 street, the principal entrances being from Higgin. street, the principal entrances being from Higgin. English strlo, of brick, with polished stone facings. The entrance will be by two gable doors, the arches over which will be supported by Corinthian pillarg, with capitals. The ex19 ft . 19 ft , and 83 ft . Prom floor to ceiling, 54 ft . to the ridge, and $61 . \mathrm{ft}$. to the top of the terminal on the spires. A galery will run round the
interior of the building, which will be fitted up with opeu stalls of read deal, providing sitting accommodation for about 700 people. The cail ing wil be divided into hev compartments, having three ornamental rentiators, encircled
by cornices in each; tho whole, it is cexpected, by cornices in each; tho whole, it is cxpected,
will be completed at a cost of 2,3002 ., of which sum about 5001. have so far been subscribed. Mr. James Kerridge, of Wisbeach, is the architect, the buildcrs being Messis. Hammond \& Burgess, of Macclestield.
Stainlond.-Tho new Independent Chapel at Holywell Grecn, by Messrs. J. Shav \& Sons, is now approaching completion. The spire, which reaches an altitude of orer 120 ft ,, is now ready for the vane and finial, and the high-pitcled roof is ready for the placing of the ridge-tiles. Most of the carving on the exterior bas beeu finished, and the workmen are now engaged upon that in the interior. Mcssrs. Walker, Emly, \& Beales, of Nowcastlo, are the contractors for into portion of the work. The interior is divided into nave witb aisles, and an organ recoss of five bays. All the hafte are of polished granite with carved capitals. All the windows are to be filled with coloured grained glass, the great five. light one being stained. The tower, which is in three stages, has a clock-dial, and over that deeply-recessed bolfry-windows, with carred mason has been Mr. Edwards, and the building has been constrnoted of local stone. The puluit will be of Caen stone, with polished shafts serpentine marble, and carved capitals. arge organ

## vided for it.

and.-The corncr-stone of a new ohapel achool for the Primitive Methodists at Hunslet has been laid. The now baildine, which s commenced in St. Joseph-strect, Hunslet, is Waterloo-road, which prill be sold, The ontive Waterloo-road, which will bo sold. The ontire cost of the new chapel and school, with a bonse or minister atlacbed, is eationted to be 5,200., promised or obtained. The chapel and school
will be orected from designs prepared by Messr fohn Kirk \& Sons, architects, Huddersfield an Dewsbury. The bnsement floor will bo th sehooroom, 51 ft . square, and there will
attached an infants' elass-room, two small olas rooms, and kitohen. The ground- foor will cor
rond ooms, and kitohen. The ground- Hoor will co ist of large and small vestries, also the ma body of the chapel, 68 ft . by 51 ft . The galle will extend ronud the chnpel, supported on orn mental cast-iron columns, with the gallery fro: noulded and decorated. There will be seatir accommodation for 900 persons. Tbe whole ee pewing and other woodnork is to be of $r$ deal, stained and varnished. The chapel w be lighted by means of ornamental sunligh nspended from the cening, and will be warm with bot air. The style of architecture to 1 adopted is Italian, freely troated, the princip ront being towards Jack-lane. The whole he building will be construoted of brick, wit Gipton ashlar dressings.
Luddenden Foot. - A new Baptist Cbapel is be built at Brearley, from plans by Messr Eorsfall, Wardle, \& Patchett. It will be in th Lombardic style of architecture. The site close to the turnpike-road, and the princip: font gives an entrauce, flanked on elin rco cur-beaded wizdows. in the head tracery. At each aido of the chap re six windows. In the interior there is a entrance vestibule ; and the chapel, which wi ave on open by 40 ft . broad. There will bo a rostrum, wit the baptistery and communion in front. circular arch opens into the organ reces Yestries are on each side of the organ. In th vear of the clapel are schools, -that for boys being 26 ft . by 20 ft ., and for the girl. 30 ft . by 13 ft

## SCHOOL. BUILDING NEWS

Linatey (Hudtersgietc). - The foundation-ston Mothocisit sunday-school, belonging to Zio Houst New Connexion Chapel, Lindtey, ha chapel, and was purchased and opposite Mr. Wm. Sylies purchased and presented owards. Sykes, jnu., besides a liberal sur esion is to crection of the builarig whape The committee strict keeping with the chape architect of the chapl Mr. Woodhonso, Bolton. The rarious works required for the ne building bave been contracted for, and th foundations havo beon dug.

STAINED GLASS
Crickhowetl Church.-A donble lancet windos has been recoutly placed in the south transep of this church, in memory of the Misses Katham of Crickhowell. The design is taken from th 35 th and 36 th verses of the 25 th chapter 0 St. Matthew. On the small rosette, at the to
centre are represented Faith, Hope, and Charit) centre, are represented Faith, Hope, and Charit,
by their emblems ; beneath, on a frizzled back ground, are four ; beneath, on a grizzled back to the Hungry" "Drink to the Thirsty, "Clothing to the Nake", and "Visiting th Sick." The artist was Mr. Chaules Gibbs, London. The stonework was re-built by Mr Owen, of Crickhowell.
St. Mary's, Lichfield.-Two other of the lights dbe ons window of chis oburoh have recont.? ect is illustrative of the "Crucifixion," and the ghts just added contain representations of the two thieves on the cross. Above the figures or the crosse are their guardian angele, the face o: the one beaming with joy, that of the othe clouded from viow: and whilst tho colonrec background employed is the same in both cases the one is broken us by the introduction of passion-flowers, the other by briars and thistles The enbject in the lower part of the window is the "Last Sapper." Threp bos of the areading formino the rerados hay angs of hile arcaling oil- paintines on shate plete will illustrate the " Ad srajion of the Nam." The window wes exeanted by Clayton \& Bell and the paintings by Bnrlisom \& Grylls. Three aud the paintings by Jnrisom d Gryis. Chree added to this clurch. Iu the noth aislo is one to the memory of the late Mr. Webb, the subject to the memory of the "ate nr. Webb, he suject end, containing the fimures of Christ, the Virgin Mary, and St. John the Baptist, and also illus-
ating "The Presentation," "Cbrist blessing the Children," and "Christ's Baptism." In the late Rer. Hastinge Gordon Ma A e subject is treated in so limited a manner, corking to the Stafordshive Adwertiser, as $t$ ake the window somewhat insignificant. Sl. Canice's Cathedral, Kilkenny.-A stained. iss window has been erected in this cathedral dur the superintendence of Mr. Holland, o of firm of Messrs. Holland, Son, \& Holt, War. ch. The central light shows two subjects,
the Cood Shepherd," and "Feed my Sheep." the two other lancets, six of tho miracles are picted. A scroll-work surrounds these deens ; and the medallions at the top and bottom each lancet, and between each of the prinoipal bjects, represent heads of the Apostles. The
دdow is the gift of Colonel the Right Hon. F. Tighe St. Giles's, Northampton, - A memorial window s been placed in the west window of the sout le of this church, by Mr. Brooks Gates, to the mory of his father and mother. The ground. rrk and shading of this window are of a much inter character than those of the others in the lurch, and tbo glass is rather a resemblance of cient than modorn work. Underneath canopies ; the Annnciation, the Nativity, and the Wise -n presenting gifts to the Infant Jesus, each presentation being overshadowed with angels. e snaller lights of the tracery.work are filled with angele carrying scrolls. It is from the rks of Mr. Powell, Whitefriars, London, the ne maker having also supplied the large west adow, and the four coloured windows of the ith aisle.
St. Wilfred's, Kibworth.-A new stained.glass adow lias just been placed in the south aisle this eburch, making the seventh that has zn put in. The window has been desigued London, the same firm who were the artists London, the same firm who were the artists
the large east window. The subject of 3 present window is the raising of Jairus's pghter, and is to correspond with tho other
racles of "raising from the dead" in the cacles of "raising from the dead" in the
th aisle. The window is divided into three npariments. In the centre light is our
mpar npartments. In the centre light is our
viour taking tho maiden hy the hand, and viour taking tbo maiden hy the hand, and
sing her from the bed. In the right coultinent are the three apostles admitted to Wess the miracle; in the left, the parents.
two of the quatrefoils in the head of the fdow are angels witb scrolls. This window is gift of Mr. John Marriott, in memory of his eestors and family, long conuected with the
ish. Thero is said to be a prospect of one, if two, new windows being presented to the th aisle of the church.

?ublic Parks.-A park for the nse of the abitants of Ashtor-under-Lyne, Stalybridg 1 neighbourhood, bas been opened hy the Ear Stanford and Warrington, who, on the undor nding that the people would subscribe 10,0002 .,
de a gift of 35 acres, valued at over 12,0002 de a gift of 35 acres, valued at over $12,000 l$., he park committee, tbus making a place of reation for the people occupying over 50 acres ground. Besides the park there is a mansion
a musenm and library, and there are also nnasinms, bowling-green, large lakes and terfalls.-Through the euergy and enterse of Mr. C. Gardiner, the densely-populated ghbourhoods of Tudhoe Grange and Spenny. or have been provided with a park, npon a all scale. The new grounds are about eight es in extent, and originally formed a portion Squire Salvin's estate. The park is within ugh still in the rough, the new park has been nally iuaugurated.

National Training School of Cookery.A meeting of promoters of the establishment of mational training scbool of cookery on a permanent basis, has been held, by permission of the Marquis of Westminster, at Crosvenor
Honse. There was a large and influential conse. There was a large and influential attendance, including her Royal Highness the Princess Lowise and Lady Franklin. The Mar. quis of Westminster presided. Mr. Henry Cole, C.B., said the meeting had arisen ont of what had taken place at tbe International Exhibition School of Cookery, of which be gave details. He was authorised by her Majesty's commissioners to say tbat they were quito disposed to try the experiment on the present premises, which wonld save them taxes, \&c., for the present was estimated tbat the expenses would be 100 l. per week. Tbere must he a lecturer, instructors, and servants, and the provisions had also to be fonnd. Ile proposed that the meeting agreed generally with the observations of the committee, and desired to see a national school of cookery established on the basis of such proposition. The Hon. F. Leveson-Gower seconded the resolntion. Mr. J. McCregor, of Rob Roy canoe fame, supported tho resolution. He did not think the proposed school wonld fail. From a school they wight riso to a collego. Tbey abould endea rour to make the school self-supporting; but that should not prevent them from boping tbat money would bo sent in towards the expenses hefore the school beeamo self-supporting. The resolution was carried nnanimously, and a pro visional committee was formed to take the neces. sary measures for establishing the scbool by means of shares, donations, and guarantees the head Cole read the names of the committec, at The princinal are included. training schools and acbool hoard are included. The present committce of the
School of Cookery at the International Exhi. bition was also requested to act in a similar capacity.
From New Yorle to England in Sixty Hours.-It seoms that the wealthy proprietors of the principal New York joninals are never tired of spending money in sensational and unique enterprises, which, if suecessful, serve as admirahle advertisensents for their papers. The last undertaking of this kind of which we hear is very startling. The proprietors of the New Fork Darly Graphic have entered into a contract with Professor John Wise, a woll. known ac̈ronaut to huild for him a balloon, in which be, his assistant, and six or eight otber persons, are to attempt to cross the Atlantic, with the hope of reaching England or Ireland in sixty honrs from the time of their departure. The Graphic is to pay for the coustruction of the balloon, and all now eoing on, and the fout. The work upon it is taken on or about the 20th of next mont anderwhole cost of the undertaking will be the 2,000t. There are to botwo balloons, These will give a lifting power of $15,900 \mathrm{lb}$., a net carrying power of $9,500 \mathrm{lh}$., and of disposable hallast $7,500 \mathrm{lb}$. Tho balloons, it is calculated, will lose by exosmose of gas abont 15 lb . per hour, and this would keep them alloat for twenty days; bnt, as a last resort, the balloons will carry beveath them a life-bont, stored with water and

