited by some members of the Moravian Society. It is now divided into five honses, in which several celehrities have resided; anuongst others may be mentioned Brunel, the originator of the Thames Tunnel; Bramah, the distinguighed engineer ; and John Martin, [not] R.A.; nor shorld Jennings's interesting muserm he overlooked. In a house facing the river, in the direction of
Turner, R.A., died in $18 \leq 5$.
A Norwegian House.-A Devonshire gentleman has imported a wooden Norwegian house. The Times, in an interesting description of it, says:- -The walls are made of pine wood, about 6 in. thick, the interstices of the logs being filled with oakum, and the whole surface heing plastered with a mixture of cowhair and lime. Outside the main wall there is a shell of wood, which is protected with paint against the action of the weather; and again inside there is another shell, which serves as a panelling to the rooms. By staining and rarnishing this, a good effect is produced. The cornices are carved, hy the nse of tho riband sam, in devices of exceltent taste. Neither paper for the wolls nor plaster for tho ceiling is nsed thronghout the house. The logs are placed vertically, which prevents the nnevenness so often to he obserred in the woodwork of English honses. To avoid the resonance, dry sand to the depth of 4 in. is placed hetween ceilings and floors. In addition, the floors of ${ }_{2}$ both stories are laid with deals, 2 in. thick, and millboard is placod under each, witl the effect of thoroughly deadening all sound. The house, which presents externally the appearance of $\Omega$ handsome villa residence,brighter, indeed, in colonr than we commonly see in this conntry,-is an oblong of abont 74 ft . by 56 ft . The total cost will be soraething under 2,000\%. The estimates previously obtaine for a stone house containing ahout the bame amonnt of accommodation, had reached 4,000 l. extras not included.
The War Damage to Strasburg Cathedral. The official report of M. Klotz, architect to the Cathedral of Strashrgrg, states that the cost of reparations rendered necessary hy the Prussian bombardment will be 598,000 francs. A quarter of a million of franes is required for the stone-work; new roofs, 187,000 france ; repairs to the painted windows, 143,125 francs. During the twenty-four days' homhardment, the cathedral was struck in more than 300 places, and the debris amonnts to more than 300 cartloads.

The Monument at Hughenden to Mr. Isaac Disraeli.-One of the most graceful compliments ever paid by a wife to her unsband, monument to Mr. Disraeli's fither, by the of Visconntess Ber. Disrae The idea by the late $V$ iscountess Beaconstield. The idea was entirely to Mr. Disraeli. The deceased lady took an intimate friend of the family into her confidence. An architect was consulted, and after due con. sideration his design was approved. Tenders were privatcly obtained, and a suitalle site upon the cstate was discovered on a hill, within view of Hughonden. As soon as the statesman and opening of Parliament worke beran pare the foundations. If Mr. Disraeli had returned to Eughenden for the Easter recess, the secret wonld have been discovered. Lad Beaconsfield was equal to the occasion, and filled tho louse with house-painters. All throngh the spring and summer the work went steadily on, intil, in August, an obelisk of 120 ft . or 130 ft . high had reared its lofty, varied, and graceful outline against the horizan. When the prorogation enablod husband and wife to return to thei country retreat, the snrprise of Mr. Disraeli may be conceived. The obelisk, snirounded by a palisading of stone pillars and iron rails, cost the deccased lady upwards of 600
Report on the Kealth of Marylebone. -The November report, by Dr. Whit. more, medical officer of health, and chemical examiner of gas for the paxish of St. Marylebone, has bcen issued in a printed form by order of the vestry. It shows a sligh incrcase npon month, bat still indicates a very favourable stato of the health of the parish. The excessive stain fall that had taken place during the month ond the constantly-recurring storms of wind, es well as of rin have had the effect of thoroughly cleansing and flnshing the sewers, and forcing currents of fresh nir into many foul, ill-veng lated conrts and alleys, and thus, as it were driving fever and infection from their forourite lurkin $\overline{\text {-places: }}$ : neverthcless, it is apparent that, owing the excessiveh midity of the atmosphere and the universal dampness that has olung to everything around, an unusual aracount of sickness and mortality from diseases of the lungs and hreathing organs has latterly prevailed. A greatly-needed improvement in one of the poorest parish has been suggested by an eminent member of the vestry, and will shortls he brourner the consideration of the Board. It is proposed to make a direct thoroughfare from Upper Lisson-streot throngh Littlo James-street into Salisbury-stroet

Cheap Gas.- Sinee the discovery of petro lennt, the improvements in all sorts of machines, and the discoverics in chemistry, we have ofton problema of applying ohcap gas to country-houscs, or to buildings situated at a distance from the cities. This, it seems, has now been accom. plished. A patent has just heen obtained in France, and in the United States for a new apparatus for making gas at home, even in the roinary apartments of cities, and so far as we an seo it is a complete success. The gas is in. explosible, its price is very low, and the whote In fact, the emparatus occupies a space of ouly one mètre in lenoth and 50 centimètres in hreadth and height, and can be placed in an ordinary capboard. The advantages are-1st. The ab. ence of all danger of explosion, , Economy 3rd. Tho instantaneous prodnction of a brilliant light. The new system is said to offer a great economy upon all other modes of lientive but this remains to he investigated. Nevertheless, if the cost he a trific more, the gain in con. renienco will amply componsate for it.-Th

## A Terrible Railway Accident in America

 A terrible railway accident has occurred in The train broke throngh a hridge near the tow of Corry, in Pennsylvania, having, we presume heen thrown ofi the line by some accident; and the bridge donbtless was of frail construction, choaply and quickly pat together. The car the fall took fire Some nineteen or twent persons were barned to death, besides nbout forty who were more or less severely injured.Scientific and Mechanical Society, Man-
Scientific and Mechanical Society, Man-chester.- The opening meeting of this society has been held at the Trevelyan Hotel, Corpora-tion-street. sir W. Fairhairn, bart., the presiremarks he said, he did not thisk it conld be dombted that from the want of sound and firstclass cdncation azoungst the better class of mechavics and artisans we wero getting behind. We ought to take the lead, as we had done for a great number of years. Hc believed that if a better systern of edncation was estainhe so that practical there the wo bo cher the wice servise mob men the wo possess at the present time me w Herm propeci, "That the ofliers and H. who for prot bo counci on the inquiries into physical science, so far as it Reynolds proposed, "That similar investigations Reynolas proposed, $r$ lac sumin but more partionlorly in those departments but more particularly in those departments hinch rclate to gases, smpply of water, and seconded by Mr. J. O. Edwards and Mr. C, J. Allport, and were passed.

## Typhoid Fever at Birmingham. -The

 alarming prevalence of typhoid fever in the district of Balsall Heath and Moseley, subarbs of Birmingham, has led to the holding of 2 public meeting of the inhabitants of Mosceley. Ihat was stated, on eminent modioal authority, the four hundred heurly which are comprised in the district of Moseley, and that there were at least thirty cases in Balsall Heath, the district adjoining. Fresh cases were occurriag every day. The sanitary precautions were character. ised by fleading local surgeon to be as defective as they could be. There was no drainage worthy of the name, and the cesspools and member of the local sanitary anthority was present, and defonded the course of action taken by that body. A resolution was adopted by a large majority, appointing a committee of residents to deal with the matter, and directing that a memorial be forwarded to the Secretary of Staie, praying for a special commission to inquire into the bad drainage of Moseley. A guarantee fund was sulscrabed, and aRevedes, Littleborough Church, near Mancliester.-A reredos has lately heen erected in this church by two friends, Mr. Edward Alfred Clegg, and Mr. William Law, of Littlehorough, as a memorial to the late Vicar, the Rev. Thomas Carter, M.A. The central feature comprises five panels, the middle one wider and more lofty than those at the sides, as well as heing onsped. The hrass altar-cross to the present church being of good design has the panel behind it has been mado of white alabaster landed with creen Connemara marble, the spandxels being of mottled alahaster. The emhlems of the four Evancelista, enclosed in emarems parels, are carred in white alahaster. The shafts carrying the arcade are of Deronshire red morble and there aro likcwise ten inlaid patere of the same material in different tints. pateras of cial mainly employed is Caen stone. The total cost has heen about 150l. The worl hes minster; Mr. Edmund B. Ferrey leing the

A Pestilential Spot.-When a fifth part of thic entire population of a place are stricken down with typhoid fever, there must be something abomizably fitthy abont the water-snpply and drainage of the locality. On the 4 th of Novemher
last, 250 out of the 1,200 inhalitants of BurtonLatimer, in Northamptonshire, had been attacked by the pest. Tho Locel Goveroment Board directed Dr. Tharne to invectigato tho
circrmetances connected with tho onthreak. He found a really disgusting state of things ahoumd. ing in the village. A large numher of wellsfor the water-supply of the place comes from shallow wells,-which were absolutely unit for ase. The sewerage and drainage of the place are extremely defective; filth and fouthess collect in the defective chamneis which are, by a stretch of the imagination, called drains. There are in Barton-Latimer a host of piggeries, and much overcrowding to make matters worse. It is to the recommendations made to the sanitary authority.

## (a) he Builder.

VOL XXXI.-No. 1562

Eelfries and Bells.
we were asked to name the most charactoristic external foature of a Cbristian Churel, should feel disposed to accord that titlo to the belfry. Tho cruciform plan, indeed, may be regraxded as generally, though not exclusively, Christian. But it is rery far from being a universal featme. Indeed, in the most ancient bistoric form of the eburch, tho Basilica, this arrangemont of plan is absent. When a modern Christian architect, whose genius is as lofty and as sirbtle as that of our own immortal Wren, strovo to consecrate the antique Pagan forms to tho service of the modern Christian rite, ise could, indeed, produce a magic effect by the intersection of his vaulted aisles. Yet the idea of a cruciform structure, not aceidentally, but purposcly, planned in that form, does not force itself on the mind of tho visitor to St. Paul's Cathedral. In St. Peter's, and, indeed, wherever the form of the equilateral, or Greek, cross is adopted, tho association beeomes still more shadowy. In feet, wherever the great Oriental element of the clome is developod at tbe iutersection, the cruciform plan fails to lay hold of tho attention. Xou may see that tliere are lateral recesses, or star-pointed distances, to the great, lofty ecntral hall; but that is a very different matter from the regular association of nave, choir, and trausepts.

Agaiu, the oricntation of our churches, which is spoken of as a Christian custom, has by no means exclusively, or cven distinctively, that character. Orientation is twofold, both in its arimuth and in its siguification. There is the alignmont directed on the East, the true cardinal point, and tbere is that which cuts the suncisepoint on a given day; often that on which the Romish calondar commonorates the saint, after whom, in superstitions timcs, the church was subordinately named-nuder his invocation, to uso the technical phrase. Not unfrequently theso two lincs are ropresonted in tho same church, in nave and chancel, to tho great confusion of arohiteetural elegance. But orienta. tion is common to tho temples of the East, and to many of those of Greco. Exact afignment in arimuth is an astronomieal characteristic of the Great Pyramid, in tbe sites of which a minnte deviatiou from tho true meridian of 4' $35^{\prime \prime}$ seens to measure the displacement of the poles of the eartb that bns occurred dnring the long period of 5,400 years on which that colossal tomb lias looked down. Oricntation, again, as definiug a kobleh, or prayer-point, and thus pointing to Jernsalem or Mecea, is common to the synagogue and to tbe mosque. Little praying compasses are to be met with in the bazars of the East, which indicate not the north, but the east, and tell tho devout pilgrim in which direc. tion to turn his face at the appointed hours of morning and evoning prayer. And we find the
|sunrise-line of the summer solstice structurally indicated in our own magnificent Stonebenge.
Bat the belfry is a structure wbich is, on the ouo hand, almost exelusively connected with buildings of the Christian rite, and of whieh (since our meeting-honses bave became things of the past, and noneonformist sects bave ceased to hido their modest chapels in holes and corners, the obscurity of whieh was only too welcome in the days of by-gono perscention), there is scarcely a place of worship so poor that it does not show at least the homologue or the symbol. The noarest approach to the belfiry may be found in the minaret. But tho sound puinciple of "parpose defining form" comes in herc to provent coufusion. The belfry, whetber it be tower, turret, or steeple, is an arcbitectural feature origizally concoived for the suspension and the housing of bells; a lofty aërial structure, giving shelter from storm, and from direct sun rays, and pierced with free apertures, from which the melodious voices of the chimes ring out loud and clear, and the full dcep tone of tho bourdon may measure forth tho hours, by might as well as by day. The miuaret, on the other hand, is essentially a lofty turret, crowned with a projecting or open balcony, whence tbe shrill voice of tho muezzin may be beard calling on tho faitbful to pray ;a relic, in the stem refusal of mechanical means to perform, or to call to the performance of, a rcligious duty, of some of the loftiest dootrines of an anciont creed. The differenco between accommolation needed for the bell, and that proper for tho ericr, is so great, that no confusion can arise betwoon tho forms proper for cither of the two.
In the Temple at Jexusalem, before the timo of Abaz, cxisted a feature which appears to have borne a relation to those outposis of tho watchers against time of which we aro speaking. It was called the Covert of the Sabbatli; and is beld to have been the station wbeuee the appointed Levites might watch the settiug of the sun on tho cre of the Sabbath, and send forth those three pecaliar trumpot-notes, the blast, the long noto, and the blast, by tho sixfold repetition of wbich the commencement of the sacred day was announced to tho city. A uatural tower on lofty wall, scarped in the solid native rock, at tho north of the great Temple platform, nbove which it still rises sbeor for more than 30 ft. was probably left in this unusual form for the base of tho Covert of tbo Sablath.
The dome is not a belfry; nor is it readily to be combiued with one. Tho purposes of the two arcbitectural features are too distinct to admit of satisfactory fusion. The dome, formed in antique structures by overlapping stones mecting finally in the centre, has gradually rison in modern use from the flat, aud then slightly vaulted, roofing common in thoso countries where snow never falls, where shado from the sun is a more needful luxury than exposure to his rays, and where all the water that comes from heaven is stored as a precious gift. Supported, in ordinary cases, on joists, or rather on rougb loge of timber, in more substantial build. ings the roofs are actually formed of flat arches; built of tufa, in districts where this light rolcanio stone is available. As a structural expedient, ratural to this condition, tbe centre of the arca is first slightly cambered; anon it riscs as a sort of shell; then expands into a bubble. The architectural effect thus produciblo was seized upon by some far-sightod genius, who raised the exquisito form of the dome on a pillared drum, and thus added a special bcauty, at ouce to the external elevation, and to the solemm reposo of the interior, of the building thus adorned.
Thero is, indeed, another theory of the genesis of the dome; that is, from tho roofing of a towcr. The ordinary gable roof, when applicd to coser a circular building, bccomes a cono. From the cone to the crpola the transition is not rery far-fetched. But, familiar as we are
with cupola forms of tow ors in the countries bordering on the Mediterranean, we still bold that it is from the flat roof that the dome has actually originated; that it attained its beauty under Saracenic rule; and that the cupola forms of Italy are reflected from an Arabic tower; and are not the direct doscendants of the cone-roofed turret, whicb in some districts, as in the romantic valley through which one road from Castelam. mare to Salemo leads, may be found side by side with them.
Another form of sheltered turret may be named, but it is one which has bad no discernible infnence on oeeidental architecture. Wo refer to the pagoda. Tho hollowed, pointed forms of tho roofs and verandalis of this Oriental type of towers evidently simulate the droop of the textile fabric, umbrella or tent, which preceded tbe roof of solid materinls. This tent-like form is an ontline equally distinet from the level roof, from the gable, and from the cupola, or itg development, the dome. But though the paroda does not appear to bave been the lineal aucestor of tho belfry, it was at least its chronological prodecessor: The angles of theso buildings are often adorned with bells. Bells wero used by the Clinese as much as 4,000 years ago; and the mention of them as dividing time for pulblic information, is 600 years anterior to that of the goldon ornaments to the vestments of the bigh priest, in the Pentateuch. These precious bells were probably like those used for borsccollars in Italy, and for children's corals in England : hollow globes witb a slit, and a looso clapper euclosed. The sound of these, if mado of gold, must have been extzaordinarily sweet. Tise gong, whether older or later thau the bell, is an instrument of much nusioal power. Wo must not omit to mention the fine tones producible from steel bars.
Leaving aside the eupola form as a foriegu product, bardly naturalised among us tho glorious instance of St. Paul's serving as an exceptiou to prove the rule), the Chistian character of England may, as a gencral division, bc rauked under the head of those furnished with towers, and thoso adorncd with spires. Of course, there is a wido border-land, where tow or and spire march, or whero wedlock of all kinds, happy equable union, or disproportionato and ridiealous bondago,-is illustrated in structoral form. Watford Church, Herts, and somo otbers in the same county, may serve as examples of the latter. On a large tower, wbicb a certain massivo solidity might reuder respectable by itself, is perehed a sort of ciminntive extin guisher, the design of which is one of those mysteries which it is cqually hard and useless to solve.
The origin of the tower, there can bo little doubt, is military. We are not preparcd to state that the distribution of the tower chnrches in England marks districts formerly exposed to the ravages of the Daues, or specially liable, from other causes, to constant danger. The topographical likencss of our old churches is so marked,-certain features are so local, so charac. toristic of a particular district, -that tbe detection of their origin cannot be beyond the reaci of intelligent investigation. But a solid, substantial fortalice, in which, first, the clergy, and then the immediato parishioners, might find refuge, and from tho summit of whiel they might both watch against attacks and give signals of distross, is, both in Eugland and the Low Countrics, the historic reality of many a church tower.
The spire is scareely debateablo as to its origia. Its growth from the ligh stono roofs of towers of the tenth and elerenth centuries, as seen for oxamplo in Normandy, to its colmination in Yienna and Frciburg, is plainly shown. The idea of its beiug a finger-post, pointing heavenward, is perhaps something moro than mere fancy.

It must be coufessed that in the act of horre ing and of ringing bells, we hare hitherto gained
but littlc from the adrance of mechanical know but littlc from the adrance of mechanical know-
ledge. It seems to be taken for granted that to ledre. It seems to be takeu for granted that to
produce a pure full tone from a bell, whatever produce a pure full tone from a bell, whatever
be its weight, it must be swung. Tlat is to say that the cup-formerd mass of metal, hung at lofty height from the ground, mast be rocked until it swings through a semieircle, with its mouth quite rertical, while the impetns with which the freely-moving clapper, suspended
from the bottom of the cup itself, strikes the from the bottom of the cup itself, strikes the inside of the bell, prodnces the desired tone.
And if we compare the tone of a bell thus runce, And if we compare the tone of a bell thas runge in place, and struck with a hammer on the oulside of its rim, the dull, hoavy, odious sonnd thas produced seems to teatify in favour of the assertion. But that while first, the application of springs, then the use of rails, and thirdly the invention of steam power, have laised our rate of trayel. ling from $2 \frac{1}{2}$ miles to 25 miles an hour, it is
rather too bad that the mechanics of so checrive rather too bad that the mechanics of so checrivg a description of pablic music as that which we may derive from the belfry should lave been almost entirely neglected. The hanging of bella has proved so destructiva to our belfries as very seriously to discourage this onee favourito source of melody. In St. Alban's, for instance, before the late repairs of the abbey, the fine peal of bells had not been rung for years, if we remember lightly, not for centuries, - for fear of bringing down the tower. And this, it is very
likely that they would havo done. But the likely that they would- haro done. But the
danger consisted, not in the pure, full tones that might heve been cduced from tho bells, but in the chmay, rociprocating action of the ringing, by which the whole weight of each bell was mado to act as a hammer on the benms on whicb it was suspended, and thus on the masonry of weight is concerned, reciprocating action has a rery destructive efliect. One main reason why wo hare as yct realised so little of the mechanical bustion of a given quantity of coal in our steamengines is, that we haro not jet succeeded iu obvinting the reciprocating action of the piston. Mechanics have long instinctively perceifed this fact,-although tho construction of is rotary steam-engine has hilherto bcen as uuattainablo as the plilosopher's stone.
There can be no doubt that the mechanical skill of the present day is snch as to enable us
not only to give such a blow to a bell by an unconnected clapper as sball produce the same sound as that obtained by the process of ringing, but to do something more. It mould be possible to institute such a series of experiments as to the relative weight of bell and clapper, and the velocity at which the latter should strike, as should cuable us not only to rival, but very far by the most skilful ringers. When we remember that a bell, according to the part of it which is struck, will emit a third, a fifth, and an octave possible that by the uso of more than one hammer to cach bell an effect something resembling tice double-stopping of a violin may be produced, adding wonderful richness to the sexial harmony. Improvemaent in bell machinery Messrrs. Cillet \& Bland, of Croydon, have applicd to a set of Belgian bells at Boston, Lincolushire, spoken of as highly satisfactory
Old-fashioned carillons, 1ung by the rude and simple machinery of a barrel, pins on which pull wires that nove the hammers that strike the bells, exist in the two churches which we have named, those of St. Albon and of Watford.
There is a cortain music in the sonnd. But those There is a cortain music in the sonnd. But those who are familiar with this part of the country chimes, which leads to the expectation that cach note struck is the last that will be audible. How far this depends on actual toue, as pro duced by a fixed hammer, and how far on the defective character of the machinery employed, wo cunthot now decide. At all events, we freely to those which are rung by the best ringers. But we should compare tho resnlts of very old and imperfect machinery, not witl the best, but
with the rudest, manual wrork. No reacora exists for doubtine that meolaniem may nttain a per. fection of performauce in the way of extractint music from bells far in execss of our present experiezce.

With the rolaurn to a mectanical mode of producing lulusical notes of the flight of time, the true cbaraoter of the spire, as affording the best form of belfry, will become more evident. The gracoful finish of our churches will then bo graceful finish of our churches will then bo a queetion no longer. When the destrnctive effect of onr present barlarous mode of producing sonnd from our bells is done away with, they may advantageons!y hang tier upon tier, utili lising for their abode a space wbich is now preserved solely for its picturesque effect. Nay more, the music of the chimes would bave im parted to it a new and peculiar beauty from the arrangement of the bells at levels proportioned
to their sizes. We all know the effect of the to their sizes. We all know the effect of the
voo angelico or von calestis stop of auch an organ as that at the Albert Iall or the Alowandia Palace; and are aware that, part of tho sur prising beauty of their tones depends on the ofty elevation from which the pipes utter their voices. Thus, when the shrillest treble of tho bells comes down npon us with a sharper and more earthward inflesion than the ribrations of the deeper-toned members of the choir, an istogetliel neglected. If any lingering in tim should be perceptible from the incrased dis tance to bo trayelled by the sound, this can be allowed for in setting the earillon. Thus, our steoples will be at once more graceful, as pierced
aue jour, and choral, as well as srmbolic, foatures aus jour, and choral, as well as symbolic, foatures of tho Christian Churclı.
A nusician who touches on no topic that he does not adorn; whose industrions bonesty in
searching out all the truth of any subject that he takes in laand, and then in atating lis results, Thaterer they may be, is perhaps unique,-tbe Rev. I. R. Hameis, in his charming work colle "Music and Morals,", hasgiven us a chapter on "Bells and Belfrics," which we should be glad the famous old belfry at Tourmay, which dates from the twellth century, and is built on a
Roman base. It now contains forty bells. Fon Roman base. It now contains forty bells. Four brothers reliere oue another in constant watch within the watcher's rance of vision, the forcat bell is at once tolled in alarm. On stormy nights thia aierinl and illuminated watch-tome rocks like an occan lighthouse. On the highest aecessible part of tio spice of notio Dame at Antwerll, which riscs 403 ft . from the base of the tower, as well as on that of the Cathedral of Strasburg, 46 ft . abore the lerel of the sca, (though less in structural lieight than its sister Non sunt ionc he has stood to listen to the bells. voccs eomem, is the hequtifully appropriate nott on a bell in the towel at Antrerp, cast in 1658 . From the marble Duomo of Milan, "oter all the pagna whicli' somo of us mey ret see blossor with the rose, from the towers of Ghent, Brussels, aud Louvain, over the canal.cut low heardies; these sacred songs without words are Haweis may vell ask, ighty music. Fhy, hir Salisbury? $\Delta$ day or two since, in ono of those quaintly-built ank? quaintly-named courts that oyous paal of tals and church, burst on the ear with nnexpected melody. The peal still rang on, when we had gether drowaed loy the yoar of the traffic
We must add one word as to the bird tha generally presides over the belfry. Pereled on corneriest spire, of furnished with a roost on a of a chanch tower, is usually to be seen the ineare of the cock. Displaced by the invention of the clock from lis time-honoured station of the measurer of the nicrit watches, to the bird of sationg has been committed, as if in compenhe me the duty of indicating the direction of cook ind. It is often said that the weather hardly, howeyer, bo zelected to do honour to that apostle. Neither is it limited to, nor alwars present in, ehurches called after his name. It is aher, we thule, a relic of the estrone renera in wheli Chanticleer was held in antiquityAstada of the $T$ like by Grecian fabies, and by the knowledge of time, and his energetic and foith ful pertinacity in communicating that knowledgo

## THE ROV'AL ACADEMY AN゙D ITS OLD

 MASTERS.In undertaling to sapply the loss occasioned by the withdrawal of the bestreatemed farour of the British Institntion (when it resolved to sleep the sleep of the just-or unjust, so far as the loud cry of modern masters would lend to belief), the Royal Academy organised,-for the magmicence of its scale made it quite a new hing,-such an extibition of the basis of their own position as the works of the oid masters, associated with works of deceased masters of the British school," could by grcat means afford, it was a task. Thero were no such collcetions ever scen in fondon berore, as tho thee years un of them at Burlington liouse has made for a courec. The Royal Academy has run a winning race, and with the usual resil, monost thank rom thoso who hare gained most by it.
The catalogue, as betore, very advisedy gives he notice of pictures being placed under their furnished designation. If England were as rich in add picture-treasure as the additional help of Rome, Florence, Bologma, Munich, and tbe Hague ogether, could make it, the product of the mine would mot be a groming one. If kind worde vere nenty as sarce, chen, as tho real calle for the use of them appear's to be, the Royal Academy would be very minch entitled to gratitude from all who can value rimhtly a great service, for the nagraificent displays by which it has done so much towards imparting to the multitude knownledge that hitherto was tho privilegre of the few to attain, of what is best worth teaching and wortli most lcarning from old masters. Pen and pencil will record the time-beats of cirilisation mulse to show its health or weakness up to the ast hour of its existence, and the grandost trongest bnildings, as if they were i:s bones rill crmmblo then. Life, indeed, is as nearly dependent on Art 0.3 on Nature, and the fine art havo a much wider and higher mission than tha of aduinisteriag to epicurean gratification, or of confining thoir beneficent influences to the re fing of alread $\bar{y}$ refned minds.
The fourtl of these anmual Extibitions of works by the old masters-somo native, bo ran winh the best of them, -should bo seen by orery one. They may bo likened to the old feasts or legend, whercat the skull presided; for ther may not be many more to follow for those rho enjoy them now. The tinge of sorrow the roverb makes the necessary associato of all pleasure, will not fail those who mnst think this source of delightful instruction not inexhaustible. dillions of eres have opened and closed on this trine world since old masters such as Glim laudajo, who tauglat Michelangelo Buonarotti, tuca signorelli, - Trho did even more than that for the Iuscan demigod, for he helped to direct Sandro Botticelli, strength and knomledge;-01 ronders as frimhtencd the monks, by the cffects produced ou the unjust critics of the view he gare of henren,-were young. Generation on goneration has lired, laboured, and gone to rest hasts of bright, honest. eyed chichren; right and roug headed, but strong-headed men, and hite-raired colncillors havo waited aud rorked and watched, all actnated by tho one belief that progress was as ineritable as age. And so it is on run, and beinc the moro nsefal instrament of tho two, is the more raluable, Solong as metal remains, it will bo cast or wrought, or overvrought; and progress will progress much as rogress ever did. For the world turns round, and in its course passes tho same stagea orer and ver again. If every particle of cried brain progress should we have arrived now; if such progress were ever really to be, as growth upor growth might make to bo possible, and which he tery thought of is enough to make evidently impossible, there rould be finer pictures to be sen than ever were seen. In what the Roya. Academy by judgment and rare opportunity is nabled to verify for genuine produetion, they leave a little room for speculation; or, to be more colveet, a smaRer gahlery - No. IV. Science helps spiritnalism herc, if it will have nothing to do with it elsewhere, and the touch of dead hands that lifts facts, embodies ghosts, and
sihle form of them, is perecptiblo here, -and
with light, too,-for the sceptic: tho sceptic with light, too,--for the sceptic: tho sceptic Who would question such a medium as old art in whet that purpose was. Signorclli died 350 years ago, and yet he will speak hcre, and account in somo degree for the religious fervour a painter's preaching may awaken (162) ; even Corredi, or Glirlandajo was ministering in the same way (163).

Sandro Botticelli is an instnnce of the absorh. ing claim genius asserts. Brought up with care, taught, and learning easily, yot, was he so discontented, so eecentric in his lahits, that his father, a worthy Florentine citizen, "tarned him over in despair to a gossip of his, called Bottiover in despair to a gossip of his, called Botti-
cello, who was a goldsmith." So says Yasari; cello, who was a goldsmith." so says fasari; proceeding to tcli of the constant intercourse
that a close connexion hetween the goldsniths that a close connexion hetween the goldsunit hs
and painters of the period engendered, and how Sandro found his calling; bccoming enamonred of painting, and resolved to dcvoto himself entirely to that vocation; of how diligent ho was; how successful in ohtaining credit and reputation, to the consequence of being appointed to execute various commissions, some of them particularised and descrihed, until we come to the very picturo (19I) of which the Duko of Hamiltou is the fortunate possessor. It was painted for tho church of San Pietro Magriore, Florence, on the commission of Mattoo Palmieri, who, if he gave the wholo scheme of tho work, could not have given that appreciation of what is lorely and graceful; nor the scientifio skill that maris the performance to he more actnated by inmate direction, than any hias of command or paynient porspective arrangement of the numorous figuros; their varicd attitndos, involving foreshortonine and a frocdon of movement truly astouishing in archaio representation, are among the charms of archaio representation, are amuong the charms of the work. In "The Assumption of Our Lady"
(191), the zones of heaven are shown inhnbited hy Patiliarche, Prophets, Apostles, Evangelists, hy Patriarchs, Prophots, Apostles, Evangelists,
Martyrs, Confessors, Doctors, Virgins, and Hierarchies ; according to the design furnished Hierarchies; according to the design furnished

mise for the walls to hoar out. Rnbens, who mise for the walls to hoar out; Rnbens, who
looked better in any ouc of the three preceding looked better in any ouc of the three preceding
exhibitions then he does now; the "Daniol in the Lious' Den" (131), tending to the corrobo. ration of admiration for Sir Edwin Landseer, as much as it can do for its author; and "Diama returning from the Chase" (207) is no better a specimen, when compared with many a wellknown specimen of his florid magnificence. Titian's masterpiece in portraiture, tho grandly composed and painted "Cornaro Family" (1.16), bas long ago heen adjudged all tho praise so Ambassadors', (II4), supposed to he Sir Thoma Wyatt and his secretary, sent by Henry VIII, to Paris on some particular husiness, that made its successful result worth notifying, is a marve worth a pilgrimage to hehold. The possible
achiorement of the minutest finish, so tho-
roughly perfect iu every detail, is manifested ronghly porfoct in every detail, is manifested in crery inch of it: it puts to shame any
notion that too close an attention has heen notion that too close an attention has heen
hestowed on minor matters, for in apite of the hestowed on minor mathers, for in apite of the
utmost elahoration of dead things, so generally complete that the interest of everything has to he weighed with the interest of cverything else, the two men by their ahsoluto vitality take just that prominent position flesh and hlood would in reality assume, and all the importanco that naturally helongs to them." Rembrandt, Velasquez, Vandyck, and Sir Joshua Reynolds, Romney and Gainsborough, hear out to the full meaning of it this real prominence of looking in the simpler, quietcr show of it. There is more life in Gainshorough's exqnisite portrait of a young lady assnming the humhle position for the natural gracefulness that a rustic, a cottager, would he suro to hecome passesse with under the painter's hest treatment (53) than any such cang joy hadame Bacecli, hy jumps to display her appreciation of it, could give a positive notion o., who can care for such flagrant frippery (56), admirahly given though it he in varnish with strong perfame in it, to cover that which all the paint in the world could never make pretty, nor the finest painting save from coarsenoss and oltrusive rulgarity, -qualities that have heen emphasized very strongly, ono must think, since Gains. borough's timo ? If Sir Joshua Reynolds was not quite inimitable, there are some of his works of incomparable excellence, even when side by side with others of his own. Apart from the taste that fashion fashioned, his snperiority will remain extant to the last, or so long as the perishablo threads and grounds of his pencient Reynolds, "grand and graceful," is not much more forcibly represented in tho present col lection than Gainsborongh is fairly; he is mor really to he identified vith the series of portraits of the "Keppel" fanily, or the charming "Mre Stanter" (112), than hy some specimens of extra-faulty drawing and meretricions graces. In his strougth aud in his weakness ho was distinct enough to divide himself from his follower,-Romnoy, whose portraits of Albemno, aud her son William Charles" (108) ; of "Mre. Drummond Smith" (15), with a quaint idea of a hecoming head.drcss that rivals some not of the ugliest to he scen nowadays; or of "Honrjetta Countess of Warwick and her Chil.
dren" (26); and "Nrs. Carmichael. Smyth" dren" (26); and "Mrs. Carmichaal. Smy th
(49), -lovely enough to have left the $y$ to the assertive $I$, and to make ordinary name extra ordinary distinction,-would yet tend to account for that division of opinion that created a Romney faction" in opposition to thoso who upheld the supremacy of Reynolds, if allowance he matc for the pleasurable excitement derivable from contradiction; "party fecling" being one of the strongest to act on sense, espccially when there is not too much of it for other feelings' play ! Thero must always ho factions, however. Leisnre for such intellectual improvement as examiuation of theso collectod piotures must surely afford, is a delightful grant ; and though
for the better help to instruction it anight he mished they had been arranged with moro regard to period, school, and class, those who love rariety will satisfy their affection plenteously with those whose satisfaction exists in finding ood for their dissatisfaction. The difficulties attezcant on tho formation of such excrbitions as a nado memorable, would lave heen insuperable to most other inBuences less powerfin than the sained respect and confidence tho Royal the gained respe
Academy enjoys.

## on Arbitratioñs.

royal insitute of british architects,
Ar the ordinary general meeting, on the 6th inst., the paper reall was "On A-hitrations," by Mr. Banister Fletcher, associate. We print some portions of it:-
The first thing an arbitrator should do is to cousider what is called the submission, as it is appear that it is not necessary that this submis. sion to arbitration should he in writing, or even

* We gave particulars of this and the Erassurs pictures (allo here) some few Yoars ago ind degeribing the curious
structure Longforal Castic, ncar Salibury, where they structure Lone
usually hana.
verbal; itwould appcar to he ahsolntely nocessary, however, that the parties intend "to to coneluded by the decision of the persous called in, in order
to clotho him with the authority of an arhito cloth
trator.?
Whe

Where it is possible, it is certainly desirable, to have the submission in writing, and in ono document, signed by hoth parties; as, if it can be sbown the partics intended to refer different matters, the award will ho invalia. I have in my mind a case where one party appointed arlitrator to determino a dispute respecting tbo construction of a Icase and the damages susained, the other, in wording lis appointment, Mluded only to the construction of the lease, and omitted any alusion to the damages ; in consequence, tho entire award was void.
That there is much technicality to he ohserved. For instance, whero there is an arbitrator appointel on each side, no such appointment is complete until it has been notified to the other side. I would call attention to the importance of this, hecause if (as is very usual) the appointnent is to be made by a certain day, it will he so late and therefore the appointment void, though tho arbitrator ho nominated on the day, irce until the dey ftor, Amoin the law halds ghere an lime to he ampo where an umpire is to he appointed hefore proarbitrators cannot act. Further, it is wise, arbitrators cannot act. Further, it is wise,
directly you are appointed, and know who is directly yon are appointed, and know who is
appointcd on tho other side, to arrange an early neet and to ire notice to each party of the day, time, and place. Again, it is well to rocollect, that if a prity to a reference is bankrupt, the reference is at an end, in most cases, if the ther sido choose to rcroke. Again, a lady marrying during the reference revokes the sinomission.* Again, death, in most cases, revokes the appointment. Either party may revolo tho authority of the arbitrator, but only with the consent of the court. An arbitrator formerly used his own discretion as to allowing evidonce to be given before him. Now he has nono. Ho is bound to receive evidence if eithor party wishes it.
Let nio next state what is understood hy a reference on the risual terms, as they aro the crms we Henrly always have to abide that or the plaintiff or defendant. If plaintiff, then assess the amount of tho damares (which, however cannot exceed the amount claincl). The cost of the encea the amount clainci). The cost arard the costs of the referenco in an way hie ward the cosis on the referenco in any way he pleases. To has unhmited trmo porty moes not award. $\dagger$ Tho death of eitber party does not athe liss authority, He has power to amend The parties must produce all docurnents relating to the matters iu question. The parties aro hound to obey his award; not to hring any action or ot her logal proceedings respecting the matters referred, cither ngainst the arathat ither of then mil fnlly y pents tho arhitrator making the anard ho will pay such costs to the other as the count holl think fit. That if either party lisp court shall think fit. That if eitzer pay refer the validity of the awara, the back to th arbitrator to reconsider. Lastly, they consent that tho order itself may be made a rule of court. $\ddagger$

Surcly with such ample powers the arvitrator would secm to be hedgod in ou every side so that no opportunity could ocenr which could Instances are not uncommon of awards beisg set aside. It is this acensation of the legal profession, that scarcely any awards, sare thoso made by their own profession, evcr stood. I would call attention to one pitfall. It would appear that it is necossary (unhess there is a special clause inscrted in the snbmission, that it shall he sulficient for the arhitrator to find in the cause generally for the defendant or plaindecide somo particular issues) for the arbitrator decide somo particular issues) for the arbitrator his award binding. The other matters that may his a ward binding. The ouser maters that may set aside our awards are,-1t can be proved it
has been ohtained by fruad. If it can he shown

* But shi and her husband are Hable to an action unless
they continue the reterenoe.-B. E .
they costinue the reterenee.- B. F.
In practice, bowerere, it is usual to Ax a time, gixing
the power to the arbizrator to enlarge the time if bo cousiders it necessary
of By which the parties are bound by all the provisions
gives eitbermmonty Law Procedure Act, 1801. This Act
it has been drawn up by mistake. Where a arbitration, anless it was soic in their prescnce third party who, although he had agreci to join or done with their knowledge. Again, a copy of proceed with the reference. Proof of andue pressure

Curious it seems that, powerf 117 as the courts are to upset or set aside awards, they have scarcely any power, in fact they are powerless, to amend an agreement of reference, even
though it is only desired that it should be made though it is only desired that it should be made
to accord with the original intentions of the parties. I am not alluding here to clerical errors, or to an immaterinl variance in an order of reference, ns such matters, and such alone, they can vary. I trust I shall not weary you if
I quote a case to show bow cantionsly all nust I quote a case to show bow cantionsly all nust extent to which tho legal judicin! mind can go The case I quote is, "Rawtree $z$ : King," 5 Moore, 167. There, by a mistake of the court's own officer (the associate), who drew up the order, referring all matters in difference betweeu tixe partios, and not all matters in difference in tho cause, they, the court, snid they could not alter the order, but that the order of reference must be treated as a mere mullity. I mention this, as I have said, to show the caution necessary in our proceedings, so that we may secure what we fervently desire, justice
deserve it at our hands.
Cortain interests discualify an arbitrator, but it is held that they must comprise something anknown to one of the parties; for instance, in architect, thongh employed hy his client to superintend a builder in buiding in house for him, may be an arbitrator between his client and the builder, oven allhough his remnneration be a commission on the amount of the bnilding charges. One other matter I think desimable to mention as those who act for the first time hase not their fcelings ander control, and aro so likely to be led into expressions of feeling which, thongh natural, aro most injudicious; for this reason, that the courts reqnire tho arbitrator to be absolntely impartial, and hold that if the arbitrator uses any expression towards oitlec party which in licates a strong bias or prejudice in his mind, or show that he is acturted by any loostile feeling (and how soon might such feeling be geuuincly expressed simply with contempt when the cose sulicitor on the wrong side cloverly the keen duce the strongeat expressions that ho might nse thera for the purpose of upsetting the award) tho award may be set aside; and it must be remembered that this sotting aside of the awrard may be accomplished eren where thero was nothing to impeach the condnct of another arbitrator, who has joined in the arrard.
Of conrse wo mast not have an arrangement with auy of the parties to the referenco, such as the purchase of their unascertained clainas ; and it seems it is wise either to deliter a detailed bill of charges before receiving payment, is if this be not done it ming render onr arvard open to be set asice, or not to receive any payment until
award is made and published. Just a few hint beforo I close as to the conduct of the iuquiry.
The arbitrator having sworn the witness, will 130, if fresh to the matter, bothered as to what is eridence, what can be admitted, and what cannot, what questions are proper, and what are in. adminsible. I wilk give a few leading ideas to
guide. The claimat or plaintiff opens his case and it is his duty to prove it as strictly and in the same manner before us as arbitrators as he would have to do were he conducting his case in a court of law, unless "by arranpement," when many matters are taken as proved, or with rery Still, whero the parties are what is called hostile and will adinit nothing, the lasy courts must be dence is not and popular idea that strict must be borne in mind the be disregarded. tion of evideuce tendered by either partr will set aside au award. Farther, that with what the law calls a lay abitrator improper admission of evidence will have the same effect.*

#### Abstract

a letter or other docriment cannot be read unt

 it has been proved that the original has been los or destroyed; but if proper steps are taken to procure the productiou of the original, a copy may sometimes be uscd. Further, a reply to leter is not evidence until the letter in reply to writine was writen las been proved. Handcomparipr admitted to be written by $A$, with that of another not so admittol. Plans shonld be proved by the person making them, and should be madc, I may remark, from actual survers Deeds thirty jears old need 120 proof of their execution, if they apparently come from a proper custodian of them; and those of less antiquity may uow be proved by calling any witness who is acquainted with the signatures. This fomerly was not so: further, it. must bo remembered this A dead is not evideuce warrants of attorneys. stamped, so that it is necessary for us to hare some slight knowlcdge of the Stamp Laws. Eutries ju books kept by a porson crunat be used by him to prove his case; but his adversary mny use them against him; the reason for this being obvious. There is notbing to prerent a man making any entry ho might think cou enient to assist him, as for instance, payment money not actually made, but it is not probable se wonld unke entries which he thought wonld perate against hin. Again, the cntries being made whout the knowledge of the other party there are similar reasons lor not allowing then o bo used, as there are for rejecting "hearsay"Another difficulty most freqnently arising i to decille npon the form of the question to be culling a witness being a rule that the party ermed a "leading" question (that is a question hich indicates the answer that is required) no (unless the witners is "hostile") can the party calling lim examine hia, except as to snch matters as are direct evidence upon the issucs aised, nor ask lim questions tendiug to coutralict the evidence he bas given. On the other itness for adversc party; can cross-examine a have seen in tho fonious Tichborne case), and ant alzo cramine lim and coll other evicence to prove that his cridence is untruc
I have far from exhansted this important brancls of my subject, but time and consideration for your patience and kind attention compel me to pass on. One other point only I would mention, as it is so liable to be done, which is, that if you are trying to fix on an nmpire, you must seem such ane by lot of tossing TM, It does culty, and I hare had it proposcd; and certainmy opponent las been astonishod wher I have told him that auch a methor is illegal. As to onr fecs as arbitrators, it should be borne in mind they must not be large, or we may be liable o an action to recovor what may be considered excessive chargos. This is the larr, although we trator; mless wo have, what we rarels beve on express promise to pay, and then only from the person so promising. Une more hint. Directly thereof to cach party, statius when send notice can be obtained on payment of the fecs amed tioning the aruount. Our award minst of menbe made within the time to which we are linitet.
professional practice of ARCHITECTS.*

## (3.) Wosks.

I. Specifications. - The best possible will describe erery portion of the building, systematically giving the fullest particulars (scant lings of carpentry, sizcs of doors, girth of monld general splecification giving no minutix, if it accompanies a gook, careful, set of drawings, not bad: it must describe the quality of all materials precisely, allowing the drawings to explain tio work in nirich they are to be nsed. and detailcd in parts and detailed in parts (pcrhaps even within the limits of the same trade), is a very imperfect
document. Eivery specifioation of any size should hare the trades in the usual order, good marginal descriptions of tho contents, and an index. Have a good example or two before you while writing may aid to zuemory: Farions good speciniens Specificatious, or' Professor' Donaldson's. Aroid the too frequent custom of askiog for tho best of every material. The best timber is rarely hecessary for ordinary framings : frequently nbsolutely the best materiala are not wanted for joinery: in ironuork, "best" as a descrip tion is onen to an opposite interpretation, as there are a "best, best," aud a "best, best, best," recognised in tho trade. Contractors say that they are able to give lower tender's for the works of some architects known o them, because of tho definiteress of theis instructions and their nico adoptation of nate ials, \&c., to the purnoses to be served. If a rell.thonght-ont draft is supplied tothe quantity nrveyor, sind he is allowed to make minor addi ions subject to rour appoval, it will of eu arer ittle extras ; and bring the quantities and ather documents into complete accordance If fou take out the quantities yourself you will perhaps defer writing some parts of the specification ill the quantitics are completed, and rour ideas on many details thus settled.
II. Creneral conditions.- The headings for clanses of contract settled between the Royal Institute of British Architects and the London Bnililers' Society supply these in a skeleton form. The conditions of contractreccutly issned by the Loudon School Board have a few speciali. ties (differing from the "headings"), but are good, and may be considered a fair precedent. III. Cutting down.- May bo requisite when the teaders have been received. This should not be done too ruthlessly; simply to reach dowu to a certain sum. No architect should radically maim a building, taking out many good decorative features or special characteristics. Of course, the efficiency for the purpose shonld not wo treuched upon; nor anything required for suability or durability cut out; nor the moncy resort. If tho contingeucies, except as a las should, what the client really wants, only they out thincs that can be put in aga, only take much difficulty, or that can bo added hereafter.

1. Getting to roork.-In Londou, get notices given to adjoining owuers as sonn as possiblo (as to works on party.walls, \&c.), so that no delay can happen when jou want to begis. Sec tho dis. trict survejor personally, if possible, before heginning, aud get him, if he will, to look orev the drawings. Sce that the builder gires the See the suryoyor to the Local Board, if jou card aud thus be sure you are richt as to the leme yonr basement Hoor and as to the rumagement of the irainage. In fixing, fizall site, do not be influenced too much by the exist cuce of auy pricate roads (if yon see they can be diverted) or of nur ordimaty thee they cass the buildino where seems best to teces; but put o the landecape merdener if one is employe with referace to worl Combine shey good access, fall of drainage, grod water supply, aspect, and (if to be lived in) good prospect; or get as many and as much of the most insportant of these as you can. Leave somo per. portant of these as joane peave the buildiug the trial lo contract-dra. taiu as to the fomdotion-mar uot hare foum tho wenk ploces; inse therefore, specting the open trenches bofore building is begın. If at aill doubtful, do not fail to got all the counsel that wide experience, and also local knowledre, can gire. Fonndations are not always improved by going deeper; e.g. Wren wona liave wasted a louge funds before he liad reached the floor level, if he had not had the coutage to build on pot-earth which had carried the old church, as detailed in he "Parentalia" (at the north-east of the choil the pot. earth was absent, and the foundation con sequently curried down full fo ft.). The trenche shonld not be open long, or be allowed to fill with water. and any earth softened into a slush shonld always be remored before buildine In the course of executiou, insist on condemned materials being taken from the sitc, or they will perhaps bo hidden in the building; see, befor folding any en that any defoct to som able accirlent is wll romedied, sce torm danger of injury cascd. Supply the clerk of
works or the forcman with printed forms of returns; and get a statement sent you weekly giving the state of the building, the works in progress in each the state of tbe weather for cach day. A bnilding of great importanee should, perhaps have a resident architect, who should make most of the drawings, and look keenly after the works. Men in large practice would do after the works. Men in large prachice woutting
well to introduce such a system,-puttin well to introduce such a system,-putting gounger men to them much of the responsibility and a giving to them minch of the responsibility and a good share of the bonour and the pay attacbed
to the work. See that the vouchors for dayto the work. See that the vouchers for day. work are supplied as by contract, and cocked and agreed npon at the time. In case of repairs to existing buildings, let the insurance company
know before anything is commenced (the brilder should be made to insure, so that all risks may clcarly fall on bim). Seespecimens of important parts or of things to be repeated, pit in place ("offered up" as trials) : if you aro like other people, you will find tho time yon spend on a building in progress about the pleasantest you
pass. V. Misfortunes (Danyers to be escaped as far as possible). (1.) Dump.-Spend some hime, rials havo behaved. (2.) Decay.-Go to tho fuarry if you can, and gelect the bed, after careful inspection, and talk with the quarrymon : your selection will be made with full knowledge, and you will recognise the characteristics of the best stone as the work comes to the joh. Bo a little forbearing, if need be, in tho matter of ovenness of colour in briclis, so long as you get Never negtoct an instance of uncqual weighting pointed out to you, especially on a doubtful foundation; tako precautions at once to broaden the area of support. Attack any crack when it is noticed, and cure it madically,-unless you is noticed, and curo it madealy, -unless you let it alone, knowing that it moy get much worse, hat hoping that it may not. (4.) Delay.-Ncver hut hoping that it may not. (4.) Delay,-Ncver details before they are wanted; select anytling required at once on being asked rbout it ; see how muoh remains to bo done, and urgo on the contractor, if necessary, by tho use of your power of withholding certificatos. Frequently the really effectual jower of tho architect is in his control of tho payments. (5.) Many extras.

- You will rarely avoid them altogether. Im. provements will suggest themsclves as works go on; or the employer will have fresh requirements; or circumstances may clange radically Generally, howevor, avoid serious variations keep your alterations within the limit of the tiou). If possible, lave the price for a real extra settled heforo it is ordered.
VI. In case of serious Disaster.-. Go to the with you and look the worst possible result in the faco from the first.

THE ARTIFICIAL LIGHTING OF BUILDINGS, AND GAS.
Ix is a somewhat singular thing tbat, considering the importance of the subject and the manifest interest of it, so very little, almost notbing indeed, bas been said on the artificial lighting of buildings and rooms in an artisti for we propose to speak at present solely of artificial lighting either by gas, oil, or candles, as doing the work of sunilight or daylight, good deal of bad and indifferent architecture if hadly or vulgarly lighted, which is nowadays almost always the case, the very hest of archi tecture and decoration, and painting and furni ture, is artistically lost and even destroyed by its bad lighting pp. The subject is just now o more than usual interest from the fact of the "gras atrike," and from the singular spectacle of a grood part of London, both streets and shops, presenting for a night or two the repetition of what they must have exhibited in tho days of of, great.grandmothers, before gas was thonght good limhting to abohish shadovs. Tbe subject is a curious one and somewhat new, and a fow words about it may prove useful to some who may not have thought much about it. Putting aside, in the first place, tbe lime. light and the elcetric light as exceptional phenomenn, we may well say that never before did there exist so
intense and sparkling a light as that of gasligbt A street or a room completely lighted by gas scene scene which would have almost transported them leaving out the aluminium-wire light, wonld hardly have been credited. And if our imme diate ancestors conld but have heen bewildered, what would imaginative Shakspeare lave tbought of such a scene with his own little Globe, o in Shakspeare's day buildings, as theatres, wer under. lighted, is it not all but certain tbat they often are nowadays as much averalighted?
In tho first place, it is to be noted that a cities, even at this advanced hour of the world's history, are not lighted artificially at all at night ; indeed, as wo find ourselves in the older place of the world, and in the regions of tho almost forgotten, wo find, as in not a few of the older Oriental citics, that tho moon and stars do all the work of street lighting; and oue of the strangest things which tho modern traveller has to opeu his eyes to in them, is the palpable dark. ness of those towns and cities at night whose very names are to him as enchanted sounde. He finds that if be needs light at night in the absence of a bright moon, he must carry it with him in a lantern, or by a flaring toreh. But wholly nnlighted towns are soon to be of the noshat wero and to be reaul of, but not seen. So we may dismiss them, and a good deal with them that our modern light puts out. Tmaginatively, it is possible to have too much, eron of light. Passing, thon, by a fow things which uced no artificial light, we come to the dim oil-lamp way of lighting $a$ street, not wholly gone ont of sight; for in places at some distance from gasworks it is yet in use, and takes us into the last contury odd. did bat little moro than indicate their own whereabouts, and light up a few feet of spaco round tbem; yet they did grood scrvice in thei own day, and fought a fierce battle against gas It had and has some advantages agaiust gas for the flame and tho light given out from an oil Argand burner arefor softer to the cye, and nearer to the colourand effect of sunlight, than is a gas flame, even when tho gas is good and pure. It is not pure white light like the electrio light that is needed for domestic purposes, bat a softened rom tho sun, that is the cesideratum. It well to know, as it at first sight may be a little doubtful, that there are some few London shops in fasbiouablo quarters lighted wholly by oil. soft, end does not distress the eye os continued gas-flamo does, and as gas is at present burnt. Some of the rooms in the Carlton Club, it may o mentioned, are lighted in this way, and may in the same place. No one can fnil to perceive the differenco, and the more softened effect of the oill flames.
It is impossible, even in these fow thonghts on the subject of artificial lighting, to do less than notice the truly modern, cbaracteristic mode of really impossible to over-estimate the impetus, artistically, that might he given to not a few tbings,-as costume and eren painting,-by thorough roform in theatrical modes of doing Fork. We might see in the theatre, as Goethe has observed, what ought, artistically, to be found in real and actual life. Thero is nothing more humanising or more instructive than a thothe stage. We see a little, -and but little, unfortunately,-of this at times; and one of the improvements that miglt be, as we think, easy of adoption wonld be in the mode of lighting the and the stape play.house; -both the bouse itself part, aro at present, the chauces aro a handred to one that we have, instead of tbe scene before us, a gas-burner, or, indeed, it may be, as them. The is, any number wione part of tho house in some of our theatres is so over.lighted as to positively hurt the eye. It is painful to remain for any time in its glare. It seems a perfect deluge of light, and to look on the scene and actors before us is to look out of light into darkness,-by contrast, that is; for the stage and scenery, in reality, are as liobt as the honse itself,-sometimes ligbter, as to fill the gas
the housc the electric light or magnesimm. wire light is called in to do that work which even gas cannot accomplisb. Surely, the secret, artistically, must be in a subdued light in the house with as fow visible barriera as possihle, and witb the limht invisiblo as to source on the stage, and that light so far under regolation as to imitate, whicb it well migbt, the appoarance of daylight and aunligbt, and thus to help the illusion, and add to the magic of the scene. Next to well. painted scenery, wo know of nothing which vould so well repay a little thonght. Expense t would positively save, for it would save gas. What Shakspeare, with bis few dall oil-lamps, or candles, and little stage, and wonderful minimum of theatrical "properties," would have thought of one of our rreat theatres filled with ras.lights all round and about, and everywhere, who can possibly imagine! He himself certainly could not, full of dreams as he was. We forbear to do more tban hint at one or two obvious improvements, but can but ask thoso in authority to think over it, for a werld of good might be done by a few well-considered alterations, by putting the bright ligbts where they onght to be, and putting them out wbere they onght not o be.
We have instanced more particularly theatree because the effect in then is the more marked, and must strike every one who for a moment gives the subject a thoncht, but the same remarks apply, more or less, to nearly all public interiors ; - gas.lighted cathedrals, churches, chapols, with gas all round, above and below. Wliy, the very genius of the sombre Romanesque church, to cite but one instance, must he put out, and its very ghost laid, hy the staring glare of gas and by the handiwork of the modern onsfitter. Who will try to initiate a hotter way of things
But letting this pass, there is one other popn. lar graslighted place of "amnsement," which, its lipht moro than all, needs improvement in as Exeter Hall, St. James's Hall, and others, wheroin the finer sort of mnsic is performed Tbe subject is not a little corious and scientific It is a well. known fact, that when one sense is dered gone ore monls fond acnte : thus the blind man is comsound on to open to the power of quiter and it is are more powarful in darls of sound and musio glare of day. Humboldt notices this, and Goethe considered it an ascertained fact. Any ono can test it by attentive notice of the effect of classical or delicate mnsic, in a dimly-lighted room, as contrasted with the same music in the full glare of daylight or gaslight. The mind is less distracted; the sense of hearing is allowed without interruption to do its work; the eye is at rest, and comparatively unoccupied, and the mind is thus ready to concentrate itself upon the special work, while tho ear takes in without distraction or hindrance its own proper lar monies. It is wronderfal bow mueb of this be and is lost, the finer quartets, by this painfol fare of Wuartets, by this painfal glare of over-lighting works of Beethaven the or Beethoven, who, pernaps, alone of all his great masters or minsical sound, breathed out his magnificent thoughts in pure sound, deaf and inconscious to all external innuences. Pur musical thinking. Nothing surely should he allowed to jar on the sense of hearing, or to dis ful gaslight amorg many others that might be ful gaslight amorg many others that might be cited, that not a few readers mnst bave noticed -we allude to the colour-killing effect which fuil supply of gos has upon pictures. We do not bere speak of its chemical effect as positivoly destroying colours; but to the strange power it has in taking the colour more or less out of a picture, no matter whether the painting be magnificent in power of colour or not. Do painter, wbatever his powers, can hope to stand against it. When pictures are lighted with gas it should be done with great discretion.

The Ancient Church of Bradford-on Avon.-An appeal is being made for funds $t$ complete recuired works at this building. As the conductor of tbis journal was amongst the first to make clear the fact that this church is a pre.Norman structure, we naturally feel in. terested in seeing its preservation, as a whole made certain
"I KNOW A HAWK FROM A HANDSAW."
Me. J. A. Picton has made a suggestion t Notes and Queries, tonching this much. disputed quotation, which is probably more likely to find farour with onr readers than with the general public. The commentators seem to be
agreed either that " handsaw" is a misprint for agreed either that "handsaw" is a misprint for hernshaw" or that the passago was a familiar
proverh already corrupted before it was adopted
hy Shaispeare. The passage first appears in hy Shatspeare. The passage first appears in
the 4 to. of 1604 , and the term "hand saw" the 4to. of 1604, and the term "hand saw"
is in Roman lower-case in two words, which is in Roman lower-caso in two words, which
the writer justly considers evidence against any the writer justly considers evidence against any
misprint. Again, if it had been a common misprint. Again, if it had been a common
vulgarised expression, it would have beon found vulgarised
elsewhere.
Shakspeare's illustrations are brought from every ordinary occupation in life, and the building trades have their fair representation. The second part of "King Henry VI.," and the "Midsummer Night's Dream," supply evidenco that Shakspeare was familiar with the bnilder and his tools of every kind. "A handsaw as a builder's tool would naturally fall into a pro. verbial comparison with another buildcr's tool, and such we find in the hawk, used by the operative plasterer. This is a thin board, ahont 18 in . or 2 ft . sqnare, held in the left hand of the workman, much in the same way as a painter's pallet, but hy a handle or stele on the nuder side. This holds the plaster of lime and hair which is floated on the wall or ceiling by trowel in the right haud. The supply of material is hrought from time to timo by an assistant, called a hawki.boy. A proverbial expression, drawn from a comparison of implements used in the hnilding trade, would be very natural. It is equivalent to saying, 'I am no fool, I under. stand my own business. I know how to dis. criminate between my own affairs and those of other people." There is yet, however, an
alternative; for in the Midland counties, espe. cially Oxfordshire, a billhook is called a lawrk, and this would certainly better compare with "handsaw" than would the bird hawk.

THE ANCIENT DEFENCES OF SOUTHAMPTOS:
Sis,-The inhabitants of Southampton shonld feel grateful for the learned and generally accurate acconnt of their town walls with which your correspondent, "G. T. C.," has favoured
them. He has, however, mavoidably fallen into ${ }^{2}$ few errors, which he will no doubt he pleased to have corrected, and he may also be glad of a little ndditional local information.

1. The Bar.gate was formerly the prison, and the curious cross arches betreen the centre arcl and the side arches prohably fortued part of the prison arrangemonts. Bridle-gate appears to lave had a similar cross arch.
2. There is no tradition on record of any water-gate to the castle, and the shore at the foot of the walls was flat and shallow, and except at the highest tides, inaccessiblo t hoats, so that any such gate would have been all decper when the walls wero built; in fact, it was probably shallower, for before the present road was made, the bcach had been washed away so as partially to expose the foundations of the wall, and yet the water was very shallow.
3. The projection between the castle wall and Bride. Eato is so weak and slight, and so much ont of tho linc of wall, that it seams to be of more modern construction,-perhaps huilt when
piece of the town wall fell down.
4. The wall is donble, and there are three arches and traces of a fourth south of Blue nchor:lane postern.
5. The only mutilated part of the passage throngh West-gate is the centre door-case.

The wall south of West-gatc does not sirk sut continnes in a fairly perfect state for eighty yards. Al the sonth end are arches similar to those near Blue Anchor-lano postern. The wall heyond this fell ahout 1760 . There are no traces of a half-round tower in this length of wall.
7. The south or water gato was pulled down ahout 1803, not 1830-40
8. The lower part of the old gaol or spnr. work appears to be Rdwardian; the npper part is a Perpendicnlar addition.
9. The York-buildings gate is altogether modern. The town wall was palled down abont 1750 , in order to make room for York. buildings. A
law.suit onsued, and the present gate was huilt as a compromise in order to give access frotn
house on one side to a garderl on the other
Wo C. M. Whe have submitted the foregoing to the Sir and well-informed correspondent, "C. M."" for his testimony to the general merits of my paper, and especially for his correction of its exrors. am an absolute stranger to the town, and em. ployed hut one afternoon, alone, but with an Ordnance map, in conrlucting my examination. Tho water.gate of the Castle I did not observe, and took upon what seemed to be grood positive testimony. To me the broad, flat pilaster seemed never to have heen pierecd. Nevertheless every castle connected with a town had an independent entrance, and every castle upon water had a water-gate, and at Southampton tie two must have been one and the came Sometimes, as at Ledes, Tonbridge, and the lower posterm of Caerphilly, it was so arranged that a boat could be floated in. Sometimos, as at the upper postern of Caerpbilly and at Porchester, the boat had to be dragged up.
Tho ligit and projecting wall ranging from the south.western angle of the Castlo to Bridle. cate, crosses the embouchare of the castle ditch upon the sea, and is no doubt in part modern Possibly it was made salient to enable mus. Gueteers to flank the wall-gate and the curtains It may he tbat the water. gate of the Castle was at the month of the ditch, into which boats could he floated for a short distance. In that case there would be needed a line of stockade or fence of timher across the shoal. water, as an he sea.
I surrender York Gate. I felt that a poster was out of place so near to a main gate, and yet

## New library buildings near the

 LONDOA UNIVERSITY.A BLOCK of buildings, now almost completed is in courss of erection in Grafton - street East, Cower-street, within a short distance of the London University, and which is intended for a lihrary and an educational establishment in connexion witl a berquest made more than a century ago, hy a Presbyterian minister named Williams, who hequenthed a large sum of money in trust for theological and academical parposes, together with his library of books and manuscripts, which are of great value. For a number of years past the huilding for the pur. treet, in the City, hat the site having been absorbed by the Great Eastern Railway Com. pany, who have bad to pay compensation for the ame, the trustees purchased a quantity of his and will be ready for opening in the course of few weeks.
The structure, which bas been erected from dc. signs hy Mr. Chat feild Clarke, is in the late Gothic style of arehitecture, and built of white Suffolk brick, with Bath stone dressings, red Mansfield stone and Forest of Dean stone heing freely used in the exterior decorations. The Grafton. stroet frontage, 80 ft . long and 70 ft . high, consists of $a$ basement, ground . fioor, and a ofty story above. The main entrance to the building in the centre of the ground.floor is a prominent feature in the elevation. On each side of the entrance there are three windows, with an qual nnmber of buttresses hetween them, carried the whole height of the elevation. The upper rindows 18 ft . 1 ll height, and contains seven arch. The centre window is immediately orer he main entrance. The keys and springers to bo headings of the upper story windows are in ed Mansfield stone, whilst those to the ground. hoor windows are in Forest of Dean stone, and al the wiudows are recessed. The cornice at top of the bnilding is supported by red Mansfeld corbels with gauged arches; and the centro of the elevation, above the principal window in the upper story, is surmounted hy a gable, enclosing an ornamental circular window, which A residal feet above the rest of the frontage. immediately adjoining the building, and it is ultimately intended to purchase this property, and ercect a new librarian's bonse on the site The basement of the building will contain
kitchen and other domestic offices, together with the heating apparatus, which is being supplied by Mr. Pbipson. This part of the interior will also contain strong-rooms, which have been mainly constructed for the safe deposit of some a nable and unusually rare manuscripts forming. in part be the library. The ground. Loor wil of the huildinge whilst the educational purposes portion will be used as committee-rooms, offices, and for other business purposes. The npper story, which may be regarded as the principal portion of the building and which, as we have already stated, is 30 ft . in height, and extends the entire length of tho frontage, will be alto. gether devoted to the lihrary. This apartment will have a handsome panelled ceiling with large ribs springiug from corbels, and will ho fitted with polished wainscot hookeases on ach side of the walls in bays. It will be lighted with gas by sun-burners, which are arravged so as to assist in the general ventilation of the buildincr Narrow flues are introduced between the smoke. flues for the ventilation of the lower stories, and provision has aiso been made for the admission of pure air under the cills of the windows. That portion of the work in connexion with the lighting of the huilding and the ventilation is being carsied out ly Mesars. Richardson, slade, $\&$ Co., of Brownlow-street, Holborn. The cost of the huilding is ostimated at between 8,0007 . and 9,0007 . and Messrs. I'erry \& Co., of Stratford, are the contractors ; Mr. March being clerk of works.

REGENTS PARK THEATRE.
A NEW theatre is heing proceeded with, situate The principal entrances are in Park, street, Glow cester-gate. Two properties have been purchased for it, making a frontage of 30 ft . and 80 ft . deep.
The façade will be three stories iu height, in tho ltalian style, with colnmens and foliated caps, which will mark the entrances. The plan includes two eutrances, one for hoxes, stails, and first circle, the other for pit ; above theso are wo conservatcries or saloons, with glass roof for plants, 50 ft . by 15 ft .,-one for ladies, the other r gentlemen,
idth theatre proper is 101 ft . by 69 ft . in rst ticr is is arranged iuto three tiers. The and chandeliers stone stairs outside the theatre at the end of tho entrances.
Lue conservatories are upon a level with the inst landiug. There are thiree tiers of boxes on either side of the proscenium, and eight at the hack of the first tier, which aro raised from the level of the halcony, 2 ft .6 in ., making in all twenty boses. On this tier thore are halcony tall, and dress circle. The pit will accommo. ate 1,000 ; there are four rows of stalls. The wo front rows of the gallery tier will he par ititioned off for the amphitheatre.
The gas and water patent, as lately, and for the first time, applied at Astley's Theatre, is adopted.

The decorations will be in carton picre; the ceiling will he arranged with sixteen star.lights in a circle, and cut.glass haskets or chaudeliers, itb ventilation above.
The gallery entrance is from Grove-street, and upon this site are erected dressing-rooms, and so forth.
The contractor is Mr. Wdward Vaughan, Birbeck - road, Fingsland. The decorators are Lionsaquare Audas \& Leggott, of Hull. The gasfitter is Mr. L. D. Berry, Reqent.street, Westmiuster; and the architect is Mr. J. T. Robinson.

LOCAL GOVERNMENT AT BETHNAL green.
Sir,-I ber most respectfully to suhmit tho following for the favour of your consideration,my apology for doing so heing that it is a sanitary question of considerable importance, not merely to the inhahitants here in particular, but to the publio generally. Dr. Sarvis, our medical officer of health, states that there are 100 fish. smoking houses in this parish. The largest of these-which is, indeed, the largest in the East. ond of London,-is at the rear of Peel. crove, in midst of four blocks of houses, in the heart of a densely-popnlated neighbourloon, and its
boundary-wall is not 37 ft . from some of our dwelling-houses. In it are cured, acoording to the report of our medical officer of health, every night, including Sundays, hetween 40,000 and 50,000 herrings. Fourteen fires, made from great logs, chiefly the roots of oak and hornheam, are harning therein at ene time, the
dense fumes of wbich roll out in volumes, filling dense fumes of wbich roll out in volumes, filling our houses with noxious gases, even when our windows and doors are shut. The louvre-boards frem which tho effluvium escapes are at the same elevation as our bedroom windows, and there is no chimney-shaft to the factory to carry the eflluvinm away from our ahodes!
Dr. Sarvis warned the vestry "that the smoke would cause irritation of the lungs." Four otber ploysicians, the copy of wbose certificates I encloso with this, have certified the smoke-house a muisance, and greatly injurions to healtb. Numbers of able chemists in this neighbourhood have affirmed the same thing. The vestrymen having been applied to repeatedly hy the sufferliaving been applied to repeatedly hy the suffer-
ing inlahitants, have not only persistently refused to ahate or remove the pest, but have refused to ahate or remove the pest, but have
always avowed themselves the defenders and always avowed themselves the defenders and
patrons of it. The reason is that sclf-interest is patrons of it. The reason is that self-interest is justicc, for most of our vestry are related to each justicc, for most of our vestry are related to each other by marriage. They consequeutly all hang of a string, like one family, forming a gigantic
olique, ahle to crush any movement for the puhlio good that is agaiust their own private interests. In a word, they do just as they liko, without any real supervision or control over
them. Wo have also petitioned the Local them. Wo have also petitioned the Local Goverument Board, hut they declare themselves powerless to do anything except to endorse the decision of the vestry : thercfore our health is being wantouly destroyed without remedy, becanse this is too poor a neighbourhood for us to be ahle to hear the legal expensos necessary to suppress the nuisance,-.which was brought to ns , for we did not come to it, and our removing from it would, in many cases, involve the breaking up of onr homes and the ruin of our business, witb the chance of some other nuisance equally place we might remove to
If this be vestry and Local Government Board management, of what use is oither of them to not be worse off under Turkish despotisn.
R. M. Gusevell.

## SANITARY MATTERS

Conferences.-Lord Leigh, Sir C. II. Adderley, and Mr. Henley, inspector of the Local Govern. ment Roard, were present at a conference of the sanitary anthorities of Warwick on Tuesday in last week. There was a general agreement that medical officers should not have private practice, and it was decided to appoint an officer for each of the two divisions of the courty
A meoting of delegates from fourteen sanitary authorities of the county of Oxford, was held at the Clarendon Hotel, Oxford, ou December 14.th, to consider the hest means of carrying out the provisions of the Puhlic Health Act. A series of "That a drly-quulifed person shall be appointed to act
as Central OHicer of Health, orer a joint area, consisting as Central Ohicer of Health, oper a joint area, consisting
of several distriets, for the term of ibree ycars: Banbury Raral, Banbury Urban, Woodstock Rearal, Chipping
Nortou Mural, Chipping Norton Urban, Henley Rural
Zienley Urban, Bicester Rural, Bicestex Market Ead Urian, Thamo Rural, Thame Urban, Witney Rural,
Witney Urban, and wibealley Urber

The chairman said the following sanitary authorities were in favour of it:-Banbury Rural, Wood. stock Rural, Chipping Norton Rinral, Chipping Norton Uriban, Henley Rural, Henley Urban, Bicester Rural, Wituey Rural, and Wheatley Urban.

Fork.-The York Rural Sanitary Board met in the board-room of the York guardians in reference to the appointment of a medical officer and his salary; and of an inspector of nuisances, which had appeared in the Buider. The appointment
of a medical officer was rosolved upon, the of a medical officer was rosolved upon, the
salary to be 200 l. that of an inspector was salary to
postponed.

Typhoid Fever caused by Germ-poisoned Mill. A viralent outbreak of typhoid fever in several streots near the Leeds townhall, a few weeks ago, attracted the attention of the authorities. The epidemic, very fatal in its character, pur-
sued a somewhat eccentric course. It attacked sued a somewhat eccentric course. It attacked
families in some parts of fashionable squares,
and left others untouched. It raged in certain middle-class houses in the same street, and passed over others. Though it was found that the drainage in some parts of the affected clis tricts was slightly defective, this did not satisfactorily account for the attack. The authorities next turned tbeir attention to the food supply of the infected bouses, and they then discorercd that one milk-dealer living in tho centre of the town supplied the whole of the infected houses, and it transpired that he received his daily quantity from a furm near Harewood. Thither the health officer of the town at once proceeded, and found that some six persons were there suffering from the faver. The milk-cans were generally kept in the kitchen, which closely adjoined the room where the fever patients wero lying, and one woman attended hoth to the sick inmates and to the dairy. Tbe tbeory is that the germs of disease inl the air settled down in the milk-cans hefore they were daily sent out with their stock. The at once stopped the sale of mill from connci at once stopped the sale of milk from this infected quarter. To show the severity of the epidenio it may be stated that some eighty people bare been thus attacked, and that twelve died.

Typhoid Fover at Birmingham.-The alarming prevalence of typhoid fever in the district of ham, has led to the holding of a puhtic meeting of tho inhabitants of Moseley. It was stated, on eminont medical authority, that there were hearly fifty cases of fever in the four hundred Moseley which are eomprised in tho district of cases in Bual least thit Fresh cases were occurring every day The sqnitary precautions were characterised by leading local surgeon to be as defective as they conld be. There mas no drainage worthy of the name, and the cesspools and waterclosets cansed incalculable mischief. A memher of the local sanitary authority was present, and defended the courso of action taken by tbat body. A re solution was adopted hy a large majority, appointing a committee of residents to dcal with the matter, and directing that a memorial he forwarded to the Secretary of State, praying for drainage of Moseley. A guaranten fuud was sud scrihed, and a movement fairly set on foot to deal witb the evil.

## SCHOOL BOARDS.

Carliste.-After an adjournment from the hall to the committee-room, the Board proceeded to consider the varions plans which had been seut in for the new schools proposed to be huilt. After a very hrief conversation, preference was miven to two sets of plans - those of Mr. D. Birkett, of Carlisle, and those of Messrs. Scoles \& Cory, London. Canon Curry said he had inquired and found that the latter plans could be carried out for 1,8002. After considerahle discussion, and Mr. Birlion of the plans, Dir. Wrigley moved that proviously decided not to pledge themselves to any of the plans as they were presented. Anotler conversation ensued, and at length it was decided, on the motion of Mr. Crowder, seconded by Canon Curry, to postpone the consideration of the plans till next meeting.
Barnstaple.-Mr. Neill moved:-"Tbat the tender of Squire Holdsworth for tho crection of a school on the Barker-end site, amounting to 9,866l, be accepted." He observed that they had two sets of tenders in respect to theso schools. In the first instance Messrs. Wilson's was the the plans had heen revised, Mr. Held ; but after the plans had heen revised, Mr. Holdsworth's was
the lowest. Tliey had dispensed with the tewer and several other matters which were considered expensive had heen taken away. Carried with. out opposition.

## NEW NATURAL HISTORY MUSEUM,

 SOUTH KENSINGTON.As promised with the view in our last number we publish tbis week a plan of the ground or principal floor of the new Natural History Museum ahout to be commenced at South Kensington.
The level of this floor is several feet ahove latter are several feet ahore the general as the
the maseum site, a basement story entirely ahove ground has heen arranged, containing owards the front several useful snites of curator's rooms and worksheps, and towards the back, tore-rooms, kitchens, \&c.
The principal floor is approached by a curved ncline for carriages, entered by two gateways in Cromwell-road, and by a hroad central flight of steps for visitors on foot.
Passing tbrough the great archway of the entrance, 40 ft . wide, we reach a hall, 170 ft . long by 97 ft . wide, consisting of what may bo called nave, 57 ft . wide, and recesses on oither side, devoted to exhihition wall-cases.
The main staircase from the principal to the frst floor, consisting of flights of steps 20 ft . wide, is placed at the northern ond of the hall. he starcase leading from the first floor to the salleries ahove, spans the sonthern end of the The hall will $a r c h$
The hall will not only give ready access to the varions portions of the Museum, but will itself afford, in the recesses on either side, large accommodation for exhibition prirposes. It is intended that this part of the boilding shall he devoted to an index or typical museum, containing specimens of a more popular character, and, together witb the Museum of British Natural History at its northern extremity, be lighted hy gas and thrown open te the public durjng the evonings. For this purpose the doorways leading from the hall, or Index Mnseum, to the eastern and western portions of the building, will he itted with fireproof doors.
To the right and left of the Index Museum, facing the south, on the principal floor, are two side-lighted galleries, eaoh 278 ft . in length by 50 ft . in width, terminating in the pavilions at either end of the main front. The cases in these galleries will be placed hetween the win. dows, and extend from the side-walls to the coupled columns (cast iron, cased in terra-cotta) supporting the floor ahove, the space betweon the two rows of columns heing deroted to passagc-way.
There will he three stories of these side-lighted gallerics, those on the principal and first floors baing precisely similar in arrangement, and those on the second floor heing partly lighted by hose on the second floor heing partly lighted by Behind the two south partly by roof-lights.
Behind the two south gallerios on the principal floor the plan shows, on tho west side, three large galleries, 39 ft . in width hy 160 ft . in length, for immediate erection, lighted by con. tinuons roof lights at the junction of the roofs with the walls. Betweon these top-lighted galleries are gallerios reserved for the study and preservation of duplicate specimens. The cases or the exhibited specimens will be placed beween the piers, and separate the puhlic galleries rom those devoted to students. They will form a continuous line towards the former, and where they are required of extra depth for the larger specimens, they will project on the students

The reserve galleries communicate by trapdoors, witb the storerooms helow. The workshops and studies in the hasement may also he reached hy a staircase across a private corridor from the reserve galleries.
A slightly different arrangement of toplighted galleries on the eastern side has been adopted in order to meet the views of those who are likely to have the custody of the collection there.
Generally speaking, it is intended that the zoological collections shall he placed on the vestern side of the huilding, and the geological ad mineralogical collections on the eastern
As the Museum progresses we may have other pportunities of puhlishing furthor descriptions its construction and arrangement. Mr. Water honse, from whosc designs, as our readers know, mocb thought and consideration, in conjunction mucb thought and consideration, in conjunction with the officials, to ensure the efficiency of the geueral arrangements.

Monumental Sculpture.-The execution of the memorial cross intended to he placed over the tomb of the late Sir H. F. Lamhert, hart., in the Malvern Cemetery, has been entrusted te Mr. W. Forsyth, sculptor. The monument has heen designed by Mr. Preedy, architect, London. The cross itself will stand 15 ft . high, upon two massive granite steps. The base, cross, and shaft will he of white Sicilian marble, with inlays of serpentine in the centre of the cross, and thesacred monogram.

-

THE NEW GOVERNMENT BUILDING, CHICAGO, U.S.
Tre rapidity with which Chicago has been reconstructed has astonished all beholders. Ahout 1,500 huildings, public and private, have heen ercoted since the fire, many of them of great sizo and cost. Amongst thoso now going on is the structure of which we give a vicm. It will occupy the square bounded on the north and sonth hy Adams and Jackson Streets, and on the east and west hy Doarborn and Clark Streets known as the Bigelow Block. The plan of the huilding measurcs 312 ft .6 in . by $210 \mathrm{ft}$.6 in . and is placed in the contre of the square. I avoid monotony, the plan is holdly treated with projections, and in the elevations there are inı portaut central features on cach façade carried
above the main cornico as towers, each surabove the main cornico as towers, each sur-
monnted with a domical roof and helfry-shaped monnted with a domical roof and helfry-shaped
termination in stone. Tbe style adopted is a sort termination in stone. Tbe style adopted is a sort
of Romazesque, trented very freely, not to say of Romanesque, trented very freely, not to say
disguised. Tho corners are heavily rusticated disguised. Tho corners are heavily rusticated,
and the wall surface is relieved hy piers, with carved capitals. The first story is treated with the segmental arch. A hold transom, carried
throughout continuonsly, adds to the solidity of throughout continuonsly, adds to the solidity of
this story, and prevents any appearance of this story, and prevents any appearance of
attenuation, which the piers otherwise would attenuation, which the piers otherwise would
have. The post-officc requirements for livht nre such as to make it a difficult problem to solve, in giving up all wall space for glass, not to destroy the architectnral effect hy au unpleasant feeling of tho slightness of support for the super structure.
On each of the shorter sidos is a capacious porch; on the long sides are entrances to the varions departments. Tho second story (or "first floor") has an ornamented pedestal conrse, through which will be admitted air for ventila tion. The windows have semicircular heads, with pointed Italian arch mouldings above. The various stories aro well defined by hroad belt carries a balustrade at its outer edge, and its great projections are sustained hy hrackets. The port above the main cornice is treated in an original manuer, wherehy a good story is ob orginal manuer, wherehy a good s
tained. The details are well studied.
The first story and basement are for the post office husinoss entirely. The second story will office husinoss entirely. The second story wit
be used by the sub.troasury and the customs be used by the sub.treasury and the customs;
and the third story will ho devoted to the Law Courts.
The general plan of the biliding comprises an interior court, 83 ft . by $198 \mathrm{ft}$. , open to the
ceiling of the first story, which will be a glass ceiling of the first story, which will be a glass skylight, lighting the working part of the postoffice. In the upper stories a contimuous corridor makes the circuit of this court, and all the rooms arc lighted from the outside walls of tho build. ing. The vanlts will be carried throngh each story in solid masonry from the foundntion. At each end of the building will he two passenger lifts, hesides a fine airy staircase. The ventila. tion of every part is well cared for
This structure will be erected under the super. vision of Mr. James C. Rankin, architect (who resigns the position of Assistant Supervising Architect of the Treasury Department for that purpose), from the desigus of Mr. A. B. Mullet suparvising architect of the U.S. Treasury, at Washington

## AN OLD BRICK HOUSE IN ENEIELD, MDDLESEX

The Great Eastern Railway Company, haxing huilt a new station at their termimus at Eafield, are ahout to pull down an extremely interesting hitherto served the purposes of a statioz. The front of the honse has good specimens of carved and moulded brickwork. The central portion of the front is, perhaps, one of the finest pieces of Euglish brickwork in existence. It consists of an elaborate entablature, with a segmental pedi. ment, and four pilasters, which divide the front into three spaces, the central space, which contains a large window, heing twice as wide as the semicircular on plan, with a semi-circulor hea filled in with a well-carved cherub's head Above the niche is a panel containing swags Above the niche is a pazel containing swags
of fruit and flowers, well carved out of briokwork. The entablature is very elahorately moulded and carved, the cornice having deli cately-monlded dentils. Each pilaster has carved composite capital. The hricks of which this portion of the front is formed are small and
the joints almost imperceptible. All the carving
is out of the solid brickwork, and none of this work appears to have been cast. The front con. tains, in addition, four windows, with carved hrick architraves and label-heads: the other features are the usual ones fonnd in houses of
this period. The plan of the houso is this period. The plan of the house is $\Pi$ shaped. All the rooms are pauelled.
A view of the front and a carefully-measured drawing of a specimen of the carved, moalded Batterbury brickwork, by Messrs. Penstone d of the Architect prolished in the fifth volume
It is a great pity that so good a specimen of a honse of the poriod should be destroyed. It is of Essox, Enfield inhabited by ono of the Earls houses; but this one is its most perfect and hest example. A correspondent suggests that the antliorities at the South Kensington Museum might preservo the central portion, and asks the London and Middlesex Archeological Societ to see what they can do towards savino it otherwise the house is doomed to be destroyed in a faw days by Messrs. Patman, builders, of Enfield.

## NEW CATTLE-MARKET AND PUBLIC WORES FOR DUNDEE.

A wew cattle-market and alattoirs, on a large and comprehensive scale, are proposed to be constructed at Drndee. It appears that Mr. recently visited London, Dentford Dundee, has Manchoster, and Paris, and personall Liverpool, the markerets and Paris, and personally examined these several places. The result of these visits and inspections is that he lias just sulmittod plans to the corporation for the erection of new market of this character in Dundee. The extent and magnitade of the proposed market may be conceived when it is stated tbat, exInsive of the boundary streots, tho site of the and the market embraces ncarly nine acres, ind the total estimated cost of the works, market market, hotel, stahles, offices, and market erections of varions sorts, lairs, and lines of railway, is nearly 50,0001 . In addition to this new market, extensive new waterworks are also ahont to be constracted, at an ontlay of more than $30,000 \mathrm{l}$; and beyond these nndertakings, both of which are proposed to he carricd out by the local municipal authorities, a schemo has beeu putforward for the construction of a high-level railway around the town, with a view of reducing the heary cartage from the railways mill mocks, and facilitating the traffic of the mens, mannfactories, and engineering establish. ments. It is further stated that the project has North British Nailway Coth the Caledonian and pared to subscribe towards the undertaking.

## WORKS AT SALFORD.

Stowell Memorial Church Schools. - These schools were formally opeued on the 2nd inst. They form the concluding part of the scheme designed as a memorial of the late Canon Stowell. They are situated near Regent-road, and are bonnded on all sides hy streets. The site contains $2,4,20$ square yards, of which about two thirds are devoted to playgrounds. There are two school-rooms, one being 60 ft . by 30 ft ., and the other 59 ft . hy 20 ft . In comnexion with the latter, is a class-room, 18 ft . hy 20 ft . The roofs are of high pitch, and open to the collar. The building is of a plain hat substantial character, faced with white headers, and having stono and stock brick dressings. They have heen the Education Dance with tre requirements of provided for ahont 400 children, who will be taught in mixed classes. The total cost, exclu sive of the site (which has been civen), is abont 2,290\%. The builder is Mr. Geo. Napier, Hulme; and the architect is Mr. Joln Lowe, of Man. chester.
Stowell Memorial Church.-A reredos, from the designs of Mr. John Lowe, has recently been erected in this charch. It is of varied stone, enrichod with marhle, and extends the whole width of the chancel. The lower portion is of Darley Dale stone, and the upper of Caen. This apper portion consists of five cableted panels the three central being so combined as to form, a centre-piece. The panel-shafts are of red granite, relieving the white Caen, and supporting
pointed arches, having also carved caps. In the meor each panel is a raised field, with carved andems (c.g., wheat, vine, passion-flowers, \&c.) panum of appropriate inscriptions. The tym. Styperson stone, in is a diapered surface, of circular atone, in the centre of which is a circular panel of Caon stone, enriched with anious coloured marbles. Crocketed pinnaclos separate the gables (which are also crocketed), is the sift of a lady carved finials. The whole is the gitt of a lady, in memory of two friends Messre Iessrs. Eillis \& Hinchliffe, of Hanchester.

## PUBLIC WORES IN WASFINGTON.

 A flowingi account of the great changes in the streets of Washington made nnder the Board of Public Works is given in the New York Tinnes. The groat width of the roads was founda difficulty:a difficulty :-
"Tho plan of Washingtou, as laid out by its foundere,
contemplated a city with millions of inhabitants. is moreares in the street and alleys of the city than there is devote to the uses of public and private builhings. In
Purio the ratio of street are to the area of the city is
Pas
 -How to eport saya:-
 Without hank rupting the people, was the practical question
 gested was so to nurrow the carriago-ways as to render
the uso of improved parements practicable. This wis.
 could be parkiked auu o thervise beautified at alight expense
to the public, and in many in to the pubic, and in many instances at the expense or tho
property bordering upon it, the owners of wliche property bordering upot it, the owners of which, for the
priviluge of the ame of the ground, would glaily beat and adorin it. By this plan, that whill glauly benutify
unsightly wast has barren an unsightly waste has been made a bearutiful feature in the
contour of the streets and avenuc. contour of the streets and avenues. Tho coatur has the the
beco very largely reduced, while isen very arpay yeduced, while the capacity of the
gtreete as ameans of intereourse has not been iu the least
abriged,

It is stated that the Board of Puhlic Works have succeeded in getting work done for 50 per cent less than the same work is done for in the cities of New York and Brooklyn. The identical pave ments which have cost Now York 5 dollars per square yard are being laid hero for 3 dollars and 3 dollars 50 conts. This result has been achieral by a determination on the part of the Board, at the outset, that it would be better to establish and to to responsible persons. The ple uniform prices oresponsible persons. The plan is said to havc
worked exceedingly well.

## "BRICKWORK AND MASONRY IN TRELAND.'

Sir, - From the speech of Mr. Owen, the presi. dent of the Architects' Institute of Dublin, quoted by you, any person would be inclined to think that the Irish granite was an utter fadure. Such statement, made by the president, is certainly not very patriotic, to say the least of it, and shows how lit tle Irishmen are acqnainted with the produce of their own beautiful country. I shall attempt to do that "justice to Ireland" which rule," if such can be applicd to the statement made in Dullilin.
No country can produce a better granite, note only nseful bnt ornamental, than Ireland; the heaunifl Aberdeen granite cannot even compare with the splendid granite produced at the model cranite co tomu of Bessbrook. Here is a granite unsurpassed for quality and beauty: only see the mouuments ercoted by Farmer \& Brindley, of the Westminster Bridgo-road. Agrain, see the works of Burke \& Co., of Regentstreet ; also of M. W. Johnson, Sanders, \& Co., Eustonn, the monumental masons, of the made in Das, and compare with the statement useful Dubin. I positively assert that a more mental core carable, and at the same time orna yet been fute than that of Bessbrook has not risiting this I have had the pleasure of truly state it to berana mol to appears as one large happy family, really secret of it all appenrs to the and the management is ander the control of the Besss brook Spinning Company, a company composed of gentlemen whose main object appears to be the welfare of the population. The granite with the obje opened by them, and are worked male population providing employment for the quality of granite is cown, and, so far as quality of granite is conoerned, they have
it unsurpassed. At very great cost they
have erected machinery to facilitate the
working (bnt whether or not such will be forking advantapeons to a granite quarry remains to be seen); they have applied water-power for polishing the granite, and have produced some of the finest possible specimens of polished granite ronuments, and likewise huilding materials, to the satisfaction of the most eminent in reguesting you to allow snch facts to be made public throngh your most aseful paper, after the sweeping condemnation of Trish granite which has appeared? and more especially when I state that I do not write as a novice in such matters, having bad an $\qquad$ an over thirty.fy
** Wo have received several other communi cations on the same snbject, including a copy of a letter addressed to the president of the Institute of Architects of Ireland. The writer of the latter says, in the course of it,-"Tho Bessbrook granite combines beanty and durability in so high a degree that the astute Scotchmen them. solves arendy recognise the fact, and apply to n 8 for blocks to be wrought, prolished, and sent
forth into the market as Aberdeen granite. In some cases we supplied these blocks, but have now ceased to do so, knowing no reason why Scotland should win fresh laurels at tho expense of Irish reputation." Mr. Owen has since written to say that his thoughts wero fixed solely on Dublin, and that he did not wish his words to extend to a wider district

THE FOREIGN COAL AN゙D IRON TRADES.
The French iron trade continues qniet, but there is a general impression that it will shortly bedome more active. Orders have dechned in importance. MM. Blondeaux \& Co. have ob. tained a contract for 3,000 tons of rail for the Northern of Spain Railway, at 12l. per ton, delivered at Antworp. The exports of iron from France in the first ten months of last year are returned at 216,000 tons, as compared with 187,000 tons in the correspouding period of 1869. The Belgian iron trade has exhibited rather more firmness. In the Bclgian coal trade, notwith. standing some temporary traffio difficulties, prices remain firm, orders being abundant, becn just officially returned at $4 \cdot 40,877$ tons, or 23,217 tons more than during Septemher, 1871, and 296,881 tons more than during September, 1870. It appears that 401,450 tons were ex. ported from Belgium to Franc its price firmly in France.
An important discovery, according to the correspondent of the Swiss Times at Dilan, has heen made within tho past month by Signor Ferrero, an amatenr chemist, who for many years has made a special study of combustihles. He has succeeded in the invention of a substi. tute for coal, the quality of which renders it most serviceable for machine and locomotive consumption and tho oxtraction of gas, the refuse use. The process is exceedingly simple, and makes in Italy, whose combustible, gaseous quali. ties were anknown or unapplied ontil this invention. The cost of this new fael will not

## A MODEL HOTEL ABROAD.

As your paper has been for years, and is still, the mediam of numerous sanitary discnssions, I thought perhaps the following might be a little interesting, as showing how these matters are conducted on some parts of the Continent. I speak of a large and well-situated hnilding, overlooking one of the finest valleys in Europe, the resort of numerous English and American travellers, and holding a primary position in the guide.books referring to the town in which it exists.
The building in question entirely surrounds a court.yard, and is annexcd to some other build. ings of tho same height and width; the court (some 50 ft . square) is entirely and completely covered over witb class, without one particle of ventilation or opening of any description, and is, in fact, to all purposes hermetically sealed. The kitchen and four stories above being next to the adjoining building, have no other frontage ex. adjoining building, have no other rontage ex.
dows opening into the same: Corridors sarround tho yard, leading to the different rooms, also having no other opening save this: untrapped
drains are below; and yet there is not one breath drains are belo
A large staircase ascends to the different rooms in one corner of the court, and has no other opening of any description, sare into the corridors. Dark and gloomy is this staircase, and the stenches from helow are horrible and offensive: the diggusting gases from tho drains rise up here, and hang iu the cormidors above, having no outlet whatever to dissipate them. To open the windows is only to let other stenches in, which have accumnlated from the cesspoole below, and which hang in one rast body under the roof, and this away.
In times of much rain, the horrible gases are driven up the drain into the corridors ahove, and are diffused thronghont the honse. Nor is this all, for tho smells from the kitchen laving no outlet whatever except into the court, rise ny under the roof, mix with the smell from the drains, and assist to make the whole doubly more sickening
I simply send this to the samitary world as a curiosity, and without one letter of exaggeration The covering over of the court, without renti ation, I have also noticed in Vienna and somo parts of Italy, in now and public buildings.
Travelling as an architectural student, the more I see of these matters the more snre do I feel that they are too often overlooked lay us. tho different styles, perspcetive, projcction of shadows, or even carpentry and mechanical drawing; but little do we hear or know of sanitary matters.
Any meetings connected with architectural students relating to these matters I should most gladly avail mysclf of on my retnrn to England, and would readiby give notes of any incidents concerning the same coming under my notice fetween now and then,-not as suggestions tor fintare improvement, but as examples of what

## EXPLORATIONS AT THE SUPPOSED

 SITE OF TROYDr, Hexrry Schlyminy has sent to the New Cork. Herald a paper in which he gires the results of his labours and researches on the site of Troy, where he has heen at work for several years. A only one metre belose the sirrace, ho says, I came npon a rclic of Greek art, a bee sculptured marble of the timo of Lysimachus, representiog Phocbus Apollo iu female attire with the disc of the sun on his head, and supported on fonr horses of heautiful workmanship. I also found there a long Greek inseription, which I shall publish, and which refers to the Emperor Antoninus Pins, who is therein called Titus Alius Hadrianus Anto. ninus. At this part of the mount the accumulation of rubbish is very great. I camo upona Wall built of huge stones, joined with clay.
Whetber this wall served as the substructure of Whetber this wall served as the substructure of
some Trojan temple, or whether it was the wall some Trojan temple, or whether it was the wall
of circumvallation which Homer ("Iliad," rii.) attribntes to Neptune and Apollo, I am unable to say. Below and above this wall I find masses of that splendid hlack pottery which resembles so much the Etruscan terra-cottas. Dy thoughts are now absorbed in another important ohject. In digging the great trench simultaneously from north and south across the mount, July 19, upon a colossal structure
masony, 12 metres or 40 ft . in thicknoss, and of a perpendicular height of 6 mètres ( 20 ft .), huilt on the primitive rock. Its structure is similar to that of the wall found beneath the site of the temple, except that the stones are smaller. I find by measure that the part I have laid hare is hut 37 or 35 metres from the western descent from the Acropolis to the plain, and it is, there. fore, not unlikely that the structure was a tower in the wall, and it may have been the great tower of Ilium ("Iliad," vi., 386), to which Andro. mache went up to scan the plain in search o Hector. . . On the primitive soil I found a Trojan lamp. I also found on the virgin soil a small domestic hurial.place, formed hy three stones, and containing two urns with human ashes. In the Trojan ruins proper I found weights of granite, hammers and axes of diorite, and small beautifully -polished implements in the form of wedges of a splendid transparent green stone,
besides simall black terra-cotta discs, \&ic. Unti
last week the only Trojan symbol I had found in all my explorations was the snn. But last week Ifound a large nimber of symhols which enable me to say with certainty that the Trojans were
Arions. The cross, and that cosnate symbol Arians. The cross, and that cognate symbol which may be described as a cross with a crotche at the end of each limb at right angles with the limb, are the symbols of those two pieces of woor which our Arian forenathers used, together with the pramatha (from which the Greek Prome thens), for kinding tho holy fre (ngmi). The crotcheted cross symbol was found on utensils discosered on the banks of the Oder, and is a
symbol of great importance in religious history..

SLR ARTHCR HELPS ON ART.
The distribution of prizes to the snccessfuk students at the Portsmouth School of Science and Art took place in the Green.row Rooms, Portsmouth, on Monday evening in last week, in the presence of a crowded audiencc. Ex.mayor Ald. S. Baker presided, snpported by Sir Arthus Helps, Mr. Stone, M.P., and members of the committee. After a preliminary statement by the Vicar of Portsmoutlh, chairman of com. mittee, showing that the students had been very nccessful,
Sir Arthur Helps addressed the meeting. He referred to the great enjoyment following scbool studies. It was a celebrated saying of Charles V. that "He who knows two langnages is twice a man," and similarly he would say he who knew any other art besides his bread getting one was twice a mar. Speaking of the intellectual advantages the studcuts gained, the first tbat struck him was the increased power of observa. tion. He had once made the rather venturesome observation-to which he adhered, - that no one had really grasped and mastered a thing unless he had had to depict and describe it. Then there was the advantage of accuracy, - a sort of plebeian virtse No! it was not common enongh in the world. Would that it were com. mon enough to be called plebcian! He believed that all the intcutional lying in the world-of which there was a good quantity, perhaps,-did not do one quarter of the mischief that inacearacy did. If a superior being were to come to him and ask him whether ho would rid the world of inaccuracy or lying, he would say, "Let ns get rid of inaceuracy,"-the misrepre. sentations, misunderstandings, misquotations, and all those things which led to the most treuendous quarrels betweon man and man, and nation and nation. There was not any method by which they could conquor this inaccuracy better than by the studies they were pursning. Another intellectnal advantage resulting from these studics was, that they gained power of expression. He believed that very low down in the world verygreat thoughts existed, but lacked expression. The students were also gaining power of representation in depicting nature. Replying to the arguments of those who asked how it was that the decadence of a State had generally begun when art was at its hest, he maintained that the assertion implied was a total delusion. There was an enormous distinction between luxury and art. Nations had fallen, it
might be, through laxury, hut not through art.

## ACCIDENTS.

Fall of a Floor in Sheffield. The floor of a shop in Pondhill bas fallen in. Between the shop and the next house there is a passage from the street, by which the back of the houses is approached. For some days before workmen had been engaged cligging up the passage for the parpose of laying a drain pipe, and a depth of about 5 ft . was reached. At this depth, the foundations of the bouses on either side were exposed, and it is believed that this was the callse of the accident, for the foundation of the shop suldenly bulged out. This caused a por. fell the outer wall to como chow, and with it fliop are roof of er injured, and a labourer shop above. A girl was injured, and a labourer received a rather severe scalp wound. At the
time of the accident, the required depth had been reached, and a portion of the drain-pipes been reach
were laid

Fall of a Floor in Commall.-Daring a tea. ueeting, which was held at Charlestown, Cornwall, on New lear's night, has of the floor of the large volunteer drill-hall, in which the company were assembled, cave waysuddenly. Sixty

I6 ft. Fortunately the cellar was used for first founder was a perpetual protest. At. the
storing china clay. Tbe andience who had escaped the accident were unahle to descend the staircase, as it was tbat end of the building that bad fallen, and tbey wore in momentary expectation that the remainder of the floor would give why. Tbe vicar was the first to make his way ont of tbe cellar, when he ing anks, and placed them across the aperture in the floor. placed persons in the cellar were theu pulled ont. The persons in the cellar were theu pulled ont. The injuries sustained were broken bones and sovere
contusions. The remainder of the audience had contusions. The remainder of the
to get down by ladders aud planks.

Fatal Accident at the Alerchudra Palace.-Mr. Richards has held an inquiry at the Nag's Head, Tottenhan, respecting the death of George Hines, aged forty-two years. It appeared from the evidence that the decensed was forman of a
number of men engared in the huilding of a number of men engaged in the huilding of a
theatre at the Alcxandra Palace. On Saturday before last be was hoisterl a distauce of 95 ft . to fix some poles in the roof of the theatre, when in commencing bis descent lie missed his footing, and fell to the ground. He oxpircd in about
soven minutes. The jury returned a verdict of soven minutes. The jury ucturned a verdict of accidental death.

## THE THAMES EMEANKMENT.

Last week a deputation from the vestry of the Procinct of tho Saroy waited upon the Metropolitan Board of Works in order to present a memorial upon the subject of an approach from the Strand through the Precinct to the Victoria Embaukment. The memorial set forth that the only means of communication between Villiers and Surry streets, a distance of
710 yards, was by means of thos steps at Waterloo Bridge, only practicalle for pedestriaus. The want of a thoroughfaro for carriages was producing serious injury to commerce, property, and public convenience, and the present limited use
of the Embankmeut between Wcstminster and Blackfriars was in a great mensure to ho attributed to the fow approaches to tho Strand buted to the few approaclics to tho Strand
from the Embankment. Tbe deputation profrom the Embankmont. Tbe deputation pro-
posed the conatruction of a road 60 ft . wide through the Savoy, appropriating a very small portiou of the Thames Embankment Cardens, and using some racant property of this Board. Mr. White having exprossed the viows of the deputation, Dre. Newton asked Mrr. White if he had not hoen to the Board before opposing auy road through the Savoy, and whether in couse-
grence of tho opposition the Board quence of the opposition the Board had not ahandoned the viaduct. Mr. White said that was 80 , but the road was different altogether to the plan now proposed, which would cost $100,000 \mathrm{l}$. instead of $300,000 \mathrm{l}$., and lead down to the Eubarakneut by an incline of one in twenty. On the motion of Mr. Phillips the matter was refered to the Works Committeo.

DEPRITATION OF PROSPECT, Robinson $r$. Grare. -In this case, before Tice. Chancellor
Wickems (Dec. 18), plaitutitt, in the spring of 1852 Whekens (Dec. 18), plaientift, in the spring of 1852 , con-
(racted to purchase thom the defendant land near Derwontwater, from which there was a lino Fiev north and
east. Plaiutif then built a house, tho defendant having hrown, at the date of the eontract, that this whe his object
in buying the lavd, wind in 18.51 the lend and house were
conveyed to the plaintift. convered to the plaintifi, The defendant shortiy after-
wrards obstrueted the view from the plaintift's wiudows
looling looking north and east, with the intenfion of preventing
his acgniring any rights under the Prescription A
1गlaintill fled his Viee-Chancellor hill to restrain such obstrnction. granted lue relief prayel.

## WORKING MEN'S COLLEGE.

Trie inaugural address at the commeneement of the winter session of this colloge, in Great Ormond-strcet, has been delivered by the Dean of students and risitors
of

Mr. Thomas Hughes, M.P., in the absence of the Viee-Principal (tbo Rer. J. S. Brewer), took the cbair, and referred to the great loss wlich the college lirud sustained by th
founder, tho Rev. F. D. Manice
Dean Stanley, who was warmly grooted, said tbero was a very widcly-sprend complaint or murmur, he could hard call it a helief, that tho age for indiridual influence bad passed away, and that the world was henceforth to bo guided
by general movement-by the action of masses, forecs, or parties of men. Againgt tbat complaint the connexion of this college with its
close of his address, the Dean said he thonght give way to the popular belicf that the age for individuals and institutions bad passed.
In the course of the evening a report was read hy the secretary, which contained the ollowing passages :-
6, 6 at members have joined the college to this date and at least double that number hare passed twrough the
 in all divisions, with of decreaso in the number of of men atteuling tho elementary bections, especially so in
English and French. . There is still a sum of anglish and French. 2201 . die for repairs on account of still a sum or buildbout 220 . due for repairs on account of the new buida-
ligg, so., and nt the close of the year there was a balnuce against the college of fol. . . The experience of the college mates it reasonbble to expect that, wheli it is support itself wilhout any extrmeous aid."

## CLEANING FLAGSTONES.

Iv reply to " G . W, " it will be necessary to tako up the flags and relay them, after clonning on diy ballast, freo from mould, and a super stratum of chalk or old clean dry mortar.
To clean the stones, lime-white thein both sides witb hot new-mado lime-wash, and boush it off when dry; and repeat the process if neces. sary. Tbis process is also applicable to any old builang material that cannot otherwise be kind. ; for old brickwork or stonework of any latter only want one thin cost, and should he scrahhed as soon as the lime is dry. In this caso the lime docs good in overy way. Where necessary it remores oontagion, kills vermin, purifics the atmosphere, aud cleans and prescrycs the wood.

Watteli Scingill,

CLVIL AND MECHANICAL. ENGINEERS' SOCIETY
$\mathrm{O}_{\mathrm{N}}$ Snturday inst, the members of this Society agni wistwecu Broud-strect and the low-lesel station at \$hore
Witch.
The mennlers assembled nt Broad-strect Station, North the new works by the represcutative of hicessls. Lucas Brothers, the continctors.
The works in this section of the railmay consist of the metween retaining walls. A notalble fcatnre is the suluway for the mains of the
Charterad Gas Company, runuing nuder the whole width of the station parallel with whit was Sun-street. Th roof of the subwny minder the plat form is formed of hrick
arehing; but under the liue of rails iron girders will be
used The Sborediteh Low-level Station clnimed the attention
 elgant, and the reatilation scems satisfactory. The irom
bridge carying Commarcial-strect over this station was
particularly noticed. The worles, which aree in to forward parteuary noticed. The worlas, which are in al forward
state, are beagg carried ont under the direction of the
company sengineer, Mr. Edward Wilson.

## THEATRICAL.

Ifaymurket Theatre.-Mr. W. S. Gilbert's new play, "The Wicked World," is the most complete work that he has yet produced, -a most ingenious fable admirably sct forth,-and it is helped by the best acting, on the part of Miss Rohertson, which that excellent actress has yet been led to exhibit. That it includes os many eloments of popularity as "Pygralion and Calatea" is not quite certain, hut that it will long hold the prolic, and give pleasure to thousands, we have not the remotess dombt. Iu parta of the play, notalily at the close of the second act, Miss Robertson displayed an amount of physical power with which her warmest admirers had scarcely croclited her, and literally carried the house hy storm. A more onthusiastic recognition, justly actress for many a long day. Mr. Buckstoue has a part full of fun, and Miss Roselle, Miss M. Litton, and Mr. Kendal efficiently carry ut the author's views. The latter hy portray ing the fairy brother Ethais with feminine refine is could produce a stronger contrast wit Mr. J. O'Connor has painted an from eurth.
Nr. J. Oonnor has painted an elegant scene "a firiry landscape on the back of a cloud"; but should convey exactly the actual situation: should hare represented in the background the carth as scen from fairy-land. Objections part, all parties concerned in the prodaction "The wicked World" are to be eongratnprogress af ane suecess tending to the upward progress of the drama.

## RAILWAY MATTERS.

Tenteriter. - A corrcspondent of a conteruporary says, -" propose to start a line from Posoca wood which would touch as near as possible, Brenchiey, Horsomonden, Goudhurst, use Cran to uselut to Beneuden, and pass down the valles on usoful to Rolvenden enteraon, wruld rum to the west of Wittersbann, whicb would be uscful to Beckley, Peasmarslr, and Iden, and so onwards to Rye.-W. H. E., arcbitect and surveror London." The tramway scheme has heen abandoned.
Inauguration of a Ratilucy in Jupan,-A live of railway has been opened from Jedlo to Joko hama, The Mikado determined to inaugurato the opening himself, and this was one of the great attractions of tbe ceremony,- to sec "the doscendant of the gods," who had hitherto permitted himself to be seen but very rarely by his own people, delivering a speech aud receiving addresses in the midst of a geaeral fote. This thereforc, may be considered as another step
taken in tho patb of progress. The taken in tho patb of progress. The importance
of the crent was recoguised by of the crent was recoguised by all, and the attendauce at the ceremony was immense. The Mikado is a very noble-looking young man, about twenty years of age, and rather tall, anm with aut olive tint of complexion, very regnalar fentures. Tre was dressed in a white tumio, and a mantle of yellow silk. His head-dress apperved to consist of a sort of chignon, formed of the back hair and hronght to the top of the head, and surmounted with a small silk cap. The ceremony terminated with a splendid display of freworks.

## CHURCH-BCILDING NEFS.

Homerton.-Tho new eluurolh of St. Lulko lias been connceted by the Bishop of London. It accomuodates 750 persons. It is faced externally
with Kentish rac-stone, with Bath-stonedressing with Kentish rag-stone, with Bath-stone dressings, and bas cost, as far as at present completed, about 5,000\%. Mr. Carruthers, of leigate, was the contractor, and Messrs. Newman \& Billing were tho architects.
Maryport.-Tho new Mission Church, which has been huilt ou the north side of the harbour at Maryport, bas heen opened for diviue service oy the bishop of the diacese. The sito for the baldug was given liy Mr. J. P. Senhousc, the lord of the manor, and the edifice itself has bees built from the design and under the supcrintend. ence of Messrs. Charles Eaglesfield \& Sou, of Maryport, arclitocts, and consists of a navo aud one side aisle, with a circular apse or chancel The style of the builcing is Early English. The nave is divided from the aisle by three noches The roof is an open timber one. The structure will have, when properly finished, The structure will have, when properly finished, a tower and
spire above the entrance, $100 \mathrm{ft} .\mathrm{in} \mathrm{height}$.The pews, which are open, and made of pitch pine varmished, will accommodate 310. The huilding generally will he lighted by gas from ornamental orass standurds, hut the chancel will be lighten by a corona, the gift of a lady. The walls are of red freestone from the Netherhall quarry aud tho church is to be wamed ly ono of Gumey's patent stoves. The contractor for the masou's work was Mr. Marshall, of Mary. port ; for tho joiner's work, Mr. Hemry Dent, of Cockermouth; for the slating, Mr. Mandle, of Maryport; for the plastering, Mr. Johuson, of Carlisle ; and for the plumbing and glazing, Mr. Anthony Picle, of Workington. The cost of the churel, including the tower and spire, will be amout 1,600, , and a considerahle portion of this amonnt has been raised. It is intended to fournial the
Dorefiester - The Aluer charcb has now gone a thorough restoration, the work extending orortwenty-five years, and costing nearly 10,4007 The proportions of the church are now well displayed, and the Jesse wiudow and the east window, with its stained glass, are plainly risible from nearly all parts of the edifice. The last and crowning portion of the work of restoration is the complete reuovation of the roof of the south aisle of the chaucel, whicb has just been accomplished from the designs of Sir Gilbert Scott. There yet, however, remaius something to be done to this aisle, as some traces of a oroined ceiling have been discovered, and it is Che wish of the vicar to have this thoroughly restored. A mazile reredos, coloured glass for the windows, more and improved seatiug, a new

St. George's, Hanover-square. The Com. mitteo of Works have recommended the vestry to aulopt the following estimates for the year ending Lady-day, 189.f:-Maintenance of roads, $12,217 l$. 6 s . 84. ; paved footwass, 3292.10 s, ;
pared carriage.ways, $1,608 l$. 5 s ; ; gravel footways, $75 \%$; casual repairs, 1,7006 ; lighting, 3,929t. 14s. 6d.; watering, $3,9662,17 \mathrm{~s} .30 \mathrm{~L}$ cleansing, $9,242 \mathrm{~L} .3 \mathrm{~s}$. Sd. ; total, $30,1 \cdot 112.17 \mathrm{~s} .1 \mathrm{a}$ This doos not include 2,2711 . 7s. 10d. for sover works, besides an additional outlay of 1,7001 . Should the vestry adopt these estimates, they will involve an additional rate of 11 d. There are recommendations to lay down asphalte on the footways in varions parts of the prish, at a cost of 1912. 105, and to lay down wood-paring as supplied by the Improved Wood Paviug Compary in Piccadilly, between Berkeley. street aud lbemarlo.street, at a cost of 1,1507 .
The Redeliffe Sanitary and Ventilating Trap. - This is the title given to a cheap, narthenware trap invented and patented by $\frac{1 r}{} \mathbf{r r}$ 3oNall Greig, and at present cliefly used on tho
Redeliffe Estate, Soutb Kensington. It holds Redeliffe Estate, Soutb Kensington. It Lolds moro water than most traps, and so gives
greator chance of security, and has a second greator chance of security, and has a second inlet, also trapped, to receive water from sinks or areas, which serres to Hush out any sediment cleposited in the bottom of the trap. The hole provided in tho crown for a ventilating pipe would be more nseful if it were in the front part of the trap, nenrer the outlet, insteak of boing behind the bridgc. Mr. Greig has made some smaller traps of the same form : all very cheas nd grool.
Ozone. -The Journal of the Tranklin Tustitute netliod of manufacturing ozone, which depends upon an observation first made by him some ime ago, and which then created considerable discussion as to its correctness, in various scientific papers. The observation is, namelr that if cold air be blown through a flame, it is converted partls into ozone. The apparatus designed by the inventor to utilise his proens cousists of a number of Bunsen barners, placod in a row, and as many lorizontal tubes, arranged at a certain distance above the lunners, throngh which cold air is blown against tho flames. Opposite to these tubes are placed a number of funnels, to collect the accurmulating ozono.
Slate Quarries on the Lochiel Istates. A correspondent of tho Teekly Sintsman states hat tic slate quarryig, begun some months ag Onich, continues to be of a most pronising Onich, continues to be of a most promising 15 ft liavo beams of slate varying trom of thous 15 ft . havo boen bored through horizontally, and from the nature of the surfaco tunnelling there is every indication that he dephi of scam hie much under the sea line. The quality of the slate found is statod to be equal to Velsll in rlurability, and the workiug of these quarries will, it is expected, greatly augruent the trade and revonue of the Caledonian Cival.
A Crystal Palace for New York.-The poople of New Fork, encouraged by the example mined to commence a similar undertokiug in their own city. The "Industrial Exhibition Coupany" has becn started, and a grand dinner was given at the St. Jaznes's Hall, in ordor to discriss the position and prospects of the company. The directors intend issuing $\mathbf{1}, 875,000$ dollars stock, at 80 cents on thie dollar, and to purchase a plot of ground outside the city, at a cost of about 952,000 dollars, for the erection of a permanent industrial exhibition. The matter is said to be iu rery good hands.
The Vienua Universal Exhlibition of 1873.-Notices have been issned to Britislı exhibitors that a special law for the protection of industrini designs and inventions at this Exhibition las been sanctiones by the omperor and published; and that the frontier custom. houses will direct goods to the chief custom. huuse in the Exhibition, and the chief customhouse back to the frontier custom-houses, under certaiu regulations announced; goods rernaining in Austria or Hungary being liable to inuport duty within three months after the close of the Eslibibition if not then onterca for exportation.
Builders' E'oremen. - Complaints reach us ngainst the fitzess of the forenen employed by certain largo bnilders, but we cannot give currency to clarges on er parte evidence. Tho
buikers themselves ought to be the best judges.

New Buildings. - On Christuns diay a nev Welsh Calvinistio Methodist Chapel was opene at Claig, near Bangor, the architect being Mr
R. G. Thonns, Mengi Bridge, and the contracto R. G. Thonlas, Menai Bridge, and the contracto Mr. Evan Williams, Bangor; the total cost was abont 1,8002 . Mr. Thouas has also iu course of erection a large mansion at Treborth, for $\operatorname{Mr}$. $\mathbf{R}$ Davies, M.P. for Anglesea; and at Trevece College, South Waies, a handsome memoria chapel to the late Howel Harris, one
Mr. John Jay, Contractor.- We regret to his residenco in Hornsey He has been long Hown en mineut eontractor haringexecuted mans undertalkinge of creat extent not onls in he metropolis but in marious parts of the Tnited hie nedours, was the first contractor for the letronolitan Undermonnd Railway Jis re ains lave been interrod in the family rault at bney-park Cemetery
A New Clock for Market Drayton.-Th arishioners of this town having ducided uno he orection of a clock in the parisa clurch, a subscription enabled the commitee to place tho rork in the liauds of Mr. smith, of Derby. It is now complete. It strikes the hours uphon a bell of 18 crit, and the qnarters on bells iu proportion. The time is shown upon four large dials (onc illuminateri)
Paris.-Workmen will shortly be ocenpied in caring away the rains of the Tuileries. They ro also employed in making some interesting epairs in the Palais dos Thernues, at Paris, the Emperor epriring the facade of the Trotel Cluny whing eparing the taçade of the lotec. the direction of the works.

## Proposed Art Gallery for Liverpool.-

 his project is again taked of in lie town: we ball he grad to sco it persevered mith. it 3,000 ,od. have becn sola during the past tro hddition to what havo been sold from tlie eshi bitions of Mressrs. Agnerv, Grindley, aud others.
## Caution to Brass Fomnders and Others.

 An account comes from America of the destruc tion of the jaw-bono of a workman, poisoned by the fumes of zinc. The manl was a brass-founder and in pouring the alloy of copper and zinc, the fumes npon the bones of the human systen appears to be analogous to that of phosphorus.The Leeds Borongh Engineer and Sur reyorship.-A reconmendation was made to the council at heir meeting on Thursdicy, lo appoint one of the three followiog gentlomon borough engineer and surveyor:-Mir. A. H. Morant Vorwich; Mr. J. Lemon, Soutlarapton; or Mr: Paal, 'Tottenham.
The Ironworkers of South Staffordshire and East Worcestershire have acceptod the time to work at present prioes for three months. At the expiration of that time a nerr basis of agreement will bo sought by the men.
Institution of Surveyors.-The next meet mg will be held on January 13th, when the dis. Mines and Niverals,n will be resumed, and loould time permit, a mper will be rend by Mr. E. J. Castle, entitled "The Origin of Parochial Relicf:"
The Queen of Diamonds.-The discovery of a diamond of enormons weight is reported from tho Cape. It is said to be of 288 carats, in colour a light yellow, shape good, thorgh slightly flawed ou the surface. In weight this snrpasses 11 known stones.
Mr. Rickman.-The nerspapers announce the denth, on the 3rd inst., at Rhyl, of Mr Edwin Swan Rickman, architect, late of Bir

VOL. XXXI.-No. 1563.

"unpicturesqueness"
NE of the most tboughtful and profound philosophors of our day, Mr. Herbert Spencer, has in his miscollaneous cssays travelled a littlo out of his usual paths of speculation, to give us his thoughts on the pictaresquo in architecture. The short essay on the subject was suggested, he tells his readers, by heariog at a watercolour exhihition the romask, "How unpicturesquo!" applied to a certain drawing, wbich had previously struck bimself in the same light. On considering the drawing in question, and having assumed the as proved by this cone sensus of opiuions, he camo to the conclusion that this defect arose from the fact that a building in the "Classic" style, with regulaur unbroken horizontal lines, was combined in the composition with a broken and irregular landscape. The lincs of the building did not harmonise in style and character with tbose of tbe landscape, and tho result was as aforesaid; upon which premiscs the writer bases some further considerations on the general conditions of the picturesque in architecture, not altogether to tho purpose.
It is always interesting to meet with original opinions on any branch of art from mon who have thought decply on other subjects, and who frame their opinions entirely independently of fashion. But the instance we have alluded to $i_{B}$ one ont of many illnstrations of the fact that, even to minds of excoptional power and hreadth of information, some special training is reqnisite to enable them to appreciate fully the subtle and dolicate distinctions involved in questions of this nature. If Mr. Spencer was right in his deduc. tion, the Acropolis ought certainly to he a most unpicturesque subject ; and Gaspar Poussin and other artists, who wore fond of introducing architecture into their landscapes, must have grievously erred in their critical judgment, as well as the numbers who havo admired their compositions, Art criticisin may often be in want of more philosopby; bat it is equally true that philosophy will not make art-critics.
In fact, the general sense of painters and students of the picturesque has decided, in the main, in favour of almost the opposito principle in combining landscape and architecture, to that to whicb wo have alluded. Tacitly, at least, it has been felt that the simple, regular lines of Classic or Itaban architecture gain in effect in combination with tbat kind of broken and irregular, but not too wild, landscape, whicb we generally call picturesque, and the effect of which (in painting) is, in turn, enhanced by the presence of the architecture. We regard architecture in a picture as something distinct from the landscape, appealing to a different class of associations, and resting upon entirely different
qnalities for its effect. As compared with nature, it is the distinctive character of architecture to bo regular and symmetrical : that is the kind of charm peculiar to it, and which, therefore, wben architectare is used as an acces. sory to pietorial effect, we like to see omphasised and brought out,-in rogard, at least, to the main lines of the structure introduced. The painter may indced represcnt the buildings he introduces as abraded and discoloured by time, for it is only thns that he can avoid the aspoct of newness and recont introduction on the scene, which would, in most cases, clash with the feeling of his picture, destroying its repose by suggesting the immediate presence of the mason and his staff, and depriving the scene of the charm of association belonging to that which has remained long unchanged, and survived many vicissitudes of time and season. So far the painter may endearour to barmonise his architectural adjuncts with the feeling of this landscape; but further than this both painter and architect will he wise not to attempt to hring the lines of thoir architecture so far into similaxity with those of the landscape as to make the former appear in any degree to compete with the latter. Architecture should stand as a contrast to, not as a reduplication of, the charnoter of the landseape. Where we have the variety and irregularity of outline and detail in nature, in broken ground and woodland scenery, there we look for the symmetrical repose of arohitecture as a foil to the landscape. We do not want budding crockets and finials, wild and piled-up outlines, and masses of building, where there are the more varied growths and tho larger outlines of nature to throw such attempts on tho part of architecture iuto the shade. A very distinguished church architect certainly attempted, in a cburch built in the lake district, to mako the architecture harmoniso with the mountains, by providing a tower and spire of exceptional and disproportionate size and massiveness. But the attempt is not a success : its purpose is evident, and the futility of the result equally so. What we can realise, in such scenery, is the contrast between tho varying and undulating outlines of nature and the soher, artificial repose of building. And on the converse principle it is that Gothic arohitecture, in its richer and more ornato developments, is pro-eminently the architecture of towns, hotb historically and westhetically. Where we have no hills and trees to compete witb our buildings, we can afford in them to give the rein to fancy, and we find a pleasmre and relief from the otherwise dreary monotony of formal streets, in playing with the outhines and details of the architecture, and seeking from it some of that variety of line and of light and shade which in the comutry is supplied by nature. Almost all landscape painters have felt this instinctively. A Gothic church, with its spire and pinnacle and crockets, would add nothing, in most cases, to a landscape, and would he felk, if worked out at all in detail, rather as an intruder in the composition. The painter seeks mainly for broad, heavy masses of light and shadow in his buildings, and is rather troubled than otherwiso with elaborate detail. When, however, tho landscape gets beyond the limits of the picturesque into those of the wild and grand, there is another change required in the treatment of architecture, which is to be combined with it. We cannot place the amenities of Classic architecture as a feature in scenory of this doscription; they would be lost and overpowered; the contrast botween tho scene and the building amounting in his case, not mercly to opposition of character, but to absolute discrepancy of sentiment and association. The Greek temple, contrasting as it loos in lino with the irregnlarity of an ordinarily picturesque landscape, is in harmony with it in sentiment; neither overpowers the other. But the Greek temple would be lost and insignificant amid the gloomy grandeur of Glencoe or similar
scenes. In snch scenes we require still furtber to denude architecture of her attempt to vie in interest with natnre. Wo must rednco the architecture to its broadest, simplest, most unpretending and yet most durable form, in order to prevent its appearing either an impertinence or a feebleness amid those great forces of nature Thus it is tbat the castle form of building is the most suitable for sucb regions; the suitability being partly, ne doubt, the association whicb connects buildings of the fortress aspect with craigs and inaccessible places, but partly, also, that scenes of the kind wo aro referring to irresistihly suggest the power of natural forces, and wo are scarcely satisfied unless with struc ures which scem capable of resisting the action of those forces. The principle will hold grood, indeed, wherever nature assumos a wild, cheer less, and uncultured aspect, as on a bleak barren moor, as well as in rocky and mountain ous landscapes. By such a treatment we are, it is true, blending architcoture with nature to a certain extent, and this because nature is here too strong for us. We can neither compote with her in cbaracter, nor offer an equally balanced contrast, and we are obliged to let our architec ture fuse itself, as far as possible, with the land soape, which must otherwiso overpower it com pletely. This fusing of architecture with nature is carric a step further, and as far as it can go, by the painter who reduces his architecture to ruin, from which the immediate hnman interes has departed, and which bocomes, in point of pictaresque effect and treatment, entirely one with the landscape, to which it serves only to impart tho additional interest of association with past times and with the former history of man. This kind of sentiment in architectural ruins in combination with the landscape bas never been moro boantifnlly illustrated than by Richard Wilson, who, perhaps, was only searching for the nere pictorial element, in the introdnction of his pictnresque blocks of rained buildings and fragments of arcados; but he was giving us nore than, possibly, he know of himself; and the architectural remains in his Italian scenes havo a kind of combination of old and modern interest which reminds us of Goethe's beautiful littlo poem, where the wearied foot-traveller in Italy is guided to the peasant's dwelling to rest, and finds, instead of tho lowly hat he expects, sbapely time-worn columns and architraves, the remains of a ruined temple.
Among more recent painters who have happily treated buildings in combination witb scenery may bo mentioned Stanfield, who evidently attached great importance to bnildings in his inlond and lake scencs, and has a way of using them, very similarly in many of his works, which indicates a settled and premeditated treatmen of them as fcatures in a scene. He depends largely upon sunlit buildings for tbe principa lights in his middle distance, and an Italian tower or campanilc so placed, and partly reflectod in water, is a very common incident with him. Another painter, not so mnch talked about now as he deserved to be, Bridell, was occasionally very happy in his introduction of buildings, generally of a classic type, into landscapes exactly suited to this type of arcbitecture. Of Roberts and Prout we do not here speak, becauso they were rather painters of buildings than landscape painters, and what little landscape did appear in their piotures was quite subordinate to the architecture. But among painters who have treated buildings in landscape with great success must be mentioned Dnntze, the painter of winter scenes in Belginm. His pictures are very mnoh abke certainly, and he paints but one effect; but his groups of high-roofed quaint houses are endlessly varied, and always picturesque and interesting; and their quaint jagged outhines smpply to the painters leafloss and flat winto scenes, just the relief and play of line which they want, and which in pictures of anotber
class wonid be furnislied hy the foliage of the trees and the undulations of the land. Of the value of arehitectural objects to the painter in giving interest to distance and middle distance, picture, examples are endless, aud too obvious to need special reference.
It might be wished, bowever, that the architects would oftener show the same sense of the value and cffect of their structures on real land.
scape which the painters evince in regard to scape which the painters evince in regard to ing of a building in the country, we are inclined to anspect that its effect on the landscape in and effoctive ray of placing it in remard to the landscape, is the last thing thonght of, if it is landscope, is the last thing thonght of, if it is
thought of at all. Yet this is certainly one of the most important points in connexion with architecture considered from an artistic point of view, if we reflect that this combination of the view, if we reflect that this combinatiou of the which it will be riewcd at all - the only way in which any pleasure will be derived from it-lby which any pleasure will be derived from it- by it. The etrictly rrchitectural beanties of the mansion, and the comfort of its arrangements, his particular circle of friends. But the nosition of a building in regard to the scenery in which it is situated, its being placed higher or lower on a slope, or a dozen other circumstances of site, may make all the difference as to whether, to the majority of those who see it, it is a nery beanty in the landscape, or an intruder spoiling the best point of the scene. We have in our by choice or happy chanco, in the landscape, as to be, Jnder almost all aspects of morning and evening, a constant source of pleasure. It is surely worth while for an arohitect to make an this, where it is possible. When an opportunity is afforded of placing a honse on the end or spur of a moderate ridge, without its being too mnch exposed, this is one of the surest opportunities tion, too, a bnilding, especially with anything in the shape of a tower rising from it, serves to give scalo to the landscape, and may even be an architectural point of view. Conversely building ill considered in proportion and outline may succeed in dwarfing and impairing tho are freqnently excecdingly lappy in realising by means of thoir orn pecnliar class of structures. Whilo a building thus placed on an cminence requires a characteristio treatment of or cupolas (of which ono of the fincst and most pictnresque examplos is perhaps the palace at Cintra, which evolsed so much adoniration from generally require a different treatment, in predominating horizontal lines; the building in this case appearing to nestle into the landsenpe rather for a huilding on such a slope, when seen in profile, will often bo a very nice point to determine; a very little difference of place, higher or In Buch a position, as we hintod just now tall projections in tho shape of towers will mostly ball out of place, as clashing too rearly with the slope of the ground behind them, especially wben this is at all steep; and for buildings on eminences a degree of solidity and squatness of proportion is genernlly required oven in their expression of stability and power to requisite all the attacks of the elements incident to such a sitnation. It is only in the plain, on level conntry, that we can succossfully introduce features of great height; it is here that such features are practically most securely placed, cffect, where there is with them. This has long been recornised by architects, as is evident from the fecornised by great spire districts of Engiand are almost en. tiroly flat countries, - a fact where almost en. bears ont the position laid down aboreletely architecture, as a male, mast contrast with, that not compete with the character of the with, and Few things of the kind can bo ther landscape. Fuccessfu? in effect than some of and more Medireval spires, rising straight from the tallest Medireal spires, rising straight from the flat expanse of conntry, or seen in the distance, the dark purple of the distant landscane-
the latter, as we all know, a favourite incisnitability of form in regard to site will depend also on the known climate of the conutry or neighbourhond; for an outline or composition which would be pleasing in aregion of sunshine and calm may give a feeling of insecurity and insta. bility if placed in a stormy and inclement neighbourhood. One recent rather successful adapta. tiou of architectural treatment to natural site, which may be mentioned in illastration, is a large house (the residence of the bead of a weli-known publishing firm), which now forms the most prominent object in a walk ont of Edinburgh to Arthur's seat. Situated low, this houso would in a sorene climate be judged as far too prononcé in character for the site; but taking jnto acconnt the prevalent climate and weather of the neighbourhood, coupled with local associations of style, and the proximity of the overhanging brow of Salisbury Crag, the stern enstellated character of this building, with tho large, heary scqnare block whicb rises above the rest as the mnin feature, is a very satisfac. tory instance of the combination of architecture with landscape. The name of the architect has escaped us.

The consideration of colonr in architectare, in regard to its effeet upon the landscape, is a very important one ; tbat is to say, it is a great and cryingevil when colours and tones, crude and out troduced into it; though the means of avoiding any glaring inconsistency of this kind are vcry any glaring inconsistency of thas kind are very
simple. Build, as far as possible, with the simple. Bnid, as far as possible, with the building harmonise with the tone of the landscape, since it is these materials that give, or rather, in fact, constitute, that tone. This is the sccret of part of tho charm of many a simple old country church-many a rural cottage; they are of the same material which forms the basis of the landscaps around them, and fall naturally of ten, to find with it. It is odious to the eye, scape a storing perticolour a quiet rural landbrick or "stig, particoloured portent of patent away all repose and harmony from the picture Foreign materials may he ased from the picthre. Foreign materials may he ased with happy effect in small quantities, to relievoand brighten up the be, if possiblc, of a local growth, and imbued with loos colour.
Where a honse is necessarily at all out of keeping with tho landsoape, in this or in other respects trom tho nccessity of using materials over by connceting the honse gradually with the landscape, through the medium of terraces and gardens, in which the materials and treatment should be made gradually to coincide more und more with the character of tho landecape, till the point is reached where the artificial blends with the natural. Very heautiful results may bo prodnced in this way, with care (and cost).
There will bo many other points to be found in almost every case of buildings to be erected sible to render a structuro which it will bo possible wo render a structuro a desirable feature in sent its own problem, no bly every case will preto perception of the architect. We will only to perception of the arohitect. We will only
add that, in selecting the precise site for a house. in addition to tho usual questions of foundation, drainage, \&c., to be deteresions of foundation, spection of the to determined by a close inbe lahour thrown gyay be lahour of the site from to take a more distant low of the site from one or two neighbouring building may be best placed, so as to be a real added interest to the landscape in which it is to form a permanent featare.

MEN AND MASTERS IN SOUTH WALES. It is worse than idle to ignore or to dissemble the extreme gravity of tho crisis in South Wales. it is far moro than the prosperity of even that bnsy centre of production that is at stake. Our great staple industries of iron, of coal, and of production of these prime elements of skilled abour, are all, directly or indirectly, involved, The mining industry of tho country alone is a source of national income to the amount of 200,000l, a day, for each of the six working days in every week in the year. Our latest returns, few days few days. From 210 mines, during that year, were raised 14 million tons of iron ore, of the
millions of tons of coal were raised, of the walue of upwards of 35 millions sterlimg: The total value 1871 minerals won in the United kingdom in more tha $\mathrm{H}_{2}$ milions sterning, bemg 2 mikons industry, and preceding year birect was expanding, the rate of inereasa being such was expanding, the rate of mereasz being such daction in fre yars daction in are years. The opposite side of the feelings of apprebension, as well as of distrust. Our collicries found employment, in the year 1869 , for 345,444 male persons, of whom. year 1869, for 045,46 male persons, of whom being 108 million tons of eoal. It is not easy to compare the complex industry of iron. with tho simple statistics of ooal. We have stated the estimated ralue of the iron ore wor. in 187. In that year the pirs iron produced was valued at $16,667,947 l$., being av increase of above 1,700,000l, in value over the preceding year: When we compare the price of pig iron with that of bar, of rails, and of sheet, and when we furthex consider the great development recently given to tho manufactare of steel, we shall he able to form some idea of tho labour devoted to. the manufacture of iron, in the condition in. wbich it becomes an article of commerce; and perchance the raw material for the ironsmith and ironworker for all descriptions of trades
Bar iron was quoted on tho 6 th of January last at from 11l, 10s. to 12l. per ton; Staffordshire sbeet iron heing as high as $15 \%$. 10s. Scoteh pig. was at 6l. Gs. These prices liave been attainedi by a pradual rise from 6l. डs. per ton for bar iron in 1861-1862. In 1856, tho price was 92. 1s* in $1851,5 \% .11 \mathrm{~s}$. ; in 1815,97 . इs. Thps for tho last quarter of a century there has been a recurrent rise and fall in the price of iron, the maximnm quotations being very nearly three times the minimam. It is evident that a trade subject to such enormons fluctuations mast de mand both nnusnal powers of business, and very large capital, for its maintenance. And the question is further complicated by the fact, that other parts of the world are only too well prepared to come into competition rith the Bnited Kingdom, for the prodnction and mammfacture of iron, not only as to quantity and price, but, stil moro serionsly, as to qualit
Thus the crim, hard, faet, of the suddon: cessation of the bread-winning worls of some 60,000 industrious men in South Wales, -a fact, enough, in itself, to intensify the rigour of a an item in that long catalogne of mischief which an item in that long catalogne

It has been nrged as a matter of hope, in thecontest now joined, that mutual consideration and good temper havo, to an moprecodented estent, been maintained during the preliminary discnssions. Wo confess that small comfort on the present vecasion from this fact. When persons quarrel in haste, thoy may often make when tho real points of dillerence appear, to tho uninformed looker on, to be so slight that they may readily be compromised: when mutual accom modation is proposed, and when, coolly and com posedly, it is refused by both parties; experience shows that the break is very difficult to close.
It is important that this great question should; be viewd in its true lirbt. Tho solf-control. hithorto exercised by hoth partios has, at all: events, the advantago of rendering this more easy. The men who are put in the fore-front of the battle aro not those who have provoked the contest. The former will be, there is no douht, the first to suffer. They are the forlorn hope of the union; and a forlorn hope exposed to suffering and starvation, for a cause to which they hy no means wholly belong. For the extreme cruelty of this casc lies in the fact, that so fow of the ironworkers are union men, so that they will not enjoy the usual solace of strilse money; but that, while holding out for a union purpose, they do so at their own cost. It must not be forgotten that this is not the case of an ordinary dispute between masters and mea. The selations between the great Welsh ironmasters and the thousands whom their wealth and enterprise enable to support themselves, lave been of somewhat a patriarchal character. It is impossible either to know the district, or to read witb care the acconnts of the conferences that have taken place, withont being aware of this fact. Had Wales been left to itself, those who know best believe maters could scarcely have come
to their present condition.
sentimental nature on this ground. The appearance of the officers and delegatos of the nion in Wales; the reference of decisions Welshmen to Darlington children of the kindly Welshmen to Darlington,-all these matters are incidents of a state of war. Battle onco joined between the two parties, humanity has but ittle to do with the matter.
Tho ground, then, is thas clearcd. The masters aro to submit, or the industry of South Wales is to be destroyed. It is on labonr that, after all, the blow is to fall. With the knowledge we possess of what Russia can do in producing iron, we are convinced that it is not, at all events, a very selfish spirit that keeps so many millions invested in the Welsh iron-fields. While all goes on well; while forges glow, and fans hum, and wheols revolvo; ahove all, while there subsists the strong tie of mutual reliauce and rood feeling between the head and tho hands, it will not bo the prospect of larger returns for his capital that will tempt the great ironmaster to displace tho scat of his lahours. But if, in spite of all that can do, and in spite of the hatter feelinis of he men themselves, a on by a semi-politieal like that is to be forced on by a semi-political agency, we very macb doubt whether any long-headed men will long continne to devote their resources to the produc tion of a metal which is both dearer and inferior to that which only awaits the applica

Arbitration may mean one of two thi
Arbitration may mean one of two things. It
may mean the reference of a dispute to the may mean the reference of a dispute to the
decision of a tribunal, or of a judge, appointed decision of a tribunal, or of a judge, appointed that case it is a special tribunal, with definite, legal powers. The evection of such tribunal is not forhidden,-we cannot say is discouraged, by our laws and our judges. In cases where a great amount of detailed investigation is regnisite, and where public convenicnco does not allow of the necossary time being devoted to the question, by our courts of law, arhitration is at times resorted to at judicial instance. In foreign countries where the code prevails, arbitration is for oxample, as partnership accounts. The arbitration is clothed, for the time, with judicial functions, and tho award is enforced by all tbe authority of the law

An arhitration of this lind is, in fact, a legal measure, and as such it may be a most beneficial procedure. But it is of its essence that it shall bo conclusivo. The parties arbitrated between must be under the power of the Court. ing out must he possille. It is a lawsuit, civil not criminal, amicahly decided, but decided with all the anthority that dignifies even a judge pro nouncing on a criminal question.
Any other arbitration than this is simply an offer of good offices. Its possible advantage arises from the chance that a third party may suggest some possiblo compromiso. Between
angry disputants, blinded hy tbeir own passion angry disputants, blinded hy tbeir own passion,
sueh an intervention may be of great service, sueh an intervention may be of great service.
Personal dignity is saved; matters that may have bcen overlooked are brought to light; in fact, a hasty quarrel may he sonndly made up.

In the present case we fcar there is but little room for an arhitration of good offices. With suggestions of all kiuds, of more or less value,
the jress has teemed. Men who have seen the national danger of the contest, and have seen little more, have been eager with their adrice. But the position has been misunderstood. For the irouworkers the fact that the price of iron has fallen might he reason enough why their own wages should fall. Bat for the men who have hitherto foreed on the strike, this is only a trifling incident. They wish to seize tho opportunity of maintained hetween profit and wage. Ther want not only to know what the ironmaster can afford to pay, hut further to decide at what rate of profit his own capital and energy shall be remnnerated.
This is a point which we are disposed to think it is impossible to carry. With one or two great employers, indeed, it might be casy to cat away any gronnd from the agitation. "There are our books," a merchant prince might say; "there are our private ledgers. So and so is the capital I bave invested. Over tho twenty-five years past, while iron has varied from the price of an ounce of gold for a ton of pig to that of more than three times that rate, I have kept my works open, come fair, come foul. So many
thousands are housed, fed, and made comfortable thousands are housed, fed, and made comfortable
by my great bnsiness. I can live without it. My my great bnsiness. I can live without it
My profits, one year with another, are so mnch per cent. And I cannot, and will not, encounter
so vast an anxiety and so imminent a risk for less. I will give
Please yourselves."

Ironmasters whom we might name might, and possilly very readily would, talke this tone. But jastice is impartial. It is not one or two millionaires who alone can consider what they
choose to do. We have seen that the forges of choose to do. We have seen that the forges of the country are very numerons. Small masters have to be protected as well as great ones. The rate of profit that will pay liberally with a larg No steps, therefore, in the direction of making the rate of wages a direct and exact function o the market price of iron can be justly taken without tho concurrent establishment of a vend or syndicate, among the ironmasters. Now our trade has grown up on the competitive principle If an order for 50,000 tons of rails, for instance, has como from Russia, it has heen matter of the keenest competition. Eacb great "works" preserves with the utmost care the secret of its hand its profit, the sound reason tbat on the one to compete for orders, the otber hand its power If the whole iron trade were formed into one great body, in which the intorests of larger and smaller proprietors, and the respectivo adran tages of different works, were elaborately and accurately balanced; if, instead of firm com peting with firm, ewob took its fair turn and proper proportion in the supply of the market of the world, $x_{\text {a }}$ partnership between master and opinion most not only practicanle, hut, in our competition exists in the iron market, a deniand for such an arhitration as alone could have any reality seems to us useless
Wo speak as to friends and constant readers on both sides. Wo ventare to think the majority will gee, on reflection, that our view is correct. f co-ope ever been adrocates of the principle great hope of the industry of the future. To atroduce it into every occnpation in which great hodies of men are concerned is, we bold, desirable. Nor do we donht that all difficulties as to the application of the system are to be removed by a sincere desire to dispel them. Where there is a will there is a way
But, then, this application of the co-operative riaciplo must be, in erery case, in accordance witb the special requisites of each distinct busiess and occupation. In a joint-stock bank, for public mectings for a list of sconrities. Confiphbie mectings for a list of sechrities. Confi-
denco is the soul of many kinds of business. If o confidence exists between the partners, none Will be awarded to them by the public. Now,
something of the co-operative principle is implied in the rise and fall of wages with the rise and all of prices. That this may he further deve loped we think highly prohahle. But it can only be so developed by mutual confidence between employer and employed. Supposing an ironmaster to promiso to increase his workmen wages five per cent., if they enabled him to do 80 by their extra industry. It would be well worth the while of all porties to do so. But if the offer nvoived the cession to any workman of tho right to inspect all the books of a large firm, or o set any small lawyer to perform this task for him, no concession of the kind would be for a moment practicable. It is thus of the very naturo of business that tho ironmasters should he treated witb a certain degree of confidence ly their workmen. If they say that with a sertain proporil in the price of iron they agree to a Fages, they go as far as, under the price of circnmstances of trade called further, as, for insionce to say that mo stcp maintenance of and atween the of a cortain defite proportioa he production inon they would the end of the iren, they would give a homus wayes, tbey would, we conceive bata increase of wages, tbey would, we conceive, both become cher and pay more to their workpeople. But the latter distrust their truth and honour, -if hoy insist on determining, not only for what wages they will themselves work, hat at what exact rate of profit every forge in the kingdom shall bo kept in blast, year by year (for it comes to that), -if that is insisted on,-we see no result possible hat the forced emigration of capital, and the transference of the great seat of the iron-mannfacture to Russia.
We call on those who are responsible for the naintenance of the present strike to ponder on what we have said. We are no adrocates. We
havo not exchanged a single word with any ironmaster sinco the quarrel began. Neither are we of that school in political economy whieh attributes a magical power to capital. We hold the best capital to be the shrewd, honest, persevering, instracted head, and the strong arm. We lnow that the former is of more importance, - as more rarely to he found,--than the latter. But we do now something, not only of the enormonsly also of the course and customs of basiness. We may wisb things to be other than they are, but we can only regard them as they actually are. Wo might say, here is a great question to be fought ont. We have our own opinion of the result. We are far from the actual scene of trife; we can only look on, and learm
But when we know it is not only the daily bread of thousands, the misery of helpless Fomen, the suffering and death of childres, nuring the miscrable prolongation of the strug. le, that are involved; when we see that a great ndustry, checked by this struggle between tho belly and the members, only reguires a little more discouragement to take its light from our hores; when we sce that, we caunot he silent. Let our readcrs recall what we told them just a year ayo, abont coal. When but a hint had been iven hy the market quotations, we showed hem, from a serions iuvestigation of the condition of the coljieries, that a rise was inevitable, and probably at hand, Ali rememher what ocurred. On precisely tho same dispassionate consideration, and with judement wholly an biassed, we assert the certainty of a long and deadly struggle, if tho demand for arbitration on the whole quastion be persevered in. The masters may do much to remove erroneons im. pressions as to their profits, and should un. questionably do it. The masters, moreover, should meet concession with conccssion. Let peace be made bofore it is too late. It will he many a year before the Russian forges are blown out by a demand for arbitration.

## VIENNA AND ITS EXHIBTTION

 BUILDING.Tare extraordinary building erected in the Prater at Vienna for tho approaching international Exhibition, proceeds apace towards comz. pletion. We have already given our readers particulars of the undertaking, with a view of the contral portion of the structure, and a plan of the wbole.* As regards the construction.ot the huilding, the commission adopted a plan de signed as carly as 1815 by the architects of the Vienna Opera, Siccardsburg and Yon der Müll This plan, ontirely difterin from all those ot formor Exhibitions, was followed. It offers not only a better light for the objects exhibited, and nllows of extension of the covered area according to tho wants of exhibitors, but makes the employment of many hundreds of workmen at the same time in the different galleries without hindering one another possible, and permits of tbe goods of the various States being deposited in their re spective spaces without interfering with thei neighbonrs, which circamstance must effect con siderable saving of time, an important point in this case, as time is so short. Neven thousan workmen went to workat once, an army which to keep in order requires no ordinary amonnt of tact and energy. Wages, of course, cose in vienna to an enormous extent. A simple laboargr earned 3 florins (6s.) a day; bricklayers mado from 52 to 56 Horins (over 5l.) per week; and large numhers or worken were brought from all parts of the empire-Tyrolese, Albanians Czechs, \&c.

To the architect Hascnauer was confided the execution of the plans marked out twenty yenr ago, the original designers having departed this ife. The oriminality of this plan consists in the application of the so.called "herring bone" system, wbich resembles somewhat the architecture of the Escurial. From a sigantio longitudinal gallery, 905 metres long and 25 metres hroad, branch ont at right angles, anc at regular intervals, sixteen cross anteries 205 mètres long and 15 mètres broad In this wise four courts closed ond In sides, and baving the same lengtb as the cros malleries, a a is thes, a formed on both sides of the great this plan, the architect, Hasenauer, founded his division of the principal building, dividing it inte
n large quadratic central construction, and a smaller building at each cnd, which latter inclose each an octagonal court. The ceutre, again, of the central building will form a grand rotunda, constructed entirely of iron, whose erection by
the firm of Farkort may be considered a triumph the firm of Harkort may be considered a triumph
of modern engineering. This rotunda is the of modern engineering. This rotunda is the
idea, as we hare hefore said, of Mr. Scott Russell, idea, as we hare hofore esid, of Mr . Scott Rnssell,
who takes a great interest in this part of the Ex. hibition works. The span of this dome, roofed by a new mothod, amounts to more than double that of the greatest domes of the world, vik., that of the greatest domes of the world, ViK.,
108 metres.
The width of the dome of
St. Paul's is only 35 mètres; that of St. Peter's is only 49 medtres wide; that of the London Eskhi. These figures alono give us an idea of the im. posing dimensions of the gigantio cupola, which posing dimensions of the gigantio cupola, which and the shell of which was hoisted and fised by Harkort's engineer, M. Steiger.

The dircctor-general of the Exhibition, Ritter von Schwarz, has another purposo in vicw with
this rotunda. He intends it for the days of the Exhibition which, being both of the days of the Exhibition which, being both a
thiag of beauty and of nscfulness, deserves to thing of beauty and of nscfulness, deserves to
oullivo those days. And it is here that the whole plan of the Exhibition borders on another whole plan of the Exlibition borders on another grand undertaking, which may be mentionedthe great work of the regulation of the Danubo.
The Vicnnese bave now for some time been almost ignorant of the fact that some time been almost ignorant of the fact that their city really
lies on thie Danube. The Danube Caual, which separates the inner eity from the Leopollatadt,
sen was, so to say, only a poor substitnte for the mighty stream, which in a bed gradually leing choked (Gormath sand, rolls its waters nearly a mile (German) from Vienna towards tbe east, and the poetical "beautiful blue Danube," was to the roal Viennese nothing but a popular myth, which to behold was the fortune of but few. of the province of Lower Austria and the adics ministration of Vienna, resolved to divert the mannbe from its present course into a uew bed, now nearly completed, to briug it lalf a mile ncarer to Vienna, and to open up to tho capital, nearer to Vienna, and to open up to tho capital, river, all tho adrantages which can be derived river, all tho adrantages which can be derived
for counmerce from so favourable a position. It is intended to construct great docks, erect fac. tories, warehousea, and counting.houscs along the banks of this new Danube, and so lay the foundation of an emporium which slall attract all the traffic of the river. The now Danube. Stadt is to spring up close to the Prater, con. soqnently near to the Exlibition building, and futare corn markct futzre
Yot more
Bebind the longitudinal axis of the Exhibition building, close to the newly.con. structed Danize dyke, rises the trcble gallery for the machinery, of about the same dimensions as the Exbibition building proper, in the con. struction of which its ulterior dcstination as sight of. During the Exhibition the meen lost sight of. During the Exhibition, the machinery Will be in full activity, and the great space the cxhibitors of machinery from all Opposite the sonthern cross front of the pr. cipal building is an annexe in four the prin. Hall of Arts. In the middle will be dows, the row of cooms, In the middle will be a double row of rooms, with ample skylight, for the re. both sides, in smoller the smaller art.trear galleries, will bo exhibited the smaller art-treasures. New modes of light. ing, which have already been tried on a small
Bcale, will be here employcd. Tastefully haid. scale, will be here employcd. Tastefully laid. of Arta and the Poine of Industry of Arta and the Patace of Industry, which will sorvects of ame nime as places for exhibiting leads from the plastic art. A oovered gallery leads from the Hall of Arts to the left, at both foature, "Expositions des Amateurs." It is the foature, "Expositions des Amateurs." It is the
intention to induce private collectors to exhibit intention to induce private collectors to exhibit
their treasures here, Ncar the Hall of Arts large palm-houses and gigantic aquaria will find their $\underset{ }{\text { palm. }}$.

Admittance into this world of wonders will bo gained, besidos by the thirty-two entrances at the frontal sides of the cross galleries of the Exhi. decorated in gy four principal portals, to be decorated in the most splendia style Which art principal road of the Prater to leeds from the principal road of the Prater to the Exhibition. On passing this wide gate, a park, profusely de. corated with oosquets and bassins, lies between
sides of the way stand pavillons of differcut slapes opposite to one another. Close to the cntrance to the left is the bnilding for the com mission; to the rigbt the post-otice; farther on tbat of the Imperial family. Close to these buildings, farther to the right, follow others, erected by tho Sultan, the Khedive, the Prince of Roumania, sce., at their own expense, with Oriental splendour, which will leave those of the besides Chin besides China and Siam, has lately asked for space of 4,000 square mètres for her special ex-
hibition.
A scrics of buildings has thus been under taken, for the constraction of which over 28 millions of bricks were necessary. To facilitate and accolorat this mighty work, eleven lines of rails were hid down from the two prineipal terminit else in possible to do much in so short a time

## THE COMBINATION OF COLOURS

AT a recent meeting of the St. Helen's Lite rary Society, Mr. S. Chandley read a paper on Art in Form and Colour." After treating of form, Mr. Chandley said,-sir Isaac Newto established tho theory that there were seven simple or homogeneous colonrs. This was after wards reducod by Sir David Browster to three, aud he showed that tho analysis of whito sola light consisted entirely of the three primary other four wero simply compounds of these between music and colour to the similarity between music and colour. The note $\mathbf{C}$ may represent a single colour, simple and pleasing itasif, sag rod; by sounding $G$, its fifth, simnl placing yellow with the red sound placing yellow wht the red; sound H , and w get the ear thorougbly salisfed, and it is no colour that the eye is perfectly of these colurreye is porfecty salisied. Lach arrangement to which all ather colors an refer subordinath In our screma cramp colonrs, wo have difficulty by artificial light in illustrating the cxact colours, as the gaslight being yellow it imparts a yellowness to some colours and takes it out of others.
any the mixture of given colour is produced by the ad mixture of the hher two, for instance, the har yollow contrast to rca is produced by mixin yellow and blue, producing green. The har monions collast a blue is produced by mixin red and yellow, whichor irang, the shronges duced by mising bluo and rew is purple, pro duced by mising bluo and rod; tbeso combina. tinguishel fro are called secondaries (as dia tinguished from primaries, now there is guess.work; it is as infalible as a rule of thrce sum. Here is a natural proof : place a red wafe time, and thcre will appear its ampler some colour, areen to surround it Tho mentary colour surnd. The same complo. wafer, and orance a blne one, and vice versd.
Colours have a shade, and a hue. By shade we nuderstand the depth of a colonr as in the gradations from black to white. By hue is meant any compound colour undiluted. For instance, he reddest hue ; purple from the bluest to in the assarting of wools to mistome than ualities, and ofon wo make there tro haded doren to a deep ornace pul icmolo colour down to a dork blue ato a subject entirely discon, makes the general effect so ttribute of yellow. Red toree primaries, red, blue, and olonrs. It hats the middles posilive of all yllow, whis a molw which is most allied to shade is dead blue warm colour, andin to shade, is decidedly compound colour into which it quality into every most appareat when com enters. The effect Red for nd, foul powerful nature, requires mor highly useful and agreeable when reduced into tones of cbocolate and claret, and perhaps (next green and blue) is the most agreeable colour o look upon. Not so when it becomes what is nsnaly called "mauve (which is crimson dihuted with white), and in some of its shades is a
most irritating colour, and highly destructive to
all other surroundings, as its contrasting colour is yellow, so it yellows or fades all colours nea, a colo a colonr in dress, witbont being considcrably mellowed by being placed in juxtaposition wit plenty of white or black. Blue is the nex primisy, It is the oly absoluto col yolow tion. Th the and it and and has a la the two wher pare is a notion or prind os. ise popular viewed simpltaneonsly. If we look on a blu sky shining orer a pren mendow se sball se sky shing or a green men w, sball вe under what circumstances they agrce (as matur sunlight ) is sum, Yellow, Yellow, ho neal priary, is ho hat all combination of ap 11 , Blact combl $i t$ all 1 absorbed, its proportional power to red, or blue, is as three to then lo thost posith pure it majute if ar phy it may be aked, dees she pive the har, if may bo aske, hrgcst flower we have, yellow, the yellow sun that Now, hang surs is ut yolo bat is not yellow, but its contrasting or neutraising stario thewer staring fower bccomes perfect. The eye dwell. rin greater pleasnc on yellow, the more it diln

take as our type) we never see larye masses of bright colour without a larger quantity of neatral or tertiary c

## balance them

It has been suggested that I might furthe mustrate this subject by refercnce to honse decoration and furming wien romid introd. as to textile fabrics abo. Now if your gin to furnish and decorate, say your dining-room, logy or by the harmony of contrast. Your first consideration in either case should be the aspect. If south or west it requires to be on a cool key. If north or east, it should he on a warm key. You then may consider your picturea (if suff. cient to recuire consideration). Now sace gree is perhaps for a background the most snitable ( 0 claret if there is plenty of light and a cold aspect) ; say the former Green for the walls, you would then ask what is the complementary colour of green. The answer is red; so you get the three colours by fixing red for your curtains, and blue and fellow in combination, forming green, on the walls; you have only to regulate further by ascertaining whether the creen is hlue preen or yellow green. If a blue green, the complementary will be made np by adopting in orange red,-in other words, searlet or cherry if a yellow green, purple must enter into the composition on your rea, which thon beome more crimsong. If the hains ane cred wit morocco, the same rnle holds good. If you di not feel that you had your red hlue enough, border containing blue might be added. If shor of scariet or yellow, a golid.colour border would supply that deficiency. The law of contrast in colonr is equally invariable in dress, and, as fa as this is concerned, we only need look at som of the costnmes worn by some of the higher
classes in England at the present time, to he struck with the advanced taste and refinement
that porvade it. Plenty of sombre colour, but that porvade it. Plonty of sombre colour, but
little raw or pure.

## PEGWELL BAY RECLAMATION

Tue streak of silfer sea that furnishes e sense of security to some subjects of the United King. dom is well knowre to be matahle, although heautiful. In some places the tides, in succes. sive serics of years, aro encroacbing noón tbe land; in other localities, in some instances by natural action, and in others by man's device, the domain of ocean is invaded, and dry land occupies large areas covered in former times by the waters of the sea. Great changes have taken place in the shore-line of almost the whole of Wales, and the coast northwards, from tho places traces of cultivation exist, according to Dr. Hume, down to the very margin of the tide. It is demonstrable that the Wirall sbore-line formerly projected macb further to seaward, formerly projected mucb further to soaward, of historic records. In that district the eneroacbments of the sea have carried away part of a raceconrse, and of a public road, witb the whole of a hurial-place. In Cardigan Bay evidences of the existeuce of an extensivo submarine forest have been distinctly traced, with trunks of trees and standing stumps as hard and black as ebouy the marke of the axe as sharp and distinct as if
they had heen just felled. Bardsey Island, in they had heen just felled. Bardsey Island, in
Cardigan Bay, and on the Carnarvon coast, is now, or was not many jears since, rated as part of Pembrokeshire, and paid taxes as such.
The encroachments of tho sea are, however compensated by recessious. On the west coast of Anglesen the sea is receding, and extensive tracks of blown sands are beiug deposited towards the sonth-west end of Menai Siraits. In another locality Tremadoc nestles in a valley formerly covercd hy the sea. On the sonthern const of Wales extensive alluvjal deposits have
been lodged in many places that are protected by blown sands, aud the same pbenomena are presented on the south coast of England; as witnoss the present condition of some of the inland towns,
"Sandwich the Silent," one of the renowned five ports, has long since receded from the shoreline, or rather the sbore-line has receded from seom, to he furtber increased by the reclamation of part of the beautiful and placid Pegwell Bay, for wbicb there is a Bill before Parliament for this year. The records of Sandwich date from he sixth century. In the days of the Roman power, Pegwell Bay had, donbtless, deeper water, and Sandwich stood mnch nearer tbe shore tban does now, or it would not have been chosen as one of the five ports. It is situated on the river
Stour, whicb has, in tho course of centuries, Stour, whicb has, in tho course of centuries, carried down and deposited, at the estuary, a vast quantity of almost purely alluvial matter, which has been allowed to rest undisturbed on
the shores of the sheltered bay into which the the shores of the sheltered bay into which the iver debouches.
The Bill to be brongbt before Parliament is for the caltivation and improvement of waste lands in Pegwell Bay and Sandwich Aats. Waste lands include the surfaces over which tbe tide Hows at ordinary spring tides. The proposed capital of the company is $200,000 \mathrm{l}$., with the emhankment of abont fonr miles in length, to be at a height of about 20 ft . ahove high-water mark, and as much more ahove the sands at low water. The present month of the Stour to tbe sea is also to be stopped, and a short cat or canal substituted. Several carriage-roads will also he constructed under the powers of the Act, if granted. The company asks for powers to bring into a state fit for cultivation such lands as they may from time to time rechim from the sea. The works proposed are to he executed within
five years from the passing of the Act. Tbe five years from the passiog of the Act. The
tolls proposed to bo charged for the use of the company's roads seem ridiculously high,-as, for instance, for every vehicle drawn by a horse or
mule, 6d.; by two horses or males, 1s.; ditto mule, 6d. ; by two horses or mules, 1s.; ditto carrying inore tban eight passengers, 1 s .3 d ; for every donkey-eart, 4 d .; for every horso or
mule, 6 d ; for every donkey, 2d.; for every mule, 6 d ; for every
foot-passenger, $2 \mathrm{~d} .$, \& .
F. H. Falkinere of the works is estimated by Mr. F. H. Falkiner, the engincer, at $\mathbf{1 7 0 , 0 0 0 2 \text { . There }}$ arc more than seventy ofticial authoritics, and
private owners or occupiers concorned, the former including tho Lords of the Admiralty, wbo
will of course take their stand on foreshores will of cuurse take their stand on foreshores, being Crown property, regardlees of the rights, or say the reasonable cxpectations, of those wbo have incurred the cost of reclaiming the waste. Witness the case of the Thames Embankment. Whetber the present promoters succeed or not, there can be little doubt that the greater part of the shallow part of Pcgwell Bay will he snccessful works of the Messrs. Brogden, in gnccessiul woris of the Messrs. Brogden, in
Morecambe Bay, hy which they bave added Morecambe Bay, hy which they bave added
bundreds of acres of fertile land to the resources of the country, will be imitated in the estuaries of the Stour, the Dee, and otber tidal rivers.

## PROPOSED TOWER BRIDGE.

There has been frequent complaint that the Thames has not as many roadpays between London on its north and south banks as the vastness of the population to be accommodated, and the importance of the commercial and social interests concerned, demand. Many projects for new bridges, railway and other, have heen proposed in snccessive years, hut no additions to their number, except Southwark Bridge, for ordinary traffo and the railway-bridges, have more than since Waterloo Bridge was finshed, friars, and Westminster Bridges are mere renewals of previously-existing communications in the same situations.
One of the Bills to be bronght before Parliament in the session of this year is for powers to construct an iron bridge over the Thames, with roadways and approaches thereto, for tbe passage of foot-passeugers, carriages, carts, wagons, horses, cattle, \&c., with all necessary works and convenionces, to commence in Fair-street, in the parish of St. Jobn, Horselydown, Surrey, and to terminate in the parisb of St. Botolph Without, Aldgate, and district of the Tomer, on Little Tower-hill, Middlesex, to the westward of the also proposed in the Bill to take power to make four tunnels or subways in the line of the pro posed hridge, and in or nnder the hed of the wayer Tbames," to he connected with the foot ways on the eaid hridge hy means of sbafts to be constructed in the piers of the bridge. Theso unnels or suhways are to he two on each side of the river, each pair parallel, and about 80 ft . apart, and constructed in directions running nearly due north and sonth. Tbey will be respectively ahont 150 ft . in length, and distant at their inner ends about 200 ft . from the centre of tbe river.
Mr. R. M. Ordish, who bas acbieved a fair structure in iron bridge-huilding and iron expense at 379000 engineer. He estimates spans, and to be of the bow-string girder type. The company necessarily look for their return to powers to impose tolls. These, it is proposed, are to be, for foot-passengers one balfpenny each; horses, mules, or asses, laden or anladen, not drawing loads, one penny eacb; each horse or beast of dranght drawing any carriage, cart, or wagon, twopence; for every carriage, two. pence ; for every cart or wagon, fourpence; for cattle, sheep, and pigs, fivepence per score. The tolls certainly seem ohjectionably high eight, a two-horse cart or wagon will be charged eightpence, viz., fourpence for the cart, and two pence each for the horses
Tbe sea-going steamers that stop short at London Bridge, and the sailing.versels tbat anchor in the Pool, will have to pass nnder the proposed new hadge, which must necessarily give a water headway sufficient for unimpeder navigation. This will necessitate approaches that will interfere with a considerable amomet of warehouse and other property. It seems ques.
tionable whether the fair claims of owners and tionable whether the fair olaims of owners and oecupiers can be met out of the residue of
$372,000 l$, after costs of construction bere been deducted.

The Euilding Act.-A paper will he read Honday afternoon next, at a meeting of the Health Departmeut of the Social Science Assohealth for the Wha Liddle, medical ofieer of Defects of the Sanitary Provisions of the Build ing Act, $18 \& 19$ Vict. c. I22, with Surgestions
for their Amendment." Lieut.Col. M. Beres. ford, M.P., will take the chair at four o'clook.

## COUNTRY HOUSES.

## ahceltectural association.

A lecture was delivered by Professor Kere at the last meeting, on "The Desigu of a Small Country Honse,"-understood ns the residenco of an English gentleman and family, living in the manner of their class, witbin a few miles of London or some large town ; the site being threc or fonr acres (more or less), and the cost from 2,000l. to 4,000l. The leeturer treated in detail all the rooms and other portions of sucb a house, giving definitions of their special uses, and indicating the most usual methods of plan and arrangemeut. On matters of much importaneo affecting such a house and its serviceableness, the following, among other conclusions, were stated :-
Approach.-Let this be from the north, or, if that cannot he got, then from the east. The view of the lawn and gardens mnst be well shat out by shrubbery (in which no flowers should bo admitted ou any consideration, the garden being the place for them). An entrance in a prominent position always gives value to a house. Prospect. This should be opeu on the south, perhaps on the west, with shelter on the east. Aspect. -South-east is the nost farourable aspect for all the living-rooms of a house, if it is to be had. They will he warmed by the morning san, will be in tbe shade in the hot noon and afternoon, and not exposed to the strong winds and drivings rains of the sonth-west. The gardens will be west, -tbe snnset is considered of mnch value to a lawn. The offices should look northwards and eastwards (not westwards), these aspects being of least value. The servants' entrance may ho the north front or east return with special access from tho main road, or, at any special access fro at any tradesmen's carts stopping in the drive. The sacrifice of aspect to prospect will certainly he the couse of after pross et will certainly he the most admirahle views will grow less interesting in timest admirahle views will grow less interesting canot be spar with safty. and warmt cannot be spared with safety. In a dining rom, aunsme fll back in the use of the room for its most important back in
Internal Arrangements.-The lines of traffe sbould always he kept in riew. The parts of whe house devoted to the family and visitors must when in use, be crossed by the servants very rarely, if at all. For instance, the dining-roon should be served from the kitchen through the scrvery, without the hall, staircase, or main passages being necessarily passed through, By to second staircase the servants should be able draping all the upper parts of the house. The passed in carrying especalyous rooms. Muin Staircase.-This should be the way to the bed rooms, and to nothing else (a drawing-room or study upstairs will he an unusual arrangement, -not the normal one; and, however, suitable for some one family, will probably be awkward for those who use the house tbereafter). It should be near the entrance, so that ladies may readily reach their rooms to take off clothes on coming home; for convenience on the upper floor, it must bo fairly central thero. A north window will often he hest, as savine the valnable aspect for rooms, and as tbe north ligbt is clearest latest, and without sun. Bedrooms.-These inay be all on one story, or on two. To all the main rooms there must he direct and stately access, a house sinks at once down to a lower level if it has badly ligbted and veutilated passages. Tho indispensable furniture of every room chonla bo plotted on the plans-the hedstead, dressiag table, and a wardrohe. Two bedrooms, each having a dressing-room [with*small bedstead] attaehed, will usually he sufficient; one beint for the beads of the house, the other for married visitors. The rest may be single roome. Nur-
series are ordinary hedrooms tenuporarily devoted series are ordinary hedrooms temporarily devoted to a special purpose. They must, in an Englisb house, be not inconveniently fir from the mother's bedroom; at the samo time, they may be shat ont by a dwor and lobby from the rest of the story. The day nursery should look sonthwards.
The lecturer notioed the matter of change of occupants in a house of the class dealt with. Through death, or reverse of fortune, and other causes, property of this kind is constantly changing hands, or receiving fresh tenants. It is therefore desirable fir arohitects to lear towards arrangements found generally suited to
the hnbits of the larger number of families of tho same rank in life, and not to consider merely the immediate wants of a client. As many of the orviuary requirements are founded on what seems like sonnd reason, they are little likely to be affected by change of fashion. As to the question of regular or irregulnr plau, regularity seems to add to the general estimate of the serviceaibleness of a house. Symmetry and simplicity of plan are highly valned. Though wanting in
piquancy, and apparently nninteresting, a house piquancy, and apparontly nninteresting, a house possessed of a good and rendily apprehended
arrancement of yooms, will never want admirers arrangement of rooms, will never want edmirers among the English gentry. As to the ventila.
tion lately so mucl? pressed on the notice of tion lately so much pressed on the notice of tuvorybody, the classes for whom architects hare
to work will not submit to low temperatures, and possible drachts, and much extra clothing in. doors in cold weather;-perhaps (the lecturer said), the indispensablencss of much special ven. tilation is often exaggerated in speaking of the Targe and lofty rooms-unt over-crawded-of the houses wo aro treating of. In fact, taking them attogether, the Eugligh houses are the best desilgned in the worla, the most repleto with comfort, and witb the best provisions for the special habits of their ocerpants ; it is probably becauso so high a standard of excollence las been reached that they are so much found fault with.