North Oxfordshire Archæological Society. - This society, wbich is now twenty years old, had its annual excursion on the 10 th nst., the place of reudezvous being Hand borough Station. The first place inspected was Mand borongh church. After hreakfast, provided by Dr. and Mrs. Higgs the order was given to march R. W. Fiske, met the party pud condueted thev. through his clureh, which, like that of Hand horongh, has heed westored (by From Northleigh the party wended their Street). the eastern part of the parish, to the way to the River Evenlode, where they saw valley of of a larce Roman villa, withey saw tbe remains ment, constructed over wiu a tesselated pavestill retainincuits over a hypocaust; the bath waker explained that another Poman Mr. EarWaker explained that another Roman villa was discovered near this, about 1713, in the parish of Stonesficld, but that its site is again forgotien. through bis chareb rector condncted the party hrough his chnrcb. At Combe the visitors gain enjoyed tbe courtesy of the incumbent, as the "Ceorgeand Dragon "In visited. A dinner in the "Ceorge and Dragon "Inn, Handborongh, was partaken of by eighteen of the party, wbo thus wound up a pleasant excursion, the weatber
being all that could be wisbed.
A. Secret of the Coal Trade. - Some cmarks upon tbe condition of the household coal trade, and the somewhat singular circumstance that wbile all other sorts of coal bad a tendency to lower rates, bouseholds were persistently advancing in price upon tbe London Coal Exchange, were recently mado by a Now castle paper. A gentleman largely concerned in trade in the county of Durham, and who bas a thorough knowledge of the subject, gives the following explanation:-"Not more coals, I believe, are now sold upon the (London) Coal Exchange than some 50,000 tons montbly or 600,000 annnally. This small proportion of the coals sold on the London Coal Excbange naturally suggests the conclusion that t may he a convenient handle to tho conl owners and coal merchants to keep alive prices as all the remainder go by railway at fixed prices at the pit mouth; and, of course, when any merchant is dealing in quantities five or six times those sold npon the market, he can well afford-it is, indced, an enormous gain to himto give a high price upon an open market for onefith of the quantity he wants, se long as it portion ho has gain upon the remaining large that the prices cannot mucblonger be prevented from coming freely down, ln spite of knavish coal mercbants and coal owners.
The Steam Quarrier.-This is an invention or quarrying and removing blocksof rock, and put into operation by Mr. Sim at his granito quaries, Lochfyneside. Hitherto in conncxion with the system of large blasts of 40,000 to 80,000 tons at one explosion, the innumerahle large pieces of rock got wedged togetber to such an xtent as to render it a work of great diffieulty nd danger to get them moved ont from the mass of rock on tine quarry floor. The quarier has heen applied by Messrs. Napier Brothers, from a modifeation of their patent purchase stcam windlass for the lifting of ships anchors. At tho outer crtremity of the area of the quarry floor the soleplato, occupying a space about 6 ft . square, is bolted down to the solid rock, and the whole uperstrueture abovo this is only, over all, about 9 ft . in length, hy 8 ft . is breadth, and 4 ft . in eight. Steam is admitted into a pair of 9 -inch horizontal cylinders, and by means of a small aviliary dram the chain cables are carried up to any given point on the quarry face. Arriviag here, the chain is attached to the block of stone required, the purchase windlass is then set in motion to heave in the chain, aud, according to est, mored off \& block of granite forty tous in eight with great ease.
Jersey Harbotr Works. We believe tbat tho sanction of Her Majesty in Council has heen received hy the States for the ereetion of La Corbiere lightbonse. The Harbour Committee took upon themselves to anthorise the construc tion of the canseway leading from the mainland out to the roek "La Corbiere," which, for more than one quarter of a mile is composed of granite stones on a faco filled in witb cement conerete. According to the Jersey Times, on the rock itself, a semi-circular roofed shed has been erected to serve as workshops, stores, and places for workmen to sleep in. A site has been levelled for the engine, which bas arrived, and will be fixed in its place next week. The foun dation of the lighthouse tower is cut out of the solid rock, and tho building is expected to be commenced at once, 80 that this longtalked - of and most - usgently. wanted ligbt. house may be expected to be finished in three or fonr months hence, though the lantern and lenses cannot be ready for at lenst six nonths, owing to the delicate and intricate nature of their construction, which are, proportionately, tbe most costly part of the whole. The engineer ight-keeper's dwolling
A New Ventilator.-Captain Wintour, a resident of Bristol, has invented an apparatus, consisting of a metal frame with glass, at each end of a cylinder of gauze wire. The cylinder slides backwards and forwards in a nietal shield, by means of which it can be easily fixed in any window, door, or indeed anywhere. The nventor claims for it that it is specially adapted for the windows of prirate houses, cburcbes, hospitala, and all large buildings; it can also bo fixed in carnages, cabins of sbips, tents, conservatories, and greenhouses. Its aetion is to admit air at the sides of the cylinder only, and remove fonl air simultaneously and mperceptibly witbout the least draught, or admission of dust or insects.

Royal Archæological Institute.-The an anal congress of the Royal Archælogical Institute of Great Britain and Ireland, which will be held this year at Exeter, commences on Tuesday, 29th inst., and will occupy up to the following Tuesday, Angust 5. The president of the meeting is the Earl of Devon, and the following are the presidents of sections:-Antiquities, Mr O. Morgan, M.P., F.S.A. Architeoture, Arohdeacon Freeman ; vice.president, Mr. BeresfordHope, M.P., F.S.A. History, Sir John St. Aubyn, M.P. Papers will he read daily on sub. jcots of local and general interest in connection with archwology, and the excursions include, of conrse, Dartmoor, which will he visited under the guidance of Mr. G. W. Ormerod, M.A. F.G.S, Amongst other places to be visited are Totnes Amry Pomeroy, Compton Castle, Ford Abbey, Powderham Castle, \&.c. The objects of interest in the city will he visited under the guidance of Mr. Parker, C.B., Mr. Dymond, F.S.A., and Mr. W. Cotton ; and Mr. Freeman is the appointed guide to the cathedral.
A Remarkable Discovery.-The people of Clevedon are talkiug of a remarkable discovery in their town. They have a public weighbridge This weighbridge was lately tested by an inspector of weights and measures, and found in good order and quite correct. It has since come out, however, that for four years at least this weighing. maohine has heen registering 16 cwt . instcad of 20 cmt . as ton! The mistake, it seems, arose thus. By an arrangement of the machinery, a set of small weights is nsed in weighing,-1 oz, representing 1 cwt . On the 16 oz. weight is marked "one pound." It seems, however, that this weight has been mistaken since the erection of the weighbricge for 1 con
Some of the honseholders have begun to connt np their losses. A corrrespondent of the Bristo Times, in commenting on the circumstance says :-"It would be woll for the public to know something abont their weighbridges: are they worked by a public officer or let to the higkest
bidder ? What sccurity is there for their correctness?"

The Sculptures of the Late John Gibson In reply to Mr, Parker in the Commons, Mr Ayrton stated that no blame attached to the Royal Academy for their not being in a position to exhibit the sculptares and models of the lato Mr. Gibson in a gallery specially provided for them, for the Lioyal Academy several years ago entered into an arrangement with the Oflice of of ans, by which they were to construct a suite of gallerles above Burbngton House, as soon as that building. The Academy, instead of waiting until these bodies shall have transferred themselves to other premises, have at considerable lexies. He expeoted the Academy of the gal a position to exhibit the scnlptures and models when they opened their exhihition in May nert
London and Midalesex Archæological Society.-The annmal meeting of this society was held on Monday evening, at University College, Mr. J. Hall, honorary treasbrer, in the chair. Mr. Brabrook, hon. secretary, read the report, which stated that during the past year society, elevern had memhers had joined the sobicty, clevon had retired, and four had died making the balance of increase ten. Nuch William Tite who had mado valuablo contributions to the illustrations of the antiquities of London and Middlesox; as well as for the late Mr. J. Walker Baily, whose knowledge of archmology and skill as an artist, together with his valuable collection of antiquities, had
use of the society

Opening of an Art-treasures and Industrial Exhibition at Bradford.- The Mayo of Bradford (Mr. M. W. Thompson) has opened the Art-treasures and lndustrial Eshibition at the Mechanics' Institntion, Bradford, the object of which is the liquidation of a debt of $5,000 \mathrm{l}$ still remaining on the building. The exhibition is on a scale of considerable magnitude, including works of art and industry to the number of npwards of a thousand, The collection of oil paintings and water-colours forms the most prominent feature of the exhibition. The first room devoted to such works contains production of local artists to the namber of about fifty Along the walls of some seven or eight other rooms are arranged paintings by masters of the modern English and foreign schools.

Proposed Public Park for Sheffeld.-A a special meeting of the Sheflield Towa Conncil a resolution has been passed to the elleot that i is desiruble for the town council to provide puhlic park for the use of the inhabicants, and committee was appointed to report on the adrisability of purohasing the residenoe and rounds of the late Miss Harison, which are now n the market, for the purpose of a public park These grounds are about elcven acres in extent, and are situnted at the west cnd of the town. it is joined on one side by land belonging to the Fater Company, and the town trustees mas prchase this land also, aud then a park near iifty acres in extent would be provided for the town.

Bank Notes and Stamps by Post.-The following notice, to come into operation on the 1st of August next, has just been issued by command of the Postmaster.General:-" Fith the riew of diminishing the temptation to which servants of the Post. Office are exposed by the practice of sending artioles of valne in unregiscred letters, and in ordor to iive area ecurity to correspondenco of that class, the egralation rospection th vill be extended to ill not duly to for packet questionably contain any of the following questionably contain any of the foliowing articles, viz., hank - notes, postage - stamps,
jewelry, and watches. Any such letters or jewelry, and watches. Any such letters or
packets will, therefore, be suhject to a donhle packets will, therefore,
registration fee of 8 d .

Technical Education.-The Prince of Walos as presided over a conferonce, held at Marl borough House, comprising the representative of the principal City companies. It was convened with a vicw of discussing how the lattor might best promote technical education, in concert with the Commissioners of the Internationa Exhibition. In addition to bis Royal Higbness, he speakers were the Earl of Carnaryon, the Lord Mayor, Alderman Stono, and Mr. Henry Cole. A resolntion, cordially sympathising wit he objects for which the conference had hee called, and promising the sapport and c operation of the City companies, was carried.

## Proposed Conversion of Two City Pasin

 in Dublin into Baths.-The Corporation of Dublin baving advertised for tenders for the naterials of two of the city basins, and the sitc or building purposes, a memerial, signed by si W. Wy.de as chairman, has been presented to the Corporation, reqnesting that the basins bo appro priated as baths for twe people, who groatly requite suoh an establishment. The memorialists helieve that such baths could be made self. supporting. The Corporation have rcferred the subject to their Waterworks Committee to con sider it and report to the CouncilSelby Abbey Churoh Restoration.-The 18 now much dilapidated, and, in order satisfactorily to restoro this ronerable edifice, Sir' G. Gilbert Scott was called in, and has reported to the committee for the restoration of the churoh on the roost im. portant of the works which require immediate attention, together with an estimate of tho cost. What is desired to he at present done is estimated to cost about $12,000 \mathrm{l}$., towards which is hoped liberal subsoriptions will he rendered.

Lpsom.-A new master's honse and extra年modation for pupils has lately been added o the Royal Medical Training College. The building, viz,, Perpendicular Gothic. Mr. Shepperd, of Bermondsey, is the huilder. The gables n pupils' entrance were carved hy Messre Smith \& Finley.

## Annual International Exhibitions,-Hor

 ections of worss of deceased British artists to be formed in connexion with the London Inter. national Exhibition of next year shall consist of works by the following artists:-Painters in Oil . Constable, R. A., died 1837; Augustus Egg, R.A., 1863; David Roberts, R.A., 1864; David Wilkie, R.A., 1841. Painters in Fater Colours . Coney, died 1833; J. S. Cotman, 1842; F. Mackenzie, 1852; S. Pront, 1852; A. Pugio 1832; J. M. W. Turner, R.A. (arcbitectural only), 1851; C. Wild, 1835. Owners of pictures painted by these artists are invited to intimate their willingness to lend them to Her Majesty's Commissionexs.
Mineral Oil in Anstralia, - A prodnct of South Australia, jnst diecovered, promises well,: Kerosene oil has been made trom a substance which exudes from the earth in large quantities at the head of the Coorong. Experiments have been made to test the stulf, which in appearancs resembles asphate, and has been called caoum chouc." A ton of it yields seventy gallons of yarnese, thircy of lubricating oil, and seven of sene will not hurn except through a wick, nntil heated to $152^{\circ}$.

Lord Foughton has accepted the nominas ion as President of the Social Scieuce Congress, Whioh will meet at Norwich on the lst of Octoben Reformatory Section of the Bradford Congress in 1859, and of the Department of Economy and Trade at the meeting of the Congress in London, in 1862. Mr. Douglas, Galton will be President of the Iealkh Department at the Norwich meet. ing.
Utilisation of Slag.-It is stated that a ompany is ahout to be formed to work the patent of Hr: Chas. Wood, at the Tees Worke, Halesbrough. Mr. Wood's process, whion the more intended to use the slag sand for agricultural purposes. The Tees Scoriæe Brick Company for working Mr. Woodward's patent is at work experimenting at clay-lane. some brid, have been turned out.

Damage to Chatham Grun Wharf.-The amage caused hy a lato storm to tho sea.wall of the Chatham Gun Wharf proves to have been so extensive that to reinstate it will cost $15,000 \mathrm{~m}$ or 16,000 . From 9 ft . to 100 ft . of masonry river, a onlvert from Chatham Barraoks having burst while the tide was full, and a great body of water having consequently collected hehind the wall

Sculpture, Painting, and Photography Persia. - Whilst in Paris the shab gave sitings to a sculptor for his bust, and for is portrait in oils and piotography. He spoke of patronising sculpture in Persia, and mado large purcbases of photographic materials 10 his own use. All who have applied for concesThe Shah is understood to have spent $50,000 \mathrm{~h}$ in jewelry and objects of art whilst in Paris.

Bronze Doors.-Messrs, Bunnett \& Co. have ast now completed, for the Provincial Bank of. baenos Ayees, soutl America, some bronzo doors, of a very exceptional character, mean weighing npwards high, 7 ft 1 in, wion these is; ereoted at their New Cross Worlas; Deptford, and might interest some of orr readers.

VOL. XXXI.-No. 1591.

"Modern Gothic Arcliticture."

HAT much of the pre. sent prevailing admira. tion for Gothic arohitec. ture, and almost exclusive practice of $i t$, is due to the influence of a mers fashion of the day, which, like other fashions, will run its course and pass away; that Mediæval architeoture is not, in its ancient or its present revived form, a snfflient exponent of the feeling or of the praotical reqquirements of modern life; that much of the rerived Gothic of this geaeration is mere copyism, rather to be called archmology than architecture; that many of the attempts at "originality" in tho practice of it have resulted in more eccen. tricity and uncouthness, and that no "new stylo" De realised hy direct and protentious striving novelty; these are propositions which will or: ought not, to appear in tho light of new is to readers of the Builder. The publication critical essay," however, by a professed ad. $r$ and practitioner of the Gothic style of tecture, in which this view of the suhject is ated and enforced with considerable literary iy, is a sufficiently marked sigu of the times 11 for somo special notice.
e object of the book is stated by its anthor , "not to examine the claime of superiority its rival styles that have been made for ic architectnre; but, starting with the aption that on the whole popular feeling is 3 favour, and that there is good reason why ould ho so, our purpose will be to inquire it is that the Gothic revival has not produced favonrablo effects on modorn art that might heen looked for; to point out certain mis. 3 in our practice which may account for the re; and to suggest certain remcdies." It is tted, however, that it is necessary to con; in the Erst instanco, the principles on h a style should bo chosen, in order to justify
assunption that wo are right in selecting nio as the style on which to base our modern itecturo. Theso principlos, as laid down in Tackson's pages, are what most persons who thought on the subject at all are familiar gh with. The charactoristios of every dis, and individual style have been the same dones-m" truth, honesty, and simplicity": nse materials in the way naturo lias best them to be used; to consult in every haild-
the habits and seutimeuts of contemporary sty.
these have been the characitics of genuine architecture in every age country." We cannot find our style hy

|simply going over existing styles and selecting what seems the best; bceause all true styles are good in relation to the circninstances and influences ander which they arose, and not (or only partially) otherwise. We cannot succeod by merely adopting and imitating even the indigenous style of our own country in its most porfect epoch, hocanse manners and habits of thonght affect architeoture as well as climate, and these have materially changed with ns. To attempt to revive the art thns would be as ineffective as the attempe to revive "classio" literature hy the Ciceronian Latinists of the Modici period (an attempt which has been more than once reforred to in our own pages as an exact countcrpart of the modern Mediaval revival). What we really need to revire is "the practice of architectnre in Great Britain aocording to true and natural principles," and the application of those prinoiples would result in an architecture that would be Gothic, "hecause modern socicty is nothing but Medioval society grown to matority," but which would differ from Mcdiæval Gothio as mnch as we differ from our forefathers of 600 years ago. As we cannot, however, apply the said prinoiples without having something to apply them to, we must take the indigenous native style, and, by working it in regard to our modern wants and hahits, we slall uncon. sciously evolve and bring to manturity a style of our own, expressive of those wants and habits. These may be new idcas to the nonprofessional publio, to whom Mr. Jackson's book is partly addressed ; they are certainly not new to architects. The point de depart theory, as we may term it, has been urged over and over again, though it has not always been so logically and clearly put as herc; yet we have seen no fruit from it yet. The roason of this, in our anthor's judgment, is, that we havo fallon into an entirely wrong and unreal method of regarding and carrying on architectnral design, and we must get clear of our error in this respect before we can hope to achieve anything of value. It is to affording somo new suggestions in regard to this part of the snhject that the book is mainly directed.
The exrors that lio nearest the surface in the revived practico of Gothic aro dealt with in Chapters II. and III,, under the heads "Formalism and Purism," and "Affectation of Originality" respectively; titles which explain thomselves. What is said in Chapter II, in regard to thoefforts that are made to restore details of Mediaval manner, grotesque carrings, stiff archaio drawings, lead-light windows, \&o., is well put ; in regard to the latter point the distinetion is rightly drawn bctweon the use of small leaded panes morely as a Modirevalism, and the logitimate use of leading in ormamental design, so ta to give the window a decorative treatment. The author, however, liko most writers who attack these abuses of precedent, has a tendency to overdraw his censurc, and to magnify to its utmost the particular fault he wishes to expose. The chapter on the "affectation of originality" is more free from this defect, and is very well written and very sensible; and the distinction bctween the "orginality of vanity," and the "orginality of genius," is a happy one. "A would-bo original anthor or artist works in a violent and extravagant style to covor the commonplace of his matter." Hence, in architecture, arises that which is here jnstly called an "ignoble manner" of building; " mouldings aud chamfers made on purpose to he stopped; projections devised for the sake of corbels and brackets to carry them : the whole plan abounding in queer breaks, starts, and irregularities, without anything unusual iu the requirements of the huilding, or the site, to occasion them." The originality of genius, on the contrary, is distinguished by breadth and simplicity; hnt it is to he remembered, in looking for this, that a very high degree of origiuality is the gift of
but a very few; that the majority of artista
must be content if, withont inventing new styles or new treatment, they can improve a littlo on their predecessors in somo special point, or offer a little hetter or newer combination of old materials. In the struggle after so-called originality, it must bo remombered also that outsiders as well as tho arohitects are to blame, a fact which Mr. Jackson appears to recognise in his perfectly true remark (after describing rather cloquently the beanty of somo of the simpler buildings of the genuine Mcdix. val date) that "there are fow men who pretend to the posscssion of good taste who would listen with patience to their architect if he were to put the design of such a building on paper, and proposo to reproduce it for them in brick, stone, and timher. The ory would be that the design kad nothing in it; that it was bald, plain," \&c. Architectural competitions, where each dranghteman vies with his ncighbour in producing a dashing and brilliant effect, have done much, wo fear, to foster this taste in design ; bnt in jastice to the public might be ohscrved that the plain, unadorned class of huilding referrod to does not look half so well on paper as in execution, especially after it has stood some time, and been weather-staincd and coloured by the hand of nature. The predominant failing, however, of the modern "original" designer lics in his vain attcmpt at a dcsign which shall he "all his own," and owe zothing to naturo or to his predecessors. Tho results we are tolerahly familiar with ; but it may he questioned whether our author does not again overstep the mark in his assertion in rogard to these obtrusive productions, that " the most insipid and lifoless Classic work never approached thom for baboness. Classic at its worst was always "gentcel," bnt perhaps that very word, in the only senso in which it can here he used, is itself ahout tho worst epithet that can be he. stowcd on a bnilding, from an architectural point of viow.
It is in the three remaining chapters, with tho somewhat fanciful titles of "Disloyalty" and "Architecturalism," that most of what may he said to be new in Mr. Jackson's architectnral gospol is to be found. "Disloyalty," we may explain, means the nse of other styles than Gothic in a dilettanto fashion; tho notion of Gothic as a church architecturo, and of its unsuitability to other and more secular classes of huilding. This view, of courso, has been protested against by Gothioists many times ; the novelty in this case lies in the ground on which the protest is made. Eminent practising Gothic architects have exhorted tho use of only the genuine Gothic style, on the ground that it was good enongh for anything; Mr. Jackson makes he same exhortation on the opposite gronnd, that it is not good enough for our present needs, and that only by confining ourselves to the style as left to ns, and applying it to every class of building, can we really hope to find out its weak points and anomalies in regard to modern life, and to dovelop it into a modern style suited to the present day. There is certainly some renson in this view of the matter; and it follows qnite ogically, at any rate, from the premises laid down in the earlior chapters. The best idea in this chapter is the olaim pat forward for the study of Renaissance ornament and figure design as material capable of being worked into, and affording new suggestions for a further development of Gothio. Renaissnnce architeoture is viewed as baving " used Classic forms on Gothic priuciples,"-a view whieh is manifestly incorrect in regard to the relation hetween construction and design in the two styles, but which in regard to design alone may be admitted to have sufficient trath in it to justify in a great measure the suggestion based upon it. "Give the artist liberty to study the great masters of Italian decorative art, and he will no longer paint his
wiudows and walls with the Mediarval grotesque which he now places there; let bim know that he may withont disloyalty to Gothic art take Donatcllo or Michclangeto for his master, and we shall seo no more of thoso conventional figures, passionless as dolls, tiresome with thoir hackneyed draperies and everlastingly repeated poses, which wo kuow so wcll and meet so regularly on overy modern Gothic building:
The argnment carricd on in the two concluding chapters, under the same heading of fuportant question angerested by the the most The sist of this is after a short tiscriminative The gist of this is (after a short discriminative indicating that the former copies principles and not forms in nature, a poll wo bope amatenr design, pure and simple, without the addition of design, pure and simple, without the addition of painting or sculpture (or both) is a dead thing, pursuit nnd study for its own sake: the of special pursuit nud study for its own sake: the inference, in fact, is that it is a kind of thing anybody can o. His is the old doctrine which Mr. Ruskin bas preached before, though in less tolerant and moderate language. The author, indeed, aver tbat he does not anggest the study of painting and seulpture as a modo of cscape from a lifeless arobitceture, "but that by combining the three arts wo shall be most likely to succeed in restoring our dead architecture to life." In our decorative details wo aro to shrink from the nse of "architectural" forms: "let us fly at once to nature, and instead of making window traceries, or whittling and chopping our angles of wood and stone into notehings and scollopings, let us copy what wo know to be real and troe, and our own, not borrowed from other times.