IHE NEW BUILDINGS IN LUDGATE CIRCUS AND FLEET.STREET.
The extensive and prominent new build. ings which have for some months been in coarse of erection at the bottom of Flect-street, and aro known as Messrs. Cook \& Co.'s tourist and exoursionist offices, are now fast approaching thair esternal conypletion, heing almost ready for the roof, and will be covered in within the next fortnipht. The structare, which will be a deoidedly striking feature amidst the varions new buildings now being erected in the looality, has no less than four frontages to the sereral ratin thoroughfnees imncediately aronnd it, namoly, the Ludgate. circus elevation, and also those in Fleet-street, Farringdon-street, and St. Bride.street. The Ludgate-cirous fapade, in point of architectural detail and ornamentation, may he regarded as the priucipai frontage, althongh the Fleet-street, Farringdon-street, and St. Bride-street frontagcs are to a great extent uniform with the first-named. The hnilding is 60 ft . in height from the street level to the eorraice below the dormers, the latter hoing 11 ft . high, making the ontire height of the elevation 71 ft ., and its width from the boundary of the Theet-street frontage to that in St. Brido-street 130 ft ., whilst it is 50 ft . in depth; the entire ground area covered by the structure heing ahont 3,300 squaro feet. The materials used in the exterior are Portland stove (the ground and mozznine floors being to a great extent of iron) with granite bases to the entrances, and polished granite piers. The huilame contains a hase ment; a very lofty ground-floor, with windows of unusually largo dimensions; a mezzanine Hoor immediately ahove, tagether with first, sccond, third, and fourth stories, in addition to lofty dormers. There are two entrances to the ground-floor portion of the building in the ind crate-circus frontage. At the bottom of the first-floor windows of this frontage (which also estends around the first floor of the entire elo. $\nabla$ xtion) thero is a projecting halcony of orna. mantal ironwork. Thero are four windows in this story, over which are projecting carred Gorbols, supporting stone halconettcs ahove at the sue suspended carved stone pendants. Botween the second-floor wind wws there are raised panels, and immodiately ahove the windows there is a centrepiece in carved stone, supported on either
side by scrall hrackets, which forms a terminal to the centro window. Tho third and fourth Hoor windows are plainor in character, lint the dormers above, whioh surmount the cornice, and which are carried round the entiro elevation, mizerially add to the attractiveness of the froutage. The Fleet.street entrance has a hold and handsome appcaranco.
The roof will be covered with green West. morcland slate, harmonising with the general ainaracter of the structare. The chief entrance to the interior of the mpper portion of the portion of the olevation, will be in Fleet-street, and above the mezzanine floor to the top of the building there will he an open stairease, with a
road way of 1 ft . round it , with a lantern light in The interior of the structure is commodious, there heing not less than forty apartments, everal of them of spacious dimensions, iu thoso portions of the hnilding which are above the round-lloor.
The ground-lloor portion of the Fleet-street frontage, and also one-half of that fronting Lndgate.circus, is intended to be occupied by Messrs. Cook as tbeir toarist and oxcnrsionist remiseg, as well as a portion of the merzanine oor above, whilst the arrangements also include n entrance, throngh Messrs. Cook's premises, to the post-office which has heen situated on the ito for sereral years past, and which will connno there, at the rear of the now buildine. portions of the ground-Hoor in Ludgate-circus ad half of the Farringlon.street frontage, will be let for private husiness purposes, whilst the ther portion of the Farringdon-street ground loor frontare, and that in St. Bride's-street, as well as a large portion of the basement of the huilding, will be ocenpied by the Midland Rail. way Company as a receiving-oflice and deport for this part of the City. The upper portions of the brilding, which include a large and noble apartment on the first floor of the Ludgate. circus frontage, stitablele for a board.room or other similar purposes, will also be let for busincss purposes.
The architect for the builder is Mr. Gundry, of John-streot, Adelphi; and the contractors are Bow ; Mr. Burch being the clerk of works.

## HEALTH NEAR BLRMINGHAM

Typhord feyer has attacked twenty two families at Moseley and Balsall Hoath, near Birmingham. The Local Government Board met the Dr. Ballard to visi the locality, and he ho 9 th inst., and told them tho sulbstance of the ceport he will make to the Government Board He finds the ground to be chiefly gravel, and herefore porous. The water supply is derived from rellis sunk into the surface gravel. After explaining to the meeting the dootrine of typhoid or enteric fever, and how it is communicated to persons, he said of the examination he had made of the distriot (according to the Birminyluam Daily Post) :-
"In the part of Moseley where the disease had shown itself, eertain conditions existed which were likely to pro.
mote its spread whon once introduced. First of all, there was the yyutem of dieposal of exrroment. Throughout
whe district, the excremeat of the population was either
 exited. For tho most part, thematart.chorestact discharged times an overfomb. Ocasionally there were separnte

the soil, tho soil beoume pollated specifloally. It was propared to asy that in eertzin iustances the disease had
apread through the drinking of water derived from the

When, some few years ago, the Conductor of this Journal, as a momber of the Social Science Association, then meeting in Birmingharn, the dangerous condition of parts of the and suhnrbs, his words of warning were received with derision and abusive denial.

BEJAPOOR AND ITS MADSOLEUMS.
In Capt. Lyon's second lecture at the Socicty of Arts, on "Indian Buildings and Life," he

The city of Bejapoor was the Mahommedan capital for 200 years, during the time the Mussulman armies were there, trying to get to the south, the Hindoos heing determined to stop them if they could. Here the only huildings remaining are the splendid mausolenms which it was the fashion of those kings to huild dnring their lifetime to repose in after death. No doubt it was an excellent plan, hut it had one disadvan. tage, that if by any change the king happened to die before it was completed, there was no place
to hury him in; for each king had quite enough to
do to build his own before he died, and could not complete the other. Outside this town (which is tho rival of Vijianuggur and Beejnogrur), with every mausoleum that these Kings bnilt, they built a small mosque alongsido it, and this is the mosque of Ibrahim Rosa, and the other side is the toml. The peouliarity of the tomb is that nobody has yet been ablo to discover how the dome is supported, Oar ongineers have actually asked the Government to be kind enough to allow them to pull it to picces, in order to discorer what supports it. Of course, the Government objected; but, springing out of a flat stone roof, there it stands, and by what means it stands, and why it does not oome down, nobody can make out. It ought to, hut it does not. All round this bnilding is a verandah, immediately outside the room in which the hody reposes. Formerly nothing could exceed the beauty of that rerandah, The stone is grey. The whole of the Koran is supposed to be encraved in relief on the walls. It was all gilded, and between the letters was painted a most beautifnl, lovoly azure blue: and the effect of the gilded letters on a blue ground and tbo grey stone was something beartiful beyond all conception. Unfortunately, now, except in one or two spots, which were carefully covered up, cvery sign of it has disappeared; but the natives there show you tbo blue and gold as it originally stood. Inside the room is where the body reposes. The window above is a solid block of stone, which has been carved into Arabio letters, which every one knows are difficult enough to write ; but here the natives bave cut away the whole of the stone, leaving nothing hat the Arabic letters and several verses of the Koran are cut in tracery over that window, each window having different parts of the Koran engraved on it, as yon see there. $\qquad$

## JOSEPH'S TOMB TN SHECHKM.

Is a paper read last week on "Joseph"s Tomh in Shechom," at the rooms of the Society of Biblical Archeology, Conduit-street, by Professor Donaldson, he said that there wore few incident: in tbe Sacred Scriptures more touching than the narrative of the pious care with which the children of Israel fnlfilled the injunction 0 Joseph to carry his hones to the land of promise There is hardly any spot in Palestine which combines, as this does, the tradition of past
times and the concurrent assent, as to its authon. times and the concurrent assent, as to its authon. ticity, of the varied sects, whether Samaritan,
Jowish, or Turkish ; and this is the more remarkJowish, or Turkish ; and this is the more remark-
able in a country where tho struggles of religious able in a country whore tho struggles of religious strife are so prevalent, and every holy spot is so much the objeot of violent contention. The approach to the ralley of Neblons, at the point
where this old ruined tomh stands, is most where this old ruined tomh stands, is most impressive. Hermon, with its snowy top, rises majestically in the far North. Closo to the tomb is Jacob's well, where our Sariour con versed with the Samaritan woman. The well is most frequently dry, and very much choked with large stones. Not far distant is the enclosure of Joseph's tomb, rhomboidal in shape, the inside shorter side measuring 15 ft ; the depth somewhat excoeds that dimension; and the enclosure walls rise some 7 ft . high, with an opening at one end. Opposite the entrance is a small mihrab, or prayer-niche, ahout 2 ft .6 in . wide, with a circular head: and over it aro two inscriptions-the npper one in Hebrew cha. racters, the latter in Samaritan. A narrow, irregular, central, pared path leads from the entrance up to the niche; and on each side, rising 6 in, or 7 in. ahove the path, is a dais, the one to the left forming a kind of prayer-platform or seat. On the dais to the right is the tomh of some Mahomedan, which is said to he held in great veneration hy his co-religionists. At each end of this tomh is a detached pillar or post, some 18 in . in diameter, and rising about 3 ft ., scooped out on the upper snrface into the shape of a hollow hasin, and which has the appearance
of having served for fire. The tomb of the of having served for fire. The tomb of the Turk is oblong in shape, and rises from the dais in a curved form, with a pointed ridge. The construction of the whole is of the ronghest materials, plastered over, as is the custom of such sepulchral erections of the Turks, and has speederable cracks in the walls, threatening pious reserence with which Moses and the descendants of Joseph which Moses and relic from the land of hondare, we may conceiva that, although the present erection may be on the spot of its ultimate deposit, it is but roason.
able to suppose they followed the custom ef the Egyptians, among whom they had so long dwelt, and with whese manancr of interment they would hawe heen so well acquainted. If se, they must have made a considerable excavation in the ground, consistent with the oxalted position or their forefathers. They must have lined the tomb with stone, and have laid the embalmed body, with its wooden sarcophagga or coffin, with becoming funeral zites. Without making an excaration, it is impossible to ascertain any further particulars of this sacred and interesting spot.

## ANCFENT TJIRRA.COTTAS OF SYRIA.

Tree incredulity with which the objects or idolatrous art, recently discovered in Monb, and of which Lient. Couder sent water.colonr sketches to the Palestine Eisploration Fund, were received in this conntry must now be at an end. Some time since, the roport of Pastor Weser, the Prussian chaplain at Jervsalem, who himself visited the - sites of cxcaration, was published. An attempt pas made to throw doubt even apon that. Now, Mr. Greville Chester, one of the opponents of the genvino character of the objects in question writes from Jerusalem a full recantation. He says that ho bas examined the collection of
Mr . Shapira, and is convinced of jts genaino character and extreme importance. At Berlin character and extreme importance. At Berlin and Pastor Weser has been elected a nember of the Oriental Society, in conscquence of the light he has personally throvin on the subject. Lient. ondex's sketehes were confined to the most striking objects, from an art point of view. Some of the jars are covered with incised characters, which, in some cases, are bi-lingual The British Museum authorities based their condemuation of some of the jars, as forgeries, on the ground that they were impressed with nknown, as well as with woll-known eharactere, a thing most unlikely for a forger to attempt. While we regret that those objects are lost to this country, it is very instructive to soe the dif. ferent tone in whioh any indication of important liseovery is met in Germany.

## CHINESE TEMPLES

The China correspondent of the Daily News rives sonse interesting particulars of temples in sorve a portion of what to our readers to precalled Temple of Heaven, tho most important of Tm:-
o the oye of a European there is nothing bout it to suggest its coclesiastical oharaoter. t is more like one of the fanciful creations of gardencr-artists, reminding you of the gardens -at Versailles or the Crysta Palace. The circular space on the top looks as if intended for a band
to play on. It is somewhat larger than one of the fountains in Trafalgar-square, with a pavonent and balustrade of whito marble. It stands on two other platforms, all formed of the same material, forming three terraces, each termaco being rscended by a flight of nine steps, or trventy-seren in all, from the ground to the top of the altar. There are four ascents, ono from each of the cardinal points. The wholo is sur. rounded by a low wall, with open marble gate. ways on each side, facing the four ascents. This wall is square in plan, and in tho sontheeast cormer is tho furnace or altar for horning the bullock, with eight other altars, smaller, and of ron, where offerings to the eight deceased ancestors are also burned, tho bullock beiuc offered to Shang-ti alone. . . . . . To those who have taken an intcrest in Professor Smyth's in. quiries respecting the Great Pyramid, this Ohincse temple ought to havo special significanoo. Although round in plan and flat on the top, it may still be described as a modification of the Pyramid. Its astronomical character is indi. cated by the great ceremony at tho winter solstice. The four ascents, with approaches and gates to the four cardinal points, suggest that on astro geographical meaning was intended, Most of tho imperial temples of Pekin have been con bers, and this reference to tho redano in of Heaven. The number nine in the Temple arcrely in it The ascent to argely in it. The ascent to each terrace has ano steps, the whole ascent being $3 \times 9=27$. Tho pavement on the circular top is formed by has nine slabs, the second is formed of eightiteen, the third twenty-seven, and so on, each circle
heing a multiple ef nine, till, at the outer circle it is $9 \times 9=81$, being a faveurite number in
Chinese philesophy. "The eaune symbolism is Chinese philesophy. "The eame symbolism is carried threugh the halustrades, the steps, and
the two lower terraces of the altar. Fourflights of steps, of nine oach, lead domn to tho middle terrace, where are placed the tablets to tho pirits of the gun, moon, and gtars, and the yea god, Tai. Sui. The sum and stars take tho east and tho moon and Tai-Sui the west. The star are the twenty-eight constellations of the Chinese zodiac, horrowed by tho Eindoos, soon after the Christian era, and called by them Naksha-tras. The Tai-Sui is a deification of the sixty-year cycle. The present year, I869, is the sixth year of the cycle, and is denoted by the characters Ki.si, takon from the denary and tablet is cycles respective the characters Keng-wu, next in order, will be taken, and so on."

The work quoted from was published about wo years ago, which explains the reference t 1869 and 1870 . The same work gives a further lustration of theso numbers:-"The balus trades havo $9 \times 8=72$ pillars and rails on the upper terrace; on the middle terrace thero ar to ; and on the lower, 180. Theso amount in al to 360 , the number of degrees in a circle. The parement of the middle terrace has in its inner. most circle ninety stones, and in its outermost 162 stoncs, thus reaching the double of eighty one, the outermost eircle of the upper torrace So again, in the lower terrace the circles increase from 171 stones, the innermost to 242, or three times the squaro of nine for the outermost.

## ASSYRIAN RESEARCHES

Fired by American example, the propriotors of the Daily Tolegraph, with the conenrrence of Lords of the Treasury, British Muscum and tho spatch Mr. George Smith (the decipherer of the tablets relating to the Deluge) to Assynia for further explorations. They propose to devote to the ohject 1,000 guineas within a period of sir months, and are willing to exceed those limits if found desirable. Mr. Smith's official salary will continne. Any memorials of interest discovered will be added to the present collection of Assyrian antiquities in the British Musonm We are glad the Government have met the proposition as they have done, aud we heartily wish success to the expedition

## PROCEEDINGS UNDER THE NEW HEALTH ACT

Macclesfield.-The rural sanitary anthority of the Macelesfield Uhion has directly refused Health Act, as required by the under the Public Health Act, as required by the Local Goveru ment Board, notwithstanding that scarlet fover
is prevalent to an alarming oxtent in the Bollingis prevalent to an alarming oxtent in the Bolling-
ton district. On being rebuked, and urged hy the Local Government Board, they passed the following rosolution by a majority of fifteen to four:-
Board Mr. May be instructed to writo to the Poor-Kam Board requesting them to accept the appointment of our
reliering oflcers for nuisance inspectors, and that we re quire none of their paltry allowance, and trast they will interfere le
Guardians.

Chester.-A meeting of representatives from the different sanitary authorities of Cheshire, has been held in the Town-hall, Cbester. The Local Government Board inspector for the of representatives was held, was arst conference of representatives was held, was present. Tho dferent authorities wero represented. After copies of the following resolution to the different sanitary authorities in the county:-
"That the andermentioned sanitary authorities, being desirous of combining for the joint appointment of name on members to form a joint commintteo to which he be appozated; to adrertise for and the ternis on selent one genteman to be recommended for appointment

Torestor A
Norcester.-A conference of urban and sani tary authorities has been held iu the Shire-hall Worcester, under the presidency of Iror Lyttelton (lord-lieatenant of the county), for the parpose of considering whether the medieal officers of health to be appointed nnder the now;
combined districts to supervise a largo area, er whether each sanitary nathority in the county sheald appoint its ewn efficer indepeadently of its neighbeurs. The urban and rura. sanitary authe rities of the following nine unions were repre-sonted:- Worcester, Droitwich, Bromscrove Kingsnorton, Pershore, Upton.on.Severn, Kidder minster, Martley, and Tenbury. It was ultimately resolved, with four dissenticnts only,--

## COLOUR DECORATION.

Magdicene, waydsworth comaros The chancel of this mission church has lately een decorated in colour by Mr. Charles Hadson of London. Mr. Edmund B. F'errey, architect in the first place gave a slipht sketch for the reneral scheme, and has from time to time been in communication with Mr. Hudson, to whou was intrnsted tho preparation of tho full-size working drawings and the dctaila of the colonring The churel is substantially buit of stock bricks, being rough stuccoed internally. The schome for the dccoration of the east wall consists of plain surbase of chocolate tint; abovo this are ten square cusped panels, with canopies ofer of a. rich description, oontaining the emblems of th Passion in vartous colours; the background is of gold. The hollow of the string-course under the east window is decorated with gilt stars, and over the altar in addition with the fleur-de-lis. At the springing line of the window-arch are arranged the emhlems of the twelve Apostlos and of St. Mary Magdalene, in lozenge panels The spaoe over is enriched with bold flowing scrollwork, formod of the vine on the north, the maple on the south side. In the centre of cach spandrel is a circular panel, oontaining a subject from the life of St. Mary Magdalene. The east rindow, which formerly had a bare, closo eprandrel, has been perforated, and the rest of it glazed with cathedral glass in different shades. ornamentally arranged. The side.walls are also decorated, the bands and horizontal divisions being carried round, but there aro no emblews $r$ subjeots, 1 , imple Tho wall over the gererally is mor simple. The wall over the altar, being covered The tints principally been decorated in colour The tints principally employed are Modiraval red, with a little black and chocolate. The panelled ceiling, however, bas for a ground tint a greyish blue, with pateras. The spaco over the west side of the chancel-arch is also decorated the principal feature being that of our Lord sitting in majesty, inclosed hy an aurcole. In addition to these works, a beam, carrying a rioh oak floriated rood, designed by the same archi tect, decorated in colonr and gilding, containing the Erangelistic emhlems, has been fixed ofer the entranco to the chaneel.
irish building materials.
Ix a short notice of the Reports on the Dr:blin Exhibitiou just now closed, the Society of Arts says,
The slates shown hy the Killaloe Slate Com pany were of excellent quality, and equal, if the
 Slate Company slso showed slates of cood qualit and with a very pretty greenish and bluish shade which would produce a good effect in roofing churches, \&c. The specimens of Donecal stono shown attracted much attention. The granito blocks were exhihited just as they were found in the quarries, in slahs, with evon, natnral surfaces aud almost, if not quite, reedy for the builler The polished red granite is quite equal to that from Aberdeen. The Belfast Portland Cement Company contrihated a large namber of samples of their production; the artieles shown were in every respect excellent. A group of marble pillars or clustered colnmens of various Irisl marbles, with Oaen stoue basement and cap, tyle, with maral and a font in the samo displat various Irish marble shafts, admiably showed the ease with which such matcrials eal be adapted to useful and decorative purposes The great heauty of the marbles and the high polish and fimish they had reoeised, displayed to great advantage the green and black marbles from the quarry near Middleton, in the county of Son. The latter is litte Bessrs: Sibthorpe a variety of shade, and contrast of colons and tone
to jasper. For this reason it bas been tecbnically named Irish jasper. The practical value of Irish marbles, and the ligh potisb they are capable of taking, were further successfully illustrated by specimens of marble pavement, and hy a portion
of tbe altar railings lately erected in the ohapel of tbe altar railings lately erected in the ohapel
of Trinity College; this last showed the rare of Trinity College ; thises of solidity joined to grace and the apqualities of solidity joi

THE NEW DWELLINGS FOR THE POOR NEAR THE HOLBORN VIADUCT.
Accormina to a communication whicb has just been received by the Holborn Vestry from tho City Corporation, it appears tbat tbe latter have at length finally decided as to the new dwellings for the poor to he ereoted in room of the bouses removod for the construction of the Holborn liaduct. The clerk to the Corporation states that the plans for the dwellings are in a forward
state of preparation, and tbat the huildings will shortly bo commenced. It appears that the site shortly bo commenced. It appears that tbe site
selected is in Bleeding Heart.-yard, a sbort dis. selected is in Bleeding Heart-yard, a s.
tance to tbe northwards of the Viaduct.

## SOHOOL BOARDS.

Lomlon. - Tbe following report has been pre. Loned to the London School Board on the new offices on the Tbames Embankment:-
"On the 26th of June the Board decided that fonr frch the oftefcea to he erectst, on the Thames Embankueut.

ent

 tions, to ohtrint tenders, and to bring up a contract to the
Tbe report was adopted.
Dewsbury. -The foundation.stones of the first three schools projected by the Dewsbury Scbool Board bare been laid with puhlic ceremonies. Board to consider tbe best mode of adjudicating upon the plans for the new sehools, which are to bo sent in or before tbe 27 th ingt. The clent had informed him tbat there had been 144 appli. cations made for particulars respecting the proposed now schools, and if only fifty of tbese sent in plans, there would be a hundred designs to be eramined, in order to which it was necessary they sbould be saspended somewbere. He sug. gested whetber it would not be advisable that a sub.committee should be appointed to look over the plans, with power to reject any of tbem out if half the number named were rejected, it would still be necessary that the remainder and examination. Ultimately it was acreed that and examination. Cltimately it was agreed that snspending the plans in the large ball.
Hanstone - pt Hans in the large ball. southem horder of Nortlamptonshire, in the county of Bucks, the new school-rooms whe county of Bucks, the new bchool-rooms, which of the Hanslope School Board, have been opened. Tbe buildings are erected with white brick, re lieved by red strings, and aro to accommodate heved by red strings, and aro to accommodate
220 children. Mr. Christopher, of Watford, was the architect ; and Mr. John Slueldon, of Newport Paguell, the builder. The schools are situated upon the west side of the road, leading througb the parish, and consist of mised school, 45 ft . by 18 parish, and consist of mixed school, $45 \mathrm{ft}$. by babies' cooms, 20 ft . by 17 ft .; and infant school 30 ft . by 17 ft . Tbere are also a naster's honse and requisite out.offices.
Leeds.-A meeting of the Leeds School Board was held last week, Sir A. Fairbairn in the correspondenoo with the Edication were the correspondenco with the Education Departmen respecting the Board schools, tbe manatemen and Visiting of the schools, tbe payment of archi. training college ${ }_{1}$ and the designs for Jack lane

School.- At the mceting of the depatation from the local Board with the Vice. President of " architect would forward to the the council's andum would forward to the Board a memo Forster) would ast the Board onco more to Forster) would ask tho Board once more to con sider the gnestion in connexion witb the memo randum; and if the Board after that decided to adhere to their proposals, ho did not thiuk tbe Department should withhold tbeir recommenda tion to the Loan Commissioners." Mr. Forster scbools; and Mr. Jowitt stated that the Board sebools; and riost ancious to keep down the expense were ruost anxious to keep dow helpers the much as possible, and that they helieved thoy scbools at small expense; payment for the scbools was to be spread over fifty years, and they felt hound to erect strong and substantial

PROCEEDINGS UNDER THE METRO politan building act
Or the 1st instant, Mr. Arthnr Wilson ap peared before Mr. Hannay, at the Worsbip street police-court, in answer to a summons foneglecting to give due "notice to tbe district sur.
veyor of Sboreditcb and Norton Folgate, of veyor of Sboreditcb and Norton Folgate, of
certain works done at No. 4, Spital-square. The work for whicb notice was claimed, was tbe rebnilding of an addition at the back of the bouse. Tbe district survefor had discovered some work in progress at the premises, and was informed tbat it was being done hy a builde named Brown, from whom, after some difficulty a notice for tbe work was obtained. This worl was completed, hit the rebuilding of the addi tion was not then commenced. Tbis was som lime sunsequently found to be in progress, an it was ascertained from the workmen that the wero employed directly by defendant, who wa descrived as the owncr in Browns notice, out no fresb notice could bo obtained from dofendant, whose address the district surveyo was for some time unable to obtain. In tb ourse of the work, a notice or irregularity ha name, as buide ind then amended The district surveror contende bat tbe rebuilding of the addition was not in cluded in the notice given hy Brown, or if it was then a notice of change of builder sbould hav
Defendant stated that he was the owner of tbe premises; tbat he had not employed any hnilder o carry out the work; tbat Brown was onl acting as his foreman; and that be considered tbe notice given sultcient. Mr. Hannay con sidered that defendant had acted as the builder, nd should have given notice in his own name which, by his own admission, he had not donc Fined 10 s , and 2s. costs.

THE DISPOSAL OF SEWAGE.
Trir youngest of the local Boards in the neighbourhood of Manchester-that of Heaton Norris, which comprises tbe districts popularly nown as Heaton Chapel, Heaton Hoor, and Heaton Mersey,- has recently called in the chester, to advise on the aystem of drainage to be adoptcd, and the method of disposing of the sewage. Mr. Lynde has had to formulate a new and comprehensive scheme, and in doing cens considered and reviewed and disposal of sewage matter.

## His own conclusions are these :-

"My opinion is decidedly in farour of a combination of dither fill ration or deodorisation (upon the Carliste system, the only sy stom that has really effectually prevented the fouling of rivers, and at the same tecime prevented thi

## COMPETITION DECIDED.

start's hill estate, orpingron, kent Mr. J. Lovrbonn, the owner of this freehold estate, whicb contains nearly one lundred acres, inpited architects, in septemher last, to submit plans, in pnblic competition, for laying it ont. Several were sent in answer to the invitation. Tbe task of adjudication was left to committee of gentlemen, bow appointed we donot know. Iir Lovibond has awarded, on their re commendation, the first preminm of 30 l . to he authors of the dcsim bearing the motto, "Comme il fant" (Mr. T. Batterbury, and M1 . Kiadle), and the second premium of 102 . to the author of design marked "Bonheur" (Mr Lewis Solomon). Messrs. T. Batterhary \& J Kiddle, consequently, bave been appointed sur reyons to tho estate.

THE CHCRCII OF WETZLAR, GERMANT. The great Chnrch of Wetzlar, on the Lahn, though far from being one of the most beantiful or perfect ecclesiastical edifices in Germany, is cortainly ono of the most curious and interesting. Gike my otber large churches, it is a complete pitome of the architecture of the conutry, an or studying tbe growtb and developmont Gotbic arcbitecture, from the very early and rude Romanesque down to the laty eccentrio vagaries of Gorman vird-pointe where, we know no buiding in all Germany the Church of WYeto We ong than the to to the everior of How atteriph to we me boxterior of his singula future, inture occasion, hat sball conine oursclves to the incerior. In plan and general arrangement, lofty nave and aigles the a mo berht at a ofy the a blas atlached to toe west of wich is a singular homanesqu front, with two small towers and a shallow porch nfinisbed and roofless addition of late date. There are spacious transepts of singular design tbat to the sonth is beautiful Geometric work and that to the north, of which we cive work is rich and fully developed fourteonth.century vork. The vallting of these transepts is singular and very original. It is treated as though tbe transepts were apsidal. Tbis will he best understood by reference to our viow. Tbe ingular areade below the windows is evidently of earlier date than the superstructure, and is peculiar oxample of the very latest German romanesque work. A ine forrteenth.centiry opening to the samo nombe canopied arche pena tho separates the choir from this portion of the hurcb. Two or the bays din rood.screen ontain too ajs, whe open into the choin, looking the the one has a glazed grating

Bejond this scroen is the choir, which is lower than the nave, but very spacious. It bas side aisles, and a fine clearstory, and is closed to the ast by a noble five -sided apse, with two. light windows in each bay. In front of the clearstory
windows is an arcaded passare, and the whole windows is an
is finely vaulted.
This choir is a noble example of pure German First-Pointel work, and dates from the middle of the thirteenth century. The nave of tbis church is nsed by the Lutherans, and the choir by the Catholics. As they are only separated by tbe before. described rood.screen, of course the re-
ligious services take place at different times in ghous Bervices take place at different times in
the day. The cboir is neatly fitted up, and has a cheday. The cboir is neatly fitted up, and has a
modern Gothic high altar, of tolerably good modern Gothic high altar, of tolerably good
design. It also contains a few singular stalls under the rood-screen, some ancient monuments to priests, and one or two fine life sized statues to prieste, and one or two mne life esized statines
in stone. Iu the nave of the church is an ancient font, a chandelier of the earlier part of the six. teetb century, of coloured iron, and two singular ancient groups of figures, now enclosed in modern cupboards. One is a "Pieta," the most capboards. One is a "Pieta," the most
grotesque and repulsivo treatment of the subject Fre have ever seen. The other represents Ow Lord's triumphal entry into Jernsalein, anci originally used on Palm Sunday for the pro. originally used on Palm Sunday for the pros
cession. These date from the commoncement of the sixteenth century, and aro singular though the sixteenth century, and are singular though
not beautiful examples of the art of that date.

YORKSHIRE ARCHITECTURAL SOCIETY The annual meeting of the members of this socioty has been held at the School of Art, Minstor-yard, York, the Dean of Yerk in the chair.
The Rev. Georgo Rowe read the repert, which stated that for the first time for sevcral years the committee had te report the loss of many mombers by death or resignation, without any corresponding increase in numhers. The finances, however, wero in a satisfactory condition, and to what was said last year concerning the publi. catien of fac similes of ancient stained glass in the Minster, the conmittee had to regret that circumstances hand prevented its progress, so that by a reference to the progress of the works cen. by a reference to the progress of the works cen.
nectcd with the restoration of the south transept of York Minster, which, under the able direction of Mr. Street, was being rapidly placed in a safe condition.
The report was unanimously adopted. The officers and committee were re.clected for the ensuing year, and Mr. W. D. Iusband, Bootham,
and Mr. Bradley, Precentor's Court, were ad. and Mr. Bradley, Precentor's
mitted members of the socicty.
Tho Rev. G. Orasby, vicar of Fishlake, read a paper on "Yorkshire Churches and Yorkshire Wills;" and the Rev. G. Rowe, principal of the York Diocesan Training College, read one on the fivelight west window in the church of St. Martip, Coney-strect, York:

## SALE OF BUILDing LANDS, LONDON AND WESTMINSTER.

Duriva tho present week, the Metropolitan District Railway Company hare submittod fer sale hy anction some valuable property and surplus building-land in the City and West.
minster. The total value of the land and bnild. ings which have been offered, and to a certain extent sold, is estimated at upwards of 220,0001 . The sales teek place on Tuesday and Wednesday, property sold en Tuesday is situated in the City, and censisted of four lots, Messis. Dcbenham, Tewson, \& Farmer being the anctioneers. The first lot consisted of freolold premises in Queen. street, Cheapiside, and Great St. Thomas Apestle,
adjoining, containing an area of $1,060 \mathrm{sq}$. ft. This lot was put up at $3,000 \mathrm{l}$, and was ultimately sold fer $4,900 \mathrm{l}$. The second lot consisted of freeheld premises in Great St. Themas Apostle, centaining a large warehouse ocoupying an aran of
$1,435 \mathrm{sq}$. ft . Forthislot $6,200 \mathrm{l}$. were offered, when $1,450 \mathrm{sq}$.ft. Forthis lot 6,2002 , were offered, when
6,500 . were named as tho reserve, and as there was noadrance on this snm the lot was withdrawn. The next lot offercd consisted of freehold property, in Love-lane and Botolph.alley, Eastcheap,
containing 3.100 square feet containing 3,100 sqnare feet, new occupied by several small buildings and ware-rooms of an inferior character, but on which it is expected blocks of warchonses will be erected on the
expiration of some existing leases, which termi. expiration of some existing leases, which termi.
nate in a few years. In reference to this lot the auctioneer stated that the Corporation was abeut to make a new street close to the property, Which would materially improve its value. Before tho bidding fer the lot commenced, a gentleman prescnt cemplained that the conditions as to the height of new buildings to be restrictions; whereupon the auctioncer observed that there was not any plot of land in the City, containing 3,100 square fect, where a builder conld carry a building to any height ho pleased. After a epirited compctition this lot was sold and most impertant of the whole. It consisted of leasehold property in Cannon-street, near the Canuon-street station, comprising a block of large warelouses and offices, covering an area of 7,100 square feet. These premises are held hy the vailway cempany under a lease for 72 years frem Christmas, 1858 ,at a ground rent of 1,115 per annum, and are let by the company on an und Telecraph Works Cempany Gutta Percha, and Telegraph Works Cempany for 21 years,
from 1867, at 2,5002 . per annum. The bidding from 1867, at 2,5002 . per annum. The biddings
for this let commenced at 10,000 ., and increased te 18,0001 ., wheu 20,0002 , wero a amed as the reserve, and there bcing no further advance, the property was withdrawn, the auctioneer stating
that as the cempany were very anxions to eell, that as the cempany were very anxions to sell,
they were open to receive an offer by private contract.
The company's surplus lands offered on Wed. nesday censisted of an extensive plot of free.
hold land in Broad Sanctuary, Westminster, centaining an area of Sa. Or. 11p., within view
of the Houses of Parliament, Westminster.hall of the Houses of Parliament, Westminster.hall, and Government Offices, and offering an oppor. tunity for the erection of buildings for national or ether purpeses. The property was divided into two lots, and its estimated value was set down at about 180,000l. Messrs. Rushworth, Abbett, \& Co. were the auctioneers, who stated in offering the property that there was not in the whole metropelis an equally large or eligible bailding site. Thare being no offers for either lot, the property was withdrawn, the auctionect stating that the railway company wonld be willing quantities

## ARCHITEOTURAL ASSOCIATION OF

 IRELAND.A geveral meeting was held on the 9th in stant, the president, Mr. J. J. O'Callaghan, in the chair. The follewing registry rules, being approved ef by the committee, were sabmitted to the general meeting and confirmed:-
"1. That tho registry be open, without fee, to all members of tho Association requiring engag gements.
2. That the assistants should sinte the sallary required and qualifications at time of registry.
repistry or otherwise, he shall let the the scretaries thoum in writing, that his name, max be wilhdrawn.
4. That practisin architeen
4. That tractising architects be noticed by odrertise-
ment that the regiotry is open, sind be reat ment thant the regittry is open, and be requested to apply
to the secretaries ghould they require asgisutunts.;
Mr. J. L. Robinsen, hon. sec., then read paper on "Architectaral Perspective." A dis. ussien followe
Mr. Lengfield, hon. sec., Mr. Early, Mr. Holmes, and others spoke.
The next general meeting will be held on the $30 t h$ inst., when Mr. E. Trevor Owen will road Use."

## PROPOSED "CODNTY COLLEGE."

The Rev, J. L. Brereton's "County College' scheme is advancing, and likely, we are told, to bo eutirely successful. It meets with the ap. proval of the tutors and heads of houses in Cam hridge, and has promises of support from nearly all whe have boen instrumental in establishin the county schools.
The plans embrace on ground.fioor a large central hall, reund which are grouped eight common rooms, 50 ft . by 25 ft .; library, board rooms, tuters' rooms' and library; porter's and stoward's reoms. At each end of the principal flont are residences for principals, chapel, and
lecture hall. lecture hall.
A bove the common rooms are three stories of bed.roems, each of the 300 students having a small reom of abeut 10 ft . by 7 ft .6 in .
The front centre of the building is occupied by officers, servants, and so on; the dining-hall and kitchen being above.
The estimated cost is 20,000 l. The architects are Messrs. Jelin Giles \& Gough, and the plan Soncrally is somewhat on the model of the them, of which the Prince of Wales is the patren

FALL OF FLOOR IN THE BELVEDERE ROAD.
Ox Firiday in last week an inqueat was held at the King's Head Tavern, Belvedere-road, Lambeth, hefore $\mathrm{Mr}^{2}$.
Willam Carter, coroner for E. Eist Surrey, on tho bodies of George Bars, aged 63, and Williara John West, aged 49
 Vedere road. \$ome tons of oats. Were stored in the theper
part of tho promiscs and the troe deceusd part of the promises, and the two deceused raen were
ssanding below with a horse and cart wheu tho floor above then gave way, and they were huricd bencath heaps ot
Hrain, On being cstricated it was found that both were Mrain. On being cstricated it was found that both were smaghed to pieces, nnd the horse attached to it was killed

 Witness was present when the necident bappened. He floar hed fallem. He found that tont. square ofd fooring
had piven way, and the corn had fallen. He had no con. ception of the weight of corn on the foor at the time it
 Gave way about hali way from the wall to the iron eolumn
m the cent tre, that was about 15 f . from the entry from the yard. The height of the heamm from the entry from trom about loft. The Iloor was gupported by one entire beam
from wall to wall, which was suppoted in the centre by un irou column, One half oupte beanm had eiren way
between the wail and the column. Witnesg did the between the wail and the column. Witness did the labour
for the building of the lloor. He knew the beum restod on
atone corbels. The half of the anpport had broken away.
He bad examined that part and found that the beam Ha tad examined that pari and found that the beam gare
way between the wall and the eolumn. That was bis opinion. By reason of that giving way the llooring came down. The heamearried joiats from another timber at the
end. Witness examined tho part wher end. Witness e xamined tho part thero the timber broke.
He coald not see any defeet ia it. Ite presumed that bean broke from thy superet ineumbent weight of eorna. He did not see anything to lend him to suppose the beam had beeu tampered wieh in any way. There was no doult it nis mjud that the deaths sere due to the beam suddenly
brealing. He did not think the accident could bave bee By the Jury. - When he built this he had the inetruc hons of the manager. He considered that the door wis considering that the ceiliug was a very low put upon it
 the beam, and he considered it ealcenlated to bear any weight that could be put upon it. He had been upon thy in hy Mr. Besuronot to give his aceident. Me was calle of the buidding. His attention was drawn to a slight
deflection in the end towards the river. Mr denlection in the end towards the river. Mr. Bcaumout
and M. Bustone were present : Mr. West (the was ulso preseut. His poinion was asked whether he opinion that somae support shoold hi hadded to it as his near the river; but ho thought the other heams were per nad no knowledge ne to what weight the By the Coroner.- He heliered that cors1 had been
placed on the floor which gave way but not had been put there when the secideut hap mo much a could not speak decisively, but he thought that this so the largest lot that had ever beon on the door. In his
opinion Mr. Benumont had used every reasonable ayd opinion Mr. Benumont had used erery reasonable and By the Jury. -The girder weat 9 iv, into the wall. The
 said thet it was suggested to him to have this hailding
erected, and Mr. Duff was sugrested as the huilder put up a part of tho building. Mr. Duft was told that tho 5 , too s,two quarters of corn. Mr. Duif prepared the drawings,
and witness asted an architcet to tell him what tho
 of the columils, Thero were about 400 quarters of oat on the floor which broke; that would be bbout half whit
tho Hoor was estimated to bear.
 Was of opinion that the statement mado by the witness Lowlett rith regard to the breakage was quite correct.
On the day before the nceident he noticed a delleetion in avother part of the promises, and told W West not to pout
any more corn there. Ths wituess Howlet was ealled in any more corn there. Ths withess Howlett wase called ins
and inspected the whole of the heums, and gave it ns his
 opiuiou that the beam which gave way Was perfectly
sound Eserythiug that could be bene was one for
security iu tho erection of the buiddiug. Nr, West made any suggestion he liked.
By the Jury. The floor was caleulated to bear the Weight of 51 tons bettreen the pillars, and there were 25 tons betweeu the pillar and the end walls.
returned a verdiet of Accideutal Death ${ }^{\text {sidenge, the jury }}$ returned a rerdiet or Accideutal Death, suggesting that
two iron eolumns should bo uscd as supports iu the of one as heretofore ; - a merc ruto.of: humb suggestiou we may add

Court for an iniunction to reatrain the defend ereeting, or continuina, any buidding that should int frome
wift the
 deyl of contralictory evidenee was adduced in it, itrom whish it appeared (inter atiu) that plans and descriptions
of the deleadants' proposed builaing had been pubbishe
 and ofber newspapers; but that the plaintit's notice was
uot piveu to the defendants till Dec
 Dre 1s72. The eause now came on upon an interiocutors The Vice-Chancellor said no rule was better settled than that a plaintitit seeking au interloeutory iujunction reason ably early period, his jntention to rely on the yete
upon the upon their proceedings to which this Court on onidered
him entitled Here the evidence had distinetly raider question of "acquiescence" on the part of the plaintitits

He had but wealily supported his case. What had been
done wes done by the defendants with the qreatest posdone wrs done by the defendants with the qreatest pos-
sible puhlicity. The plaintilf savy, or must be taken to hase seen, that the huilding would he a mege one. The slightest inquiry would, long hetore he filed the bive, Thate enabled him to know what the increased height of the
structure would probably be; nud on the whole cires hic
muat be nassumed to have known what was about to lse smuet be nasuured to have knorn what was about to b
built hefore ayy material progress had been made. Th
motion must therefore he refused.
'I KNOW A HATK FROM A HAND-SAW.' Sra,- So vast and rapid ore now the strides of the pen, and the progress of literature, that one medium is ofte Thus it has baypened that the suggestion which yo aseribe to Mr. J. A. Picton, and quote from Notes and
Qeerien, was made public heforchand in the Autiquary. In jnstice to an almost unhnown publication, I heg you fill allow this starement to appear; the facts have alread I enelose you a copy of the numher in question, vol. ii
No. 30 , dated $J$ ane 10, 1872.

WARMING
S1R,-Abont this time, either two or threo yeara ago,
here sppeared a letter in the Buider from an architect, Tho had recently built himselfa a large house, I Ithiuk in warming it, quite to bis born satisfaction, by means of iron airochambers fixed behind his room fire places. I have read the Buideer earefnlly erery week since that time, his experienee; but up to this time I lasve seen fo other would say if the sy stene continues to gnswer or otberwisc he would confer a benefit upon many of your readers who
tike myself, wish to make coal go as lur as possible in the dear times,

WHITEHAVEN BATHS COMPETITION.
Sir,-Messra. Dyson \& Dyson baving written fou suondence, from which, I think, jou will see that I have siondence, from which, think, sou wili see that hase they have stated the case hetwixt us.
advertioment, and the following words, in my letter of Savertisoment, and the following words, in my letter of give a guarante, "4 4 hitch has ariven rexpecting the ground,
so that I cannot just now give any gwaraniee." My position in the matter is briefly this. As amemher of our Harhour Board, I eppealed to my colle agues to concey to trinstens
or a connpuy a piece of (at present) wastc ground, about tion thereon of puthic baths. The idea being favourably received, Iforwarded to you an adrertisemient asking for Jesigns, fe. This appasired in yonr issuc of Oetoher 2bih,
Immediately after publication, Messrs, Dyson \& Dyson, with about thirty othera, applied for trucing of ground with nbout thirty othera, appled for trucing of ground,
So. The date for receiving desigua (oripinally intended
for Noperber for November 18th) was inadvertcntly omitted. This being limited; it was accordingly extended to the end of the month. At the Arst meeting of our Board (November 31)
the application for grouud was complied with, but subject to conirmation or orkernise by Mr. Brunlees, the en succoeding meeting ( (jorember 25th), the engineer advised the Boari that the ground would be required for raifway
idints, \&e. Mess. Dysons plans had hen deapatehed the meeting. I conmunuicated the deecision of the Boning of
by first post to all the applicants for designs The by first post to all the applicants for designs. The ahore zotice crossed some plans iu the transit (these, at the
senders request, were immediately returned), aud pre-
vented others from heing sent any competition, and Messrant. Dyson not having ang in in.
structious from me, I much doulit whether they claim.
Regarding the merits of their designs, which I forward alogg with this, I leave Jout to judge whether,
done for work
dhe sum offered is not sufficient; and whether the proposed mode of aetllement has nny thing of the nature
** Mr. Jackson appears to bare acted with good iutentions, and ho evidently fecls, judging from the offer ho has made, that he had no right by certain offers to induce
architects to expend time aud thought in tho preparation architects to expend time aud thought in the preparation
of desigas, and then when worrs had been done to with. or desigas, hand hifer. A mora claim against him certininly
exists. What the power of cnforcing it may bewo will Dyson \& Dyson contipuing to presa us for mill opinion) that their design for the exterior of the huilding, as sent too ns by Mr. Johnson, is of such a character than

## POSTAL TELEGRAMS.

Sin, - It is now gonarally admitted that it is sery desir -able reccipts should be fiven for telegrnms. I bave ro

- doubt the reason of the Telegraph Department refusing to give receipts for telegrams is, that it would consuming quantity of paper, and give too much employ ment to the
.clerks ; but if $\boldsymbol{I}$ may be permitted to offer a fev sugres. stions, I think it conld be oarried out in this wry ;-
The counter or receiving clerk should be prosided with The counter or receiving elerk should be provided with
a rack of small tickets similar to railway tekest, and in
the same form, having consecative numbers, the 8 gme forth, having oonsec
various values from one shilling.

A reilway date stamp placed on the counter
These tickets (receipts for telegrams) could be drawn, almost eleotriial ppeod.
In cases where it is necesssery to produce a copy of a telegram,--if it is after twelve months the Telcgraph
Department destroys them; and as the production of Department destroys them; and as the prodection of
telegrams would often proce $a$ case, it is an importan telegrams would otten prove a cuse, it is an importan
itera to men of businesg. The following suggestion rould
avoid this:-
telegraph station or for use al their places of business, telecraph station or for use at their places of business
with hooks containing postal twlegraph forms , whith dappli-
cate forms for conies, sinsilat to thone which the rariou cate forms for copies, sinilar to thone which the various
telegraph compnies supplied to merchants and others,
und by the use of carbonic paper copies could be retained. These copies should be banded, with the oripinal (fo These copics should be handed, with the oripinal (fo-
(ransmission), to the receiving clerli, who should afla th transmission, to the receiving clerli, who ghould afix the
date and oflice stamp upon the eopy,
Aritich G, Newron.

## THE RECENT FALL IN BRISTOL.

Sin, With reference to tho paragrapl in jour paper of the 4th inst., on the disaster which ately ocourred at our building, opposite the Railwas Terminus, Bristol, we shall be obliged foa will allow us to say, the weight of tho roof, which is not at all disproportioned to the supporting pillars, was not the cause of the acci dent, nor are the portions of the roof remaining in a bud stato; so far from their having to come down, they will not require anything to be done to thom. The cause of the fall of the roof was the giving way of the fonndation of one of the intcrior pillars, owing to an old tank, which had been long anused and forgotten, existing nea $t$ : the tank wall gare way, and the foundation slid into it; and the support boing withdrawn, of courso tho flat roof abore and the intervening stories fell to the ground.

The side walls stood the strain of the fallin interior without displacement, and the ends of he iron tierods, which ran through the build ag, were even wrenched through them by thic falling beams, without cansing nore dnmage than the distrurbance of the fer bricks imme diately round thom.

Brock \& Bruce.

## BELLS.

Sir,-With respect to your remarks about bells, there are two reasons why bells sound month of they aro swnng. One is, that the which the sound is intended to travel, and enother that tho centrifugal force throws out the sonud. By securing the bell horizontally with screw-bolt through the head, tho first difficulty might be overcome. The second point appear of less importance, brat I cannot imagine that bell would ever sonnd well with its mouth oppo. site the floor of the belfry
A. J. Bleer.

DIFFERENCES AT OSWESTRY.
WIre reference to the restoration of the ancient cluurch of Osw cstry, now going on nuder the direction of Mr. Street, a stormy meeting has that the architect desired to make the building as much like a Roman Catho ic anel as sible, others expressing porfect satisfaction possos ultimatery resolved was ther y and railings to separate the chancel from the nave.

THE OLD MANSION HOUSE AT ENFIELD, Sin,-I cordially endorse the views you have pronounced in fuvour of tho conservation of this is its early listory? Fort. Quccn Ame. That my early education in it, when, and for some time before it was woll known as a lar privat school, presided over by an oner atic, estimable mar, $p$ med Hainsworth who first to estebtish the primiple teaching by "firmness and tindness" and with who "tundine" rofe and birches were umown tanding rill rod, and birches were ankow. beanties when trying often to sketoh it as a boy beaucies wisitine it ome yearsloter when I dis covered it to be converted into most incon venient railway station, $I$, too, became impressed with the peonliarities yon note. In additioned the ornamental brick entrance porch admich the way, from facing the north, was in when, by preservation -its internal arrangements and "planning" pore admirable. The western face had a trached, wich tormer formed one side of large cont yard the eastern side of which was largo courd.yar, the of buildings which were at my time psed as schoolrooms The were at front was close to a public road, on the other side of which flowed the river Lea the sume Bouthern side was occupied hy apacions with forest trees, beyond which was a splendid
orchard and garden, in tho centre of which was large and well.stocked ornainental fish.pond, Thich provided also excellent skating in winter On the eastern sido were paddocks, where cricket nd other sports were hold. A mansion so com pletely planned in itself, and in referenco to the amusements of fishing, boating, skating, cricket ing, sce, so admimably arranged within its own gronnds, must have been founded by somo one of no mean importance. Tho was the founder of $t$, and who tho architect? F. R. Filson.

## SANITARY SONGS.

Sin,-The Ladies' Association of which $\mathbf{I}$ am a momber dicsire to thank you for the sanitary song or hyma lately printed in tho Duilder (rol. xxx., p. 1022). It only noeds, we think, nother stanza or two (somewhat of the following character) to make it perfect, an iliad in a nut. hell, so to speak, "on the cvils that are wrought"" by ignorance and neglect, and the "good that is sought" from the establishment and due obseryanco of true sanitary principles. Such simple hymes would, as I ace before co co, d nd nd ciroulabed ${ }^{5}$ and secular schools
This stanza (a humblo imitation, of course, which, it is hoped, will not be considered presumptuous) should follow the lino in the original (verse 2), -

## Where plague creeps on by stealth." <br> Shall we lage putrid beef in the pot, Polatoes diseased and dear <br> Or mouldering hread, or fist to rot;

Or mill: made of whiting and sot;
Thesc adulterations, properls speaking, belong now to the public analyst ; but your readers will doubtloss remember that the whole subjoet was thoroughly and continuously exposed in the Builler long before a pablic analyst was hoped for.

HOLY TRINITY SCHOOLS, SYDENHAN.
The plans of Messrs. John Giles \& Gough, of Cravcn-stre日t, have been solected in a hmited competition, for the above schools. They are intended to provide for 100 boye, 100 girls, and 150 infants.

ORNAMENTATION OF A NEW REOREATION GROUND IN BETHNAL GREEN.
In carrying out the several alterations on the Colnmbia Market estate, purchased by Lady Burdett Coutts for the parpose of making pablic improvements in the neighbourhood, the Baroness cleared a triangular piece of land at the corner of Crab Tree-row and on which stood is number of dilapidated houses, and formed the area into an oper space for the benent of the teuans of the inge in the locality. The Baroress is now about ings in the locality. The Barozess is now about to prant circular seats around them for the two. place circe of fold purpore pros and be of uso to the publio the reaker In addi. "reste" rests, similar to that in Piccadily, nearly opposite tho end of Down-strcel, are also to be erected, after waress the land legally made over to then may be preserved as a free ind open space for ever for the benefit of the inhabitants.

THE MMPROVEMENT OF SMALL HOUSES. Tee thonght has occurred to me that the very numerous class of persons with small and fixed incomes, whom the Chancollor of the Exchequer delights more especially to honour, and whom the general rise in the means of living has put somewhat in a dilemma at this orncial period of the ycar, might be profitably aided by a bittle ingenuity exercised in the direction of a more economic arrangement of their dwolliugs and the more gencral adoption of dunestic labour-savine appliances, by the nedlect of these matters, they ar constrained to derote a margin of their income to uroftable labour. It is true we conne hare Australian villas packed in tirs and im. ported to compete with our speculating builders;
but the object sought after might be gained by reconsidoring the arrangemont of our own produce. Theso villas are by no means bealthy,
unless it be contonded that livine naderarome unless it be contonded that living nndergroma
is healthy, as their inhabitants mostly do, viz, in the breakfast-parlour! nert the kitclien, "daro "rains are generally defective, and this means oxpense. I heard lately of a man discovering a half-filled well under his floor "All's well that ends well," douhtless quotb the builder, as be laid tho last board that hid his nfornal pit. Could not tho kitchen be put nearer tho bed.rooms, so as to have tbis oftice
handy for tho suporrision of the children on that handy for tho suporrision of the children on that
foor? For if a man is to be honoured who makes two blades of grass grow where erst has grown but one, how much more sball be be hononrod who ma
havo done hefore.
Now, as to the servants' work, thero is dirly Fork and there is clean work. It is in the formor of these more especially that I tbink a saving is to he effected, as it inclucles cooking, cleaming stoves, passages, and generally "tidy.
ing np." Clean work consists, inter alia, of making beds, waiting at table, attending the door, crocbet, roading the newspapers and ponny
dreadfuls ; these lattor occupations aro a sine dreadfuls ; these lattor occupations aro a sine qua non in this our day, and must conseqnently playing (too often a nuisance to neighbours) and subscription to Mudie's are mere acces. sories of ornamental service, and do not come within our category of necessary. The general adoption of tile hearths and back and movable grates wouid save trouble. Then there is a hozt cloanly olosed kitchon.rances, gas for spines, and more water.taps should be about summer, and the surplus heat from the hoiler capable of being utilised when wanted. Then the long aight of stone stops to the frout door shonld bs keeping trim (particularly if the maid "takes a peeping in them," (pand a pleasuro in a compre hensive and contemplative vion of the neigh. oourhood from their summit), -a proceeding,
oowevor exhilarating in itself, wasteful of time and addivg no dignity to the front of the house. and adding no dignity to the front of the house. Giant intellects may consider tho solution of this intellect, pace the elephant's tromls, should 0 able to pick $n p$ the pin of economy as well as coot up a tree to let in tbe light and air of know. ledge. I know I have tried to reconcile the ponflicting claims in tbese microcosms of bouses, and have fonod designiug large houses child's play in comparison.

## CEURCE-BUILDING NEWS.

## Woodhouse (Leads). - St. Mark's Churcb,

 Woodhouse, whicb bas lately been closod, bas undergone conaiderable alterations. The ground. loor has been entirely replanned, the old higb-jacked pews having been replaced with open leal benches, having solid cut pitch.pine cads. the backs are framed and panelled, witb noulded top.rail. The seat-boards are nuade to lope, as also the backs. A spacious chancel has asterumost bays, and filling in between the olumns with wooden screens, the lower part of which is panelled, the npper portion heing open ramework, with sunk, pierced, ard cusped
racery-head, resting on turned shafting. The choir soats are open benches in ${ }^{1}$ pitch-pine, witb rnamental solid cut onds. The frouts of the soys seats are of open framework, with cusped
leuds. The wood fooring noder all the cesting leads. The woor flooring nader all the seating sassages, and means have been used to secure erfect rontilation, as it was found on romoving he old floor. boards that the joisting, for want of entilation, was in many places thoroughly leoayed, and could not have lasted much longer, Cho floor of the chancel and within the altar. ail (or sacrarinon) is laid with tiling. The steps o the altar aro of white Sioilian marble, with ed marble risers. The seating has been stained
nd varnished. The walls and roofs have been leaned down . The walls and roofs have been oofs of the nave and aisles are finisbed witb lnish.grey tint, and have ornamental pattorns tencilled on thom. The walls are finisbed with buff colour, witb a dado of green, baring pat. orns stencilled on. The roveals to tbe windows re painted in red, with ivy-leaf running
ound. Tbe walls and roof of the chancel
are treatod much more richly, the roof having the spandrels filled in with the pomegranate and vino, and angels represented is singing. The east wall has been decorated so as to bar. monise with the chancel window (which repre. sents the Ascension), and has angels playing npon various instruments of music, with the with tho sound of a trumpet" (Patm the Lord running across. The rerados is dirided into three panels, each containing a picture, in oil colours, the trree symbolising the three dispensations, viz., the patriarchal, the Mosaic, and tbe Christian The centre picture represents our Lord, as Christian high priest, blessing the boly sacrament; tbe left band represents Abrabara and sou Isaac on their way to Mount Morialh, a type
of the willing sacrifice of Christ (Genesis xxii.) ; the right panel represents Moses lifting ap the brazen serpent in tbe wildcrness, a typo of the salvation of tho Cross (St. John iii. I1, 15).
The panels to the left of the reredos will bhortly The panels to the left of the reredos will ghortly be filled in with subjects, one represonting the the other, the parable of tho Weddino Gar ment. The panels to the right will Gont the miracle of the Feeding of the Five Thousand, and tho parable of tho Ten Virging. The panels beneath these bare the passion. flower stonoilled upon a chocolate-coloured gronnd. The chancel-screens have been deco. rated in oolours. The organ bas been repaired and embellished, the pipes being cloaned and deoorated with gold and coloured patterns. A new oak pulpit and altar have also hcen supplied years old) the mand 500 been regrained and painted in plain andours seatiog in the gallery retions $r$ phe Brother beca carried out hy Mcssis. Powell Brothers, of Park-place, Leeds, under tbe direction of the architects. The contractors for tho The pulpit and chancel.screen \& Son, of Leeds. The pulpit and chancel.screen are tho workmanship of Mr, James Wood, of Leeds. The grain. plain and varnisbing of tho woodwork, and the plain painting of the walls, roofs, and gallery seats, haro becn done by Messrs. Fred. Jackson d
Co., Leeds. The whole of the work, with the cxception of the pulpit, altar, and graining, has been earried out under tbe superintendence of Messrs, Adams \& Kelly, architects, Leeds. Gifts have been mado to the cburch hy different members of the congregation. Simultaneonsly with window by restoration, a new stained.glass placed in the nortb aisle by Mr. Thos. Tennee to the momory of his late wife, who was for many years a communicant and generous hene factor of St. Mark's. The tbree lights of tho the tre bave been subdivided, so as to admit of mercy. The three upper sabjects represents of spectively, "The Foeding of the Hungry," "The Clothing of the Naked," and "Tbe Giving of Drink to the Thirsty:" while in tbo lower are
depicted, "The Ministering to Prisoners and Captivos," "The Receiving and Entertaining of Strangers," and "The Ministoring to the Sick and Dying.

Wellingoorough,-The new school chureb at Wellingborougb, which bas beon dedicated to St. Barnabas the Apostle, has heen opened for Givine worship: it is an iron construction, in the Gothic style of architecture, very similar to that ampton, only tbat it is somewhat larger. The edifice is situated in Osford.street, off the Wilby. road, just outside the outskirts of the eld town, fast-increasing neighbourhood. Its dimensions are these:-On the ground.floor, length, not including the chancel, 51 ft ., width 32 ft .; en. trance-porch, 10 ft . by 6 ft . The chancel is 24 ft . wide, 16 ft . loug. It is divided from the main part of the church by a Gothic aroh, and on the south side tbere is a smaller Gothic arch opening into the vestry. The vestry is 15 ft . by 16 ft The height to the ridge of the main building is 30 ft ., and to the top of tbe small spire, 48 ft The spire includes a small belfry. The church either sid with four small Gothic windows on ciroular window, filled in with glazed class of oathedral green, and relieved by a centre colonr ing, illumnating the sacred monogram, I.H.S in the body it is lighted by gas-stand pendants, mental and many. linhted ans stan chancel. It is panelled witb burnished timber tbroughont, and is seated, witb tbe exception of
the choir.sents in the ehnncel, with catbedral chairs, It will seat ahout 3 az0 persons, and afford accommodation for school purposes, according to the Coverument requirements, for more than
220 children. It was bailt by Miess. 220 children. It was built by Messrs. Kent, of London ; Mr. Bold, Wellingborough, having executed the foundation brickwork. The cost of the land, whiob measnres 856 square yards, was 1392. 10s., and that of the erection more than
500 l. in addition.

## SCHOOL-BUILDING NEWS.

Garford and Frilford.-A new school for the parishes of Garford and Frilford is to be bnilt immediately from the designs of Mr. Edwin Dolby, of Abingdon, architect. The plans will residence, with separate girls, and a private enclosed yard attached to the tencber's honse. The local stone will be the for the walls, and the windows will be of stone, fitted with Messrs, Burt e Potto's iror lights. The roof of the school and class.room will he partiall exposed to rion. Thoom of Mrr. R. F. Bryan, of Abingdon, bas been accepted, and he is to commence forthwitb. Horton Kirby,-The Bradford Schoel for Littlo Boys, situated in the parisb of Horton Kirby, Kent, near the Farningham.road Station of the London, Chatham, and Dover Railway, bas been openod, witl some ceremony, by tbe Mayor of Bradford, Mr. M. W. Thompson. The "Home," with which the school is to be connected,-is intended cor boys under ten years of age who are falliner homeless or destitute, or in danger of falling into crime. It consists of ten houses, and the building orected by the Bradford people is to be used as a scbool. Thirty boys reside in each of tho houses, under the care of a man and his wife, as the "father" and "mother" of the tion for 300 the Home provides accommoda them, bomeless boys, it feeds and clothes education gives them a secular and religious trades wi, the boys are then sent to tbe varions are sentheb they most prefer; and when tboy as "old boys", and if they are looked alter length of time, they receive prizes. Tbe fonnda tion-stone of the new school was laid on the I3t of July last, with creat ceremony by Frederick C. Cavendish, M.P. On tb by Lord tbe Prince Imperial of France presented the prizes to the boys, among whom were a number of "old boys." The new building consists of a main room, 26 ft , hy 30 ft ., an infant.room $18 \mathrm{ft} . \mathrm{by} 19 \mathrm{ft}$., and tbree separato class-rooms of proportionato dimensions. In the rear of the ouilding is a covered playground. All the external walls are luilt of Kentish rag, sur mounted with an ornamental slate roof. The of 1,0001 . bave been subscrihed in Bradford. Amongst the donors were Sir T. Salt and Mr. Amongst the donors were Sir T. Salt and Mr.
Geo. Salt, 1002 , each.
. Sall, loor. each.
Cheadle,-Tbe now church scbools at Whiston have been opened. The schools cost in their erection upwards of $600 l$.
Brighton.-The new schools whioh bave been ereoted in Mount-street, in connexion with St. M. Ell Ciapel, as a momorial of the Rev. Julius mally Elliot opened by the Bishop of the Diooese. Mr. the Mattestor life in 1869 , whilst descending he local Herald, he hed conoeived a scheme for supplying a want greatly felt in the district in which St. Mary's Chapel is situated, viz., of a school on the principles of the Church of England. The congregation resolved to carry it ont as the best memorial they could erect to the memory of their pastor. The "Elliott Mcmorin Schools" were, therefore, raised, at a cost 2,612l., towards which the Misses Elbott of 1,000 . The schools, whioh are capable of giving accommodation to 132 boys and 200 girls, are to oo worked in connoxion with the Branch Central Natienal Schools in Warwick-street, which bave also been repairod and altered at an expenso of 300l. Tho buildings are well adaptod for a shool of this character; the ground floor being, a usual, appropriated for the boys, and the gronnd for each sex The with a separate play. gronnd for each sex. The external walla, whicb are built bollow, are faced with Suffolk white biln and blue string courses and arches of red kiln and blue Staffordshire brick. The copings and koystones are of Bath stone; the roofs being covered with Broomhall tiles; and the buildings are plastered internally with Scott's
cement. Sufficient ventilation has been secured hy means of open fireplaces fitted with "Abbots. ford" stoves, the windows heing provided with hung sashes, and ventilators aro placed in the floors and ceilings. Mr. John C. Gibbins (Goolty \& Gibhins, London and Brighton), was the the contractor.

The Drainage and Sewerago of Bombay: being a Report submitted to the Bench of Justices of
that City. By their Executive Enriueer, that City. By their Executive Engimeer, London: Printed hy W. J. Johoson, 21, Fleet. strcet. 1872.
Majob supply of Bomhay we recently noticed, has also reported, as We here sec, on its drainage and heretofore projected, and proposes a new ono of his own for the complete sewerage and drainage of the whole island of Bombay at once as hy far the most advisahlo. The island, ho says, can he drained on his project without the aid of any new underground channel, and simply by enlarging tho present sluices, so that the whole of its sewage can he removed by one single main sewer of moderate sizc, and can be pumped at one spot. it thus does not matter, as regards the drainare, in what direction the town spreads, as the drainage of each new district can he delivered into the one main sewer hy gravita. tion. The major does not propose to purap the sewage into the sea, hut to utilise it, and after utilisation, and when it is pure, to discharge it into the creek north of Trombay, at a point seven miles from Bombay, where there is no large village.

A Digest of the Statutes relating to the Public Health; for the Use of Members of Urban Sani. tary Authorities. By George F. Orambers,
F.R.A.S., Barrister-at.Law. Stevens \& Co. F.R.A.

## VARIORUM.

Iv a prper "On the Utilisation of Wasto Coal," hy Mr. W. H. Wahl, in the "Journal of the Franklin Iustitute of Pennsylvania," edited
by Mr. Wahl, Pb.D., and others, the author by Mr.

Joumal of the Society of Telegraph Engineers. Edited by Major Frank Bolton, hon. sec., and ${ }^{G}$. E. Preece, sec. London: Spon. No. 2, Vol. I. telegraphic journal must tend greatly to promote contaius some rases. and reports on telegraphy and electrical science. The journal is prblished under the supervision of an editing committee.-With the Cardener's Chronicle has heen issued a characteristic and very fairly executed Almanac, for suspension. The chronicle continues its career witb credit to itself and satisfaction to its subscribers.

## Miscellanea.

Telegraph Amalgamation.-We learn from Abbott's Monthly C'ircular that the preliminary arrangements for the amalgamation of the telegraph lines oast of Bombay are now nnder consideration, and it is gratifying to hear that the representatives from the various colonies in Aus tralia are ahout to meet in Sydney to fix upon the amoint of subsidy to be paid in oxchange for a reduction of tariff, thus showing that the colonies are quite ahive to the importance of cheap tele. graphy, and are prepared to make large sacrifices to obtain it. At the present time the impression,
to some extent, prevails, and the question is to some extent, prevails, and the question is being activcly ventilated, that clieap telegraphy can he hrought about hy competing lines. Never was there a greater fallacy, and I take this opportunity of warning those who have hitherto cone well in thcir investments to shun proposals having no other justifcation than mere competition. At tempts at competition draw prominent attention to the great fact that tho directors of existing ines must not delay their arrangements for an amalgamation of all submarine cable companies under one great organisation. By this means expenses can be rednced to ar minimum, and innumerahle other adrantages would be attained. At present, without the Boards of any new
scheme, thero are no less than thirty four scheme, there are no less than thirty-four directors on the lines now working, which prac. tically form but one system of communication hetween East and West,-or, in othcr words,
there is one director for every 298,9001 , of there is one director for every $298,900 \mathrm{l}$. of
capital, and no less than elcren of the directors are receiving either double, triple, or quadruple ees hy heing on separate boards.
Thunderstorms.-Lightning has done much damage in various parts of the country during this strange winter. At Birmingham mnch damage was done hy it. A house in Newhall. A pile of huildings at Perry Bacr was partially demolisbed. Some windows of a huilding at Oldbury were forced ont hy the lightning. The storm was also sceverely felt in Derhyshire. Tolegraph.wires were rent and torn asunder. The spire of Newhold Charch was struck hy lightning, and seriously damaged, so that it was not considered safe. At the time the charch was injured, a man engaged in digging a grave in the churchyard was also struck hy the he lay stunned for screral minutes tingham two houses were struck and seriously damaged. The electric current struck a stack of chimneys, which it almost entirely demolished, and passed thence to the ground-floor, tearing away the fire-grates of the third-story hedroom and parlours of both houses. A charch at Aughton, ahout a mile from Ormskirk, Lan. cashire, was struck and damaged. All the win. dows in the tower were hroken and scattered, and a large stone in the hase was driven out of the wall. Intelligence has reached Kinsale that the electric force had struck part of the lighthonse on the Old Head, carrying anay heo lowe flooring, the door and window frames, and rendered the huilding rather unsafe. The Trinity Board has sent over an engineer to examine the structure.
Widdrington Church.-Reverherations from the poem of "Chery Chase," says Mr. Wilson in his "Churches of Lindisfarue," will come into the minds of most persons who hear of Widdring. ton parish for the first time. Nor will the first sight of the church dispel them. It is a relic of fourteenth-century workmanship, fraught witb an air of venerahle grace, delicacy, and serenity that is full of charm. It has, however, been much abused hy monstrons churchwardenisms; notahly the removal of a north aisle, which, leaving no supports, has hrought the arches of
the fabric all awry. To remedy these defects the fabric all awry. To remedy these defects and to supply additional accommodation for the incroasing population of the parish, the cburch is ahout to be thoroughly restored and enlargen nuder the auspices of the vicar, the Rev. R.
Firth, M.A. Lord Vernon, the late owner and Mr. Hugh Taylor, the present possessor of the Wriddington Estate, have both sulscriher largely to the work, with whicb Mr. F. R. Wilson, architect, is entrusted.
Extraordinary Accident at Bolton.- By the hursting of a fy-wheel, at the Bolton Iron and Steel Works, in Black Horse-street, Bolton, great damage done to property.

Gorleston Church, Great Yarmouth.Mr. Stuart C. Blake, in his new issue of the "Yarmouth Annual," says:-"In the splays of chapel foliage and fruit of the vino wero discovered. There were three angels in a splay, hence in the four splays more or less of twelve angels were uncovered upon the walls: around the windows many other angcls were found. That portion of the north arcade forming the south side of the north chancel chapel was also found to he painted with figures and floral designs, traccfully cxtcnding over and fringing each arch. Traces of paintings were discorered on the east wall of the chancel; on the walls of the south chancel chapel (Bacon's chapel), and the west wall of tho south aisle near the helfry-stair doorIn the nave, remains of paintings and coloured decorations were discovered. Each pillar had heen decorated with various colours,-red, black, marhle where, with their sepulchral surfaces beneath, they had formed part of the pavement. 16 is very probable tbat most of then were originally placed in St. Aicholas's, the convcutual church stood in Fen-street, where some of its ruins may still be seen."

Fever Department at South Staffordshire Hospital.-Extensive alterations and additions made to the South Stafordshire Hospital, in ing of the fever department. The original huilding, orected ahout 1818, was on the corridor plan. The recont alterations and additions consist of the removal of the out-patient department to a new wing, one story in height, on the Clevelaud road a separate approach the infirmary portion of the hospital. The extension of the south-western wing forms two spacions wards. A further addition is the extension of the south.eastern wiug for infec. wards. cases, and arranged for six separito that each nu nurses rooms are now so inved or cuhicle. The light and ventilation to the wards have beon iucreased, as also the cnhic space to each patient. The hnilding has heen heated, and the water-sapply and service for hot water in baths, \&c., have heen entirely re-
arranged. The floors of the new bnildings are arranged. The floors of the new buitdings are of oak, and the walls plastered with Parian cement. The huilder's work builder, Wolverhampe out hy Mr. Horsnan, bulal., from the designs at a cost of superintendence of Mr. George Bidlake (Bidlake \& Fleeming), architect, Wolverhampton. The heating was contracted for by Mr. Blakemore, of Wedneshury.

Bedford Irrigation Farm. - Mr. J. C. now in the hands of eacli member of the corponow in the hands of eaclı member of the corpo-
ration, and on pernsing it, says the Bedforl ration, and on porasing it, says tha Bedford
Times, we find that it is an exhustive and thorougbly scientific document. Premising that, as the farm is capahle of cleansing the focal waste of more than 100,000 persons, there is not a chance of the draiuage water creating or
hecoming a nnisance, Mr. Morton derotes his attention exclusively to the subject of farm profits; and he states that, considering the perfect fitess of the farm the land sewage, pay, if ever land will pay, for the cost of pump. ing the sewage applied to it. Taking the rent, taxes, and cost of purping, a total of some 1,300., has rent and manure per acre reach ahout 7l. 10s., and he considers that for the annual cost of such land is not heyond the amount at which it is possiblo to make a market-garden pay, especiany as the soil is good, deep, easily worked, and well snited for
such crops as sewago irrigation is especiafly such crops as sewa

Carr and Barlow's Patent Electric Distance Signal Apparatus for Railways.blished motion, and the signal is exhibited on the engine immediately in front of the driver. The apparatus is said to he less complicated than that now in use, and no circumstanco of thick weather can prevent the signal heing seen and known hy the driver. Arrangements have heen made with
Nessrs. Siemens, Brothers, the electricians, for -he constraction of the requisite apparatus.

American Antiquities.-Reports concur i declaring that in remote parts of Arizona ther exist well-preserved and extensivo ruins, which
aro assumed to be those of once populous cities Colonel Roberts's city covers aliont three square miles. It is surrounded by a wall of sandstone miles. It is surrounded by a wall of sandstone thick, and originally, judging from tho talas, thick, and originally,-judging from tho talas,
15 ft , or 20 ft . high. Within are the walls of bouscs, temples, and markets, all of solid stone, houscs, temples, and markets, all of solid stone,
and showing excellent masonry. These walls and showing excellent masonry. These walls
bear numerous hicroglyphics, cut dceply into tho stone. The whole of the ruins, like most of those of the Orient, and more ospecially those of Arabia and Assyria, aro more or less huried in sand. According to tho account, this city is some 90
miles from the houndary between Utah and miles from the houndary between Dtah and
Arizona, and an equal distance from the Westem Arizona, and an equal distance from the Western
Colorado line. It proves to he closc to the Colorado line. It proves to he close to the
desert, and, in truth, environcd by extensivo desort, and, in trutl, environcd by extensivc
eandy plans. This accounts for the latencss of modern discoveries, since neither Indians non stances, to penctrate srich desolate wilds.

Restoration of Warwick Castle. - Con sidcrahle progress has heen mado during th past year in rebuilding tho private apartment and barcaial hall of Warwick Castle, which were destroyed by the disastrous firo at the
close of 1871 . Tho external walls hare been close of 1871 . Tho external walls hare been
repaired, the partition walls of the domestic apartments completed, and the work of internal decoration will shortly be commenced. The
barouial hall is also progressing satisfactorily; barouial hall is also progressing satisfactorily;
but the workmen havo ouly just heron npon but the workmen havo ouly just hegun npon ruhhish carted away from the ruins of the hall many relics of the curious armour which adorned its walls have been discovered. It is
helieved that nearly tho whole of the steel armour can he restored. Mr: Syers engaged on the work. The stato apartments, from which the furniture and treasures of painting and sculpture were hurriedly removed hurt.

Co-operation.-Mr. E. O. Greening bas been lecturing at tho rooms of the Social Science
Association on "Co-operation ". Mr. E. V. Neale Association on "Co-operation"; Mr. E. V. Neale in the chair. After reviewing the history of the movement and refcrring to the receut attack made upon it, he said that co-operative societics were yearly increasing in numbers, and, of solidity and strength. Thcir growth was cren more remarkahle, tho subscribed capital exceed 12,000,000l. a year. In England and Scotland alone there were upwards of 100,000 registered members. A! though the societies were increasing in material prosperity, ho thought he saw a short operators ; but he was glad to state that lately there had been a remarkable revipal iu the movement.
The Corinium Museum,-Tho interesting collection of Roman antiguities found in this ancient Roman town, has heen euriched by al A few years ago three beadstoues, commemo rating ancient Romans, were found at Watermoor. One of thesc was at once scoured by Mr. represented a soldier on horsehack spemring a prostrate foe. The second likewise commemo. rated a mounted soldier in the same attitude This beome the property of the late $\operatorname{Sir}$ Samuel R. Meyrick, and passed into the possession of Museum, where it has arrived. The third monument is a memorial of a civilian. This, formerly in the possession of Mr. P. B. Purnell, has been placed in the musenm recently cstablished at Gloucester.
The New Drinking Fountain in Park-lane.-Mr. Morneycroft is engaged on the nen he erected at the expense of Mrs. Brown, in Park-lane, and which is heing excented under the supervision of her Mnjestj's Office of Works, The - St. George's, Manover - square, Vestry,
having communicated with the Government authorities as to tho alleged delay in completing the fonntain, have received a letter from the First Commissioner of Works to the effect that from the artistic character of the fountain much time is required to complete it, but that Mr. Thorneycroft is making satisfactory progress with the

Ancient English Wall Paintings. - A Depar bas been issued by the Scienco and $A x$ said:-"The Lords of the Committee of on Educes Lords of Committee of Counci students of the schools of art throughont the United Kingdom should bo encouraged to make copies of ancient wall paintings found in churches or other old huildings in the neighbonrlood of their respective schools, and decide that prizes of $5 l ., 3$. ., 2 l ., and 12. should be offered for successful copies of such paintings, with the condition that the Department should have the right of purchasing the drawings sent in at prices to be fixed by the inspector-general of art.
The master of a school of art will be at liberty o prepare copies of such wall paintings himself and to submit them for purchaso; hut they wil be incligible for prizes. All drawings must be made to scalc, and must be within the size of an imperial sheet.
Report on the Liverpool Free Library, Museum, and Art Gallery.-The committee stato in their twentieth and last report, that the snccess of tho institution has, on tho whole, fully borne ont tho most sanguine anticipations of the fonnders. "The carecr of such an insti tution," they romark, "steadily pursuing its courso of usefulness, prescnts few incidents of sensational character to record. Its hest eulogium is tho fact of its quietly carrying out tho tho past ycar, the schools wbich have heon tho past ycar, the schools which have heon century have been handed over to tho School Board. The reporting committeo has therefore ceascd to have any connexion with their management.

Asbestos Steam Packing.-The raw mate ial, says thie Glasgou Herali, is brought to the manufactory [of the Patent Asbestos Company, Glasgow] in considerable quantities from ifferent parts of the world. It comes in sacks wa bags like chips and blocks of ryood, but of a beautiful white colonr. Experiments and study mavo demonstrated to the proprictors the hest method of disintegrating and pickiug apart these
chips and hlocks and reducing them to a fibrous condition like jute, flax, or cotton. The material once properly opened up, it is, hy means of machinery, which is both simple and ingenious, Cormed into packing of the usual market sizes. Wo are assarod, adds our anthority, that the consumers of ashestos packing oxpress them.
selves in the warmest manner as to its desirable selves in the warmest manner as to its desirable propertics and durability.
Two Building Trade Sicoundrels.-Two plasterers, named Mills and Tingay, have been committed for trial by the Camhridgo County magistrates, for a violent ontrage upon Mr. Richardson, foreman of some building works at Cambridge, whero tho defendants were em.
ployed. In consequence of some insubordination, ployed. In consequence of some insubordination,
the two men were reprimanded. They threat. ened to throw the forcman ont of the window, and they were then discharged for their mis. conduct. The men subsequeutly waylaid Richardson on the county side of the River Cam, and assaulted him in a very violent manner, so that he was fcarfully bruised and injured. For eight days ho was in a dangerous state, and it is feared he will not get over an injury to his oyes. His ribs were also hroken. The magis. trates refnscd bail.

The Fall of a Church in America. The rew York Herald gives an account of a fatal accident at Williamsport, Pennsylvania, on the 25th of December, at tho Sabbath school attached to the Baptist church at Newberry. A peculiar shako and quivering of timbers was felt, and the foor gave way, precipitating a whole
assemblage into tho cellar below. To add to the horror, the oil of the lamps of the edifice ignited and bade fair to destroy all in a general conflagration. The church was on fire, but providentially the flames could be reached and were speedily extinguished. Before the floor gave way many of those within were able to reach the windows and leapod to the ground, a distance of 15 ft . In tho panic fifteen people twere killed and fifty wounded.
Cemetery for Hampstead.-.Tho Vestry of Hampstead have resolved, "That a publi chat it is desirable that the this parish, and sider the hest means by which this pressing want may be met." A committee was also appointed to inquire into and report upon the

Utilising the Great Ormes Head.-The boldest headland on the North Welsh coast, bleak and sterile, but forming a welcome shelter to one of the prettiest hays and the most popular watering-places in Wales, - Llandudno, - has heen taken in hand by a limited liability company. There is no known mineral wealth, but its surfaco is ayailable for enterprise, and so a carriago drive is to be constructed round the headland, and pleasnre-gardens, with a pavilion, music.hall, conservatories, \&c., are to be constructed on the available spaces. The cstimated cost of the road is 11,5002 . ; and a further sum
of 7,0007 . will, it is calculated, supply all the other features nccessary to convert the bluff promontory into a resort second only to the novelty and interest.

## Economising Fuel and Preventing Smoke

 Mr. Joseph Knott, of the firm of Knott \& Co., steel manufacturers, of the Highfield Steel Forks, has patented an invention for economising of bringing together two atmospheric consists whicb meet in the two atmospheric pressures whicb meet in tho fire, and create, it is said, a perfect combustion. spected hy the mayors of Sheffeld and Rother. ham, Sir Jolan Brown, Messrb. Brown \& Bayley (of the firm of Brown, Baylcy, \& Dixon), Mr. Bardwell, Mr. Unwin, and Mr. Hakershon, jun.They aro said to bave expressed themselves They aro said to bave expressed themselves
satisfied with the cxperiment, and thonght that if it would answer as well when applied to a large boiler as in the prescet instanco, it would prove of irmmense advantage.
The Price of Gas for the Public Lamps. The Metropolitan Board have had uuder consideration the qnestion of the large price of the gas supplied to the puhlic lamps, and the inten.
tion of the companies to increase the cost. Tho matter has heen referred to the Works Com. matter has heen referrca the with a view to Parliamentary interference in behalf of the consumers, and full time too. The gas companies used to maintain that the
The The gas companies used to maintain that the price of coal was always o minor consideration as regarded the ectual price of gas: that is what they said when coal was cheap; why
shonld it be otherwise now, especially with shonld it be otherwise now, especially with such ruhbishing gas as they but too generally now give? Compared with its dingy, watery,
yellow hue, paraffine is like solar brillianey itself.

Air-Gas Apparatus.-An improved form of apparatus for air-gas is described in the Notts Guardian:-"The apparatns for making the gas consists of a meter-like construction, $3 \frac{1}{2} \mathrm{ft}$. high, and perhaps 2 ft . across, and it consists of threo chambors. Into one of thoso chambers is poured henzoline or petroleum, or any species of hydrocarbon gas. Whilst the benzoline or hydrocarbon is in this chamber, a fan which is placed in an adjoining chamber (No. 2 chamber wo may call it), is so worked by weights and a pulley outside, that the atmospheric air mixes with it and this having possed into a third compartment filled with sponges forms the lighting gas, which can he at once drawn off in pipes, and used in any quantity.

The Trades' Congress at Leeds.-The fifth annual assembly of the trades of Great Britain, through their representatives, has been opened in the Assembly-nooms, Cookridge. street, when there was a more mumerous attend. ance of delegates than at Nottingham last ycar. After the verification of the credentials of the delegates, and other formal business, Mr. Lishman was elected president unani. mously. Ho reserved his inaugural remarks until next day, in order that the report of the Parliamentary Committee might be received. Mr. Howell then read the Parlimmentary Committee's report, which has sivce been nuder dis cnssion.
The Price of Coal. - At a meeting of coal Masters of the Cannock Chase district, held in Birmingham, it has been resolved to raise the prico of coal, from 18. 6d. to 3 s. per ton, ac-
cording to quality. The causes assigned for this advance are the increased activity of demand resnlting from the closing of the Sonth Wales collieries, the diminished output due to the innn dations, and the additional charges thrown upon coalowners by the Mines Regulation Act. In East Worcestershire, South Staffordshire, and elsewhere, a similar movement is expected.

Civil and Mechanical Engineers' Society. The next meeting of this society will be on February 7th, there being no meetia
(Friday) evening, as showa on the card.

Re-construction of Weigh-house Chapel. The well.known Weigh. louse Clapel, near th Mronument, celehrated, for something like half a century, amongst Congregationalists as tho seene of the Rev. Dr. Binney's lahour, has just been closed, and the interior is about to he entirely reconstructed. The final series, prior to the closing of the odifice for the alterations, took place on Sanday last, when the Rev. Dr. Biuney, who retired from the ministry there about two years ago, returned to his pulpit, and preached there for the last time.
Bursting of a Vitriol Chamber at Farn-worth.-At Mr. Wilson's, Prestolee Chemical Works, is a mechanics' workshop, and ahove that was a large vitriol chamber, 150 ft . long, full of vitriol. Suddenly a heam supporting the floor gave way; the floor fell, and the bottom of the chamber burst, releasing all tho liqnid into the mechanics' shop. The loss of tho chamber, vitriol, machinery, tools, and building is estimated to amonnt to 3,0002 . Fortnnately, no ono was working in the place at the time.
Ryde Angineer and Surveyorship.-We muderstand that Mr. George H. Stayton, C.E., ansistant borough engineer of Portsmouth, has loen elected to this appointment. There were thirty.ninc candidates originaly: these were
reduced to three, who attended a meeting of reduced to three, who attended a meeting of
the whole council in committee last Mondey; the other two gentlemen being Mr. Pollard, town surveyor of Sheerness; and Mr. Boston,
Newcastle.on.'Tyne Surveyor's Departuent.
Houses for Workmen in Paris.-A model cite industrielle is now in courso of construction Botween tho Fauhourg St. Antoine and the ereoted. The tenants are to be proviled with gas and water, at rents varying from $6 l$, to $16 l$. ner annum. The plan also comprises a number In the centre there are haths and washbouses, to be made available at a nominal price.

Dock Accommodation at New Millford. The long-projected Bcheme for the construction of docks at New Milford appears at longth to have assumed a practical shape, and it is said that preparations are already being made for the commencement of the work at an early date. The chief engineer of the Great Western
Railway Company in making arrangements for the immediate commencement of tho Great Western Dock.
Leicester-square.-This unfortunate squaro has been completely enclosed. The posts are about 12 lr square itself will he levelled, asphalke laid down, and the enclosure used as a drill ground. The hoarding is made an oxtensive feld for advertisements. Tho greater the naiganee the likelier
the remedy. The inhabitants are astir on the the reme

Burving of a Now York Theatre.Descriptions of the total destruction by fire of the Eifth Avenue Theatre, one of the finest in Nerw York, and adjoining the hotel in which the dread. ful fire occurred a month ago, are brought hy fire originated by prarke from a defective twenty minutes after an audience had been lismissed.
Messrs. Cassell, Petter, \& Galpin's Premises, in La Belle Sauvage.yard, are to he extencled, and for this purpose they have acquired the greater portion of the ground ronning round from their back premises alongside tho new viaduct railway station, up the south sido of Fleet.lane to Prujean. square, in the old Bailey. Mr. Francis Clambers is the arelitect
Retirement of $\mathrm{IMr}_{\mathrm{r}}$. Cole, C.B.-At the mnnual distribntion of prizes of the Nottingham Scbool of Art, Mr. Cole, C.B., amia expressions ycars of public service, of resigning his toty years of public service, of resigning his post in We mentioned this intention some time ago.

The Public Tealth Act.-It is satisfactory to find the British Medical Jourmal is of opinion that some of the inspectors of the Local Covernment Boarl under the Public Fealth Act should be engineers
Dr. Williams's New Library.-We are asked to say that Mr. Shillito was the clerk of the works: Mr. March was the contractor's foreman.

Street Improvements in Rome. - An architect and engineer at Rome, Signor Landi, has brought forward a project for constructing a great strcet through the city, $2 \frac{1}{2}$ miles long, and nearly 44 yards wide, to he called the Via Massima. The cost is estimated at 100 millions of frances.

The Proposed New Arboretum at Wal-sall.-At meling of ano promoters of this undertaking, it was stated that a sufficient number of shares had now been taken np to justify the directors in commencing the work forthwith.
The Working of the Telegraph,-At the meeting of the Society of Telegraph Engineers nownesday week, Mr. Scudamore, of the Post.0fice, sada there wero ia this country fron practice of telegraphy, most of them youns.

Licensed Victuallers' Asylum. - Tho annual hall iu aid of the funds of the Licensed Victnallers' Asylum, took place at St. James's Hafl, on Thursday, tho 16 th inst., and wo heliere the exectutivo of this extensivo institution were favoured with as numerous a gathering as usual.
Additions to the Caterhani Asylum.- At the last meetiug of the Metropolitan Asylum Board the tender of Ir. Henshaw to crect an addi tional block of huildings, with recreation. gromnd attached, at the Caterham Asylum, for the sum of $12,193 l$,, was accepted.
Royal Iustitute of British Architects. At the next ordinary general meeting of the "Architecture Practically Coth inst., a paper on to Music" to Music," by Mr. II. II. Statham, Associate, will

## Ancient Cornish Sepuldwral Monuments.

ORLASE is an anspicious name in connexion with Oornish antiquities, and the present posscessor of that namo, who now comes before the puhlic with an essay on tho ancient doctor's fa. vourite theme,* seems to he well imhned with his antiqnarian spirit. He appears, however, to he rather too much of a theorist or gene. raliser on the short-date principle, and follows in the wake of Mr. Forgusson, whom he outdoes, we think, in his attachment to that principle, and overlooks pecubarities, such as that of tho wide pre. valence of the simula. tive tomh order; which Mr, Fergusson has al. ready clearly recognised and estahlished.
We are far from mainuating that Mr. Borlase is consciously a theorist; we rather think he sub-consciously holds that it is the long.date people only who theorise, and that he alone, and those of his order, stick to hare facts. What we think, howover, is that he generalises too for and too fast upon his facts, even as regards those ancient monumental records which ho has care fully selected from tho mass as heing clearly sepulchral,-and, shall we say, late. With no other than the sepnlchral will he deal; and in and about many of those he has selected were found urns and coins, of ancient Roman times. Se condary interments he almost discards, as they do not suit his foregone conclusion; but it is quite ohvious that in ancient times, when the inhabitants of Cornwall knew well the purpose of burial-mounds and other sepulchral monu. ments, and how they were made, and what thoy contained, they may havo frequently reared a fine monument and dedicated it to the remains and the memory of some great chief of their own time and trihe, hy simply hasing their new monument upon some already accumulated mound or other monument, especially if it wer of ancient and immemorial date; and having dug right down at onco to the kist in the heart of it,
with comparativel l little trouhle, there huried tho remains and the coins and urns, carefully replacing and restoring the monument so as to canse it to look like a span new one. Under snch possible, - nay, prohahle, --circumstances, we think Mr. Borlase gencralises, we repeat, too far and too fast when he forthwith concludes that because coins of known date have heon found in earthen mounds and cairns, or in suhterrancar artificial orother oaves, farless inkists or dolmens, and other monuments connected with ancient hut or cave dwellings; therefore the Romano. British occupation is, generally spenking, the proved and undoubted date, or a little earlier

* Nrenia Cornubie: A deseriptive Essay, illuutratiry
of tho Sepuletres and
Funereal Customs of the Earl Inhabitants of the County of Cornwall. By Williain copctand Borinse, B.A., F.8.
Green, Reader \& Dyer. 187 I .
or a little later, of all such monuments, or of the general run of them.

Still thero cannot he a douht that there aro many monnmeats in Cornwall dating from the closo of the Pagan era, after the opening of the Christian, and while the Cormish were still Pagans; and Mr. Borlaso gives a very interest. ing account of thesc and others, with numerous engravings,-of urns especially, the dates of which, however, in many cases, cannot ho established liko those of the coins.
In ignoring the immense antiqnity of the Pagan era itself, which eren a single flint implement of the drift estahhishes, some antiquaries wilfully close their eyes to tho great prohahility that somo at least of evidently the most permanent and most ancient of the monu ments may have heen more or less noarly contemporaneons with these implements, sinco many of these monuments, -to the dolmens we here specially refer,--are admitted, even hy Mr Fergusson himself, to be cotermineus with the caves of the arctic or glacial caro.men; and it is a curious fact that even artificial caves, suh terranean, and often heneath the remains of ancient surface hut dwellings, are a peculiarity of the Cornish as well as of other prehistoric monuments. Of some of these Mr . Borlase gives interesting particulars; and, as to hoth tho hee. hive or ether shaped huts, and the caves, as summer and winter residences, respectively, of the ancient Cornish Pagans, speaks of "the ruinons heaps of what were once the dwellings of a large resident population."
"To the cultivation of grain [he adds] the mildness of close proximity to these hut villages, it is usual to ind Ploty of grounì, artificully levelled, and eleared of stoncs. corn, preserted in cavers under the hant, which also served as refuges for the inhal
And here we cannot refrain from quoting passage from Dark Blue for January, 1873 which has turned up fin onr stray reading, as it refers to just such a state of things as must have at one time existed in Comwall, much as it now or still exists in Kamskatka, and other nearly Arctic latitucles. It is the Rey. J. G. Wood who writes:-

Every one who has watcled tbe squirrel in ita wid stato knows perfeotly well that it lias two distinct drelings, one for the summer, and the other for
the winter. The summer 'cafe, as it is called in the Now Forest, x here s suirrela abound, is sig ight, pervious a the air, and placed at the end of a lofy bough; While
the winter cage is a large mass of dry leares, moss, and
 trunl of the tree, so that when the inhahiant is within, it
cannot be disturbed eren hy $\mathbf{a}$ breath of air, though ${ }_{3}$. cannot be disturbed even hy a broath of air, though
violent tale may be blowing Now there are several parts of the world where men build dwellings of a simillar character, light and airy for summer, close and massive for
winter. Such, for example, is the habitation of the Kamskattan, the summer dwelling being a slight structure of ranches suppurted on a sort of scatfold, while the winter touscs or jurt, if deeply suak in the ground, built of The winter huts of the Tschutski, at the north-eati Aib, are construted arter a similar fashion, the roof Pneients as well as the moderns had similar luts, the Gaagerabben, or Passage Graves (?) Or Scandinavin, Bo familiur to all cthnologists, being constructed on preciscly
the same princizle as that employed in the kimmskatkan 'jurt.'.
Fe cannot even ho regarded as going out of our way in here noting,-in refereuco to tho fact that in Cornwall, as in Persia and elsewhere, in very ancient times, yet during man's cxistence in this and other countries, the winters were "sovere," to an extent far greater than they now are,--that a remarkable mythical allusion to such a state of things in now temperate or warm parallels of latitude is made in the "Zend. Avesta" of Zoroaster and the ancient Persians, or Assyrians and Chaldeans. That allusion has allegorical or mythical reference, by contrast, to the loss of the "delights" or ecstasies of EIon or Paradise, and the culmination of the principle of evil in a terrihle winter, just as in a deluge, in kiudred docnments, of recent interest, such as those of tho Chaldeans and Assyrians of the region now called Persia. This is what the "Zend-Arosta" says: *-Ormuz, the God-Light,

[^0]the good principle, informs Zoroaster that Ile gave to man a place [or state] of delight [or ecstasy] and abandance:-
"If I had not giren him this place of delight, no other
seing wonld hare given it him. This place is Eiren Vedio, which, in the beginazizty, was more henutifal then the vedio, vorll, which exists by my power. Nothing equalled the iorld, which exists by my power. Notbing equalled the
beanty of thin place of detight whicb I guve him. OTmnz, or the Good Principle acted first, then Pexiake tho Evil Principile]. This Petiare Ahriman, full ot death, made in the River the great Addcr, Nother ef Wizter the spiral apparont movenient of the sun out or

 ${ }^{\text {Wost, },}$ Wha . The poles of carth mere tarn'd askance

- The poles of carth were tarn'd askance

In order to show how Mr. Borlase deals with his extensive subject in this suggestive and intexesting volume, we shall now select several passages showing his more general treatment of it, olways with passing referenco to Cornwall, in relation to defunitions of sepulchral monuments, and ancient modes of disposing of the body in hurial. He says:-
Sir John Luhbock has summed np the charac teristic features of the primitive sepulchre in the remark: "A complote burial-place may he de. scribed as a dolmen, covered hy a tumulus, and surrounded hy a stone circle. Often, however; we havo only the tumulus, sometimes only the dolmen, and sometimes only the circle." To this list if thero he added "sometimes only two adjacent menhirs, and sometimes only tho simple standing stone," under the one or the other head may he classed every mode of interment hitherto discovered in Cornwall.

## Firstly, the dolmen, or oromlech.

So much has heen surmised and written on the prohahle derivation of this word, that the suhject is only here introduced for the sake of recording the fact that, whatever it may signify, $\dagger$ it was in uso as a local name in Comwall, as well as in Wales or Ireland. "Rescal Cromlegh" represents, in an ancient deed, one of the houndarics of the property helonging to the Deanery of St. Buryan; a tract of country, even at the present day, more full of megalithic remains than perhaps any other of the liko extent in the duchy. Unfortunately, the spot cannot he now identifed, where this Crom?ech-if, indeed, it was one, in the usnal sense of the term-stood.
European Cromlechs are capahlo of divisior into three classes, 1. The dolmen, or "tahlestone" proper, where, as Colonel Forbes Leslic remarks, "the vertical supporters of the tahular stone are columnar," and cannot he said to enclose a space. 2. The Larger Kist Vaon, or stone chest, where, as the name implies, " the vertical supports are sluhs;" and, together with the

covering stone, form a structure not unlike wha children huild with five cards. These wer designed to hold the iuterment within the chamber, and were covered, sometimes rery slightly
with conical or other mounds. 3. Monaments, with conical or other mounds. 3. Monaments,
similar in structure to the last, but raised ove similar in structure to the last, but raised over
the interment. These were merely cenotaphs, the interment. These were merely cenotaphs,
such as are frequently found in modern church yards, not intencled to contain the body, but to mark the spot, where the less pretentious grave was concraled below. Craig-Madden, in Stirling. shire, and many of the rude Irish cromlechs, are instances of this latter class; as well as the more prominent examples in Deamark and Norkists actually occur on the summits of the tumauli. No instances of this latter class are extant in Cornwall.
Of these three classes (and many suhdivisions of them might be made, for each individual monument has some distinguishing characteristic of its own), the first, or "Dolmen proper," is comparatively of rare ocenrrence. In height it much exceeds the othors, and the difficulty of its constrnction must have been proportionately class of cromlech of the finest specimens of this class of cromlech are to be found respectivoly at Pentre Ifan, in Pemhrokeshire; Castle Wollan,
in Ireland; and Lanyon, in Cornwall. Caerin Ireland; and Lanyon, in Cornwall. Caerwynen, iu the latter county, is another instance of the same mode of construction, and the ruder trilithons of the Continent seem to belong to a like category. The form of these monuments in itself precludes the idea of the interment having takcu place immediately bencath the raised over them; for, had such heen the case, tho debris of the mound must inevitably have forced its Tray at once into the chamber, the very result which, it is known, the builders of Wile kists were so carefnl to guard against. Dr. Wilson, thereforc, regards monuments of this suhterranean chamhers, but, nomorial atroctures raised over the grave. Such was the design in the case of one at least of these,- that at Lanyon, in the parish of Madron, the finest and, in all probability, the most primitive of our Cornish prehistoric remains.
t may be as woll to make a short classification of the varions kinds of tumuli which are to be met with in Cornwall.

The raising of mounds of earth or stone, over the remains of the dead, is a practice," says Mr. Akerman, "which may he triced in all countries their remotest times." Dr. Wilson adds, that heap of earth diaplaced by interment, which still to thousands suffices as the most touching me. morial of the dead." It will he superfluous, therefore, to call to mind the individual instances of this practice which history supplies, or to dwell on the inemorials which the conjugal affectiou of Semiramis, or the vast riches of Croesus, tho frieudship of Alexander, or the stern obe. dience of Joshua to the will of the Deity, raised to the honour or dishonour of tho noted dead. From times so remoto one might, indced, pass to end relate how Siourd mino in the recent date, tury, buried his yanquished unclo in a tumulus after the battle of Brawalla, or how Queen Thyra and King Gorm, in the middle of the tenth century, were interred in a similar manner at Jellinge. Coming nearer home, Mr. Petrie might be qnoted for the record of many an ancient risk chieftaiu's barial mound; and present day, one might turn to the American Indians for a similarity in their customs of mound-building, which, when compared with markable.
We may here intercalate an interesting pas. sage from a rocent article by the Pekin Cor. respondent of the Daily Ners, on Chinese burial"mounds, which will aid in the completion of tlio correspondent is deacribinge hero allndes. Tho Tomhs; and after speaking of " a lon the Ming bordered on each side with sculptured animals", -grifins, elephants, camels, horges, mules, and human figures,-he alays,-

it will do for them all. it will do for them all, Their arrangement is rery ims-
portant as bearing on the old ideas of tomb construetion portant as bearing on the old dieas of tomb conntruetion,
and particularly that of the barrow or tumulus grares,
The graves all round Pelin are siuply small mounds of carth, which are to be seen in erery direction, and the
Imperial tombs of the Mings are alto Imperial tombs of the Mings are also mounds, but larg
mounds. We visited the tomb of Ynag. lo, the third the race, Who died in 12525 . A large mound, about 600 f
or 700 nt. in diameter, forms the sepulchral part of thi monament. It is surrounded by a high, creuellated wat scent, heing most plentiful. The mound is thus raade to appear like a strong castle or fort, nud it would be takes entirely hidden by a series of very important builling
erected in front of it. These buildings are surrounded hy
 about 1,200 ft. long by 500 ft . wide. The brildings within
this encloure are in the form of a palace or temple, with this enclosure are in the form of a palace or temple, with
gates and halls snd altars, showing that in this part of the world, the tomb, the temple, and the house, are constructed on the same idea. The principal hall is over
200 f. in length, and is aupported bry tenk pilarg, aixteen
of which are of great heiglit (about 60 ft. of which are of great height (about 60 ft .), and nearly 4 ft
in diamncter at the brse. They are said to kave core from Borneo, and were made into a rafl, and brooght by tha
means. In this hall thers is a ahrine, with a tablet in it to the memory of Yung-lo."
Suffice it (continnes Mr. Borlase), for the present, to say, that as far as Cornwall is concorned, not a single record or availahle tradition, as to the orgin of these mounds, has been handed down to us ; although hy hundreds they lie scattered throngh the length and breadth of he country; on the summit of almost every hort, a barren tract of country has afforded In protection from the plough.
In the West the word "burrow" (the more is applied as well to of the usual term harrow) is applied as well to the refuse heap from tho
mine, as to the sopulehral mound of more ancient mine, as to the sopulchral mound of more ancient date. In this latter sense it hat taken the place
of the Ccltic "cruc," or vulgarly "creeg," the genuine Comish word for a hillock or mound till found among others in the following local names: "Croegcarrow"-Deer's barrow; "Cree-glase"-Green barrow; "Cruk heyth"-Bar-row-heath; Crig-an-barght-" Kito's baxrow ;" and "Creggo" (plural), "The Barrows." The
later Saxon word occurs in Hensburrow, FourBurrow, de.

The ancient burrows are sometimes piles of earth, sometimes accumulations of atones. In the latter case they are termed "cairns," or by other hand, which are composed of eartb and tones indiscriminately throme torether, are seldom or never found to he sepulchral in their cigin, bat have been raised for a heacon, or ccasionally for a hermitage to be perched on heir summits. It must be mentioned, however, "cairn" of loose stones is very frequently found a "cairn" of loose stones is very frequently found. In one instance, where this arrangement had Carnecledey Downs, near the Nine Maiden the Carnecledyy Downs, near the Nine Maidens, St.
Columb), no interment could bo discorered though the monnd was cloarly undisturbed hy previous explorers.
In spito of Dr. Wilson's opinion to the coutrary, as regards Scotland, it may be laid down as a general rule in the case of Cornish "burrows, that those formed of earth belong to districts where stone is not rendily obtained, whilo the "cairns" are the natural product of a stony district. Thus, to tho St. Colomh, St. Austell, and Lizard districts, the earthen harrows belong; while "cairns" are invariably found on the Liskeard; as well asthroughout tho entire rance of West Cornwall.
By far the freater namber of Cornish tumnli, Whether cairns or barrows of earth, were surronuded by circles of atones set on their edge, not peristaliths or rings of rnde pillars apart from the mound, like that at New Grange, but circular base-works or walling; the stones boing generally contiguous, and serving both to confine the earth or stonos within their proper aroa, tumulus.

The sepulchral mounds of Cornwall, whether of earth or stones, range from 15 ft . to 100 ft . in diameter, and from 2 ft . to 25 ft . iu height. As it has been usual to classify thern according to their form, the reader may learn that he will find in Cornwall-first, the Coneshapod barrow; socond, the Bowl-barrow; third, the Bellbarrow; fourth, the Flat-barrow; and, fifth, with cqual propriety, be called the Tnith perhaps, barrow.

Long barrows," "Druid barrows," "Egg
barrows," "Twin barrows" (i.e., twosurtonnded hy the same trenel), are unknown.

The different modes of disposing of the body which meet the explorers of the early sarcophagi areat Britain, are three in number. Inter they here placcd in the groun (1) crenation. Those hodies whicb have heen buried in their entirety are either (2) extended or (3) contracted. It may be remarked with reference to the practice of inhumation, that保 the North of England it is hy far the and conmon mode of barial; and that in Eng ound to haly the contracted form of it has been Rev. Canon Greenwell, in a letter dated the 12 th of December, 1871, informs the author that "out of ahove 200 intcrments of what may he coll. sidered pre-Roman times," he has only found "a single instance where the hody had heen huried in an extended position." So much for the north. Coming further south, the combined researches of Sir R. C. Hoare and Mr. Thomas Bateman, tabuhated by Sir John Lubhook, ahow are were contracted, the rest being harnt.
In Cornwall a marked differcnce is observable. Well-authenticated instances of inhumation at all are extromely rare. Among these only two or three examples of the extended position rence of empty long graves, whether cut in the hard soil or walled with stonea, affords a strone presumption that, bad they not boen rifled, a similar mode of interment might have been discovered in them. Of the contracted position, only ono really authentic instance can be cited. e showed in our article-probahly African, as alluded to, of many of the Cornish aborigines inadvertently comes eut in Mr. Borlase's further remarks on cremation.]
The necessity, as he says, for such a conrse must hare almost immediately forced itself upon the hury the bodies in or tropical climate, where, to only be to spread pestilence far and near:
"That tho enstom of cremation originated in a tropical clime is, indeed almost beyond a douht. In Sonth America* the funeral pile is quite as fally recognised as a national institution among aative tribes, as ever it is in India. Britain has, therefore, received it from the south.'
These references, we may add, go to show tbat cremation came in with the African, or, at least, the Sonthern, aborigines, and inhumation witb the Aaian or Eastern migranta of the Northern region, through the great plain of Europe, while probably a mixed practice came with the South* eastern migration throngh Persia or Assyria and Asia Minor.

The contracted form of the body in inhumation, resemhling the sleeping posture of the Thibetans, appears to have been rery general in ancient times, since it prevailed cyen in America, and Herodot

A CHAT ABOUT GATEWAYS AND PORCHES.
Tre idea which an Enslish hoy, and thus generally an English man, forms of a gato, is something very different from that which was conveyed by the word before the period of the Great Fire of London. The deEnition of a gate, as ordinarily conceived, would he an opentyork
bartier, constructed of wood or of metal, and barilier, constructed of wood or of metal, and
mado to swing apon linges, the general object mado to swing apon linges, the general object
being the exclusion of stray cattle, and the ready the excmission of human heings, and of animals ready admission of human heings, aud of animals
under the care of man. The most exhilarating undcr the care of man. The most exhilarating which attach to the five-harred gate ;-visions of hound and horn, of red coats and gallant mounts, of a bright autumnal morning and a free gallop over a grassy country.
Indeed, of the 750,000 persons who enter the city of London evcry twenty-four hours, we question if therearo seveuty-five who bestow even the most fleeting thought on the original mean. ing of those names,-Aldgate, Bishopsgate,
Ludgate, Newgate,-that designate the streets
*Dr. Daniel Wilson, ', Prehistoric Mar," vol. ii., p. 291, makes the following curious remark :- Mummification, among fiterent theibes and nationa of south America, and havo left th
continent."
througb which they so frequently pass. But in ancient London these names had a serious sig. nificancy. The form still kept up, on certain occasions, of demanding permission from the which has subsidod into the simulated presenta tion ef ancient keys at Temple-har, to he re tion ef ancient keys, at Temple-har, to he re
turned with a customary comp? turned with a customary comp vigilance which, in the days of such ready-handed monarchs as the Conqueror, formed the surcst safeguard of
the cradle of English freedom. The instance whicb we havo cited is almost tbe only relio left among us of tho ecremonics which formally attached to the guardinnship of the City gates. The inhahitants of Yorts, of Chester, of Arun del, and of some few otber of our ancient English towns, may yet rotain some feching of pride in their gates. We need not, even now adequate idea of what were once tbe main fea tures of this important membor of our monicipal defences. A massive tower, or a pair of towers, joined by a curtain, perforated by a wide and alarm, hy ponderous iron-studded leaves of oak, with, prohably, a yet stronger grating of wood or iron, that could he lowered from its sucb was the general outline of the sity gates; A turret, or watch-tower, with a stone stair leading into tbe vestibule, or arched court forming the central area of the gateway, through wbich all who used the road mus pase, was also usual. Here, in fact, wero sihility. Tbere was the outlook pest to give warning of danger; the free aecces for traffic at proper times; and the strength which conld
resist any bostile attack that fell short of a regular siege.
Fene, not Cast, the gates of a city were th हcene, not only of all extraordinary coremonials hat of the ordiuary administration of justice Our ancient conrts of pied.powire were held at
times under trecs; but tlo giving of Oriental judgments is so associated with the city gate that the threo troatiees of tho Tamma tha che civil laws of the Jews are entitled the most interesting relics of tho architecture o the thirtcentb century in Itoly is tho arohed court, entircly open at the sides, in whicl Charles of Anjou sat, in summary jurisdiction in his quaiut little cathodral city of Sorrento. that took place in the form of gate, as war improved tho means of offenco, are well illus. trated. There is first the arch hetween two there is tho more complicated structure, Tben proached hy a bridge, with curtain to turn the incomer from the direct line, and with cbamhers from which arquobins-men or even culverins
could sweep the path. The donhle tower was ahandoned when gunpowder became common, hecanse the fire from one flanking projection would damage its twin-neighhour; an effect not the stately Spanish cateway, a return to somes tbing like the Roman arch. Aud a little within the city the justiciary function of the gateway is performed by a separate huilding
Lofty gateways, with battlemented walls and stately towers, blazoned with the sixty-six quar. terings of the Itriperial House of Austria, tell of foreign rule in Italy. In such gates may be seen tho ovidence of a state of society when
surpiso was not dreaded; but when well-esta. blished military power, relying on arms and dis. cipline, felt it unnecessany to diminish the pomp of the cit.y cutrances for the purpose of defence.
We may mention, as connected with massive architecture telling of a power that once bid fair to he the dictator of Enrope, an cxample of that shelter for the applicants for
admission, which in Gothic architecture (and in the rural architecture of our own country) has given birth to the porch. Orer tho great catervay of an ancient palace in Naples, now devoted to the administration of what the Neapolitans ironically term justice, is a large expanded hood, of the most delicatcly-wrought
stunework, reaching out from the wall without prop or support, and entirely sheltering the steps. This stone hood looks almost as fragile as it shell yet it has existed for centuriee, in partial reconstruction of most huildiags in tbat city at least once in a century

In ecclesiastical architecture
a feature of the utmost importance. The principal entrances to large and beautiful churches may be classed in three groups. First, there is what we may call the tunuel moutb; a forn of grote or mindow iu woich there is little o rojection heyond the plane of tho walls, but into the shadow or for light. The Porte de Hal, at Brussels, work of tho fourteenth century, furnishes a good work of tho fourtecnth century, furnishes a good
illustration of this receding gateway. The west front of Tewkeshury Abbey Charch affords a nohle example of recedive monldings under arge semicirenlar arch. The splay, so common in Early Euglish lights, is a kindred feature altbough its purpose of admitting the largest quantity of light with the smallest actual per. foration in the wall, leads to the revcrsal of tbe funnel, the splay beiug within instead of witb. out. This method of dealiug witb a doorway, which is mostly to he found in our earlicr forms of BLediacval architecture, may be considered as naturally derived from the cxeavation of rock for structural perposes.
A sceond form of gateway, being that which has probably attained tbe higlicst splendour, is that in which the contral façade of a huilding consti. tutes a great portico; appearing sometimes even as a separate structure. Something of this kind must have characterised the Temple of Solomon, in wbich hoth the height and the width of the porch were greatly in excess of those of the main huilding, the height heing double, and the width ncarly one-third greater. Instances of this great façade, often pierood for three gate. ways, are preserved by somo of our Enntish catbedrals witb which our readors aro familiar.
But the porch proper, as we gencrally undorstand the term, differs from either of the abovo main types of architectural gateway. It is, in its essenec and origin, an open and roofed space hefore the gate, in which tbe visitors may be protected from the weather white waiting for admis sion. It is thus a characteristic of a northern
conntry, and springs from the empiognent of wood for structural purposes. The rustic porch, sbaded by iry, and hordered hy the hardy flowers which our forefathors had to cultivate, was the very spot for a calm enjoyment of the long twilights of
midsummer. There was a diily convenience in midsummer. There was a dinly convenience in nnubaal permanence to its use os an architec tural feature. To this day it is solemnly recheap metropolitan stuccoed Absurd as the two columns, with brick corcs and cement casing supporing a small projecting sqnare, that some ines, though rarely, is nitilised as the floor of grcenhousc are; yet the advantage gaiacd hy
shelter from the downour which we may expec for 200 days out of the $36 \%$, is such as to enable this often unsightly addition to our doorway stendily to hold its own
So natural to a nortiorn country is the porth, so readily do its simplo requivements lend them selves to the exigencies of every style of Gothic architecture, that the repetition of the idea within as well as without the huilding, has bocome one of the main features of ecclesiastion decoration. Whererer the image of saint or angel was erected on the eutside of a building, the shelter of a special porch hecame obvionsly proper. This, in fact, is the ennopy. Thas it came to pass tbat, for large statues withiu or without a building, unless in some ivstances of special positionand dignity, the bracket-stand and the tahernacle canopy became the natural setting For the stalls of canons and other dignitaries, in ahheys and cathedrals, tho general idea of tbe niche with its sheltering canopy, wis developed in tho richly-carved choir; the throne of the bishop, or the stall of the abbot, prior, or dean towering upinto a pinnacle expressive of superior dignity. With wooden canopies in the choir and with stone canopies within and without the walls, was combined yet a third rendering of the original idea of tho porch. In the lights of stained windows, where saints or henefactors were portrayed at full length, they were treated like statues, and thus the tabernacle work, which exercised the skill of the carver, was simulated by tho worker in glass. Wbile the delicacy of the tracery that was originally intended to admit light, but to exclude weather, forms a main part for instory of some of our nohlest churches (as niche, with its elements of shady recester, for jectivg and often foliated bracket, and of taber jectivg and often foliated bracket, and of taber most abundant architectnral decoration of all our pointed work.

There is another form of gatoway, admirably adapted for the comfortable domestic life of the casier classes of society, which is so rare in this country that it is not easy to call attention to a vell-known and perfect type. On the Continent, especially in Italy, it is of constant ocourrence, under the name of tbe portome or porte cochere. It is a feature generally conspicuons by its absence in many of our large palatial huildings, in which it ought to form at once a striking architectural featare and a most desirable inxury. To he forced to alight, in evening rress, at the verge of a pedimented portico, in stepping across whicb wind, and rain, and sleet have a momentary chance of assailing the defencelcss visitor, of wbich they rarely fail to make vigorous use, is, in poiut of fact, a
barharism. A convenient cateway, leading barharism. A convenient gateway, leading tbrough the centre of tho house to the courtyard aronnd, or in front of, which it stands; with the principal Hight of steps leading down, under cover, so that you step from tho carriage direct into tbe vestihule, is an arrangement never lost sight of in Italian palazz. It is almost a necessity for health (at least for pro. tection from dangerous cold, precisely when the person is least fitted to resist it), no kess than for real comfort. Tho contiast between our metropobtan palacos and those of even a second and tbird rank in Italy is hore extreme. In Becting a lovee at either SL. James on ackingham Parace, conly sensitive to the sharp nip ef the March inds. At Caserta, at Naples, at one of the amerous and noblo dalian kingdom, those who arrive to pay their duty to tho sovereign, ap from the very door the utmost indifference to the state of the the utmost indif

In some of our public buildings, as at Coyent Garden Theatre and the Albert Hall, there is, indeed, the convenicnce of a large carriage-porch, projecting from tho face of the buidivg, whach biver a certain degree of shelter to the visitors; In tose porches are only rude expedients. In old Saxon times horses and carriages were admitted into the main hall. There is a rude magnificence in this arrangement, which is hardly consistent with our present ideas,* Bat in rough winter linghts, and snch is the season which the architect ought chicty to bear in viow, the wind almost in rariably sweeps through a Directig cariage-porch wit o concentrated ary all. Between the rough barbaric stato which admits the champion on borsehack into the capacions hall hailt by William Rufus, and the rakeshift shelter of a sbed beforo tbe door the imple, commodious, dignified arrangement of the portone comes in. It is the only true mode $f$ entrance to a palace or great public huildingPort, portico, and portone while ther are variants of the same original word, have the ariants the architectural idens. The express very different archiectural idea. The ruot of the word is prohably derived from tho opening throagh filied place. The monosyllable ported, into a forfilied place. The monosylable is now uused by pound words as exical sense, and in such com pound words as sally-port and port-bole. In and least.cone we have an instance of the smallest and least-conspicuons aperture that will allow of the issue of troops; or of the projection of the muzzle of a gan. With our recent improvements in defence, especially with reference to our use of solid planks of iron for the walls of orts and the bulwarks of ships, the port becomes more narrow, so as to be almost invisihle rom any senous distance, as well as more fficiently strengthened against shot. The ports and gates of all regular fortifications are conconled, as far as practicahle, behind au earthen lacis, so as to he out of rango of the enemy's fire. The architecture of modern war thus abhors the picturesque, and presents a remark. able contrast to the proud castcllated becps of he Middle Agcs.
Thus the word port may be taken as associated with that tunnel.formed mouth of which we have beforc spoken. The portico, both in anguage and in fact, is the forerunner of the Gothic porch. Whetber projecting heforo the main building, as in the National Gallery and University College, or flush with the facade as in the paired columns of St. Paul's, the portico is properly a protection against the

staumore, Middlesex.

Eunu - a roofed gallery or promenade, in which tho air may he enjoyed hy those who linger Withant the temple, whine sunstrotizo may he averted. This peristyle contrasts admirably with thr Gothic cloister, a characteristio ex anple, of which is to be secn at Westwinster.
The purpose of tho cloister is to give shelter The purpose of tho cloister is to give shelter
from foul weather, as that of the peristyle is from foul weather, as that of the peristyle is
to give shade from the sun. They are two paraillel derelopments of a structure originally wooden, ono fitted for
lie other for our own.
Connected with tho various forms of porch, fre may mention a subject that has now lost its uncient signififance, namely, the mode of hang
ing the doors. We know from classic history ing the doors. We know from classic history
that the distinction bottreen the doors of a honse that the distinction botwcen the doors of a honse
aud those of a temple, namaly, that the former aud those of a tomple, namoly, that the forner
opened inwards and the latter outwards, was one which it was unlawfeul to neglect. In mavy of our country charches we find the doors open
oziwards into the porch, as all doors shonld do oxtwards into the porch, as all doons shonld
through wlich a crowd may lare to eccape.
There is one innovation which is rery rapidls diteriorating, our domestic architecture in the practice of lenving ont the eshutters. We fear thant this trempery economy is becoming nin. rorss. Street-doors, moreover, are now often
p:ierced for panes of ghass, to which no shutter is p:ierced for panes of glass, to which no shutter is attached. Shatters are hecoming the exception, instead of the rule. The quiet and the elloom,
in which all persons sleep hest, and without in which all persons sleep hest, and without
wtich some nerrous temperaments, or hard. witich some nervous temperaments, or hard-
vorted brains, can obtain no refreshing sieep Whaterer, aro thns sacrificed, to save
pound in the consstruction of a honse! Yt is, i: fact, $a \cdot$ etcep in the return to the original
wigwmin. The nnmber of steps that we have tsus talken, and are taking hack towards barbarisna is such as to bo anything hut consolatory, if faiily set forth. Perhaps no blow of
(cqual force has ever been so quiety dealt to that "qual force has ever been so quielty dealt to that repose which is a necessary element of perfect
heallu, as in the case of this miserable and wasteful bit of parsimony. In thaly, whore the great influence of thoso mighty builders, the
Rmans, is yet paramontt, the elhnters of Rimans, is yet paramonnt, the shnsters windows and the leaves of doors are such as to shame our trumpory make-shifts. Lofty aper. tares adorn cerery building bat the very poorest, ctosed with three.fold care. Without is a strong rooden frumervork, containing lonyre-boards, or what we call Venetian blinds, which admit air
when desirable, and $a$ a small' degree of light. when desirable, and a amanli degree of light.
Within this is a substantial pnir of glass doors. Within this is a substantial pair of glass doors. once thief-proof and light-proof. The contrast letween the well-appointed windorrs of an
ltatian palazzo and the cheap hits of fimmy 1tatian pulazzo and the cheap hits of flimsy
ellasing of which tho visitor to London hy the Criazing of Which tho visior Tortern Railway may look out npon such duilly-axteuding acres, is as striking as that between the stuccoed porch and the handsome
commodions portone. Truly, we may take many comunodions portone. Truly, we may take many

comporary buildings of Italy.

## CARRIACES AND THEIR WAYS

Tr is scarcely possible to take up a daily news1) oper without observing the frightful number of eutastrophes which may be classified ronghly wader tho heul of "carriage accidente." Putting 1:2ere collisions,-the resnlts of unskilful driving fur the most part, - restive horses, and so forth, out of the question, we shall soon begin to discover thit most of these casualties are owing, in the first place, either to defects in the construction of the carriage and the harness; and secondly, to glaring constractive defects in the roadwa over which the carriage is driven. Carriage accidents are of course no modern contingency only tho days are somewhat altered since coachos and six, of the original style and model of the Lird Mayor's state-coach and that of the Speaker. of the House of Comnions, drew leisurely along that suburb of the city of London which existed from Charing-cross to Temple Bar. Tho conditions of society have likewise altered, and su lave the character of the carriages. The extonsion of their use is also quite enormons Iadeed, it is a sort of necessity of modern lif: that it shall be more or less vehicular in it action of locomotion, and it is hardly necessar: to add that speed is the highest quality sough a forr. From the neat, trim, and tidy hronghan of the professional man or the City merchant, $\Omega$ though the innumerable eategories, to the
sulsudid chariota and sociable landans of thi
"upper ten" which glitter and sparkle athwar Park, the one thing vistas of Piccadilly and the Park, the one thing conspicuous, the predomi. nant feature in fact, of the whole of them, is hat lightness, airiness, aud, it is proper to add, legance of build, which are alone compatible with a high degree of specd. Hence it follows conrse that the entire frame-work, as well a he whecls and springs, are reduced to the very minimum of constructive strength. Any part is
liahle to rupture at any moment. We have secn liahle to rupture at any moment. We have secy
a patent spring broken over and over again by laving simply nndergone the process of rapid driving across a hundred yards of newly macadamised rond. We have also freqnently seen a stylish pole snap near its socket from the simple but obvions cause of the checked inertia of a too sudden pull-np by a fashionable whip. In almost all cases the wheels are possessed of much too narrow tires. Those new-fangled drags, with the long poles and silver swivels, drawn hy a pair of high-stepping blood horses, Which seem to realise the ideal curnstriumphat of onr horsey aristocracg, aro decidedly unsafe instruments of transit or conveyance. Every. Thing about them is too slender or too slight. The tires of the wheels seem to be gradually approaching those of the velocipide, i.e., only
about about $\frac{3}{4}$ in. in breadth! and are turned moreover on the outer bection to the are of a very
small circle. No donbt, there are precedents for such a model machine. The Louisiana "buggy," With which type they seem to be associated in their construction, has some excuse for slender wheels and narrow tires, inasmuch as it is
primarily destined to the purposes of travelling primarily destined to the purposes of travelling
through the half-liquid 3 Bissonri mud or the through the half-1iquid 3issonri mud or the
dusty land of the lookinc.glass prairie which dusty land of the looking.glass prairie which alternately constitate the superficies of the roadways in the neighbourhood of St. Louis or
Chicago. There, however, what must he acknowChicago. There, however, what must he acknowledged at ouce to be a certain fitness of things, on rather adaptation to purpose, is clearly a piece of blandering imitation and impertinenco in Hyde
Park or Hounslov Heath. And let as mark the Park or Hounslow Heath. And let us mark the
consequences when these attenuated wheels get consequences when these attenuated vhbels get
into the rat of a tram.way rail !-by no means a remote contingency. It is all pery woll solong a they are in the ruty. the atting out ncoin is the difficulty,-like the getting out of all other ruts in this unhappy world! Let the shrill whistle be heard and the ugly car be seen approaching: it well if the rashionable Jehu,-who must turn out at all hazards hy Act of Parliament, anil tnrn out too at an angle more or less acute
and disadrantageous, - it is well, we say, if there and disadvantageous, -it is well, we say, if there be an escape with only a broken spring or two; and if the whole unsubstantial and airy fabric with its too confiding occapants, are not relentless: $y$ smashed up at the shrine of this modern
Juggernant! It needs no stretoh of imagina tion to shadow forth suok atretoh of imaginaThe tranways, indeed, with respect to privat. carriages, ficial safo, lave very nearly destroyed the supercoachmano will, if heading roadways. No goo verse these dangerous thoroughfares. They have craelly invaded if ancient and time-hononred law of the road; and although we must confess a dislike to all manner of pessimists and prophets of ovil, we cannot avoid in this case entertaining the strong impres sion that tramways, as at present constructed and governed, and managed, will prove a peren nial sonree of fatal accidents of the most painful and revolting character. In fact, they bav already done so in every large town in the king dom where they have penetrated. The metho their projectors have introdnced, of laying down a solid bed of Portland cement concrete road way, in the centre of a Macadamised road, or even in a street of granite cubes, cannot do otherwise than produce, in course of time, the most serions surface ineqnaitics. It will also be easily under stood that tho more substantial and solid the construction of the tramway, the worse these inequalitios will soon appear in its junction with the roadway. And this is nothing, moreover, to what we may expect to see when the subway has to be takon up for repairs or renewal of rails, or still worse, to get at the water or gas pipes, or sewers or telegraphs, which aro buried beneath their ohdurate surface. The effect of a sudden change of temperaturo,--日nch as a severe frost following upon a long traot of wat weather,--is too often neglected. The contraction and expansion of the iron rod, - often imperfectly welded,-which forms the tire creates a looseness of the entire circle of wood and iron, whic is more prolific of accidents thau most carriag people are amare of.

With regard to the defective harness of on fashonahle carrages, we have more to say than we can at present find room for. Lhat, too, seems o bo suffering more and more from this ill mened process of tapering off and attenuation he breech harness seems to have in some case disappeared altogether. The traces, also, are radnally growing small by.degrees and heantiully less. Wo aro given to understand that the hodern intprovement of sewing harness by machincry is gaining gronnd in the manufacture, and those who understand the value of such eams in woollen or linen cloth, where no such normous tensile strain has to he encountered, will, perhaps, pause and investigate before they rust their lives to a bran new set of "splendid silver-mounted harness." As to those wretched Birmingham phated buckles, which too often disgrace our modern equipages, the wonder it hat thoy do not moro frequently give way at the joints than they actailly do. These buckles, we ought to point ont, are more dangerous, of course, on acconat of their smatler size, apon tho reins than the traces. It has to be mentioncd, morcover, that from whatever cause,-a defect in the process of tanning, it may be, or the em. ployment of inferior skins, -our modern harness is by no means so strong in the fibre as it was, say, five-and-twenty years ago. The breaking, or rather tearing weight, of amodern ribbon of eather, is not nearly 80 great as that of an ancient one of similar dimensions. The consequences are that, with diminished scantlings on the one hand and deteriorated strength of fibre on the other, the most common of carriage accidents in our days arises from a rein breaking or a trace giving way. It was only tho other day we observed, with more than ordinary feelings of regret, a fatal accident of this kind which occurred near Cockormonth. A gentseman was driving his wife out, when the horse, a yoang and spirited animal (imperfectly bitted, in all prohability) took fright and ran away. As the rond was long and level, there was not much ground for apprehension to a skifal ariver, as there anquestionably was in this case ; out the reins oroike. The horse took a too sudden turning at a narrow bridge, with the parapet of which it came into violent contact, and was killed on the spot. The rehicle was smashod to pieces. The gentleman who was diving escaped with a broken limh ; hut his unfortunate partner in this life was launched into eternity! Wo may add, in con clusion, that many an accident on the hnnting. field is unquestionably due to a defective stirnp leather or a broken rein; and we cannot too earnestly insist on their secnity. Indeed, wo hope to see tho day when all sach important and, in the interests of the pubuic healtir and safety, vital athiles of commerce as carriageharness and springo, togetber with their wheels and axletrecs, win be subjected, along with iron girders and steam-boilers, fycerine and gan powder, petroleum and inflammable oins, to tho cracial test of a Covernment stamp and super vision.

THE RATINC OF MINERAL PROPERTY.*
Is considering the question of the rating of mineral property, the poor - rate is the most important, and generally when tho poor-rate is payable most of the other parochial are takes its origin and is now based unon an Act of Parliament passed in the roiga of Elizabeth; and under and by virtue of that Actat tax was im. posed upon every inhabitant, parson, vicar, and every occupier of lands, houses, tithes, coal. mives, or saleable underwood, within the parish for and towards the nocessary relief of the lame impotent, ofd, blind, and such others being poor and not able to work, within the said parish. It will be seen that no mine except a coal-mine was by that Act rateahle to the poor, althongh, as Lord Ellenhorough has observed, the word "coal mine" was probably mentioned in the statute hy ray of example and not of exclusion, and not. withstanding a more recent opinion of Chief nstice Tindall that if the statute were now to be reviewed it would be probably held not to exclude any mine. Bat, whether by accident or atention, the law remains the same to the present time,-viz, that no mine, except a coal liable to the poor-rat
When a mino is not liable to be rated, the

* From a papar on Mines and Minerals, by Mr
rundel Rogers, zead at meoting of the Institution of Arundel R
Surreyors.
proprietors will not be liablo to a ratc for engines, machinery, buildings, or any other erections, erocted and used solely for the purpose of effectnally working the mines, cither on or beneatb the surface, or for drawing water from off tbe mine, such erections being regarded as part and parcel of the mine; but all smeltingmills, furnaces, machinery, and buildings necessary for smelting or the liko purposes, are not regarded as part and parcol of the mine, and are therefore rateable, although the mine itself may not be rateable.
It frequently happens that iron is intermixed with coal, and in such cases it was formerly -doubted whether the entiro productions of the mine, includiug the iron as well as the coal, was not rateable; but it was afterwards decided that the lessees and oceupiers of a large tract of land, and of mines which had been discovered under the said land, contaiuing iron and coal intermixed, were not liable to be rated to tbe poor in -one sum for the farm and land, and in another sum for the iron and coals, although sufficient coal ouly was raised for the purpose of manufactaring the iron, and not for sale, -the Count holding that the lessees and occupiers were not rateable for the iron, but only for the coal, and that, inasmuch as they had been rated for both the iroa and coal in one entiro sum, the rate being bad as to one was had as to both; for tbe Court had no means of ascertaining how much was ap. plioable to one, and how much to the other.
lioable to one, and how much to the other.
But although mines, exeept coal.mines,
But although mines, except coal.mines, are
oxompt from poor-rates, under and by virtae of exompt from poor-rates, under and by virtae of
the statute of Elizabeth, minerals are not always the statute of Elizabeth, minerals are not always
oxempted, and, consequently, if minerals be raised oxempted, and, consequently, if minerals be raised
in any other way thau by means of a mine, they widl bo liable to the rate. Minorals frequently are raised from quarries; quarries of minerals are, tbereforo, rateable; and, as the question has often been raised whether the working for ores or the raising of metallic and even non-metallic substances amounts to a mino or a quarry, it will be seen that tho attempt we havo already made to draw a distinetion between the two is not unimportant.
Tolls or dues reserved in Lind, in respect of all mines, are also rateable, on the ground that the reservation is a portion of tbe land itself, and that the persons entitled to them are the actual occupiers of the laud; but tolls or ducs reserved in money are not rateable to the poor, beoouse sneh a roservation is a certain fixed payment or rent reserved out of the produce of rocerpancy of the land itself. On this subjeet, Mr. Justice Taunton, many years ago, is reported to have said, "The distinetion is very subtlo, but tbe cases may, perkaps, bo reconciled by Fand a reservation of part of the soil; in the Fand a reservation of part of the soil; in the later case the lessor has boen considered as reserved, Here there is a pecuniary rent reserved and no resorvation of any part of the -soil A reservation of a portion of the ore in a
melted state is in the fiature of a money remelted state is in the lature of a money re-
-servation, and thereforo not rateable ; if in a servation, and thereforo not rateablo; if in a
state only fit to be smelted it is like a reserva tion of part of the soil, and consequently rateable."
Tolls or dues payable by custom, as in the case of tin-bounding, are subject to the rate, and residence is not necessary to create the liability to pay the rate, whether the reservation is by custom or by deed.

Tbe principle npon which coal-mines are rated is contained in the Parochial Assessment Act, 6 and 7 Wm . IV. c. 96 , which provides that every rato shall be made upon an estimate of the net annual valne of the several bereditaments rated, - that is to say, of the rent at which the same year reasonahly be expected to let from year to and tithe commutation rent-charge (if any) and deducting therefrom the probable avery annual cost of the repairs, insurance, and other expenses (if any) necessary to maintain the property in a state to command sucb rent. The Act also provides that nothing therein contained or different relative liabilities (if any), according to which different kinds of hereditaments wer then by law rateable.

The Union Assessment Committee Act, 1862 provides that the gross estimated rental shall be the rent at whicb the hereditanents might be expected to let from year to year, free from al usual tenant's rates and taxes, and tithe commuration rent-charge, and that notbing in that Ac contained was to repeal or interfere with the pro-
yision of the before-mentionod Paroehial Assess ment Act, which defiued the net annual value of the hereditaments to be rated. The Union Assessunent Committee Act, 1862, further pro vides that nothing therein contained was to
affect any special or exceptional principle of valect any
Tho provisions in the two before-mentioned statutes are uot necessarily inconsistent; and i the principle involved in them had beon more closely followed, we skould have been apared many inconsistencies in the valuation of minos,
for the purpose of rating, whicb have occarred for the purpose of rating, whicb have occur

A coal-mine must, therefore, be rated, and a soon as it is set to work and produces coal, and only daring the time that it is productive. Lord Ellenborough illustrated this principle, by observing that the mine itself being exhausted, the subject-matter of profit is gone, and that being ratoable only for the concarront annual value, during the period for which the rate is made,-if the mine be occupied no longer,--to longer affords any such concurrent anntal value,-the subject-matter of the rating is gone
It also follows from the before-mentioned Acts, that the criterion of value does not neces sarily depend upon the actual amount of rent paid to the landlord, hut on the sum for whieh the land or entire property would reasonahly let. Consequently, tbe improved annual value from year to year of the mine, together with tho machincry, buildings, and othor crections, whic ther underground or on the surface, and without considering whether the maehinery be real or personal property passing to the hoir or executor, or belonging, at the expiration of the lease, to tho landlord, lessee, or teuant, must be included in tho valuation.
No person can be rated in respoct of a right of way, of way-leaves, wagon-way, or similar incorporeal rights, because they are in their nature incapable of oecupation; but a rate may bo made for such rigits, in respect of land in the aetaal and exclasive oceupation of sueh persons in or over which such rights are esercised; and if, therefore, the same person is in possession of the land and of the cascment, he will be subject to the rate. The rules which are adopted in rating railwass will be generally the best guide in rating all other rights of ways.
The highway.rate exteuds only to those mines and quarrios of stone which had usually been rated to the poor-rate, and are made payable by the occupier. And by 1 if \& 15 Vict., c. 16 pecial propisions are made respecting highways, Radnor Che counin Ghnorgan, Brechnock Radnor, Carmarthen, Pembroke, and Cardigan that the lighway-rate shall be levied on the persons and in respect of the property by law rateable to the relief of the poor in the respectire parishes, and shall be assessed npon the net rate, for the time pring tor the relief of tho poor, provide the being, or the relief ont to ueh woods minat aud cuarries of stone as were before the Act of 5 \& $6 \mathrm{Wm} .$, o. 4, usually rated oo the highways.
Mines and quarries are liable to church-rates, not as distinet from the land, but as part of the land, and there should be no separate assessment, unless the ownership to the minerals is distinot from the ownersbip of the soil.
Mines, howerer', are not usually titheable, oxcept by prescription or custom; but minerals or anything else which is part of the soil, as a hrickkilu or salt-works, may be subjeet to the payment of tithes; as, for instance, in the parish of Wirks. worth, in Derbyshiro, where the lead-mines are subject to tithes by custom. By the statute for the commutation of tithes into rent-charges, the term "tithes" is defined to menn all prescriptive and customary payments, and special proviaions are therein inserted for the commutation of minerals tithes, and whenever mines or minerals, suhjeet to tithes, aro commnted by the Act into ent-charges, the rent-charge is to he snbject to and such Parliamentary, parochial, and county tithes were subject to before such commutation.
The rating of mines, ways, and easements in Ireland is provided for by the 1 \& 2 Vict., c. 56 wherein it is deelared that the following, among other hereditaments, shall be rateable under that Act, viz., all lands, baildings, and open mines; other profits to he had, reoeived, or taken out of any land, rights of way, and other rights on easements over land, and the tolls levied in
respect of such rights and easements, and all
other tolls; provided always that no mines which have not heen open seven years before tho passing of this Act are to be rateable until the theroof shall hare expired the timo of opening theroof shall hare expired, and no mines therehe same shall have been until seven years after the same shall have been opened, and mines bond file re-opened after the same sball havo heen oni fide abandoned, are to be deemed an openng of mines within the meaning of tho Act. The rates are to be estimated aecording to the same principlo as that adopted for assessment in England.
Tho result of the law, as it now stands, may, thcrefore, be stated tbus :-

1. Coal-mines only are rateable to the poorrate; hat machinery and huildings, not absoutely necessary for carrying on a mine, whether it bs a coal or any other miueral mine, aro rateable
2. That the mino is rataahle only during such ime as it is productive.
3. That a mine which is partly coal and iron, or any other mineral, ean only be rated in respect of the coal, and then only if the ralue of the coal can be separately aseertained.

That althougb evcry otber mine except a coal-mine is excmpted from rates, all minerals which are raized from quarries are rateable
5. That tolls or dues payable in kind are rateahle, whilst if payable in money they are not rateable.
6. That all way-leares and otl er easements are exempted from rates, uuless there be land oceupied therewith.
7. That all other parochial rates anl taxer, including tithes and church-rates, are only pay able when the poor-rate is payable.
8. That in Ireland all mines of every description aro rateable, hut not uutil after they have been opened for the period of seven years.
Such being the state of tho law at the present tinue, I desire the opinion of this Institution Whether any and what alterations can he advaritageousty made. The suhject has reeeutly atrieted the attentiou of the Legislature, and Is will very soon again be engaged tupon it Is it reasouable that coal-nines only ahould bo raled, and all other mines he exempted? or that all minerals, if raised hy means of quarrying, should ho rateable, but if raised fromi a minc not rateable? And should (what Ithir fairly bo called technieal) distinctions be allowed to prevail, whereby tolls or dues, reserved in kind, hecome rateable, whilst the valne of such tolls or dues, if reserved in money, are not rateable?

## HULL SOUTH AND WEST JUNCTION

 RAILWAY.Tre first Parlinmentary battle of the session of $1872-73$, in so far as prirate Bill legrislation is conoenned, came off on Monday last in the Court of Mr. Frerc, Senior Examiner on Standing Orders. The case was that of the proposed riilway to pass uuder the river Humber, at Hull.
Last year, before the joint Committee of Lords and Commons on railway amalgamatiou, inflaeutial men, more or less intimately counected with the North-Eastern Railway Nompany, gave evidence to the effect that the North-Eastern Company furnished, in so far as amalgamation had proved excellent policy on the part of the companies amalgamating, and without detriment to the pablic. The company paid amongst the highest dividends of any in the United Kingdom; the public was well served: and the witnesses had not heard of any complaints on the part of the public of defective or rion ald service, or because of amalgamasom. A fent monts have furnished evidence somewhat in confutation of these atatements. The merehants, traders, and inhabitants of Eull complain hitterly of tbeir want of railway accom-
modution, and have determined to supply it for modation, and have determined to supply it for themselves, at a cost of about a million pounds sterling. They had initiated their important project before the amalgomation committeo closed its sittiogs. Of late there has been in the neighbourhood of Hull a plethora of traffic, which tbe North-Eastern Company, it is alleged has been unable to reliove. Laden truoks making up trains extending to miles in length have accumulated that the company has not had means of convering to their respective dcstinations, and the parties interested have as a matter of necessity, combined to help themsolves, if baply they may. The proposed ho
has excited very general and lively local in
and commands very strong local support. Certain allogations having heen discussed an sworn to, the Examiner ruled that tbe goneral plan should, in every cose, bo made as complete as possible, and that, whero there was room to write the numbers, they should havo heen entered on the general plan, as well as on the side and, as is not unnusual in such cases, they side, anc, as is
flatly contradicted each other, one contending that nobody, and the other that anyhody, conld idontify the particular properties from the plans as deposited
On this finding the allegations of the me morial were, in many instances, sustained, and Orders, who may prohahly cive a dispensation The ruling is not necessarily fatal to the Bill.

## BOARDS OF ARBITRATION IN germany.

A meering took place lately between the Aesociation of Berlin Master Builders and the foremen of the Berlin huilding trades to dclibe. rate upon the advisability of definitively constituting a board of arbitration for the huilding
season of 1873 . Boards of arhitration were originated, it is asserted, at Berlin, by Dr. Max originatce, it is asserted, at Berlin, by Dr. Max
Hirsch. The period for which the hoard of Mirsch. The period for which the hourd of arbitratiou for the building trades had been
provisionally constituted expired with the year ${ }^{2} 872$.
Director Simon, after explaining the object of the meeting, said it was desirable to have tho opinion of the foremen on the subject, and also mastors in their endeavours.
mastcrs in their endeavours.
Dr. Hilse then pictured the present anomalous conditions at the outhreak of dispntes, and put conditions at the outhreak of dispates, and put
it to the meeting whother they were willing to assist in obtaining the object in viore.
A long debate ensued, iu which it was pointed out by Dr. Hirsch, who had becr specially invited by the Association, that all parties invited by the Association, that all parties of social Democrats were now ayrecd as the disputes as hitherto conducted were ruinous. The Vollisstaat (organ of the workmen) had openly advocated hoards of arbitration, and the operly advocated hoards of arbitration, and hio
Carpenters' Union had entered into communica. Carpenters' Union had entered into communica.
tion with tho Association respecting the laying tion with tho Association respecting the laying
down of tariff for piecework. The speaker then down of a tarift for piecework. The speaker then entcred minutcly into the objecticial activity in directed attention to their heneficial activity in
England, and requested the meeting to further Engana, and requested the meeting to further
the definitive constitation of such a Board for the Berlin builders. No opposition was raised in tho Berlin builders. No opposition was raised in tho
meeting to the principle of arbitration. The only meeting to the principle of arbitration. The only
objections mooted wero, that the awards of the objections mooted wero, that the awards of the
Boards were not binding, and that the workmen Boards were not binding, and that the workmen
ought to he consulted first. This latter view was oupht to he consulted first. This lattcr view was
ultimately adopted, and it was resolved to issuo ultimately adopted, and it was resolved to issuo
an address to the workmen. As soon as tho an address to the workmen. As soon as tho
views of the latter are known, the dofinitive for. mation of the Board is to be proceeded with. A conference of delegates of social dernocrats, as
well as of tho local unions of the building trades, is shortly to be convened.

THE LATE W. W. DEANE, ARTIST. The late William Wood Deane was born the 3rd of March, 1825, at Islington; received a clas Eical education undcr Bishop Jackson, at the grammar school; and was articled to Mr. Herbert
Williams, arelitect, on Sept. 7,1812 . On the 13th of January, 18 H , he was admitted a student at the Royal Academy, and ohtained a silver medal in Decemher of the same year. He also became a student of the Royal Institute of became a student of the Royal Institute of
British Architects, and obtained prizes there in 1844 and 1845. After serving his articles he assisted Mr. Mocatta, and obtained some pre. miums in competition.

He travelled in France, Germany, and Italy end of 1851 , and took the late Alfred end of 1851, and took the late Alfred Bailey into
partnership.
During their partnership they parinerghip. During their partnership they ration, in 1855, Mr. Deane built some housc ration, in 1855, Mr. Deane built some housce and studios, and put a new stono shop-front to ALessrs. Dhekinson's, the photographers, of Bond. his profession, and being withont clients, he mainly occupied himself with making desigus and drawings and colouring views of new and and drawings and colouring riews of new and
yrropesed building for other architects, and in
occasionally drawing on wood, for tbe illustrated papers. He oventually abandoned architecture for painting. He was elected Associate in 1862 , and Memher, in 1868, of the Institute of Painters in Water Colours, from which he migrated, in 1870, to the old Society. He also exhibited at the Dudley Gallery, and at the Royal Acadomy He was attacked with disease of the liver in 1870, and died at his residence, 6t, King Henry'sroad, N.W., on the 18 th inst
It is rarely we have to deplore the loss of one equally skilled in arcbitecture and painting, and one, too, cut off at the very height of his powers, personal intimates those only who those talents for architecture that were denied a fitting career Had he possessed a fortune, or a patron, he might have embellished London with his works ; for no man ever had a more fertile invention, a nicer feeling for proportion, a greater mastory over detail, nor a more caltivated appreciation of the scope and meaning of his art; but after a frnit, less essay of ten yehut skill was required to ge competence and fame.
All who are interested in the arts know his clarming exposition of the architccture and the old Frencl towns, olistening with the rain to the yellow spires of Seville, winking in th heat ; from the sombre coolness of St. Mark to the brilliant whiteness of the Mcorish towers of the Cornice. The loss of the man is cven more deplored hy those who knew him than the loss the artist, for it was difficult to know whether character or by the hrilliancy of his conversntion.

## CHELSEA WATERWORKS.

Considerame dissatisfaction lias been cansed hy the proposed works of the Chelsea Water. ion will detract from the picturesque beauty of certain localities near the banks of the Upper Thames. The present intake of water from the Thames, nnder the Act of 1852 , is at Seething Wclls, in the parish of Kingston, at which point the water is at times tnrhid and discoloured. It Parliposed, by the Bill to he brouglit before Pamment in this session, to take water at Moulsey The work will consist of an encine house at West Moulsey ; a reservoir, about 45 yards long and 20 acres area, at East Moulsey; a second reservoir, of nearly the same dimen. sions, in the parish of Thames Ditton; and a gird on the east side of tho existing reservoirs Putney Heath; also six conduits or lines of Moulsey and Thames Ditton respectively, and on the riglit hauks of the rivers Ember and Thames respectively. The estimated cost of the works is 230,0007 , and powers are proposed to occupy a period of ten years in their completion.

IMANUEL CHURCE, STREATHAM COMMON.
A reredos has lately been erected in this charch, the principal material employed being caen stone. The central portion of the compo. ition over the altar is raised higher than the mounted by a species of delicato cresting. The central panel is composed of a quatrefoil richly central panel is composed of a quatrefoil richly
moulded, inclosing a whito alahaster Maltese cross; a representation of a dove, holding an olive-branch in its beak, occupies the intersection; the background is formed of gold nosaic. The side-panels are composed of cosped circles, with the ears of wheat and the Betreen the marble on an alabaster ground. ings, containing the powe rich hollow mould. ings, containing the passion. flower and the lily,
bordered by bands of dove marble. At the side bordered by bands of dove marble. At the side of the altar is an arcade of seven bays, with valts of dove marble. The sill of the east yrindow not being very high, part of the design is carried up between the jambs of the window and the wall. There are three gahled panels on each sido, the spandrels carved with flowing foliage, and tho copings crowned by seculptured mials. As the east window is composed of rained glass of deep shades, the reredos, as dospects colour, bas been kept rather subdued, ove marble and mottled alabaster being the main tinted materials. Some ornamental
gratings nnder the reredos have been pioked ont
in colour by Mr. C. Eudson, of London. The total cost of the work bas amounted to ahont 2001., the whole of which has been defrayed by Mr. William Leaf, of Strcatbam Common. Mr Ferrey, F.S.A. (wbo designed the churcb), sup plied the designs and working drawings; and Mr. J. L. Jaquet, of Festminster, executed tbe reredos.

## MINSTERLEY, SHROPSHIRE.

THe fine old manor.house has been lately restored by the Marquis of Bath. The timber raming exposed to view, on the removal of the plaster whicb covercd the cxterior, has boen cayed, with new oak where the old was deused for the filling in thereby adding consider. ahly to the comfort of the occupiers of the house. Windows, with oak frames, mallions, and transoms have been substituted for plain sasbes where the latter had been inserted, and the moulded barge-boards, hip knohs, and brackets are reproductions of the old, which were decayed. The west, or principal front, consists of three wido and lofty gahles, with a lower and richer one at the north side ranning through to the east front, and probably of earlier date. On the east or garden front the tro larere dormers, of which the ralley pieces indicated their siz and position, have been restored. The roofs have hocn covercd with Ridgehill tiles. Inter nally, the panelling has heen continued round the hall, and tho screen opened ont. Mr. Hay coik, of Shrewsbury, was the architect. and the contractors were the Messrs. Boppdier \& Darlington.
vicarago has been built for this pariso principally at the expense of tbo Marquis of Bath, who also gave the site, and of the Ecclesiastical Commissioners, who made a Ecclesiastical Commissioners, who made a dining-room, stndy, kitchen, \&c., and siz bedrooms, and is huilt of red brick, relieved with bands of white and black. Yellow Grinshill stone has heen used for the heads, mullions, and sills to the windows. The roof is tiled. The work has heen carried out by Messrs. Bowdler e Darlington, under the direction of Mr. Edwara Haycock, at a cost of about 1,100 l.

## FROM IRELAND.

Belfast. - The foundation.stone of the Ormcauroad new Werleyan chapel school was laid in April last, and tho building, having been pushed orward with th ins. Ib mop Lombardic, of assmplo charnotor. The floor of he chapel is rased ahove the level or he Ormeaurad by the introduction of a wide tight of steps necessitated by he groun and wicb the building is erected. Underneath the chapel, having 53 ft fy 40 ft , 12 ft , the school room, 53 ft by 40 f ., and 12 ft hign, audin con0 ft b 10 ft an 16 ft . by 10 ft ., and a room for the heating appa. ratus and apphances for tea-meetings. The chaper is 58 iv. by 10 f. on ive of vestibales, and bas a fall of 9 in . from ront towards rear, wbich gives an uninterrupted yiew of platform, and the pows aro all open. Two wide sets of stairs from the outer vestihule give acess to the gallery, wbich runs round thre ides of the huilding, and is snpported by columns. At the rear, and communicating witb the chapel, are the vestry and committee. rooms, and over these commodious apartmente for the care-taker. The whole of the chapel atings are of selected pitch pine, slightly stained and varnished. The warming-apparatus connists on hot-water pipes, which ran up the centre and round the sides of the chapel. The lower or asement.story is built of rubble masonry ointed, the remainder being red brick, with Fhite and blue brick dressings, the piers of the tranco.archos bing onsone mouded bases, and carved oaps and key.stones. Accommoda tion is provided for about 600 persons, and the cost will be ahout 2,500 ., including gas.fittings heating-apparatus, boundary-wall, and so oa Mr. William Batt, jun., was the architect, the plans having been selected in competition; and the works have been executed hy Messrs. Rowley \& Mansell. The heating was done by Messrs. Riddell ; and the plambing by Mr. J Gilroy. The gas.fittings wero executed by Mr W. J. Watson; and the entrance-gates by Messrs,
Musgrave \& Co., all of Belfast.

DEFECTS IN THE SANITARY PROVISIONS OF THE METROPOLITAN BUILDING ACT.
At a meeting of the Social Science Associa tion, on the 20th inst., a paper by Mr. John Liddle, Medical Officer of Health for the Whitechapel Distaict, "On the Defects of the Sanitary Provisions of the Building Act, $18 \& 19$ Vict, c. 122, with Suggestions for their Amendment," was read and dise
M.P., in the chair.
Mr. Liddle said: What I am anxions to do by bringing the subject of this paper under your notice, is to prevent the furtber erection of unlealthy houses; for unless tho existing evil of disregard of such arrangements in the structure and surroundings of a dwelling.house as are necessary for healthy occupation be presented, all the lahours of sanitary officers in getting monhealthy honscs closed under the Nuisance Removal Acts, or pulled down under the Artizans' tively uscless, if similarly unhealthy houses can be tively uscless, if simiarly unhealthy houses can be
built elsewherc, or even, perhaps, on the old built elsewherc, or even, perhaps, on the old
foundations of those which have been condemned. The rights of property are, as regards house buildings, unduly considered, while the rights of the puhlic, as regards their breathing tho pure atmosphere, are disregarded. The ouly property that a poor man geverally possesses is his health -deprive lim of that, and he, and perhaps his whole family, are at once rendered destitute. Such is the demand for houses at the present time among the poor that any place, howcver
whealthy it may he, will readily find a tenaut.
The healthy housing of tho population is the conndation of all sanitary improvements, for arection of unhealthy dwellings, the numerous statutes relating to the public health will be of comparatively little benefit. The radical defect in the Building Act is, that it is not complete in fitself, but other Acts of Parliament are incorporared with it; and hence an unnecessary amount of trouble is imposed upon builders in having to consult the district surveyor in some matters relating to the builaing of a board in others, and no one authority seems to be responsible for seeing that a house is so constructed as to be fit for hahitation.

Mo constructed as to be fitdle, having enumerated what he cont sidercd the principal sanitary defects in the Building Act, submitted the following sugges. tions as amendments. A Building Aet should, in the first place, provide

1. That no house in any new street shall beocen. pied as a dwelling-house unless a sewer has been constructed along such street, and a commanica. tion hy a properly constructed and reatilated drain mado from the house to the sewer. The ventilation of the house-drain, into which usually passes the soil-pipe of the water.closet, may, as to the Board of the Whitechapel District, be oasily carried out by fising a small pipe in the apper part of the soil-pipe, and carrying the same above the roof of the honse.
2. That hefore any house is permitted to be occupied, the road and footways shall be paved, and the surface. drainage properly provided for.
3. That before the building of any new house is commenced, plans of the drainage and of all the sanitary arrangements of the house shall he suomitted for approval to the Local Board. This the builder of any new house within the district so to altcr his plans, if necessary, for the healthy occupation of the bouse, as the Board ander the accupation of the bouse, as the B
advico of its officers slall direct.
4. It shall likewise he made compnlsory upon every builder to provide a separate water-closet or privy, and ash.pit, for each house within the arrtilage of the house. This provision would prevent the erection of public privies in courts
accupied by the poorer classes, which are now, cocupied by the poorer classes, which are now,
for the most past, public nuisances, and injurious 5 the health of the people.
5. That during the progress of the building of any house, the surveyor to the Local Board shall be required to inspect the foundation thereof; and if such surveyor be of opinion that the materials which are heing used for such founda. tion are not proper for the purpose, he shall make known his ohjections to the builder, and shall report the same to the Board. This report having been made, the Board shall have power to prevent the use of all such improper
6. That the walls and foundation of erery
house shall be 80 constructed as to prevent the rise of damp.
7. That every new house shall at all times have at the rear an open space of sufficient extent for the thorough ventilation of the stair. cases and passages. The extent of the open space to be determined by the Act (say 100 square feet), but the plan of this open space shall be approved hy the Local Board, hefore the huilder is allowed to complete the building.
8. That the flooss of every honse shall be pro perly ventilated, and that the floors of the brosement shall not be laid upon the bare ground.
9. That the back yards of every new house, and of the houses now in existence, shall not be bnilt upon without the sanction of the Local Board; and in no instance shall the open space in the rear be less than 100 square fect, and so in the rear be less than 100 square fect, and so
arranged with regard to the house as to he suffi. arranged with regard to the house as to he suffi.
cient, in the opinion of the Local Board, for the parpose of ventilation.
10. That old buildings, such as warehouses stables, \&c., shall not be converted into dwelling liouses, unless the plans as regards all the sani tary arrangements shall have been submitted to and approved of, by the Local Board.
11. That the same law as regards the width of new courts and alleys shall be applied to old pulled when any of the houses therein bave been new cown; for, if it be dcemed necessary that certain public health that the old courts should be equally wide.
12. In order that every new street shall have an adequate supply of sunlight, which is so essential to liealth, the buildings on either side of the street shall not be permitted to exceed in height the width of the street. This regulation would be of the utmost importance in courts which are not thoroughfares, but such is the desire of owners of property to make the most ont of it (and unfortumately such a proceeding is sanctioned by the Legislature), that they are perfectly regardless of the rights of the public perfectly regardless of the rights of the public the light of the sun.
13. That in consequence of danger to the pnblic while walking along the streets by the falling of snow or slates from the roof of any house unprovided with a parapet.wall, no new
house sliall be considered as completed nnles house shall be considered as completed nn
the same is provided with a parapet-wall. the same is provided witl a parapet-wall.
14. That no house shall bo allowed to be
occupied unless there shall he a passage occupied unless there shall he
and unless the staircase leading to yard; room shall open into a landing, so that each room in every house shall be distinct and separate from the other rooms. Under present arrangements it is not uncommon to fiud that hailders, on the score of economy, build houses with the front-door opening direct from the sitting-2oom on the ground.floor, into the street, and the stairs leading to the npper rooms opening directly into and forming a part of the lower ventilated by the foul air of the lower room is room above. Such a faulty arrancement also destroys the privacy and cornfort of families, hy converting rooms so arranged into thoroughfares There are some houses in the Whitechapel dis. trice which the tenants of room are obliged to carry all their filth through their neighbonr's room before it can be thrown into
the prify or drain in the back-yard. This pro ceeding is not only highly indecent, but, in case of epidemic diseases, is dancerons to health, the germs of such disease heing frequently contained in and given off from the excrement of the sick.
15. That no house shall he permitted to be occnpied, unless the person letting such house shall have a certificate, signed by the surveyor that the same is fit for healthy occupation, whick certificate shall he shown to every incoming tenant.
16. That in consequence of numerous an. healthy houses, which are continually being built in the suburbs of London, and also in other large area of thews, and the suburbs thereof, the to all larre towns and populens cities in Englond and that the carrying out of all the sanitery arrangements of liabitable buildings shall he trusted to the Local Boarcls, who by their several officers would be able to superintend the erection of all houses.
section to the Buikling Act shall oontain a section to give power to the Local Board to pur.
chase such property, at a moderate compensa.
tion, as has been condemned under the Artisans and Lahourers' Dwellings Act by the medical officer and surveyor to the Local Board.
17. That in all cases of dispute between the Local Board and the builder, in regard to plans of drainage and other sanitary provisions, powe of appeal to a competent authority shall be given.
In conclusion, permit me respectfully to urge upon this Association the desirability of forming with as little delay as possible, a deputation to the Local Government Board, and urging upon its notice the pressing neccssity of the Govern ment bringing in such a Bill as shall effectually prevent the further erection of nnhealthy houscs; for 80 long as houses unfit for habitation are allowed to be built, the labours of the sanitary officers will he comparatively, of little avail, and the public will continue to suffer from many Weases which are preventible.

We shall return to the sabject.

## CONCRETE buildings

$S_{1 R}$, With reference to the bistory of can. rete huildings, the following passage in an inte resting work on "Santo Domingo and Haiti," by Samuel Hazard, just published, is deserving of notice. With reference to the buildings in St . Domingo city, it says:-"The walls of the older houses are very solidly constructed, cither of stone or the material known as mamposteria, a mode of architecture somewhat similar to that simple and Che method of making these walls is the vicinity is taken and mixed with lime and sometimes, as in Cuba, with powdered stone frames of planks are then made in the desired form, and these are filled with layers of this composition, sand and lime heing added. The whole is then moistenod with water, well pounded and kneaded, and allowed to dry, whon the mould being withdrewn, leaves a firm solid wall which, on exposure to the air, kecomes hard as stone. Even the walls of the city are built in this way.
I am told by an engineer who has visited those parts that the stone used is a description of lava T. A. Bertrow.

## PERSPECTIVE DRAWING.

In the course of a paper "On Architectural Perspective," read at the Architectural Associa. Lion of Treland, as
It is a great error to be careless in the first iustance with a perspective, and then bestow a great amount of work on the details. Get in the main lines correctly, and after some practice you will be enahled to fill in the details without rules by meroly getting a few main points. Of conrse the portion nearest the eye should be drawn the portion nearest the eye should be drawn ground, which may be treated in a comparatively ground, which ma
sketchy manner.
Architects, as a geveral rule, are too prone to Architects, as a general rule, aro too prone to
confine themselves to geometrical drawings, confine themselves to geometrical drawings, ble, are such that none but a professional mind can grasp, and that few of the uninitiated can understand. We all know who have tried the experiment how diffionlt, almost impossible, it is to impress a client with the slightest notion of what we mean by an elevation or plan. It is from a want of perspective knowledge not only with the profession, hat with the pablic generally, that is mainly derived the odions custom of having the front of the detached or semidetached suburban villas of red brick of the cost ambitious design, whilst the flank and rear down ane simply dashed, or, stil! worse, compo generally arises from an elevation of the front heing suhmitted to the chient whilst the sides and back are allowed to shift for themselves. Both architect and employer forget that, when bailt, it can never possibly appear as on paper. If we cannot liave the funds to build such houses of red brick all roand, let as have all the walls of reod tock bricks, well designed and of good ontline stock bricks, well designed and of good ontline,
without wigging or shams of any kind; and I without wigging or shams of any kind : and I have no doubt but that the public would prefer Lhem to the ridiculous mushrooms that are springing up round the city, whose appearance "cannot but make the judicious grieve."
A narchitect should, when making a geometrical rawing of no matter how trifling an object, have the perspective effect of it in his mind's eje, and he will never make a mistake, or be disappointed
when ho sees his dcsigu put into exeoution. Some I havo known who, when they are making a design, make a rough perspective sketch on the margin of the paper, to give themselves an idea of the effect, whicli I considcr an excellent practice, and worthy of imitation.
There is no greater aid to the study of per.
 artist has a good eye and a steady hand, he will see how objects show in perspcetive, and will after a while he enahled to make perspective views untrammelled hy any rulcs savo those of good taste. What can he more agreeable to the architect or artist than to ramblo ahout, sketch book in hand, and sketch any object that strikes sourenirs or useful hints which he may have received on his travels? It is hy such means that the mind is to ho enlarged and experience gainod.
I would now caution you against a fault which deliberato fulsification of criminal, - namely, the which some indulre in, in order to miro to the designs a better aspect than the working draw. ings give. This I consider,- -and I know you will agreo with me,-is a pernicious and diskoncst bahit, and likely to lead the men who are quilty resorted to in retting up competition drawings. Others, when they introduce figures in the foreground of their dwellings, make them foreground of their dwellings, make them in height. This is done in order to make the hnilding appear of far greatcr size than it actually is. The cheat is, however, soon detected by comparing the size of tho doors and windows and other details with the figures.
And lastly, a word with rcgard to that not least important branch of the subject, the style of the drawings. Somo architects draw them in pencil pure and simple, and 1 consider few drawings have a neater and hetter effect than a neatly.drawn poncil.sketoh; others ontline in pencil, Indian ink, or brown ink, and tint, pencil, Ladian ink, or brown ink, and tint, colourist ; and others etch in Indian ink, writing. ink, and brown ink. Etched drawings are very offective, are great favourites, and are open to a wonderful variety of troatment.

## glass houses at milner field,

 SEAR SALTAREAx extensive range of hot-houses has been reoently crected at Milner Field, Yorkshire, the residence of Mr. Titus Salt. The gardon is a now one-indeed, it is yet in courso of formation by Mr. Marnock. Some particulars of the hot.
houses are given in the Garden, which may be houses are given in
usefully reprinted :-
The principal houses are ranged side by sido, ying due north and south; they are $34 \mathrm{ft}$. . long and 18 ft . wide, inside measure, and aro tour in number, and with lean.to houses at either end. bat erery house can hin ontcred withoutridor, so that every house can he ontcred without exposing laid with 3.in. thick Yorkshire flags, and the paths of the houses are laid with cast.iron plates, $\frac{\pi}{3}$ in. thick and 3 ft . wide, diamond pattern, sup. ported on angle iron-rails and cast.iron pilhars every 6 ft . This arrangement leaves the border ree, for the roots of the vines, \&c., to run under the paths. Out of each corridor opens a potting.
shed, thus enabling plants to bo carrieu into it shed, thus enabling plants to bo carried into it
without exposing them to the cold. The corridors without exposing them to the cold. The corridors are fitted up with tabling betwoen the doors of the honses, for plants, and a high shelf runs the whole length, for strawberrios, \&c. Tho back walls aro wirod and ornamented with flowering creepers: one corridor with stove, and the other with cool climhers. The houses Nos. 6 and 7 are fitted up with pits in the centre, and slate tables round, supported on anglo iron rails and cast.iron pillars. The tables aro covered with small cannel coal, which furnishes drainago for the pots, and has the advantage of not becoming green, as do spar and stone. As to ventilation, the whole is worked from the two conzidors hy handles fived on each side of the doors entering the houses, working, by moans of hevel wheels, a perpendicular shaft with a doublo thread, which worrs into a nut attached to tho levers for raising the top lights. Theso threads have all been cut in the lathe, are half.inch (double) pitch, and work very quickly and easily. The side ventiation is worked by means of a similar
screw placed under the tabling, which opens and
shuts sheet-iron doors into a ventilating.flue in tho hrick wall between the houses, running to ample side.light ventilation. The south lights in all the houses open if required. There is a rain water cistern in every honse, and a hot-water cistern (wood) in the hoiler-house, with a pipo is of loreo size, and supplies all the warm wate for wateling purnoses. It is leated hy a coil hot.wator conper pipes, so there is no fear ot rust or other damage to the water. As regards the heating, the wholo of tho houses aro wammed by means of three of Weeks's patent duplex npright tubular boilers ; ouo heing only for an emergency. They are so connected that either one, two, or all threo can be worked together, or any one will work the whole; and any one of then can be nsed separately, either for the front or back range, as may he desired. The hoilers are about 7 ft . high, and are doing their work dinirahly. The main pipes are $6 . \mathrm{in}$. ones, and nan tho length of each corridor, brancling out into each house under the doorways. Eacl house has valves on hotli flow and return pipes are 2 in the main pipes. The valves use re wins ain., and i-in. Pcet's patent valves, and, almough cosky the first instance, they stove pits are made with malthiln tiles, ahout 1 ft square supported on $T$ iron arrangoment which necessitates a very small mount of butom necessitates a very gmal factorily. The warm air flows through the small holes, so that it is furly dividad in the smal oil to be heoted Tho pines grown mass pally smothte. Tho pines grown are princi pally smooth.leaved Cayonne, Quoens, and Char-
 has been executed throughout in the very best manner. The adoption of a plan by whicl all the largest houses open on to a roomy corridor much facilitates the labours of the gardeners nd permits the honses to be visited in an agree ble manner in any weather This ars imilar plan, deserves ceneral adaption.
Beforo long wo shall give views and plan of hee now residucuce here

PROVINCLAL STREET ARCHITECTURE : READING.
We publish this week an illustration of the Market.place front of the new buildings of Messrs. Sutton \& Sons, the Queen's scedsmen of Readiug, and append a short description which may
Duri
During the last few years nearly the whole of the extensire premises belonging to this well. known firm hare been either remodelled or rebuit. The frontage to the market-place rcmained, howerer, until quite recently, as hereto wo ; but possessiou having been obtained of wo houses immediately adjoming, the present andsomo structure has been raised.
The varions blocks of buildings extend from he markct-place, in an easterly direction; then branching southward through Ahbey-square hey join the new diversion of the King's-road pened in 1869 by the Prince and Princess of Wales, and known as the "Prince of Walesbuildings
Tho portion shown in our view is built above the ground level, of white Mansfield stone, the basement being constructed in Wheeler \& Son's Rcadiug pressed lricks set in cement.
Tho fascias are of Forest of Dean stone, with sunk letters gilded; the columns of Bristol Blae stone aud red Bishop's Lydeard alternated. Royal green slates are used for roof coverings, with ornamental cast-iron curb and hip plates, hy Walter MacFarlane \& Co., of London, and ing. Tho stall.plates are of grey polished granite, sunk-lottered in gilt.
Of the three lower arches of tho front, two are windows lighting the retail departments; whilst the third, somewhat more elahorate in design, forms, in connexion with corridors, the main entrance to the whole of the establishmen
The first-floor reached by a flight of Portland stone steps, is dovoted entirely to the purposes of a library and recreation.room, and has lavatories attached.
On the second.floor are two large rooms, which may bo used as private offices, or for other business purposos. There is a Infty well. lighted useer floon [antl) in roof which br
means of a lift, can be conmected with the rround-floor and basement.
The ground-floor is 15 ft . high; the first foor 14 ft . The total height from the parement line to flat of roof is 63 ft .
The whole of the joiner's work, including ittings, is of oak and pitch pine, slightly re leved with walnut, all French polisied, and orepared from tho architect's special designs.
immedintely at tho rear of the marketplace block of haildings, is the sample market, 78 ft ong, where single sacks, as specimens, of nearly 11 the more bulky grarden and farm seeds tacked in the larger stores are ranmed for inspection. The space above the sample mar rot is occupicd as an "Order-room" for tho execntion of orders belonging to the depart. rents of flower-seeds and flower.roots only Beyond, covering an arca where the largest mount of light cun be obtained, are the various ffices. These offices form two blocks of buila ges on each side of an open area. They are ofty and well pentilated, and contain desk.roon for ahout sixty clerks. Eack block is two floors in heirht, so that that there are four floors, each 60 ft . long hy 20 ft . wide. In these blocks also are the private offices of the principals
With these offices terminates that pertion of the prenises running in a dircet line from the fan place eastward Here, on the ground oorlith is one enormous pors o-rous 2 or oor, woro weasured, and ot together ready to be transferred for paching One of tho most remarkahlo of the departbitch is that devoted to the execution of ft in more is a room, ang fonsect wive smalle rooms, all of which are lighted entirely from the oof. The wall.spaces thus obtained are fitted from foor to ceing with numberless drawer and shelves, loaded with many thousands of packets of seeds, of vorious dimensions, ready r sending awney
The floor is occupied by a series of counters running the entire length, and these are full of drawers and bins from which a staff, chiefly of young men, continually weigh and measure the seeds and mako them inwo parcels.
Farther on to the south, the buildings are occupied by farm.seeds in sacks, piled in regular rar tho above another, an avcnue heing left down the centre. The dimensions of this por. tion are:-Length, 161 ft . ; breadth, 34 ft . The basement portion of these stores is set apart for
seed-potatoes, the total length being 138 ft ., the width 34 ft .
Connected by a covered bridgo with all the foregoing are numerous other stores, also the stahling and covered yard for the vans and carts of the establishment, as well as an engine house, containing a small but powerful engine, hy Shand Mason.
The whole is terminated by a handsome and capacious lecture.hall, completely fitted, with
open-timbered roof, staincd and varnished and open-timbered roof, staincd

## pastered hetween rafters

On tho opposito side of the road, Messere. Sutton have built aud fitted up a coffee and refreshnent house, which is largely used, not only by their own men, but by many others who prefer getting their meals thore to the plan of resorting to an ordinary public-house.
On an adjacent portion of the King's.road, Messrs. Sutton have erected another large store for agricultural seeds, three foors in height. The superficial area of the floor-space is $5,474 \mathrm{ft}$. At the junction also of the Great Wcstern, South. Eastern, and Soutl. Western Railways are some extensive banns, seed.stores, and other erections attached to their expermental farm.
The contractors for the Market-place portion of the buildings, sample-market, \&c., are Messrs. Aitchison \& Walker, of Portland-yard, St. John's.wood, London, who have carried ont the work rery satisfactorily. Tho carving, in which various representations of agricultural produce aro introduced, is by Earp, of London. The steel revolving shntters are by Clark \& Co., of London. The encaustic paving is by MacColla, of Victoria-street, London. The gras.fittings are connt, of Reading. The oak and wainut of Readina . The offices and portions adjacent are the by Hathors and party by Strong is Son, Mr. Thomas oy Barnicoal,-all heam The whole has acted as gencral and under the superintendence of Messrs. Wm. \& J.T. Brown, architects, of Reading ; the total cost,
exclusive of land and fittings hein about $1700 \%$ ?

the new cathedral at linz, on the Danube.-Herr Vinceyt Statz, Arcintect.

The Netw Cathedral at Linz, on the Danube.--Plan.

NEW CATHEDRAL AT IINZ, ON THE DANUBE.
The new Cathedral of Linz, on the Danube, in Austria, of which we present our readers with an illustration this week, is interesting to all an illustration this wreek, is interesting to a
lovers of ecclesiology, from the fact of its bein lovers of ecclesiology, from the fact of its being
the largest Christian church now being orected in the world. When completed, it will be con. siderably the largest church in the Austrian dominions, and will be exceeded in size only by
two cathedrals in Germany, thoso of Cologne two cathe
and Ulm, and Ulm. This noble building was commencer in the year 1860, and in the year 1864 the lady chapel and crypt woro completed, and consecrated by the Bishop of Linz. Since that time the works have been steadily progressing, and it is hoped that the choir, nave, and transepte will bo suffi. ciently advanced to admit of their boing used for divine serrice by the year 1880. We aro not accustomed to hear of churches ocoupging twenty years in building in the nineteenth contury, bat at the same time it should be taken into account the size of not in the habit of erccing

When it was decided to commence this edifice, a competition was announced, and tho plans which were considered most appropriate boing those of Herr Vincent Statz, of Cologne, he was
appointed architect, and his oricinal desige is now being carried out, with very fow modifica. tions.
The materials used in tho construction of this cathedial aro local granite, and a fine sandstome which is also found not far from the spot.
The charcb, when completed, will consist of a western tower and spire, the lower portion of ower wer corming a porch $v 0 \mathrm{ft}$. deep. This eadinil also he ansed by two other porches, ransepts will be south by apses. To the cast of these will be the great nave, of six bays, with a single aisle on either side. There will be transepts, three bays deep, with aisles both to the east and the west, Those aisles, however, aro a bay less in lengtb than the transepts, so that the extreme north and cxtrene south bays of the transepts will be without aisles. The choir will be three bays deep, exclusive of the five-sided apse which orms its termination to the east. It will also hare doulble aisles on cither side, which will be grain flanked by sacristies and chapter house ach divided by rows of columes into twe aisles The inner aisles of the choir will be continued round the apse, and will give acess radiating chapels and the lady chas to six lady chapel consists of a square nave, two bays

The rave or body of the chapel is divided into two cqual aisles hy a spinc of columns cunning down the centro from west to east. This chapel has three altars. The church will contain twenty altars. One of the western transepts will bo screened off for a mortuary chapel, and the other for a haptistery. There will be a parochia alar at the west end of the choir, under the lantern, and one against each of the great pier of the chancel-arch. The high altar will stand on the chord of the apse, and will have a small altar for relice hohind it.

The choir stalls will occupy two bays of the chancel, which will be separated from its aisles by pierced screens
The style chosen is the Geometrical. The aisle windows will he of three lights, and those of the clearstory of four lights, except in the apse wbere these will also be of three lights. The nave will be divided from the aikles by massivo cylindrical columns, with octagonal bases and ahaci. The triforium will be only a continuation of the lights of the clearstory windows, with cusped heads introduced, and a pierced parapet cusped heads introduced, and a pierced parapet
resting upon a sculptured cornice over the great resting upon a scriptured cormice over the great
arches. The whole charch vill be vanlted in stone
arches. The whole church will be vanited in stone. Under the lady chapel and choir is a large The following stone.
The following are the principal dimensions of this noble church:-Length, 410 ft ; width 65 ft ass transepts, 200 ft ; western tower, square, 65 ft . at baso ; nave, 40 ft . clear; height to vanlting, 96 ft . ; height to external roof, 136 ft .
some fow years ago, 1867, when treating of the present condition of Ecclesiastical Archi. tecture in Germany, we gave a small approximate plan of the cathedral, and this for con. venience sake we now repeat.

ON THE TECHNOLOGY OF GLASS. $\dagger$
Farious Finds of Glass.-Glass is separated, according to its composition or method of manu facture, into :-
A. Plate-gtass,
I. Glase free from Leead.
a. Window plass :-
indow plass:-
a. Rolled glass.
b. Crown glass.
b. Plate. Crass :- glas
b. Blown plate-glass.
B. Bottle glass :-
a. Ordinary bottle glass.
b. Mredicine and pertumery glass.
c. Glass for goblets, ding c. Glass for goblets, drinling. glass. d. Water pipes and gas tubes.
C. Pressed or stamped glass.
C. Pressed or st
D. Water glags.
II. Gloza
e. Retort glass
A. Ory. Glazs containing Lead (Flintoglus)
B. Glass for optical purposes.
C. Enamel,

Plate or Window Glass. - The glass molted in muffer or vessels is manufactured as plate.glass or as crown-glass. Plate-glass, as its name imphes, is formed in large or small plates; window.glass is generally either ordinary bottle. glass or a finer glass of a whiter colour. Recently, thick has taken the place of thin glass for windows, but the colour is herehy considerably increased. That window-glass shonld he pre pared cheaply is an essential point, consequently crnde materials are employed,-crude potash and Boda, wood.ash, Glauber's salt, ordinary and and broken glass from the warehouses of Plate or window glass is generally composed of 100 parts sand, 30 to 40 parts of crude celcined soda, 30 to 40 parts of carhonate of calciued Instead of the soda may be snbstitnted an equivalent quantity of Glauher's salt Benrath (1869) found in several kinds of plate.glass tho following constituents:-

Plate-glass is manufactured as crown-glass or as rolled glass.
Crown.glass,-Crown.glass is tho oldest kiad of window-glass. It is formed in the manufac. ture as a disc of glass, generally of about 6 in in radius from the periphery to tho centre knot

## + From xxw, p. 793.

Rudolf Wegner Handhook of Chemical Technologe," By at Wartzburg Unirersity (already noticen in Techaology

2eft by the glass-blowers' pipes, technically termed the bull'seye. The largest discs are scarcely 64 in. to 66 in ., from which a square plate of 22 in . only can be cut, the bulis.ey interfering with the catting of a arger size. In the preparation of this glass threo workmen ar emproyed : the first takes so much molten glas on the end of a pipe as will serve for a single disc, and pesses pipe and glass to tho second workman, the blower; he blows the glass into a lands to a third workman, the finisher, who opens the globe, and forms the sheet or pane The labonr is divided in detail in the following manner:-The first workman receives the warm pipe, thrusts it into the vessel of molten glass, and turns it steadily round until he has colleeted The weicht of this knob is renerally 10 lb to The weight of The first worleman imparts somewhat a spherical form by meang of the marbel to the solid glass ball, which is now taken in hand by the blower, who, by tarning and shifting the glass about, at tho same time blowing through sflass has by this time cooled considerably, and, with the pipe, is therefore retared in the tube of the pipe being fasted in a globe of glass is gradually heated the weight of the rod causes it to tarten out, and it is removed by the finisher as a dise of nearly-molten glass He placos the tuve ru the cavity of the whip the shope, on the disc if required or in some partially futtened sphere from the oven, opening the bottom with a manl or iron rod, and causing the glass to take the form of a dise by means of the centrifugal force resulting from a rapid rotatory motion of the rod. Finally the discs are separated from the pipe by the help of a drop of cold water, and are next placed in an annealing oven, to the unmber of to the required cool. The finished plates are cut to the required size; the centres or buthers of strass and for other purposes making of strass and for other purposes
Skeet-glass, or Cylinder-glass.-Rolled or shcet glass is made by cutting a glass cylinder or roll throughout its length, and beating or rolling it out flat on a table. It is for this reason termed "sheet-glass. Usually this sheet-glass is used for ground glass, and is further separated into ord nary sheet or roll glass and fine
The preparation of sheet-glass is one of the most difficult processes of glass-manufacture: it may be considered as consisting of two oper

1. The hlowing of the roll, or cylinder; and 2. The flattexing

After the molten glass has eleared, and attained the barely fiuid consistence before guentioned, the workman inserts his pipe into the mass, and by turning manages to accumulate on it a globe of glass, during the timo hlowing into the tnbe to keep it clear of the molten glass. The glase now takes the form $a$, Fig, 135. By continued manipulation in the marbel, and by blowing, the enlarged forms, $b$ and $c$, and finally et, are obtained. The glass has by this time cooled, and is taken to the oven to be reheated. When this is effected, tho workman, by means of his tools, hy a continued rotation of glass, and by blowing, brings the glohe to the shape represented by $f$. He then opens out the bottom of this form with a maul-stick, and obtaing the cylinder $e$, which is separated from the pipe hy dropping a little cold water on the neck, 0 , joining the two. The removal of this neck is next effected by means of a red-hot iron rod, which
also serves to open the cylinder throughout its length.
After a great aumber of theso cylinders have been blown, the operation being generally continued for three days, the opening into plates is commenced. The cylinders are placed in an oven termed the plate-oven, consisting of two chambers, one the heating-room, and the other the tempering or anncaling room. 'In the paseage the heatod glass rolls or cylinders are suspended arpon two iron rods, where they are maintained at a certain heat. The most important part of the plate-oven is the platten, made of a well-rammed fre-olay. A similar plate is placed in the an nealing-room. When sufficiently heated, the bylinders are brought to the flattening-table, where they are speedily opened out. A workman receivos tbe flat panes of glass, and lean them acgainst iron bars, in the annealing-room

five day
packed.
packed.
Plate-glass.-Plate-glass is either blown or of table-glass just described. The materials are in great part the same as those employed in the manufacture of fine white class. This branch o glass-manufacture is most strikingly illustrative of the rapid growth of the indastry during the ast ten or twenty years. Formerly plate-glass was esteomed on article of lusbry, whereas now it is that most generally used for workshop windows, windors of pirate residences. It far gurpasse in transparency and eleranee the small manes formerly used. By the class jury of the Inter national Exbibition of Paris of 1867 , it was snr mised that before ten years had elansed plate lases would be that most sederally in the market The blowing of plate.glass is effected with the ame tools as tho blowing of table-glass; and the cylinder is obtained in a similar manner. The ump of chass taken by the blower on lis pipe from the melting vessel weiphs about 45 lb from which a plate of 1.5 mètre in lengtli and 1 to $1 \cdot 1$ mètre breadth by 1 to $1 \cdot 1$ centimer thickness is obtained. But the ehicf method of making plate-glass is by casting. Cast plate. class is may be considered as a soda-caleiom glass free from lead. Potash calcium glass is far more expensive, being almost a colourless glass. I rials used in mannact plate-rlass are sand, limestone, and soda, or (tlanber's salts.
Benrath (1869) found in English (a) and German ( $\beta$ ) plate-glass :-

The following description of casting the plate is mainly fonluded upon the method pursued a St Gobin and Ravenhead. The manufacture included in,-

1. The melting and clearing
. The casting and cooling,
The polishing: including
The fine-polishing. Finishing.

Water-glass.-By water - glass is understood soluble alkaline silicate. Its preparation is ffected by melting sand with much alkali, the result heing a \#uid suhstance, first observed by Von Helmont, in 1640
It was made hy Glauber in 1648 from potash and silica, and by him termed fluid silica. Fon Fuchs, in 1825, obtained what is now known as water-glass by treating silicic acid with an alkali, the result being boluble in
The various kinds of water-glass are known as potash water-glass, soda water-glass, double vater-glass, and fixing water-class
Potash water-crlass is ohtained hy the melting together of pulverised quartz or parified quartz sand 45 parts, potash 30 parts, powdered wood charcoal 3 parts, the molten mass being dissolved by means of boiling in water. The solu. tion contains much sulphuret of potassium, which is removed by boiling with oxide of opper.
Water-glass is an important prodnct in inustry. It is used to render wood, linen, and paper non-intammahle. She water-glass of as is first mixed with double is amol beight of rain-water, and is then treated whilh some are-proof folspar, \&c. The material to be rendered spar, felspar, de. The material to be rendered
uninflammahle is painted with the solution, and grain with another coat, after tho first has reagain with another coat, after tho Wood is thus preserved from being worm-enten, from encrusta ion of fungi, \&c. Another industrial applica tion of water.glass is as a cement. In this it is equal to lime, and, indeed, is known as mineral me. Chak mixed with water-glass forms a very compact mass, drying as hard as marble No chemical change is hereby effected; there is a conversioa to sicate of calcim, or carbonate i potash; the hardening is entarely the result of dhesion. Phosphate of calctum treated with water-glass acts similarly. Cinc-white aud nag.
nesia lose none of their nseful rolerties when
mixed with water-glass. Another important application of water-glass is in the painting of tone and concrete wais, and is the preparation of artificial stone. The latter, first made by Ransome, is daily meeting with more extended application in England, India, and America. It is prepared by mixing sand with silicate of soda o a plastic mass, which is pressed into the required shape, and then placed in a solation of chloride of calciun. By this means silicate of calcium is formed, and cements the grains of sand together, while the chloride of sodimm is removed by repeated washings. As cement for tone, glass, and porcclain, water-glass is cspecially useful. It is also employed in the preparation of ayloplastic casts, made of wood rendered pulpy by treatment with hydrochloric acid, and afterwards impregrated with water glass.
(An interesting and important pplication of water-glass is in the new art of nural and monumental painting, termed by Von
 colour). There is first to be considered the is or cement ground upon which the pareivg execiated. This ground has of under and an over ground. It is essental should be of a stone or cement possessing every renusite for darability. The next, or under romend, is made with lime-mortar, and is allowed to remain for some time to harden. When wel dried the water-glass solution is applied, and allowed to soak well into the interstices of the mortar. After the nuder-ground has been thns prepared, tho orer-pround, or that to receive tho painting, is laid on. This consists of similar conatituenta to the under-rround, with the exception that a gool sharp sand js used, and the mixture treated with a thin ley of carbouate of lime. This over-gronnd of fine cement being nicely levelled, and having dried, it is thoroughly impregnated with water-glass. When this is Nothing further is necessary than to fix these colours, which is effected by a treatment with a fixing water-cinss. The colours employed are:-zinc-white, chrome-green, ohrome-oside, cobaltgreen, chrome-red (basic chromate of lead), zincyellow, oxide of iron, sulphuret of cadminm, ultra-marine, ochre, \&c. Vermilion is not employed, as it changes colour in fixing, turning to a brown. Cobalt-ultramarine, on the contrary, brightens on the application of the fixing solution, and is therefore a very effective colour As a decorative art. stereochromy will douhtless attain great importance, the paintings being unaffected hy rain, smoke, or change of temperature

Strass.- The imitation of precious stones is an interesting featare of glass-manufacture, and in Egypt and Greece it is an art that has attan with to great perfection. All preeious stones, with imitated these artificial rems is strass, or as it is termed by Fontanier, Mayence base; and in France artificial poms are mostly known as Riomes te Strass. This base, then, is colourless, and may be considered as horo-silicate of the alkalies be consini containing oxide of lead,

Donault-Wieland fonnd colourless strass, by onalysis, to consist of :-

Coloured
Coloured Glass and Glass staining.-Coloured coloured as a whole, and that only partially colourca. The latter is prepared with such metallic oxidos as will impart to the glass very
intenso colour; for instance, protoxido of copper, protoxide of cobalt, oxide of gold, and oxide of manganeso. This kind of glass is termed snper. fine, and is prepared in the following manner:-
Two melting vessels are placed in the oven; Two melting vessels are placed in the oven;
one containg the load glass, the other the coloured one contains the lead glass, the other the coloured
glass. We will take as an oxample glass coloured red with protoxide of copper, which if further oxidised imparts a green colour to the glass. The glass.blower dips his pipe first into the red glass, and collects a sufficient quantity to blow; then lie dips this into the white glass, and pro. ceeds to form a oylinder or roll, as in the making "outside" gass. "Superfine glass is known as In the first case the workman takes a lump of white glass npon his pipe and covers it with the coloured glass; or, in the second case, he takes
up only a small quantity of whito rlass, then up only a small quantity of whito glass, then sufficient of the coloured glass, and again more
white glass. Rod glass may be obtained with White giass. Rod glass may be obtained witl
either Cassius's purple, protoxide of copper, or either Cassius's purple, protoxide of copper, or
oxide of iron as the colouring ingredient. Cassius's purplo is used chiefly for ruhy-red glass. It was long thought that ruby-coloured glass could not be ohtained with any other preparation than Cassins's purple; Lut twenty five years ago
Fuss showed that chloride of gold was effoctual. If glass containing salts of gold or protoxide of copper is cooled suddenly, the colour disappears; then if again gently warmed, not quite to sof $t$. aess, the colour suddenly roappears infull splon. lour. This phenomenou occurs equally in atmo. spheres of oxygen, lydrogeu, and carbonio acid. In the preparation of protoxide of copper glass, ead-glass is taken as a basis, to which 3 per ent. of the protoxide is proportioned. The lrawback to the employment of the protoxide is he readiness with which it becomes oxide, this mparting a green colour to the glass. To pre.
vent this change iron filings, rust, or tartar, is ldded, or the glass is stirred with green wood. Jopper.glass, as has just heen said, is colourless m cooling, regaining its colour during the process f annealing. Oxide of iron, known commercially is hlood.stone, oohre, or red chalk, is also used o impart a red colour. Yellow and topaz-yellow ue obtained by means of antimoniate of potash xide of silver, and by sulphuret of silver. Oxide of nranium impaits a green-yellow. Bluo is btained from oxide of cobalt, more seldom by neans of oxide of copper. Green results from he addition of chronc-oxide, oxide of copper, nd protoxide of iron. Tiolet is ohtained from lack, from a mixture of protoxide of iron, oxide f copper, braunite, and protoxide of cobalt,
euatifnl hlack results from sesquioxide reautifnl
ridium.
Glass Painting.-The delineation of figures nd Scriptural events in coloured glass dates rom a very remote period. At first the work vas meroly mosaic, pieces of coloured glass ainting was known in Germany in the Middle iges, and soon extended throughout Europe. In he thirteenth century, when Gothic architecture ecame prevalcnt, glass painting also became ore general, as until then the heavy, ronnd. jent. But it was not antil the fifteenth century ant the lieavy outlined figures were discarded ir the more mingled colours of heraldic device, s scen in the churches of Sobaldus and Lorenz, Nuremburg, in the prodactions of the celebrated eenth centory, when the glass-maker tried the fects of pigments uponglass. Since that time art has gradually improved, the improvement frrt being most manifest in France and the
etherlands.

The natnre of glass painting or staining is in principle the following:-When coloured glass, rendered easily fusible by the metallic oxide it contains, is finely pulverised, and laid upon plain glass snrface and heated, it forms a skin, glass being said to be "flashed on" layer of evident that very brilliant effects may this be attained. The near surface of the olass theceive the strong shades and colours, the other or distant surface the lighter tints. White was not employed in the older glass.paintings, but is now used in the flesh tints, paro white effeots, \&c Oxide of tin and antimoniate of potash yield good white. For yellow, Naples-yellow, or antimony-yellow, or a mixture of the oxides of iron, tim, and antimony, or of antimonic acid and oxide of iron, of sulphuret of silver and sulphuret of antimony, or chloride of silver is used; for red oxide of iron, purple of Cassius, and a misture of oxide of gold, oxide of tin, and chloride of silver; for brown, oxide of manganese, yellow ochre, nmber, and chromate of iron; for black, oxide of iridium, oxide of platioum, oxide of cobalt, and oxide of manganese; for blue, oxide of cobalt, or potassium-cobalt aitrate ; for green, the oxides of chromium and copper. Two kinds of colour are distinguished, -the hard and the soft. The soft are called ramish colours, are not very easily fluid, forming a kind of glaze upon the glass. These colours are placod upon the outer surface. The hard or docided tints are semi-opaque, and are placed npon the inner surface of the glass. The binding fluid or vohicle is a mixtire of silich, ninium, and orax, with which the colour, boing previously This mixturo is painted on tho glass with a pencil, and the glass plate is aftorwards fired in a mufle. Recently volatile oils have beon mployed as a vehicle, viz., oil of turpentine avender bergamot, and cloves. The hurning. in or firing, the colonrs was formerly effected hy placing the glass tahlet with dried and pulverised ime in an pan raised to a red heat. But ecently the muffe.oven has been employed. The bottom of the muffle is covered to a depth of
1 in. with dry powdered lime, upon which the 1 in. with dry powdered lime, upon which the
plato of glass is laid, and again a layer of lime. The ofen is then raised equally to a dark red hoat. After six to seven hours the fire is gradually withdrawn, and the oven allowed to cool. The glass is taken out, cleansed with warm water, and dried.
Enamel.-Bone Glass.-Alabaster Elass.-By cnamel is understood, in glass-manufacture, a coloured or colourless class mass, rendered opaque by the addition of oxide of tin. $1 t$ for merly was prepared in the following manner:An alloy of 15 to 18 parts tin and 100 parts lead was oxidised by heat in a stream of air, the oxide pulverised and washed. The mixture of tho oxides was then fritted with the glass. An enamel-like appearance is imparted to glass by calciums acid, chlorido of silver, phosphate of and precipionte, fuor-spar, aluminate of soda class, so ialed sulatile glass, so balled, a mind white, semi.opaque glass, containing phosphate of calcium in the shape of White. It is emponeash, somhrerite, or phos. phorite. It is employed for lamp.globes and shades, thermometer-scales, \&c. It is made by adding to white glass about 10 to 20 per cent. of white bone ash, or a corresponding quantity of mineral phosphate. After melting the glass is generally clear and transparent, becoming milk white and opaque during the process of blowing The colour is finally developed during annealing. A similar glass to the preceding is alabaster glass, but the latter is more opaquo. It is also termed opal giass, rice glass, or rice-stone glass, and Reaumur's porcelain. The materials are the same as in the preparation of crystal gless, of which it may he considered tho soum or ander: layer of impurities, though it is really imper. feetly-prepared erystal glass.
Cryolite Glass.-Cryolite glass, or hot-cast porcelain, has recently been manufactured in py melting together

> Cryolite

$67 \cdot 19$ per cent.
Oride of $z$ in
23.81
8.97

Fluor-spar or aluminate of sodium "may bo substituted for cryolite. Benrath found (1869) in such a milk glass-

Aventurin Glass.-Aventurin or avanturin glass was formerly made only in the Island of Murano, near Venice, but is now prepared hroughout Germany, Italy, Austria, and France it is a brown class mass in which crystalline spangles of metallic copper according to Wöhler (of protoxide of copper according to Yon Pettenkofer) appear dispersed. Fremy and Clemandot bave produced a glass similar to aventurin glass, and which consisted of 300 parts glass, 40 parts protoxide of copper, and 80 parts copper.scale The Bavarian and Bohemian glass houses prouce an aventurin glass rivalling the original. Fon Pettenkofer has prepared aventurin glass direct from hematinon hy mixing sufficient iron flings with the molten mass to reduce about half the copper contained. Pettenkofer surmises, and with good reason, that aveuturin glass is a mixture of greeu protoxide of copper glass with rod crystals of silicate of protoxide of copper these complementary colours giving the brown int. This glass is also well initatod liv melting mixture of equal parts of the protoxides of iron and copper with a glass mass. The protoxide of copper appears after a long annealing as a sepa. rate, crystallino, red combination, while the protoxide of iron is lost in the green colour it imparts to the plass. Pelonze found that by freely adding chromate of potash to the glass matorials spangles of oxide of chromium were scparated. Ne termed this glass chromearentnrin ; it has been employed by A. Warchter in the glazing of porcelain.

Hyalography.-Hyalograply, or the att of etching on glass, is due to one Eeinrich Soliwankhardt or Schwandard, au artist living at Nnremburg in 1670 . It consists of the following opera-tions:-Powdered fluor-spar is treated with concentrated sulphuric acid in a leaden vessel; gentle heat is applied, the vessel being covered with the glass plate to he etcled conted with wax, through which the design is traced with a steel ctching-needle. Vaponrs of hydrofluoric acid (FlH) are evolved, which combine with the silica of the glass, forming fluoride of silicon, $\mathrm{SiFl}_{2}$, and volatilising. Tbe plate is afterwards washed with warm oil of tnrpentine. The first practical application is due to Hann, of Warsaw, in 1829.: More recently, Bubtiger and Brömeis, with Auer, of Vienna, have improved the pro. cesses. The etching-ground used for engraving on metallic surfaces, would not in this case give favourable results. Pül recommends a molten mixture of 1 part asphalt and 1 part colophonium, with so much oil of turpentine as will bring the mass to the consistency of a syrup. Etched glass plates have heen used by Böttger and Bromeis to print from instead of steel and copper In the press the glass plate is backed by a cast iron plate. The process, however, has not been practioally successful : it is better suited to the production of bank.notes, \&c., than engravines, the rosulting etchings being hard in tone. But for purposes of decoration, etched glass is largely used. By the method of Tessié du Motay and of hydrofluoride or fluorid of potassium, 1 litre of hydrofuoride or fuorid or potassium, 1 litre acid. Kicssler employs a solution of fluorido of ammonium
The new and very cnrions sand process is not noticed in the peesent edition of Professor
Wagner's work, so far as we can see no douht it will appear in a future edition.

## THE TRADE.UNION CONCRESS AT

 LEEDS.Tey fifth annual Congress of Trade Unions continued throughout last week, and is now at an end. One hundred and thirty delegates were present from all parts of England and from Scot. and. The report of the Parliamentary Com. mittee was read hy Mr. Howell, who dwelt on the peculiar significance both of the labour more. ments and of the lahour legislation of the year. The report was a document of great length, which would fill ahout six ordinary newspaper columins. It commences thins:-
"The year that has just closed marika an era in this trio for years hare como to tho frout, azd many concearded or years hare como to the ront, and many conceasions
had heen obtained which had appeared to many to be almost hopeless. Foremost among these must be named the agitation that has taken place among the agri-
cultural labourera for bettor pay and more definite hours, We rejoice to see this vigorous movement, nend hold out to them, and wish them, God speed. The nine houre more-
ment, which originated with the building trade in London ment, which origiuated with the building trade in London
in 1859 had sunk into lethargy until the enfineers of
Sunderiand and Newcastle gare a fresh life, and secured
their erent sictory in the gun ander,and and Newcastle gare a fresh life, ard secured
their preat rictory in the auturan of last year. This was
cugineers all over the country, and Jennary, 1872 , opened
with a genersl concession of the nine hours per day in all with a general concession of the nine hours per day in all The building trades of London followed with a sinilar
demand, and, ofter a serere atruggle, won. The ninedemand, and, efter a gapere atruggle, won. The nine-
hours day now bids fair to become general and over the
conntry. The baleere, whose long hours and short pay have hours day Thatbleas, whose long hours and short pay
conntry. The balen the theme of philenthropio sentimet,
long been the engeriy and earnemt of taken in hand theiro own work, th
result heng that in many places they have oltained the concession of o hetter defined day, together with a substantial rise in weges, Your committee heve sean with
much pleasnre the great growth of trade unionism during
the year. The increase of members has been unprecethe year.
The meetings were orderly and moderate $i$ tone. The subjects discnssed included the limitation of the nnmber of apprentices to be employed, the tendency of piecowort, the com petition caused hy prison lahour, the application of the principle of arbitration to internationa dispntes, and the propriety of returning repre sentativo workiug-men to Parliament.

The following
That as the principla of arbitration and it epplication to the settlement of disputes betwcen omployer and emploged hes been econornically and worally heneficial to When the pripciples should be extended to the settlement
of disputes between nations, znd inasmuch as the baw ond its equitable edministretion is the first element of peace
in ciriilised society, and es the absence of intcrnationa in cirilised society, and es the absence of international
law end international tribunals leads to misnndergtanding, conliets, and wer between nations, peralysing industry, entailing hcary financial burdens on thopeople, incressing
the cost of thoir food, ond generally reterding the pro. Eress of their civilisetion, it is resolved to memorielise the
House of Commons to take the gecessary steps towards forming a code of internationel low, and the coteblishing of an internetional tribunal; and that the chair sign such
memorial on behalf of the Congress. Thet it bo an instruction to the
mittee to be appointed to prepare o Bill founded upon the 1st, 2nd, ond 3rd points or suggestions contained in Mr. Crompton"s peper, to be snbmitted to Parliament with
the following edditions: "Fist, to provide for the repeal
of all unjust und of all nujuse and oppressire penal progislation reatine to
trade-unions; and to elearly defle end consolidate the low into one Act relsting to conspiracy, coercion, and
intinidation. Sceondly, that where e committal takes
 cmployers ond employed, the jury selected to try ailsuch
cases shall he taken from the electoral register, eithor by cases shall he taken fromes electoral regrster, eithor by
ballot, or es their nemes stand in rotation on the paid register."
piecework, es practised in some of the most influentia piece work, es prractised in some of the most inlluentia
trades of the United Kingdom, is detrimentel to the best int creats of trade unious, tends to lower wages, defeatg the oljects of the short.time movement hy giving into the
hands of the employers a weapon to nse egeingt worlmen bands of the employers a weapon to nse egenns workmen, this congresp recoommeuds to all delegates present to use
their in mence with their respective societies to do all their intacnce with their respective societi
they con to ebolish buch a pervicious system.

Mr. Hickes, Leeds, read a paper on the subject of the limitation of apprentices, having special reference to the letter-press printers of Leeds The writer contended that a journeyman had right to protect himself, and decline to work wit any number of boys a master might think fit to employ. In a vast number of caseg-he helieved in mnch the larger proportion-the masters did not train, instruct, and fit the hoys to heoome competent journoymen. That was cast npon the journeymen, and the latter had a fair right say with boy
would work.
No resolution was passed upon the subject.
Mr. Cremer, London, moved the following re solution:-
"Thet this congressare of opinion thet the present high
prices of coal and iron are due to a combination of coal. prices of coal and iron are due to a combination of coal. owners, and iron-masters, and capitelists, and that sach
conibination is o conspirecy of a graver and much more serious chorecter then the so called gas stokers' consiracy, end instructs the Parlicmestory committeo to institute such proceeding in o court of law agninst either
coat-owners or iren-mastors, with a view of oscrtoining Coslowners or iron-masters, mith a new of osccrtoining framed ns to apply to all who combine ond conspire, or

The Congress, however, declined to vote npon this resolution, or rather hoth it and an amend ment on it were rejected.

FATAL BRIDGG ACCIDENT
WITH A TRACTION ENGINE AT WOKING. As accident, which has proved fatal to threo unfortnnate men at Woking, keeps the adjacent locality in a state of excitement. The nature of it will appear from the inqnest proceedings before Mr. Hull, the coroner for the district, on the bodies of George Reed and William Bird, engine-driver and stoker of the traction engine, who were killed by the catastrophe.
Mr. Miskin, the owner of the engine, was the first witness called. He deposed that the engine was dragging a thrashing-machine to Paper
Farm, and it had to cross the hridge after going
down Woking.hill. The engine had repeatedly cossed the lridge before, and it woighed abont 9 tons, while the machine weighed 3 tons more the engine was going at the rate of three miles an honr. He gave orders to his men not to ventare over unsafe hridges, but as no notice was posted up at this bridge to say it was nusafe he took it for granted it was all right. Some time ago, not thinking the bridge safe, he applied to Mr. Drewitt, and asked him to strengthen it. Mr. Drewitt declined, hut gave bim some timher, and he strengtheved the hridge himself. The old piles
In answer to Mr. Smallpiece, who appeared for the Earl of Onslow, the witness said he commonced busisess with the engine four years and a half ago, and he strengthened the hridge fou years ago. He had no means of testing the bridge, hut he did his best to avoid all risk of accident. He applied to Mr. Drowitt strengthen the bridge, hot he refused, and said the bridge was good enough for their purposes hat he gave him some timber to strengthen the hridge. It was nsed for that purpoge. The first time the engino went over the hridce he steered it himself. The men with the engine did not carry anything to strengthen the hridges they went over; hut in the case of Cart Bridge it vas strengthoned every time the engine went over it, aud the timhers nsed wore kept at public-honse near. Goorge Reed, the driver had ahsolute charge of tho engine. The same engine and the same driver had frequently grone over the hridge hefore. No notice of the unsafe condition of tbe bridge was posted ap, and bo had nover been warned against it. The inques was adjourned,

## A SONG OF HEALTII.

Crime may cronch with a skeleton-key, But Plagne need anlock no door He comes all hours of the night and day And visits hoth rich and poor. Tho reriest hind, the wealthiest lord, Will wither boneath his hreath
There's honour in falling hy the sword, But plague hringe disgracoful death.

Want and sorrow may visit ns all, And find ns free of all hlame
But when by our own negleot wo fall, Then ours are the sin and shame. cen may talk of the chastenins The laws of health are the laws of God, They can save a man or a town,

Oh : Statesmen of Britain, ronse ye up, The way and the will be thine he people drink of the poison'd cup, As if it were hlood-red wine.
Think of the millions of human souls In the lap of want and wealtb, er whom the tide of contagion rolls, And strike a blow for Health

DECORATION OF BRUNSWICK CHAPEL BERKELEY.ST., PORTMAN.SQUARE.

This chapl, which soon monthe no was e.constracted under the direction of Bessr Heskoth \& T. H. Watson, with the exception of internal colouring, has,-under the direction of the architeet to the Portman Estate, Mr. F. W. Hunt,-lately heen completed.
The walls are finished in a warm stone-grey with a dado seat high in Indian red, finishe with lines and running stencil ornament in bin and red, which are also continued round the nindows.
The wall.space orer the Communion.tahle is formed into a reredos, in colours and gold, a follows :-
Tho surface is divided into fise panels-a square one in tbe centre, and two arched panels on each side of the same, the outer one on the right being ocenpied by the "Lord's Prayer," the outer one on the left hy the "Belief"; the inner arched panels have the "Ten Commandments"; the ground of the panels is in a deep hlue, the text heing in gold. Each panel is separated hy a horder in stone vellum, outlined in deep red. The spandrels formed by the circular heads are in olive green, and filled with a suitahlo soroll ornament upon a diapered ground. The centre, or square panel, has at each side a pilaster, 口por which are inlaid
panels being filled with a diaper of self hue. From under the panel springs a Greek cross, the ends of whioh show each way in gold, with diaper pattorn upon them, upon a dark silver grey ground; this ground is enclosed hy circular lines,
and an ornamental border in deep brown and ground
and a
gold.

The church was not closed during the progress f the works, whioh were executed within a month. The designs were made and the work carried out hy Messrs. W. Phillips \& Son, Bakerstreet, Portnan.square.

## ATHENAUM, CAMDEN-ROAD

Tris huilding was opened on the 11th inst. by the Lord Mayor, president of the institution. The second portion now completed comprises, on the ground.floor, a reading-room, 40 ft . by 25 ft , and 21 ft . high in clear, and two offices or lihraries for hooks. On the mezzanine floor, retiring-rooms, and on the first-floor a public room, 40 ft . hy 25 ft , and 1.4 ft . high in clear ; and four smaller rooms. The hase. ment, which extcnds througbont, is 9 ft . high in clear, and in it are the keeper's rooms, beatiug.chamber, and coal-cellar. The stair. case to the first floor is 4 ft .6 in . wide, and that to the hasement 4 ft . wide. The exterior of the huilding is very plain, owing to al the decorative features originally intended having heen owitted, to reduce tho cost. On the angle of the building is an illuminated clock. The contract for this portion of the hutiding (not including the clock) was entered into with Messrs. Gregory \& Knight, for 2,3151., suhject to an allowance in respect of the increased rate of wages. The architect is Mr. Fredorick Meeson.

THE ENGLISH SCHOOL OF SCULPTURE. Sin,-In your recent critique of Professor Lïhke's "History of Sculptnre," yon gave a well-merited and much-nceded vindication of modern English scnlptrre sculptnre of the Middle Ages, that of England certainly shared in the excellonco and complete. ness, if not snperiority, of its architecture, as ompared with that of Continental Europe Whether as an integral and decorative part of the architecture, or in tomhs, the effigies upon many of which still hear ahnndant witness to the technical excellence of the art, and to fall power in purity of feeling and appropriateness of expression. But it is in regard to onr modern and existing sculpture that it seems to he taken for granted that we have very little to he prond of, and-he critics to decry or speak of with a sort would-he critics to decry or speak of with a sort
of pitying contempt, unless a purpose bad to bo served in exalting the name of some presin favourite, whose work would otberwise have remained in congenial obscurity. There has been too rach ons sot on thig, and the proper estimate of English sculptare las doubt-
lessly been most injuriously affected therehy, both at home and ahroad. The fact is, that the modern English school has langnished for lack of encouragement for the ligher works of genius, The ouly two conditions under which the Fine Arts can really flourish have been lamentably wanting in the modora porod theso are, when art forms part of the life of a nation, as in ancient Greece, supply and demand groing band in hand under the infuence of keen, enlightened nterest and criticism, making art a national pride; and (ح) When art has its cause and encouragement in the feeling for art possessed by the cultured few who have the power to
hestow upon it an enlightened patronago. This hestow upon it an enlightened patronago. This Was the case mostiy among the ecclesiastics ation nohles of the Middle Ages, though the nation gained largely in all time throngo the same. But modern art in England has existed condition of the artist coming into the under the condition or the artist coming into the and thas becoming necessarily sulject to igno. rant popular approval or indifferenco, and tho possihly misdirected patronage of the rich, of Goyernment, corporations, \&c. Under these condi ions, the snrpriso is that so many works of the highest cxcellence have been produced, too often, alas! uncommissioned; hut proving that in native capacity the English are in nowise hehind their neighhours, past or present, in artistic gifts; and wbile so littlo opportunty or enconragement for their display has existed, perhaps no other one sation could show-say,
from the time of Flaxman,-works of greater
interest and merit than those which havo ap. peared among tho Eanglish school, if not alto gether in grandeur of composition and consum. mate nnatomy, yet in an nnsurpassed purity of feeling, loveliness of expression, and genuine originality. A long list could ho mado of such workg, which, had they heen dng up from the soil of Grecee or Rome, wonld have elicited raptures, and won all tho praiees of oritics and connoisseurs, now either denied to real genius, or hestowed ou its opposito. Such works as "Mother" and "Iuo and Bacchus," Bell's "Dorothea," Munroe's Child sculpture, with countless other instances at once rush to the
mind. Give to English art, in whatever department, a true, generous development in its culture, ment, a true, generous development in its culture,
guidance, and patronage, and we bave no reason So think that we are at all hehind in artistic
to pron faculty, hut the very reverse. It is, however true that save in the native love for and encouragement of landscape art, England has
bsen peculiarly unfortunate; and the greatest osen peculiarly unfortunate; and the greatest
genius in historical and ideal art, whether genius in historical and ideal art, whether
painting or sculptare, as also in architecture, has heen wasted among ns under the chillin infuence ahovo noted.
J. H. B.

## SCHOOL BOARDS.

Lomdon.- The works committee invited tender from builders for tho erection of a school to pro vide accomnodation for 580 children, on the site in Cook's-ground, Chelsea. The tenders ap-
peared in our list of the 18 th inst. The com. peared in our list of the 18th inst. The committeo reconmended the acceptance of the ng to 5,1002 . The committee also invitod tenders for the ercotion of a school to provide accommodation for 1,186 children, on tho site in Maidstone-street, Haggerton. These tenders also appeared in our list of last week. The committee recommended the acceptance of the lowest tender, thint of Messrs. W. H. \& J. Mans bridge, amonating to $7,193 \mathrm{l}$. Tenders have also been invited from huildera for the erection of schoon to provie in ccommo Pi for 720 Southwark. The amounts were alloy Sheffield, 6,2362.; Benjamin Wells, 6,2002. Joseph Cook, 5,797l. ; Manley \& Rogers, $5,767 \mathrm{l}$. Sosepheoriven \& White, $5,76 \mathrm{ll}$. ; Marsland \& Sons 5,710 l. ; W. Shepherd, $5,665 \mathrm{~F}$. . ; Wieks, Bangs, \& 5,710l.; W. Shepherd, 5,675l.; Wicks, Bangs, \&
 Greon, 5,575.; Dove, Brothers, 5,475l. ; J. \&
F. Coleman, 5,445l. ; W. Higgs, 5,105l.; W. Gifoward, 5,280 L. The committee recommendod Howard, $5,280 \mathrm{c}$. The committee recommendod
the nceeptanoe of the lowest tender, that of Mr. the acceptanoe of the lowest tender, that of Mr.
$\$ \mathrm{~F}$. Howard, amounting to 5,2801 . The reoom. mendations were agreed to; as also the tender of Mr. J. Spink, of Grove-road, Clapham Junc. tiou, amounting to $5,370 \mathrm{l}$., for tho erection of a school to provide accommodation for 575 chil.
dren, on the site of Bolinghroke.road Tatterean dren, on the site of Bolinghroke.road, Battersea; and also the tender of Mr. G. Stephenson, o Beaufort-street, Chelsea, amounting to $5,901 \mathrm{l}$, for the building of a school to accommodate 824 children, on the site in Winstanley-road,

Huddersfield.-A letter wat read from the Education Depart ment agreeing to the erection of a school in Almondbury for 412 children. enders were sent in for the erection of tho decided Oakes School, and the following wer jocided upon:- Masons, Dyson, Bros., Lindley James Brook; Blaters, Pycock \& ' Sons, Leede plumberg, J. H. Taylor \& Co., Huddersfield; plasterers, Longbottom \& Son; painter, W. T. plasterers, Longbottom \& Son; paiuter, W. T. Hainsworth; clock and hell, Mr. J. W. Bell, at a total cost of $7,885 \mathrm{l}$. 14s.
Stoke-upon-Trent. - Mr. Grose hronght forward a series of notions relating to now schools at
Kingscroft and Stoke. At Kincscroft Kingscroft and Stoke. At Kingscroft Mr. Grose proposed to haild a sohool in two departments for 200 children, as near as possible to the Grose saggested, shonld he hnilt in thehool, Mr. the town. Mr. Grose would huild a sohool of three departments, riz., 180 hoys, 180 girls, and 200 infants. Mr. Bishop boped the Board would hesitate before committing themselves to a serious expense withont ample proof that such
sehoolrooms were ahsolutely necessary Con. schoolrooms were ahsolutely necessary. Con-
siderahlo room was still to he found in the siderahlo room was still to he fond in the rector's sehools in Stoke. A long conversation
followed, hut eventnally Mr. Grose withdrew his motion, and eventaaily tr. appointed to dray up a report on the subject.

Carliste.-Mr. Wrigley renerved the motion which he had made at the last meeting, that Mr Birkett be appointed architect of the new Board schoo.s. He moved his appointment on the snch modifications as shall meet the wishes of the Board. Mr. Hannah seconded the motion hit he was not very well fatisfied with any o the plans. His opinion as a practical teacher was that the schools would be all too narrow. The Go verament had commenced with 16 ft . as the width of their sch ools, then they got to 18 ft , and though were ready to accept 20 ft . Mr. Birkett's would were ready to accept 20 ft . Mr. Birkett's would 25 ft . This opinion was horne to less than School Boards opinion was horne out hy otber plans of a school 25 ft , considered the width too great, and refused to sanction them, and the Board sent the plans hack, asking their lordships to reconsider the decision, and there thoy were at present. All the plans were $L$ shaped, too, and he had heard that that was inconvenient. In the infant chool he could not see the use of three class26 ft , to 28 fthe main room was enlarged from away with, it wonld do. The lighting and many other things would have to he altered. Canon Prescott objected to the plans mainly hecanse tho houses and water-closets were away from the schools altogether, and that of the infants further than any of the others. Mr. Wrigley pointed out that there was a covered way to the infants' closets. A long discossion ensned, and at length the motion was put and agreed to.

## THE CHAIR OF FINE ART AT CAMBRIDGE

On the supposition that Sir Dighy Wyatt will not seek to retain the Slade Professorship at Cambridge, Mr. W. Cave Thomas has offered himself, amongst others, for the appointment. Mr. Thomas says in his address,-
the principles of Art must be evolved by inpposed, that method than the laws of physioal phenomenn; that they are in fact inserntable, shadowy, sud free from any hard
and fast rule. This is most unfortunate for At pro The true prineiples of Art may bo obtained by a stroetl induretive met hood, by cart mal observation and experricent,
br a method us atriet indeed as athat purand in the stady by a method us striet indeed as that pursued in the study
of any other class of phenomena; the difference merely hany, other class of phenomena, the difference merely pheoo theat, whilst in in the other we have to observe and teat the phenomena ofour own inner sentient being. Everg ereat
Hork of art is the result of indnction, the fruition of fare. rul observation and cxperiment, from which the painter abuormal, and to to elimmate what is variable, what i
 oxternal aud,
Mr. Cave Thomas, by a long conrse of thought ful study, has well fitted himself for the position he seeks, and shows this by his works hoth as a painter and a writer.

## DILAPIDATION CASE:

## cook $\%$ mages.

This action, hronght in Westminster County Court to recover the sum of 302. , opened up some questions respecting dilapidation of huildings.
Mr. Cook, harrister, on hehalf of the plaintif a gentleman residing at 18, Warwick-square Pimilico, produced the agreement made between the litigants for the tenancy of a house in Myrtle street, Dalston, and hy which the defendant was hound, at the expiration of his lease, to repair the premises and leave them in the same condition as when he entered into possession.
Mr. Brabey, buidder, anid previosa to the defondant Mr. Bellinger, waild wout 500 . for the worli he did. Mr. Bellinger, builder, seid ho had repaired the pre 22l. Ther roop of the house was in a bad state, and the to
nite interior required repainting and new papering.
Cross-examined. JIuch ot he damage to the from the damp; but he conld not separate that porion of July last. Hr . Holl, foremas to Mr. Bellinger, estimated the The learned Jud ge sue dhamp at 106 . The learned Judge snita a ecording to this oridence the Mr. Bellinger here said his cestr, or dilapidations. necessary reparrs was $22 l$; ; but as be wished for the job Mo did it for 15 .
was not entitled to barrister, contended that the plaintif? Was not entitied to any damages for reparining the house.
His elient vacated it in March, and it was not until July ny one from the inndiord entered to put the premises in order. During thoso four months the rain had reeched
the inside, and not being looked after, this had caused the
damago spolien to, and now the 1andlord wanted to attri-
buto the injury to the tenant who actually had at tha time of his quitting paid a builder to ropair the house according to the agreement alludided to.
 deponit, when the, agrieement was given by the tenant na a
digned, and the defondant had further paid 16s, for property taxa, which the A number of buildera on belaif

master lefte, the lend housebeeper stated that belore ber mbat was neeessary to be done, and this may carried out The learued Judge enid he did not remember oo weant. case with regard to claims for dilapidation. There wras
no evidence to show tho state of the honse when tho defendant gave up possession and the premse when tho haye bees in the same state four months atters courd not Leing exposed to the rain, and no one to look after themer had been produced to show that tha plaidinct by receipt sum as stated for repairs, nad altogether the cazc paid any Wenk, that he shoold only give 1 nominal verdict for the
plaintift, and asseas the damper dilapidations.

"I ENOW A HAWK FROM A HANDSAW."
Sin,- Trill you kiudly permit mo a Yord of expleaation Januarence 1sth the letter of "A. H." in your publication of mado by auouther writort in anoknowither pubment a suntion, and thastion made ny auother writer in another publication, and that I would be entirely contrary to the trath. The theorry in
aneution has long been fanailiar with me. When II wrote

 of the dutiquary of a fow weeks preeriously in whin wh
donbtiess the same thcory was put forth, but treate entirely differentlly, ss any person may jndge who will It is satisfactory to fin should almost simultaneously come to the same conclite sions respecting a disputed pasage in our anme conclu-
tiat. Thatever credit may be dia of it I am quite ready to concedo to your forrt publication "* We print Mr. Picton"s letter; but it is is quitex. un.
necessary.

## A FOREMAN'S VIEW.

SyR, - Seeing a note in the Builder of Jan. 11, 1873, re
Cerring to the unfitness of foremen, some muff in that elass, and for my part I to mo are where, in a few years, there will be fornd any men it to carry on good work if the societies are allowed to have in and about London as a foreman and master experience a job is commenced in London, all the socicties at an seem to be aware of the minuteat particulars as regards the quality of work required, and claraster of master Lonfere at tho society: they ore sent first are the usua their discharge, as yoty: they gre sent frod, , but tha soon get thy have been long crough to ap on' ary one intending to to a day s work I say, agzain, it it prith the greatest diflienty of their clase. foremen, cau get men to do the work, as the muft wee, as fuil pay, and a genuine man gets no more; herefore there is no encouragemont to perserere, as (aceording to mociety
rules) he cunnot mot Fules) he canhot get more money than the mut who works
beevide him, zo he sinks to the same lerel for want of couragement. I have had, say, sixty or serenty men in London at a time ou a job, and' soarcely a man who really couid be trusted for one hour to do his work. They re-
quired continually to be looked up and shorn th Mured continually to be looked up and shown the simplest
nid maost trifling thing, and then they would take some round bout way to do it. All the blume is thrown uno
 imes working man, and also draughtsman, as well ha
storeveeeper, for searcely any more per hour than the nuff who gives him no onauch trouble, wher all the the are counted (as ho must apend many hours after the men aro gone to keep his secounts in order).
Now I ask the Builder what Now I ask the Buider what encouragment is there for
a fristechas man ay
gets tos. per weels

## ARCHITECTS' GUARANTEES FOR CONTRACTORS.

Ruselh, julgeomsbnry Country Court, before Mr. L. $\mathbf{L}$. some hints to architects and surreyorr ineaun antorded
coming reaponsible for building nimterials. Mr. Curtis, $\mathbf{a}$ zinc aud metai worker bro agzinst Mr. Solomon, on architect and anrveror his action ampton-atreet, Holborn, to recocerer the sum of 162 . 13 s .9 d .
 Mr. Curtis stated that, in th
builder named James applie teginning of Angust last, the zino work required for two housess in the Now.cut, Lambeth; and haring gone over the matter, he was unable to give any distinct figuro, and no notecial prie
wais agreed upon ; and Mr. James, being unknownto ho told him, before he commenced the jow, that he to hould require some solvent person to become answerable for th upplied to, anteed to become and Mri, Solomon, on being
His did allt the work required, and Mr. Mames paid him
one cheque and Mr. Solominan another, as the worlz weat

#### Abstract

  the defendant, had for whom the worl lisd been execute to his satisfaction. In crossexamination by Mr. Lewis, the ritness ad mitted a letter produced to be his handwriting. This  recited, " Mr . James, of Niewman. street, has appointed me to do cortain zincwork for two houses in the New-cut Lambeth, and hae referred me to you for payment." He received a cheque of the de The anemer to the casewnas, that James had a large con- traet with the defendant, and that all the puartmee given by Mr. 8olomon mas, promisiug Mr. Curtis to do all he could to see James paid hiss for the world doue, aud with this riew, ingtend of giving James Ar cheque for twenty- fre ponnds to pay Mr . Curtis, Mr. Solomon sent the money direct to the plaint tit: Mr. Solomon positively den curante for payment or sayiue biving would he liantifis any gunantee for payment, or saying bis woud sasing, "he was referred to him for payment. The learned Judge oliserved The learned Judye olserved that there mas a considerable conflict of evidence betreen the parties, and there Fas no written guarautce produced, or indeed any reliable Was no written guarsutce produced, or inded parole promiee to pay, nad in the face of the plainitim's own letter, he could not do otherwise than find for the own letter, he conld not do otherwise than find fu defendant. Verdict for the defendant accordingly, with costs.

WARMING.
Ste, -I obserre a letter in your last number signed
"Reader," asking if "Lewi's Patent Warm Air: Chamber Fireplaces," which I described in your payer of Fcbruary 18, 1871 , ashaving used in my residence, con-
tinue to answer my expectations. tinue to answer my expectations.
In reply, if beg to say that they answer splendidly in The other day $I$ received a eommission to build a house, througha gentleman, astranger tome, , bavithe boen struek with the ceonomical way I had warmed a house in which
I used them. I have ndvised Mr, Lewiis to sond his

## ART AND DESIGN

Sir,-As this suhject has attracted much attention of late througb Sir Arthur Felps' words, "Lot us get rid of inaccuracy," \&ce, it should also be shown in the press, through your kindness, that inaccuracy commences in our scbools of art hy pnpils not holding the penci aright, as seen in the Bathforum school of art where some sixty hoys were instructed, and only one or two held the pencil right according to surgeon holding the dissecting-Enife, as an example of the scientific mode of holding penci! and pen, Other inaccuracies exist in the patterns of notbing for pupils to copy, whereas notice, such as are represented in drawings from nature from the microscope hy Leeuwenhock, wherein the first lessons in drawiog in parallel horizontal, and peroondicular lines are avnilable hesides in patterns for artistic work. Furthermore, the performances of celebrated artists in our weekly periodicals and other works show ead falling 0way from Hogarth's criticism of art and design. The qnestion now is, should science and nature he neglected in preference to men's crude notions of the present day? Again, the drill is introduced into schools; wherefore sbould pupils
be suffered to lounge and appear carcless of their work, whilst elegance and gracefuluess of the person, and freedom of the thumb, fingers, and wrist, would add to the well heing of every pupils to dram, straight lines, which they cannot draw themselves, and which do not exist in nature.
Witb these prcliminaries, is it too much to sugrest a discussion of the suhject in private and public meetings to consider hefore we commi further inroads in inefliciencies, whilst some ton or more ohjects from nature are rendy for examination to supersede present plans?
Let us get rid of rubbish, instead of cherishing oily talk" from the Privy Council amidst the rational dismrace in artistic drawing.

Whlmam Parker, M.R.C.S.

PRESENTATION TO AN ARCHETECT. Ler us note a novelty. Last week Mr. Alex Reid, architect, Elgin, met a large numher of his business friends, by invitation, in the Assembly Roons, Elgin, whero, at an ontertainment they presentod him with a very handsome marriago gift-plate and other articles, to tho value of 180 t ., including a gold necklet and locket for the lady of their appreciation of his their respect, and of heir appreston professional ahilities. Major Johnston, Now mill, presided, and made the pome time, happy speech, proposing, at he sano the, the health of Mr. Reid, and wishing that the interesting event, in view of which they had met that evening, might bring to him every possible happiness. Tho toast was received with enthusiasm, and Mr. Reid tast
toast and the presents.

## THE STREETS OF DUBLIN

Sil, - I bave heen informed that a well-known and woll-informed memher of the corporation has unexpectedly turned upon that angust hody and administered a rehuke, the geverity of which can bo well estimated hy those who know him gentleman referred to is reported to bavo publiely said that the streets of Duhlin were kept con stantly clean and in a stato of thoroagh repair tantly clean and in a stato of himself ever used
eathing irony against the sophists than did the encrgetic memher of the corporation of this city when he spoke those over-to-be-remom. hered words; and I trust that my down-trodden and ovor-taxed fellow-citizens will with me take of those rights for which we pay so heavily, but have not.

Dubliniensis.

## BARROW-IN.FURNESS.

Thz mayor, aldermen, and hurgesses of the young and vigorous borough of Barrow-iu Furness have a Bill heforo Parliament, that has passed Standing Orders this week, in which they - for Parliamentary powers to accomplis rarious important objects. These incluce power and new addels for extending the limits within which they may supply gas and water; for making a railway or tramway; and for othe purposes. The estimated expense of the waterwrorke is $28,000 \mathrm{l}$; of the two new streets, $33,000 l$; and of the railway, 1,460 . The cor poration also ask for powers by the Bill to erect and maintain, at such time as may seem fit, town-hall and puhlic buildings, at a cost of 25,000 l.

STEEPLE-JACK ON DARLINGTON CHURCH SPIRE
Durng the heavy gales last Novemher, the ron rod on which the weather.cock of this heing restored hy Messrs. Sanderson \& Proctor of Huddersfield. In order to reach the top of the church spire, instead of scaffolding, only a few iron spikes were driven into the joints of tbe stone work at intervals, the workman heing slung in a kind of saddle, which was removed higher up as every fresh spike was driven in. A rope with blocks and pulleys was at leugt spire, and by fasten ronnd the highest part of the descended in a remarkahly simple thongh darger.
ous manner. By this means the iron rod, which has heen hanging from the top of the spire by the most slender hold, was brought down. It bad broken off close by the top of the ball of lead which forms the oap of the steeple, the corrosion being caused by the galyanic action of the twa metals, iron and lead. To avoid corrosion in the future, it is proposed to put a cast-iron cap in place of the lead one; and a new iron rod, of a similar design to the old one, with a cross, is being forged hy Mr. Jos. Wray, of the Bridgeeud. The old weathercock, which is of copper, has heen re-gilded by Mr. Joln Willis, and it was expected that in about a week the wbole work would he completed.

MEETING OF DELEGATES OF SANITARY AUTHORITIES AT SHRETSSBURY.
Oy Friday in last week a meeting of delegates from the various sanitary autho. delegates from the various sanitary autho.
rities of Sbropshire and some portions of rities of Sbropshire and some portions the adjacent connties was held in the shire. ment of a medical officer under the Public Health Act of 1872 . The chairman reported that the following nnions assented generally to the joint namely - Atchom, Chnrob Stretton Clun Lad namely,-Atcham, Clinreb Streton, Cun, Lud. ow, Forde, Shina, Madey, Bridgort, and
 Tenbury would pronauly join. It was resoived for all the sesentine unions, that the appoint. ment tho assen ment be made, in the first instance, for two years; that the salary be 800 l . per annam, to include traveling and al ouher expenses, and that the medical offecr devote his whole time to the duties of his office. It was further agreed, That the testmonials be examined, and the appoin mont made, by three delegates from each savitary authority, Tbe charman, Captain Severne, and advertice for candidatos, and to arrange the other preliminaries for
medical officer of health.

## VARIORUM.

"A Fers Thoughts on Sanitary Questions, by T. W. Wallis," Sanitary Engineer (Larder, Lonth), interest us mainly hocause they are the work of one who somo years ago made himsclf worthily known hy the production of some admirable carvings of dead game, for which medals were justly awarded him. Mr. Wallis has changed his profession, and we are sorry for it. Tho letters licre put together doubtless woke np some of the good people of Louth and its neighhourhood, and will do good olsewhero Nevertheless, we regret his loss in the practice of an art the difficulties of which he had mastered. -- A second odition has been published hy Messrs. Stovons \& Haynes, of "The Rule of the Law of Fistures," by Archibald Brown, Barrister-at-Law (Bell-yard, Temple Bar, 1872). Its distinctive feature is that it ancludes a statement of the principal American decisions. Some recent Scotch and Irisb cases are also added.-Tbe Council of the Society of Arts havo issued in a separate form (Bell \& Daldy, Yorb -street), some Reports on the London Intcrnational Exhibition, 1872, prepared under their direction. As the Council "desiro it to be understood that, in publishing these reports, they do not necossarily adopt all the views expressed in them, whioh must be taken as those of the writers only,' the writers names should have heen given.--"Notes on the Elements of Algebra and Trigonometry, hy Winiam N. Griffin, B.D. (Longmans, Green, \& Co.), includes solutions of the more dificult questions. The student wbo uses the book in lieu of a master mnst not turn too soon to this part of it. "Mathematical proficiency results, not from inspecting the solutions of a ninmher of examples, hut from the hoars of patiunt thought spent in drawing from them the power of solving other similar examples which may arise." - Thenew numher of the Quarterty includes an article on "The Exhaustion of the Soil of Great Britain," which should iuterest many of our readors.Tbe Mechanics Magazine, after a careor of half a century (being the oldest technical periodical in existence), will henceforth appear in an Iron, which sufficiently indicates the more com. prehenaive programme of the new scries as a reflex of everything affecting this important intcrest and all its ramifications.-_"Natious,

Languages, and Tongues." Messrs. Hall \& Co. Languages, and Tongues." Messrs. Hall \& Co ., the publication of a Rudimentary Dictionary of Universal Philology.

## 縣iscellanea.

Decoration of the Mansion-house, Lson-don.-The two state drawing-rooms bave been painted, gilt, and enriched. The ground of the centre of the ceiling is white, the panels and being otched in gold; the cored portion heyond, extending to the walls, is of a lighth cream colour, extending to the walis, is of a light cream colour,
and embellished with elaborate gilding. The City Press gives a fuller description:-The walls are painted in parti-colour, a delicate Wedgwood blue predominating, and tbe large panels are covored with richly-figured amber satin, surrounded by massive gilt mouldings. Both apartments have also heen fitted with large dogstone fire ranges, with marblo fenders, polished steel bars, and encaustic tile hearths. Tbo Venetian Parlour has been embellished. The centre of the ceiling, like the state drawing-rooms, is whito and gold, the enrichment of the panelling heing exceedingly artistic. The festoons of fruit and flowers around the cove of the cciling have also been tastefully ornamented and gilt, while tbe enrichments and gilding of the bold cornice immediately The paint ing of the walls consists of a buff cround the columns aud pilasters, together with the panels containing tho large mirrors around the apartmont, being gilt and ornamented, as woll as the framewori and mouldings around the large circular window ovellooking Queen Vic toria-street. The decorations of the Long Par-
dour (approached from the saloon and vestibule) are among the principal features in the ornamentation of the interior. As regards the ceilmentation of the interior. As regards the ceil-
ing, noted for its elaborate mouldings, and their ing, noted for its elaborate mouldings, and their All the flat portion of the ceiling is in white and gold, while the upright portion is in a light tint, gold, while the upright portion is in a light tint, blue, and the whole enriched by massive gilding That portion of the walls between the skirting and the surhase is in panels painted in varied

The Kendal Sewage Scheme, Mr. Black ourn, of Aldershott, accompanied by the Mayor and the Borough Surveyor, have mado an in spection of the Kendal Corporation land at Watts. field, with the view generally of advising the Council upon its adaptahility for utilising the sewage of the town, and also what in other respects would be the best plan for disposing of
the sewagre of Kendal. Tis report will, we nn. the sewage of Kendal. His report will, we nn -
derstand, be unfavourable to irrigating the derstand, be unfavourable to irrigating the
greater portion of the recently.purchascd Wattsfield Estate, with sewage, on account of the great cost which pumping up the sewage would entail and its comparatively worthless nature when pumped. Ar. Blackharn is of opinion that suflicient land can be obtained below the present farm, which can he irrigated hy gravitation. He is ecidedly adverse to corporate bodies engaging him in the way of utilising the Kendal sewage is the unusual quantity of surface and spring water tbat finds its way into the drains.

Extraordinary Proceedings at the Iron Church, Frodsham. - Ono morning lately about two (a.m.), a number of men wero found busy, under the direction of the vicar, erecting a wooden additiou to the iron church, projocting from one side, and some 9 ft . square, whilst ono or two others were endeavouring to demolish part of the work as fast as it was being proceeded with; but, as the vicar's force was much the strongest, and being well supplied with beer and pies, the other party had to give way. Betwcen ten and
eleven o'clock the same morning, horvever, fresh actors, with axes, saws, files, chisels, \&c., comfreshactors, withaxes, saws, files, chisels, \&c., com-
menoed, in a pery summary way, to reduco the menoed, in a fery summary way, to reduco the
dimensions of the new creotion by cutting abont dimensions of the new creotion by cutting about
2 ft . off the outer side, and, as thero was no opposing forco present, this part of the drama
ont was soon accomplished. It seems there is a dispute between the vicar and the owner of the land adjoining as to tbe exact boundary of the site of the church, the owner of that land con-
tending that it was an encroachment to the extent of the piece cut off.

Patent Gas-burners.-At a recent conversazione of tbe Birmingham and Midland Institute, Messrs. John Wright \& Co. exhibited a series of models of Wallace's patent gas-burners, which are said to have solved the problem of hurning a mixture of air and gas with certainty nnd safety under all conditions of pressure or qnality of gas. The lower part of the flame contains a conical space whose surface is of a brilliant emerald green colour; and this is surmounted by a clear amber flame. The temperature of this flame is such that, coming from a half.ivet Bansen hurner tube at main pressure, it will, it is ssid, readily melt hrass, silver, gold, or coppor. The experiment was made frequently during the evening with copper, the drops of molten metal falling into a glass vessel of water. The tem$3,000^{\circ}$ Fobrenheit ranged from the common laboratory burner consuming 3 ft . per hour, to the steam-boiler furnace, which would born 80 ft . per hour. Such a burner would need good rentil per hour. Such
Fatal Accident. - ln St. Brido. street opposite Harp-alley, Farringdov-street, a stone outlet is boing constructed by Messrs. Noel \& Rohson, contractors for the Metropolitan Board of Works, to carry off the overflow water from St. Pancras, where the storm floods from the Highgate hills are intercepted at Wharf road, and so directed from the Fleet sewer and emptied into the Thames at Blackfriars Bridgo A wooden platform had been erected ahout 12 ft . above the level of the railway, and upon this was deposited tho wet clay raised through shafts some 50 ft . in depth, and whicb was con stantly being carted away. As Samuel Burton, a bricklayers' labonrer, and Samuel Thompson, a miner, wero passing nuder the heavily-weighted platform, the timbers suddenly gare way, and wet clay were buried under the falling mass of wet clay. Thompson was speedily rescued, and when Burton was dug out he was quite dead. Thompson has reccived such injuries quite to make his recovery doubtful.
An Aquarium for Scarhorough. - A re. port, to the town council, of a committce, on a letter from Mr. J. MoMillan, proposing to erect a large pablic aquarium at Scarborough similar to that at Brigbton, bas bcen considered oy the council. The plans were prepared by Mr. T. Birch, C.E. Tbe committee recommended that the council grant to the promoters for 999 years, the land applied for, at an annual rent of rom 30,0002 cost of the construction would be sion, however, a resolution was passed to the effect that wbile tho council approved to the scheme, the consideration of tbo terms and con. ditions should be referred back to the committe

Grainers and Marhlers.-A large meeting composed of London imitators of woods and marbles, was held on Friday ercning, January 17 Regent's Parls, Cathcart Tavern, Munster-square formation of a trade.umion, and to idicuratica the matters connected with their interests. The chair was taken by Mr. Kessit, and supported we Ire explained by The objects of tbe society wero explained by Mr. Jas. M'Intosb in a very then mado ond disensey nseful suggestions were then made and discussed by the several persons.
A committee was formed to draw up rules for A committee was formed to draw up rules for
the guidance of its future members, and, after the guidance of its future members, and, after
passing a vote of thanks to tho cbairman, the meeting separated.
Messrs. Longman's Scientific and Educational Works. - We may do good by directing and scien to the remarkable series of educationa and scientific books advertised by Messrs. Long mans, Green, © Co., in the present and a previous number of our journal. Their stock of such works must be enormous, and all engaged in tcaching or anxious to learn may find in it proper advertised in our their purpose. From tho ist Uro's "Dictionary of Arts, Manufactures, and Commerce," Brande's "Dictionary of Science Literature, and Art," and Gwilt's " Encyclopmdia of Arclutecture," as three of the most useful works we know
Institution of Surveyors. - At the next meeting, to be held on Monday evening, January 27th, the discussion on the Paper by Prices of Acriculturd "Statistical Notes on the Rent, from the Early Part of the Last Century to the Present Time," will he resumed.

The Wigan Infirmary Exhibition.-At special meeting of the Wigan town council, resolution has been unazimously passed, complying with the request of the Wigan lnfirmary Exhibition and Bazaar Committee, that the cor poration sbould authorise the mayor to invit the Queen, or such otber member of the Royal Family as her Majesty should be pleased to appoint to represent ber on the occasion of the opening of the institution. Tbe infirmary has been erected at a cost of nearly $30,000 \mathrm{l}$. the whole of which has been raised hy public sub scription; and the Exhihition and Fancy Fair are intended to raise 5,000 . for necessary fur nisbing, endowment, \&c. The district of the institution includes nearly all the mining and manufacturing district of South Lancashire

## London International Exhibition, 1873

 The fourtb meating of the committee on cooking was held on Satnrday last, at the offices, Gore Lodge, South Kensington. The committee considered certain proposals with reference to practical and instrmctive illustration of popular cooking, as adapted to the requirements of the middlo and lower classes, and they inspected ites in the Exhibition huildings which appeared vitable for the purpose. After having passed resolutions containing recommendations to her Majcaty's Commissioners as to the hest executive arrangements for the class, the committee ad journed nntil Monday, the 27 th inst. Much good might be done by this committee.Ipswich Mechanics' Institution: Portrait of MI . Thomas Shave Gowing.- A number of friends, recognising Mr. Gowing's long and invaluable scrvices to the Ipswich Mechanics nstitution, determined to have bis portrait w. R. Syinonds, of Inter to that institution. Mr. ho commission, of Ipswich, was intrusted with in the library of the portrait is now on view in the library of the Townhall. The young Gowing's expression just at ther, has caught Mr. thengs expression just at tbe time he has set or cpigram. Round the room are hung several paintings by local artists.

## Cleveland Institute of Engineers, Mid.

 dleshrough. - The monthly meeting of this Institute has been held at Middlesbrough Mr. Jeremiah Head, president, in the chair. A paper was read hy Mr. John Dunning, C.E., oI his proposed plan for converting the xiver Tces into a dock. The chairman, in commenting on the plan, cxprossed the opinion that it was a very practical one, and that the real difficulties in the way would not be of an engineering natnre, but would lie in legal opposition and preconcoived notions. An interesting discussion ensued.Camherwell.-The old mansion situated at the foot of Denmark-hill, Camberwell, which was erected by Sir Christopher Wren upwards of 200 years ago, has been disposed of hy auction, as materials, in upwards of 100 lots, nnd will now at once be demolished, in order to make way for the erection of about 200 houses, which are nbout to he built on tbe site and the grounds connected with the mansion, whiob are about to be laid out in streets. The mansion is identified with Mrs. Thrale and tho fomily who founded the great firm of Barclay, Porkins, \& Co., when Dr. Johnson was a frequent visitor there.
Grimshy Docks.-Sir E. Watkin and several Lincolnslize Railway Compester, Sheffield, and Lincolnsllire Railway Company, together with Mr. R. G. Undordown, the general manager and Mr. C. Sacré, engineer, have visited Grimsby, for the purpose of ascertaining by personal in.
spection the additional facilities required to epection tbe additional facilities required to
meet the necessitios of the greatly increasing meet the necessitios of the greatly increasing
timber trade on the west side, and the general epport and import trade on the easts side. It is probable that a road at the rear of the timber yards will be taken in and added to the timber ground.
Ancient Architectural Remains in Salis-hury.-Remarkable antiquarian discoveries are being made in Salisbury. The massive foundations of the south-east corner of the old monastery are laid hare. The hardness and compactness of the concrete are referred to as
showing how well our ancestors nnderstood the showing how well our ancestors nnderstood the
art of building; bat this bardness of the concrete partly at least depends on its age.
Fine Arts, Oxford.-Mr. John Ruskin has been re-elected to the office of Slade Professor of Fine Arts, in Oxford, without opposition.

Sewerage of Neston and Parkgate.-At the last meeting of the Local Board at Neston, instructions were given to Messrs. Reade a Goowson, civil engineers, of Liverpool, foressary plans and sections for the complete sewerage of the district. The water. supply being now completed, a system of sewer. age has hecome indispensahle. The question of ntilisation is still an open one, but as the naturo of the district is adapted to irrigation work they may prohably be eventually adopted.
Ruislip, Middlesex.-This fine old churoh, which some years ago was restored to a considerahle estent hy Sir Gilbert Scott, has had a handsome reredos put up across the chancel, and some other works latterly carried ont from the designs of Mr. K. L. Roumiou. It has also been warmed by hot water by Messrs. Bacon's patont. Messrs. Hebbins \& Tasler, of Kiugston, were the masons; and Mr. Cox the builder. The whole of theso works have heen done at the expense of one of the churchwardens, Mr. R. Parnell.
Winchester New Guildhall.-It is reported ocally that in conseqnenco of the extreme wet weather, and the existence already of a slight bulge in the westers wall of the large hall (which, however, has not increased for some weeks), the propriety of buttressing the wall has been casvassed in committee. The four statues of Eghert, Alfred the Great, Henry III. (of Winchester), and Florence de Lnnn, tho first mayor, are placed in position in tho front.
Patent Pipes and Boilers.-Mr. T. S. Truss, C.E., has pateuted a joint for piping which can he applied hy any unskilled person. It consists of an india-rubber band, which passes over the ends of hoth of tho pieces to be joined, and which is retained in its place by the application of a circular iron hand. This band is devided into three portions, and theso ary

The Rating of Metalliferous Mines. At Truro, on the 21st inst., a large meeting, which was attended by Mr. Pendarves Vivian, M.P., Mr. Brydges Willyams, M.P., and MLr. St. Auhyo, M.P., was held to consider the subject of the rating of metalliferous mines. A comthe principle of the rating of lord's dues was unanimously affirmed.

Cannon-street and Ludgate-hill Foot-bridges.-Tho Court of Common Council haco referred to the Bridge House Committee to ascertain upon what terms and conditions Cannonstreet foothridge can be throisn open to the puhlic, and to report thereon to the court ; nlso to inquire and report why the footway at Lud. gate-hill had not hitherto been thrown open to the public.

Demolition of a Factory Chimney. - Las week a square chimney-stalk, 111 ft , high, on the site of the Charch-street Mills, Preston, was razed to the ground. The chimney, which was 3 ft , ont of the perpendicular, stood in a crowded and busy part of the town. The work of demolition, though hoth ditheult and dangerous, was accom plished withont ivjury to the surrounding pro
perty, in the presence of a considerahle crowd. South London Working Men's College.-
Professor Huxley, F.R.S., the Principal of the Professor Huxley, F.R.S., tho Principal of the College, will presido at a general mecting on Tuesday evening, January 28th, when a lectnre
will be given by Mr. J. H. Freeman, F.R.A.S., on "Star Showers." New classes in French, Geography, and History will begin, we hear, in Geography, and His
the following week.

The late Mr. M, B. Newton.-We regret to hear of the death of Mr. Marcus Bourne Newton, at his residence, Highbury. He was fo many years London agent to Messrs. Joseph Cliff \& Son, of Wortley, near Leeds. He was well known in the building trade, as a man of information, and was greatiy esteemed by all his friends.
Sculptrure, Burlington House.-The added story for the Royal Acaderry, at Burlington House, will receive the adormment of eight statues. These are, of course, to be execnted hy members of the Academy
Buxlington Fine Arts Club.-An exhibition of the collected works of the late George Mason, A.R.A., has been opened in the gallery of this cluh, Savile-row, and will be fond interesting.

Dalbeattie Quarries.-Some of our readers may bo interested in knowing that Messrs. R. oeen transferred to Messrs. Shearer Smith \& Co

## Another Look at

Bethnal-greens Museum.

## IE contrast hetween

 tho plain, nnpretending extorior of the hnilding at Bethnal. green, and the opposite character of, some of the articles at present grouped in it for exhihition, suggests the reflection whethor, regarded in a certain light, the outside aspect is not the more suitable of tho two, more in koeping at least with the manncrs and associations of the district. Of course we aro not here thinking of the pictnres, the best of which are things that may he equally welcome in palaco or cottage ; hut tho articles of ornamental art (furniture, \&c.), with which the gromad-floor is largely taken up, appear to us not quite the best kind of thiug to placo in a freo exhihition in such a quarter. A large proportion of them, indeed, would be the wrong kind of thing anywhere, consisting as they do to a great extent of that class of modern Freneh objets de luce, such as candelahra, timepieces, bronze and gilt statuettes, \&c., the worth of which consists much moro in the value and -showiness of the matcrial than in any ex.collence of artistic design, or even of execution. We do not forget that thay are intended, to a certain extent, to serve as incentives of work. men in various hranches. Still, rather than these gold and ormolu "Cupid and uymph" things, We would like to see a good proportion of the collection illustrating the applieation of elegance and relinement of treatment to the ordinary furnitare and appurtenances of humbler life, not uecessarily altogether in a chcap form, but at all events in a form in which the moncy valuo of the articles was not their most import. ant elaim to attention. In the upstairs cases there are here and there very beautifal specimens of ornamental work, chicfly Italian, but in the collection which first strikes the cye downstairs, gaudiness and mere meretriciousness are tho main characteristics. This, as it seems to ns, is to be rogretted.
As to the pietures whieh form the main attraction at present, a glanco round them in a com. prehensivo and consecutive manner, may still bo apropos, more especially as indicating the extent and manncr in which different schools aro ropresented. The arrangement of the pictures, hy the way, the larger works round the wall and the smaller ones on screcns, is very seen. The English sehool is not largely represented, and chiefly hy portraits, including two or three of the best known and finest hy Reynolds and Gainshorough. In one of the Gainshorough portraits of a yonvg lady sitting ander a tree, the pet dog seated beside her on
the bank is a masterpiece in truthfnlness of aetion. Romney's portrait of "Mrs. Robinson" (19) tends, along with other works at present in Burlington House, to raise his name very mueh ahove its conventional standing, and puts him nearer Reynolds than it has heen the fashion to reckon him. Certain Lawrences in the vienity look sadly depreciated in such company; and two pieces of tame classicality (i.e., nudity), by Westall and Hilton, are among the things whiel like some of the Frenchifed gilt curiosities downstairs, seem ont of place here. It appears scarcely desirable to place suhjects of this kind hefore uneducated spectators, who are apt to take (to say the least), a very vulgar view of them; more especially when they happen, as in this case, to ho very poor art. Such a thing as the small "Tarquin and Lucretia," of Cagnacci again (257), in which the sulject is certainly not very delicately handled, might as well not have heen hung. Not that there is any large proportion of works hore to which such a consideration would apply; hut, in regard to Art Exhibitions for the masses, tho point is worth a remark, whether anything is gained at present by puzzling their propriety with paintings of which they only take in the hard fact, not the anderlying ideal : since what a recent writer in the Contemporary Review has termed "tho law of modesty in axt" is not very well nuderstood at prcsent, eveu among the upper classes in English society. Worth somo dozens of average nymph and Vonus pictures are Vandyck's grand por. traits of "Philippe lo Roy and his Wife" (59, 63), lent hy the King of Holland, the very embodiments of stately patrician dignity and sense of power.
The multifarious collections of dead game, and so forth, hy Weenix, in this vicinity, do not raise one's idea of this somewhat over-valued painter of "still life"; the colours are harsh and crude often, and the texture and hrilliant light reflections proper to plumage and fruit are sometimes strangely ignored. "Vulgar," it is to bo foared, must he written against these productions, by those who are not taken in ly the prestige of a nainc. Nor do the landscapes of Rnysdaël and Hohbema, as seen in conjunction here, altogether realiso their reputation. There are finer Ruys daëls in existenee, certainly, than these, but many of this painter's works tell hetter in engraving than in their original form. The composition is "romnntic," "pietaresque," and such other adjectives, hat then the colouring and the dctail, in rocks and water especially, is not that of nature. The llobhemas are tame, and also with a grey colour rot pleasant to tho eye. The artist's diplomn pictnre, painted for tho Amsterdam Academy (76), in which ono would suppose that he would put forth his hest powers, is certainly not a work to make mach alk about. Both's glowing landscape (90) is a much intenser worl, a pleasant atmosphere to be introduced to, and which tells tho more from juxtaposition with tho small cool Claude (92), Wich in truth it rather overpowers. Th half-length of tho Earl of Leicester ( 94 , hy Sir
Antonio More, is worth attention, for the pieturesque and unusual dress, and tho pains which the painter has bestowed upon it. Tho irmmense advantage whieh the old portrait.painters pos. sessed in tho costumes of their sitters ought to he always taken into account in drawing any comparisons between tho artistic results of modern and ancient portrait-painting. Rembrandt's "Youthful Head" (103), his hetterknown portraits of tho "Palekan Fantily" (100, 107), and his superh "Portrait of an Old Lady" (113), which has heen in one of the reeent Bur lington House exhihitions, aro all masterpieces in their way, and things which one is always glad to meet again. Vandyek's "Wife of Cor nelius de Vos" (116), with less power than somo of his works, may he noted as one of the most heautiful and iuteresting faees ever seen upon
canvas. Two balf-length portraits of Jane Sey mour and Edward VI. $(111,115)$, with the name of Zucchero on the frames, but which are more cautionsly lahelled in the catalogue, "artist nnknown," aro worth special attention. These are hardly-painted pictures, in low tones on a very dark ground, somewhat resombling in general treatment the small profile portrait by Pictro della Francesca, No. 195 in the present Burlington Honse collection. In the "Jaro Seymour," the drawing of the features is a little stiff and angular, but the general effect, with the pale dress only a little darker than the fleshtint, and the head-dress, in folds of orange and low purple, is most delicato and nnusual. In the other tho face is hetter painted, but the colour not equal to this one. The allegorical pictnre hy Porbus, "The Power of Love" (120) (a very sensuous kind of allegory), is well worth attention for its peculiar motif and fine colour, and execution of costumes and accessories. On the small screens iu this portion of the collec. tion are some of the enest existing specimens of the two great genre painters of tho school, Ostade and Teniers, in which especially the splendid composition, hoth as to hines and lights, wherehy the former painter glorified the hum. hlest peasant life of his country, may be studied to great advantage. Among these, "Interior with Peasants" (128), is perhaps the most perfect. A small Terhorg, " $A$ Lady at her Toilet" (170), should he particularly studied; it is a masterpiece of tone and execution in regard hoth to the figure and the painting of the marblo column and cornico which form part of the baekground; thore are few things in the Peel collection at the National Gallery to equal this. Among the few Italian pietures Canaletto is predominant, and is seen here to the greatest adrantage; "Venice, from tho Giudecca" (256), is a particularly good specimen, with its espanse of reddish brown quay in the foregronnd, which throws baek so well the distant city scen across the water. Domeniehino's "Woman in Eastern Costume" (252) is a fine thing in the painter's usual bright, cheerfnl manner ; and Conegliano's "St. Katharine of Alexandria" (265), rather crude in colour, is a capital example of what may be called decorative painting, in style and manner. But worth more than all the other Italian works, and, indeed, one of the finest things in the whole place, is the Giorgione, "Vonus disarming Lovo" (263). The tone of the landscape is quite unroal, it is true, but then so aro the fgures, and the whole thing is in perfect kceping, and suffused with a glow of colours qnite magical in its warmith and intensity. Thero is no Titian worth saying much ahout; and the Spamish school is reprosented mainly hy Murillo. There is one fine and well-known Velasquez, the portrait of the little "Infante of Spain" (299), looking like an inverted wineglass in his stiff frock, which, for its splendid qualities of execution, is likely to retain its hold on our admiration more permanently than many pictures of a more aspiring type in regard to subject.
The most interesting portion of the picture exhilition, however, is the French collection; interesting, hecause of its remarkahly high average merit, and because it illustrates a school of painters whose works we have not often such an opportunity of studying and comparing ; viz, the French painters of the last generation and the older men of the present generation. Here is the larger copy of Ary Scheffer's fuest pieture, the "Francesca da Rimini" (366); one of tho few works in which the artist escaped from the region of mere sentiment, and rose to the expression of passion and tragic power,-a picture far superior in conception and artistic power to the theatrical "Christas Consolator," or tho placid "Dante and Beatrioe," hy which Scheffer is hest known to tho English pulbic. Of one most remarkahle artist of the same period, Decamps

Whose works are almost minkown to the public England, there aro noloss than thirty-four spec mens, including almost all classes of subject, The largest of thesc, "The Patrol at Smyrna" (35), has been engraved in an Euglish puhlication; it is one of the finest combinations of
humour and of hrilliant execution we luow of humour and of hrilliant execution we kuow of in modern art: the members of the said patrol,
in cay parti-colonred dresses, with thicir comin gay parti-colonred dresses, with thicir comtearing at full speed down a stepped street tearing at full speed down a stepped street, as if they would brenk their necks and the horses', but otberwise with a stolidity of counte-
nance and manner clearly indicating that this is nance and manner clearly indicating that this is merely their way of doing tho hnsiness. Among other admirahle works by Dccamp, may he men-
tioned "A Troop Watering their Horses" (337), tioned "A Troop Watering their Horses" (337), "Well in Syria" (482), "Turkish Fortress",
(498) "Mules at Boulac" ( 555 ), a wonderfully (498), "Mules at Boulac" (555), a wonderfully
clevor thing; "Villa Dorin-Pamfili, near Rome" clepor thing; " Villa Dorin-Pamfili, near Rome ${ }^{\text {j2 }}$ (562): whoover will compare these three last. mentioned works, and uotice how distinct they are in subject and treatment, and how excellent each is in its way, will eertainly form a very
high idea of the versatility and porver of this high idea of the versatility and porver of this artist, who seems never to have sunk into com-mon-placo, whatever ho attempted. One picturo only of his here mast he regretted, "Au Execu-
tion in the East," as an instance of that tendency tion in the East," as an instance of that tendency
to paint suhjects of horriblo oruclty, which is even a greater blot on modern French art than its sensuality in some other classes of subject; it is a pity such a work was hung. Close to "Tho Patrol" is ono of the finest Corots we
know of, "Macbeth and Banquo meeting the know of, "Macbeth and Banquo meeting the
Witches" ( 356 : the ficures, of course, are cuite Witches" ( 356 : the figures, of conrse, are quite
anhordinate to the landscape), find near this is a anhordinate to the landscape), and near this is a
heautiful landscape hy Rousseau ( 353 ), in which heautiful landscape hy Rousseau (353), in which
we look into meadow-land and a stream, tlurongh we look into meadow-land and a stream, throngh
an arch of troes in tho foreground. Among the an arch of troes in tho foreground. Among the
older French painters we find on tho walls older French painters we find on tho walls
Wattean, represented in some of his largest and best works ; notably his "Picnic Party" (398) a charming group of gay figures, among which should be noticed especially the two couples in the backgronnd, where a lady is heing assisted to riso from her seat by her companion; anything more nataral and elegant in mannor than
these little figuros one conld not wish to see these little figuros one conld not wish to see.
Greuze is largely represented, chicfly hy heads Greuze is largely represented, chicfly hy heads
in his usual manner, and with lis nswal merits in his usual manner, and with his nsual merits however, "The Broken Eggs" ( 468 ), shows this painter in a class of subject in which wo seldom see him, and which in humour and feeling partakes of tho characteristics of Wilkie, though the humour is at once less delicate and less genuine than that of the Scottish artist.
Death of Marino Faliero," by Delacroix (3 Death of Marino Taliero," by Delacroix (371), is a very fine specimen of this painter. That mas.
culine artist and splendid dranghtsman, Horace culine artist and splendid draughtsman, Horace
Vernet, is here in great force; among his larger works are "Tho Arab Tale-teller" and "Joseph's Brethren dipping the Coat" ( 335,338 ); among "A smaller works on the sercens are noticeahle "A Lion Hunt" (505) and "Fishermen Emarkik:
ing " (536), the latter a charming and natura] work, $-a$ single man in a red cap walking over the heach to his boat in a strong sunlight, which throws his shadow on the face of a quay on the
richt. Of Meissonier, again, there are a number right. Of Meissonier, again, there are a number
of specimens, of whlich pach seems the best until of specimens, of which each seems the best until
you look at the next one; among others, the you look at the next one; among others, the
first picture heoverexhibited, ""Visitors" ( 516 ), in whieh his peculiar excellences seem atready fully dereloped. Cloge to this, "Napoleon and liis Staff" ( 546 ) is a marvol in minute execution of men and horses; all the characteristic power and expression in the countenance of the man whom Fietor Hugo celebrated (in a poem) as simply "Lui," are given on a head aboat the
size of a pea. Some others of these little porks size of a pea. Some others of these little works
are cuite beyond praise for concentrated powe are quite beyond praise for concentrated power, brilliancy, and expression; , we may name par-
tictlarly "Throwing Diee" (537), "Sulject from the Decameron" ( 561, a heautiful work), and "Travellers Halting" ( 587 ), One wromk by
Dupré, "Crossing the Bridgo" ( 595 ), illustrates this fine and original landscape artist. Conture's "Masqueraders" and "Duel after the Masquerade" " $(513,517$ ), shonld be looked at for their artistic merits, not to speak of the moral lesson conveyed; and the same painter's "Roman Lnxury", (493) contains one of the most excellent specimens of drawing and painting of the female figure we have seen, giving the indicar tions of the main points of the framework with out losing softness and delicaey of surface-a very difficnlt achievement. Among the artists of the last generation, Marilhat should be noticed epecially for his "Composition : the Erechtheum"
(362), and one or two of his Nile scenes. Among the eighteenth-century men, too, Fragonard wiil repay attention, for a real heauty and originality
of feeling in spite of the tendenoy of his desimg of feeling in spite of the tendenoy of his designs,
to " prettiness." "The Fonntain of Pleasure" (344), engraved a good many years ago in the Art. Jourval, is a little composition full of ennny, classic feeling and poetry; and the little figure of the "Lady carving her Name" on a trec (570) despite a certain mannerism in the figure, is a bright rision of youthful beauty and gaieté du ccens, which tempts one to look lightly on faults of style. On the whole this French colleetion
affords $\&$ rery full illustration of some of tho affords a rery full illustration of some of tho
ablest artists France has possessed during the ablest artists France has possessed during the modern epoch of painting.
The English and French water-colours, on screens on the ground-floor, contain some fine things; Decamps again being predominant annong the Frencl, his "Arabs fording a River" (668), and a "Well in the East" (687), heing among tho bost; Marilhat's "On the Nile" (676), a very fine drawing, should also be looked at. Among the English works are a consider. ahle number of those neat and thinly-washed water-colour drawings by popular artists in this school, which are so like each other in style and Those by David bopour of art-manufacture. Those by David Roherts aro oxceptions, and include some skctches in his finest manner; hut the things to look at here are some small works by Turner, particnlarly "Grouse Shooting," and Woodcock Shooting" (653 and 657) : tho latter shows Turner in a suhject different from what wo usually associate with his nemc. It is a con. the left, the claver, with a higli hank of trees of the ground is shown aseending between the stems of tho trees, the small dark firstree in ront standing out against the rest of the composition, and the ferns in the immediate foreground, all indicated quite precisely in a drawing Which is evidently rapidly executed, show thie hand of a master in the art. It is worth while Ticldingars "Look "Gronse Shooting " with Copley Ficlding's "Look Katrine," on the same screen, and notice the diference between genias and mere facility of hand and prottiness. Perhaps theere are no things in the art more certain to ketches.
Our remarks may, perhaps, serre to direct attention to some of the things not always likely to ho noticed hy geueral visitors, or mentioned in ordinary reports of this collection of pictnres, which it is to be presumed will have to be remored durivg the ensuing summer. Wo must add a word in praise of the catalogne, which is arranged in a manner that might he a modol for some other picture exhibitions. The names of artistr, in tho continuous catalogue, are printed in large black type, in the centre of the page, rally the title of each picturo, so that it is gencclance down the pares particular name hy a loguce over agrin under the head of artists names alphahetically arranged, giving under each name not only the numbers, but the titles of all the works of each artist exhibited.

## ARCHITECTURE IN REFERENCE TO

 MUSIC.the rotal hastitupe of bitilist architects.
Architecture practically considered in referenco to music was the snbject of an claborate jon., on the 20th of Jannary, and which was illustrated hy a numher of diagrams. After some account of St. Gcorge's Fiall, Liverpool, in respect of sound, contrasting with it the Albert Hall, the paper proceeded :
It is prohahle that for the largest class of musical performances, the execution of great worss of combined choral and instrumental effect, form will be found the mosc suitable. The form of the completo ataplitheatre, thongly its symnetry and simplicity may seem to recommend it, has this serious disadvantage (when used on a largo scale) that the sound, as produced in the orchestra, is not properly controlled and confined in the direction in which it is most wanted. A certain proportion must be ohserved between height and width, and the wide area of an elliptic amphitheatre requires a lofty roof, and consequently a great space for the prolaunched with nothing to eonfine it in the direc tion of the ardience, so that a considerahle por-
tion flies off to the roof, and is either absorbed there (ii absorbent materials are placed to retain it), and so wasted, or it is rellected back again. and hecomes a source of serions disturbance. Something approaching to the theatre form is nder, as the orchestra can then be coufined the a lower roof and between side walls, and n a tion of sarge scale, there is still the same objccspace, in which persed, besides a degree of diffeulty in cretting all the audience suffiently in frout and facing the music. Accommodation, too, in such a case zurst be obtained by the use of successive tiers of galleries, which, exeept in. hood front row or two, can searcely ever bo 8o tho whole, therefore, I believe it will be found that the requirements of the ease are best met, and the diffenlties best avoided by the long form of room, rather than the theatre or amphithoatre form, and that conduction is a more direct and sucecssful way of conveying the sound to the audience than radiation. The waste space of air in a room of this size may be made mnch less in proportion to the area than in an amphitheatre. The amphithentro could not be made to look otherwise than illproportioned, unless its roof were placed nt something like a proportionate height. For the successful conduction of sound in this way through a long building it is essential that the soma, as produced in the orchestra, should be confined from spreading ahove or at one side of the performers, aud reflectea forward as strongly as possible; that the height of the auditorium, though greater than that of the orchestra, shomid lot be such as to give room for any unnecessary a disturbing echo from the roof, that for tho same end the roof should be nearly flat rather than circular, so as not to collect and focus any reflection of sound which may be inevitable. The orchestra sbould be constructed priucipally of wood, and the walls of the auditorium lined with wood; but the walls, as well as the ceiling. hroken to have their otherwise flat surfaces avoid the conduction of sojound along the walls. and hreak up any reflection from the ceiling ; and careful provision must be made against a return the principal acoustic provisions, which have heen before laid down from experiment by some of the best authorities on the subject, and in regard to which I need only ohserve that my own experience, as far as it goes, completely eonirms them. But now as to arrangement of the andience and performers in regard to onelongitndinal of the prineipal adrantages of the facing and directly opposite to the performers; not only a better position for hearing, hut moro comfortable in every way: for although we donot hear with our eyes, thero is an irresistiblo tendency to look towards the quarter from which the sound comes: and in a sido gallery in a music hall you will always see the andience with their heads all turned sideways to look at the orchestra. A room with a flat floor, homever, is always unsatisfactory for hearing, and 1 hold from tho orchestra. When sitting, as I have often done, at the back of a lone flat-Hoored room at a concert, I havo always felt that tbe principal. volume of sound was orer my head, aud out of called reach, so to speak. I adopt the principle curve." The tendency of this eurve is to fall. near the point of sound preduction, and to rise again furither on, this hrings the front roms of the auditory higher up in relation to the performers, so that the somad is not carrici so far over their heads as would otherwisa be the case. Another point to he considered in plaeing theaudience is, that for a performance on a large scale (which alone we are now considering), no person who wishes to enjoy the music, or to realise its trae effect, wrould ever choose to sit close up to the orchestra. As concert-roome are zenerally arranged, it may be takpn as a rule that for this class of performance all the first ten or twelve rows of seats, if not more, are thrown away, so far as any realenjoyment of the music goes. Now we geneconsidemat in connexion mith concert.-noms, ocenpied hy a lutce lobly or minly $n$ witi for ming sure of the crowd in going out or coming in.

Now I have proposed here the system of carrying the auditorium to the very hack of the building, and making the entrances to the principal portion of it at the sidcs, between the auditorium and tho orchestra, and transforming the space usually occupicd hy the front seats, in which no one can hear with pleasure, into a vacant spaco after the concert, and as a promeyade for part of the audicnce during the interval which generally occurs in the middle of a porformance. this space were laid with parguetry flooring on
joista, with a hollow space undernoath, it would joists, with a hollow space underneath, it would
not only make a very effective cntrance to a room, hut wonld prohably act as a rellector and reinforcer of the sound from the orchestra. Tho fact that any of tho audience leaving beforo the elose of a concert would have to pass before the performers, may oconr as an objection; hut it is only the solo performers in front of the platform who are much disturhed hy snch an untimely exodus, and by the arrangement of the aisles it will be seen that the audionce need not pass near thom at all. It may be observed that there should nevcr be a centro aislo hetween tho seats opposite an empty strip of floor instead of a rango of appreciative countenances. The possimore serions objection to this placing of the ontrance, but I think it may he entirely obviated hy such an arrangement as is indicated in the plan, of making the lohhies to the ladies' and inncr lobhy, and having no communication between it and tho outer vestibule; and by kecping the inner lobby well warmed, and with a sumicient outlet at the top, any craughts which
might be drawn in wonld bo disposed of here, without finding their way into tho concert-room. This is of course ouly a question of ordinary
This planning ; but I think in all cases of entranecs to concert-halls some such decisive means shoudd
be employed to shut out any access of cold air be employed to shat out any access of cold air
from without, which is the causo of much indis. position among singers, independently of the discomfort to the audience.
Now in regard to tho orchestra: it may be
said that the placing of the various performers not only so as to be well heard by the audience, each other, has heen almost entirely overlooked in most coses. It is almost entirely ovcriooked cient to make a tier of scmicircular stages, ond behind another, and the band and chorus fit themeclves into these in a kind of promisenous manncr, while the solo singers find room whare they can in the narrow strip loft for them in
front of tho band. This might hare done very well in old days of smaller performances, and when the band was used much more in conjunc. tion with the chorus than it now is, and for the chorus sang. Now the case is very different; the modern band is much more powerful and brilliant than the old one, and is mostly used quite ruanner: and the usual construotion of the manner: and the usual construotion of the
orchestra, which crowds the band and chorus together, is a double disadvantage. The band is immediately baoked, not hy any sound-reflecting substanco, but hy the mass of tho chorus, whose dress forme a body of soind-absorbing material;
and on the other hand tho singers are liable to and on the other hand tho singers are hable to
ho put out and clisturbed by tho noise of particular instruments close to them; for it may be supposed that a chorus-singer is not likely to go
through his part the more correctly with tromhone bellowing in his ear something quite different from what he is singing. The construc. tion of the orchestra which I would propose as kind of wooden shell or sound-board bending round them in the rear, and coming under their feet to the front, the stages on which they stand being carried by framing at intervals. The
sound-hoori would he carried above the heads of the upper rank of the band and bent forward over them to some extent; and then above and behind this and on tho apper levol would be ranged the chorus seats. By this means I expect that the sound of the band would be timo the sound into the room, while at the same ments, the brass and drums (which are always at the back) would he to a certain oxtent veiled from the singers, who would he ablo to hear their own voices better, and hear the band as a having here and there a particular instrument close to their ears, drowning everything else.

This arrangement of the orchestra in two that rooms bnilt on this principle, and with tho iers would be susceptible aiso of very good hest acoustic principles and arrangement, might dcorative treatment. The orchestra as planned be made mnch louger than they commonly are, by me is iutended to accommodate a band o about eighty; a good average number for the hest class of band. It may be useful just to mention how the instrumeuts aro generally A band and what space is required or oach a band of chis size would indide abour hirty second, and occupying tho lower stages to left and richt of the conductor (who faces them) about twelvo tenor violins placed in the midd of the same stages, betweon the first and seconds; and from oight to ten violoncellos, and nearly the same numher of basses, which are usually divided and placed half on each side belind the violins. Then there are the quieter wind instrumente, the wood instrumente, हlmost always eight in number, which should range in a row hohind the tenor violins, as sometimes thoy are kept more to the left; and at the back are placed the drums, and on each side of them the orass instimments. If the stages aro made ahout 3 ft . wide, it will he found sulficient for the violing; the two back rows should be wider, to allow plenty of room for the larger stringed instruments. Ahout 3 ft . longitudinally should he aillowed for each violin, and ahout 1 ft . more or the violoncellos; the basses, which are very alky instruments, must he reckonedas requiring nearly 5 ft . to each player. A platform, the width of two stages, 期ould he left in the centre of the two top rows for drums, which for want of sach a provision are often very inconveniently placed. The wind-instrument players reqnire ittlo moro than easy standing-room longitudi. ally, their instruments not necessitating much action in playing. Those detaile are not quite was instructed to provido room for a band of ixty, and very conscientiously provid a band of ixty, and very conscientiously providoc standing oom for sixty persons; which did not quite newer. The organ should bo at tive back of the whole, behind the chorus, to whom it is the roatest assietance; and it should, whorever possible, be rather spread out laterally behind he singers than projecting forward among then a square mass: the lattor is the almost universal arrangement, bat it is had, as it places a part of the chorus on each side in a recess, where they aro not well heard and cannot hear em other; which latter point, it should he ormancen, is as essential for satisfactory peringers. The rest of the space benden par ition like that bohind the hand, or it may he partially filled by carrying ronnd some of the which worgan-pipes in a segment of a circle, effect. In the organ height has to be provided for a pipe 32 ft . long, which is the longest nsed; hut these larger pipes may be placed helow the level of the visible organ-case ; they will he just as well heard, it being an understood thing that the organ is connected with, and supported hy, the samo system of timher framing which carries the chorus-seats. The organist should rehestra, which, below, in front of the whil orchestra, which, now that tho electric movenost important; for when the player is caged up cloge ander the instrument he cannot possibly ell what effect he is producing; but there re very few concert-rooms in England whore his has been attended to. Lastly, tho soloingers 1 would have advanced on a small proceting platform of their own, so as to bo a littlo nearer the andience and farther from the band hy this means not only will their voices stan out hotter, but they will not he incommoded by he too near proximity of the band.
These deviations from the regular arrange ment of the orchestra would, I believe, conduc to the more successful and clear performance of music on a large scale, and to the comfort and case of the performers in going through the work. The auditorium, it may be observed, not nnlike that of Exeter Hah in renera arrangement, hut the seats there are not arranged on a cnrve, and the proportions of Exeter Hall are broader and shorter. But, ugly and faulty in many ways as that time-honoured room is, I have never heard the effect of oratorio choruses on a large scale so clearly and satisfac orily as from the back part of Exeter Hall. trihute this to the raised seats and to the position of the audience directly facing the perormers. The ceiling is low, and it is a question of simple construction of sound. In fact, there
e made mnch louger than they commony are, my plan the auditorinm is 150 ft . long, exclusive f tho space in front of the audience. Tho length from the front of the orchestra to the ack of the hall, in St. George's Hall, is about 140 ft , and a flight of steps at the back rises to bout 8 ft . or 10 ft . ahove the floor level. From the manner in whioh a hand at the other end can be heard at this extreme point, I have no doubt that, with proper construction, the rcom might be prolonged 100 ft . further with sucecss. So also Exeter Hall might he prolonged without he gallery, to a very coneiderahio extent, with inprovement to tho effect. Of course, it may be said that side galleries would give the same accommodation without increasing the length. But side galleries are most mnsatisfactory places for hearing music. In one hall with which I am very familiar there are long galleries at each side arranged in a slope, front to hack, and which take ahout 1,000 of the audience. But in hose galienies the part in which you can hear the effect of band and chorns fairly cren is mited : in all the rest of the gallery it is an unsatisfactory strain to hear. Large windows in any position whero they can reflect sound are andcsirable, and lichting from the roof is generally bad on this account. On the whole, the windows aro probably safest himh np in the sido ralls; and concert-rooms beinn so much more used by night than hy day, lighting is not the most important point. Ono practical difficalty in dealing with a hall on this plan is, of conrse, tho utilisation of the space uuder the seats at the hack, which is too larre an area to he throma away: in towns it would probahly hecome an available source of revenue as shops or in some similar manncr; and where tho sito allows of no approach at the side, the cntrance, of course ould be here.
Very large ideas have been afloat lately as to dated to hear pursicns who may he accommo dated to hear manc in one builing; and a well known writer on architecture has mado it charge against us that wo are content with getling three or four thonsand people into a concertroom, whereas, if tho buldings wer properly arranged four or fivo times that numher might hear. Thisidea I believoto ho a complet fallaoy, and one which those who build snch rooms should discourage. It is impessible hy any acoustic expedients to secure that minsic should be intelligibly heard and effectively rensay in rooms heyond certain hmits of size. hinted, is really the point. You may no donh group 15,000 or 20,000 peoplo in such a way that they shall all be within sound of the performers, and have a general notion of what is going on hut that is not bearing mnsic. It does not in the least follow that hecause 500 performers produce a cortain effect in a building of a certain size, 2,000 will produce an eqna effect in a building of four times tho area for two reasons. The organ can be iu som decree adapted to an increased scale of build ing, becanse its sounds are produced parely hy mechanism, and hy a heavier pressure of win they can be forced up to a proportionate strength Io not think these hage over-hown music mille give as much pleasure to the ear as the od quieter instruments; but it must be admitte that they can make themselves heard. But in regard to other instruments and voices, increase or powor can only be got hy multiplying the namhers, and this is not the same thing at all. With increase of numbers comes decrease of dehcacy, accuracy, and precision; and besides a pectura indistinctness and want of sharpness of effect better folt than described, as if the outiues of the composition were blurred and uncertain,- the result, I suppose, of the fact that when a thousand or more porformers are tosing togethe they must he so far asander that their sounds do not strike the ear with that comhinod and in stantancous effect which can be seourcd with a amaller number. In the second place, 15,000 or 20,000 peoplo cannot be accommodated within hearing of music at all except in a huilding having a great cubical capacity in proportion to its area; that is to say, a rast mass of air space between the performers and a great portion of no andience, and sound cannot, by ordinary liability to he dispersed and disturhed in its passage. This is not, certainly, a very acientific way of putting it, hut this is the only way in
which $\mathbf{I}$ can explain the singular effect of the
music in the Albert Tiall as heard in the balcony. Yon get a part of a plirase, from tbe violins for instance, distinctly, and the other portion of it seems to go away somerwhere else-

## "The rest the gods dispersed in

You do not hear partioular instruments come in when they ought, but you find them out when they have got half through a phrase. This first time I visited the building. This is not "hearing music." I have beard, within a short period, 1,000 performers in the Albert Hall, 500 harmonic Hall, The 500 produced the effect; hat certainly tho 250 in the compara tively small room at Liverpool prodnced more effect than the 1,000 in the large hall, and as to clearness of rendering, in regard to detail, there is absolutely no comparison. I should apologise, perhaps, for going into what may seem purely this is, that great hrildings like the Ahhert Hall are unsuitable for a cloar and intelligible render. ing of mnsio: and the result would have been far more satisfactory, for this end, if two hails of half the size had been built, and the audience and performers divided between them. It may be possihle to enable- 10,000 people, or at all events, 8,000 , to hear su0 performers satisfac onable 20,000 to hear 1,000 with the like rosult.
We have been considoring, so far, the problem of brildings for large comhined clioral and instrumental performancos only. A differont class of performance, bowever, changes tbe conditions
very much. la comparing vocal and instrumental concerts, it must be rememhered that roices can be satisfactorily heard in front only; but the greater proportion of instruments can be heard nearly equally well all round; even the conditions of voices, can bo heard as well sideways as frontways for all practical purposes, away from the listener. For this reason a central position may hecome the hest for the performer in a building intended specially for this class of music. There is a most beautififl and intellectual class of compositions written by the great masters of music for three, four, or five-stringed instive ments. Tho idea occurred some fer y yars ag of bringing these warks within the knowledgo of a larger public by that serics of performances which has gained such celebrity under the title in one sense a great success, are given under the most serious disadrantages from the want of sxitahly planned and constructed room for them. It is absurd to suppose that the same performance can be suitahle for this fine and del: cate class of music. To treat charnber music so is as reasonable as it would be to place a statuette intended for a drawing-room in the centre of a large sqnare. What is wanted in this case is a room where all the amdience shal! be as near as
possible to the performers, and whero them should be as little waste air space as possible. In this case the centre of the room is quite the most suitable place for the performers, and a circalar raisod platform in tbo centre would be probably the best form that could be employed. Th isacoustic curve, the whole building kept low in comparison with its area, and roofed by a dome, The inner surface of tho domo should he lined with wood panelling, as also the wall ahove the
top row of seats. The central skylight would be the simplest and most natural method of lighting in a case of this kind; but to obviate the echo from a flat surface of glass, I would glaze the inner skylight as a congeries of small circular lights, with conves glass, the convex sides downperso echo; and at night artificial light could bo applied within and aboro tho centre of each
of theso lights. In a building arranged on this plan thore wonld not be more than abont 30 ft . above the players at the highest point. The whole of the resonant surfaces, the roof players, and the sound would impingo on every players, and the sound would impingo on every
point at the same moment. The hrilding, as

* Timber wonla be preferablo for aroustic reason, as
 tien. proble with timber.
suggested here, would seat 2,000 people, of whom the furtbest row wonld be within 50 ft. of the players. In such a room I believe 2,000 people
would be able to hear string quartette music would be able to hear string quartette music
witb the effect which tho composer intended. This is cortainly not the case with St. James's This is certainly not tbe case with St. James's
Hall, where these compositions are now played. It is possible tbat for instrumental masic on a larger scale the central arrangement of tbo players might be fonnd tbe best in some ways, as bringing a larger number within good hearing distance of the more delicate passages, though the arrangement and placing of the musiciaus in such a case is a matter of some little difficnlty. such a case is a matter of some little difficnlty. idea had been practically adopted for some time past at M. Pasdeloup's Sunday instrumental concerts in Paris, which are given in a building concerts in Paris, which are grven in a builestra
at other times used as a circns, the orchestra being placed in the centre. The Athencrum 2 contains a long communication on orchestral concerts in Paris, in which the writer mentioned this arrangement as realising a very satisfactory effect, and added, "the matter is worihy the conefrect, and aded, the matter is worthy the consideration of architects who may have to erect
new concert-halls $"$ and though a think the Albert Hall far too largo as it stands, to realise the moro dehicate effeets of orchestral playing, it is very possible that if you were to take the araplitheatre portion alone (omitting the boxes), armphitheatre portion a ione (omitting the boxes),
witb a lower roof, and place tbe orchestra in tho arena, it might prove an exceedingly satisfactory arrangement for enabling a large number of arrangement for emabing a large number
persons to hear a symphony to adrantage. persons to hear a symphony to advandage. It ments so that they could be equally well heard ments so tsat they could be equally well heard only serious difficulty. Of course, this central arrangement in hoth cases supposes concerts of instrumental music alone, unmixed with singing. We are not much accustomed to this in England; but this is mere mattor of fashion, and since the conditions of successful hearing for voices and instruments are so different, it seems better, wben large audiences are in question, not to mi . wben 1
them.

RECONSTRUCTION OF THE INTERLOR of GREENifiCH HOSpital.
Durisg the last few months very extensive works havo been in progress at Greenwich Hogpital, a large portion of tbe interior having been undergoing structural alterations for the College, which is intended to be partially opened to-day for the reception of students.
The portions of the interior whicl have been reconstructed in order to adapt them to the educational purposes to which they are in future
to be devoted, are wlich, until within the last fee apartments Which, until within the last few years, formed
the home of the old naral pensioncrs. The lospital buildings, as may he generally known, hospitar buildings, as may he generaly known, Charles and King William hlocks, and the Queen Sary and Queen Anno blocks, all of which are included in the alterations which are now almost completed. In designing and carrying out the conversion of the building, the principle of appropriating the several blocks to the separato educational and domestic, has been mainly kept in riow. The King Charles hlock, which, under hoeoping onarters of the old naval apart as the sleeping quarters ond haval veterans, has andergono a completo transformation. Th clearel the penshars dor.alies have been cleared away, he interior wand having, to formally occupied has been converted into class-rooms for the naval students who will in future occupy them. These several class-rooms rated, and fitted with gas and other con veniences for their intended purpose
The King William hlock, which formerly con tained the pensioners' dining.room, is intended and i and in order to adapt it to this purpose ex including the formation of large and commodious kitchens, fitted up with several ranges and other domestic convenience. It is also intended to constract a spacious lecture.room in this block. The Qucen Mary block during the period o dormitorioners residence was mainly used a dormitories, threc Coors in tho building consisting of sleeping apartments, with long corridors alon each side. In addition to these dormitories
there was a large and commodious day-room in
tbe centre of the block on each floor, fitted, amongst other aids to comfort with luge old English fire-ranges, around wbieh the veterans were in the habit of relatjug to their iriends and
others the scenes wbich tbey bad witnessed in battle, and otherwise interestinc their listeners witb many a well-spun " yarn." The whole of these apartments $h$ ve beenplctely renovoted and decorated, and ore now in conrse of being fitted up and furnished os dormitories for the students of the college. This block is now divided from the ground-floor up to the floors abore by a new wide and spacious staircase and the northe east portion will be occupied by the sub-lieuterants, whilst the southera portion will be set apart for the encineer students when the college is fuly opened in October next; and the college is fuly opened in October next; and the
large day-rooms on each floor, alrcady alluded to, baye undergone extensivo alterations, and are newly decorated and intended to be nsed as general and mess rooms by the encineer officers and students. Tho hospitnl chnpel, which is in this blect bes aso been renoratel and cleaned, and will be opencd for services as the college chapel.

The Queen Anne block is intended to be formed into spacious apartments for a museum in con. nexion with the college. The worn this lieary The block formorly contained twenty. four wards for tho pensioners, nd these have all heen cleared oway, which has admited of all heen eshinition-room of largo dimensions heing conform portions of the museum in this portion of tho reconstructed interior, are the now at South Kensington, which aro he removed to the Royal College at Greenwicb. have heen effected in the interior of the lospital in order to render it ayailabe for its future pur. poses es a naval educational estahlishment, but still further chenges in the building are said to have heen resolved upon, one of the being the conversion of the chal pintel githe an elegantly finished mess-room for the officers and students of the college.
ane
will be heated with Fill be heated with hot.water pipes, this portion of the works having been carried out ly Messrs.
D. \& E. Bailey, of Holborn. The alterations have bcen designed hy Col. Clarko, C.B., Royal Engineer to the Nayy and Director of Works, and carried ent under his superintendence; $\mathrm{Mr}^{2}$ G. Smith being the contractor, and Mr. Lough. borough the clerk of works.

NEW GYMAASIUM BUILDINGS AT THE ROYAL NAVAL SCIOOL.
Whisst the works descrihed above have been oing formard at tho hospital, an extensive new huilding for the purposes of a gymnasinm has kowise heen in progress at the Royal Naval This structure lias also been designed by Col larke, the Director of Works, Ir STol. being the contractor for the new building at the Naval Schools as well as for the alterations at the lospital. The new gymnasinm is being rected on tho open area betwcen the present Naval School huildings, and its principal north rontago towards the hospital is uniform in rebitectural design with the school.buildings hemselves. The line of elevation of the new uilding stands 25 ft hackwards of the scliool in beight from the ground-level to the cornice he cornio itself being $5 \mathrm{ft}, 4 \mathrm{in}$ in heirht, sur me cornico itach belustmde, 5 ft .2 in. hight, The nownted of the frontare is thns 43 ft . The total hoig a hely buiding is catirely of Portland stone, the basemilaters, with columns nnuing un hetween the windows Tho prin minula ipal entrace in the centre, which stands yation and which is 5 ft . in width, lasan arcled recess, supported by two colnmns on either side recess, supportel cipitols. The centrol portion with orvapual for the portion b bove the corlo whick is phaced the the groups She The ggmanain is approated through an orna nenu wich of the royal arms. The interion of the front portion of the building will contain he frop the basement will consist of the instructors' rooms, apparatus.
room, lavatories, and dressing rooms. On the first floor there is a large gallery opening into the gymnasium, and from this gallery a commading view is obtained of tho gymnasitum exercises. On each sido of the gallery there are several rooms which will be devoted to there are several apartments for domestic pur. poses. The gymnosinm itself is at the rear of poses. The gymmesilum itself is at the rear of from the ground-level. Its dimensions are area being enclosed hy an elliptical roof conarea being enclosed hy an elliptical roof con-
sisting of eight wrought.iron ribs, springing from the ground. floor line, the span of the ribs being 80 ft . each. The height of the gymaasium from tbe ground to the centro of the roof is
31 ft ., above which thero is a continuous light 31 ft ., above which thero is a continuous light
and ventilator. Tho building is also lighted at the sides by a series of windows. A large quan. tity of iron is required in the constraction of
tho gymnasium, which is supplied by the tho gymnasium, which is supplied by the
Horsley Iron Company, at Tiplon, in Staffordshire.

## COMMON WEAL QUERIES

## curremte calamo.

Wirmerer a Minister of Public Elealth is not more indispensable than a Public Prosecutor and whether both should not be qualified profes sional men?
Whether a medical officer of health ought not to be a practical chemist, that he might bo fitted
for his ohvious duties as a public analyst ; and for his ohvious duties as a public analyst; and
whether his salary should not be sucb as would properly remuncrato his services, and secure his nudivided attention to his office?
Whether every local Board surveyor appointed in the fature shall not possess the necossary qualifications of a sanitary engineer?
Whether a person adjudicated a baukrupt three times within soven years, and who on each occasion left nothing for his creditors to realise, Board or company? and if eligible, wbether his citizen right should not be susponded for a limited interyal ?
Whether these or similar restrictions would not havo a beneficial effect, and raiso the standard of public ropresentation?
Wbethor the main drainage and recent sewer. age works of London have not greatly exhausted the water- bearing strata of tho metropolis, and had an injurious effect on all kinds of
regetation in tho vicinity of its circuit?
Whether the carrying out of onr drainage and Bewerage works, as also tho sinking of the numerous artesian and other decp producing springs, is not the cause of the gradanily drying
np of many of the ancient celebrated wells of up of man
Whether prevontion does not render a pro. gnosis and diagnosis nnnecessary, and whether it is not in consequence the stepping.stone and basis of individual as well as puhlic healkh
Whether it is not a most unviso and dangerous proceeding to lay out a number of new streets converging to ono common contre, and whether the danger and the difficulty are not greatly increased where they are inade to oouverge from different angles opposito a bridge, which has already a line of roadway parallel to the river? Whether Mr. Lowe has not been contemplating for some time what he can get for public pur. poses from the City companies, and whether be oonld not he checkmated by the City guilds at once carrying out a
parpose of thoir heing ?

Whether, in constructing a new town or city, or reconstructing an old or a batoed-down one, great parallel lines of streets or roadways, running east and west or north and south at cious and practical method of street.planning?
Whether a prorision shonld not bo made in every railway and pablic improvement act whereby the poor who are dispossessed will he provided for by the erection of new and healthy
Whes, or an equinicnt of nerses
whellings for er nem awcllings for thoso dispossessed, at a distance from the centre of their employment, is in itself sideration?
Whether it is not judicions and wise to make our caols and workhouses as self-supporting as possible
Whether great mechanical skill or great mental genius in itself ought to be the most
prized, and whether one is incompatible with he other ?
Whether mental thonght in every age did not precede nuechanical labour and invention?
Whether both are not twius horn of the same paront, and should
Whether it would not bo criminal to draw an invidious line of demareation that could lead to the divorce of mental genius and mechanical kill?
Whether the rapid increase of population is not a serious fact, and whether it is not the duty of tho Stato to look in time and legiclata vith a view to the fature proper bousing and sources of sustenance boat will be required hy our people?
Whether at some future era of the world all insular nations will not perforco he ohliged hrough reason of self.preservation, to amalgamate, and whother some non.insular ones will not also have to follow suite?
Whether theso natural exigonces will not be the natural laws througb which all races of mankind will be uuited,-tho tonch or force of nature making, at last, "tbo wbole world kin"
Whether, while wo are madly exhausting our conl.fields, we are not most nuwisely neglecting the generating power that is to be found in water, wind, and eloctricity?

Whether the water.force of Artesian wells could not have a moro inseful mochanical applica. tion; and whether wind.sails and water-wheels are not still capable of a much higher phase of development?
Whether the comhined waste gases of the animal and vegetable kingdom (living and dead matter) in the metropolis, if collected, would not be safticient to blow np London; and whether this in itself is not a great wasto of power that might be partially and beneficially utilised ?

Whether the cstablishment of an inventors fund by tho State, for the purpose of encouraging and rewarding the authors of really useful inventious, schemes, or systems, whereby the nation at large is benefited, would not exceed in value the ordinary applications of rewards hrongh the action of tho civil list
Whether some of the most deserving of our puhlio benefactors are not left to dio in poverty, neglected and unrewarded, after expending a
lifetime and exhansting their own private for. lifetime and exhausting their own private for tane in benefiting the commonweal?

Whether each of us could not do a little indiridually for the improvement of our species and society during our lives, and would not the sum the efleche labours in each generation have much hetter position than we found it?
Whether a simple snggestion thrown ont casually, and acted upon, has not often led to important results; and whether it may not be possihle that a modicum of good to the common. weal will arise from the penning of theso queries?
Whether anybody will thank us if this shonld bappen?

THE DECORATION OF ST. PAUL'S. Tre English, as a rule, are not critical. They do not readily detect anomalies in thought, ast or combination; have no notion of consistency in matters relating to art ; and are, therefore, insen. sihle to the fact, that any set of men are not fit te also to the and decide upon any snbject; and ties necessarily competeut tribunals. They will appointing in of able men of business andeleacomittee to settle any any important public work to its guidance abo which prohbly, not of its gemance, abou elightest practical too its mers bas the affairs, the chan andergo. In ordinary whether chances are, pernaps, about equal, be tight or wroitce, proniscuously chosen, wilh uations, wrong in its proceedings and determi. predict, ont io matters artistic, we may safely what it ought, for most unfortunately, exery Englishman of fair education has of tate got the conceit that bo is competent to decide in matter: of taste; and the country, nnder this state of things, may indeed consider itself fortanate, it any greal pubic work, requiring consummate arcistic knowledge to direct, be brougbt to
consistent and glorions completion. In any other country common sense would dictate that the initiative in sucb undertakings should be entrusted to a body of men, a committee, thoronghly conversant with art.
Tho first thing to be considered in reference to the completion of St. Paul's is, what were Wren's views respecting it? Iis views are often confidently spoken of as if they had been em. bodied in some precise testamentary declaration. If this really be the case, where was the necos. sity for supplementing Mr. Penroso, who had so long boen the cathedral survegor? But we never conld believe that Tren was competent to determine, other than very vacuely, what the decorations of St. Paul's shonld be, and we are tully confirmed in this belief hy Mr. Wyatt Pap. worth's letters to the editor of the Times. There was no sufficient art education in wren's time, to cnable him to form a just and definite conception respecting them. Nor wero there tben painters, in Englaud at least, ablo to carry out his vicws, had they been correct. The orna. mental carvings of Gibbons, whatever their special merits may be, are not in a style strictly appropriate to the architecture. His employment on theso embellisbments was, doubtless, a necessity imposed by the dearth of choice. Wren's towers, with Renaissance clock faces, at Westminster, clearly show that he had no nice and varied discriminating taste. And yet what is there tbat has been said in reference to Mir. Burges's ap. pointment, which conld not have been said with equal or greater force in favour of Wren being competent to complete the towerless ahbey? But thero the towers stand, as monuments of his incapacity to deal with a style to which he had not been to the manner hred and born. Tbe ord "circumspice," in the inscription in St. Panl's, may have been qualifing, not meant ofertend as far as Westmiuster. In truth, a man who has, by circumstance and inclination, been long hent to a partieular kind of art, cannot divest himsolf of a deeply ingrained bias. The liosyncrasy will, imperceptibly to the artist, rop up just as it did with Wren at Westminster, Thr. Burges at Worcester College.
Tho public appears quite to have forgotten that a Royal Commission* was appointed some thirty years since to collect every available formation with reference to tho proper mode of conducting great mural works, and the best qualified painter of the time was its chosen secretary. From the various reports published y this Commission, ,we may gather tbat when the great baildings in Italy, or more recently in sunich, were completed, the ahlest mural painters were called in to decide the iconography and scheme of decoration as regards design and colour; the architect thenceforth only inter-解 any arenitectonic anomaly vero present tbemsel ves when the desigus mental decorations. The supposed necessity for supplementing Mr. Penrose doubtless arose in grorance of the separate and special functions of artist and architect in conducting a great edifice to "eompletion." The time had arrived o call in the painters, not another arcbitect, to determine tbe iconography, stylo of desigu, and scheme of colour. One arcbitect, and tbat one as fally acquainted witb Wren's views as any one is likely to be, would have been, nnaided, sufficient for the duties properly devolving upon him at this juncture
But if what been done every precaution must now be taken to guard gainst a probable Gothic bias in the nowly appointed architect. In this we have no doubt Mr. Barges would concur, and he ready te take to his counsel the best-qualified artists and technical advisers. This, at least, is all that We
can now hope for. We fully helieve in Mr. can now hope for. We fully helieve in Mr. Burges's special aptitudes, but if he is to succeed in this undertaking he must, like the great masters of the Renaissance, put aside his lean. ings to the Giottesque in mural art, which is essentially Gothic, and unfitted for the massive Renaissance architecture. This brings uB at once in vier of the rock alead, on which our would. be decorators of St. Paul's are ignorantly and perversely steering. The early Italian style of painting is to their untutored art-mind tbe true ecclesiastical style, whereas it was only a step in tho development of the solool. It is Gothic in its leaninge, and would be totally infit for and out of place in St. Panl's Cathedral. The great change in Raffaclle's style of design

* Correspondents of tha Builder have, on seceral occa.
has of ten heen noticed, but the reason for it has nowhere, to our knowledge, heen given. Raffaelle's style, till he became cngaged on the great mural works in the Fatican, was, though great mucal works in the vatican, was,
superior to that of his master and other earlier Italian painters, Gothic in its bias. But as soon Italian painters, Gothic in its bras. But as soonght within the influonce of the as he was brought within the inflaonce of the Rerival, of Grecian and Roman antiquities, and was called upon to adorn with his pencil the massive architectnre of the ronarssacce, larger forms and a greater holdness of that larger forms and a greater holdness of
treatment in design would he required to bring heatment in deaign would into harmony, into unison, with the his painting into harmony, into uad made some architecturo. Michelangelo ceiling of the Sistino inefiective attempts on the celing of the sistine required in method of treatment for anch an requifed in motho though had long previonsly intuitively felt that a large and grand stylo of design would bo necessary to bring painting and sculpture bo necessary to bring paining and sealing faslion into harmony with the then provailing fashion in architecture. eathedral in its smoky and hold grandeur than to deliver it over to our self. styled srandcur than to deliver it over to our sell.styled windows and contorted saints. Two of the Freatest ahsardities amongst the various items proposed for the "completion" are the insertion proposed for the "completion" are the insertion monst inevitably be fatal to the offect of any must inevitably be fatal to tho cifcet of any mural paintings which may be hereafter exe. quetti's marble inlayings, which, however appro. quettis marble inlayings, which, however appro-
printe to certain other conditions, would in St. printe to cortain other conditions, would in St. of time undistinguishahle from plain surfaces. Let Mr. Burges leave the iconography and mural painting to the painters: ho will find his proper vocation in purely architectural matters in the restorations and suhsidiary decorations. And we learn from a reliablo source that there are many restorations and repairs needed, which are thas crureerated:-"considerable regilding, replacing of rails, especially those encircling the churchyard, and graarding some of the cracked comometrical pavement; the replacing of fostoons that have wholly disappeared." There is no remedy, we are afraid, for the sinking of the piers. So long ago as 1803 , a Commission reported that "in certain places they had subsided from 4 in, to 5 in., the dome suhsiding with from 4 in, them; that the stones supporting one huge arch had yawned nearly $1 . \frac{1}{3}$ in., that there were deep indentations in the exterior pillars, cansed by rain, and forming channels for it, that the mortar rain, and forming channels for it, that the mortar corrosion was in progress. No doubt efforts corrosion was in progress. havo from time to time heen made to arrest this docay, but all in a partial and perfunctory docay, but all in a partial and perfunctory
manner." There is another source of injury not manner. There is another source of injury not apparently to be reached,-the inherent dampncss of the walls. Possibly modern invention
may discover a cure for it. We mnst, however, may discover a cure for it. We mnst, however, picking in, of mouldings with gold, as recently picking in, of mouldings with gold, as recently done. This is suited to poiaces, theatres, hall. rooms, sc., hat utterly unsn
Thero is another altoration practicable, and ahsolutely required, which has heen referred to ahsolutely required, which has heen referred to hy several writers on this subject, viz., the
removal of all those sculptured memorials which removal of all those sculptured memorials which edifice: detached statues and groups may, per edice: detached statnes and groups may, per-
linns, be permitted to remain yet some time longer or in perpetuity. The completion of St. Paul's may, perhaps, more forcibly hring to our wainds the necossity there is for an English Walhalla in order to relievo St. Panl's and the Abbey of many monnments, which to improved thaste in these matters have hecome eyesores. And, in conclusion, we venture to express a hope that only a small amount of colour, certamiy not and that tho field will chiefly be of "grisaille."
C. 1.

Landslip at Oswaldkirls.-For something like twelve months past, on the south.western slope of the Hamhletou range of hills in Forth Forkshice, has heen witnessed the phonomenon of about 10 acres of grass land, comprising por. tions of fire or six fields, gradually and with irresistihle force gliding from its original position into the plain heneath, confusing and interfering with old "rights of property," in the most reck?ess manner. Other landslips in the locality parison. Eveu a road has been cut into two by
the process.

## ON CORBELS, CONSOLES, ATD

 BRACKETS.What is a corhel in architecture, and in what particular is it distinguished from a hracket or console? What is its trne origin, and how far has the term heen altered in the practice of modern huilding? Is a bond fuos corhel the Can a corbel Gothic or Classic architecture it constitute a corbel when it springs from within the face of a wall, or when it is merely affixed? These are questions I would like to put to information, as well as for the satisfaction of those who onght to fcel interested.
One of our "standard dictionaries" thus
defines the term :-
"Corhel, s. In architecture, the representation of a hasket, sometimes set on the heads of Corinthian colamn, so called from its resem hlance to a hasket. A short piece of timher, ron, de., in a wall, jutting 6 in , or 8 in . in the manner of a showlder-piece; a niche left in walls for images, figares, or statues.
The bnilding workman must have a rathe lear head if he would not he puzzled hy the tion given in a recently. published encyclo. padia:

Corhel (Ang..Norm.), in architecture, the name given to blocks of stone projecting from the surface of a wall, to support the machicola. tions of towers, or the ends of the beams of the floors in old castles. The beams which form what is called an open roof in churches and large halls are often supported on carved cornels. The stones which support the bartizans at the nowles of a tower, jutting out in layers one ahove nother, are also called corbel stones, and stones corhelling ont.
The atandard dictionary anthority gives the pronunciation as kawr-bel; while the encyclo predia pnts it down as kor'bel.
Let us take what is looked npon as a hetter authority than either. In Parker's "Glossary of Terms" we have it thus,-" "Corhel (Lat. corbis, a basket), a term demoting a projecting stone or piece of tituber which supports a superincumbent weight. Corbels aro nsed in a great variety of tuations, and are carved and mouldcd in varions ways, according to the taste of the age in which requently executed. The form of a head was from the Norman to the Late Perpendionlar, espe. cially when used under the ends of the weather mouldings of doors and windows, and in other sitnations. Sometimes, also, masks were intro. duced." The above definition, on the score of technical description, is, indeed, infinitely hetter than the preceding ones. The same authority thus descrihes a console, -" Console is strictly the French term for a hracket, or for the ancones; but it is commonly used hy English anthorities also for a hrackot or corhel of any kind in Classical architecture." Well, the same author from the face of a wall to smpport a statue, \&o. Thoy are sometimes nearly plain, or ornamented only with monldiugs; hut are generally carved either into heads, folidge, angels, or animals. Brackets are very frequently found on the walls
in the inside of churches, especially at the east end of the chancel and aisles, where they sup. ported statues which were placed near the altars. also nsed as the termination of weather mould. ings, and in all senses it may be said to he a projection. When it ends a drip-stono is it not called a corhel ? Brackets aud consoles are used in some cases as trusses. Then are hrackets and consoles convertible terms? Brackets in some of our Gothic cathedrals, -for instance, York, are both heautifully foliated as well as moulded, and spring from, or are supported hy, an image. The hest examples, I believe, are let into the pillars, columns, or walls, where they are seen and are not affised; therefore they partake, in these cases I should say, more of a corhel than a bracket, although not intended for the ordinary application of the corhel. There is a heautiful specimen of a corhel in Wells Cathedral, used in the springing and smpporting position that eccle. siastical corhels were generally used in in con. dexion with roofs, not floors.
Cbantry altars, in some of our ancient Gothic hurches, are supported on "hrackets or trusses built into or projecting from the wall." (See Bloxham's "Gothic Architecture.") In other
instances these altars were partly supported on hrackets, and partly sustained on shafts or slender piers. Now if these brackets were let into the wall, and had their usual projection, were they not corhels per se, instead of hrackets or trusses? We have some instances, I helieve, of double and even triple hell.cots corhelled out from the gahle end of our Mediseval chnrches. These constrnc. tions have heen called hy different names, such as bell.gables, bell-turrets, or hell-cots. Whon these erections occurred on the apex of the eastcrn end of the roof of the nave, they wore intended for the Sancte bell. Numerous instances could be adduced to show to what extent the system of corhelling was carried out in the exigencies, or in pursuance of the waywardness, of Gothic architects and builders, hut it has been left to our times to corrupt and confound, and mix up and muddle the distinct and heantiful terms onco used for a specilio purpose. We have heen told within the last few days hy a huilder who was giving lis evidence in the case of an accident, that " the corhels were fush with the walls." I shall not be surprised in the least if in the next edition of our standard dietionaries or technical manuals our building workmen are informed that a corhel is the name of "any pieco of stone, timher, or iron, let in flush with the wall to support a beam or other super. incumbent weight."
Notwithstanding the estahlishment of our school-boards, I greatly fear that the schoolmaster will be a long time abroad. $\qquad$

THE CAMBERTVELL NEW INELRMAARY.
a large and costly hook of buildings, erected hy the Camberwell parochial authorities, as an ulircary for the parish, at an outlay of $20,000 \mathrm{l}$. has heen in progress during the past twelve months, and is now so far completed that the dispensary and medical staff portion of the huilding has been opened; but it will he some months hefore the structure is reacy for the reception of patients, for 300 of whom there will he accommodation in the several wards. The onilding is situated in Havill-stroet, within short distance of the new vestry-hall, at the corner of that street and Peckham-road, and which is also now covered in.
The internal arrangements of the huilding are being carried out upon tho most anple scale, the arge space within the interior admitting of this heing effected. The portion just now opened consists of the hasement, which contains the dispensary and rooms and apartments directly with it, including tho medical men's consulting rooms, patients waiting-room, and drug.room in tho front portion, which is divided from the rear of the basement hy a spacious corridor, 7 ft , in width. The basement rear heyond the corridor contains the domestic offices, which consist of laundry, kitchens, heer and wine cellars, wash. honse, and cnrrine-house and boiler.
The structure itself forms a large square block, covemig an area of 1,900 square yards, and erea enclosed hy the main frontage and wings of the building give to it within the cha. racter of a quadrangle. The main frontage in Havill-street is 150 ft . in length, consisting of a prominent centre and two wings, the latter at the side elevations extending back wards 110 ft . The contral portion of the Havill.street elevation is 80 ft . high to the top of the cornice, the wings heing 6 ft . in height. In addition to the hasement and ground-foor, there are four lofty stories in the central elevation, and three stories in tho plain or wings. The clevation is comparatively hrick, The prevailing materials used aro wito stone, whe a free aumixtare of red brick, and and keysings. The windows have stone springers sills of each story theen are bands in red lurich, filled in with encaustic tiles, carried across the entire elevation; the corvice at the extreme height of the elevation is of red hrick. In the central portion of the elevation is a stone balcony, projecting from the top of the first story, ahove which a lofty window, in Bath stono, vith red brick arched headings, and stono springers and keystones, is carried up to tho top of third story, The windows in the upper part of tho central elevation form also a prominent feature. They are carried much higher than the two side portions of the frontage, and contain nine clustered windows, the mhole boing surmounted by a gahle. The whole of the windows in the elevation, with the exception of those just uamed, are in three hays. The principal eu. trance, which is immediately under the large

THE BUILDER.
contral window, bas on each side carved stont piors, surmounted by a stono carved archway. The ground-floor of the central portion of the - elevation contains the house-surgeon's sittingroom, and also the matron's sitting-room, both
in front of tbo buildiag, the ono on the right and in front of tho buildiag, the ono on the right and $\Lambda$ wide corridor divides this portion of tbe - rround-hoor from the rear, and this corridor leads to the bouse-surgeon's hedroom, lavatories, stores, and other oflices. Tho first floor contains the matron's hedroom, the nurses' day-room, nurses' kitchen, stores, and nurses' dormitories. Tho second and third floors are sescy iu the special wvards, whilst tos lourth story gablo will bo cxclusively set apart as servants' dormitories. The whole of both winges, inclusire -dormitories. The whole of both wings, inclusire of pros wards the female wards heino in the ath wing whilst the male wards are in the orth of these several wards having accom mola 168 with tho special warls in the contral portion of the bnilding warls in the will be accommodation for 300 pationts. Tho arrangements for conveying patients to any part of tbe building are on a scalc of unnsua completeness. In the oorridor opposite to the principal entrance there are two lifts connected from the gronnd-floor with the top of the bnild. ing, by one of which patients can be conveyed to and from any of the wards in the several parts of the linilding, and the other is a dinner. lift. In addition to the space occupied by the building itsclf, there are exteusive lecreation. rrounds for the patients attached, upwards of the Infirmary and groands boing upwards of half on zacre

THE PRESERVATION OF ANCIENT MONUMENTS
At the last mocting of the Anthropological Tustitnte, Sir John Lubbock said, in roferenee to the Bill he was about to introduce in the Houso of Commons for the pressian relics, that it had alroady recsived the sapport of the most eminent archreologists. The great difficulty in dealing with monuments was that it intor fored with wbat are called "private rights" hut we might attain onr olject by scheduling those monnments which appear most worthy of preservation, and give notice to their owners, thus preventing them from being wilfally do. stroyod. Some efforts had been made by our representatives abroad to induce the Tarkisb Government to take stcps for to preservation - if monuments in its territoriss, and he did not see how wo could ask foreign Governments to - exert themselves to preservs thoir monumonts when we did not take tho trouble to preserve wur own. Noar to Marlborongh, until recently, thero existed three dolmens, one of them being - destroyed simply in order to repair the roads
with the stone, and the second had entirely diswith the st
Mr. Branks Baid that the Dutch Government vere fully alive to the necessity of preserving these monuments, every fear a certain numher Geing purchased by the State. Oat of fifty-four mogalithic monuments in one province, fifty-one Sarl been thus purcbased for the country
Mr. Conway asked if the Dutch Government fonnd much difficulty in inspecting or in gnarding them ; because, if so, sooner than have these destroy them, and the result would he, probably a general devastation.
Mc. Franks stated that, in the ense of Hollaud, a map was mado out, with every monnment marked thereon.
M1: Howard said that in Wales there were a freat numher of dolmens scattered over the coast. The farmers did not objoct to them, b to dutiquaries trespassing on their lands
DIr. Dawkins said there were areat many monolithic monnments in the Isle of Man, and that, owing to the force of popular snperstition, they liad been hitherto remarkably woll proserved. Unfortunately, however, for the monn--inents, the superstition was disappearing hefore the sproad of education, and it was to be feared theil many of these ancicnt remains would bo Restroyed unless something were done to secure
their preservation. Some years ago a party of
antiquaries had the holdness to examine a sepul chral chamber under one of these monamsuts near to St. John's Chnreh, where tho Tynwald is situated. Thsy had meddled with baman bonss and the farmer on whose fround the monument stood, killed a beifer, and hurnt it, as a propitiatory sacrifice, lest the sacr
some eril resuls
Iu answer to Dr. Hyde Clark, Sir John Lub bock said that no information had been received from the Foreign Office relative to wbat had servation of bistorical monuments.

THE LATE MR. SLATER, ARCHITECT.

## Wheciabr Slater, who died on December 17th

 in his fift.fonth year, was a son of the late Mr. Slater, of Daselheech, Northants ; his early years were spent in his native county, and whou articled years old he came to London, and thas from tho first, becran the intimate friendship which, up to the death of Mr. Carpenter, existed bstwoen tbem.In the early days of the Gothic Revival they vorked together with enthusiasm in the prepara. tion of some of Mr . Carpenter's earlier designs, as St. Stephen's, Birmingham; St. Paul's, Brighton St. Patrick's Catbedral restoration, Dublin; CookSt.Patricis's Catbedral Cestoration, Drabin; Cook ho thas acquired that love for, and approciation of, Englisb Gothie, which remnined with him wben various fashions of foreign Gothic in after jears distracted many leading architects. Be. sears distracted many leading architects. Mr. Carpenter in his district of St. Luko, Old. treet, and also in the district of Islington.
During many years Mr. Slater lived in Mr. Carpenter's house, in Guildford-street and Upper Bsdford-place, and tho greatest intimacy oxisted hetween him and Mr. Carpenter's family, to whon his kind and affectionate natare harn mnch endeared bim, and hy Mr. Carpenter hinn
solf, also, he was beld in' the greatest esteom and confdence.
For a short time befire Mr. Carpenter's deatl Mr . Slater took an office in tho Adclphi, with his old frisnd and fellow-pupil, Mr. William Smith, and commenced his first works, tho restoration of Weldon, Islip, and Stanwick chnches Mr. Smith ereetsd a new tofn-hall at Lourh boovough.
When Mr. Carponter died, in 1S55, he wa advised by some of the oldest friends and clients of Mr. Carpenter, such as Mr. Beresford Hope Canon Woodard, tho Rev. B. Febb, the Rev. E Tower, and othera, to return to his late frisnd's office, and undertake bis engegements, both in his own interost and for the benefit of M1r. Car pentsr's widow, and the future advantage of his son. Mr. Slater aceordingly took bis place, and rosumed the works left incomplete, sucb a Bedgebury Park, Lancing and IIurstpierpoin Colleges, Earl's Shilton and Sompting Chnceheb, \&c.; and he was appointed to succeed Mr. Car psnter as architect to Chichestcr Cathedral, and architect for tho restoration of Sherbome Abbsy choir. He also carried ont at this time ner buildiugs for the King's Scbool, and St. John's Almshouses, Sherborne, and many chnreh retorations and other huildings in the ncighbourbood, for Mr. G. D. W. Dighy.
In his native connty D . Slater restored very many chnrches; amongst which were Hinham. Ferrers, Kiugsthorpe, Finedon, Easton.Mandit, and Woodford; and, with Mr. Smith, the grand old chureh of Brixworth. Many churches for tbe Duke of Bucelench were restored under his care, and many other churches iu difforent parts of England, such as St. John's, Devizes ; St. Leonard's, Bridgenorth; and Etchingham, Wadhurst, Burwash, Deerhurst, Ditching, Rustington, Alcomh, and Goudhurst ehurehes. He erected new churches at Edinburgh, Belfast, Bray, Dunkeld, St. Kitt's, Devizos, and Kogser Ireland, and restored Limerick Cathedral. Honses were ereeted by him at the High Becches, for Mr. Loder, one for the Dcan of Kilmore, besides many parsonages and schools, including the large school of St. Juhn, in St. Pancras parish. Cathedral was commenced under Mr. Slater's Cathedral was conchen Gilhert Scot care ; and iu conjmuetion with Sir Gilhert Scot and spiro ; and with Professor Lewis ho restored the grand Priory Church of St. Bartholomew the Great, in Smithfield. During thesc and the
snbsequent years his fricnd, Mr. Ingelow, was harious office, a
In 1863 Mr . R. Herhert Carpenter, having beon articlod to bim, became his partner, and np to the day of his death they worked togother in the most perfoct friendsbip. Under their direotion the restoration of Chichester choir was com pleted. Hurstpierpoint Chapel, and new churcbes at Bootle, Oatrington, Dumfries, Belfast, Church. Lawford, Southeud, Milton, Burwash. Weald, \&c. wero erected, and the new catbedral of Jonolnln commenced; and restorations carried out at many commenced; and restorations caried Middleton, churches, such as Calne, Braton, Middketon,
Thornford, Tburnby, Menfield, Tortworth, BurThornford, Tburnby, Menfield, Tortworth, Bur. ton. Latimer, Earl's Barton, Strixton, Amport, Hemington, Tisbury, Bywell, Stapleton, Staplefort, \&c.; alse the restoration of Brigstock
Manor Honse, for the Duke of Buccleuch, Manor Honse, for the Duke of Buccleuch,
Holdenby House, and the Bishop's palace at Holdenby House, and the Bishop's palace at
Chichestcr. They also ercoted Lord Salishury's Chichestcr. They also erooted Lord Salishury's new mansion in Arlington-street; the mansion at Seacox-heath, for ths Right Hon. G.J. Goschen, M.P.; tho nem colleges of St. Chad, Denstone, and St. Saviour, Ardingly, and the new building of St. Nicholas College, Lancing (the chapel of which is yet in eourse of erection) ; ths King's School huildings, Sherhorne, and works at Cheam School, Surrey. Amonges tho works which are still being carried on hy Mr. Carpenter are the now churel and sebools of St. Mary the Virgin Soho; the newy church of St. Michael, Enflold the completion of St. Panl's, Brighton ; and the last work on wbich M. Slater was engraged, even on the of his death tho nsw chancol and anse of St Mark's, Mrddelton-8quare, where b had bean churehwarden for twenty years.
His oharactor may be summed np in a fopy words He was a man of rars simplity and nobilit $f$ win a Earnest indefitigable and nobility of mind. Earnest, indefitigable, and zealons in all which le nudertook, trouble was which lie had undertaken wlilo the stores of Which he had undertaken; whilo the storss of krowledge on which he hat tensive and accurate, and his natural good taste saped him from tos suare of then attempt after cccentric originality in whioh arohitects even or hiph inthoriv aro somer prone to indalge. His private life was marked by tho deptli of his religions convictions, and by the kindliness and oheerfulness of a thoroughly swect disposition.

## STREET SUBWATS

Parlimentriry powers for the construction en snb.aqueous communications in London have boen outained with little difficulty; and the mechanical and engineering appliances, such communications can he openod in a space of time, and at a cost, marrellonsly small, as contrastsd with tbe time occupied and the money expended in the construction of Brnnel's first celehrated and unfortunate Thames Tunnel Not withstanding tbese circnmstances, the powers given to construct subways under the Thamos do not seem to lead to rapid and assured sue cesses. The Tower Subway Company havo failed to carry out their original design of conMiddes passenge sur se the river. The Middlesex and surrey sides ond tiverin the steam engines for rists, and for drawing ths omnihus through tho hoists, and for drawing ths omminus througi ho suhway, have been removed long since from tho hottom of the shafts; the iron chanhers in whieh the passengers asconded and descended and the iron omnibns, have long since boen taken to pieces and clearcd away; and now passeag gors pay simply a toll of a halfpenny each, ascen and descend the shafts by commonplace stairs, and make thcir way, with as little bumping as possible, through tho 7 .ft. tube.
Concerning the other subways under tho Thames, for the construction of which Acts have been obtained in former sessions of Parliament, - the City and Sonthwark, and tbe Templo subways-nothing is now heard.
There is another uso to whicb snbways may bo applied in Londou that it seems strange should escape the attention of tbe Metropolitan Board of Works and the Corporation of the City of London. We refer to their provision as a means of avoiding the dangers of a number of our most perilons street-crossings. Tho moot point, subways versus bridges, bas becn dizcussed very fully, and the discussion has been carried over many years; but passengers continue to bo rnn down iu the public streets, tho crossings become more crowded and dangerous dails, and
no remedy is applied. How long are the pas sengers that have to cross daily or oceasionally at the Mansion Honse, at the bottom of Ludgatehill, and other dangerous placos, to have to do so with paralysing fear ? How many more victims are to bo crushed to death, or maimed, and injured for lifo by the Juggernaut of our streets before the authorities provide an ergis? It is simply a question of time, and of the extent of sacrifice that mast be made; sooner or later footways under or over the carriage ways $m u s t$ be provided at numerous croseings,
and the sooner a beginning is made the better. With many persons it will be quite a minor con sideration whether they have to ascend 20 ft . to got to tho top of a foot-bridge, or to descend 10 ft . to get into a subway: the para. mount consideration is, any means of getting across rather than by threading a way among the vehicles. The Ludgate-circus, in course of formation, furnishes pressing claims tor some snch safe provision for foot-crossing. The safest part of that crossing is, cnriously, that at which it is most gorged with traffic, namoly, the corner at which the old building remains as ye andisturbed, and where the stream of rehicle has to be crossed at a simple rigbt angle. In otber portions of the crossing, vehicles of all kinds, driven at all speeds, taking all kinds of angles and curres, have to be mot, and Scylla can only he avoided at the imminent risk of encountering Charybdis. Ouly the other day a serious acci. dent befell a well-known literary man at this place. His brain and spine were seriousy inwohind in the mud a packet of valuable manuscript, he was carried away unconscious to St, Bartholowew's Hospital, and theuce to his own residence, his useful labours suspended for an indefinite time. The police force told off to regulato the traffic at this croseing may bave heen reinforced, hut some more certainly trast. worthy safeguard than this is imperatively de. manded.
Glasgow Subuay.-One of the private Bills of the session is for a subway under the river Clyde, commencing on the north side of the river and harbour of the city of Flasgow, at or near Anderson Quay, and terminating on the sonth side of the river, at or near the east cud capital of the Quay, in the parish of Gover cone to be $33,000 \mathrm{l}$., and the works to be completed in five years. Tbe proposed toll is to be one penny per foot-passenger.

THE PROPOSED NATURAL HISTORY MUSEUM, KENSLNGTON
Sir,-I shall be glad if jou can allow me space in your periodical to correct an crror which has crept into the notice which appeared in the Builder of Jan. 4, 1873, concorning the proposed Natnral History Musenm at Kensington, and which, if unexplained, would leave a capy wrong impression of the work of tho lato Captain Fowke, Royal Engineers, with respect to that building
It is therein stated that, "as so often happens with desigus which are the result of compotition, it was found that much of the ingenuity Fhicb bad been displayed in this design (Captain Fowke's) had been thrown away in consequence of tho arrangeusents boing incompatible with the absolute requirements of the authorities; and that to meet those requirements it was impossiblo to retain any large portion of it." This, he idea that Captain Fowke bad paid conve attention to the conditions laid down for tho guidauce of the competing architects that his design, to which the appointed jurdres awarded he prize, had to he virtually abandoned on sub. sequent examivation by the "authorities," whoever they were.
tbe trastees of thens, which were laid down hy the time the British Museum, were printed efereuco to them that Captain Fowle found on as originalliy that Captain Fowko's design, for them completely. So fully was his design criticised in this respect by the autboritios of the museum, that observations in detail apon it were made at tho time for the consideration of the judges or of the Goverament. These criticisma, which, on the wbole, appear to have heen favourable to Captain Fowke's desion, weer eplied to by him on the points on which objec. tions were made to $i t$, and be showed in these
replies how fally he had provided for the official requiremeats. Other objcctions there were to pen to Giscussion, they Tere upon matter: Fowke's opinion was at least as valuable a those of his critics.
After his plan was accepted, it is well known that he had frequent consultations with Professo Owen on the subject, by whose advice be may bave made some modifications in his original design. Bat tbo bost proof of the correctness arrangrement fiows with respect to the general ten years of delay, Mr. Waterhouse has virtually adopted them, as shown in tho plan of his desion in your paper of the 11th. And as regards foor space, Captain Fowke's ground-floor conhained
The extract from your paper to which I have aken exception must also be considered, I think, Fowk im that in the writer's opinion Captain to many competitive plans. But considering his large previous experience in the arrangements exhibitions and museums, and his known pecialty in that line of architceture, $\mathbf{I}$ should ope that such an in
The question of the general merits of Mr Waterhouse's plan, as compared with Captain owke's, would lead mo far beyond the object the imputation of a want of careful thought in he preparation of his design. As, however, the oourse pursued hy the Government witb reapect o this huilding loads one to the consideration of the general question of the best mode of obtain. ing designs for our public buildings, perhaps you will allow me to recur to the subject on another
. B. Collinson, Colone
Royal Engiueors.

## CHAMBERS OF COMMERCE AND

 RAILWAYSAt the approaching annual meeting of the Association of Chambers of Commerce important propositions are to be discussed in relation to railway anualgamation, management, and iurproved communication. It will be proposed that the report from the Joint Select Committee of the House of Lords and the House of Commons on railway companies' amalgamation be considered, and tbat a doputation from the Association be sent to tho Government, to support, or otherwise, all or any of the recommendations of the Committec; also, that a deputation from the Association of Chanbers of Commerce wait upon the President of the Board of Trade and the Home Sccretary, and urge upon the Government the desirability of an inquity by Commission or Select Committce into the question of railway management, with reference to tbe convenience and comfort of passengers, and the diminution of the number of accidents, both to passengers and railway serfants. The inhabitants of Southampton have for a long time past been greatly dissatisued with the insufficiency of their neans of commuvication by railway with other ocalities, and maintain that this circumstance has greatly impaired the prosperity of the port. The Sonthampton Chamber sends the ollowing proposition for consideration by Association:
That it is of paramount importance to the commercial and manufacturing interesta of the northarn districts and the southern ports should he sanctioned by Parlinment.
The proposed Swindon, Marlborough, and that er line is a project of the present sessio that comes withis the scopo of the resolution.

ENGLISH ARTIZANS FOR ATHENS. Mr. Watson, onl representative in Atbens, in : ecent olficial roturn, says, be bas been informed y several persons resident, in whose judgment e places reliance, that there now exists an open British artizans. He has consulted jeot with rarions persons established and with several employers of worlemen, and these with replied to his inquiries. - "s Do not hese have Euglish artizans from coming to Athens. Steady skilled men might make their way here very well." The demand, however, for English
labour would seem to bo only for men akilled in making, managing, or repairing maohinery, and for locksmiths, bell-bangers, house-decorators, quality of workmanamestmakers, As the venieuce, expense, trouble, and, in for the impossihility of getting any repairs done to houses at the worst season of the jear are very harassing to tho occupant, witb respect to locks, door-handles, rarnishing, \&c.; and in Athenian rooms their condition is utterly disraceful. As a means of obtaining furniture tho possessor of empty rooms has to purchase at ailes-when these occur, such articles as may he presented, without recrard to his taste or to heir corresponding with each other. The German cabinetmaker is often unable to execato an order under months. Such being the state of things, it would be a boon to the more civilised portion of the community if some English artizans, of the crafts indicated, could be made o see tboir way to emigrate to Athens with profit to themselves, as in that case some of the hanks in the skilled labour nurket wonld pro hably be gradually filled up; besides, were better quality of skilled labour introduced into Greece, it might bo hoped that a taste for better workmanship would thus be, ere long, oreated amongst the Greeks: above all things, however, they must be temperate.

## NEW POST-OFFICE, ST. MARTIN'S-LE-

 GRAND.Tae new Post-office huilding at St. Martin's Ic-Grand, erected from the designs and under tbe superintendence of Mr. James Williams, of M.M Office of Works and Pahlic Baildings, is rapidly approaching completiou. We puhlish in our present number a viow of the extcrior and plan ire a plon give a plan of tho nppor story. The building is
rectangular, having frontares of 286 ft to St. Martin's-le-Grand and Bath-street, and frontages of 144 ft , to Nowratevstrcet and Angel-street, and is 8.1 ft . in height from the paring liue. Itstands on a base of granite from the De Lank quarries, and the whole of the fronts have quarrees, and the whole of the the "Whene "" in Portland stone of stories in "in fous the flor will the loore ment whll he partly occupied as offce-rooms, partly for stores, and partly by the department or the the centre being used as a hattery-room. The General and General aud the Acconntant-General. Or the and their staff; the third and the secretaries and tbeir shat, the third and lourth foors being appropriated the telegraph depariment. The tern in win especialy devoted to the will with la, room ie 125 ft by 80 ft . The large instrument.
It 125 ft . by 80 ft .
It was originalyintended to provide a Public Office on the ground.floor of the building, and is now, hall was accondingly constructed. It is now, however, found necessary to abandon his scheme, and tbe central hall will be occupied Iy the staft of the Accountant-General.
In the north court there will be placed four ateam-engines, each of 50 horse power, for working the pneumatio tuhes, and he works reilera for the hoilers. These compriso a large boiler-bouse, nd a chmney about 20 ft . ligher than the main huilding. An Artesian well is also proposed cor the supply of the large quantity of water equired, and a small ongine will be kept at work at pumping to tho large tanks (two of 6,000 gallons each), at the top of the building. The plastering is now for the most part com ploted, witb the exception of the central hall much of the joinery fixed; and the special fittinga commenced. It is calculated that ahout hree-quarters of a mile of instrument-tables will be required in the telegraph-galleries.
1569 , huiding was commenced in December 1869, the first block of Portland stone being laid by tbe Right Hon. A. S. Ayrton, M.P, the First Commissioner of Works, on tho 6 th of Decemher, 1870. The contractor is Mr. Willian Brass; the clerk of works, Mr. William Trickett. The conract amounts to 129,718l.
The wholo of the carving and scalpture has been execnted hy Mr. Burnie Philip. The site cost, wo believe, in round numbers, 300,000

DEFECTS IN THE SANYTARY PROVISIONS OFTHE METROPOLITAN BULLDING ACT. Ar the close of Mr. Liddle's paper, of w
we gave a summary in our last (p. 63 ), we gave a summary in our last (p. 63),
Dr. Hardwicke said, that in the distri which he had supervision there were above 300 houses annually built. There were two striking defects in the present way of building houses which were not provided agrainst by the existing law. One was the wretched foundations on which they were raised. The surface of the ground filled up with taken off, and a large porton found by analysis to bo organie refuse. And much offensivo matter was under many houses, and seen the latter substance giving evidence hy its yellow colour of the presence of such ohjectionable matcrial. Snch houses might well be called diseaso-traps. The dampness which defective construction caused also gave rise to much sickthat whon new streets were formed, the local hoards did not take to them, and form the roads in proper time. A long period generally elapsed hotore this was done, aud the consequeace was that a low class of temants grot into the bouses, and the wholeneighbourhood becanne deteriorated. The sloppy condition of these neglected streets gave rise to much sickness. One great cause of
shortcomings, he thought, arose from the fact that the Metropolitan Board of Works had no sanitary otticer counected with themselve日 to whom to appeal in doubtful matters. He helieved the Artizans and Workmen's Dwellings Act was in practice totally unworkable,
Mr, P. JI. Holland thought the paper which common senge. There was one portion to whieh howevor, he must take exception, and that was the recommendation, as he understood it, that the whole of the management should be under the local hoards. He thought it extremely im. portant that the control should he rather under one separate board. Tho hitble local boards were created. If the power were given to them, how wore thoy to he controlled, and madeanswerable for neglect? It was lifhly necessary, he thought, to have a body coustituted for the unanagement of snch matters which would not be under local iulluence. If the local boards were to he supreme each in its own district, wo should havo the
sanitary measures carried out in some, and samtary measures carried out in some, and opinon, but ono anthority for the whole of London. A great defect in the appointment of
clistrict surveyors was, that they held their offices in conjunction with their own private businesses The rosult was that their own business paturally The rosult was that their own business aaturaly
had their first attention, and tho public business was consequeutly neglected. He thought the was consequeuty neglected. Ae surveyord did more harm than good. London was cortainly one of the worst built cities that could be found. Fires in provineial towns were not so destructive to human lifo as here. Fire-escapes were rarely found in these
towns, nor was their absence felt. Ife thought towns, nor was their absence felt. Ife thought
the district surveyors simply looked at tho letthe district survefors simply looked at tho let.
ter of tho law, and to them he referred much ter of tho law, aud to them he referred much
of what was objectionable. Wero not lath-and. plaster walls rery common t and what could tend more to the spread of fires when they hroke out? Why had the surveyors allowed this and
other equally unwisc things to exist? A largo other equally unwisc things to exist: A largo
sum of money was spent in reconpensing their sum of money was spent in reconmensing their
serviees, which would be better spent in engaging the whole services of a smaller numher, and rethe whole services of a smaller number, and reemployment. We should get a number of new louses properly built, and then wo should have could not he found in London, at a price within the means of the great bulk of the people. Then The means of exit from churches and other such The means of exit from churches and other such
huildings were very mengre, and in casc of alarm of fre would be certain to lead to persons being crushed to doath. Would not in such cases the fault of the architects amount to manslaughter: Fatal results had followed in some instances; and in such a place as Exeter Hall, for instance, a sudden alarm would lead to lanentable com-
sequences. He almost despaired of seeing archj. sequences. He almost despaired of tects doing their work intelligently.
Mr. G. Godwrin rose to protest against the
unfounded attacks upon district anrvegors unfounded attacks upon district anrveyors made by the last speaker. They had simply the power of seeing the Building Act earried out, and this
they did in the majority of cases most efficintly.