One figure in painting or mosaio really portraying a man or a woman, such as men or women soom to us, is worth whole ibly it is. But this is in reality shifting the ground entirely, and raising the question whether architecture has, or is to have, a separate existence as an art or not. The autbor is somewhat in a pazzlo himself hore, and doos not know exactly what he wants. He is severe (p. 159) on tho architect who spends lis time in laboriously collecting sections of mouldings lirltest peculiarity in the profle of otices th" and this errine mortal is exhorted "t t mode his ornament after the original, and not after the copy," in other words, to and not after But on p. 41 we read that it is inconcoivablo that any person should become even a tolerable architect at the present day who has not earched into the constructiou and ornamenta with every part of their design in detail, "hy actual measurenieut taken witb the utmos nicety and to a hair's breadth." On page 75 e have an eloquent description (before referre to) of the effect of a grand simple building on large scale, with its expanse of wall and mountain of tiled roof above," and "no perso of fceling can fail to admire such a pioture." But when we get to p. 187, the author's mind is changed, and he asks, is the architect to "be atisfied with arranging the plan and designing roughly the mass of the building, and to be responsible only for its effect when sccn a furion off ?" These are somewhat irrecoucilahlo re ffections. Undoubtedly the study of the higher branches of form and expression, as set fort in painting and sculpture, will assist the arch tect in designing ornament of a high class Nevertheless, Lincoln tower, Lichfield spire St. Panl's dome, are all beautiful things for Which we may be thankful, and wbich are $n$ coustant source of pleasure, and yet they are neither scalpture nor painting, hut, in shor architecture." The often-repeated example Michelangelo, paintor, scalptor, and arclitect (not forgotten by our author), is scareely poiut; not only bccause he was an exceptionn enius, bnt because it is admitted on all band ant the construction of his dome is a failure nd that the dome of the "architect" Wren ar snperior in beanty to that of Michelancolo The nnfortunate "architect" is pulled abo nfficientiy jnst at present, it must be padmitted one person wanting him to he a painter and sculptor, another that he ghould he sure an sud so on. This happy uncertainty as to the locus standi mey perhaps warrant the ide the there is (nominally at least) a profession too many somewhere, aud that two mighion to tageously be amalcamated; but, if go advan we take it, the architect and peinter, bation
the architect and engiueer, who should be amal. gamated,-an idea which has been beforo suggested. Our author thinks that wo should turn from an art which is in so melancholy a condialmost howards other arts which are not in so We can only gay that wo read overy dny, in current art-criticisms, lamentations over the uncertain and unsatisfying state of paintiug, and the utter worthlessness of modern sculpture so that opinions, at all events, are not unani mous on this point. But granting it to be a Mr. Jackson says, we do not think a neglect of the constructional side of architecture, and an inroad on tho fields of other arts, will ensure our having any better buildings than at present. Wo designed by "artists," mansions planned and oesigned by "artists," in the more popularsense of tho tcrm, and the result has not been happy and donbt the drawing of the figure is a higher and moro rccondite form of art-r.press:on than the planning and grouping of a building, and in its best forms affects us more intensely ; but for lightly taken up by those who have not special genius for it. There are a great many people already drawing figures who had much hetter not do so, and it would not bo desirable to mul tiply tho numbers. On the other hand, there are those who have a special talent for com-
bining converience and effectiveness of with picturesque appoarance and appropriat ornament in huilding, a power which the study of paiating and scalpturo will not give, and which cxists separately. We certainly do not see why, because this is not 80 purely poetical and ideal an art as the phonetic arts, it should therefore he "daffed asido" as valueless. The combination of convenient planning and grod coustruction with picturesque design, is in itself a most fascinating study, and most arebitect with any love for and ahility in their profession would be very sorry to lose the constructive and practical part of it. In short, we think Mr Jackson has altogether fullen into a mistake in groring architecture proper (the art of expressive building) and wishing to make it into sculpture and painting, which it is not; although which in its turn gircs support and efeet to tho Upon the riev tolen of the foregoing con diderations denends olso the fors question further raised by the authe ta the question thery professin the ye archicolur. He wishe t all, on tho same footing as the profession the , on tho samc footing as the engineering or heotingal profession; but an "arb, on tlie sanuc footing as that of the painter or sculptor. If tho viow Mr. Jackson takes of the nature and end an architect's duties were acceptcd as the correct one, this couclusion as to the professional if as would follow as a matter of corrse. But if, as we know, the architcct does valuable service in overlooking the carrying out of a huilding in its constructive as well as its artistic details, and in providing buildings in which plan and arrangement are so manipulated as to furnish occasion for picturesque effect without sacrificing utility, hat rather in furtherance of the expression of that utility, he is cortainly doing what no one else at present can do, and What requires special ability and special training and practical experience. Painters and sculpors cannot do this; and ongineers, whatever they themsel ves may suppose, cannot eitber, as their works do abuadautly testify; and a proabiliti which gave congonal aimed at being artists in Mr. Jackson's sense of the word, may surely claim a ripht to existence as an independent study, withont the aid of the more strictly imitative arts.
The essay may do good, however, in pro moting more serious thought and attention to an mportant subject, and perhaps in opening the eyes of general readers to some of the singular popular misconceptions on the subject of archi. tecture; and in point of style and tone it is a horoughly well-writteu book, the prodnction of nderrated and cultivated mind. The author nderrates, however, on the whole, the value of which are to follow from the a the results heory which he puta forth for the of the theory which he pute forth for the future pracearnestness in his subject has betrayed him into letting bis feelings run away with him sometimes on the point he happens to be engraged on, with the result of producing contradictory or irreconcilable opinions in oner instances sides those already pointed out.

## WESTERN PCMPING STATION

On Saturdny, the 26th of July, Mr. Williau Newton, Deputy Chairman of the Works ani General Purposes Committee of the Metropolita oard of Works, laid tho foundation stone he Tresteru Pumping Station in tbe Grosvenor ond, opposite the Thames, and a little east o Chelsea Hospital. The works at this station ar to provide pumping power to lift the sewage ant a part of tho rainfall contrihuted by tho district prother estimated at 38,000 gallons per minute height of 18 ft . into the Low Level Sewer chich extends from the Abbey Mills Pumping tation to Pimlico. The requisite power will b obtained from four hich.pressure condensing heam ongines, of an a agregate of 360 horse power; each engino actuating two single-activ? plunger pumps, and the whole heing supplie with stcam form boilers, 6 ft . 0 in. in diameter. The engines wil e arranged in pairs within an engine-hous ronting the Grossonor-road, the boiler-hons being placed at its rear
Supplementary power to be used in casoo accident to the principal engines, or on any similar emergency, will be provided by an addi tional high-pressure non-condensing engine erected in a separate building to the rear of th main buildings, near the canal. The flues froy both sots of boilers will be connected with s chimuey-shaft 172 ft . in height, situate betwest the two buildings.
The intended works further comprise coal aults, sethor-pond, and reservoirs for cou asing water, repairing shops, slores, an welling-house日 for the workmen and the super intendent in oharge of the works, all of whic will be erected on the plot of land situat between the Grosvenor Canal and the railway from the Victoria Station, and containing abou four acres, a part of which was formerly th ite of the Chelsen Waterworks, and th mainder was reclaimed from the river in 185 The contracts for huildings and engines bav aceu taken by Mr. Webster, the former fo 20,955., and the Hor, and th
dopting the official account after an ex adopling the min specißation phe engine-ko bet bact abont 16 ft . from tho frontage line of the road its depth $41 \mathrm{ft}$. , the beight from tho ground ul the springing of the roof 50 ft and to thi idge 71 ft . The style selccted for the building is Italian, of a simplo character, the lower atory engine-room floor, heing faced with store ant rusticated, having a plain splayed and monlder plinth below, and monlad architrave above The entrance (which stands out 3 ft . in ad vance? is the only projection from the general frontage ine. The upper story or beam floor is to be faced with hrick, the dressings of the window being of Portland stone. The wall of this story is to bo pierced on eacb of the two principa? facos with eight windows, with gegmental heade all to the same design, and will be surmounted by a cornice of Portland stone, carrying a cast. iron eaves gutter. Above this will rise a curved Mansard roof, with ornamental" covering of zinc ierced with circular openings for ventilation.
The boiler-house will be situate at the roar of he engine-honse, at a much lower level, the ornice from which the roof springs being level with the sills of the windows of the encine-room. The elevation of this building will be compara-1 cively plain, the whole being rusticated. The chimney-shaft will ho detached, and sitaate to the north-west of the engine-house, and will also be Italian in character. It will be 172 ff . in height above the ground, and 21 ft . in width at the gronnd level, tapcring to ahout 15 ft . under the cornice at the top. Each side will he simply relieved by three recessed panels, arched over a slort distance below tho entahlature which Suffolk bricks, with Portland stone dressings. There is to be all internal circular hrick shat, ft . in diameter, within the outer casing, the intermediate space beine occmpied by a staircase intermediate space being occnpied by a starcaso. extending to the top of tho shafl. Ale lounanformod by a mass of Portland cement concrete, 35 ft square.

The coal-paults will be situate on the west side of tho cngine-house, and placed below the finished surfaces of the gronnd, the floor heing evel with the stokehole of the boiler-honse, into which the coals will be conveyed on a tram.
ree lines of trams will he also laid on the top the paults, and from these the coals will be at down into the vaults through openings in 19 arcled roof. Bereath the ooal-vaults, and amher, to he uscd as a rcservoir for ooudensing ter:
On the western side of the ground, and immeitely to the north of tho chimney-shaft, will the anxiliary engino and boiler honso. The res will he sitnate opposite the workshops, l next the railway, on tho east side of the sund, and betweon them a settling-pond,
iptical on plan, and measuring 142 ft . hy 68 ft , 116 ft . 6 in. dcep. The sides of this poud are 16 ft .6 in . dcep. Tho sides of this pouch are
med of ooncrete fuced with brickwork, the med being of conorete only. The pond will be covered at the top, and divided into two comcovered at the with the ohject of allowing one to thrown out of use for the purpose of heing
aned. Pipes and valrcs will admit the water aned. Pipes and valres will admit the water
m the river, and convey it into the pond, and noe into the roservoir in the engine-house. notion has got ahroad that this is to be used the storage of seware, bat this is altogether oneous.
The workmen's cottage will he situate to the th of the stores and settling.pond, hut the beriatendent's house in the rcar, and to the th-east of the ho
sole of the works.
The sewage from the western districts will be reyed by a circular scwer 6 ft . 9 in. in metcr from the Chelsea Embankment along Grosvenor-road to the front of the engine. anael, one leading to the well under the prinal, and the other to the well under the siliary, engine honsc, each channel being nished with a penstock to direct the soware well under the principal engine-house into o coopartments, and the scwage may he pectod into one or both of them hy the nse of ustocks plared in a chamber in front of the
tre of the huilding. After passing the pencks, the sewage will enter a chamher containan open iron cage, by which any large stences will he intercepted provious to the rage arriving at the pnmps. The iron cage is be lifted hy machinery in a covered passage
ow the surface of the groand, and the con. to there to be emptied into trueks, and carricd ay on the tram, which rung along this passace, lis in communication with the trams already erred to.
The maximum quantity of scwage to he lifted ustimated at 6,000 cabic feet per minute, tho ght of lift heing 18 ft . This work would be formed by three out of the four engines to erected, the fonrth engine heing added to
ws of one heing ont of use for examination or

The promps will deliver the scwage into neh cast-iron culverte, 5 ft . in diameter, and nec into a main, 6 ft .9 in . diamcter, leading the upper or eastern Low Level Sewer alrendy structed, which will convey the sewage to the nping-station at Abbey Mills, to he there
tin lifted into tho High Level or Oatfall ver, and conveyed to Barking Creek. The works are being executed nuder the the MLetropolitan Board of Wor, C.B., Enginecr rick, assistant encind of Works ; and Mr. T. ore us , are engineer. The drawings, now aplete. Tbe shoring in the excavation pre-
are ed for the engine-house, some 60 ft . deep in ground, is an elahorate and massive conuction, putting failuro in that direction quite of tho question.
Ir. Nowton, after loying the foundation-stone, elt upon the scanllness of the death-rate of ndon as compared with that of some of the ge towns as proof of the good government of metropolis, and in conclusion gave wellBazalgette.

Work at the Temple.-The works required separate the Temple Gardens from tho Thames thankment are being executed for the Mctrolitan Board of Works hy Messrs. Gihbs \& Co.. Cheltenham, for about 7,0001. They compris: roncrete foundation, a Portland stono pliuth, ulded, 3 ft . ahove the line of the paring, and orvamental railing, reaching a total heiglt ot ft., mainly of wronght iron. There are twi