They were certainly constantly foiled in their ondeavours, but they did the best they could In the matter of foundations, for example, the Act said walls minst be on a solid foundation or a layer of concrete ; the Act did not saj what must be nuder the concrete, nor of what thickness it should be laid. If the suryeyor found defects which were not expressly provided against in tho Act, and went before a magistrate with his comtilation did not fall within his province; he had no power whatever to interfere. The impatience of tho publie to pay for anything for which there seerned no immediate necessity, was an obstacle to be overcomo before this conld be properly earried out. The surveyors were not lesponsible ter under the Metropolitan Management Act Now that a new Bill was mnder consideration was the time to strengthen it hy the representa. tions of the bodies who havo had experience in matters which it is designed to meet. Most of what had been brought forward by Mr. Liddle had already been laid before the Metropolitau Board of Forks. He (Mr. Godwin) lad no fault to find with what he had said. The clauses iu the present Act respecting maderground dwel. lings were found to be nearly nugatory in their operation. It was a difficult task to find out the way it was onacted they shonld be dealt with. All that the district surveyors could do in were pointed out to them were or were not fit for aceupation according to the Act.
Dr. G. lioss wished to draw attention to the defects in the 29 th section of the Building Act. in a very crowded neighbournood, a man might of those for whom accommodation was proyided The Act, he had found, impeded the action of officers of health, and tended to increase sanitary evils. By evading the provisions, any proprietor could go on increasing the numher of houses. Attics must be, by the Act, 稫 least 7 ft . high over half thoir area: why not all? This part of
tho house, for varions considerations, should, if unything, be more lofty than any other. There was no canse, in his opinion, that was half so important as good, sound, wholesome luildings. Many of the poorer elass were lrought into the low state of health in which they were found to be in consequence of the close, suall, crowded houses in which they dwolt. Ho thought the Artizans ${ }^{2}$ Dwellings Act might be made extremely useful. Many houses liad been pulled down to make way for improrements, and many poor people had been turned out withont compensathe inhabitants of already overcrowded veighbourhoods. This was a hardship, hut still, if sanitary improvements wero to proceed, he could not see how such conld be avoided. There would be a great diffeulty in providing compensation, for it might tend to encourage so great an expenditure that few local hoards would find courago to commence any sanitary works when thing might perhaps be done in this direction. He could limeself testify to the abominahlo stuff He could lamself testify to the abominahlo stuff Often that which was takon from the severs was nsed iu making mortar. Another evil was, that contractor's took away the gravel on which a contractors took away the gravel on which a
house was thought to ho built, and suhstituted house was thought to ho buit, and suhstituted
loads of rubbish. This, which was dono everyloads of rubbish. This, which
where, should not he allowed.
Mr. Edwin Chadwick thought it was deplorablo that the subject brought forward by Mr. Liddle shonld have made so little way, and that even of first-class loouses it should still be a sanitary rule that they are nnsafe to inhahit until nine or twelve montlas after their construction. Speaking not long since to the superintending registras
of a sulurban district, and expressing surprise that although much money had been spont no progress had been mado in the reduction of the death-rates, his answer was, that the death-rates were kept up hy the building of new houses (the eonstructions by which the death-rates should be
reduced), for soon after a block of new houses reduced), for soon after a block of new houses was entercd, or within a month or two aiter, the long after that he, tho registrar, had to recond additional deaths, especially amongst children, The fact was architectural construction and sanitary construction were differcnt things, and sanitary science, or responsibility for sanitary
results, had not yet been conjoined with archi. results, had not yet been conjoined with archi-
tectural art and practice. Soon after the pub. tectural art and practice. Soon after the pub.
lication of the sanitary rcport, he had been
rcquested to join a committee of first-ciass or palace architects, to frame a new Building Act from that sopolis. He had begged to be excused and practice were so little in accordance with What he considered the chief objects to be aimed at, that thero would be no uso in going into the subject with them. He could not hope to alter their fised opinions, and should be in a minority of one. At that time ho objected that the func. tions of the officers superintending now buildings were fragmentary, incomplete, and mislitting. The district surveyors as a class were doubtless very rcspectable men, but the daties assigned to them were fragmentary and incomplete. Look only to the samitary arrangements requaxcd as which is requisite to keep tho road firm and in line, is the same that is required to abate damp in the site of the house and its grounds. The house drain - tho cliannel that is to remove putrescible matter, and not let it permeate and trate the su its adaptation to the disarce into the street sewer, to make botlı drain and sewer complete and self-cleansing, and act as one piece of work. The drain that is to carry off the horse-dung and surface-washing from the roads - on which there is often as much putrescible matter to be removed as from within the honses-must also be well adjusted and self. cleansing, and well adapted to the street sewer, in which refuse should not he kept stagnant, as it usually is, with other matter, but to be at once removed from heneath the site of the town before it can enter into noxious decomposition. The iupormeable drain of the house, and the impermeable drain of the voad surfooe, the sewer of the house and road, required thereforo careful adjustment to act as one work, to carry their contents in ono direction, whilst the permoable subsoil drain of the road and the permeable subsoil drain of tho house and land reguired careful adjustment, to carry their contents in auother telligently, wo and any one, laying out work in. bined drainare apparatus in parts to be dealt witl independently? Bat in administration there was one officer, the building surveyor, who has only supervision of ono part, - that is the house, and not always of the house drain, or tho sanitary arrangements for the immediatc removal of putrescible matter. Then there was the roadsurveyor, who had nothing to do with the subsoil drainage, on which the wear of his road mainly depends, nor with the sewer, which is to receive its surface draingge, and which, if it be a permcable sewer, may let out sewage, and let it permeate the subsoil, as well as tuke it in. Then of tho street sower ouly, and very little charge in of tho way of adjustment, with the tributarics, the house, or the road drains, the capillaries of a proper system of sanitary work. Each of thoso proper system of sanitary work. Lach of thess
officors had usnally to he sent for at different times, when they could be got from their private practice, to superviso thair respective bits of uument more calcalated to ensure misfits, and dis. inters ind and to do it at a notices, and separate service? Surely we might hopo for an adranced perception of the economy; of a hetter organisation; of the functions re. quisito to insure efficiency and economy in local works, under the superintendence of officers, with the qualifications of sanitary engineers, giving their whole time to the performance of their duties.
Mr. Baldwin Latham, O.E., observed that he could not at all agree with Mrr. Holland in the remarks he had mado with refcrence to the incompetency of the anstriet surveyors of London to discharge their dnties; on the other hand, he agreed wicil Mr. Godwh tha thorouglily competent to discharge the dutics they were called upon to perform, and murehy examination, had proved themselres conihy examination, had proved themseres conspotent to cuscbarge their duties, which were thought, with Mr. Chadwick, tliat it would he an advantage for the officers who had tho structnral control of buildings also to have sanitery control. Prohahly it would be well that somo contral authority should be appointed, with ahsolute control orel the construction and sanitary reqnirements of all buildings hereafer to be or at present oreched. The question was a very much larger ono than that of merely applying a certain
Act of Parliament to the metropolis. There
were many large towns and country places that equally required a Buildiag Aot, fnd it would
be well for the Association to be well for the Association to promote some
measuro whereby a gonoral Act of Parliament measuro whereby a gonoral Act of Parliament should bointroducod that could be applied to the wholo country. It was true, that under the provisions of the Local Governmont Act, Local
Boards had power to mako by.laws for regulating baildings; yet it was notorious, especially in districts in which building operations carried on to a great extent, that those interested in promoting such building operations took care to have such represcntatives on the Board, wat either the by-laws were favourable their An examination of the by.laws of various Looal Boards would show a marked differcace. Usually in the districts where they were most required the hy-laws were most defective ; while in dis-
tricts where there was hat little building going on, the by-laws were of a very perfect character. With regard to by-laws, it had been decided that the by-laws of Local Boards do not apply to buildings erected previously to the passing of the
Act under which they were framed; conse Act under which they were framed; conse-
gacntly, open spaces about old buitdings were quently, open spaces about old buitangs were ment of the people inhahiting the district. The swoeping away of the by-laws which now regu-
late the construction of huildings, the passing of late the construction of huildinge, the passing of
an Act of Parliameat applicable to all parts of the country, regulating their stability, the means for the prevention of the spread of fire, and their sanitary requirements, would be a grea Professor Donaldson large.
Mr. Liddlo had said. conld affirm almost all Hr. Liddlo had said. He did mot agree with
those who thought that the Local Buards shonld bo consolidated into one body. He thought, considering the different operations, it would bo one man. In his own district no houses conld of built auless the plans were suhmitted to the Local Board. Certain conditions in tho sizes of it was found very difficult to carry out, himself had from time to time made reports to those under whom ho acted; but frequently no attention was paid to them. The surreyor often
went round, and made his report, and they often proved to be nothing more thrn wasto paper. This was very discouraging. With regard to the This was vely discouraging. With regard to the
overcrowding of rooms, it was a shame to society that matters should bo as they mere. He did not think these defects could bo fairly charged
to the surveyors. They werc anxious to do their luty; and if their suggestious were not carried sut, the fanlt did not lie with them. The walls If a house should be built on concrete, and the eyor, who should be allowed the power of ad. ising the magistrato. At the prosent time, if a omplaint were made, the huilder would bring he house properly, and tho magistrato would lay that the weight of cridence was in his avour, and the surveyor wonld bare to sustain he costs of the action. He (Professor Donald. hould be corered with concrete. the bascment a the adoption of suitable measures lay in the nd on the Loci Bonds wha were themselves uilders, and from then rreat obstuctions kely to he enconntered. Ho could not see how could be that gravel should he forbidden to e taken away, for it was the property of the
wner of the soil. If a man way, and sell it, ho did not seo how to take it way, and sell it, ho did not seo how he could he ne reservation of $\Omega$ pioper area for rentilation re cxcellent; but ho thought they con be carried out where space was very conld Area was more necessary to be piven in slecping-rooms. He hoped the suggestions Mr. didalo would igased in drawing up the new Bailding Bill. Mr. J. P. Seddon called attention to the matter it concerned the roofs of honses. The usual the flimsy sheet of slate was not sufficient in d oocurred in Anerica. The roofs should he de more uninflummable. The construction ders. Tho way in wands of epeculatiner is the curse of tho age. Matters should be left so much in the lands of huilders. chitects were not employed for one-tithe o e honses that were built,
c. Liddl shouser wished to say that he though r. Liddle should make himself well acquainte
with tho Bill ahout to bo bronght before ParliaBefor This, he thought, he had failed to do, berore any action was taken by this Society, it Was very requisite that this should be doue found that was suggested, he thought, would be main it that Bill; and if anything should re. important medioal men and architects should act in harmony. Matters could be better car riod out when the efforts of the one body did not infringe upon those of the other.

The chairman (Licut.-Col. Beresford, M.P.) deprecated the idea that this question should lio with the Metropolitan Board of Works. They Were so overwhelmed with work, that the less
that was pat into their hands the better. There was a competition between throo different were this were tho Metropolitan Board of Works, the had, in some case, aroduced confusion. II thonght the Public Ifealth Bill was a most excel leut Bill as far as it went. That Bill not ouly but it made it campulsory that its enactment should he carried out. There should be a power invested in certain anthorities of seeing to the making good roads and the foundations of houses. In his own roighbourhood he had tried the effect of the existing means; it was in the case of a addressed was in a disgraceful state. He had property was immediately inspected, and shown to he in a state injurious to healtb. The private wners had suhsequently recoived ord por Liddle proposed, we had the present Act ta fall back upon, and this he had proved was not inoperative. Ho (the chairman) thought the water quostion went side by side with the build. ing. There should he a constant supply, and better facilities for estahlishing it. One gentle. ad tho mau) was afraid that, for a He (the chairfamilies in London, this distinotion did not exist He trusted the matter now disoussed wonld go He trusted the matter now disoussed wonld go
to the Local Government Board, and influeuce heir decisious.
Mr. Liddle was glad to find that almost all the sperakers agreed with him generally. He was perfectly well aequainted with all the amendof Yorks and exing law proposed hy tho Board body did, and he had been informed that that thonglit the sanitary works, as they had no niedical adviser to help them. Tho great absardity of the pre. seut state of things was the different and distunct Acts which referred to matters sohstantially the anc. 10 butid a house a person must con into one.

On the motion of M1. Elwarl Pears, it was
"That the paper be referred to tho Committee of the Heaith Department witl a view to con sidering the desirability of maling represent tions to the Local Government Board in favou of an amendment of tho Act."

## NOTTLNGHAM SGIOOL OF ART

Tre anmmal distribution of prizes to the succossful students in connexion with this institution Gall. Tlace on Jauuary loth, in the Mechanios Belper presidet was a largo attendanco. Lord Belper presiden, and among thoso present was Ar. H. Cole, C.B., who delivered the prizes, and on this occasion announced his own retirement Mr. Cole Saice and Art Department.
Mr. Cole said, had he been present last year, he should have ventured a fuw observations to whem on the position in which Nottingham stood with reghrd to art aud its fitucss for establishing larly ham of scionce and art. Ho was particu oipation, hut rather of a to talk about an antiheld out, and amply falflled. They knew that the Museum of Art and Science in this town had had a beginning, and ho hoped it was the commencoment of much greater things in the future. Ho thought that Nottingham was dis. ingusined for its modern arohiteoture; and hough they could not perhaps equal Lomhard. treet, yet they were superior to many other he was saying too much if lo maid that Torink am was more distingnished in this respect than Derby, and he also believed that Leicester was a
long way behind as compared with Nottingham Their school of art was, in some respects, the very cleanest and he country. It was certainy the figures that it occupied a high position in the
work it did. All these facts mion thinking that Nottingham might talko the lead in tho country in establishmight fako the lead in andart, and in setting an example to other towns and art, and in setting an example to other towns in Eggland. He regretiod to state that in this matter Englaud was behind the Continental countries. They were aware that they conld not go from London to Paris without lighting on several museums of this kind. He thourht, however, that the rarious matters he had mentoued jnstifed him in asking them to considor the question of establishing a inuseum of science and art. He had taken some trouble to look about in ascertaining what would be a good site and the conviction in his mind was that they had site alroady prepared,-ono that would act as beacon to all the Midland counties -and thas was the Castle. If they did what they could with the Castle, he beliored that it would bo ould of the very fincst thines in all England one nes told the trustes of Co He willino to help them, and ho lastie were quite blan and design that bad been mado for builin $p$ the $C$ otle again and he old bill and preserving the design of istingnisheding, which was attrihuted to that distingnished architcct, Inigo Jones. Anarchitect rality and beanty, had prepared a plan, and he dared sayit would not long be a great sccret. The question was, was Nottincham to assist in an poration of this kind? His strong faith was that it would. He wished to tell them, as a fact, that Nottingham had taken public money for master's prizes moro than the average. With regard to the students, he reminded them that there were 120 schools competing for the State medals, grold, silver, and bronze. Gold medals had bocn given a $4 \times \frac{1}{}$ y for seven years, and there yen more than ten gold modals given every year. The serenty modals that had been given away had heen competed for by 120 schools, the areage being less than a medal per school, aud or tho seventy Nottingham had gained no less than six. In fact, the medals taken by Notting-ham,-and no doubt their skill in cock-fighting, prize-fighting, and rifle-shooting had something averare of the resinit,-wrere eight times the Mr. Rowle, the bead-naster, addressed the students.
From a Department of Science and Art report, recently issued, wo ohserve, that in the Government examinations in draving of 1872 the Nottingham school has agaiu, for the fifth car, headed tho lists, and has, for two years mong, heatea the South Kensington and othe metropoitan schools. Wo give the names of some of the schools which have taken the greates number of prizes:-Nottingham, 56 ; Birming ham, 51; South Kensington, 42; Derlyy and Dufield, 10 ; Glasgow, 39; West London, 37 ; Manchester (G.S.), 33 ; Bloomshary, 28; Lei-
cester, 28; Lombeth, 27; Dublin, 25. Edin bargh, 25; Bristol, 24; Sheftield, 21 ; Man Linester (h.1.), 23 ; Brighton, 22 ; Exeter, 22 Lincoln, 22 ; Liverpool (S.D.), 21 ; Newcastle Belfast, 18 ; Leeds (M.I.), 18 ; Suuderland, 18.

## IRRIGATION IN NORTHERN INDIA

## institution of cifil emgineers.

At the meeting on Jannary 1 - th h, the paper read was "On the Practice and Results of Irri: gation in Nerthern India," by Colonel W. H. Greathed, C.B., Chief Engineer of Irrigation to he Government of the North-Western Pro-

The ohject of the papor was to describe what heen done and what was now doing in that portion of Upper India where irrigation had been longest practised, and on the largest scale. The tract of country nuder consideration was north, the River Bralumapitra on the ont the the rivers which merged into the Indus on the west.
The people of the North. Western Provinces had practised sinking wells for irrigation from the earliest periods. The depth it which water was found in the Plains valied from 10 ft . to little pit supplied as ace. At the lesser depth a little pit supplied as much water as could be
lifted in a day in a jar attached to a light
balance-beam worked by men. Two men conld Ficep a plot of an acre watered, but the demand on labour prevented its employment on a large scale. Pits of this description fell in during the
rainy season, and had to bo annually renewed at rainy season, and had to bo annually renewed at the cost of the tenant. Deeperwells, brushwood cylinders, and worked by ballock power, cost from 5l. to 182. apiece, and employed sis men and three pairs of bullocks every day to keep five acres watered.
Extracts were given from the official account of the famine of 1868-9, describing the desoletion in districts unprovided with canals, and the security of those that were irrigrated.
The scheme projected for tarning all available waters to the greatest advantage was next detailed. The characteristics of the rivers Ganges and Jumma, which included between them the larger part of the zone of "Plains," were identical. Both rose in eternal snows, and both seceived large affants before leaving the moun. tains. The drainage area of the Ganges was 11,200 square milos, that of the Jumna 7,800 square miles. The flow of water in the greatest floods was respectively 230,000 and 160,000 cuhio feet per second, and when these rivers were at their lowest, from the midale of January to the end of March, the flow was reduced to 1,000 cubic feet and 2,000 cuhic feet.
The Ganges Canal was perbaps the largest work of the kind in the world. Its full capacity was 6,500 cubic fect of water a second. The width of bed on the Solani Aquoduct, eighteen miles from the head, was 161 ft ., and the depth 10 ft . The main cbanvel was 318 miles in lengtb, and it was vavigablo throughont; tbe branches wore 306 miles in aggregnte length, and the distrihutaries $3,0 \% 1$ miles. A carriag and the banks were planted with timber trees The flow of water per second in 1870-71 was 4,300 cubic feet, and 767,000 acres were watered in 5,061 villages. Irrigation commenced twenty two miles below the bead works, and was diffused over an area 320 miles long by about 50 wide. The sub.Himalayan drainage, which the cannl crossed, was passed partly into, partly over, and partly under tho caval. The works in the upper part were chiefly constructed on block cuandations, perforated witb wells, by means of Which they were sunk in running, sand a balley stro miles and alani Aqneduct span width; its foundations were supported by the pressure and friction of wet sand, and no subsidence had occurred. The slope of the country in the upper part of the canal was mnch more rapid than that given to the canal beds, -a difficulty which bad hoen orercome by masonry ogee falls; in place of these, vertical weirs with long crests wore heing buition new canals. The difficulty of the condrerocommenced whe detailed, and the functions of the canal officers. The earning of a cubic foot of water on the Ganges Canal, in 1870-71, The net anaum; on the Erstern Juma, 591 . North-Western Provinces, in 1870-71, after the Tryment of working expenses, was $182,437 \%$., 3,714,631l.
The Agra Canal had been projected for the irrigation of the Muttra and Agra districts, on the right bauk of the Jumna, below Delhi. A weir, $2,12 \mathrm{~S} \mathrm{ft}$. long, had been built across the Jumua, at a point wbere a spur of quartz from work had no foundations. It consisted of two parallel masonry walls, $2,128 \mathrm{ft}$. loug. running from cod to end of the weir, of which the footings rested on the fine sand of the river-hed at lowwater surface level. Between these walls, which were 26 ft . apart, stone was packed, and a slope of stone was constrncted, up stream with a base of 40 ft ., and down stream with a hase of 200 ft . Scouring sluices wero constructed on one flank of the weir, to keep a clear channel in front of the canal head. This weir, when partiolly constructed, had satisfactorily withstood the greatest known flood on the Jumna.
The financial results were also explained. the end of the year 1871 npwards of a million acres were irrigated from existing works, which afforded a net return of 182,500l. The capital expended had been $2,7 \cdot 7,0001$, and the net fully completed, the cost of the nndertakings would amount to about $7,500,000 \mathrm{l}$., with a return of 12 per cent. on the capital when the canals were fully developed.
The principal canal in operation was the

Western Jamna, an old Mahomedan work. It had paid nearly $2,000,0007$. clear profit, after from the river Ravee, was constructed on the model of the Ganges Canal, and was gradually making way

## GAS EXPLOSION: HYDRAULIC

 GASELIERS.A serious gas explosion has ocourred at Pierrepont-street, Bath. An cscapo of gas called in suspected in tho parlour, a workman light han an explosion took plroe, harling tbe man from the steps on which he was standing, and reaking the fon-light over the street-door. The ornse of the escape was want of water in the pendant. Workmen dealing with gas ought to know better tban to strike a light on such ona ocension. As to the want of water, this is the fitting time and place to recall what we said about three winters ago as to hydraulic gaseliers Water is rot only ready to evaporato in a short time, but also, when frost comes, to burst the tubing, and thens it incurs a double risk. We then , that wil was meferable to water, and we a nor to notify that a which, are mplied three voars since with oil has continued till now in groal order, a little ail contince oly one been added. fo frost ha injured it and no risls has been ran from escape fores , aither has the ail given tho slightest disagreeable smell. Nerer mind what cas-men iswo bout in hal (it wes colza oil) : water suits them best, explosions notwithstanding.

BUILDINGS IN BLRMINGIAM.
Teree blocks of bnildings are heing erected ronting to New.street, Birmingham, the total length being 238 ft ; also buildiugs on each side an intended pascago from New-street to the London and North-Western Railway Station, the frontaro heing $151 \mathrm{ft}$. ; and awother range of buildings opposite the station on each side, the upper atories being carried over the passage, and having a frontage of 80 ft .
Part of the erections is arranged as a hotel, and the remainder is to be let 0.8 shops, warehouses, and offices. Tho materials employed are white brick and stone. The style is Italian, witb considerable ornamentation, both in terra cotta and in stonework, the whole of the front being carried on iron columns, and so arranged that the plate-glass extends in front ost possible amonnt of space for the display of goods; hut, unfortunately, in an architectural point of view this detracts from its effect, as it grives the huild. ings the appearance of standing on glass. Part of the buildings next New-street is now being proceeded with under contracts ontered invo with Mr. John Garlick and Mr. Charles Jones coth of this town, and the other portions will Plevins, of Birmingham, is the architect engaged upon the works $\qquad$
THE SALT STATUE FOR BRADFORD.
A wooden structure, opposite the Bridge-street corncr of the new town-halh, has been put up on the site of the statue to be erected to Sir Titus Salt bart., in order to give some idea as to whether the sito would be really a suitable one. This structure, which has been undertaken hy Messrs. Farmer \& Brindley, who havo executed the whole of the carying in the new town-hall, is in an adranced stage of complction. The form of the erection is quadrangular. The base consists of fonr steps, on the top of which is placed the pedestal, the whole raising the statue 8 ft . ahove the level of the road. Over the statue is a canopy + supported at each corner by clustered shafts of polished Shapp granite. These shafts support
the arches of the four sides of the principal stage. The four arches are decorated with inlets terminating in stone finials. Orer this principal stage is an intermediate stage, with nicbes in each face of the structare, for the reception of four statues, representinc Chariny, Justice, Temperance, and Prudence. The upper part of the canopy is decorated with ated by gables, and anglo pinnacies, and height from the ground spire, rising to a tola edifice has heen designed hy Messrs. Lockwood \& Mawson, the architects of the town-hall, and is in harmony with the architecture of that bnilding. The statue itself is also very nearly completed, in the studio of Mr. Adams Acton, the scalptor. The figure is heing execnted in white Carrara marble, and represents Sir Titus seated in a chair altbough in a sitting posture, its height is 7 ft . The stone of which the canopy is formed was all obtained from the Cliff Wood Quarries, out of which the whole of the stone used in the front of the town-hall was also ohtained.

## STATION PLATFORMS

Captain Tyler, in reporting to the Board Trade upon the accident which cansed mends a uniform standard for passencer platforms and carriages on the motropolitan ines, and suggests that in the meantime the carriares should be supplied with continuons footboards. Captain Tyler also points out the ocessits for careful suporvision in regard to the tarting of the trains. The danger of the plat. forms on the metropolitan lines we gave urgent warning of the year before last, and previonsly; but it repuired the sacrifice of some specinl per. sonage ere anythiner could be done. As long as only a monere rictim now and tben whs mangled only an obsered, the railway Jurgernaut just moved on as beforo; but now we shall have something done.
Srr,-Doubtloss the public will appreciate the valuable recommendutions made by Captain Tyler for improve-
ments in the heights of railway platforms and oontinuong carriage foothoards as a preventive, in onome degrea, of

Ihichoula, however, like to call attontion to a matter Fhicu seems o have been oserloohod. The means of plat-
form ingress and egress being in many instances by ono gateway, there must be a righ of persons rushing ay oner a
train in motion if the gate bo left open for the exit of train in motion if the gate be left open for the exit slgnalled the latter have to whate time in waiting for tho
not fery active porters to open the gate when the train has
 stations. Now, to aroid both these dificulties 1 would
suggest the erection of high iron turnstiles to open iu opposite directious: thus, when a train is signalled "in "1
the inlet turnstile slould be locked, tho other heing fre the inlet turnstile slould bo looked, tho other heing fre o
for exit, but provided with a look for wholly olosing tho plat forms.
If this pla
If this plan were alopted, one divided way would suffice at all stntions where room was not arailablc, and effect a saving
public.

THE OLD HOUSE, ENFIELD. Srr,-It will interest your readers to know What the magnificent brickwork alluded to in seen secured for tho South Kensington Mnsemm The Old House is now being razed; and ex. berienced workmen are engaged in taking down he brickwork for the purpose of removal. Mr. Alexander Andrews, with whom I have poken on the subject, does not agree with your houso thendent, Mr. Wilsor, in calling the old he Manor House (for some time the residen of f tho Wroth family) as having been "long pulled down," in his time, and which seems to lave st
own.

Th. Bitterbury.

THE EFFECT OF CHARCOAL ON PLASTERING.
Sur,- I have a kitchen in which a good doal of charcoal used in the usual way in little open fires along one side
$f$ the room, and to its use $I$ attribute the falling awsy of urge patches of the plastering on the ceiling and the pper portion of the side walls, as well as the whitewash
$y$ which it has been yearly coated. It is lofy $y$ which it has been yearly coated. It is lofty enough,
nd there is a ventilator in the ceiling sumpient for the arpose; and the position of the roof wound serara to
uFonr ita action, as the kitchen is a detached building
nd is ceiled a consider nd is ceiled a conside rable way up the roof inside. I have ck, but does not eome off easily; but its appearance 3ke of all the plastering, and do it again. Now, may I
sik, through your valuable paper, what is the beat mode do it, 50 as to resist the sulphurous yapour best mode to lime in mi xed some similar cases. I aro told that when o mach affected, but I have nevor seen it ased in it is not
ling-house; while in some of the hop-kilns, where largo
quantities of sulphur are used as well as charcoal, the cei ings are composed of tempered cluy ; but this would not
do ao well in my case, as a decent apperance is required do so well in my care, as a decent appearance is reqnired.
Possibly some of the cements so mulh in use now answer the purpose, but I would prefor lime afit conld he Perhaps $\begin{aligned} & \text { ome of your readors will kindly help me i } \\ & \text { the ratter. At the same time it }\end{aligned}$ the matter. At the same time, it in needless to sdrise th charcoar better discontinuad, for rosuave already urged that,
with no bethe choice of a strike or $r$ revolu tion. I expect anaongst the many remedies or appliances
now at hand for every evil, some one will be able to giv a practical and not expensive one for tho above. scriber. $\qquad$
HOW FAR IS AN ARCHITEOT LIABLE?
Sir,-I havo had built two honsos, at a cost of 5002 ., employed an architect to make plans de., and see overything done properly, and paid the whole of the cash on the faith of his certifi-
oates. Ten months elapse ; the pumps the oates. Ten months elapse ; the pumps then lead pipe proves to be full of sand.holes, of the of the quality specified, necessitating the substitntion of new, at a cost of 61 . Now, sir, what is the best thing to do ? The contractor has since died. Can I recover of the architect?
M. H.
*** This, thongh a small matter, raises on which we shall be glad to hear what corre. spondents havo to say.

NEW DRINKING FOUNTALN IN CHESTER
Miss Humble, in memory of her two sisters, and her brother, the lato Mr. E. Humble, has presented to the corporation of Choster a drink-ing-fountain. It is situated at the junction of the Tarviu aud Christlaton roads, in the suburb of Boughton, and has boen recently opened.
The main body of the structure, surmonnted by hood, is hexagonal in plan, three sidos having inscribed panels alternating with a bowl on each of the other sides. The bowls are of grey granite, polished inside, with fine axed exterior hile faced recesses abore them, out of which the water flows. A willow wreath is cut upon a torus, forming an appropriate neck mould for a memorial fountain. The fced-pipes are long a strong shield of brass to unischievous persons, the water flowing from openings in the pipe, about 3 in . hack in the stoneworls. The overflows from the bowls feed three troughs for cattle ; these troughs face the panels, and aro cattle; these troughs face the panels, and aro
easily reached from the side of the road, the curbstone alone intervening. All the stonework curbstone alone intervening. All the stonowork
is of York stone, with the exception of the bowls
The hood torminates with a bronzo and gilt lamp, the ladder-rests serving as guides to wayfarers.
The presentation is rocorded on one of the panels; and the texts, St. Luke xviii. 16, and St. ohn sili. 11, occupy the other two.
Mossrs. Harricson \& Seaton, Liverpool, were the architects; and Mr. H. Wigginer was the contractor.

## THE TRADES MOVEMENT.

The Building Trade of London.-It will be remonbered that last snmmer the operatives in the various branches of the London building trade made a demand for an incrense of one penny per hour in their rate of wages, and that Central Association of Master Builders hase The received notice that this year the men intend to "stand out" for the other halfponny, making their wages 9d. per hour, "in accordance with the terms of their original memorial." The notice fixes the 19th of July next as the date for the increase to come into operation, and adds that, sarics of life, they find the cost of the necesmoney, within the last few years, has been re money, within the last fow,
duced at least 20 per cent."

The South Wales Strike.-A meeting of the atters and smithe, carpenters and other " tradesmen, employed in the Dowlais, Plymouth, and for the works, has been held at Penydarren, relation to the of considering their positiou in perate the strize. In the course of a temperate discussion it seems to have heen made pretty clear that all present were desirons of
passod to the effect that "each man was at biberty to do as he pleased," go to work or stop Sut.
Strike through a recent Act of Parliament.-A strike of the chain-cahle makers of the north of England (which will extend to other parts and o the metropolitan iron-works) has occurred, for an unexpected reason. The trinity House Brethren, the Admiralty, and the Board of rade, finding that shipping have been long supplied with defective iron cables, by which vessels have heen lost in far greater number than from bad anchors, introduced a Bill into Parliament to remedy this serious evil; and now the ChainCahles Act has come into force, which roquires that before a chain is passed, it shall undergo 2 test, according to sizo, ap to 40 to 50 per cent above the Admiralty strain, so as to prove the quality of the irou and workmanship. The additional proof has caused the chain-cable artians to use more skill, labour, and time, than in ormer days, and for these extras they have emanded an advance of wages at the rate for heary chains of 6 d . per cwt., and then relaced heir request to 3 d . per owt. The employers, hewercr, dold out agannt both demants; and as he mon, since the Act in question was mooted, have husbanded a fund to meet a strike, tho chain-cable making is likely to want many links before the men make any more cahlos. The dispute opens up somo serious misgivings es to past shipwrecis.

## A.COIDENTS.

Fatal Scafolding Accident near Newport. The platform part of the scaffolding of a now bridge now in course of construction over tho river Usk, near Newport, recently fell into the river. One man was drowned; two are missing and four others injured, two of them soriously. Fall of a Building at Walkley.-The gable end Industryeling-house in course of erection in Inaustry-street, Walkley, has collapsed, and fortunately catderable damage to property, thongh, appeared very insecure. Thabe end had lately tenat completely overwholmed with building material of great weirht.

A Building Set on Fire by Lightning at Black. Beardwood Cliff, near Blackburn, were recently set on fire by lightning. Thachn, were recently miles distant from the Tho house being tiro before the encines could are of recent construction with a roof of pitch pine, and the damage doue will be about 300 . The horses were got out of danger with difficulty. A pear-tree on the north side of tho stables was split by the electricity, and the coachman was thrown to tho pround and son, however, was injured.
131, Fall of a Brichlayer in Belgravia,-A 131, Ebury-street, Belgravia, a bricklayer, in the employ of Messers. Walter \& Sons, builders, is a is a very high one, and occupied by officers of racks. rail of the area steps, and from on to the hand to the spikes, and tumed from thence jack on smashing mils and stone and do to ment and and stone, and deluging the pare ment and arca-bleps with blood. A lady and gentleman passing by narrowly escaped the blood spue fiom, were corered with the Fatal Fall from the poor fellow's head.
been held been held at New Town, Millom, says the HeWilliam anmal, on the hody of Thomas HoWillian, aged 32 years, who had met with a datal accident on the previous day. Deceased was engaged at the Millom Ironworks, and about half-past three oclock in the morning he was at work filling metal into the furnaces with a wheel. barrow. Near where he was walking along on the top of the furnaces there is a lift used for raising the ore from the ground to the top, which is a distance of 50 ft . Down this lift MeWilliam by some means or other fell, and met with immediate death. The jury returned a verdict of "Accidentally killed," but as this was he second death of a similar nature at that place they recommended that a gate should be placed i front of the lift.
Fatal Fall at Arborjeld, Reading.-An inquest as been held before the countr coroner, Reading, ou the body of John Buckland. Emme racock said decoased was repairing a porch Hearing a "crash" I went down at once and
foand deceased on the ground and the ladder brokeu. He appeared dead. Only about three minutes elapsed frem the time I saw lim alive till I found him dead. No one ras working witb deceased, nor was any one near him at the time Just hefore tbe fall decoased cautioned me against letting the children get ander the
ladder as it was unsafe. Deceased was perladder as it was unsafe. Deceased was per-
fectly sober. A labourer saic, I spoke to fectly sober. $A$ labourer said, I spoke to
deceased during the day, and he told we he was deceased during the day, and he told the he wa Deceased hrought the ladder with him. A verdict of "Accidentally killed by a fall from a ladder" was returned.
Great Fire in Gateshead.--Ono of the most destructive fices that have ever occurred in Gateshend has just takon place. Tho scene of the fire was the well-known saw-mills and timber-yard of Messrs. Meggie, which are situate in Fillgate, about half a mile from the Tyne Bridge. The portion next and highest up the river was occupied as a timber-yard, whilst lower down, and strotching from the shore to the narrow street whigh leads to Hillgate, were the extensive planing and saw mills. Adjoining these was the tar-yard of Messrs. Hegrie, who aro aso rope-maninfacturers. the eutire premises from end to end wras one mass of fire Even a new cranc, whicls cost 300 t. some shor time ago, fell and was broken in several pieces Messrs. Hegric liave been rery unfortunate, having been burnt down before on one or two occasions. The damage is estimatcd at between $20,000 l$. and
insurance.

SCHOOL BOARDS
London.-I an in a position, says tho London correspondent of tho Weekly Scotsman, to give you an iden of what the total cost of the opera. tiens of the London School Board will he for providing school accommodation for the 100,000 children needing it. The first sum raised by the Board was 40,000 l, which means on rate of a halfpenny in the pound all over the metropolis. The next sum was 75,000 l., which a rate of little more than three.farthings in the pound would, make up. A further sum of $62,000 \mathrm{l}$, was asked, which represents about another rate of threefarthiugs in the pound. It is estimated that provide for the 100,000 children up to Maroh, Is:1, so that the total cost will entail a rate of about twopence and the one tenth of a penny or a halfpenmy a year, for tho threo years and some months which the Board expect to exist. It is intended to apply again next sessicn for an Act of Parliament to continue the tenure of office of the present members for five or six montlis beyond the threo years, so as to enable them to complete the work they have entered upon. Sheffeld.-The first sohools built by a school board in Yorkshire have beeu opened with some little ceremony by the board, in Sandersonstreet, Sheffield. The schools are of stone, and have cost something like 5,000 . playgrounde are attached.

## Hiscellamea.

Water-supply for Fires at New York. In the American Gaslighting Joumal is an article that there is a project in New York for an indefinite supply of river.weter in case of fire, with powerful engines for raising it, together with a system of special maius throughout the eity. Power could also be sold to warehouses, stores, and manufactories. Five millions of dollars are mentioned as the probable cost of establishing the new worls; and this sum would, at all evonts, it is said, cover the cost of works for supposing the new system to be confined to that quarter which is in greatest danger from the present lack of pressure ; and it is just in this prestrict that small xuotors are most in demand. The sale of power to 500 buildiugs at an averace of 1,000 dollars each, would, it is estimated, pay the interest on that sura, aud perhays the cast o maintenance.

Manchester Aquarium Building.-Goor progrees is being made with this building. It is now almost a matter of certainty that the bild-
ing may be open in May, in time for the Whiting may be open
suntide holidays,

Dr. BorIase, the Cornish Antiquary. Mr. W. Copeland Borlase, of Castle Horneck athor of the valuable work on "Cornish Sepul chral Monuments," reviewed by us last week, as opened the session of the Penzance Institute, Mr. Thos. Cornish, the newly-elected president f the society, presiding. From a report in the Comish Telegraph, it appears that Mr. Borlas read a paper on the well-known Doctor Borlasc f the last century. The doctor at first lived at his father's manor-house, at Pcndeen, St. Just, a house possessiug many noteworthy features and associations, but the rectory of Ludgyan oon became Dr. Borlase's ife-lon abode. One was his communications with the fashionable and literary world, with which his connexion was larsely kept up through Dr. Oliver, a Cor was largcly kept up through Dr. Onver, a Cor Bath, Letters from Dr. Oliver were read, and two unpublished from Pope to Dr. Borlase were wo unpubishod from Pope to, in one of which is given a fuller description than any other by the poet himsel description than any other by the poet himasel of his grotto, which was much enriched labour of Dr. Borlase might be divided into thre parts: the earlier occupied by archreolopy; the middle age by the history of natural phenomena whilo his latter days were taken up in making while his latter days were taicn up in makions fora parochialaccount of Cornwall, con taining the heraldry and genealogy of the county In his day there were very few antiquarie edition of the "Antiquities of Cornwall" Than edition of the "Antiquities of Cornwall." Thong facts were unimpeached and valuable. Borlase's age was an age of collecting without sufficient rudimentary knowledge to make any adequate generalisations possible. Gropings in the dark were many of the best efforts. A manuscrijt volume, however, by Dr. Borlase, con the causes of earthquakes, which might be placed alnost side by side with those of Six Charles Lyell; but the volume was not published. Was the subject of many much attention, and was the subject of many letters bet ween Borlas Borlase rose at five, and every evening retired to rest at nine, continuine theso hours uutil his death at Ludgvan, on the 31st of August, 1772 .
The Buried Valley of the Mersey.-A paper has been read before the Liverpool Geolo. F.G. Society, by Mr. T. Mellard Reade, C.L., F.G.S., on this bubject. It was of a mixed engineering and geological character, commending itself to those who have a taste for practical
science. Mr. Reade stated that he was led investigate the form of the rocky bed of the riper Mersey, by finding that in the upper reaches of the river the rock lay at a depth considerably below the deepest part of its present bed, which is situated between Seacombe and the Rock Light. house. The ancient or pre-glacial course of the river was traced past Runcorn Gap, and the ques. tion of its course onwards to the sea next considered. The author's reasons for not considering the valley to be a lake-basin were also given, and that thero had been an outlet, at a regular gradient, to the sea, or a sub-aërial valley, where the estuary now is, when the land was hipher with respect to the sea-lesel, was argued from the following facts:-That a bed of water.worn pravel or stones, mixed with red sand though sometimes absent, usnally lay upon the roct That this red sand being dre to the griuding down of the Trisssic rocks when the whole country was enveloped in ice, like Greenland of the present day, if there had been no outlet for the sub. glacial river, a great accumulation of debris would have taken place in the bed, which, on the supposition of an outlet, was being continually carried seaward by the sub-glacial river. It was also shown that, in Greenland, rivers conrsed over the surface of the ice, and then, plunging bolow it, flowed underneath to the sea.
The Linoleum Manufacture.-The report of the Linoleum Manufacturing Company (Limited) shows an avalable total for the year of 22,5832 . ncluding a previous balance of $2,43 \overline{\mathrm{~L}}$, and re commeuds an appropliation of 19,500 l. to dividend at the rato of 20 per eent. per anminn
(of which 4, 766 . were paid in July), leaving (of which 4,766l. were paid in July), leaving
3,0831 . to be curtied forward. For the previous year the dividend was also 20 per cent., 2,0001 were added to reserve, and 2,1887 . were carrie forvard. Linoleum fioor-cloth is a decided im provement on wax cloth. We believe the paint in it is mixed with cork,
desigas generally are good.

The Early Monuments of the British Isles.-Mr. John S. Phené, F.S.A., has delivered a lecture in London, on tho more recent discoveries of archwological relics of remote antiquity. In the course of his lecture he gave a resune of his own explorations conducted during the past year. Thess extended at intervals from May to Decemher, and comprised tho examinetion of tumuli on the Cotswold Hills; of cromlechs at Harlech and other places in Wales, and in the counties of Dablia, Down, and intrim, in Ireland; a somewhat extensive urrey of the round towers of lrcland; and lose and critical exanination of the domed cructures on the Boybo Water. Varanded eresting results of a novel character attended established in the construction of the cromlechs the north of Treland and in Argyleshire by which a trong corroboration is given to the bis torical tradition of the invasion of that part of cotlan now tof the Areplesbire by the trish Delriade. Ho found supenranees of a careful and syat He nd systematio erasare ass ines incised chater the part chamberca not so erasediqures still pon them. In the known to antrins in Wales those le had idertified with the localities of such mountains in Scotland.

Box Edgings. -This is a very good time to make new and re-form existing edgea of box. The Gardener's Magazine gives some hiats on the subject:-The gronnd is made ready for the reception of the plants by being made level, and then trodden or well beaten dorn to a level with the existing walk, ol the inteaded height of the one to be made. A trench, about 6 in, deep, must bo neatly taken out, the soil brought onde perfectly straight for the pieces of box to lie against. The side of the trench should be made rather slopiag, and in laying in the box koep it is its place with the left hand, and fill in a portion of the soil with the other; when tion rable length is done, fill a further por. a good treadin in with a spade, give part in, and when made firm the operation is complete, and nothing remains but to put the gravel in its place. In prepariug the box for planting, strip off tho moderate-sized sprigs with a portion of the roots adhering, and trim so as to form a miniature fan. The tips of tho old hard wood at the botton when it is too long, and likely to prevent the piece lying aicely in its place. Each spray should be as near in sizo as possible, to provent any unnecessary sizo able then laying it in.

The Proposed South London Museum. A problic meeting has been held at the Lambeth Baths, Westminster-road, in promotion of the movement now in progress for the establishment of a museum in the Sonth of London. Mr. John Locke, M.P. for Southwark, occupied the chair, and was supported by his collengue, Colonel Beresford, M.P., and a large body of local and influential gentlemen. The ohairman, in opening the procecdings, expressed his hearty concurrenco in the object of the meeting, which, if carried out, would tend to the great advantage of the working population of the southern distriets of the metropolis. The establishment of a museum and gallery of fine arts in South
London would go far to educate the masses of the people. He pointed out the advantages
which had resulted to the East end of Loudon by the establishment of the Bethnal-green Musenm. There was a large piece of ground, called the Glebe Land, at Nowington Butts, which could, he said, be obtained as a site for the proposed museum. Mr. Clements, the chairman of the provisional committee, detailed the progress alrendy made by the movement, which has been of the most encouraging character. The meeting plodged itself to use its bestefforts to ensure the anceess of the movement, and other resolutions
in furtheranco of the object of the meeting were in furthe

The Dorchester Surveyorship. - Mr Joln Wood, of Wolverhampton, has been ap. pinced at a salaxy or leok. per this bor an appointed also inspector of nuisances an addition appointed also muspector be nade.
to his salary men

Mr. Stansfeld and the Strveyors of
Highway Boards.-A depntation, appointed by Highway Boards.-A depntation, appointed by
the District Surreyors ${ }^{2}$ Association, have waited the District Surreyors Association, have waited Board, to urge upon him tbe better management of highways gencrally, and placing the appoint. ment of surveyors of ligbways iu tho hands of tho Local Government Board. Major Allen,
M.P., in introducing the deputation, said they reprcsented an association comprising 130 high. way districts. They desire to have their appointments taken out of the bands of the ratepayers, and to be under the Local Government Board, so that they might be placed on a footing sufficiently independent to allow them to do sufficiently independent to allow them to do their duty without fear or favour. Mr. Edward
Hicks, chairman of the Surveyors' Association, Hicks, chairman of the Surveyors Association,
said they wislied to be under the control of the Local Goyoroment Board in a similar way to the officers under the Pohlic Healtb Act. Mr.
Stansfeld said he did not think they could mako Stansfeld said he did not think they could mako
tbe charge for tho maintenance of roads an im. the charge for tho maintenance of roads an im.
perial chargo; but there was a strong feeling perial chargo; but there was a strong feeling
where there were great tboronghfares near where there were great thoronghfares near
populous towns, for widening the area, so that populous towns, for widening the area, so that
the cost might not fall so beavily upon a small district. A county charge would necessarily imply conrty control.
Coal versus Colliers. - A miner, referring to tbe new advance of coal, pertineutly asks whose fault it is this timo that coals are raised. F twelve montbs past it is the collicrs who have been popularly blamed for forcing up the price of coal by their reckless demands, but it is high time, be thinks, that the facts sbould bo known. "Eightecn months ago," he points ont, "coal
that is being sold now for 17 s . and 17 s . 6 d . at that is being sold now for 17 s . and 17 s .6 d . at
the pit-mouth, sold for about 8 s . or 8 s .6 d . per the pit-mouth, sold for about 8s. or 8a. Gd. per
ton. I helieve," he says, "it is the opinion of the public that we miners aro receiving the benefit of this enormous adrance of coal; but I will tell you the facts: we had 6d. per day rike
in October, 1871 , and wo hare recoived no ad. in October, 1871 , and wo have received no ad. rance of wages since. During the past year, we had our hours of lahour rednced from eleven to
eight, but the $6 d$. rise wo had in 1871 , and the eight, but the Gd. rise we had in 1871 , and the
reduction of hours together, would not make more than 2s. fid. per men per day. Now let us assume there is one ton of coal per day drawn per man, - and coal is now just as mucb arran per ton as it was in Septemher, 1871,-there is 6s. 6d. or 7 s . clear profit moro than there was two years ago on one single ton of coal." They who can chent the public in this way would, pickpockots.

New Reredos in St. Mark's Chureh, Lewisham.-A rerodos of Caen stone has heeu erected in this church, the design of whicb comprises a centre portion of three moulded arcades with marhlo clustered slafts, tho arcades the width of tho altar.table, and pinnacled supports crooketed on either side, containing four niches for the rcception of figures of the Evangelists. The middle compartment of the arcade is deeply recessed, and a statuary Calvary cross on a gold ground placed thereis, and above it is elected a light tabernacle-canopy, supported on four Michnel and Gabricl supported on pinnacles on either side. In the panels of the sido compart. ments are carved on a diapered ground the symbols of the Agnus Dei and tbe pelionn, and symhols of the Agnus Dei and the pelicna, and
in the spandrels the Dore and the Alpha and in the spandrels the Dore and the Alpha and
Omega. Tbo whole is profusely carred, and has Omega. Tbo whole is profusely carred, and has emblematical teaching. Tho work has heen exocated by Mr. George Whittingham, of Kenning.
ton Park-road, from designs by the architect of ton Park.road, from designs by the architect of
the building, Mr. Williaw C. Banks, of Grace. the building, Mr. Willian C. Banks, of Grace-church-street, who also has designed the scheme
for filling the whole of the traceried windows with stained glass. The portion of the reredos already erected is the gift of Mr. J. Lonsdale.
St. Michael's, Highgate.-The reredos of this chnrch has just been revised and restored by Messrs. Cox \& Sons. Orer the altar.tablo has been placed $几$ carved stone panel represent-
ing, in lifo-sized figures, the Breaking of Bread at Emmans, the figare of Christ heing central, at Emmans, the firare of Christ heing central,
with one of tho disciples on either side. The hackgromnd is filled with tracery and carved foliage, and in the panels on each side are tho Commandments, illuminated. The tracery is flled in with the passion.flower, the Agnus Dei, and the Pclican. The lower portion is diapered in rich hrown and gold. A text runs througb
the whole,-"Tbeir eyes were opened, and they fnew Him,"

The Bourne at Caterham.-Tbe Bourne water has again made its appearance, and las week it was running strongly through Caterham Valley. Aubrey, the historian, says the Croydon Times, records a curious superstition concernin this subterranean stream. In speaking of Caterbam, ho says,-"Between this place and Coulsdon, in the bottom, commonly called Stone ham-lane, issues out sometimes (as against any change in our English Government), a Bourne, which overflows, and runs down in Smitham Bottom to Croydon. Tbis is held by the inhabitants and neigbbourhood to be ominous, and prognosticating sometbing remarkable approach ing, as it did before the happy rostoration of King Charles II., of ever glorions memory, in 1660 ;-before the Plague of Loudon in 1665 ;and in 1688, the era of another change of the constitution." The stream has already reached constitntion." The Etream has already reached made by the local Board to receive it into the made by the local Board to receive it into the
Wandle. Before the erection of this culvert the southern portion of the town and tbe Old Town used to bo inundated at its rising.
Paper Wheels.-We now learn from the monthly scientific paper in Chambers's Jouraa? that the article in question is made by treating waste-paper, or paper.pulp, or vegetable fibre waste-paper, or paper.pulp, or vegetable fibre
witb chloride of zine [wonld not oxychloride of wind chloride of zine [wond not oxycbloride of zinc he best ? ], and subjecting it to pressure,
whereby it becomes hard and tough. The hard. whereby it becomes hard and tough. The hardness and toughness may he varied according to
the strength of the bath of zine solution, and the the strength of the bath of zine solution, and the
material produced will be flexible as leather, or material produced will be flesible as leather, or rigid as wood. It takes colour readily, and can
be used as floor-cloth; it is a substitnte for be used as floor-cloth; it is a substitnte for leatber, both soles and uppers; can be fashionod into gas.pipes, handles for whips, for saws, and
many kinds of tools; into buttons, combs, many kinds of tools; into buttons, combs,
pulless, aud so forth, and into large sheots pullefs, aud so forth, and into large sheots
for roofing. It promises to bo useful for orna. montal purposes; perhaps, for coats and trousers and paper already manfactured may bo toughened by being passed, unsized, through the chloride of zinc bath.
Borrowed Capital for Land.-Mr. Mechi says:-The time is fast approaching when tho surplus capital of trade, commerce, and manufactures, will find its way to a food.producing
channel. There is plenty of room for it, without channel. There is plenty of room for it, without
any fear of its overflowing the banks. A farmer any fear of its overflowing the banks. A farmer
who owns the land he farms said to me last week,-
"t Twenty-two years ago I borrowed between 7,0002,
ad 8,000 . of the Government loan paying $6 \frac{1}{2}$ per cent.
 two years. I draibed
apert. The twenty-two years hare expired, and now I an
free of charge, and have free of charge, and have all my drains as perfect as at
firat, barring andry remorals of roots and trees, se. Ay
land and cropa have been imaproyed, and it has been alto land and cropa hare been improred, and it
gether a satiafactory and profitable affair."
Well, then, for G8. Gd. an acre (less than the price of a bushel of wheat) annually during a period of twenty.two ycars, tbis land has been permanently improved, the prodnce greatly in. creased, there has been a large augmentation of capital, and profit to landowner and tenant and tho conntry at large. Why is it that some
$20,000,000$ of acres are still awaiting a similar manipulation ?
Opening of New Picture Gallery in Brighton.-Tbo Picture Gallery in counexion with the Frce Library and Museurn has been opened, but without any inaugural ceremony,
tho formal dedication to the public of the entire tho fomal dedication to the public of the entire
building laving been made during the visit of building laving been made during the visit o
the British Association in August last. The the British Association in August last. The permanent opening of the Library and Museum has been delayed by circnmstances, and np to the present time the arrangements for the picture-gallery only have been completed. shortly finished in their entirety howerer, be whole, says the local Herclut, the exhi. bition, both in oil and water colours, is one of the finest to bo found in the provinces, including as it does the works of Phillips, Millais, O'Neil, Faed, the Linnells, Solomon, Frith, Frère, Marcus Stone, Sir John Gilbert, T. S. Cooper, Hunt, Cox, Coplcy Fielding, Ficat Cole, Richardson, De Wint, sc.

Meeting of Grainers and Marblers.-Mr. Jas. MacIntosh thinks it an error to describe the meeting beld by this trade on the 17 tb ult. as a "meeting for tbe formation of a trade-union," "the ohject being that of benevolence." He set fortb by him, but by one of the promoters o the meeting.

Japanese Progress.-A prospectus of Tai Sei Shimbun, or Great Western News, a native Japanese paper, edited by a Japanese resident in London,-Ofice: 3, George Yard, Lomhard-street,-bas been issued. It says the immense advance which Japan is making in material progress renders the present moment opportune for the establishment of a newspaper in tbe metro. polis of the West, to serve as a means of communi. cating further knowledge of Western arts and policy among the millions of Japanese whe are now desirous of learning all tbey can of foreign nations. The paper will be illustrated, so as to couver the most vivid ideas of the objects ex plained, and to simplify description. A portion of the first number will be circulated among the Japanese reident in Europe and America, and the remainder will be forrarded to Nagasaki, Yoko hama, and Yedo, for circulation in the Japanese Empire.
Monumental: St. Mary's Church, Eynes-bury:-ln the porch of this church there has just been erected a mural monnment of Caen stone, in the Early English style of architecture to the memory of the late Mrs. Humbley. The inside arches, with moulded hases and carred caps, are supported upon marble shafts, forming three spandrels, in the centre of ppich is the inscription, in indelible letters, in a quatrefoil within a circle of marble; and in the side spandrels are carvod, in bold relief, the lily (on tho left) and the rose (on the right). On eacl side, also, is a moulded sunk panel. The shafts are green serpentine marble, the quatrefoil and circle being statuary Marble. The monument
has heon erectod by Mr. W. Wade, of Eaton has heon crectod by Mr. W. Wade, of Eaton
Socon, St. Neots, by tbe direction of Captaiu Humbley.
Selfworking Ship Ventilation and Ship
Pumping.-An invention of groat advantago to Pumping.-An invention of groat advantago to Foul water and successfuly tried at Plymouth are both ship. Two iron cylinders, connocted below by a ship. Two ron oynioders, connected below by a tube, are placed one on ezch side of the vessel From each cylinder a pipe descends into the similar pipo rises as an outlet out, and a similar pipo rises as an outlet above. The cylinders are filled with quicksilver, and being he cted below, as already stated, each roll of the ghip produces an alternate rise and fall of the quicksilver, oreates theroby a vaoum, into
which the bilge-water rushes, and is pumped out which the bilge. water rushes, and is pumped out
at the vent in a continuous stream. The cylinat tbe vent in a continuous stream. The cylin-
ders which expel air are filled with water; but their action is the same as here described.
Crags and Cairns.-Under this title Mr Garner, W. L.S., has read a paper in the StokeTown hall, bofore the North Staffordshire Naturalists Field Club, on the houlders and other traces of gracial times in that part of the country, and on implements of the glacial drift and ancient megalithic and other monuments. Views of cromlechs and dolmens, and stono circles, were exhibited, and also flint implements. A paper by Dr. Davis, was also read as to barrows and caves. Dr. Davis was wrong in supposing that Professor Husloy regarded the Neandertbal skull as evidence of the supposed "missing link" between apes and men. To the best of our recollection Huxley lield precisely the conrary opinion: yet he is spoken contemptuously of by Dr. Daris on this false supposition.
Madden and Worcester Park.-The new ontrance over the green joins the old road opposite the late lodge. A new lodge and three rilla residences bavo been erected, with conservatories attached. These new buildings, now nearly completed, are in the Swiss style. The ground floors aro of red brick, with stone dressings, and tbe first floors and gables are of timber and stucco, with roofs of ornamental tiling. The gables are finished with verge boards and finials. The architects are Messrs. John Giles \& Gouph, of London; and the builders are Messrs. Hibhins T Trasler, of Kingston. The wholo of the works were carried out under the superintend. ence of Mrr. Mark H. Judige.
Technical School for Edinburgh. - A preliminary meeting of persons favourable to the establishment of a technical school in Edin. burgh bas been held, under tho presidency of the Lord Prosost. Resolutions wrero adopted to the effect that such a school was desirable, and that a portion of the sarplus funds of Heriot's Hos. pital might very properly be set apart for its maintenance. A committee was appointed to prosecute the matter.

Saxor Antiquities.-A collection of Saxor antiquities of rare valne has just heen presente to the library and museum of Trinity College Cambridge, by the sub.librarian of tho society For some time past exeavations have been going on on the site of an Anglo- Saxou cemetery 200 years old) as Edix. lill.hole, near Orwell, Cambridgeshire, and some curious remains have been brought to light. The donation includes varions implements in iron, as spear. heads, shield. oosses, and handles, \&c., and somo articles used in hunting and in domestic life. There are also artioles of pottery.
The Smole Nuisance.-The higb price of fuel is revising an interest in South Staffordshire in tho question of smoke consumption at the ironworks and other manufncturing establishments. At tho last meeting of the Wolverhampton town counci, a resolntion was carried by a slight majority in favour of instituting proceedings against manufacturers at whoso works the smoko nuisance existed. The town clerk, how. ever, said that the majority was so small that he sbonld decline the respousibility of acting in tho matter until it had been brought a second time before the council.
Colliery Cas Lighting.-The Marquis of Lothian has just completed new gasworls to and colliery villages on tho estate of home farm, Abbey, and eventually the underground working Abbey, and eventually the underground workings the village of Newtongrance. The crected at the village of Newtongrange. The gas is clear and brillant, veing made from the best parrot under tho supervision of Mr. Davidson, manager of his lordship's coal works.
Rise in the Value of Property.-Tho Owners of property situate at Carbrook and Attereliffe, Sheffield, liave unanimously resolved to raise all cottage house.rents by amounts equal to 15 per cent. Tho determination has been come to, owing to the great demand for dwellinge, consequent upon activity of trade, scarcity of accommodation, high price of building materials, labour, and land. The resolution affects many thonsands of houses, chicfly situate near the great iron and steel works,
The Leicester Municipal Building Ques-tion.- A meeting of tho Municipal Buildings Commaittee, consisting of the whole of the Council, bas been held at the Town-hall, Leicester, for conestion of municipal buildinens. mately resolved "That tho municipal builaing mately resolved That tho municipal buildings a frontare to a trontage trect, Horsetairstrect, Bowling Greenof plans and thepert, and that tho question be referred to a sulbion or municipal buildings upon at a future meeting of the oommitteo of the whole council.

Wax-Chandlers' Kall, Gresham-street West.-The Court of this ancient compary mot at dinner last week for the first time since their proved system of lighting and ventilating by means of a large sun.burner, which brings into strong relief the decorations, Elizabethan in Mr. Edward Jenners have been executed by woder the snperintendence of Past. Mraster Quallett, surrejor.
Charges under the Workshops Regulation Acts at Dudley.-At the Dudley Polico Court, Mr. Jones, snb-inspector of factories, anpeared in support of a number of charges against Regult persons Lor contavening the Workshops Regulation Acts, Fines of 10 s . in ench of several cases, and of 20 s . in one case, were inflicted against employers, and of ls. agrainst parents, for allowing entren bo worked beyond tho proper number of hours per day, ond for want of educational certificates.
Fire-damp. Mr. Charles Kidd, M.D., writes the Nimes as followa.the birthplace of our chief discoveries an to the reactions of gases, vapours, S.c. Blake, of Boston, the reactions
 restored to hife by inhalation of oxygen. This gas seems
a perfeet antidote to fire-dnmp: in some cates there ws relapse when the oxygen Tras discontinued, ing its inhalation the patients were saved. this $\mathrm{gas}^{2}$ in the too-often painfle the great eflieiteney of where hitherto nothing whanful acenes in coal mines, to restore life, cotiliote was known

Trees in Brighton Streets.-Another step a the planting of the streets of Brighton with elms (presented hy the Earl of Chichester) haro been planted on tho onter skirts of the centrel pavement of the Stoyne. It is intended to plant wo other lines jnst inside the Steyne enclosures, to run parallel with those ontside, so as to form an avenuo from Castle-square to St. James's. street. Eastem.road is also to be planted from the College to Kemp.town, and Buckingham-road on both sides.

Public Health Act, 1872: Engineering Department,--Mr. (roht. Kiminson, C.B., has been appouted Chiel Inspector and Consuting Lngineer; Hajor Tulloch, R.E., has been ap. pointed an Inspector. Mr. Rawlinson ceases to hold country iuquiries, as formerly, but may be alled upon for any special report. His duties future will he chiefly in the Local Govorn ment Office, Whitehall.
The Iate Mr. William Harry Elogers. Fe are sorry to bear that this gentleman, long well known as a designer and draughtsman, died on Sunday night, the 19th nlt., of phthisis pulmonaizs, after ten months' illness. Mr. W. H. logers, who was the son of tue eminent wood-carver of that namo still enjoying a hearty old age, was but forty-sever yeara of age, and leaves a ridow and six children.
The Sea-wall at Dawlish.-The south westerly grale of Saturday night and Sunday caused high tides to undermine a further portion of the sea-wall against the South Devon Railway breach. Some 25 yards yards abovo the last breach. So 25 jus endangered, and masons bare beon busily cm . endangered, and mason
plojed in shoriug it up.
MI. J. B. A. Tehas, the eminent Freach engineer, is dead. It was he who placed the He wras of Luror in the Place de la Concorde. Ecolo Polytechnique. In 1819 he published memoir, entilled, "L'Obúlisqne do Louqsor, Histoiro de sa Translation à Praris."

Explosion of Gas at the New Relief Offices, Islington.-An explosion of gas has tion Station, now in course of erection in slington, wherely two crainers havo met with severe iujuries.
The Royal Academy. - At a meoting of the members of the Royal Academy on Tuesday Messrs. II. W. B. Davis and J. Hodgson; and Messrs. II. W. B. Davis and J. Hodgson; and
engraver, Mr. T. Oldham Barlow.
The National Theatre at Washington. The National Thentre in this city has been totally destroyed by fire.

VOL. XXXI.-No. 1566.

Proposed Cathedral Church of St. Mary, Edinburgh :
Principles of Design.
our present number we give a view of the design suhmitted by Sir G. G Scott for the proposed cathodral charch to be erected in Edinbargh, and which was selected, when in competition with others, by the Trustecs.
In the ohservations that accompanied the design, the architect has explained the principles which guided him, and has produced so interest. ing a document that wo are led to print it entire :-
In compliance with your invitation, $I$ submit for your examination the designs I have pre.
pared for your proposed cathedral church of pared for your propose
St. Mary, at Fidinburgh.
In designing a church which is to take the rank of a cathedral, and that in the metropolis
of Scotland, and which must, capable of heing crected for a moderatess, bo ono has to consider carefully what are the archi. tectural, and what the ritual, essentials of a cathedral, as distinguished from a church of less dignificed rants.
It would not be easy to define tho csscntial betweeu a cathedral exist among ancient churches jroat collegiate church. Tho latter were often pronnoted to the higher dignity, and wero found in crery way fitted for it. Our own question, however, lies between a cathedral and a parochial
church ; and eren hero it is not might appear to define the differenco, inasmuch as many large parish churclies equal, and even axceed, in scale and dignity of aspect cathodrals of the smaller size. In the present instance ven, the proposed dimensions of tho cathedral ure equallec by those of some parochial churches,
ind in some instances the ritual arrangements of such churchos may also be on a nearly equal Our
Our aim, theu, must, I think, bo positive rather han relative. The church must, both within and
vithout, bear such unmistakable credontials of cithout, bear such unmistakable credentials of
ligh dignity ns to be obriously suited to is the chiof church of the suited to its rank which its chief pastor adopts as moro especially ts own; and perbaps the great essential is that he choir should bo of such ample dimensions as o allow the diocesan clergy, from time to time, a assemble there in the presenco of their .
There are, however, no universal rules for the orm of a church of cathedral rank. If we were o say that it should have a central tower, it ould at once occur to every ono that many pat feature. If wo were to moderave not emand, and say that it should, at least, be uciorm, it would be replied that we have in ritain at least two,-D Dunblane and Clandaff, mich are not so; and so on: no feature can he amed which is the special and menarying anacteristic of a cathedral. All, then, whicli in be demanded for it is that it should be as gind will permit, and that it shatll, tand will permit, and that it shall, as a rule, be te nohlest church in the city and diocese in
hich it is placed hich it is placed.

Although, however, a craciform plan and
central tower are not indispensable central tower are not indispensable charactoris.
tics, it must be admitted that both tics, it must be admitted that both are in a high
degree conducive to dignity of apect degree conducive to dignity of aspect, and are consequently most desirable features in a cathedral church. No plan is so nohle or so impres. sive as that which is founded on the cross, and the cross plan is never so cmphatic as when a central tower crowns its intersection.
I have therefore chosen as my [more normal] design the customary and typical form of cruciform church, with a central tower, only making the central crossing, with the narc and transepts, unusually wide in their proportions, so as best to provide for congregational purposes, and so constructing and planning the sup. porting piers of the tower as to offer the least practicable amount of ohstruction to view and practic.
I have in this design given aisles on either side to the transepts as well as to the other amms of the oross, which tends to produce a great amount of space in the part most useful to the congregation. As, however, yon appear to lay
special stress on this point, I have considercd special stress on this point, I have considercd
other methods of providing for it her methods of providing for it.
Had I been called in without being subjected to the ordenl of competition, I shonld have laid before you several methods of arrangement for your consideration and choice, giving you my riews upon each. Competition, however, is interfercs with this great practical evil, that it laying the whole power of confidentially customary wher an architcet of you, which cnce is called in at once as your selected adrise
There are at least three schemes which ourht to submit for your considcration which conditions wonld appear to demand that yo should lay each beforo yon, I should that, if each hy the great list of drawings which you demanad, - a labonr which would exceed my command of time. I have, however, ventured on one alternative schemo, for which a very few drawings would have sufficed; but, onit of con formity with your terms, I have trcated it as a distinct design rather than a mere rariety, and given it a complete set of drawings of its own.
This design, distinguished as Dcsign B, is Alan de Walsingham in the teration made by where omitted to rebuild the four central tower, he had supported it, but,-stepping onwards to the next in every direction,-converted his to the space into a rast octagor. This plan, though less dignified in external aspect, has very great practical edvantages as regards the actual nses of the church through its affording a great and nobstructed space in front both of the choir and the pulpit for the congregation.
In neither design, however, have I introduced a lantern rising high above the general elesation of the juterior, -that being injurious to the acoustio qualitics of the church; and, with the same riew, I have slown all parts of the roof as raulted either with stone or wood,-i.e., tho choir and tho aisles with stone, the nave, cross. ing, and transepts with wood; tho latter being particularly favourable to sound.
Iu my design $B$ I have, to avoid undre length, shown the choir as projecting a certain distanco into tho central octagon, an arrangement very avourable to acoustic objects; but, lest this showd not find favour, I havo, by a fiy-leaf, shown an extension of the choir which would crops. Con!
Conld I have afforded time for the preparation of a third design, it would have had a central tower, with a shortened castorn arm, the choral arrangements extending westward into the crossing. The nave would have been widened for congregaional ohjects, and the organ placed in
one transpet. The aisles of the nave in the two one transcpt. The aisles of the nave in the two
hays nest to tho transept would have been hays nest to tho transept would have been extended in width to provide for more persong near to the pulpit, \&c. I do not, however, like
this plan so well as the two which I have worked this
out.

In my design B, as I could not have a central tower, I found that I must either place the tower in some jrregular position, which seemed hardly to suit the site, or 1 must have a façade usual towers. Were this, hotvever, as is most he at the west end, it would be attended with oward herefore, 1 loss-frequented quarter. I havo, make my twin steeples to flank the enstern instead of the western front, so as to be seen
centrally as you approach through Melville treet.
This arrangement, thongh less customary, is not contrary to precedent, as many old churches on tbe Continent have their twin towers hoth at transent and the west, and somo even to the If
In, however, a western façade bo preferred, you will casily imagine the change, by fancying portal introduced of the east end omitted, and portal introduced in their stead, or, rather, by imagining the central portion of the west front substituted for that shown between the towers
Returning to castern elevation.*
Returning to the internal arrangemont, I will mention, that I have not ventured to show a high choir-screcn, fearing that objections may be felt to it, but have shown a low screen or septum, like those at Florence, Moureale \&c. I should, however, as a mattcr of taste, rejoice to substitute the higher form of screcn. Nor havo I shown closo scrcens or canopies on tho sides of the choir becanse they render the choir aisles onavailable except for passages.
I have provided for the organ in this manner : with lighter parts, especially the "choir organ," whic the keys and the organist's seat, I have placed close to the first hay on the north of the choir ; but the larger and more cumbrous parts have placed in the eastern aisle of the north transept, immediately behind, a place where the sound would spread itself frecly throurh both choir, transepts, crossing, and nave mnication would be by trackers passing heneath the floor of tho gisle. Thero ishorer the possiblo alternative of placing the ormanist and tho choir organ, \&c., as already mentioned, but placing the heary parts in the triforium of the choir and transept.
The arrangements of the choir will speak for emselvcs
The seating of tho navc, \&c., would be by The of chairs.
The question you have suggcsted ns to the place for tho congregation during ordinary daily ser. oce as distinguishacd from their place on greater and 1 have carefully considcred, but do not seo any necessity (but the contrary) for proIng a distinet position.
It would scem to me a great pity that the services on minor, though the most frequent, occasions should be in a less'dignificd place than at other timcs. It is an arrangement not known in country, excepting for enrly services; nor orthink it desirable.
The question whether, at ordinary week-day dmitted withint of the congregation shonld be mitted within the choir, seems one which shonla belct to the decision of the bishop and clergy. It is not essential to the arrangement to decide it while planning the cathcdral, as, if not so ad. mitted, they would simply occupy the space in front of the choirscreen, according to their umbers.
Though the choir of a parochial charch shonld and chonal bodies to hold no more than the clerical and choral bodies, that of a cathedral should do addition should bo capahle of contaiuing in addition so many at least of the diocesan clergy as are likely, on any groat diocesan occasion, to assemble.
This renders the choir somewhat larger than would on ordinary occasions be needed. I would not by any means, on sundays or on fcstivals, allow this excess of room to be occupied hy the congregation; hut whether the rule should be so severe at ordinary daily scrvice is a question I would not take upon myself to decido.
In both designs I have placed the chapter. by a cloister north-eastern angle, approached t withaster-like passage. I havo not provided hey atone seats, thinking it improhable that square also of but by a peculiar treatment, partakes and picturesque varicty from the accustomed forms.
I have provided several vcstrics, e. g., for the bishop, the clergy, and the choir
In solecting the variety of architecturo on Which to found my design, I have met with some tho least, he discordant with it should not, at Scottish examples; buthere the finest of tho de richesses; for we find in Scotland noble ue richesses; for we find in Scotland noble
examples of nearly every period. Patting aside examples of nearly every period. Patting aside
the Norman, we have glorious examples of the
question baving desigu did not go before the trustees, st

Transitioual sigle, as at Kelso, Jcdhurgh, St. Andrew's, parts of Holyrood, de. We have
tho doveloned Early Pointed, as in thio greater tho dovelonod Early Pointed, as in tho greaten
part of Holyrood, the whole of Glasgow, EIgin, and many other grand examples; tho earlier Decorated, as at Dunblane, Sweetheart Abley ic., and the later styles in very many otliers. I have mysclf, howerer, been most impressed by the earlier phase of the Early Pointed, a style which especially unites the architecture o Scotland with that of the North of Eng.and, and is one capable, as I think, of the greatest possible degree of dignity united whil a rcasonable amount of simplicity and any amount of heanty. always strikes developed Early Pointed, while it is moth mor simple and far more dignified than any varict of tho Decorated stjlc. Holyrood is a fine example of it, as are many parts of Jedburgh and most of Nu. Andrew Cathedral. In England one of its fincst examples is in a horder connty. I refer to the exquisite sanctuary of Tynemouth Priory, which inn the the Eevcre dignity of the Transition with the richness of the devoloped Early Pointed. On this variety, then, I havo founded my design. In no other, whether in Scotland, Eugland, or Wales, do we find nobler composition more care-fully-studied detail, or a eloser uniou of simplicity with architectural beanty. But the style of St. Andrew's, Giastonbury, and St. David needs no apology from any British architect.
In following this style, howorer, I have aroided merely transitional fcatures, such especially as the round arch, and hare mado my style purcly and strictly Pointed, though, as at Jedburgh, I lave not serapled to incli retain reminiscences of ornamental details whicli retain reminiscences of the Norman. No ono who is accuainted ritl the western portal and the little cloister doorway at Jedburgh,-two of the most exquisite gems of architectnral art in this island, -will
find fault with this. In placing the church upon the ground, I
sbould be disposed to make the axis coincide sbould be disposed to make the axis coincide with that of Melville-street, so that the castern part, with the central or the fanking town that tho case may he), may he well seen down that
street. Its western facado would, in a similar street. Its western façado would, in a si manner, he seen from Crosvenor-crescent. As I prosumo that several ecolosiastical resi-
dences will be needed, I should suggest that one should bo placed a little back from tho southeastern and south.western angles of tho ground and the others nicturesquely distrihuted about the northern end of the grount in which
I should most unquestionahly retain East Coates House.
In a part of Edinburgh so esseutially new, is a most happy circumstance to possess upo the eathedral site a veritahle old Scottish building. It is very picturesguo in its design, and will become more so by careful restoration Its internal aceommodation is open to improvement, and I have no doubt that by judicious treatment it may be made a comfortane while its presence will add much to dence, whilc its presence will add mach to
tho picturesque grouping of the ecclesiastical tho.picturesque grouping of the ecclesias
buildings.
I intend the huilding to be wholly of stone;
reserve the power to mako a catefnl selection of
stone for tho different works, should I bo intrusted with the work, according to the position of the different parts aud also with reference to cost. My present impressions are in favour of Dalmeny stone for the extarnal wrought work; Hales, Grarlleith, and Redhall stone for rongh walling and plain external facing, which is to be in irregular courses. Whether the internal plain wall.faces will be of wrought stonework must depend upon cost. The choice of tho internal wrought gtone mast depend upon its functions and position. Parts carrying much weight would probably be of Dalmony stone; other parts may he of Fifeshire or other stones less costly to work.
The ribs of vaulting to choir, aisles, and other parts raulted in stone to be of one of the stoncs last alluded to. The filling in between the ribs will he either of wrought stone, stone in irregular conrscs, or rubhle faced with plaster, according to circumstances.

I havo made a calculation as to the cost which gives a result as farourable as $I$ could anticipato; but as such works as this are rarely crected in our day, I will not pledgo myself to meet your views with minute accuracy, hut content nyself, as I should have done had I heen selected your architect withont conipetition, with carefnlly
niming at the urescrilied sum; and I believe
that, with care and rensomahle economy, and possinly with the aid of somo safoty-valves, it a matter prorerbially it wou of a lottery as the cost of a large huilding to pledgo oneself too minntely. My object has been to give the best and nohlest church which your conditions appear to admit.
I have made this my an xious aim, but beyond this I will not hind myself furtlicr than to say that I helieve I have realised my aim with very reasonable accuracy. Some of the more deco rative fittincs, such as the rerodos, may be looked for as individual offerings, and tho painted decorations would not he included.
I will ask one farour: as I hare given nomi pally two designs, though really two varieties of the same idea, I will beg of you, if the matter comes to a rote, to view the two as one, so by own supporters.
My name not appearing, it may be right to say that I am an experienced church-builder and can refer you, thongh it will he needless, to I be hououred by your appointment to this great aud important work, I shall devote my hes enerries and my most anxious exertions to ren dering it wort the diocese of Scotland's chief city and worthy, also of a place amoug the architectural monuments of that famous metropolis.
metropolis.
olock: hut I connot bring myself to disfigure the tower (or towers) with a prosnic dial. To the cloek nad its works the room is ample, hit in a district where evers honse is replete with timepiese of every raricts I would conjure yon not to disfigure your cathedral witl clock faces but to be with chimes wich may b constructed with alorree of horological or musical elahoration.

LEIGESTER-SQUARE: A RETROSPEOT.
Lacester.souate has nothing remarkahle in it but the inclosuro in the middle, which alone affords the inhahitants round ahout it something tike tho prospect of a garden, and preserves it rom tho rudcness of the populace, too." Thus roto the editor of the Genferent is the condition of the square now. Who would have prophesied that a fashionablo place of the cirhtcouth cen tury, containing many noble mansions, in one o whieh lived a queen and soveral generations of tho royal family, and in others Sir Isaac Newtod Sir Joshma Reynolds, and Horrarth, should, in the nimeteenth coutury have heen allowed (althongl still in the centro of London and close (alcome of tho ehicf thoronghfares) to fall into condition that makes it a disgrace to tho motro polis?
In tho year 1658 we find by the famous map of Richard Neweourt (engrared by William Faithorne) that the sito of Lcicester-square wn occlpied by a field, with a footpath across it eading from the back of the mews to a lane now Princes.strcet. To the north is a large house, surrounded by a wall, with a garden hebind, which adjoins the Anitary Yard, founded hy Henry Princo of Waies, and atcrivards sep acadomy for riding. This was Leicester Honse hut when the square was planned, the homse must havo been pulled down, and placed further back ; Piccadilly, by the old gaminc-honse ot the to of Piccadily, by the old gaming-housc tho marden at the bmale of the hilding. In the map another at the back of the huilding. In the map another houso is marked as standing of thich cun rath bournc-street, the gardens of Touse tales it to St. Giless Fields. Loicester House takes its namo from Rohert Sydney, Earl of Leicester, the rather of Algernon Sydney, of the handsome
Sydney of Cliarles II.'s Court, and of the Sydney of chanles Ho Sacharissa of the poet Yaller. The houso was bwit upon Lammas land, and tho warl appears hy the accounts have made yearly payments for the Lammas of field in front. Lord Leicester did not dio until feld in fromt. Lord Leicester dia lived in lis house for some years hefore lis doath. The unfortunate Flizaheth, here was a forut amonge whe wre Colbert and Princo Eugene. In I718 the Prince of Wales (afterwaxds George II.) bonght Leicester House and took up
his residence there on the occasion of his quarrel with his father. His son, Frederiok, Prince of Wales, followed the examplo set him, by quarrelling with his father and living in Leicester House. There is a scarce print of the square which shows this Prinee proceeding in a sedan to St. Jumes's, attended by his suito and hy halherdiers. There is another in Strypo's edition of Stow, which shows the house well, with its conrtyard in front and garden in rear The Prince's widow, tho mother of Geargo III. was living herc in 1761, according to Dodsley's "London and its Eavirons," and ber som the Duke of Gloucester in 1766. Ahont 1778 the house was let to Sir Ashton Lever, who flled it with his Museum of Natural History. These argo collections were offered to the publie in a ottery, hut only 8,000 gninea tickets were sold out of 36,000 . Howrever, the proprietor allowe the lottery to take place, and although he hel 28,000 tickets, he lost his museum, which was won hy a Mr. Parkinson, who only held two In 1791 New Lisle-street was bailt on the sit of the gardens. On the west side of Leiceste House was huilt Ayloshury House, called after Thomas, second Earl of Aylesbary, who ontertaincd Peter the Great here when ho visited England in 1698. It afterwards passed into the Savilo family, through the marriage of Charles, third and last Earl of Ayleshwry, with Lady Anme Savile, eldest daughter and co-heir of Sir William Savile, bart., second Marquis of Halifas, and has since been known as Savile House. George III. lived here when Prince of Wales, at the same time that his mother was living next door at Leicester House. Sir George Savile, hart., M.P., possersed Savile Houso in 1780 , when it was stripped of its valuable furniture, books, and pietures, lyy tho Gordon riotars, whe hnrnt all the property in the fields in front. At the same time these agents of destruction tore down the railings and used tho irom for weapons. Early in the prosent eentury tho housc was rehuilt, when it was opened with the exhihition of Liss Linmood's needlework, the commence ment of a long series or miscellaneous cxhihitions, which continued here till the honse was destroyed by fire in 1565. Mise Mary Linwood, the mis tress of a boarding-school at Leicester, com. menced the imitation of pictures in 1785, and in the following year received a medal from the Society of Arts in hodour of her wors. Whem she had succeeded in fluishing a sufficient numher of her productions they were shown privately at the Pantheon, and in 1798 they were first exhibited puhlicly at the Hanover-square Rooms, where 40,000 visitors attonded to Fiow hem dnring the first season. Soon afterwards the collection was removed to Savile House, and axhibited there till tho lady's death in 1844 . 3,000 guineas were refused for the chicf work iz., "Salvator Mundi," after Garlo Dolci, and Liss Liuwood bcqueathed it to the Queen, but so reduced was tho value of these works at he death, that when Messrs. Christio it Manson sold tho collection hy anctiou, all the pictures, excopt a few which
than 1,000l.
Ou Fel. 28, 1865, Savile House Tas bnrnt and amone the spectators at the fire mere th Prince of Walcs and the Duke of Sutheriand Although eight years have passed simce then, the site, in spite of several proposals to utilise it, gap still remains.
Hogarth came to live in Leicester-square (then nore commonly called Liccester-fields) in 1733 , and remained there till his death in 1761 His house was on the east side, and tho most Sablonly of two houses atcer's sign was "Th Golden Head," and outside his house he exhibited liead cut out of pieces of cork hy himself. There is an engraved card of Hogarth, dated April, 1720, which announces him as "Eugraver at ye Golden Ball, corner of Cranhouru Alloy, littlo Nowport Street.' Next door to Hogarth's lived John Hunter, who built a gallery at tho hack of his house, in 1785 , to hold his musenm, the nucleus of the celebrated Hunterian Huseum of the Royal College of Surgeons. The Sabla niere Hotel has lately heen pulled corn, and by Archhishop Tcuison's Scliool.
Sir Joshua Reynolds lived at No. -1.7 , on the west side, from 1760 till his death, Fehwary 23 , 1792 , ad here have met all the celehrities and beauties of lis timo. The charming picture of 'Puck," which was cbeerod when it was sold Reynolds from a little child that be fourd on the
steps of his house. Alderman Boydoll was mucl struck with the portrait of tbe naked boy, and wished it could he introdnced into his Shal.speare; a fricnd, therefore, suggested that Sir Joshua should turn the boy into Puck by adding fawn's cars, and seating him upon a mushroom. The painter's handsome house was subsequently held by the Earl of Inchiqnin, then by the Western Literary and Scicntific Institution, and is now in the possession of Mesers. Pattick \& Simpson, the anctioncers. In 1787, Lawrence, then a mere boy, was induced by his friends to open his studio in Leicester-square; but this open his studio in Leicester-square; bnt this
rivalry with the great master was not continued rivalry with the gr
more than a year.
On the 2nd of June, 1851, Wyld's Great Glohe, bnilt over the centre enclosuro, was opened. bnilt over the centre enclosuro, was opened.
This vast representation of the world mas 65 ft . in diameter, and occupied 10,000 square ft.; its proportions were ten milcs to an inch horizontally, and one mile vertically, and to viow
the whole more conveniently the world was turned outside in. When the linge building to contain this globe was erected, it was looked npon
with favour because it rescued the square from with farour because it rescued the square from
the dilapidated condition it was in,- a condition the dilapidated condition it was in,-a condition
that is said to have given rise to Lcdru Rollin's that is said to have given rise to $L$.
work on the decadence of Fngland.

When the Great Globo was clearcd awras, in 1862 , tho miserable remains of the equestrian statuo of Gcorge 1.* were disclosed to viow, and several practical jokes were played upon it. This statue had onee been brifliantly gilt, and about 1751 was brought from the Duke of Chandos's seat at Canons, near Edgware. Nay we hope that something is now to be done with the which it has so long been left will be followed by a better state of things. Is the hoarding raised round the open space a preliminary step iu the good work of malking the cnclosuro agreeable to the eye, and creditable to the neighbourhood?
If not, Parliamcnt sbould interfcre. Private If not, Pariamcnt sbould interfcre. Private
rights, if thero bo any, bavo been allowed there long enough to contraveno the common weal,

## GENTRAL EXHIBITION OF WATER. COLOUR DRAWINGS.

(at the dodley gallery.)
This, the ninth of the annual exhihitions of clever, pleasant, and pretty drawings that for two water-colour societies show fully enough how strong and prevalent this readiest means of making pictures popular really has become, might be judged to be the bsst of them; even without the great holp that some extraordinary
assistance lends. It is worth tho unfair fare assistance lands. It is worth1 tho unfair fare
of a bi-quadrupeded cah, or plodding soles' pilof a bi-quadrupeded cah, or plodding soles' pil-
grimage through miles of such aludge and slush grimage through miles of such eludge and slush
that Christmas leaves in liquidation of its debt of white snow and firm footing, to mect with prosperity and success, for they are rery dear-
ver searco-things nowndays very searco-things nowadays. Strikes are
striking, far and wido. A stone droped into striking, far and wido. A stone dropped into
water makes many circlos before they merge into nothing.
There is scarcely a drawing here that may not bo thonght good of its kind; and to specify reason for commendation throagh 500 littlo claims for it, would be beyond reasomalle expectation of what type-notice can do for what is bcing so constantly done. Such pictures, howevcr, as Mr. E. Burne Jones paints are quite tions: they are so strong, so fize, in a perverted taste, that they may lead,-or mislond,-to wrong teaching. Ifcary swollen eyelids, lithe supple limbs, and such graces as aro choap,thongh they may not always be held so, -are "Tr. Jones's adumbrate views of woman's charms. The Hosperides" (482) is splendid in colour
a diatribe on "red," tho tamed sorpent the sticks like one to the apple-tree,- could thero be greatcr anomaly ? - the grass and pink doisies all wonderfully well done, begpeak acknowledg. ment of great power in apprehending the re. sources of colour, and the work is a magnificent
specimen taken in this limat specimen taken in this light.
"Love among the Ruin
Love among the Ruins" (1F9) treats of silue as the Hesperides do of rod. This, at first sight, might be taken for an illustration of Coleridge's poem, "Genevicेre;" but it is not. There Was not ling blne about her.
Some critics will find metaphor in every iuch - - is their wont; but there is bad per
*The statue has bren supposed by some to be a repre
seatation of Georgo II., and by others of William III.
spective, and more than that, to lcave question The pieture is cutirely a good one.
Thero are many clever drawings amongst the more than 500 ; but they are in the near neigh. hourhood of "Old Masters," and it is a scoff and swept crossing leads to what art was, It is a dcad religion; but a lively faith in handiwork's worth still exists.

## PROFESSIONAL PRACTICE OF ARCHITECTS.*

(1.) In Dealing with Honey.

Generally.-Let no money pass through your hands (except the salary of the clerk of works). The method of trade payments will probably suggest itself, nnd you will with difficulty get credited with taking extra trouble and no profit Of course yon can sometimes safely deviate from this rule, when your client is an old personal friend, or is disconnected with husiness, and looks on you as a friend as wcll as professional adviser. Avoid ordering goods. Select on occestock, and let the contractor order and take every rcsponsibility. If you only make stipula tions as to the understood selling price, the con tractor will mako a profit on the transaction, and asually, thereforo, take more interest in it. You will also be relieved from liability to be charged pleasant suspicions. Ces from ever more ninquestions affecting money with mnch caro. I is a very important oonsileration among private persons and with the Governmant and all public bodies in England.
I. Estimates.-These you will do well to make deliberately (nover guessing at a prioe), in yourself of thorongh lnowledgo, and dealing with complete honesty witb your own judgment. Such approxinate estimntes should be made and submitted before tenders are received from tradesmon. It will always be well to make it clear that no one can tell what everything is going to cost. This will be the case especially when the forndations are doultfful, or when the work is to be done in great haste (e.f., the cost of thoatres is olmost invariably arrived at after completion). In works of repair to a dccayed completion). In works of repair to a dccayed when hidden parts aro uncovered,-rotten timWhen hidden parts aro uncovered,-rotten timpinning, \&c. In the case of new buildinge, cubing out is a valuable mode of arriving at an approximate ostimato. Wisely and carefully applied, it is a very safe guide. Always follow the same method of measurement: either (1) from the ground-fioor line, (2) from half-way between floor and botton of footings or from the op of the footings, (3) from bottom of footings, or even (4) bottom of all artificial foundation.
Method 3 is tho safest in general results. Method 3 is tho safest in general results. Malse a soparate item of an extraordinary amount of wails and the aper of the roof will top of the a fair hoight to mensuro to. If the chimneys aro elahorate and high, an extra allowance mnst be made. Keep tho divisions of the building separate,--the moro elaborate main building, the plainer offices, the stables, and any structure differing in elaboration or kind of matcrials from the rcst. Your skill will be tested in applying the proper price. You must devote some special work to the acquisition of experience, to ascertaining the grices at do not fail to actaally erected work ont; and do not fail to tabulate for an easy refercnce
crery new building or work of any size you hare flesigncd and executed. Cbeck the estimate thus obtained before using it:-(1) By putting price on each square ( 100 superficial feet) of each story; e.g., for ordinary buildings not too high nor elaborately finished, 30l. per square per story might nsefully supply a rough cheok, of
course, for increased accuracy, this method re. course, for increased accuracy, this method re-
quires delicate adjustnient for ench huidding in quires delicate adjustnent for each huiding in question. Or (2), you can take out approximately the principal quantitios, aud prico them; e.g., the gross anount of brickwork; the numprice on each) , the foor, pists, and ceilings measnred togetber, the roof and all coverings. Applied boldly, this rough measurement need take little more time than cubing. At the same
 ante. Wee ocrmenen these and the previous notes to the
time it will be even less reliablo uulcss experience has tanght a good deal pretty accurately as to the cost of the various parts. Another method (3), is to put down so much per room, horse for plain ordinary work racing per 250l. nor horsc. For schools 51, ranging up to 7l., or 8l., according to circumsthen, or 6il., ., or 8u., accorang to circumstances. For hospitale, 40l. to 50t. por bed has done the work, and they haro cost as much as 500 l . per bed or more.
As to Euilders' Dstimates [or "tenders' $"$ ], -
Chey are obtained on tho gereral nderstan They are obtained on tho general nnderstand. ing, in limited competitions, that the lowest will be accepted, either without revision or as a basis or negotiation. Therefore, if for any reason no pledge can be given that a teuder can he recognised in this way, it must bo expressly notilled to the contractors when they aro first asked as to the matter. These tenders will be infnenced greatly by the facilities given for corryiug on the work, by the contractor's, more or less, com. plete knowledge or ignoranco of the materials to be nged, and by his confidence in, or distrust of the ability and character of the architect. in every case quantities of some sort aro indispens. able. The enployment of a man who is a advantaces. He will if maple man be cool. will work with a good doal of system, uninterrantedly to tho work. and will look on overythince with a kern critical will look on ontire frecdom from preindice eyc, and an ontire frecdom from prejudice. An architect taking ont his own quantities will be helped to profitable work, and may gain some critical in-
sight into details that he wonlil othcrwise have sight into details that he wolla othcrwise have
overlooked; hut the opinion of poople of much experience is against his employment in this way. For there are certain risks. The architect may he too sanguiue, and pass lightly orer nnusual work. The adrantage will be lost of a and the clearing up of difection of lacune, payment will nsually of difficulties; and the buitler, man from the legall, making the architect in this respect not the builder's servant. An architect shoula He shather than the following arrangement:share the wrork in a sur veyor of good repite to responsibility shonld fall wnerwion this sir veyor, whose name alone should appear, and Who shonld receivo the builder's payment. Quantities might be simplified of much of their detail without harm beiug done. It is, horever, the recognised practice to hare all the detan escape, and contractors aro guided by the minntia in cstimating the quality of tho work. Prices may indeed be put to everything by the builder's clerks ; but he will himsolf take some. thing off, and trim his tender generally, if te is anxions to have the job.
II. Accounts.-(Price settled for Works at the Close.) - The quantity snrveyor in Large tronks, with many deriations from the oontract, will of ten oo employcd. A schedule of prices in the form of a prioed bill of quantities will then be found very uscful. In smaller works it is a good plan to make np the account with the huilder. Usually however, he presents an account first, and it has to be dealt with as may prove necessary. Explain to the olient as much as he wants to know (no more). An architect's statoments of accounts shonld be short (ou one sheet of paper), stating contract and agreed amonnt, value of additional works heyond that of omissions and money prisions - the principal additional works beng. . . - amoxuts paid, and balance. The dil actai of cach item should bo kept, and sap. ficd at once if asked for: It is the custom for an archivect not to state the detalod prices if he can help it. Builders object to their prices heing known, and should always be very formally con. salted betore priced itens are sent to any one, Stand hy a settlement stifly. Of course, before is come to, you twill be satisfied that it is just everythinr to be measured as contract is for closo of the works. Rarely recommen it this conrse Works always in rcoomment this conrse. Works anas cot woro when thus erecited, but a ings coninan an Thee conkactor should in such a caso he a man of yon agreement is or own to yo. ..... When the cost, and 7 to 10 (or other smm) per cent. profit, cost, and 7 to 10 (or other smm) per cent. profit,
a special system of periodical chocking will be a special systent of periodical chocking win be
necessary; but this method of payment is comparatively rare.
III. Professional Charges.-Avoid working for
any one besides your client, and recciving payy.
ment for such services. The builder will often ment for such services. The builder will often
waut extra drawings or copies, or to pay for trouble that you might avoid, -or on other specious pretences it may be made clear to
you that money will be paid if you are willing to receire it. The solc purpose is to get you under the thumb, and kecp you there till
the building is completed. If this sort of thing is suspected, a elient will go to some one else next time; and if it gets abroad respectable arclitects and huilders whl have nothing to do with such an architect. For al charges tho TR. I. B. A. paper gives the preseut dom. Young men may not, in justice to the res of the profession, tako work at less than 5 per cent. ; but they may jnstify tbeir appointment in place of older men hy giving a greater amount of personal tronble and extra service for the recognised remuneration. The ${ }^{5}$ per cent. charge must be regarded as a give-and-take arrange. ment, having: one great advantage,--tbat clients know, thereabouts, what they will bare to pay, -and on tho whole it does not work very nufairly in a raried practice. Try to keep as
closely to it as possible without doing yourself cobvious injustice; do uot charge all you might charge, using your rights as to extra charges compess and fert four services in receiving instructions in [quote
services as detailed in R I.B.A. rules]. for tbe amount expended under tect's superintendeuce being
. Deduct any amount from the builder's hills on which
you were not consulted, especially if rou do not approve what was done]." On this amonnt crlculate tho commission. Charges for special services, disbarsements, and travelling erpenses willtben follow. Althongh the per-entage cbarge as sunersaly (and to our adrantago) recognsed will do well to keep a careful diary, and have a clerk's diary with the time on different works recorded. Occasionally work out from these the will then see whether yons for a carrying on businoess extravagantly. If yon have to live hy y you may find that you could be less niggardly, and safely indulge yourself in some more expenso. Keep a small set of books, and take stock of your position at intervals to see bow you stand, generally and witb reference to special works. These books may be (1) a ledger, containing the details of each undertak king extracted from time counts ${ }^{\text {; }}$; and (3) a cash-book for all payments and receipts. Obtain payments on account while the works arc going on. On small works (under 2,000 .) one payment shortly after signing tho contract, and another when all is being cbarges; only a small balence being left for the final payment. In larger works obtain paymeut at the time, and on the amonnt of each certili. cate. Aroid most thorougbly any mistakes or discrepancics in nooney statements. Let every such statement bo in writing, or, at any rate,
make a carcful memorandum. Many worthy people who are easily managed as to many thiugs, are rery difficult about money matters, and nothing but the eridence of habits of ex. treme care can mako then trust you fairly.
To deal fully with the class of huaincss manape by surveyors would require several lectures; in one, notice can only be taken of the portions of the subject cropping up in ordinary practice. The case is rare in which an architect can dispense with surveying, and derote himself wbolly to tho design and superintendence of works of
real arebitectare. Frequently the money to be earned hy other practice is wished for; and it is often necessary to give good service on any matter allied to bnilding, or a valuable client better. Most soung men would therefore do well to be "architocts and surveyors," and pre. pare themselves accordingly.

1. Law.-Erery Englishinan is snpposed to know the whole law of bis country. Ignorance Bearing this in mind for your own sake, you will find it frequently necessary to take much paing to ascertain the right and wrong in any pains dure, and will soon acquire a wholesome distrist of any smattering you can obtain from serus ret-hids. for the poter part of the general England is not in Aots of Parliament, but in tbe
recorded decisions, and precedent is of extreme importance. Prefer, therefore, to follow a custo-
mary course, for which you have good precedent, mary course, for whicb you have good precedent,
rather than any inuovation of your own. Use words and phrases well established and recognised; or, if you are obliged to deal with a case that is new to you, use the plainest common. sense English possible, and aroid any pretence of legal technicality. If a penalty is prescribed in case of non.completion of works hy a certain time, it will probably not he euforeed, on the amount of damage actually sustained will bo specially asscsscd; but if a certaiu sum is tixed as "liqnidated and ascertained dannages," it may be beld hack without question. If a committee is mado to enter into a contract with a builder, it will not be a serviceable contract; but certain individuals must bo specified, who aro to he separately liable. (An incorporated body may, bowever, enter into a contract througb officers or under their seal, according to their special stances might he adducod of the necossity of conforming to the legally accepted way putting things. If anything goes into law it means delay,-no telling how prolonged. This and and perhaps in part to the confirmed habits of delay logr profession. Even in ordinary matters, dolay, scemingly quite avoidable, is apparently fore, as as proper. Consider litigation, the can encounter, and give any amount of time and trouble, and make any possible sacrifice in order to avoid it. If, however, it must he resorted to and well. Shrewd men say, "Consnlt a ric lawyer: he will lkeep you out of lawsuits if ho can. A prosperous and rell-estahlished hangry for practice, and not eager to point out the weakness of a case intrusted to his guidance. As to (1) Contracts for Buildings, it is desirable to have a carefully-drawn legal contract prepared by a solicitor. If this is not authorised, rally he sufficient. As an instance, letters were simply exclanged, witb reference to an important huilding matter, and the contract was con. sidered so hinding that 5,0001 , were paid to put an end to the arrangement. The following simple form was recommended by an eminent Q.C., now a well-known judge. It sbonld be placed at tho end of the specification and a set of general conditions of contract.: -" I undertake to perform the ahovo works, under the A. B. Accepted (signed), C. D. London, January, 187-." On the subject of coutracts, reed D. Gibbons,-"Tho Law of Contracts for Works and Services" (Weale's Scries), As to (2) Certifcates for payments to a tradesman, or works being executed by him at-- let them be on an engraved form, whit tho hottom of each should he put a statement as to the pre. vious certificates. (In arranging the amonnt, to be paid, let the builder bring his figurcs, to show absence of express stipne the same proportion of the palue of oxtra, works as of those under the original contract.) For (3) Orler's for Extras, nnder any large or spocial contract, tho solicitor should supply the form. Mnciz injustice may possibly bo not minntely obscryed. Generally, for anything nnusual, always advise that a good lawyer shall be employed to shape the document. When (1) Buidding on Leasehold Property, see to the coveohserved, ali consents obtained, and restrictions complied with. Declino, as a rule, to get the consent of adjoining ofners. This will be better done, when a matter of any favour, hy the milding.owner himself. In (5) Works in Lonton, he Building Act, the Local Nanagement Aots, water companies, haring the force of law, must bo carefully studied, and their provisions complied with. The main purposes of the Building Act are to secure (1) fair stabibty, and (2) the most obvious and simple precautions against fre and the spread of it. As a rule, never build less substantially (in any part of the conntry) than the schedules of this Act stipulate (and never hild 9 -in. walls, even for upper stories, if you an get 14-inch). A puhlic building is 0 or who will senemilly require thet the strwetur shall be somewhat stronger tban a building of an
ordinary kind. For your own sake, it should not be weakcr. Some of the requirements of the Act can be dispensed with, if the consent of the Metropolitan Board is first properly obtained; e. $g$., for a detached house, projecting eaves, wooden harge.hoards, or hay. rindows, and wooden porches or verandabs may not be objected to. (6.) Light and air are the suhjects of much coutention in works in largo cities; the action of much recent decision heing really prejndicial to architecture, and to the improvement of our cities. Nuch of this injury should be prevented by the more universal widening of streets, and by the adoption, as a rule, of componsation for deprivation. Still you will have to regard for the present the rnles as they stand in legal minds. If you are consulted, thereforc, hy an injured person, keep in mind the fatal effect of delay in the assertion of your client's position; let an injunction he ohtained,
or steps taken iu view of one immediately. (7.) or steps taken iu view of one immediately. (7.)
Disamreements nay occur. - The builder may sue for ho or money, extras may be disputed, pers, or the work may be said to be unsatisfactory, and be may decline to pay. Or the architect may have to sue for his cbargcs, or even for mrongful dismissal. Some of these may he contemplated and prorided for by an arbitration clause in the contract; otherwise it will probably be referred to an arbitrator, either a barristor or an archision to the Court, or by eonsent. The submisthe good mater in dispute) should be drawn hy a god solscitor, aud should specify the arhiztar, decis (very precisely) wbat is referred to decision. On the admission or rejection thus evidence you should be prepared, if acting thus as refere, with a kuowledge of the rales oward. This art to risk the invalidation of the verdict of a jury, and specify no rcasons. In all cases but tho most simple, bave your award revised hy a good lawyer.
II. Property.-An architect sbould be the right man to advise on questions affecting the management and value of houses and other haildings, and of huilding land. Tho business will usnally como through solicitors, who will do the legal part, learing to you an the puroly technical work, and the responsibility for it. (1.) In dealing with Dilapidations under leases and other teuuros, nothing but experience can reador yon ready and self.confident. Let stadents take every opportanity of following actual cases, and ascertaining what is taken or not taken, and why, and what disputes (if any) arise. They can in this way only acquire knowledge as to the esact legal force supposed to be attached to the terms in covenants. Questions as to fixtures,
also, and their ralue, and the richt to them, will fre quently demand quick and (of conrse) correct decision in actual practice. (2.) Taluations of Propesty are usually required for (a) mortgages and (b) for salcs or purchases. (a) These do not usually involve so mucb responsibility as the otbers, owing to a proportion only of the reported ralne (one-half, or a little more) being advanced; (b) a valuation to gnide or dotermino actual purchase or sale is often of great interest, well paid for, and-if thorougbly reliable,-as valuable a service as can be rendered hy an expert as to buildings. Tho methods of calculation are simple, involving bittle matbematical skill in application ; but experience and talent can alone determine the letting, or prohable letting, value of a building. Inwood's Tables, Mr. . .. T'Anson's recent paper at the R.I.B.A., and died and at hand. Continual attention extended over many years, many precedents, and much sagacity, can alone enable you to give reports that will stand the test of after-experinco in difficult cases. Valuations of orill not find difficult, other simple tenneach case pains, and thought, and system. (3.) Laying outs part can be done by any architect with the most ordinary common sense. To determine, however, tbe class of brilding that wonld be proper, or likely to tempt'speculators; to settle the frontages and lines of road so as to make the most and the best of a property, will require a good deal of general intelligence and information ordinary tenants, and house-hayers. Settle firmly, and maintain stontly, conditions as to what shall be permitted or not on the estate. Endeavour as much $2 s$ you can to enforce good sound building thorough drainage, and a fair architectural
ippearance; make and maintain covenants as ic whoscquent alterations of property, so that hey may not in any case be andertaken without
zonsent being obtained. At times, from the zonsent being obtained. At times, from the
want of this provision, the whole of the bonses n a strcet may be depreciated in letting ralue, and much nnfair annoyance given, owing to the 4 laundry some after.addition to one building. 4 laundry recently crected at the back of a 10 inse in London has lowered the value of eigbt
1015 ines in the strcet adjoining 102 . or 15 l. per year, 101 ses in the strest adjoining $10 t$. or $15 l$. per year, and much damaged the adjoining houses,-a wrong ior which thore exists no remedy. Try, therefore, in the creation of honso property, bo to design nants affecting them, that an even band may now and hereafter be kept over the whole, and no gross injury permitted to be done by one of Estates.-Mnch lucrative occupation, in the receipt of rents and kecping property in order, falls into tho hands of architects and surveyors who are good men of business, especially in tho case of the large leasehold estates of noblemen
and otbers in London. This work is not by any and otbers in London. This work is not by any means so dull and commonplace as it might seem
to an outsider. It has tho merit of being very useful; for often the only mitigation of the miseries of London buildings is found in the skill, and taot, and right foeling, aud dealing of the comparatively few men who are in the posi-
tion to exercise these qualities in such business London suffers trieponsly tries in such business. London suffers grievonsly from the system, now and horetofore pursued, in land letting, by
which a large socure income realised hy tho tandowner is obtainod without much difficulty, and everybody else who is connected with the property is disgnsted, and oven injured. Unintelligent planning, and faulty and dishouest construction have been indulged in, 80 that
housos generally are a crying disgrace. Per resulting from this, the public cares hardly at atl about good hnilding or good drainage. You will, therefore, have difficulty,-porhaps will run In the long ruu, however, pecuniary adrantago may in some casos bo secured by assuming a higber standard than ordinary, and keeping to it. At least you, and those for whom you act, will havo tho satisfaction of setting a good examplo whero it is mucb wanted.

In tho general sketch thus given of the practice of architects, it has been made evident that many good qualities and attainmeuts are order that ho may bo successful and useful. Fair success is, however, probahly within the and will take paias. As compared with most other callings, there is in our profession a wider rango of occupation, and better opportunity for the developnent of the various sides of a man's real distinction, and of the huilding ap rearacter, and position and inf character, and position, and influence, in which no natural gifts, no possible excellence in educa tion, no nmonnt of ceneral or special attainment will be found suporfluous.

## RESISTANCCE OF STONES TO CRUSHING

 hmerican society of civil engineers.a meeting of this Society in New York, on January 8th, a paper, by Mr. Charles B Richards, of Hartford, Conn,, recording "Er. periments on the Resistance of Stones to Crushitg," was read.
Tho specimens tested were old and dry
samples, well solected, of Farions American building stones, worked into 1 in. and $1 \frac{1}{2}$ in cubes, with flat and smooth faces.
The testing machine used was built, after a
long experience with two smaller ond similar machines. It is arranged to weigh the strains upon it sensitive platform scale of 50 tons capacity, and is well adapted to quiokly give accurate results.

The specimens were crushed between the plane curved two hardened steel hemisphercs, the sponding caritios whichwero seated in corre machine. Singlo thioknesses of "lace" leather were interposed between the stones and metal surfaces : thus the preseure was nniformly dis. of the cubes parallel to the patural bed faces stone, and carcfully increased to rupture by pouring shot into the hollow weight by which the strain was caused.

Tables were presented, giving the mininum, mean, and maximum resistance to erushing, per square inch of the specimens tested.
Sixteen specimens of granite from six quar. ries gave from 8,620 to $15,622 \mathrm{lb}$. minimum $9,83 \mathrm{~S}$ to $18,778 \mathrm{lb}$. maximum strength. Forr. teen specimens of sandstone from thrce quarries gave from $5,806 \mathrm{lb}$. minimum, and 8,956 to $10,928 \mathrm{lb}$. maximun strength. Ton specimens of wolite maible from three quarrics gave from 3,905 to $12,917 \mathrm{lb}$. minimum; and 5,976 to $13,972 \mathrm{lb}$. maximum strength, -each being 1 in . cilies
The specimens failed by breaking up into to the pressince.

HOW FAR IS AN ARCHITECT LIABLE? Before making up one's mind that the con"M1. H.'s" case," himself be legally liable in M1. H.'s" case," one would ask a number of questions, and then be perhaps a littlo douhtful.
Was the lead pipo clearly defective when fixed. Was the lead pipo clearly defective when fixed? In what did it differ in quality from the specif.cation? Not the woight, nor size? Was the contruct a low oue, and the work not intended to be first-rate? Was a set-off agroed against brain work done? It needs no racking of tho answers implied in questions. Let us, bowerer, drop questioning as to the legal and moral liabilities of the contractor, and conelude that he is to blame without a doubt; and that, with equal certainty, he cannot personally make good his misdoings, fravds, or errors. Is the architect liably? Here, again, we find self-questiou ing as to the variations without controvers fairly made by every architect in the conduct of any work. Hias tho architect stated that the pipe shonld not have been used, and that ho did ot know of the rariation? If so, we have touched the realisms. Was he bound to know
of it, or to suffer, if need be, for his overlooking ? Clearly it would have heon better for every. hody if ho had found it out, and insisted on remedy or recognised recompense. Many archiects, especially those not overburdened with work, take a deal of pains, - fur which they receive neither thanks nor adequate pay,-in worrying fitting; sometimes with very pleasing resnlts in efficiency and special contrivance ; sometimes, it is to be feared, with some injustice to a conractor who has not expected to be criticised so sharply, and with a lawsuit or arbitration at the end of all. Tho former result twill of course depend unainly on real knowledge, command of cmper, proper feeling, \&c.; all the things, in fuct, that go to make up a man it is a pleasure $t 0$ neet, as distinguished from a mass of punctilios and conscientious querulousncss. Tbe extra sersices, of which we are speaking, may be giveu from all kinds of motives, - as a study, rom personal interest in a special work; for experiment, and the sake of making it succeed, personal energy on a client and his capacity and perhaps in some instances from the architect's love of work in general, and specially for he work of bis profession. I think, bowever, bat no one contends toat they are given as a part of the professional services inclnded in co ordinary cbarge of 5 per cent." In tbe last confirmed at a Gencral Conference of Architects of the Enited Kingdora, 1872] "Schedule of Rules for Professional Practice and Charges of Architects,"-Clause 2 gives "General Superintendence of Works (exclusive of Clerk of the Works)," as thas included. The intention of this phraseology is, I take it, to indicate the conclusion 1 have stated ahove, viz., that special, detaled, minute supcrintendence is not what the architect offers (except under speoial bargain), or what anyboay has a right in thought, or by law and custom, to ask for, for the accepted standard remuneration. I need not say anything about the position that tbe clerk of the works occupies, and his liabilities, and the architect's as affected by his employment.
These are quite questions apart, and difficult ones, too, it may he said; though something airly approaching uniformity of practice and for the aherrations of suspicious boards and meddling committees. Suffice it to say that the arebitect
confessedly incurs many responsibilities in re. spect of design, directod construction, \&c., and
that, with reference to generral superintendence he is with reterence to general superiatendence, he is rosponsiblo in practice for furnishing sucb intelligent dircction of the works in progress as may tend to secure the right interpretation and carrying out of his designs, but that he needs never pretend to do the duty of a clerk of the distance framly not on balriness, and perhap nearly unlimited in numher, oxtent, and rariety Every reasomable juryman would estimate th probabilities of the case,--tho understanding of the employer underlying au architect's engage. ment, the real satisfaction with which a man is thrilled when he is told that bis arobitect has no leisurc to give to his special design,-by his own comurn sense; and shooild not, under any decent jadicial dircection, be led to credit an architect juitial dircction, be fed to credit an archilect
with responsibilities for services which the client well knew from the first that he woolld never try to perform. And the terms of eirployment and rate of charge apply equally to the whole profes-
sion. The sion. The good sense of the guieral mass of people recognises this, for the most part, very thorouggly. Tbe world-embracing Leviathaun is consequently employed only ou works whero pubic subscriptions are neecessary, and must be got from all parts, and tho work is merely of public interest ; and tho expense of a clerk of tho works is, of course, not worth consideration. Ou works of privaie kind, ou the contrary, it is more general to have a local or a younger mau who will be likely to do, in roturn for tbe same pay, many works of supereraration,--amone which would probably be, with good luck, the detoction of an atteunpt at the usc of $a$ wrone bort of pipe, cither through the evil intention or blander of a builder or come of bis people.
Has, then, "M. H." no remedy? Supposo the builder's linbility cloar, did not tho contract provide for the liability going beyond his death to his "heirs, executors, administrators, or "M. H." be unwilling to risk his action, or maybe to hring penalties on a family without its support and hicad? If so, one can only regret that inevitable loss has come to hin, and hope that, in building as in other busincss and affairs or his lifo, those contracting with him will here-
after do him justice both by their after do him jutice both by their fair dealing
and intelligence,-or that they will sur and intelligence, - or that they will survive the
time the time that may be necessary. This is the kind of
consolation that most of us find ins consolation that most of us find in our ears and in our own minds when we are mifortunate
enougl to have been thoroughly defeated hy man or circommatance.

Tris question may be considered in tho 18t. The arclitect and contractor together will be mado, as far as legrally possible, responsiblo for the production in due time of a result realising all that custom, common sense, and duranility could demand in carrying out the client's instructions.
It were impossible for an architcet to super vise every portion of material ased in a building (even if he were always on the spot), because a very small defect in timber, iron, or lead, would if thenes be almost in visible, and yet exist, and or perhaps danger ; but it is, however, customary in most works of any importanco to employ a clerk of works, who will, in a efficiently and consciontiously, discorer and demn wbatever material can he found by him in the works which shall in can he found by him in the architect's approval of his decision) be anfit for tbe purposo the contractor would use sucb material for; but the most watchful supervision boing liable to sometimes fail in discovering what it win sometimes fail in discovering therefore tho onus of responsibiscover, and therefore the onus of respoasiolity is legally borne by tbe party most capable of making it a light one, by himself, his foremen, and workmen, each and severally, doing tbeir hest to ensure that tbe matcrials they uso are really what they ongbt to be for the purpose. Tbere is also another reason why the contractor should, according to the dictates of common sense, be held liablo for bad materials or workmanship discovered after the settlement of the account, 3.e., becauso it is his work, and not the architect's. If the architect's work should be done improperly, ho would Lone have to hear the blame; then why should he be saddled with the blame attached to defects which his most consciontious and attentivo care (given so far as compatibility with otber daties rould admit) bad been unable to detect, bat
which the contractor had at the least a much better opportunity to discover?
They, in the case cited by " N.
H. ." deduce from tho foregoing reasoning that the coutractor was legally and properly liable, and the architect consequently not linble; aud the transier this liability to the architect, to whom it never belonged, but transferred it to the contractor's estato; and if the executors of adainistrators (if such bave been appointed)
haro not yet paid the debts, there wonld perhaps bo a possibility of recorering the loss, but otherwise it would assame the form of an irrecoverable debt owed by the deceascd con trictor to his employor, tho architoet's elient.
Hemby Arrose.

Sun, - 1 , with many others, shall watch with interest what correspondents say ppon the ques
tion mised by "M. H." in yonr last. Many, lice hime hare becn fearfully deceived. I an amougst the number, only that I purchased house ${ }^{23 \times p}$. $50 \%^{2}$ ty to the value not only of 5002 ., but employed an architect to see everything dono promerly, and paid the whole of the cash on the and I found the partition walls on the basement whiout foundations, so that I was snbject to the expenso of making good these serious defects expenso of making good these serious defects wore laid on the flat, and soon were "as full as at egg ;" faulty tanks put up; plumbers' work icrective ; in fact, every part shoming what is property for some yenrs, nud it has heen a constant expense, and likely to be, from roofs to basements, and below basements, so that it has won like buying the houses a second time, and hey can neper be after all as they would he if honest men had built the property.
Liko "M. K.," I inquared if I had any redress from the builder or the architect. I was tuld that surveror's certificate that I employed, I had no redress ; that there was nothing to be done bu make the hest of a bad bargain; and a bad bar. gain I have, indeed, found it, I enclose my

Views and particulars are given of many of ho chapels, the most important of which are ho Victorin Chapel, Quoen's. road, Manchester,Icsses. Clegr \& knowles, architects; and Laun aston Chapel,-Messrs, Jas. Hine \& Alfred SANITARY ENGINEERS AND THE GOVERNMENT.
We mentioned in our last tho attendance of a deputation of Local Boards' Survegors and Sanitary Engincers on Mr. Stansfeld, with the view fr obtaining a more independent position undor Strong efforts wero made in this direction before tho passing of tho late Health Art, but failed The Local Guvernment induco local authorities of appoint raedical officers and inspectors by beariog haff the amount of salaries, and protect snch oficors. Tho engineers and surveyors, although tho active executive and practical officers, are loft entirely without protection. . It is now pro-
posed to make another effort in view of amended r alditional sanitary legislation, and to form am Association of Sanitary Luginecrs and Sur cyors." The Local Goremment Board have, in he opiniou of many, while attaching importance to the functions of the medical officer and in spector, shown entire neglect of the equally important and execative official the "tow surveyor," who will become tho unprotected "catspaw " to carry out the measures suggested uy protected medical ollicors. Most sanitary authorities screw saltries down as low as possible, and thus obtain iufcrior mon; while such is the case there will be but little sanitary progress. Au arvertisement in our last issure anounce present holding appointments und or corporations Local Boards, and other sanitary antborities, wil be held at the Institution of Civil Enginoers, Great George-strect, Westminster, at two p.m. ou Suturday, Febraary 15th, for the purpose of thermig an association, and for Those who ar interested should attend and help.

MR. SPURGEON'S NEW COLLEGE.
Nrw buildings are about to be erected on an extensive scale for 3rr. Spurgeon's Students Collego, in conncxion with the Metropolitan Tiblernacle, at Nerrington. It appears from a satement made by AIr. Spurgeon lnst week that he funds towards the erection of the now build ing aro making considerablo progress. Up wards of 6,000., he said, hnd aready bee till required. The new building, which is to be crected on a site near the 'Tabernacle, will also be used for a Sundey school, as the present school rom undor the Tabernacle is said to be ill-suited for the purpose.

## THE COAL QUESTION

THE price of coal in Londou while we writo ts 2t. 8s, a ton!-an unprecedented price, ono apt to say; yet that is not so, according to a Writer iu the Daily Neus; for so long since as February, 1814, the war price was 2.11s. 8d. reforred to says:-
"If, to-morrow, the colliery owners of Durham were
to notify to the Iondon Coal Exchange that they had
resolved to raise the price of coals by 20s. per ton,
 whonitted to. Thcy know, and use, their power, It the supply, but they ore reaping the edvantzge of having
had tho supply "gagged for them ly their morkmen. To quote Sir Willinm Armstrong, "Coal.owners have long
been aware that limitation of quantity was the onl effcctual mode of rajsing price, but they have never beon
eblo by their own action to mainain a restricted produc ablo by their ownaction to mains:in a restricted jroduc-
tion. At last their rorkmen have done it for them, ond tion. At last theip rorkmen have done it for them, and
wo see the result. It may be added that we feel fit as
well as see it it thia moment the restriction so pro.
 is so keen that they could sell as many couls sgain at ful prices as they do now,
thiy canupt goo the collers to ony mad more coals than they
did before, no mater how high the scale ol' wages may did before, no matter how high tha scale of wages may
 content to receive and enjof uearly double the wage for shout two-thirds of the work he was nont to do in time
less prosperous. He is, it is true, in a chronic state of dess prosperous. He is, it in hrue, in a chronic state oct
demane, and his derands have alhstrat
ightou heir side, looking to the prices which the owner right ou lheir side, looking to the prices which the owners
ohtain; but when he gets ans advance he discounts it by ohtain; but when he gets ans advance he discounts it by
winning so much less conl. So the process goes on and winning so much less conl. So the pri
on, towards whet climax who shall say"
A movement is said to be on foot in the Nort? Midland connties to press npon the Government the necessity of instituting a full and fair inves figation into the increased price of coal, which and domestic interests. It is proposed that the conrt of incuiry should be constituted of mon of ow or abity and unflinching impartiality nown abily and conl caplore coal proprietors, and also men connected wit tho colliers unions, azd thosc, The object of the iuquiry would be "to ascertain if the sole carsse of the present high prick
of conl is the advance of colliers' wages and tho sliort. time morement, and other aliterations which hapc beer hironght about in the working of coal mincs, not forgetting
the charge so frequently mande against the colliers lato that they are so idie and intemperate now, in con sequence of the great wages they ree
that the output is seriously limited.
Mr. C. Seely, jun., M.P. for Nottingham, who is a very extensive colliery proprietor, has promised opromote this official inquiry, and to give ovidence if called upon.

A uew company,-tho Diamond Fuel Corn. pany,- has been incorporated, with a capital of $200,000 \mathrm{l}$., in shares of 51 . each, to acquire aud carry on the works now in tho hands of Messra. Birker \& Clare, at Stratford, Essex The process cousists in the conversion of slack or duff, coal-dust, or small coal, into solid and compact blocks in combination with ingredients which render them, says the Mining Joumat, actually superior as a fuel to the lump on acreened coal itself. The machinery used in the roduction of the diamond fnel is almostentirely clf-acting, the material boing scarcely touched rom the timo it is first lifted to the machine until it is ready for the market; and as it is iutended to establish works and depôts at Liver pool, Hull, Swansea, Nowcastle.on. Tyne, Sunder and, $\& c$., the oxpenses of carriage both for rap naterial and marlsetable fuel will be reduced to the minimum. $\qquad$

## GUILDS AND TRADE UNIONS

AT a meeting of the Society of Arts on the $29 t h$ ult., Dr. John Yeats read a paper on Guilds and their Functions, which will be found in full an the Journal of the society. It is an interesting ondensed view of the subject, though open to iscussion in some parts. The writer properly rges the existing guilds to assist in the tech nical education of the country. Towards the close of the paper Dr. Yeats says:-
"Closely connected with the subject of the uilds is that of their modern analogues-the rade-unions. Enough has been already said to how that the principle and practice of labour combinations is not in itsell the novelty, danger ous or beneficial, which it is sometimes asscrted to be. As a national institution this is one of our oldest; and if for a time it foll into dcsue. ude, the preseut century has witnessed its revival with a new power and a promise of long ived vitality. Like their Mediasal forerunuers, trade-umions are societies which havo a double object- to provide regulations for some one branch of trado, and to form amongst its mem bers a mutual beneft society. It is tho union of these two objects, declared incompatible by the opponents of the system, which has given an opportunity for much of the vitnperation cas apon the institution. But that snch a tunion has heretofore existed, the statiates of every craft guild prove; and that such a union lias not bcen as pernicious as its enemies precict that it mus heccssarily be, is proved by the longeyity of the old guilds, and by the harmony which long existed between tho mastors and men of tho crafts thus united.
As England was the birth.place of the guild, so it has been of tho modern association, and dhe scene or its most extensive developmeut. It was an aggravation of the circumstanee which, $f$ ore than any other, contributed to the decline rade cratt-guilds, that gave rise to the trade-unions. As a ready shown, the growibl power of the capitalist rendered it impossible Contra craft-guild to exist in its original form contrary to old custom and legislation, master grade fo men who had passed through th of the cotton steam-power, and tho introduction of costly machinery, made tho possession of a large capita still more indispensable to the master. Price of all commodities had risen, whilo wares had relatively fallen. Labour was no longer the co. adjutor, but rather the hond-servant of capital The more inteligert of tho town populations hogan to perceive the poryer of resistance which combination would give them. Somo funds they had, oollected for mutual assurance purposes, fo riendly societies are of older date than trado unions. The first efforts of the new unions were directed against the violation of the Act, 5 Eliza Weth, c. 4, which limited the number of journey mea and apprentices each master was allowc to seep. It was only at a later period, when they felt their power, that trade umions hegan abour, \&c and to rianise strikes as a means of attaining their ends.
Twogenerations agotrade-unions were scarcely known. Amongst the earliest were thoso formed by the clothworkers of Leeds, in 1802; by the shipwrights of Liverpool, at the close of the eighteenth century; and by the hatters at a somerhat earlier date. In their infancy they were illegal, and wero compelled to carry on their operatious under the guise of friendly rocieties, in order to evade the provisions of the fct against combinations of workmen ( $39 \& 40$

Gea. III., c. 106 ). In 182 t they receivod partial
legal recognition, whieh has hecu still furthor legal recognition, which has hecn still furthor twenty-five years their development has gone on with extraordinary rapidity. The Fortnightly Review of Decenber, 1867, says :- 'Tradeunions are already a distinct porver in the State, and are rapidly advancing to a foremost place amongst national institutions. Neaxly 2,000 of these are now spread over the kingdom, ramifying through every county, and ensconed iu every town and almost every trado.' Since this was written the movement has extended to the arricul-
tural lahourere. But not only aro these societies tural lahourers. But not only aro these societies
beeoming troly national; some are forming international commexions, and others are likely to follow the lead thus sot. The International
Working Men's Association was evowedly formed Working Men's Association was avowedly formed
with tho ohject of uniting the labourer and with tho ohject of uniting the labourer and
artizan classes in overy country, for the purpose artizan classes in every country, for the purpose of mutual aid in caso of need. The association,
runder its present leadors, has, however, assumed anther a political than an industrial character, and as such has no connexion with our suhject. Accepting the existence of the institution as an andeniahle and potent fact, it will he sufficient for our purpose to point out that there are not a fow particulars in which trade-unions might learn a useful lesson from the old craft-guilds. They might more closely imitate their serupulous avoidance of aets of illegality; they might exhihit a little more of that chatitable spirit of the old guilds, which looked beyond the immedinto interests of their own fratermity ; thoy might connect themsclves, as their predecessoris did, with works baving for their object intel. lectual and moral, as well as matexial advanoc. ment; and last, but not least, they might emulato their zeal for the doing of honest, man-like lato their zeal for the doing of honest, man-ike
work, and for the checking of fraudulont tricks work, and for the checking of fraudulont tricks well said, in a letter to the Pall Mrall Gazette, dated July 4th, 1870 :- "We have atrikes against dated July 4.th, $1870:$ - Wehave atrikes against
reeeiving low wages. There are no strikes against loing had work. All over the land a good against doing had work. All over the land a goou
deal of work is exeeuted that is so shabby, so deal of work is exeented that is so shabling or dishonest, that it is degradation to bungling or dighonest, that it is a degradation
be conmected with it. If it was known that a be connected with it, If it was known that a other, that he conld be depended on to do good work, and could not do bad, -that ho put his character into his work,-a unionist would ho the most popnlar of workmen, and wages would stand higher than any combination could raiso them. It ought to bo impossible for employers to find men who will executo any shabhy work. It is a sort of crime against the honour of in-
alustry, a fraud by connivance 1 pon the pur. chaser."

## BRISTOL.

Consecration of St. Mattliew's Church, Moor-fiedds.-The chmreh of St. Matthew, Moorfields, St. George's, has heen consecrated hy the Bishop of Gloncester and Bristol. The site is hetween ehurch is in the thirteenth-century style, and of Penuant stone. When completed, it will cousist Pendant stone. When corapleted, it will consist apsidal chancel, and sacracium, with tower and spire 120 ft . high; the south chapol forming the minister's vestry, and the north chapel the organchamber. The estimated cost of the huilding is
$3,000 \%$. The contract, just finished, is for the 3,000\%. The contract, just finished, is for the
erection of the nave, south aisle, chancel, crection of the nave, south aisle, chancel,
sacrarinm, south chapel, and tower, up to the sacratinm, south chapel, and tower, up to the lovel of the clearstory windows, at a cost of chapel, and completion of the tower and spire to some fisture day. The church, when conszhleted, will seat 700, and the present section 4.50 persons. The coutractors are Messrs. William Banner \& Co., of Bristol. The masons' work has
been exeouted by tho Messrs. Beaven, of Bed. minster; and the tiling, glazing, plastering, \&c., by Messrs. W. Cowlin \& Son. The architect is Mr: J. Neale, of Bristol. Among the presents that have been made are three stained-glass windows in the apse, given by Nirs. David Cooper, in memory of deceased childroo. The Tmmanuel Church, Clifton. The edifico may be termed a working mau's clanch. There is still a deficiency npon the first contract, amounting to between 2002 . and 3002 ., whilst 1,0002 . more will havo to be raised before the church can be completed.
St.TVerourgh's Church, - A paragraph, pnblished ence to the rerary, says the local Times, in refer.

The sum provisionally agreed upon by the bishop and the late lord chanccllor for the church and churchyard was 9,5002 ., and it is not expected that any action will be takon except apon the hasis of this agreament. Again, the site for the Ashley-hill has heon proposed as its site. The Sanitary Authority have given notice that they will require also, for the widening of Small strect, the rectory-house of St. Werhurgh's and the honse adjoining, but this will be at a scparate aluation and hy separato agreement
Opening of St. Simon's Nev Schools. -The new parochial soliools, begun last spring, for St
Simon'a parish, Baptist Mills, are nove Simon's parish, Baptist Mills, are now eomplete, and have been formally opened. The schools are situated close to tho church, at the east end Opposite the front door is the door of the infant schoolroom, 60 ft . hy 27 ft ; a class-room, 22 ft . hy 20 ft , occupies the corner to the right of tho girls' sebool, 60 ft . hy 21 ft ., with class-room adjoining, 21 ft . hy 16 ft . The schools wil accommodate 465 girls and infants. Theamount of the contract (which has heen oarried out hy Mr. J. P. Stephens) has been 1,344 , includin extras; the site cost 465 l ., and the expenditure for gas, sundries, and fees of the architect (Messrs. Medland, of Gloucester), has brought up the total outlay to ahout 1,900 .

## ARCHITECTURAL ASSOCIATION

At the last ordinary meeting thanks were voted to the Prime Warden of the Goldsmiths' Company for permission to visit the hall, and to Mr. R. Hesketh, the arehitect of the recent alterations, for accompanying the members over the works. There is a raro profusion of rich foreign marhles in the entrance - hall, and in the construction and decoration of the prin.
cipal ataircaso, as wo have already told our cipal atnircaso, as we have already told our
readers. The prineipal suite of rooms has also readers. The principal suite of rooms has also
heen redecorated, and the great ball rendered hoen redecorated, and the great ball rondered
more roomy for halls by actting hack the wall. lino betweon the large maing colamins, the con tinuous dado heing ge main colanins, the conwere aldo giren to Dr Wiliams, the architect to the new Post-office huildings, for his permission to visit them, and for his personal explanations. A paper was read hy Mr. Joln Sulman on "Teachings of some old Churches in Northants," following the conrse of a tour made last year as the holder of the Pugin Trarelling Studentship. The district thus travelled over was the centr and south-east of the county,-tho kind of triangle included hetween Northampton and and Tounds (ahout twenty miles to the north-east) Northampton); additional buildings being also visited to tho south of Hirham Ferrers and west of Northampton. Tho paper was illustrated by numerous drawings hung on the wals, and hy sketelios on the hlackhoard shire vies with Lincolnshire and Somerset for the first win Lincolashire and Somerset for the first plaeo among the English counties fo parish ehession of the largest numher of Mediova grood building stone, tho wealth of tho distriet and the power of the religions orders, no doubt, contributed to tho result. Though the country is not flat, hut rolling and well diversified, s pires are frequent,-almost ever-recurrent. They are grace, some of this heing duo to their being pierced with tro,-sometimes with three,-tier of spire-lights. The strong, sturdy type of spire hardly appears at all. Probably the so frequeut that worked its was a fashion, once well set, then gradually thay down the Nene valley, and the district. At any rate, in walking through, the original meaning of tho word "stceple-chase" is drivon on the mind, and the possibility of indyging that amnsement at any rillago green in run. The clurehes mostly two or three mile and frequently a clayel joins the chancel. There are few transepts. The towors are almost universally at the west cnd, opening into the charches by good tower arches. Among a confully studied, only that of Barton Seagrave (a milo or two from Kettering) showed a central towor,-m a small Norman church, huilt no doubt hefore even tho rudimentary stone spire had the towers and spires is renerally not cartie into and through the rest of the buildings. The
good ashlar has seemingly given out in many cases, and a less complete and nohle class of Fork been tho result, Earls Barton and Brixworts. The Tramsitional (Norman to Early English) nare arcades at Rothwell might fit a large minster, and there are onc ho tho remains of this dato scattered about. The greatest architectural movement took place, however, in the Early English era (about 1230 to
1250 ), when many churches were founded and 1250), when many churches were founded and
others rehuilt. Decorated additions and inser. others rehuilt. Decorated additions and inser of Wimmiurton, Beds (balf a mile from the border, and about two miles from Rushden), is Chroughout of the samo Inte Dccorated date, even down to the font, and is said to have been buitt and fivished within two years. In the Perpendienlar period, dissatisfation with the lighting heretofore enjoyed led to the introducion of the clearstory; few churches in the county heing left untouched. The sudden transition from the old high-pitohed to the dat roofs that hecame enstomary probably originated in tho desire not to divarf the towers, - designed hefore the clearstories came into fashion. Mr. Sulman directed attention to the special features found at each place; auong the rest the tombs at Brington; the form-house at Yardley Hastings the strainor arches at Easton Maudit, Rnshden, and Finedon; the strance, once-inhabited towe at Irthlinghorough, were noticed. Aleo the characteristics of the perfect west ond of Raunds, locally known as "The Gentleman," as con trasted with "The Lady," at Stanwick,-that almost uniquo ectagon tower and spiro, with ita wouderful delicate grace. Some remarks were mado on the suhject of rough masonry in the wterior of churches, it boing maintained that the arcditecture must be hold and broad to stand the test of proximity to such unsmoothed surfnoes, and that cubble may he too rudo to be safely shown in any interior. Also that there is little dount that in the majority of enses plastering whether for paiuting or for smoothness, was contemplater, in many instances from the first, and aetually put on rery frequently for the latter reason only hy the Medizval huilders. External variegation with bands, of rich brown ironstone alternating with white stone, is found in the towers of St. Peter, Northampton, and Irchester (noticeable also as the most slender spire in the county). Of internal wall-painting many interesting portions of the Early English well-dramn figures and conventional foliage re Kettering) Burton Latmer (four miles rine ; and at Great Addington and Barton Sergrate clum bits of the toco blio Sengrave churches bits of the decoration may bo juen, giving fair promise of good suecoss 110 m jucion seraping. At. Whmmington some of the original Purheck paving quarries remnin in the parts of the loox, showing clearly that the designer from the first oontemplated the present slopo from tho west up to the enst end, - a plan tried also at linshden, but in neither case (ar. saman thonght) with good reanlt. In civil architecturo tho quaint, very picturesque, never-completed, ruined Late Elizabethat Market-house at Rothwell was deacribed;--its plan being simplicity itself,-an oblong, with and ohlong projection in the centre of each sido and each end, -the lower part with open arohes

HE GDILDHALL, TEMPLE BAR, NEW LIBRARY, AND CITY TEMPLE, AT THE COURI OF COMDION COUNCIL.
Ar the last meeting of the Court of Common Council, attention was called, hy Alderman Sir Ekancis Iruscott, to tho dangerous condition of the couneil-chamber. Some of the walls, be said, rere much cracked, and the architect had to make an examination of the building before the meotings of the Court, in ordar to see whetion it would be safe for them to assemble in it.
Mr. McGeorge said the City Lands Committee would look into the matter. He expressed his opivion that the council.chamher was not large enough, and that tho committee-rooms were sadequate.
Mr. Pedler said, notice had been sent to some builders in Loudon, asking for tenders for the erection of the new Law Courts. He asked the chairman of the City Lands Committee if his tteution had beeu called to the circamstance. Che proposed building would very much dwarf Temple Bar

Mr. McGeorge said the Gorernment, under the Act ohtained for the construction of the Law Courts, had power to remove the Bar, but only with the consent of the corporation. He apprehended tho corporation would not wish such an interesting memorial removed.
Replying to Mr. Clark, Dr. Sedgwick Sannders said the architect was derising means to improve the ventilation of the new library, whicb wa admitted to be defcetire.
Mr. Deputy Fry moved, pursuant to notice,
"That the church and congregation connected with the Powtry Chapel having purchased of the Ciey a frechold rhich they oro now erecting a church, to be known as the City Temple, designed (exclusive of large propision for
day and Suadny achools) to accommodate 2,500 persons,
and day and suadny zehools) to acommodata 2,500 persoas,
and involving an expenditure of more than $31,000 t$, thus
maining a total minimum outlay of $56,000 t$, this Court being desirous of erincing its interest in 50 grest a more. ment, and in reeognition of the public spirit displayed in
the determination to perpetuate a long-existing coanexio with the City, do present to them a pulpit, to be for erer London; and that it be referred to the Cfy Lands Com mittee to carry the sa,

The bon. deputy said that the coagregation had rcceived upwards of $50,000 \mathrm{l}$. for the site of their late chapel, and, instead of removing to determined to remain in the Cheap, they had much larger expenditure was thereby entailed
The motion wes opposed, and Mr. Shaw an hat in 1820 the site of the Ponltry Chapel was bought for 2,000 le and the congrecration, wa bought for $2,000 \mathrm{l}$, and the congregation, afte having had the use or for cifty years, had heen paid upwards of $50,000 \mathrm{l}$. for it. With regard to same rate as other land in the neighbourhood, it would have realised $15,000 t$, more than the City bad received for it. If the money were to be roted as a honus, 'what were they to say to Negretti \& Zambra, and other purchasers? He thought a more legitimate proposal would have heen for the gentlemen connected with the chapel to come forward and offer to place tained glass window in Guildhall.
Mr. Bedford said if the motion were carried he would ask a contribution of 500 l, to St Sepulchre's Church for their public spirit in throwing a piece of ground into the public way and in consideration of the circumstance that wre about to erect a handsome new tower.
The motion was nltimately carried.

A NOTE FROM ITALY.
A CORrespondent, dating from Rome, writes:Mrs. Salis Schwabe, who passes her life in doin good to the poor and the ruserable of thi ret a hetter state of things introcluced into Naples for the very poorest,-the yourg lazza roni, but obstaole on obstacle arose, and onl last year did sho obtain what she wanted, a local in which to hegin ber work. The municipality gave her a convent that bad been confiscated, gave her a convent that had been confiscated, put it in order; so the affair was begun last put it in order; so the affair was begun last
February, and then in May she had to bo in England. The architect, siding, it is to be England. The architect, siding, it is to bo canso of progress and edacation, left the huild ing much in the same state as when Mrs Schwabe left; and, in a state of desperation, slie not being able to leave Englaud, induced a frien to ury and tinish and faruish the schools. The present municipality, elected after the triump of the olerical party in the sammer, had put a suspension on all the works, and nothing was those intercsted have been been misspent, and those intercsted have been forced to go to Rome Ministers and Govermment, and, mercy of the telemran is cepected to state the 1 now writ The misery and deamdation ine result. Naples isery and degradation in rome parts Naplity hos dedione, and the clerical muni cipality has deducted from the allowance for education ras sure whether education did not heln to fill the prisons; that only religious teaching could help the poor to be hetter.
A weck ago the first stone was laid in Rome of the Americau Episcopal Cburch, to he dedi ented to St. Paul. It is to be built at the angle of Via Nazionalo and Via Napoli; the former is the new street now boing built leading from the Santa Maria Maggiore to the Corso. The posi. metre; the whole, 20,000 dollars. The churoh
is to be in tho Italian Gothic style, and to hold bout soo people. The Americans have thus gained the initiative in planting withan the walls stone was laid on St. Paul's day, and Engtish stone was laid on St. Paul's day, and English
and American clergy joined ju tho coremony, the Bishop of Derry olliciating
It is to Derry olliciating
It is to he hoped the Euglish, though more suitably supplied with a temporary chmel than ho Americans have been, will not be long hefor collecting the required sum for tho commache ment of their church. The overcrowded state
of the Eaglish ohareh shows the necessity of providing a large and, it may bo hoped, a hand ome edifice
The weather has been damp and unhealthy in Rome, but a fine day does much to raise the tone of moveme
progressing

WOKTVG BRIDGE ACCIDENT
A COrrespondeyt sendis us rougb sketches of some existing bridges on the river Wey, and pays, 1 presume they have been contimally irder being put in when one gives way nad not before. There are some half dozen bridges of bis pettern over the river Wey above Woking and three above Guildford; the first one a Broadford, near Shalford Railway Station, being very rickcty and unsafe for a public thorough are." If the sketches give a corrcct iden of the Board or other competent authority direct the ttention of the proper officer to them the better. We shall otherwise soon hear of another accident in this neighbourhood.

## ACCIDENTS.

Destruction by Fire of the North Surrey Dis trict schools.- One of the largest fires known for some time in Lamheth toos place early on Saturday morning, in last week, and resulted in
the total destruction of the North Surrey District Schools, in tho Aneriey-road. The building consisted of two floors, about 60 ft . by 60 ft nsed as workshops for shoemakers and tailors nd was entirely hurnt out, aud the roof was burnt off the carpentors' workshops, de., adjoin gh, and the contents danaged by hre and water The cause of the fire is unkuo
Dedmage to Ryde Fer,-About midnight, on Wednesday in last week, a large barge in a gale truck against the pier with great violence, and amarged the structure 30 yards, tearing np the rails of the pier tram. way. bound for Poole, was completely dismasted, Fall of Machisery into the Usk.-A somewha emarkable accideut took place last weck, near Newport, in Monmouthshire. Au iron bridgo on the Pontypool and Caerleon Railway, and a tage was placed over the water to carry certain heavy machinery used iu pile-driving. From some nnexplained cause the stage gave way, and
precipitated tho machinery and a number of the precipitated tho machinery and a mumber of the
workmen into the Tsk. One is known to be lrowned, and two are missing. Fonr others were njured, two seriously.
Partial Foll of a House in Eradford. - The Wa of a builang in Ranter-court, Craven-street, Wapping-road, fell outwarde, and six people who were in the house had marrow escapes. The house is one of a block of tivesituated in Ranter
court. Although antiquated and somewbat dila pidated in the exterior, in the inside they appea to be suhstantial enough. At the back of this block a large weaving-shed is in conrse of erec tion, and the necessary excarations for building
purposes are being actirely proceeded with. Tho foundation las been dug almost close in line with the back wall of this blook of dwelling houses, and it is thougit thal this may in some way have been the cause of the accident.
Fatal Scafold Accident near Bishop Auckland. An inquest on the body of Jesse Burge, who
met his death by the falling of a scaffold, at Coundon new church near Bishop Auckloud has heen held at old Counden, before $\mathrm{Mr}_{r}$ Thomas Denn, deputy coroner. The evidence of Mr. Townsend, clork of the works, went to how that deceased and a man named Rule were engaged plastering the ceiling, and were on scation which appeared sufficieutly strong for the purpose. He lad a short time previously
ordered them to stop work, as the frost was
severe, and they said they would just use up what lime they had up. They, however, con nued to go on, and a labourer named Alexande Davidson, had taken up a hod of lime, about ine stone. He threw it down on the scaffold and the two plasterers both stepped up at the same time to ret some, when a hean- one of the main supports of the seaffold,--gave way, 'and he whole three wero precipitated to the ground Burge ferl with his neck upos a wal red So appoll neams also ere severely hure an a a precariou dental death."

## SCHOOL BOARDS.

Thet:mpolitan Board. - At the last nsual meeting of the School Board, it was resolved "That the nder of Mr. W. Shepiera, of 101, Bermondsey Ver-road, amounting to 6,720 ., or the orection a a school to provide accommodation for 899 eepted; and that the tender of Messrs. D. King Sons, of 5 , Mitre street, Ald gate, E.C., amonnt ing to $6,628 l$., for the erection of a school to rovide accommodation for 1,058 children, on provide accommodation for 1, ond chanden, on it was further resolved, - That the tonder of Mr V . Webster, of 8 , St. Martin's -place, Trafalgar scuare, W.C., amomuting to 017 l . for excavatin square, N.C., amometigg boundions for the Board offices on the Thames Embankinent site, be accepted.
hames Embankment sitc, be accepted.
 chool plaze was toe first business. Mr. Hanual aid there had been some now schoois at Penrith In order to sce tbouse rith ord the tratan Penrith, and had the advantag, being ther on the same day as Hor Majesy' luspector. Ho found the scliools in many respects filted for their ohject, but li.cro we cur jections them. The mas of the Pe shools hat not much objection to the $L$ shape, but he hought it was very much too narrow, and was re hatir they wen for for a wol, would be much nore favourabic. Those schools had been buh aceorg to the holl nation 20 ., but he trusted he would induco ho Board not to adopt that whet. Thero wa now much agitatuoa on this porl, among olher phees, at Halifurand Leeds, the Boards at whic pres had sert a lopilat or Be nbers Mr. Fomter io a di. Whaso bords dor width of 30 ft . Mr. Forster had stated that beginning, before he had gone iuto office at all when Parliament was only granting certain sums then to mist have beer passed to pare the money. Ho added that the Boards ought now to be allowed by their lordships to put ap buildings which they considered best fitte or the district. There was another point, that of light, and he was a strong adrocate for a much yatural hignt as possive. Ho movea that the wiach of the boys and girls schools he 25 ft. and the intant schools not less than 30 It . exairman seconded the motion, at the samo timo exprcssing lis approval of the $L$ siape. Wr birketh, who was preselt, expolin to ing the pians ho liad gone according to the regulations of the Deparment, not baving felt himself justified in departing from them, thongh he quito agreed with all that Mr. Hanuah had said The original width was made that the number of pupils accommodated on one side of the school If ter be more than or tho If they increased the wideh to $2, \mathrm{ft}$. it wonld $\mathbf{r}$ quire four rows of desks, and if increased to 25 ft , it would requiro five rows of desks to accommo date the pupils; so that in gaining the advantage of having moro room for class teaching they los ho advantage of the other mode of teaching in having such a great depth of desms. His own inclination was to adopt a widu of our rows of desks. The broader it is the shorte it will be, as the area must nccessarily be eigh superGicial feet to each pupil. Considerable dis cinssion ensued, and it was at length decided to adopt the $L$ shape, that tbe hoys' and girls'school hould be 25 ft . wide, and that the infant-sohoo should be 28 ft . wide, Canon Carry dissenting rom the latter portion of tho resolution, thinking that the width of the plans, 26 ft ., was sufficient Considerable discussion cusued on detaiis, and il war delermine haa the vice-chairna, Cano Durham, Mr. Wigey, Mr. Clarke, and Mr Hannah, bo appoinced a committoe to consult with the arclitect and submit his plans a amended to the nest meeting

NALYSTS AND MEDICAL OFFICERS OF HEALTH.

## Wandsworth District Boartl of Works.-The

 neral parposes committce sulmitted Dis. uter and Moore as candidates for the office of alyst, and the former, who has alrearly beon pointed to tho parishes of Lambeth, Camber was then agreod, upon the motion of Mr. was then agreod, upon the motion of Mr. dgson, tbat the payment should be hy fees,d on a scale to be hereafter detcrumed by d on a sc
e Board.
Whiteckapel District Bourd of Works.-Dr dy has expressed his willingress to undertake o duty of analyst to this hoard for six months tho following rates:- For the first hundred ses, at the rate of one guinon for each analysis the next fifty casce, at the rate of half a inea each; and for any number of subsequent ses that might occur during the half.rear at - rate of 6s. for each. Dr. Tidy's offer was ceptod.

In St. Pancras the feo bas heen fixed The

Pancras Vestry havo appointed $\therefore$ Sterenson, the medical officer of bealth for o parish, to the post of analyst. He is to be penses as may be actually incurred by him reng the ensuing ycar." It is provided, how er, that the expenditure mast be. limited to 102. At the end of the year the vestry will consider the whole question, w ake a permanent arrangement. In the Bethanal Green Vestry Dr. Jarvis, ablic analyst for the parisb, has suhmitted ablic analyst for the parisb, has suhmitted a that office, and asked to be ompowered to fit a laboratory and purchase the necessary struments, at a cost not exceeding lool. A
mmittee of seven memhers was appointed to ake inquiries and adriso the Board upon tho atter.
Marylebone Vestry. - A communication lias on received from tho Local Government Board sonting to tho appointment of Dr. Whitmore food analyst, \&c., for the parish.
The Hoborn and St. Giles's District Board Clerkenwell Vestry in the joint appointment an analyet, and they have resolved to apply Dr. Lethehy to allow his name to be bronght rward as a candidatc.
Miscellaneous. - Tho St. Sariour's Distric oard have agreed to pay Mr. Bianclii a nomina lary of $50 l .$, as analyst. Dr. Comer, the edical officer of health for Mile.end Old Town, r. Tripe, tho medical officer of bealth, has been ected. In St. George's, Hanotcr-square, and helsea, it has also been resolved to include the ho Whitechapel Board have appointed Dr: ogmott Tidy, Dr. Hardrick has been elected r Paddington; Dr, Yinen for St. Olave; Dr. oodfredo for Poplar; Dr Letle by for the City r. Bernays for Camberwell; Dr. Pary for St. ake's; Dr. Rogers for himenonse. hach district ve elected thoir own medical officers of bealtb nualysts.
The Gloucoster Town Cowneil havo had a long tting to discuss the question of tho appointent of a medical officer moder the Public Health A committee of the Conncil liad recom. endlod the appointment of on officer for the ty only, at a salary of 100 . per annum, con. tionally mpon half the salary being paid hy the ocal Gorernment Board, and that the appointen system one year, in order to see how the as stated that tho Local Boards and sanitary atborities of the suburbrn district of Gloucester ould prohably join with the city, and appoint te same gentleman.
The Carlisle Council. - The Town Clerk, at a ant mecting of council, reported that a meeting ad taken place between the Town Improvement owncyer, and the county authorities, who ad the appointment of a public analyst. Wheatley askcd how long they could defer is. Some public bodies lad deferred it for an definite period, and did not mean to appoint ressed npon than till they were compclled to ke decisive action ; and the county magistrates do given to understand that they did not intend do it until they were pressed.-The Town
lerk: Tbere is no special time mentioned tbat
makes it incumbent upon public bodies to make the appointments. With regard to the appoint. ment of a medieal offeer and inspector, the committeo had met the rural sanitary autbority but they had no report to make. He helieved tbat tbe authorities of the several unions com. municated with had all declined to join in the appointment of a modical officer. Mr. Cock. burn: There is notbing in the Act to presen that standing over?-The Town Clerk: The subject then dropped.
Liverpool. - Several cases were recently brought before the Liverpool stipondiary ma. istrate in which cortain tradesmen were harged with selling adulterated butter
the cases wero dismissed hy the magistrate, on the ground that tho defendants did not appear to have a guilty knowledge that the hutter was adulterated. It is clear that if his be the true interpretation of the law, no one can be convicted for the sale of adulterated articlea, aud tho Act might just as well not have been passed. The Liverpool Corporation have appointed a public analyst, at a salary of 2001 . appointed a public analyst, at a salary naturally they do not look with favour on a decision which reduces their appoint. ment to a comfortable sinceure, and have determent to a comfortable siuccure, and have detcrminoritativo declaration of the lave
Bedford Town Council.-At a special meeting of this council, actiug as the sanitary authority for the borongh, Alderman Bull said that hy a resolution of the Board passod some fow weeks ago it was decided that tho two offices of medical offieer of health and aralyst for tho borough shontd be held by one gentleman, and be proposed that Dr. Cbarles Edward Prior slould be appointed to these oflices. It was then resolved that Dr. Prior be appointed medical officer of health for five sears, at a salary of 1002. per annum; and also borongh analyst for the same period, nt a salary of 50\%. per annum. Thero were no other candidates.
Berks.-A conference of Guardians of the Poor and the members of the various sanitary anthorities in the county has been held at tho Grand Jury Room of the Assize Conrts, Rending, o diseuss the 10th sec. of the Public Health Act, which imposes on the Sanitary Authority the duty of appointing an officer of healtly, and also an inspector of nuisances, and other officials. Tbe meeting was convcued by Mr. Henley, Poor. law Inspector. It was moved:-
for the period of twollye months act ind of endently for or the persiod of trelve months act independenty of one f heatth."
It was also mored as an amendment,-
"That, recognising the principle of combination, it is
deairable lasat the county of Berks be divided into two or more clistriets, and that the feveral town aud county anifary anthorities he respectfully invited to co-operale
othe appointment of a medicat officar of health for in the app
aistrict.:
Arnong the spcakers was Mr. Walter, MI.P., who said that it appeared to him that the Legislatne itsolf was cliefly responsible for the difficulty wich they wero at present endenvouring to re. nove. He supported the amendment. Mr. Munley said that at Birminglan the medieal officer of lealtb, who was also the puhlic aualyst, received salary of 650, and $150 l$. for the oflico of analyst. After some by 20 sotes to 18 .

NEW GAS COMPANY (LIDITED) FOR FEATING AND LTGHTING

A NEW gas company is being formed, with a 50,000 of 500,0002 ., one-balf to be issued in ffered fur sulseription. The ohject in view is to purchase certain patents for $50,000 \mathrm{l}$. in cash, and 75,0002 . in shares of the company, with oneenth of the surplus profits in every year, after the declaration be tbe cempany of a dividend of 25 per cent., and onc-tenth of tbe net procceds of any foreign patents which nay be sold for sums in gross. The chief patents to be uscd in return for this valuable consideration are what have been known as Ruck's pateuts. A practicable model gas manufactory has been huilt at Batter. sea, and experiments have heen thero cxhibited of the working of the process. Steam (or water of course) is decomposed by highly. hoated coke or charcoal, into free lydrogen, mixed with caronic oxide and carboric acid gases, and some ulphuretted hydrogen, which last is scpa. rated fron the gas, but the carbonic gases
remain, unless wben the carbonic acid is to be
removed by the help of caustic soda. The resultant gas is to be used for beating purposes only, as hydrogen gas in lurning gives little light but much lieat. But the gas is also to be converted into gas for illuminating purposes by being charged with petroleum vapour, which is said to form with the hydrogen a more or less permaneut comhination, and a rich hydro. carbonaceons gas, yielding a light equal to 16.6 candles barning 120 graius of sperm. Of course tho beating gas and tho gas for light will require to be separately prepared and distributed in two separate sets of pipes to their respective destinations. Tho decomposition of water or steam by highly.heated carhonaceons substances into hydrogen and oxy.carbonaceous gases is not new, but there secms to have always heen some difficulty until now in making practical uso o? tho process. We may add, that witbout committing ourselves to the present or any form of the process as an improvement on the usual mode of gas-making, we should be glad to hear of the practical success of any form of gas manufacture which conld render us eren of gas less dependent on colliery-owners aud colliers, either for light or for boat.

TEOHNOLOGICAL EXAMINATIONS.
The programme of examinations in the tecboology of the arts and manufactures of the country, is now ready for issuc, and may be had on application to the secretary of the Society of Arts. These examinations will he held annually, in conjunction with the examinations of the Science and Art Departinent.
Iu 1873 examinations will he held in the technology of cotton, paper, silk, steel, and carringe.building
Tho examinations of the Science and Art Department will be held during tho first thrce weeks of May

The following prizes are offered by the Society of Arts in each of the fivo subjects mentioned to the:-Ta tho liest candidate in honours, 10l.; to the 5t.; and the Council appeal to the companies of the City of Lonlon, to merchants and manufactarers, and to members of the Socicty menarally, to aid them by contributing to the prize rally,
fund.

THE OLD MASTERS AND TIE WORKING Classes.
A correspondent calls upoz us to urge the Council of the Royal Acadcmy "to set apart a weck, or some few evewings hefore the Exhibition is closed, at half-price, so as to allow the lovers of art among the working classes an opportunity of studying these grand old pictures. I beliere tho Academy adopts a sinilar plan in their summer exhibitiou of modern paintings." We are disposed to think tbo Acadony scarcely nceds any urgiug in the matter. But will the workiug classes-or, as we would rather say, the wage-class-take advantage of tho opportunity if it be afforded ? Unless we are misinformed, they do so in the summer only to a trifing cxtent. They thus weaken the hands of those who would increase their enjoyments and facilities for scff.culture.

## ACTION FOR SEIYER WORE.

WhaHore re white - brompron county court Mr. Laxton, who appeared for the plaintiff, a builder, of Fulbam, in his address to the Court, ohserved that the action was one of some im. portanco to contractors for making sewers and to hoards of works. His olient sourght to recover the sum of 181 . of Mr. Whitc, who, being of tho same trade as the plaintiff, should have known better than to have raised any dispute to the claim.
Mr. Wigmore, in reply to questions, stanted that some
time since he eutered into an contract with the parish of time since ho ettored into an ent ract with the parish of
Fulhan to construct a serrer in the Nwuster Tulhain to construct a sever in the Muuster-road, and
whilst the works were in progress Mr. White calted nuen binu nad mformed him he was the orrner of several houses borderiug on the sewer leing made, and it would be a good opportunity to have a drainaige frum his property
run jato the sewer, instead of into cesspools. as no douby the district or privh surveyor would ultimately order n
 The sum che sewer
The sum cisimed was for material, labour, watcolmen In cross-examination, hee plaintif said hic bad not got
the job spceifically that what he hid was to go to the
parian aeeount. The work be did was certainly not inpariah neeount, The work he did was certainly not in Board gare bibe orders to make junctions into the , semers,

EXPENDITURE OF METROPOLITAN BOARD OF WORES.
Sur,-At the last meeting of the City Com missioners of Sewers, the chsirman said:-
"Now, let us see wbat other pulilic badies are doing. I
take np the accounts of the Motropolitan Board of Works -not In any bud givirit but to doraw s comparison hetween that hoded on the fire hrigade 15 per cent. of the receipts; on works 32 per cent, and interest 53 per cent. of the
whole expenditure. That is a farting statement. Wr

 Holborn Yaliey inpyrove
Allow me, as a ratepayer, to call attention to this. Out of every sliilling of the ratcs collected we have to pay 53 per cent. for interest, while the inhahitants of the City only phy from $2 \sqrt{2}$ to 5 per
cent. This is not the way to encourame cither ant or labour, at this time when every dear, and no wonder that rates and taxes are high when more than half is spent in interest on loans.

## ENGINEERS' ACTIONS

mhen $v$, tiee exyouth doces conpany.
This action (in Court of Qreen's Bench) was brought by the plaintif to recover a certaiusum of money for professional services rendered by Exmouth Docks. The defendants pleaded not liable.
The plaintiff, residing in Vietoris.strect, Westminster,
brought the action tor ecorer a sum or 2 , 1 sin brought the nction 10 recover a sum of 2,1 isll, eommission
at the rate of 5 per cent, on works exceuted hy Mr. Juckson, a contractor, in construeting the Exnounth Dooks. In.
the course of the evidence it nppared thint there was netnally no oompany, and also thet thect there were no that thre. boldirs. Mr. Jach kon, the eontrnctor, nndertook the
eonstruction of the docks and exenention of the worls for
 tive vilue the completion of the worls to hor debentures, and to any company thut might be formed. The shares had necer heen disposed of Thac had heen. deposited as security for radvances hy the contractor, who was etill in

## BOND-STREET IMPROVEMENT.

Srn, - In Norember last the Chrendon Hotel, Old Bondsitrect was sild hy haction, and 1 now har that it
intended shortly to pull it down and rebuild, with sbops o other rise. Tha sito has the immense trontage of 200 fo. ineonveriently narruw. Is this not nn excellent oppor-
tunity to widen the street, aul eannot the extremelt Wealthy parich of the Gitreet, aud eannot the extremety

 or 15 f., especially in that part nesp in $G$ gaphon-street
wbere it is wholly inadequate to the traffic. In the seas

## COMPETITYONS.

Essex.-The Birdbrook School Board liave sclected the dosign sent in by Mrr. Frank Whit. more, of Chclmsford, architect, for the proposed new schools and master's resideuce to be buitt in that parish.
Palmer's Endowed School, Greys, Essex.-The designs of Mr. Thomas Rook Mrples, of London, have been solected. Thirteen architects com peted; the designs of Mcessrs. Wilson \& Wilcox were considered second.

STABLING AT GREY TOWERS, NEAR MIDDLESBROUGH.
The comfort and convenience of a covered stableyard have been exemplified doring the last season's trightitul rainfa!! in one which has been Carriea out, during the ycar jnst passed, for hr. from the desions of Mressrs. Ross Darlington digns of Lessrs. Ross \& Lamb, of way, beneath a tering through a spacor emerges into a stable-yard, entircly covered with an glass roof, sufficiont ground space being allowed to drive even an nuruly font-in-hand into, round, and out again. The value of being able to drive into immediate shelter is felt bath by host, visitors, grooms, and helpers; doubtless, also by heated and exharsted horses, as the latter are apt
to suffer from the chill and exposure consequent pon unharnessing in severe weathe
The rango of buildings comprises stall and oose - box accommodation for alont twenty horses, with ample coachhouses, hrmess-rooms washing and cleaning rooms, smithy, \&c.; also two dwellings for coachman and grooms; the whole being constrncted at a cost of about 5,000l.
"I KNOTV A HAWK FROM A KANDSAW."
By an accident I did not see the Builder of January 11, until last night. On the 21st of May, 1843, a friend of mine, who is a native of Norfolk, made the following memorandum in my "Shakspeare":
"The expression in Shakspeare, 'I know a Hawls from a Handsaw,' should be a 'Hawk from a Hanser,' i.e, I know the heron from the hank that pursues it. Hanser is the common word for heron in Norfolk, and other parts of
England.-G. P. B."
R. A. P.

## TIMBER IN FLUES

A Fire has lately occurred in an old house which I inhabit, by which it is proved that a great deal of timber is contiguous to the flues of the climneys.
Can you suggest what remedy I have with regard to making the flues secure? D. F. G. *** A careful examination should precede advice. The introduction of flue-pipes might be found practicahle and snfficient.

## NORTHUMDERLAND HOUSE

Trie Metropolitan Board of Works at their last meeting adopted a report of their committec, who have bcen negrotiating withe the Dike of Korthum. berland or his solicitors for the transter of the Northmberland House property at Claring. cross, to the Board for the Thames approaches. Tho Duke was willing to sell the property for $500,000 \mathrm{~m}$, and lie committee to recommend its purchase for that snm. The Board, sulject hack to tho committee, with instructions suluject hack to tho commintee, with instructions to carry out the recommendations of the report.
Wo are not glad that the old façade is to como down. We must look into the matter.

THE EFFECT OF CHARCOAL ON PLASTERING.
Sin,-Your correspondent "L. L." in your ast impression asks about a remedy for injury to plaster-work arising from the sulphur emitted hy burning charcoal in his kitchen.
As sulphurio acid acts immediately in destroy. ing all animal and vegetable orgamsm, the hair which should ho in ordinary plaster would farnish themeans of disintegrating the fibre of the plaster, as well as acting on the surtace of the same injuriously, if it is unprotected by any covering of a character sufficient the ras.
No doubt, Keeno's, Parinn, or Martin's cement, would be sazficient, or a coatiby of tho same, from din. to $\frac{1}{7}$ in. thiok, on tho surface of the of Paris, purpose, or a coating of the same aboat $\frac{1}{6}$ in. to in. on tho surface of the ordinary plaster would do.
Of course, pure water mast be used in all cases; foul water would farnish raterial for the sulphur to act upoon.

## CaURCA-BUILDING NEWS.

Manciester.-The new oharell of St. Martin, German-street, oldham-road, has been conse. crated. The new parish is complosed of part of St. Peter's, Oldham-road. The site cost 1,6002 . Tho charch consists of nave, 30 ft wide, and aisles and chancel. The tower (the spire to which is still wauting) and main entranoe are placed at the German-street end of the north aisle, and ncarest to Oldham-road. A second entrance is provided from German-street into the south aislo, and each of these protected by an inner wooden porch for the prevention of dranghts. The church accommodates 531 adults ( 320 of the sittings being wholly free and unap.
propriated), and cost, including tower, under 3,000 . The front, next German-street, and the tower are of Pierrepoint walling, with stene dressings, and window and door tiacery.
Iork,-St. Martiu's Chareh, Corey.atreet, which bas been leng in tho hands of the restorers, is now completed, and opened for divine service. The additions, and in some instances transformations, are many, and some of them are works of au ornate and expensive kind. An entirely now stained-glass window has heen put in at the east Or sanctuary ond, and a new organ has been
placed in the ohurch. The east window is the ptaced in the ohurch. The east window is the
work of Messrs. Heaton, Butler, \& Bayne. This work of Messrs. Heaton, Butler, \& Bayne. This
window consists of five prineipal lights, and each of these centains a couple of picture parels of sacred pictorial subjects. The smallor top.lights are filled in with stained glass geometrical figures at present; subsequently, we helievo, to be supplanted by desigas in accord with the pic. tures in the large lights below them. The seats for the congregation are all new and are open, of oak, carved at the ends; and the choir.stalls are the same. The roof,-of pitch pine, stained -is new, and covercd by lead oxternally. The seats, choir.stalls, screens, reading.desk, pulpit, and roof- woork, havo all heen done by Mr. Wignall, joiuer, while tho carving of the woodwork has heen done by Mr. Jones, wood-carver. The window-glass, stained and otherwise, has been taken out and cleaned, and new leaded, and replaced by Mr. Knowles, glass.stainer. New gasstaudards, rising from the floor, in tracery designs up tho standards, topped hy gaselicrs have been placed in the church by Mr. Holmes, gasfitter. A row of gas.lights has been plaoed under each sill of the oleurstory windows at the east end, for the purpose of lighting up the sanctuary and Mr. Keswick, builder. The new organ, by Mr. Keswick, builder. The new organ, by metal pipes on its west and south sides, has been placed in one of the arcados of the north aisle at its east end. Tho whole outlay fer the restoration of the church, inclusive of the new organ, is about
3,500 . The parish subscription to this amonat 3,500 . The parish subgcription to this amount
was 800 l . The organ cest about 500 l . ont of the was 800 l .
sum total.

Winkleijh (Devon)-All Saints', Winkleigh, new in process of restoration, stands upon high ground, and not only are the hills of Dartmoor seen distinctly from its site, hut from the top of the tower no less than twonty.four parish Mr. Ewan Christian, architect, restored ago chancel, and now the rest of Winkleigh Church has heen almost ontirely taken down, and is supervisien of Mr. Johu F. Gould, of Barnstaple. The north wall and the lower part of the tower are old; so also are the granite piers and arches of the arcade separating the nare from the north aisle, and about half the roof.timbers : excepting these and a few other minor items, all the work
will be now. The upper part of the tower has been rebnilt, and surmountod hy carved pin nacles. It rises to a height of 80 ft ., and has heen further streugthened by now buttresses. These latter, as well as the belfry windows and the new windows of the church, are of Hather. leigh stone, the walls of the atructure throughout being ef local stone, quarried in the imme. diate neighbonrhood. Middlecott stono, a warm, red material, is being introduced in the south porch and other parts of the building. The tower will be utilised by a peal of six new bells, supphed hy Messrs. Mears \& Stainbank, of Whiteehapel; and there will bo a new clock, hy Funnell, of Brighton. In plan, the charch consists of chancel, nave, north aisle, the Loosedon aisle, organ-chambor, vestry, and west. ond tower. The interior is still in the hands of the artiacers. The roof, partly old, is of English oak. The effect of this roof will be enhanced by painted decorations. A considerablo amount of mural decoration is also contemplated. The seating is to he all of the hest English oak. A now organ is in the hands of Messrs. Hill \& Sons to harmonise with the other fittings of the clurch, and will ho placed in the new organ. chamber on the north side of the Lady.chapel or north-choir aisle. The architect employed is Mr. John F. Gould, of Barnstaple. He is represonted upon the spot hy Mr. George Vickery, as clerk of the works. The stone and wood carving,
of which there is a great deal, has been placed in of which there is a great deal, has been placed in
the hands of Mr. Harry Hems, sculptor. Mr. J the hands of Mr. Harry Hems, sculptor. Mr. J. Dendle, of Barnstaple, huilder, has the contract
for all tho carpentering and joiner's work. Mr. fr. H. Pinckard, of Godalming, Surrey, is the
denor of funds for the carrying out of the re. storation; and the organ is the donation of a
lady connected with his family. It is expected lady connected with his family. It is expected that the church will be ready for opening about midsummer
Hastings and St. Leonard's.-It is in con. templation to erect a second ohurch in St. Panl's parish, mainly for the use of the poor who at present attend divine worship in St. Paul's to be totally inadegnate parish church is found seats made upon it, and another chnrch is to be erccted in a less.fashionable part of the parish. To aid in this work the rector appeals to his parishioners at large. It is proposod to purchase an iron church for 900 l., and towneds this amount the rector has himself contribated 2002. There is no doubt, it is believed, but that the money will be almost immediately forthcoming.
Ticehurst.-St. Angustine's Charch, Flimwell, has not been hnilt many years: it is a district church carved out of the old catensive parish of Tiochurst. The present incumbent (the Rev J. C. Eacgleton), aided by several friends, has raised funds for putting a steeple on the square works were being performed hy Mossrs. Carriek \& Balcemb, builders, Ticehurgt. On erecting the framework of the steople, and at the point of rearing the main upright centro.picce of timber, the gear work gave way, and it was pre. church, knocking a hole right through, shattering the slates in all directions, and the pieces of timber that fell snapped, from the great force, in four distinct pieces, liko so many pieces of tobacco pipe. This will be a loss to the contractors.
Hadnal (Shropshire). .- The parish church, which has been closed fer some time past for the purpese of undergoing a complete re storation, has been reopened. The improve ments comprise the removal of the gallery and pews, and of the plaster from the internal dressed stone heing substituted and pointed in the window jamhs, heads, and sills. New boarded and quarry floors, and a new warm. ing apparatus, have heen provided; and the nave is fitted with convemient seats of pitch round the church, and the churchyard has boon drained. The contractors were Messrs. Bowdler \& Darliugton, whe have carriod out the work from the design and under the superintendence of Mr. Eidward Haycock, architect. The warm. ing apparatus was supplied hy Mr. W. Dodwell The total ontlay sas been 321l. Whon funds are forthcoming, it is intendod to add a smal chancel (for which plaus are already prepared), and, if possihle, a new vestry and organ. chamber. Bradford- - meeting in furtherance of a project to erect a new church in connesion with St. Jude's, has been held. The Rev. J. Eddowes, who presided, said it was intended to build a asoful charch, with clergy.house and schools. The site has heen secured, and part of the pur. plodpinothey paid. A resolution was passed, to erect a church, to bo dedicated to St. Mary Magdalene, in the White Abbey district; and a committee was appointed to carry out the reso. lution. Ahout 1,700l. were subscribed at the olose of the meeting.

## SCHOOL-BUILDING NEWS.

Great Misserden (Bucks). -Two new national schools, with class.rooms and teachers' resi. dences, were on Thursday, the 16th ultimo, opened here with considerable eclat, hy the Duke of Buckingham and Chandos, who was upported by a large numher of the local nobility, clergy, and gentry. The buildings are Great Missenden suply the educational wants of Great Missenden parish, nnder the national 210 scholars. They are of brick and together Early scholars. They are of brick and stone in Early English design, with uncoloured brick work inside. The cost of the school-rooms only has heen ahont 4.l. per head, and the total expendi. ture somewhat under 1,500l. The site of half an acre at Lee was presented by Mr. C. G. Du Pré, M.P. The contractor was Mr. H. |Taylor, of Uxbridge; and the architect, Mr. Arthur Vor. non, of Migh Wycombe. The whole of the about 25 l. under the stipulated sam.

Amersham.-A new National School is to be orected at Amersham, Bucks, to accommodate 28.1
children, aud au Infant School at Woodrow, in the parish, for thirty. It is expected that this some will be meffort to provide the requisite schools will be mueh cheaper than to allow the forma. tion of a School Board. Half an acre of the glohe land is secured in a favourahle position, and the works are expected to be commenced forthwith. The eemmission has been entrusted to Mr. Arthur Vernon, architect.
Westerdale (Yorkshire). - Contracts having been signcd, the new school is to he commenced at once. The plans and specifications have received the seal and approval of the Committee of Ceuncil on Education. The school, desigued by Mr. Henry Perkin, of Leeds, is in the Gothio style, and is to he built of hammer.dressed wall. stones, with bosted-hewn dressings, having open. timbered roof, plastered hetweon the roof spars, covered with Welsh slates, with bell. cote on the ridge of dressed timber, slated, and finished with iren terminal. The plans were submitted in the Colenel by Mr. David Hartley to the Hon. Colenel and Lady Caroline Duncembe, who expressed their entire approval of them, and the ands for the erection of the school are almost
ontirely raised.

## FROM SCOTLAND.

Leith.-The Post.Office anthorities are endeavouring to procure a site for a new post.office of much larger dimensions than the very small exist ing one in Bernard-street. The building plans are in course of preparation, and the erection
will, it is understood, be of a handsome if not highly is ornamental, charaeter, and will he, if not highly ornamental, charaeter, and will he within easy distance of
the Corn Market.
the Corn Market. Cxctange Buildings and
Castlecary.-For many years past extensive mining operations hare been carried on in the neighhourhood of Castlecary Station, on the Edimburgh and Glasgow section of the North British Railway, and in the ceurse of theso operations the limestone-the mineral wrought, -has hoen excavated for some distance under. ook place and in consequence the year a "sit " rack for aheut a quarter of a mile subsided to he extent of nearly 2 ft . Fortunately the rains whioh passed over the place met with no interruption before the mishap was discovered. The station-house and olfices were very severely injurod hy the occurrence, and in some places openings occurred through which a man could thrust his arm. In |fact, the station altogether presented a very dilapidated appearance. In a short time the railway was repaired, but fears were entertained of a further snbsidence, which has taken place this time to the eastrward of the which, spans this and tretcong towards the lofty viadnct Which spans this part of the glen. Tho subsi. diderahle longth $2 \frac{1}{2} \mathrm{ft}$. in dopth, and of con. siderahle longth, and a large body of the emptoyds have been husy raising the line to its very close to the viaduct-one of the highest it will go further in that directied probable that is resting upon tho solid, and for some distance the strata are intact. Curionsly enouch, by the last "sit" the condition of the station.house has beon much changed, and the wido openings Which were previously made have to a great old places.

Glasgow.-A meeting of gentlemen interested in the formation of a Technical College in 12,0007 has been held. It was atated that suggestions and proposals as to the Various nature of the instintion were made, and a few additional members of committoo appointed. Willith.-The new town-hall, the gift of Mr opened. Mr. Longmore at the opening handed over the titles of the property to nine trustees for the thehoof of the town and parish of Keith The hall is expected to cost 2,0001 . A portrait of Mr. Longmore, which will cost 150l., has heen presented to that gentleman as an acknowledgo-
ment of his gift.

Liverpool Architectural and Archæological Society.-The paper read on Wednesday evening was by Mr. Samuel Haggins, "On the Revival of Art in Liverpeol." The council aro memorating tho a soiree, in April next, comsociety.

## 

Mamal of Mythotogy By Aieximper $S$.
Murnar, of the British Museum. London: Asher \& Co. 1873.
Aitrough founded on a popular German work, "Der Olymp," written by Eerr Petisous, Mr. Marray has made this manual his own by gencral revision and a zeew introduction. He bas added too, a brief account of the Scandinarian, Old German, the Indian, and Egyptian mythologies, Read as a whole, the book cives a very interesting account of the growth and influonce of the early religions.
In the myths, awkward as some of them may sound in modern ears (to a people more fastidions as to words than acte), morality or immorality was scarcely involved. For instance, when we find the natural process by which the clouds ponr out their rain upon the earth and are again filled from the sea, described as Hermes (the god of rain) stealing the cattle (clouds) of Apollo, we cannot attach to the story the idea of criminality which it at first enggests. Similar interpretations we mnst be prepared to seek thronghout the mythologies of the Iudo-Ger-
manic races. It is rexations to find the manic races. It is rexations to find the Neptune, Mars, Vulcan, Juno, disippearing into Poseidon, Ares, Hephacstos, aud Hera. But it cannot be helped, with a view to the reest of Europe, and Mr. Murray is never above giving both names. A number of engraved illustrations increase the ralue of the book, which is addressed as welf to the geueral reader as to the Ligker is cosses of schools and art-students. The author is correct in saying that, in forming an opiuiou of the ancient mythology, whatever its apparent or real shortcominge thay lave been, it exorcised enormous inflaence on the education and life of at least two of tho most highly-culcivated nations of the earth.

## Fartoruji.

We take a paragrapls from "Facts and ITints" (Cassell \& Co.) about charconl:-"Billets of any kind of wood are heaped up into piles, usually in the form of pyramids. The whule is then and bottom for a current of air. The pile is now set fire to, and when completely ignited throughout, tue apertures are closed, and the fire conscjuices of the vegetohle, its oil, \&c.,gre dissipated, leaving little more than ite woody fibre. It loses about three-fourths of its woifht, and what remains is celled charcoal. This charcoal con. tains, hesides carbon, small quantities of different kinds of earth, and it is now supposed by some a proportion of oxygen. When cliareal is burnt, its carbon unites with tho oxygen of the form, and constitutes carhonic acid gas, or fixed air.". Cassell's Mayazine for February has a paper on the Darien Canal, by Mr. W. H. White. The writer says,-"The real difficulties of this route ne in the eight miles of mountainous country between the plain of the Napipi and the or a combination of tunvelling ond open cutting, or a cominuation of tunnelling and open cutting a tunnel five miles long, 120 ft . and containing a depth of water of 26 ft .' This and contanning would form the summit. and would he 130 ft . ahove tlie sea, or 90 ft . above the junction of the Atrato and Napipi. above the junctinn of the Atrato and Napipi.
On tbe eastern side it would be appronched by a channel 120 ft . wide at the surface, from 99 ft . to 100 ft wide at the bottorm, and containing 26 ft of water. Deep catting would ho required for some distance from the enstern end of the tnnnel, and nine locks oapable of containing the largest ships, are proposed for the plarpose of of the tunnel would be 130 ft . The western end of the tunnel would be 130 ft . ahove the Pacific, basins being provided for the transfer of ships from the sea.level to the canal." - Iron says of the SL. Gothard Tannel :-" By the latest Swiss advices, tho works for this undertaking seem to be actively pushed forward. The dimensions of the tnnnel are the same as at Mont Cenis, 68 ( $15 \frac{1}{2}$ kilomètres, or about $9 \frac{1}{2}$ miles, asconding 220 mètres; gradient, 1 iu, 70 ), from Goscheneng on the Cisalpine, to Airclo, on the Trans. Alpine on the Cisalpine, to Alrolo, on the Trans. Alpine contractor, M. Favre, with the healings at cach
end of the tunnel. The summit-level is 1,152 metres or $3,750 \mathrm{ft}$ above the level of the sea." Ornamental Art, says,-"We cannot now presume to positively define the motives that led to the symholic use of the fish in Ohristian art. It is curious that the letters of the Grecke word for fisll are also the initial letters of the words 'Jesus Christ, the Son of Gool, the Saviour, while Tertullian and several others of the early writers suggest a fresh train of thought, earing they frequently term their converts piseicyli, iney frequently term their converts piscickla, of baptism. In some instances the fisb may of baptism. been rudely cut on the slab in token that the decensed was a fisherman or sailor, hut a signe that clearly refer to the worldy occupa signs that clearly refer to the worldly occuparery abundant, we may, we think very reason rery abundant, we may, we think, very reasonably assume that in most cases, at least, it was the higher surnmbi, uot in the lower, but in early ilhminators, many examples of the use of early yinminators, many examples of the use of
the fish will he found, in some cases as an acces. sory, while at other times tho flexibility of the creature is taken adpantage of in the formatiou of entire letters: a C may bo composed eutirely of the fish-form, white two in combination are used to form the letter O." With last Saturday's edition of the Readiag Mercury were Fcbruary 1st, 1723, one hundred and fifty years aro. The fac-simite illustrates the diminutive sixe of newspapors a century and a half ago,
the dimensions of its pages the dimensions of its pages rot exceetling 9 im . the stato of London at that time:-" London, January 23. On Saturday night last a clergyman was attacked in a chariot iu Hiph Holbourn, at seven in the evening, and robhed of I5l. besides his watch." "On Saturday night last a gentle. man, iu his chariot, passing the King's-road near Chedsea, fonr footpads sudden!y rushed out of a redgo, commanding the coach man to stand; but foll fring on, they fired a pistor at him, and he fell from the box, and broke his arm with the fricht; whilst the footman hebinnl discharced a of them on the spot; the others made their escape.'

## miscellancix

Royal Institution, AlbemarIe-street. The laboratory department here, at the hack of the main buiding, has beon rebuilt under the dircetion of Mr. Harwood, architect, Messrs. George Smith \& Co. being the contractors. Tho Mr tropolitan gives some particulars:--There are three floors; the lowest, the laboratory proper, large roopecially to chemical operations, with a a smail open yard for ventiation closely adjoining, on the other side of which are emall hrick chambers, containing several various sets of hotwater apparatus in mse for different purposes ahout the general structure, aud fitted up some time aro, severally, hy Mossrs. Norris, Quarm, it Clements, Mr. Lynch White, and Mr. Perkins. The floors are all of Denuett's ratent, i.e., concrete, and the roof of the same material. They are carried npon cast.iron columns where required, and wroucht-iron stancheons, made hy Messre. Moreland \& Sons, of Old-street, and the thers and roof are of asphalte. This portion of of D . rl has been executed hy Mr. W. Wright, is another laborntorminster. On the floor ahore to scier laboratory, more particularly devoted chemical. Clark's patent steel resofiviner shutters aro provided to the exteraal wiudows, and a sky light is protected in a similar way. On the Hoor above is what is called the lecture-room, ahont 22 ft . by 12 it ., communicating with the already cx
stairease.
Society for the Encouragement of the Fine Arts.-On Thursday evening in last week, at tho Society's rooms, 9 , Conduit-street, Mr.
T. H. Thomas delivered a lecture - the first T. H. Thomas delivered a lecture-the first this season,-on Greek Art, Mr. Soloman Mart, R.A., in the chair. It was numerovely attended. On the walls of the gallery were arranged some careful studies from the pencil of the lecturen of the chefs. d'cuctre still romaining to us of the Classic beauty of old Greece. At its
conclusion, the chairman, Mr. Sadlor, and Mr. conclusion, the chairman, Mr. Sadler, and Mr
Gcorge Browning made a fey critical remarks.

The Improved Industrial Dwellings Company (Limited). Established 1863.nineteenth half-yearly meeting of sharebolders states that "the dircetors recommend that the nsual dividend, at the rate of 5 per cent. per annam, free of income-tax, be paid, which will nosorb $3,331 \mathrm{l}$. 13 s . 1d., and leave a balance of 2,403l. 19s. 812 d. At 31st December, 1872, 1,268 were iga were erectod and occupied, and 262 Crahtree-row, Shoreditch, were not completed by the contractors until the end of Septemher, and those in Ebury-square until the end of December. In both cases the applications were greatly in excess of the number of dwellings, and the buildings were at once fully tenanted. Owing to the difficultics which existed in the thi past trade, the directors were unable during theyaro nor talking steps to obtain tenders for covering the two sites in Commercial road Whitechanel and the dwellines will he com menced within the next few wels The tional site in Pimlico offered by the Mar ad of Westminster will be takeu up shortly, and the Westminster, wil bo lakeu up shortly, and the direall site iu Stingolane Marylebone neatia. tions lavia Sun mith the netiapoliton Bard of Worls for that purpose. The directors, thercfore, hope to provide during the comiug yoar nearly 250 additional tenements, to acoominodate about 1,400 persons.

## Progyess shown by the Income-Tax.-

 Tho property aud probits assessed to lncome-tax in the United hingdom for the year ending the 5th of April, 1871, amounted to 419,850,7982., cear $1,02,000$. More than in the preceding England, and of an increase of sothud, but a decrease of 48,000. in Ireland. The profits of trades and professions, public companies, railo wayes, iron works, gasworks, \&c., assessed under ${ }^{2}$ Schcdule D for the yoar 1870, yield an increase of 10,611, ,G00l. in comparison with thoso for the year 1869-9,833,000l. in England, 719,000l. in Scotland, $42,000 \mathrm{l}$. in Ireland. In 1853 tbe gross \&c., and $46,959,3387$. for kouses ; in 1870, $56,510,000 \mathrm{l}$. on lands, \&c., and $\$ 2,732,000 \mathrm{l}$. on houses. The profits charged to Income-tax in respect of "trades and profersions" under Schedule $D_{7}$ in Great Britain, wero $75,008,000$. in the year 1853, and 129,773,000l. in the year $1870-7 \mathrm{I}$. In order to mako this comparison, a portion of the present constituents of Schedule D-viz., raikways, canals, mines, \&c., has been excluded from the figurcs for 1870, because it did not form part of that schedule (but of Scbedule A), in 1853. A comparison of the profits assessed under those heads for the same years gives remarkable results. The net receipts from Income-tax in the year ending tho 31st of Marcli, 1872, amounted to $0,328,1021$ - $-12,3,325,402$. under Schedule $A$, Schedule $\mathrm{C}, 4, \mathrm{I} 25,324 \mathrm{l}$. under Schodule D , and 541,812l. under Schedule E.The Newington Butts Improvement and the Building of the New Churches,-A puhlic meeting, wbich was held in St. Mary's puse of raising Tuesday evening, for the purnew narish church, in place of the old clurch new parish church, in placo of the old churcb,
which is to he removed for the widening of Newinaton, showed that, notwithstanding all difficulties in comnexion with the improvement in question had been reunoved, its ultimate accomplishment is atill a matter of uncertainty It transpired, from what took place in the course of the discussion at the meeting on Tuesday, that the Act of Parliament under which the im, provement is to be effected provides that, unless a sum, in addition to the like sum paid by the Board of Works (wbich is 5 , 000\%), be raised before the end of next ycar, the improvernent calonet be accomplished, as the powers of the Bond for that purpose come to an end. It was therefore urred that it was of the greatest importance urged than efo the great be made to raise the money ou the part of the parishioners and others who are in the habit of using the theroug fare which is at present dancerously narrow The meeting resulted in scveral large sums The meeting resurted in scveral large sums improvement may at once be carried out.
Cambrialge Slade Professorship. - Mr Sidney Culvin, M.A., of Triuity Cullege, has been elected Slade Professor of Fine Arts at Cambridge, in succession to Sir M. Digby Wyatt.

Earthqualkes. - These manifestations of physical commotion are still pretty frequent here and there throughout hoth the western hemi-
sphere and the eastorn, hut eapecially in the sphere and the eastorn, hut expecially in the
castern. On the 19th ult., an earthqnake startled eastern. On the 19 th ult., an earthqnake startled
the inhahitants of Rome from their sleep. Tho shock was repeated two or three times. The Baron de Cosson, writing from Cairo, says that a shock of earthquako was felt hy many persons there on the 12 th ult. The oscillations lasted shout a minute and a half. The movement resemhled that experionced on a very small hoat in a little cloppping sea. Five hundred people have been killed by an earthquake in India. In-
formation reccived at Madras stated that on the formation reccived at Madras stated that on the
night of Decemher 15th, a shock of earthquake took place, from the effccts of which the people throaghout the district safely cscaped except in the town of Lehree, in Eastern Catchi and tho fall of houscs and walls, and only twelve persons were saved. The eaxthqnake was also felt in the Rohree division, at Sehwan, Dadur. At Shikarpore the shocks were so much ter in
tho town that small articles were upset. The shocks were also felt at Jacobahad.

## Great Fire at the Royal Military Aca

 demy, Woolwich.-On Saturday morning of last week, about four o'clock, a fire broke out in the Royal Military Aocrdemy at Woolvich, and hefore it was extinguished the largo centra dostroyed. This huilding was two stories in hoight, and measured ahont 90 ft square. It library, and other offices. All theso rooms were entirely hurned out. The books used for cducational purposes and the papers helonging to the students were saved, hut the military library was lost. It is halieved that the firo arose from was lost. It is halieved that the firo arose from for heating the huilding. A court of inquiry, compased of officers representing tho various hranches of the service at Woolwich, commencedan investigation, on Saturday, into the circnman investigation, on saturday, into the circmm-
stances attending the fire. At present the evidence clearly points to the flue of the heating
apparatus as the origin of the fire: and now that apparatus as the origin of the fire: and now that
the mischief is done, it seems that this flue, which could never be properly swept, has heen long regarded as a source of danger by many of those comnected with the establishment.
Overcrowding at Workington.-The CarRisle Journal gives a sad account of the want of houso accommodation and overcrowding at
Workington. The"writer says:- "The popnlation during the last three years has increased hy nearly as many thousands, owing ontirely to the
extensive and rapid development of the iron extensive and rapid development of tho iron
trade. Tho building of houscs has not kept pace with the increase of population, and the conse. quence is that the value of house property has advanced upwards of 100 per cent. Some new
houses have heen huilt, hut for every one erected there is half a dozen tenants. Many of the persons inhahiting such places have been taken seriously ill with rheumatic fever and other
ailments, brought on hy the damp and uahealthy ailments, brought on hy the damp and unhealthy
state of the rooms in which they had taken up state of the rooms in which they had taken up with which Workington is aflicted at the present timo is overcrowding. The town is literally swarming with people whose hahits, under the snost farourahle conditions, are uot couducive to health, and who are huddled together in a stato of filth and misery which is positively frightful?'

St. George's, Hanover-sqnare, and its Committee of worts George's, Hanover-square a suls-committee, recommending that the wayes of the selver-men and the flushers should be in creascd. The surveyor, Mr. H. T. Tomkins, said t. James's, Westminster, paid its sewor-men 5 s per day, finding boots, a slop, and a hat; St. District (SE. Margaret and St. John) Board, 6s., finding hoots ; Paddington, 5s. 1d.; Hampstead, 4s., with hoots ; Marylehone, Is. $6 \frac{1}{2} \mathrm{~d}$. , with boots As for ordinary sewor-men, St. James's paii Westmincer Dis. per boots; Paddington, 4s., with boots ; Hampstead, boots; Paddington, 4 s. , with boots; Hampstead,
3s."6d., with boots; St. George's had one man at 3s. 6 d., with boots; st. George's had one man at
3 s. , one man at 3 s . 2 d ., four men at 3 s . 10 d ., one man at 4s., and two men at 4s. 2d. per day. Mr J. Morris moved that the sewer-men have 1 s . extra per week, which he considcred equal to the wear and tear of the boots. Tho motion was
adopted.

Belfast Arclitectural Association.-A meeting of the Belfast Architectural Association Mr. Rohert Young oceupied tho chair. Mr. R Watt read a paper on "Architectural Edncation." The reader referred to the great want tha oxisted for a thorough systematio training for architectural students, especially hefore entering
an offioe. Ho suggested that, as a stcp in tho n offioe. Ho suggested that, as a stcp in tho direction of supplying this want, architecture
should be recognised as well as engineering in the should bo recognised as well as engineering in the Queen's Colleges, and advocated the appointment of a lecturer on architecture at each college. He rccommended that the Belfast Architectural Association, until something hetter he suhstituted, should take up this work in Belfast, and, as a commencement, open classes for instruction fer science and history of archite for draw ings. The Assooiation have already a class o design meeting fortnightly, and which is largely attended.
Society of Engineers.-At tho first ordinary meeting of the Society of Engineers for the present year, the president, Mr. Jahez Church, presented the promiums of hooks which had been awarded to the following members for papers read during the past yoar, Fiz., to Mrr. E. G. Bartholomew, for papers on Electric Telegraphy; to Mr. W. H. Fox, for a paper on con. linnous Railway Brakes; and to Mr. H. Davey, for a paper on Milford Haven and its new pier address in which ho reviewed the progrcss of ongineering practice during the past year, noticing in the first place the advances made in sanitary engincering, that being the branch of the profession in which his practice chiefly lay. Ho then procceded to notico successively the inauguration, progress, and completion of various largo and important engineering works in the metropohis, in the provinces, and abroad.
Competition Desigus for the New Chester Workhouse.- A correspondent of the Chester Chronicle, under the signatnre of "Fair Play," ives some good advice. He says:-" As the designs for the new proposed workhouse have now hoen sent in, I would heg to snggest to the authorities that they should engage a large room, to properly exhihit the merits of each; and, if possihle, after the award has heen made, a puhlic exhivition of the drawings should take place; as rawings, which will cost the or fify sets of tects from 507. to 60\%. each sot, and theso, if mounted on stretchers, as they generally are, will require an area of 150 superficial feet of wall-space to each set of designs. Also I would suggest, for tho satisfaction of all parties, that a disintercsted architect should be called in to assist the gnardians in arriving at an ultimate assist the gnardians in arriving at an ultimate
decision npon the merits of thoso to whom preminms are to he awarded."
Fires in Churches.-A fire hroke ont the other day in St. Stephen's Church, Pratt-street, Camden Town. The fire was discovered by smoke issuing from the roof. Several engines were quickly on the spot, and the firemen soon extinguished the flames, hut not until about 15 ft . of the roof was much damaged. The fire was supposed to have heen caused while the church was heing heated previously to the commencement of morning service.-Ablerley Parish Church, situated ahout a mile and a half from Witley, Worcestershire, has heen almost otally burnt down. The entire edifice was enreloped in flames when the fire was first discovered, and nothing was left standing hut
the tower and two of the outer walls. It is supposed that tho firo was caused by the oversupposed that tho firo was caused oy the overwhich was completed in the year 1852, cost upwards of 8,000 . Tho edifice was partially insured.
A New Puhlic Hall for Leicester.--A meeting of the momhers of the Leicester Literary and Philosophical Society, and other gentlemen interested in the matter, has been held in the mayor's parlour, at the town-hall, the ohject of Which tras to consider the advisahility of taking steps towards the erection of a new and commodious halt in Leicester, in which puhlic lectures "That this meeting cordinlly commond to public supxpenso of proriding in connexion with the pure
 School of Art; such sum to be offired to the corparation
of Leicester,
an conition that they pend an nditional sum, of at least equal amount, on the accomplishment of

Leeds, Castleford, and Pontefract Junction Railway. - The ohject of this Bill now heforo Parliament, and nnopposed, is the construction of railvays between Garforth, on Ehe Leeds and Selby Line of the Northand astern Railway, and Castleford, on the York and North-Midand Line of the same Railway, and the Pontefract and Methley Branch of the Lancashire and Yorkshire Railway at Houghton, with junctions to and power to nse the North-Eastern Railway Company's Railway and Stations at Garforth and Castleford, and a hranch to the navigable River Aire, in the parish of Led. sham. It is promoted hy the various landowners interested and hacked up by soveral of the large companies. If an act he ohtained, it will hring into the market a considerahle amount of coal 80 that the puhlic may he considered interested in the success of the schene.

Protection of Norwich Cathedral from Fire.-Efforts are heing made to minimise the damage to Norwich Cathedral should a fire un. fortunately hreak out in any part of the huilding, fire 1 riechef constahle, and a numher of the Cathedral , with Mr. Brown, the architect to tho mont ( n ) a thorities, have conducted an exper the Dean) a the dircction and in the Cathedral, to ascertain to what height water could bo thrown from the hydrant on Live's Green. It was evident that water could not he thrown to a greater height than 50 ft . or 60 ft ., not suffiless thy high to reach the roofs of the aisles, moch ta ken to the nave ; and steps will, it is said, be in the Palace Gardeu. It is also contemplated to provide lydrants at other places.
Inlabited House Duty. - The tax on in
 the financial year 1870-71, on 178,796 shops or warehonses, of the argrerate annual value of $9,198,8081$., the gross amount of the duty charged on them being 229,9532 ; also on 65,635 beerhouses, of the annual valne of $3,588,4.282$., the farmhouses of heing 89,0862 ; also on 28,167 duty amounting to 16,939l.; and also on 520,795 dwelling-houses, of the value of $27,548,6871$., the duty amounting to $1,032,208$. The total is 796,393 houses charged, their annaal valuo heing 11,015,126l.; and the gross amonnt of duty charged was $1,368,7862$. Only honses of 201 . per annum and npwards are taxed.
A Grateful Architect.-A correspondont Hites,- The suhscriptions in promotion of the schemo for providing a townhall for Paisley, have received a most remarkable stimulus. The leavi collected amounts to ahout $10,5002$. , thus and to ahout 500l. to he raised hy Mr. Clars him inose gentlemen who havo emharsed with well the undertaking. Nr. Clark states tha a well-knomn architect in Londos, noroposed hall hos unolicited, offered to fur proposed hall, has, he commitlee with a desiga and plans as a con brance of many agreeahle associations with the brance of ?
old town?

Inventors' Institute.-On Thursday cven. ing in last week, Mr. F. H. Yarley in tho chair, a paper was read by Dr. Calantarients "On a Means of Preventing Pipes or Vessels Bursting from tho Effect of Frost." The theory of the invention was that as water in passing from the fuid to the solid condition expands one-twelfth its huik, if a space were secured inside the pipe equal to the additional volume of the ice, the expansion will take the direction of this space and fill it withont producing extra tension on the pipe. An internal air-tuhe of india-rubher was the means proposed, and the idea met with favour in the long discussion which ensued.
Norwich Surveyorship.-The town council, after rejecting a motion for rescinding a previons resolution that the new city engineer and survice, shall not he allowed to tako private prac tice; also resolved, "That the salary of the surveyor be 4.5.. a year, with the same privileges viding an assistant-surveror" corporation prothen appointed the assistant-surveyor; and the town clerk was instructed to adrertiso for surveyor.
English for Japan.-It is soriously asserted hat endeavours will he made hy the ruling powers of Japan to suhstitute for the native tongue of that oountry English
most copious vehicle of thought.

Walsall Cettage Hospital,-The annual meeting of the subscribers to this institation has taken place at the hospital. Tho annnal balance-sheet showed that the income for the penditure to 7002 . 9 s . 4d. The annual report opened with congratnlatory sentences on the increase of the contributions. About two-thirds of the more serious cases brought into the hospital were from accidents in connoxion with mining. 208 cases had heen treated dnring the year in the in-patient department, and 2,182 in the out.patient department.
Purchase of Railways by Government. The Birmsinghann Daily Post gives prominence to the following announcement:-We have reason to believe that the acquisition of the railways by tho state is now seriously engaging the attention of the Goverument; and that an investigation is in progress-conducted by a memher of the Cabinet, in coajunction with one of our ablest permanent officials-to collect information necos sary to enable the Government to come to a conclusion as to the opportunity and the terms of purchase. It is not improhable, we are told, that a beginning may be made next year with the Irish railways.
Clement's Inn, Strand.-The Society of Clemeut's Inn are forming a now roadway to their property, the value of which will he much increased by the erection of the now Law Courts, close by. Losing their old entrance they acquired from the Commissioners of Works a site for a from the Commissioners of Works a site for a
new roadway, $2 \overline{5}$ ft. wide, which will open iato new roadway,
the Strand, it. wide, which will open into Church. This work is now nearly done, and has been carried out hy Messrs. Dove Brothers, from the design of Mr. Raphael Brandon, archi teot to the society. The road has a subway, containing the drains, and gas and water pipes.

The Law Courts.-According to tho Law Magazine, the quantities being ready, builders bave been inviled to compete, and in a lew weeks tenders will he delivered. The work is divided into two contracts, the first containing the contral courts and roons attached to them ; and the other, the east wing facing Bell-yard. The builders tendering are about twenty in number. According to another statement nothing is to be done till the proposed scheme of Law Reform bas been brought in.
Patent Pipes and Boilers. - The patents of Mr. T. S. Trass, C.E., of tho Crown Works, Friar-street, Loodon, for jointed pipes, coils, and new company, to bo named the Datent aew company, to bo named the Patent Pipe and capital of 80,0007 ., in 16,000 slares of $5 \%$ each, of which 11,000 arare offered for subscription, as appears from our advertising colunnus. The appears from our advertising colunns. The
patents of Mr. Truss are well known. This patents of Mr. Truss are well
New Bridge over the Dwina.- The new railway-bridge over the Dwina, near Riga, is one of the most important works lately undertaken in Enrope. Its length is 2,44 English feet The undertaking was promoted by a joint-stock company, and executed nnder the supervision of Colonel von Struve, of the Engineers. The bridge was commenced tho 22nd of May, 1871 , and ou the 27 th of October, 1872 ,was so far completed that the first locomotive could run over it.
Reading Architectural and Archeological Society,-On the 22 nd ult,, an essay on Rolfe, at ation $k$ Rolie, at the Athoncon. the essay gaye flass, and in the latter part of of painting in glass, aud the necessity existing in the his paper showed ecclesiastical existing, in the present phase of the ornamental glass and general architectare of our charches,

Miss Susan Durant, the well-known scal tor, is dend. She was a pupil of Barou de Triquetti, nnd was constantly commissioned to execute works in her own peculise line by her Majesty and other members of the Royal family. Miss Susan Durant was widely known both in London society and also in Paris, where her death has recently occorred before attaining middle life.
Burning of Court-house, Quebec.-The Court-house in this city has heer destroyed hy fire. All the records of the colony, the register of titles, and other deeds, together with namy
important historical documente, axe burnt.

The New Domesday Bool.-It is naserted by the Echo that the worl is rapidly progressing under the mauagement of the Looal Govern ment Board, at whose office half a dozen gentlemen are constantly employed npon the returns, the local operations being condncted hy the clerks to the hoarde of guardians, who are apecially paid for the labour. Can this be cor rect ? Surely some otber organisation wonld be necessary?

An "Amalgamated Labour Union."-A grganticas sociation, to he caller the Amalgamated Labour Union, is said to be in course of formation. It is to comprise the A malgamated Society of Railway Servants, Amalgamated Society of Ligatermen and Watermen, the Associar Protection League, and the Carneen's exsimated at 100,000 . Its great object, course, is to protect the interests of labour.

The City Flour Mills.-According to the London corvespondent of the Manchester Guardiam, tho plans for rebuilding the large and socalled nreproof City Flour Mills are now com. plote. The estimated cost of restoring the fabric and the machinery to their original status is about 40,0001 ., nearly the whole of whicb falls apon the insarance companjes.
MiddLesbrough.-The erection of commo dious brildings for the "Erimus" Club is to he proceeded with immediately, at a cost of 2,5002 , from the plans of Mossrs. Weatherill \& Moses, architects, of Stockton-on.Tees, whose designs were selected in a limited competition, This cluh derives its name from the motto on the Middleshrough coat of arms, "Erimns."
Poplar.-According to the Daily Chronicle an action has boen laken hy Messrs. Hill, Keddell, \& Waldram, contractors, against the Poplar Guardians for a sum of sool. for extra work in house. It has been decided by the guardians to resist the claim.
Prospects of Barrow.-The Barrow Herald is informed that the Barrow Iron Shipbuilding Company have lot a contract for the erection of houses on Barrow Island at a cost of 50,000l. It house recommodation could he supplied, wo could bo found for 20,000 additional men.

VOL, XXXI.-No. 1567.

Covent Garden M curkit.

PICTURE of fields over which streets and squares have since been erected caunot fail to strike the popalar innagination by the change it discovers. Wo see this change continually occurring in the outskirts of great cities, but it seems hard for us to realise that the centre of London was in the same condition \& fow conturies aro. Few who go to buy fruits or flowers at Covent Gardeu Market think that beforo the abolishment of conventaal establishments hy Henry VIII, tbe placo where they aro walking was occnpied by tho garden and burial-ground of a convent, although the name tells tbom tbat it was so. In the grand distribation of ecclesiastical spoils, Edward Seymour, Duke of Somerset, brother-in-law of Henry VIII., and afterwards Protector of the Realm in the reign of Edward VI., obtaincd the land previously belonging to tho Westminster mouks as part of his share. In the year 1552, however, when he wag behoaded, it roverted to the Crown, and "a patent [was] granted to John, Earl of Bedford, of the gifts of the Convent Garden, lying in the parish of St. Martin-in-the-Fields, near Charing Cross, with seveu aores, called Long-aore, of the yearly value of $6 l .6 \mathrm{~s} .8 \mathrm{~d}$., parcel of the posses. sions of the late Duke of Somerset, to have to him and his heirs, reserving a tonure to the king's majesty in socago and not in capite" ("Privy Council Records," March, 1552). The earl bailt himself a timber mansion in the samo year on the site of Southampton-street, with a garden tbot ran down to the Strand, and an entrance fiom that thoroughfare, bnt the rest of the land ho did not use. Covent Grarden continucd for some years to be an enclosure or pasture, extending westward from "the comnne high waye that leadetb from the Strondo to St. Giles-in-tbo-fyoldes" (now Drary-lane), almost to the present St. Martin's-lane. Queen Ebzaboth's trusty Secretary of State, Sir William Cecil, livod in a house on the north side of the Strand, almost adjoining Bedford Honse, of the presence of which we are reminded by Buricigh and Exetor streets, tho titles of himself and of his son. This mansion was originally built upon the site of the parsonage-house of St. Martin's-in-the-fiolds by Sir Tbomas Palmer, in the reign of Edward VI. Adjoining his house Cecil had an orcbard, and in September, 1570, Francis, Earl of Bedford, K. G., granted to him by a lease of twenty-one years a portion of the pasture of Covent Garden, which was next to his honse, at a rent of 55. a year. This lease is printed in the Archceologia (vol. xxx., p. 497), from which we quote the description of the land:- "That the said Earle of Bcdforde, for the goodwyll he beareth to the said Sr. Willm. Cecill, hath
demysed, graunted, and to ferme letton, and by these presentes dothe demyse, granate, and to ferme lett zunto the said Sr. Willm. Cecill, all that hisporcyon or percell of grounde lyenge in the east ende, and being percell of the enolosure or pasture communely called Covent Gardon, scituate in Westm', which porcyon the said Sr. Willm. Cecill doeth and of late jeares bath occupied at the sufferaunce of the said Farle, and hath bene and $y s$ nowe dyryeded from the rest of the said enclosnre called Covent Garden on the west syde of the said porcyon or $p^{\prime}$ cell nowe demysed wh certayne stulpes and raylcs of wood, and is fensed w'th a wall of mudde or earth on the east next unto the comune high waye that leadeth from Stronde to St. Gyles-in-tho-fyeldes, and on the west end towardes the sonth is fensed $W^{\text {th }}$ tho orchardo wall of the said Sr. Willm. Cecyll, and on the south end $w^{1 \mathrm{~b}}$ a ocrtayne fence wall of mudde or earthe, beinge therbye deryeded from certayne gardens belonginge to tbe inne called the Whyte Heart and other tenementes scituate in the high streate of Westm., comunly called the Stronde." Tbo word "stulp" used in this loeso is now obsolete, except in the county of Norfolk, and signifies a low post or bonndary.
We hear no more of Covent Garden until abont he year 1630, when another Earl of Bedford began to clear away the old buildings that were scattered over tho ground, and to form the present square, by building, from the designs of Inigo Jones, a church and piazza, in imitation of the square at Leghorn. In H. Lestrange's "Annals of the Reign of Charles I." we find this adventure mentioned, under the date 1632 :"Tho king having granted leare to the Barl of Bedford to edify at pleasnre npon the Convent Garden, it boing a very ample and spacious area and content, tho earl plied his design with such celerity and quick despatch, as he soon reared such numerous rows of stately and ambitious buildings as made old Tondon orvy the magnif. cenco of her sub-urbieary city." A new fashion. able quarter bad been much required, and the Earl of Bedford's houscs "were soon let to thoso members of the axistocracy who had no family mansions in London. In 1634 the earl granted a lease of two houses in tbe Piazza to Sir Edmund Verney, Knight Marshal to Cbarles 1., from wbich we learn that tbe oolonnade was originally termed the "Portioo-walk," and, therefore, that the mistake of calling the arcodes the Pinzzas, was of later date. A covenant was made that the earl shonld have free "ingresse, egresse, and regresse, into, out of, and from the sayd mes; suages, npon, by, over, and through the sayd Portioowalke, and that he, together with other his majesty's subjects, may at all times walke in, upon, and over tho said Portico-walke, to and fro, at bis and thoir own will and pleasaro." Also, "that Sir Edmund Verney may expell, pat, or drive away ent of the said walke any youth or other person whatsoever, whicb shall cyther play or bo in the said Portico-walke, in offence or disturbanoe to the said Six Edminad Verney." The annual rent was "one hundred and threescore poundes," - a large sum in those days,-whicb shows that the neighhourhood was in high repnte. The inventory of fixtures is a very full and cnrious document of somo interest in the history of building in England. It is printed in the Archcologia (vol. xxxv., p. 197). Hollar's fiew of Covent Garden was taken about the jear 1647, and represcnts a very handsome square. It is taken from Russellstreet, looking straight at tbe church, and shows the eolonnade on the south-east side, wbich was destroyod by the fire in tho last centary. Through tho columns we get a peep at the trees and garden-wall of Bedford House, on the south side of the square. The eentre is inclosed by open posts, and the old gablod houses in Henrietta and King streets are well shown np, adding greatly to the general pictaresque effect.

Tho market originated in a few temporary stalls or sheds, which grew up ander the sbadow of tho garden-wall of Bedford House. Tho squatters who held theso stalls seem to havo heen reoognised in 1656, as at that date the charch. wardens of the parish mado payment as fol-lows:-"21 Marcb, 1656. Paid to the painter for painting tbe benches and seates in the Market. place." Ten years later trees wore planted "in the broad place"; and in 1668 money was colleoted from the inhabitants towards the expense of crecting a column in the centre of the square, which had been inclosed with railings 60 ft . distant from the buildinga. This column, with a dial on the top, was taken down in June, 1790. The various improvements made in the centre area are noticed in R. Brome's comedy, "The Wecding of Covent Garden," which was published in 1658 :-

- Of Covent Garden, when he wroto his boolt,
Sone ten years siuce, when it was grown with weeds; Note set years since, when it was groy

In 1671 tbe Earl of Bedford obtained a patent for his market, and oigbt years afterwards it was rated to the poor for the first time, wher there were twenty-threo salesmen, scverally rated at 2s. and 1s. Fireworks wero exhibited in the centre of the square in 1672, and agaiu in 1690. On the last occasion they were "porformed at the charge of the gontry and othor inhabitants of the parisb, for the joyfal return of his Majesty from his conqnest in Ireland," on September 10 th , and wore considered of enongh importance to have a print made to oelebrate them. Accord. ing to the parish books, tho expenses of this cntertainmont were not very great, and tho indiridual inhabitants need not have been much out of pockot:-"1690, Sept. 23. Paid to Mr. Brown, for 200 of ffagots and 30 hrmshes for honefire for the parish, 1l. 12s. 6d. Sept. 25 th, Mr. Stokes, for a barrell of ale for the bonofire, 1l. Given to the watchmen to drincke att the king's returne from Ircland, 2s. 6 d . 1691. Given to Stokes and $\mathrm{y}^{4}$ watchmen to drincke at the bonefire and fireworks, 10 s. ." The crowds who attended these jollifications seem to have injured the enclosure, so that it was necossary to employ men to repair it:"Oct. 12. Pd. the labourers and carters for 4 dayes worke, in laying and spreading the gravell, $17,6 \mathrm{~s}$."

Ahont this date Covent Garden was a favourito renderrous of the fast men of the day. In Shadwell's pley of "The Scowrerg" (1691), onect the charaoters says, "Why, I knew the Hectors, and before them the TityreTu's. They were braro fellows indeed. In thoso days a man could not go from tbo Rose Tavern to the Piazza once, bnt he must venture his life twice." Tbere is an old print of Covent Garden of this time, which shows Young Ramble and his drunken com. panions raising a riot. On it are tho following verses:-
> "Yonng Ramble, without wit or dread,
Does now a drunlien party head: Thes sawl forth, nud party the street, And play the Dovil with all they rucet Swagger and swear, and riots nuske, And windows, lamps, aud lanthorns break; Make oll that dare onpose them ily On mischief hent, there's not a man Ariong them but does all be can: Btrects, allers, , imeses, a handred : pass. $\mathrm{d}_{\text {, }}$ There we present'em to your sight And show their maduess in its height. See Ramble, though he risks his life,
Will from the husband force the wife, As radely his companions treat All that in petticonts they meet The women struggte, scream, and scratch,
Lond swear the men:-In come the watch, Lond swear the men:-In come the Watch, And rall upon the roaring boys. Uplifted slares, drame syords oppyo And stabs are well repaid with blows.,

In 1704. Bedford House was pulled down, and the market, which had up to this date crouched beneath the shadow of its wall, was pashed into tho centre of the square. Strype describes the look of the place about this time as follows:'The south side of Covent Garden-square licth
open to Redford.garden, whero there is a small grotto of trees, most pleasant in the summer senson; and on this side there is kept a market for fruits, herhs, roots, and flowers, every
Tuesday, Thursday, and Saturday, which is Tuesday, Thursday, and Saturday, which is
grown to is considerable account, and well gerved with choice goods, which makes it much resorted unto." The market continned to prosper, and the sheds were gradually enlarged, and upper stories were added to them. This growth was watched with dislike by the vestry of the parish, who addressed a memorial, in 1748, to the Duke of Bedford, complaining that bakers, cooks, and retailers of gin lived in the added apartments, "to the injury and prejudice of the fair trader;" and further, that the value of honse.property in the neighhourhood was
reduced ly the growth of the market; bnt reduced hy the growth of the market; bnt
apparently the complaints were disregarded apparenty
The place continued to deserve its ill name, as the resort of disorderly characters. Shenstone, writing in 174t, tells his friend Jago, that in the Piazza large bodies of pickpockets "attack wholo parties, so that the danger of coming ont
of the play.honses is of some weight in the of the play.honses is of some weight in the
opposite scale Then I am disposed to go to them opposite scale when I am disposed to go to then
oflener than I ought." There is a print, "in vented and engraved hy I. P. Boitard," "The Covent Garden Morning Frolick, Oct. 9th 1747, " in which are fignred some ef the notorious characters of the day. The prixcipal groun consists of a drunken woman asleep in a sedan. chair, with a roaring man on the top of it. The Woman was Bet Careless, and the man mad Captain Nontague, a well. known noisy hally of
the day. In front of the sedan is a little the day. In front of the sedan is a little fellow carrying a lurdy.gurdy. This was little Casey, an extremely ugly and vicions Blackguard, whose home was the dunghill. Montagne and others of his set encouraged of bis low wit stockingless link-hoy, on account of bis low wit. These noisy pooplo found accommodation at the low pullichouses of the neighhourhood which were kept open all night Oue of these was Tom King's Coffee-house, mere shed heneath the portico of St. Paul's into into Logarth's priut of "Merning." Another Was Carpcnter's Cofiee-honse, originally the Queen's Head, hut mere generally known as the
"Finish," one of the muarket slods "Finish," one of the market slieds on tho east side of the square, nearly opposite the "Hunmums." Ned Shuter, the comedian, at one time a livery sorvant te Lampe, tho com. poscr, of Corent Gnrden Theatre, was pot.hoy here. The presidiug genius of the place, was one Jack Tetherington, a queer character, de. "Dicted in one of Deighton's caricatures as a Deep.nn." As most of thesenight-houses were Ircquented hy those who had taken more liquor than was good fer them, they were the scenes of frequent quarrels. One of the standing rules of tho Finish was, that if any young man unacqunintod with the place appeared in a cocked hat some regular customer of the honse should fore him inte a quarrel. An arausing scene in
which Jehn Kemhle figured, is related hy John Which Jehn Kemhle figured, is related hy John
Adolphus (Recollections, p. 88). The great actor tipsy hut majestic tavern, and attempted to lead the conversation, hnt at last, higiny indignant at the little con. sidelation with which he was treated, be swept with one tragic sweep of his arm all the glasses of liquor of the tray that the landlady was hringing into the room for her guests. By this performimmediately put him into a hackney coach, and sent him home

In 1829 the sheds wero all cleared away, and the site for the new market was prepared. The new huilding was erected in 1830, from the designs of the late Mr. Charles Fowler, at the expense of the Dnke of Belferd. The market gained its great famo while it was excessively
ngly, and the old sheds were as much freqnented ngly, and the old sheds were as much freqnented
as the new building. The chief featare of the as the new building. The chief feature of the
new market-house is the centro avenue, which hecamo pepular at once. Lately the holders of stalls have loudly complained of their unprotected condition, and the landlord has been asked to place a covering over them to prevent some of This demand he is supposed to have refisscd, and in consequence, the complainants have threatened to leave in a hody, and remove to Farringdon Markct. Donbtless the present market, although it is a great improvement on the miserahle sheds of the early part of the century, is mnch hehind in grandeur and convenience what a market of snch fame, and the chief markot moreover of
Iondon, should be. Country towns have now
handsome market-honses, and we might fairly
look to the Duke of Bedfard, who receives so look to the Duke of Bedford, who receives so
large an income from Covent Garden Market, large an income from Covent Garden Market, to make
mity.

## FLUES AND CHIMNEY STACKS.

The visitor who arrives in London hy eithe of the railways that lead from a port in the Channel is presented with a spectacle to which no other European capital that wc can at tho is a hahitaal denizen of the a paraliepolis, or a man whose thoughts are too actively engaged to allow of his ejes distracting their course, ho will pass it without remark. If he he a foreigner, a stranger, an intelligent child, or a person tormented with an inqniring disposition, he will he atruck with the vast array of helpless ugli. nesses that stand out above the roofs of the honses. Onevery side, as far as he can see from the lofty viaduct over which he whirls, stretches nd son ahominahle forms. No weather.heaten goarled thorn-hushes, no pollard willows, torm.driven vespel hods out such intelligihie signals of distress. Nowhere is it written in such large letters, "Wanted, an intelligent upervisor.
We speak, of course, of those complex and Faried ahominations the chimney-pots. Pots, rick , is a complimentary term. Iren and zinc rri and terra-cotta, are all pressed into the he Jews that if, during the long.continued law of rom Palestir, during the long.continued exits in any other land, thoy shall leave a portion o the edifice incomplete, in memory of the desola. tion of the Templa and Holy City. Not a house is to he seen (for example, from the South.
Eastern Railway) which wonld not fully eastern Railway) which would not fully carry ppears always to he loft in the state of a rndi. mentary stump, on which smoke.doctors of all grades set forth their wares for display. times the huilder is also a smoke.doctor. Then yon see the little hrick stamp twisted into nn. cornfortahle zigzags. But none the less are these zigzargs crowned each with its special pot, or cowl, or smoke ladder, er ahomination of some kind. And one very remarkahle feature of the case is , that thevere any unity, or even harmony in he tois there any unity, or even han chimen nd every fis of tho same louse. Every chiviney invariahly its special pot, mnlike that which adorns its neighbour, as if it were a necessary means of asserting the individualities of the

This was not always the case in England. ave; in those country localities which have as yet escaped the improvement of modern times, many an example of a chimney which comhines the two requisites of utility and of beautywhich are at once striking, and even nohle, archicetnral features, and perfect appliances for horough warming and ventilation. Great care as hestowed, not more than 200 ycars ago on his important feature of the domestic architec. ure of a cold and variable climato. Bricks were moulded on purpose to huild architecturally. designed chimneys, Frot-work, or spiral-work, or lozenge.work, deftly executed in well-cat or well. moulded brick, adorns groups of lofty turrets that, high ahove the tufted trecs, denote the locality of the old hall. There is a fine instance at Chenies, Bucke, the site of the mortaary cbapel of the Dokes of Bedford. An old honse, once forming a quadrangle, has now sunk into a modest ahode for tho Duke's steward, with a wing tenanted hy cotters. But the loner row of chimneys, each standing on a haso of its own, and forming so many hold projections from the line of the huilding, each of the size of featnre that tolls of the riso into a pictorial than of the well.considered coly dignity, no less studied hy the architect of the "old house" in Tudor times.
It seems to he the case that it is to the great storm of $1700^{\circ}$ that we owo very mnch of this unfortanate decadence in onr domestic architec. turo. We have heen visited during the present winter with storms of unnsual fury. To say wind b, here, as to the effect of rain, that of wind has heen most formidahle. Trees of many earth their roots, or a torn or monntain of earth with hranch. In Marlhorongh Forest alone ninety
trees have thus perished. It is not the patriarchs of the forest alone that have auffered. The most cyclonic character of the fury and at whe have noticed, was in the case of a perfectly sonnd and bealthy young holly.tree, a standard in a hedge, that had its head positively wrung off hy thickly. Dut, while slates of the fall of chimney-stacks. Few bave been left to fall.
When we examine what was the form of the chimney-stack in some of those yet remaining central court wo shall the better understand how it has occarred that we have fallen into the nnfortunate bahit of building our houses, as regards the smoke-flues, inside out, and of thus wasting hoth fuel aud other possihle advantages. Early English houses differ from those in Italy, among other things, hy the special character of the climney. The first step from the simple plan of having lonvres in the roof for be escape of smoke rising from an epen fire, was o build a stack, or tuhe, of froproof materials, ander which the fire should be lighted, and throngh which the smoke should readily escape, we mar see the the room. At the present day ferm. Aronnd the fringes of land taken for conversion into railways, hy each deep cutting or lengthened tunnel, few Englishmen can have failed to ohserve the mpspringing of a colony of labonrers. Shealings of turf, or shanties of slahs, give anng shelter to many a bardy "narry,",the one atructural feature of the huilding heing, almast invariably, a brick chimney. In a structure of a little higher pretence, the smith's shop, which is an esscntial feature of these nomadic riltages, the same feature is prominent.
The shop itsolf is nisnally ef the most flimsy and temporary description. The roof may he sheet iron, slate, or even painted oanvas. The sides are the ronghest and thinnest slahs, put tooether with a slight overlap. But the hearth, forge, and climney are of hrick, and give a permanent air to the slight shedwork which surronnds them. huilding of this mixcd sort in tho fact that the tarbary rights, in the New Forest, are attached to chimneys of not less than sisty years old, --a provision that seems to carry hack the evidence of the antiquity of this mode of hnilding to the time of William Rufus himsolf

As wood hecame less and less emplored for the material of Euylish houses, the use dying out with the discontinuance of projecting stories, ar the picturesqne timher mansions yet to chimney still maintained its original independ. ence. It formed a main fcatnre, or cromp of features, of the house, both in plan and elcra. tion. It was, originally, a aquare chamher, at the side or end of the main hall and principal apartments, in which the fire was kindled on degs, from which heat radiated to the larger room, and in the sides and corners of which a which evening might he passed on the henchos stack, ending in an ornamental tuhe of brick, and so raised as always to insure a sufficient draught. In fact, the whole structure was a of the bonse
As architecture sank, economy hecame more dominant than tho decent pride which onr sea.coal took in rearing their aboaes, and the place of wood for fuel, the chimney shrank from its normal form of an independent stack into the miserable hittle square fluos which are practised in the outer walls of onr rows of houses. But, while shrivelled to an atrophy, the smoke.tuhe still unfortunately maintained that position, with reforence to the plan of the honso for which there was a crood reason in the case of the old chimney-stacks. The English, of all people in the world, like to go step hy step. When an improvement, or at all events an alteration, is effected, it is not our habit to sit down and consider what other alterations ought occurs that pit. It thus not onfequency withont duo consideration of all their hearings, involve suoh coanterhalancing disadvantores as to do more harm than good, and either to conse a stcp hackwar short time, thrown aside, from no inherent fanlt.
himney became both possihle and converient

That heing the case, the proper thing would havo becn to study the ohimney de novo, to investigate the proper size, hoight, and position of the ventilating apparatus of the new fuel. Nothing of this kind seems to have boon done. The historio chimney was allowed to dwindle into a vertical channcl too weak to bear its own weight, or to resist the wind for more than a few feet or inches above the shelling roof. It was still left
in the outer wall, when its transference to the in the outer wall, when its transfercnce to the insido of the building would have heen attended hy great advantages. And thus, while doing the onerated by tbe combustion of a given quantity of coal, it rarely succeeded in averting tho uisance of at least occasional smoke.
To this very day the scientific study, and consequent final determination, of the lest form of stove, chimney, and general rontilation for a dwelling-bouse of any given size, is an unat lempted prohlem. Some arclitects attain credit and suocess by retraoing thoir stops as far as
possible towards tbe Tador chimney. Bnt witb the great majority of huilders the chimney is one of tbose unknown and confusing forces the operation of whioh they fail to predict, as is usually proved by tho fantastic variety of cowl, chimney. proved, or tall.boy, that does anything hut adorn tho sky.line of a house.
It is the moro necessary that this question hould receivo that degree of attention which should romove it from tho dominion of the rule of thumb, and hring it under that of definite architectural praotice, from the fact that thero are, on the one hand, great facilities now placed at the serrice of the builder which were unknown a
quarter of a century ago, and, on the other hand, quarter of a century ago, and, on the other land,
some of the appliances of our increased luxury some of the appliances of our increased luxury are subject to derangements which not only for a time dostroy comfort, hut often p
injure health, or even terminate life.
In fact, it mast he considered to he nothing short of barbarous to regari, in designing a house, the smoke-flues as mere nnimportant issues for tho smoke of a given numher of fireplaces, and nothing more. Yentilation must, in any architecture worthy of the namo, be considered as a domestic requisitc of as much importance as illumination itsclf. Connected with ventilation, or the arrangements for the admission of oxygenated air, whether cold or warm, to the apartments, hecome vitiated, either hy respiration, by com. bustion, or by the result of any vital or domestic process
Wapply have little donht, from various distinct reasons, which it would be easy to adcluco, that the entirc separation from the d welling-house of every kind of office, is tho most sanitary arrangement possible. Such was the case in the timo of ment possible. Such was the case in the timo of Romney loved to paint, The most delicate voman would he compelled to faco the frosty air, in tho old-fashioned arrangements of the country mansion, to the great advantage of her constitution. Tbat has now become rare anywhere, and impossible in towns. We are not
proposing to revert to a state of things that proposing to revert to a state of things that hut intimately connect increased luxury with diminisbed boalth. But now that water, led on through pipes, has hecome an intogral part of our domestic economy, at all events in towns, it is no small disgrace to us that the arrangement of these pipes is invariably that which is most certain to bring work to the plumber. The rueful effects of the thaw which succeeds the first sharp frost of a winter seem, year after year, as if they resulted from the operation of some natural and unavoidahle law, instcad of from our own slovenly neglect. We know that, when the wind is in the north, in certain months, the temperature sinks below freezing point. We know that pipes containing water are burst hy frost; ayd yet we contentedly build, year after year, acres of cisterns fed and connected by things utterly nnknown in England.
Certain precantions might greatly diminish, if not altogether obviate, much of this recurrent disaster, discomfort, and danger. A certain perative in the hailding of every house, would perative in the hailding of every house, would of pecuniary cost to the occupant, to say nothing of the avoilance of a cost not to be estimated in money. We may venture to indicate some of the leading principles which no bailder ought to neglect.
In the first place, in every house, from the
cottage to the palace, the chimney stack or stacks shonld form a distinct featuro of the plan heing one or more hollow towers rising direc from tho lerel of the foundations. Tbore can be no objection to their being so bonded with the walls of the house as to save unnceessary brickwork, but tbey must he channels complete in themselves, and mnst contain no timher passing tbrough their walls; and the position of these entilating towers should, as a rule, be within and not withont the house, so as to economise and not.
To

To every fireplace abould bo attachod a sepa rate smoke-tuhe, which will be best when it is an earthonware pipe, properly fitted and jointed, and led from the stove to the top of the chimney within the stack, and with no connexion with any other smoke-tuhe. The proper tuhos should be decided by experiment, reduced to a tabular form, as a definito part of architectural theory.

To every fireplace should be provided communication, on the level of the floor, with the outer air, - tbus ensuring a feed-blast for the fire. It will he convenient to attach damper or shutter to this aperture. In houses of any magnitude, the upeast air may be
directed under the floors, to corridors or other cirected under the Hoors, to corridors or other
spots fit for the admission of aventilating dranght The waste leat of the kitchen fire, passing int the rir-stack at a low level, may tbus be made availablo for warming and ventilating the whole house. The details will depond on the circum stancos of the building, bat the principie shoul always he kept in view. Ventilating tubes, or openings from near the ceiling of the apartments, may also form a valuable part of the same system.
All gas-pipes, hell-wires, speaking-tubes, or electric wires may be readily carriod from floor to floor througb the air-staoks.
The pipes supplying water to the cistern slould also be brought through the air-stacks care being takon, wherever the system of water spply is at all complicated, to form such cou helow the freczing-point. The hot-water apma ratus, warmed by the kitchen fire, and eupolyin baths on tho hedroom-floor, which is now muoh omployed, ougbt in the same way to beconnected with the air-stack. Of oourso, proper arches should bo turned at the bottom of the stack, and where the pipes are led ont, closed with a slate or stone slah, so as to give access in case of need.

The details of such a plan as the aboro ar for the decision of individual architects; but as to the importance of the principle, as regards health, comort, saving of expensc, and ahsenc In ounoyance, there oan, we think, be no doubt In our present state of civilisation, with the and with tho improved and almost air-tight losing of doors and windows, that is effected hy tho employment of seasoned wood and good
workmanship, it has become absolutely necessary to provide for efficient ventilation. The air-passages and water-conduits that are required for our present mode of life can no more bo neglected or omitted with safety than the respiratory and circulating channels of the animal frame can be injured with impnnity. There is wo thing more than mere analogy between the tiva systems. The home of the hody must he home of as a protection for that which is tho this can he done. A small extra ontlay in the first instance, wisely directed to meet the ineritable demands for air, fire, and water, will be repaid hy the darability, as well as hy the healthy and comfortablo character of the huild. ing; nor can there he any doubt that, when the yequires, the receives the attention whind for properly and chimneyed houses will he such as to leave those in which these requirements are neglected the last to find tenants or purchasers.

Increase of Salary to Surveyor of st. George the Martyr's Vestry.-The local Roads Committee recommended that from and after January 25 th the ealary of the surveyor be paid at the rate of $250 l$. per annum. Tbe chairman, in moving its adoption, said that with the amount of work done, and the way in which it had been carried out, he certainly thought they would not be doing wrong in making the proposed increase. The doing wrong in makion the proposed unanimously carried.

EXCAVATION OF THE ROMAN FORUM, Ever since, at the heginning of tbis century the antiqnarian interest in the romains of ancient Rome first awroke to any great oxtent, tho
different Governments of the day have considere less the work of excavation. The present Govermment has granted an annual sulyention of 100,000 francs, and splendid results have crowned the work under the direction of Signor Rosa. No part of the old eity has occupied nore attention and lahour than the forum formerly the husiest, now the quietest, part within the walls. What was in classic times the prondest quarter of the metropolis, the present century found a pasturage for oattlo and the undisputed playground of Roman children. The lay bare Goveramont of that time irst bega to slopes of the Copitoline Hill, whioh had stood in direct connexion with the Forum, and whioh snrrounded the latter part of the "Via Sacre" leading from tho Forum to the Temple of the Capitoline Jupiter. Nothing could then be done for the exaration of the Forum, and it was left to the generosity and antiquarian interest of a highly.cultivated Englishwoman, the Duchess of Somerset, to establish the meaning of tbat column, standing singly like a riddle, erected in honour of Phocas, as the inscription proved. On this occasion, those large regular tufa slahs were Forum, whilc the neighbouring streots are paved with polygonal basalt blocks. Along the edge of the travertine pavement, which was thre steps higher than the roadivay, compact hlock of masonry, partly woll preserved, wero fonnd, which scem to have served as bases for columns or statues. If the oxplorations had at that time been continued, it would hiave been porsible then to establish what we now know, that this row of bases formed the southern limit of the Forum As the excavation of the single colamiz had led to such remarkable results, tho Papal Goyern ment resolved to continue explorations near tho three marble columns, the architraves of which wore partly preserved, visihle in tho direction of the Palatine. Without innols trouble it was estahlisbed that they helonged to a temple, since proved to have heen dedicated to Castor and Pollux; the groater part of the stairs was also laid hare, which led from the hall of the Temple to the street. But the considerahle sume spent by the Pupal autborities, especially in 1829 and 1830, for the conservation and laying open of antiqne huildings, -for instance, of the Colos senta, -contributed little towards tbe excavation of the Foram, thongb all the different Government which Rome has seen since the berioning of this century willingly contributod to the attainment of that olject. Even the Republican interregnum of 1848 at least propared a decree ordering the complete excavation of the Forum. But no lormer Government finished the work, an essen tial step forward in this direction heing only lately made under the present Government. The much-cispnted question of the area of the Roman Forum, of which no classic writer gives clear indioation, has at last heen hrought a step neare its solution. The length of the soutb side, from which that of the other probably differs ver little, is, acoording to Canida, shont 95 metres. Although the length of the Fortm is thas approximately fised, this cannot he aaid of its breadth, and considerable difficulties will have to be overcome botare the whole area is laid hare. The works have not ap till now come into con fict with the traffic of the modern city; on the sestern sido alone a small part beine covered by a street. A difficulty arises as to the northern limit of the Foram. This crosses under a ver mach frequented streot, not easily to he diverted. It leads, as proved hy passages from classic writers as well as by modern inquiries, in a straight line from the Areh of Septimius Severus, in the direc tion of the Temple of Fiustina, opposite the Temple of Castor, and was formed by thesame "Via Sacra," one end of which we met with already at the Capitoline Fill. One part of this road, re cognisahle hy its hasalt pavement, is seen unde the arch itself. It was hrought to light before near the Temple of Feustina, and its existence about midway, in a straight direction, has also beon established. Ererything, therefore, points to the conclusion that the limits of the Forum are formed hy a line which, lecrinning at the left wing of the Arch of Septimius, extends as fur as the comer of the Column of Phocas, turns here to the east, and, skirting the basemente, reaches the oorner which lies opposite to the
steps of the Temple of Castor and Pollux; then touching the street lately laid open, leads at a reaches tho beginning of the boundary-bine again at Soptimius's Aroh. It is a little space whin at Soptimius's Aroh. It is a little space measurements the Form is 63 mestres broad on its western side, This would give, thereforo an ares of 5,985 square mètres if tho space wore oase, -the longer sides couverge towards the cast, and we may therefore take the area of the Forum as abont 5,000 square mètres. It will be asked, how is it possible that such a small place asked, how is it possible that such a small place
sufficed for the Roman peoplo? In answering this, we must take into consideration that tbe place was selected and formed at a time when the later greatness of the city was never thought of, and when it was fonnd, already in the last coutury before the Christian era, that it was becoming too small for all the business transacted tbere; commorce, and after that the juridical part of the Roman pablic life, were moved from it. In the place of private houses, those basilico were erected, of whine, built by Crasar, extending along the whole length of the Forum, has been laid open. The work in tho Forum are progressing steadily, though vith a more limited supply of labour than last rinter. About one-chird of the whole mass of parth, accumnlated during centuries, and from 7 metres to 12 metres tlick, has been romoved. Huoh bas been accomplished, but more remains as of important ingcrivest of sculptures, as well as of important inscriptions, has heen incousider-
able. This was to he expected; for no other part of the old city has been so open to explorers, and noue has heen so often rummaged as this. In Septemher of last yoar, howover, a valuable find, to which we have already alludod, was fud, to Which we have already alluded, was
made. This is the now well-known marhle bas. relicfs, found aear the corner where rises a Middle-Age tower. At two different portions of Middle-Age tower. At two different portions of
this tower, to which they appear to have served ai supports, hiddon by other materials, is now disclosed a row of portions of wall, ocoupying from 12 metres to 15 metros, decked on both sides with costly sculptures, which have appa sides with costly sculptures, Which have appaThe reliefs forld the decoration of the rostrum. people standing below an historically-arranged people standing below an historically-arranged Foruin. The position in which they have been found opens a fresb field to topographical conjecture and inqniry; whilst the reliefs themselves are of the greatest importance, not only on account of their historical import, but ou account of the brilliant quality of their execu. tion, which appears to belong to the last bright epocb of Greek art in Rome. The roliefs are to be exhihited at the fortbcoming Tienna xhibition,
In connexion with this subject may be menloned, that within the last few days a tomh, of ory beavtiful architecture, has heen discovered consists of thrce, near the Appian Way. It coffins, of whito marble, docorated witb sculpcomis, of white marble, docorated witb sculpures. The lattor represent, in relief, the Muses, Bacchus, and Ariadne; a hnnt of wild beasts and the door of a sepuichre. It is assumed that one of the SIuses, whose head is decorated with flowers, represents one of the deceased persons hears the inscrintion, "TlTVES. The sepulchre prars the inscription, Fures, and other detters, the style of the sculptume of Sether details, place the tomb in the ime or septirs Severus. The hair of one of ristio fashion of Julia Mammea, in the form of a diadem, witb high forehead.

## "ARCHITECTURAL DETAILS IN

 COMMON USE.Under this title Mrr. E.T. Owen is reading some papers to the Architectural Association of Ireland. In the course of the first, the reader said the use of iron, however manufactured, has of late years taken a prominent place in many jmportant material, and is admitted to be a most become still more inportant in destined to tectural works ; but I at precent future archi. that, as a purely architectural material it lase beon fairly dealt with. But, like many it las usaful thines, it can and does lielp many other and buider over many does help the architect which might otherrvise cost a little more moner, But in really good architecture, whetleer costly
or otherwise, there are certain situations and conditions in and nuder which it shonld not be admitted. I know a building (not in Ireland, by cient to serve as an illustration of will bo saffi. cient to serve as an illustration of the nse, and
also of the abuse, of that material. In the building alluded to there are four stories, exclu sive of the ground story, which is a lofty one bosting on an iron girdcr, supported in its tur beneathes cround flo eqnal to fuly one-half of the whole ground floor, and this oovered space is used by think numbers of persous every day; and what I the objectionable is the, - to $82 y$ nothing o he general construction,-tbat these column girclers, \&c., are all carefully concealed, and ored up in such a way that no possibility is fforded of gettimg at them, should any con ingency arise requaing tbeir examination, with ont considicrahle and manecessary expense; for hey aro made to assume, hy dint of bracketinge, porings, and any amoant of plaster, de., the proportions and external appearance of an elaborate Classic styles, order in one of the richest of the Classic styles, so $2 s$ to have quite a presen table that this mow, I winnot only penture to say romm node treating inderals not to be recommended, being anything but bruc archi ecture. but I will go further, and say that i to be positively avoided as dangerous, although be danger may appear remote; and I fancy buildira know hnman beings frequenting that building know auything of construction, and happen to think of the Chicago or any of the great fires of late years, their placid on durance of such things would come to an end. disabuse the public mind of its tondency to obdisabuse the public mind of its tondency to ob-

Similar objections might justly be raised with regard to street architecture, se called, in our large cities, where we see story after story piled one over another, apparently iu "mid-air"
bnt we, the experts in such mattors, know hetter for wo have obserfed that thoy are carried upon refined and sometimes very elegant costings, bko bamboo canes, plaoed a little to the rear of the glass or other equally fragile front. Now all that business and common sense require can be obtained without this ; and being architoc turally bad and dangerous into the bargrain, we should set our faces agrainst sluch temptations withont fear, eveu although wo know it to be possible that Mr. So-and-80 will get his builder offcnce to the builders, though).

If, however, cases should arise in which suoh mode of construction is resorted to under special circumstances, when heavy masses may should the iron beams or other medium upport be so situated as to be concealed ifficult of access ; but I wrould recommend preferable, in the majority of cases, the retaining the unmistakable, though somewhat antj uated, brick or stone vault, arch and pier without forgetting the old and honest timher work, whether in the roof, truss, framed parti ton, or simple beam, as things less likely a times to orerwbelm us wath sndden destruction hin some of their more modern competitors, hich after all give one the idea of clever architectural gymnastios, - a mountebank on stilts, looking very extraordinary, hut at the same time showing a rathor undesirable method of progres sion. In a former paper, it was my intention to go into the subject of roof construction, devoting sufficient care to that important requirement of almost every kind of building because drawings of eacb kind onght to illustrate sucb a paper; but I will endeavour to give a hint or two, if you will accopt it as such, for
consideration. I suppose I may imagine that consideration. I suppose I may imagine that
we have done with the panlt or dome, in oldWe have done with the rault or dome, in oldfashoned materials at least, for all future time, and that we mnst confine oursolves to timber,
iron, \&c., and perhaps concrete. Now, I think a great respect should be given to timber, becanse hens ted The hausted. The ngly, but serviceable and common tie-beam -whether king, qneen, or a comhination of both-is familiar to each of $n 8$, as is also the hammer-beam, and the paried forms found iu old works, in many of which the effort to get rid of the horizontal beam withont wasto of material is erident. Now, whilst respeoting all, whother ancient or modern, for the userul suggestions ligent progress from the apparent success or
comparativo waut of it which the various kinds present, by studying the ciroumstances which pppear to govern each particular case, rejecting quality of materials, or quality of materials, or the principle of con. truction adopted, provided always that we are quite sure that the couditions by which we may honestly lay claim to botter thinge. A very fat honestly lay claim to botter things. A very flat pitched roof requires very diffcrent treatment to stcep one, yet you will somotimes see that the which is unnecessary theary timbers to the former Which is unnecessary, the spans being snpposed to be the same,-the traasverse strain being so mucb greater in the one case tbau the other. both kinds have their legitimate place, but I can see no good reason for the unwholesome foar of showing the outside of a good high-pitched roof, provided it keeps out the weather hetter than me liat one - at least, in tbis country, -and you ahle, whint Neither should can almost always be cone. mneb afraid of parying the ancle of the pery of roofs in the same huilding for the sake of symmetry only, when leading conditions point out that it would be an advantage to have it otherwise. At the same time, liberty must not become boence, irrespective of sound and lasting constmotion ; and we must therefore ondure a certain restraint in the consideration of the proper points of bearing, thrust, and support. The ahominably ugly and wasteful roofs pnt np of late years, are a disgrace to the gene. ration, and especially so as the same amount of material and labour would, if properly used, havo made them fitting and pleasing accessories to the general composition of which they form a part ; but I suppose that in the "good old times" the architco was partly his ewn buider, and in some cases quite his own client, and that stocks and shares, and everything except pions contrihations to tho good work, wero then niknow. Conorete and similar compositions may tend somowhat to radify the morc ordinary and unprotending class of huildings, and perbaps take a more important place than it now does, in an arest of time sense; but it has not yet stood the test of time, or other trials to which all kinds of hould or more or less liable, and therefore it tance, it employed with dno caution: for in rial for are heat, althourk reqnired to withatand intense ages; and wilst might resist the weather for mation of a level, strong and inexpensive foor it might not prore ang, and inexpensivo with a lime or malt liln ar a baker's oren Perhaps a good deal more may ho doue than has hitherto been by nsing concreto in cornbination rith other materials, not only as grouting similas o what we see in old Poman works, hut is courses and blocks forming important parts of a structure. Tre must bo content, however, to move cautiously, testing every new invention as we go.

THE RIGHTS AND WRONGS OH ARCEITECTS' ASSISTANTS

A Gexthemin, who calls himsclf a Superio Assistant, has faroured us, in a badly-writte letter, with the iuformalion that ho was em ployed, on his own terms, to assist an architect in the preparation of drawings for a recent competition, and that he executed, in fact, the greater part of the work; and he calls upou us, some what noisily, to make public his name, and to claim for him the credit of heing the real author of the resulting design. We learn further from his letter that he was paid all ho charged-was, in fact, treated with very great kindness and confidence by his employer; that giving such assistance is his mode of livelihood at present and that he is already at work in another offico affording tamporary aid.
It ought to he nnnecessary to say that we decline compliance with his request. If we did state his name, it would be to gibbet it for the benoft of others. Unless our notions of right and wrong have hecomo sadly old-ieshioned, his conduct, as stated by himself, will be piewed by every honourahle mind with feelings the reverse of flattering.

Judging from parts of this "superior assist. ant's" conumunication, we doubt altogether his ability to make the design to which he refers, however much he may lave contrihuted to it, ander the control and direction of his employer. But supposing that he had done so, the case rould remain precisely tho same. Ile offered
certain assistanco for a certain salary, and was paid it fully and fairly. There was no arrongement that be was to be personally identitied
with the work, or in any way responsible horeafter : there was the univeraally.accopted understanding to the contrary; and in seoking to break this he takes a step towards the dc. struction of confidenco calculated to do the most serious injury to the rising mombers of the profession, many of whom find it absolutely necessary, both on financial gronnds and for the sake of acquiring knowledge and experience, to salke of acquiring knowledge and experience, to
seek cmployment with architects in actua seek cmi
It will be a bad thing for the friendless aspirant, when the establisbed and prosperous architcct has been taught to fear that bis share in the production of designs sent out in his nome will be weighed and measured and pub.
lished by those ho has paid aud instructed to assist him.
This matter is the more apropos just now in consequence of the attack rccently made on
Mr. Ross, of Tuperness, who snbmitted an able Mr. Ross, of Tuverness, who snbmitted an able
desion for the proposed cathedral in Edinburgh. desion for the proposed cathedral in Edinburgb. Of Mr. Ross personally we know nothing what. ever,-wo never saw him, so far as we are
aware; but we do not besitate, in the interest of justice and decency, and a regard for tho best interests of the profession, to say that a more scandalons endeavour to ruin a professional man was never made by profcesional brothers. I the iu and out workings in it of one or two hands are so obvious, that an acute lawyer, properly instructed, would probably considerably astonis thoso who have been guilty of the outrage.
As to a letter publishod by the assistant employed by Mr. Ross, Mr. G. F. Roper, settiug forth that he made the design, and not his employer, we will simply say that we regard it as a breach of confidence which will probably do the writer all the harm tbat he evidently feels it ought to do him.

NETV BUILDINGS IN WELLINGTON. STREET, COVENT GARDEN.
During the last few months, the neighbour. hood of Wellington-street, Covent Garden, bas been indergoing some considerable improvement amongst themare the large and commodious premises at the corner of Tavistock-strcet and premises at the corner of Cavistock-strcet and
Wellington.street, for Messrs. Findlater \& Co., which aro now almost finished, and the now Covent Garden flower-market adjoining, the Wellington.street elevation of which has only
just been finally completed. The first-naned just been fiually completed. The first-nanied with the rest of the buildings in the immediate locality. The height of the building is 62 ft . from the street lorel, and the width of the Wellington-street and Tavistock.street elcvations (which are uniform), 50 ft . each, whilst at the angle of the two streets there is a third aud prominent frontage, which contains the main entrance to the premises. In addition to the basement and ground floor the building is four stories in height. The ground plinthsall round, up to a little above the strect level, are of of white brick, with Portland cement dressings. The gromad floor has three wide segment.headed windows in the Wellington-street and Taristockstrect elevations respectively, whilst the four architect of the building is Mr. V. Gore, and Moasrs. Cabitt are the contractors.

The elcration of tho Covent Garden flowermarkot is about 45 ft , in height and 50 ft . with Portland stone window frames, cornice, and balustrade, the whole enriched with terracotta decorations. There aro two spacious entranoes 9 ft . each in width, with arched headings, with a wiudow of similar character in the centre. On wiudow of simile of the window there are stone piers, recessed arches in terra cotta, springing from recessed arches in terra cotta, springing from
them over the window and the two entrances. Above these arches a terra.cotta moulding is carried across the elevation. Over this, again, corbels in terra cotta support a cornice of Port. land stone, the elevation, which as a whole
is bold and effective, being surmounted by a is bold and effective, being surmounted by a Has bcen erected from the designs of Mr. Rogers, Mossrs. Cubitt being the contractors, as well as for the building adjoining.

METROPOLITAN CONSTANT WATER. SUPPLY.
At the last wcek's Metropolitar Board of Works Meeting, the Works and General Purposes Committee presented a report upon the regula. ions mado pursuant to the provisions of the Metropolitan Water Act, 1871. The committee were of opinion that the Board should not take Wly steps at present with a view of giving notice or a conetant supply of water in any of the istricts of London. They recommended that be subject bo roferred back to them, with autbo. the imperfect state of the law, and the nccessity for new legislation on the subject. The motion was adopted.
At the last meoting of the St. George the fartyr (Sonthwark) Vestry a resolution was Martyr (Sonthwark) Vestry \& resolution was
adopted, declaring the rales for a constant water supply to bo unnecessarily stringent, arbitrary, and enormously expensive
Colonel Beres ford has given notice in the Honse of Commons that on March 7th he will call atten. fion to the neoessity for a constant supply of water being given throughout the metropolis, and
will move for a Selcet Committee on the aubject.

THE METROPOLITAN GAS SUPPLY.
Is consequence of the defcctive quality of tho gas supplied by the Pboenix Company to Batersea and that neighbourhood, tho Wandsworth District Board of Works lave resolved to bring the subject under the notice of the company with a view to secure an improvement in the illuminating power of the gas supplied to the street lamps.
Notice, says the Daily Chronicle, having been given to the Marylebone Vestry by the Imperial Gos Company of their wish to terminate tbe prosent contract for the supply of gas, the
former asked for the definito decision of the former asked for the definito decision of the company by the lst of Febraary. A reply was
received in which tho company state that it is received in which tho company state thation at present as to whether they will raise tho price of gas or not. They will shortly bave to enter into a contract for the snpply of 400,000 tons of coals, the price per ton being 33 s . as against 18 s. the present contract price; but they hope that a favourable tura in the coal market will come before they are compelled to ontor into the supply of gas at cxisting prices.

DESIGNS FOR MOCNTATN CHAPELS. Oun readers may remember that at the annual neeting of the Carlisle Diocesan Church Exten. sion Society, last August, the Bishop of Carlisle referred to tbe tendency to pull dawn the moun. tain chapels in his dioceso, and rebuild them in a fashion whicb did net quite suit the scenery in
which they were placed. The Bishop expressed which they were placed. The Bishop expressed
a wish to have something like a model design for a mountain chapel, -" something of a solid and solemn character, which would seem to tone and harmonise with the mountain solitudes iu which they were placed." Mr. Schneider took up the suggestion, and offered 20 guineas as a premium for the most suitable design, and a second in the hands of the Central Committee, who, at their next meeting, directed the secretaries to advertise the scheme, confining the compe. tition to Cumberland, Westmorcland, and Lancashire. About fifty sets of plans have been sent in to the committee, and are now being exhibited. The Carlisle Journal says, "They are naturally and necessarily of a very various character, and the contrasts in grounds are somewhat amusing. The bishop asked for something 'solid and solemm.' Some architects have met the bishop's demaud by offering lipht airy and exceedingly pretty stric olfering light, airy, and exceedingly pretty struc tures, but snimitely more fitted for the quiet of a Eashionable square in a largo town than to eucounter the rude blasts among our Cumberland nountains. Others seern contertain the opinion than an old barn, and accordingly adhere as than an old barn, and accordingly adhery as are already too many eopies in Cumberland dales. Others, again, there are with which we mus express mucb satisfaction. They are substantial,
real keeping with the design, and are relieved from tameness by Gothic porches, strong buttresses, and pointed gables. The design which to our mind is most faithfully described by the bishop's words is that signed 'Vivo in spe. This is a picturesque little chapel, bold and cffective, with strong tower and spire, noither of which is witb out beanty, well buttressed, and wearing a general air of substantiality. The design of 'Ilex,' too, is very pleasing to the eye in its general features, though somewbat wanting in simplicity, and in some respects perhaps too ornate ; hut it contains the elements of success and, with slight modifications, might be rendered very suitable."

## HEREFORD.

Tre borderers of England, whether on the north or on the west, were bold, bardy, and aggressive races of men, having for their patrimony the moor and the morass, the wild, bleals upland which occurs on the Scottish fronticr, or the steep crags and rugged defiles which gavo Welsh. The Seots, indecd, came of the tame stock with the Englisb, and had recently formed stock with a part of the same kingdom, nnder wes the land immediately soutb of hords; nor was the land manediately soutb of that to its immediate north. But the Welsb had otber more potent and better causes for their continual and ferocious transgressions. They were the earlier possessors of tho whole country, a possession still attested by the bills and rivers, and, indeed, by the names of many of the chief cities of Eugland. Tbey were of an
ontirely differcnt blood and language from either Sazou or Norman: by the ono they had been gradually driven into the western and lessfertile tracts of the island, and the other held them cooped np and at bay within their mountain fastnesses, and responded to their continual partisan warfare by occasional invasions on a arge and, for the time, irresistible scale.
Full in view of the velsh mountains were spread out some of the most fertile lands in Britain,-cultivated, inhabited, and fortified by the invaders, who, not content with the slopes of the Cotteswold and the velvet meads on the left bank of the Sovern, had pushed their conquests far boyond the right bank, holding the stately ridge of Malvern and the rich pastures of the Teme, the Lug, the Fromo, the Worm, and the still to be traeed along much of its lengtb, was felt to be a perpetual mark of inferiority, an abiding affront to the patriotic feelings of cvery abiang afront to the patriotic feelings of cevery and the Dee. No marvel, theu, that the Welsh were ever iusurgent, ever breaking forth with firo and sword into the Eurlish terxitory, and cspecially into the most rieb and, by nature, least-protected tract of it, the fair county of Hereford.
Herefordshiro was first subjugated by the Romans. Three miles north of the city are the remaius of a camp, probably Roman, covering about 30 acres of gronnd, and uow known as Sutton Walls, a littlo south of which runs the hine of the road which led to the Roman town of Hagna Castra, fonr miles to the west, and was continued onward in the same direction.
At what precise period Herefordshire passed onder the Saxor yoke, and became annexed to Mercia, is unknown,-probably under Orida, early in the seventh century. The see wha founded in 680, when a synod was held here under Putta, the first bishop. Sutton or Southton, so called from its position closo south of the Roman camp to which it has given its name, was at a very Gero, in tho middle of the merelan kings. resided the celebrated Offa, probably during the construction of bis dyke, which passes ohout six miles to the west; and here in 794 was committed the murder of Fthelbert, his intended son-in.larr, a deed which led to the aggrandisement of the cathedral church, to which his penitential donations were largely paid. A cliarter of King Coennlf, A.D. 700, mentions Hereford, as do others by Deneberht, in 802 and 803 , tho last recording certain " monasteria quca olim in recording certion monastcia quec otm in arostita fuerturt." Sutton continued a Mercian palace until the union of the seren kingdoms, nder Egbert of Wessex, iu 827
Edward the Filder, a great constructor of strong places, who repaired the citadel and walls
of Chestor in 909 , is said by Grafton also to have fortified Hereford, erecting a strong castle there.
His sister Ethelfleda, a still reater castle-buildor His sister Ethelfleda, a still greater castle-buildor than he, and to whom are due the mounds of Tuthary, Tanworth, Leicester, aud some others,
was the was the widow of Ethelred, Duke of Mercia, in
915, when the Danes had advanced by the Wye, 915, when the Danes had arlvanced by the Wye,
and taken captive the Bishop of Archenfield. and taken captive the Bishop of Archenfield. ford, no doubt making use of the new defences. She died shortly afterwards.
Early in the eleventh eentury, the Saxon sway had heen so fir extended as to have left tho Dyke behind, aud Wales was regarded as a part of England, aud an attempt made to foree it to contribute to the common tax for the
defence of the island agrainst the Danes. For defence of the island against the Danes. For
this purposo Edwin, tho Ealderman of the Mercians, led an army as far as St. David's, punish. ing the people for their refusat. At that period, and during the reign of the Confessor, tho Welsh were led by Griffith-ap.Llewelyn, the ablest of their princes, and, indeed, the only one who
ever held the Welsh together, or gare the ever held the Welsh together, or gare the
English cause for auything live serious appre. hension. Aided sometimes by the Danes from Ireland, sometimes hy traitorous Sacon ehiefs, and sometimes even by the discontented Normans, he is found daring the first half of the eleventh eentury whring on the whole a successful war against Herefordshire. It is eertain, from the numher, macnitude, and elaracter of the existing earthworks, that Irchen or Archen", feld, called from its bcocli-trees "Trefinwith," "Fernley," had from a very early period been "Fernley," had from a very early period been these, or hecause he wished to quarter afar off the visitors whom he attracted, but of whon he wns afraid, the Confessor made large grants of land along this district to his Norman courtiers, with whom, therefore, Grifith had not unfrequently to deal.
The earliest of these grants seems to have beeu made to Richard Fitz. Scrob, whose fortress, built after a fushion till then anknown in
England, gare great and gencral offence. His original castle has been replaced hy later strucfures, now also in min, but the earthworks are prohably original; and tho name of Richard's Castlo shows how doeply the fear of its huilders Was impressed upon the people; and it is, more. over, a very rare example of a parish hearing a purely Norman name.
These grants were opposed hy Earl Godwin and his sons, and it was to enforce his remon. strances against them that the English Thane led a force from Beverstone, and challenged the Confessor to give up his stringer favourites, a struggle which finally ended in the temporary hauishment of that traly English enr?
In 1052, during Godwin's exile, Griffith varded Herofordshire, and advanced as far as Leominster hefore Fitz.Scrob nnd his Normans were in the field to meet lim. They were heaten in a pitched hattlo, and npon open ground.
In 1055 , the enrddom of Hercford was in the hands of Ralph, surnamed "the Timid." Grif. fith, uniting with julfgar, the Saxon lord of the East Angles, who was accompanied hy an Irish force, harst into Archenfield, and agmin laid waste tho horder. Two miles from Hereford Grifithind Elf,gre were met by Earl Ralph, who seems, witl the Norman contempt for infantry to have placed undne weight upon his cavalry, he result of which was a completo defeat, Grifith entored Horeford, which was unde feuded, sacked and hnrnt tho city, treated tho cathedral and the clergy with excessive seperity, and destroyed what the "Brat" calls the gaes" that is, the castrum or fort. The account seems to imply that the city was not then fortifed. Ir. Freeman thinks the grer was a work of masonry. However that may he, there is little loubt but that it was a work on the site of the later castle, for by the river.side, for defence, it wonld certainly be placed; and as the position of the cathedral has donbtless nlways been the same, there would scareely be room for a fortress between its precincts and the western marsh The position of the bridge, too, is probably ancient, and this wonld lead into the city, not into the grier. The appearances of the earthworts, as they existed hefore the removal of the monnd and the filling up of its proper ditch, much resembled those of Tamworth, and other worke attrihuted to Edward and Ethelfeda, and the gaer may well have been of that drte, so far as the earthworks were concerned. This innond of the Welsh in 1055 was the most severe and the mose lasting in its effects of any on record

All Axchenfield suffered, and traces of the spoile are recorcled lang afterwards in Domesday.
Althourh Godirin's return from banishment in 1052 had heen followed hy the putting forth of most of the Norman intruders, Richard Fitz. Scroh, one of the most offensive, seems to have remained, nnd long afterwards to hare put down Edric the Vild; and his son Osbern, after a short exile in Scotland, came back to Horefordshiro, and held office and dignities both before an after the Couquest.

I11 1055 Godwin was dend, and to Harold, as Earl of the West Saxons, it helonged to redeem the disgrace incurred by lialph the Timid. He lost no time in preparation. In the conrse of the same year ho mustered lis forces at Gloucester and by his mere presence cleared Fereford of the Velsh and Fifgnar. Ho at once forticed Heveford. Whether he restored the eastle is anknown, but ho smrrounded the city with a wall, no doubt along the line of the later structure. Mr. Frcemau supposts Harold's work to have been a mere "dyke of earth and loose stones," or as Florence of Worcester descrihes it, "Jallum latum et altum." Domesday, hors. ever, records a "murus" at Hereford, as having Haroll, when Hereford came nnder lis imme. diate govemment, may, as Mr. Freeman singmasomry. Harold's his vallum with a wall of inclade the suhurb, which even then mist have existed, sinee we read in Domesday of Barciers within aud Burghers without the walls; thourh the latter would derive a not incomplete protec. tion from the hroad belt of marsh which then surronnded the city.

Griffith had sought and received terms of peaco. Nevertheless it did not suit him to allow Hereford to hecome n st:ong post. 1056 ho again crossed the burder. He was opposed by Leofghr, tho new bishop, who, however, was slain in the first combat. His suc. cessor, Ealured-a man of equal determination with better fortune,-held the Welsh in eheck, and negotiated a peace, and tho fortifications of Hereford were completed.
In 1062 Grifith again appears upon the seene. Frobably he traversed Herefordshire, for he crossed the Severn in the diocese of Worcester. On this occasion Harold,-appearing not as the whender of this or that province, hat of the and inguom,--execnted a counter movement 1863 hy Harold's was murdered by his own countrymen, and Wale suhmitted, having deprived herself of her arent est son. It was at the conclusion of this war sort of lunting-lodge for his sovereign in the low lands of Gwent, at Portskewet, whoro earth woclis aro still seen. Tho lodre was attacked and destroyed while in procress by Caradoc.ap Griffith-ap-Rhyadlerch, of South Wales.
Hereford played no part in the Conquest ; hut the city and shire occupy a respeetable place in related in day Survey, Where has castoma are here, and the bishop one. Of the city burgesses 103 hold of tho ling, and 27 had held of Earl Harold. All the tenants of the burgh were liahle to military service against the Welsh.
The customs called of the Welsh in King Eward's land in Arcencfeld, or Irchenficld, also here rceorded, are curious, and show not only Velsh hlood, and were the peoplo were mostly of Welsh mon. The King held thrce cluurclies there, and tho priests of them were to he the King's legates $0_{2}$ amhassadors in Wales, and when the army marched against an enemy, to the men of Archenfeld was committed the nost of trust and langer. Daring the advance they were to form the "Auntwarde," and in retrent the "Redre warde."
Such, then, hrving heen the autecodents of Herefordstire, it is not to be wondered at that it hich histled with strong places, nerrly all of may be trinced thations of early dates, andinming and there is strong reason to repard as in favonr in the tenth century. Domesday, nsunlly so silent as to fortresses, and cnumerating only forts.nine in all Eugland, mentions in this county eicht and two stronz honser. There were, bowerer many more, and at this day there remain tracee more or less considernhle of twenty-eight, of which many preserve the mouut, and othere arthworks of an early chrracter. Similar works are found at Brecon and Builth, places known to
have heen held by tho Enclish at an carly period. No doubt, these stronghoids, originally strengtheatimber, wero hurned again and again yy che insurgent Welsh; but the positions of surrounding were well chosen, and caeh had its quest, the great Norman barons marehed into Wales, they constructed upou these sites enstles of masonry after their fasbion, of which a few remain, though many, having heen destroyed, have boen rebuilt in the reign of Henry III., or later.
William's arrival no donht eonfirmed and extended any local power that may have heen allowed to Richard Fitz.Scroh and his son, under Harold. Osborn, as sheriff, held Hereford, and either he or the first Norman earl prohahly rehnilt the castle iu the Norman manner.
William FitzOsborn, the great Norman chicf, "Magister militum bellicosus," Earl of Hereford from 1067 to 1071 , was a fearful scourme of the Welsh, whom lie drove hack and vauquished on the hanks of the distant Rhymny. To him are attributed the castles of Strignil, Clifford, Wig. more, and Ewias, that is, the Norman part of them, for some at least preserye older earth.

Roger de Bretuil, William's third son, suc ceeded him in the earldom. He plays no part in the history of shire or castle. Failine in rebel. ion in the eastern connties, he euded his days in prison.
When Bretuil died is unknown, but in 1138 Hereford, commanded by Wm. Talbot, held out In thisfully agaiust Stephen, duriug a long siege. of Eus be was much uded hy Milo, the ford from who recelved tho cardomsined in his family till the end of the centiry. Milo's patent gare him the moat, probahly the "motte" and all the eastle. As earl, however, he was less fortmate. Stephen returned and took the castle, and wore his crown in state in the eathedral
Roger, son of Milo, was in opposition Henry II., but cscoped hy the wise eonmsels of Foliot, the hishop. In the reign of John a less discreet, or hoder prelate, Giles, Baron de Braose, united with Llowelyn ; int, fniling to oring over the men of Herelord to support him, died in exile. The castlo seems then to am, fallen into the possession of the Crown, and so to have remained. Prince John gave the custody of it to Roger Bigod, and in the sixth of his reign as king, and in the 7th of Hen. III., William hrother to Thomas, Lord Cantelupe, and sheriff was also gorernor. The turhulent reion of Henry III. gave value to the eastle of Hereford 15 Hen. III., John Fitz-Terrickand Wm. de Stowe surverors of wouks at Hereford Castle were allowed 20l, for repairing the walls, 16 \#en, III Terrick and Roger Carlton were surveyors of mangonels and potards within the castle. 26 Hen II., John and Romer and had spent 7l. 8s. 62 d. on artillery, and 12l. 1s. 4d. in making a trehuchet called "Blythe," and 402. 14s. 1d. in huilding a tower in the castle. 42 Han. III., the castlo was in the hands of the sheriff, Hy. de Pemhridge, until tho barons forced the king to appoint John do Grey, and penetrated into $W$ Vles as far as Builth govermor, as, however, in turn attacked, and held the castle hough for a few weeks only, arainst Simon de fontford and Prince Tlewclyn. Bishop Acqua Blanea was taken and imprisoned at Fardesley Peter de Montford, the earl's son, had charge of he county, and employed the issues of the for mer in the repairs of the latter. After the batto L Lewes, Prince Edward was a prisower here Edrard's escape hence has often heen lated. Widemarsh, whence he galloped off, still bears that name, and lies ahout a mile north of the city
During tho whole of this time, from 1199, the title of Earl of Hereford lind been borne by Henry de Bohun, whose mother was a coheir of a prefions earl, but neither ho nor his celchrated descendants, Earls of Hereford and Essex, athough they held Huntington Castle and the ordship of Brecknock, and built the Castle of caldecot, ever seem to have been seized of that of Hereford, which remained in the Crown.
Soon after the time of Edward'a flight, Jobn Werrur and TVm. Valet were surveyors of $557.6 \mathrm{~s}, 10^{-1} \mathrm{~d}$ for remairs of the walls and of the king's houses. Wm. Capon also held lands ot Iarden, by the serjeantry of keeping the door the castle, and this, nuder Hea. III, was commuted into military service.
Possihly the castle was employed as a loms
treasury for I Edward I. Henry Pigot held 46 acres in capite by the tenure of transporting the king's treasure from Hereford Castle to London. In the same year Richard Porter and Richard lo Panner, surveyors, charged 2II. 1s. 6d. for expenses and repairs of the king's houso in the castle, and in the next year they had fifteen oaks from the king's forest of Haywood, a milo
2 EA. I., Gilcs Berkeley, sheriff, had spent 47. 15 s . in repairs, and in $7-8 \mathrm{Ed}$. I. Roger Burghall, his successor, had spent 21. 5s. 4d. Hugh Turberville, one of a very unruly race, had, it appeared, when sherfif, burnt and lostroyed in tho castle the king's house, and the value of IOOl. For this he had a pardon, 5 Nov., 48 Hen. III., but the debt remained, and, 9 Ed. I., the
upon his goods.
nestled in the ling's arenequer, hy the king's precept, allowed Roger de Burghall 102. 68. 8 d . on that account. $15 \mathrm{Ed}$. I., Henry de Solers, a Herefordshire man, had charge o the castle, with arms and stores. 32 Ed. I., Miles Pychard charged 40 marks for repairs which wore disallowed because not certified hy the snrveyor. John de Acton was governor 33 Ed. I.

I Ed. II., Alan Plukenet, keeper of tho king' ciorest of Haywood, was to allow twelve oaks and stone for the repairs of tho castle walls and towers, Ralph Freeman held lands in capite, in Fromyngton, by the servicc of carrying the cord round the castle walls when they were measured. 5 Ed. II., be paid half thark for his relief, and commuted future payments for 7s. 7d. per week. $10 \mathrm{Ed} . \mathrm{II}_{\text {, }}$, Hugh de Hac luyt charged 5l. for repairs
13 Ed. II., Sheriff Richard Walwyn charged $6 l$. 13 s .6 d . for repairs. At the close of the reign the queen held a great council at Hereford, upon a tall gibhet, outside Friar's Gate. During the reign of Edward Il., Wales was loyal, and Hereford therefore neglected. Jobn of Gaunt was its governor, 1 Rich. II., but cven his great love of building was not exercised here. As lato as $\$$ Hen. VI., the city had a grant of timber to The castle lay unnoticed

The castle lay unnoticed, and more or less of scene of one of the struggles between Charles acene of one of the struggles between Charles and his people. It was first seized by Sir Wm. Walter, for the Parliament in 1643, with
the city, then also walled, and the position of which is natnrally strong. He retired from it before Prince Maurice, but shortly after. wards, withont stroke of sword, recovered pos. session, again to retire, so that in 1644 it was still held by the king. In I645, however, its trouhles began in good earnest. Leslie and the Scots laid regular siege to it, and from the south of the Wye opened a destructive fire upon Sir Barnahas Scudamore, witb eleren gnna, held out stontly, beat off an attempt at a storm, and forced the enemy to be content with a stockade. As the mills without the walls were destroyed, others were extemporised within tbem. The Scots then encamped on Burton. shaw Meads, close under the castle, between it and the river. Scudamore, whose defences were out of repair, and his garrison weak, sent out for rountry folks to assist as workmen. The enemy found tbis out, and entering place. Much injury was then taking the pahlio huildings, and the castle, as belonging puhlio huidings, and the castle, as belonging for the value of the materials.

## DESCRIPTION OF THE DEPENCES.

The Castle of Hereford was one of the strongest, most advanced, and most important fortressea upon the Welsh March, and one
which heing posted in a very fertile and open which heing posted in a very fertile and open
district, was peouliarly offensive, and very liable to the attacks of the Wclsh people. The present remains are not inconsiderahle, bnt as is often the case with fortresses of pre.Norman date, they are confined chielly to earthworks, and include but slight traces of the later or defences of masonry.
The castle was placed upon the left or north. ern hank of tho wye, east of and helow the city bridge, the cathedral, and in some measure tbe city, of which it occupied the south-eastern
it is, in common with the city, covered at some distance by a steep slope, at the foot of which
lies the Yazor brook, which, rising far off to the les the Yazor brook, which, rising far off to tbe Magne Castra, supplied the broad tract of low. land still known as Forster's Moor, Moorfield, Canon's Hoor, Prior's Moor, Eastern Moor, Moor Barn, and Widemarsh, to the north.west of tho city, and which, after skirting its north front below Baron.conrt, turns DIonk moor and Scult Mills, and finally falls into the Wye, at Eign Mill, some traces of which remain abont half a mile in advance of, and below the castle. The ground thas included is to the north-east, a broad and dry platform of gravel, very fertile, and prohahly employed as a safe pasture in wild times. The lower tract to the north.west, now drained, and either cultivated or built upon, must in former days, have heen an almost im. practicable morass.
Tbe city of Hereford, within its walls, was, in plan, ahout three.fourths of an irregnlar circle placed upon the Wye, which forms its concave 600 yards ; Imensions were, north and south 600 yards; cast and west, 770 yards; and along the river. hank, about 600 yards; including the cathedral and tbo castle. The total girtb was about 2,350 yards. The walls,-no doubt Nor. man,-upon the older lines were confined to the landward sides, excepting ahont 50 yards above the city hridge, and were in length ahout a mile and a quarter. Tbey wero pierced by six gates, Wye Bridge, removed in 1782 ; Friar's Widemarsh Gate and Bye or Bishop's Gate towards the north, removed in I798; and St. Andrew's or St. Owen's Gate, on the east, removed in 1786.
The walls were reinforced by fifteen bollow mural towers, placed from 75 yards to 125 yards apart, or at a "Hyto shoot,"-explained to he were rather yards, and here mneh less. They say, their side-walls were a littlo prolonged or stilted in plan, and they werc 34 ft . high, having a cruciform loop in front, and probahly two others laterally. Of chese, two at least remain and are accessible, though their upper half has been removed. Tbe intervening curtain was 16 ft . bigh on tbe interior, hut it was buil against tho old Engligh bank, whicb thus covere the lower 6 ft , of the interior face, and served as
a ramp. Besides the two towers alreads a ramp. Besides the two towers already men.
tioned, and wbich stood on the north.west face, the wall may be traced along the western side from Bisbop's Gate, - now "the Commercial road,' - to the river-hank. Where it has heen pulled down the step remains, and the difference between the level within and withont is brought to view. Of this wall the part from the Friar's Gate to the river is open to view from the exterior paddock. The ditch has been partly filled np, but the wall remains ahout 12 ft . bigh, r 6 ft . At regular intervals along it of ahout 50 ft . nre broad pilaster bnttresses, of slight projection, and without sets-off. These die into tho wall helow its present top. There do not appear to have been any mural towers on thi part of the wall. Some kind of manafactor conceals the termination of this wall poon the river, where there was prohably a tower; and from this point to the bridge a line of modern houses effectually conceals any foundations that may bave escaped. The tracing out the town wall, or wbat romains of it, though aided by parallel streets, representing the rampart within and the ditch without, is a delicatc opera. ion; for the lowest houses of the city aro here found, and the inhabitants seem to drive the trade of those who, at Jericho, dwelt in a similar locality. That part of the wall showing the pilasters is, no doubt, the original Norman wall The part beyond, or, at least, the towers upon it,
is probahly of the time of Henry III. The wide modern street called Commercial-road, and which takes the place of the old Bishop's Gate bas, of coursc, caused the removal of all traces of the wall near the site of the gate; but tbe Jine may still be traced round the eastern quarter of the city, as far as the angle of the castle. Here, as before, are two roads, -one inside and one autside the line of the wall, - the actual place of which is shown, sometimes hy a few stones built into the walls of later houses, and sometimes hy a dip of nearly 6 ft . in level Beyond St. Owen's Gate the actual wall remains for some yards, and may he seen from the exterior road. It extends to tbe connterscarp of the castle ditcb, where it ends abruptly, havin been in part pulled down.

The city bridge crosses the W ye by six arches, coundbeaded and all apparently old. One is tiffened with three plain square ribs, and naridge has taken of this to widen it hy turning a subsidiary arch, about 5 ft . wide, on each face, so that the old work is partially concealed. It does not appear wbere the fortified gateway was placed; prohahly upon the last narrow arch on the city side. This does not, indeed, show any trace of having heen perforated for a drawbridge, and tradition places the gate at the outer end.
Next to and a little below the hridge, near the river hank, and a little south of the centre of the city standa the cathedral, and helow and next to the cistle.
Besides the cathedral and its appendage of St. John's, there stood within the walls fonr churches-St. Nicholas's, All Saints', St. Peter's, and St. Owen's. There was also St. Martin's, heyond the Wye, destroyed during tho civil wars. The disposition of the strects is irregular, and in no way cruciform or indicative of any Romanarrangement. Thas sitnated and defended, Hereford was a very strong place, as it had need to he, for it was exposed to the fierce and re. peated attacks of the Welsh, who especially esented, as was natural, the conquest of their most fertile provinces by the invaders.
The castle, as has heen said, occupied the outh. enstern quarter of the city. It lay in the parish of St. John. Leland clescribes it as one of the fairest, largest, and strongest castles in England.
It was composed of two wards placed side by side along the hank of the Wye, not actually on the strcam, which, when the defences were of earth, migbt have undermined them; but ahout even yards distant from and on the edge of a teep sloping hank, about 8 ft . above the water. In seneral plan the eastern ward was an blong, the sides heing nearly straight, and the east end narrower than the west. The eastern lon long the old line of its wall 100 yards. The tho north front. The west front tho north front. The west front, connecting the two, measured 196 yards. This inclosure
formed the eastern or lower ward, and contained bout 26,000 square yards.
The upper or western ward was applied to the end of the eastern, and like it rested on the niver. n form it was rounded, or rather irregularly polygonal, and composed of a large conical mound, wholly artificia, with a eirenlar circumberibing ditch. Within the ditch it measured, on the east and sontl sides each 100 yards, and, on the hree remaining sides, 60 yards each. It was, therefore, in girth about 380 yards, and in area ahout I4,000 yards. Thus the area of the whole castle, ditches included, mioht be ahout $8 \frac{1}{}$ gerea The castern watd is stated to have contained ahout $5 \frac{1}{2}$ acres.
The earthworks of the lower ward are tolerably perfect. They are composed of a steep brak along the north and east sides, from $I 5 \mathrm{ft}$. to 30 ft . high, the higbest and hroadest part being at the north-east angle, where there was probally a tower. This hank has evidently heen thrown up out of a broad and deep ditch, which remains perfect and fall of water, on tho north front; but has recently heen filled up along the east as ar as the river; nor do there remain any traces of the castle mill, which stood at its junction with the river. The ground is raised along the river front ahout 4 ft ., and may have been higber. Along the west or side towards the upper ward, the bank has been thrown into the ditch, and here is only a trace of either. Leland says there was "a great bridge of stone arches, and a draw. bridge in the middle of it, to enter into the
castle; ;" but cven in Leland's time this was gone.
Tbe entrance to this ward was evident at its north-west angle, where the moat is crossed hy a causeway, and the public now entcr. There was a gate-house in Speed's time, wbich he the midd prohahly by an error of drawing, near far too high, and the ditch for too deep and hroad, to allow of the entrance being placed here.
Tbe modem museum hailt on the river at the south.west angle of the ward, or ratber hetween the two wards, and over the line of the ditch, contains somo parts of an older huildino, and o loorway of the time of Henry III. or Edward I. This bailding prohably guarded the opening of he middle ditch into the river, and was also the gatehouse hetween the two wards. Speed shows
a sort of water-gato here, which is proballe enough. The surface of the lower ward is level
In it stood the cbapel of St. Cuthert, with a In it stood the cbapel of St. Cuthhert, with a somicircular apse, and in Speed's time also two
small dwelling-houses. Leland cays, "There is small dwelling-houses. Leland cays, "There is
a fayre and plentifull spring of water in the a fayre and plentifull spring of water in the
castell, and that, and the piece of the brooko coming out of the diteh, did drive a will withi the castle." This was in addition to the mill outsido and north of the castle, and prohahl was a part of the present musenm-house.
Tho earthworks of the upper ward have unfortunately been destroyed, the mound and banks thrown into the ditches, and all made level,
and much built over. The site of tho mound is and much built over. The site of tho monud is occupied hy en enclosed three-cornered kitchongarden. The well or spring spoken of as St. Fthel-
red's, remains. It opens behind the museum red's, remains. It opens behind the museum building ahout 50 ft . from the river, and 6 ft . or 8 ft ahove it. As it is described as being
further north, it is prohahle that when the ditch pras filled up a pipe was laid to bring the water out at its original level. This ward contained the monnd known as the Castle Hill, and which seems to have heen removed early in the present century. It was girded at the hase by a poly. gonal curtain wall, outside of which was the
ditch. It is difficult clearly to understand how tho mound was occupied. Leland says "there was one great tower in the inner warde." Sir Henry Slingsby, in his diary, in 1615 , describea Hereford city as not much palike York, "for it hath a xound tower mounted upon a hill, bke to Clifford's Tower, and the mills near it, with some little works about, having the river Wye running close by; but the walls, tbough they he high, yet are not mounted npon a ramp, as York walls are." This is intelligible erough, the walls spoken of having heen at the hase of the hill; bat Leland speaks also of a donjon or keep, of what plan is uuknown; but upon its wall ten half-round towers, and within, what appears to have been a square tower of
considerable height, in the base of which was a dungeon. We niay safely conclude from Sir Hy. Slingshy's very clear account that the mound carried, like Cardiff and Kilpeck, a shell-keep; but this could scarcely have been furnished with ten half-round towers. These probably helonged to the enceinte wall below. The kecp was entered, it seems, from the south-east side by a flight of steep steps up the mound. In the mound was a well, lined with stone, as at York. The cestle ditches were wide, deep, and filled with water, not from the river, or but partially so, but from a brook, which seems to have fed the city ditch on this side, and on reaching the castle at the north-east angle to have divided, a part runuing direct along the east front of the lower
ward, to the river, and the other part supplying the north ditcher, and the ditch which divided the upper from the lower ward, and the ditch which passed round the east side of the ward, and divided it from the cathedral precinct. This latter ditch also received some little contrihution from St, Ethelred's Well, a spring on the north side of the upper ward, already mentioned. The castle mill stood at the junction of the castle ditech with the Wye. use of the mill, and to strengthen the defences, and it seems to bave flowed back npon the strengthening and compecting the city and the castle.
We have, then, to recapitulate, as the constitwent parts of Hereford Castle, an oblong space, with the river on one side, and high hanks and ditches on the other three. One end was cut off less circular, and within it proper ditch, more or a table summit, and upon it a shell keep, with some kind of central tower, prohahly an addition.
At the hase of the mound, within its ditch, was a second wall, many-sided in plan.
The lower ward no douht had its walls along the sumuit of the earthworks, and these probants and the depth of the ditch heyond of the was a gatehouse at the land entrance at the north-west angle, and a water-gate at the southwestern, where also was the passage between at the south-eastern angle, where is now a footat the
way.
The
way. There is a general resemblance, as regards the mound aud bank, botween theso arrange. ments and those at Wallingford, Wareham, and Tam worth, and with what is related of tbe Cast 1873.

## FLLTERED WATER

## FLOATING SWIMMING-BATHS.

We believe that the Legislature must soome or lator entertain the question of the establishment of large swimming-baths within easy reach of all townspeople,-that is to say, a large hath in each comparatively small district. The largeness is nocessary to give a sense of pleasnre and enjoyment to persons performing a mere requirenent of bealth. Merely to provide a bath of themselves is not sufficient, -at least, it is not sufficient to begin with. When the habit has heen acquired, and the personal benefit has been experionced, of frequent hathing, smaller haths may he sufficient. In the heginning, however,and wo have yet to make a heginning in this matter,-it is necessary to create a sense of with utility. The many baths that have heen already established have mostly proved failures, for two reasons, - the one beiug the smallness, and glominess, and general discomfort of the place, the cause of whicb is chielly to ho attri. buted to the higb price at which alone land can be purchased in large towns in situations suitahle for haths, and the cousequent failure to puy a reasonahle dividend on the large amount required for the construction of a proper bath; and the other, that they are situated in such ho woi-the-way places as to be unknown to many we believe that ultimately such althoug have indicated must he constructed in every large town, with the assistance or by the direct control of the Imperial Legislature, we are sensihle that they cannot be of immediate autarinaent; and in the mentimes of nayy be well to co
of rivers.
As almost every large town is situated on a river, it is to it that attention is naturally batbing-pted; but the very thing which makes also the cause of the pollution of the river, and, in fact, it wonld he hard to find in England a river running through or by a large town which is fit to bathe iu.
The following communication by Mr. Chas. Slagg, C.E., suggests a scheme for the coustruction of Hoating swimming-baths, to be placed on fivers the
hathe in.

It is proposed to place fluating baths in the current of a river, and by means of tide wheels to utilise the motive power of the current to pump water into the bath from a well into which bottom of the ressel.
It is proposed to make the length of the and the g-nath 120 ft ., and its width 30 ft .; long and ontside dimensions of the vessel, 200 ft . is to run $\mathrm{ft}^{2} \mathrm{ft}$. wide. A platform 12 ft . in width being divided into three portions. The middle portion, 3 ft . in width, is to he occupied by dressing-boxes. The inner portion, 5 ft . in width, is to project over the side of the bath, and form a promenade, heing 2 ft . or 3 ft . ahove portion of the platform, 4 ft . in width, is to form a gangway upon which persons will arrive, and from which they will depart; the entrances to way.

Near to the filter at each end of the vessel is placed a pair of tide wheels or current wheels, vessel, gearing, working a crank shaft and the pumps, I'wo pumps are to he placed in a well at each end of the vessel. The pumpsare to he of equal hath, while the other exhausts it from it. Adjoining the well is to he a space in the hottom of the ressel, from which the planking is omitted, and in its room is to he placed copper wire-graze grating, such as is commonly used in water is to be flush with the underside of the bottom planking, is to be supported hy bars of properly framed together. Upon the grating is fo he laid wool, cotton, flax, hemp, or othe sbrous material, or a mixture of two or more of coarse sand and, gravel. By lowering the water in the well hy pumping, a head is created out. side the vesed sufficient to cause the river-water
to flow inwards to the well through the filtering eamm.
The hotton of the vessel slopes downward from each end to the middle of its length, so that when the swimming-hath is filled with water there shall he a depth of from 4 to 5 ft . a each end, and from 8 ft . to 10 ft . in the middle Those who prefer a header may ch
Sentre portion of each side of the bath
Seeing that the power to he applied is costless nearly,-constant, nearly, -and in most situadons of sufficient force to elevate the water to a light from which it may descend in a shower through a perforated floor, it is proposed to pump the wator into an elevated tank of, say, allons, afford a shower-bath, donche, or other similar form of bath, on a large scale. A space at each end of the swimming-hath 6 ft , in width each 30 ft . in length, or whatever the width, and vessel may he, is to be allotted to thoe the may take their bath in this way, either solely or before plunging into the swimming-bath.

Thns the ontward aspect of the hath will be that of a long harge, with a row of dressing. bozes along each side and accoss each end; a tank overhead near each end, and near each tank a wheel, something like the paddle-wheel of a steamboat (and protected in the same manner), which will he slowly tnrned by the current and pump filtered water into the tank, from which it will descend either through the shower-hath or directly into the swimming-hath, at the discretion of the bath-atteudant.

A nearly constant current of fresb water will be onused by the action of one set of pumps witbdrawing the water and discharging it into the river, while the other set draw water into the hath thronglb the filters. For a short time before and after the tarn of the tide, the wheels will not work; but there will he water in the tanks, to the amount of from 5,000 to 10,000 gallons, always ready for use.
If the total elevation of the water, including both the supply and exluaust, he taken at 20 ft ., and the time in which the tank (containing 5,000 gallons) is to hefilled, at one hour, the power to be exerted by each pair of wheels will not be more than half an effective horse-power. Taking the velocities of the tides of the Thames, recorded hy the Ordnance Surrey Conmission, by Mr. Rennie, and by Mr. Hawhsley, and making the wheels light, it may be caid that the current is fully equal to this power, without here going into figures of detail.
In respect of the form of the filter here descrihed, it may he worthy of romark, that athongh on land upward filtration is ohjection.
 in this case it in current in the river has a wash grray any accumntion that of the water inwards tends to cause at the entrance.
It is proposed to establish, in connexion with shore, Bath, a service of hoats to and from each shore, one payment to include all services. (This hut another and perhaps better plan would he to make arrancements with the steam buat com panies.)
It is proposed that a launderer be employed o wash and dry the towels on board tbe vessel of the real is for the purchase of hoats, washing and drying for the purchase of hoats, washing
A ticket-box is to he established
pposite, or as no shore pposite, or as is included in the estimate of expenses.
In situations where there is no current of water, or on insufficient one, it is proposed to
place a small steam-engine on board the vessel, in substitntion steam-engine on board the vessel in substitution of the wheels.

Note.-The details have been worked out, and show the following results. The cost of each bath, completely furnished, is estimated at 3,000\%. The estimated net annual ivcome making the charges small, and after paying all expenses, is $278 l$., or fully 9 per cent, calculated or half the year, or twenty.six weeks. No accounate; but natil nine oclock the in this se e opene ellier freo a nominal cbarge Neither is any res aning the ro maining half-year; but possihly some nse migh he found for the bath daring that time also.

SCHOOLS FOR THE LONDON SCHOOL BOARD,
biundele-steeet, islingion.
Tre puhlic elementary school now in course of erection in Blinndell-street, Islington, is one of tbose for which the School Board for London invited designs in limited competition, The design which was enccessful was that submitted by Mr, T. Roger Smith, and it is being carried out, under his superintendence, sabstantially as snbmitted,
The chief difficnlty attending the planning of this school rose from the fact that only a comparatively moderate portion of the, site, and that of a somewhat inconvorient shape, was available for huilding. The design, bowever, supplies all the required accommodation, and, on the whole is believed to do so in as efficient a manner as if
there had been no irregularity of site. The adjoins that for the infants. They have a star design was arranged for 740 cbildren- 300 case without winders, and with a central solid infants on the ground floor, 220 girls on the first wall, and are accommodated in a echool-room floor, and 220 boys on the second. The building 22 ft , by 42 ft ., seated for eighty children, of will, howovor, seat eight more in each scbool, two grades, with a donble class-room 20 ft , by making the total accommodation 80 The infants' bchool-room is on the ground. loor, and the principal gallery is placed in解 carried higher than this floor. A large class. obtain side licht This has not been oss.rooms room ocoupies one end of this room, and a second in the sobool-room : the children thcre have the or double class-room, separated by a movable north light behind them. The girls have a partition, is placed at the other end. The en- cloak-room in the hasement, and their convetrance for the infants is direct from the front, niences are approached by a covered way. They and adjoins that for the girls. They share the sbare part of the playgronnd and the nse of giris' play-ground; tbeir conveniences are at tbe the playshed with tbe infants,
back of the main building; their cloak-room is der the large gallery.
Tbe girls' entranco is from the front, and

The entrance for tbe boys is entirely at the opposite end of the bnilding from that for girls opposite end of the bnilding from that for girls
and infants, and is at the rear. A separate

[^1]access to their playground has been preserved for them at the rear of the building staircase, school, and class rooms are similar in size and arrangement to those below them, whioh the girls occupy.
The original design provided for an additional story, over the boys ${ }^{2}$ school-room, to contain a drawing class.room and teachers' rooms. This will be dispensed with in carrying out the build,
ing. The hasement, besides some teachers' ing. 'The hasement, besides some teachers' rooms and boys' and girls' lavatories, will con-
tain a residence for tbe care-taker and the necessary furnace.room.
Tho entire building will be warmed by a hot. water apparatus in the basement, from which heated air will be conveyed to every school and class room by flues provided for the purpose. This apparatus has been designed and arranged
hy Mr. D. O. Boyd. hy Mr. D. O. Boyd.
for all the school and class rooms, tho windows will have the casements hinged at the bottom and opening inwards, such as are often known as "hospital windows."
The material is brick, with stono sparingly introduced, and the roofs are slated. The contract has been taken by Messrs. L. H. \& R. olerk of works is Mr. Joshua Lewis.

## the waste of coal.

On the lst inst., Sir W. G. Armstrong deliverod the presidential address to the North of England Institute of Mining and Mechanical Engmeers, It included many valuable ob.
servations, but we are forced to confine ourselves to those on one sabject. Sir Cilliame said, As I shall speak of coal in an econo. I cannot well asoid making some reference to its I cannot well avoid making some reference to its
present excessive cost, hecause coal, like every. presont excessive cost, hecanse coal, like every-
thing else, must be governed in the extent of its application hy its price in the markot. In addressing an Institution, so largely composed, as
this is, of colliery proprietors, it is not an agree. this is, of colliery proprietors, it is not an agree-
able task to dwell on the evil of dear coal able task to dwell on the evil of dear coal;
but our Institution is not a commercial one, and I must speak of this subject, not as affocting in. dividnal interests, but as hearing upon mechanical art and national prosperity. For many years past the consumption of coal
has beon increasing at the rate of about has beon increasing at the rate of about 4 per oont. per annnm, computed in the manner of
compound interest. We are all familiar with the cumulative effects of compound rates of increase ; and it is easy to see that if the consumption of coal continued to advance at this rate, we should speedily arrive at impossible quantities. Thus, in eighteen years our present enormous consumption would be doubled; in fifty-fix years it would be quadrupled; and in than at present. It is clear, therefore, that our consumption has been increasing at a rate which destined possibly last. If nothing else was was inevitably approaching to havo that effect; but a few years would probably have yet elapsed hefore the number of hands became inadeqnate to meet the required domand, had not the miners preoipitated the event hy restricting the The honrs
twenty-five years mining labour in this district, twenty-five years apo, were nine per day. At a subsequent date they were reduced to eight,
then to seven, and finally to gix then to seven, and finally to six. Hitherto the men have worked eleven days a fortnight, but it seems douhtfuI whether more than ten can now be worked, consistently with the very proper
limitations of the recent Coal Mines Act, in limitations of the recent Coal Mines Act, in
regard to the labour of the boys. The full regard to the labour of the boys. The full
hours per fortnight will therefore at the most be sixty-six, or thirty-three hours per week of labour at the face of the coal; but as it is only the steadiest men that work full time, the average time will, of course, be cousiderably below that limit. I am not aware to what extent reduction of time has been carcied in other parts of England, but we hear of the same oolicy of restriction, either of timo or output, or
of both, being put in practice in all the important coal districts. I do not suppose that the iverage ontpnt, per man, has fallon off propor. ionately to the reduction of hours. The men work hard, even harder than formerly, while at -eduction of working time oan have takeu place fithout so lessening the output, per head, as to
neutralise, in a great degree, the increase o production due to the numerical growth of the mining population.
sumption and restricted lions of increasing consumpint at hich the demand has have reaohed supply. As yet, the deficioner connottaken the for it has ouly very recently cannot he great, Consumption does not advan become apparent. wonsumption does not advance by jumps; and we may assume that if a progressive increase
of 4 or 5 per cent. per annum could have been maintained in the production of coal, a halance maintained in the production of coal, a halance would still have oxisted between supply and up with demand, it has not, so far as we can judge, actually recoded; and it would therefore appear that a small addition to the present supply would restore the equilibrium. But small as the doficiency mast be, it is sufficient to create a sonse of scaroity, and, as a consequence to send up prioes to a famine pitcl.
The situation is a grave one, and the public has not yet fully realised how very grave it is faking the present consumption at 110 millions of tons (exclusive of exportation), and estimating all, the annual loss to the community from the additional cost of fuel amounts to 44 millions sterling. Had a Goverament tax of 44 millions heen levied upon coal, in addition to existing tazation, the effect would have been regarded as dipious amount, hot only in regird to its pro. effect upon every kind of production. Yet, it is a fact, that we are now paying the equivalent of that the money does not pourable differencethat the money does not go into the coffers of whers or coal-miners is a question which Ineed not discuss; but I may observe, that the restrictive action of tho men has benefited their employers as well as themselves, and that the puhlic
are the only sufferers. Cosil been aware that limitation ofluers have long only effectual raode of raising price; bat they have nover been able, by their own actiou, to maintain a restrictod production. At last their workmen have done it for them, and we see the

Whether the trade of the country will bear up against the hoary hurden of dear coal, com. bined as it is with dearness of other products, arising from similar causes in other industries, is a question on which I shall not attempt to consider. It will be more to the purpose to under which the nation is now labon eving in regard to the price of coal. It is labonring in for telief either to coal-owners or coal appeal Self-interest is the ruling pinciple of trorkers. it is visionary to expect that men will sell either abour or the produce of labour for less than the ee, he will not exhibit his generous a man may an article below exhitit his generosity by selling an artacle below its value. Speaking, then, as no or the public, and not as a coal-owner, I say e must strive to economise the use of coal; and mechas president of an institution of mining and mechanical engineors, I say we must endoaour to make up for the deficiency of human abour by a more extended use of machine abour.
The waste of coal, both in domestic and manufacturing use, is a threadbare suhject ; but there never was a time when its cousideration was of so much importance as at present. The small deficiency of supply, which is now so violently stimulating the market, would be just as effectually expunged by economising consumption as by increasing production. If, on the one hand, the mining population could easily, by a fow hourg' addition to their weekly labour, restore the equilibrium between supply and demand, so, on the other hand, consumers, taken as a hody, could do the same thing, by discontinuing in a small degree those reckless habits of wasting coal to which they obstinately adhere.
The consumption of coal takes place undo three great divisions, each absorbing about one third of the whole prodnce: - 1 Ist. Domestic and 3rd. processes. In the first two manufacturing processes. In the first two divisions the waste great, but still conid the third it is not so processes, and especially in the smelting of iron economy of fuel has been so diligently pursued further saving I sher saving
I shall not dwell on tho waste of coal in
for engineers; but the circnmstances of the times are such as to forbid my passing it unnoticed. It is impossible to conceive any system of sinking a dwelling more wastefnl than that beneath the the fireplace into a wall directly ducts of chimney, which carries off the prothan the adransion. Nothing can he clearer advarcing the fireplace a littlo gred by merely and constructing it with proper heating surfaces, as in the "Gill stove" and in many other stoves acting on the same principle. There is no occa sion to shat ont the fire from view. Neither is there any difficulty about ventilation, since fresh ir can easily be introduced from the exterior by plates, delivering its supply against the heated the room. By this simp the air before it enters departure from this simple and unohjectionable departure from the conventional fireplace, the quantity of coal required to produce a given heating effeot might easily be redaced to oneoif, and still greater economy would be offected f the uso of hot-water apparatus, which, how. firs, has the objection of heing too costly in frst outlay to admit of pery general application For cooking purposes, also, the consumption of coal is in most houses equally extravagant, and may add, eqnally inexcusable, since the means of prevention are attainable by the adoption of known methods and appliances for concentrating the heat upon the work to bo done.

THE SLMPLICITY AND SAFETY OF SEIVER VENTLLATION.
In the course of a prper on this subject recently read, Dr. Alfred Carponter said tho principle to be avoided is stagnation; the principle to be inculcated is movement. Keep any quantity of sewage moving, and no evil will arise; keep the air contained in sewers in a similar stato of movement, and ro danger from with possible. Given a number of eylinders the increased area, hit decreasing capacity, the prohlem is how to olitain such a circulation possir in those cylinders as shall prevent the possibility of stagnation of any air contained in them. I contend that if the supericial area of the smaller ouds, if open to the air, be groater than the square of the cross sections of the sewer itself, and if no dead ends are allowed in soil-soil-pipe is extended upwards in a straight line above the watercloset, so as to provide the openings, there will be a constant cenrent of air from within the sewer throngh the honse-drains into the open air, which will prevent the possibility of stagnation, and cut short the evils which spring from the introduction of sewer pases into houses. It is true that occasionally there might he a reverser action in consequence of the disuse of, or the stoppace of a miven sower by foodine This wonld be occasional only, and wonld not ho attended with danger to the inmates of the houses or the sewer.
If sewage is running down a drain or sewer it waill be always fonnd that air is passing np. the pressar the air, which will bo suffie in density of movement. The saturation with moisture will also vary, being always greater in the sewer than in the external air; there will also be variations in temperature: if the air is cold out of doors there will he an escape of warm air. This is oonstantly seen in snowy weather and frosty the gratinge in melted space is observed around which cover in the streets, and on the iron doors which cover the man-holes; whilst if the air is warmer outgide, the difference in the quantity of ontained moisture koeps up the cirenlation in he same direction. The wave of sewage passing down a sewer displaces an equal wave of air, which rashes up to ocompy the space vacated by the sewage. The intermittent disoharge of hot water also assists in the same direotion, and it is not fourd that the temperature of town sewers ver falle below $43^{\circ}$ or $44^{\circ} \mathrm{F}$.
Thus, then, there is an alteration of density prodnced by the wave of sewage passing down a p by the differenco a circulation, which is kept lready mentionco in the physioa sif cientnumber of openings at the gmaller ends tho ouse-drains, so that every brench comm. directly with the open air, and no dead onds exist at all, we shall bring into play every one of the forces which arise from differences of density of temperature and moisture; whilat, if thero
should be new productions within the sewers themselves, another powerful agent comes into play, namely, the law by which gases diffuse hemselves into space. These altogether will effectually prevent that stagnation which gives rise to danger in sewers. The openings will act,
to some extent at least, in manner like to the stomata in the leaves of plants, and the pores in stomata in the leaves of plants, and the pores in the skin, hy promoting an interchange of mate. rial and keeping up circulation. Thus stagnation will be prevented, and withont stagnation there will he no procluction of those matters capalle of setting up disease in the human frame; or if those matters are produced in the first instance above ground, and are discharged into sewers, there will be not that concentration of matte which is necessary for evi to arise from it, and no reproduction of matter will he possihle. The constant current of air through the sewer will act upon such morbife matter, if it should foat render it innocuous, depriving it of its malig. nant power.
It is really curious aud trying to read in local journals of intelligent men recommending the erection of furnaces for the destruction of gases, and the expenditure of large sums of money for the purpose of dissipating norious fumes, when it is so mach more easy to prevent their produc. tion altogether, if the simple plan I advocate is put into general operation. Let it he general,
and the production and spread of typhoid from terer gases will altogether disappear from the list of causes of death in towns, with a general plan of sewerage.
There may be any number of water. closets on the same pipe, one ahove another, with hut one rentilator. It is not necessary for the extension to be carried npa long distance ahove the houses unless the houses are rery crowded, and the openings likely to be in close courts or alleys. It may terminate as soon as possihle, and if it is near to an outer wall (as it always ought to be), it may pierce the wall and he left so, heing cutt off and left flush with the outer surface of the wall, cemented into it, and covered over by a perforated iron grating. The tall erections and queer.looking things that one sees ahout in all directions when ventilation is practised, are un.
necessary. They are put np by persons who do necessary. They are put np by persons who do not understand the principle for which ventila. tion is carried out-namely, not for the purpose of carrying upstinks and dangerous miasms, bnt to provide a draught which
origin of danger alcogether.
oricrin of danger altogether. indicated be provided on a given sewer-namely, at least one for each soil-pipe, and one for each branch drain, which may be used for any other purpose (and which it is not possible to cut off, so that the commnnication is indirect only), no cril will he generated in the sewer, for no stag. nation will arise, no reprodaction will be possihle, and no concentration can take place. It nnfortanately happens that the principle is ignored, or the operation of it reduced to a minimam by putting a number of right angles on the ventilating pipe for the purpose of earrying it round spontings, string conrses, and the eaves of the house, or any other impediments which may happen to come in the way.
It may be said that the plan $I$ advocate speaks of ontlets only, but there must be inlets for the air which is to continually traverse the honsedrains. These inlets in the Croydon districts have been made in the public sewer by openings which ocenr every 100 yards. They are covered by gratiugs, and guarded by baskets containing charcoal, placed in a particnlar manner, so that the charcoal cannot get wet. In the majority of instarces these openings are inlets for air, and if they are examined in dry weather, the charcoal is seen to be covered with dust, proving that air bas descended into the sewer. In some the charcoal is always black, and from some of these I have known a foul suell proceed when the basket of charcoal has been temporarily removed. It is scen that the openings nearest to the outlet, that is, in the lowest part of the sewers, are inlets;
The same rule applies to the openings which exist in London streets; some of them give out sickening odours, which are deprived of their dangerous qualities by dilution with fresh air, a process by which their striking character is offen made more manifest, bnt their eni nature reduced. The tendency among local authorities plan is to admit moreair, and remore the deposit which gires rise to the smek.

ON CYLINDRICAL OR COLUMNAR FOUNDATIONS IN CONCRETE, BRICK. WORK, AND STONEWORK.
Thys was the subject of a paper hy Mr. John Milroy, C.E., read at the Institution of Civil Engineers, on January 28th. In this commanication a description was giveu of an attemp which had been made hy the anthor, acting partly in concert with Mr. J. W. Batler, to render concrete, hrick, and stone, more easily availabie for cylindrical foundations. After alluding to orick cylinders, which had been in use in India for for hoese and had more than onced that prohabl the ene works, it was remes of the Ciyde nay gation had heen the frrst to adopt them in con. nexion with a great and important undertaking. In 1869, the trastees requested Mr. J. F. Bateman and Mr. J. Deas to report on the best means for providing a large and progressive extension of quayage, suited to the present and fature re. quirements of the harhour of Qlasgow. With a view to ohtain a greater depth of water tha attention was dougside the existing quay, bath sequently to hrick cylinders. The result was that, in 1870, an arrangement was made with the author, in conjunction with the late Mr. Brassey, to construct in brick cylinders, to some extent as an experimental work, the Plantation Quay, an extension westward of the wharfs on the south side of the Clyde. After a brief introductory description of this work, the author confned his remarks to a novel manner of making the hrick cylinders, to the mode of sinking them, to the form of the shoe, and to the general arrange ments adopted in the execution of the work.
line Plantation Quay was founded on 10 grethe so as to form a length of 400 yards of quay The wells were 12 ft . in external diameter, and 2 ft .4 in . thick, thus having an internal diameter of 7 ft .4 in . Their shape was circular, escept at the poiuts of contact, where they were formed with tongue and groove, i.e. a square projection fitting into and sliding in a corresponding recess in the adjoining well. From the bottom of a trench which was cut down nearly to the level of low water, the cylinders were sunk about 36 ft , when the sinking was completed, and dredged to whenth of 20 ft . helow low water level, thus leaving a length of abont 14 ft . of cylinder beneath the dredred bed of the river. The cylinders were only carried up 2 ft . above low. water mark ; play of concrete was then lowered water mark; a plage coninder, to give it a proper hearing and to protect the rest of the filling from disturbing infuences, when the cylinders were refilled with the sand and other materials which had boen excouvated. On this fondation, suit. nbly prepared, the rest of the quay was built as ably prepared, the rest ofl.
Instead of constructing the cylinders brick hy brick, in sitx, as was the custom in India, the author resolved, with a view to the expeditious execntion of the work, to pursue the novel conrse of making them in ringa, in frames placed on a platform near the line of the quay, and then to put them together, in situ, after they had been allowed to consolidate. Close to the line of the cylinders, over which was erected a high gauntry, with a steam traveller, a wooden platform was laid with a low gauntry, carrying a steam traveller. On this platform the rings were moulded four sections bolted together. Annular layers of wood were fised to the platform, in such a way that their outer edges might keep the frames in place, while their inner edges served as guides in shaping the eye of tbe rings. When a ring cement, and had partially set, the frame was removed, and the ring, which weighed between moved, and the ring, whilowed to stand a few mine and ten tons, was angly. When the ring had become thoronghly indurated, it could he re. moved by means of the travellers and a line of rails, either to he fixed in place or to be stored up for future nse.
In practical construction, concrete differca from brick cylinders only in this, that they mnst he made in frames or moulds, and that an in. ternal as well as an exterual frame must be used. In choosing between them, the question was chielly one of expense. When their relative oost was equal, concrete, was perhaps to he pre. ferred, as the frame was so simple that it could filling the frame was so simple that
be carried on, under proper surveillauce, with
unskilled lahonr. In this connexion, men tion might be made of the application by Mr. J. W. Batler of Mr. Ransome's artificial stone "apoenite," on the same system as that employed hy the author. Having conceived the dea that it was admirably adapted for the con at the experimental cylinders with complete success. They were 8 ft . in diameter, and 9 in. thick. The保 which they were composed.

## THE WALLS AND FLOORS OF

 HOSPITALS.It would appear from Dr. Langstaff's address to the Southampton Medical Society,* that many existing hospitals are too large to affor undergo surgical operations. It is impossible to ventilate large wards efficiently while the patients are there, for the foul air arising from their hodies and their wounds haugs ahout the hedding, furniture, and walls, and cannot he got rid of without first removing the patients. The remedy for this, radically, is to huild a large numher of small separate rooms, instead of the few large ones now generally existing; but in lrying to make the best of what we have, Dr Langetair says tho has founc-as well as othe physicians whom he mentions,- that the Roors and walls of a hospital, after continued use, absor matter which leads to the outhreak and spread of disease; and that it behoves, thererore, apply to them a noa-absorvent material, and one that can he readily cleaned. Parian cement has of late years been much used for the walls of hospitals and large huildings; but aithough this answers very well for small enraces, yet for large surfaces, its want of elasticity causes large numhers of minute cracks, which afford lodgement for the noxious material foating in the air. When these Parian wallsare cleancd, the surface matter is washed into the cracks, ad hus forms an organic nidns for the propagation of a poison. Thebest method, he believes, of rendering hospital walls and ceilinfs non-absorbent is to paimt them on a smooth surface win several coats of paint, and finally to varnish thern, or, in the caso of Parian walls cracked as described, a solution of paraffine, either in turpentine or paraffine oil, thoroughly applied to the wails with a hrush, will entirely fill up the cracks. Hard paratine is a white, solid, volatile substance, very like white wax, and its awnities axe so feeher that it has derived its name from this peculiarity. It is applied to floors as well as walls. Floors in this country, says tho author, are as a rule very hadly laid, and when they are washed and interstices and the matter is drivening is of all things an mas cleanse and the more it can be done away with the better.

Dr. Langstaff has tried, and fonnd it to answer very well, the following process for rendering paraf non-absorkent:-A quantity of hara vessel and hrst meled in an irnod over a portion of the wood, and then is ironed into it with a hox-iron, heated from the interior hy charcoal. The parafine in this way is driven out into the wood to a depth of something like $\frac{1}{4}$ in., and a surface of parafine is thas procured. Tho superflmous paraffine is seraped off, and the floor is brnshed with a weighted bard brush, and the oftener it is hrashed the better tho surface obtained. The floor thus prepared is not sticky, requires no re-application of the material, ana scarcely any fluids spilled on the wippery, when list slippers are used.
"When floors are laid, especial care should be taken that the planks (hoards?) of which they are composed he jammed up closely together, and they never should be permanently nailed down till they bave been placed a year or more. The planks should be oak, the smaller, doctor's oninion on these thinge, even though a practical builder may modify the details.

Digest of Sanitary Law.-In reply to Sir tansfeld has stated, in the Commons, that the digest is already in type, and
the question of printing is simply one of time. question of prinking is simply ond of time.
${ }^{\text {* }}$ H. Hognital Hypiene, ${ }^{\text {by }}$ Cbartes Langataff, M.D.

## SCHOOL BOARDS.

Thondon.-The Rev. B. Waugh nsked whether arrangements had been made to have a large hall in any of the schools of the Greenwioh district. Mr. C. Recd, M.P., said the Works No arrangement of the kind had yet been mado. Mr. Tabrum said the subject was before the working drawings committee, and it was considered important that there should be in each division at least one school where there shonld be a hall or room large enongh to hold a meetiug for the examination of scholars, or for other collective gatherings.
Reading.-11r. Joseph Morris read a report explanatory of sereral plans for schools which he had sent in, and
adopted by the Board.
Appleton Tiske.-A new Board school ha been opened here. The building is of briok, without any attcinpt at ornamentation. The principal room is 39 ft . by 20 ft .; the class-collar-beams, 15 ft . from the ceiliug across thic
coor. The desks collar-beams, 15 ft . from the floor. The desks
and seats aro Messrs. Sidebotham \& Co.'s patent and seats aro Messrs. Sidebotham \& Co.'s patent
"national desks," which form either a table, a national desks, which form either a table, a desk is turned down for the back to rest agminst. Tho contractor for the building was Mr. Thos. Poacock, of Northallerton, who snb. let the joinors', ironmongers', plambers', painters', and
glaziers' Wiske. The whoie of the work has been fuisherl and the total cost, including the sito, buildings dosks, dc., has been rather under th. per scholar which is one of tho cheapest Board sehools ye. built.

## Parochial relilef.

Last Monday ereuing, Mr. E. J. Castle rend a paper at the Rooms of the Institution of SurParochial Relief.
The present systcm of parochial relief, 2. But though this statuto is the Eliz., it is not the origin of the system. It is true, a popular idea exists that up to the dissocharitable institutions of the country were sulficient to support the poor, and that the Act of Elizabeth was passed in ordcr to meet the wants of tho new order of thingz. This, however, is not the case. The Act of Tilizabeth lation-and the result of a system that sprang lation-and the result of a systom that sprang
into existence in what may, as far as law is concerned, he cailed pre-historic times, and which cerncd, he called pre-historic times, and which
had been gradually developed pis to thic last Parliament of Elizabeth, when, from causes that wero pointed out, further legislation ceased, nya we have had to bo satisfied to hase our system of parochial relief apon an Act which all must admit to be nnequal in its opera-
tion and full of anomalies. In the tion and full of anomalies. In the last
session of Parliament, however, there were session of Parliament, however, there were
symptoms that the governiag powers were awaking from their lethargy, and a draft of a Bill was brought before this Institution which offered some hopes of inprovemont; these
hopes, however, for a time, fell to the and it is impossible to say whether they will ever bo realised. In the meanwhile, it may not bo out of placo if I bring before this hody the gradual process which produced the Act of Eliza. beth. It is trie that the information is, at many of only to be collected from old Acts, expunged from our statute.hook. Yet, I think, from their perusal, I shall be able to throw some curions light apou the domestic history of Eng land, especiall! with regard to the predecessors of tho modern pauper.
described rans steps in the process were then coucluded thns:- The Act of Elizabeth reado personal as well as to real proporty, hut owing, perhaps, to the difficulty of assessing persona of throwing all hurdens upon land, principle sprang up in many paishes of not assessing this property, and afterwards by an annual statute personal proporty is declured not rateable ; other wiso the Act of Elizabeth remains untouched in
principle to the prescnt timo. To sum up the principle to the prescnt timo. To sum up the
history of these statutes, we fiod that, from history of these statutes, we fiad that, from
the earliest period, the right of the poor to the earliest period, the right of the poor to
parochial relief has always heen admitted ; but that the Legistatnre rested content with
declaring this to be the law, directing its
earlier efforts-not to the support of poverty but to its suppression, - going so far a branding, slavery, aud even death. That gradually, however, the real difficulty became apparent, and it was discovered to bo quite as important to find food and worls for the poor in their parish, as it was considered to be to fore the destitute by all means to return there That the legislatare, having this former object in riew for some time attemp ted to carry it out by appeal. ing to the charity of the parishioners, by insti tuting collectors for tho poor, and arming them with sach power as religious and moral infnence cound give; but these in their turn heing found to make an order upon the person contumaciously refusing to coutribute, and then the next step ras taken, and a general assessment to the Elizabeth. All poor vas institnted by the'Act of tho very session of Parliament at which it was passed, the first growl of the coming storm was lieard, -the first spark of that spirit which was
wase afterwards to ligltt up a civil war flashed forth Elizabeth as Hall struggle, and when the Cons, retired from the interferenco in a me commons resented her contost James money bill, she declined the through bis reign the best way ho could, with what money he could get; being the Enolish Solomon, he was prepared to, and alsways did, argue the point with such of his Commoncrs as wonld listen to him ; but his pugnacity went no further. Charles succeeded, and we know with what result. Of course, while Joln Hampulen was stirring up all England on the question whether he was liable to contribute to the Rogal Exchequer 203. for slip-money, there was very little attention paid to tho wants of the pauper, whether a sturdy valiant beggar or one really destitutc. All further legislation was thas arrested. Aud such as it was it romained, and on the Act our system of parochial relief has been bold enourh to iuterfor no Government has Tn the discuas inchor wir
that the statute of the f3rd Elizabeth Ryo said the best Acts of Parligment the thas on in its wisdom ever passed, considering the leveth of time which has passed, and that no material nlteration has since been made in it. Mr. ChatReid Clarke thourht that the poration of the vido-law was most inefficient, and failed to pro cases adequate relief in the greater number of cases with which it attempted to deal. A
demonstrated in the present day, it was inefficient orelieve tho necessitous poor, and was doin an immense deal of mischief in its dealing witl half-paaperism. Wases of chronic vagraney and half-pasperism. We have utterly failed, he said, to deal with this subject. The chairman (Mr.
Clifton) was of opinion that the labour test Clifton) was of opinion that the labour test, VIII., was a very advisable the reign of Henry to dealing with the poor, he said that in Hollar the law was very strict as to vagrants. If a each lound hegrging, the first thing to do is to caught becrgome nseful trade. If he is again hy the effectual mode in which beggars are dealt with, very few of them are seen by ravellers in that country.

## ORGANS IN CHURCHẸS AND

 C.ATHEDRALS.Str,- -In the course of a paper read the other Iay before tho Institute of Architects, part of Builder, some rema the honour to print in the to the some remarks were made in referenco to the unsatisfactory way in which the organ is ompard o musical uffect, by heing penned up in a small chamber in one corner of the building. It is stil moro to bo regretted that this system of hiding the organ or the way, as if it were somethiag to be ashamed of, is being extended to onr cathedrals, and that upon very high architectural authority.
In a letter to the Builder some tine since (Jnly 2, 18\%0), I called attention to the plan proposed by a distinguished architect, in restoring and rearranging one of our existing cathedrals, cutting up the organ into pieces and placing it pand down in the triforium and in the choir aisles. In the very interesting report upon the intended Edinburgh Cathedral hy the same archi cet, printed in your number, the sam system is definitely proposed for the treatment
of the organ in this nev structure, in the follow ing paragraph:-
"I have provided for tho organ in this manner: the

 north transcot, imamediacely behind ${ }^{\text {entern }}$ plaos where the
sound would spread itself freely thro sound woud spread itself freely throagh both ohoir, tran-
septs, crossing, and nsve. The commanication wind septs, crossing, and nsve. The communication would be
by trackers passing heneath the floor of the aisle. There is, however, the possible alter uative of placing the organist and choir organ, se., as already mentioned, hut placing
the beary parts in the triforium of the choir and tran-
bept."

Now, six, every organ-builder and every organ. player knows that such an arrangement as is proposed here cannot be satisfactory for an organ, so far as musical effect is concerned. The second alternative, of placing parts of the instrue ment in the triforium of the choir and transept, would allow the best chance for individual pipes or stops to make themselves well heard, though they would be somewhat too high up; but such an arrangement would necessarily entirely destroy the homogeneous effect of the instrin ment, by outting it up into parts and making it peak in different directions. But the other position, in the transept aisle, is quite as unesirable, 2.8 indeed seems almost self-evident rom a glance at the plan of the cathedral; for has certaiuly au odd look to see something on he plan labelled "grand organ," and hidden away in the remotest corner of the huilding, which is, aisles are the case. The arches of the transept aisles are about 27 ft . high to the apex; and as doubt, he placed iu sucb a building would, no hozed orrans as the smaller orgrans are in the smaller " organ-chatmbers" of our modern parish churches. It is totally out of the question to suppose that anything wortlo calling a "grand organ" conld realise a "grand" effect when placed in such a position. If the rgan it such a case were to be in the transept perly, be in the enable it to speak out properly, be in the principal aisle with plenty of space above and around $\mathrm{it}_{\mathrm{t}}$ and this would not be ail a bad position for accompanying the sinc if of a congregation sented in the nave. Or il inight bo divided into a morth and south orgn, be placed in each transept, the instruments to whise fogether or separately at discretion, the might be accomplished easily hy applying electrio movement instead of the ordinar tracker" system. The old position over the choir screen is, for mnsical effect, about the mos satisfactory which the instrument could have, athis increased size of modern organs is, deliet, a difliculty in regard to this situation. I blace the howerer, it would be quite possible to the floor and withinai) pipes lengthways under and this to reduce the portion pochor screen, the screen to more the portion placed aloft on out materinlly semeatinate proportions, with instrument But pros the position for but probably the hest possible effect and the grand organ, both for musical effect-and assisting conregational singing, would be the west end of he cathedral, where the instrument could ho the wed two blocks or towers on each side of the wind position in the lend itself very well to architectural effect the treatment of the organ-case, which wonld of interfere with the view of any important part of the building; the instrument would be so placed that the sound could freely expand in tho direction in which it is wanted, and would be confmed by no intervening walls or piers; and ${ }^{\text {a }}$ it would be possible to support the voices of the Congregation, in those parts of the service in which they joined, without drownine those of the choir, Who wonld be accompanied by the small choir organ placed close to them, as aready singgested in the architect's report There would probably be no ohstacle to pacin the two instruments, by electric action, under the control of the same player, who would ther enjoy an opportunity for regnlating and hen bining the musical service of choir and gation, such as no cathedral organist has hitherte possessed. If such a scheme were found, howorer, to entail more expense than might be judged desirable, at least the organ should he placed in an open and (as far as possible) in a the ral position, and not in an aisle or corner of the huilding. The feeling of modern church architects seems to be, to get rid of the organ as architectural effect impediment to the reasonnhle organs are built now than were formerly placed
in English cathedrals, and to provido for them acoordingly, and make them a part of the archi tectural design, rather than to ovade the difficnlty by plaoing au organ where it never can have its proper effoct.
Of course, the present remarks are made mercly from a musioal point of view, and are not intended to be taken as in any sense a criticism of Sir G. Scott's plan, architccturally rogarded. Brit the pointcd refercnce to the proposed posi tion for the organ in his report, naturally suggests a word on the suhject, in the intorest of those who liave most to do with organs practically, especially as organists and organ builders probably do not in general read architectura papcrs much, and are commonly not amare till it is too late that the ohances of the instru ment heing well placed have been ascrificed by the nrchitect, as in nineteen cases out of twenty they are. The case of the proposcd Edinburgh Cathedral only differs from tha of most other modern churches in that th buildivg is a larger and moro important one, an the organ to be erected in it will probably be a large and valuable one; if so, and if it is placed in tho position at present proposed, there can be no doubt that half its value and half its effect will be thrown away. In placing larger organs in existing cathedrals, such a disadvantage of position may in some cases be unavoidable ; but surely the bnilding of a new cathedral is an opportunity for securing something moro satisfactory than this kind of make-slift arrangemen
II. H. Sraridir.

## the trades movement

Builders' Labourers at Lambeth Baths. - A meeting of labourers has been held in the Lambeth Baths, New Cut, under the auspices of the Ceneral Labourers' Amalgamated Cnion. There was a large attendance. The chair was tainported by the Rev. G. M. Murphy and others. supported by the Rev. G. M. Murplyy and others. to whe they had done. He objected to strikos, but he know that sometimes they were neces sary. He urged them to be careful beforc sary. He urged them to be careful belorc resorting to extreme measures. By uniting they should he careful how they ased their power. By niting torether they might ohtain power. By nniting together they might ontain own clubs, their own libraries, and obtain evers own clubs, their own libraries, and instruction. opportunity of improvement and instruction. mously :-
"That this meeting, composed of labourers in tho building trades, , , aring seat a reepecect full memorial to thio mould bring their wages from wid., and in some instances, di. to tid. per hour, and having jiven six monthr notice of the same, which expires in March next, instructs the steps as they think necesanry to insirc this legitimate
cism of the workmen, and especially requests that ald clam of the workmen, and especisly requests that all
coacilintory means shond be adopted before any extremo concilintory means should
measures are yesorted to.'
Another resolution, in favonr of the release of the imprisoned gas-stokers, was also passed,
The Leamingtor Builders' Association have met to consider a demand made by the operahours and increased wages after the 25th March twe unanimously resolvcd that the presen
 ante of the buildug trade, conpled withtere the assibility of the terms of the men being con ossibiny oith respect to hours or wages de secretary was directed to communicate the ecision of the mastors to tha trade conncil re presenting the operations in every branch of the presen
Operative Painters' Urion, Birkenhead.-The biennial conference of this union has heen held the Crown Hotel, Consvay-street, Birken head; 3r. Hewitt in the chair. The report of Mr Sharples the reneral secretary which was read, stated that the naion was fiuncially in a much better condition than on any previous meeting. During the past year sixteen new societies had been formed in connexion with the eneral union, soveral of them being in the ieighbourhood of Birmingham and the Potteries Ir Sharples recommended the members to pive heir attention to the provisions of the Trede Union Bill, and make every endeavour to secur its repeal.

Forknen's Demands.- A number of hammer drivers in tho employment of Messrs. John Sheffield, bavo been dismissed from their work
for demanding to be paid full seale of wage Then the hammors were idlo from accident or other canse. It is sapposed that the firm will places, though the hammer-divers are entreated by the mon who are out to kecp away from the tomn.

SANITARY AND SOCIAL MAXEMS More hints on health we here epitomise, For youth and are, for wise, and otherwise

Deatroy the canse, you care the exil. A house withont a drain
Ts like to be a house of pain.
Neglect your health and you neglect your busincess.
fi the room be damp, light a fire;
If always damp, pray retire.
Keep no sccret to the iojury of your health. Wearing your broad-cloth Will prevent the moth.
Look up tho past character of your liome, as you would that of your new sorvant.

Let tho pump run dry
Where a cesspool's nigh
There is only one natural death, all others are innatural.

As tho crovy flies
Should the man rise,
Moving straight to
The goal in view.
Tho way of right,
Captured locta-pickers somotimes plead guilty rain-pickers nerer.

The poor if healthy have real wealth.

STATE OF THE CAMDEN.ROAD.
Sir,-Would you pormit rue, in a few words to state a grievance in yowr columns, as this may bo the surest means to its remedy f hiohway by oad, N.W., in which I reside, is New Markct ar distribnted It is also a highway for human beings, and was or their convenienco first designed and carried out. The mid-portion of the road has for some time been given over to omnibuses and tram cars. Tho cattle, therefore, goaded on by the drovers, rush helter-skelter through any vacan channels left open by the dominant public conreyances, and, without respect to passengers or pavement, tear along, to the terror and confusion of wonsen and children, who fly for refuge into the gardens, and close the gatcs of the villas where these are fortunately open. This you will, perhaps, say, sir, is very fussy and silly of ns That we ouglit to have more presence of mind, and open our umbrellas or parasols, as it is sonewhere related a lady once did, in the face of the beast. But we have not the courage o that lady, in this district at least; and I have of ten seen the strongest sex trying to look cool and keep an even stato when a herd of cattle on the stampede has been behiod them-the drover swearing, the cattle lowing, and the dogs barking -and even they have sometimes to dodge ar infuriated animnl, or take sheltor. But I find am going off, like all my sex, into the minutely
descriptivo; whereas I only took up my pen to sugrest, that the authorities should fence the avement with iron posts and ralls along the An Uxprotected Female.

## SAXON CHERCH AT BRADFORD-ON-

 AVON.Sir, -As it was by you (Aug. 22, 1857) that first decided opinion was given as to this ncient church heing clearly a pre.Norman tructure, you will, I hope, give me the oppor unity of drawing attention to an advertisement in your columns respecting our efforts to recover and ultimately restore it
We have waited for many jears in the hope f preserviag this precious relic of former days. Matters were complicated by the fact of the chancel an
An opportunity offering a few months ago of purchasing the chancel, I at once embraced it. Our Wiltshire friends have since supplied the fuuds.
We have now a chance of obtaining the nave. Bat, in addition to present snbscriptions, we want at lerst sool. Then, we hope, will follow the restoration, which wil cos that wo want some 800t, in all.
Two of our greatest living authorities have, after careful examination, pronounced it to be Feninte,-" tho only one perfeet surviving Old Ernclish church in the land, and possibly in Europe.

Iu the name of the trustees, I venture to ask earnestly for help in this our cffort permanently to preserve so invaluable a memorial of the past
W. II. Jones (Treasurer)

Prebendary of Sarum, Vicar of Bradfordon+A von.

HOW TO PREYENT DAMP FROM ENTERINC INTO STONE.
Sir,-Permit me, through your valuable jonrnal, to give to the public a piece of information which they have long been inquiring after. Many have asked the question, liow oan we prevent damp from entering into stonework ? and some havo asked if it is possible to prevent vegetable substances from growing upon stone. The following ingrodients melted and mixed together and applied whilo in a hot state to the surface of the stone will prevent all damp from entering into it, and also those vegetable substancos from growing upon it: $-1 \frac{1}{2} \mathrm{lb}$. rosin, 1 lb . Russian growing upon it:-1 ${ }_{\text {tallow, }}^{1}$ quart linseed oil. This simple remedy has been proved upon a piece of very porous stone made into the form of a basin, and two coats of this liquid being applied, caused it to hold water as well as any earthenware vessel.

Vielear Cross.

## RE BUILDIKG ACT

Sir,-Dr. Little, in his paper "On the Sanitary Defects of the Building Aots," seemed desirous hat the parish sul'veyors should admimister, and the local boards control, the Act.
I have no hesitation in saying that if this wero carried out no greatar mistako could be made, and no better arrangement for destroying the surveyor's independence conld well be devised, nasmuch as the members of the local boards ar mostly owuers of small house property, and are very testy if their rights, as they call thom, are oterfered with.
That professional appointments should be made by an independent body (now the case with District Survoyors by the Metropolitan Board) is telt very strongly throughout the country, and cormed one of the requests, a few days since, of he deputation that waited apon Mr. Stansfeld in reference to the management of highways and other matters
I have said that professional appointments hy ocal boards are bad, and will give one of many illustrations of the reasons why I think so. Soon after I was appointed to a district I had occasion o serve a formal notice for irregularity on a member of the local Board. A day or two after met the individual in question, when the follow ing dialogue took place:-
M. L. B.- Yon aro onr new district survejor D. S.- I am.
M. L. B.-I have received a notioe from you to alter the footings of my buildings.
D. S.- Tees.
M. L. B.-Do you know, sir, that I am member of the hoard of works?
D. S. - No, I hear it now for the first time ; but as I find that to he the caso you are in the position of one who should teach tho public how to ohsorre the law, and not slow thom how to
break it, ly using your oflicial position as a broak it, hy using your officinl position as a
Bhield. I havo to inform you that unless you Bhield. I havo to inform you that unless you
corrcet the mistake forthwith, I shall proceed by correct the mistake forthwith,
summons in forty-oight hours.

Tho effect was marvellous, the work was correctly done, and ever siaco when wo meet ho very properly "doffs his castor." Now, what
woutd liave been my position had he been one of my masters? In fine, I wonld say a puhlic officor, whether he be a district medical officer or district survegor, cannot aroid treading on tho tocs of some one in his district, if he does his duty; and if these somehodies have the power they will not fail to let him know it, and if his incomo is an objeot interests will clash : there. fore I have come to the conclusion that such authority.

Experiemtia docer.

Wirfin the last few montha the convict prison on Brixton,hill has been undorgoing very exten sive altorations and enlargement, the interior having heen almost entizely reoonstrnoted. The ld troadmins, to which in past years prisoners rero sent for hard labour, have heen altogether removo, ana in ther place a large number of workshps a mpted to aluast eyery description of handicraft and trade, have beon erected, and in fatare convicts sentenced to penal servitude, nd derent periods of imprisonment, will have own trades which they may have rospectively followed. A considerable number of experienced warders from other prisons have recently heen drafted to the Brixton establish. ment, and are now engaged in superiutonding masonty ng the prisoners various trades in making, tiloperg and oth, smithrs wof ment, the result heing that a large amount of work is nor daily turned ont, and the lobour of the prisoners realises a considarahio. roter Amongst other articles pmoduced, the boota tho motropolitan police-force are noty mar tnred at the prison, Insuhordinate and obstineto prisonors are sent to Chathsm Dockyort Tho alterations whioh to have been carried out hy the made in the huilding superintendence of the prison authorities.

PICTURES FOR THE LONDON INTERNATIONAL EXHIBITION, 1873. A berting of nohlemen and gentlemen laas heen held at Marlborough Honso, presided over hy the Princo of Wales. The ohject of the meeting was to oreate a permanent organisation for promoting the exhihition of the best modern British pictures upon a system somewhat similar to that successfully pursned for more than half a century hy the British Institution. General Scott read a memorandum. It is proposed in the International Exhibitions to collect only the works of cottemporary painters in oil and water colours. This is a field of action which is not covered by any existing institution
General Scott exploined that the Exhibition of 1873 would consist of:-(A) Paintings in oil and water-colours which have been executed since 1863, aud have heen exhibited at the Royal Academy, the Water-Colour Society, and similar estahlishod bocieties, contrihuted direct by the artists or by proprietors. (B) New works submitted for the first time for exhibition. (C) A representation of the works of John Phillip, R.A., who died in 1867, and of Thomas Creswick, R.A., who died in 1869 (for this a special part of the Eslihition Gallerios will ho assigned). (D) A collection of paintings in water-colorrs by artists who havo died sinco 1863 (for this division a special part of the Exhihition will be assigned if found to be desirable).
The Marquis of Westminster expressed his willingness to act ou the committee, and to lend pictures; and several gentilemen spoko in the samo senso. A general feeling was exprossed that the proposed limitation of ten years was too short, and that it ought to be extendel to at least twenty-fire.
"ENGLISH ARTIZANS FOR ATHENS."
Is consequence of our paragraph on this subject (p. 84, ante), we have received oight letters from artizans expressing desire to go to Athens, and asking for introductions to Mr Watson is the representatire of this country is Athens, and his report is an official one. We cannot attempt to co any farther into details. We simply stated the reneral opinion at which Wo simply stated the general opinion at which he has arrived, and persons disposed to go wonk have act on their own responsihility.
Our Foreign Office would probably give some additional information if appliod to.

## THE COAL QUESTION.

Good will no doubt come out of tho evil of the coal famine. An impetus has been given to coal-cutting by machinery, for one thing. The proprietors of Hetton Colliery, after having tried various coal-cntting machines, have adopted the patent of Mesers. Baird, of Cartsherrio Ironactnated by sure of 5.5 lh . to the square inch. For something like a year one, and the only une of these machines yet in operation, has been at work in Cartsherrie Colliery, where it has been seeu by many scientific and practical men, inoluding not a few members of the Iron and Steel Institute of Groat Britain. The machine can cut 350 ft . of coal per night of eight honrs, thus yielding from 70 to 75 tons of coal, or a production equal to that of furty men. Only three, or at mos four men aro required to look after it. The compressed air is bronght in cast iron pipes to the machine, which is upwards of 300 fathoms from the pit hottom. The revolution of an end. less chain gires motion to tho collocutters, nine in number, aud an ingevious arrangement enahle the machine to propel itself elone the face of the seam. The proprictors of the Hetton Collier are the first, after the Gartsherrie firm, to resol on the adoption of these machines. It is esti mated that the total nnmher of people employed in and ahout the coal-mines of this country is pwards of 360,000 ; and hy tho universal adop. tion of the Cartsherrie machine it is estimate that the odd 60.000 would ho almost sufficient to raise the $120,000,000$ tons of coals which are now annually produced in Creat Britain. The use of compressed air also gives improved ventilation in the mine, and the use of the machines rednces the waste from 12 to 4 per cent.
Another machine, which is likely to he hronght immediately into prominent use, is Clayton \&

Co.'s patent for the condensation of peat turf into fuel-hricks, almost as dense, it is said, as coal. It is proposed to utilise the great mosses near Dumfries, and so convert them into rich arable land, while reaping a valuahle crop of fuel as the first.fruits. Even were roal as cheap as ever it was, it is said that this will he a highly profitable process. The total cost of production is stated at 5 s . a ton.

## ARCEITECTS' LIARILITIES.

In reference to the letter of "M. H.," on this suhject, I think there need he no hesitation as to whom the liahility rests upon. If the plumher has not complied with the coritract entered into hy him, he can be prosecuted for fraud. If the architect prepared a proper specification, and gave a reasonahle amount of superintendence, he has done his daty; he is ouly remunerated hy a small commission, -the tradesman receives a profit, and therehy hecomes a responsible aim at ohtaining cighteenpence for a shilling aim at ohtainins eighteenpenco for a shinling, and let their work get inco the hands of nnscruthe architoct spent the whole of his time upon the worls. explanation in the scale of charges issued hy the Institute, as no mention is madc of tho amount of atteute, as no mention is mo of tho amourt 5 per cent. commission, although charges for extra attendance are named. The only remedy against had work is to employ tradesmen of known character and ability, and allow them a fair remnneration. It would ho impossihle for an architect to be certain of the quality of many of the materials used in the building without applying chemical and other tests, which would applying chemical and otier tests, whelexpons, iuvolve such an amount of hoour and expense,
I have myself goue very deeply iuto theso matters, and the more I do the more is ex. matters, and the more 1 do the more is ex. pectored iotbing hands with no experience nd cosed joblio han naile's fored (withent to tha paru nilder s foreman (inde and atua pourse) In works of mannunde, and adoter of ce, when opportunity oficred, 1 have tested a variety of whero I and haviug prelly well ascertained whing I can deperain the theng the hing, Irequently give the names of the manuhaturers form whan 1 deeire the arthe to be
 cannot be properly enforced. Thero is no material more adnaterated than paint, yet how is an architect in the ordinary course of his duty, to nscertain that hequentiy the workman himself does not know; the appear. ance of the
hat proves it.
I have tested
路 onndation of most paints), and the quality called "Best" in the trade I have found to contain 30 per cent. of adutteration; the same an architect can he saddled with responsihility it must first be shown that he has not given pro per must first be shown that he has not given pro per directions, or a reasonablo ano borne in mind that there are plenty of conbractors who would rob their emplosers if evers vorkuan had a policeman at his elbow. Builders as a class, have degenerated, and tho canse is attributable to the emplorers alone, who have taught them dishonesty in inciting them to tako work at less than cost price

THE NEW NORTH BRITISH RAILWAY SLEEPING-CAR.
The new sleeping-carriage, specially con tructed for the North British Railway Compan by the Ashhury Railway Caurrage Company of system ter, has heen tried on the Nornth The carriarge was 1 tached tow and erpess train leavin Glasgow at 1 ame and reaching Edinhurgh a $2 \cdot 25$. The carriage is 30 ft . long and 7 ft .6 in. wide, ontside measurement, and 6 ft .10 in . from the nuder side of roof to the floor in the centre inside. The hody of the carriage is divided into one second.class compartment at one end, and a luggage compartment at the other end; the centre portion heing fitted np as two first.class saloon compartments, with communicating lobhy hetween them, on one side of which lohby lavatory, and at the other side a watercloset are
provided, a water tank on the roof giving supply for both. The interiors of the first.class com. partmeuts are panelied on the sides and roof with silver walnat wood, with mouldings of ehony and gold. Tho seats and hacks are trimmed with crimson velvet, on a hasis of spring maturess, with sofa springs and horse-hair stufting. The seats and backs, three in each compartnient, are hy a simple arrangement made so that the seat will fold up, when the hack, hy a slight pull, comes forward and fals dowa, forming a com. fortable hed 6 ft .3 in . long, with pillow or cushion. This, when not required, by a very slight lift, is replaced in its original positiou, and the seat again resumes its usual form, as in a first.class carriage. The whole of tho furniture and mountings in the first-class compartment, outside and inside, aro silver-plated. The oarrige can bo ventilated as required, at the and is carpeted with pile carpet on a layer of kamptulicon.

## DIOCESAN TRAINING

COLLEGES FOR SCHOOL MASTERS AND MISTRESSES, DURHAM.
Haxdsome voluntary subscriptions have been raised in tho diocese for enlarging hoth these colleges; tho former at present contains accom. modation for forty-six stadents, and it is proposed to enlarge it, so as to accommodate in all serenty students, at an estimated outlay of 2500l. The latter has now accommodation for forty-six students, and this building will be enlarged so as to accommodate tweuty-four more studeuts, or seventy in all, at an estimated cost of $3,000 \mathrm{k}$. The latter work has been already commenced, and the former will shortly he so. Mr. William Crozier, county engineor and architect, has heen appointed architect for both works.

## DR. BORLASE.

Sir, - With reference to this Cornubian anthor and his early residence, I have visited it recently. It is a curious specimen of seven. and in the ey rostrum unay be seen, from which Samuel Wesley addressed tho people when he twas in Cornwall.
In Mr. Blight's "Wrek at tho Land's End" seen from the south this old manor-house, as of the building. It is only a few miles from St. Just, in Penwith, at Pendeeu, and close to the sea. Near the house is a long vuderground callery or cave, descrihed by Dr B in his work apon the antiquities of Cornwall. Mr. Blight's work ing of a curious old house at Fowlyn, near Penzance, now or formerly the "Keigwin Arms," which I have seen. It merits the notice of antiquaries, as does the old house of Kenegie, near Penzance.

Cer. Cooke.

## 筑iscellamea.

A New Industry in Tasmania.-The com. nencement of irob-mining in Tasmania seems likely, says a Launceston paper of Tasmania, variety of industries. Messrs. Ha open up a aniety of industries. Messrs. Harrison \& Jyst ave paten invention hy which osbestos is likely to he turned to pery profitable eccount in the ondere furclay and froclay articles The incombutile character of abestos, and the he incory natuo refractory athed Harrison, and the pecessity for securing large Harrison, and fiecece fily securing Jarg supplies of relily of combining suggested stances-the one incombustihle and fihrous, the other refractory-in such a way as to produce the reqnired article. Experiment is said to hore iustifid this expectation The matorial, it i usin will fire bars pipes, and other articlos hesidos fire bricks.
Books on Art and Science.-Our adver ising columns contain a further list of important works on Art wad general literature published hy Messrs. Longmans, Creen, Reader, \& Dyer. We point to it less for the sake of the pnblishers than for that of onr readers.

National Health Society.-Dr. Hardwicke medical efficer ef health for Paddingten, has read a papor at the rooms of the Secial Science Associatien, Adam-street, Adelphi, "On Model Dwel. lings of Workpeeple in Tewns," Mr. Pennington, the chairman, in introducing the lccturer,
dwelt upou the importance of the subject of dwelt upou the importance of the subject model dwellings, especially in a conntry like England, where a larger proportion ef the pepucountry in the werld, and in twenty-six towns alone tho population exceeded 100,000 ; and he recommended a reyal commission to inquire inte the condition of the pceple in large towns. Dr amongst the various social prohlems requiring solutien, an important ono was as to the hest manner of effecting a reform in the dwelliugs of this conntry, ospecially ameng werkpeople. The this conntry, espectally ameng werkpeople. physically and morally bad. They endangered health, and were strong incentives to intemper-
anco. lt was the dnty ef Gevernment to avert these dangers without dclay. As far as the these dangers without dclay. As far as the present model dwellings were cencerned, they had never heen profitable to capitalists; but ohjection to them had beon taken on aoconnt of the external staircase and the deficiency of snu
light. Too much suporvision, too, was ob jectionahle. The familistere of M. Godin, at Guise, ncar Paris, gave the best example he knew, showing hetter than anything elso what might he done in the matter of model huildings.

The Want of Additional Dwelling-houses in Nottingham,-At a recent meeting of the Town Council, the Parliamentery Committee presented a report in which they said :-"Your committee consider that thore are many cascs in which it would bo beneficial, hoth in a sanitary and moral point of view, to ahlow of dwellinghouses heiug orected with less than threo bed rooms. Your committee therefore recommend that section 125 [of the Nottingham Enclosure Act of 1845 ] be amended so as to vest a discretion in the Conncil to allow dwelling-houses to be orected possessing less than three hedrooms zhove the ground-foor thereof." Mr. Manning remarked that they had passed a resolntion possessed of tlioir dwelling-houses, and he was possessed of thoir dwelling-houses, and he was honses required for the accommodation of the honses required for the accommodation of the
working-classes in the town. There was a clause working-classes in the town. There was a clause
in the Enclosure Act which prevented very much in the Enclosure Act which prevented very much
the huilding of working men's houses, and therethe huilding of working men's houses, and there-
fore the Parliamentary Bills Committeo had fore the Parliamentary Bills Committeo had
agreed to the report, the acloptiou of which he hegged to move. Alderman Enfiold seconded the motion, and it was carried.
London and County Banls.-Tho directors at the meeting held on the 6th, annonnced that after paying interest to customers, and all charges, allowing for rebate, and making pro. vision for had and doubtful dehts, the net profits amount to 101,803l. 9 s . 6d. This sum, added to $10,634 . .11 \mathrm{~s}, 10 \mathrm{~d}$. brought from the last account,
produces a total of $115,478 \mathrm{l}$, 1 s .4 d , The direcproduces a total of recommended the payment of the customary dividend of 6 per cent. for the half-year, with a lonus of 4 per cent., both free of income-tax, which would amount to 100,0001 ., and leave 5411 . 13 s .4 d , as a reserve to meet interest accrued on
new shares, and 14,9362 . Ss. to lee carried forward now shares, and $14,9862.8$ s, to be carried forward
to profit and loss new account, and this was agreed to. The present dividend and bonas added to the June payment will make 20 per cent. for the year 1872. The amount of discounted bills and advances to customers in town and country is $12,099,2522$. 17 s . 5 d ., and tho liabilities of customers for drafts accepted hy the bank is $4,243,814 \mathrm{l} .18 \mathrm{~s} .7 \mathrm{~d} .,-m a k i n g ~ a ~ t o t a ~$ of $16,343,097 l$. 16 s .