## THE VIENNA EXIIBISION.

Is ubserving the objects which surround the visitors to this Exhihition, with the viow of studying art as applied to indastry, I find no lack of suhjects on which to write; but I do find great dificulty in selecting those subjects which it is most important that we consider, for the claims of many manufactures to condideration are aljke pressing. Shall I consider carpets? Perhaps it is well that I do so, for I chall thus bave an opportunity of calling attention to an prepared to face, which is this wo must he prepared to face, which is this, that in this manufacture, as well as in others, we English do not hold that position which we ought as the nation producing a much larger quantity of We are not only beny other country-
We are not only beaten by the beantifnl works from the Eastern nations, which aro here displased in unusual numbers, and of special merit, hut also by a Viennese firm known as
Philip Haas \& Co., for to this firm helones the Philip Haas \& Co., for to this firm helongs the honour of taking the great step which has other efforts made by carpet mannfacturers This firm has a carpet, tho ground of wh'ch is in cloth of gold, and the ornament in a rich silk pile. Tho gold is bept as flat as possihle, and the ground is so thickly covered with ornament as to he in every part protected. The ornament is Arahian in character, and of very excellent design. The draughtsman who prepared the pattern had intimato aequaintance with Eastern art, and it is not too mucb to say that the orna. meut is a well-considered and heautiful expres. kion of Arabian art, alike excellent in the drasp. ing of the forms, the colours of the parts, and the spuit of tho composition. Tho oraament is wrought in thick velvet pile, and thus protects the carpet is in use; and the pile bing when (which is also the case with many of the hest Indian rugs), rives a rich, hright bloominess of effect, with which no other material can vie.
indee lifians make silk carpets, and heautiful nderd some of them are. I have heard that atcmpts have beeu mide in England at their will not stand, nud that silk will not "worts" \&o.,-expressions in which those who are devoid of the necessary ahility seok to shroud their ignorance; and yet here we Lave a carpet new effective, and bcantiful, wrouglit in the most perfect manner, and mocking our hoasted knowledge of the possibilities and impossibilities of manufacture.
This is by no mcans the only instance observable, or even conspicuous, of our taking a second. we are place in refercnce to manufactures in which wnoed, and it is not without some feoling of humiliation that the English section of the Exhibition must be vicwed, as a whole; for in some departments of art-industry we are shamefully behind a nation for which every excnse could now be made. I allude to France. But in most
branches of manufactnre where art is concerned France requires no sympathy, for she holds up her head with a nohleness which is heyond all praise, and leaves us shamefully hehind.
Bat to continue our review of carpets, we may notice that while P. Haas \& Co. make the one great advanco in the manufacture of Eturopcan carpets, they are not hehind in the prowalls of the more ordinary works. On the of works, many of which are of considerahle therit. A Equare carpet on a rich citrine ground bears upon its surface one of the finest pieces of Arabian ormament to bo fomnd in the entiro Exhibition;-an ortamental composition which the student of Eastern art will do well to study, for in it I seo no defect of drawing, and no errol in composition, and this I say after making a critical observation of the work. Bat while perfect as an expression of pure Arabian drawit fails in one most important particular and thus it hecomes peculiarly nosuited for a floor decoration. The ornameut all points in one direction.
The carpets on which the Mahometan prays has a pattern pointing in one direction, and the levotee sets the point towards Mecca; hut what is right in the case of the prayer-carpet is wrong the devotee the pattern of his rug is alway: right way upwards; to the majority of the ocou pants of an ordinary room the pattern of such :
carpet would he correctly seen hy the few only;
and it is no more legitimate to place a rug hefore the spectator with the pattern inverted then it is to invert a painting and ask your In this particnlar
In this partionlar, this otherwise heautiful corpet is utterly wrong; and bow a man who to perceive that such a ornament shonld fail that adopeive that such a mode of treatment as that adopted is otherwise than wrong, I fail to understand. The only explanatiou of the error that can he imagined is that it is specially made for some very exceptional purpose.
A model carpet is that which is neutral, yet not "dowdy," in general effect; which is mingled in "colour-bloom," soft in appearance, conveys the thought of flowers, and is has di on geometrical plau. A carpet should he neutral in effect; for at hest it hecomes but a backgronnd to the fnrniture and objects contained a an apartmont. But neutrality may result from the admixture of positive colonrs if theso colours are in very small quantities, or masses. The former will give a peneral neutral ffect, which, while low in tone, will at the gamo time bo rich and "bloomy," and this effeet I prefer,-this "glowing" of "radiant" \&ffect of acutrality. This is the cleverest and tho oleasantest effect, and is that which is most ifficalt to achieve. A carpet should convoy tho hought of flowers, for it is pleasant to associate lowers with the floor on which we tread, har renness and fertility strangely contrast, and the verdant or flowery path is that which we like to read. But a floor is a flat surfioe, and while the thought of flowers is pleasant, no one with a rightly constituted minti would like to walk through flower-beds nor over the well-arranged parterro. Mence, while the decoration of a cappet should awaken the thought of flowers in the beholder, it should not imitate a plant nor any combination of plants, but should be a consistent floor decoration, so skilfully arranged as to be truly and simply what it pretends to be, and yet such as will call up the greatest numher of pleasant memories
I hasis, for the manifest have a geometrical hasis, for the manifestation of order in arrangement of the parts of any works revcals the working of a thourhtful and order:y mind in the construction of the work. The planets evalve in order around the sum, and althongh he lcaves of plants appear to be scattered irre. gulary over the stems of plants, thicy are yet, as auy hotanist will tell yout, developed on a mathematical plan of tho most orderly deseription ; and it is blights, cold, and insects which by destroying or disturhing parts, render the wof order more or less ditficult to perceive. Many Indian and Persian carpets very fully manifest these qualities. The design is con structed on a geometrical plan. They have Howery character, which is highly pleasant, and fet the pattern is ornamental and not naturalis lic in its parts. The colours are rich and posi live, ont are so hlended as to produce a glowing or radiant, nentral effect, and thus the carpet is fitted for its place as a hackgronnd to furni ture. I cannot too stroncly recommend my brother architects, as well as our English carpet manufacturers, to carefully consider the heanti ful works from Persia, India, and Turkey shown in the Vienna Exhibition; for some are perfect models of what a carpet should be.
The Persian nation, although hat imperfectly opened up to us, comes b fore us with a some what commercial aspect, and Turkey loses no opportunity of extending its trade. Persia sends almost innmmerable carpets, and this fact is noteworthy, that, while all Easterre nations, so far as I know, have confined themselves to the manufacture of whole carpets only (what are often called square carpets), Persia send carpeting in long rolls of about a yard is width and also separate hordering for attachment to the "body" oarpet. Up to this time Oriental carpets have never, save in rare and accilental cases, fitted the rooms on tho floors of which they lave been placed,-they have been sur rounded with polished hoards, or parguetry. work but now the opportunity is offered us of fitting Eastern carpets to our rooms and of covering our floors as completely with Oriental manufactures as wo do with English goods. Whether it is desirable that we thus cover our floors or not is another matter,-indeed, whether wo are right in covering oar floors completely with any carpeting is open to question; hat the attempt is heing made at meeting European requirements, and the manufactures are all that we could
desire in taste and durahility.

Turning to the British carpets, throo firms raake creditable display, yet I cannot say of either that it has done all that it might, Messrs. Jacksou \& Grahan exhihit carpets in good taste: one or two of their rugs are very commendable.
Messrs. Templetou \& Co., of Glasgow, have the Messrs. Templetou \& Co., of Glasgow, have the newest thing in the way of carpets shown in the
British section of the Exhibition, which is a British section of the Exhibition, which is a Chinose pattern with a "key" ornament spread
over the ground, and a spray of proony "dis. over the ground, and a spray of proony "displayed "upon the surface and rnuning over the Fey pattern in a manner familiar to as in so many Chinese examples. This carpet is, to ns, now in style, effeotive, well coloared, suitably bordered, and in cvery way a successfal work. Besides this, Messrs. Templeton \& Co. show other good, low-toned, carpets; bnt in all we look in vain for that rich, mingled, fresb colourbloom whicb we discover in the Eastern works, or for that powerful expression of a pare style of ornament which we get in one or two of Haas's carpets. Bnt besides these carpets Ternpleton shows otbers which are worse than inartistic, for some are painfully deficient of even the least manifestation of an exalted form of art.
The third firm that we have to name corionsly makes the largest show on the British side of the Exhibition, while the factory from which the goods are sent is very small, if not one of the
smallest in our kingdom. Here we hapo enter. prise at lenst; and some of the carpets entern prise of considerable morit, and can onsts shown mand farourable notice ; but upon inveatigation it is apparcnt that many of the worls exhibited, if not tbe majority, are of a manufacture such as is not produced at the works from which they appoar to come, but are of Templeton's they a make.
Mr. Jno. Lewis, of Halifar, however, shows many fine carpete, whether made hy himself or any other house; and while his worlse at home aro yet very small, the display mado in the Vienna Exhihiton is great,
This lattor manufaoturer, for some reason or other, exhibited a number of foreign rags, although, as far as I can learu, he does not even deal in such goods. These ings were excced. ingly beautiful, hut they have reoently heen
covered hy other carpets of British manufacture.
We have now reviewed the exhibits of three British manufucturera, and besides theso nono rake a sbow whicb does us credit, althongh tho number of exhibitors competing in this department is considerahle; and of these three there is but one which fairly represents the productive power of the firm exbihiting. It would be difficult, if not unjust, to say to any enterprising frm that it should not exhibit anything that it does not prodsce. If a firm like Messrs. Ja'kson \& Graham is engaged upon the decors. tion of a house, and the farniture, carpet, and hazgings are designed nuder their guidance, and are expressions of their taste and enterprise, it would bo hard if they were not allowed to exhihit these various manufactares, although they do not manufacture the goots themselves, or even make the slightest pretension that the goods are of their own production. But in suoh cases it is desirable that the objects shown sbould be exhibited in a special class. If the works are of most excellent manufacture, it appears to me that no award for sncb excellence should be given to the exhibitor. If given, it sbould he hestowed upon the producer, if the exhibitor likes to reveal his name, but the award for enterpriso should be given to the exhibiting firm; and I am not sore that an award for the excellence of the pattern shonld be given unless the nane of the designer is revealed. But if a work is merely bought from another, and shown hy the purchaser as if of his own manufacture, the case is different, and the exhibitor does wrong hy showing it ; and even in those cases where the manufacturer prodnces one class of goods only, and for the parposes of success in an Exhibition gets other classes of goods made for lim, I think it would be well if the exhibitor were constrained to say which works he actnally produced and which were produced for him; for otherwise he can scarcely be said fairly to compete with otber namnfacturers. To return to our three exhibitors, Dr. J. Lowis certainly makes an excellent show, even if his works are not wholly of his own manufacture, and he appears to have resolved on leaving behind him in ienna an impression of the nobleness of the English name; for on every hand I hear of his princely hospitality being dippensed with bonutifulness which is calculated to make Lasting impression on the Fiennese mind.
fatal fall of engiveering works at Wapping.
Tik works of the Fast London Extension Railway at Wapping bave been the scene of a serions accident. The company have projeoted an extension of their railway sys'em from the terminns at the old Thames Tunnel at Wapping, to the Blackwall Railway at Shadwell. The work does not exceed balf a mile, but is likely to cost npwards of 200,000 . After clearing
away a portion of a street running parallel with the river, the encineer, Mr. J. Hawkshaw, wa met by the London Docks, which stand in the oentre of the proposed route, and be bas been obliged, therefore, to coffer-dam the dock, as a
proliminary to cotting and corering in a tunnel. Tho portion of street referred to was found to stand npon a bod of gravel, througb which the waters of the Thames percolated with persistency. Pending the removal of this water, and the huilding of tbe covered way, the banks on either side of the cutting have been kept apart by bcams which cross and recross each other in a
trellis-work. The fallacy of all the calculations trellis-work. The fallacy of all the calculations, however, bas been painfully proved. The contractors employ a thousand men in the works. A gang of ninety were working in the cutting nearest the junction, when snddenly a rombling noise like thnnder was heard, the banks on either side began to lean towards eacb other, and in a moment the great beams running across splintered as if they were so many matches, and, hearing upwards, broke in pieces, and the whole cutting was in a state of claos, witb balf a hundred mon in it, struggling for their lives in bulk taring light of tbe gas-lamps. How the themselvos, hut three, if not four, were canght by the closing earth, and remained in their living grave, whenco they conld not bo dug out in less tban a week, the banks baving to be propped up again hefore a spade could be put into the dsbris in tho cuttiug. The mombers and associates of the Socicty of Enginecrs had arranged to pay a visit to tbese works, and, notwith standing the occurrence of the accident, Mr Hrwkshaw's engagement to conduct them ove the line was courteously fulfilled by the resident engineor.
"SCREW.JACK ARCHITECTURE" IN America.
Tar feat of removing the Pacific Hotel, at New York, bodily, soveral feet from its original site, which excited a good deal of attention a fow months ago, when vague reports of the proeeedings reached us from ocross the Atlantic; and the offer of an American to put Northumherand Honse on wheels and remove it to such position as wonld allow of the oreation of the new street betiveen Charing-cross and the Embankment witbout demolishing the venerable strncture, will doubtless be fresh in the memory of onr readers. The idea seems so preposterons, that steady-going Enclish people scarcely know what to make of it. The American buildinge are not, however, erected in the samo substantial manner as buildings in England, and are frequently run up in a hnrry, without foundations, so that a house bas not always to be raised from a hole hefore it can be moved. The rapidity with which Chicago bas been rebuilt is astonishing in onr eyes; but we are accustomed to look a towns and cities composed of houses built of stone or brick, in a solid substantial manner: America the honses are run up as rapicly possible. The following description of the node adopted for the removal of small houses in America, kindly forwarded hy an English architect resident in the United States, may prove interesting, and will give some idea, of the lightness of many of tho buildings which are
burnt down one day to be almost re-erected on burnt down
"Vague reports have often reached England of the manner in which the Amerioans remove their honses hodily when they change the place of tbeir ahode. Like snails, they carry their houses almost on their backs, living in them during the migration, as tbough nothing nnusual were occurring : hat very few people have any idea of
When I first arrived in Chicago I baw a large wo-story honse stauding in the centre of the street. I was inclined to think this was merely an assertion of 'independence' on tho part of
in the middle of the pablic thoroughfare; bnt, ol a close inspection, I fond the honse was moving so I stopped to see what this marvel might be. Along the street, for a distance of 200 ft . 300 ft ,, were laid rows of planks, to form, smooth road on which the honse migbt travel. the end of this temporary road was a windlass orked by a borse, a chain from wbich wa rollers, and thus drawn bodily along
When a building has to be remored in thi way, the following plan for raising it and placin, on rollers is adopted. The house is firs rick wined, and large beams placed under th inkwork as it is exposed. Under mai at the end on the nnderside, to act ass sledge when the building is raised high enough to $b$ drawn away. Screw-jacks, about 2 ft . long ame 3 in. in diameter, are now brought into reqni sition, and placed under the beams heneath th walls of the honse, at intervals of 2 ft . or 3 B When properly fixed they are turned simnltal neously, and the whole house is gradually raisee neously, and the whole house isgradually raisee extent, if the bouse is not alrendy bigh enongl new ones are bronght into use, placed on block of wood, and by this means the building is raise of wood, and by this means the building is raise
to the desirod hoicht. Wooden rollers, aboo 6 in . in diameter and 5 ft . or 6 ft . long, are thel placed nndor the sledge pieces, and the whol affair is unade to slide into the rond, on to th line of planks prepared for $i t$. The mindlass inned down into the road with iron spikes bont 200 ft . a-head; and as the honse is dually drawn up to it, it is carried furthe hoad, and tho process continued till tho ne ite is reached procoss continued 1 a is th average rate of progression for a small bonsr Heavy huildings are of conrso not moved a Geavy
In this way I have seen two or tbree bria or wooden honses moving about in one dny ften with the family living in them, as thoug they were firmly planted in the earth. Nothin Is disturbed, and it is seldom that any accider! occurs."
Jack-screws are also used for raising building When they are below the stroet level, or whea, is desired to build an additional story. I England this is done at the bottom of the honse In America they add to the height of tbei buildings from underneath. Many large struc tures, five and six stories high, have leon raise his way, and a basement bnilt beneath them But jack-screws are also useful in anothe articles have been found very serviceable is bnitding many edifices, which, without their ase might rever have existed.
Chicago, fifty years ago, was a small tradind station, known as Fort Dearborn, where ouly few traders stations existed, and whose inhabi tants were principally adventurons traders ant than a swamp the flat land being innndeted by the Ilinois river Sucb a soil as this is not wol adapted for building houses of any descriptiou without great care and attention being given to the foundations. Tho Americans generally. and the Chicaroans specially, are too anxioui to begin business to wait for elahorate founds tions heing laid before the superstructure is commenced; so they huild the upper part of their warehouse or office on jaok-screws firat raise it, and add the lower stories from under neath; so that the building may be occupied as it is heing advanced, and the foundations laid afterwards. Bat even then, in their endeavonr to spare expense, the foundations are scamped, onongh is yot spent to onsure safety, and con: tinual repoirs are necessary, which often canse a far greater expenditure in the end than fair attention and liherality at first would have occasioned.
An example of this may be seen in the offices of the American Express Company in Monroeatreet. This bailding was designed by an arehi-1 tect in New York, wbo only put in such fanndations as wonld have been necessary for the same structure in New York, where, instead of a swampy soil, there is solid rook to build npouThe consequence was, that when the building twas ive stortes high, some ugly cracks began to appear, which soon became so dangerous thati the whole of the front had to be taten down, and the rest of the building snpported on jacksorews while the foundations were taken out, and relaid snffciently strong at a greater depth. False economy this! which it is surprising onr far-seeing cousins do not recognise as more
xpensive than roasonably liberal expenditure n doing woll at first what is to be done at all, Chis is not a solitary instanco of the effects of uch hasty, careless work. It is a striking astance, but there are many
Many large buildings are fronted with fine at stone, or, as the Yankocs delight to call it, tmarhle," The " marble," bowever, is seldom nore than 4 in. thick, no thicker in proportion the wall, which is out of sight, is composed of oft bricks, thrown together as rapidly as possible. Where iron is used, it is reduced to the miniaum quantity. Iron columns are made as thin dan a certain weight. If the goods in a wareouse supported on iron columns are increased o more than a fixed amount, there will soon be a onfused mixture of merchandise and brilding terials.
Cracks are frequently appearing in houses nly recently built, whicb were ran ap three, onr, aud even five stories high, without fronts; be iron and stone for the fronts were not ready
o hand, and, rather than wait for their arriral, ho huilders erected the other walls, leaving مothings in the party-walls to bond into after. vards. Tho body of many of tbese buildings tank bofore the front was added, and wben this was done, a further settlemont took place, which s manifesting itself in the appearance of large traoks, and in the breaking away of the front rom the rest of the house.
This is the case witl too many of the large tores and warchonses that are being erected in Jhicago at the present moment. They are large enougb, tbey are built quickly enongh, they are numerous cnough to satisfy any Yankee who ;hinks thoso three features are enough to constitute a city of buildings of which any conntry
nay he prond. But their architectnral beanties nay he prond. But their architectnral beanties are souglt for in vain. This, howevcr, could he lispensed with, if they were well huilt; but whether they are constructed from the roof lownwards, or from the earth npwards.