The Enlargement of Durham Graol.-At the adjourned Quarter Seasions for the county of Durham, Mr. Crozicr (county architoct) said it was contemplated making 102 cells, with six rooms and six workshops underneath, which
were much wanted. There were two sets of yard water-closets, and three leating-rooms, where heating apparatus was kept.-The chair. man snid there was another plan, to carry round the west wing in order to meot the south wing,
This would cost 5,0007 , more. Tho estimate for This would cost $5,000 \mathrm{l}$, more. Tho estimate for while that for the extonsion of the west wing was $5,342 l$. The south wing would gire 109 new cells, and the extension of the west wing 63. It was resolved "That the magistrates carry ont the whole plan, at a cost of $13,650 l$."

Choke-damp Experiment in the Paris Catacombs.-Captain Denarouze is proving to the savans of Paris, that if miners henceforth perish from chokedamp it will not be threugh the fanlt of science. His demonstrations te thi elfect are made in the catacombs, under the Rne apparatus analogeus to that for breathing and working under water, the same frcedem ef mevement may be obtained in the midst of chovement may be obtained in the midst of is a kind of water, though invisible, and drowns those plunged in it without protection, just as water does. A "hood and meuthpicce" fer protection, with a supply of vital air te hreathe were experimented with in this country between thirty and ferty years since; and it is net more ject was mooted with reference to colliery. accidents from choke-damp in England.
The Manchester Town-hall Contracts. Tho Manchester city council occupied a con. siderable portien of their last sitting in discussing the new town-hall contracts. The sub. ect was intreduced by Alderman Hoywoed, whe moved that the course suggested hy the sub. that Messrs. Smith \& Sons, the contractors for the mason-work, be in vited to send in a schedule of prices, be approved and adopted. The proposition, however, was strongly opposed: it was
said that justice would not he done the rate. payersin reraud to the contracts done the ratepayers in regard to the contracts unless they were hrown open to competition; and that the amount heely to be saved by puhlic competition would reminded the conncil 00 . Dr. Mark Price would cost $1,000,000$ l, which would lay npon tho ratepayers a perpetial rate of tenpence in the ponud. An amendment was ultimately carried that the remainder of tho contract he
Atmospheric Bells for Buildings.-The tmospheric system of commmication for houses hetels, warehouses, factories, and so forth, fitted up by'Messrs. Homfray \& Co., seems, so far, superior to tho electric system, in that when once fitted it requires no furthor attention ; its sending power is constant, thus the disadvanof batteries, aro entirely done away with; whilst the annoyances arising from slack wires, common in tho usnal crank and wire system, aro in this unknown. Instruments with indicating tablets and hell attached placed in any desired position, show tho number or name of the room or rooms from which the bell has heen rong; the tuhe or press.button as the conductor on air betwean the sight, and laid down and soldered in the same way as gas tuhing. They deserve the attention of persons building, or tired of the old ystem.
Improvement of Houses of the Poor. The special committee formed by the Charity Organisation Society to consider what steps can direlliugs of the poor throughont London, held its first meeting on Wednesday last at the central office of the Society, 15, Buckingham street, Adelphi, nnder tho presidency of tho Lord Mayor. There were present, among others, the Marquis of Westminster, Earl Fortescne, Lord Mahon, M.P., Mr. Andrew Johnston, MI.P. Mr. Kay-Shuttleworth, M.P., Mr. Fastwick, M.P. Sir Baldwin Leighton, Mr. Liddle, Dr. Ross, Dr Hardwiok, Rev. W. Denton, Jiss Octavia Hill Mr. Godwin, Mr. W. H. Mall, Mr. R. Freoman, Mr. Gilhert, Lord Rohert Montague, Mr. Bosan quet, Mr. Gatliff, Mr. Fletcher.
Foremen Engineers.-On Saturday cvening ast the mon and triends of the london Association of coremen ingineers and Draughtsmod dined together at the City Terminus Hotel, C.E. The chairman, Mr. John R. Ravenhill, illustrated the practical application of his subject by stating that he had that day received answered, and received a reply to, a tolegram
from Egypt; Professor Goodeve, noticing the prom Eogypt; Professor Goodeve, noticing the probahle supersession of the use of iron hy that material manufactured under a pressisro of 8,000 tons.
The Royal Gold Medal.-The Conncil of the Royal Institute of British Architects have resolved to recommend to her Majesty the present recipient of the Royal Gold Medal for 1873

The British Archaological Association,On Wednesday night in last week a special general meeting of the Sheffield Architectural and Archreelogical Seciety was held at the Rooms, School of Art. A suh-committee that had been appointed to wait on the pnblio bodies of the town, and to cemmnnicate with the Duke of Norfelk, reported that the preposal to invite the British Archæological Asseciatien to hold its next Congress in Sheffield, met with the most cordial appreval. The Duke of Norfolk, through Mr. Ellison, ferwarded a letter cxpressing the pleasure it would afferd him to take part in the proceedings if the time of the meoting did not elash with ether engagements. A reselution was manimously passed inviting the Associatien to come to Sheffield.
Unsafe Landings. - The St. Geerge's, Hanevcr-square, Vestry have censidered a letter from their soliciters (Messrs. Capron \& Ce.) with Hanever.square, Vestry $v$, Cel, Hamilton" (of Eatever.square, Vestry $v$. Cel. Hamilton" (of magistrate at the Westminster Pelice Court for fro expenses of repairs done to the landing in front of his house. Messrs. Capron informed the veatry that the magistrate, finding, under the 226th section of the Act (Metropolis Local Maragement Act), he had large discretionary powers, had decided to divide the expenses between the vestry and Col, Hamilton. After some dehate, the vestry agreod to accopt the magistrate's decision.

The Dublin Tramways Company. - The report of the directors to be read at the third ordiuary half-yearly mooting, on tho 20 th inst., shows that the gross receipts from all sonrees amount to 23,745 l. 4s. 10 d , and alter paying all working expenses, there remains a net profit of 7,829l. 7s. 4d. available for division, out of which it is proposed to appropriate sufficiont for a dividend at the rate of 12 per cont. per annum free of income-tax, leaving the sum of This fund will then added to the reserve fund. This fund will then amount to 2,458 . 10 s ., of which the snm of $1,229 l$. 78. 6d, has been invosted in Three per Cent. Consols, wa certified hy the anditors. The acconnt looks healthy and the prospect promising.
Royal Architectural Mnseum.-Mr. J. F' Redfern will give practioal descriptions of the figure sculpture in this Musenm on Saturday days. Mr. Thoon, 22, and the two following Saturdays. Mr. Thomas Peard has promised two Work, on on the Art of Producing Artistio Iron Work, on March 15 and March 22. Any may enter free. Wo wonld further draw attention to the fact that art-workmen's evening drawing and modelling classes aro now in full work in this Museum, at seven o'clock every Monday, Wed. nesday, and Friday evening, at nominal cost for entry.
Tangye's Wall Steam Engine. -Those who hink it better to distribate the steam power required in manafactories ever a number of small engines rather than confine it to one large one, an ander will find Where workshops wensist of for this purpose. Where workshops consist of three or four floors, an engine of 4 -horse or 6-horso power can be fixed on the wall of each floor to work the nachinery on that floor, quite indcpendent of any other, saving the floor space, as well as the hrick foundation required by any other kind of engine.
New School for Bermondsey.-On Mronday new school attached to St. James's Church, cess Teck, in the presence of the Lord Mayor, the sheriffs, and a number of the clergy and eading inhabitants. Thoer of the clergy and $1,350 \mathrm{l}$., of which $1,050 l$. have alread behool was cribed, leaving a deficiency already been snbhuilding is Gothic in design, and consists of one argo room and one class-room. The architeot Mr. R. Hesketh; and the huilders aro Messers. Dowas \& Co., of Union-street, Borough.
The Removal of the Snow. -In the Chelsea Vestry the aurveyor reported that the now had heen left, by the contractor, in twenty-nine streets. Mr. Fisher moved that a fine of 5l. be inflicted in each case, making in all 145l. This not being seconded, he then moved to fine for fifteen streets, a total of 752 . To this there was a fortnight; but this was lost. Mr. Davidge a fortnight; but this was lost. Mr. Davidge
then moved a fine of $30 l$. for six streets, which then moved

Sanitary Requirements of Metropolitan Workshops.-At a meeting of the Metropolitan Association of Sanilary Officers, held on Honday Associatio, in the hall of the Institute, Alderman's. walk, Bishopsgate, a lectnre was delivered on the ahove subject by ifr. Thomas A. Dennis, the chief annitary inspector of tho parish of Shoreditch. He dwelt strongly on the ncoessity of effioient ventilation and the uso of the syphon traps in all cases of sewer drainace, as heing tho best means of rendering water flushings effectua when there was a proper supply of that im portant material.

The Americans and Mr. Bessemer.-The Americans hare adopted a novel method of showing their appreciation of Mr. Bessemer's ser. Fices to science. In the midst of one of the richest iron and coal districts in Cincinnati they have begun to build a now city, which, from its geographical position and local adrantages will probably become one of the largest centres of trade in America. To this city they have given the name of Bessemer.
Pavement of Worcester Cathedral.-Lord Dudley has offered to defray the cost of a flooring of white and hlaok marble to the nave of Worcester Cathedral in lieu of one of stone and slate, and the offer has been accepted by the Restoration Oommittee. The cost of the marble flooring will be hetween 4,0001 , and $5_{1} 000 l$. The choir is already floored with en. caustic tiles and marbles of various colours.
Glass-lined Pipes.-In Kow Tork glass. lined iron pipes, it is said are being used to convoy water, as the frietion is lessened, the pipes are always clean, and the water is kept pure. Between the glass and iron is a layer of heat, prevents tho water from frepuinctor of winter. Whether this layer prevents tho con traction and oxpansion of the iron from destroy. ing the coating of glass may be a question.

A Mortuany Chapel for Scaxbro', The parish vestry have resolved that "it is expedient, as well on sanitary grounds as for the conveni interests of the pohlic cenerally that mortuary ahapel he erected at the cemetery ${ }^{11}$ and "that he Burial Bond be requested to porvy tho fore going resolution into effect, at \& cost not exceed going resol

Metropolis Euildings Aot Amendment On Wedreaday last, Dr. Brewer hrought in a Bill to repeal the 55th clanse of 7 \& 8 Vict., cap. 84 tho Metropolitan Buildings Act) 1 , as food. The Bill reas first time, and tho second reading was fixed for Apill 2 .

The Works of the late $\mathbf{M r}$. George Mason A.R.A.-Unusual pressure cornporg to consine ourselves to recommending all our readers ${ }_{1}$ who love art, to visit (through a number of the Burlington Fine Arts Glub), the collection of pictures hy the lato Mr : Mason $\mathrm{n}_{1}$ now collected in the Rooms of tho Clnb, Savilo-rown
The Labour Question.-On Monday evening last, at the sessional meeting of the National Asso ciation for the Promotion of Social Science, Mr. Alsagar H. Hill read a paper "On Impediments to the Dirculation of Lahour and Suggestions for their Removal.
New Mint Site.-Mr. Ayrton has obtained leave to bring in a Bill for the removal of the Royal Mint to the new site selected for it

## VOL, XXXI.-No. 1568.

A Health Bool."

HE plain meaning of Public Hygiene is defined hy the author of a hand-hook just now published to he "that hranch of sanitary science which concerns the physical condition of commnnities." This heing so, it may be said to he the most important of all scionces ; for what, indced, is the practical value of tbe acquirements of any other science or any other knowledge if the physical condition of the people amongst whom it is taught and acqnired is not of a high status? The most valuable of all knowledge taught to men of low physical condition, even if they are capable of acquiring it, cannot be retained and effeotnally made use of. Hygiene, then, is the foundation of all otber useful sciences, and mnst precede the cffective exercise of every other species of knowledge. "It embraces a consideration of the varions influences operating npon society, whether for its material good or its actnal deterioration, with the view of oxtending the formor, and preventing or ameliorating, as far as passible, the effects of the latter. It involves the enactment of laws hy which the safety of the whole may he proteoted against tbe errors of a part, and, above all, it aims at the provention of disease hy the removal of its avoidahlo canses. In a wide sense, therefore, the science of public hygieno enlists the services of the people themselves in continuous efforts at self.improvement; of tbe teacbers of the people, to inculcate the hest rules of lifo and action; of physicians, in pre. venting as well as curing disease; and of law. givers, to legalise and enforce measures of health-preservation. But wbile it is tbe special province of the medical profession, as guardians of the pahlio health, to study the causos of physical deterioration and diseaso, and to point ont bow far these canses may he controlled or averted, the general well-heing of the people must mainly depend on their own excrtions and self-restraint. Sanitary improvements in man's material sarroundings will not compensate for social tranggressions against laws of morality; for public virtue is essential to pullic. health, and both to national prosperity.
The time, however, has gone hy when people can he dragooned into oleanliness, or ho made virtnons hy police regulations, and hence it is that the most thoughtful amongst practical reformers of the present day hase their hopes of sanitary progress on the education of tbe masses as the real gronndwork of national health. The people mnst be taught that good conduct, personal cleanliness, and the avoidance of all axcesses, are the first principles of health. proservation; that mental and physical training must go hand in hand in the rearing and guid. ance of youth; and that morality does not
M.D. Edin. Handbook of Hygiene. By George Willon, M.A.,
consist so much of a blind ohserpance of the formutce of empty creeds, as iu a hearty snhmission to precepts of health. Nor is this all. They must be interested aystematically in tho genoral results of sanitary progress, and become more intimately acquainted with the social and material canses by which it is impeded. Unless a knowledge of these fundamental principles of hygiene be widely disseminated amongst them, it is in vain to expect that legislative enactments, however well devisod, will succeed in raising the standard of puhlic health to any considerahle extent. If it be objected that such knowledge cannot be imparted in schools [which we deny], it may at all events he convcyed through the puhlic press and from the pulpit; or is it too much to hope that the wordy warfare concorning tbe origin of human life may speedily give place to united efforts in striving to prevent its appalling waste?"
These words of Dr. Wilson are words of the highest wisdom. Taking this wide view of the scope of the pnblic health, the anthor discusses the suhject under the three sections of -1. Hereditary influence ; 2. Causes of ceterioration and diseaso; 3. Preventable disease. After some romarks on the subject of heredity, the anthor says that the causes of deterioration and disease are of two kinds,-msocial and material. Legislation can control the material influences, such as impure air, impnre water, insufficicnt or anwhole. some food, dampness of soil, deficiency of warmth \&c., and the removal of these causes is the prin. cipal aim of practical hygiene as enforced hy legislative onactments; hut "the social canses of deterioration and disease, on tho other hand are little, if at all, controlled hy State inter. ference, and hence their removal, as far as possible, mnst depend mainly on individnal or comhined efforts, dictated by a sense of dnty, which may he either egotistic or philanthropic, as the case may he. It is here that the effects of education, whether imparted in the family circle and school, or from the pulpit and platform, or hy the public press, will be tricd and tested." In the rapid growth of town population there is reason to fear that the avorage physique of the English race bas of lato years become lowered, hut at the same time there are good grouuds for believing that the deterioration has reached its culminating point. "Already the resnlts of sanitary improvements in many large towns are beginning to declare themselres, not only in a lessoned sick-rate and death-rate, but in an ap. parently healthier tone of puhlic opinion. The working-classes in all parts of the country are hestirring themselves for more lcisure and more pay, and so far they have succeeded. It romains to be seen whetber the loisure will he spent in self.improvement, or the extra pay he judi. ciously applied, and not worse than wasted." So far as these (social) canses are con. corned, the hopes of progrcss and improve. ment mnst rest on education wide-spread and general. Tbe fundamental principles of personal and domestic hygiene must hecome matters of intelligent conviction amongst all classes, and especially amongst the upper and middle, that they may help those of the lower who are unahle to help themselves. For it can. not ho denied that there are multitudes in all our large towns so heavily unrdened with the oad of a vitiated heritage, and so hemmed in with the harriers of foul air, filth, and want, that teaching and preaching can only be felt as bitter mockories nuless these barriers are first removed. Herein lie the daties of sanitary anthorities, and in their compulsion by legisla. tive moans there is at last some hope that ame. lioration and enlightenment may penetrate even to these depths.
We know that of the 120,000 preventible deaths in a year in England and Wales, each unit represents a larger or smaller group of otber cases in which preventible disense, not
onding in death, thongh often of far-reaching ill offects on life, has heen suffered. And while these vast qnantities of needless animal suffer ing, if regarded merely as such, would be matter for indignant human protest, it furtber bas to be rememhered, as of legislative concern, that the physical strength of a people is an essential and main factor of national prosperity; that discase, as far as it affects the workers of the population is in direct antagouism to industry; and tbat disease which affects the growing and reproduc. tive parts of a population, must also in part ho regarded as tonding to deterioration of race.
The chapter on Food contains instrnctions on the appearances of sound and unsound meat, and the means of judging it.
The clapter on Air and its contamination shows that the peculiarly foetid smell of seswage gas is orring to the presence of organic matter more than to the gases given off, wbich are car. bonic acid, nitrogen, sulphuretted hydrogen, light carburetted hydrogen, and ammoniam snlphide. Dr. Odling belioves it to he carboammoniacal. It is alkaline in reaetion, and speedily decolorises solutions of potassium permanganate. Like other organic efluria, it promotes the growth of fungi, renders milk sour, and taints meat. The great interest which attaches to this important snhject rests on the development and spread of enteric fevcr. Tbe actual poison may, like the miasmata which give rise to ague, be inappreciahlo to the sonses, or by chemical research; hut Dr. Murchison not with, daring tho four years 1858.62 , few cxamples of enteric fever which, on investigation, ho conld not trace to defectivo drainage, the existence of which was sometimes unknown to the inhabitants of the infected locality.
The point to he horne in mind is this, that sewfers often hecomo the real channels by which tbe contagion is propagated. The sewer air, taden with the specific poison, readily finds its way into houses on account of its greator tension, and in consequence of hadly.trapped or imperfectly-yentilated drains. It may bo inap. preciable to tho senses, hut its banefol effects make themselves felt none the less.
Supposing that sewage.tainted air is kept out of dwelling.houses, tbe impurity of tbe air which peoplo inhale is measured hy tbe amount of carbonic acid gas it contains, arising from tbo exhalations of the body and the products of comhustion that pass into the room from lights. It is found that 1 onhic foot of coal.gas destroys the oxygen of 8 cnbic fcet of air in combnstion, and produces ahont 2 cubic feet of carbonic acid gas, besides other impnritics. As a common gasburner hurns ahont 3 cuhio feet of gas per hour, the importance of having these delete. rious products of combustion carried off by special channols is ohrious. All things heing considered, the author is of opinion, founded on experimental data, that the cuhic space of rooms should he such as to allow 3,000 cubic feet of air per head per hour to pass through them without perceptible dranght. Thus, if the space he only 100 cuhic feet, the contained air must be renewed hirty times per hour, in order that the standard amount be supplied; whereas in a room of 1,000 cuhic feet, only three renewals of air will be required. Wbat, then, is the minimum amount of cubic space through which the standard amonnt of fresh air can ho passed witbout per. ceptilile movement?
Professor Pettenkofer has answered this question experimentally, and has fonnd that, hy means of artificial vontilation, and with the aid of the hest mechanical contrivances, the air in a chamber of 424 cuhic feet can be renewed six times per hour withont creating any perceptible air.currents. Providing that perfect artificial means he employed, and the air warmed, snch a room as tbis can he efficiently ventilated, no doubt, but with natnral ventilation it is impossible to do it. Dr. Parkes maintaing tbat a
change of air four or five times an hour
is all that can be borne in this country,
and this mould require an initial air space and this mould require an initial air spaee
of 750 to 1,000 cubic feet Practicall of 750 to 1,000 cubje feet. Practically, the ently are due not so much to the movement of the contained air as to the rclative position of tho inlcts, these being necessarily so near the person that the draughts are disagreeable or injurious. So far as our own experience goes, well-derised plans of ventilation, to supply the neceseary amoult of fresh air per bend per hour withost creating pereeptible drauchts, if the space be less than 600 enbic feet. The Barrack Commissioners recoromended a space of 600 cubio feet per head, and insisted that the air shonld be renewcd at least twice every hour. "The only sare pirgim for contingencies; and the question rearly is not whether 600 cubic feet per man bo too mueh, but whether 600 cubic feot be enough for all the purposes of warmiag, rentilation, and comfort." Experiments that have since been allomance is inndeqnate. The Commissioners themeelres observe, "It has been said that the question of cubic space is simply a question of ventilation, but it is rather a question as to the possibility of rentilation. The more beds or encumbranees jou have in a room, with a limited cubic space, the more obstruction fou have to rentilation; the fewer the beds the more casy is it to ventilate the rooms. There are casy is it to ventilate the rooms. There are
fewer nooks and corners, fewer surfaces exposel to the movement of the air, and less stagnation. We have been in rooms, both in barrncks and hospitals, in which the atmospleere was positively offeusise with the doors and windows open,"
Tho force of gaseons diffusion, upon which then nuiform constitution of the atmosphere itself depends, is manifestly inadequate as a ventilating power. It operates chiefly in producing a tolerably equal distribution of the gaseons pro ducts of respiration and combustion througho the air contained in a roont, but aids ouly very slight extent tho removal of theso purities from tho room, while it is altogether inoperatire
impuritics.
Of the mothods of natural rentilation, that of Mr. Putts has been well spoken of. It consists as our readers know, of a lollow metal cornice running continuously round the room, and, being
divided longitudinally, ono half brings fresh air divided longitudinally, ono half brings fresh air into the roon, whilo the other division remores the foul air. We are sorry to say wo have been obliged to hear of failores in practice. Then
thore are the methoda of Mr. H. Varley, Mr. thore are the methods of Mr. H. Varley, Mr.
Mokinuell, Dr. Stallard, and others. Of the ordinary method of warming a room by an open coal fire, it is found that rearly seven-eighths of the heat generated passes up tho chinney, along
with a quantity of air, rarying from 0,000 to 20,000 cubic feet per hour.
ard aud of water ${ }^{1}$, soveral are stated. As to the harn? doue by impure water, Dr. Wilson righty says,-"It must bo romembered that the elfects may engender a general impairment of tho halth, without giring riso to well-pronounced isease.
Souc rery judicions remarks aro made on tho construction of dwellinge, on hospitals, on the remoral of sowage and its purification and utilisation, on the effects of improved drainage on public health,
and disinfection.
This handbook
This handbook ought to be in the hands of erery medical officer of health, and of every inspector of nuisances in the country; and, considering that government in this conntry exists for no other purlose than the public welfare, we elieve it wrould be a rery proper application of public money if the Local Government Board should issuc to the persons above-named this haudbook for their guidance; and not ouly this, but Dr. Parkes's work on "Practical Hygiene. Probably the medical ofticers may possess thes books, without putting the Department of State that the inspectore of muster, but it is less likely that the inspectors of misances will possess tbem, and yet it is almost more necessary that it should bo in tbeir hands than in tbose of the
medical officers.

Institution of Surveyors.- The next meet ing will be beld on Monday evening, Febraary 21 , when a paper will be read by Mr. R. B. Grantham entitled "Private Agricultural Railwaya."

THE GREAT indUstrial question is SOUTH WALES.
Whe position of the iron-workers in South Wales has been so far changed, since the date of our former remarks on the snbject of the strike, * that we are not without some hope that ever the interval which necessarily clapscs between may witness a renewal of tho indisstrial life of this great district. + Howerer that moy be a considerations may be usefully submitted to our readers. We ventured on the last occasion, to give connsel to the men; it may not be altogether improper now to offer a word of suggestion to the masters.
Since we pointed out those serious practical objectious which, in our judgment, rendered the plan of arbitration altogether illnsory and inapplicable; in the present instavce, the arga. ments for that proceduro have been tacitly abandoned. The parties were neither of them competent to come into a court of arbitration The groands of the original dispute were capaof exact definition without any such process. The further questions, which appeared as likely to follow when the first was solved, were snelias no arbitrators could deal with. For discussion of an amiable and conciliatory natrire between one or two trustworthy representatives of men and of masters, there was, indeed, amplo room. Nor do wo think, from forner experience of the settlement of very angry disputes, that there should be any hesitation on either side in follow. ing sueb a course. But this is not the form rhich tho proposals hare jet assumed on either side.
Haring a word to say as to the double-shift question, the peremptory refusal of which has probably damaged the union far moro thau its leaders have at all imagined, we first refer to that later proposal which seems, as we write, to eminently English,-candid, honest, and manly̆. If the owner of hibour, the workman,-has a right to demand a fair dry's wages for a fair day's worl, the purchaser of labour, -the master, -has an exactly corrosponding right to
demad a fair day's work for a fair day's wages. demand a fair day's work for a fair day s wages. If the question is put on the simple ground of
right and wrong, there can be no second opinion right and wron
Difficulties, of course, will arise in the application of any uew principio. We can see man in the present instanco. Bat that they shouk provo insuperable, in the face of any real wish, on both sides, to agree, we do not for a moment beliere. Our connsel, then, to the masters is this. Facilitate the acceptance of your terms by the men. Give them no excuse for the feeling that you seck for triumph. If they are willing, on agreed terme, to give up tho position which you have all along declared to be intenablo, let rar. If they dread the with the honours of turn-coats," more than they dread cold, hun ger, and all the evils of idleness, respect an honest pride, and give your onemies (wo do not mean your men) no excuse for working on an honourable, even if a misguided feeling. It is only by the adoption of a large, liberal, Christian policy of this description that harmony, if $\mathbf{r e}$ torea, can bo maibtained.
estion the difficulties of detail, we havo a sug been distinake. We are not aware whether it has has been hitherto accompanied by an eguiralent fall in production. Taking the fyures which have been published from time to time, it comes out that the sole advantage derived by the labourer sages Sonth Wales district from incrased hours has been, that he bas forked fewer many of the hours tbns withdrawn from toil have been spent in the public-honse. When the wages that were earned by fifty hours' labou have been so raised that they conld be carned by forty-five hours' labour, the workman hed rorked firo hours less. Ho has not increased his comfort, laid by for a rainy day, or in any way added to his saviogs. Ho has simply done master less work. The consequence to the master has becn, that while he has paid ten per ten per cent. lcss output. Thus the rise in loss to threefold the amount in the master;

## See p. 33, ante.

ment, on a compromise has taken place in one establishthe difliculties are rather in the remaind
and to a much larger extent afterwards, to th public; and a gain to uo one. For the les to his advantage, if we may take the consump tion of strong drink as an indication.

We have a word or two to say to the men as the opinion so generally held among them that ing the cuantity of work exeonted. by diminish
 to keep to the practical question first. We con case case, the experience of the mnsters is to thi eflect. The higher wages we pay, the less wor is done. Give us some guarantee that this stat of things shall cease. We are quite willing t pay, and pay very handsome!y, for work. W neither can nor will pay for idleness.

Let the men, then, meet the question liks men. The justice of the position eannot be fo a moment called in question. It used to be the pride of the English workman,-an honest prid which distiuguished him not only from the slave who worked becanse ho was forced, bat fron many a foreign workman, who, wo aro apt $t$ think, loes not know what a good day's wor is, - that it was his habit to do his full duty is this respect. It was an honest prido. Such a daty is duo to a man's self-respect, to his family and to his country. Lot the English workman pride have its proper iufluence now. We thin we can suggest a mocle that shall obriate th difficulties of detail which seem (and not un naturally) so formidable to the employers o labour.
From day to day, from week to week, from pay-day to pry-day, flnctuations ocerr in th yield of a colljery or an ironwork that cannot be compensated by a sliding scale of wages, withon complication so great as to be impracticable From year to year, however, a broader average can be taken. It may bo possiblo oven from quarter to quarter.
Wo propose, then, that the proportion betweer wages and output which snbsisted before the last rise of the formor, or that which has beer the average of the last twelve years, should be taken as the basis of an arrangeinent twelve years, because that time corers a cycl of depression and elation in tho trade; the quotations for bariron in 1861 having been $6 l$. 5 s . per ton. Let the men go to work on the lowest scale of wages, but with the understanding that will be entixely their own choico if this hey will should be auy more than wat ment on account. At the end of tbree months the ontput of the period cau be ascertained with olerablo accuracy. Let r percentage be tben paid of wages as sct down in the time-sheets for the three months. This snm, given as a bonns, might be given in such a form as to onoonrage prodent and economic habits. It might, for workman or to the safer oustody of his wife, be paid to the savings bank on his account. Many man would hesitato to draw out a little nest. gg of this kind for the parpose of drink or of ts way who would find the bonus in money burn soou nnderstand that the money was actually his. With the sense of proprictorship migbt come some of its pride and its prudence. At all erents, Tre slonld give these principles of see to the proposal would arisc from any diffi culty that the masters mirtht find as to the declaration of the output of their worls But his can barclly be insuperable. They arebound by the 1 of last 5 on to mate a metur Gorernmert of their outpnt The genem ont porernment a district is to bo publisicd, general ont details. If it prove injurious to any indiridual proprietors to make known their shares in the general industry of their district (and we are far rom attempting to deny that there may exist rood and adequate reasons for this fecling), the emedy would be to make the general output of he district, which must be published by the Goverument, regulate the bonus or percentage io par. at bor might make a specistirgain when regulated by the disurict output ho number of men employod.
As far as the public aro concerned, the broader the basis taken the better. And who are the public? The population of Great Britain, in 1869, was $25,075,782$ souls. Tho male persons at work in the collieries, in that year, were $3 \cdot 45,446$. We must take these males
as representing a popnlation of at least a
million and three-quarters. That is to say that tho colhers form rather more than one-fourteenth part of the British pnhlic. We wait for the retarns of the current year to ascertain how of thoso who depend for sustenance on the industry of iron. But it is stated that the ahstinence from work of 10,000 colliers in South Wales keeps from 50,000 to 60,000 ironworkers idle, - that is to say, from 250,000 to 300,000 and Tho iron smelted in Wales in 1866 was less than Tho iron smelted in Wales in 1866 was less than
the fifth part of the entiro yield of Great Britain. the fifth part of the entiro yield of Great Britain.
These considerations show that, if we take iron These considerations show that, if we take iron
and coal together, the families dependent on these great industries must form not far short of one-
Britain. Britain.
Now, it is stated, (they are not our own
figures, but they figures, but they present nothing that is incredible) that the loss which the lahouring population have sustained hy the idleness of the past fow weeks amounts to no less a sum than $400,000 \mathrm{l}$. sterling. Further, the loss sustained by the public, in oonsequence of the rise in the
price of coal, is estimated at no less than forty price of coal, is estimated at no less than forty
millions sterling. This loss may not, it is true, millions sterling. This loss may not, it is true,
ho accorately represented at so much per head all round,-in that case it would already havo inflicted a penalty of 32s. per head on every individual in the United Kingdom, heing nearly 2s. more than tho annual contrihution per head required for the interest of the National Debt. As far as the direct consumption of coal for pays more than the poor man in proportion to the numb
keeps up.

## But the

but coal required for domestic consump. In 1869 it was 18 per cent, of the total yield. 107 million tons. The axportation in that year 107 miluon tons. The exportatiou in that year
was 10 million tons. The remaining 79 million tons were therefore cmployed in tho manufacture of pig and merchant iron, in working coal and of pig and merchant iron, in working coal and
other mines and in smelting, in steam navigaother mines and in smelting, in steam naviga-
tion, in rallways, and in gas and water works. Thus the rise in price directly tells on all hardThus the rise in price directly tells on all hardware and ironmongery, npon all tools and mate-
rials for industry, on freight and carriage, on rials for industry, on freight and carriage, on
puhlie convenience and security. And that loss will ho, proportionatoly, fur more heavily felt hy the poor than by the rich, and that for this roason: the poor man buys in smaller quantities than the rioh man. He thus buys of the smallen dealer, and almost invariably at a higher price in consequence. An additional step in the detail of distribation is taken for his convenience, and for that he, and he alone, has to pay. Therefore, if the puhlic has heen put to an expense of 40 millions hy the strike, or 32 s . per head, the $3 \frac{1}{f}$ millions who form the coal and iron part
of the puhlic can hardly estimate their portion this loss, up to the present time, at less than 3 millions sterling. This is a terrible tax for idleness to havo imposed upon industry.
This brings us to the question of the double shift. We spproach it thus, hecause we wish the workman to corne with us. We are not truth of our own views. We only aim nt plesin before them such facts, and such considerations, as shall lead them,

## The working

The working men of this country aro a large and important hody, constituting the very pith power is extraordinary, - for rood or for oril porver is extraordinary,-for good or for ovil.
They are only just begineing to realise this great political truth; and it is no wonder that, in political truth; and it is no wonder that, in
trying to ascertain what their real strengtl js, they may try at times in the wrong direction power righly exerted is the of good. Thei power, rightly exerted, is the mighty and illimitahle force of industry. In their thews and they occur) educated hrains, resides the true capital of the country. We know that this is not the customary language of educated writers. But we are fully prepared to show, with all the exactitude of logic, from the works of no less distinguished a political writer than M1. J. S. Mill, that the value and importance of what is commonly called capital-that is to say, the accumulated produce of lahour,-is grossly, ridiculunsly, and mischievously over-estimated Indirectly the working man feels this; and we think nothing has tended more to diminish the influence of public writers, clergymen, and the
educated classes generally on the industria portion of the populace, than the falso reliance
which the former have been taught, by a school of non-practical writers, to place upon the store which may at any time exist in the hands of he nou-working classes.
But it is only hy its activity that industry asserts its power. The moment that it hegins to think that it can do more hy idleness than hy exertion, it treads the downwarl road. Now every attempt on the part of the working man o hmit the output of his industry is an appeal It is an attompt that will certainly of idlcness. It is an attompt that will certainly defeat itself. Fe need not speak of the concurrence of mechanical power, - that is to say, of the new contrivances for suhstituting machines worked hy steam for human lahour, to which every rise
in the price of the latter gives so much stimulus. in the price of the latter gives so much stimulus. he present we only alluent in will sup pose that the ony allude to ill that he hopes o effect hy limiting his lahour, By working only twenty-four hours a week, and raising, let us say, it third of what he could easily send up rom the pit, let as suppose that he has increased he nominal wages that ho received two years ago. But by how much has he caused the price coal to adrance? By how mach the price of ordirary fopendention articlo of consumption is at least one-third ahore its wholesale price-that is to say, something like the douhle of the cost price. Now, if the workman raises his wages, say 10 per cent., not hy industry, but by idleness, he may pocket, or he may drink, the extra six shillings per week, if he earns ten shillings a day. But how much nore will he have to pay for everything that he consumes ? in motion that multiplies at every step. To the
workman, as one of the pnblic, the effect is lisastrous. We might go step hy step through he inquiry, hut the result would not differ muel from this dry, ngly one. For the six shillings per weok that the workman has raised his wages welve to eighteen shillings per weels in the acreased price of everything he consumes, if he maintains the sanno degree of comfort that he had previously attained.
It is hy increasing the accommodation of the puhlic, of which he forms so important a part and by increasing the means of the employers of labour to pay remunerative wages-that is to say. hy increasing their profits-that the workman can most essentially bevefit socicty, and henefit himself. If we ouce master this great economic truth, the effect on our industry will he more precions than the addition of a vast province to onr empire. Almost the entire industrial movement of the past few years has neglected, hat, intec, this fndamental law. We have seen wages has been accompanjed hy a fall of 10 per cent. in production. That is a direct loss to the master. It car only he reconped hy time at the expense of society, and it is so recouped, if at all, hy putting society to the iucreased expense of 30 per cent.-not in tho price of coal alone hat, more or less, in the price of every article the price of that reat necessaly of life, sprang up at one hound to trehlo its amount, in consequence of the rise in the cost of fuel necessary for the manufacture. The rise stopped the rade. Peoplo would not huy salt, for which thoy had been in the hahit of paying 7 s . at the price of a pound. It foll then to 12 s ., or a little
uncler double its former prico. But the collier's uncer double its former prico. But the collier's
wife will find that she has to pay muoh more than douhle the that she has to pay muon moretion ef salt than that which sufficed hefore the coal famine was occasioned, not by the hand of God, hut by the ignorance of man.
The workman then has first to understand that the more productive his mastry is, the hetter it is for himself as well as for every one else. will then see that it is not by diminishing, hut hy increasing his ontput, that he can hetter oog ran, -and that run will be run out within a year or two.
Productiveness of lahonr is increased, without any cost to the workman, hy the use of all machinery that facilitates lahour. We are not now speaking of machinery which replaces lahour. Mr. Bahhage (as quoted hy Mr. J. S. Will in his "Principles of Political Economy," chap. ix.) says that the only economical mode of employing machines is to keep them working lequire three relays of labour. No donbt, in
mines, where the sunlight is of little importance to the work, this would he the most ecunomical arrangemont. It is not, however, that now preferred. Mr. Brogden has invited the Welsh workmen to divide themselves into two relays. By this simple change in habit, all the fixed expenses of great works, plaut, interest, depre. ciation of stock (which goes on faster while machinery is at rest, in many cases, than when it is in motion), office and corresponding ex. penses, agency, and a loost of other details of outlay, would at once he halred. The master could then afford to pay hotter wages for haman lahonr, - that is to say, for industry, not for idleness. The public would gain hy a decline in price, or, at all events, hy an arrest of tho up. ward movement. If the douhle-shift were com. hined with such a systom of honus as we have ahove indicated, the impetus given to the industry of the district wonld ho unprecedented; and those who would first and foremost henefit by the change would he the industrious workmen and their families.
It is quite true that the renewal of activity, might hecome ande dream, but a condation that run us on another horn ef a dilemma. We refor to the exhaustion of our coal- fields. Our readers will remember our mars on this subjet a yenr ago The furnect a year ago. The future course of the coal industry we indicate to he heor two extreme couds tions, that of the total exhaustion of all our vaniahle coal by tho year 19 nc , anc uat of the 1886 . Ye ore the 1886. We have approached much more rapidly than conld have heen expected to the latter imit. The effect of this approach on the consapply, has yet to he ascertained. It may ho supply, bas yet to he ascertained. It may ho
some time heforo we can ascertain the results of the actual check. What enterprise may have heen directed, hy the choking of the main sapply in England, to the opening up of those foreign coaltiolds which are twenty times the area of those in England, has yet to he found oat,
Into this, however, we nced not now onter. The present famine iu coal depends, to a great extent, on artifial causes. We are more con. cerned to remove theso, than to anticipate the evils of suhsequent exhaustion. When natural causes alone are at work, as in the case of tho definite exhaustion of a known source of stipply, compensation often occurs. It is when economio law 18 directly riolated, that compensation is less prohable. We speak to the industrious, and in helalf of a great industry. Wo have, we trust, from the decrease of his industry that the condi tion of the worting men catl abe be inproved The workman now in quention ean earm during short lours of tol, during educated man in many a profession and calling, car rate of wion rate of wages should ho accompanied by halits providence and self.respect. "Fngland expects, was to bis duty." Men who strike, except against intolerahle injustice, and as a last resource, do not do their daty, - either to their country, their families, or themselves We take a position almost singular among educated writers as to the value and the rights of lahour. Bat the future of lahour can be elevated only hy proper
industry. Inasmuch as we admire and defend industry. Inasmuch as we admire and defend called the unrichts of idleness. This terrible called the unrights of ideness. Inss terrible
weapon is double edged. It is even more fatal to those double edged. It is eveu more fatal whom it is directed. Idleness is the weapon of the strike-maker. To employ it, in the great majority of cases, is at once a blander and a crime.

REFEREE'S REPORT ON THE DESIGNS FOR ST. MARY'S CATHEDRAL, EDIN゙. BURGH.
Permission for puhlication of Mr. Eman Chis han's report having boeu given by the trnstees, we print the hore interesting portions of it :-

Agreeahly to your request communicated to me hy Mr. Phin, 1 have made a carefnl examina. tion of the several designs submisted in oompe. tition for the proposed cathedral for the Epis copal Church of Scotland in Edinburgh ; and in the report which follows, I will as hriefly as pos sihle give yon the reault of ary lahours.
I may perbaps he allowed, in the first place congratulate you on the admirahle manner in which your invitation has hoen responded to.

The care and skill which bave been hestorved on the preparation of the respeotive designs, and the heanty of many of the drawinga, is very remarkanle; and it can hardly bo douoted hut you can scarcely fail in securing a building not only well calculated for the parpose in view, but one that shall be a noble additiou to the orma mental structures of your city.
As, however, the object of my report pose iu this sense to review the Eeveral designs in regular order as they hang upon the walls, and to report mpon each, first, as to agreement, with instractions, and arohitoctural character, and estimates. WVith, regard to the last very important poiut I would, however, most carefnlly guard ogainst any misconception as to the limits within whicl, I have confined my examinatiou. I have not proposed to myself, and youz would not expect that I should undortake, the dity of a standing of the designs themselver underconable yon to form a more accarate judgment than'you otherwise conld, as to their proportionate costliness, I have mado a series of approximato calculations, which, while prohally sufficient for tbis purpose, must not in any sense, or in any case, he taken as representing ultimate expen. measurement and calchlation founded on careful hasis, it would indeo be onite ino uniform arrive at a proper understanding on this as has heen required for attein to thination many important points of difference might pos. maby important points of difference might pos. your ultirnate seloction of a design, these calca. your ultimate seloction of a design, tbose calca.
lations must not so far weigh as to detormine a choice. Each competitor who tells you that his choice. Each competitor who tells you that his
Trork, accordiug to the design sulunitted, can be exccuted within the designated limits of expense must be helicyed to be correct, until he is proved must be helicerer to be correct, until he is proved to be wrong ; and provided that in this particular monst in all fairness be allowed fnll opportunity mpast in
of proof.
The authors of two first.class designs state that they believe that those designs can be executed or the sum stipulated by the trustees, 'Fide. "Non hignoc signo mis and "Non ignotzo Civitatis Municeps,' of equal
beantr, to which, althongh its author adds no beanty, to which, althongh its author adds no xact estimate, my calculations will show, that if the first.named could be carried out for the required sum, this could certainly be done for much loss; and there is yet another, "Auld Lang
Sjae," of which, though he will not give any dofoite estimate, its anthor says that he has aimed at exeontion within the sum named hy the rustees.
If you select any one of these, or, indeed, any other design, the first test that mest he applied is that of cost ; and shonld the author of that
you most approve bo unable to find responsible you most approve bo unable to find responsible within the specified sum, or a moderate addition thereto-say, not exceeding 10 per oent, -your
must, in all fairness, put snch design aside, and mist, in all fairness, put snch design aside, and allow the next on the list to be similarly tested. I do not say that this is a rale that should mivays hold good, becanse a case of competition dosign, might be deemed worthy of its object, but that is not so in this instance; on the contrary, there is rather a difficulty iu the other
direction, and so many having done so well, the dirct ion, and so many having done so well, the
rulo should be applied with nuflinching sternness."
Mr. Chrisfian then reviews the various designs "Haring nows concludes:
cribed in detail, as loriefly as practicable, de remains for mo to respective designe, it only tions, and to state my own views as to the order of merit. In all such structures, and, indoed, it lies at the fondation of all really good architecture tho arrangement of the ground-plan is a matter of very priraary importance.
In respect of this feature, I can have uo hesitntion in ascribing the first place to the
desigu marked 'ris In hoc Sismo' desigu marked 'Is In hoc Signo' [Mr. Street]. I do not think it would be possiblo to design a the purnose iu view, is here shown. It is in every respect excellent. The plans of 'Non ignotro Civitatis Municeps' [Mr, Burges] and ' Fidelitas' [Mr. Alex. Ross], though worked
ont on different principles to the last-named, are
hoth also in most respects good. The latter nuch larger than the former, hat neither appears to have been so expressly dosigned for congreThey marposes as the frst I have desoribed. They may be considerod, I think, as about equal G. G. Scoti] plan of 'Auld Lang Syno' Sir protection for the doormays, which in your climate must, I think, be a nattor of necessity, and I think also it is iuforior to tho others alread noticed, in matters of detail, such as the pro visions for vestries and reneral communication In respect of phan, however, cach of the fore going designs must be deemed superior to either of the remaining two
In respect of solid goodnoss of construction, your instructions as to cost and what is desirable in a cathedral strncture do to some extent clash. There can be no doubt, I think, but that a clinrch vaulted throughout with stone is in many rospects more desirable, more solid, and neoessarily more snbstantial than one roof cd only with wood. Within the prosent oentury there have been two fires which have destroyed wood groining in York Minstor, aud during my exami nation of the designs, thero has occurred at Cantorbury ana lich Cantorbury another, Which servos rery strikingly to ilnastrate the protection afforded by ston My own judgment, however, accords with tha of the architects who have deemed it im practicable within your limit of expenditure to of the chooghoal the loftier and larger parts the churoh, hecause it is not only the actual reater solidity of the greater solidity of the walls, pillars, buitresses, the.; still, as providing for vaulting throughout, the design of 'Fidelitas is in this partioula most valuahle. The desirns marked 'Auld Lang Syne' and ' ${ }^{2}$ In hoo Signo' provide stono vaultiug for choir and transepts, and for the aisles ; and tho former, for the Chapter House also; but in each of these the nave is groined in wood. The design marked Non iguoto Civitatis Munioeps ${ }^{\prime}$ and $\oplus$ [Messrs. Peddie \& Kinnear provile for stone vaulting only in the aisles, the oftier parts of the church being wholy covere with wood; and in the design 'Essayez-moi, wood roofing is employed throughout.
In this particular, therefore, ' Fidelitas' stands first; 'sy In hoc Signo' and 'Auld Lang Syne' are respectively equal, and inferior only in the nave; 'Non ignotze Civitatis Municeps' and $\oplus$ are also equal in respect of this point, though the latter is far helow tho former as regards the
quality of roof substituted; and ' Essayez-moi' is in erery respeot the last.
As regards arohitootnral character, Fidelitas and ' Non ignotro Civitatis Municeps,' both are s heartiful in general design, that 1 think, in re spect of detail, it would be hard to halance their respeotive morits; bat, as a composition, whilst there may be, and I think there is on the whole partly for constructice reasons and for general solidty, more dignity and eathedral. like characte in the design marked 'Fidelites' ; yet there is not less beanty, whilst there is porhaps more general richness and picturesqueness of effoct in he eroa ignote Civitatis Munioeps., Both icher, and, to my mind, moro berutifal than hose of 'Fidelitas,' and the western front espe. cially is throughout a most finished and beautifn composition. As regards interior, also, excepting in the point of stone vaulting, which, con sidering cost, I helieve the aathor to be right in omitting, I must also say, that in my judg. uent the design of 'Non ignotem Civitatis Manicepss' is preferablo to that of 'Fidelitas.' The design marked ' In hoe Signo' is also one of great excellence in respect of detail, and alt hough perkaps more severo in its general character ro ellher of thoso first mentionod, jet it bined with in a bold and vigorozs style, com doubtedis, if executed, produce externally in dignified and noble resnlt, whilst the interior would be remarkably light and elegant, It is evident, from careful examination of the design, that the architect has in seroral points felt himself straitened by tho limits of the estimate, to which he has rightly ondeavoured to conform. as regards Auld Lang Syne,' the obsorvation ready mado in my detailed report will suffi. nd Iy show my riews as to gencral cill on this point, except to say, that if yon desiro to select the best design of those submitted, your choice must be limited to one of these forr.
As to plan, there can, I think, be no douht hatever; as to construction, all are good; and
way be room for difference of opinion, yet in my Twn judgment the design of 'Non ignotre bear awas the palm

## On the

ion of a desiot of cost, as regards the selec. mencement of this report will at the com ciently explain my views; hut on the pages which follow you will soo in figures the general result of a comparison of areas and onbical hulk, and approximete estimates of proportionate costliness deduced therofrom. You will observe in the valuation pricos, in respect of the chnroh, a somewhat considerable variation in the mult. plying figures. This result per foot oube has according to guantities, of the cost of a corre sponding portion of the buildiug in oach design, made on one uniform basis as to materials and labour, with such differences only as regards the latter as careful consideration of work to done, may have in each case dictated

The striking differcnoe between the work of fail to bo noticed. bat it chisefly lies inar cannot olidity of walls, tho massive fling buttro ond the ane renting thro hous the main builling ng the th have ventured
In couclusion,
lieve fasion, I would say, that having, as I believe, faithfully given you in the foregoing pages the result of much and very careful examination of the desirns submitted to your con. sideration, I trust that you may be guided to a sonnd and just decision respecting them. The opportunity is an important one, and the subject
demands at your hands the greatest possible demands at your hands the greatest possible
care and impartiality in forming your final judgment."

THE NEW BUILDINGS AT THE DISTRICT RAILFAY STATION, BLACEFRIARS.
Two prominent and striking blocks of buildings tho Blacl some time been in course of erection at District Railway, One is a hotel or restaurant erected over the superstructure of the station itself, the other is a number of shops extending in the direction of Queen Victoria-street to the bridge carrying the Chatham and Dover Railway over that street, and forming a quadrant. Tho first.named building is externally completed, with the exception of some gilding and orna. mentation of handsome iron balconies in the elevation, fixed pon the projecting stouework. The htock of shops, which when finished will materially improve the architectural appearance of the luoality, is in a lessadranced stato. Tho hotel is a strncture somewhat bizarre in character erected in the Oriental atsle of architecturo. is very lofty, being 80 fto in beight from tho street level to the parement, in addition to an Oriental minaret or tower at eithor end 50 ft high, the elovation thus baving a very commanding view of the Thames Embankment westward. The building, which is 80 ft . in width, contains within itself threo distinct stories irrespective of the ground floor forming the railway station, and will be approached at the north angle by a wido stone staircase which is carried to the top of the strncture. The elevation is faced with white Suffolk brick, the windows and genemal dressings being of Bath stone, white and blue iles, and dark rod bricks, being freely iutroduced into the elevation for decorative purposes Windows with Moresque horsoshoe heads are grouped on the several floors, the rance of wiu. dows in the third floor being areaded. Tho handsome ornamental railings and balconets ius ront of the second and third story windows orm a marked feature in the elovaliore rhen these are enriched by gilding and particlours the effect will be still more heightered The entiro ares of the floor aloge the raily tation is beiur fitted up a dining room the ccond flopr as affeo and smoling room; ana the third floor as a hilliard room, which we ; ander tand is larme plough to contain ton tobles all hess ierol roem tow bing all ratea in listinet coloure that in the dinum aned and the billiard collee and sin of rown grecn, Messrs. Spiers \& Pond have become stated that ofssrs. Spiers \& Pond have become the lessees dijoining, already alluded to which will form the Victorio-strect aro intended to be ornamental architectnral structures hermonisin to $a$ cortiol axtent with the building alreaty doribed although the eleration will bo considerably lower
the beigbt of this last-named blook being about 50 ft .
The architect is Mr. F. J. Ward, of Albert huildings, Queen Viotoria-strect;
Lacy, of Clapham, the contractor.

THE NATIONAL SAFE DEPOSIT COMPANY'S NEW BUILDINGS AT THE MANSION HOUSE,
Amonast the numerous large edifices which are at present in course of construction in Queen Victoria-street, the coatly buildiug now in progress for tho National Safe Deposit Company, on tho triangular piece of ground to the west of the Mausion House, merits a notico. This hailding, wben finished, will ho one of unusual extont,
involving an outlay of more than 30,000 . Owing involving an outlay of more than 30,000 . Owing
to the beavy character of the work in clearing to the beavy character of the work in clearing
away tbe eartbwork for tho fonndations, and the awnay tbe eartbwork for tho fonndations, and the
construction of the hasement and sub.basement construction of the hasement and sub.basement
now in progress, it will yet be some time hefore now in progress, it will yet be some time here
the superstructure itself shows above the gronnd level; but in tbe meantime we may state tbat the preliminary worl is actively proceeding, and that tbat portion of the hasement at the angle of Queen Victoria-street and tbe Mansion House, is considerably advanced towards completion. The building, which will contain tbree frontages, is intended, in point of architectural cbaractor and effect, to he equal to the several new structures in immediato proximity to it,

The site on which the new huilding will stand has a frontago to Queen Victoria-streot 121 ft . in leng th, 100 ft . to the Hansion House, and 100 ft , to Buckersbury; the whole covering an
area of about 6,500 superficial feet. In view of area of abont 6,500 superficial feet. In vies of building is to he fire and burglar proof, for the safe custody of nogotiable and other securities, safe custody of nogotiable to and intending to take in charge every tho company intending to take in charge every description of securitios, bud other documents; jowels, title-deeds, wills, and other documents;
guaranteeing the safety of tho same, wben reguaranteemg the safety of tho same, wben re-
quired, on certain specified terms. Tho strongquired, on certain specified terms.
rooms iu the interior of the building will be rooms iu the interior of the building will be
under the ground lovel, in the basement and suh-basement, at present in oonrse of construction, the sub-basement baving Alagged floors laid upon a thick mass of concrete resting on the London clay. Tho upper chambers will have firoproof floors, levelled up from the strong segmontal erches that form the ceilings of the rooms in the sub-hasement. The basemont chambers will alse have Greproof ceilings. Eacb strong.room will have four ranges of safe-racks, two of tho ranges being placed back to back on iron frames ranring along the centre of the room, and the otber two with their backs to the partition-walls. In order to give access to the ranges of safos, tbero will be a longitndinal paseago of 2 ft .6 in , wide between tbe rows. The oompany will have their own day and night watchmen; and from a patrol chamber ronnd tbe strong rooms each room may bo inspected at any moment.
The architect for the new huilding now heing arected for the compariy is Mr. Whichcord Messrg. Peto, Brotbors, being the contractors.

## HOUSE FOR THE SCIENTTFIC SOCIETIES

 A company is heing formed to provido improved house accommodation, on reasonable terms, for certain of the learned societics in London, with a capital of $40,000 \mathrm{l}$., in 4,000 shares of 102. eaob. Mr. William Nowmarch,F.R.S., is chairman of the hoard of directors, F.R.S., is chairman of the hoard of directors, and Mr. G. W. Hastings, deputy-chairman. The societies whiol have so far taken part in the discnssions and negotiations are, Statistical Society, Socinl Scienoe Association, Instituie of Actuaries, Tron and Steel Institute, Meterological Fociety, Iuridical Society, Anthropological Institute, Photarraphic Soclety, and Royal Colonial Institute, and several other societies are known to be favourable to tho scheme. The directors have good reason to believe that a freehold site and buiding adequato for at least twelve societies may be ohtained for about $35,000 \mathrm{l}$, and will show a rental of, say, 2,500l. per annum (to be obtained from societies paying rent in proportion to space ocenpied), and from otber sources. Afr. Thomas Bellamy is the arcbitect scheme should not be successfully carriod out provided a proper site he obtained. If they hury tbemselves in a hole in Westminster, as the

Architoctural Museum Committee, for examplo, have done, where no omnibuses pass, and to which you cannot direct a cahman with less tban a quarter

## LEICESTER MUNICIPAL BUILDINGS

 COMPETITIONThr Leicester Town Council bare again advertized for designs for their proposed New Municipal Offices. Surely this is very unjust to tbe autbors of the soleoted design in the formor competition (Measrs. T. Barnard \& W. Smith) Tbeir design was cbosen as the best by a large majority ( 27 to 17), but endeavours to bave the buildings erected on a different site altogether, if possible, have prevented hitherto tbis adoption. Now tbis alteration has been oarried, all the plans snhmitted in the former competition are uscless in tbeir present form ; hut this ourbt not to prejudice the successful competitors.
Heving fairly gained distinction in the original competition, and having produced tho hest design for a very difficult site, the Council ought in all fairnoss to appoint them as tbeir archiin all fairnoss to appoint them as ton archito suit the new site.

CHESTER FORKHOUSE COMPETITION.
In reply to the advertisement issmod by tbo guardians in November last, thirty sets of designs for the proposed workhouse have been received, and exbibited at the townhall. Tn followiug list of them has been prepared:-

and Cruizer, as she floated, till her keel rose inte daylight, by the five invention of Mr. Edwin Clark, C.E.
The lift consists of a double row of iron columns, eaob containing a bydraulic press; these hydraulic presses are simultaneously worked by a powerful steam engine, and their comhinod aetion is brought to bear upon a series of iron girders of great streagth. Over and on to these girders an iron pontoon or dook is floated, and upon this pontoon tbe ship is floated; snitahle blooks, adapted to the form of her bottom being provided upon the pontoon. Tbe hydraulic rams are then sct to work and raise the pontoon with the ship on it out of the water; the water in the pontoon is then allowed to ran ont of it, and tbe hoganey of the pontoon tben floats the slip. The pontoon with tbe ship upon it may then be emoved from hetween the lifting columns, and eplaced hy another, and so on ; tbiss the only limit to the docking power is the number of pontoons provided. Tho contractors who built he Clarenoe Lift were Messrs. Emmerson \& Co.
Lord Clarence Paget incidentally stated at tbo hanquet that Malta is lamentably deficient in botels, and that the population is increasing to an alarming extent. The last census shows that it amounts to nearly 124,000 irbabitants in a proportion of 1,200 to the square mile, being any conntry on tbo glohe; aud what is still more triking and appalling, is its rapid increase, sometbing like 1,000 in every year. There were proposals of emigration to India and the West indies, bat he strencously advocated tbe colonisation of the shores of the Moditerranean in the Arah distriet of Cyrenaica, - the ricb quondam rogion of "the gardens of the Hesperides." Arrangoments with the Araba, be tbought, might readily bo made.

## SCHOOL BOARDS.

London. - The Works Committee invited tendera for the erection of a school to proride accommodation for 1,167 children, on the site in Konnow-road, Southrwark. The list of tenders has already appeared in our columns. The committee recommended the acceptance of the lowest, tbat of Mr. A. Kilhy, of 193, Salmon-lane, Limehouse, E., amounting to 7,7602 . The committee also invitcd tenders for the erection of a echool to provide accommodation for 1,102 cbildren, on tbe site in Wornington-road, Chelsea. Tbo following are tbe amounts of tho tenders:- $G$. Stepbenson, 11,230l. ; J. Grover, 9,112l.; Adamsou \& Sons, 8,1951 . ; W. Wigmore, 7,4952 . The committee recommended the acceptance of the lowest tender, that of Mr. W. Wigmore, of Bradfeld House, Fulham, aumonnting to 7,495l. Teaders were also invited for the erection of a school t provide accommodation for $1,08 t$ children, on the site in New-road, Wandeworth, the amounts of which are as follow:-Gammon \& Sons, 7,563I. Nixon if Sons, 7,397l. ; J. Tyerman, 7,298l. Mryers \& Sons, 6,9927. ; J. Cools, 6,921l. ; Newman \& Mann, 6,930l. ; Cooke \& Green, 6,895l. ; Mars. land \& Sons, 6,895l.; W. Hirgg, 6,430l. The committeo reoommended tbe acceptance of the lowest tender, that of Mr. V. Higge, of Crown Works, Soutb Lambeth.road, amounting to 6,430l. The committee subjoined the amounts 6,4302. The committee subjoined the amounts of tenders received for the orection of a school to provide accommodation for 766 children, on the site in Hughes's fields, Deptford:-W. Higgs 6,5432. ; J. \& F. Coleman, 6,3892. ; J. Perry \& Co. 5,275l.; Cooke \& Green, 6,460u. ; S. J. Jermard 5,9742 ; F. Johuson, 5,950l. ; J. Cooper, 5,850l. The committce, in this case also, rccommended the acceptance of the lowest tender, that of Mr J. Cooper, of 221, Camherwoll.road, S. E., amount irg to 5,850t. The recommendations of th committee have heen agreed to by the Board.
Leeds.-The Sobool Buard bave decided to appoint an architect to superintend the orectiou of their schools, seron of wbich are to be iminediately proceeded with. The Board declined to alter the widtb of the schools to 22 ft ., as recommendod by the Education Departrbent There are already 10,259 scholars in the Board schools.

Carlisle. - Witb respect to alterations of plans agreed upon, M1. Mannah said tbat the committee had consulted with Mr. Birkett, and the alterations sgggested had been msdo. A draft plau, showing the alterations, was sulbmitted by Mr. Birkett and considerable discussion again ensued as to whether a covered way slould be made to the infants' effices, and whether part of tbe infauts' playgronnd sbould be roofed in. After various
suggestions, a memher asked if the boys' playground was to bo covered. Mr. Birkett: The boys are supposed to be hardy. Even in London
the Board only recommends covering for girls the Board only recommends covering for girls and infants, and they are generally bupposed to he 10 degrees softer than we are. -The girls' and infants' playground being virtually one, this was thought objectionable, and it was decided to divide them. With regard to the coverings, it was determined to crect covered sheds in the girls ${ }^{3}$ and infants' playgrounds, not in the boys'. Oue or two other alterations were made, and it was then decided to omit the dwelling house, whicb would not affect the symmetry of the building, and could be ercoted at any future time. Pernission was then given to Mr. Birkett to send a preliminary plan to London, and ask whethe he Department would sanction it
Worcester.--Dfr. F. A. Day, architoct of the now Board schools, offered rarious suggestions such as lowering the floor of the infants' class room 6 in., so as to rednce the number of steps; the construction of two skylights over the porch, so as to secure more light; the placing of lightning-conductor on the hell-turret; an alteration of the plan as regardod the coal-store so as to economise ground space; the insertion of two circular windows in the gahle of the girls rom; the laying down or heating-apparatus, \&c. Mr. Day submitted plaus of the new premises, and explained the improvements he suggested The cost of the alterations, iudependently of the extra cost of the heating-apparatus (occasioned yy the increased valae of iron), would be abou 1l,-Aldorman T, R. Hill said it was strange that, after all the pains they had taken to avoid having any extras, these propositions should he made to them. - Mr. Soott said he did not wisb o make any refection on their architect; but he should like Mr. Day to explain why theso things were not thought of before-Mr. Day eplied that it was an acknowledged fact in carrying out work practically that idens for mprovement suggested themselves which did not appear in the drawing.- It transpired that he principal part of the work connected with tho alteration of the coal-store had been alrend executed, Mr. Day explaining that he considered the alteration would be so great an improvement hat he had gone on with the work, in order thet the erection of the building should not be delayed. Several memhers of the Board os ressed their disapproval of being asked to sac ion any alteration after it hed been commenced or completod. A proposal that the surveyor' suggestions be adopted, with exception of the construction of a lightning conductor,- tho cost of the whole work not to excece 37l, 10s.,-was ohtaining the necessary to two. The subject of hot and cold water supply to the heating, and was discussed, and sion the board schoo advertiso in the local papers for tenders for tho oxecution of the work.

## IRON AND COAL.

Earl Dudiey and Messre. Barrows, who now lead the changes in South Staffordshire, hare announced that ordcrs for coals can only now be prices or at tho to special arrangement as to prices, or at tho prices ourrent at the time of diamonds no doubt far exoel his white ones in value, if they do not do so in lustre.
The leading iron merchants in South Stafford shire, by reason of the announcement just made to them on the part of Lond Dudley and Messrs: Barrows, have advanced the price of iron hy twenty shillings per tou
It is stated that in consequence of the highprice of conl, arrangements are heing made for putting ont of work nert week about 300 furnaces in the North of England iron district. This will be
The price of coals in London has been lowered hy is. to 1 s , per ton inore than once of late, and the various descriptions of Wallsend are now quoted from 40 s . to 4 ss . At most of the collieries in the neighbourhood of Chesterfeld coal has heen reduced by 3s. per ton on the pit's bank. On tho other hand, nearly all the South Durham colliories have again edranced their prices by 2s. Gd. to 3s. per ton.
South Staffordshire and anded meeting of the Coalmasters' Association, held Worcestershire thas been resolved hy a small meiority to give the colliers an advance of 6d. per day. The
price of coal was immediatcly afterwards raised 2s. per ton.
Mr. Stephen Gregory, of Brailes, near Shipston, hrickmaker, says that, having sunk a shaft upon his premises, he has come upon wat he helieves to bo indications of the prox mity of conl. Ho alleges that ho has "cut through an ironstone bed, and different heds of Fossi,, , and he invites inspection of the workings. Whitecliff Bay, Islo of Wight, is likoly to become a place of somo importance from the fact of large deposits of coal having beeu found there within the last few days. The shore of the bay is nsually covered with large deposits of sand and shingle, but the late gales have stripped it completely bare, and lcft cxposed a seam of coal extendiug in a straight line from the foot of tbe cliffs down to low-water mark (s distance of from 70 to 80 yards), and from thence out into the sea. The seam is from 6 ft . to 7 ft . in width, and has heen dug out by loca ishermen and others to the depth of 6 ft . with out any signs of exhaustion, but apparent widening as it deepens. In the cliff the sean appears to take an upward course. The coa appears to be of the ordinary character, frce from slate, and burns woll. Explorations will, no douht, be at onco made to ascertain its real ex tent. At present it can bo dug ont upon the shore with as little labonr as would be required to cut an ordinary drain, and the seam in the cliff could be worked, it is" said, at as little cost as chalk or gravel pit in the side of a hill.
Coal-cutting machines are coming into more notice than heretofore. The now coal-outting atent of Messrs, Gillott \& Copley, of Barnsley, consists of an improved mode of mounting the atter. Wheel. By the invention of Mr. Wm. K. to a horizontal Derby, the machino gives motion o a traveiling carriage with traversing gear for egulating the pressure of tho disc or saw duriag its revolutions on the face of and in cutting int the coal to bo worked.
In the Honse of Commons the other day the subject of cool in Ohina was alluded to. Mr . Akroyd asked the Uader-Secretary of State for Freign Aftairs if his attention had been called he competent arthorities that of 400,000 er China cover an arca of upward comparatively small area of 12,000 square mile in Great Britain ; if his attention ha ben alle a the report of Baron Von Richthofen, printed at Shanghai in 1870 and 1871 respoct, printe conl-hearinc prorinces, notably that of Shand oontaining some 30,600 square miles, with beds varying from 12 ft . to 30 ft . in thickaess, whilst the system of coal-bearing strata in this province was about 500 ft . in thickness, containing boside an inexhanstible sapply of iron ore; and asked whether her Majesty's Government, hy concerted action and in co-operation with the Powers who were parties to the Treaty of Tien.Tsin, would endeavour to negotiato a supplementary treaty provide for the safe investment of British and European capital in mining enterpriso and is connecting lives of railway, uuder proper safe. Lord Enfield said there was no reason to douht the accuracy of the reports in reference to the gaantity of coal in China. Indeed, they were confirmed by the reports of our own consals but with regard to the obtaining the sanction of the Chincse Government to the coal heing worked hy foreign enterprise, Sir Rutherford Alcock had usod his utmost endeavours, hut unhappily with out success hitherto, in this direction. He (Lord Enfield) conld only hope that, sooner or later the Chinese people would see their way hy their own industry and capital to develop these esources.

I KNOW A MAWK FROM A HANDSAW.' Sir,-If your correspondent " A . H." will con ult Richardson's Dictionary, under the word Heron" he will see all about the Hernshaw and why the man mnst have heen very ignorant of falconry-and in those days of most otber things-who "did not know the hawk from the hernshaw." He will see that Chaucer spells the word "Hernscwe" without the "h." It also appears in the not nncommon surnames Heam "Earnsha," Hanshaw," or "Henshaw," and heron is still called the hernslaw by suftolk, the coantry people coantry people, and the word probably lingers frequently seen.

## WILLESDEN, MIDDLESEX.

AT a recent mecting of tho Architectural Wsociation, a paper was read by Mr. F, A. Mary Willg a history of the Chutch of of the Regent's Park, and two miles from Wil lesden Junction) ; the details fathered from the muniment-room in St. Paul's (Tondon) from the records in the Augmentation Office (finll lists of the Church's roods, 5 Edward YI ), also from old wills, charch-rate books of the last centary, c. The church is of some interest (1) as an London, chureh of a small paris masses of huilding 1 (2) in cownerion with the pilgrimages to O (2) in connexion very popular fifteenth centrory (3) The huilding ion the some ood remains of little good remans and is but St. Erkenwal ( now represen (by St. Paul' worth of note $A$ charter of (925-911) 0 oron ( Villen give from forms or Church) and Willesden, then two his sor his sout. Long after that time the whole of horest, brok must hare been a continuous forest, broken only hy a fow cultivated openings and by spots whero the stagnant streams pre. vented the trecs from flonrishing. At such a point (the site of the present parish chnreh), on he edge of the forest and the edge of a wide marsh, a chapel or oratory was built for the twenty-eight families mentioned in the Domesday Survey. This was perhaps served occosionally by a priest sent trom the cathedral; or it may have been simply an oratory like that at Kilbarn, Some remains of this church (of Early Norman date) have lately heen found, and the font, long supposed to have been removed the early building. Tho by these portions of (abont buing . ne ghbouring church containing twines of still earlier work (Roman tiles, do.), was probably built on the same model, -a plain oblong struoture without aisles. This Kingsbury Churcb,-now sadly defaced and mutilated,-has never heen added to since it was first built on the picturesque little knoll overhanging the Brent, in the midst of primoval forest that stretched unbroken all the way to the Chilterns.
Mr. Food then traced the further history of the church and parish: mentioning the now church of the twelfth and thirteenth centuries complete in 12.23 ), the original charch remain ing, in his opinion, as the north aisle; - the firs appointment of a vicar about 1200 , 一the dilapidaion of the chancel as evidenced hy a petition to tho dean and chapter of st. Panl's about temp, Rich. II.; the lnilding of a new chancel, south. isle, and tower arly in the fiftoenth century: and the modera history, -the work upon it in 1851, and the recent additions. In connexion, with the relations with st. Pauls, it may be mentioned that about 1103 this parish was divided into two great divisions, each division subdivided into four prebends. To the west and north, Harlesden, East Twyford, Neasden, and Oxgate ; the other division comprising Willesden Brandesbnry, Mapesbary, and Chamheriain's Vood. These names appearing on the stalls in the cathedral, mixed up with names of well known places, sometimes puzzle people a little

The well-kuown populous suburb (threo mile from Enstow Station), was on the תluin St, Alban's road (thasto Edgware) in King Stephen's time. Fitzatephen (through in strong terms of the dangers (" Foivestephen speare, men -worse than either") that lursed in the forest im mediately beyond the environs of tho metropolis.
The road, in flact, after it had aseended the hill aboer
Killurn, called Shoot up Hill, descended into a dense forest, which continued the greater part of the way. The froma the savage part of the roser. Separated the civilised to malke up partics for the purpose of protection in passing these dangerous ronds. This of prould aftord time for offering up prayers for protection, and on arofo arrimal hank would be given. An orstory bad baen established
here by a hermit. This became the Priory of St. John
the Baptist. On the death of Jand (Grst wfo of Henry Y.) the Baptist. On the death of Maud (harst wife of Henry K.),
three of her maids of honour were the first nums, anó
buil ton built convent and church onder the auspicees of the Abbey
of St. Peter, Westwinater. As St. Yeter's and St, Paul' were alwaya nt variance, Te may underatand that the with jealous eyes ly the Dean and Chapter of St. Panl
resulting is the erection of the seco resulting is the erection of the second chureh at Willes,

of it.
who are not in the secret. At this (1103) time, these two divisions of the parish were completely separated from each other hy dense oak forest,
the acoms of which, according to Domesday, the acorns of which, according to Domesday,
wonld afford food for 650 swine. The chapel at Church End served one division, while no douht the neighbouring peasants of Willesden proper (thirty families, in Domesday) resorted to the oratory at Kilhurn,
western Hampstead.
The local pilgrimages of tho Middle Ages, Mr. Wood said, would form a very instructive and very interesting chapter in a history of the
national manuers. Thoy were supported hy popalar feeling, -not hy the nohle and rich. popalar feeling,-not hy the nohle and rich.
Curiously enough, the literature of the day con. Curiously enough, the literature of the day con.
tains scaroely any allusion to them, except tains scaroely any allusion to them, except
towards the period of their decadency, and then towards the period of their decadency, and then
all that is said of them is to their discredit, and condemns them both in their origin and consequences. In a list of tho goods of the
charch in 1249 , mention is made of "two large chnrch in 1349 , mention is made of "two lavge
scnlptured images of the hlessed Virgin." Along with the dedication of the recently completed Charch of the Viryin, an attempt was thus made to give her special honour. It is most prohahle that one of these was afterwards the miraculous inage of Our Lady of Willosden, placed in the north aisle (tho original Norman elureh), the proper position of the altar of tho Virgin being always on the north, to the right of tho high altar (to her son). It may well bo that tho puhlication of some well-belicved miracles either
originated or revived the pilgrimages, and produced a devotion, tho fruits of which helped to tho works undertaken to the church in the sfteent ecenury. But whateorer may hare been tho orinin, tho eacerasarer of thio eatly piezims

 hecame pleasant excursions into the country,-a and the stricter class (the great middle class) of the time, denonncing pleasores they did not care
to share, spoke of them roughly. They had to share, spoke of them roughly. They had
degenerated into fairs, such as any ono may see degenerated into fairs, such as any ono may see
now at the patterns of Ireland, or the Pardons of Bristany. The church profited by the gifts of thoso who attended, but the district suffered from the congregation of the idle and disorderly.
The pious, well - to - do farmer was not only The pious, well - to -do farmer was not only
shocked by tho profanity, but also disgusted hy shocked by tho profanity, but also disgusted hy the conduct of the pilgrims who came to the
parish to hreak down his hedges, steal his fowls, parish to hreak down his hedges, steal his fowls,
and set a bad example to his servants. This sort of sentiment liad quito as mach to do, Mr. Wood thought, with the suppression of the local pilgrimages as any religious motives. The image was destroyed at Chelsea, in the first or second year of Edward VI. (at the same and the north aisle, Lady of Walsingham") ; pulled down. The tradition in the parish is that nothing was suffered to remain that as it now stands, contains some very fair as it now stands, contains some very fair
hrasses; one of Bartholomew Willesden, in civilian dress, to the time of Henry VII., and his wives. "In these hrasses," Mr. Wood remarked, " if a', mar has hut one wife, hoth look out of the brass; when he has two, they are placed one on each side, looking at him." In the will den, prehendary of St. Panl's, and Chancellor of the diocese), now at Doctors' Commons, he desires that he may he haried -hefore the altar of the Virgin in his church at Willesden. The inscrihed hrass, depicting him as a vested priest, still remains in the church, -another relic of the destroyed north aislo-the aisle at last replaced hy the recent addition. In the discussion after the paper, allusion was mado to the three-light window, inscrted in 1851, at the west end; and the opinion expressed that there was sound reason for the almost universal custom of putting an eqnal namber of lights in west windows in the old time. By this difforence from the eastern end, a judicious distinction is made, which it is noither necessary nor desirahlo to ahandon.

ARCHITECTURAL DETAILS IN COMMON USE.
Continuing the ohservations on this subject, read at the Architectural Association of Ireland, Mr, E. Trevor Owen said,-There are many unnecossary and expensive things in every style an order which I think may he omitted with general
advantage and without prejudice to the main points of the composition, for a refinement of parts to such an extent as sometimes to be lost bing alogether, from the fact of their position the end in view; hut, whether in that case or not, such details as label mouldings, a repetition of moulded strings, too great an elaboration of hase conrses and plinths, and sometimes even he cornice itself, are amongst the numher that may, under many circumstances, he dispensed in, giving more consideration to well-halanced proportion, grouping, and outline of such portions general arrangement of the plan and this of the careful use of the materials pan, fail to produce materials at hand, will seldom But perhaps some one will satisfactory results. but perhaps sone one will say that this tends to he, my view of the subject However that may he, my view of the subject is to avoid meanness display as prodigality in design and attempts at display, prohahly produced hy Portland coment, rough stncco, plaster casts, and "machine-made" mouldings, sc., at per 100 lineal feet, superficial yards, or by the gross, as the case may he.
Do not nse ornamental
Do not nse ornamental details-I was ahout to say indiscriminately, or solely because the several kinds may have been found to he heautiful or very appropriato in this or that building, hut rather take calmly into consideration the varied circumstances and requirements of your work as they naturally occur, then, supposing that you have arrived at a just conclusion as to what will best suit those circumstances, show as plainly as you cen a reasonable cause for the mode of treatment adopted in cvery part of the tiona. In the use of scul ptured work, is it not objec Some to observe a good thing done too much lovingly worked out hy the carver (sometimes to the surprise of tho architect himself), and forthwith its effect is spirited away, or at least depreciated, hy too great a repetition, overlooking the fact that a single object or mere point of heauty in the right place will never weary or hecome common.
In our ordinary city houses, amongst other things capable of improvement, may be menand fancies displayed in. The peculiar whims and fancies displayed in some are decided ex amples of what to avoid. Of course, we have "Classic or less respect for what is called "Classic," but not when so distorted and mis placed, though dignified hy the name of portico as in the case where an order is crammed nnder a semicircular arch forming the ontward termination to an eutrance-hall or lohhy, from 8 ft . to 10 ft . wide, though composed of two unexceptionable columos, with entahlature to match, heautifully paiuted in imitation of what it is not, standing out from the plainest possible red hrick, "tuck-pointed," and most likely "raddled" front, accompanied hy inconsistently fplain rec. tangular openings in wearisome square miles of such fronts hy way of windows. Is not this a very faint but true pictare of our present repeated from to time appre see it entire satisfaction of all parties conce the at least so disfigured, it considerat , hecomes a somewhat serious consistent work in common things true and conbe seen and if in some providential palace to the college; and if in some providential way it does partially appear, whether it will be appreciated generally. Ve may have tried hard to helieve in the painted Venus of the late sculptor, Gihson, and not feel paint, not tho sculptured marhle), hecause this paint, not tho sculptured marhle), hecause this edecking and hesmearing otherwiso good work If we same objectionahe manner.
If we take into consideration the lahour skilled workmen in every hranch connected with huilding, and tho materials employed--frequently of a costly nature, -and the evident in. indifferen perseverance expended in many very indifferent designs, and compare it with what rightly direoth ane should find that ents been travagance had been indulged in, though quite unwittingly. Our plain duty would, therefore us lies the he the task of teaching as much as in disseminate the heautiful and true moro widely, but, in so doing, save also our clients' pockets
During the discussion which followed,
Mr. Longlield (hon. sec.), said that dentils are the use of triglyphs in Classic work may he accounted for quite as well as many features in

Gothic. We ought not to forget that it is from Classic art we have ohtained onr caps and hases. Pediments are a very natural form, provided always that what is behind them is not a sham. Architectnro in the present day is copied from What has heen done in tho past. Everything seems to lave been done already. If anything is to he done in the way of a modern or Victorian style, it mnst he mixture of the old styles, as in music with the same notes any amonnt of variety may he obtained.
Mr. John L. Rohinson said that he agreed with Mr. Owen that triglyphs in the Doric order were shams, heing an imitation of what they were not - viz., ends of timher or wood construction. As Courts Gandon's works-the Cnstom House, Four Courts, and Bank of Ireland,-none could deny the ahility with which those hnildings had beon treated, and with a freedom which might well he copied. Wall columns in Classic were, he con sidered, not to he deprecated when nsed for the only purpose to which they are legitimately adapted-as huttresses to strengthen a wall, and perform the samo function as hattresses in Gothic. As for iron construction, in New York they go so far as to form the framework of the huilding of iron hars nad rieders, and to hang thin slahs of marble, sometimes only 1 in thick in front, civing the appearance of a solid ashlar huilding : while in reality itwas a mere assa of iron without constructive troth As for the pitch of roofs ho thourht that ther should be high as posithle Ho thous as is hestored on tho Often in builings terial havo lat surfo heve have heen treated as the walls, with parti-colour or scolloped slates? or, hetter still, broken up with dormers, lnnettcs, or ventilators? He was of opinion that the grouping or outline of a hnild ing is of far greater importance than the detail As for the planer of our middle-class houses, from the earliest ages the hulk of the population ived in comparatively flimsy and plain dwellings. Ho considered that the very nnsatisfactory appearance of modern strect architecture was due to the fact that the houses were roofed parallel to the street, and not as they ought to he, at right angles to it, as wo see in old houses of the Queen Anne period in the liherties of Duhlin; the effect of the gahles, as they are vulgarly called A roofs, being most picturesqne and pleasing. No trace of the middle-class dwellings of the ancients romain, and it is considered that they must have heen very rude indeed, although the ancients have left hehind them such eantiful temples.
Mr. Mitchell said that he agreed with Mr Longfield that dentils were a beautiful form of ornament (no matter what may have heen their origin), somewhat analogous to the hillet mould ing of Gothic. He thought it would he an evil heing the bailding was disused. As for iron wonld rather say of material of the future, he wonld rather say of the past, as eminent engineers have discovered, that it will not bear exposnre to the weather. The iron hridges will not last half so long as the stone ones, and when he was generally known, the use of iron wonld, ke was sure, he discontinued. Iron is not, from the evidence of Captain Shaw, of the London Fire Brigade, a fireproof material; he would prefer a wooden heam to resist the action of hre. He thought that every one with artistic taste would not be sorry to see the last of iron in architecture, Mr. Owen might have laid greator stress on truth,--a truthful huilding
may he designed in any style.

## PROGRESS OF THE ST. GOTMTARD RAILWAY.

Tye Swiss Federal Council have sent to the different suhsidising Governments their first report on the progress of tho undertaking, from hich we ohtain the following particnlars.
In an introduction the report gives first the history of the foundation and constitution of the St. Gutthard Railway Company, the appointment of the council of administration ("Verwaltungsath"), as well as the election of the hoard of directors, at the first meeting of the council. Then follows the report on the raising of the becessary capital and details as to the financial combination, the names of the different hankers who formed the latter, and the proportion in which each member of it suhscrihed.
On April 2, 1872, the council confirmed tho elections by the hoard of the principal officials

Of the railway, who aro tho following:- If neer; Dr. Schweizer, of Zürich, first secretary of the board and the council; M. Kaltbrunner of Geneva, French secretary to the chairman of the hoard, and translator at the meetings of the comencil; Professor Zahringer, of Laufeubury clief accountant; M. O. Gelpke, of Berne, chief of the topographical sectiou of the technical same time, appointed M. G. Koller, of Winterthur, Bame time, appointed M. G. Koller, of Winterthur,
Federal inspector of works at the St. Gotthard, The board of directors was divided into three differeat departmeuts, of which the first, the political, comprisod the business of the railway, so far as it is of a political character, as well as its relations with the administrations of otber railways; also the constrnction of the railway, ( (Hith the exception of works aizove ground ("Fochhauten"), end the rolling stock, inder the direction of tho chairman of the board, Dr. Alfred Escher. The second department, under the superintendence of the vice chairman, M. Zingy, includes the mauagement of the finances, with the construction of the works above ground the tolls, and correspondenco resulting therefrom with other railways. The third depart mont, comprising tbo legal business of the company, the rolling stock and traffic, the adminis. tration of the local finances, the superintendence of the offices and buildings of the company, and tho correspondence connected with these sub
jects, is under the supervision of M. Weber.
The superintending engineer had already visionally entered upon his duties on March 1 , 1872 , and had set to work at once in forming
the necessary technical staff. More than 1,200 candidates applied, of which many were men high in their profession. Tha applications have not all been considered yet, but 100 persons
have already been selected, of which bulf are have alrealy been selected, of which balf are employed in the canton of Ticino; the rest partly in the cent
Lucerne and Uri.

The preliminary technical work could now a once be proceeded with. For this purpose, sedtious were formed in Lucerne, Wasen, Güschenen, Airolo, Faido, Bellinzona, Locarno, and Lugano, and those points were first attacked whoso texecution required a longer time, or which bod to be done by a certrin specified time. These preliminary labours adranced at such a rate
that already, in June of last year, the plans fur tbe large tumnel, for the stations of Gouschenen and Aurolo, and for tho lines fron Biasea to Langensee and from Lugano to Chiasso, could he submitted to the Federal Conncil and the cautonal governments. The Federal Council had already sanctioned the plans for the de. finitive direction of the axis of the tunnel and Göschenen cross-sections, those for tho station of tamel, for the heirht of the station of Airolo and the southern entrance, for tho execution of 100 metres of the tunnel from the morth and of 600 metres from the soutb, as well as the plans of the works of the firm of Sillar \& Co., at the bridgo over the Moesa, near Hellinzona, and at the tnnnel of Paradiso, near
The snrveys for the lines from Biasca to Langonsee and from Lugeno to Chiasso bad especially to be pushed forward, it boing the years and a half, reckoning from October 22, 1872; and the surveys are, indeod, so far and tbe works commenoed at once. The tracinc and the locality of the principal stations at Belbinzona, $\backslash$ Lugano, and Locarno, have been sametioned by the council of administration, and are only paising for ratification hy the govern. ment of the canton of Ticino. The surveys of Göschenen to below Airolo to Faido, and from gressed that the central bureau will be able in he conrse of this winter to work out the submit tbe definite plans. The staff at Ling to is ocenpied with plans. The staff at Lucerne to comnect the St Gottbard Roilmore with the Contral and North-East Railways. All those greometrical labours are fonnded on the level. jongs of MM. Benz and Spahn, hegun under the supervision of the Federal Geodetic Commis ion, at the instigation of the Gotthard Com mittee, in 1869, and completed in the course of 15. The details of these interesting works Hirsch and Plantamour, directors respeotively Hirsch and Plantamour, dixectors respeotively

The very extensive and difficult works for deter. mining the axis and height of the tunnel and the altitudes of the two entrances were bogun hy H. O. Gelpke in 1869, continued during 1870 , and completed in 1871 . The notices of the separate deterninations and triangulations of the expert an idea of the magritude and difficulty of the work. According to them, the two exireme points of the tunnel at Airolo and at Guschenen are 15,568 metres 616 millimetres distant from each other. The exactitude of the works and of tho calculations leave nothing to bo desired; hut xis to a second test by means of staking of the tbe pround and astronomical verification ding out be ground and astronomical verification during con'se of the coming sumner. The direction $0^{\circ} 55^{\prime} 30 \cdot t^{\prime \prime}$ tow deviates from the moridiau The Gotthard 30 " towards the west.
The Gothard tnnnol will havo in its cross. section the same dimensions as the Mont Cenis cunnel. A later slicht alteration of the axis, causing tho same to come nearer to the village of dirolo, will offer many advantages, amongst The station of protection against aralanches The station will be erected on the mealows he The same is the case with the river Ticino The same is the case with the station at Güschenen, which will stand in the angle formed
by tho two arms of the Reuss named respectively by tho two arms of the Reuss named respectively
the Gotthard and Göscheuen Reuss. The latter the Gotthard and Güscheuen Reuss. The latter station will have a length of 480 metres, tbat at Airolo of 700 metres. From Göschenen downfall will be $2 \overline{3}$ in $\%$ from Airolo to the precipices of Stalvedra the fall is a little less. The stipulations of the comvention of October 15,
1869, have been strictly observed : is regards the height of the tamnel ( G netries to 8 metres, by a width of 7.60 metres), the defnitive project is More favourable thant that of tho survoyors, Mar. Beckh and Gervig, wlich served as the two lines of rails, and will be stranicht will have exception of als, and will be straisht, with tho leugth of 1.55 metres, near the sontbern entrauce, which connects the axis of the tunnel with the axis of the Airolo station. The tunnel itst lf has a length of 14,900 metres, and its greatest elevation above sea-level will be $1152 \cdot 40$ metres, 14 stead of $1163-33$ metres, the maximum elevation allowed by the stipulations.
efinitie the juno of last year the works were保itively begun, to permit of the tamneling all, proceeded with. The stone hitherto met with is a hard and closo gneiss-granite with a course strongly tending towards the soutb.east in a direction from north.cast to sonth-west. is presumed that this rock reaches as far as Uruerloch, a distance a littlo over 2 kilometres. Rails have been laid down for the transport of material to the workshops, and the brickwork for the repairing aud eugine sheds has been finished. On the lst of July the works at Airole were taken in hand, and M. Farre began his operations on September 13. By November 30 91 metres, $i, e$. on hoth sides of the tunne 96 metres, As far as 36 metres, earth mived with sand and gravel, with partial percolation of water, was met with; then came ahout 29 metres of layers of limestone, with considerable aflinx feldspath. An exact description of the gealugical features of the work is to be published.

The Alpenpost, in a communication from tbe superintending engineer, furnishes somo details of the geological formations met with up to the present timo in driving the tunnel. Their featares are much more simple on the north side than on tho south. At Göschenen, in the fore outting, granitio gneiss was met with; at a distance of 26 metres a layer of chlorite was cut dry, and while town ceased. Tho rock is quite dry, and While towards the surface it shows two conchoidal firactnre. At Airolo, on the south however, rubbish of a moraine-like nature seemingly resting on peat, was first cut throngh yellow gallery then runs, at 10 metres, through sum huestone; at moctres throngh gyp metres, metres, throngl talc and mica-slate; and still fimilar debris of rock, magnesian hmestone and lebris herrs of rock; at 80.7 metres a bed of debris heing entered, the affux of water, whioh carries into the gallery debris of mica-slate and quartz.blocks, was 30 litres per second. After had been ent through, easily crumbling mica.
slate was met with, which, at 100 metres ncreased in compactness, and showed altcrnate soft and hard layers. According to calculations the outflow of water at the month of tho tunnel amounts to 37.5 litres per second. At 34 metres from the entrance, in widening the gallery, 14 metres under the surface, another bed of peat anderneath moraine debiris was fourd; it con. baiued well-preserved remants of wood, probably of the birch. Collections are to be made of the different kinds of rock met with at every 100 metres, or in places where the ature of the ground suddenly changes, cahical pieces are to he cut out, numbered, and provided with labels showing at what distance from the annel entrance they were to be found. They will he inspected by experts twice or three times uring tho year, and then sent to the authorities Berne, who will forward specimens to the niversities of Zärich, Berne, Basle, Berlin, Tilan, Rome, and Florence. The villages of Alort and Airolo will also each receive a com. plete collection. At both entrances of the tannel, hesides, a list of theso stones, with number, kind of rock, date of cutting, distance from the tunnel entrances, name, layer, and temperature of the rook, as well as that of the springs found, and matiematical notices relating to the construction of the tunnel, will he placed. Meteo. rological iuvestigation will also be instituted during the progress of the works.
As regards the granting of the contracts for adds thnelling works to M. Favre, tho report Coun in reasons which determined the Federal ounch in choice. The conventiou which the bliga coucluded is in accordance with tho bigations undertaken towards the subsidising assed, as well as with tho different resolutions the con hy the lederal Council in this matter tages from furtber offers all possible advanand financial point of vion, the more favourable tban thoso of all other com. petitors; and the character and positiou of the entrepreneur offers all desirahle gnarantees. The Italian Govermment, it is to bo hoped, will hy this time havo beon hetter informed by the report of the Federal Council than by the come plaints of interested engineers.
The first yoar of operations for the great work has heon fixed by the Federal Council from October 1, 1872, to October 1, 1873. After the lapse of that space of time, the Federal Counci? is obliged, hy the 17th article of the Interrender acoount to the contracting States of the money spent in the construction of the railway. Later advices state tbat all difficulties raised hy the Italian Government have been removed and the programme has been accepted. Ar agreement satisfactory to both sides has beon come to as to the acquirement of the boring and tunnel. from the the following additional data first year. It is intended to employ at both ends of the tunnel, boring eneines of at both power than those used for the Mont Cenis tunnel to be driven by encines of 500 . Cenis tunnel, the north end, a waterfall of the river Reuss, near the entrance to the tunnel, is to drive turbines; and at the southern side the waters of the Val Tremola will have to perform the same fuuction futction. Hotive powers, such as were employed St. St. Gothand. The contractor considers it possible, with an expenditure of two million francs, to complete his preliminary arranyements by able froin the able, from the lst of Junuary, to proceed with the work at the rate of 100 metres per month, at each end. The estimate for the first year is as follows:-1. Machiuery, touls, preparations of all descriptions, 2,000,000 fr. 2. Tunvelling: direction levels at Airolo, $1 \mathbf{1} 5$ metres, at 1,500 fr: por metre, $217,500 \mathrm{fr}$.; horing of 1,800 metres of the principal tunnel, at 2, $800 \mathrm{fx} ., 5,152,000 \mathrm{fr}$. walhing, according to the difforent sections the report, $1,458,050 \mathrm{fr}$. 3. General expenses of administratiou and preliminary work for 1.840 kilomotre, at $97,000 \mathrm{fr}$. per kilometre, $178,480 \mathrm{fi}:$ Total, $9,006,030 \mathrm{fr}$. According to Art. 17 us Con above-mentioned convention, the Federal Connoll will give notice at the end of the first jear to the subsidicing States what sum has cetnally been expended. At the same time, the ninth part of the third of toe subsidies, payable in equal yearly portions ( $28,333,333 \mathrm{fr}$.), will be due to the amount of $3,148,148 \mathrm{fr}$. Total, $12,15 t, 178 \mathrm{fr}$. This is 113 per ceut. of the whule subvention.

immanuel church, samaden, switzerland.-Messrs. George \& Vaugean, Arceitects.

IMMANUEL CHURCH, SAMADEN, SWITZERLAND.
Ter question of designs for Mountain Chapols being at this moment on the tapis, we make it an opportunity to give an illustration of the
picturesque little church that has lately risen picturesque little church that has lately risen upon the granite heights of the Upper Engadin. Two years ago, the English who were filling the hotels at the pleasant village of Samaden,
found no better place for their Sunday service found no better place for their Sunday service
than the ooffee-room of Bernina's Hotel. At the saggestion of the Rev. Stenton Eardley (then staying at Samaden), M. Bernina gavo the site, some materials, and a donation towards the
erection of an English church. The buildingfund (abont 1,200l.) has since been raised eatirely by the exertions of Mr. Eardley, and the work was paid for by the time of the consecration last summer.

Messrs. George \& Vanghan wero consulted as architects, and they have designed a bnilding quite in harmony with its position, Being $6,000 \mathrm{ft}$. above the sea, and a day's journey from any town, skilled labour was hardly to be had ceredos which has recently been set up in The low walls are of granite, quarried from the Gloucester Catbedral, from the design of Sir from a very excollent photograph, the production The low walls are of granite, quarried from the Gilbert Scott, and at the cost of the munificent of Mr. Abraham Thomas, of Gloucester.

the new reredos, gloucester cathedral.---Sir G. G. Scott, R.A., Architect.

## ARCHITEUTS AND DRAUGHTSMEN

Sir, 一That the arehitectural profession, common with nearly every other in this country which tho members of that profession will prowhich tho members of that profession will pro-
bably be, for the most part, the last persons to bably be, for the most part, the last persons to
contradict. Certain movements, partly con. contradiet. Certain movements, partly con.
nected with aut, partly with ecclesiastical feel. ing, gave no doubt a great impetus to the prac. tice of architecturo during the past thirty or forty years, and brought many workers into the field, a considerahle proportion of whom have mado what is called "a good thing" of it. The profession has acquired 乞 higher status, in some points at least, and a greater popularity; and,
as in nealy all such cases, tho re-inforcement of as in nearly all such cases, tho re-inforcement of its razks has proceeded in a moro rapid ratio than the increase of professional work. The superfluons number of rectuits, who we
able to find for themselves a separate nexion," wido cnough to establish a busiuess upon, fonnd an outlet for thoir ahilities in assising those more able or more fortunate per accumulsted more worle than they accumulated more work than they could carry tural draughtsman became alnost established as a recognised branch of the profession. For sonne time past, however, there have not been has become izconveniently crowded, bringing has become inconveniently crowded, bringing
with it the usual and well. known results of an excess of sapply over demand in any department of human lahonr. In the present day, it seems almost equally a natter of course that those who find those resulta affecting them, in the usual shape of hard work and low remumeration, should hethink theuselves of the modern weapon of
combination, which has been handled with such combination, which has been handled with such
effect in some of the lower strata of the labour sarket, in order to better themselves. Hints, a all crents, are baudied aboutwhich indicato tha this ider has suggested itself to the mind of architectural dranghtsmen. We hear of comparisons iustituted between the incomes obtain. able by architects' assistants and those realised by mercantile clerks, who occupy the same relative position in regard to their principals; and
the hasty inference drawn is, that tho latter the hasty inference drawn is, that tho latter have only to league together, and to stand out It oir own terms.
It may be hoped that so unphilosophical view of things is not likely to be widely ac cepted by a body of men possessing a fair average of education and culture. It is impossible $t$ salary of the meroantile clorks and of the ot tect's assistant, conld seriously be adduced as a basis for consideration, without any recognition of the vast difference in proportion between the average trains of the primcipals in each caso And it is scaroely possine hat the evils and Lisks to all parties, atteudant upon any combination for the purpose (to use plain English) of raising wagos, can need to he pointed ont, at this time of day, to any but the most
unthinking. But there is a point of viery in unthinking. But there is a point of view in
which the draughtsman bas a cause of complaint Which the draughtsman has a cause of complaint defect in the professional system, and which defect in the professional system, and which might be curable, withont recourse to attemptsat
artificial modifications of the scale of remu. deration.
There are, in fuct, though not, perhaps, in name, two very different classes among those tice. Those who merely profess in large prac. tice. Those who merely profess the practical
operation of drawing plans, -that is to say, of assisting the axchitect in framing the necessary instructions to the contractor,--are fulfiling an ordinary and necessary part in the division of labour, and stand to the architect in the same relation in which the operative bricklayer, masom, or joiner, stands to the contractor but not headwork; and the fact of the arohi tect delegating it to other hands in no way afiects the ultimate result for which he is re. sponsible, and for which he is paid by his client But there are now a certain number of men in the profession, ranking as architectural dranghtsmen, profession, ranking as architectural dranghtsmen, who are really suhurdinate architeuts doing headwork, designing, de., for and in the name of their principal, who has not time to doitall himself. The principal, who has not time to doitall himself. The mere draughtsman occupies, as 1 observed, no
anomalous position, but a perfeotly natural and anomalous position, but a perfeotly natural and
ordinary one, having its oounterpart in every ordinary one, having its oounterpart in every
other department of labour ; and his remuneraother department of labour; and his remunera-
tion, unless he tries the dangerous experimeut tion, unless he tries the dangerous esperimeut
of (temporarily) raising it by combination,
must be regulated hy the nsual laws of supply and deraand. But the assistant arohitect is, on the contrary, in a somewhat anomalous position. He is supplying, in fact, at a greatly reduced cipal is remuneration, tho work for which his prinprincipal and with the merit of which his ture really is, is $I$ hy credited. Now, it archies art, and not a mere businees, this certainly is a somewhat anomalons position, and the re sult is unsatisfactory. The public do not get what they really pay for, i.e., tho skill and Songht of the eminent architect bimself; the for as architect pives thought and ability, 80 for as they go, without getting any credit for bnbly suffers, either from the inferior ability, or from tho necessarily inferior interest in, and re. sponsibility for the work, on tho part of the assistant.
am not necessarily blaming any one; still less am I taking up the cudgels for the assistant architect as arraiust the principal. The arrangement is a habit we have adopted, and it is
probably adopted in general as a mat ter of course probably adopted in general as a matter of course
by both sides. What, it may be asked, is a man by both sides. What, it may be asked, is a man to do, who has gained such a reputation that he is entrusted with more worl than he can desicn and overse personally? Is he to lose the advantage of his superior ability? By no moans. Somebody onght certninly to pay hin for his puperior ability: and this "somebody" is the it. There is a standard of 5 per cent., below which certainly think the architect's remuneration should unt fall (unless in some very excentional cases) ; worl which is not worth that is pretty sure to be bad. Bnt if an architoct acquires snch a repntation that more work is crowded on him than ho can attend to,-if, in any other words. tho public prefer to employ A. rather than B., C., or D.,-the plainest conrse open to A. is to raise his terms. This would bave one of two effects; it would either enable him to remunerate his assistants adequately, or it would et free the surplas work, which he could not personally undertake, to be carxied out, at the ordinary rate of remuneration, by those who at present work as his assistants at much less than hat rate, and without the credit due to them for their work. There seems no more reason why an architect should not take this means of making capital out of his superior talent, than why a painter should not.
The result to the pocket of the eminent architect would be much the same as at present; the result to his repntation probably better; and he would have the satisfaction of reflecting that his supexior abilities were paid for not by his humbler brethren, but by the publio who have the benefit of them.

A Provinctal architect.

## RAILWAY MANAGEMENT.

The subjeot of railway management is certain for some time to come to occupy a considerable degree of puhlic attention. Government natu. rally shrinks from incurring the responsibility of taking such on enormous increase to its burdens as the management of tho railways of the United Kingdom, the control of 800 millions sterling of capital, the administration of the affairs and direction of an army of 300,000 specially educated, experienced, and trained oficers and men, and the exeroise of the rast kind of power for which cormments whish breath may make or nnmako, are in the nature of things masuited.
Short of the purchase and alsolute control of the railways and canals of tho kingdom, however, there appears to he a growing opinion that the State authorities should possess reater degree of power in the direction of these moces of vational communication than lias been hitherto exercised, and the manner in whioh ench power is to be employed is set forth in the Rail way and Canal Traftio Bill that has been pre pared and bronght into Parliament in the present session by Mr. Chichester Fortescue, President of the Board of Trade, Mr. Childers, and Mr. Arthur Peel.
A prominent feature in the Bill is the appointment of a permanent tribunal to exercise urisdiotion in railway affairs, such tribnnal to consist of not more than three commissioners and two assistant-commissioners. The salary of the chief commissioner not to exceed 3,000 .,
of the other commissioners to be not more than

2,000l., and of the assistant-commissioners not more than $1,500 l$. per annum each respectively. One of the commissioners must be learned in railway and other departments of law, and nother ruast have railway experience. The commissioners mayy sit at such times and places as they may think proper, either separately or ogether, and in open court or with closed doors. They are to have powers to detormine differ noes between railway and canal compenie and to exarcise, by trensfer, certain powers and duties in relation milways that powers and cised by the Board of Trade. They will have jurisdiction in questions of through rontes, and heapioin of rates of begn and and will be the of races as belo the Postmaster-General and the rail blwo panies in ter-General and the ralway companies, in the matter of carriage of mails. commissioners powers are to be exercised hy the commissioners, aud certain new duties are imposed by the Bill apon railway companies. One of these is of an extraordinary character, and can only be carried into effect by the expendi-
tare of an enormous amount of work. The tare of an enormous amount of work. The
eleventh section of the Bill provides, that every eleventh section of the Bill provides, that every railway cormpany and canal company shall keep, at each of their stations and wharfs, a book or books showing every rato chargeahle for the carriage of traffic, other than passengers and lud luggage, from that station or wharf, inlading any rates charged under any special how mut. Every such book shall distivguishi the traffic each rate is for the couveyauce of therein tolls for the use of the railway or canal for the use of carriages or vessels, or fur lacemotive power, and how much is for loading and unloading, cosering, collection, delivery, and other expenses ; and the entries in sucb books shall be made in such form, and contaiu sucb particulars as the cornmissioners mny from time to time, and on the application of any person interested, and for the purpose of insuring publicity, direct Suab purpose of iasuring publicity, direct. Such books are to be open for inspection without the payment of any fee.
Penalty for noz-compliance with this require. ment may be five pounds, aud "five pounds per day for every day daring which the offence continues." Analysed traffic rates may be possible for a limited selection of stations, hut imposing such analysed rates from every station or wharf to every other station or wharf, is imposing a burden too heavy to be borne.
The Association of Chambers of Commerce is taking action in another direction in relation to railway management, and there have been thrown out for consideration of the Chamber numerons practical sugrestions, having regard, mainly, to the prevention of accidents, few serious accidents have occurred through the breaking of coupling chains, and it is suggested that Government should be asked to prescribo a more efficient system of coupling wagons and carriages. Improved fastenings for carriagedoors, such as are in use on many Continental railways, to prevent passengers from falling out are also recommended; also, to protect the publio from fraud, that the fares be printed upon railway tickets ; that tickets should be issued for at least ten minutes before the time appointed for the departure of each train; that the hahi tual crowding of third-class passengers into first and second class carriagss should be peremp torily stopped, and that every compartmeut prominent notice of the of persons it is constructed to carry. These and other suggestions will, it is expected, evoke resolutions or expressions of opiniou from the
conference of the Associated Chambers held conference of the Associated Chambers held
in London during the current month,

## CAUTION TO HOUSE PAINTERS.

Brown v. Smith.-This action, in Westminster County Court, was brought from the Court of Queen's Bench, by order of the Judges, under recent Act of Parliament, notwithstanding the damages were laid a.t 500l. as compensation, nnder the following circumstandes:-
The plaintiff is a painter, and on the 20th o September his wife, whilst passivg the defend. ant's place of business, in Marsham-street, Weat minster, was knocked down and severely injured hy a shutter, that had been left standiug ontside by some house-painters ia the employ of H : Allen, builder, of Gieat Smith-street, West minster, who had the contract to paint the defendant's shop. An important question to builders arose as to whether the painters
hutters were placed by them in the street, or the servants of the contractor Allen; and, as will be seen, Mr. Allen has only escaped bein wade the defendant by the skin of his teeth. Mrs. Brown deposed, that at the time in ques tion she was passing the defendant's shop, which was being painted, and the shutters were standing against the wall on the public footway. The her, knocking her down, hreaking her collar bone, and injnring her to tho present time. A surgeon from the Westminster Hospital deposed to the serious injuries sustained by the plaintiff, and considered it would be two month
berore she could follow her former livelihood.
Arr. Allen, the builder, stated that he was but veitler be nor any of his men had anything to do with taking down or patting np the shntters, althongh they bad to paint them. On the day of the accident witness's men certainly took them down, but under the direction of the de fendant himself, and placed them arainst the fenda

One of the painters, named Neal, swore that on the day of the accident they were not painto the shutters, nor did they require them to be placed aganst the wall. They had been fendnnt's request.
The defendant's counsel urged upon the jury that it was the builder, Allen, who ought to have that it was the buider, Allen, who ought to have client, as it was cntirely owing to the job and the painters that the accident ocourred. His client deeply regretted this accident to the poor client deeply regretted this accident to the poor
woman, althongh hor lusband had tried to ruin the defendant by demanding tho exorbitant the defendant by demanding tho exorbitant
sam of 500 , for compensation. Mrs. Brown was sam of 500 . for compensation. Mrs. Brown was
clearly wrong in suing the present defendant, clearly wrong in suing the present defendant, and he trusted the jury would direct her to apply for compensation to the builder; Allen. It
could not be said that the painters who caused could not be said that the painters who caused -they were Allen's men, and Allen was
answerable for his own men's negligence
Mr. Smith said he entered into a centract with Mr. Allen to paint his shop, and had nothing whatever to do in giving orders to the painters The shutters wero taken down by Mr. Allen withont his wish or instruction. He did no witness the accident, and the first he heard of it was, whilst picking up the shitter, a mar said, "Ah, you are taking more care of your shutters than the poor woman. The shutters were usually kept in the shop, but they were placed outside tho slop hy Mr. Allen's men. Another shutter had blown down previously. When the
accident occurred, the painters bad left off work, accident occurred, the painters bad left off work, and were not present.
James Young, in the employ of the defendant said Mr. Allen's men directed him to place the shutters against the wall, as ho supposed, to paint them.
In cross-examination, this witness said Mr. Allen's men did not tell him to do so on the day in question, hnt the day before.
The Judge ruled that if the jury believed that the shutters were placed on the footway hy order of the defendant, he was liable; but if the painters placed them against the wall for their own convenience to work on, then Mr. Allen would he lialle. The damages, laid, however, appeared excessivo for a little trades man to meet.
The jury gave a verdict for $\mathbf{1 5 l}$., and the Judge awarded costs only on that scale.

## THE ART CLASSES.

At a meeting of the joint committee of the architectural art-classes, held at the rooms of he Royal Institnte of British Architects, on Thursday, the 13th inst., a resolution, of whic the following is an outline, was passed:-
"Looking back upon the efforts which have been made,
thoug it cannot be said that the thenefit to the students
has heen stuch us wus boped tur set the result has been stich 43 wha hoped fur, yet the results as regards the excess of working expenditure over the receipts from
fees of ithe student have not been worse than our calea-
lations have led us to expect, nor than can be fairly looked lations have led us to expect, nor than ean be fairly looked
for in the future. These efforts have resulted in a loss or in the future. These efforts have resulted in a losa
Which falls upon the members of the cominittee. Wo are Which falls upon the members of the committe
therefore reluctantly obliged to discontinue ou
carry on the classes as at preaent constituted.

Arrangements were made to facilitate the carrying on of classes for the study of the living model and the practice of Digule design for architectural purposes, for which a class, pro. very ronote period, in accordance with the rules of the Architectural Association.

For the present, therefore, the profession has nothing to show as a result of all the discussions and lond demands made for the artistic training of the finture architect beyond a few stools and easels, and a disused room at the Architectural Musenm.

Thomas Henry Witson, Hon. Sec.

## ENLARGEMENT OF THE WATERLOO

 RAILWAY STATIONThe South Western Railway Company are ahout to effect a considerable enlargement o their Waterloo Station, with tho view of afford ing additional accommodation at that part of the station which is set apart for tho traffic of the Richmond and Windsor section of the company's lines. For this purpose they are taking steps to purohase land and buildings on the north side of the prescat terminus, the increased area which they are endeavouring to obtain heing upwards of an acre in extent. The powers to purchas this land and houses for the purposes stated are amongst thoso for which the company are apply ingito Parliament in the present session, and the Lambetli vestry, having had the company's application under their consideration, have consented not to oppose the Bill hefore the Parlin mentary committee, providing that the company until the proposed new station buildings ar bronght under rating by the overseers.

## THE SCHOOL BOARDS AND TECHNICAI

 EDUCATION.The Liverpool School Boards are entitled to the distinction of initiating a movement to com. bine with the ordinary primary education of the olomentary schools that technical education the co is so essential to the future artizans of he country, Having appointed a committee to consider certain proposals concerning this sub ject, the following report has been drawn up and agreed to:-That it is of great importance in a national point or niew to impart at least the ele ments of sound scientific knowledge to tho futur artizans of this country, in order, as far as pos ihle, to qualify them to competo, on equal ground, with the same casses in Continental ations. In referonce to the following further proposals, siz.:-1. That with this object, and considering tho large numher of elementary schools in the borough, it is expedient to con stitute a department of technical educatio nnder a competent liead, by whom the masters, assistent masters, and pupil teachers should he ormed into normal classes, wherein they may bo qualified for giving lessons to their pupils. That the head of the department shall give periodical lectures, illustrated by expermments hring each school regularly under his instruc ions. 3. That when special aptitude or tast or scientifio knowledge, is manifested hy any onpils, either as the resnlt of the lectures or oherwise, such pupils shall bo formed int pecial classes, and further instrncted in such subjects as appear most suitahle for their in. ended trades. 4. That in order further to xtend elcmentary scientific knowledge in the horough, the several denominational schools may participate in the hanefits of the department in such a manner and on such terms as may be arranged between the School Board and the local managers. it was resolved that the clers be instracted to forward a copy of these proposals to the Education Department, and to in quire how far, in the opinion of the Department, it is within the power of the Board to carty the same into effect

LOAGEORD CASTLE, NEAR SALISBURY. Rarnor, and to which we have before $\mathbf{r}$ ferred as the home of the worns hy Holbein now oxciting interest in Burington House, is in coure of completion under the direction of hr. Salvin, ir. Ockley being clerk of the works. The whol of the work has been intrusted to Mr. R. Futcher contractor, Fisherton Works, Salisbury. The arving bar heeu execnted by Mr. Alfred C hemm, of Petersfinger, Salisbury
The county Mirror gives some additional par iculars:-The south-east tower forms now a par of the new drawing-room, which is 19 ft , high 7 ft . wide, 56 ft . long, with an apsidal termina tion. The walls to the height of 4 ft , are
panelled in ook and walnnt, moulded and polished. The floor is of oak, rubbed and polished. The entrance-door is surmounted with an coriched entablatnre, supported by columns with carved placed On the fascia hetween the caps will he placed, carved in oak, an ornamental shield beartwo Cupids, festooned with frvit and fowers The ceiling is of Elizabethan desirn in plaster work. The room is approached from a corrider with a vaulted and enriched ceiling, supporterl by polished Devonsbire marble columns On the right of the corridor you enter the diningroom, which io an apartment of some 19 ft by 21 ft ., and 19 ft iph that of the drawing walls, to the bight 16 ft fiter with one panelling, surmounted with a cornice, supported at intervals with pilaster columns with carved caps. The faces of the pilasters are covered with carvint, representing is masks, hung with fruit and flowers, Pan, Bacchus, and Silenus, with their attendant Satyrs and Fauns, some tiventrone ir numher; and also a mask of Medus The chimner piece is of carved white stone. We understand that there will he a large picture-gallery.

## DWELLINGS FOR THE WORKING CLASSES.

Is the course of a lecture on Dwellings fom the working classes, mertioned in our last, Dr. Hard. wicke said his views were that in a block of build. ings with arcommodation for about 100 families there should be various scales of residences, and many dormitories for singlo persons of botli sexes, under supervision; shops on the ground. floor; and, what was very essential and never thought of, workshops for various trades on the top floor, airy and well lighted, to render unnecossary the use of living-rooras for the purpose. These residences would be disposed round an internal court, glazed over, like those of tho great hotels in Paris. This would form a playground for children. In tho basement there would he a common kitchen and batbs, sud separate spaces for coals, peramhulators, \&c. At the rear, reached under cover, would he common laundries and drging-rooms, and a hall for meetings, or clab-room, with committee-roon. Common reading, smoking, eating, and billiard rooms should be provided. The water-closets, he thought, should be in groups for the separate sexes, ander care of attendants, as at railway stations, who could reep a barher's shop. The provision of school-rooms and creches for: garding imfants under the same roof would also be made, and the comfort and convenience of the inmates so studied as to make their lives bappiex, as well as healther, than they could bo now, miserably lodged as they were, as a rule The covered areas would be found, as those at Guise were, warmer in winter and cooler in summer than the external air, and ventilation was secured hy the air lising from the cool spaces in the basement up to and throurh the class roof. That this would be the effect Mr. Baldwin Lathan corroborated.
The lectnre was illnstrated hy a set of plans, prepared for the purpose hy Mr. Seddon, which Edrewar hapted to a site near the Harrow and bo procured at a moderate many whicb could the main new streets in various parts of London.

## THE TRADES MOVEMENT.

Sheffeld.-An association of the steel and iron manufacturers of Sheffield has been formed for securing mutual support, and co-operation, or unity of action, in resisting comhinations of workmen, and for other tiade purposes. The suhscription for raising a fund has heen fired at $5 s$. for each melting-hole and converting furnace in the possession of the frm, whether in use or therwise.
Edinburgh.-A mass meeting of Edinburgh oiners has heen held in St. Mary's Hall, Lothianstreet, for the purpose of considering an overtule received from a mecting of employers, requesting a conference with the men in regard to the demand for a rise of wages on 1st of March. Mr. Jas. Wood occupied the chair. The meeting nuanimonsly agreed to send several delegates to conferwith the masters, and to report the resnlt of the conference to a future reeting; hut in the meanime they resolved "That we do not accept the ofier of the employers, but are willing to nerotiate with regard to the other $\frac{1}{2} \mathrm{~d}$. ."

FRESCO BY PAUL VERONESE.
Carlo Ripolifr, in his very interesting book, "Maraviglic dell' Arte," published in Venice in 1618, notices very fully the numerous works cxecuted by Paul Veronese. He describes a
palace in Murano, near Yenico, built for Signor palace in Murano, near Yenico, built for Signor
Camillo Trevisano, after the designs of Mon. Camillo Trevisano, after the designs of Mon.
signor Danicl Barbaro, the interior of which was very beautifully decorated by Panl Veronese, assisted by his pupil Battista Zelotti. The palace was afterwards, says Ridolf, converted into a placo of evening cntertainment for the gentlemen and ladies of Venice.
About fifty years ago, the huilding was dis. mantled, and tho frescoes were removed from the walls, and transferred to oanvas by what was then a new process. Somo of these have found their way to England, and three large works, in a good state of preservation, are Boyd Blanfar by Messrs. Morant Bond-street. The figuros in these are all larger than life: the smallest fresco represents Minerva as the representative of Wisdom, between tro other female fignres, Law and Justice, and evidently preferriug the latter. The other sub. jects consist of boldyy-treated groups of allego. rical figures, amongst which are conspicuou Motory, Astronomy, Chronology, and Fortune. ing, which may possihly have disappered in draw. ing, which may possihly have disappeared in the original position of the works, there is a
grandeur about these productions which fixes grandeur about these productions which fires and holds the attention.
Shagrauph to visit Mesens. Merant led by this paragraph to visit Messrs. Morant \& Co.'s pre mises, thoy will also find thero some noticeable
old farniture.

THE CHAPEL AND HALL, WINCHESTER
Str,-Permit me, through your columns, to call attentiou to the state of the chapel and hall of Winchester College. It is with the greatest indiffereuce that the anthorities of tho College treat all ropresentations made to them on this subject, and tho facts really deserve publicity. In 1681, the old stalls, with their canopies were romored from their places in the chapel in the four eastern bays (the remaining twoad that time forming an ante-chapel), and an Ionic that time forming an ante.chapel), and an Ionic
altar-piece of the same material took the place altar-piece of the same material took the place
of the anciont tabernacle work. of the anciont tabernacle work. Though always
somewhat incongruous with the style of the somewhat incongruous with the style of the
chapel, this woodwork had a handsome appear chapel, this woodworls had a handsome appear. ance in itsclf. Bat a more remarkable aspect
than this interior now presents, it would be han this interior now presents, it would be
difficnlt to find. Owiog to the necessity of in difficnlt to find. Owing to the necessity of ins.
creasing the accommodation, the tribunes appro. creasing the accommodation, the tribunes appro.
priated to the warden and sub.wardeu have priated to the warden and sub.wardeu have been moved back from the rest of the panelling to the very western wall, Ahout six years ago also, the rercdos aud wainscot were cut away from the eastern bay, and half the next bay. Consequently, proceediog from the east, we have one bay and a half, bare wall; two bays and a half, rrainscot; two bays bare wall; and then the tribnnes before mentionel, against the west wall. Also on the north side, in the western. most hay but ono; a very dirty old red curtain extende a good way up the wall, whilst the very westernmost bay is all bare wall ahove the seats. but such patchwork appearance is not confined to alterations in the old work; hut even the
new stomo reredos has an eyesore. One niche was painted to see what the effect of colouring was painted to see what the effect of colouring
here would be. It was eventually decided to leave the stonework wncoloured, but the colorr. leave the stonework uncoloured, but the colonr.
ing has never been removed from this one niche, thongh tho experiment was nomde several years ago. A credence-niche close by in the north

mortar, and in this state it is allowed to re. mortar, and in this state it is allowed to re.
main. The interior of the chapel is also visited main. The interior of the chapel is also visited
by very unpleasant draughts. These come by very unpleasant draughts,
partly from the roof, partly from the win. dows, which latter reqnire releading in some places. The seats are high, straight-backed, and uncomfortable. There is no regular pulpit, and the consequence of the custom of preaching from one or other of the tribunes against the west wall is, that it is utterly impossible for any one sitting in the seats towards the east end to hear anything like half the sermon, except if the preacher happens to be one whose voice is remarkably cloar. There is a paltry stove near the door, which is an extremoly deficient warming
apparatus.

But the most extraordinary thing in this chapel is the organ. This instrnment is coeval with the waiuscot, having been built by Harris in 1681. It bears an inscription, stating that it was last repaired and added to in 1780 . Owing to its cramped position (in a wiudlow.niche on the north side), there is uot actually space for proper bellows , here is uot actually space for proper bellows, and in these hellows a large hole to speals properly, and the pitch of the instru. o speal properly, and the pitch of the instru. not all the facts about this a tone ; and these are It is necaless to ant this instrument.
It is needless to add that thorough restoration is necessary to make this chapel what it should be. Bat more than this is neoded in the case of the west wall. There being no west window, there is a great blank wall the whole height of cover this nakiedy something might he done to there was formerly a representation of the Day of Judgment here. At any rate, it is absurd to suppose that William of Wykeham, with his well-known magnificent tasto, could have laft such an eyesore to this elegant chapel as the west wall now is
About the College Hall there is less to be said. Still, its present state is a perfect scandal The lower part of the walls is draped in yellow waiuscot, set $n p$ in 1510, aud is innocent of all heauty. For the rest of the way to the roof (a a barren wasto of some years aro) extends wood, and the thbles enash. Tho thor is of rough. The collegre pictures, instead of being hung in this, obviously their most proper, situa tion, are kept, by a great abuso, whero nobody
Bosides these, the exterior stonework of the old huldings, tho images, \&c., require much attention. The rule of those in authority seems to be to lct everything go untonched till it falls
down, or until actual dilapidation makes necessary; and this supposition is horno out by the fact that a short supposition is horno out by mall windov connected with the chapel fell down from very age into the court belorw.
Now, if the authorities really cannot afford to carry out these works of restoration, they ourht Ifantly to open a subscription for the purpose. foel sure that past and present Wykehamisis The soon subscribe the necessary amount. the authorities need not bo ashamed of showing ne mey want money for this purpose, for every nat who knows Winchester College must see hat they have not sufficient funds,-unless, indeed, which I canuot believe, they have ohstinately determined, even though they have of things.

PROPOSED NEW LINES TO THE CRYSTAL. Palace.
Ат present passengers by the main line of tbe London, Chatham, and Dover Railway from Victoria, Moorgate.street, Ludgate-hill, and intermediate stations, are carried across tbo bigh level at a point a short distance to the soutbeast of the Crystal Palace; and passengers by tho Brighton from the West London line, Victoria Station, Clapham Junction, and other low-level station at the Palace availahle. A Bill is before Parliament for the construction of two is berore Pariamcut for the construction from Dulwich, the other of half a mile in length from Lower Norwood. The proposed lines from their respectire points of junction with the main tine of the Chatham, aud the west.end line of the Brighton Company, to approach each other until they form a junction near the high-evel station, into waich they wilions and districts indicated abore. The estimated oost for tbe three miles of double lino is $201,000 \mathrm{t}$.

## SANITARY MATTERS.

Iv Parliament, Sir C. Adderley asked the president of the Local Government Board whether it was his intention to introduce measures this session arnending any of those Sanitary Acts imposing duties on local authorities which tho sanitary Comenssioners recommended to be repealed and re-enacted in one Bill. Mr. Stans fuld reptied that be should bo very glad to introduce a measure of the nature indicated by the question, hut whether he should be able to do so or not this session depended entirely upon the progress mado with public hasiness.
Mr. Raikes asked the right hon. baronet, the member for North Staffordshire, whether he intended to introdnce during the present session any measmre relating to public heaith? Sir C. Adderley soid he hopod to be permitied to reintroduce his Bill this ycar. It would simply he a collection in one BHI of the powers and duties of local authorities throughout the kingdom, Which were now scatered through nineteen or twenty Acts of Partiament. He hoped from what fell from the Prime Minister the other day that he might expect tho assistance of the Government, and also that if tho Government contemplated any amendment of the existing laws, they might see fit to introduce a supple mental mensure

## PROPOSED AYARD OF THE ROYAL

 MEDAL.Sir,--In spite of the rumonrs which have becn prevelent as to the award of the Royal Gold Medal this year, I must own that I have been mazed at the announcement that tho Conncil ecommend its heing given to the present presilent of the Iustitute. I do not intend to queshon the meints of the individual, howover per onally deserving this high distinction. I mus regard it on other gronnds, quite irrespective of him, as being unconstitutional, irregular, unprecedented, and dangerous.
The president is, of course, the chairman and chief member of the Council, and any act of the Conncil collectively is presumed to have the udivianal sanction of the members. How, hen, can the presideat recommend hikeself to this hononr. It is useless to plead that he was not present when the question was mooted in council That can always be arranged ; but tho can presume to offor any other name when that of the president himself is put-ene occupying so higb an office; who to a great degree directs and controls the preceedings; whose influence is neces sarily se great and irresistible ?
Can the president he present at the special general meeting on the 3rd of March when the approval is to he put, and he would have to suhmit the question for contrmation?
It ured to he the etiquette iu commumication with Royalty, for the president to suhrait the name for her Majesty's gracious sanction. Can the president with propriety suhmit his own?

Can any previous oceasion he mentioned apon which the president for the time being has had the reedal awarded to him? On thc contrary, I believe, when the name of ono of tho ordinary has beon withdrawn upon the inconsistene being pointed out. Besides which, the Council must naturally be deprived of the opinion and advice of the president on an important occasion, when the full woight of his wise coassel is most required as an independent
man-jealous for the due and proper courso of man-jeal

Thus the opinion has hithorto prevailed that no memher of Council, it being the recommending hody, should he proposed; and that if the presi deut for tho time being wero the most proper party, as it may be on this occasion, be ought to
he out of tho chair for at least a yoar before his he out of tho chair for at least a yoar before his name is put up. Otherwise it must necessurily ensue that, hereafter the members can have no liberty of indcpendent selection; hat must adopt the prosident for the gold medal. The proce dent once established, it cannot he departed from without a marked personal slight npon the out-going presidont.
I am influenced hy no othor fceling than a deep interest in the due and decent transaction of the puhlic business, and by the fear of the Institute being involved in a course of action discreditablo and embarrassing to the members.
M. I. B. A

## NEW FISH-MARKETS, MANCHESTER.

Last week the Mayor of Manchestor (Alderman Booth) formally opened the new fish markets, which lavo heen crected within the sedo the wholesale fish.market in Strangeways. sedo the wholesale fish.market in Strangeways.
The now markets, two in number,-a wholesale The now marketa, two in number,-a wholesale market and a retail market,-are situated one at
each side of Upper High-street, adjoining the Shadebill market, the entrances of all thre hoing within a few yards of oach other. Tho wholesale market is abont twice as large as the retail, and has a main entrance from Opper
High-strcet, consisting of three lofty arched gatestrcet, consisting of three lofly arched is abays, with sculptured decorations, Its area thirty-two dealers, for whom and has stalenient offices aro provided, hoth on the market floor and in an elerated part of the building at the hack, approached by stairs. Under the market Nee a pumber of cellars, eight of which are construeted to serve as ice stores. It is roofed Trith two spans. The cost has been $42,000 l$. The rotail market on the opposite side of the street has an area of 1,000 square yards, and cost 0,0001 . The architects were Messrs. Speakman \& Son, and the contractors for the large market were Mossrs. Wade Brothers, of Miles Platting and Mr. Southern, Salford ; and for the retail market, Mir. Edward Johnson.

## CHARGES FOR PLANS.

Brand v . Harrington.-This action was brought in the Bloomsbury County Court, before Mr. G Lake Russell, judge, to recover the sum of four guineas for preparing two plans for alteration to be carried out in a huilding.
Mr: Brand stated most positively that Sir John Harrington, the defendant, justructed him to prepare two plans, one a ground and the other a basement plan, and that he executed them and spent some time over the huilding and in preparing the plans to a scale. That four guineas, his fee, was very moderate, hut Sir John
Harrington offered him three guineas, whicb, of Harrington offered him three guineas, whicb, of
course, he refused to accept, and hence the action course, he refused to accept, an
to recover the propor clargeb.
to recover the propor charges.
Sir John Harrington admitted instrncting Mr.
Brand to make a plon of thi Brand to make a plon of the building in question as it stood, aud the sum to be paid was three guineas; and one was made showing certain alterations. Upon receiving this he returned it to Mr. Brand, with a lettor stating that be required a plan slowing tho huilding as it stood. Mr. Brand furnished a second plan showing the brilding as it stood, and demanded fonr guineas, which he considered he had no right to pay.
In answer to this, the plaintiff urged that he fulfilled his instructions by the first plan; and it was not to bo supposed that architects and surveyors were to be called on for fresh plans in this way at clients' whims withont being remunerated for their trouble.
The Judge was of opinion that all the plaintiff was cntitled to was three grineas and no costs.

The court costs in this case are ahout one guinea, and added to loss of time and incidenta likely at a loss.

## NEW GASWORKS, ASKERN, NEAR DONCASTER.

Tire gasworks at Askern have been opened with much rejoicing. The works are situated on the Selby-road. The brickwork, erected by Messrs. Shillitoe \& Morgan, of Campsall, con governor's house, office, purifying-house, meter governor's house, othce, purifying-house, meter. in a substantial manner, and has given gencral satisfaction. The engineers for the works were satisfaction. The engineers for the works were apparatus consists of five retorts over two yalves, - threo other,--with the nocessary asconsion pipes hydranlic mains, sc.; an improved annular pipe condenser, soruhber, and two purifiers. All the necessary valves, however, can be worked with or withont the scrubher, and with one purifier or both. The valves, too, are so arranged that no person can put them wrong, or cause an oxplosion. The gasholder measuress, 33 ft in 10,000 ft, by 10 ft . doep, and will or hye passed without the four way valves. Therc is also a stationed meter to indicate the quantity of gas made, and which can be used as a check to the amount of gas supplied.

## HEREFORD.

The ablo and very interesting acoount of Hereford in your last numher seems hardly complete withont some reference to the probable origin of the nane.
Hereford is the modern representative of : rery important Roman station termed Magna,a great settlement, or, zuore fully, Magaa Castra, i. e. Kyn.chester, or Great Castle. It, stood at
the junction of two Roman military roais, and the junction of two Roman military roads, and was destroyed when the Romans finally evacnated
Britain. This township was succeeded by a Mritain. This township was succeeded by a
Sazon settlement, formed to guard the ford sairon settlement, formed to gaard the ford
over the Wye, and prevent Welsh incursions. over the Wye, and prevent Velsh incursions. Some say "here"= armay-ford; but it might be Compare onr modera word "harry." It was tho hen.fford or old.ford of the ancient Britons.
The Romans did not stop such intercourse, hut placed their stronghold at an easy distance, overlook the traffic, their treatment Britons being paternal, whore not aggravated hy opposition ; but the Saxons, on the contrary, generally found it necessary to block up the vay and master the route.
Besides Sutton.walls, there are Burgh-hill and Credenhill Camp, ancient strongholds in the immediato neighbourhood, all with an eye on
this ford.

## EDINBURGI ARCHITECTURAL

 ASSOCIATION.At a popular meeting of this Association, held last week, in tho Hall, St. Andrew's.square, Mr. Joln Paterson, president, in tho ohair, Mr. James Salmon, architect, Glasgow, read a paper entitled "An Architectural Sketch," in which he defined real architocture from the unreal or imitative. In illustration, he traced the various changes in arobitectural design, from the ancient remains of Egypt to modern Europe, and showod how genius of design, along with perfection of building, was required for real architectural succoss. The development, duration, and forms of the various styles were then considered, and the influences from whioh they arose were reviewed and compared with those of the present. In conclusion, Mr. Salmon, while regretting the mercantile considerations mposed upon modern architecture, specified many circumstances favourable for the architec. ture of the future. The reading of the paper was warmly applauded.
Mr. Jokn T. Rochead moved a rote of thanks which was seoonded by Mr. Wm. Beattie.
Afterwards, several of the other gentlemen present, amongst them Mr. R. T. Ross, Mr. thomas Henderson, and Mr. James Ballantine spoke in favour of the papor.
Mr. Salmon, in returning thanks, impressed upon the Architectural Association the import.
influence, so as to hecome a power to guide and ecide in matters of taste
fler a vote of thanks to the chairman, moved by Mr. Kennoth Macleay, R.S.A., the meeting
separated. separated.
THE DERBY CENTRAL SGHOOL OF ART.
The annual distribution of prizes in connexion with this school took place in the Leeture Hall, Wardwick. Mr. T. W. Evaus, of Allestree (high sheriff of the oounty), occupied the chair, and was supported on the platform hy the mayor and others. The papils and their friends also mustered in oonsiderable force, and every part of tered in oonsiderable f
the hall was well filled.
The report of the head.master, Mr. Thos. C. Simmonds, congratulated the committee on the ncrease in the number of students attending the shool, and that their studies are of a wore advanced character than those executed last year. The report again oalled attentiou to the lamentably inadequate accommodation afforded hy the present sohool premises. "To attompt ssaid the master] to conpaxo the school with hose in other towns would show such an ahsurd disproportion that it would be waste of time to put the figures upon paper. I will, therefore, give one or two instances only :-

Burslem
Number Floor-space

Had cubic space heen compared the difference would bave been much greater. This does nots in any way arise from excess of accommodation in other places, but from such a want of it here, that persons competent to judge cannot realise the fisad that the drawings are produced under such disadvantages. I would remind you that these sentiments were oxpressed by Mr. Crowe, the Finally, I would urge apou the gentlemen of this committee to take steps to proside accommo dation before a permanent injury is inflicted upon tho school."

## OPENINGS OF NEW PUBLIC BUILDINGS in lancashire.

cift or a free libmary at wigan.
The three neighbouring manufacturing towns of Bolton, Wigan, and Warrington, in Lan. cashire, are likely to be the scene of much festivity during the ensuing summer in connexion With the opening of a new town-hall, a new infirmary, and a public park, in the threo towns respectively in June next, it leing the intention of the several corporations to invito the Prince and Princess of Wales on the occasion. At Bolton a fine town.hall and manicipal huildings, which have cost $120,000 \mathrm{l}$, are to be inauguratcd, and a new infirmary is to be opened at Wigan, whilst at Warrington a new puhlic park, which has just heen completed, is also to be opened. The three towns aro not more than six milcs distant from each other, being situated almost in the centre of the Lancashire manufacturing district, and in view of the Prince of Wales accepting the invitations to be forwarded, it has been arranged to open the buildings at Bolton and Wigan, as woll as the park at Wrrrington, in the same week. We may add that a new free library is alout to ho erected in what is known as the Mesnes Park in Wigan, which will be a gift to the town, the mayor having given the land, whilst Mr. Taylor, a wealthy local cottonapinner, has presonted to the town 5,000l. for the erection of the building. A new free gramma
school is also about to be ereated in this park.

THE SEWAGE QUESTION.
Stroud.-A report to tho Local Board of Health has been sent in hy Mr. Burns, the engineer employed hy the Board to advise them as to the sewage question. Mr. Burns inspected the sewage works and land in the neighbourhood and he says be is decidedly of opinion that irri gation is the simplest and best method of defe cating scwage, and the must profitahle when suitable land is to be obtained at a reasonable price. He is of opinion that Stroud is very forirrigation, more so than the majority of to by irrigation, more so than the majority of towns subject with reference to the lons fully into the subject with reference to the locality
Norvich.-A short time ago the Norwich Cor-
poration determined to purchase a portion of the Crown Point Estate for sewerage and irrigation parposes, and to oudeavour to borrow the pur $3 \frac{1}{3}$ per cent. An application was accordingly $\frac{2}{3}$ per cent. An application was accordingly
addressed by tho corporation to the Local addressed by tho corporation to the Loca Government Board, to borrow the silm of 32,500l. ; and in pursuance of the provisions of the Local Government Act, Mr. R. Morgan, C.E., an inspcctor appointed for the purpose, has held an inquiry, at the Guildhall, as to tho subject matter of tho application. No intimation was given by the inspector at the close of the the tone of his remarks he seemed to be farour:able to the application.

## SCHOOL-BUILUING NEWS.

Cray's (Essex),-The new elementary schools, erected from the design of Mr. Thos. Rook Maples, architect, are now complete. They aro built of stocks and red bricks, in a plain and sahstantial style, for 350 children (with offices and two residences), for the huilding committee. The huider's estimate was will include the cost of boundary walle. The schools are one story in height, and consist of girls' school, 20 ft . by 41 ft . in centre; hoys school, 48 ft. by 20 ft . (which can bo thrown into girls' school by means of folding-doors, When required, at a right angle to the contre of the same; and infants' school, $52 \mathrm{ft} . \mathrm{hy} 21 \mathrm{ft}$.; class-rooms at hack, with residences (which are two stories in height, with cellars), respectively at ends of hoys' and infants' schools.
s square, and half an acre in extent the District School Board here are schools for and opene consisting of mixed school for hoys and girls, 32 ft . by $20 \mathrm{ft} . ;$ class-room, 20 ft . hy 14 ft .; and infant-school, 18 ft . hy 20 ft ; with porch, cloakThe entire cost was I,120l., including boundary walls round ahont lialf an acro of ground. They are built of local stone and coloured brick, and are completely fitted up. Mr. S. T. Woodburne, of Liss, was the huilder, and Mr. Thos. Rook Maples, of London, the architect.

## 

What am 1 ? a popular Introduction to the Study of Psychology. By Edward William Cox, Man, London: Longmans \& Co. 1873. THis is a thoughtful and remarkable hook, full of original and suggestive ideas, some of them rery singular in their nature, and not a few well fitted, we must add, to excite much controversy. Into this we cannot here enter; and all wo can do is to give a few outlines of the nature and purpose of the work, and of one or two of its leading deas. It must bo kept in view, howerer, that We have in this volume only one half of the sul. ject under consideration, and that the more im. portant part is yet to come. The present volume relates, as the ticle has shorr, to the mechanism of man, and the second will deal with that mechanismin action. But the autbor's dea of the nature of the soul of man comes ander the head of the mechanism of man, and is dealt with in the present volume; and as this is the highest principle treated of, we shall give a hrief outline of the anthor's ideas on tbat suhject ; premising that he is an opponent of the matcrialists, ordinarily socalled. Yet he is a materialist himself of a new and refined order. He fights the materialists win their own weapons. He maintains that man has a "soul," not only apart from bis hody, but apart from his mind; hat that this soul is itself material, and hence occupics space, in the human shape, though composed of highly refined and subtlo material; and not only capable of existing apant from the grosser hody, which it has huilt for itself as its temporary dwelling in this world, hut "im. mortal" por se; although how he can be sure of that, if it be composed of atoms, or whaterer we may call the first ebements of matter, however suhtle and refined, it is difficult to conceire. In short, Serjeant Cox appears to regard the sonl as consisting of "matter" radiated into a say, something like hydrogen, hut perbaps even far more subtle, refined, or "spiritual," as he
regards it; while matter proper, such as tbat of the grosser body, is the same subject-that is, matter," - concentrated or condensed into a "spirite and visible state, And as regards the bs infinity in which to radiate forth and subtilise the grosser "matter," the author seems to think that anything more truly and supermaturally "spiritual" can meither be conceized nor needed.
Tbis "soul" aloue, according to the author, is the Ego; and, as for the "mind," he fairly hands that over to the Matcriblist, as a depend. ence on the brain, and liablo to injury and soul-the The word mind ssuredly involre the mome The least if the "soul" leaves its memory behind may the "soul" leaves its memory behind, may it not just as well be aoneso as an ego? Con were into somethin more than mer up as it hered succession in time of hered succession in time or momendary pulsa cannot, with an propiety, perierce, really cannot, with any propriety, be even called orscionsers, on most ments of consciousness togetber that the Ego can alone be said to identify itself in these suc cessive moments of time, as one and the selfsame boing or Ego; and how is it to do that withon any mind or memory? Mental analysis is sadly wanted here, we fear, ere such subjects as this or to Serjeant scaz be mooted with any benent, or to any useful purpose ; and phrenology, with which he largely deals, Wowever true and im. portant it may be in itseif, gives synthetical results much rather than analytical.
To go fully into the book is beyond our province; we can hut direct to it the attention
those who find interest in such speculations.

## discellanca.

Winter Garden and Promemade for Southport.-A company was formed last year to carry out a scheme which will it is believed hourht betwern popularity of Sonthport. They the very heart of the town, and alans wore in once obtained showing the capabilities of the site, aud the arrangements of the hailding. The land is situate hetween Coronation-walk and Dukestreet, having extonsive frontages to the sea and Lord-street, towards each of which the principal açades of the building, 350 ft . long, extend, as The building, with the exception of the consorra tory, will be mostly of hrick with stone dressing The roofs will have cut green slates mingled with the purple. The stairs will all he carcied up in and pide towers, with slate tarrets, to give vaciety bo an aquarium, cxbibition gallery, \&c. The principal or winter entrance to the building is rrom and on a level with Lord-street. The space promenades, shruhberies, finding walks, croquetlawns, summer-houses, ferneries, dc. The lawns and flower-gardens are screened from the winds by raised embankments. Fine gates and offices poratisitors of the promes forof the company. Contracts for theso worts have heert company. Conlrachs for theso works have whole, to a littlc under 30,000 l. The huildings have heen designed and the grounds laid out by the architects of the company, Messrs. Maxwell \& Tuke, of Bury.
Cost of new Workhouse at Chorley.-At a recent meeting of the local Board of guardians, the chairman said that a certificatc had heen architect for the new workbouse, for $9532.7 \mathrm{~s}, 10 \mathrm{~d}$ which would complete the payment on the con. tract. He congratulated tbo Board npon its completion. The tender for building the new workhouse amounted to 16,796l., and with de. undions for work omitted, amounting to 4901. werc the total amount $16,305 l .8 \mathrm{~s}$., but there again raised for day labour to he added, which contract had been fulfilled for an amount less than the contract price. There had been no extras, and the Board ought to be vexy thankfu] to Mr. Bradshaw for his earnest care of their interests. The halance of 9533.7 s .10 d was

Roport 02 Health of Glasgow. - The annual reports on the bealth of the city of Glasgow for 1871, by Dr. Gairdner, the medical officer, and Mr. K. M. Macleod, the sanitary inspector, have been presented to the Health Committee, and printed by Robert Anderson, of Ann-street. The doath-rate for 1871, which was (say 33) in I 000 ionally high mortali, tban the arerage of tho preceding ten pears The total rumber of cases of amall por reported Tho total number of casee smai-pox reported I, 089 , assumed that tho number of casos of small-pox in all was considerably more than those reported. Dr. Gairdner considers it
"certain that the mortality of small. pors in Glasgow has been less than 1 in 5 , probably, indeed, not morethan 1 in
6 or 7 of the attack; $a$ fact [ho adds] which certainly tends to prove, among others, the considerable protection exerted by vaccination over a community eren imperfectly
raccinated, the mortality of small-pox in unprotected persons being probably at least 1 in 3 , and in some cased higher than this, Oa the other hand, it would be uncandia not to admit that 62 deaths belour five yonrs of afe from misil-poris Glasgow, occarring among 203 deaths from grave doubts as to the supposed completeness of the reiso-
teotion afforded to tection afforded to the popalation at those early ages, by the Compulsory Taccination Aet of 1863, in our largo
Extraordinary Sewer Accident in Liver-pooi.-Some workmen in the employ of the liverpool Corporation were engaged in repairing a sewer, for which purpose a manhole had been left open. Watching the operation was an old was knocked into the vendor of olanges, - who was knocked into the sewer, and disappeared. The accident happened near the Town-hall, and some sewer-men went down the sewer as far as the pier-head, but could discover no trace of the missing man. It was supposed he struck his head against the side of the opening, and, heing stnnned, was wasked awny hy the water in the sower, which was knce-deep, ant running with mach force. The hody was afterwards found, however, and the coroner's jury, after a short deliberation, returned a verdict of "Parely accidental," followed, however, with a reoommenda. tion to the corporation to provide some better protectiou to manholes when opon than at pro-
sent exists. They wera also of opinion that sent exists. They wera also of opinion that sometimes the planks in use around the ban.
holes were allowed to protrude, which were holes were allowed to protrude,
liable to he caught by passing carts.

Proposed Public Buildings, Vest HartIe-pool.-At the nsual meeting of the Commissioners last week the leading business hefore the board was the anbmission by the surveyor, in ohedience to the request of the Commissioners, of a set of plaus for a proposed suite of puhlic offces and hall, the scheme ombracing a donble project, the smaller section of which included a hoard-room of 39 ft . hy 20 ft ., situatad a high, in the Itar and eatrance with stone steps, and a 12 feet main the cost heing 1,3001 eps, woro so constitated as to embrace the plans siderably increased cost, a public hall, 90 ft . by 40 ft ., with town clerk's offices, \&c., beneath, but the former portion of the plan was capable of being carried out independently of the latter. The works committee recommended that the first portion of tho scheme he only cotertained for the present, and upon this being put to the meeting a discussion ensued, hat on a division the Commissioners' proposition for carrying out the sualler scheme was carried by fivo votes, with only two opponents.

Artizans', Labourers', and GeneraI Dwellings' Company.-The anual meeting of the shareholders of this company has been hold at their offices, 1, Great College-street, Westminster. Dr. Baxter Langley presided. Thereport stated that in order that building operations on the Shaftesbury Park, or Workmen's City, Estate and in other districts may be continued without should it is important that addaral shares fore appeal to the for, and las ares of society to support them with additional capital in carrying on a work which, besides giving a fair return for money invested, they state, is calculatod to render untold benefits to working men by supplying them with healthy homes aud surrounding them with associations of a moral and intellcctual kind. No public-houses or beer-shops will be permitted on the estates. The operations speculative perty gives good security. Tho report was ananimously adopted

Rise of Prices in Baltic Wood. - For some weeks past thero has bcen an enormous some weeks past the price of weod in tho north of Europe, recalling that which occurred at the end of the at the beginning of 1872 , the increaso already at the beginning of 1872 , the increaso already
amounts to 30 to 60 per cent. in Sweden, and amounts to 30 to 60 per cent. in swoden, and
20 to 50 per cent. in Norway, varying according to description and qualities, and from all accounts we mnst expect from day to day still higher prices. That the prico of wooden goods would infallibly advanco in Sweden and Norway had been for some time expected, in consequenco of the continually-increasing distance of the forest districts from the coast, the difficaltios always arising in cutting for sale and transporting the wood from the forests to the saw-mills, the onhancement in value of the forests in growth,
with the expenscs of maintenance and manufacturo, and especially from the cnormeus increase of exportation to various countries; an increase which has now assumed such proportions as to excecd greatly the most favourable ant
of the growers in the north of Europe.

The Exhibition at Vienna.-The Imperial Commissioners presiding over the Vienna Exhi. bition have decided upon awarding seven different
distinctions, none of which is to possess any distinctions, none of which is to possess any
intrinsic value iu itself. These will not be gold, silver, or bronze medals, as in other cxhibitions The highest distinction will be the "diploma of honour," awarded to the highest merit in science, pnre or applied, education and the like. The
second is the "medal of progress," due to in. rentions showing an apprcciahle progress on the exhibits of the last great cxbibition. The third is the "medal of merit," for land or machine made articlos remarkable for wolkmanship or works of art. The fifth, tho " medal fort," for taste," whoso name speaks for itself. The sixth is the "co-operator's medal," intended for workuen and assistants contributing to tho The seventh is the "diploma of recognitiou," which is to constitute a second degree to the medals of progress and merit.
Reservoir for Chelsea Waterworlks at
Hampton Court. The Chelsen Watcrworks Company have fixed on the hank of the Thames, just opposite Hampton Court Palace and grounds, posal conte of a new storago reservor. the Honse of Lords, is to bnild a wall in the hed of the xiver for half a mile opposite Hampton Court, and thus to namow the stream, destroying the view, The water thus to be storec on the river miles farther up. The City of London Library.-At a meet. ing of the Court of Common Council, Dr. W. that considering the additional accommodation provided for readers in tho new library at Guildhall, and fully recognising the paramount obligation of every municipality to afford to its citizens the fullost opportunity of acquiring an intimate knowledge of the literary treasures in its possession, the Court declared that its library should henceforth be devoted to the free use of the public, subject only to such regulations as might from timo te time he necessary to ensure that the change might be fraught with considerthat the change might be fraught with considerahle danger, and that to all intents and purposes
the kibrary was freo to all comers. All oppesithe library was freo te all comers. All oppesi-
tion to the motion was eventualls withdrawn, or a promiso heing made on hehalf of the lihrary committee that proper regulations should be framed with a view to prevent any abuse of the privilege of free admission. The resolntion was then carried unanimously.
Thames Embankment. - The Chancellor of the Excliequer has obtained leave to bring in a Bill to authorise the acquisition and appropria. tion by the Metrepolitan Board of Works of
certain land reclaimed from the river Thames, certain land reclaimed from the river Thames,
in pursuance of the Thames Embankment Act, in pux
1862.

Natural IListory Museum.-Mr. Solater Booth asked the First Commissioner of Works Whether a contract had been ontered into for he construction of tho Natural History Museum at Kensington; and, if so, how many persons wero invited to competo, and what was the
amount of the tender accepted. Mr, Ayrion said amount of the tender accepted. Mr. Aprion said
that twenty-one persons had been invited to send in tenders, and only seventicen had com plied with the requost. All tho original tende sent in were much in excess of the sum intended to be spent on the building. The architect was accordingly asked to reconsider his plans, and a contract was eventually arrangcd with a firm for
$352,000 \%$. There were other expenses, however which would raise the sum ahove that given in the estimates. It was not intended this session to introduce a Bill for the removal of the Museum. It would not be moved till the new bnilding was completed. Three yours was the time allowed for the construction of the build.

Blackburn Sewage Irrigation.-0ı Satur ay last these works were inaugurated by th mayor and tho chairman and the members of the committee, in the presenco of the engineer, borough surveyor, and other corporate officials. The seware was turned into the conduit, and the works examined along their whole length. Afterwards the irngation of the portion of the farm already prepared was commenced. The gentle. men present expressed their satisfaction with the works and the manacr of their oxecution. Tho outfall conduit includes in its length of ahout three miles sundry earthenware pipes, of 30 in . diameter, tiro syphons of 2 -tin. iron pipes 2,700 yards in aggregate length, and one tunnel 073 yards in length, with othcr works. Mr. Thane, of Marypert, is the contractor, and the works have been carried ont hy him under the superintendence of the engineer, Mr. Joscph Brierley, Blackburn.
The Reservoir, Swansea.-Mr. Rawlinson, from whose plans the Lhiw Rescrvoir was constructed, has reportcd that it is sonnd. He says, -
outer ruddy water whice has been liowing from the

 for weight). Water simbing through or flowing from the
side of the mountuin would pass henesth, and come out muddy, but will not in any way endanger the safity of the
cmbankment. This I wish you and the committeo to nderstand and to believe.
He adds that Major Tulloch, Government ongineer, fully agrees with him, and loe requests practicable
Petersen's Steam Life-boat. - It is remarkable that there seems to bo no such thing yet as a steam life-hoat. An old sailor, Mr.
C. W. Petcrsen, of 25 , Branswick-place, City. road, who appears to have had some engineetia and shipbuilding experience, has devoted himself to the realisation of this great desideratum as his one life idca, to whick ho scems to have sa. crificed overything else in the shape of worldly prospect. He has invented a steam life-boat, and has presented his invention to the Chairman of tho Shipwrecked Mariners' Socicty; and it is to hoped it will be held to he of sufficient iow is an important one, and should not bect in longer lost sight of.
Society of Telegraph Engineers. - At the last meeting of the Socicty of Tclegraph Engineers, Mr. Latimer Clark read a communication from Mr. Willoughby Smith, the electrician of
the Telegraph Construction and Maintenance the Telegraph Construction and Maintenance
Company, detailing an interesting discovery Company, detailing an interesting discovery
which he had made of the extreme sensibility of seleninm to the infnence of light during the passage of an clectric current. If a har of seleniam placed in tho dark have an electric current passed through it, and it be then exposed to the influence of light, either daylight or that of a lamp or cande, its power of conducting electricity is immediately douhled, and the effect ceases as soon as the light is withdrawn. Mr. Clark pointed ont the value this discosery would have

New Graving Dock for Birkenhead.-The Mersey Docks Board have decided to construct a third graving dock at Birkenhead, east of the present dock, and the works committee has been instructed to carry out the plan.

The Proposed Harbour of Refuge at Conncil, they unanimously resolved that, "having examined tho bills and plans for the improve. ment of this port introduced into Parliament by the Dover Harbour Board, they highly approve of the course of action adopted by that Board, assisted by the two railway companies, having the object of giving increased accommodation and encouragement to the Contiuental traffic and the commerco of the port "; and the mayor, depnty mayor, Mr. Alderman Clares, and Councillor Dickeson, have been appointed a depatation, with instructions to seek an early interview with the President of the Board of Trade, and represcnt their views for the consideration of her Majesty's Government.
Royal Horticultural Society.- $\Delta$ very se rious disagreement has taken place here. The
Council recommended to the Fellows certain ar. Council recommended to the Fellows certain ar.
rangements with the Royal Commissioners of 1851, in connexion with tiou, which a large body of the Fellows construe into a eacrifice of their interests. At an adjourned meeting held on Tuesday linst the Council's re. port was rejected by a largo majority, and it wRs understood that the Council wonld resign. Withont at the moment going inte the cause of quarrel, we would remind Fellows of tho Horti. cultural Society that they are under grave ohli gations to the Commissioners,-bnt for whom indeed, at one time, the Society could scarcely o held its own.
New Patent Elast Furnace at Summer-Iee.-A new patent hlast furnace has been put in operation at Summerlee by the Messra. Neilson. Since the cra of the hot-hlast, origin ated hy tho uncle of the senior partner of the firm at Summerlce, thero has not been a more bold contrivance, it is said, introduced into the iron trade of Scotland than that just inaug gurated. The flues at the top of the furnace are dispensed with. Tho furnace has been elevated from 50 ft . to fully 70 ft ., with a gradually sloping furnace, from $16 \frac{1}{2} \mathrm{ft}$. at the hoshes to 12 ft . at the top, the raw material heing filled upon equal layers, and the blast modulated according to circumstances.
The Grecian Theatre.-A more artistic production in its way than the form in which Mr. George Conquest appears,-as Nix, the De a hoge head, has seldom been seen on tho stage. It is the design of the actor himself, and the remarkable manncr in which expression is given to it, the opening and turning of the eyes, the act of gaping, putting out the tongue, and so forth, quite remove it from the ordinary run of such prodnctions. The aerobatic feats of the same actor in the latter part of tho performance are also very surprising.
Gillingham Pier.-A new pier and landing. place for the parish of Gillingliam, near Chatham, has becn fermally opened. The worls las been carried out at an enormous expense by the Admiralty authorities in exchange for the parish pier, the site upon which it steod heing required for the deckyard extensiou works. The work was commenced as far back as 1862 , the contract heing 34,0007 .; but that amount was spent in two years owing to the nature of the soil, and it is not at all likely the work will he cntirely finished for other two years.
Prize for Steel.-The Council of the Socioty of Arts have resolved to offer the Gold Medal of the society to the manufaoturer who shall pro Exhibition of 1873 the best collection of speci. mens of steel suitable for general engineoring purposes. All persons using steel for general purgineering purposes, who are not manuf acturers of such steel, are also invited to oxhilit specimens.
Edinburgh Cathedral Competition.-We have received from Mr. H. C. MacAndrew, indignanterter lnverness-8nire, a copy of an porary in reply to the attacks made on Mr Ross, with a request that we would print it. We are unable to comply, it being contrary to din to insert letters addressed to others
The "Bulletin Monumental."-We are glad to hear that the Bulletin Monumental is now recommenced in a new series (4th), vol. xxxix.,
and it opens with an article, in which Mr. Roach and it opens with an article, in which Mr. Roach Smith's remarks on M. de Caumont in the
Builder are given at full leagth. The editor is Builder are given at full length. The editor is
M. de Cougny, and the Bulletin will bo published M. de Cougry, and the Bulletin wil
himonthly at Tours and at Paris.

Newport.-The erection of national schools, tbe foundation.stone of whiob was laid in May last, has now been completed. The schools are erected on a piece of land situated on the Ceme-tery-road, given by the Marsh truatees, and the style of "architecture is Domestic Gothic. The schools bave been built to accommodate ${ }^{\text {chind }}$ ( 41 ft .6 in. by 19 ft .), a girls' room, at one end adjoining ( 33 ft . by 18 ft .), infants' room, same dimensions, with two class-rooms ( 18 ft . by 10 ft .6 in .), and separate porcbes and lobbies for boys and girls, with offices, \&c., outside Adjoining the schools is the master's house. The playgrounds are inclosed by wood fencing, and divided for boys and girls.
The Lats Mr. Jas. Murras, Architect. An appeal is mado in behalf of the children of the late Mr. James Murray, Fellow of the Royal Institnte of British Architecte, who now are, by the death of their mother, left homeless and des. titnte orphans. Mr. J. C. Horsley, R.A., of Willesley, Staplehurst, Kont, will gladly receive subscriptions.

The Town Surveyor of Great Yarmonth, At a mecting of the committee especially ap. pointed for the purpose, the salary of the town surveyor (Mr, H, H. Baker) has been increased from 200l. to 300 l , a year (eubject to the confirmation of ths council). Mr. Baker will in fature have to keep a pony and gig, his duties extending to Gorleston
Mr. Henry Leslie's Choir.-Mr. Leslie annonnces his eigbteenth season. The concerts will be given on the last Thursday evenings in ths months of Febrnary, March, April, and May. T'be artista engaged include Mr. Sims Reeves, Mr. Santley, and Madame Patey; and the programme issned is a very interesting one.

VOL. XXXI.-No. 1569.

The Strength of Building Materials.

ONE very useful information on the strength of materials em. ployed in general building is given interalia, in Mr Stoney's valuable book on the Strains in Girders.*. The nature of the strains pro. duced in all horizoztal beame, -as bressummers, girders, joists, lintels, \&c.,-is alike in all. It is compounded of compressive strains' in the side immediately loaded and of tensile strains in the opposite sido; while the strains produoed in pillars, columns, and struts aro wholly compressive, and in tie-rods and tie-beams wholly tensile, except that in some forms of structure and mode of loading strnts and ties occasionally act in botb ways, and in these cases require exceptional consideration.
Having ascertained by experiment the break. ing weight of specimens of materials of known dimensions, the general custom is to take some snb-mpltiple of that weight ns the safe load; as, for instance, whero a bar of iron 1 in. gquaro is found to break with a weight of 20 tons, it would be loaded with not more than, say, 5 tons, or one-fourth, as the working-load.

Tho croshing strength of timber varies with its condition of diyness, being not nearly so strong when wet as when dry. The crushing strength in pounds per square inch, when in its ordinary state, and wher dry, is as follows, respectively :-Rod deal, 5,748 and 6,586; white deal, 6,781 and 7,$293 ;$ sprace fir, 6,499 and 6,819 ; mahogany, 8,198 and 8,198; Queboc 0.k, 4,231 and 5,982; English oak, 6,184 and 10,058; Pitch pine, 6,790 and 6,790 ; yellow pine, 5,375 and 5,445 ; rod pine, 5,395 and 7,518 ; willow, 2,899 and 6,128 . These cxperiments, having been made with selected speoimens of small size, show results in general much greater than can be reckoned upon in practice with large scantlings, subject to the defects of knots, dec., and probably about half these woights per square inch would represent the real ultimate strength of tibe respective kinds of timber. The working load should be only a fraction of this streagth. At the Landore Viaduct, constructed by the late Mr. Brunel of creosoted Amcrican pine, the timber was generally caloulated to bear 373 lb . per square inch in compression, though in some parts of the struoture the strain Was allowed to reach 560 lb . At the Innoshaznon latice timber bridge, crected by Mr. Nixon, on the Cork and Bandon Railway, tbe ordinary working strain was 48 il l . in compression. In America, General Haupt has not considered it safe to assign more than 800 lb . per square inch as a permanent load; and in a paper read by SMr. Mosse, at the Institution of Civil Engincers, in 1863 , it is stated that about 900 lb . per square inch are usually considered by American engineers to be the lirit of safe compression for timber framing (pine is the timber here meant). "Navier land Morin, distingnished French authorities, recommend that the working strain of timber sbould not exceed one-tenth of the breaking

* The Theory of Straine in Girders and similar Stractures; By Bindon B. Btoney, M.A, M. Inst. C.E. New
edition. Longmans, Green, \& Co, 1879,
strain, and, owing to its liability to decay, this rule seems safe practice for structures which are exposed to the weatber; but when timber is under cover, one-eighth of the breaking strain is a safo working load. For merely temporary purposes, a strain of one-fourth of the breaking weight is probably safe, provided there are no sbocks." The experiments, the results of which are given above, were mado with short pieces, not more in height than twice the diameter. With long pillars, bowever, the case is different, owing to the liability to bend under loads approacbing the safe compressive strain of the wood itself. The square is the strongest form of rectangular timber pillar. It appears from Hodgkinson's experiments, tbat the strength of long, round, or square timber pillars is nearly as the fourth power of the diameter or side divided by the square of the leagth. The late Pro. fessor Hodgkinson gave the following rules for the strength of timber pillars with both ends flat and well bedded, and whose lengths exceed thirty times the diameter:-
Let $\mathrm{W}=$ the breaking weight in tons.
$l=$ the length of the pillar in feet.
$d=$ the breadth in inches
For long squaro pillars of dry Dantzic oak,

$$
W=1095 \frac{d^{4}}{l^{2}}
$$

For long square pillars of rod deal (dry),

$$
W=78 \frac{d^{4}}{l^{2}}
$$

For long square pillars of Fronch oak (dry); $W=6 \cdot 9 \frac{d^{4}}{l^{2}}$
When timber pillars are less than 30 diameters long, they come under the olnss of medium pillars, for which Mr. Hodgkinson devised the following formula:-

$$
W^{\prime}=\frac{W c^{\prime}}{W+\frac{\pi}{4} c} .
$$

whore $T$ the brealing weight in tons derived from the formula for long pillars, on the hypothesis that the pillar yields by flexure alone; $=$ the ornshing woight of a short length of the pillar, i.e., its seotional aren multiplied into the crushing unit-strain of the material, in tons; and $W^{\prime}=$ thereal breaking weight of the medium pillar, in tons, from the combined effects of flesure and crushing.
Pillars with flat ends, well bedded, are mmoh stronger than pillars witli round ends, or tbose imperfectly bodded. "In all long pillars of the same dimensions the resistencu to fracture by flesnre is about three times greater when the ends of the pillars are flat and firmly berded, than when they are rounded and capable of turning." The strength of pillars with one end flat and the other roundod, is a mean between that of a pillar with both ends ronnd and one with both ends flat.
The crushing strength of granite of various kinds has been found to be as follows:-Aberdeen (bluc), $10,914 \mathrm{lb}$. per squaro inch; Peterhead, 8,263 ; Cornish, 6,356; Killiney, 10,780; Kingatown, 10,115; Blessington, 3,630; Belly. knockar, 3,173; Newry, 13,410; Mount Sorrel, $12,861$.

The strength of Arbroath paring stone (sandstone) is $7,884 \mathrm{lb}$. por square inch; Caithness, 6,493 lb. ; Dundee sandstono, 6,630; Craigleith white freestene, 5,487 ; Bramley Fall, near Leeds, 6,059; Derby grit, 3,142 and 4,315; Yorkshire paviug, 5,714. Compact limestone $7,713 \mathrm{lb}$. per square inch; black compact time rick limestone, 8,855; Anglesoa Iimestone, 7,579 Valencia slate, 10,943 ; Killaloe, on bed of strata 26,495; the same on edge of strata, 15,225 ; Glanmore on bed of strata, 21,315; on edge 12,710.
The ultimate strength of bricks to resist com pression is set down as follows:-Pale red 562 lb . per square inch; Red brick, 808 lb. yellow - face baked Hammersmith paviors,
$1,002 \mathrm{lb}$; yellow-face burat Hammersmith
paviors, $1,44 \mathrm{l} \mathrm{lb}$. ; Stourbridge fire brick, 1,717 lb. ; Buckley mountain brick, North Wales, $2,130 \mathrm{lb}$; brickwork set in coment (the brioks not of a hard description), 521 lb . per square incli. For the parpose of comparing the strength of Portland cement bricks with that of common bricks, Mr. Grant made somo experiments, which were as follow ("Minutes of Proceedings, Inst. C.E.," vol. sxxii.) :-Ganlt clay brick, $8 \frac{\pi}{6} \times 4 \frac{t}{8} \times 2 \frac{3}{4}$ boro a weight of 40.04 tons before crushing; a wire-cut brick of the same clay, $\frac{1}{4}$ in. longer than the last-named, 32.70 tons; a porforated gault clay brick, 9 in . long, $4 \frac{2}{6}$ in. wide, $2{ }_{6}^{5}$ in. thick, $46 \cdot 40$ tons; Suffolk brimstones, $9 \times 4 \frac{2}{2} \times 2 \frac{5}{5}, 34.94$ tons; Stock brick, $9 \times 4 \frac{2}{8} \times 25.38 .34$ tons ; Fareham red brick, $8 \frac{3}{3} \times 4 \frac{1}{6} \times 2 \frac{5}{8}, 90-40$ tons; Staffordshire blue brick, pressed with frog, $8 \frac{3}{4} \times 4 \frac{1}{8} \times 2 \frac{4}{4}, \quad 1110 \cdot 4$ tons; the same kind of brick without the frog, 117.92 tons.

The late Professor Rankine considered the crushing strength of good conused rubble masonry to be about fonr-tenths of that of tho. stone of which it is built. The resistanse of common rubble to crushing is not mach greater than that of the mortar which it contains. The following is the crushing strength of lime mortar, according to Rondelet, in poanda per square inch: Lime and river sand, 436 lb .; the same beaten, 596 lh ; lime and pit sand, 578 lb . ; the sarme heaton, 800 lb ; cement and pounded tiles, 677 lb ; the same beaten, $929 \mathrm{lb} . ;$ these mortars were eighteen months old. Fiftcen years later the experiments were repeated, when mortars of lime and sand were fond to have increased instrength about one-eighth, and mortars of cement about one-fourth.
Some cxamples of the actual pressure sustained by stone and brick of various kinds are givon, the greatest of which appears to be in the pillars of tho charch of All Saints at Angers, of Fourneaux stone, viz., $38 \cdot 4$ tons per square foot. The pillars of the dome of St. Peter's, at Rome, carry a weight equal to 11.9 tons per square foot, and are of calcareous tufa, called Travertin. The pillars of the dome of St. Paul's, London, of the oolitic limestone of Portland, carry 17.6 tons per square foot. A pillar in the Cbapter-house of Elgin, of red sandstone, catries 17.9 tons per square foot. Red Birmingham bricks, in a viaduct in that town, set in lias-lime mortar, carry 7 tons per square foot. London paviors, set in mortar of 1 of cement to $2 \frac{1}{2}$ of sand, in the Charing Cross railway bridge, carry 12 tons per square foot. Staffordshire blue bricks, sot in Portland ccment, in Clifton Suspension Bridge 10 tons per square foot. Concrete made of 1 of Portland coment to 7 of Thames gravel, carries 8 tons per square foot in Charing Cross bridge.
Experiments on the crushing weight of cast ron from sixteen localities showed a mean of 38.519 tons per square inch, the specimens cx . pcrimented on being one diameter and two diameters high, an equal number of each. The weakest of theso was 27.004 tons, and the strongest $49 \cdot 109$ tons. Another get of experi. ments on twenty-two different sorts of cast-irom showed a mean crushing weight of 37.6 tons per square inch; the weakest being 24.45 tons, and tho strongest 51.78 tons. The strongest epeci. mens were mixtures of different sorts of iron Repeated meltings seem to have the effect of in. creasing the crashing strength, which may be said to be in general about 42 tons per sqnaro inch for mixtmres, but for simple cast-iron to be somerhat less than 38 tozs. In practice, how evor, these pressures seem never to be nearly approached. For instance, in the Severn Valley railway-bridge, carrying the Coalbrook-dale ra:1way, 200 ft . spar, and 20 ft . rise, the calcalated working strain is between $2 \frac{1}{2}$ and 3 tons per square inch. In the centre arch of Southwark Bridge, 240 ft . span, it is 2 tons per square inch. In subjecting wrought-iron to a compressive strain, its greater elasticity must be taken into
account. Ordinary wrought.iron is complotely crushed, i.e., bulged, with a pressure of from 16 to 20 tons per square incb, and the point at which compressive set sensibly commences, that
is, the limit of compressive elasticity, is ahonit is, the limit of compress
12 tons per squaro inch.
The tensile strength, on the other band, is greater in wrought than in cast iron. Tbe mean tensile strength of twenty-seven sorts of cast. iron was 7 tons, the weakest being $5 \cdot 667$ tons, and the strongest 1047 ; whereas Mr. Kirkald foand tbe mean tensile strength of 188 rolled bars to be $25^{\frac{3}{3}}$ tons per squaro inch; of 72 angle irons and straps, $2 \frac{1}{2}$; of 167 plates lengtbwise, $22 \cdot 65$ tons, and of 160 plates crosswise 20.6 tovs. Timber is put to better uso wben so placed as to receive a compressive strain in the direction of its fibre than when emploged as a tie; never. thelcss, as it is sometimes used for this purpose, a. feve examples of its tenacity may be quoted. Cbristiana deal is set down as having a tensile strength of $12,900 \mathrm{lb}$. per sqnare inch; elen, $1.4,100 \mathrm{lb}$.; fir, $12,000 \mathrm{lh}$.; mahogany, $8,000 \mathrm{lb}$., nccording to Barlow, but according to Bevan mach more ; English oak, $10,000 \mathrm{lb}$. $;$ pitch pine, $7,650 \mathrm{lb}$; Norway pine, $7,257 \mathrm{lb}$. to $14,3001 \mathrm{~b}$.;
Petershurg pine, $13,300 \mathrm{lb}$; teak, $15,000 \mathrm{lb}$. Petershurg pine, 13,300 lb. ; teak, $15,000 \mathrm{lb}$. The fibres asunder crosswise, the following numhers are given, in pounds per square inch. Memel fir from 5.10 lh . to 8.10 lb .; Scotch fir, 562 lb . ; larcb, 970 lb . to $1,700 \mathrm{lb}$. ; oak, $2,316 \mathrm{lb}$. As stone is rarely employed in direct tension there aro but fow experiments on its tensile strength, hut the following are given of some Seotch stones, viz., Arbroath paving, $1,261 \mathrm{lb}$. per sqnare inch; Caitbness, $1,054 \mathrm{lb}$.; Craig. leitl1, 453 lh .; Hailes, $336 \mathrm{lb} . ;$ Humhie, 283 lb .; Binnie, 279 ib .; Redhall, 326 lb .; Whinstone, $1,469 \mathrm{lb}$. The tensile strength of mortar is more often nsefnl, and is as follows, according to Ai. Vicat:- Mortar of qnartzose sand, and sqnare inch; of qnartzose sand and ordinary hydraulic lime, well made, 85 lb ; ; of quartzose sand and ordinary lime, woll made, 51 l . mortar, hadly made, 21 lb .
When a boam projects from a wall, and is over its length, the upper edge is extonded and the lower edge compressed. This projecting. beam may be called a semi-girder. The relative strength of beams or girders is proportional to the breadth, to the square of the deptb, and inversely proportional to the lengit; or in other Werds, it is proportional to tbe cross-sectional area multiplied into the depth, and dividod by the material, and is determined for each kind of material hy experiments, from which are deducod mrom each the co-efficient of rupture, S .
When a semi.girder is loaded at the ex. tremity $\mathrm{W}=\frac{a d \mathrm{~S}}{i}$, and $\mathrm{S}=\frac{l \mathrm{~W}}{a d}$, in which $\mathrm{W}=$
the breaking weight, a the sectional area, $d$ tho depth, and $l$ the length, $S$ being the constant determined for each material, by finding expe. rimeutally tbe breaking weigbt of a girder of known dimensions, and similar in section to that of which the strength is required. For small rectangular oast -iron hars, not exceeding 1 in . in width, $\mathrm{S}=3 \cdot 10$ tons. For large rectangular cast.iron bars, say 3 in . wide, $\mathrm{S}=2 \cdot 25$ tons. For Cluristiana deal $\mathrm{S}=1,562 \mathrm{lb}$. ; Eaglish elm, 782 lb . Canada rock elm, $1,970 \mathrm{lb}$. ; Mar Forest fir, $1,232 \mathrm{hh}$; spruce fir, $1,346 \mathrm{lb}$; American hickory, $2,129 \mathrm{lb}$.; Australian iron. bark, $2,288 \mathrm{lb}$.; Norway spar, $1,47 \mathrm{llh}$. ; African eak, $2,523 \mathrm{lb}$.; Dantzic oak, $1,518 \mathrm{lb}$.; English aak, $1,69 \mathrm{lll}$. ; American red pine, $1,527 \mathrm{lb}$.; ${ }^{\text {pitch }} 1 ; 229 \mathrm{lb}$.; American $1,727 \mathrm{lb}$; American white pine, Dantzic pine, $1,426 \mathrm{lb}$.; Memel pine, $\mathbf{1 , 3 4 8} \mathrm{lb}$; Riga pine, $1,383 \mathrm{lb}$.; teaks, $2,108 \mathrm{lb}$.; South Aficau sneezerood, $3,305 \mathrm{~h}$,
The foregoing values of S for timher are lorived from selected samples, of small scant. fections that cannot he avoided in other imperaud tbe few experiments recorded on balks of large size indicate that the valnes of $S$ must he large size incicate that tbe valnes of S must he
rednced to nearly half ( 54 times) those given above.
By mechanical reasoning, as well as hy oxperi. ment, it is found that heams will carry various Weights, the dimensions being the same, ac. oaded, e.g., for a semi-girder, loaded uniformly oaded, e.g., for a semi-girder, loaded uniformly
$W=\frac{2 a d \mathrm{~S}}{l}$.

For a girder supported at both ends, and oaded at the centre, $\mathrm{W}=\frac{-1 a d \mathrm{~S}}{?}$.
For a girder supported at both ends, and oaded niformly, $W=8 a d \mathrm{~S}$.
For a girder supported at hoth ends, and loaded at an intermediate point, the segments of the length being called $m b$ nad $n$ respectively, and $m+n$ being equal to $l, W=\frac{a d l \mathrm{~S}}{m n^{2}}$
It is often very useful to know the transverse strength of stone. The author gives the fol lowing values of S for several kinds. Of granite, the following: - Ballyknocken, co. Wioklow, 109 lb . ; Golden Hill, Blessington, 76 lb .; Kil. liney, co. Dublin, 270 lb ; Kingstown, co. Dub-
lin, 316 lb ; Newry, co. Down, 340 lb ; Taylor's Hill, Galway, 407 ll .
Of sandstones and grits :--Green-moor, York shire, blue stone, 335 lh .; white stone of the same locality, 359 lb .; Caithness stone, 857 lb . Of limestone from Listowel quarry, co. Kerry, 1.1.4 lb.; Ballydnff, hing's comnty, 351 lb .; Woodhine quarry, co. Kildare, 283 lb .; Finglass quarry, co. Dublin, 291 lb .
Valencia slate on edge of strata, $1,091 \mathrm{lh}$.; co. Wicklow, on bed of strata, $1,097 \mathrm{ib}$. Rillaloe Tipperary, on bed of strata, $1,233 \mathrm{lb}$; Welsb slate, $1,961 \mathrm{lb}$.
Tbe etrengths of the Irish stones are talsen chielly from Mr. Wilkinson's experiments, which were made on stones 3 in . sqnare and 12 in . clear lue middle of the leneth
The working strain pnt upon any material, compared with its ultimate strength, must he regarded in connexion with the naturo of the material : the more fihrons the material, the mate strengtb, within the limits of convenience in respect of bending.

THE COAL AND GRATE QUESTION.
A general satisfaction has been feltat the ap. pointment of a Parliamentary Coramittee to investigate tbe causes of the present scaroity and dearaess of coal. Altbongh a committee of the Eouse of Commons is farfrom being the best conceipable tribunal for the prosecution of such an inquiry, it is certainly the hest practicable one, in the existing state of things. It is, moreover, a kind of court that possseses advantages peculiar to itself. Its great defect is, that it is destitute of a judgo; the cbairman baving no such pre. eminenceover his colleames as to invest him with the unquestioned dignity of a judicial president. Tho advantage is, that the members unite the functions of counsel and of jury men. In all members of a committee not froin to solect the members or a conmmittee, not froun disinterested, proper halance is thus maintained. Each mom. ber, putting questions intended to elicit support for his own views, practically cross-examines every witness otber tban those whom he invites te come forward. Out of tbis con flict a consider. able degree of light and truth is usually elicited. committee as the ont.come of their lart of the commintee as the ont.come of their lahours, we ferencelilly find ourselves disappointed. Tbe inferences in which all the memhers agree are gencrally so few as to give hut a meagre aspect to the statement. The want of an independent president makes the report a mero matter of compromise. But any such resuits thus arrived at have the weight of something like admitted and proved truth. And, in any case, the of pence laid before the pnhlic is a source of positive information to the student of politics; while the ventilation, from day to day, of oppo. site views, and the revelation of unsuspected facts, tend to guide both opinion and legislation We right channel.
We may thus expeet from Mr. Mundella's committee a report, or at all events a publica. tion, of a very different value from that of the Royal Commission on Coal. We cannot, in justice, attrihute to the optimist and unprac. tical report of tbat Commission any of the dis. turhance which has tnken place, as if in ironical comment on their work. But there can be no doubt tbat that inquiry, if it had been carried out with due ahility, might have done mnch to prepare us for our present distress, and so far, to aid us to meet it. As to that, however, we
bave said eneugh. The matter now in hand is,
to consider how tho inquiries of tho present com. mittce may be so grided as to prodnce the quickest, the surest, and the most exhnustive reault.

We must refer (not as matter of literary criticism, but with a view to aroid misleading fal. lacy) to tbe mode in which "the great law of supply and demand" is involed with a kind of religious reverence, not so much by the speakers in the Honse of Commons, as hy the speakers as represented in the newspapers. That the hon. mover should say he had no wish to indnce the House to interfere with the usnal course of husiness in this country, is only plain good sense. That "Parliament sbonld in no way interfere with the production of coal," which was the assnmption of the Home secretary, is a very different statement. Parliament has interfered witb tbat suhject again and again. No later than the lat of January, 1873, a measure came into operation wbich very conssuerahly inter. feres with tDat production-whethor advan. tageonsly or disadvantageously. The question of an export duty, which has before this received the warm advocacy of the present Primo Minister, js one that will havo to be discussed by the committee; and to assume tbat Pariament can, sbonld, and will do nothing in the matter, is as helpless a piece of innocence as to assert that Parliament con control prices altogether.
It is of essential importance, in a matter that comes home to the fireside of every one of us, to avoid unmeaning phraseology. Speakers and fetion may thinz it harmloss retish worsbip to what they snpp, admilled and mystery may tbint, from having their foundations undermined by people who understand a snhject of which they have only a very hazy perception. But tbey do great barm, nevertheless. By admit-ing the fore of phrases which they do not altogether uuderstand, men help to form such phrases into fetters of the intelligence. The real fact is, that the true laws, or incontestable principles, of economical science, are excessively general and ahstract. They are little more than truisms, couched in more or less scientific, or often only pretentious, language. They have practical effect only inas. mnch as men are guided hy one out of many motives of bmman conduct. Mr. J. S. Mill, who has laboured more than most men to erect political economy into a science, plainly and onestly states, in the first volame of his Principles of Political Economy," that it is only on tbe hypothesis that production and price aro exclusively regulated by compectition, that his
favonrite theory has amy pretensions to the title of a science. Where custom rules, instead of competition, be admits that his reasoning is inapplicablo. It cannot bo too carefully borae in mind that such is the case. Mueb human action is regulated almost entirely by custom. Into all such action custom, or other moral influence, onters very largely. Competition, on the other hand, is never found to be the sole priuciple in activity; unless it he at an anction. Whaterer trnth, then, exists in the dogmas of the political economist, or rather wbatever may he the clearness and poiuted wisdom with which he applies known principles to the condnct of business,-valne, regulated by unchecked competive to 18 but of the Commite with the Commitee wh wowl, say ahout the "great law of supply and demand," cod the moro thoy upply thenselves to ciscover how it is that, in the pinching cold of tbis late
winter, the demand for fuel for ontruns the supply.
The first practical lesson, however, which each one of us may draw from an event that has hrought discomfort to almost all, alarm to the houghtful, and disease and death to not a fev, is, how to avoid our own daily wasto of a mineral now felt to be so precious. Our domestic consumption of coal, in the year 1869, was 18 million tons. Considering that we are now in tbe midst of tbe winter half.year, we can bardly estimate the cost to which the consumer (for domestio use) bas aireaty heen put at less than $4 \frac{1}{2}$ millions sterling. If the present price of coal is not materially ahated the householders of Great Britain will bavo paid at least 9 millions sterling more for coals in 1873 than they did in 1872. Tbo average consnmption of coal per bead of the population, taking the latter ap. proximately at $31 \frac{1}{7}$ millions, is 0.57 of a ton nearly sixtb-tenths of a ton) per annum. For the population of the metropolitan district this
gives a consmmption hard apon 2 millions of tons of coal for domestio uso alone. We suppose that there are few among them who would not rejoice at the idea of being ahle to buy all tbeir coal for at tbe idea of being able to buy all tbeir coal for
1873 at an advance of only 20 s. per ton on the 1873 at an advance of only 20s. per ton on the
price they paid in 1872 . Here is, in one item, price they paid in 1872 . Here is, in one item, a even this, large as it is, is, as we shall presently sbow, but a part of the actual increase of expen diture caused to the Londoners by the dis turbance in the coal trade.
We have confined our view to the metropoli alone, because it enahles ns to place before our readers figures which, although only approx mate, are sufficicutly correct to allow us to form a very distinot idea of the practical bearing of tbe subject. Now we suppose that no engineer, we might almost say no cultivated man who has
ever travelled in Northern Eurone, - can donbt ever travelled in Northern Europe, - can doubt that all the comfort and adrantage that have been ministered to tbo $3 \frac{1}{2}$ millions of Londoncr coal migbt bave been secured, by an economical method of consumption, by the use of a third of that quantity. Let us consider price to be doubled, and consumption reduced to one.third, and we bave a clear gain of two.thirds of the original outlay. Thus, instead of 2 millions of tons London should, say in 1874, consume 666,000 tons, tho price having risen from 20 s . per ton to 40 s . per ton, the cost would be $1^{\frac{1}{3}}$ million storling as against 2 millions in 1872 , mind 4 millions in 1874.

We are not ahout to use so magnificent an opportunity for recommending the pse of any particular description of stove. We have little donbt that the manufacturers, the retail trades. men, and the advertisers will rise to tho level of is familiar witb tho ordinary stoves any one who is familiar witb tho ordinary stoves in use iu so many parts of the Centinent, whether he will he contented, coal being as it is, to forego the
introduction of so manifest an element of economy, as well as of cleanliness and comfort? Will he continue, for the sako of habitual ple. judice in favour of the open fire, to pay $60 l$. a
year instead of $20 l$.? The iron stores wbich are not incommonly to be met with amoug ns have serious diadivantages, especially in the anplea. sant result of bringing the air we have to breathe into direct contact with heated iron. But this does not apply to stoves covered witb, or comhighly ornameutal embellisbments for a room. In the ceramio gallery of the South Kensington Museum may be seen specimens of the applica. tion of the potter's art to wh
called the focus of domestic life

One point has to be borne in mind witb regard to that introduction of earthenware stoves wbicb can only be a question of time. A struggle will ensue between economy and health. The former will induce us to save heat, at the expease of ventilation. The latter calls on us to ventilate, whatever may be the loss of te mperature. The miafortune of the case is, tbat, hitherto, economy has carried the day. It has done so, not solely by its own force, but because it has afforded the greater amonnt of sensible comfort to most people. Cold is felt by every one, especially oppression whicb air, vitiated by human respiration, exerts on the lungs, is, comparatively speaking, felt by few. But almost every
Englishman or Finglishwoman is seasible of Englishman or finglishwoman is sensible of
tbis oppression on going into many a stove. warmed bouse. Let us take the bright little miniature of Paris, the city of Brossels, for an examplc. It is souse years since wo Were there; but we deubt not tbat the experience of the traveller of to-day is the same as our own. On eatering one of the clean and comfortable hotels of Brussels or of Ghent, with its noble and lofty apartments, large and well-glazed windows, and all the stately furniture that befits a palace, we become very sensible of the confined air of the place. The bouse bas heen shut np for the winter! Cold is kept out, but, with it, fresh air is excluded. An imperceptible,-no, a perceptible,-presence; a sert of faint, ghostly reminisoence of eaten dinners, and smoked pipes, and emptied bottles, and extinguisbed matches, and performed household duties of every description, comes to meet us 2 s we enter. We must not let our economy of ccal afflict ns with such an atmosphere as

There is no reason why it sbonld. The actual consumption of fuel will be regulated by the amonnt of air that passes tbrough the fire.grate But that quantity, in nine cases out of ten, is
atterly inadequate to the due ventilation of the apartment. Nosr the economy effected, in the case of the closed apartment, is twofold. First. there is the diminished consumption of fuel secondly, there is the prevention of the escape of radiant heat. It is the latter alone that of radiant heat. It is the latter alone that
involves contamination of the atmosphere. Nor is the economy of this part of the system more han a small portion of the tatal saring. Be it less or more, it is a false economy. Everything chat calls on the human organisation to perform a destrnctive functien, which can bo avoided hy
the use of mechanical means, is a thoronghly the use of mechanical means, is a thoronghly alse economy. But even with our wasteful open
fres we are not in a position to be very sever lires we are not in a position to be very sever on our more tbrifty ncighbeurs in this respeet. An open grate, within twelve or fourteen inohos of the floor, is but a very imperfect ventilator If the apartment be lofty, it wil never he or werly ventilated by sucb a brown open, and a horonch rentilation, a storm on a small scalc, be from time to time introdaced. It is only by special openings for ventilation in the top of the room that due sweetness of air can bo otherwise insured. We have often spoken on this subject. Such an arrangement is admitted by all the more thougbtful and conscientions architects to be indispensable. The use of earthenware pipes for tbe express purpose of ventilation, and never employed as smoke.cbannels, has been known among us for many years. It has often heen ccommended in our paycs, and is, we believe slewly luaking its way into general use

The intreduction of this wise sanitary precan tion should be the constant acconpaniment of tbat of the carthenware stove. We must not bottle up de-oxygenised air because it is warm Means will probably be found, sooner or later, of extracting the saline from deteriorated air, while in the process of removal from our apart ments. We rannot afford to wait for that. We have to guard against running from one extreme to azother. We slall, we have little doubt, effect a very graat saving in our domestic con-
sumption. But do not let us increase the surnption. But do not let us increase the doctor's bill at tbe expense of the coal merchant, or injure our lungs while we improve our grates. We have naturally bcen led to dwell on that part of this great subject which most directly concerns the practice of the architect and of the builder, and which most sharply and constantly comes hotne to our daily perception. But, economically speaking, we have touched on tbe smallest element in a great national question Tbe domestic supply of coal is not a sixth part of the tatal supply, and a fact of wbich we are only beginning to find out the prossure has yet to be fully elucidated. Tbe price of conl is no anly an eloment in the cost of all manufacture into account over, and over, and over again.
We require coal to work the encine that ra coal from the mine. Then we require it to move the locomotive tbat takes tbe coal to the wharf Agaiu it is required to raise the iron ore, and tbe lime-stone flux to be used in smelting; to heat the furnace of the smelter, to blow his fans, to raise tbo proportioned contents of his furnace cupola; to heat coal to run the iron from tbe cupola; to heat tbe pudding.furnace; to heat hammer, or roll the puddled bars into bar or shect. Tbe engineer, the merchant, the black smith, the catler, the workman in iron in any form, each requires a new heat and a new supply of coal. Fresb locomotive power is needed to end tbe manufactured article into tbe market and what bave we tben? A tool witb wbich a man may begin to work! How the price of hammer, a chisel, or a saw may be increased by the action of the one item of costly fuel, over cesses, besides recurring in these various prolabour, in the matter of the daily consumption of the workman, it is not easy to foresee; but natter wr hr. Ball does not overstate the England as a preat nation depends on the price of her coal sapply
There is no doubt that the actual rise in the price of coal is not to be accounted for on coonomical grounds. Political economy takes no heed of panic, or rather it takes heed of it as i does of death itself, as a stern element in tbe restriction of what it calls over.production and over-population. Into that we cannot now the actual rise must be referred to moral canses alone, not to physical or to mechanical causes. We very mucb question whether the demonstration which we offered, that the depth of workable
coal must be limited by the distance of 2,000 民t. ratber than of $4,000 \mathrm{ft}$., from the surface, if it were present to the mind of every coal-owner and of every collier, would have raised tbe price coal a singlo penny per ton.
But the fact is, in the first place, that the onstant jearly augmentation in the demand for oal, which, as we pointed out, would, if mainained, bare exhausted all our certain supplies within a century, has approached unmanagable oroportions. Sir W. Armstrong speaks of the reat activity of the iron trade. This, no donbt, is one great element in the oase; hut all he eloments of increased demand src represented in the one figure of constant annual nerease of coal produced. Tbis, we repeat, is becoming unmanageable, involving, as it does, he conditions and the demands of so many coalfed industries.
Fintirely distinct in its easence from this case, although taking occasion from its activity, is the labenr question. The prime element here has been the disposition which party strife has so aufortunately developed, to treat industrial questions on non-industrial principles. Men have heard so mach of political econoniy that many of them have began to think that politics (in the vulgar and erroneous sense of the word) is the truc economy. The workman bas been condition, is not the hammer or tbe pick, bnt the rote. If he las learnt tbis lesson rather toe aptly it is net so mueb himself as tbe inculcators of this new gospel that are to be hlamed. Taught, hy every tencher to whom he can look, he doctrine (false, except in a very abstract scnse) that lahour is limited by capital, the workman has not uunaturally come to the conclusion that capital is the great enemy of labour. Thas we have fonud bim adrised and induced (as in the case of the double shift) to neglect that which was to his own manifest adrantare, on he sole ground that it was also to the manifest advantago of the person denounced as the capitalist.
Tbirdly, we bave the usual influence of panic an influence calssing a rapid and energetic action, and calling into play every degree of motive, from prudence to rascality. For a rise of 8 s , per ton at the pit's moutb, to bo accompanied by a rise of 30s. per ton at tbe hall.door, is ar anomaly hat can oniy be transitory. It is in this last and, indeed, most pressing point of the case, that the most advantage is to be expected from the labonrs of the committee. The honourable mover stated tbat the very commencement of the motion caused a decline in the price of coals. It is by o means inconsistent with the known facts of nancial panic to suppose this to be tbe case. The knowledge that the subject is about to re In panic, every mind tranquilise many minds. In panic, every wind tranquinised is a subtrac. fion from the violence of the disturbing force. Thus, we can bardly doubt, the committee will render excellent service by bringing into fulf ight many of the elements that will come in to reduce the price of ceal. Suchare tbat decrease of waste in use to which we have referred, in one rancl alone ; the possible effect of export duty ; he influx of foreign workmen; the application to collieries of labour disengaged elsewbere; tbe application of ooal-cutting machinery; and the importation of coal from toe most accessible por. tions of toe enormons foreign supply, compared to whioh our own stores of the mineral are only ractional. In presence of tlese and similar con siderations, we besitate to believe that anything ite prescnt prices can he maintained. Sbonld sucb prove to be the case, it cannot fail to parayse the manufacturing and commercial activity of the country. Over. dear conl would then right tself with a yengennce ; and the "great lam of supply and domand" would produce one of those violent and fatal oscillations which it is tbe duty of the statesman to avert.

The German Gymmastic Society.-The welfth annual report of this Society notes a atisfactory progress in all its branches during he year 18.2. It is propesed to build anothes ory on tbe top of the pren hare subcribed -Mr. C.W. Siemens, 400l : Baron H Schroeder 00l. Messrs, Frinhling \& Goschen, 1007. Megers Frederick Futh \& Co, 1007 ; subseribed ans romised by member, 3002 , The object ind et a lectare.room, a reading maller rooms, comfortably and suitably fitted ap ; cost estimated at about $1,500 l$.

EXHIBLTION OF THE ROYAL SCOTMISII ACADEMY,
Tre first thing which strikes the oyo upor entering the Academy gallories this year is the ontering the Academy galleries this year in the oommitteo seom to have not only been de. girous to place the pictures where they could best be seou, but also to arrange thom in such a manner as to produce a good general effect. The first room is entirely occupied by watercolour drawings, the examination of which
acoustoms the sight to sustain and endure the acoustoms the sight to sustain and endure the
gtronger colouring of the oil paintings. Upon stronger colouring of the oil paintings. Upon
passing the screen which divides this room from passing the screen which divides this room from the others, a long perspectiveis seen, terminating

rest of the apartments. This effect has been rest of the apartments. This effect has been
obtained by remoring a screon which formerly obtained by remoring a soreon which
cut off the view of the sculpture-room.
cut off the view of the sculpture-room. time, we cannot say that much high art, -really intellectual work, which will live and he prized by future agges, is to be found. Some of thoso slready familiar to the public do possess very
high qualities. Fzed's "From Dawn to Sunset" high qualities. Fred's "From Dawn to Sunset",
is "a thing of beauty, a joy for ever,"一 a poem is "a thing of beauty, a joy for ever,"- a poem
of the artist's own composing as fine in its way of the artist's own composing
Millais's "Chill Octoher" also adds its attrac. tions to the exlibition. The artist, in this instance, divorges from his former practice painting figure enbjects; and his oxample has been followed by G. Panl Chalmers, whoso "End of the Harvest" hangs opposite; and no tryo
works conld form a greater contrast, Millais works conld form a greater contrast, Millais has made colour a means towards an end, and
has produoed a veritable transcript of nature. has 'produoed a veritable transcript of nature. In looking at the painting, the spectator does not think of the painter: tho work is entirely
doroid of mannerism. Chalmers has made his doroid of mannerism. Chalmers has made his subject an occasion for the display of colour:
that sombre, rich tone which pervades his in. teriors is here reproluced in the open air. The scene represented is a potato. field, with workers
filling bags with the esculent roots. The snn is filling bags with the esculent roots. The snn is trees throws a dark shadow over the greater part of tho foreground, -so dark, indeed, a.s at first siglit to make it difficult to distingniah between the hags of potatoes and tho labourors. The picture is a fine one of its kind, but wo would have liked a little more light thrown into it. The repetition of the same offect in every kind of suhject is sure to degenerate into manaerism. In Sir George Harvey's "Thrieve Castle" we have muoh the samo open-daylight ellect as in Chill October," but we canaot here disassociate the effect is produced are transparent, The csudt, however, is very pleasing.
The "Interview between Jennnio and Effie Deans" in prison is rendered with truthfuluess and simplicity by Mr. Rohert IIerdman. oharacters of the two sisters are nicely discrimi nated ; both in appearance and manncr they ar such as described hy Sir Walter. The action i natnral and unaffected, and the coloar and com. position remarkably good. Sir Nool Paton nters appearanco it a scripture subject Christ and the Sleeping Disciples." painting is more solid aud the colour dueper io one than is usual with the artist, The drauring and composition aro graceful, but we cannot say any religious reeling was awra
Mr. Mactaggart has again been at the sea.side where he is quite at home. He has a free style of his own, entirely devoid of conventionality His best work is, we think, Amongst the Bent," where we have a fine breezy strotch of sandy bay, with hillocks topped No tnfts of bent, amongst which rnddy, happy chicen tumble about, free from woo or
Mr. Hugh Cameron continues to produce little $5^{2 m s}$,-gems they are, and pretend to be nothing eise,-birs of lovely oolour, delightful to look soft, larmbent light of the Copal, "Going to th Well" the paler lastre of the pearl
Mr. W. F. Holo represents "Chivalry" in ite best aspect. A knight on horseback is erossiog a stream, having seated in front of him an old woman with a basket of eggs; to her he pays as nuch attention as if she were the fairest lady in the land. A prinoess and her attendent strolling ou the river's bank, look altendant wonder, whiist a dwarf minstrel strums his
guitar as an accompanimont to a ditty apon the action of the knight.
Kave pleasantly by Mr. Keoly Halawell, we have pleฉsantly represented one of those pic. costnme of the people, who stand in groups costnue of the people, who stand in groups
firting and otherwise amusing themselves, giving auimation to the scone.
"The Entrance to Curaig Skye" (Waller H Paton) is one of tho most wonderful scenes in tho British Isles. The artist's point of view is from between two almost perpendicular masses of rugged rock, which rise np higher than the oanvas; between these stands, clear against the sky, a hnge "needle," whilo in the distance are gleams of water. Here, if anywhero, the artist might have been expectod to abnndon his nsual trapings of purple and gold and array himself
in simple gray and brown, but he has not done so, - he must everywhere appear en reeple. Very 8o,-he must everywhere appear en re,ple. Pery Graham: down the distant mountain side the gleaming streams tear along from amongst wreaths of mist to meet in one torrent of brown water, which broaks in spray over a rocky chanuel. This is the true spirit of the land of Ossian. Wo are not altogether satisfied with the delineation of the mist, however, which in parta appenrs too solid and immorable.
"Tho Clansman's Grave"," by Mr. John McWhirter, and "Danottar", by Mr. W. W. of Scotland. Mr. James Drammond does not appear to have much of the comic cloment in his composition, yet he has prodnced a picture called "Rosinante" which is really comical. The gaunt, raw-boned charger of the redoubtable knight of La Manca, which, like its master, had some hreeding in it, is represented as a short-logged, spiritless, pot-hellied hrate, and whether the figure in the background is the knight himself or his squire it is dificult to say.
The number of portraits eshibited is nousual,
The number of portraits exhibited is unusual, and why most of them were admitted, excopt to fill up wall-space, it is diftroult to say. One Chalmers, of an artrait, however, is, by G. P. Chal mers, of an aged divine, fine in expres
remarkably good in colour and toxture,
perusal of the great mass of tbe works exhibited leads to the conclusion that too many pursne the art of painting by striving merely to attain manipulative skill, the caltivation of the miud being entirely neglected, resulting in
paucity of ideas melancholy to contemplato. The arohitectaral works will be mentioned in our nest.

MONEY TO BE SPENT BY THE LONDON AND NORTH.FESTERN RAILWAY COMPANY.
Tre half. yearly meetings which aro now being held by the several railway companies throngh. ont the country disclose, amongst other facts, the remarkable oxpenditure which the different companies feel themselves compelled to incur in new works and station buildings, for the parpose of providing for their constantly increasing traffic. The outlay in this respect of many of the leading companies is somothing enormons, if not actually unprecedented. The proceedings at the meeting of the Loudon \& North.TVestern Company, held on Saturday last, show the marvellous oxpansion and resources of this powerfal railway corpora. tion. At the meeting in question the directors asked for, and obtained from the shareholders, a vote of no less than $818,416 \mathrm{~L}$. for additional rolling stock and new works. The particulars of the expenditare for which this enormons sum of np. vards of three.quartera of a million sterling is required, will be interesting. A considerable portion of the amount is to be oxpended in addi. tional rolling.stock, $295,000 \mathrm{l}$. out of the entire nm voted being required for new engines, cart ringes, and wagons. There is then the sum of 285,297 , for extensive new works ar soveral of the prinoipal towns and districts intersected by the line, such works being for the most part now a progress. These works include $25,000 \mathrm{l}$. for a call station at Curtain-road, in the City; 9,000 ? for the extension of roofing and other improve nents at the Euston Station; 50,0007 , for the extension of the Wapping goods station at Liver pool. $11,000 \mathrm{l}$ for machinery for the cooda station L London.rond, Manchester; 41,0007. for the idening of tunnels on the Bettews and Festiniog ine in Wales; 12,0002 for a double line on the Llandudno branch, 25,0001 for incrensed the accommodation at Chester: 35,0001 for gadd tional block telegraphs; 12,000l. for widening !
the line at Preston : and $64,750 \mathrm{l}$, for additional shops and sidings at the Crewe works, where tho company's engincs, carriages, and wagons ar chiefly manufactured. Beyond these amounts, 99,730l. have been granted for enlarging and pro. viding additional accommodation at sixty.six of the company's passenger stations in different parts of the conntry, whilst 138, 3597 , hare also been voted for the purchase of additional lands in twenty-eight different localitiesfor still farther extensions, bringing the argregate sum voted for new works alone, irrespective of the intended outlay on new rolling-stock, to $523,416 l$., or upwards of half a million sterliug
It may further be observed that thoso several large sums are altogethor independent of a heavy the conn the company's lines, including the widening o the railway between London and Bletchley which, beskes the remoral of a large quantity o earthwork, and extension of hridges and viaducts Wrolvos the construction of three new tumnels at Watford, Northchurch, and Leighton, oontaining an aggregate length of 2,632 yards. Simul. nneously with the works just named tho main by two meonstaflord and Crewa is being widened by two additional lines, requiriug, as the eugineer states in his report, the removal of 640,000 cubic yards of earthwork, and the construction of fifty five bridges. A large new dock, at Garston, near Liverpool, is also in course of oonstruction for the company; together with warehouses at the Canadr dock station at Liverpool, and. at the Egerton dock at Birkenhead, in addition to other minor works. The above all refer to works in progress; but beyond these it should be staten that the company aro applying to Parliament for still further extensive powers, including the enlargement of the Lime-street passenger station at Liverpool, at an estimated cost of between 250,0002 . and 300,000 . It may therefore be safoly assumed that the company are now en. involving an outlay of not less than $1,500,000 \mathrm{l}$.

## the santary movement in

## DUBLIN.

It is now a well-established fact, that Duhlin has at length awakened to the knowledge of her own defioiency in a sanitary point of view. To some extert the public of Dublin wero nader the of rumal the achoa which caused the removal that wers manure.heaps and obser misaoted from time to time, was effected by the constitated autborities.
There are, however, good gronnds for smp. position that such was not the case; and it would appear that the true ngent at work has been merely the demands of the market, or in other words, that as Dubsin is bounded in some direetions by highly valuable tillage lends, it is only at cortain seasons that the leausing pro. cesses referred to are carried out.
There wonld appear to be some grounds also for the comparative impunity with whicu nui-sance-mongering is carried on in many of the city districts, in the delays of the law, in com. pelling offenders to consider their neighbours as well often as themselves, as well as their un. wholesome trade.
Close proximity to tho cor-shed, the stable, and the piggery, as well as mann re-hoap, gleaved other even more obje ive near; but our knowledge of suich cases enahles us to bring to mind very many well-todo people who sometimes in their own persons, but oftener still in those of their offspring, suffer from illness ongendered, as
Epear, by this odorons state and endemical disease too fre. quently and too constantly compels attention to Che state of Dublia, as scen in the high rate of io regard to mortality, especially when thation per acre in the Dublin registration district.
Another reason why the matter demands im. perial inquiry, and as authoritative remedial sometimes actrally falls be birth-rate whats has for several years past actually very littlo exceceded the.latter.
Here is an explanation of the fact that Dublin, unlike every large city in the United Kiugrdom, 8 wo helieve, has actually fallen off in popula. ion, although embraciug within its registration ounds several Hourishing seaside ,and raral ownships,

This year anotber tbriving suburban district
has been added to the Dablin district. Wend to the Adelaide.road, Haverstock. has been added to tbe Dablin district. We would remind the executive that inquiry sbould be had, and then large measures possibly might forget that not only is physical decay injnrious to the well.heing of a town, and even destructive to a nation if genoral, but, a people's moral state may become a national burden as well as dis. graco through nerlect of their sanitary con
dition. dition
It is a matter of great importance to Duhlin,
tobat such questions as we have now glanced at that such questions as we have now glanced at
have heen taken up by several of the citizens, have heen taken up by several of the citizens,
as well as by the Duhtin University, and the Royal Dublin Society, and the movement bas already net with a response also on the part of the Dablin Municipal authorities.
The Dublin Sanitary Association, now a few
montbs old, nambers in its raks many lay as montbs old, nambers in its raks many lay as
well as professional men of standing, energy, and ability. It has already conforred with the corporation, and with tbe Public Healtb Com. mittee of that body; and we trust that these confercuces will resalt in improved efficieney lay officers, in tho carryino out of measnres of sanitary relief for the people of Dublin
In concert, too, witb the Royal Duhlin Society, wbose usofulnoss datos back to nearly a century and a half-the Dablin Sanitary Association, and the Conncil of the have conmenced a series of puhlio lec. Society, have commenced a series of puhlio lec-
tures, in the theatro of Leinster Honse, on the tures, in the theatro of Leinster House, on the fecturo was delivered on Saturdny last ( $22 n d$ February), to a large and influontial audienco.

## NEW RAILWAYS AND TRAMTVAYS.

The railway and canal Bills of the currcut session for which notices of petitions have been
deposited are 190 in nuber, deposited are 190 in number, of which 160 aro for the construction of new railways or additional
railway works. Of the total number, serenty. railway works. Of the total number, soventy. seven Bills are promoted by now companies,
and 113 by existing companies. The powers asked for are for the construction of 1,812 miles of new lines, and the proposed additional capital to be raised under the Bills amounts to
$.69,09 \pm, 7782$., two-thirds of that amount heing by $69,09 \pm, 7782$., two-thirds of that amount heing by sbares and the remaiuder hy loan. Eighteen tramway Bills havo been petitioned for, to lay seventy-eight miles of tramway, capital in shares rand loan, 837,8001 . In addition to the latter, thero are twenty-seven applications for pro. visional orders for the construction of 158 miles of tramway; capital, $837,012 l$. Of the new tramwnys, se venty miles are proposed to he laid mileare in the four Bills that were suspended last Jnly by order of the Fiouse of Commons.
The streets and roads in wbioh it is proposed to lay tramways include:-A Brixton, Streatham and Croydon line of seven miles and a half ; Lines from Blackbeath.hill to Eltham, with a hranch
nlong the Lewisham.road; lines in Dover.road, Kennington.road, and Wandsworth-road; lines in Victoria.strect, Westminster, and from the south end of Westminster Bridge, along the south end of Westminster Bridge, along the
bridge, and the Thames Embankment to General Outram's statne; from Somerset House along Waterloo Bridge and Waterlooroad to a junction with tramways at the Borough road; from London Bridge along Southwark - street, over
Blackfriars Bridge alongt Bridge-street, FarringBlackfriars Bridge along Bridge-street, Farring-
klon.street, King's Cross-road, and the Caleरlon.street, King's Cross-road, and the Cale-
donian.road to Holloway, with hranches in the donian.rond to Holloway, witb hranches in the House, and from the Ladgate-circus by the new stroet to Holborn ; an exteusion from Goawollrond to St. Martin's-le. Grand; a short line in Lothbury and along the west side of the Bank; an extension of the Whitechapel line to the junction of Leadenhall. Etreet with Fenchuroh-
street, an extonsion fron. Old-street.road to street, an extonsion from Old-street.road to Bishopsgate-strect, and a short ine from Hoorand sonth-west tramways are proposed from Shepherd's Busl, along the. Uxbridge-road, to Aoton, Ealing, Hanwel!, and Southill, with a branch to Brentford, and from Hanmersmith, to Chiswick, Kew, and Richmond. Another line is proposed from Knightsbridge, along tho Brompton and New Brompton roads, to Wulham Green and Fulham. On the north and north. west, lines are proposed from Stamford-hill to Tottenham and Edmonton; lines in tbe Victoria Park-road and Grove-street; in the Junction road, Upper Holloway; and from the Hamp.
proposed by the London Street Tramways Com. proposed and the Common Road Conveyance Com. pany, and the Common Road Conveyance Com-ville-road, Euston.road, Marylebone-road, and Edgware.road, to Edgware, with a branch from Oxford-street, along Tottonham court-road, to Euston-road. Some of these applications onght Euston-road. Some of these
certainly not to be granted.
The tramway companies, judging from their estimates, cxecute their works at excessive cost One of the new bills, for instance, is for laying 1 mile 41 chains of tramway; for which a capital of $25,000 \mathrm{l}$, is required, or at the rate of ahout 16,0002. per mile, with no land to purchase, cuttings, ombankments, or other works, beyond laying a light permauent way, that costs for heavy railways less than half the amount.
Tbo Metropolitan Railway District group embraces nino Bills, for the construction of $10^{\frac{2}{2}}$ miles of new lines, that aro all suburban, the most extensive being the Metropolitan and 10 John's Food now lines, of 5 miles and ne toin, for an extension at Finley-rad, a Edgware-road, a second to the Midland Railway, and a third by Willesden to Kingshury. The additional capital to be raised is $400,000 l$.

HOW FAR IS AN゙ ARCHITECT LIABLE
II." in four last number ( p .152 ) wishes to know what is the nse of an architect's certificate I am sure he will pardon mee if, in the desire to be explicit, I happen to state anything witb
which he feels himself already accuainted. The certificate for final payment is, as I take it, im. mediately in question. Tbe cortiticate for works in progress does not, bowever, matorially differ in purpose. Both are, I contond, given simply to guide the payments, and aro in the natnere of somewhat coufidential communications between the arohitect and the client. A certificate for fnal payment is always indubitable evidence very works are substantially completo, - that and spirit of the contract stipulated for. If in any instance this was not the case, the arehi. tect would be logally liable for neglect. [Of course, as a matter of fact, architects, if at all judiciously-selected practitioners, tako pains to make their certificates as final as they cau in every way,-withhold them if not satisfied, suc.,so that, where the surveys bave been fairly requent, and tho scruting of the works keen lients usually and justly regard final certificates is pretty good evidence also as to the character with contract drawings and spencifications with contract drawings and specifications.] If anything further than the fact of completion was
vouched for, the architect would cease to bo the rouched for, the architect would cease to bo the
overlooker of the works, and hecome a guarantor f efficiency, a rôle that be is never, I think, employed or paid to take. In trath, as your correspondent, "Z.," hints, the scale of the architcot's pay should he cridence enongh as to
thts. He is (int the ahsence, he it always said of pecial ancement whiche, he it always saic, of mornt of oment which might provide for any oustructor, who also undertaies to see that his esigns are enveried undertanes to see hat his tentions. It is not by detecting and exposis. as be does at times, the misdecds (the intentiona scamping) of tradesmen that ho justifies his existeuce. His employment would have a poor bolicres that, -all due allowanres beiug ingene, a trae tradesman wishes and aims at and takes pride in doing fairly. No one provably loiug therwise wilfully should stand a chance of heing employed by any one. No judicious person, one inclines to think, would, however, dispense with on architect's services in any building matter, even if he could secare right-doing on the part of tradesmen, carried to tho length of neglected self. interest. But I must not be led away into general cousiderations, which would call for more space than you wonld afford me. It should be a sup. port to what I have said, that contractors show no desiro to consider themselves cleared of liability hy the architect's final cortificate. In the "conditions of Builders' Contract, prepared by tho Loindon Builders' Sooiety," clause 11, runs thas:-
"Any defects, shriukage, and other faults whieh may
monper withius from the completion of the appear within months from the completion of the risls or workmanslip, are, upon the direction of the architect, to be amended and made good by the contractors at
their okn cost, ualess the architect shall decide that they
ought to be paid for the same ; and, in case of default, the
employer may recorer from the contractors the cost of malring good the work3.
And the last sentence of clause 17 makes it clear as to the continning libbility, notwitb. standing the certificates:-
"Provided always that no final or other certificate is to cover or reliove the contractors from their liability
under the provisions of clause No. 11 , Whe ther or not the
same be notitied by the architect at the time or sabse. same be notitied by the architect at the ther or not the
quently to granting any such certificate," Clo 18 a
Clanse 18 makes clear what the framers of this contract consider the certificate,-what it is to do and what it is not:-
"A certificate of the architect, or an award of the thefee hercinatter referred to, es the case mey be, showing the final balauce due or payzble to the contractors, is to
be conclusive evidenco of the works baring been duly completed, and that the contractors nre entitled to receire payment of the final balsace, but without prejudice to the
liability of the oontractors under the provisions of

In discussing this question, time argone, with an intelligent and responsible huilder, he justified somo sucb arrangement as this:-"-
months" (eay six to twenty-four, according to moaths" (gay six to twenty-four, according to
the size and kind of work), not on the ground that be wished to a roid fair responsililities, but on the principle of Statutes of Limitation, -the evidence boing much affected by short lapse of time, -huildings are altered or neglectod, architects dio, foremen emigrate, 总c. Therefore the shortest timo, he argued, should bo named that Till give tho bnilding a fair and thorongh trial, and after that time no inquiry shonld be possiblo. One is bound to confess that a fairseeming argument can he made in this way,but not a thoroughly convincing one. I suhjoin a clanse long in common uso which is not nnfair and shonkl not he objected to (in fact, is not objected to) by well-intentioned tradesmen:-
"Shonld any flaws, cracks, setilement, shrinkings, or defects of any lind whatsoever arise, ocur, or become
endent durjug the progress of the works, or within the
 from the conipletion and delivering np of tha same, or at
any tinue tiereafter, whioh are farly attributable to tho
use of bad naterials, any time thereafter, whioh are fairly attributable to tho
use of bad materials, workmanshiy, or negligenco, the
contractor shall pull down and rebuild or rectify and contractor shall pull down and rebuild or rectify and
make food the same at his own expense, to the satisfac.
tion of the architect. tion of the architect; and shanl not be considered in any of payments of moneys haring been paune by the fict of payments of moneys haring been previously made on
the certilicates of the sajd arehitect. Aud on ease of
defnult, the said. . . Fproprictor] may recover from default, the said. . Eproprietor] May recover from
the suid contractor for tho damage sintained by him ia
consequence of such defiets, or for the cost of pulling consequence of such defectif, or for the cost of pulling
down and rehnilding, rectifing and maling good, tho
work, and for damages suetained by the ain works, and for damages suetrined by the said. ... [pro-
prietor] in conscquence of the same."

Hard cases make bad law," -and bad rule and custom also, one may add. While one must acknowledge that "A Sufferer's" architect was obviously very blind and negligent, and "A Sufferer" was very hadly servod, on looking at the whole question of supervision in building trades, one is not inolined to recommend a revoIntion by which the architect wonld become a capitalist underwriter, instead of (what he is now nuderstood to bc) a director of works.

Srr,-In reply to this question, I will refer your correspondent " $H$." to the prictice of the medical profession. If "II." ghould be so unfortunate as to require the eervices of a medical man, and calls in a physician, tbat gontleman prescribes, and on subsequont visits watches the progress of the disease; but if "I." sends hi prescription to he made up by a vendor of adulterated drugs, instead of a properly-qualified dispenser, and fails to recover, or gets poisoned hy the negligence of a shopman, it will senreel he expected that the physician be liable to blame. The same with an architect: if he furnishes a proper plan and specification, aud such geveral supervision as would bo required wher a respectable and able tradesman is empioyed that is all that should be expected from him ; and when the work is finisbed, the arclitect certifies that the contractor is entitled to tbe amonnt of bis coutract, and that the work is completed accoud ing to specilication so far as can he seen. but
 is always to be implied that, it means "fraud excepted,"
Unless the tradesman be well known as a reliable and experienced man, it is ahsolutely accessary to have a olerk of worlss to see every portion of material beforo it is placed in the works, works, owing to tho ignorance and incapacity of
workmen renerally, this is desirable and workmen generally, this is desirable and more satisfactory to tbe contractor. I bave frequeritly petent and fraudulent men, and, in reply, have
been answered somewhat to this effect,-"Wo consider it nccessary to accept the cheapest man, and must look to you to take care that we get our pound of tesh." In tho early days of my practice I was, to some extent, compelled to fall in with this; hut the result was frequently bankruptcy of contractor, who was insolvent to commene delight was to rain overy traderman he had to deal with. I do not wish to appear one sided in my remarks, but am willing to admit that there are remarks, but am willing to admit that there are many young architects who would be better fitted for their duties if they followed the good old practice of working at the several branches before or just after their pupilage, and tbere are before or just atter their pupilage, and toere are
sometimes instances where failures could be sometimes instances where fallures conld be part, and for which a degree of liahility would part, and for which a degree of liahility wonld endearour to mako the contractor responsible endearour to mako the contractor responsible
for this as it would be to expect the architect to make good defects axising from the rascality of the contractor, and pat out of sight during his absence

## WAREHOUSE IN VICTORIA.STREET

 BRISTOL,A NEW warehouse has heen brilt in Victoria. street, Bristol, for Mr. Joseph Birtwell, iron. founder. Mr. H. Masters was tho architect, and Messrs. Ford \& Summers were the contractors It was designed specially to adrait of a good amonnt of the class of manufactures whicb Mr Birtwell produces. Ordamental rain-water pipes border the frontage on eacb side, and the low parapet forming the gntter is fringed, in the French manner, with ligh cresting. Tbe win. dows, which have stone arches carried on ornamental iron columns, pramidise, so to speak, tbere being three openings on the ground floor, two on the next, and one at top, producing a somerrhat odd effect. The ironwork is from original designs. The iron panels on the door represent the varions stages in the process of iron-working, and some small carvings in the stone work show the three degrees of progress of the trade - the top, "mining" and the two

## CHESTER WORKHOUSF COMPETITION.

The huilding committee considered the plans and selected for the consideration of the Boar numhers 1 (Experior), 3 (F*delis), I (Deva) 6 (Ventilation), 8 (We fylt to win), 9 (Cestria) 10 (a wheat-sheaf), 13 (Castrium), 16 (Rusticus) 19 (Palmam qui meruit ferat), 25 (Dee Side) 26 (Alpha), 30 (Idoneum).

After a long discussion, it was resolved, on the motion of Mr. Salisbury, that the thirteen plans he referred back to tho committee, and that they take steps to see some competent persons upon the matter, and satisty themselves that the wor can be carried out for the money stipulated.

## WHOLESALE FISH-MARKET FOR

 LIVERPOOL.During the past week there has heon commenced in Liverpool a new fisl-market, some what similar in its design to that of Manchester, descrihed in last week's Builder, except that the Liverpool structure will be exclusively devoted to the wholesale trado. Hitherto there has heen no acommodation for the wholesale fisb trade; the dealers have had to he content witl two comparatively narrow avenues near the retail market in Great Charlotte-street, which, hesides being totally unfit for the purposes of the trade, were not even spacious enough. The conseqnence has been that for many years, the London and Manchester markets have heen hetter supplied tban the Liverpool market, and various inland towns have heen in the sam position. At the last meeting of the Liverpoo town council, a tender of Messrs. R. Wells Sons, contractors, Commercial-road, Liverpool for alterations intended to accommodate the wholesale trade, was accepted hy the council; so that the complaints that for years have beez made by the dealers, will be productive of a cubstantial local improvement. The cost of the alterations will amount to $1,541 \mathrm{l}$, and the enlarged space will bo made hy extending the retail market on the west side, across the present open passage near the Amphitheatre. By taking in a portion of the retail market, a whole.
sale market of 600 square yards will be provided; the retail market possessing nnder the new arrangement, 1,000 square yards. The present retail market will be entiroly rearranged, but there will be no diminution of counter space, although the area of the market itself will be reduced. At the north end of the market, in Rose.street, space will be provided will the accommodation of the the wharfs and quays. The present frontage to Great Char lotte-street will remain, bat it will be extended laterally, the style of tho now additions heing assimilated to that of the old. These altera tions will, it is expected, he finished in about four months.

## DWELLINGS OF THE POOR

The Special Dwellings Committee of tbe Charity Organisation Society held its second meeting last week, the MLarqnis of Westminster in the chair. A sub-committee was appointed on the motion of Mr. V. J. Kay.Shuttleworth, M.P., to consider various suggestions and advise the committee as to the hest mode of dealing sub.coumittee met on the 26 th nlt, and made some progress in their worls.

MEDALS AND PREMIUMS OF THE INSTITUTE OF AROHITECTS
A very fair assortment of drawings and essay have been submitted this year, including si desigus for a puhlic hall in competition for the Soane medallion and 50l. For this it is more
than likely tlat the drawings distingaisbed by than likely that the drawings distingaisbed by the device of a hell within a circle will be recommonded, and that medals of merit will bo awarded to the authors of the drawings hearing respec tively tho mottoes, "Frustra?" and "They say! What say they?" The Institute Siver Medal, tho author of the drawings distinguished hy the device of a circlo. (Building illustratod-St Mary's Abhey, Malton, Yorkshire) ; and a medal of merit to the author of the essay on "Modern Art. Architectural Criticism," bearing the motto oi "Unde et Inde?
We are sorry to learn that an excess of dis bursements over receipts, to the amount of 3002 . will have to be met at the special meeting o Monday next.

THE " $[$ AWK AND HANDSAW.
If Mr. Gedge will look over the preceding correspondence, he will see that there is no dispute about the word "hernshaw;" it is hanser that we aro in trouhle ahont.
At present "hanser" requires anthentication. If Mr. Gedge can throw any light upon its use, obliged to him.
As to Mr. Barry Sallivan's reading, it must he conceded that every individual has a right to his words opinion, and any actor may alec ant I do not find that either of his proposed now words, viz., "hern or heron," and "pshaw," exists any where in Shakspeare's text. Mrs. Cowden Clark's invaluable Concordance bas no reference to either.
So far as Shakspeare's text goes, be may never bave sean a heron; for there is no men. ion of it save in this douhtful passage. The word "pshaw," I think, is more modern than hi day; the word "pish," whicb might be deemed
a synonym, does occur in some editions; but unfortunately it is clossed as equivalent to "push." See "Much Ado," act $\nabla$., sc. I.
In sending this "note," I ougbt to make eservation as
A. H.

THE CASTLE OF PONTEFRACT
"Our histories," says Swift, "are full of Pomfret Castle;" and although this has long ceased to he the case, and Pomfret he now Lamous but for cales and the cultivation of the root employed in the soothing of catarrh and the adulteration of railway coffee, it was once a very famone, and is still a very interesting, place.
Whence came the name of Pontefract, and wen and whero its hridge was hroken down, are questions over which antiqnaries have long
stumbled, seeing that the Aire, the only stream of the district needing to he traversed by a bridgo,
is two miles from the town and quite out of its is two
girth.
It appears from Norman charters that the name of the place was Kirkby, a nanie, no doubt, bestowed upon it when church and bamlet were rounded as a Christian settlement, in the old days when King Oswald of Northumbria embraced the new faith, an ovcnt probably com. memorated hy the cross which gave name to the wapentake still known of Oswald's or Osgod's Cross. Kirkhy, however, is not named in Domesday, though prohably even then a burgh. It in evidently included in the manor of Tateshanl, on anshelf, winch belonged soke of Manesthorp Barnchi, and Silchestone. Tatesbail formed, and still forms, a part of the town of Pontefract No doubt this is the "Tadenes Seylf," where, in 9.47 , King Eadred received the fealty. of Archhishop Wulfstan and the Northumbrian Witan, as recorded, with their speedy breach of it, in the Anglo. Saxon chromicle. The place nst even then have heen of importazoe, ain net can be but hitcle doubt castle. Also it continued to be an important place, for at and is recorded in aomesday as rated at 202 having three mills, and containing a hospital for the poor. Domesday, no douht, means Pontefract Castle, when it records that, "Omnis tomour sedet inject metam castelli Ilberti secundum primam mensuram, et secundum novissimam mensurama sedet extra." Meto is bere clearly the castle garth or boundary of its immediate lands, not the military enceinte or curtain abont the position, with respect to which no measurement could be in error, nor is it the Castelry, whicb: was a much larger area.
The parish of Pontefract, wbich is large, is omposod of six townships, of whicb one is Pontefract proper. Tho parish is one of twenty mposing the wapentake or hundrec.
Le", wha calls the fortrees "Snorre longed to Richaril Aschenald, and then to Ailric Sweine, and Adam, his son, grandson, and areat wrandson. This lost had two daughters, marrie to Alex. do Crevequer and Adam de Montbegon. Dodsworth calls Aschenald, Aske, still a greate Yorkshire name, and points out, what indecd is still very evident, that the Norman works stood in part on an artificial hill, on which no doubte stood the houso of the English lord, dispossessed by the Conqueror
Ailric is a real person, and a Domesday land owner, and hefore the Conquest held many manors. Sweine was his son, and inherited, and ave a church and chapel to tbe monks of St ohn's Church at Pontefract, Ailic held his lands, much reduced, under the Norman grantee, s did Sweine, and Adam Fitz Swine, wbo founded Bretton Priory, and died ahout 1158 having heen a very considerahle person. Charter by botb Sweine and
ontefract cartalary
William l. was at Castleford on the Aire in tbe inter of 1069, and as he stayed there three weeks e prohahly found the means of inspecting so trong a place as the English House at Kirkby, and it may reasonably he supposed that he followed it may reasonably practice of directing a castle to be: it may
his us
built.
Mr.

Frecman sugoests that the name Pontefract may have arisen from some incident connected with this passage of the Aire; others ave thought that, like Richmond and Bont gomery, it was an imported name. Ordericus however, as zr. Freeman remarks, reters to it a Fractus Pons, not Pons-Eractus, Hex ditur ad fracti pontis valla, as though the words were in a state of transition from a description to a proper name. The change of name certainly was adoptcd slowly, for while an early cbarte hy Robert de Lacy, the second lord, has the passage, "s de dominio suo de Kirkbi," a later one has "Deo et $S^{\text {s" Johanni et Monachis meis de }}$ Pontefract," while Mugh de Lanval, the intrusive lord, at leost as late as 1120, employs the older name. Robert of Castleford, a good local authority, writing about a century after the vent, says the name commemorales tbe escape of a multitude of people from drowning, when a bridge broke down heneatb them. There is, however, no river within two mile
capahle of drowning a multitude.
Camden derives the name from the breaking down of a bridge or causeway that traversed the
marshy valley still called the Wash, tho spangs Pontefract, excepting the castle, which the king of which rise close N.W. of the castle and cross its approach from Knottingley, at Bnbwith Houscs, where, in the timo of Edward II., John Pontefroct, about a quarter of a mile from the castle, wbich, indeed, proves the existence of a bridge, thougb not of a broken one. How water came the defences of tbe castle are treated of. Perthe defences of tbe castle are treated of. Per-
haps tbe real truth of the matter may lie in the suggestion of Hopkinson, that the castle was called after a place of
De Lacy in Normandy.
A fow marks of Roman occnpation have been discovered here, and but few. Legeolinm, the station of the district, seems to have been at Castleford, three miles distant
But whatever may have been the origin of the fortress, or of its evidently pre-Norman earth. workg, its recorded history conmences with Ilbert de Lacy, to whom William granted Knototber lands, including about 150 manors, cbiefly in the West Riding,-where they fill seven pages of Domesday-book,-Nottinghem, and Lincoln, of Honour, of which Puntefract, the strongest and most important place, bccame naturally tbe chief seat. llbert, though no donbt of near kin Lacy, was a different person. He is thonglit to havo built Pontefract Castle before 1080, commencing it probahly in consequence of the visit of the Conqueror, in 1069. If Sir \#. Ellis be right, and it be alludod to by the Domesday entry Ilberti," it was speedily completed. Ilbert also Ilberti, ${ }^{3}$ it was speedily completed. Ilbert also
endowed tbe chapel of St . Clement within the endowed too chapel of St . Clement whithin the vived. He lived into the reigu of Rufus, from whom he had a confirmation of his grants. his wife, Hawise, be left Robert and Hugb.
Robert de Lacy, called, from his birthplace, "of Pontefract," claims to have huilt Clitheroe,
which las, indeed, becn attributed to his second which lias, indeed, becn attribated to his second
aon. He also had a confirmation from Rufas. By Mand, his wife, he had Ilbert, who, with his father, on the death of Rufus, joined Curthose against IIenry I., and fought at Tenchbrai. Both were banished, and Robert was disseized of Ponte fract in favour of Willim Transversus, and then of Huch de la Val, or Lanval, who beld it to the reign of Stephen. Robert finally regained the honomr, but King. Henry claimed 2,000 maros, innd De la Val had 1502. for the demesme lands, and 20 knights' fees, which are entered in the Liber Niger in 1165 as held "de Fateri feodo Dontisfracti." Robert confirmed some of De la Priory of Pontefrat

Hbert pontefrao
fourht porght at Northallerton, and was a zealons supporter of Stephen, on whose death he adhered to
Henry II. He married Alice, daughter of Gilbert de Gant, bnt died childless.

Henry de Lacy, next brother, succeeded. To him is attributed the later Norman work in the castle. He appears in the Liber Niger as holding 60 fees. Henry II. confirmed him in the Houour of Pontefract, and the other English and tho
Norman possessions of his family Norman possessions of his family. 12 Hen. II, he was assessed upon $79 \frac{1}{2}$ fees. He was a considerable church benefactor, and gave St. John's Cburch and St. Nicholas's Hospital, both in Pontefract, to the priory there. He founded Kirkstall. Robert de Lacy, his son, and succeseor to the Honour, was piesent at the coronation of
apichard I. He died clifdless in 1193 . dhichard I. He died childless in 1193.
The beir, according to Dugdale, and in violation of an accepted rule of inheritance, was Hunter, however, in his preface to the Piperoll of 31 Hc . I. has shown that in all probability Albrcda was the danghter of Robert de Lizures by a sister of Ilbert de Lacy, second of this name, and therefore Robert's cousin, and heir of the full blood. This point is important as setting sido what bas been regarded as a singular exception to an accepted law. Albreda married Ricbard FitzEustace, Constable of Chester Lord of their son, who died before his mother ubancloncd his House of Constable of Chester, and arms of De Lacy, and died 1179, having und arms of De Lacy,
narried Alice de Vere.
Roger cle Lacy, son and beir. 5 Richard I. he received from his grandmother the Lacy lands Richard's train. 7 Richard father in Ning Richard's train. 7 Richard I. he paid
ir,, 000 mares to have livery of the Honour of
retained in his own hands, and to which he paik 1 least tcn visits between 1205 and 1216 20 fees, for livery of the question of the De la Va 20 fees, for livery of which he paid 500 mares and 4 John, 1203, the king addressed a letter to do Lacy as their lord. Thougb John continged do Lacy as their lord. Thougb John continued mpord the Castle, he employed Roger in varions mportant offices, aud made him governor of the strong fortress of Chattean Gaillard, on the Seine, in which he stood a very famons siege, only giving ing when short of frod, and deserted by the is own John he paid scntage upon 4.rates of wardship. Heseemsto have been the baron who in the ausence of regular solliers, led the Cbester minstrels to the relipf of Earl Ranulpb, when surrounded by the Welsh. He was a great soldier, and an openhanded benefactor to the cburch, and deserved the line with which the monks of Hanlan began his epitaph:
"Hic sepelitur Heros gelerosus in orbe Rogerus."

## Earl Roger died a young man in 121 I

December, 14. John, 1212, the Honour was in bo king's bands, and lie seems to have made 300 with its revcnues; for in 1213 ho directed Torks at Corf Castle. Is to be spent on the Clare, and was sacceeded by marricd Maud de Tohn de lacy
John lacy had seizin 20 September, 1213, and paid John 7,000 mares for livery of the Honour, less the castles of Pontcfract and Durrington, which the king kept, and for the expenses of keeping which Peter FitzHerbert
had an order on the Exchequer. John, who is Barons ng the writ John de Cbester, joined the Barons against King Jobn, and was duly excommunicated by tbe Pope. The mother of his chiddren was Margaret, co-heir of Saer de Quincy, Earl of Winchester, by Hawise, Countess o Lincoln and co-heir of Ranulph, Earl of Chester and Lincoln. Early in the reign of Henry III., 1232, on the death of Earl Ranulph, Hawise seems to hnve made over her earldom to her daugbter's busband, who bore the title till bis death, in 12.10 .
Edmund de Lacy, thoir son, was, by the contrivanca of Uenry IIL., married to one of bis toreign kinsfolk, Alice, danghter of the Marquis not assmes. Me inheritcd Pontefract, but did outlive his motber. He died 42 Henry III., 1258, having built tbe House of the White Friars, ear the Barbican, at Pontefract
Menry do Lacy, Earl of Lincoln, his son, was the Longspee, and in ber right mecred the heiress of bury. He and in ber rigbt became Earl of Salis was knighted in ward to the king, and in 1272 was knignted and made Governor of Knares. borough Castie. He walled the town, and com meuced the Castle of Denbigh, which he is said to have left unfinished because bis only sur-
viving son was drowned in a draw-well in the Red Tower there. His other son bad been killed by a fail from a tower at Pontefract.
Having thus no son, Ear] Henry surrendered his estates to the king, wbo regranted them, 28th December, 21 Edward 1., to him for life, with remainder to Edmmud, Earl of Lancaster, and the beirs of his hody. 28 Edward I., Queen Mar garet was a visitor at Pontefract Castle, and daring a short hunting excursion to Brotherton, was there brought to bed suddenly of Thomas, called from his birth-place. It is said tbat tbe house in which she took refuge, witb 20 acres of land, was enclosed in a wall and ditched, and ranted by the tenure of keeping the wall in repair. Earl Henry died at Lincoln's Inn, 1310, leaving $\Omega$ daughter
Earl of Leicester.
Thomus Plantagenet, Earl of Lancaster, and by his wife, Alice, of Liucoln, and Lord of Ponte. fract, succeeded. He was mach at the castle, built Swillinerton Tower, the structures the bases of whicb remain in the main ward. He also in 1315 built Dunstan. borongb, and added Lancaster's Buildings to knownorth. Earl Tnomas's bistory is well known. From Boroughbridge Field he was taken to Pontefract Castle, then occupied by tbe weak and vindictive ling. He was imprisoned in great hall, and, in 1322, executed on the hill which still bears bis canomised name, a mile to the nortb-east. He was buried in tbe Priory. The patent creating Harcla, one of his captors, dars of Carlisle, was clated from the castlo, tbrec

Countess Alice, whose charaoter was unhappily not so impregnable as her castle, married
secondly Eubolo L'Estrange, whodied 9 Edw. III. Her third hasband was High de Fresnes, called Earl of Lincoln. Tbere was a fourth, earlier in the list, whose claims are doubtfin. Alice died 1348 , but Pontefract and the other pos. sessions had already passed, under tbo re-grant, to her husband's brother
Henry Plantagenet, Earl of Lancaster, sncceeded to his brotber's honour in 1321 and died 134. Edward III. probably retained the castle. He was here in 1328. By Mand Cbawortb Earl Henry had another Heary.
Henry Plantagenet (Tort-col, or of Grismond), Earl of Derby, \&c., and, in I351, Duke of daughter by He died 1361. Blanch, his second daughter by Isabel Beaumont, and co-lieir, inJohn Plantagenet, of Garnt Duke
ohn Plantagenet, of Gaunt, Duke of Lancaster, married tbe heiress and became Lord of Pontefract. Ho mucb resided at Poutefract, and restored the works. When threatened by Richard II. he victualled and put the castle into a state of defenco. 12 Rich. II. be obtained by chartor " jura regalia" witbin the honour. Parts of the half-covercd basements in the main ward appear of his time. He died 1399.
Fionry Plantagenet, of Bolinbroke, Dnke of Hereford, afterwards Henry IV,, son and beir succeeded, being then in exile. Ricbard II., by confiscating the cstates, provoked reprisals, Which led to bis own deposition. Pontefract Castle became his first prison, and the scene of his supposed murder. Since tbat event tive castle has been vosted in the Crown. Richard Scrope, Archbishop of York, was here condemned to dcath in 1405, and at that time Henry IV, was much here, putting down the Northern insurrections. Many of bis instru ments are hence dated between 1405 and 1408 . Henry V., mnch occupied with foreign wars, and having penoo at bome, bad no occasion to make use of Pontefract, which seems to have been neglected in its military capacity; but court harles, Duke of fined, both accomplished men and given to lite. ature
Witb the civil dissensions that came onder ance. Tbe Duke of Exeter, taken from sanctuary after St. Alban's was 1460, after the battle of Wakefield, Edward her took part, witl his of Wakeflela, Edward here was nnder the walls of tho castle that Warwich killed his horse before the soldiers, saying, "Let him flce that flee will; I stiny by him who stays by me. It was in accordancentith this declararation that the king advanced from Pontefract next day, and defeated the Lencastrins Towton. Edward's fatber, Richard, Duke of York, and his brother, tho Earl of Rutland slain at Wakefield, had been buried at Ponto ract. He now added his father's bead to his body, and removed the whole from St Lo his Cburcb to Fotherineray During Edwand' verses and absence in Holland, the Lancastrians used Pontefract as a military prison.
In 1463, Edward was again at Pontefract, and in 1.178 , when ho was escorted thitber in great state, and remained a week.
The bloody celebrity of Pontefract was in. creased during the ascendancy of Ricbard, Duko of Gloucester, who sent bither Rivers, Grey, Favghan, and Hawte to be executed witbout
 The castle rose into a manicipal borougb. The eastle rose again briefly into notice in 1530, when Aske and the insurgenta of tbe Pingrimage of Grace appeared before it, and forced its survender by Lord Darcy and tbe Archbishop of York, with more than a presumpfion of treachery. Heury VIII. was here in 1540. Two years later, Sir Honry Savile, as governor, bad charge of several Scottish prisoners ken at Solway Moss.
Elizabeth, towards the close of hor reign, paired the castle, and rebuilt tbe cbapel of Clement within it. King James was here in 1603, and made the castle and bonour a part of the dower of his queen. He repeated his visit in 1616, and viewed the newly-established college of St. Clement, within the castle. King Charles was here in 1625, soon after his accession.
Pontefract was once more to become a place of mintary importance. Once the centre of the tberallying-place of the oreat now to appear as sbire, and of the Royal party. In 1642, when

Charles lifted his standard at York, Pontefract Castle was garrisoned by a very strong force of local gentry and volunteers, with the gallant Sir William Lowtber, of Swillington, as governor. Their courage was soon to bo tried. After Marston Moor and the surrender of York, Sir T.
Fairfax appeared befure the castle, fand in Fairfax appeared befure the castle, and in
December, $16 \pm 4$, cornmenced its siege. The main attack seems to have been directed upon the north.west angle, where the Pix tower was battered, and fell, bringing down part of the adjacent curtain with it. The enemy, however, did not storm, and the breach was made good with earth. Mines were then tried, and one was sprung near the king's tower, at the sonth-east angle. These were met by connter mines, for which tho ground, a soft rock, was very favour. able. Very many shafts were sunk near the walls in the main ward, and no doubt are still in esistence. Both attack and defence were carried on with great spiit, but at last stores garrison. They were reduced to extremity when, on the ist of March, Sir 31. Langrdale arrived with 2,000 men from Oxford, and forced Lambert to raise the siege, while he victnalled and reinforced the garrison,
The Parliament, howover, was now in the ascendant, and in a few days their forces were
This timo regnlar trenches were opened, batterics thrown up, and a complete line of cir. cumvallation laid out. This was of an oval figure, completely inclosing tho castle and ite Micklegste The contained area, from the head of Monk. hill near Nuw Hall on the east, was 900 yards; and from Baghill ou the south, to the middle of the Abbot's Closes on the north, 700 yards, and about 3,000 yards in girth. Upou this line, which in parts commanded the castle, wedans, or batteries, hesides fleches and lighter redins, or batienies, hesides curtaius to beate off the frequent sallies of the garrison. General Sauds commanded, and General Overton was governur of the town. New Hall, a large mansion of the Tabots, to the east of ane casthe anid by Sir John Savile. The gar'ison held Swilling. ton tower, the tower of the greas church, and Neville's monnt, a cavalier thrown up by thens within the barbican, and carrying a large irom gun. These adranced works were of great service, as they both retarded the siege works and protected the repeated sallies from the garrison. The trenches were opened in March, but it was the 24th of May before a battery opened upon the keep. General Poy ntz then took the command of theattack. It was, however, late
in May before the churuh tower was battered in May before the church.tower was battered down, and the post therefore abandoned. withstanding the disastrous news of Naseby, Loxther continued to hold oul, and it was not until July 20 th , after four months of sigge, without farther supply of stores or ammunition, and without a chanco of relief, that he sur rendered upon excellent terins. The fall of Pon. tofract was followed in three days by th
Sandal Castle, within signal of its towers. Sandal Castle, within signal of its towers.
The Parliament spared Pontefract on account of its strength, and put in General Cotterell, with a garrison. The Royalists, however, were still strong in the district, and Jane 6, 1618 , it was recovered by the treason of Morrice, a renegade, but a man of courage. A garrison was quickly collected, and the castle became once more a Royalist centre.
A third sicge tlus became necessary, and such was the strength of the place that, discourared as the Royalists were, it promised to be a trouble. some one. General Rainsborough, who was ap. phinted, met hisdeath befrare taking the commaud, Which fell at first to Sir H. Cholmley. Crornwell the north wresent for a lime, and however, left Lamhert death had broken up the party; and ultimate success heing impossible, the governor, Morrice, listened to terms. He himself and some others were excepted hy name. The difficulty thus persons being rednced to three, they were walled up in one of the subterranean chambers, well provided with food and air, and Lamhert was made to believe that they bad escaped. The place was then surrendered, Lanbert entered March 24,1649 , and as he did not retain the place, the three culprits got away gafely. Parliaxnent now orderod the castle to be demolished, and the only record of the details of its parts is that
preserved in the sohedule of its destruction. The materials-timber, lead, glass, and iron, sold for 1,7792. 17s. 4d., of which 777l. 4s. 6d. was tho cost of demolition, $1,000 \mathrm{l}$. was paid to the town, and the balance of $2 l .12 \mathrm{~s}$. Mod, went to the received afterwards soune arrears amounting $145 l .11 \mathrm{~s} .7 \mathrm{~d} .$, and so, in an acoount of profit and loss, was wound up the history of one of the
strongest and greatest fortresses in the North. strongest and greatest fortresses in the North.
A description of it will follow. G. T. C.

STR EDWARD LOVET PEARCE, ARCHTECT.
(" kdward peakce.")
On eeveral occasions the query lias been put, was hir the pages of the Builder, as tos whe known of him to our Enclish architects was, by John Overton of a work on Friezes, Wiculd Newrate, nenre the Fountains Tavern." Now, if the preseat writer mistakes not, he has suc
ceeded in identifying and "fixing" the entity of this Edward Pearce, who has been for a long time an ignis fatuus, whom, though seemingly within our reach, we have failed to secure. have strong reasons for believiug that Captain Majesty's Works in Ireland, and tho official acknowledred arclitect of the Irish Houses of Parlinment, commenced in 1728-9, was no other than the missing "Edward Pearce." If we fail in the following particuiars to prove that hoth are identical, we shall succeed at the same time in bringing into more prominent notice a second Edward Pearce, who by his work deserves a fitting niche in the "Dictionary of Architeoture." Owing to the decay of Chichester House where the Parliament in Dublin used to meet, a committee was uppointed to report on the condition of the edifice, and to estimate for the can struction of a new Parliament House. Matter hung on until 1727, when it was found imprac. ticable to retain the oth bu new builling should then uade, advising that a new builing should towards the proxiding of the materials and con. struction, and Thornas Burgh,** tho predecessor of Pearce as Surveyor.General, was ordered to prepare a plan of the building. On the 3 rd of February, 172S-9, the first atone of the new the Lords Juetioes, sevoral peerers, the King-at. Arms, and Captain Edward Lonevt Poarce.
Passing over the particulars atteuding the foundation and ceremonial, we may note that Thomas Burgh, who was instructed by the House of Commons to prepare the plans, hel the office of director-general and overseer of
fortifications and buildings from the year 1700 to 1730 . In all the oficial documents of the time, Mr. Gilbert saye, in his "Eistory of Dublin," Sir Edward Lovet Pearce appears as the designer and director of the new Houses o Parliament.
A committee was appointed in 1729 to repor on the progress of the buildings, and reported most favourably of the works. They conld not, they said, "help ohserving with the greatest pleasure an uncommon beauty, order, and con. trivauce in the building, and that the same had heen carried on with unasual expedition and diligence ; that the money expended thereupon had been laid out with tho greatest frugality, and the accounts thereof kept in the nost regular and orderly manner." It is further observed that " the director nppointed by the Government had attended the said work from the begiuning with the utmostapplication, and had therenysaved blarge sum to the public, which in the course of anch work by the ordinary uethod must neces. arily have been expended, and at the same time had charged nothing for his own great expenses, skill, and pains." The same day that this report was brought before the Commons, the sum of 1,000\%. was unanimously voted to the director (or of Parlia) for his great success. Octuber, 1731, hy the Duko of Dorset, the then Lord Lieutenant of Ireland; and in the December the same year the Commons agreed to a resolu. asking that an additional sum of 1,000 l. might bo voted to Edward Lovet Pearce, "in consideration
\# Thomas Burgh, was suthor of $n$ work extitled "AR
Method to Determine the Areas of Ripht-libed Figure

of the care and pains he had taken in carrying on the building of the Parliament Honse, and shall take in finishing the same." The House of tords also unanimously resolsed that the director had shown ability, skill, and workmanship, in the erection of the new bnilding. It would be wrong of us here at this stage of our account to suppress the statements mado shortly afterwards in public to the injury of Pearce. It was pretty openly stated that Pearce lad obtained the plans and otber assistance frum Richard Castle, otherwise Cassels, a noted arclitect at the same period
iu Dublin. Some account of Castle we have in Dublin. Some account of Castle we have alrearly given in a previous volume of the
Builder.* It was even stated that Pearce cheated Castle in the transaction, by not paying the amounts agreed upon between both. These statements received first currency tbrough the mediun of an annny mous work printed for private circulation in 1ヶ3f. The writer, however, all. mitted that Pearce opposed bim in a family lawsuit, and hence his eumity. Previously to the publication of Mr. Gilbert's work, the name of Richard Castle appeared in all the publicationa we huve net with as the architect of the Irish Houses of Parliament.

Pence is desuribed by our anonymous writer 1736 in unen viable terms.
In contrast to the above wo have some lines written by is Heary Nelson, entitled, "The House to the Government. February 3rd, 172S.9."

> Next let my gratitnio and due respect
Bo bumbly paid to the great arehitect,
> And as hia merit, let his praises ring
> Who did mo fritit to this praises hivg hour bring; Let ev cry torgue in softest notes rehearse, All hnil to theol who only is the man And hy the strue hares form'd this noble plan ; S. shall your praise, exalted to the sties. ad all 1 majestic shall its beauty show, nad atid its beauty to your judgment of its projector, and record yame

One of the frieuds and companions of Dean Swift, Dr. Delaney, in his poent entitled "The Pheasmit and the Lark," alludes in a compliCaptain Pearce
It furtherappears that this El ward Lovet Pearco ars a captain in Nevill's regiment of dragoons, nut sat for dwhile in the Trish Parliameut as a nember for Ratoath. Sir Elward Pearce died o the year 1733 and ligan, interred in the village church of Donnybrook. He had a brother, Lieutenaut.General Thomas Pearce who is eported to have served with great courage in be campaigns of Spain and Portugal. He was lected a privy conmcillor and served as a member of Parliament, andi also as a governor of Limerick. The brother, 'Thomas, was buried subequently in tbe same graveyard with his brother Gdward Pearce.
Arthur Dobbs sncceeded Pearce as surseyorenerial in Ireland in superintending the finishing and it wes said also of himent it was presionsl said of Pearce, that he was the wort hy Richard Castle. The works were completed in 1739, and in 1711 the Commone roted 4 rbur Dobbs 9501 "for his core and pains in finishing the Parliament House,
In Mr. Gilbert's work already quoted, and hose statements may be relied upon as he quotes official documents, we find the expendifor the Parliament House in December 735 , including 2,000l, to Pearce, and 490l. paid Act of Parlacen the proprietors of the several buildinge which had A Parliamentary ame year to inquire into the state and condition f the buildin resolred "s tbat Sir Edwand Love Pearce, late engineer and surveyor general, is executrix nd honeat, Anne, him received for huilding the Parliament IIouse." Of the subsequent additions to the Irish Parlia. ment House, it is unnecessary to write in detail. The names of Thomas Cooley and James Gandon, two English architects, are associated with other additions to the Irish Parliament House towards the close of the last cemtury. Gindon, the greater architect of the two, designed the Corinthiaa portico which was added as an entrance to the House of Lords on the eastern
side. Elaxman, the English sculptor, designed

[^2]the three figmres on the southorn front of the building; but Edward Smyth, a native sculptor, execnted them. These figures wereaddedafter the Union of Great Britain with Ireland. When the Parliament House was purchased, and altercd to suit the requirements of its new tenants, tho directors of the Bank of Ireland, Francis John ston, the Irish architect, designod the new 1804. It will he seen from our betch that 1801. It will he seen from our seetch that several and subsequent alterntions of the de signing, and subsequent alterations of the Trish Senate from the days of Thomas Burgh and Edward Pearce. English, lrish, and Gorman (Castle was a nativo of Germany), each has his name associated with the bnilding. Each adopted Ircland as the scelle of their practice, and each and all rose to distinction and left works behind them by which thoy will he rememhered.
Little remains now to say cxcept that if our Edward Lovet Poarce is not the Edward Pearce of the "Friez.ce," let somebedy give us as much authenticated proof that he is not tho man as we have produced in favour of his heing the man, or the ncarcst rescmblaco to him. Whether Capt. Pearce cane to lreland with the Prince of Orange, or in the reign of Anne, or the first George, we have yet to learn. He was in Dablin, however, at the comuencement of Genrite II.s there cxists a tombstone still about his pereve is ace may possibly be found stated thereon and if not there, in the church register.
The uame as spelt is not au Irish, but an English
In the absence of knowledge of Peirce's precise age at denth,-if we suppose lino to ho thirty years of nge in 7688 , this would make him This wonld afford 128 - fine in 1733 at his demise. This wonld aiford 188 sufficiunt room to prove that the styleand typography of the work on "Friczes" (which hears no (late) was in consonance with
the period through which lat lived, still supposing our subject to be the long-songht Edvard Pearce.

NEW POST-OFFICE, ST. MARTIN'S-LE. GRAND, LONDOA

Williams, Mr. William Brass being the conWilliam

PROPOSED CATIEDRAL CHURCH OF ST. MARY, EDINBURGE.
The accompanying viow represents Sir Gilhort Scott's dcsign for the interior of the proposed arth-east. We have already given a view of the exterior, and the architect's own description of the design, $\dagger$ and we now append tbe Referee's comments on the dosign whon it wos submitted under the motto,

## Auld Lang Syne"

"The architect's report in this aase refers to tbree desigus; two carefully worked out, and ono indicated only by a sketch plan in the hody of the report.
The design B appers to have boen withdrawn; the following obserpations will apply therefore only to that marked $A$, though a word or two may perhaps without impropriety be giren to As regards Alorement with instmetions

1. The area provided is very ample, there being sufficient space for 1,500 persons westward of the preacher, and exclasive of the choit and its aisles; and althongh, from the description, either of tho alternative designs would seem to lave provided a better aren for preaching purposes yct, not withstanding the block interposcd by the north-west pier of the tower, the clear area
capable of being commanded by a preacher is considerable. As regards the daily services, the author says,-'I have carefully considered, but do not see any necessity (but the contrary) for providing a distinct position. It would seenu to me a great pity that the services on minor, though the most frequont, accasions should be in a less dignified place than at other times. It is an arrangement not known in this country, excepting for early services, nor do I think it desirable. The qucstion, whether at ordinary

week day services any part of the congregation shonld be admitted within the choir, seems one and clergy he left to the decision of the hishop ment to gy. It is not essential to the arrange as, if cocide it while planning the cathedral the space in front of they would simply ocenpy to their numbers.'
2. As to the organ, he says, - '1 have provided for the organ in this manner. The lighter parts, especially the choir orgna, with the keys and the organist's seat, I have placed close to the first bay on tho north of the choil; but the larger and more cumbrous parts I have placed in the enstorn aisle of the north transept, immodiately hehind a place where the sound would spread itself freely tlrough both choir, transepts cossing, and nave.
3. The central towor being closed in at the levcl of the vaulting of the choir, there is ample space within it above that level for hoth bells and clock.
4. The chapter-house is of sufficient aroa, bu can only be approacher from the interior of the cathedral, and throngh a vestry,-a somain defect, which is, however, capablo of eas remedy.
5. The central axis of the cathedral is pro posed to coincido with that of Melville stroe and Grosvenor-cresecnt respectively.
As l'gards 'Coatcs House,' the autbor snys, 'He should mnquestionably retain it '; and adds, 'In a part of Edinburgh so essentially now, i is a most happy circumatance to possess apon the euthedral site a veritable old Scottish build ing. It is very pictnresque in design, and will hecome more so lyy carcful restoration. The and I have no donbt that open to improvement, and I have no doubt that by judicious treatment it may be made a comfortable residence, wbile its presence will add much to the picturesque gronping of the ecclesiastical huildings.
6. As regaris cost, the author says,- I have made a calculation as to the cost, which gives a result as farourable as I conld anticipate; but as such works as this are rarely orected in our day, I will not pledge nyself to meet your vients with minute aceuracy, but content myself with carefully aiming at the prescribed sum; and I ond possihly with the aid of some abfety-valyes, it may be realised, thongl it wonld not be wise in a matter proverbially so much of a lottery as the cost of a large building, to pledge oneself too minutely. My object has beon to pive the best and noblest church which your conditions appear to admit. I have made tbis my anxions aim, but heyond this I will not hind myself further than to say that I believe I have realised my aim with very reasomable accuracy. Some of the more decorative fittings, snch as the rerodos, may he looked for as individual offerings, and the painted decorations would not be included.' Ia respect of Arangenent. - The plau of the cathedral is a broad and simple one. The building consists of nave and north and south aisles, contral tower, north and south transepts, each with east and west aislos, choir and aisles, and square chapter-house connected witb the north aisle of choir by a cloistral passage. The vestries are provided for in bays of the choir and transept aislos, screencd off from the general area. The entrances are from the west end in tho centre of the nave, and from the south side throngh th
In respect of Construction.- All the provisions are amply bufficient. The nave is roofed in
rood, and groined internally in the same material : but tho romainder of the chorch is groinod in stone.
As regards Architectural Character. - The author says,- 'Te has met with some difficulty in selccting the variety of architecture on which to found his design, but he desired that it should not at the least be discordant with the finest Scottish examples,' and that he has been most mpressed with the earlior phase of the Early Pointed, which especially unites the architecture of Scotland with that of the North of England; and is capahle of the greatest possible degree of dignity united witb simplicity and heauty.
The design is consequently, throughout, bold and simple in its character externally; but nternally docoration is more froely introduced. The most striking feature is undoubtedly tho contral tower, the massivenoss and noble proportions of wbich wonld he of tbe greatest possihle value on \& site like that on which it is proposed to build, in civincr a remeral digmity of offect to tbo whole structure. The tower for this pnrpose s designed with rory considerable power. Other portions of the exterior, and notably the western front, are much less happy and forcible; hut the eastern end of the choir is a fine and dignified composition. As regards the interior, t would, 1 think, rain in dignity, as it certainly rould in simplicity, by the omission of the surface ornament in tho clearstory windows which tends to givo prettiness to what would otherwise he vigorous and strong; but in the nain it must be snid, that if originality, it has at least as a whole a thoroughly church-like and dignified ehamater much in accordance with ancient examples.
As regards Cost.-Tho architect appears to he disinclined to give any positive opinion ; but, exceltivg in the tower, which on account of its hulk mnst neeessarily be costly, the genera character of the bnilding is not likely to he excessive on this joint. The comparison with other designs will be seen on the table of cubical areas."
Fo priat this table, togethor with one as to oat, based hpon it, in coujunction with the uperficial areas measured within the walls :-

THE NEW POST-OFFICE, ST. MARTIN'S-LE-GRAND.

IMPEDIMENTS TO THE CIRCULATION OF LABOUR, AND THEIR REMOVAL.
AT a recent meeting of the Social Science Association, Mr. Alsager H. Hill read a paper on this subject, containing matters of interest to
many of our roaders. We have condensed the many of ou

I shall submit, present circulation the threshold, that the present circulation of labour in this country, as
exhibited by the industrial and social condition exhibited by the industrial and social condition
of large masses of tho people, is far from satisfactory. It may be observed that, notwith standing the acknowledged prosperity and com-
morcial progress of the country, there is still an morcial progress of the country, there is still an
immense mass of registered pauperism in our immense mass of registered pauperism in our
midst, which is certainly strangely iuconsistent midst, which is certainly strangely inconsistent
with the idea of our rapidly advancing civilisa tion; and it is further a remarkable fact that this pauperism is in many instances more than proportioned to tbe industrial activity of the district in which it is so registored. I find, for instance, that at the end of November, 1872, the number of persons in receipt of relief was returned as 820,919 , and that out of that aggregate a very large proportion, amounting to mor parishes and unions. I shall have occasion later on in tbis paper to call attention to the more special phenomena of industrial life, or rather staguation, exhibited by the metropolis. For significant pauperroll of the London district. It may, however, be still more instructive to look at the condition of things in South Wales, as illustrated by a recent circular letter, ad dressed by Mr. Anchew Doyle, one of the Poorlaw inspectors, to the clerks of guardians, and in
this letter, speaking of four Breconshiro unions, this letter, speaking of four Breconshiro unions,
Mr. Doyle says,-"Of supertluous labour it is Mr. Doyle says,-" Of supertinous labour it is
needless to say that during tho last year at least no sacb thing existed. The difficulty experienced by employers of every description of
labour was to find hands to do the indispensable labour was to find hands to do the indispensable
work of the district"; and yet, side by side with this statement, we fiud Mr. Doyle very properly remarking that "it appears to be most unreasonable that employers wbo are compelled to pay very high, if not exorbitant, wages, exorbitant poor-rates." And yet such is pay doultedly the case, be it reasonable or not. If, again, we turn to the Midlands, we shail find a heavy poor-rate, co-existent with an abundance of employment in almost every brauch of our great iudustrios. Looking to the Western counties, moro cspecially Somersetsbiro and pauperism; but a standard of wages, chiefly for pauperism; but a standard of wages, chiety for
agricultural servioes, infinitely below that of agnicultural servioes, infinitely below that of
either the metropolis or the Midlands. It is, however, highly instructive to learn, from
is 18, however, highly instructive to learn, from a recent Parliamentary paper, that, as far as onicial retrnser can of persons only in proportion to the aggregate numher of registered paupers, aro relieved on the ground of being out of employ. ment aud unable to ohtain work; aud, what is more signifioant still, of that small number, showing a total, if I renuember rightly, of about 2,100 , a very large proportion is retarned from the retropolitan district, whilst from more than five counties, no cases of able-bolied persons relioved on the ground of being out of pork, as showu in the books.
With these facts before us, it is therefore reasonable to suppose that no very large number of persons are, as some are apt to assume, continuously, and for long periods of time, out of employment ; and yet, admitting this to be the caso, there is still calling for explazation the of this paper, of an immense population de pendent almost, eutirely on tbe better fortune or pendevolence of thoir neighhours, conveyed to them either through the rates or private charity. them either through the rates or private charity.
This pauper population mast clearly be the This pauper population mast clearly be the
result of some imperfect organisation in our resuit of some imperfect organisation in our
sooial system; and as labour constitutes the sooial system; and as labour constitates the
industrial life of the body politic, so this stagindustrial life of the body politic, so this stag-
nation, taking tho shape of direct or indirect dependence on others, must represent some condependence on others, must represent some congestion or other imperfection in the
that go to the making of the trae life.
From Phillips's "Million of Facts," I learn that the population of Loudon, in 1836, was returned at $1,400,000$; in the present year it stands at a figrare rapidly approaching 4 millions. As the metropolis, and apart from its industrial ing into its capacious maw all the arabitions and
enterprising elements of the country popnlation and for almost as long a period other influences than those of anchition or of enterprise, of which I shall speak further hereafter, have tended to couvert London into such a colluvies gentium as no writer, ancient or modern, could ever have
contemplated in his most opprobrious mood Assuming the industries of the metropolis th have kept pace "with the indux of ita rapidly increasing population, a time must have come, When from its very physical and geologicul position, it mnst have given place to some of its moro northernly sisters in the race for supremacy and as it now is, with its multiplicity of indus. tries, London must be considered rather as conmorcial than an industrial centre.
In London, in consequence of tho congestion to which I have just directed attention, labour of a certain sort, under the pressure of eitber hunger or tyranny, may be secured at almost any as I before remarked, is too often orerlooked. I is, however, perhaps the best starting-point that I can take for my more practical observations on tho impediments to circulation of labour and und best means for their removal. I may, I think, assume that London, if no other part of England poreal illustration of this statement be required, I would ask somo of those who hear me to pay au early visit to our dock sides and huilders' yards at taking-on time, and judge for themz elves.
How far some of the deteriorated labour which forms a peculiar feature in the London marke may be found on close analysis to be the natura detritus of great iudustrial activities, it may bo But it if not, indeed, impossible, to determine eulis surely moro consistent with tho higber things of social science to believe that much ribu is waste now might, if more equably dis. nationd becomo the marrow and muscle of our resal ife. Inactivity and stagnation, in the parent condition of things, must surely, to or dirt, simply denote labour " in the thorism place." Assuming, therefore, much of this con gested metropolitan labour to be in the wroug plave, let us consider the causes which have mainly brought it here. It is almost unnecessory o point ont that the first and most general canse of this, as of most other social disoases, is of yorance, and in this case, probably ignorance and the kinds. Ignorance of phyoical geography ade to morto aocon for the blind and infatuated onplise which leads generatiou after generatiou fortane in our cities and great towns, rather fortune in our cities and great towns, rather
than in other districts where their native enervies might soon be adapted to the work which lies eady to tbeir hands. I need hardly detail the ondition in which most of our rustic popnlation are left with respeat to the resources of their wn conntry on leaving the villago schools; and Iam not going far wrong when I say that in hinechildron out of ten the mountains of Palestine are better known than the hills of Cleveland or the busy valloys of South Wales On tech nical and industrial matters their minds are generally a still denser blank; and when the young man sets forth from home in search of ork, in all probability his face is turned worth village inn ording to the last intelligence of his fancy, such as a desire to seo London or find ous a cousin in some distant obedience to any low, rather than in man's services outside the limits of his own hamlet or connty.
Passing from ignorance as a primary cause of imperfeet circulation of labour, I would touch in a fow sentences on the resultant want of organidemand in the adjustment processes of supply and for it is not necessary for of the labour marlset mere econot necessary for me to point out that th mere economio law of supply and demand, with out a well-regulated social system, can no more insure the industrial life of a country, than can tho elements which make up the blood insure a healthy circnlation withont proper excrcise and teraperance in the organism it pervades. With respect to organisation I shall probably be told that this has in a great measure been met by the institution of trade-umions; but even at it highest reckoning the nominally organised labou of the United Kingdom cannot bo set at muck above 800,000 persons, whilst the available work ing population may be set down at an amrerate of at least $6,000,000$ of persons. Moreover, as know from careful examination, much of this
organisation, apart from that provided in sach bodies as the Amalgamated Engineers, carpenters the joiners, stonemasons, and a few others, is of the most implerfect kind, and utterly unable to grapplo with the complex difficulties of a con. stantly changing labour market. Hitherto the hest of these organisations have been elaborated, as mightr havo been expected from tho superior intelligence of their members, by tbe higher skillca trades; but within the last yoar the elements of orgmisation have made themselves apparent, and in a very active form, amongst toe most numerous and ignorant classes of our labourers, namoly, the agrioultural. And according to some reports, the number of actually enrolled members in these latter organisations is now over 300,000 , being more than a third of the aggregate estimated by $\mathrm{M} \mathbf{r}$. Tiloyd Jones a few yoars since, as included in tho ranks of English tradeunionists
In one or tivo cases, whilst factories are languishing for hands, new homes for orphan girls are being built, and columns of the newspaper filled with sensational appeals and repeated bsts of ignorant subscribers, when a few pounds oxpended in adjusting the laws of supply and demand in certain brancbes of the national labour-market, by brizging employers and employed together, would have remored the neces. sity of the huge bomes and subscriptions altogether. With respect to certain emigration charities, I can speak in even stronger terms, as these have to do with adult workers, whilst the other class is chiefly concorned with children. and one of tho most common and natural conse quences of these emigration charities is to send adrift a large number of men, either olread earning or able to earn reasonable wages in their own country, to beg from door to door ing to the more approved fashion, from selected benevolent persons, to enahle them to leave the conntry at at time when coal is risiug daily from the scarcity of tho getters, and niles of railway are not to be had Much, because lie labond the ind more might be said on subject this orening in its bearing upon my subject this evening, but I pass on to notice another existing impediment to the circulation olabour, namely, the influence of miscirected trade-unionism, as say purposely nisdirected trade-unionism, as $I$ have before expressed my goneral helief in the advantages of the besi managed societies in the direction of organisa. tion, and it may perlaps seem strange that trade unionism, the very basis of which is assumed to bo a healthy disuributiou of labour, should in any way interfere will the currents of circulation What, however, I concoive to be a mistakor policy with respect to the standard of wages songht to be regulated by the action of trad societies, not unfrequontly results in la hers of men, and as frequently non.luion unian men, declining to quit crowded oentres is which work is slack, though work may be indicated to them elsowhere at wages which tiey are not willing to ascept. The natural consequence is that large numbers of men beginning with an assertion of dignity in not accepting anything under their own estimate of their value, end by joining that groat army of the partially nnem ployed, who lower London wagos and increase ur poor-rates.
Under existing circumstances a personal search for work is in many cases alnost essential; and, except where the railway system is very com. plete, tiavelling by train would be almost im. possible. Nevertheless, with better iuformation travel and toil might even now be sared however, the worm in ven a Parliamentary fobige to tase the train, oxcept upon high prospective wages; and when the family accompanies the workman, the burden becomes one which only a very long job seeme o justify.
Following on the want of cheap and effective looomotion, may be meutioned the want of cbeap and suitable accommodation for workmen at many of our iudustrial centres, and the providirg of cheap and good animal food. To any one who punly studies this question, it will soon be ere fcens conditions of life from that to which it is the experience of the late Mr. Brassey, as recorded in the very interesting memoir by his sou, goes to show that with care even ray his cultaral labour may soon, under good conditions of diet, be converted into a quality vailable for the heaviest railway or dock work
The only other impediment to the circulation
of labonr which I can now touch upon is the pernicions and wide-spread system of dealing on credit which prevails among onr working of labour which bave taken place since the formation of the varions agricaltural labonrers unions, it has been a constant complaint with the local secretaries that the debts at the village shops have prevented the men getting away and the same difficulty, though perbaps in minor degree, will be found to arise amongst onr town poprulation. The remedy for this state of things is obviously a system of ready-money payments; or, hetter still, in my opinion, in the spread of true co-operation, as understood in the spread of true co-operation, which, in addition to the avoidance of debt, a emall, and in many cascs a considerable, sum accumulates to the crodit of the cus. tomer, which can, of conrse, he rendered available for migration or any other purpose.

Metropolitan free blidges The opening of Kew Bridge, free from toll, wh an event suficiently important to be well worth Bridees Conial bestowed upon it. The dom their motto might seem to be Festina lent still they are hastening, or at least, prosecuting steadily and perseveringly the great object they have set before them, hy sweeping away the obstructions by tolls to the free passage across the river between the north and south banks of the Thames. Considering the opposition the committee has had to enconnter, and the magnitude of the interests that have to be conciliated and hare not done more, but that they have done so much. Already, within the last five years, the mridges at Tralton, Staines, Kingston, and now at Kew, hare been opened to the public free from toll, the last at a cost of $57,300 \mathrm{l}$.,
The olening of the hridges named
ever, only a good becinning with a goad wort and it is much to be desired that the "Metropolitan Bridges Bill," now before Parliament may have an unopposed and rapid course. It is mromoted by the Metronoliton Board of Works, promoted by the Metropolitan Board of Works polis, and to improve the communications across the riser Thames, by providing for the opening the river 'lhames, by providing for the opening of the present toll hridges for the free use of
the public. The means by which the bridges are to be freed from toll is, the application to that object of the London coal and wine duties, whicls are continued by the Act of 1868 to the 5 th of July, 1bs9. The bridges that it is proposed by the Bill to free from tull embrace the following goodly list:- Hammersmith Suspension, FulSuspension, Vanxhall, Lambeth, Waterloo, and Suspension, Vanxhal, Lambeth, Waterloo, and
Deptford Creek Bridges. The Board also takes Deptford Creck Bridges. The Board also takes
power by the Bill for the extinction of toll upon the respective foot - bridges over the Charingcruss and Canton-street railways. The Boarl will in woll if they are able to carry
half of their largeminded programme.
half of their large.minded programme.
That noost important puhlic advantages would result from the adoption of this Bill, must be readily apparent. One of these advantages
would be the better distribution of street traffic, would be the better distribution of street traffic, and the relief of congested thoroughfares. This is evident in the contrast that the traftic by Sonthwark Bridge, as a free bridge, presents With what it was before the tolls were abolislied, and by the contrast it now jresents
with the dreary quietude of Waterloo Bridge, with the dreary quietude of Waterloo Bricke,
which frou the heart of Southwark debouches npon the middle of the Stranal, but that, notwithstanding, may occasionally be seen at the busiest hours of the day, clear of vehicles between one tollgate and another, and the whole of the splendid structure in the occupation of the toll.takers at each end, and of a few strag. gling foot passengers between them. The effuct that the freeing of the bridges from toll would hare upon the value of house property ard
building land in many localities, would be jmme. building land in many localities, would be jmme. diate aud important, but that is an element that
concerns owners and occupiers more than the general public.
Another important benefit that would be con. ferred upon large masses of population in various localities, would be by extinguishing the tolls, to deliver them from a really grievous and is a notable illustration of this fact. Between the nost populous parts of Deptford, the Royal

Creenwich, the direct route is by the Creek Bridge, at which heary tolls are charged for fehicles, and as much as one penty per head for men, women, and children, on foot. There another, the Railway Bridge, available for fuot passengers higher up the Ravensbourne, at he the same toll is charged, the distance he Railway Pridge, about lialf a mile, benn streets and the distance. that is is by peptor have long persistently pressed their toll-bridge grievance upon the attention of the anthorities and are noturally elated, as the inhabitants a other districts similarly situated may he, by th hope of early deliverazce.

## FROM SCOTLAND.

Edinbergh. - A new inon lattice girder bridge erected by the North British Railway Company, at a cost of over 20,000, has heen formally the valley whick separates the old and new towns, and connects Cockburn-street with Princes street, benides affording access to the new pas senger station of the North British Railway
Parstey.-A public meeting of the ratepayers of the burgh parisles of Paisley has been held Board to erect a new parochial asylum. Thele was a large attendance. The meeting disap proved of the resolution come to hy the Burat Parochial Board, hecause Mr. Cranfurd, M.P has again bronght before Parliament a Bill to amend the present Puor-law Act which, if carparishes, and thus have one establishment abey tho management of the poor, and also disap prore of the procedure of the majority at that Board in makine contracts for the erection this expensive asylum with such precipitate

Fauldhouse.-A new Roman Catholic clurch is now rapidly approaching completion, aud, when finished, it will afford accommodation for 500 sitters. The bailding is in the Early English Gothic style, and consists of nave and sanctuary with vestry and choir gallery. The main enmblic mbiren tliere is a double lancet window. It is proposed to ereot a belfry and spirelet over the apoce of this gable, but this part of the work will be question of time and fands. The side elevations bave buttresses and lancet windows, and the ing the chnrch is in contemplation. The plans are by Miessrs. W. \& R. Ingram, Glasgow,

BELLS AND BELL-CAGES.
In your recent article on "Belfries and Bells," you deplore the fact "that in the art of hanging and ringing bells we have hitherto
gained but little frow tlie adrance of mechanjual gnowledge." Now as regards tho lianging, the manner in which that shonid be done of course depends chiefly upon whether the bells are to be raised and rung or merely chimed. In the latter case, the hanging is a simple affair; but in the former, great care should be exereised in the design and construction of the bell-cage, so that it may be able to hear with safety the ramiety of
strains and shocks to which it must be subjected strains and shocks to which it must be subjected by the reciprocating motion of the bells in e
varying order, and to couvey the resultant force of those strains downwards, and not laterally Egainst the walls or the tower.
Emiuent authorities tell us that it is of the greatest consequence that the timhers should take their berring independent of the masonry; they shóuld be laid on wooden plates, the whole resting cither on stome corhels or on a set-off
formed in the wall. The sides of the cage should not toucl the wall at iny point, hat clear space should be left the whole way round hetween the timbers and the stonework.
Wany of our most celebrated church towers were built long before the present mode of ringing bells camo into practice, and in some towers the bell-cage has been either built directly into the walls or wedred against them to steady lay the blame of the mischief which has been done on the mode of cinging, but rather on the ignorance of bellhangers and those who have put heary peals into towers wbich were never intended to benr the strains resnlting from the
present mode of ringing. It is well known that in many towers where the bells are properly hang heavy peals have been rung for a great number of years, and still continue to be runc withont coing the slightest imjury to the strme diocese wher of the catnedral of my own teenth century, is perfectly free from any vibration, the bells being hung as described above, all of it heing absorbed by the loft on whicb the cace rests.

It is generally admitted that hell-ringing is an art, aud, like many others, has heen carried to a high degree of perfection. If in painting and the old masters, why should we be come up th ecause the whe be diss.tisfied becthe bell riprer art cannot be produced by methal ber ? mechanical heans Is a barrel-organ, no matten prorement on the manul organ becaus tho prorement on the mannal organ, because the not merely by be payed by learning the art, and carillon bachine bot a warrel-organ, the neighhourhood must hear it enery withouthourhood hast hear it and endure it, withont being able to get the policeman on dint wearging move How inexpressibly weary s der and och the same tune, repeated many times in the day secome, and that, in most enses, only the have suhject of a tunc, without any of jts mel. lowing harmonjes. A bell, no doubt, produces some of the harmonies to its consonanr, when struck. though in a subjued manner, and rather after than along wiln it, bat not in a way that makes up for the absence of the full chord struck simaltaneonsy. There is, no doubt, also, as yon by a marked, that a hell struck when at rest somma, as comproces, a dull, heavy, odime bell wa compared with the tone of the same round." The motion of the bell itsclf must therefore, I thint hon of the bell itsclf must the quality and penetrating power of the sound produced, and that is also the opinion of the Rev. H. T. Ellacombe, than whom, I believe, there is no greater anthority on the suhject. As to the profluction of the other notes of the chord by striking the bell in different places, there is this one great dimituly to be got over, that if you strike the hell sufficiently hard to bring out its tone anywhere hut on the soundbow, it will most asemredly crack, sooner or

As a practical bell-ringer, I hope that it will be a long time before the present reviving interest in bell-ringiug, in an art, and as a means of producing a most delightful species of music, which all mny enjoy, is superseded by a desire to erect carillon-machines, bowever clever they may bo as pieces of mechanism.
lo defend their art from the chatge of beinc Ancient Society of Collece Youthe

> Ay Irtsh Diocesan Architect.

## SCHOOL BOARDS

High IVycombe.-The School Board for this horough are about to erect new buildings, to accommodate in all 600 children. The site is three roods in extent, on a commanding position. Puhlic tenders will, it is believed, ho solicited. The architect appoisted is Mr. Arthur Vernon. Kingston-upon-Hull. - The foumdation stons of the first new Board School was laid here by Sir Heary Cooper, Kat., M.D., chairman of this Board, with appropriate ceremonies, on Monday last, the 21 th of February. This school, situate in Daltry-street, is desigued to accommodate 250 boys, 250 girls, and 260 infants, all on the ground floor. The boys' school-room is to be 75 ft . long and 20 ft . wide, having three classrooms adjoining. The girls' department will be similarinsize. The Infants' School will be 51 ft . long hy 27 ft .8 sin . wide, with two class-rooms contignous. There are three private rooms for the principal teachers, and all necessary offices. The cubical contents of the whole building, exclusive of earth-closets and boundary walls, are $250,510 \mathrm{ft}$. Mr. W. Barritt, of Hull, l:2s con. tracted to execute the whole of the works for 4, 1072. 15s. Messrs. Rundle \& Parker, of Leede, will supply the hot-water lieating apparatus. The worss are nder ouperintendence Bir. Augustus W. Tanner, architect to the Board. Deroy.-A letter was read from Mr. Coul. architect to tho new schools ; and the Clerk said
tbat be had not received any reply to his letter to the Edncational Department in reference to the extension of the Nun-street site. He had received a letter from Mr. Coulthurst in reference to the plans for the new schools.

Leicester.-The architects' committee reported that they had received tenders for the erection of the school in Oxford-street, a list whereof wa presented with their report. The committce recommended that the tender of Mr. Sackree be accepted by the Board, suhject to its receiving the sanction of the Education Dopartment. The clerk then read the list of tenders:-

| II. F. Allen |
| :---: |
| F. Major |
| J. R. Ratclife |
| T. Bland |
| Oshorne, Bro |
| Neal \& Sons |
| T. W. Herb |
| T. Forsi |
| J. Fern |
| J. Sac |
| W. |
| atl |

The Rev. Canon Fry moved that the report of the committee be adopted. Somo discussion ensued, in the course of which Mr. Merrick moved as an amendment that the tender of Messre. Butler \& Marshall be accepted. The amendment was carried.
Llunelly.-At a mecting of this Board, held a short timo since, drawings prepared by Messrs. Alexander \& Henman, architects, of Stockton and Middlesbrough, and Mr. E. Sugden, Bristol, were chosen from a number sent in in competition for their proposed schools at Brynmawr.
Aberdare (Soutt Wales).-On the 20th ult., this Board met to finally decide respecting tho plans sent is in competition for their schools. The designs prepared hy Mosses. Alexander \& Henman, architects, of Stockton and Middlesbrough, and Mr. E. Sugden, of Bristol, were selected, and those gentlomen
instructions to proceed at once with the tyorking drawings.

## ACCIDENTS.

Destruction of Gildersome Church by Fire. The parish church of Cildersome, a village about fire miles from Leeds, has been entirely destroyed by fire. The outbreak was first seen ahout four o'clock on Saturday morning, when the flames had already taken too great a hold upon the chancel and the body of the ohurcb to be subdued. Eren otherwise, there were no means, within easy reach, of extinguishing a large firc. It was scveral hours before the fire had spent itself. Tho church was therefore reduccd to a complete wreck. The roof fell in, and nothing remains hat the four hare walls and a damaged portion of the tower. The church had heen re. opened only in Angust last, after improvements whicb cost about 1,1002. This sum bad been almost entirely raised, althongh with some difficulty, among the parishioners. The church old. The chancel was ncw, and there was a stained-glass memorial window, the gift of Mrs. Stepbenson and family, To the erection of a new church W. J. Armitage, of Farnley, has already promised a coutribation of 250 L . The cause of the fire is not known; but the sup position seems to he that it originated with a
gas-stove used to prevent the new organ from gas-stove used
becoming damp.

Fall of New Houses in Manchester.-Two new houses which wero in course of erection in Daw. son-street, Errden-street, Hulme, have fallen to the ground, and huried two men in the ruins. The person who was building the houses was a Mr. Powiss, bricksetter, Mona-street, Vine-street, Hulme. The erection of the cottages commenced throe wecks before, and owing to a little favourable weather, the work progressed withont
interruption. At the time of tho accident, the interruption. At the time of tho accident, the only portion of the builder's contract remaining unfinishod was the laying of the roof, and this was being proceeded with when the buildings collapsed. There were eight men employed in finishing the houses, hut four of them had cefused to resume work on account of the appearance of the houses, the back walls having hulged outwardly. Tho other four considered that there was no danger, and continued their labours. The back walls first gave way, and the wbolo fabric
*Mr. Kellett wishes to add $62 l$, to his tender, in con-
日equeneo of a mistakise in bis ironfounder's tender, which eequenee of a mista
will makie it $5,457 h$.
fell to the gronnd, only one of the gable end remaining standing. At this time twomen were working on the roofs of the houses. They botl fell witb tho huildings, and were buried in the debris. They ware rescued, butwere both hadly cut and bruised. A third man, whoalso fell with the buildings, snstained contuscd wounds on the scalp and cheek. The main walls of the houses were $4 \frac{1}{2}$ in. thick, and the "mortar" used is said to have consistcd almost exclusively of sand We dccline to call this disaster an accident.
Accident at an Auction,-An alarming acciother property at an old farmbouse near Dore, four or fivo miles from Sheffield. The anctioneer was disposing of some bedstcads in one of the upper apartments when tho floor suddealy gave way, and tho company, nearly thirty in number, found themselves atruggling in the room below amidst a mass of broken timher and furniture. Fortunately no lives were lost, hat several persons were seriously injured. The house has been built many years, tho late occupants and their ancestors having resided thero for nearly two centuries. The immediate causo of the accident was the giving way of a beam at a point where an iron rivet had been inserted to strengthen it

Fall of a Factory at Wolverhampton.-The roof and front wall of a lock factory in Wolver. hampton, have suddenly fallen to the gronnd. Fourteen men, women, and clildren at work in the building escaped alnost without injury.
Accident at the London Docks.-The East London Railway Company, for their extension line, lately commenced constructing a tunne under the eastern dock, at the London Docks, and, in order to facilitate the works, erected a tinber platform in the dock, npon which was placed a dredging machine. About twenty men wero engaged upon tho platform, when it sudwater Several of throwing the men into tho injory, but thrge men, including the foreman were badly hurt. Three otbers are missing, and it is feared that they bave heen drowned.
Fall of a Cafe into the Sea at Smyrna.-The Smyrna correspoudent of the Levant Herald, writing under date of the 11th of Fehruary, gives somo account of a melancholy accident in that town, which had before been briefly noticed. The Café Kivoto, built upon piles over the sea, oroke down suddenly during a performance given by a company of acrobats. The proprietor of the café says he only sold 108 tickets, hat the people saved declare there were 200 persons pre. sent. Most of them were of the poorer class and there were not many Turks there, or yonng men of respectahle families. At ten o'clock loud cracking was heard, and within five minates The total number of bodies found under water The total number of bodies found up to the 11th was eighty, and it was snpposed that there were
still fifty more in the water. An English capstill fifty more in the water. An English captain, two Turkish merchants, a young man of lork, and some commercial clerks, werc amon the victims.

THE PEABODY DONATION FUND
Tae trustees of this fund have puhlighed report for the year ending the 31st day of December, 1572. In addition to the five groups of buildings already crected and fully reported apon in previous statements, the trustees have now in course of erection on a small site at Bermondscy six blocks of dwellings of concrete to accommodate 72 families. These will cost much less than if built in the ordinary way, hut anti this mode of coustruction has been more fully tested, the trustees do not fcol jnstified in spending any large amo
From the statement of acconnts, it appears
that to the oiginal or first gift of $150,000 l_{\text {. }}$, tberc has been added hy iuterest and rents the sum of $36,7332.4 \mathrm{~s}$. 11 d ., so that the total amount of the property of this first trust is now upwards 186,700t, The net incorne for the year has been 3,810 t. 6s. Sd. The properties belonging to the second trust mentioned in the last ro port, were a site at Chelsea and the Magdalen Hospital Estate, Blackfriars-road. The trustecs rave since acquired a site of about two acres in Roupell-street, near to Blackfriars and Waterloo a half in sonother of more than an acre and to Southwark Bridge, and within easy accose of London and Blackfriars hridges.
It is only on the soutb side of the Thames

Lhat the trustees have lately been ablo to find suitable plots of ground at a reasonable cost. Tho experience gained at Blackfriars has shown that huildings in this neighbourhood not only huld labourors cngared in manufactorics on the south side, but from their position are available for those who are so mucb nconvenienced on the nortls side of the river, in Westminster and its neighhourhood. Contracts are about being entered into for covering the two new sites with dwellinge, and it is estimated that accommodation will thas be afforded or more than 500 families.
The late Mr. Peabody conveyed to the trustees everal acres of land at Stockwell. It has been et on long building leases.
The applications for rooms at Blackfriars-road continue to be so namerous, that the trastces have resolved to huild three more blocks on this site. Although the dwellings at Blackfriars are reatly superior to thoso erected at an earlier priod the trustees will be able to give still betrer accommodation in the proposed new huildings, withont increasing the rents. This rust now represents a total of 228,0002 . The net income during the past year was $7,637 \mathrm{~F} 8 \mathrm{~s}$ 3d. Before the close of the present 0 , the sum of $150,000 \mathrm{l}$. will be added to this sccond um of 150,000 . will be added to this sccond bequest contained in the will of the late Mr . Peahody.
The trustecs give the following details :-In Hay, 1872, there were 817 families, consisting of 3,407 persons, occupying 3,328 rooms, which is approximately a room for each indivilual. The verage weckly carnings of the 81.7 heads of amilies were abont 17.2 s , 1 d , and the average clarge per room about 1 s . 10 d , per week.

TITE PUGIN TRAVELLING STUDENTSHIP. AT the last mecting of the Royal Iustitute of Architcets, the chairman announced that of tbe nino candidates who had submitted drawings and testimonials in competition for the Pugin Travelling Studentship of 1873, the conneil had clected Mr. Aston Webb, of Duke-strect, Adelphi, mhject to the conditions prescribed in the Pugin deed of trust, and that the comncil desired to all particular attention to the skilful execution and number of his sketches.
The ehairman, Mr. Horace Jones, added, that he council had determined to mark the unusual excellence of other drawings submitted this year or the Pugin Studentahip, by awarding medals of merit to two other candidates, riz:-MIr. . Jarvin and Mr. R. C. Pige, and by distinuishing with Honourable Mention the drawings of Mr. Thomas Garmatt and Mr. Walter L. Spiers.
The drawings and sketches made hy Mr. John Sulman, Pugin Travelling Student for 1872, rere exbibited in accordnnce with the conditions of the Pugin Deed of Trust.

## TIEE IRON AND COAL TRADES

An illustration of the unprecedented condition of the trade of Wolverhampton is furnished by a circular issued by one of the leading houses, in which tho following passage oceurs:-
"In consequence of the enormous advance of all raw materials we are reluctantly compelled to withdraw all
late quatations of irou for the present, but we shall he
ciad to quote you specially if you will be food enoush to giad to quote you specially if,
lavour us with your inquiries.
At a hanquct given by the Sheffield Typothical society, Mr. Philip Casey, secretary ome South Yorkshire LLiners' Association, mado price of cations as to the canse of the lingly per ton was He said that in 1863 only $11_{2}$. daced, and sinec that time they had received 1s. 6 d . per ton, which was an advance of 50 per cent. It was reported that the miners were making 10 s . a day. Some of them were; but others were making a deal less, and when coals had heen advanced from 4s. 6d. per ton to 19s, and 1l. per ton at the pit's month, the coal-owners must be getting the lion's share. Tho supply of coal was not equal to the demand, and in consequence the owners were able to push it up to its present price, and the demand had heen so reat that vendors had offered 4s. per ton over the published prices if the coal.owners would supply it. The colliers of this district had received an adrance of about 50 per cent. on $Y_{8}$ per ton; hat that was very different from the case of the owners, who were getting 150 per
cent. upon 4 s . or 5 s . per ton. They must nut bo
ancprised if the colliers went in for another rise in a week or two. They belioved they were entitled to it fairly, and it was not their increased wages which caused the present high prices. It was a fearful and monstrous thing that coal should be sold for 50 s , a ton in London, when it cost 17 , at the pit's mouth and 8s. carriage; thus of coal-muerchants of London
of 17 . per ton upon all they sold.
The Clay Cross miners have passed the following resolution :-
"That thit meeting, sening the serions state of things
pensting from the scarcity of coal, pledges itself to attend worls regular?
Sinco the recent large adrance of wages, many of the pitsmen bavo spent the greater part of their time in drinkiag, racing, and dog-fightiug.
Compressed Irish peat, possessing the density of coal, and well suited for bousehold purposes,
as well as manufacturing uses, may be shortly expected in large quantities in the market. Now and improved compressing-machines have been perfected, and are expected to be set at work in
March, under the auspices of $a$ company esta. blished for the purpose of supplying peat for all general purposes.
The men on strike in South Wales have ac cepted the mediation of Sir Rowland Stephen. son, who by this time has donbtless commani cated the result of his interview with the mas ters. It is earnestly to be prayed that work may be speedily resumed.

TECHNICAL EDUCATION IN SCOTLAND A connctiee appoiuted by the Town Council of Edinburgh have recommended to the govermors of Heriot's Hospital a scheme for a complete system of theoretical and technical educa. tion, which consists of a school for boys between twelve and fiftecn, and an evening technical college for adults and apprentices. Meetings have recently heen held at Dunse, Kelso, Lauder, and other places, where reselutions have been carried recommending the School Boards of Scotland now in course of election to consider how the elements of science and drawing can be introduced into Board schools. The Rev. J. Macleod, the Rer. J. Bell Middloton Nisbett, and other ministers of the Lstablished Church have taken a warm interest in the meetings. At the last meeting of the governors o Herioth, sceretary to the Society for the Em ployment of Women, urging that, should the governors agree to establish a technical school in Edinburgb, provision should bo made for imparting technical education of certain kinds struction of 2 usefnl kind, and especially in the uso of the sowing machine, has been imparted to girls in at least two of the Heriot out-door schools, and with gratifying results, and Counoillor Mitchell is, we understand, moring to have tho whole of the out-door schools supplied with sewing-machines. Shonld this be accomplished, Working olasses of Edinbnrgh will soon be put in the position of heing able to earn a livelihood so soon as they leave school.
"THE EFFECT OF CHARCOAL ON PLASTERING:'
Sir,-Your correspondent, "John Davidson," in answer to "L. C..," would be a very clever man if he could set an old ceiling with pure coarse plaster of Paris and pure water, and would be deserving of a meda momber of the large family of plasterers (if he is one) that could accomplish such a feat, as good pure coarse or fine plaster sets, when gauged with pure water, in about two minutes; in fact, wonld get as hard as a brick hefore he could spread one trowelful, and the suction in an old ceiling also, even if it could be done, the old ceiling being highly impregnated with the sulphuric acid, would soon bleach through, and the plaster being porous, it would soon absorb a large amount of the gas, so that the remedy he sug. gests wonld be as bad as the disease.
Having condemned his snggestion, allow me to make one. If, as "L. L." states, the coiling is in a bad condition, remove it, laths also, if unsound ; re-lath it, painting the heads of the nails to prevent corrosion ; then render it in one oat in Keene's or Parian coarse quality; two of
and, washed free of organic matter, to one of cement, with about the same amount of clean sow-hair as is put into lime and hair; then, when hardened, sot it with pure white Keene's or Parian coment ganged with pure wator, and a his does not set quickly it gives timo for trowel ling, and with plenty of elbow-grease introduce into that operation the surface becomes
polished one: therefore the gas would not attac) polishod one: therefore the gas would not attach
to it as to a rougher surface ; and, being a pure oit as to a rougher surface ; and, being a pur hitening as the require ne acid pas soon turus them a brownish yellow. If at any time it showld discolour, it can easily be removed by the application of clean hot water and Americal otash, applied with a soft brush or houseannel. St tho same time, I woald recommen he introduction of one or two perforated zin entilators, a ccording to the size of the ceining. Williay Pulams.

Sri, A9 Mr. Davidson has mentioned, in his letter oement might be used for the eeiling in question "or a coating of the same. from in in. to in, thick on the
 maner described is not at all to he desired. The onder coat, forraed of com mon lime (anrhonato) and sand, would
not assimilate with the finishing eoat; consequenty the latter would sbell off, to the ann yynace of all concerned. I would gnggest that for the particular purpose now
 dry, theso mi mith be gerewed up to the timher of the roof, and then flished with pure cement, forming a strong fire-
proof ceilling, which would not be likely to orrack. Rlaster would not stand for any length of time.
J. C. PART.

SOCLETY OF ARTS' GRATE COMPETITION.
Srz, -Now the Society of Arts haro offerd prizes for ooll for iomestio purposes,', I beg you will kindly inse the following questions, which, I have no doubt, have prs. as myself.
II it requisite for $B$ corppotitor to takko out $B$ " "natent" protected prom infring ement? If not, Who is respon siblo Tor the protection of oill the grates sont in for eomppotition and proventing other poople from taling out a "pato
for any oue of them beforo the prizes are awnaded? ourrast that amonf the numerous readers of yon ahore questions for the benofit of competitors. M. Geiprirr.

THE BRIGHTON AQUARIUM.
Sit, - Being at Brighton on Snturday last, of course
fisited the Aquarium, and need hardily sar ;it haing
 "rasty decp," my attentiou mas soon directed to other nf preferencee, and which led mee to writo, you, was the Very aut rative reading room. Whon awny from home,
 nd to tending-room. Its tendenof is to widen thought, not so dififerent ons in ppicit asitis in mothod. Who can calculat the amount of force lost to progress from prejudice, and gooranco of the true spirit animating those difforing as only one I had an opportanity of visiting while at Brighton, and being desirous of geeing my Butlder, I asked the

 by the direetors in opening the institution on Sundaye:
the good leelariour and pleased f feres of many, evidently ho go from the surroundiug eountry districts, st ruck me ag sained as to the resalt of the Sunday opening.
Foreeter Park, Surrey.

DEFECTIVE SLATE CISTERNS.
Hitur \& Co. d. Grebm and Ashror.
Iv the Lord Mayor's Court, on Tuedsa, a muster Were oresent as witnesses in the ense of Messrs. Hiil,
Keddell \& Wald Keddell, \& Waldram, who sued Messrs. Green dA Ash ton, camages
Mr. Willis was connsel for the plaiutiffs, and Mr . Tall . ourd Salter and Mr. Kempe, barristers, appeared for the Inendants.
 tracted with Ahston \& Green's firm to erect a large slate cistern for a manufuctory in Farringdon-street, City, and
he contract price was to be about $2 \$ 4$. After ths cistern He erected their firm received sereral pomplaints that the cistorn would not hold tho water, and they referred these omplaints to Mesars. Ashton \& Green, and applied to contract they had entered into properyy ithis Messrs. atching alterations, but which did who made some
efectually
make n good job of the cistern, they paid no furt her
attention to the matter: nud as the eacape of water wsa

 apon being compsiled to rcconove the roof of the building,
difficolty the slaters bad not to meet when the cistern ras first
It heing intimeted that the defenes to the action Fould rest as to wather the rant dia not lie with the buiders
in not preparing sulicient underaenth
eunport for the in not preparigg sulucient underuenth support for the
cistern, the evidence uppo this point was the chiof con-
ention ention on hoth sides
Mr. Gunnin archit
Mr. Gunning architect, snid he remembered seing the
 reight of water the eistern held. He considered that the eahage arose from the sidcs of the cistern not heing pro-
perly groored into the hottom, so that when three tons of water were in the cistern, the pressure forced the bottom to give way, and bcing, only supported by tho bearers
instiad of it omm strenth, which should have been tho case, tho leaknge would arise at sides and bottom.
tical. men, mand Mrr. Hayward, who mades nood job of the istern, stated that he found the grooves and joints in tho lste sillect with cement instead of being groperly hoilowed out, as such a strong job required. He Honsidered the
bacrers sufficienty tricol aud eloss enough to hood twice the sizs of the cistern.
$A$ witness
also den
deposed that the cintern leaked the first Counsel for the defendansts, and ly inereral arohiteots, buildors, worlimen, und alato masons, on the other hund, stoutly urged that tho job was performed in a worlsman-
iliko and trudesmanly way; that the hesms did not anlleiently support the cisteria which bad heen fixed on tivo bars of iron whioh wore too far apart, and tho weight
of water had strunued the midal and eanged tho leik. age that when Mr. Heyward was called in, he notieed when this was done the lealkago ceased. The defendants urther contended that it was no part of their contract or duty to look after the aupports of a cistern. All
they engaped to do was to ereat the cistern, und if the Thole building fell down when the water filled the eistern, they would not be lia ble for the damage, and that it was the
place of the party who ordered the oistern, to see that the heams were plsed iu correct position, Willis urged In anger to this siew of the matter, Mr. Willis urge it was intended for, and to hod water, and this had cleariy not been done and the de tendants not huring carricd out
his a greoment, they were liable to the costs incurred by the plaintifirs in mating good tho defeetti
topped in his summing np by the jory returning g a verdict or the plaiutiliti for the full amonat.

A WRINKLE FOR HOUSE DECORATORS. Dunn V. Burke.-This action was bronght, in the West-
minater County Court, by a hailder rad hana decorntor if Brewer-street, Westmintor, against Lord Burke,
 corered wh
for extras.
From ifr. Dann's statement, and his witneses, it peared that lust Ootoher Mr H . Hanson, housekeeper io the defendant, applied for on eatimate for whitening the
ceilinge of the chambers in the Albany, and for some ecpaira of the busth room
Previously to supplying the estimate, the plaintifl's furcman a acquainted the housekeeper that, before the wor'z coural he proceced of pietures, furniture, גc.; and she was asked if the making of theso proparations were to be is-
 After the estiriant had heon forwarded. that haweke oeper and that the work was to be procecded with direotly,
 and he sgain cold the housekeeper it was neeegsary that
the pioturea, elocks, and furciture must be takea out of
 The foreman told Mrs. Hanson that this labour was not prorlded for in the contract, and that it the workmen did onil Lord Burke must pay for it, of course. The work ontracted for took up 1 th haors. Upon the bill being sent in Lord Burks refused to pay more than the eatima
and offered 11l. 10 s ., which Mr. Dunu refued to take.
 sonable.
 of Clamricarde, and occupied chambers in the Albay. By his direction his honsekeoper applied to Mr. Dunn for
nu estimate for whitewashing a sition room, hedroom nu estimate for whiteawasing a situing-room, hedroom,
dreening-room, and beth-room, and to make good a broken
ceiling. The es
present de provided that the walls should he coveredi, to prevent damage to the pictures, lookiug. plasess, and
bookeceacs, and this was provided fir in the first titem of
the contract

 ineluded in the contract, but offcred to pay for beating
the carpets and altering the door, and upon oskliog th. the caspets and altering the door, and upon askling th
plaintitit's foreman what this was worth. He said 3as. woul amply cover it. Ho desirad the foreman to take the b back, and get the items ho disputod atruck out, but ho
efarad to do so. He then sent it back. atating that ho rould not pay for the dismantling. The articles in tho it, eren if each wera Trmored. He tad teated the timo
by remoring one picturo from one roam to by remoring one picturo from one roam to another in
fire minutes; and
as only about forty articles vere live minutes; and na only about forty articles were
mored, it would only ocoupy three hours altogether. Hr. Reed, house decorrater and aphoulterer, ssid he hio gone orer ths chamhers and the oontract, , and he hhou

ocyered up,
Mr. At inson, for the phaintif, said his elient hal
received a leater from Lord Burke, of a threatonng
vsinre, and Mr. Dina bad no choice but to bring this ustire, and Mr. Dina had no choiog but to bring this
zotion, to show that ho had in no wiso irmposed upon the defendant. Ho urged that the orderso of the houselkeeper
 The learned judge, Mr. F. Bayley, suid he did not
concor with the learnod counsel; for, from the evidence

 contract sum and for beating the carpet, was sil the
defendant was entitled to pay, znd his verdict would be be

TIIE TEALPLE OF DIANA, EPHESUS.
Folrowing up the information already made puhlic through our pages and elsewhere, Mr. J . Wood has forwarded particulars of his recen Ephesus:-

## PRE. HISTORIC FORTIFICATIONS.

I a lecturo delivered a short time back at St . George's Hall, Langham.place, on "Pre. historic Fortifications and tho Military Engineering of our Anecstors during the Stono Age," Mr. Law. son rat eaid, everywhere wo find traces of civilisation. There may he distinctly traced the stages of the stone, the bronze, and the thon ages, es points of dovelopment in man's history; advale other countries, not having made such advances, and having flourished as long, are only being of stone. Tbe state of a nation's warfare being of stone. Tbe state of a nation's warfare
was a sigu of its advancement, and this was exeraplifed in the constrnction of forts.

The earliest instance of armoury that we know of, was that of a chip. Alint pebble, which was nsed either hy being attached to a stick, or else clutched in the hand. The natural positions of defences used by onr ancestors were those of an elevated charactor, and so in the construction of forts, the eariest and rudest of which were
hill-forts. They were first constructed simply as places of refuge, and were made npon little table-lands. Afterwards we find that in the ercction of these forts the masonry improves, and small oval ohamhers are introduced; then they hecome regular placcs of residence. In
tho oonnty of Sutherland many of these forts wero huilt entirely of stone, though earth. forts preoeded them, and so were constructed on posi-
tons which weere naturally strong. A remarkthoy fealure in tho construction of forts is that and, hy a system of tolemen she one anchier, tion could be on the alert in case of forcige inasion. One of these forts, situated frign iavaIslands, sto a shape 1 esembeg fis hapely of bry stone a ce.box, and it was hnilt ased. In some inston cement whatever heing these forts somo instances, the stones of which some mils, were bail mush havo been carrica by thiles distance, and the industry displayed by the builders must have heen onormons. Many of these forts are preserved to us now in consequenoe of the difficulty there is in dcstroy. ing thern, they heing so suhstantially built. At Inglehury, in Xorkshire, thero exist the remains which of these forts, huilt on the top of a hill, cientifically an area of thirty.one acres, In different parts of the Yeans of ramparts. reuches have been cut some thirteen and fourtcen milos in length. Tbese and other defonces evince in our ancestors not ouly an amonnt of exgineering skill, but an enormous amount of patieuce; and considering the ineffioiency of the have involved a considerahle amount of labour.

## THE TRADES MOVEment.

Bradford,-In November last the masons of Bradford gave their employers six months' notice that at the expiration of that time they wonld require an advance of 3 s . per week. Negotia. tual since carried on have terminated in a mu. ployed. The masters acree cmployers and oman advance of 2 s . per weck npon their present rate of wages. The adrance will come into operation in May ncxt.
operation in May noxt.
shiphnilding yards of joinors employed at the shiphnilding yards of Messrs. Redhead \& Co. and Mcssrs. Softlcy \& Co., bave struck work for an
advance of 3 . per week. Advance of 3s. per week.
Airdrie. - $A t$ an adjourned confcrenco of painters held betwecn employers and employed to advance tho present rate of by the employers to advance the present rate of wages from 6id d. to 7d. per honr, and the country wages from 3 . to 48. per weck.
Dunfermline. - The operative joiners and cahinetmakers havo applied for a rise of wares to the extent of ${ }^{1}$ d. per hour, and intimatod to tbeir employers that they will come ont on strike, after giving a fortnight's warning, if it be not granted on tho 1st of March. The non. resolution. Two of the masters bense to this faronrable raception to the demand. Certain by-laws for the regulation of all disputes con nected with the trade have been submitted for considcration to tbe masters.

## SANitaby matters.

Nantwich.-The rural sanitary authority hare appointed a sanitary inspector, with a salary of 300 . per annum, hut who is expected to act as about 120 candidates, which nure were rednced to somen, wher was firs Hod mson, Mr. Crece to all of whose testi, Mrarry, and Mr. Maylo, special reference, and who, he said, were all men acquainted with seworage. Mr.J. A. Davenport, of Orer, said by Mr. Bailey Denton to be a good Bertorin
Berkshive.-An adjourned conference of the varions sanitary authorities in Berbshire on the Now Public Health Act, respecting the appoint. ment of an otticer of hcalth ninder that Act, has been held at the Assize Courts, Reading. Mr.
R. Benyon, M.P., presided. Mr. Henley, the Poor. Law Inspector, was also prosent. The dele. gates from the following sanitary authorities within the connty of Borks signified the assent of the authorities they represented to the principle of combination in the appointment of the medical officer of health :-Abingdon (rural and urhan) Bradield, Cookham, Speenhamland, and Newhury rural, Newbury nrban, Hungerford, and Falling. ford, both rural and urhan. The sanitary autho. rities for Windsor, hoth rural and urban have not yet met, and the remaining sanitary anthorities in Beris either positively declined or only assented to combination to a very limited extent Resolutions were passed by the delegates of the assenting sanitary anthorities, agreeing to ap.
point one officer of bealth for the whole of these districts, at a maximum salary of 800 l ., the pay ment to be apportioned according to the rateable value of property in eacb district. A committee was appointed to carry out the details, consisting of the delegates from the assenting districts.
Newarli.-A meeting of the samitary authorities of the town of Newark and the county,
convened at the instigation of the Tnspector of the Local Ge instigation of the Inspector or Fleming) Govornment Board (Mr. Baldwin Newark. Mr. heen held in the Drill.hall, chairman, and theville, of Sturton, was elected from the following bodies :-Borongh of Newark Improvement Commissioners, Masfold Im provement Commissioners, Grantbam Radford Board of Guardians, Newarl Nnion, Southwell Union, Worksop Union, Sutton, Ashfield Local Board, Mansfield Woodhouse Local Board, Besford Union Hulwall was Huthwgite Local Boar Bial Hander nall Torkard Looal Board, \&c. Mr. Floming addressed tho conference at some length. In the course of his ohservations, he said the Government oonsented to repay one.half the salarics, in order that the burden might he repay this money -"We money,
eflcicient ond indcpondent officer fitart the officer is an elicient ond indcpondent ollicer. For that reason wo
must keep iu our hands the power of sayin we approve an appointment unlesswer wave evidence that tho person proposed is fit to hold the office, and we must also kreep in our hands the po wer of reftusing to alloom the
disnisal of an oflicer, ualess there are very good grounds
dir

These
These were the only conditions made by Govern ment, and he holieved tbere was no idea of oentralisation, or any desire to obtain undue power to interfere with local authority. ought to be distinetly understood that, accordin to the provisions of the Act, the officers of health wonld of themselves hare of prosecute. They could only act on the instruc appointed, authorities hy whom they wer appointed, and those authorities took action on ro inorss that were made to then. There was no intention on the part of the Lcgislature of ading materially to the hurdens of the rate payers hy compeling the local authorities to make the appointments in question. What thoy hoped was to rednce the preventible diseascs to minimnm, and therchy greatly to lessen the hurden whioh now fell npon the rates. It was not desired that the inspectors of nuisances should unnecessarily intrude themaelves any Where. After a lengthened discussion, Mr. W. Becror proposed,
a medical oflicer of health thould be he tit is desirable that area, that he should be required to deppointed for o largo vices to the oflise, and that such to devote his ontire sor. as would command the services of an able, elicicant, thend
independent mand Mr. B. Walker,
ik. B. Waker, of Lenton, said that he sbould whetber it was expression of opinion as to districts or not. Ho therefore mendment, - "That ench district moved as an mendmont, Godber, of Balderton, in the subject." Mr. Godber, of Balderton, inquircd whether the Local Government Board would so far disap. prove as not to allow each separate sanitary racticy to appoint a medical man acting and ractising in the district. Mr. Fleming: You have the power to appoint whom you like, pro. viding he is properly qualifed. The question
was then put to the vote, and the original was then put to the vote, and the original
motion was carried hy a majority of nineteen to fiftcen.

THE CHAPEL AND HALL, WINCHESTER COLLEGE.
$\mathrm{S}_{12,}$ - Your correspondent, "D," in your lasf week's impression, coucludos his letter,-"Now if tbe anthorities really cannot afford these works of restoration, they ought instantly to open a subscription for the parpose." And "every oue who knows Winchester College, must see that they have rot sulticient funds, \&c." It may in. terest "D," and others who may not know the facts, to he informed that Winchester Oollege is one of the richest corporations in the kingdom; that their presont income is 20,0000 . a year, or more, and is increasing every day. At the present moment the college is said to be under com. missioners, who are responsible, bnt who certainly do not take any active measures for the improve. ment of the college huildings, or their landed states, dotted as tbey are orer nine counties. Nor are the college funds much entrenetued on by liberal contributions to schools, or publia
charities in the parishes where tbo property 18 sitnate, the nnnual subscriptions seldom exceed. ing a very few pounds.
There can now be no reason, as formerly existed, for colleges and such like institutions to hold landed estates. And wben it is known what a bar to improvement these properties frequently are-never managed as other estates, - the sooner the commissioners have power to sell their estates (without heing obliged to re-invest in land), the better it will he for the colleges, their lessees, and the public generally.
The funded property of thia college, I am told, is nearly $100,000 \mathrm{l}$.* So want of money cannot be urged as a reason why everything connected with this property should not be well done, aud done at once.

FRESCO AND MURAL DECORATION.
The Committee of the Council of Education have annonnced their intention of awarding a numher of prizes for the best copies of any good examples of fresco or other wall-painting existing in the United Kingdom in connexion with ecclesiastical and other buildings. Information is also desired as to the former practice of nural paintings in thcse countries, and the artiats who were engaged in the pursuit. to state the name of the church or other old buildings on the walls of which the painting exista, the name of the town and connty, whetber in tempora, fresco, or oil; the size, the name of the artist if known or probable name, date of the work or probable date, name of any printed work [or m
The head.master of the schools of art in con. nexion with South Kensingtun will send circulars through the country detailing the particulars of pe compible information unon the subject. Some our readers may help.

THE EMBANKMENT FROM CHARING CROSS.
Sir,-Should Northumberland House be removed, and should an opening be made through its site to the Embankment, I will presume that (especially if the trees at the two sides of the avenueso laid open be retained) a marruificent opportunity will arise for looking down such avenue. But must not the expense of destroying the house be supplemented by the further expense of providing an object to be looked at as the termination of the vista ? The river Thames will, in perspective, be reduced to insig. nificance, if not hidden altogether behind parapets. Are the Metropolitan Board prepared to lay out a for thor something like an Albert Memorial on the Surrey
shore?
G. M.

## THE ROYAL COLD MEDAL.

Sir,--Your correspondent "M. I. B. A." drew attention in yonr last issue to the proposed award of the Royal Gold Medal to Mr. T. H. Wyatt, and
in a temperate and forcihle manner pointed out in a temperate and forcihle manner pointed oat the impropriety of the proposal, and indicated
some of the ill resnlts which will ensue if the some of the ill resnlts which will ensue if the ecommendation of the Council be confirmed by the Institute.
I fully anticipated when the ammonncement was first made that it would elicit some remarks from the professional journals, but as far as I have seen the letter of your correspondent is the first public notice that has been taken of the matter. This reticence in all probability arises from a desire to avoid any apparent disparagement of Mr. Thos. Henry IVyatt, who is universally esteemed both as an architect and a gentleman. $\dagger$ It is not, however, in any sense a personal question, but entirely a queation of policy, and may, to divest it of all appearance of personal feelingr, he put in this form: "Is it right for a public body, intrusted with the duty of advising her Majosty as to tho bestowal of a mark of distinction, to nominate their own president for the time being for the honour?" The answer to that proposition mast be in the nega.
tive. What would be thonght of a Cubinet tive. What would be thonght of a Cubinet
wbich alvised the sovereign to confer a vacant

## * I koow this as a fuct from private sources. + Quite right, so far as we are concerned. We feel  willing cains.

Garter pon the Ninister at the head of the Government? Such a course would he matnrally considered improper and unbecoming, and yet it is precisely similar to the action of the Institute. Should architects hove any less standard of honour than statesmen, or is there one code of honour among politicians and another for pro. The Royal C
The Royal Cold Medal is one of the few dis tinctions which fall to the lot of our profession, and it is important that this distinction should be distributed impartially, and that it should not bo oonfined to a clique, nor be used as a roward for services to the Institute, The Council of the Institute are merely trustees of the Royal favour, and it is an abuse of that trust if they restrict their recommendation to Her Majesty among their own members, or allow any personal feeling or favonr to influence their decision. Somo of the later awards of the medal have been cer. tainly open to question; but we have not had hitherto such a Elarcant instance of official nepotism as the present proposal, and I trust sufficient distinctness to indnce the Courcil to withdraw their recommendation.
As I before remarked, the president of the Institnte is in every sense an architect and a gontleman; and I can scarcely credit that he approves the action of the Council. I cannot beliere that a man of his sonsibility could accept from the hands of his sovereiren with any satisfac. tion to himself under the present circumstances.

## LEAD PIPES AND FROST.

Sin, $-A s$ a subscriber of more than twenty yeare, I have not read your pages without seoing many suggestions for preventing the bursting of rate-pipes by frost ; but none of them appear ford mucb favour, as tbo evil still wanta a remedy.
Intian venture to affirm that the snggestion mentioned in your last issue as finding favour in a discussion at the Inventors' Institute will not be much used, although thero cannot be a doubt of its practical efficiency. A small india-rubber tuhe inside the ordinary lead-pipe need not be very costly; but it would puzzle many a workman how to finish off the end near the tap, If you think the follon the pipe branches.
If you think the following sugrestion worth inserting, it is at your service. I would have made it some years ago, but should have preLet an ordinary lead pipe be passed through Let an ordinary lead pipe be passed tarough a pair of rollers so as to datten it shghty; the expansion of water within it during frost will probably it will probably it will ruquire many severe frosts to accomplish that, for eren in lead there is some elasticity. An iron (wronght iron) or zinc pipe would probably always resume its flattened shape, after the frost is orer. Other sections besides the elliptic might of course be appliedas half-round and three-quarter round, with a fliat side to the wall. These sections for water
or gas pipes would be far neater in appearance or gas pipes would be far neater in al
than the circular sbape now universal.
F. H. M'Lather.

## Churcesullding news.

East Stoke.-The chancel of East Stoke Church (near Newark) has been restored, at the expense of Sir Henry Bromlcy, bart. It had a level plastered ceiling, high pews, and rough stone paring, the extreme end only of the chancel
being raised one step above the door of the nave. The improvements consist of new plinth and facing to a portion of the exterior, with caves, gratters, and rain-pipes, a chancel archway with moulded jambs and bases, and carved capitals; a stone screen, with moulded quatrefoil perforations aud coping, two omamental panels inserted in tho western spandrels of the arch, ant an oak door and frame with moulded and carred stone dressings on the north side. There are now five steps, including the altar, of red Mansfield stone, with inlaid encaustic tile risings and rounded nosings. Tho lloors are lail with Min ton's tiles; those of the Sacrarium being the gift of Captain Bromley, R.N. The plasterivg has heon removed from the interior, tho wall. stones pointed, the tie.beams and king. posts cat aray, the principals cross.braced and
secured with iron tie-rods. A polygonal secured with iron tie-rods. A polygonal
moulded and panelled ceiling is formed of
pitch-pine. There are an oak altar-table and pitch pine open sittings. The book-rests to These improvements bring on iron standards. These improvements bring ont the fiue proportions of this chancel, and show the tracery in the east window, proviously hidden by the plastered ceiling. The gallery is romoved to the west end of the nave, and the tower archway opened out and restored. The works were carried out under the direction of Messrs. Hine \& Son, of Nottingham, hy Mr. R. Young, of Lincoln, builder; the carving was by Mr. J. M. Thompson, of Nottingham.
Lightcliffe.-The parishioners of Lighteliffe have had a liberal offer made to them, at a meeting, hy Major Foster, of Cliffe Hill. There being ohstacles in the way of building on or near the site of the present church, the major offered a site for a new church on a portion of his own park, more conveniently situated for the parishioners at large, and to buid the churoh at a cost of at least 5,000., capable of accommo. dating from 400 to 600 persons (a third of the sittings to bo free), trusting to the parishioners to provide a clock, peal of eight bells, and an organ. The offer was most heartily received by the work.

## VARIORUM

"Tre Newspaper Press Directory and Advertisers' Guide. 1873. City Sewers Commission, Mr. Haywood treats City Sewers Commission, Mr. Haywood treats
of the railway and tramway projects before of the railway and tramway projects before
Parliament in the present session, as they affect Parliament in the presont session, as they affect
tho City of London. Tho following is a list of them:-City and West End Railway, Metropelitan Railway, Midland Railway (Additional Powers), East and West Mctropolitan Junction and Cannon-street Railway, North Metropolitan Tramways, and New Mint Building Site. The rail way projects will interfere with the seworage, he states, and ought to be dissented from in order that the interests of the public and the
City authorities may be sccured. The New City authorities may be secured. The New
Mint site is the same as before, on the Thames Emhankment, near Templestreet and the Gas Light and Coko Company's premises.

## Wiscellanea.

## A New Safety Lamp.-A patent has been

 taken out hy Mr. William Yates, of Westminster modifying the old lamp in the following way :of it which surrounded tho flame, and roplaced it by a strong lens or bull's.eje glass on one side, and a silver reflector on the other. The result of this arrangement is that his lamp gives "a cheerfullight, estimated at twenty times that of purposes." The lamp is easily opened, hut this cannot be dene without at the same time with-drawing the wick and extinruishing drawing the wick and extinguishing the flame,
and it thus hecomes impossible to ohtain a light by opening the lamp. There arc other improve monts ohviating objections to the old lamps. Mr . W. Galloway, we may hero remark, has
found that a sound-wave is capable of cansing found that a sound-wave is capable of causing the flame within the wire-gauze cago of a safety-
lamp to be transmitted to the oxternal oxplosive atmosphere. This tends to show that the firing of a shot in a colliery may determine an explosion, not hy actual cemmunication of flame fiom the gunpowder, hut solely by transmission of the sound of the workings.
The Fever from Infected Milk at Leeds. Dr. Robinson, the medical officer of health for Dr. Robinson, the medical officer of health for
Leeds, has just presented his sanitary report to Leeds, has just presented his sanitary report to
the Town Council, and in this document he gives full particulars of this peculiar dissemination of the opidemic, which be traced to milk used in common among those attacked; and on tracing the milk to the dairy, he there foond typhoid fever very prevalent and fatal in the farmhouse, part of which, open to the sick apartment, formed the dairy, under circumstances which showed clearly how the contamination of the milk arose. He says, nofewer than eighty persons who had oh,
tained this milk, which was of "superior cuality," tained this milk, which was of "superior quality," ns evidence prored, were attacked by fever, and
of this number fourteen died. At Armley, near Leeds, there has also heen an outbreak of typhoid fever, and into this epidemic a special investign. tion has heen made by Dr. Ballard (one of the and who has had previous experience in milk poisoning at Islington), and from whom \& report is shortly expected.
Rateable Property.-..For all England and Walce the amount of the gross estimated rental, nader the valuation,list in force at Lady-day, 1871, was $126,473,9212$., and under the list in force t Lady-day, $1872,129,038,9767$. The amount of the rateable value, under the valuation- list iu
orco at Lady. day, 1871 , was $107,398,2427$., and under the list in force at Lady-day, 1872 , $.09,447,111 l$.

Obstruction of Light. - An arbitration has taken place in the New Music-hall, Sheffield,
befere Mr. M. E. Hadfeld. The parties to the before Mr. M. E. Hadfeld. The parties to the arhitratien were Mr. William Herridge, hern, stag, and scale merchant, Barker-pool, and the Music-hall Cempany, Limited. The arbitration was fer the purpose of ascertaining the amount of less which had been, and would he, sustained hy Mr. Herridge in consequence of air and light to his works heing obstructed hy the erectien of the New Music Hall. The company, by the order ef reference, had admitted their liahility o pay daragres, and the only question to be settled was the amount which they were to pay. Soveral witnesses gave their evidence; among whom were Mr. Ahhott, of Mockuon Mr. rchitects for the music-hall, and Mr. Jen estimatod the depreciation to the factory at 2881. and Mr. Fowler at 158 l. The arbitrator promised to give his decision on a future day.

Science in Liverpool.-A private meeting held last week in the townhall, Liverpool, nder the presidency of the mayor, is interestfeeling in that that there is really a scientific meeting, though vcry unpretentious, is expected meeting, though very unpretentious, is expected
to result in considerable henefit to the toxn, where science has too long heen almost ignorod. The ohject is to induce visits from the ignorod. The ohjcct is to induce visits from the greatest scientific lecturers; and a guarantee fund has been estahlished to secare the managing com-
mittee against loss. The presidents of all the mittee against loss. The presidents of all the herence to the scheme, and attached their names to the list of guarantors. Altogether the Liverpool Science Lecture Association wears an appearance of reality that promises well for its uccess. The mayor evinced much interest in the subject, and the guarantors are nearly all gentlemen who may be relied upon for active

Windsor Literary Institution. - Last weok a lecture was delivered to the members of
the ahove Institution hy the Rev. H. F. Limpus, the ahove Institution hy the Rev. H. F. Limpus, one of the minor canons of St. George's Chapel, the suhject heing "Architects and Architecture." The lecturer, in commencing, said he hoped they wound not think he was saling undor falso colours in announcing that he was going to address them on architecture and architects, and so leading them to expect that he was going to troat of the various styles of architecture,such as the Ionic, the Italian, Gothic, Early English, and so on, and on men who were minent in that profession, for that was not his intention; bat he was going to tell them of various animals, insects, and birds, who were not only the architects, hat the constructors and hnilders of their own hahitations. Misleading titles such as this should always be avoided.

The Reclaimed Land on the Thames Embankment. -The question as to the owner ship of the reclaimed land on the Embankment claimed by the Crown, but disputod by the Metropolitan Board of Works, is likely, it wonld seem, to he amionhly gettlod. After demanding 40,000 l. for the ground which the Board required to be preserved as an open space, the Govern. ment are now, through the Commissioners of Woods and Foreste, willing to accept 3,000l., suhject to the Metropolitan Boaxd (in the event of their obtaining an Act to enable th $m$ to acquire Northumherlannd House), permitting the Crown to huild upon a portion of the estato so acquired, as well as upon a part of the Em. bankment their legal right to which is hardly
disputed. disputed.
Metropolitan District Railway. - The report of the directors read at the half-yearly meeting of sharcholders gave the total receipts the corre, being an increase of 21,7992 . over The net profit on the half - year's work. ing was $49,071 l$,, which enahled the Board to pay all liahilities, interest, do., and carry a small balance to current revenue account. The nnm. ber of passengers carried had been ahout one million and a half in excess of the previons half year, and the recoipts therofrom had been:1st class, 2,000l.; 2nd class, 2,500l. ; an
3rd class, 12,600l. An 21,700l. had been earned by an increase of only 7,360l. in the expenses.

Society of Lady Axtists.-The exhibition (9, Conduit-street) will be opened to the public on Monday next. The private view will take place on (this) Satarday.

Mortality of Preston,-Mr. Radeliffe, of the medical department of the Lecal Gevernment Board, has just given a statement from inquiries he has made into the increased mortality of Preston. During one particular period of the past year the death-rate in Preston was higher than in any other part of the kingdem. He has inspected the different lecalities in the temn where the greatest number of deathe curred, and the result is that the unusual degree ef mertality is owing to defective sewerage and vitiated air. But the principal cause he ascribed to an imperfect system of cleansing the ashpits, and intimated that the lecal hoard of health should take the scavenging into their own hands,

## Archæological Discovery in South Wales.

 A few days ago, Mr. Howel Pugh, of Tyddyn. bach Farm, Llanfachreth, noar Dolgelly, dis. covered a vault containing human remainsin a field which he was preparing to plough. The field rises aruptry in the centre, like several other ficlds stone, which interfered with ploushing a hage stone, Which interfered with ploughing operait, and eventaally the stone was dragged away hy a team of horses. A deep hole was then found and at therses. A deep hole was then found, and at the bottom of it very dark earthmixed with stones. It was also discovered that mixed with stones. It was also discovered that there was probahly a cavity lower down, and a little excovation revealed a stone vault, con-
taining haman remains, a brass dagger, and a gold ring.
Earthquakes.-The attention of men of science is heginning at last to he drawn to the remarkable frequency of the occurrence of earthquakes in divers places thronghout the earth'虽 crust. Mr. R. Mallet, F.R.S., in his introduction to a translation of Professor Palmieri's account of the ernption of Vesuvins last year, says that "if we were possessed of a sufficient report from all parts of our globe, we should prohably find scarcely a day pass withont a very sensible earthquako occurring somewhere; whilst, as regards still smaller tremors, it might almost be said that our glohe, as a whole, is scarcely ever free from them." Moreover, "we may expect at present one great carthquake ahout every

Serious Explosion of Gas.- A gas explosion recently took place on tho premises of Mr. Jay, Stafford-street, Walsall, by which parts of the partition walls were hlown into the next house ; six doors smashed, some of them heing carried away bodily; shop windows and other windows hlown out, and the property generally shattered, besides much furniture heing destroyed. The accident was occasioned hy a gasfitter having left the supply-pipe in a roon insecure or unplugged. The gas found its way into the room above; and a gasman, who had heen sent for, applied a lighted candle to the hole through which the pipe passed up
The Tramway-Scavenge System.-It is proposed that our tramway service should be utilised during the small honrs of the morning, ceases imediately after the passenger traffic ceases, for the purpose of conveying the ahle depots or "shoots" ontside the metropolis, and in several places where the tramway vico exists the Local Boards are making their arrangements for availing themselves of this expeditious service. It is reperted that all the chief towns and oities in Great Britain, through their publie hoards, will immediately follows suit helieving the system to ho $\Omega$ simple, expeditious, and economical one. The idea is a good one.
Architects on the Stage.-Friday evening, the 21st of February, at the Arohitectaral Association, was occupied with the members' soirée, and amateurs in farces, divers kinds of music, dra a goed muster of sociahle members. The could wero voted successful when the sudience Goose with thughing, and the end of the performers hefore the onrtio. The program the vith the usual onigmas looked perhaps little late in the day. most of the perhaps, a little tectural doings being ho this neiges J'antan; but of course with dry filling old printed matter will make good new squihs.
Cleansing Carriage-ways, - Mr. William Haywoed has made a valuable report to the City Commissioners of Scwers upon the results of experiments in clcansing the carriage-ways of main streets. We will give the pith of it on nother occasion.

Another Bridge brokear down by a Trac-tion-engine. - A fatal accident has occurred at the hamlet of Broom, in the parish of Sonthill, near Biggleswade, according to the Bedfordshire Times, which states that a traction. engine of 10 or 12 tons weight, broke down a bridge of five ekeleton iron girders, erected ahout fifty years eince over a bye strearn of the river Irel, 2 ft machinery, hut not broken, died of oxposnre to machinery, hut not broken, died of oxposnre to cold, as he conld not he extrieated for some time,
and declined to have his leg amputated. Another traction-engine had passed safely on a previous occasion.
Stone in Forkshire.-The stone trade in Yorkshire is still increasing, and the quarrymen are again agitating for a further advance in wagee Mr. Stephen Seal, of the Darfield quarries, conceded a further rise on the 20th zult. The price of stone, though higher, has not heen advaneed, we understand, in proportion to the increased rate of wares, and considering the enormons advance in coal, iron, and steel the position of cuarry proprietors is not en eavi able one. An adrance in price and the etoppage of some saw-mills are prodicted.

The Late $\mathrm{M}_{1}$. George Shaldere.-A committee of artists has been formed for the purpose of making some provision for the family of the late Mr. George Shalders, member of the Institute of Painters in Water.coloners. In addition to subscriptions, the committee are now formins a collection of drawings and sketehes in oil and water-eolours, to be afterwards disposed of for the fund. Mr. J. II. Molo, of 7, Guildford-place, cussell.square, W.C., is the treasurer: and the Bloomgbary hranch of the London and Westmin ster Bank receives subseriptions.
The Age of Wood.-A discorery was roade by Mr. John Glasbrook, in an old adit level, at Pwllycwm Collicry, noar Landore. The men are sinking anew pit there, and in an old adi level, filled with ruhbish, came across two old wooden shovels, evidently used by the miners huodreds of years ago. The handles of theso shovels are of ash, the blades of oak (still as hard as steel). There is not a particle of iron even in the fastenings, and those implements of trade must have heen left where now found at lenst 200 years ago.

Science in Daily Life.-The last but one of the present serics of leotnres on the application of seience to the requirements of daily life, organised by Mr. Thomas Twining, in connexion with the late Economic Museura at Twickenham, and latoly dolivered on alternato Taesday eyenings, at the Lambeth Baths, was given on Tuesday last, when the subject was the important but much neglected one of "the human body." South London Chronicle.

## Heating Buildings.-An invention of Mr.

 IV. G. Lankester has been tried in the New Guildhall, Winchester. It consists of cast.iron rectangular hollow ehambers forming the skirting of the room. The heated water passes through these, as it does throngh ordinary pipes. The patent hot-water skirtings, however, appear jnst liko wood skirting, and are therefore practically invisible, and they afford an opportunity for the introduetion and warming of pure air at theback.

Deeign for a Deek.-At the last meeting of the Metropolitan School Board, on the motion of Mr. MeGregor, chairman of the Sehool Manage. ment Committee, it was agreed to empower that committee to offer a prize of $10 \%$. for the best design for a desk and bench of the description recommended in the report.

Literary Dinners.-Tho Right IIon. W. E. Gladstone has accepted an invitation to preside at the anniversary dimner of the Royal Literary Fund on Wednesday, the 28th of May next. The nonal festival in aid of the Newspaper Press Fund will be presided over by Mr. Froude.
Oxford Architectural and Historical Society.-The Saturday walks and excursions will bo continued, conmencing March 1, at $2.15 \mathrm{p} . \mathrm{m}$. (Oriel College and St. Mary Hall); and on March 8, a visit will he paid to Lincoln College and All Sainta' Church.
Oil for the Lighthonece.-The Honourable Corporation of Trinity House have accepted the ender of Sir W. A. Rose \& Co., of London, for no less than 75,000 gallons of colza oil for the English and colonial lighthouses.

Pictures and Sketchee.-We wonld remind our readers that a rale of the late Mr. Thomas Allom's pictures, drawings, and sketches will ake place at the rooms of Messrs. Christie Ianson, \& Woods, on March 14th

Mr. Cole, C.B.-It is said that Mr. H. Cole, C.B., of the South Kensington Museum, has ccepted the presidency of the Birmingham School of Art.

VOL. XXXI.-No. 1570.

The Real, the Conventional, and th Ideal.

T rarely happens that a man who, to the possessioz of an observant eye, and of a taste for ma. tural beanty, adds cyen the faintest spark of the artist's fire, cau take country stroll with ont having his imagination impressed by graceful forms which ho will desiro to perpetuate or to reproduce. Painter, sculptor, or architect, in whatever province of art his symapathies may lie, they will respona unimpressive in its features, tho clouds in the sky, the flceting shadows which they throw on the earth, tho purple and gold of the sunrise, the grayer and evancsoent tints of the sunset, clothe it with fresh life in almost each successive day of our chaygeful climato. If form be appre. cintod by tho observer more highly than colour every copse and hedge-row will field spoils to his note-hook; or, at all events, to his memory. A waving spray of eglantine, the massy, clustered foliage of the lime, the taper form and silver veining of some specially graceful ivy-leaf, the bold lanotted contortions of the stem of that glossy creeper-which forms the tapestry of the rain, and is of ten the murderer of the pinc,each will he instinct with a lesson from the very fountain of lifo and of beauty.
But if, whilo seeking communion with nature the path of the student be hemmed in by the hand of man,-if it lies through those untidy outskirts of civilisstion, more depressing to the spirits than even the interior of tomn or city, where clay is steaming itself into lurick, and where the bideous abodes of cheap suburban life are replacing the trees onco ocenpied by до builders but the birds; how often may he look in rain for such a message? If the free wild growth of the field be roplaced hy the straight walks and trim beds of the nursery-man's garden, the contrast is not much less striking. The lader hiranohes of the espalier, full of commercial hopo and promise to the owner, present to the artist a sad carionture of tho clouded masses of the wild cherry; the pyramidnl azalea, the pride of the grower, looks to the lover of nature like of Clinese manufacture; the largest new rose, with its card-board ruff, is not to be eglantine.
If we ascend from landscapo and from vegetation to animal forms, the samo rule holds good. Escapo from the beaten path. Fly, wher you can, beyond the sound of tho steam-whistle. Take some road, once busy with traffic, hut now three-parts overgrown witl grass-somo country lano on which hasy traffic has ncvor yet set foot; or a drive through a park or rond, sacred to the English cults of the fox and the pheasant,wherever you come within the domain of animal $l_{\text {ife, }}$ unbrutalised by haman interference, you
find artistic food for tho mind. The swoop of the swift over a hill crest, the steady poise of the kito, the adroit hop of the rook, the scuttle of the squirrel, the dignified prowl of the fox, the martial evolutions of the curlew, and the sudder change of the aërial squadron into flecks of bril. liant golden light-these tell anothor tale to the artist from the sullen shamble of the caged lion, or the mournful grimace of the organ.dwelling monkey.
Nature, uncabined, unconfincd, unspoiled by man, supplies that milk upon which the artist lives. Art can no more bo brought np hy hand, with any chance of attaining a vigorous maturity than can the human iufant, in a physical sense. And if this be true with regard to the painter of landscape, or of vegetation, and to the sonlptor and painter of animal forms, no less is it the case with the artist who deals with the highest class of subjects, the representation of himan forms, of human passion, grace, and beauty.
In whatever way we approach this part of the subject, wo shall find the same lesson repeated. If we look either to the listoric, or to the geographical, distribution of art, we shall find that nothing has ever replaced the direct teaching of nature. In climates where human forms, in the saltry season, betake themselves to the water or to the shade of the forcst, for shelter or for enjoyment, the painter las tbe advantage of Actroon, without his fate. The artist who sees man in a state of frce natural activity, can draw or can sculpture as he never can do who has worked only upon models. Thus the supromo excellence of the art of the sculptor is closely connected with tho institutions of the Greek games, where not ouly every description of pose and of play of limh, in the best proportioned forms, Fas unconsiously presented hy the combatants; but where also every omotion of hope and of fear, of sympathy and of anger, of surprise and of delight, was reflected from the faces of the spectators. The foot-race, or the wrestling match, afforded a lesson not less instructive in pathogromy than in anatomy.
Tho contrast hetween the scusuous, instinc ive, nuregarding exjoyment of life which the summer months develop on the shores of the Mediterranean, and the rigid, self-ohservant, self-controlled physiognomy of modern life and of northern civilisation, is as marked as is that between дature and convontion, or nature ruined by mar, in any other department of pictorial study. But civilisation has its own features, as well as savage life, and to seize and depict the passions of civilised man is no less a theme porthy of the artist than to draw Diana in her bath. The language has, however, hecome more complicated. It has lost its monosyllabic formThe artist has painfully to learn both spelling and grammar, and to advance by slow degrecs to lahoured composition. It is in the study of these elomeatary portions of his art that the artist of modern times is often so far compelled to linger that he loses the very idea that his path ios to something heyond.
An instance of the attainment of great per fectiou of what we may call grammatical detail, may be found in the Dutch school. The preliminary portions of the artist's toil have been mastered hy some of these painters with rare power and felicity. The actual manipulation ${ }^{\circ}$ the draughtsman, though an ossential element in the craft of tho painter, must be regarded as one of the lowost elements. Thero hare heen artists without this power,-authors of a sort of song without words in art,-men who could see what was beautiful, and who could imagine what was heautiful; but who could neither copy what they saw, nor emhody what they dreamed. They lacked the mechanical power, - the lowest, - hut none the less the essential element of artisti success.

In this mechanical power the painters of the
school to which we refer are eminent. Perhaps ever the fac-sinite of arother. And yet, within

0 artist ever possessed this gift in greater vigour than did Breughel. Among ourselves it characterises Holman Hunt and Noel Paton. What they see, either in nature or in dreams, they oan aid other men to sce on their canvas.
But the Dutch painters have attained a higher step than that of merc faithful representation, or the fidelity to rature spoken of as Realism. They have acquircd a great amount of physiognomical and pathognomical knowledge; and thoy have preserved and handed down this knowledge to posterity in their works. They have done on canvas what Theoplrastus did in language; and have produced a number of faithful, photographio representations of certain types of human life and cortain pheses of human passion, which, although far from bcing hich art, aro clements of high art. They are studics of great valuo for he student,--grammatical exercises, as it were, which he cannot study without profit. To speak of them as beautiful, or as possessing anything approaching to immortality, would be ahuse of anguage. They bave much of the value of a collection of photographs, and while they are less reliable as to absoluto truth of delineation of form, they shan the grinn distortion which photography has not yet been alle to avoil in its treatment of certain lines of shadow, such, for instance, as the most characteristic of all physiognomical lines-that of the meeting of the lips.
Wo may look at Rembrandt as the most sigual and noble instance of the limited range of the realistic school. We do not forget that, in his power of dealing with light and shade, Rembrandt las a magic peculiar to himself. Objects foll on his cye wrapt in a glory or shrouded in a gloom, unperccived by less anbtle rision until he throw them on his canvas. But ook at Renihrandt as a portrait-painter. His likeness of himself, his grey rabbins, his sturdy burgo-masters, are not only life, but life subtly appreciated, and represented. with that grasp of tho main salient characteristios which is the seorct of the highest art eithor in language or in graphic representation.
But take Rembrandt a step further. In his idea of those grand subjects which were the avourite themes of the Italian masters (the great thomes of art since the era of Diocletian), and how profound is his failure. What oar be more nuiserably undignified than the proportions of the central figure of the groups of the women brought before Christ in the Temple, in spite of the imaginative lighting of the scenc, and the pathognomical force of many of the heads? What can be more paltry and undigaified than the last so.called Rembraadt added to the National Gallery? Remlurandt, mastering the grammax of his art as few painters have done, limited in his studies to a certain tgpe of form and of physiognomy, becomes a mero dauber when he attempts the ideal, however he may conceal his failure beneath his unrivalled wealth of illuminative power, which, like the rays of the sun himself, elothes with lustre both the lofty and the mean.
In the endeavour to attain a mastery of what we have called the etymology and the grammar of the art of the painter and of the scolptor, the artist must remember that exact reproduction is not a natural phenomenoz. A lake, or a mirror, not only alters the tint and tone of the objects reflected from its surface, but also reverses crery feature of the scene. Photography not only is as yet absolutely achromatic, but has to contend with such diffoulties of distorted perspoctive and exaggerated shadow as seem bikely long to confine sun-pictures to that humble rank, when compared with human handiwork, that chronicle bears with reference to history, or the brief holds when compared to the oration. No plant, no animal no cloud, within definite homan experience, was
ever the fac-simite of another. And yot, within
certain limits, nothing is more definite than species. No two plants of groundsel in a garden, to take the humblest illustration, could be con. sidered as exactly aliko. But no gerdener would cver mistake either of them for an individual of the most closely-neighbouring species. The artist cannot be more exact than the mirror, nor can he approach the fidelity of optical reflexion by attempting to limn each detail with absolute precision. Take such an example as a flowing heard. A keen eyesight will distingrish the individual hairs, to some of which even a distinct and important physiognomical value, or a sort of per. sonality, may attach. But what the painter has to represent is the comhination of form, of out. line, of colour, and of opacity, which the vision of the actual waving mass presents to the mind. The task of the sculptor is still more difficult, as te has to effect the samo ohject hy his skilfal entrapping of shadow. If either artist thought that he could produce what some people call a realistic ellcot hy portraying hair hy hair, what a wretched failure would he the result! Even photography often brcaks down before the beard,
Actual fidelity to nature, then, does not consist in servile reproduction of detail. To say in what it does consist is less easy, - for here we cross the broad liewt which scparates talent from that of genius. The hand, and even the eye, can the artist mist be instinctive. That promethean fire is struck from no earthly fint.
But the direction in which the true artist will seek for the gift of true representation of nature can only he indicated hy naturo hersclf. He must seek to unveil the goddess. He must works, if he wowld seek to portray his croatures, and that law is widely removed from tho iden of imitation or of reprinting a definito type. It may not, as jct, or perhaps ever, he dofinitely apprehended hy human wit; but we are yet far from being left in total darkness as to its mode of operation.
history or a in every natural ohject, either a history or a promise. More correctly speaking, we ought to trace both. We sce the operation of fixed law, under varying conditions, From species; froin the constant change of condition species ; froin the constant change of condition
results the endless variety of individuals. Thus in every living form, of either kingdom (apart in every living form, of either kingaom (apart logioal considerations), there is that which we call, in default of more accurate knowledge, a vital principlc. In the grain of wheat there is a something which tends, under appropriato oircumstances, to produce a wheat plant. The distributed or altered by the action of this unknown something, and orgavic chemistry elabo. rates tho brate elements into the living tissue. We may suppose (not for the sake of assertion hut of intelligibility), that that naknown someany individual grain of wheat wonld develope in exactly the same manner as any other grain, every condition heing exactly the samo; or ference between tho unkromn elements as to constitute an on iginal individuality, considering this term as inappropriate to mark the distinc-
tion of perfectly homogeneous units. The idea of the wheat plant is thus one,-specifically one,-and the presence of that idea, modified in its external cxpression hy the conditions of growth, constitutes the specific nnity of wheat. So with animal species. The idea of a fox, tho definite purport in the hierarchy of life of that honoured beast of prey, is present in the poor draggled captive chained to the kennel, and in the wary ranger of the wood. But the artist who would draw a fox must grasp the idea of the auinal, and then clothe the idea as nature teaches him to do. If he draws the clothes olone, he will only attain to the rank of an illustrator
fit for Madame Tussaud. If he endeayour to do. fit for Madame Tussaud. If he endearour to de. he prill attempt $a$ talk which in the first place, is beyond human capacity to perform ; and, in the second, even were it preferred, would be beyond buman capacity to admire or to compre. hend. But more or less imperfectly developed, theso two elements must be present in all work of real genius, - the appreciation of the idea, essence, or spirit, and the study of the mode in which this idea is clothed by nature with visible form. The mechanical mode of reproducing that form is an entirely separate matter.