## SCHOOL BOARDS,

London.-Mr. C. Reed, M.P., moved, on a Former roport of the Works Committee:-"That the tender of Mr. G. Stephonson, of Benufortstreet, Chclsea, S.W., amounting to $4,962 l$. , for
the erection of a school to provide accommodathe orection of a school to provide accommoree,
tion for 588 children, on the site in James-street, Camberwell, be aocepted." He intimated, however, that a conferonce between Mr. Tresidder and the architect of the Board would probably resnlt in a further modification of the plans, which a largcr number of children could be accommodated hy the conversion of the teaohers head would be also reduced. The resolution was arreed to. On the recommendation of the Works Committee the following tenders were ac. cepted :-The tender of Mr. J. Kirk, of Warronlane Wharf, Woolwich, amounting to 6,666L, for the erection of a school to provide accommoda. tion for 806 clildren, on the site in Cantorburyroad, Lambeth; the tender of Messrs. Cooko \& Green, of Malborough.street, Black friars.road, school to provide accommodation for 1,024 chil. dren, on the site in Victory. place, Lamheth; the tender of Messrs. W. M. \& J. Mansbridge, of North 3,81l., for the crection of a school to provine accommodation for 716 children on the site in Tottenham.road, Kingsland.

THE CLAPHAM AND BRTXTON BATHS. On Saturday the Lord Mayor laid the founda. tion.stone of some new and extensive baths abont to be erected is Ferndale-road, Brixton. The buildings will, it is stated, comprise alargecovered swimming-bath, 150 ft . by 60 ft ,, giving 9,000 square feet, superfcial, of water for the nse of men, as well as a separate hath, with a distinct ontrnlee, tor women, of the dimensions of water, medieated baths, and a set of Turkish hathe for both sexes, so that, as the committee say, "a complete system of hydro. therapentic arrange. suents will be avalahie for the crjoyment of the
strong and healliy, for the promotion of clean. strongs and the art of swimming, as woll as appliances for the invalid and delicate." This
of shareholders and donors. The site selected is in an open and healthy locality, surronaded by an increasing population, and is most central for the purposes intended, being midway between
Claphan and Brixton. The water will be obtained from an Artesian well now heing bored whereby a continuous supply of pure water will be kept constantly flowing. Tho first issue of half th. shares has been made, and allotted. Mr. Fras. Fowler, the arcbitect, mentioned that he mon's swimming-baths would be the lar rost to the metropolis. Every assistance should be given to suoh an enierpriso.

## THE TRADE BANNERS OF ENGLAND.

From time immemorial, "banners" bave played an important part in the history of all countries, ancient and modern; but England is more particularly tbe land of streamers, pennons, ensigns, standards, tlags, bamners, and bannerets. Her poets, painters, historians, dramatists, and
fiction.writers have alike immortalised "the fiction.writers have alike immortalised "the banners which the Lord had blessed.
The amount of devotion, courage, and con tempt of life cxhihited by our soldiers and saitors with reference to their oolours is sublime and impressive. It is a kind of adoration of regi moutal colours that has cansed our youthful ensigns to wrap standards round their dying forms, that they might not surrender them to the enemy; and our heroes at sea nail the "flag of old England to the mast" lest it might be shot away in battle. To banl down the coloar is the signal of defeat and submission, and wbenever that rare instance bas occnired to an English ship, our old "salts" bave wrapped the flags round their bodies, and gone down with them to the deep, to prevent the enemy exulting over the prize. It is a patriotio veneration that our seamen, both naval and mercantile, feel to their flags; and one of the grandest speotacles ever seen ou water was "all nations," when the "Shah"" went down the Thames lately. In denth, the colours are carried on the soldier's coffin, and the "Union Jack" performs the liko for the sailor as he is Jack" performs the
cast into the deep.
It is not surprising, therefore, that this English love of hanners has extended into the ranks of the working classes ; bnt fow can bave a right oonception of its vast and costly extent. Its origin may have dated from the tattered flags that have led onr armies and navies to victory, and which hang np in our cathedrals and public love of "crimson silk with golden cross" from their forefathers of the ancient City Trado Guilds, whose banners were followed befure the " Union Jack "一the "Flag of Eogland,"- Sew on the seas, for its hcraldry dates no further back than the 12th of April, 1606, and then only in onr ships of war, for the Union Jack was not adopted in the English army till the Parliamontary Union of 1707.
Be it as it will, one fact is apparent, that of late years there has been a generous rivalry on the part of tradc and benent societies as to which should possess the most magni6cent banner; and no cost has been spared to ohtain the best: some idea may be gathered on this head by the fact that in June last, at a demon. stration of the conl-miners on the Durham Race12,000 ,.! That the trades are desirous of following the art of heraldry is apparent, if it bo true that the hakers' trade-mnion recently applied to the Heralds' College for the " Bakers' Arms" for their banners: whether Garter King of Arms has such heraldry at Doctors' Commons, the bakers are anxiously waiting to learn. If not the uniou intend offering " $\Omega$ handsome reward" for the best design.*
The colliers of the North do not, lowever study heraldry, like the bakers, or seek to adopt chalk out their own designs, me mines fix and resolved to have a banner, they obtain an article resolved to lave a banner, they obtain an article
of the most respectabie and expressive cha. racter, thinking wbat is worth doing at all is worth doing well, irrespective of cost.
For instance, at the Newton Cap Colliery, near Bishop Anckland, Durham, the pitmen first chose a committee to procare or fis npon a design. This involved the subject or ideas to be illastrated. The committee had no trouble

* Arms would wot be granted to any but an incorporated
on these points. $A$ old workman at the colliery sketched a design for both sides of the banner, in which tall details were given. 1.is sketch was bauded to Geordie Coxon, a young miner of artistic genius, and he produced a design truthfal in the whole of the details, and illustrating the original crude ideas of the old pitman in a very coroible mauner. The design was highly ap proved of, and the painting and fin shing of the banner wero cntrusted to a Newcastle firm Saturday, Fcbruary 15th, of this year, was fixed for unfurling the banner in public, and the men and youths mustered in strong force at the Newton Cap Hotel, where wero assembled a large crowd, the knowing ones passing their distinguishod criticism arnidst shouts of approbation.