The step may seem a long ono, in the first istance, from the art of the sculptor and of the painter to that of the architect. But in the atter, no less than in the former, are the three elements of reality, conventional treatment, and imagination, to be distinctly traced. It is the latter that makes a great architect, as distingnished from a mere builder. With a momory stored with the best cxamples of the past, with a constructive power bascd, on the one hand on mathematical law, and on the other hand on a profonnd knowledge of the structural pecnliarities of various materials, with that apprecia. tion of the demands of the civilisation of his day which gives a conventional propriety to his work; it is the imagination that gives life and soul to the design, and makes a noblo building the embodiment of a grand idea.
A great portion of what we may call the realistic part of the work of the architcot lies in the fit adoption of the materials furnishod by the locality. While coonomical, and thus traly architoctural, reasons make this ordinarily desirahle, there results, if proper taste is pre. sent, $a$ picturesqne effect which is truly har chalet the pine $\log$ is tho natural unit of structure. For warmth and drynces, for resistance to the furious monntain blasts, and for thorongh harmony with the masses of living pine-wood in architecturally well adapted to the site or pic turesquely more appropriate. Take the chîlet bodily, as did the late Ear! of Essex, and trans. port it to the thickly planted banks of a Hert. fordshire tront-strean. The Swiss cottage in Cashiohnry Park is a gema of its kind. For a a toy is never wholly lost. The fisherman who lores the red-spotted trout that bask in the rapid Gade; the sportsman who has a chance of rapingat the sportsman who has a chance of the farmer who watches the kine and sheep that pasture in the noble park; the lover of natnre, who has a non professional interest in all these, each has a sort of dim idea that the chàlet is only a very charming "folly." Bat when wo find a somewhat similar atructure perched at what, not many years ago, was the extreme limit of London to the north.cast, -whon wo add stabling for the neighhouring cal-stand, and fill the dark timhered gahles with prosaic fountains of Bass or of Alsop, -the Swiss cottage has suuk a Cockney vulgarity
Another instance in which the local use of the materials natural to any locality is attended with the happiest architectural results, and whcro the ahandonment of the clements of structure atorded by nature is for the most part attended "churchwarden order" of architecture, is to be found in the chalk districts of England. Chalk, whicll in many of its physical, though not of its chemical, qualities very closely resemhles the ordinary building gtone of Italy, the volcanic tufa, has one peculiarity which unfits it for the
ordinary use of the builder. It freely ahsorbs ordinary use of the builder. It freely ahsorbs
water, and, when frost supervenes, is subject to water, and, when frost aupervenes, is subject
destruction of the surface, the depth to which the frost penetrates sheiling off on the succeeding thaw.
For interior purposes, bowever, the lightness of the material, the ease with which it may be
cut, its perfect homogeneity, and its beautiful colour, are highly to he prized. In the groined arches of many of our cathedrals, chalk forms a portion of the roof, relieved for the most part by ribs of some darker stone. But the matcrial for tho external walls which is nativo to the chalk districts is the flint. For a conntry church, a cottage, or for almost every building that does not challenge a palatial dignity, a wall of flints, chipped and fitted as the builders of the chałk district well know how to work that material, and as their ancestors knew perliaps better, is an appropriate and often adnuissible resoarce; and tihle face (ther is thus cased with anlodedin suitahle) (the mortar or coment a be woll and cheaply made of chalk. If to the work thus ported into the comare that of huildings, of whaterer material, rough cast, comented, or fal. any taste can hasitate which to prcfer
Into the fuller investigation of these rcalistic conventional, and ideal elements, hy the bappy of tho first order, whether in of whinting excellence or architecture, is alone to he attained, wo hope to enter at a futuxe opportunity.

## PROPOSED DESTRUCTION

OF NORTHLMBERLAND HOUSE.
We do not willingly oppose the Metropolitan Board of Works. We believe that they act con. scientiously and desire to do their duty. We that tho that tho House of Commons did not carry Lord Fictoria Embankment Approach Bill to a mixed Coctoria Embankment Approach Bill to a mised
commiteo of nine memhers. We agree with the committee of nine memhers. We agree with the
mover that this is no mere private hut rather an mover that this is no mere private hut rather an
imperial question. All who are interested in imperial question. All who are interested in
the welfare of the metropolis should look the welfare of the metropolis should looly
narrowly into the question, and be properly jealous of the alterations which are proposed to be carried out. It is too important a question to be dealt with hy any private incorporation,
however popular or powerful, and an important question as to the heauty of the metropolis, as far as its street architccture is concerned, is bound np in this Bin. Lord Elcho warned the House against placing too much faith in the good taste and discretion of the Board of works, and urged that, so far from being infalline, that Board had made more than one mistake which had been loudly condemned. He declared that many of the so-called improvements in the metropolis were earried out in rather "a God-forsaken way," and he besought the House not to give its sanction to any scheme which proposed further
to proceed in that direction. He protested to proceed in that direction. He protested against an old palace like Northumberland House, so rich in historic associations, and so well fitted to adorn the locality in which it was situated, being treated by Parliament as it would treat a mere railway in the wilds of Ireland. Mr. Beresford Hope and others supported his views, but the motion was lost.

New roads must be formed, frosh means of accoss mnst be ohtained, improvements must and will he made; hut there are two ways of carrying these on. If we continue in onr present course, there will he nothing left in lof tho establif from an earlier period than that of the Works,-a loss the Metropo of which could not he estimated. The memorials of the various epochs through which London bns passed are pricelcs8, and should be most jealously guarded. If there were no other way of getting from Charing-cross to the Embankment than by the destruction of Northumherland House, with its associations, its art.collections, and most interesting Jacobean façade, we should feel that resistance would be nseless, althongh we will not admit that even then it should not be attempted. We helieve that an association, a touch of sentiment, a reminder of the past, may nnder circumstances he of more value in the education of a nation than a short cut. But wo professionsl arvisers of the Board, that an equally good approach might be obtained with. out this costly sacrifice. We are not alone in this opinion. The late Sir James Pennethorne took the samo vierw after long and anxions con-sideration,-of itself sufficient argument in do most earnestly hope that the House of Lords may yet come to the rescue.

AT the last mecting of the Metropolitan Board of Works, the Works and General Purposes
Committee suhmitted the proposed contracts with the Duko of Northnmherland for the pur. chase of Northnmberiand House and property required for the formation of the approach from Charing.cross to the Victoria Embankment, and recommended that the same should be approved and the seal of the Board affised thereto.
Mr. Newton, in moving the adoption of the Committees report, referred at some lengta to the opposition in the House against the motion of Lord Elcho. $500,000 \mathrm{I}$, it had been said, was a very large s13m to pay for Northumherland
House, but he wished to explain that ihat amount covered much more. In stables, and gardeus, there were four large shops fronting the Strand, four housos and warehouses in Northumberland Court, and 24 houses in Northnmherland Street, all of which were included in the amount. The purchase included an area of at least five acres.
Mr. Sarage hoped that a considerable portion of the amount paid would be recouped.
Mr. Turner called attention to the fact that 75,0001. per acre having been paid for the site of could scarcely be considered an extravagant price for such a site as that of Northumberland House.

Mr. Taylor thought that this wrould be one of the grandcst improvemcnts of the metropolis, and that tho public would have no rcason to be dissatisfied. He also expressed an opinion that having made terms without driving them to un. reoessary expense.
Several other membersaddressed the meating congratulating the chairman upon his snccessful oppesition in the House, and expressing on apinion that the price paid for the property $\begin{aligned} & \text { pas }\end{aligned}$ fair and just.

The report was then adopted.
railway expenditure on new wORKS.
the great western and tha great nortiern.
In last week's Builder we drow attention to the large expenditure about to be incurred in tho construction of new works by soveral of the leading railway companies, particularlyi specifying the heary outlay of the London aud NorthWestern Company. The proceedings of the Grent Western Company, at their meeting leeld on Friday last (the 28th ulk.), show that that company, like the London and North-Western, are also about to embark in a heavy expenditure in additional rolling stock and now works, amounting to nearly half a million sterling. The shareholders sanctioned an outlay of $467,690 \mathrm{l}$., of which 167,000 l. will be expended in now engines, enrriages, and wagons; doubling the Bristol and Sonth Wales Union line, 19,500l.; additional station accommodation at Swansea and Neath, $30,000 l$; new station at Reading, 10,0002.; new cngine-shed at New Milford, 8,000l.; new boiler-shop at Swiudon, 9,0002 .; machinory and siding accommodation for workshops, 10,790l. ; 1arrow-gauge arrangements and goods sidings at Bristol, 19,800l. ; new warehouso at Manchester Dock, Liverpool, 5,300l. ; new basin at Swan Villago, $7,420 l$.; increased sidings and goods accommodation at Llanelly, 11,600l.; sidings between Acton and Maidenhead, 14,300l.; increased station accommodation at Chipping Norton, Hockley, Wrexham, and Waterford, $13,180 \mathrm{l}$. ; additional sidings and other accommodation at Briton Ferry, Gloucester, Birkenhead, Great Bridge, Wootton Bussett, and Llautrissant Great Bridge,
$60,200 l$. ; hooth telcgraph, for signalling and $60,200 l$. ; hlock telcgraph, for signalling and and 40,000 l. for the Bristol Port and Pier Extenand 40,000 . for the Bristol Port and Pier Exten-
sion Railway. In addition to these items of expenditure, the shareholders are ahout to incur an outlay of about $10,000 \mathrm{l}$. in rew church and chapel buildings, a special expenditure which is peouliar to the Great Western Company. The population of New Swindon consists almost entirely of the servants of the company, and for some years past the shareholders, by ther individual suhscriptions, have been enahled to erect cburches, chapels, and schools in the district. The present half-yearly report states that the population of the district now exceeds 12,000 , whilst the church accommodation is scarcely sufficient for 1,200 , and 10,000 l. at least are now required to provide the netr church and chapel bnildings needed. At the meeting on Friday, tho chairman invited the contributions of the shareholders towards this ohject, and a large amount was subscribed in the rom, which will erection of the huildings required.
At the meeting of the Great Northern Company, a rote of $186,671 l$. Was granted by the shareholders for now works to be constructed, in order to meet a largely.jncreasing traffic. About 45,000 , of this sum is to be laid out at King's politan traffic at this station, in improving tho politan traftic at and various other matters in connoxion with the working of the local passengertrains. The next large item of this intended oxpenditure is for the enlargement of the DonCaster Station, which is now used by the Midland, Soutli Yorkshire, North-Eastern, and Lancashire and Yorkshire Companjes, as well as by the Great Northern Company itself. The chairman stated at the meeting that the company were at present paying interest upon nearly a million on unproductive capital, but that hefore tho ycar was out a great deal of that would be productive. The new line to Liverpool would be opened in June, whilst the line to the Alexandra Park wa to bo opened in May next. As respects the intended opening of the Alexandra Park in May, the chairman expressed a confident opinion that
it would turn out to be a considerablo source of profit to the Great Northern Company. H added that on the very best authority he might state that the promoters of the Alexandra Park enterpriso were at this moment laying out very large sum of moncy to complete the palace and grounds, in anticipation of the opening during the ensuing summer.

The directors of the East London line are looking forward to the prospect of highly-favourable results on the completion of the extended and the under the London Docks, now in progress the City, and the London and Brighton and South-Eastern Iines at New-cross. The report speaking of the line as completed, says, "It will speaking of the as and the City and the Commercial Docks, and afford rreat facilities for the carriage of the vast quantity of timher which passes from those docks to the north and east of the metropolis, and to the surrounding counties. It will have a hranch into the new Foreign Cattle Market at Deptford. By means of the junction with the Sonth London Railway at the Old Kent-road, it will afford the hest line of communication from extreme west to the City, and to the northern and eastern districts of the metropolis. The exchange station with the Blackwall Railway a Shadwell will afford to the graziers and cattle dealers from the eastern counties improved commuication with the Foreign Cattle Market, and the railway will give to a large section of the inhabitants cheaper and quicker access to the attraotions of the Crystal Palace, and to the residences in the picturesquo and healthful counties of Kent, Surrey, and Sussex.

SOME DETAILS OF THE CENSUS.
The population tables, of which instalment bavo begun to be delivered, contain, as may he supposed, elahorate as they are, some curious cluding parts of the counties of Middleses Surrey and Kent, the points on its boundary embracing Crossness, Plumstead, Sydenham Lower Wion Tooting. Wimbledon Common Lame Scrubhs Jonsa Hamma Hackney, Bow, Bromley, and Poplar, but not Stratford, or any loeality in Essox, excepting a small patch of land at Barking Creek.
The number of persons in public institutions When the census was taken was 7,516 , in 44. institutions. Of these there wero 26,313 paupers including pauper children in workhouses and workhouso schools; 7,521 patients in hospitals 3,3-10 lunatics, 6,344 prisoners, 913 inmates of reformatory achools, 8,301 military men and their families in barracks, 121 in training in H.M.'s ships, and 15,531 in orphan asylums and other institutions not enumerated above. Of the total inmates, 9,127 woro officers and their familics. In the above return schools for the blind, the deaf and dumb, and for orphans, are included, but not colleges, training colleges, private schools, model lodging-houses, or poice. stations. The institutions having the largest number of inmatcs among the above are, Paddington Workhonse, 452; Kensington Worknouse, 570; Chelsea Barracke, 1,289; Millhank Prison, 1,280; Wellington Barracks, 1,181; Marylebone Workhonse, 1,844; Metropolitan Asylums District Small-pox Hospital, 465 . Asylums District Sowali-pox Hospital, 465 ; Albany-stil. St Bartholomew' Hospital, 74.7 Chrit' 1 ; Christ s Hosial, Correction, 1,614; Bcthal, 1,080 ; Dethieder in linatics, 321 ; St. Luke s, 191 ; , Woolwich, 878; hoyal Artillery Barracks, Hoolwich, Corps, 595 ; and Roral Engineers, 143 . Corps, 595 ; and Royal Engineers, 143.
The number of persons on hoard sea-going vessels in the River and docks, on the night of April 2nd, 1871, was 5,739 , and, in addition, 989 in boats and barges. Within London Division there were on board ressels of all kinds, 6,317 males and 411 females on the night in question, of whom 1,064 were in Poplar.
In tho London Division there appears from the returns to bo 74,455 acres of land, 907 acres of water, and 2,718 acres of tidal water and fore. shore,-total, 78,050 acres. Stoke Newington has 49 acres of water; Hacknoy suh-district, 35 acres; St. John (St. George's in the East) Poplar, 160 acres; St. Mary, Rotherhithe, 170
acres; and Wandsworth, 28 acres. East PlumWooad has 333 acres of tidal water and foreshore, Woolwich Arsenal, 287 acres; ; East Greenwieh Poplar, 300 acres ; St. Mary, Rotherhithe, 152 acres ; and Fulham, 174 acres.
The population of London in 1631 was according to Captain John Graunt, F.R.S., -ward within the walls, 71,029 ; without, $40, \overline{579}$; old horough of Southwark, Bridge Withont, 18,660; or total, -

| 1631 | population | 130,268 |
| :---: | :---: | :---: |
| 1801 | $"$ | 958,863 |
| 1811 | $"$ | $1,138,815$ |
| 1881 | $"$ | $1,378,947$ |
| 1831 | $"$ | $1,65,994$ |
| 1881 | $"$ | $1,94,94,417$ |
| 1851 | $"$ | $2,362,236$ |
| 1861 | $"$ | $2,803,989$ |
| 1871 | $"$ | $3,251,260$ |

The population stated abore is of London within the now Tables of Mortality, 1871.

ARCHITECTURE IN THE ROYAL SCOTTISH ACADEMY.
Ecclesiological revivabism has produced many extravagances in design, especially whero originality has been aimed at. Eccentricity is often amusing, bnt seldom dcserving of admira tion. "Piling up the ngony" and caricaturing detail is not the way to produce original works, yet such seems to be the prevailing idea of many of the younger members of the profession. We do not advocate a dull reiteration of copied detail, but that the old forms be frankly accepted and a new expression given to them; that tho relation between construction and ornament he carcfully stndied; that where dignity is aimed at, massiveness and simplicity be combined with richness of parts, so as to produce a feeling of harmony and repose; that where usefulness and comfort are requisite, they shonld not be sach ficed to whim and caprice. In short, we may say the most original design, as a rule, is that in which most thought is displayed.
The entire absence of thought in many of the designos cxhihited is patent, the sole ohject of the design boing apparently to produce something striking. Mr. J. B. Pirie, for example, gives us "An Architectural Idca," a church bristling with points like "quills upon the fretful porcupine": 5 per cent. of the detail lavishly scattered ahout, if jndiciously concentrated would produce a richer effect than is here attained. Nr. C. W. Somerville is also striving after novelty in his "Adaptation of the Dome to Medireval Ecclesiastical Architcetare." The Dome, "the grandest product of the Renais sance," is here deprived of all its grandenr. The dcsigner scems to think it requisite that the whole roof should be formed of domes, so that we have one large and sevcral small ones, liko a hen followed by her chickens. Mr. Somerville also givcs us his idea of a "Villa Residence, the chief peculiarity of which consists in the introduction of a number of columns (?), the diameter of which exceeds their height. Mr. Patrick Auld exhibits a "Design for a Publio Kiall," the whole wall-surface of which is crowded with ornament, the gencral effect being weak in the extreme. We are far from wishing to dis courago our younger brethren, but they must "learn to creep hefore they can walk"; let them make the attempt, and they will find it more diffeult to produce a simple well-proportho forid ahsurditics in which they delight For example, look at the "Competitive Design for the Eistahlished Chnreh at Ohan," by Mr. J. W. Small,-a monntain church very suitable for the locality, with puro and fresh detail, not a single feature too much, and rich withal in ele. gant simplicity. ${ }^{\text {g }}$ We should not be anrprised however, to learn that a more florid but less beautiful design was selected by the local come mitteo. Your local committee is apt to expect too much; having, with great exertion, collected 2,000l. or $3,000 l_{\text {e, }}$ competitive desiges are called for, and none of those submitted, however grand exceed their expectations. Aspire of course, the clurcb must have; and when carried out the result is tho production of an architectural toy The successful desion for the "Erce Church at Morningaide," by Messrs. Macgibhon \& Ross, is an example of this sort of thing. The tower and spire are in themselves well composed, but tho effect of the whole is pert and assuming: if more halk were given to the body of the charch,
and a simple belfy added, the result would be much more satisfactory
That such is not always the outcome of a com. petition, is evidenced hy the dosign of the interior of the "Proposed Holy Apostolic Charel in Edinburgh," by Mr. R. Anderson. The in structions to the competitors were to the effect. that the chiurch was to be Norman in style, but Mr. Anderson secmis to have persunded the building committec to accept a Gothic version of that submitted by him in competition. Th style is Early French; the plan provides apsidal choir, transepts, and nave, all without aisles The windows are placed as high op in the walls as if in a clcarstory, and the wall space below is uscd as a field for pictorial decoration. From the ground spring slender shafts to support tho roof principale, and in the choir the upper part of the shaft carries a niche, with statue. The choir windows are single lights, those in the nare douhle, with large uncusped circular openings in the heading. Simplicity avd elegance aro the characteristios of this interior, which is a yery satisfactory rendering of a chureh without aisles, -an accessory which could not be attained in his instance, owing to the peculiarity of the site. Mr. R. Thornton Shiells exhihits tho interior of A Private R.C. Chapel," whick depends chielly for cffect upon the rich colouring of the wall surfaces, and the introduction of statues, which in the drawing are made to appcar like plaster casts, as prohahly they are. Mr.
Anderson exhibits the designs for two altar Andcrson exhibits the designs for two altar to the late Earl of Kellie, to be crected in St John's Church, Alloa," is espocially rortliy af commendation.
The "Odd Fellows' Hall, Forrest.road, Edin burgh," in course of erection, designed by Mr. J.C. Hay, is a welcome addition to the archi tocture of what is developing inte one of the most pioturesque portions of the south side of Domestic, and Mr. Hay while adthe is Scottish Domestic, and Mr. Hay, while adhering to the
general characteristios of the style, lias not general characteristics of the style, has not
scrapled to blenu with it.new features. Although the facade is a narrow one, it produces a good effect, Mr. Hay having made it the central and effect, Mr. Hay having made it the central and
culminating poiut of the block of buildings of culminating poiut of the
Opposite this block is another designed hy Mr. R. T. Sbiells, of which he sends a perspec tive: a series of gables, oriels, and chimneyshafts, treatcd in a bold and effective manuer, give variety and contraet to the composition. Abercairney, Pet thshire," hy the same architect, is not so satisfactory. The style of the building is of the sort of Gothic which prevailed at the beginning of the century, and the additions are carried ont in exactly the same style, so that it is impossible to tell the new from the old. Advantage might surely have heen talion of tho adrance of knowledge in this mattor, withont detriment to the general effect of tha mansion. The Mansion-house of "Cairn-dhu," dcsigned by Mr . Wm. Leiper, is a rich and effoctive composition, with wuch freshness of dotail. It has all the picturesqueness, without the sternness of the Scottish haronial residence, Mr. Leiper exhibits desigus of one or two other residences of less importance, which all display the hand of an artist.
Mr. Charles G. E. Kinnear shows us the "North Frout of Anchnore House " as altcred and enlarged. From a vignette, it appears that the original mansion was a strango jumble,
withont dignity or picturcsqueness. This the withont dignity or picturcsqueness. This the
architect has combincd into a stately chàteau. "Hill Wond Coritod into a stately chateau. bon \& Ross, is spoit by having a massive embattled tower as its chief feature, a feature moro suited to an ancient citadel than to a modern mansion. More satisfactory is thcir design of the "New Lecture-hall of George Watson's Col. lege School," in the "New Grec-French style. It will contrast, but not bo out of kceping, with the buildiing to which it is an adjunct
The "Telling-room of tho Royal Bank, Glas. gow," designed hy Mr. J. Dick Peddic, is a severe, husiness like, and appropriate apartment, suffi. ciently rich in detail to bo in keeping with its purpose.
The "Lady Flora's School, Newmilus," is dcsigned by Mr. F. T. Pilkington, in a style snggestive of its designation; the carred pro-
jecting harge-work calling yp visions of smnny, sheltered nook where children delight to play and wild flowers to grow.
Could we in this country of eurs honse all our
bowie, Linlithgowshire," who can tell what the result would be Beneficial, surely; for if a beneficial result in this direction we are groatly mistaken.

## NEW SOUTH WALES.

New Souta Waues is the oldest and longest settled of the group of Australian Colonies. It ranges from about the 28th to the 37 th degree of south latitude, which evables it to yield iu profusion produce varying from that of ropical countries to that of Great Britain whilo its pure atmosphere and mild cliuate are free from the drawbaeks of either
Aloneamongst the Australian group, it possesses a coal supply which is practically unlimited, and its metalic mines are now being devoloped with a vigour and activity which will render it the greatest centre of mineral indnstry in the southern hemisphere. Its railway system is in Sydney ispio development. The capital city, Syaney, is situated on tho fincst harbour in lie beanty of its ar for the Rorlona buildings.
An interesting paper, reviewing the progress of the colony during the last ten years, has heen recently read heforc the Royal Socicty at Sydney, hy the Auditor.General, Mr. Rollestonl. It is bascd on the official statistics laid hefore the Colonial Parliamont in 1872; and the following abstract of the information it affords will he acceptahle to the numcrons class of persons who
are interested, either actively or prospectively, in this flourislin either act
Population.-The population in 1861 was 350,860 ; and, in 1871, 503,981; showing an in crease of 43 per cont. The proportion of males to females is about 11 to 9 . It is remarked on these figures, that if the land of the colony were parcelled out equally amongst this popnlation, there would more than 400 acres fall to the lot of each person; and as the soil, indepeudently of its natural productiveness, is teeming with mineral weallh, and capable of slrstaining perhaps twenty millions of souls, it is impossible not to hail with pleasure the prospects of acces sion te the population which the funds fo assisted emigration, now appearing on the colonial estimates, hold out to the people of Great Britain.
Lire Stock.-This is shown in the following
 Thus it appears that for every 100 of the popa lation there are 400 hood of cattle and 3,200 sheep; so that there exists there at least no apprehension of a famine of butchers' mcat. Tront, gec-The seaward export of wool was as follows :-
 The total value of the exports in 1871 pro duced from tho flocks and herds of the colony was as follows:-
Wool exported seawards ........................ £1,74,160
 14,748,160 Exportsoverland for shipment et the portion 465,606 of the adjoining Coionies .......... port 3,331,867 Tota1.......... $\overline{c 8,598,633}$ Being ahont $17 l$. por head of the population from pastoral productions alone.
Grain.-The average pield of the whoat tillage in 1862 to 1867 was about 10 hushels per acre; and tho arerage yield in 1868 to 1872 was 12 buskels per acre ; the average prices at Sydney being 8 s . in the formor period, and 6s. in the latter.

| Wheat. | Maize. | Oither Crops. | Total |
| :---: | :---: | :---: | :---: |
| res | Acres: | A |  |
|  | 101,223 | 125 |  |
| 180,965 | Arevage Rive | 1888 |  |

The annual value of the imports of wheat and flour, deducting exports, has arcraged in the decade, 472,5602 .
Maize maintains a steady average rield of 30 hushels per acre. There is a large export trade in this grain, and it is valued for export about 38. per hushel.
ugar.- In the statistics of 186.t, two acres gugar-canes, producing heen first planted with

1872 no less than 4,393 acres were nnder cultivation. The yield appears to be ahout one ton or sugor per acre, and lie future of this industry will probahly be a brilliant one in the northern districts of the colcny, where the climate is suited for it,

Wine,-From 1,459 aeres under vine culture in 1863, there is an adrance to 4,15 ? acres in 1s72, producing 413,321 gallons of wine, or nearly 100 gallons per acre.
Gold.- The average annual value of the gole ohtained in the decado has been $1,159,1737$. The total value of the gold raised in the colony since the first discopery of the gold mines in 1851 has been upwards of 25 millions sterling. Coal.-New South Wales is here without rival, and may calculate on a production limited only by the dcmand for ages to come. The average amounts raised in the decade has been, -

## In the flive jears $\begin{aligned} & \text { Averngo } \\ & \text { tons por }\end{aligned}$ <br>  <br> $\qquad$

Trade and Cnmmerce. The exported pro. duce and manufactnres for the decade have renched $52,043,742 l$. in value. This is at the rate of $122.3 \mathrm{~s}, 6 \mathrm{~d}$, annual valuo per head of the population; while the exports of Great Britais for the game period were at the rate of $5 l .168$. only. Relatively, therefore, the wealth of this community has heen increasing in a ratio more than double that of tho mother conntry.
The value of the imports seawards in the decade was $81,832,3631$; averaging nearly $S_{\frac{1}{z}}$ millions stcrling for a population of less than half a million.
For the last year of the decade, 1871, the ollowing figures are given :-
Total imports lay land and sea ....
Total exporty $\qquad$ $59,609,508$
$11,215,032$
These firures exhihit an import trade at the rate of $19 l, 1_{\mathrm{s}}, 3 \mathrm{~d}$. , aud an export trade at the rate of $22 l$. 6 s . 2d. per head of the colonial popn. ation; heing relatively more than double the of Great Britain per head of the poprlation of Great Britain per head of the popination, Customs' retnrns of the two eonntrics.

With cheap meat, cheap coals, cheap bread, a splondid climate, and a practionlly unlimited demand for labonr fous conntries offer suck inducoments to intending emigraats as this prosperous colony.

ARCHITECTURAL ART IN INDIA.
Last Friday evening, the 2Sth ult., Mr. T: Roger Smith read a paper at the Rooms of the Society of Arts, Adelphi, on "Architectaral Art in India." Mr. James Fergusson, D.C.L., took the chair, and there was a good attendance.

In the course of Mr. Smith's remarks, he said that the style natire to England-the Euglish Gothic, - was not fitted to be transferred to India without large modifications. All its forms were designed to bo seen by a faint light. It was essentially fitted to a cold, damp climate; and while, on the one hand, its characteristics woald requiro many alterations in order to cope with the glare of Indian sanshine, on the other hand its provisions for carrying off the gentle shawcre, or evon the steady downpons of an English wet day, would prove quite inadequate to cope with the torrential rains of a tropical stom, In many instances the adoption for India of Renaissance architecture, as practised in England, would be less impracticable than the adoption of Eughish Gothic. Tbe style took its rise in a sunshiny country, and though all the changes we have made in it have been introduced with a view to fit it for use in a colder climate than that of the land of its birth, still those changes have not been many nor great. The circumstance that the heat and the light were se intense in 1ndia would always occasion many yuriations in the huildings, either Gothic or Classic, which were put np.
Most of onr building work in the East had not been hitherto creditable to onr taste, though it hore witness to our cnergy and vigour. The time had come when it ought to be held imperative, both for the Government and for prirate individuals, to render their haildings models of grood taste. In order to do this thoir design, and the design of such decoration as they receive ought to he intrusted to men of tectural taste; and the style adopted for them
ought to be, not a direct imitation of any Asiatic
type, hut an adaptation of those European styles which have grown up in sunshiny regions Such styles were ancient Roman, or even Greek (when good enongh naterials and workmanship were procurahle), or the Romanesque, Gothic, and Renaissaroe of Southern Italy, Soutbern Franco, and perhaps Spain. In troating any of these stylos cortain fentures of the architecture rativo to tropical countries would have to be incorporated.
There was but one limit to the degree to which these features of Eastern art may bo appropriated: they must not be so freely used as to Had we a distinctive English style, we ought, unquestionahly, to use it in our colonies, as Romo did in hers, with such changes as local circumstances mude necessary. But though this was, unhappily, not possihle to us, there were in existence familit suited to the purpose; and appeared only casonoblo that as, ond European justico, order, law, energy, and honour o our huildings ought to be held ap as a lo b tandard of European art. They ought to be European both as a rallying-point for ourselves and as raising a distinctive symbol of our preaence, to be beheld with respect, and oven with admiration, by the natives of the country.
The Chairman said that it was only within the last twenty years that architects bud gone to India; and they had been principally employed by the Government and tho railways. question of what style of architecture to employ in India was a serions one. As regarded churches, he thought that the Gotbic style very difficult for India. The only rood Gothio building he knew in India was one erected by Captain Kitto at Benares, which had a short Tudor areb that kept ont the sun very well. He recommerded the adoption of the Italian style of architectnre, with some modifioations Tbo natives, he said, nsed stone as we do iron their style could he copied in iron, and thus we could set many native styles which would suit European, hat still sufficiently native; hut the question was one whicb could only be worked out in England. He thought that we should soon have huildings in India wbich would bo examples of creat beauty and elegance. We owed, he said in conclusion, a debt of gratituce to Mr. Smith for having brought forward the whole question so prominently; aud if the people of India conld read his paper it would influence their style of architecture zaterially.

BUILDING OPERATIONS IN BRADFORD.
At the present time an extraordinary mumhe of town improvements are in progress in Brad ford. Among these may be ennmerated new sewage works, defeoation of sewage, new Tomn ball, new covered market, new wholesale market and abattoir, extension of gas. works Bridge to Thorns, new main aurchase of the purk proposed new fre-brigado station, the widening of old tboroughfares, and a more thorongh an efficient system of paring, in addition to the Improvement Bill

Thanks to the public spirit of the owners, some of tho improvements are being effected at a comparatively moderate expense. Of these are the widening of Towler-lane and Duck worthlane, in Manningham, and other tboroughfares in that neighborrhood, now in progress. A portion of Silsbridge lane has heen widened, but the completion of this improvement has heen de. layed by the price asked hy an owner of land at the outlet of Thornton-road. The corporation, however, has the opportuaity, by tbe removal of a. few old houses and the purchase of some land unbuilt upon, to extend the lane into Thorn-ton-road opposite to Longside-lano. Wiganstreet is heing opened out into Longlands-streot. Considerable progress has been made with Caualroad, and tbis portion of the borough is beginning to assume quite a new aspect. Tho widening of Mauningham-lane to 20 yards is gradually heing effected, hut Christ Church still blooks np one of the best entrances to the town in this direction. The owners, however, aro willing to dispose of the charch and site for 10l. a yard, and this purchaso will require to bo made hefore Darby. street can be considered a satisfactory thorougb. faro. So far as the street improvements hare gone, the cost has not been so heary as might
have been expected, the corporation having recouped a large part of the outlay hy the gale of land not required for the thorourbfares. This plan will be followed out in the other under. akings that will be gone on with. The corpora ion, actuated by a desire to meet the requirements of the town, has holdly lannched out into schemes that will tend to improve the commumication between one part of tbe town and the other, and to increase the healthfulness and prosperity of the borough.

PROVERBS FOR GENERAI CIRCULATION
The characters of giants have often to be witten hy dwarfs, who, though tip.toed and condent, are quite unequal to the task.
The scoundrel who, mal prepense, injures or oobs a man, will defame him in order to justify bis crime.
Talents, liko riches, excite the cupidity of ose who are in want
It is better to be dull, with an ardent desire to lenrn, than clover with no disposition to improve. When the powerful conspire to hustle a man, be will be fortnnate, indeed, if he escape without acar.
A prophet is without honour in his own country, and especially in his own family.
Mon are pre-Raffaellite in hypocrisy. Tbey mitate the real thing so closely, that it is diffi. cult to tell which is which.
Tbe plcasures of auticipation, imagination, and ope are the sunshine of life; but the rough weather of disappoiutment often does a man the most good.
Mcanness is always prying into, and harping apor, antceedents; charity, with more wisdom and generosity, looks to sequents
Far more labour and talent have been sacrificed to orror thrn to truth.
Everybody who sifts doesu't find the jewel.
Truths lie soattered hroad-cast, through the ages, waiting eyes to see them
Natious which eucourage spyidg will ere long be enslaved.
Espionage is an antidote which, in the end, is found to he worse than the disease.
Trcacbery is the unpardonable of crimes ; it saps all the foundations of society.
Religion on the tongue, and self in the heart, the way of the world.
Keep in the temperate zone if you would rish o travel pleasantly and safely.

## THE BAD CONDITION OF DUBLIN.

Every day justifics statements made hy ns long co, and from time to time, and asually deried In the last weekly return of births and deaths issued hy the Registrar.Ceneral for Ireland, we read that the deaths registered in Dublin for the week represented an annual mortality of forty in every 1,000 of the population, while in London the rate was twenty-six. In Duhin the births were 149 , and the deaths 245 . Morcover, for the corresponding week of the ycars 1864 to 1872 inclusive, the avera
Surely such a state of things demands imme. diate Governmentinquiry, for unfortunately the local powerg have beet invoked in vain, as would appear from the proceedings of the chicf sanitary anthority of Dublin.

For several jears past the sanitary work of Duhlin has been entrusted to the corporation of tlat city, and the machinery employed for tbe purposc consists of a Public Health Committee of its own body, a medical officer of health, a city analyst, a secretary, and eight acting sergeants of police, as muisance inspectors, with wo fall sergernts ab At times, especially the medical officers of disease of great severity, the medical officers of by the pulic Ferlth Committee to send is by the Public Healli Commiluee to send is reports of cases of infectious sickness, and espe cially those appearing to arise in connexion
with savitary defects. Such reports have been unore or less frequently made hy those gentle men, some of whom have received official letter of thanks from the Public Health Committee for their important services to tho pnblic.

So important is it thought to have the ser vices of a hody of professional men conversan with the people and their wants, in a sanitary point of view, as well as with the several loca. itics haunted by successive epidemics, that public functionaries and pablic lecturers in

Dublin have strongly recommended their regnlar employment in connexion with the sanitary maohinery of the Dablin corporation, and this Fiew bas been also strongly advocated by tho Dubliz Sanitary Associatiou.

Great complaints have been from time to time made of tho inadequacy of the scavenging systom of Duhlin, which consists of imperfect cleansing of the streets, the refuse matter being, at times more or less infrequent, removed from the streets, and thrown into largo yards, situated generally in some of the most densely-peopled parts of the town, inhabited by the poorer working elasses, such looalitios being hut too often, as migbt be expected, the scenes of outbreaks of disease.

No provision whaterer exists for the cleansing of madens, ashpits, or latrines by the Corpora. found whe, owing to various circuinstances, it is duty performed by pers who used to earn a livelihood in this way, or their chargo is 60 extremely ligh as to prevent any except the rich indulging in the luxury of cleanliness.
It is hardly necessary to add that this want has led, in the opinion of very competent judges, has lh lay and often of a spreading or contarious nature. This matter has also hecu brought nnder the notico of the Corporation repeatedly hy the public, who express a willineness to pay a reasonable chargo for such eleansing if tho Corporation would establish a recular service, such as exists in many English and Continental towns, frequontly without charge to the puhlic; but epidemies may come and epidemies may go, as well as men, and still nothing is done hy tho Duhlin civio dignitaries in this needful zrattor.

Our space does not now permit ns to enter into the full details of the recommendations of the Sanitary Association of Dublin, and of the reply returned by the Public IIealth Committee of the Dublin Corporation, which has excited much discontent. Wo recommend that hody, interested as they dountless must be in doing what is best for the health of Dublin, to adopt the request of the Dublin Sanitary Association that they will reconsider tho suggestions already It
It is indeed a matter of serious import to reflect that Dublin, with only 33 persons to the acre, as stated by Dr. Stokes, Regius Professor of Medicine, in his recent puhlic lecture, should contrast so unfarourahly as to birth-rate, zuortality, and sickness with Edinburgh and London, with their population of 40 persons peracre, and Glasgow, with 89 persons per acre.
Raise the moral and the physical condition of the Dublin humbler classes, and there will be less need for police supervision, and tho chronic Giscontent and smouldering disaffection, or treason, if tho word must he used, as well as ondemic and epidenic sickness and a heary mortality, will cease to sap the vitals of the people of Dablin, and so to curtail the porver and hinder the welfare of our common nationality.

MIEDALS OF TIE ROYAL INSTITUTE OF BRITISH ARCHITECTS.

Ar a special general meeting of this Institute, held on Monday last, Mr. Horace Jones, V.P., in tbe chair, it was unanimonsly resolved that, suloject to her Majesty's gracious sanction, the Royal Gold Medal (nnnually bestowed on some eminent architect, or autbor of works on architecture) should this ycar be awarded to Mr. Thomas H. Wyatt, president of the Institute.
At tho same mecting; the Soane Medallion (with 50t., under certain conditions of Continental study) was awarded to Mr. William Frome, for lis design for a Public Hall ; while medals of merit were voted to Mr. Trederick C. Deshon, and to Mr. J. H. Eastwood, for their designs. Mr. A. H. Kersey gained the Institnte Silver Medal and five guineas for a large set of drawings illustrative St. Mary's Ahhey, Malton, York. shire ; and, in the same competition, medals of mire; and, in the same competition, Mrit for his merit were awarded to Mr. Arthar Chapel, Casbel, and to Mr. Thomas Garratt for his drawings of St . Mr. Thomas Garratt for Ahbey, Lilleshall, shropshire.

## Mary's Ahbey, Lilleshall, Shropshire.

A medal of merit was awarded to Mr. Alfred Jowers for his essay on "Architectural Criti. cism."
Tbe next meeting of the Institate will be held n Monday, the l7th inst., when Mr. Alan S. Cole, of the South Kensington Museum, will read a paper on the art of "Sgrafito Decoration."

AWARD OF ROTAL GOLD MEDAL, R.I.B.A.

Sth, - Favorr me with a brief space in your next impression, to say that my own experience, derived from a long tenure of office as member of corncil, in various capacities, of the R.I.B.A. does not agree with certain statements contained
in the letters of your correspondents " M.I.B.A." and "Civis," in the two last numbers of the Builder.
The circumstances counected with the proceedings of the council when considering their recommendation as to the recipient of the Royal Medal, annually laid before tho members of the Institate, wero well known to mo for many suc. oessive years, commencing with the first award to Mr. Cockerell, R.A., in 1818.
So far was a seat at the Conncil Board from being held a bar to the claim of a worthy recipient, that, in fact, the fourth award of the Royal Medal was the result of the recom. mendation made and adrocated at the Council self drew up the bighly but well-merited com. plimentary resolution by which that award of the medal to another member of the then existing Council was submitted to the consideration, decision, and final approval of the subsequent general meeting.
That the vice-president in question, subsequently president, Mr. Cockerell, R.A., would bave infringed, either in spirit or in deed, any
honourable rulo or understood punctilio in matter which be had taken on himself the responsibility of initiating and heartily supporting, is as probable as that tho bonoured, well. known recipient of the medal wonld have availed himself of any such a palpable infraction of any known or implied regulation, and accepted the irregularly proffered mark of professional dis-
tinction! Council bave sanctioned any such proceeding in which they themsel ves were impticated.
I bave nover been aware, nor do I believe, that the duty of the President, whether professional or non-professional, requires bim to submit any snggestions to the royal donor of the medal (I have served nuder both classes of Prosidents) The general mceting baving accepted the recormmendation of the council (or otherwise), the duty submit the final award for the royal sanction. submit the final award for the royal sazetion.
This heing graciously granted, instructions for striking the medal are formafly given to the striking the medal ar
Government medallist,

## A JOINERS' FESTTYAL.

## the wage question.

Lasr week the annual festival of the Greenoch joiners, Greenock East Branches of Associated Carpenters and Joiners of Scotlaud, took place in the Town-hall, the area of which was fillcd, about 700 being present. Mr. James Aitken occupied the chair, and made an address on various topics
of pressing interest. Towards the close of it of pressing interest. Towards the close of it ho said, -Thirty-five years ago joiuers' wages
rauged from 158 . to 17 s . per week. Yon are all aware that they are now nearly douhle, and the wages in other occupations bave ivereased iu ters very uaturally gives rise to a question that is worth our consideration, Have workmed benefited in the proportion that wages have risen, or are the comforts tbey enjoy much greater on account of the increase of wages ? It will be pretty generally admitted that they would have possessed impression is, that workmen now do had wages remained the same as they were thirty-five years ago. In short, I go the leugth of saying, tbat practically wages bave not risen at all; for as wages advanced everything else advanced in price,-your food, clothing, house-rents, ay, and your socinl entertainment too,- and in the very natnre of things it cannot be otherwise, if you deal fairly and honestly towards your hrother tradesmen. If yon apply for and get an advance of 10 per cent. on your wages, you mnst admit that the mason, slater, plumber, the unskilled lahourer, and every other branch connectod with the building trade, hare as good a claim to an advance of 10 per cent as you have, and will get it, too; and when got all round it is just equivalent to 10 per cent. on the cost of the building, 10 per cent. on the honserent; so that the house that formerly cost 1000 . will now cost 1,100l., and the rent that was for
merly $10 l$ will now be 11 . Then come in their turn the tailor, the shoemaker, and the baker, These haviug to pay 10 you bave erected the commodity yon have furnished to them, very naturally look for 10 per cent. more on the commodity which they furnish to you, An agitation is set afloat, and, if need bc, you aid them by your contribntious natil they attain ocoppation in the samo laing goes on until ever cent. advance. Then when younce. Then you are where you wer You are began, and ready to start afresh. and paying 10 per cent. more for everything you require, so that practically wages have not risen at all, I bave no doubt that some of you will be concluding tbat is a false view of tho question, that the ad vance affects only the labour, not the material part of tho build ug. This reminds me of a discussion tha ook place between a trade - unionist and an mployer when wagos were heing raised from 188. to 20s. por week. The employer way and wages to tho injury of trade. "No, Sir," rephed the unionist, you will never unjurionsly five ns cheap materials, the lahour being mall sum compared to the materials of a building." Now, this is a question that is very
imperfectly understood becanse imperfectly understood, becanse few give it any consideration. I bave sometimes heard sked what would he the value of the material apart from the labour of a building that cost 1,000l. ? I have heard various answers to the question, some as high as 800 l ., and somo as low 500 l . but 1 can assure you that in the questio
tboroughly investigated, it will be found hat the raw material of such a building apari from the labour is not worth 301. While on the wage question, let us take a retrospective glance at what yon have accomplished during the last thirty-ive yoars. Xou have succeeded a nearly doubling your wages, and in the cause ave spent large sums of money. Yon bave rought many a noble hattle, and gained many a glorions victory; but agrainst whom have'you ought, over whom have you cained these vic ories? If you take a broad and comprehensive view of the qnestion, you will come to see tha in almost every iustance you have fought agaiust your own shadows, and gained the victory over yoursolves. What would it matter on your employers though your wages wer donhle to-morrow? It would only affect them solar as they had contracts taken for the preselves fryor that, they would recop the bouses, and the proprietors in tarn would reconp themselves from those of you who has the bouses, and the result would be, a almost every occupation would be as highly paid as yourselves. This is neither the time, nor is such a place, to dwell on the injurious effect it to say for the present on that country. Sufnce who are taking an active part in the trade movements of the day were impartially to investigate and thoroughly nuderstand such questions, and assist your fellow-workmen to understand them, you wonld not only expel from your minds that phantom breach hetween capital and labour that only exists in the imagination, bat you would do much to maintain the prosperity of the country, to establish good feeling between employers and employed, and hasten on that good time coming, when
"Man to man, the world ${ }^{\text {' }}$, er,
Shull brithers be, for a 'that,"

COAL AND ITS COLLATERALS.
The price and scarcity of coal are not only cansing much suffering to the poor and inconvenience to every one, but are also interfering with business, and destroying the prestige of the country as tho work.house of the world, generally abroad. The large on the subject panies are laying up their vessels, mills are stopped, and contracts are seriously intorfered with. And yet there is not only an ahnndance of coal in the earth throughout tive conntry, but there are enormons supplies already "won.", The quantity of coal at present stored Liserpool is far larger than was anticipated The great depôts in Crown-street are full to prerflowing and the chows-street are full to
ereasing. The amount of steam-coal stored in bulk and in wagons on both sides of the Mersey is enormons, the quantity at Birkenhead being stimated at about 100,000 tons; wbilst that in Liverpool is probably 100,000 more. This is apart from the stores for domestio use. The output of coal from many of the collieries situate between Wigan, Rainford, Skelmersdale, and Liverpool is quite as large as horetofore; there is no diminution whatever in tho "cnittings"; and the quantities at the pits' mouths are so arge tbat extensive wooden structures have been erected for storing the surplus coal! It is becoming a very serious question whether many manufacturers win not be compeliled to closo their estabishments, the present cost of coal making it impossible to work them at a proft. Forth Wales and Lancashire coals aro difficult to obtain in any qualities. The price of the former is 24 s . at Birkenhead, and the latter $2 / 1 \mathrm{~s} .8 \mathrm{~d}$. in Liverpool. A rise of 2 s . to 3 s . per on is expected in the course of a few days. The exports of coal during the montb of January Were:-From the northern ports, 347,913 tons; Yorkshire ports, 42,183 tons; London, 2,686 tons; Liverpool, 48,031 tons ; Severn ports, 277,03ね lons ; and scotch ports, 28,923 tons ; making a cotal of 749,031 tons; and which shows a deorease, when compared with the
It is said that the pri, 190 tons of any other commodity, is regulated and governed, not so much by the cost of prodnction as by the inexorable law of supply and demand hut that law does not apply to coal in respect of smpply, hecause the stock is for the present inexhanstible. The scarcity is not hy the visitation of God, nor is it tbe act of Providence : there is coal enough in the mines; the idleness of tos men is part of the reason of scarcity, but high peration soon overcome that disculy. hind monost coal-masters and merchants is a far more formidahle canse of the high price.
When coal.owners resolve to tax the nation by millious, purely for their own henefit, it compels every one to ask why should they he allowed to levy this black-mail? Property exists for the common good, and when property bccomes a pullic evil, and the welfare and existence of the many are painfully affected by the conduct of owners, it caunot be expecta people will quietly submit to he ruined or killed, while gigantic fortunes are being made by a fexy selfish proprietors.
The prices of iron are still rising, and tbo dearuess of coal affords the iron-masters too good an oxcuso for almost any price, or for putting out their furnaces altogether. The iron orkers at Merthyr, in turn, determine not to etarn to work on the 10 per cent. rednction Everything, in short, is "out of joint." Six Rowland Stephenson tells the men that there is ochance of their ohtaining better terms from he mastors than tbose offerod.

## WILD EsttMating,

Terbible differences in the price named by different contractors for the same work are still constantly observahle, notwithstanding all that has been said on the suhjoct. Confining ourselves to our last and present nombers, several extraordinary examples present themselves. Thus, for a chapel in Peckham Rye, while Mr. Ray proposes to execute it for $2,2197$. , Mr Munday will be glad to do tbe job for $1,080 l$. and for the erection of schools for the Middleshrough School Board, Mr, Adamson tenders at the sum of 8,785l., and Messrs. Bulmer \& Co. at $3,884 l$. For sewerage works at Barrow-in.Farness, Messrs. Bulmer ask 14,0001., and Mr. Ritson offers to execnte the same works for 6,6982.; while, more striking than all, in the case of roads and paths required at West-hill, Hastings, Mr. Kempling names as his price, 1,693i., thongb Mr. T. Gardner will be delighted to form them, in just the same manner and under precisely the same conditions, for 673 l . Truly trade is still a mystery.

Henley-on-Thames Bridge,-On Satnrday last, the lst inst., at noon, the toll-gate and barriers on tho hridge at Henley-on.Thames were cleared away. It is now free from toll. The hridge is now the property of the Corporation of
Henley, who will in futnre keep it in repair from Henley, who will in futnre keep it in re
funds in their bands for that purpose.
oLD house planning.
In these days of forerish architeoture and durry, and of so much that is inartistic, it is not a little soothing to turn to those old ways of wor fically, the ingenious works which nowadays all alike strive to copy and compete with. If the birth of a style is a something curious to think upon and to try to explain, then is the denth of one not the less so. Why should a good and expressive style of architecture die uut? And then again, after a style is dend, as the Gothic there would seem always to be such an un-
willingness in the minds of men to give it up, willinguess in the yninds of men to give it up,
sad abandon it, and to take to the new and the untried. Wbo cau imagive old London? A com pleto street, not a single house, here and there in a mile's walk, but a whole street of gable ends, and projecting windows, and odd out-of-the-way bits of detail, and quaint carving, and doorways under which one could stand out of
the wet for half an hour, with a something to the wet for half an hour, with a something to look at all the time on the opposite side of the way! Who, we say, can imagine this ? Not
the keencst lover of Gothic forms and ornament And then once more when you got inside the house, how full of queer-looking and out-of-theway curiosities of architecture, quaint to designed on paper at all; for to think them ou you must construct them in reality, and in material, and almost put them togother yourself, as in model-making. But these things are of tho past, perhaps never in any way, certainly not in the same way, to return. They are for the most part unfortunately nearly all are left wait only for a little notice and improve. ment to disappear too,-like ghosts of houses. ment to disappear too, -like ghosts of houses.
But still, there aro a few yet left, and, what is But still, there aro a fow yet left, and, what is
porhaps stranger, thero are houses in parts of porhaps stranger, thero the houses in parts of up to more reoent times. We refer to those houses which were huilt in the last century, and oven in the ommencement of this. One might almost call them Christopher Wren houses, and
their architectnre Wren architectore. We happen to know of a number of them in out of-the-way parts of London, - in the East-end of it and in the Borough. A glanco at them may not come amias, and may interest an architectural thinker here and there.
It is noticeable how much contrivance and ingenuity may be introduced even into a commou house ; and how it is possible to create an interest in the mere planning of stairs, and the disposal of rooms on different levels, and unexpected places.

In ordinary house-planniug of to-day you know all about it before entering, and after seeing just like it; but here it is not so. This house just like it; bat here it is not so. This house it, for it is differently arrauged. May nct the great secret of a new arohitecture in the future spring after all out of common house building, and from the fact of differences in each indivi. dual house? Not in all boing alike, but all differont; each bouse showing individuality of troatment, and cousequent expression in some sort human. Indeed, ono cannot but see what a field there is here for architectural thonght, architectural quaintnesses, and "architectn-
resque" curiosities. In the most recent of resque" curiosities. In the most recent of
modern street building, the whole row of moders street building, the whole row of whouses, at times a quartor of a mile Portland Town, Palinerston Whole row, as in Portland Cown, Pamerston
Town, and in the new outskirts of the metropolis, are simply liko long boxes divided internally into separate sections : their very merit seeming to consist in their absolate uniformity, and ntter sameness. Surely this cannot be thought "progress," still less architectaral progress ; and yet is this that to which the mechanical architecture or huilding of the day is perpetaally tonding. Square blocks of buildings, straight streats, uniformly level houses, all of the same size and pattern and materials, and ornament! May we not here ask whether or no such a system of house architecture has of a country? A very curious and instructive subject here opens upon us. Is the house a man lives in entirely inoperato upon him as a mental lesson. Day after. day, year after year, he sees the same nothimgess lio work not of the thinking architect, but the dall production common house-builder: These have supplied common house-builder. These have supplied
sonally of architecture. We have many time thought of this, and the problem has presented itself to us in several ways. Going down one of those modern "improved" streets, -two long, straight, brick boxes opposite each ather, with long holes for windows and doors without varietyor interest of any possible kind, why the mind must of necessity be utterly acant and empty as far as art is concerned. No memories, no associations, no isspirations, no thoughts of any kind-a true "lack-lustre andscape,"-a mere prospect of ntter stupidity ! But now take an ancient street from almost anywhere,-a street ont of old London will do,--
and say, in spite of all shortcomines, whether and say, in spite of all shortcomings, whether interest in such, of an artistio lind, is not to
be found. Such a street as those yet to he scen be found. Such a street as those yet to he scen in Continental towns, - Rouen, or Nuremberg, presents a coustant succession of quaint ideas, in each successire house of the mind, if not the hand, of a thoughtful artist.
You know that the honse you are looking at is not like the ono you have left, nor the one you are coming to. There is something new to cye and mind. Is this nothing, therefore, to the general public who live in the streets? An inhabitant in the old days, whatever bis short comings and prejadices, must have found "education" in the open atreets. He must have earn a something of architectnre and fine ar even in spite of himself! Can we do this in
improved London?

## THE NEW WANDSWORTH AND FULHAM

 BRIDGE.The new hridge across the Thames hetween Wandsworth and Fullam, which was commenced pletion, the girders for the fourth eve of com. heen raised to their places on the span baving weck, leaving only the girders for the fifth span connecting the bridgo with tho Middlesex shore at Fulham, to be fixed, and it is expected that his will be effeoted in the course of abont a fortnight. The extreme length of the bridge from its commencement on the Surrey side of the river, between the old Wandsworth Pier and Messrs. Watney's distillery, to the Middlesex shore, is about $1,500 \mathrm{ft}$., including the approaches from the Surrey and Middlesex sides respeccousist of five briok arches of the Surrey side and another span of 20 ft . carried by girders over the roadway to Messers. Watney's distillery and in addition to these arches, the approach is carried for a distance of 280 ft . by a solid bank. On the Middlesex side the approach is by an embankment 490 ft . in length, and a brick arch of 30 ft . span adjoining the bridge itsele. This is already is already almost entirely finished. The approaches on the Surrey side are connected with
York-road, Battersea, by an ensy gradient, York-road, Battersea, by an ensy gradient,
whilst on the Falham side the approaches comwhist on the Faham side the approaches com-
municate with the King's-road, near Broom. house-lane, and when completed and opened the new bridge will directly connect the Fandsworth and Battersea districts with those of Fulham, Chelgea, and hensington, on the opposite shore The bridge stretches across the river hy five wrous, supported by four river piers formed of piers on each syide of the and shore abutment brickwork and masonry. The shore spans are each 113 ft .6 in . in length, whilst the three spans in the stream are 133 ft , in length each The cylinder piers in the river are 7 ft .6 in . in diameter, each pier consisting of two cylinders connected transversely under the platform of the bridge. The cylinders are sunk to a depth of 14 ft . into the clay, and rest upon a thick hed of concrete placed undor them, the cylinders themselves heing also flled in with that material The centre of the bridge has a clear headway of 20 ft . ahove high-water level, whilst tho height at the shore ahutnents is If ft . The main girders on each sido of tho bridge, which are of tinuous throughout by being connected and con cods, the main girders heing again connected hy cross girders placed 4 ft . apart throughout the entire length of the hridge, and riveted to the upper side of the hottom flanges of the main girders. The roadway over the bridge is formed
by timbers laid diagonally upon the surface of the cross girders, a longitudinal decking being
again laid over these, upon which is macadamised paving. The entire width of the bridge between the main side girders is 30 ft ., 18 ft , of which forms the carriage-way, with footways on eitler side 6 ft . in width.

In the erection of tho bridge no particular attempt has heen made to produce architectural effect, the structure being substantial rathe than ornamental; but a pedestal over each pier carrics a cluster of three lamps, and there is a foliated capital at the head of each column, or cylinder, on the underside of the main girders The process of constracting the main girders is interesting. They have all been built up on a timber platform on the Surrey side of the river, parallel with the line of the bridge, and when finished a portion of the platform at each end is removed, and two barges, each fitted with raised stagings, are floated nnder the ends of the girder. As the tide rises, the girder is thus lifted, and then floated into position and placed on its bearings upon the piers. The two remaining girders for the fifth span on the Ariddlesex shore are now in course of crection on the timber platform described and os wo hare ? stated, will be raised and frod in position in the course of ahout a fortnight, when the connexion betwe of about a cortars, when been effected. The new bridge is about a mile beer cffected. The new bridge is about a mile oridge. It bas boen erected from aud Fulham Mr. J. H. Tolme: Messra de Rerg the designs of the contractors, Messry. de Bergue \& Co. were the contractors, the works heing superintended
by their engineer, Mr. Mallalieu. Mr. Bult of by their engineer, Mr. Mallalieu. Mr. Bull, of Southampton, is the contractor for the approaches, and Mr. Nichols has acted as resident engineer during the progress of the works. It is expected that the bridge, including the laying and paring of the roadway, will be finally completed and opened for traffic ahoat the end of April or early in May, and that one of its immcdiate results will be the laying out of the several acres of land in the locality, on the Fulham side of the river, for building purposes, the new bridge affording more direct access to Fulham from heichbowrer, Battersea, Clapham, and other railways on the Surrey side than now exists.

## Marienburg castle.

It is not with the purpose of reviving a con. roversy which, if not dead, is slumbering, that wo have ciren the above title to these notes out the interest attaching to that ancient and nique remain, Marienburg Castle, has such a remarkable bearing upon many of the aspects of he controversy hetween Gothic and Classic architecture, that, shonld the old antagonism be gain aroused,-as is not untikely to be the case the event of a general and open competition for an important public wors,-a reference to hese may not he without interest and service. It is probablo that so long as the architectural art of England speaks only in dead laaguages, which since the decadence of Gothic to Elizabethan or Renaissance forms of art, it bas chielly done, -as agrain in the revivals of Classic and Gothic art within the present century, such controversies will arise. They are not withont their value, giving a zest to art-matters which prevents staguation; but they are open to great objection when pushed to extremes, which range ac advocates of different styles into hostile to that in reting a sort of birotry in art similar in its own cherished mode. It is orently to be regretted that when, by the fresh otention be and study of ancient Classic romains, a feeling for Classic art in its purest forms, ond not as interpreted throuph the Renaissance, had so largely revived, that our architects did not carry it on, first hy careful reproduction mastering its detail, till, becoming imhued with its spirit its detail, till, becoming imbued with its spirit, its principles of proportion and beauty had again sprung to light and become plastic in their
hands for adjastment to modern requirements hands for adjustment to modern requirements. But ere the promise of such hopeful frait was brought to perfection a Gothic revival set in, which has followed minch the same course, without having very satisfactorily established superior claims in its modern adaptation as a style more saitahle to the spirit and requirements of the age. Had there been a parallel development of each,-for which, in the penchant of our architects, there seemed abundant scope, it heing very remarkahle how, within the lines
of each style, a special forte has oftem manifested
itself,-settled and dignifed results might har accrued, for wbich, for the most part, we look i vain. Eacb style has now long had to conten with novelties introduced from all quarters trcated in the most bizarre manner, till our architecture has showe "all things hy turns and notling long," and in these heterogeneous changes, pure, noble art has bad a very poor chance indeed. If it should be, as the bistory of modern art seems to indicate, that architec ture culminated in its two chief forms o Grecian and Gothic, and their congeners, then architects would be wortbily engaged in seeking to wring from them tho secrets of their pro portion and beanty, certainly not yet grasped by us, as principles for unfailing guidance and satisfying rcsults, and their genius would be best seen in comprebensive and Faried applications of these styles, rather toan in efforts after origi nality and attractive novelty. Both styles can reach all the parposes of our present civilisation neither need supplant the other; for no dispessionate mind, unwarped by a special bias, can doubt that both Grecian and Gothic forms of art are capable, in great fulness, of all the exprossion which sacred, secular, and domestic art requires, from the graudest impress of relicious and public buildings down to the grace and homeliness of the villa and the cottare.
It is just in its exhibition of the most flexible adaptation to these varied ends that the archi interesting study for architecte forms snch a it does, 17 pon almost all points, the allegrations of the opposite school, that Gothic architecture being a hirth of the ecclesiastical and monkish spirit of tho Middle Agees, is little in accord with the modem spirit, or subservient to presco uses. A modicum of fect, howerer is werth largo amount of arrument, and we shall, therc fore, so far briefly and generally describe the castlo as to bring out the point in whioh ffords a vindication of Gothe architocture
 bility to all modern purposes.
Marienburg Castle owes its cxistcnce to the German knights, in the period of their sway laring the thirtcenth, fourteenth, and fifteenth centuries, it bcing their great stronghold and residence. It is by no means a singlo building but a collection of brildiugs of the most varied haractcr, including defences, palaces, charches, hapels, courts, offices, and private residences Its architecture is somewhat of a Norman type but in more ric, massive style than the later Gothic can hord its own in elastic adapta. ion for such varied purposes, then, a fortiori the case Tits capahility of meeting, by skilful treatment, all those prohlems as to hght and arrangement in which, in its modern dress, it is alleged so conspicuously to fail. We need not dwell upon he entemat architectnio of the castie otherwise thau to say that it is or imposing characker, show g great enill in is diversined aspects throughout ngs, which make upar ensemble perhaps unsur. passed by any similar collection of edifices. I is with the interior that we have most to do, as remarkably suggesting the capabilitios of Gothic And here it may besaid that the pointed arch and ranited roof enter into endess comhinations not only in the constrnction of buildings which may be called puhtic, snch as halls, chambers, de. but by the easiest and most graceful transition from these to galleries, cahinets, offices, and aparments deroted to all the secular purposes of daily life, bo it living, working, or sleeping all yielding satisfaction in the perception of their appropriate character. Nowhere throughout do arch and pillar, vanltod roof, aud mallioned window seem out of place. If it really merits the descriptions giveu of it, a monogram by a competent architect on this unique and remarkahle remain,-still almost entire and little hurt by the ravages of time,-illustrated by drawings or photographs, would be a service done to Eughish art, which could not hut have its effect in moderating unaccountably prejudiced controversies as to opposite styles of art-development, which should he each in its mode hailed as but another form of heauty's dress, which man, as by an innate bent at certain staces of his history and cultare, seeks to throw over his works, to educe in their way that sense of delight, thought, and emotion, which in its abiding impress is the test of every true work of art. All true art wearied delight. In an eminent sense in architooture Grecian and Gothic forms bave dono this. Tbey are not then antagonistic, hut proofs
of the contrasted working of the eame innate principles of beanty, and as such should Bo
revered and cultivated.

## SAVERTAKE COTTAGE HOSPITAL, WILTSHIRE.

Abvocating, as we earliest did, in the face of some opposition, the establishment of Cottage Hospitals, we have chronicled the progress of be movement and described tbe buildings rected in conscquence with particular satisfaoion. In our present number we add to the list illustrations of the uew structure which has been rected, from the dosigns of Sir G. G. Scott, R.A. for oue of the most successful of these institu-ions,-that of Savernake. It was established, about six years ago, by tho Rev. J. O. Stepbens the ormayernake, for the use and benefit o the surrounding neighbourhood, including Marl borong, Nam bury, lurge, Great and Litto sedwyn, dc. Nos buing " was that known as the Institukion, on the bordcrs of Savernake Forest, near tho london lill gate, the use of which was cranted by Lord hury. In 1870, however, it was found too small o mect the constant anplications for admittance and endeavours were made which have resulted in the building we have illustrated. Lord Ailes bury gavo a site noar the original building aud the sum of 1,000 l., and Lady Ailesbury gave
The gardens are rather extensive, and are astefully laid out, At the entrance-gate is a 300l, from a porter's lodge, crected at a cost of 300l. from a portion of the pronits of a fanoy fair. The style of the hospital is domestic Gothic, the timbers over the entrance boing picked out and painted oak; the cxterior walls are of red brick, built lrollow, and the gabled roof covered with ornamental tilcs. A brass plate will be placed in the lobby with the words, as opened on the 22ud day of Miay, 1872 . The foundation-stone was laid by the Marchioness of Ailesbury, April 12th, 1871." The entrance and staircase hall load on the one side to the mon's on the other to the women's, ward; each of hese apartments is 32 ft . by 20 ft ., and lofty in beight, the building being at the wing but ne story. They are lighted by two large bay cindows, placed sufficiently low to enablo patients to see out of tbem as they lie in bed The gahled end has also a six-light transomed window. The floors are laid with oak par uetrie, aud the walls plastered with Parian ement. Sheringham's patent ventilators have been adopted, communicating by a shaft with the ue. Attached to each ward are bath-rooms and lavatories, with hot and cold water laid on. Loule's patent earth-closets are adopted through. ont the building. Betwcen the wards are two convalescent rooms, the expense of erecting and fornishing which was exclusively horne by Lady Alesbury; the lower (for the male patients) is The "Operatinerorom" is iishted by a skylight above, and situate behind the men's ward. From the women's we pass to the matron's room, and then to $t$ wo fever wards for isolating special ases. These are built and furnished hy Mrs. hushand, as the followin inscription on a bras plate hetween the two will testify :-

"In Memoriam Thome Buverstock Merrimon Duo Erac Cubicula Adstruends Curarit<br>dua Mome S.E.M. 1-7 .

These wards in walls, floor, and ventilation, are similar to the others, and contain two beds each The kitchen, scullery, laundry, and wash-house are kept distinct, brit on the same lovel. A close ange in the former apartment snpphes hot water y means of pipes throughout the building; the aundry is provided with a drying apparatus. heated hy a circulatiug stove, and the wash house with permanent troughs. The ontbuild. ings include a mortuary and stabling. The walls we coloured with neutral tints, those other than the wards being painted and varnished to the eight of 4 ft ., and then distempered a pale reen, All the external woodwors is stained ad varnishod.
The cost, including fnruishing, laying out the uilding a porter's lodge, bas been nearly 5,000 ?.,
all raised by public subscription and at"a fancy air held at Savernake last year
It will accommodate twenty beds, and is in. ended for the nse of nearly sixty parishes ituated in North Wilts and Sunth Berks. It s maintained by public subscription at a cost f $550 l$. per annum.
The contractors were Messrs. Roberts, of Islington. Mr. Wheeler was the clerk of the works,

## LONDON STREET ARCHITECTURE Nos. 36 \& 37 , PICCADILLY.

In a former number * we noticed at some ength the picturesque and original building that as being erected at the corner of Swallow-位, Piccadilly, for Mr. Sotheran, from tho esigns of Meesrs. George \& Vaughan. We give vies of the premises which have since heen mpletod, the work baving been carried out in horough manner, even to the shop-fttings. round place of the usual mezzamine is a gallery which the shop, supported on onk posts, whole of the fittings through the two stories are of oak, as is also the double staircase to the gallery, with its handsome carved newels. We have beforo noticed the arrangemont of mural rlass panels in the elevation representing the history of book-makinc, also the effective recess forming loggia to the drawing-room on the upper storyThe elevation is of Portland stone. Within the rches of the logrin are carved lifc-size busts of Shakspeare, Newton, and Hichelangelo, as repre. senting Literature Science, and At. The series of pictures in Powell's mosaic glass comprises:1. Egyptians inscribing hieroglyphics on a sarcophagus.
ophagus.
2. King Alfred being presented by his mother ith a manuscript
4. The dreaming mannscripts
4. The dream of Guttenber
5. Caston readines the first proof of the Canterbury Tales.
Tbe long panel under the logria is divided into three picturos, representing ctching, lithoraphy, and wood-evgraving. The figures are bont 2 ft . higb. These cartoons wero drawl yr. Henry Burrow.
The building, including fittings, has cost about 0,000 l. It was erected out by Messrs. Hollands Hannen ; Mr. Ville acting as foreman
The adjoining house, No. 37, was also reviewed in our previous article. This building bas been erected for the former proprietor, Mr. Addley Bourne, by Messrs. John Perry \& Co., buildcrs, of Tredegar Works, Bow, from tho plans aud under tho superintendenco of Mr. Edgar Leuchars arohitect. The butalding consists of basenent, shop, and show-room, with four stories over the former, the latter being in the rear, and having a carved ceiling and skylights. The harrowness of the frontage rendered it inadrisable to sacrifice any of the show-window for a rivate entrance while the shop was open. An ingenious arrangement has thercfore bcen dopted by which the front portion of the partifion which separates the shop from the stairs is inged, and turus on a tram-plate, so as to form, a conjunction with the shop-door, also opening back, an entranoe-lobby, when the shop is closed. The street-door then, in two folds, is fitted into be shifting pilasters of the revolving shutters of the shop-front
The shop is separated from the show-room hy an ornamental polished brass screen, about 7 ft hich, with curtains and porteres attached to it. Both shop and show-room are heated hy hotwater pipes, and are fitted with Pott's rentilating ornice.
The basement, except kitchen and sitting.room pared with Yal de Travers aspbalte. The pper part of tho bailding, being required as a esidence for Mr. Bourne, and also for his assist ints, a separate back staircaso has been provided rom the basement np to the third foor.
The iront is faced with cauced white Suffolk ricks, with dressings of Portlend stone. The pilasters of the shop-front are of polished lrish hlack marble, lightly incised and gilt. The total cost was about 1,000 z.

Norwich.-Mr. Christopher Thwaites, C.E. son of the late Chairman of the Hetropolitan Board of Works, has been elected to the office of city engineer and surveyor for Norwich.

SAVERNAKE COTTAGE HOSPITAL, WLLTSHILE.--Sir G. G. Scott, R.A., Argertect.

CAMBERWELL NEW VESTRT-HALL
THE new bnildings at the comer of High street, Peckham-road, for the Camberwell vestry, which have been in course of erection sinco th spring of last year (and of which we gave an illustration and as short notice in April last), are now so far completed that a portion of them will be opened for business about Lady-day, or in the course of a month from the present time. The brilding externally is already fimshed, interior is also far advanced Bath stone, with the exception of a sculptured figures and vases, which materially heighten the architectural appearance of the building. This elevation is 77 ft . in width, aud 37 ft . in height to the cormice, above which is an ornamental balnstrade, making the entiro height of the elevation about 40 ft .

The interior of the building, now in progress, contains scveral suites of apartments for its intendod purpose, in addition to a spacions and commodious Board-room, which is being decorated. The building is approached by a flight of nine steps throngh the principal cntrance, leading into a vestibule and hall, 20 ft . in width by 34 ft . in length
It is expected that the whole of the groundoor of the new building will be occupied by the soveral dopartments for whom they are intendod in the course of next month, but the Board. room will not be finished and ready for the vestry to hold the
Although the cost of the building was origin. ally estimated at 8,0001 ., several extras have since boen decided upon, and it is now understood that the structure, when fiuished, will involve an expenditure of not less than 10,000l. to $11,000 \mathrm{l}$. Messrs. D. King \& Sons are the contractors, and Mr. Goodwin is the clerk of works.

THE REPRODUCTION OF DRAWINGS B THE REDUCTION OF SILVER SALTS.
IT is well known that all salts of the oxide of silver, when impregnating paper, calico, linen,
\&c., aue reduced by copper, hydropen, and phos phorus vapour ; while the haloidal salts, such as
per, hydronen and the chloride, cyanide, \&c., are not so reduced a ordinary temperatures. Acting on this, M. Renault has devised a process which from
thus describes:--
"If, than, a drawing or an engraving iaplaced on a shee of pasteboard which has for some time preriously been
exposed to hydroulloric acid rapours, and alove the
 those places where the pusargo of the gas sis sopped by Tr engrating, the sait of the oxide of silver teing reduce

## NEW NORTH-EASTERN STATION MIDDLESBROUGH.

TIIE plans-prepared hy Mr. Cudworth, the ngineer of the company, and Mr. Peachey, of arlington, their architect for the Darlington section,-have been to a certair oxtent com. b the west of the present one-that is, toward he Exchange. Architecturally, the station will pacious porch in front. It wrill have phiti pacious porch in front. It will have platforms e 720 ft . in length. Therc will also peatms will scursion platform a hittle further west, of aliont te same length; and there will be separate fiees for booking and accommodating excrarsiou.
ts. There will be -one approaching from Zetlees to the station the east of the present entranco, and the other lading off Bridge-street West, on the other side. Isubway, to be constructed beneath the station, atforms. Access to this subway will be gained the Zetland-road side of the station by
fight of steps abutting on the platform, while on the other side passengers can eithor pass through the subway to the othor platform or to the street. The offices and waiting.rooms will be lofty, spacious, and well ventilated. The entire width of the station within the walls will be 120 ft ., and the roof will be constructed, chielly of glass, in three bays. Between the platforms there will be three lines of rails.
Soveral collateral improvements of consider. able importance are embraced in the new abcheme.
schen
The cost of carrying out theso alteration including the building of the new station, is approximately stated at from 100,000 , 150,000 l. This large expenditure will 100,000 This large expenditure will be abont doubled by the North-Eastern Company's outlay sion of the dockat similar sum towards the estersion of the docks.

## ON CORPORATION LANDS

A paper "On Lands held by Corporations, f Pre the Policy either of their Alienation, o to Public heen read before the Sy Mr. Thomas Hare, has In the course of his address Mr. Hare said,-

occupation of all the pub)ic lands would he sacertained ?

Ho could not see how we could lave better $f$ thity than this would give for the fulfilment the economical objects of sueh possession.
A discussion followed the reading of tho paper which Mr. Hare's riows were very favonrahly regaxded.

Brompton Hospital for Consumption the opposite have ben purchased, more house have been fitted un archased, and two of them Branch." This up and furnished as a "South teen additional male patients, and is now full.

ARCHITECTS' ASSISTANTS,
Sir, -I quite agree with "Provincial Archi. tect" that leading architects ought to make higher charges than those struggling into practice, and it would throw a vast amount of work on other hands, to the pecaniary henofit of the prossion generally; but 1 do not think we shall or bened oar position until pupils are taugh tho not left to pick up what they can by doin littlece work, and as soon " afle useful, the assistant is be), him a mirracery subint be required, making office to office so that the little bount fiom becomes very small inder averare ; 25 an brought to an less) is decidedly 2 . per weok (and sometime. a man who has perhers articles and has perhaps served five years nnder and yetes and been assistant for some time as well, We are not all genii! and many of us have not We aro not all genin! and many of us have not Whe to chare o pracice; but we surely ought to he paid enough to live on, without (uniess having private property) being obliged take a vow of celibacy (vide advertisement woekly in your paper)
Another great evil is that architccture is not a recormised profession, and anybody with the slightest idea on the subject may 11 socialy an architect, thereby lowering us ou an instanco professionaly. I can give mong several architects, one had been penter, who, having nothing to do, set up as an architect and surveyor ; another wras a joumey. nan bricklayer; and I could mention other similar instances.
Heaven forbid we slould lower ourselvos to mions, unless it be for the purpose of not going Sor liose scandalous $5 l$ competitions.
digious" in your Number of March 19th, 1870 Assist'ayt.

PRIVATE AGRICULTURAL RALLFAYS.
Under this title Mr. Richard B. Granthan road a paper at the ordinary general meeting of the instication of Surveyors, on February $24 t h$ in which he considered the subject under the following heads :-

1. The purposes for and estent to which rail. Ways can be made useful in promoting the in ricultur
2. The prokability of their making a profitable Iturn for the outlay
III. The best mode of constructing and IV Tking them.
IV aplice nate country to which they applicable
V. The present stato of the law relating to In adoption.
In conclusion, he laid before the meeting a description of the agricnltural railway which the Duse of Buckingham and Chandos ha constructed through his estate at Wotton, near Aylesbury.
The line passes throngh the estate of the Duke wotton, which is about eleven miles en the west sido of Aylesuary, and abont the same distanco sonth-east from bicester, those bein the two nearest market torms by the roads. The line, which is of the same gavge, $4 \mathrm{ft} .8 \frac{1}{2}$ in. as main line, commences on the Aylesbury nd Buckingham Railway at Quainton Station, anout tre miles from Ayleshury, and twelve niles from Buckingham. The line is altogether 8 miles in length; of this $6 \frac{3}{3}$ miles are direct line, and $1 \frac{1}{4}$ mile a branch to a farm, whence it is sapable of being extended further into the public In this distance the line crosses three for which formal permission was and on the level, The main line was penmenced given.
870 was was completed for Wotton in April, 1871, and The branch was cr The cost of completed in Augnst, 1872. Oler cor tho Wotton Railways has been 1200 in il ior mile, exclusive of land, or heds; but only , borrowed : the remainder was paid by the duke timself. The working expenses have been estinated at bool. per annum, and the annua interest and repayment of loan of the 6,6002 . is bout 400., making 1,102 . as the annnal charte, o which should be added the interest on the oullay on the difference between the total cost. and the loan.

His Grace places a percentago rate, as the probable value of the improvenent, which in the whole amounts to 350 L . ; and he also estimates that coal, road stone, and timber wolld produce 200 l . a year more, naking 550 l ., which more than covers lue repay interest. Since the line has been opened, other sonrces of traffic bave sprung up, which have doubled the agricultural value of the estate, and there is no doubt whatever that the traffic will be developed in the course of a short t
much larger extent than I have shown.
The Duke has frequently expressed to me his The Duke has frequently expressed to me his
expectation that this line will afford an example expectation that this line will afford an example of the benefit estates will derive from raiways of this and similar kinds where they can be introduced; and he quoted an instance in the sale of bark, in which he was limited in his market to the neighbonring towns; but aince the railway was opened, he conld send to any distance, as bayers came and gave him a laryo increase on his former prices. A corresponding increase may

The engines at present in uso are two of Aveling \& Porter's, which aro similar to those employed as road-rollers, with chain couplings ; but I should prefer the ordinary locomotive light pattern, with four wheels coupled.
My connexion with this railway was as in spector under the Inclosure Commissioners. I had to decide ruon the lines which should be adopted, and I had frequent opportunities of secing the work. His Grace employed Messrs. Lawford \& Hanghton to tako the surveys and levels, and procure the rails and timber, but the Duke himself personally saperintended the execution of the works.

## A PIECE OF CTALK.

In a recent lecture on this subject, Dr. Car penter, after considering the position of chatk i the scries of stratified deposits, said, what is chalk? and thus answered the question:- It was long ago shown by the celebrated microscopist, Professor Elireuburg, to be chiefly composed of an aggregation, either of very minute sbells, o of the fragmentary remaius of very minute sholls, helonging to the group now called Foraminifera; hy far the greatest proportion being of the ono type which we call Globigerina. Irundreds of them would only weigh a grain. What is the nature of the animal? It is a little lump, or rather a series of lumps of jelly, with no mouth, no stomach, no any thing, except that which is hardly conceivable to you. These threads, which are not the teu.thousandth of an inch in diameter, go out in clusters ; they diffuse themselves through the water, lay hold of purticles still minuter than themselves, and then draw theso particles back. I bave sometimes described them as a sort of animated spider's web. The central mass is always sending out some of these threads, while other threads are being drawn hack into it; and in this manner, without any distinct mouth or stomach, the nutrieut particles are constantly heing drawn in, nutrieut particles animal is thus supplied with food. Now, when I tell yon that there probably is a far greater whantity of this life at present existing than of quantity of kinds of bifo put together, you will seo all other kinds of hfo put together, you wini 880 what an inportant part these humble The whole perform in the Atlantic, except where cold cur rents come down, is covered with these aninals, and with masses of their decayed and broken shells. I cannot pretend to form an estimate shells. I cannot pretend to form an estimate or iden of it when I tell yon that, in dredring some idea of it when I tell yon that, in dredging the Atlentic, at one wile in depth, we brought up nearly half a tou at one time; and frow nearly threo riles a besides our three hundred weight and a half, besides our three miles line and a heavy dredgo. Speaking of
limestones, he said geolocists heve come to the linestones, he said geologists have come to the general conclusion that all the lime of which they are composed has at one time or anotber formed parts of the skeletons of animals; for we are not acquainted with any other natural agency which can withdraw lime from its soluton in sca-water, and convert how Foraminiferal masses. I have shown you how Foraminiferal life does this, hy producing that immense aggregation of minute shells which we call chatk; and corals also are doing the same thing on an enormous scale: whilst Eclimoderms and Mol msks also contribute, then lods in particular localities.

## GARDEN DRAINAGE AND OTHER

 IMPROVEDIENTSIn the Vice-Chancellors' Courts, Liveoln's Inn, on Febranry 20 th , before Vice-Chancellor Sir R. Malins, the cise of Broad v. Huxley was tried. The plaintiff in this suit is a retired tradesman, residing at No. 12.A, Blenheim-terrace, St. John' Wood, and letting a portion of his house in lodgings; and the defendant, Professor Huxley, is the owner of a house and garden to the rear of and adjoining on the south the plaintiffs honse. Professor Huxley's premises are at a higlser level than the plaintiff's house. The plaintiff's case was that certain improvemonts which the defendant commenced in November last, and which consisted in raising the general level of his garden so as to form a croquet-lawn, making an embankment at the rear of the plaintiff's house and planting it with trees, and draining the surface water from his garden into a cess-pool, 22 ft . from the plaintifi's house, had bad the effect of rendering the basement of his house so damp as to be uninhabitable, and of darkening the premises. The plaintiff's bilt prayed for an injunction to restrain the defendant from draining his premises so as to cause injury to the plaintiff's bouse, from permitting the embankment to damage the plaintiff's partywall, and from allowing the trees thereon to darken his premises. The case, which occupied the whole day, was, by conse

## heard as a motion for decree.

The Vice-Chancellor delivered an elaborate udgment, in which, after remarking upon the conciliatory digposition shown throughout by the deferdant, he said that the onus of proving bis case lay upon the plaintiff, and that he had entirely failed in so doing. The evidence satisfied his Hononr that the plaintiff's house had for years been damp, and that the defendant had not alade it damper; that the case as to the trees was preposterous, and as to the wall had no foundatiou. In dismissing the bill with costs, his Honoar remarked that tlee plaintiff, the valne of whose bouse was about 700 l ., had persisted in a litigation which would probably cost bim 500l.

## EDUCATION IN MELBOURNE.

Sir,- The new Education Act comes into force this day (January 1st). Its clauses render education in the colony compulsory, secular, and free.
For the proper carrying out of the intentions of the Lecrislature, a new department has been establisled, under the control of a himistor of ment.
It has heen decided that the colony is to be divided into school districts, in each of which the ratepayers can elect a Board of advice; to direct what use shall he made of the school buildings after school hours; to suspend any teacher for miscondact ; to report on the condition and management of the schools, and to visit them from time to time; to nse every endeavour to indace parents to send their children regularly to school, and to report the names of those who neglect to do so; and to recommend the grant of a scholarship to any child displaying unusual ability.
The compulsory clause of the Act is not of a very stringent character, as only sixty days in enoh half. year are provided for ; and it is questionable whether so short a time will prove of any benefit to the neglected children of the colony. Parents neglecting to send their childten for a period of sixty days in each half year (unless they are being educated elsewhere,o1 are iucapacitated from some valid cause) are to he punished by fine, or imprisonment for one week.
Secular instruction only is to be imparted in the State schools.
Free instruction is to bo given to all chiddren attending the State schools in reading, writing, arithmetic, grammar, geograply, drill, and needlework for girls; a certificate heing givon to each child odncated in these subjects no to the standard requirod.
Teachers are to be paid by salary for teaohing the branchos specified, but fees are to be charged

## or extra subjects

The Act also provides for the establishmont of night schools.
The regalations ander which the Act is to be are framed hy the Minister of Edacation (the

Hon. J. W. Stephen), who has the public confidence for his earnestness and ability in furthering the cause of education, it is certain that the regulations wil be framed and carried out in a liberal and enlightened way, both as regards the teacher and the children tanght.
Melbourne.
S. H. R.

DOCTORS DIFEER, SO DO MATHEMA TICIAN゙S.
Required the weight that would broak a rectangalar beam of Riga fir when applied at the middle of its length, the benm being supported at both ends. The length of the beam between the supports is 21 ft. , its depth 14 in ., and breadth 12 in .

Tredgrold says, "Jiultiply the breadth in inches y the square of the depth in inohes, divide the product by the length in feet, and the quotient multiplied by the tabular value of the constant $\mathrm{C}=530$
and $\underline{12 \times 14 \times 14 \times 530}=59,360 \mathrm{lb}$.
the breaking weight." 1,108 by 4 times the depth in inches, and by the area of the section in inches, and divide the proarea of the section in inches, and the supports in duct by the distance between the supports ing inches,
$\frac{1108 \times 4 \times 14 \times 168}{259}=4 . \mathrm{T}, 365 \mathrm{lb} . "$
It will be seen there is a difference in the two methods of calculation amounting to $17,995 \mathrm{lb}$. or 8 tons.
If there are these differences between the formulw of authors on whom weordinary mortals are taught to look as authorities, and to depend upon in our ordinary caloulations, can it be surprising that "surveyors differ" also when giving eV dence in our courts of law?
Probably some of your readers will be able to xplain thô above diserepancy ; hut it appears to me that if the experiments on the strength of timbers were made with larger pieces than from 1 in. to 3 in, thick, the results would be more reliable.
T. T. G.

THE PAVING OF SOUTH LONDON AND THE YESTRTES.
COMFERENCE OF ROUSE OWNERS.
Tre builders and housenowners of South London are complaining of the inconsistent and expensive character of the paving in tlie locality, by which they allege that they are put to ans unfair cost in respect of the property which hold. At a conference held last week to memostated that whilst some neiglibourhoods were most extravagantly paved with materials quite unsuitable, others were altocether neglected. It was also stated that huilders and owners of prowas also stated that duilders and and pave roads, liad not the ontion of doing the work themselves, which they conld in most instances do more cheaply; and that there was no opportunity for making suggestions of a local character in regard to the kind of pewement to he used, the conse. quence being that very often poor neighbourhoods were required to pay for the most expensive kinds of parement, and vice verse. It was suggested that streets should be classified, and pavements also, so that the owuers of property in any particular locality would know at once for what kind of parement they would be expected to pay. Piompt action in tho matter was urged on the ground that the Lambeth Festry bave it in contemplation to borrow $\mathbf{1 0 , 0 0 0 l}$, for the purpose of carrying out a scheme of uniformity in the outlying districts by the general adoption of tar paving. The owners of property in Camberwell also complain of the same grievance, alleging that some districts are orer-paved whilst others are neglected, and re cently they presented a memorial to the Cam herwell Vestry agninst the proposal to pave Croxted-road and Acacia-road (a rural district in Dulwich) with stone in square sets. So strong is the feeling agranst this proposal in Dulwich, hal Mr. Green, the jargest owner of houses in the neighbonchood, has offered to incur the expense of keeping the paths in order rather than that the character of the neighbourhool should he destroyed; and the College autborities have also interposed in the matter, Hith a view of preventing the picturesque character of the neighbourhood from heing affected by the kind of paving proposed.

## A. BLIND BUILDER.

Tre old village of Hampsthwaite, in Yorkshire has recently lost one of its most interesting and worthy inhabitanta, Peter Barker (Blind Peter), Who died on Tuesday, in the sixty-fifth year of
bis are. Becoming fever, when throe years old, his prospects in life were not very hopeful; hut through his energy of cbaracter and his natural aluilities, he main. tained himself in a respectahle position. He was skiliful in music, and, heing possessed of a
fine bass voice, he was very efficient in the fine bass voice, he was very efficient in the
psalmody of tbe parish churcb. With marvel. psalmody of tbe parish churcl.
lons readiness, he, in his early days, emhraced the husiness of a carpenter and cahinet-maker, undertaking many smail hailding johs, and
executing them satisfactorily. His knowledge was acquired without serving as an apprentice or baving any other instructions, hat througb hie remarkable natural endowments. A lady
who came to Hampsthwaite when he was fiftytbree years old tanght him to read the Bihle by moans of Moon's system of raised letters. With of tho Shadow of feet," he travcrsed the Valle

## COTTAGE HOSPITALS.

Ventror (Isle of Wight). -The report read at committee still plead for anothor benevolent person to build an adjoining house, when the bospital will consist of six complete pairs or blocks, containing in all over seventy patients,
each of whom will have a separate sleoping. chamher. During the past year, and under the chamher. During the past year, and under the
presidency of the Bishop of Winchester, the presidency of the Bishop of Winchester, the
committee held a puhlio dinner, and the contricommittee held a puhlio dinner, and the contri-
butions ther received amounted to 2,300 . They are now endeavouring to ohtain $2,500 l$. for fur .
and are now endeavouring to ohtain 2,500l. for fur.
aishing and maintaining the houses now building, and which will accommodate thirty additional jatients. The medical report, read by Dr. arthar Till Hassall, states that the improvement ery great.
Longton.-The coitage hospital here in October ast bocame the property of the town, and a neeting of the governors has heon held to elect he yearly committee. Tho Mayor of Longton Mr. T. W. Barlow) presided. It was stated at be mecting that there wore eighteen patients in ed, and there had heen twenty, so that there hcro was a deht of $62 l$. 9 s . They the funds, and 0l., and their expenses were heavier now than the sammer. He belioved the wbole populaades being liahle to aocident, A committee nd officers were appointed.
Tetbury.- The general anzual meeting of tbe ahscrikers to this institution has been beld raong tbose present wero tbe Duchess of Beau. ort and varions other ladies, the Right Hon. T. otheron Estcourt, the president, and several ergymen and otber gentlemen. The report for 372 was adopted. It stated that the hospital, hich was hegun in 1866, in a small rented ttage, has heen pat on a more permanent oting in the course of the last twelve months
the complction of a commodious huilding ected on a rery favourable site, at the expense tho president.
in position "We are happy to say eet. We have paid off the halanco of last tar, we havo boen ahlo to meet the erpense last first ycar in a new building, and wo have a lance in hand at the bank." The number of tients from the list prepared hy Mr. Wickham pears to he 4.1 .
Ledoury. - The committee have formall cned the institution for the reception o the usefulness of cottago hospitals in menere d eulogised the exertions of the sub.com. ittee in estahlishing a bospital for Ledhury uny were present at the coremony. The spital, which is a well. built bouse, situate in mend-street, in the town of Ledbury, consists two large rooms snitahle for a day-room and board-room, a kitchen and back-kitchen on ther for women-a large wards-one for men an operating-room, on the for the matron, mal rooms on the upper story, which could e serviceahle should occasion require, hut

The hospital committee do not propose
accidents and diseages red for the recep. of accidents and diseases requiring active
medical and surgical treatment, and is suitahly furnished. All the medical gentlomen in the thewn and neighbourbood have consented to giv Somers, and the president is Dr. Henry. Mr
Mratan G. E. Masefield is the hon, sec. We understend the committee have received many articles of use, anoh as linen, hooks, and furniture.
Anford. There are fifteen cases in the bos pital at the present time; indeed, tbe calls upon the funds are so great that there is a consider-
ahle sum due to the treasurer. Grcat is rendered hy ladies greatuitonsily. Great service concert has heen given at Charing on behalf of the hospital. There was a large gathering of gentry prcsent at tbe concert. The ladies and gentlemon who carried out the propramme all helonged to the npper class of society, and the whole affair was vory successfal. A anm of 81.10 s . was realized on helalf of tho hospital

IV isbeach. - The North Camhridge Cottage Hospital at Wisheach is making proce exponse of Miss Trafford-Sonthrell of Grat the Miss Sonthwell proposes to endow it with $3,000 \mathrm{l}$. its future maintenance. She has also nndertaken to provide it with surgioal library instruments. Mr. William Peckover, of Wisbeaoh, gives 2,0007 . to the endowment, aud r. Algernon Peckover, 5002

## EXTRAORDINARY CASE IN TIE buILDING TRADE.

Under this beading a lengthened report of part of a local case in progress is given in the Sussean's Bench of last week. It hegan in tbe Queen's Bench, hefore Mr. Justice Mellor and a mmon jury, hat has heen banded over hy mutual consont of the parties to Mr. J. Smith, arrister, as arhitrator, under whom it has heen progressing. The parties in the case are Mr. F fracs, a huilder at Reigate, plaintiff, who claime 514.13 s .10 d . for work done and materials supplied, 1002 . for detention of business hooks, \&c dotained hy defendant, and 2002. damages. Defendant is Mr. John Fuller, hy whom plaintiff was employed in huilding a house at Reigate Plaintiff instructed his counsel to state that white at defendant's housc, witb his hooks and documents, trying to get a settlement with defendant, he was detained while fonr men wer called in and an attempt made to men wero admit that certain scaffolding so helonged to defendant, and that defendant altimately detained his documents.

## WIRING THE WORK.

Mr. Humphrey Turner, of the Cardigan Steel and Wire Mills, has patented an invention of his for applying wire to huilding and other purposes. The invention consists in the application of wire, steel cut in strips, or iron rolled to particular patterne, for walls, ceilinge, roofs, aud floors of huildings; it is also a 0 . plicahle for large cisterns, water-tanks, hrewers' squares, and other vessels. In the erection of a house it is thus applied. The foundation is laid and brongbt up 12 in . or 18 in , above the gronnd. ron, oast metal standards, and straining posts attacbed from cerdin distances. To these wire is from the posts Panels posts throngh holes in the standards. anels and propor stay posts are tben fixed inthe thickness of proper distances, according to the thickness of tho walls required. The walls this formed hy means of a concrete, and while this is heing laid on inside, the plasterer may carry on his work on the outside, hy layinc on a hetter material consisting of cement and harp sand. The walls heing hrought up to the height required for the first floor, iron plates are laid npon them with holes for the wire to pass through. An iron or cast metal heam is then thrown across the centre of the rooms from wall to wall, and when the walls are oomplete, the wire is strained upon them through the plates ; and in this way the whole of the hailding is secarely tied. Mr. Turncr claimg tbat the wires will supersede the uso of floor joiste of wood, and will form heds for concrete boors. They will also answer on the mele side as laths for the plastered ceilings, plastering may he carried on at the same tie as tho laying of the floors in concrete time next floor is completed in a similar me The When the required beicht is reached the plate and beams are laid so as to give a proper fall ${ }^{\text {titelf. }}$
for the water, and a wall is carried on the top of the plates for 3 ft . or 4 ft . The wires are then strained across the whole of the top, and on these concrete is laid, thus doing away witb rafters and slates. Mr. Turner contends that the only wood required in the construction of a dwelling-house will he for doors, cumhords, Findow bashes, and panes. The stairs may he f concrete or wood. Heuses thus brilt we he be almost fire-proof, and 0 romin ould lodgment in the floor and skirting hoards, hecause they would be made of sobd concrete.

## WINCHESTER COLLEGE CHAPEL.

Sir,-I bave not the slightest intention of entering upon a long puhlic correspondence with persons who are afraid to give their real namos, hat shall be ohliged if, as a mere matter of justice, yon will ho good enongh to insert this onts, "D." and "North Ho your correspond. plains that the Winchester autboritios the plains that the winchester autborities treat all representations with indifference. This is a curious heen made. Ho is, no representations have in saying that stand-still, at a "North Hants" to want of funds. As to his letter is a tissue of fave inform him, that his letter is a lissae of falsehoode, and that, with all bia hoasted information, he knows nothing ahout the matter. The accomnlated fund which he speaks of, exists only in the imagina. " $D$ ") " himself or his private informant. It D. and "North Hants" have the manliness tottere to me privately, I will answer their f. nonymous conmumioations.
Fine Warden of Winchester College.

## THE FATE OF THE OHELSEA WATER BILL.

IT is gratifying to be able to record that the audacious Bill for the formation of an unsightly wall and roservoir to replace the thees and general landscape on the Thames, right opposite to the famous holiday resort of the Londoners it Hampton Court Palace, bas been thrown out of the Honse of Lords without even the asual formality of a second reading. The action taken on the part of the Royal Academy in which Mr. Marks did his work well, bas brougbt about this very satisfactory result. Corpor or companies have the assurance to try to things so impndent and unwies that no individual to self to do the like,

## ARCHITECTURAL PUBLICATION

 SOCIETY.IT is now several years since the suhscrihers to this society have received any instalment of tor illustration; no reports have been issued, and no annual meetings bela. I think it would be well if the secrotaries would, througb your columns, make known to Die suhscrihers the exact state of progress of the Dictionary. The local secretaries ohtained many sabscriptions on the understanding tbat the work would he completed forthwith, and it is completion. $\qquad$ L. H. S.

GAS ESCAPE AND THE SAFETY LAMP.
SLr,-I beg to thank you for the favourahle notice which you puhlished in your issue of last week of my safety-lamp. Curiously enough, on the same page, and in a line with this article, is Whe accoll.
The necessity for adopting safety lamps in works and other places where explosive materials are stored or nsed is ohvious. Had one of $\mathrm{m}_{\mathrm{J}}$ lamps, instead of a naked light, heen in the bands of the gasfitter when inspecting the apot from whicb gas was oscaping, no explosion could have taken place. Under ordinary circum. stances, gas cannot penetrate the wire gauze column of my lamp; under very extraor. dinary pressure, it is possihle to drive tho gas through the outer casing, but only in such a small quantity that nothing more alarming than innocent puff goes off, which merely pats out light, without even any damage to the lamp self.

Williais Yates.

WINCHESTER NEW TOWN.HALL. AT the last meeting of the Winchester Town Council, the Guildhall Committeo reported that, in consequence of a defect laving appeared in the west wall of the great room, they thougnchi. dcsirable to have the opinion of Mr. G. Legg, archs. tect, who recommended that, inorder tostrengthen the wall, six buttresses shouid he erected on the weat side, and piers added to the walls under the room i likewise that a parapet slould be erceted on each side of the roof. The committee recom.
mended that the report of Mr. Legg be adopted mended that the report of Mr. Legr be adopted
at an cstinated cost of 2206. Tho reports and at an cstimated cost of 2256 . Tho reports and plans proposed hy Mr. Legg, and a correspond. enco with the architects, Mossrs. Jeffery \& Skiller on the salhject clerk's office.
After a long discussion $n_{1}$ and some hard words the report was adopted. The appoarance of the four statues in canopies on the frout is strongly objected to: and not without reason.

SEFAGE AND ITS VENTILATION In a paper "Ou the Relative Value of Clari fled and Unclarified Sowage ${ }_{1}$ " by Mr. William Paul, F.R.H.S., Waltham Cross, the author says:-
"I have looked long and earnestly at this question, both from tro theoreticna and practicul point of view, and

 of stirring the surficace of the boil anter every application of the sewage. The resulte then excoeded my expecta-

 have two thrge cesspools into which the sewage isdirertcd
and allo
aned to settre beomung aluost clear by bubsidence, in which state it is freely used and found most
yaluable.*
In conclusion, $I$ would say that $I$ am opinion that the sludge in sermage is raluable asa manure. in a scmi-liguid stote. If so applicd the surface of the soil should be constantly stirred and broken, which, of
conrse, involves consideratio oxpeuso. It then becomes a question whether it it in not more economien to separatc parp,
A report by a committee on the ventilation of the semers of the Halifax union-house was guardians. We give an abstract of this re port :-

## CASES UNDER

THE METROPOLITAN BUILDING ACT.
moodex bumbivas.
District Sumveyor for Penge and Norwood v. Sichard Winnifrith. -This case, at the Lambeth Police Court, was for not giving notice (under the 3sth section) of the eroction of a wooden cantiage. shed. The hearing was on Jur The district snrveyor (1ur. ft . in . long by 23 ft .6 in the structure as being estlosed on three sides and wide, one story high enclosed on three sith wood open on
Upon this the magistrate stated that, being oper on one side, he donhted its being a building within the meaning of the Act, whoreupon the district surveyor stated that many suructurcs of a similar kind had been deemed to be build ings. The magistrate then asked for cases, and adjourned this one for a fortnight for the dis trict surveyor to bring precedents.
On the 6 th of Februncy, the district surveyor argued that this whade mase erecting buildings. not only in his omb district, but also in all tho districts metropolis, and therefore he wilued at make a full
 prenublo, but, if it had one, it would unquestionalis The spresad of fire in tho metropolis, inasmuch as allite provivions are tramed moot conspicuously with that onject.
Neitcher doos the Act contain any deffinition of a huilinim. and consequently the presumption sems natural thint ait
structures which are not movable ebatels are builiting and mast be erected in the manner preseribed by the Mct; and there is an indication of this meaning in section mi.,
whioh states that the term si External wail "," all apply to cerey vertical enclosuro of any boilding." Again, the
arst clase of the first achedule states thut every buiding arst
shull be enclosed with walls constructed in a certain
me aylluded to oll this, hecause it is cridently manner. He that structures shonla be euclosed with $\begin{aligned} & \text { malle, } \\ & \text { intended }\end{aligned}$ and not with wood, and ho felt sure that if the strncture和中uestion were to tako tire, ot other struct tres near it of Works, being now the controller or
the interests of that body would sulfer
But he further urged that the main quastion had yet to be considerca, namely, as to whether a structure open on one side is s building or not, within the meaning of the
Act, and in doing so it was neeessary to understand what Act, and in doing boit was necessary to underssand what
was meant lyy a side and wat number of sides strue-

 decagon, or a duodecengn, and then if 1.10th or 1.124
of its outside ecrer the category of buildinks, if the being opes on one side
cave it exemption: or it might be circular, haring only an fare the cxemptort or and then (the district survey or said) he shoula want to know how mach of the periphory mus
remain unenclosed. The exemption derived from being oper on one eside would apply not only to the dimsy strue
ture in cuestion, but to others, howorer lurge or substan. tial : so that, if as atrong as a castle or a warehouse, the woold be exempted, which, he thought, eond not liare
been intended and he felt surs that it the idea of open ness on one side कre to prevail, he should be unable to magistrate to permit him to make the remarly that th Bulding Act appoints the mag istrato quite as much as it ing out the operations of the Act.
The distrive ourveyor puroduced five precedeuts of struc.
tnres pen on one side, and which had beon condemned tnres open on one side, and which had beon condemned Lambeth Police-court, and he stated that he could pro. duce numerous nalagous cases, but he thought it hest to
confine himadi exactly to structircs open on one side. The magitr rate
shillinge and costs.
On tho
goth February tho samo builder was summoned by the district surseyor for noncompliance with hig notice of irreegularity in respect of the samo building, when the
magistrate ordered that it be altered so as to bring it into mamistrate ordered
conformity with the Act.

BUILDERS AND THEIR WORKMEN.

MICROSCOPICAL SOCIETIES AND FREE FORUMS.
Sru,-The amalgamation of these societies, with some alterations to muet contingencics, would add much to the well-heing of amateurs ${ }_{1}$ and energy of scientife persons, would be great help-mates to free public libraries ${ }_{1}$ which are now well conducted, without the nuisance of the ballot-box, as now used in Microscopical Societies. It slould be asked, wherefore is this abomination cmployed, where poaceful and soher persons assemble for the purpose of mutual information only, apart from olitics? Furthermore, the exolusion of many houghtful persons of the lawer class from cijoy ing research into hicden nature, is now nphold hy persons who have not shown their sptite during he he last fourteen or afteen years action oced "a societies, which ""are not exclude smgrestions from in ontsis mouse, it is hoped that the press may kindly make some impression on these closo societies, whilst their annual assemblies are like lerees of the Qucen, where admiration of heauty chiefly is talked of, not of usefulucss ; hearing in mind that external beauty of microscopical objects is no guide to excollence in quality, and gems may be foana in the most unsnspected corner of natman 1 mernhors hes heat. Converstion wimmonly called humbug) no henefit to real science; and pahlic experience of microscopal display proves fuly such to he the case for outsiders to give opinior thereon. Much more can be said to show that fresh blood and system are requisite to ellect some good in the science. In these availall to keep pace with our neighbours on the Con tinent, and in America; therefore the following propositions are set forth:-
I That the manufactnre of microscopes, parious forms, at moderate price, should effected. amateurs and artists may occup? their leisure hours in examining dame Nature. heir That confirmation of douhtful qnestion might be easily solved.
4. That artistic works may he more generall founded in nature's laws of mechanical forms, 5. That principles of the microscope might layed by atho and played by authors, and hy witnesses in courts
ing powers are not the most needed to be known for practical parposes in daily occupations of life.
6. That the ten specimens of microscopical drawings supplied to the Vice-President of Education, for the purpose of superseding present patterns of nothing in our Schools of Alt, are fair examples of henefit from the study of the microscope by Loenw
at the author's honse.
Tbe history, progress, and present state of microscopical science, and proposed future stady of the subject, bave been suggested for a lecture, if sufficiont interest thereon can be collected within foor walls, by yours obliged,

Whliak Parker, m.R.C.S.

## BRITISH ARCHEOLOGICAL ASSOCIATION.

AT tho council meeting, February 26 th, Mr J. R. Planché, Somerset Herald, in the chair, year would be held at Sheffield during August or tho early part of Scptember nest, the Duke or tho early part of Scptember next, the Duke
of Norfork having acocpted the office of presi. dent for the occasion.
At the evening meeting on the same day, Mr Gordon M. Hills, treasurer, presiding, several papers were read and exhibitions made by
Messrs. Roberts, J. W. Baily, Dr. Kendrick, and others, and amongst them was a broken portion of a Roman bronze ougle, presumed to belong to a standard-bearer, and lately found in Victoria. strect, City. Mr. J. W. Grover further illustrata this interesting object by a drawing of a Roman zagle, abont the same size, found at Silchester,
oy the Rev. Mr. Joyce, who, it was intimated, oy the Rev. Mr. Joyce, who, it was intimated,
will read a paper on the snhject at the Society of Antiquaries very shortly.
A paper was read by Mr. H. Syer-Cuming on
Roman Condurit or Wher Roman Condurit or Water Pipes, and illustrated y some soctions of Roman leaden pipos found ately in the City and in Beauliou Abboy, Hants ; he section of the one found in the City was nusually large, heing 6 in. in diameter, and was xlibited at a previous meeting by Mr. Edward ,
Mr. Blashill then read a paper, communicated Y Mr. J. T. Irvine, on Roman Temples in Bath, Iinerva, which Mr. J. W. Grover commented on, ointing put, amongst other interesting matters, ant there was evideuce of coal having boen sod in these temples by the Romans, for the urpos
res.
The t
The treasurer exbibited a fine specimen of the eg tankard, said to have belonged to Sir rancis Drake; it was of silver, and weighed loz. avoirdupois; and then the moeting stood 1 journed to the 12 th Marcb next.

## ECHNICAL EDUCATION IN EDINBURGH

In reference to the scheme described in last sek's Builder for the cstablishment of a tech. lcal school in Edinburgh, to bo maintained ont available funds connected with the Heriot ades Council, and a large section of the adies Council, and a large section of the prement most strenuously.
A speoial neeeting of the Trades Conncil was ld for the purpose of recciving a deputation m the Committee on Tcechnical Edacation. Mr. Cousin, architect, in introducing thao deputa. $n_{\text {, said that with the view of eliciting tho }}$ - technical schools for Edinbnrgh they bad puested this meeting with tho Trades Council. said that they were desirous of promoting at
st one large and well-appointed school in st one large and well-appointed school in
ich the children of their skilled artisans who I gone through the course of training of the mary schools should have an opportunity of luiring a knowledge of geometry and of hitectural aud mechanical drawing iu its cetical departments. He referred to the ad. I that in alluding to skilled artizans, more ecially of those connected with architectural |rations, ho had no hesitation in asserting that sould point to buildings in and around Edin. Sh in which the masonry, carpentry, and work are unsurpassed, if equalled, in any of hand, the desire of the committee was
that these and others of liko mould should have an opportunity of cultivating their minds with cnergy and zeal.
A few days subsequently the Trades Connci met to give the subject further consideration, when it was resolved "to oppose by evory legitimate means the appropriation of the Ueriot funds for such a purpose." It appears that the surplus funds of Ueriot's Hospital now amonent to about 20,0002. per annum, and Parliament having already afforded ample means of edu. cating the poorest children up to the level of the at-door Ueriot Sohools, it was thought that tbe munificence of the founder would be best applied in supplying a higher and more practical education than is furnished by the Govornment systern of education.

## LEAD PIPES AND FROST.

$\operatorname{Sin},-I$ ohserve a suggestion in your paper for the prevention of the bursting of water-pipes by frost, tbat india.rubber tubes should be in. serted inside the lead pipes. Now, I cannot express approval of the idea, from a fear that a lad effect would be prodnced upon the water. I also consider that when in process of time the india-rubher became cracked and worn,-which in hot-water pipes miglt not be long, -it would becomo a, great nnisance. Seeing also tbat this india-rubher tube wonld encroach considerably upon the interior area of the lead pipe, a larger lead pipo would require to be nsed than if there were no india.rubbor tube inside of it. If the india-rubber tubes were to be usod at all, I wonld be inclined to prefer their heing put outside the lead pipes in place of inside. If, however, it were more the general practice to wrap up our dead pipes in felt, and protect them from cold draughts, th

As to Mrr. M'Lauchlan's idea, at page 174, that an oval or flattened water-pipe would on acconnt The canse not burst, that, I fear, is a mistake. the ice takes ap more room bursting is hecause f there be no room for expansion longitudinally within the pipe, then the ice, or the water in the act of hecoming ice, simply forces out the side of the pipe, and so makes room for itself.

The shape of pipe necessary to carry out Mr. 31'Lauchlan's idea would he a square-shaped one say flat on top and bottom, and concave ou its two sides ) (: 'tbis shape, however, I fear would be more troublesome and expensive in the fitting up, and I would not like to guarantee its being entirely frost-proof either.
W. P. Buchan.

Sir,-During the ten years that I have been a reader of tho Builier, I have often wondered at the complaints about frost-burst pipes that have from time to time appeared in its pages, and at the apparent difficulty of finding an easily. applied remody. Doring a fair practice of a considerable number of years now, I have ncver had a singlo case of pipes being burst by frost; and the method of preventing it is very simple. In the first place, I take some trouble so to arrange my pipes somewhere well within the honse, if possible, and away from external walls. But if they must be against external walls, as is of ten euough the case, then I have a $8-\mathrm{in}$. or $\frac{3}{1}-\mathrm{in}$. wood lath fixed against the wall, and fix the pipes on that; and they never freeze, even during the rigours of a Scotch winter on the East coast.
In fact, two things only are to he graarded against,-first, 'pipes touching a cold external wall; second, allowing a ourrent of frosty air to play over them at any part. The means of pre. enting these almost sole causes of frost-burst pipes werson of ready enough suggest themselres.to any person of intelligence, in any circumstances.

Chart of Manufactures, Trade, and Agri-cuIture.-A sheet, titled "The 'Popular Edu. cator' Cbart of the Progress of Manafactures, Trade, and Agrienlture," has been issued by Messrs. Cassell, Petter, \& Galpin, with Cassell's new "Popular Eduoator." It gives a condensed list of leading inventions and inventors' names, discoveries, materials, names of discoverers and travellers, chronological list of events, \&c., and therefore contains a mass of useful information well arranged for ready reference, and in smal

## MONUMENTA工.

A sunscrelptiox having bcen set on foot for tlo pnrpose of prescuting Dr. Pierco, ex-mayor of Denbigh, and coroner for the conuty, mith a testimonial, the committee resolved that as Dr. subsce wonld not accept plate, the money nearly 500 , monnting ahcady to the sum of erecting a testimonial to him, and that Mr. Underwood, architect, shonla be asked to prepare a design for the same. The tostimonial took its rise upon Dr. Pierce giving up the mayoralty after occupying the civic chair for five years in succession. During his years of office many and great improvements were made in the town. great improvements were made in the town :
from being ill paved it is now one of the best pared in the principality is now one of the best paved in the principality; a tborough system of drainago was commenced, designed by a competeut enginoer; a fonntain and two publio clocks put up for tho bencfit of the town at the sole cost of Dr. Pierce; besides which the town was Wonoured by being made the capital of North Wales. In refcrence to the heroic exertions of Dr. Pierce at the time of the cholora in Denhigh, tho snbscribers wished the testimonial to take a shape which should commemorate his services then as well as his subsequent actions in connexion with his profession and his public duties. A suggestion has been made, whicb has met wit much approbation, that a monument should be erectcd in the town, consisting of a square hase armounted by an obelisk or column. Upon the four faces of the base four bas.reliefs are designed, -one a bust of Dr. Pierce, one"'Visitine the Sick," one "Clothing the Naked" and the other "Fceding the Hungry."

## THE TRADES MOVEMENTT.

Edinburgh.-The joiners resolved "to use every lawful effort to carry ont the resolution dopted at the meeting of the four branches of the association held in St. Mary's Hall, Lothian street, namely, 'That we come out on strike on Friday, 28tb Fehruary.'" The employers have had a meeting on the snbject, and have resolved to adhere to their offer of 7 d . per hour, or $\frac{1}{2} \mathrm{~d}$. in advance, the workmen wanting another half penay. It is said that of 1,400 joiners in Edinburgh only 300 or 400 had shown a dispo. sition to strike.
Leith.- \& strike of joiners here, too, is said to be imminent, the masters having refused to grant the demand of 1.d. increase by the men.
Ayr.- The operative joiners of Ayr met to receive a reply from the omployers to the demand made for an advance of $\frac{1}{2} d$. per hour on and after 3rd March, and that hours be reduced from 51 to 51 per weck. The masters' reply was that they would grant an advance of $\frac{1}{2}$. per bour on and after 3rd Marcb, bnt no reduction in the hours. This the men refused.
German Workmen in England.-According to a tolegram from Berlin, the Voss Gazette says that a great nmmber of workers in the metal trade, wbo, in consequence of the strikes in the north of England had been enticed by specn. lators to go thithor, had been hadly treated, and were forced to obtain pecuniary assistance fromthe German consuls in order to return to their homes. The moncy thus adranced has now been demanded by the German Government from tho workmen, and in consequence diplomatic intervention bas hy them heen invoked in order that the speoulators who induced the men to come may be mado to falfil their engagements.

## SANTTARY MATTERS.

oxford.-The proposal to appoint one medical offeer of health for the whole of the county under the provisions of the Public Mealth Act of last session, has met with considerable but not with complete success. At an adjourncd meet ing of the representatives of the urbar and raral sanitary authorities held in Oxford it was determined to appoint a central officer of health for the wholo county, or rather for the area com prised within the linits of the following sanitary authorities, namely :-Rural : Banbury, Bicester Chipping-Norton, Henley, Thame, Witney, and Woodstock. Urban : Bicester Market - ond, Cbipping-Norton, IIenley, Thame, Wheatley, and Witney. Oxford and Banbury urban dis tricts and Headington rural are excluded from the scheme, preferring to retain the sanitary and or the several districts in their own hands. The proposed medical officer is to re-
ceive a salary of $760 l$. per annum. The area
ander his jurisdiction will be very large, comprising, in fact, nearly the whole of the county, fristy miles in lengtb and from seven to twentyeight miles wide.
At Evesham, the alarming reports from the county analyst as to the polluted state of tho puhlio wells of the borough have led tbe sanitary committee of the town council to hold a special meeting to consider the matter. It was ordered that all the wells be examined and thoroughly cleansed out; and as a preliminary step, it was resolved that the well at the corner of Oat-street bo at once opened, excavated for 9 ft . aronnd, then filled with puddled clay, and comented. It is thought that this will prevent the percolation of sewago matter into the water. A disonssion took place as to Mr. Barry's and other schemes for tho sewerage of the town, but as they all involved a water supply to fush the semers, the dry sysitem (housc-to-house collection daily) as cmployed at Rochdale and Manchester, was considered by the committee to have the greatest advantage. A depntation from this borough will these towns.
Wales.-The state of some Welsh habitations has been shown by the newly-appointed inspector of nuisances for tho rural district of Aberystwith, who has made two reports which reveal an almost inconceivahle state of degradation and immorality amongst the peoplo. A large number of tho houses are altogether unfit for habitation, and these hovels are terribly overcrowded, adults of both sexces sleeping together in the same bed. In one caso sisteen men sleep in eight heds in mon small rooms, and in another the heds during tho night, and four during the day, the day occupants often having to wait antil tbe nigbt men get up.

NEW TIMBER DOCK AT BARROW. Last week a large new dock at Barrow-inFurness was formally opened. It contains an
area of 33 acres, and is colled the Buccleuch Dock, ont of compliment to tho Duke of Buccleuch, out of compliment to tho Duke of Buccleuch, who, with the Duse of in in inteuded mainly for interested in Barrow. which, along with other branches of shipping, is rapidly increasing at Barrow. There is wharfage accommodation Barrow. There is whartage accommodation vessels discharging at the same time, together with spacions quays and timher-yards adjoining. Another new dock, containing the enormousarea of 200 acres, is now in conrse of constraction, and will shortly be opened.

THE UTILISATION OF COAL-DUST.
Propessor Gardier, F.E.S., lectured last Saturday eveniug, at the Royal Polytechnic Institution, on "Fuel, - What shall we Burn ?" In the course of his remarks, he said that the question of fuel was most important at the the high price of 54 s . a ton, nor had it before continucd to beep the enormous price it now commands. Coal was the most important fuel we possessed, but, of course, it was not the only fuel. By chemical action varions substances, sncb as lead, cast iron, \&c., were mado com. bustible, and, indeed, the oxidation of snbstance would hring shout combustion. had been calculatod that the amount of coal raised in this country yearly was 144 millions of tons. When raised from the mine it underwent many processes, and by this means we have latter, whicb we call coal-dust, had never been properly utilised, though it amounts to a very harge quantity indeed. This coal-dust did not in any respeot difiter from the larger kinds of peculiar size it was unfit for burning in ordinary peculiar size it was unft tor burning in ordinary freplaces. Ont of the 141 millions of tons of nsmudge" or dust coal, which was of the hest kind, was perfectly useless. By suhmitting it to a certain process it could be formed into a solid lump, having all the qualities of ordinary coal. The agent employed for tho agglomoration of tho dust coal was a fluid
invented hy Mr. Barker, called "the diamond invented cement," which had the power of making fue small particles resist weter and retain the the small particles resist water and retain the
solid form. The lecturer then proceeded to verify his statements by transforming coal verify his statements by transforming coal
whicb was literaily in a state of powder, into a
solid lamp. In a few minutes the experiment was performed, and fragments of the coal were converted amonget the audience. Tbe
" TEE EFFECT OF CHARCOAL ON PLASTERING."
Srb,-- K the first paragraph of "William Pulham"s" Cettor last week, I can see very little senso. Passing on,

CHURCH-BUILDING NEWS.
Newart:-The new cborch of St. Leonard has beer consecrated by the Bishop of Lincoln. The contracts were entered into by Messrs. Hodgson $\&$ Facon, under the direction and superintend enco of Messrs. Evans \& Jolly, architects, for tho huilding of the church, with accommodation for 600 persons. Land was parchased of the trustees of the Duke of Newcastle in North.gate, and the building is now complete. The style of the edifice is Early Decorated, and it congists of a nave, 72 ft . by 25 ft .; chancel, 30 ft . hy 25 ft ., with chancel aisles for organ and children; and north and south aisles, 72 ft . hy 11 ft . On the south side at the east end of the nave arcade there is a hell-tnrret. Provision is made for ingress and egress by a western doorway, and hy a south porch and south door at the east end of the south aislo. The height of the nave and clearstory is such as to give proportions of more than ordinary elevation, and tho chancel is similar in this respect, and, having a large cast window, the hope is naturally entertained tbat some one will undertake the filling of the window with painted glass worthy of the position. It should he mentioned that the sido arohes of the chancel have screens of traceried woodwork. Staffordshire tiles bave heen used to lay the floors in the chancel and sacrarium. The tiles are of a slightly ornamental character, from R. Minton Taylor. Immediately over tbe
sacrarium the portion of the roof ceiling is divided into panels, each haring a decoration of an angel, or other conventional form suitablo to the position. Tbis decoration is also of a temporary charaoter, and it is hoped that ere long paintings of a more costly cha. racter will be provided. The pulpit is as yet in an unfinished state, and, according to the design of the architects, is capable of being made a feature or tho church. and varnished, and both them and the seats are all open and free. The church is built of Ancaster stone, except the pillare to arcades, which are of Little Eaton stone, from Thompson \& Fryer \& The war covered with brincled sfected by means of hot water oirculating through a series of collular cylinders, and so arranged as to supply fresh air through them. The apparatus was of the Trent Ironworks, Newark. The gasfittings were made by Mr. Rhodes, of Notting. ham. The woodroork was executed hy Mr. Menderson, of Newank, a sub-contractor, under Messrs. Hodson and Facon. The total cost, in. cluding site, will be about $4,000 \mathrm{l}$. The cross on the super.altar, the candlesticks, the altar desk, and the pulpit dest have heen presented to the church through the new incumhent. They are from Nessrs. Thomason \& Co.. of Birning. are from Messre. progress of the work it was thoucht that some provision ought to be made for the education of the children of the district, and snbscriptions were liherally offered for the erecsubscriptions were commodation. The sehools are used on Sundus is chnroh schools. The founused on Sundays as chnohls wens laid by Mr. W Gilsirap, then Sheriff of Suffolk, and the brildGilicias, Menderson, and is now completed.
Seaton,-A new roredos has just been erected in St. Mary's Cburch, from the designs of Mr. R. Medley Fnlford, architect, of Exetor. The reredos is huilt principally of Becr stone-a material hargely used a Mine trom whes The anoient and extensive quarries from which this stone is procured are soarcely three miles from forms which forms a shelf or slab, projecting some 6 in. from tho face of the work immediately Devonshire marble; and western marbles are Devonshire marhle; the wets the structure leo introlu in The rcredos proper consst ments, the cench in largest, though each is surmounted and ter A larce cross stands detached from the middle A large cross stands detached from diaper, and upon the arched head above is carved a ropreentation of the furitful vine, emhlematic of th Moly Sacrament. In sunk panels, on either side of the central compartment, are schlpure gwinging a censer. The capitals, corniees, splays, finials, \&o., are all carved, the foliage being of an oar!y type. The carved and sculptured wors, has heen carried out by Mr. Harry teme sculptor, Exeter.
whole is 7 ft .9 in ., and this measurement is just the extreme width of the strueture withont the wings. These latter are kept suhordinate to all the rest; they cxtend the full width of tone, surmounted hy a cornice in keeping with the cornice of the reredos-proner.
Darlingtons.-The fouudation-stone of a nen charoh, to be designated the Church of St. John has heen laid on a plot of ground ncar to Bishop. ton.lane, which has been presented for that propose. The church is to be a hriok building in the Basilican style of architccture, having nave, aiiles, transepts, chancel, and campanile tower. The churcs is to acconmedat 2,1000 persons, the seats to be free. Already 2,1 is have heen promised hy sured to complete the building.

The Trades Movement and the Social Science Association.-The Labour and Capita Committee of the Social Science Association ave prepared tho way for an arrangemen etween the Barnsley power-loom weavers arr heir employers, who have agreed, under the committee's influence, to settle their difference and their strike and lock.out by arhitration Mr. Edwin Pears and Mr. Applegarth, for thi

SCHOOL-BUILUING NEWS.
Kettering.- A new Church sohool has been opened here. The school erected is for boys exclusively, to accommodate nearly 300 . The Duke of Bucclench gave the site as his contri. hution to the school. The total cost, exclusive of the value of tho ground, and inclusive of the master's house, which is a part of the building, has been over 1,500l. The school is huilt in the Horsemarket. It is easy of access, is built on one of the most elevated parts of the town, and commands a healthy position. In form or design it resembles the letter $T$, the hase of the letter being the master's house, and the stem and cros: the sohoolroom proper. The extreme length of 64 ft ., and the width $18 \mathrm{ft}$. ; tbe top cross being 51 ft . by 18 ft . It is lighted with windows of a Gothic charaoter. The roof is open, is supported by polished beams, which rest on carved corbels, and to the ridge is 26 ft . high. It is hnilt in red brick, and has stone window-frames. It is lavatorg, and every reqnisite convenience aro supplied for a largo achool. A good playgronnd
is attached. Mr. R. W. Johnston, of Melton is attached. Mr. R. W. Johnston, of Melton
Mowbray, was the architect, and Mr. Charles Sharman, of Kettering, the builder.
Sleilton (near Yorli).- New National sohools have heen opened here. The site, at the east end of the village, has been given by Messra. Hepworth, the lordis of the manor of Skelton, on which has been erected a buildiag, plain in character, the roof being high-pitched and open.
timbered. The school is capable of accom. timbered. The school is capable of accommodating 120 boys and girls. The sittings and desks are reversible, being arranged so as to A. Davies, Leeds; and Mr. Bellerby, Clifton, was tho sole contractor. In addition to tho school, a house for tho
Aridullesbrough.-The Roman Catholio schools just erocted at Midaleshrough have been opened by the R.C. bishop of Beverley. The schools are huilt on a site close to the Newport ironworks. The plan of the building resembles the letter f, the north and south wiogs heing for hoys and girls, and the central parts for infants, each
school having a separate class-room and gallery. The entire cost is about 2,0002 .
Heworth. - Now schools have been opened here. The school premises aro situated adjoining Heworth-terrace, near the post-office and North Riding police-station, a short distance
from the church. They are of red hick, from the church. They are of red hrick, in modernised Gothio style, and have heen huilt, not with a view to external effect, hut for prac-
tical school purposes. The building, which consists of two school-rooms and a class-room, with offices and playgrounds, is inclosed within a brick and stone wall, with iron fence. The rooms are lofty, well ventilated and lighted, boarded round the lower parts, and fitted up in accordance with modern school requirements, The desks are reversiblo. The schools aro 'mixed" cirls' and ginls and infants, heing a having previously oxisted in connexion with the oarish for the education of 100 boys at the Bilton-street school, Layerthorpe. The addiional accommodation now provided is to the extont of 150 scholars. The schools will be in yonnexion with the National Society. The total wards which Lady Wheler gare 250l., and the Rev. II. Newton the site and a liberal suhscrip-
M. Mr. G. F. Jones was the architect, and, rom his plans and under his supervision, tho Forks have been carried out hy the following irms :-Mr. Keswick, hricklayers' and masons' lasterers'; Mr. Hartley, the plumbing and lazing ; Mr. Baines, slaters' work; Mr. Gowland, ainting ; and Mr. Fryer, smiths' work

A New Industry in Derby:-We learn from he local Acluertiser that Mr. J. A. Lee, of the evern Engineering Works, near Lydney, Glouive works recently erected by Mr. Alpheus mith at Little Chester, known as "The Derby Vagon Works," and that it is Mr. Lee's intention remore to it his husiness, which cousists of 10 construction of Mr. Lee's patent machinery ill machinery. This will bring a large business ill machinery. This will bring a large business
the town, as Mr. Lee will employ, it is stated, the town, as Mr. Lee
om 500 to 1,000 hands.

## VARIORUM.

Ther valuo of "a hobby" is tbas dwelt on in man who keeps his thonghts and lahen - "The man who keeps his thonghts and lahonrs in one nnvaried groove is like the meohanician who never oils his machine. But the man who has the happy facility of closing the door of his method work-room on his toil, takes the surest method of keeping his own powers in the best working order. This is the great use of what wo call a hohby. And here is a very special adrantage in some knowledge of art. We do not speak now of any general art-education, What we mean is rather the intelligent cultivation of taste, hy the study of some particular detail or branch of art. One man may take a special interest in pottery. From the long range of fictile art he may select some one shelf, so to speak, which le may have special facilities for filling. He may be an admirer of Wedgwood ware; a collector of old Worcester or old Chelsea; a purchaser of eggshell porcelain, or of Japanese lacquered ware. He may carve a little wood. He may collect carvings in irory. He may group ogether photographs illustrating a particular stylo of sculpture. What tho studymay be matters inc. It will dopend partly on tasto, and partly pursuit agreeable to the great point is to have revert with plensure the mind, to which it will winning anxieties. In relaxation from hreacthans commenced. But it is a new education is faculty that would otherwise the education of a pursued pursued, not only without unduo lahour, hut March includos, whe People's Magazine for and includes, with many interesting stories and papers, a continuation of Mr. Beavington Atkinson's observations on the French School
of Painting. Mr. Atkinson defends Claude Lorrain as against Mr. Ruslin's objections.

## Miscellamea.

Report on Second Autumn Exhihition of Pictures at Liverpool.-The local Fine Arts Committee report the results of the late antumn exhibition of pictures at the Liverpool Free opened from during the day to December 14 th, at 6 d. ; and in the evenin from October 21 st to Novomber 30th, at ev.; and from December 2nd to December 14th, at 3d. The number of admissions hy payments at the door amounted to 22,891 , besides 332 season tickets, and ahout 10,000 pupils of educational ostablishments admitted gratuitously. nnmber of works exhibited consisted of 430 oil colours, 501 water colours, twenty-nino pieces of of 960 . Of these, 898 were for sale and total were sold for sume, 8 wounting to 621 and 4 s .6 . of which pictures to the extent of $2,1497.17 \mathrm{~s}$ were purchased by members of the Town Conncil, exclusive of 600 l . expended by the
Corporation in pictures for the permanent Corporation in pictures for the permanent gallery of art now in formation. Tho total receipts amounted to $1,368 \mathrm{l} .88$. 3d., leaving pulity of the pictures exhi bited attained a decidedly higher level than at the previous exhibition.
Oxford Mrain Drainage. -Tho line of out fall sewer, site for pumping station, and land for irigation, are now deterinined upon. Tenders for the first contract are advertised for, and the works will be commenced with as little
delay as possible. They will be carried ont under the superintendence of Mr. W. H. White, engineer to the Oxford Local Board.

Edinburgh Architectural Association.A meeting of this association was held in tho rooms last week, Mr. John Paterson, president, in the chair. Mr. J. D. Marshall read a paper on "Art, its Compass and Limits." Mr. Marshal osthetical in so far as it is throngh the per eption of the beautifnl thatit addresses sympathies already existent. It is a source of intel lectual delight, and ministers to cultnre, and is not, in ita proper and higher sense, a medium of instruction. It is also distinot from the moral perceptions; its appeal is to the costhetical pereptions, and through them to human sympathy and feeling. Tho natural love we have towards religion lovely induced its use in the service of eligion; but the argument for the necessarily moral hearing of the materially beautiful is wicture may he bad art, and vice versa. Con-
poran siderable discussion followed, in which several of the memhers joined. A practical paper was then read hy Mr. T. B. M'Fadzen on the subject of modern building constrnction, in which the was considered. as considered.
Artists' General Benevolent Institution. has been general mecting of this institntion street, Mr. J. Jenninos in the chairs, old Bond. present Messrs. J. E. Millais, R.A., hon. sec. of the institution ; and many other well-known artists. The assistant secretary, Mr. F. W. Maynard, having read the minutes of the previous meeting, having read the minutes of the previous meeting,
the report and halance-sheet for the past year the roport and halance-sheet for the past year
were snbmitted, from which it appeared that the were snbmitted, from which it appeared that the year 1872 was not less prosperous for the insti. from all sonrces of its predecessors. The income part of sonrces amounted to $3,57 / 2$., the greater part of which sum was suhscribed at the annoal inner presided over by the Marquis of Lorne. the cound ha to acknowledge the receipt of some large donations, amongst which was one of 500. from Mr. J. Heugh; the report further stating that 86 applicants were relieved during the year; and conoluding with the announcement that the Right Hon. sir I. P. Collier had consentod to preside at the next annual dinner which would take place at fillis's Roams on the 10 th of May, when it was hoped that a strong list of stewards would be obtained.
Trades Guild of Learning. - At a small preliminary meeting of skilled workmen, con-
vened by the Rev. H. Solly at the Working vened by the Rev. H. Solly, at the Working
Men's Cluh and Institute Union Ollices, it has Men's Cluh and Institute Union Ollices, it has heen resolved,"That in the optnion of this meeting it is is deirable to

ment thich should give at their membersadmission to certain courses of lee tures and to colasses, either withoot pay-
ment or or reduced terms; also to libraries, readingrooms, disenssions and social meetings, where these eso
be provided by the Gaild ; and that if the requisite fund can be obtained, an agont commanding the confictence of trade societies he engaged to visit their lodge meetings,
by permision, and invite their support for the foregoing
objects"
It was further resolved, -
Whath that it is important to obtaiu the co-operation of the
bodics
Opezing of New Record-room at Lewes. The record-room, the constraction of which has recently been completed, has been formally pered for the use of the town. The new vision market occupies the site of the old provision market, the dilapidated state of which wad for nany years heen an eyesore. The plans vere fre months a Mr. Card, architect, and about huilder, was ao the Berry, nilder, was acceptea. The work was at once of the eed, and the building 15 now completed. front presented by the old market-tower, which is left almost untouched. On the ground floor space is still left forthed. On the ground-floor it he revived and a the provision-market, shonld the revived, and a broad Hight of steps leads to the spacious record-room. The timbers of the roof are supported hy six qroins of stone, which are at present plain, but will he docorated with present high constable one for the clerk to the commissioners, and another for the architect, Mr. Card. The mantelpiece has been decorated in majolica, and bears the names of the late high constables.

Gaol Occupation．Mr．Tallack，the socre－ tary to tho Howard Association，draws attention to tho want of proper economisation in the gaol accommodation of the conntry，whereby gaol establishments are kept up without necessity， and might he considerahly reducod，－a work for some energetio Home Secretary to sue to．
governor of Pipon gaol writes on a kindred governor of Rispon gad Association，namely，on the absurdity of keeping criminals for years in prison withont terching them some useful trade，so that each time they are sent ont just as ignorant and useless as before，to be again shat np and kept over again at the cost of the country，instead of being made useful to themselves and able and often willing to relieve their fellow countrymen from tho perpetnal burden of providing for them．It is wonderful with how much absurdity and how little sense a the Parliamentary palaver that is perpetnally going on．

Serious Kitchen Boiler Explosion．－An oxplosion which has done dawage to property and injured two servants，has taken place at one，situated in the washhomse，and was nsed to snpply hot－water pipes to a small conservatory above the washhouse．The fire had been ont few days，and the water－pipes became frozen． A brick wall was blown entirely down and across the place，and several persons knocked down， nervous system．The door of the washhouso was blown off，the windlows were blown out，frames and altogether，and one of the door－iambs par－ and altogether，and one of the door－jambs par－ the washhonse to a cellar，and the conoussion the washhonse to a celar，and the conoussion was so great as to break several panes out of a Wio．，were sent through the ceiling into the room above．

Ereemantle Church Spire．－A meeting of the seatholders in Freemantle Church was con． vened by the rector to consider tho completion of the church spire．The rector said that Mr． Bassett，entirely unsolicited，had promised 100 l ． towards the object，and he hoped they would bo enabled to hegin this work nnencumbered． The cost of the spire，according to the estimate of the architect（Mr．White），would be 8502 ， and if，afterwards，a peal of six bells were added， it would be ahout 6002．more．Mr．Bassett called attention to the fact that thore was no peal of bells nearer than Southampton on the one side， and Eling on the other，and said e peal in that district was much to be desired．Mr．Bassett proposed that a committeo be formed，with power to add to their number，to take the neces－ sary stcps，which was carried unanimously．The rector was appointed chairman of the committee．

New Catholic and Apostolic Church at Birkenhead．This new church is crected npon a site at the junction of Park－roads South and East，and forms a prominent featuro in the locality．The tower，with slated spire，which rises to the height of 75 ft ．，is hrought forward to the edge of the site，and is detached with an open bell－stage．The building is constructed wholly of brick．The style is that of the first half of the thirteenth century．The interior， which is also lined with brick，is lofty，and the chancel is unusually large．Tho roof of the chancel is broken into panels，and ceiled with pitch－pine，to give a distinctive treatment from the nave，which is open－timbered，and plasterod between the spars．The chancel fittings are of pitch－pine，the nare heing seated with rush－ bottomed chairs，and will accommodate about 250 ． The cost of the edifice complete，without land，will be about 1，300l．The contract has been camried ont by Mr．W．H．Forde，of Birkenhead，builder；
Venetian Blinds of Coloured Glass．－A good idea has been put into form in an invention patented by Mr．Peattie，of Rankeillor－street， Edinburgh，It is simply the substitution，with several little improvements，of coloured and ground glass instead of wood in the ordinary Yenctian long and short blinds for windows．The glass is bonnd round with brass，to preserve it； and heary blinds are simply wound op and down with something like a clock－key．The play of
colours，it is easy to see，may thins be managed colours，it is easy to see，may thns be managed so as to give beautiful effects．Outside at night
and inside by day windows will look as if they and inside by day windows will look as if they
were illominated；and a city seen from the were illominated；and a city seen from the streets，of an evening，under such circumatances
would have quite a gay and novel effect，

Southwark and City Subway．－＂ADescrip ion of the Southwark and City Dounle Line of Snbway or Tunncl，showing the impor of London Bridge；by P．W．Barlow，C．E．，\＆c．，＂has been printed for circulation．The object of the promoters，who hevo already obtained an part of the land required，is to constract a double line of tnonel from St．George＇s Churcls， in the borourh，and across the Thames，in a line with London Bridge，to Arthur－street，City， close to King：William－street and the bridge approaches．Trains will be run every five minutes by ropo traction，at a chargo of one halfpenny second class，with lifts at a similar chargo at erch end．The estimated cost is 130,0001 ．，or 00,0002 ．for a single line．A return of nearly 7 per cent，is calcolated on

South Kensington Musenm．－The Marquis of Ripon，K．G．，presided at a recent meeting of officors employed at the South Kensington Museum，to inaugurate among them the esta－ hlishment of various provident institations in onnesion hlained by Mr．Bartles，The general of the Provident Knowlodge Society，after which is ardship－who stated that， 0.8 he took oreat is Lordsnip，Who sta hat，as ho took great presiding in his private capacity as a friend to the movement，－dwelt on the excellent arrange－ ments provided by Parlinment to stimulate thrift，which are administered by the Post－office， and particularly on the importance of com． mencing to make provision for the futuro when young，and of continuing it regularly．A col． lector of savings under the Post－office regulations is to be appointed，and a branch of the Instal ment Club and Niddlesex Penny Bank has been opened．
A．New City Thoroughfare．－A commnni－ cation has been opened between Charterhonse． strect and Saficon－hill，which latter thoronglifaro had been rendered a cul de sac by the Holborn Falley Improvement Works and the formation of Charterhouse－street；it consists of a flight Charterhouse－street and that of Saffron－hill． This will give convenient access to the valuable property belonging to tho corporation which hes化ween Saffron－hill and the property in Ely－ place，and will also benefit the property on
Saffron－hill．Tho works are，in fact，part of the large scheme of improvements carried out by the corporation in this neighbourhood under the Holbom Valley lmprovement Act，and of which Mr．Haywood is the engineer，and Mossrs．Hill， Keddell，\＆Waldram lave been for the most part contractors．－City Press：
The Proposed Harbonr at Diuggeness． The Bills for this harbour are now before Parlia－ ment，and will，it is to bo hoped，receive careful attention．A corrospondent rightly says，－It is now a good roadstead，formed by nature； not try and improve naturo by making a break－ water，leaving an opening at the point？Ships could then lie in safety from the point to IIythe． Then thero is another important matter．The material for doing this is on the spot，－hnudreds of acres of shingle which could be made into blocks．Ships of all sizes，and at any time of tide，could ride here in safety．It would bo a great boon to the Royal Navy，as well as to the Mercantile Marine，and to the new Channel traffic，being right opposite Boulogne，only twenty－four miles across．
Steam Boiler Explosion，A shocking catastrophe has ocourred at Hartishead，ac－ of a boiler that had neither safety－valve，steam－ gauge，nor any thing to indicate the pressure of steam！There was a severe frost on the previons night，causing the feed－pipe，return－pipe，and steam－pipe to be frozen．The consequence was that，when the boiler fire was lighted，there was no vent，and an explosion cnsued，cansing the almost instant death of a sou of the proprictor of the works，and injury to two others，the wonder being that the disaster was not more fatal．It transpired at the inquest that there are a considerable nnmber of boilers worked on a similar＂principle＂of neglect，and hence the jury in their verdict gave a seasonable piece of adrice on the subject．
Royal Academy of MIusic．－Arrangements re on foot with a view to the removal of the the Royal Alhert Hall．

An Eleanor Cross for Belifax．－A cross is fiortly to he erected in tho recreation－ground at Akroydon，at the sole expense of Col．Akroyd， M．P．，the object being solely that of building a pleasing object with the hope of raising pualio taste in Malifax．The cross for Akroydon is designed by Mr．S．Barber，of this town，the details being suggested from tho crosses at Northampton and Geddington，It will be in four stages，hexagonal in form， 50 ft ，in height， standing upon a base of eight steps，and sur－ mounted by a low stono wall with wronght－lion保解 Birnie Philip，of Lozdon．The work is to be commenced at an early date．
Hotel de Ville，Paris．－At this moment pwards of sixty plans for the reconstruction of the Hotel de Fillo are on exhihition at the Palais d＇ludustric．According to tho terms of the competition，the architects were to preserve as mach as possihle the original façade of Boc． cadore，which formed the great beauty of the building．Out of the whole number，bowever， only fourtcen have sufficiently preserved the façade to be entitled to consideration．The popular choice seeras to have awarded the palm to M．Magne，the architect of the Vaudeville． Those by M．Ballu，M．Crepinet，M．Búnard， M．Esculior，M．Vaudremer，andothers，are worthy of examination．
The Elooring of Worcester Cathedral．－ A correspondent of the local Herald says，＂Now that the generous gift of Lord Dndey to our cathedral，of a costly paving，is occupying the thoughts of many
permit me to ask
to adopt for the whether it would he possiblo to adopt for the parpose a flooring of wood？I contend that many advantages wonld ensue four the nse of wood．A pattern formed in oak and other woods of various colours would have a rich and hand－ some effect．The chief advantago in my plan would be warmeth．We know how difficult a thing it is to get heat onough to counteract the chill engendered by such a large assemblage of stone．Another advantage would be sound．The effect of music is highly increased by wood．＇
Society of Engineers．－At a meeting of the Society held on Monday evening last，Mr． Jabez Church，president，in the ebair，Mr．W． II．Fox read a paper＂On Continuons Rail－ way Brakes． the conditions which a continuous brake should fulcil， tions as to tho retarding force required to stop a train within a given distance．The author stated thent the elcctric brake，although at pre－ sent in a somerihat experimental stage，never． theless complied with most of the conditions he had named．It was，however，boing forther developed，and by the light of his present ex－ meveloped，he considered it wonld ultiniately prove a．snccess．

Improvement at Leadenhall Market．－ At a meeting of the Court of Common Counci，nt Guildhall，last week，the Lord Mayor preajding， Mr．Rudkin，tho chairman of the Markets Com－ mittee，preserted a report from the comaittee， suhmitting plans and a model for the construction of a poultry－market on the site of Leadenhall meat－mariket，at the estimated cost of 25,0002 ． The project was vigorously canvassed hy various memhers of the Court，and ultimately the motion of Mr．Rudkin was negatived by a majority of Commite，was referred tho whole question， particnlarly as to the valuo of the Corporation property in Leadenhall Market．
Defying a Corporation．－Some time ago he officials of the London and North．Western Railway Company snbmitted to the General Purposes Comenittee of the Preston Local Board plans of stables proposed to be erected at the rere not in conformity with tho requirements of the bye－larrs of tho borough，the plans were at nce rejected．Notwithstanding this，the stables have been erected upon the site named，and according to the very plans rejected by the com－ mittee．The toma clerk has received instinctions to proceed against the company in
as he may think most expedient．
Generous．－Professor Tyndall has appro． priated the profits of his lectures in tund assist the scientific studies of jonng Americans in Europe．

VOL. XXXI.-No. 1571.

Early. French Goldsmiths' Work, Trinkets, Vestments, and Weapons.

INCE the terrible siege of Paris, M. Viollet.le.Duc has iesued four moro parts of his voluminous Diction. nacire Raisonnée du Mobi. lier Français,?de l'Epoque Carlovingienne d̀ la Renaissance.
It is now about fifteen years since the first volume of this important French work was pub. lished. The first instalwent, as we informed our readers at the time, was apportioned to furnitnro. The old French chateanx, musenmes, sacristies, and mannseripts were ransacked and scratinised to show us the aneient honsehold farniture of the old kings, nobles, and bur. gesses of France in the eleventh, twelfth, thirteenth, and fourteenth centuries, successively; and a most interest ing array of facts was gronped together, Which, hearing in mind the close associa tion of France and England in those old timeß
is of as mnch consequence to the English antiguary as to his Contincntal neighboar After an interval of ten years, the first fascicule of a second volume appeared, in which ancient French utensils wero illustrated and described. We gave our rcaders some account of the con. tents of this part of the worls also. The crystal and silver and gold veesels that stood upon the dressoirs, and formed the troasures of princes, figured in this colleetion, among other costly ohjects. Miniature ships, equipped with sails and crew completo, that stood upon the banquet-tables, and contained spices and condi. ments; the candelahra; the drageoirs to hold sweetments ; lamps that swung down over the centres of beds to keep away evil spirits a night ; lantorns; quoer snuffers, like birds, that opened their bcaks to snuff off the wick that required removal; mirrors, when they were so small they might have been carried in the pockot; plates, when they wore so rare as to bo given as love-gifts; sqrirts, when thoy were used to cxtiuguish fires; fans; spoons, beforo any one thought of placing the twelve apostles on the handles; and about 160 varieties of ohjects of a similar clabs, gave page after page nearly equal interest.
After two more years, the second volume was completed by two more fascicules, containing treatises on goldsmiths' wares, musical instru. ments, games, pastimes, aud tools. The specimens of goldsmiths' work hegin with what is loft of the famous golden retable said to have belonged to the oratory of Charlemagne. This is the ornament which formed the summit of it, consisting of an aiguemamine intaglio, repre. senting Julia, the daughter of Titus, surrounded by nine large sapphires, framed in gold, seven of Which are surmounted by largo pearls, fixed in their places hy golden cups affized to the gold mounting of the sapphires. The golden chalice of St. Remi, which from Rheims passed to the
treasury of St. Denis, and was thence transferred in 1796, to the National Lilirary, and since then deposited in the treasury of Rheims Cathedral, is the next object npon which the peculiaritics of early workmanship are pointed out. Some antiquaries suppose that all early goldwork of worth is of Byzantine origin; but M. Le Dao thinks that even before the time of Charlemagne there were goldsmiths in the Westeru world who wero acquainted with the art of soldering as well as of casting, and whose work was of a high ordor. The cnd of a belt found in an old battle. field, near Poictiers, and snpposed to have belonged to one of the chiefs beaten by Charles Martel ; the reliquary of St. Siste and St. Sinice, in the treasury at Rheims; a ciboire, or cup and cover, from Sens Cathedral; a twelfth-century Pascal candlestick, are further selections of carly work shown us. M. Le Duc points ont the prevalence of granulated threads of gold soldered to a fonndation hy means of fligranes of solder in twelfth-century work; and the gradaal enrich. ment which took place in the thirteenth eentury, when the goldsmiths, trying to give more light. ness and brilliancy to their work, raised their coils of grannlated threads from the foundation and soldered several of them together to form spiral designs. Our British Museum, we may remark, is rich in early work of these times The ancient process of enamelling upon metals, translucid and opaqne, is well described. It is illustrated by a Merovingian hnckle and elasp, a Byzantino box, the Rheims chalicc, and the snperh enamel of Geoffrey Plantagenet, now in the museum at Mans. This last work is one of the largest known. It represents Geoffros standing up, holding a sword in his right hand, and a large shiold, charged with four leopards, in his left. On his head is a pointed cap showing a lion passant $d^{2}$ or on azare; and he is robed in a long vestment, like that which nobles wore in the middle of the twolfth century. The figuro stands ont of a background divided into parts by a green open pattern, in every compart. ment of which aro hine and white floworets upon a gold ground. Green, blue, and whito are so managed as to give a very harmonious richness to this work; and M. Le Duc contends that a performance of this extent and perfection conld not be the result of an industry then in its infancy. Another spccimen of enamel.work is from the tomb of Prince John, the son of St. Louis. Tho workmanship of the Limoges eunmellers is representod by the oiboire $d^{\prime}$ Alpais, now in tho Louvre, round the lip of which runs tho legend,--" Magister: G: Alpais me fecit: Lemovicaram." Another beautiful object shown us in its full colours is a crozier of copper, gilded and enamelled, belonging to Sens. Dwelling npon the heauty of these worke, M. Le Duc remarks,-"All cannot possess silver plate, bijoux of gold, ornamented with precions stones, furnitures of precious woods, and vestments of velvet ; but all, however modest their fortune, an possess objects invested with distinguished forms; for art is independent of luxury, and as free of it as a master is of his slavo; and an carthen pot by its aid may be mado more precions than an ugly vase of rock crystal, monnted in gold."
We may look upon the archoology of tools as almost a new shoot from the great tree of antiquarian knowledge; for although pre-bistoric studies have brought stone, flint, and bone tools into prominent notice, those of the Middle Ages have been bnt little mentioned. For information concerning them our anthor has been obliged to turn to ancient MSS., stained glass, tapestry, carved woodwork, and sculptnred stouework. We have collectors of many kinds of "uncon. sidered trifles" nowadays, but collectors of tools, otherwiso than pre-historic, are rare. M. Le Duc has a fow examples in his own possession. He begins his list with the auge, or receptable to hold mortar and plaster. The most ancient
monuments show that the masons of yore carried this upon their heads, and that they formed it ont of a length of the trunk of a tree, halved and hollowed out: it was used eveu down to the fifteenth- ccutury. The accompanying trowel does rot differ in shape from that in nse. The auge is not to be confused with the hod, which is to he seen, also, on oarly basreliefs, furnished with two short handles, instead of one long one. Batons, clubs, or sticks, for which there are twenty-one different uames in old French, have as many forms and purposes as they have designations. Brooms were always as wo have them now. Spades, biches, shown in the tapestry of St. Médard de Paxis, are made of wood, with the shovel protceted with iron on both sides from the shoulder downwards in one case, and from halfway down the side in another. Those in nso in tho thirteenth century were construoted on such a clever principle that II. Le Duc cannot see why that particular make was ever ahandoned. A figure from this same tapestry shows a carpenter with his tools. A hatchet rests on his shomlder, a coil of rope is wonnd round and round his neck, and from his leathern belt hangs a hatchet, a pair of compasses, a large purse, an axe, and a twy.bill. If it were not for his trunk-hose and the shape of the axe, we should see no great difference between hixn and any carpenter busy with his work in the present doy. Slakspeare opens his play of Julius Crosar with a remark from Flavins to the rabble of citizens present, to the effect that being mechanical they ought not to walk upon a labonring day without the signs of their professions, and tarning to one ho asks, "Speak, What trade art thon?" When the man replies he is a carpenter, Marcellus chimes in with, "Where is thy leatheru apron and thy rule $?$ " Neither of these signs of profession appears in the carpentor here delineated. One of the stalls in the church of Montréale (Yonne), of fifteenth.century worlmanship, shows another member of the same eraft at work. He has a piece of wood before him on his bench, held by a hold-fast (ralet), into which he is inserting a loug.handled gouge. Behind him are several chisele suspended to the walls, an auger, and a hatchet, nono of which aro very different from those in present ase. M. Le Duc, however, shows us a pair of callipers in whioh thero is a very material difference in the form. The legs first cross oach other and then bow out in reversed curves. These are to be seen in basreliefs on the stalls in Poictiers Cathedral, in Chartres Cathedral, and in vignettes of tho thirteenth and fourteenth centuries. We are also shown two smiths at work. Both wear leathern aprons, and on the head of one is a felt cap, which projects over his face and depende over his ears, so as to protect them from sparks and the intense heat of the furnace. Smiths' work was in every-day requisition in the Middle Ages, eithor in the armoury or workshop, and great faeility was arrived at in the managernent of ron. Anvils were made of varions forms, some flat and square, somo with inclined faces, and some had one or two horizontal eones projecting from them snitable for rounding pieces of iron. Passing on to the plano (rabot), M. Le Duc has not found any examples of this tool figured before the middle of the fifteenth century, although, from the ovidence of work, it must have been in use at a much earlier date. The rabot of the fifteenth contury is furnished with a vertical haudle as a prow, which facilitates the pushing, or moving of it. It has not, like ours of to-day, its two sides parallel, but bowed, so as to sit better on the wood to be planed. Tho planes were made of pear. tree wood, of elm, of maple, and fashioned with great care. Tho long plane (vartope) employed to dress very long and slender mouldings does not appear fignred on moungents before the sisteenth contury.
The long leisure, the long winters, the distances,
the bad seasons, and bud roads made many a dull honr in the old chateaus. When there was no warfare going on, there remained hut the chasc, fetos, jousts, tourvaments, and assemblies to pass away the time; and it oftex happened that a of his family without receiving news of the world withont for a long period. When a tronbadour, or a pilgrim, or a messenger arrived it was an evont; he was entertained in the best manner, and if he amused the chatelnin ever so little he was loaded with presents to indnce him to remain or to return. A few remarks showing the un. lettered haron of the Midale Ages thns isolated for at least six months in the year sorves M. Lic Due as a prelude to the diversions of old times. His acconnt of tournaments, plan of the lists, illustrations of knightly armour and weapons, illustrations of knightly armour and weapons, the caparisons of horses, presentation of prizes, are as intcresting as those relating to the chase
with its dogs and hawks, or the dance with its wlowers, suumersaults, sword. dances, bell Howers, suumersaults, sword. dances, bell.
dances, and other dances of which our country. dances, and other dances of which our country.
dances are bnt traditions. But we pass over dances are bnt traditions. But we pass over our scope.
The third volame, which is appropriated to jewelry, gamments, and articles of the toilet, commences with the clasp, agrafe, or fastming, by means of which the two sides of a garment could be united on the wearer. At least a hundred differont forms of these articles have been found. The tombs of the German chiefs, who invaded Gaul in the fifth century, have furnished several, both in silfer and gold. A round silver clasp, composed of two plates riveted togother with an intervening horder an inch wide, and ornamented with coloured glass, arranged in a pattern, discovered at Odratzheim, near Stras nonrg, in atomb, is shown. An agrafe, with the name of Christ ongraved upon it, found in a Merovingian cemetery, is the subject of another illustration. And there are ten other examples fgured. These clasps were always worn upon
the right shoulder, to allow the right arm to the right shoulder, to allow the right arm to
he frce hetween the two borders of the mantle. he frce hetween the two borders of the mantle.
As we turn over the pages of the three As we turn over the pages of the three fascicules forming this volume, object after
object arrests the hand. But as we cannot objeot arrests the hand. But as we cannot
enumerate them all, we will pass on till we come to the bags or retionles, that were once almost miversally worn slngg from the helt. In the first place there was the anemonière,
which was a small barg, fastened with knots and clasps, and slung from the waist, to contain small objects in constant use, and money. From the twelth centnry to the fourteenth, this was an indispensable article of the duily raiment of hoth sexes, either at home or abroad. The earliest form is that of a small square bag, with two cords to close it with, and another to open it and suspend it with. There are three ancient The earliest, which appears to Troyes Cathedral. The earliest, which appeers to date from the end of the twelfth century, is emhroidered by hand, upon canvass, in bright colours and gold, with centre of each of which is a hird, animal, or con. ventional flower. It is bell-shaped. It opens in the centre of one side, whore the aperturo strengtbened by an iron ring. All ronnd are small balls and tasscls of gold thread. This is illustrated. The second armoniere is supposed to have helonged to Henri le Liberal; the third is attributed to Comte Thibatt IV.; botb are tine suhjects. The last has the additional in terest of heing associated with the sentiment Count Thibaut entertained for Queen Blanche. On the upper part of this aumoniere there is omhroidered a lady sleeping on a bank of green tnrf, nuder the branches of an oak, whilst a winged youth is admiring her. On the lower part two ladics are dividing a heart that is on a hatchet, issues from w eloud, and, armed with at the sitw with which they are conducting their operation. The allegory is of douhtful taste, M. Le Duc admite, but quite in keeping with the of the fignres is most admirable. Many had clasps, like the bags in use by exenrsionists and others at the present day. Then there wore purses for coins and relics, which, instead of it, and kopt safely in that position by strap it, and sopt sofely in that position by straps by the neck, as it were, and in sight, exprsing the mode of operations of thicves, which led to the employment of the term "cut-pnrses" for them. Tbere was still another kind of

Wag, which was, however, in rise only among persons of rank or fortune. This was destined posc of carrying it of devotions, for the pur. pose of carrying it to church. It was fur or from the waist, and sling from the arm, were made longer than was required for a book were made longer than was required for a book
only, or of a scabbard shape, when they were only, or of a scabbard shape, when they were
folcd round the arm, or ticd to it hy a knot. folcicd round the arm, or tied to it hy a knot. pearls and precious stones. The practice of pearls and precious stones. The practice of
carrying les lives d'heures in suspended receptacles ceased at the end of the fifteenth century. After that date, a page carried the century. Aftcr that date, a page carried the century gontlefolks begin to carry their books in their hands, or in their pockets. These liveres d'heures wero considered indispensable as an accessory to tho toilet of ladies of good families in the fourteenth century. They are mentioned as necessary expenses by the poet
Eustacho Deschamps, in Le Mirour de Mariage. Another kind of bag, onlled an escarcelle, was reserved for messengers and pilgrims. This was furnished with a knife or dagger in a scahbard, which was slipped through a strap or slit made to receive it. A largo escarcelle, without a knife, called a gibeciate, was carried by
travellers, whether nohles or peasants, snspended travelers, whether nohles or peasants, snspended
by thoir sides. These were as richly decorated by thoir sides. These were as richly decorated
as the rest, occasionally. One is thus entered as the rest, occasionally. One is thus entered
in the inventory of Charles V.:- Une gibeciere a perles sur champ verneil a trefles, a troys fleur de lys." After our eyes have feasted upon the charming illustrations of other ohjects of the toilette, upon fragments of the alh and chasuhle of Thomas iे Bocket, a sample of the stuff fonnd in the tomh of Charlemagne, and a dozen other specimens of the "precions staffe" made of sills and gold in old times, given in chromolitho. graphs, we come to the close of the third volume, having only arrived, alphabetically, at the letter H .
The fourtly voltme, accordingly, proceeds with tho jarretièe, with the devices and mottoes em broidered upon it, including that upon the garter of the order created by our Edward III., Honi soit qui mal y pense. The fine gentlemen of the reigns of Charles VI. and Charles VII. wore, embroidered upon their garters, a device or cipher of some lady intermingled with pearls and jewels. M. LLe Duc shows that whether trunk.hose or short-stockings were worn, these articles were nsed from a very early time. They are shown as worn in the Bayeux tapestry. Passing on to ment of jewels.
Tho populations of Gaul, he says, have alwaye manifosted a pronounced taste for ornaments in gold and silver, and for gaudy colours. The instead of stilling this love of jewels in the West, served, on the coutrary, to develope it, aud military vestments and arms, were ornamented with golden bijoux, which, although barbarian in point of fabrication, were not less of a great frequent intercourse of the West with Byzance spread over Italy and Gaul numbers of bijoux, the fahrication of which, together with those made in the West, acquired a degree of remark. able perfection. With the thirteonth century wherefore, it is difficult to explain; hnt, 2.5 in thirteenth-century architecture, simplicity, sobriety, if not austerity, hecame the order of the diay* Only the high clergy continued to woar jewels on their vcstments. St. Louis did not encourage the gentlemen of his court to appear affected the greatest simplicity in fis and be raiment. But in the fourteenth century, notwithstanding sumptuary edicts, the nolility returned to their passion for jewelry, and, nuder Charles V. and Charles VI., indulged their luxu rions taste to a scandalons extent. The misfortuncs of the commencement of the fifteenth cen. tury repressed the exaggerations of the fashion for a time; hut this form of luxury reigned brilliantly again under Charles VII., Louis XI., Charles VIII, and Louis XII. "Precious stuffs" were, in very ancient times, prodnced in the were, in very ancient times, prodnced in the
East, and the crusades and the traffic of the Venetians nltimately caused their produotion in the West. These rich materials were literally precions, heing gold and silk tissues with pearls and precious stones interswoven with them. There mingled with pearls of Oriental fase tissues mingled with pearls of Oriental fahrication,
turies; and the monnments of this period also tell of their oxtensive uso by the French nobility Borderings with pearls, clasps of large dimen sions and of extreme richness, bnckles, cinctnres coronets, earrings, and cassolettes, were further vehicles of rich ornamentation, all of which parthe twelfth ceutury. After this the mida tion of Eastern art ceased, and a Western charactor wastern art ceased, and a Western character was given to fabrics and bijous, which continued to produce jewelled work through all contimued to produce jewelled work through all this time, and in the sisteenth century, when England England and Germany, the veretians mate numbers of brooches, pendants, ear-riugs, cha telaines, cinctures, in the new tudcsque taste, thus realising great riches by their power of Their talent faselves to fuctuations of fastion, Their talent for assimilation, and perfection of exccution, quite excuses, in M. Le Dac's eyes, the drawback of connterroitin. Their power of Imitation, be adds, has been inherited by the Veretians of the present day; for, just as amateurs of antiquities can always find plenty to purchase at Rome and Naples, so in Venice collectors of ancient jewelry can be suited with Nuremhnrg bijnux of equal heanty to those made in the days of yore, and at a much less cost.
Some of the modes of using jewels once in vogne are no longer employed. Before the change that ocourred in the latter part of the twelfth century, pendants were worn to circlets and coronets that hung down upon the hair and descended to the shoulders. Under the reign of King Jean, gentlemen began to carry jowels of great value upon their vestments. They wore jewvelled helts upon their hips which were worth fabulous prices. About the commencement of the rign of Charles V., they lowered theso jewelled cinctures till they were evon with the edge of their npper garment, or cotte hardie, to which they were attached hy agrofes. Their richly-emhroidered capes with hoods to them were made to open upon the right shoulder, Where they were fastened with jewels, much in the same manner as that with which the old Merovingian chuefs clasped their cloaks, only with mous callars of ornamcnt. chains, dames, were covered with bijoux. Noble dames also wore poctoral ornaments descending from their throats almost to their knees. When the passion and fashion for jewels was at its height many of the most ancient shrines which were rich in antique cameos and intaglios were stripped. Ahbots and bishops bonght the good graces of the neighbouring seigneurs with these nceeptable presents. So many and minute were the attempt to follew snrvey of them on this occasion.
We will turn over the pages describing and illustrating the numerons articles of raiment, till we come to the mantle. This is a garment that held a high place among vestments in the Midate Ages. It belonged particnlarly to the wornty, and under the Merovingians was only founded we tominart race. It must nouberich were worn by all classes. The mantle, and tho mamer in which it was worn, was a mork of nohility which was not effaced till the end of the fonrteenth century. The Greek manuscripts show square and semicircular mantles, both fastened on the right shoulder, as worn by the Eastern emperors and great persons of both sexes. The square form appears to have heen worn on ceremonial occasions by the Merovingian and Carlovingian kings in imitation of the Eastern emperors ; hut an ancient mosaic of Saintein a short in Rome, shows Charlemagne hahited fastened upon the right shouldor, and corered by a sort of pezterine. The semicircnlar form is also seen npon the shonlders of kings and gueens in the western portail of Chartres Cathedral and npon those of Notre D (1I40) These arly mantles were excessirely (inh . These oarly mankes wero ezcessively bordered with jowels, and down the left side near the slope made for the neck was a parallelogram of a still richer material. Illustrations of many of them are given, hoth spread ont, that we may see the exact figure of them, and falling from the portly and knightly shoulders of princes and nohles. One of Charlemagne's nobles leads this superb procession of mantles. He is followed by a personage weaning a circular mantle, not semi-
circular, which is fastened on his breast. This
figure is taken from a tenth.century manuscript. Then we have early statues from Toulouse and St. Denis, and more figures from manuscript, till we have counted twcnty-one personages all wearing this noble article of dress in various ways. The mantle of one "grande dame" is lined with ernuund by a fermale atiendant, who walks behind (sbeepskin capos worn by the peasantry) ; mirrors to sling from tho cincture or carry in the pocket; to sling from tho cincture or carry in the pocket, handkerchiefs ; mufflers; knots (worn to indicate rows), including that worn by the cbevaliers of the order of Saint.Esprit ard droit Desir, or $d u$ Neetle, which was composed of a loop of gold and another of pearls; gold embroidery, called orfois, when made in thelts or bands to be used as examples ave which upwards of follow each other in rapid succession, and conclude the premier fascicule of the fourth volume.
We are reminded early in tho nest portion of the work that pattens, patins, formed one of the items inventod in the Middle Ages, to meet the
wintry dificulty of the bad state of the roads. wintry difficulty of the bad state of the roads.
They were worn by gentlemen in the fourteenth They were worn by gentlemen in the fourteonth
and fifteenth centuries below their pointed hoots It seems it was always considered bad manners to make a noise with them upon the flagstones in walking; and Martial d'Auvergne, in his "Arrêts d'Amour," interdicts a lover from clat. tering his pattens when he walks in the church to find his mistress. They were formed of wooden soles, more or less thick, kept in their place by two sandals crossed upon the instop. M. Le Duc has, wo note, as much to tell of the peliçon, or pelisse, as of the mantle, and quite as many and various illnstrations of it to sbow. tat wo must pass these, with pernkes, perfumod, be ; toilet-cases, with all their Medimel they secrets; plumes; poulaines, or pointed shoes; pourpoints, or jackets; rochets, or startingpoint of the hlouse ; the sachets, or little bags point of the hlouse; the sachets, or little bags