This banner, which is 11 ft . hy 10 ft ., is made of double silk throughout, finished and trimmed with rich gold-coloured fringe and tassels, with The tamentation of fruit, llowers, and toliage. che beads of the poles aro givded, and tbe cords and headed, "Newton Cap is on both sider, and headed, "Newton Cap Colliery Branch of Durham Miners Association"; and the evils of a a properly and intolligently cond gocted results of a properly and intolligently conducted union re illustrated in a somewhat amnsing but corcible manner. The first, or leading side, contains three separate and distinct illustrations. The two first are side by side, -one representing the triumph of capital, i.e., a long plank resting on a clump of wood (titty.mytorty), which is placed in the middle. On one ond is an employer, with a largo box of gold beside him, to give weight. On the other ead is an emaciated and toil-worn pitman. Ho is raised high up in the air, the employer and his gold being too heavy a balance for him. The pitman, from his elevated position, is sbouting to his weighty opponent, "Let. me have fair," and behind and below bim are a number of toil.worn miners, looking up, with rueful countenance日, representing, as imprinted, "Unorganised and Plentiful Labour." The omployor, with his bor of sovereigos, roplics to the pitman's appeal, You must yield. You see I am too heary for "La, Tho companion illustration ropresents pitman scarce, and the employer and the bave seized on their end of the plank, and by their extra woight have brought it down. Hats aro off and waving about, and shouts ascend to he employer, who, clinging to bis box of gold, poised rather dangorously bigh in the gir, "We have you now," is the pitmen's cry. The
Whater employer responds, "A trucc. Let us meet, and mployer to come to terms." The third scane retre. tonts organised pitmen and eniployers meetine The same plank is in nse. The pitmeneen ang. the same plank is in ase. The pitmen's agent ocupies one end and the chairman of the em. nnmer othcr, and each is accompanied win nnmber of his respective haokers. Standing with one foot on each side, to lion it lerel and equally halanced. Bylow aro the level and equally halanced. Below are tho following foture hy this means, and let Justioe hold tho alance. Hurroh for Justice! "
The other side of the bamer bas also three separato illustrations, whiela are in roduced by the following words:-"Justice, leading to homocomfort and happiness, is the true object aimed at by all intelligent ruionists." On one side is the figure of Justice, blindfolded, and holding her soales. In the centre appears the intended comfortable pitman's home. Ho is seated at table, with his wife and children, in the parlonr, eating their Sunday's dinner. Conspicuous among the furaiture is a well-6illed hook-case, with a glass front, bespeaking a taste for reading, and the whole eceno speaks of comfort and iutelligence. This is explained by the words, "A happy homo: the result of orgraisation and arhitration." Oa the other side of the hapny bome is seen the employer and workman exchanging courtesies, and parting with tho nnderstanding conveyed by the fullowing words, - "Henceforth ct strifo cease hetween us, and our joint aim be the true happiness of all." The hanner, headed by a brass hand, was then taken in procession to the maarers and owners of the pit, and to ther colliery owners, after which the pitmen sere regaled by the owners, and speeches of an amicable natare followed, evidoucing that emloyers in the North are takiog as much prida their men's bavners as the pitmen themselves. It is not frequent that the miners are the suthors of their own design, but when it occurs

the demonstration referred to, some 80,000 miners, their wives, and friends were loud in their applause and laughter at a small and neat flag carried hy the Coxhoe and of this banner is a poor, worn out, fleshless, ribbed sbadow of a horse, moekly but almost vainly endeavouring to draw a large tubfu!l of coals, and the horse, straining every muscte, is encouraged to persevero in its almost hopeless task hy its driver pertino and saying to it "Come up, Bohby, ten bours a day!" On tbe Come up, Bohby, ten bours a day ! On toe reverse face of the picture, howerer, is displayed poor Boblish, and almost intractable animal, whose driver is exclaiming, "Woa, Bohhy; woa, Bobhy diver is oxclaiming, eight hours a day." There is as m humour as signification in this design
If the miners do not furuish the designs to the banner-paiutors, they snpply the mottoos for tbe designs, and tho words are, in some instances, as pointed as the paiutings. For the Byer Moor Lodge of colliers supply :-

> And every one that's true
Now we re bound together,
> Let's try what we can do
> Our masters they do tell us,
That if we mean to stand We shall do ourselves an injury, And the trade will leave the land But in that we have adrantage,
And that you know is true ; For if the trade leaves England,

One hanner has a school scene, and nuder the illustration the Addison miners show the reces. sity of schools in their village :-

The miner-boyb ronld hare to go to school,
The Mines Inspeetion Bill says 90 ,
The Mines Inspection Bill says so,

## This, parents, yoa must know.

The Bewick Main colliers go in for illustra. ions. Their banners show the most important works of the company tbey work under, such as a ship going out to sen, a large factory in full operation, an engine in the act of crossing a viaduct, with the aspiration, "Success to the coal and iron trade by land and sca." Portraits of a master and workman embellish the other eide, together 'with the maxim, "He tbat oppresses the poor reproacheth his Maker."
The Browney miners' hanner contains the figures of a miner and a sinker, with the following explanatory lines:-

## Nature's crologic roll, Til we reach Gnds hididen treasure, The morid. vide fampous coal."

On the obverse, are the figures of two miners, with the words:

## Tbrough geolagic records, Great Yuture's printed <br> Great Nuture's printed seron, Wo work the famed black dinmond Wo work the farned black din The heat-sustaining coal,"

The Burnbope banner has a boy holuing a placard, on which are the words, "The Mines Regulation Bill, 1872: Ton Hours from Bank to Badk:

This Bill bas passed, and it does asy,
The boys to have ten hours a day;
But in this Bill it does say more,
Though I have not time to tell you all."
On the obrerso is a picture of a lion and a On the obverse is a picture of a lion and a
lamb, and a child lending them, with the noder. neath pitmen's "poesy"

> Ha have met again, my dear friends,
> or our rights we mean to fight
> But as our flag wares in the air,
The capitalist he bepins to stare,
And does cry out, I do declare,
> I'ma afraid the Union' a off for lair

The Byers Green flag contains figures of several workmen belonging to different bandicrafts, nnder which is tbe symbol of peace-the lion and the lamb; "It is well for brothers to dwell in unity."
Soveral hanners depict rery pathetic scenes of widows and fatherless children, with quota-tions:-." What mean ye that go beat my people to pieces, and grind the faces of the poor." "Master", give unto jonr servants that whicb is equal and just, knowing that yo have also a Master in Hearen.
The Derwent banner has the declaration, "The workmen wish to sectle all disputes hy arbitration." On the obserse, tbe representation pupils. The first fgure, a bright and intelliment boy, is listening to the instruction of the school. master, and represents the eight hours system the second, a sleepy boy, with balf-closed eye.
ids, is intended for the ten honrs system; and the third, a miner's boy, who is sound asleep, with his book on the ground, designates the twelve honrs system
The East Hetton pitmen sbow a tomb, "In memory of a deceased brother miner," and a reeping woman and children knceling beside it with hands uplifted in prayer. Tbe grave is loscendino, hearine a wrenth. The reverse con tains a picture of the rood Samaritan pourin oil and wine into the wounde of the man who had fallen among thieres, $i$ the mine owners The Edmondsloy hanner containg portaits the miners' leaders, and the following the minims:-

## Masters and men should both unite And thes would keep the trade all right C $^{\text {Compensation thea would tuke its flight, }}$ If all were found in union,"

Awake, arise, or be for ever fallen;" and Wealth gotten hy vanity shall ho dissolved but he that gathereth by labour shall increase." The Etherleg-lane miners depict what a pitman's home should be, and in time may he. On wo form lew a the inmates wol clothed and red. The toll the day boing over, the erening chapter from the book of ble is heing read by a clean, matronly female, in whose lap reclines a sleep ing, happy babe, whilst the contented father sits opposite, listening to his wife. Below this "Arcadian" picture are the words, "Princes and lords are but the hreath of kings, but man ly noblest work of God." Lower down is depicted a earexporn, tired miner, going to his work at tho dark hour of morn, and opposite is seen a healthy, cheerful, woll-clad man proceed ing to his labour at the hour of seven. The Haswell banner has an elihorato representation of tbe Good Samaritan, with the injanction of "Go thou, and do likewise:" and on the contrary side is painted a group of miners return ing thanks to Mr. Bruce, the Home Secretary for passing the Mines Regulation Bill, whilst below is:-

## All are equal in Gud's sight, <br> He mat the free, the black, the Fhite : He made themz all, freedom gure

Milkwell Burn and Brod Oak colliers depic a motber shaking a half.ctressed slecpy boy, and saying,-"Johnny, wake up; are you not going Ho night school Po, mother, $I$ an so teon and sleepy, I have been in the pit four same hors to.day. The daber and, "John, where are you going to?" "1 am gring to school, mother; I've only becn in the pit eight hours to-day.
The Nettleworth men are profuse in designs and inscriptions, and are rather original, On the left-hand side of their splendid banner is the figare of a check. weighman, wbo is saying I will freat miner, - Wait a little longer, and and a capitalist; near to the latter stands a girl, imploring the master "not to take all from our father: give him a fair share of that he labours for." Near the girl stands a boy and a bishop facing, across whose mitre is encraved " 16,000 . a year." The youth points to the prelate and the couplet:-

It is you that robs us of our bread,
Beware, our Saviour is ou the other sid
The hishop heeds not the threatening of the boy, but points towards the capitalist, and says, - "Leave something more for me." Beneatli are the mottoes, -" He that oppresses the poor to increase bis riches shall surely come to want ; on the other side is a painting of Christ in tbe act of turning the usurers ont of the Temple, with the following admonition:My house shall be called a bouse of prayer, hut yo have made it a den of thieves.
The Roddymoor flag bas a miner standing wear a colliery, singing: -

Gire me the piok and the man who oan use it;
Tucy tura the blacta coalinio bright shining gold,
What would our fintare bara been, lad, withont it
When the lunds lay ull bare, and north winds blew
cold."
The Seaham colliers have a joint committe as the prineipal emblem, and, "We want a fair days' wage for a fair đny's work." The external workings of a supposed co.operative colliery and tbe query, - "Do you think it would pay ell?" and, "Oh yes; 100 per cent." are seen on the obverse. What Earl Vane thinks of his Seaham pitmen is a matter somewhat in. teresting.

The springwell miners have a scene of masters and men taking connsel together, and,

Seo what can be done when we are wise,
What glorious deeds perform, my sufforing brother When men unite, in love and right,

Tbe South Derwent men depict a miner standugg on a stone in a valley, and his master stand. ng on a hill-side, looking down upon him. A aumher of miners are engaged pulling merrity at tho ropes of a pulley, and hy co-operation and union are steadily hoisting up the miner to he lovel on which the master stands. Tbe in. scription underneatb is :-

## Te proud and wealthy let this theme <br> Concos boast its splendour too."

The Uswortb pitmen hare a small flag, worked y a lady, of a most costly and elaborate descrip. ion, being gold needlework on thick crimsan velvet, edged with heary gold lace: the cost of aterials was 155 l.
The Westwood banner bears the inscriptions:-
Two years we've been established, which surely is not
Yet now the miners' nnion is forty thousaud strong.'
The union they say is winding its way, and driviog
all fear. 'imes are fled, the old boud is dead, and
es, the old timer a tear."
no
he Woodhouse hanner is emblazored witb a borrible represeutation of an explosion in a pit, with the insoription,

Are many and fearfut hy thiss you may know
The above are selected from 130 hanners, xclusive of bannerets, on the ground; and in point of excellence of subjects, "Arbitration" eld the chief place. Capital and Labour afford nother favourite point for the artist's brusib. Beehires, as reprosenting Industry, and the Bundle of Sticks as Unity, whilst "Good Samaritars" for the charitable element were also pleutifully illustrated. It will he seen. Politics are nearly left oat by the Durham miners; hut the Northumberland bannors that ere nnfuried at a great demonstration on the oweasho nake it apparent that tho Northmhertand miners are alve to the polical use that is to bo ot out of hanners ; and Fletcher of Saltonn's ft-quoted "Give me the making of the ballads, and you make the laws," may, perhaps, be. atered to " Give me the making of the banners, and you make the laws.
Thns, the Northumberiand Bloomhill miners' banner has on it, "Equal Rights Torgether," witb representation of a batlot-box, and a gentleman aud a working man recording their votes togother.

The Newsham Colliery has inscribed on it We Claim Manhood Suffrage.

```
Parsons nnd peers may preach,
And eadless talsehood teach, Think for jourselves; Justice and libert
```

Tbo Seaton Burn miners' llag has these lines:Oh, man of dauntlesa courage, arm for the fight
Stand out for the wrongs of 'thousands, do battle for the right;
Who do their duty hravely, despite opposing ills,
And trear life's rugged journey as men of wis
The benner of the Dinnington colliers is of rich dark hlue silk, 9 ft . by 3 ft ., handsomely trimmed, with scarlet cords and tassels, and a deep wbite silk fringe along the hottom, the colonr of the mountings being arranged to represent the tricolour. On one side is a picture of Liberty, helow whici is placed the motto Liberty, Equality, Fraternity."
The Barrington men tbus preach on their flag, "The poor man's wisdom is despised, and his words are not heard"; "Wisdom is betterthan strength"; "Go and do thou likewise."
The Burradon men believe that,-
The rank is hut the guinea's stamp,
The man's the gowd for a' that."
Tbo Byron pitmen lave a hanncer representiog a colliery, and a miner stauding pick in hand, with the chains of slavery lying shattered at his feet, On another part of the picture is the "Sun of Education" spreading its glorious rays, before which is the tyrant Ignorance retrentiag into a cloud, and the motto "Union and Liberty." The hanner of the Society of Operative Brick. layers is of maure silk. In tbe centre is an elaborate painting representing workmen erect. Ug a honse ; the pictare being supported by two ing a honse ; the pichare bing supported
inscriptions "By industry we floarish"; "In labour thore is profit"; "Unity is strength "; adustry is the source of prosperity." In the atre is an allegorical representation of Justice tehias over a body of bricklayers at work: * The 'yne shipwrights' banner is of white silk, th hlue border. Two hands aro clasped other. A painting represents a vessel ready launching from the ways, and a streamer ng from the mainmast-hes
Che Tyne bricklayers' banner is of hlue silk, I deep pink border with the inotto "In God dl our trust." On the reverse side is a painting resenting two officers in the act of relieving injared bricklayer.
Che Sunderland saw-mill operatives designed anver especially novel and to the purpose. is made of broad shavings, interlaced and gred with curled shavings, and ornamented th large tassels, also of curled shavings of ied-coloured woods. On the front of this Irage," and a device representing a crown, aposed of curled sbavings.
Thu ironmoulders' banner is of green silk. A ture represents the manufacture and uses of a,-showing the blast-furnaces, the engine-
cis, a screw-steamer, a plough, and a paddleamer, and a fignre of Justice watching over trade.
e silk, biomakers' banner is very large, ot $\theta$ silk, with white and floral border, fringed the bottont. In the centre is the crest of spin and Crispino, and thy tho figures of spin and Crispino, and the words, "Unity is ength "; "We relieve our sick and hury our d"; "Cnited to protect, not to oppress", $o$ whole is relieved with very elahorate and utiful scroll-work in gold. This belongs to ndon.
The stonemasons have several haudsome uners and devices, of the square, coropassee, d is our trust"; "Eight hours the earnest of new era in the history of labour"; "We are "; "United we stand, divided we fall"; anhood suffrage, our rights as men, and our d, join in one social band, and save yourselves." Tho Gateshead pipemakers' banner las a aple of long pipes crossed, the word "Equity," I underucath the cye of Providence. This was .ced ou a large rolley drawn hy a gley borse, which were seated two pipemakers and a boy, 0 were occupied in making " manhood suffrage Che
Tho Brushmakers' Society has a hanner with ir trade handiwork and the motto, "A sweepmeasure the $017 e$ thing needful."
the Ousebnrn engineers and operative smiths e as their principal banner a model of a steam nmer, \& large wagon belonging to the works Which are eleverly-constructed models, luding a steamer fitted up with both padde 1 Ecrow, a screw steamer, a steaut hammer,
of which are worked by steam, and workmen onding to the operations. On the white sill oner are the words, "The representation of "poople, not of a class ; brains, not hricks"; he future of the people rests with themves"; "By lammer and hand all arts do nd."
Che amalgamated engineers' banuer is of large mensions, with the motto, "Be united aud lustrions."
'he joiners' hanners are of hlue silk, with op white border, and pictures of carpenters rhing at the hencb surrounded by their prinial tools together with the joiners' coat of ns , and the mottoes, "Crede, sede, care"; fustice and equity"; "How good it is for de of shavings
The painters of Newcastle and districts' bawner very large and elahorate. Two figures at op represent Trutb and Jastice, hetween of the trade and the motto, "Anor et iedientia"; Cupid is standing before an ensel inting the words "Manhood suffrage", and th and perseverance we'll gain our rights"; abour and capital go hand in hand" "Cleave that which is good"; "Give us justice: it is r right."
Boiler-makers and iron ship-bnilders of Jarrow
This banner belongs to the London Society of
icklagers.
have several banners with pictures and devices
of their trads, and the mottoes on which are "Suecess to Iron Shipbuilding" ; "Let Jarrow flourish"; "United to support, not handed to injure"; "Honour Bright"; "Nil Desperan dom"; "We scek no favour, but demand our right." A banner bearing the Jarrow ironfounders coat of artms, is elaborately painted, and exhibits in the backoround a seq viour, with a ship under full sail, and the words, "God the first founder."
The London trade hanners are perhaps more costly than the prorincials, but the designs are not particularly wirle of those of Newcastle. At theod she Hyde Park demonstration they made a good show, hut "Boreas" became so sh. the "tailor's" coat of arms, and the motto "Concorlia parvao res crescunt" the mottoes, reverse side, Adam and Eve, as they were attired when they were driven out of the Garden of Eden. It is stated that when the other trade han. ners were unfurled on the Victoria Embankment, the sun shone brightly, and there was scarcely hreath of wind, but 70 sooner was the tailors and ber hoisted than "Boreas" became furious, and blew all the hanners out of the hearers' hands, and when they roached Hyde Park most of them were in tatters, and "Adam and Eve" were hlown out of the picture, as well as turned out of the Garden of Eden. The London trades have a great affection for Phrygina caps, hundles of sticks, and the tricolor.
This wreck will necessitate new trade banners, and as some alteration will take place, it may se left to another paper to describe the London trade banners.
The hanners of the ancient City trado guilds, which are now extant, were not made of silk, but many aro of tapestry, with the coat of arms work, in. The City library contaius a valuahle nerets of the City trade gilds of the time of Charles II., which seem to show that our present trade banners are supurior both in design, cost, and execution.

## TWICKENHAN.

Most large citics have agreeable outskirts, to the peace and quiet of which the well-to-do inhabitants can retire from the noise and hastle supplied as London. Of late years "the northern heights" of Hampstead and Highgate have come more than ever into favour, and they are now joined by one conto favour, and they are now joined by one continuons line of resi-
dences to our huge metropolis ; and on the soutbern side large environs of pretentious and of modest villas of all grades have grown around of modest villas of all grades have grown around Formerly, bowever, it was the Thames that attracted to itself, like a magnet, the noblemen Palnes retired millionaires, or still husy citizens. Palaces and mansions gradually arose along its
banks, and its windings became the controllingr banks, and its windings became the controlling its varying course.
Of all tbe outskirts of London, the one with The most interesting literary associations is Twickenbam, so especially connected as it is witlo the names of Alexander Pope and Horace Walpole. The houses of both these men were their chareturesting, as being exnibitions of its mild and good air has drawn large nambers to its site, so that of late years it has grown greatly ; but its trne fame will ever cling around the persons and events of the vast. Walpole, in a letter to R. Bentley (July 5th, 1755 ), claims great consideration for the place he loved:Nothing is equal to the glory of this village. Wo shall be as celehrated as Baizo or Tivoli and if we have not as sonorous nnmes as they hoast, we have very famons people. Clive and Pritchard, actresses; Scott and Hudson, painters; my Lady Suffolk, famous in her time; Mr. H., the impu Whitehead, tho poet ; and Cambridge the every thing." These are but a faw of the distin everynames of those connected with the plase Walpole hiuself made a more ample place; hut years after this Rocmens Castlo was a wards known hy the less singular name of atter Cottage, but is now no longer standing. Kitty Clive lived at Little Strawberry Hill, at a house tbat her friend Walpole loved to call "Cliveden." Dr. Johoson for her character and talents, both off and on the stage, could have been no ordinary
after her death :-
Te smiles and jests still hover round; This is mirth"s consecrated ground.
Here lifed the laughter.loring dume, A matchless actress, Clise her name, The comic muse with her retired,
And shed a tear when she expired,"
Scott was a celebrated painter of sen-pieces and landscapes in his day, nnd was called by admirers the "English Canaletti." Hudson was he portrait-painter, who would now be for Repnols reynoids. In after-life Reynolds had a villa on the sumait of Richmond-hill, and Hudson woserved to bim one day, "Little did I think re sbould ever have had conntry-houses opposite 'Little did I the which Sir Joskua replied Little did I tbink, when I was a young man bat I should at any time look down upon Mr. Kudson." Lady Suffolk lived at Marble-kill, house designed for her by the Earl of Pemhroke and Mr. H., "the impudent lawycr," was Josepl Hickey, who figures more creditahly in Goldmith's "Retaliation ":-
'Here Hiokey reclines, a most hlnnt, pleasant cresture;
And slander jrself must ellow him good nature. He cherish'd his friend, and he relish'd a humper Pet ons fuult he had, and that ons was a thumper Perhaps you may ask if the man was a mise
I answer, No, дo; for he always was wiser. Too courteous, perhaps, or obligingey flat ip
His very worst foe can't sccuse him of that.
Perhaps be confided in men as they
Aerhaps be confided in men as they go,
And so was too foolishly honest ? Ah no
Then what was his fsiling? Come tell it, and hurn ye
He was -could he help it? ${ }^{\text {a }}$ special attorney."
Panl Whitehead, "the champion and bard of Leicester Honse," "whose beart was inorned in bis patron Lord Le Despencer's mausoleum at West Wyoombe, with Pagan rites, lived at Colno Lodre ; and Richard Owen Cambridge, the bean ideal of a thorough Englisb rentleman lived at amhridge House. prose. Ahout 1758 be wrote some verses called "The Parish Recister of Twickonh verses called most of the famous residents of the parish are introraced:-

> Wiere silver Thames round Twit' nom meads
> His winding current sweetly leads,
Twitinam, the Muses fav'rite seat,
Twit'nam, the Graces loved retreat There polish'd Essex went to retreat; There Bacon tuned the grateful lyre Ton soothe Eliza*s haughty ire.
Ah! happy had no meaner straiu Than friendahip's dush'd his milighty vol Retired from folly's frantio stage, While his vast soul was hug on tenters, Wwit' nam, where frolic Wharton revel'd,
Where Montan w, with iocle diskevel'd Conflict of dirt and warmth divine), Whoked and soandalized the Nine; To th' anguish'd soral music apoke And whisper' d , how true genius erre, Preferring joys that power confers;
Bliss never to great minds arisiog From ruling worlds, hut from despising And ao they quafid the fiery juice, Droll nature starnp da each lucky $h$
With unimaginahlo wit Where Suftile sought the Resignine Richmond to the peaceful scene, And all the giory, all the teasing, Whereasing one, not worth the pleasing; Ejaculates the gracefol pray' $r$, For Thitfirld's cant le with nonsense smit, A mid this choir of sounding names inall the last trifler of beauteons dames Enroll his own such names among? To no nasough if $\boldsymbol{F}$ consign To lastiog type their notes divine, The title-page of fame shall flll."

This is a goodly list of great names, but several others remain onmentioned, and these we must otice farther on. At present wo will just refer Essex was supposed to have lived at Twicken. bam Park, but there is no authority for the supposition, although be appears to have visited Francis Bacon here, when the place was in the ossession of that distinguished man. Queen Elizabeth visited Twickenbam Park in 1592, when Bacon presented her witb a sonnet in praise of hie Earl of Essex. Edward Hyde, Earl of Claren on, lived at York House, which was given him by the Crown on the pahlic announcement of the marriag of his daagher wivh James 11, then Duke of York. It was his hiterary villa, where e passed the sammer months, and was visited y most of the celebrities of his day. The notorions Duke o. Wharton, called hy Pope "tbe corn and wonder of our day,' lived at the Grove. Lady Mary Wortley Montagn came to ive at Saville House about tbe year 1720, Pope
having used his best endeavours to iuduce her too settle at Twickenbam. Fielding, the novelist, occupied two rooms in a quaint, old.fashioned wooden house in Back-lane, where he wrote his "Tom Jones." The last name on Walpole's hist is too lovely Lady faray shirls of Ferrers, who lived at Heathone of the tharls of Ferrers, who Ived at Heathlane Lodge, and on whom was written the woll omitted many distinguished inliabitants of tho omitted many dusing ished inlabitants of the "literary suburh" from his "Parish Register," fand we will no
his omissions.
Ris omissiond Corbet, the poet, and Bishop of Richard Corbet, the poet, and Bishop of
Norwioh, whose father cnltivated a nurseryground at this place; William Lenthall, the famons Speaker of the Long Parliament; Robert Boyle, the philosopher; Sir John Suckling, most light and sprightly of our poets, except Moore"; and Dr. Edward StillingHeet, Bishop of Worcester; all lived at Twickenham. Tho parisl churcb is dedicated to St. Mary the the vicars has been eminently distinguished, and ubis was Daniel Waterland, one of the ablest pillars of the Churoh of England. Tho list o churchwardens contains one famous name in that of Sir Godfrey Eneller, "wbo bragged more, spelt worse, and paintod hetter than any
artist of his day." Ho was also a most lenient justico of the peace, and once let olf a thief, reprimanding the prosecutor for putting tempta. tion in his way. Poperefers to this remarkable judgment in his lines:-

Whink Sir Godfrey should decide the suit,
And punish'd him that put it in his way.
Sir Godfrey lived at Whitton House, which has Kneller. Hall In the Register of Marriaged this parish there is an entry of more than local interest, viz., the marriagc of the famous sculptor, "Erancis Chantrey, of St. George's, Hanover-square, and Mexy Aun Wale, November Hanover-squ
Several royal personages have been connected with Twickenham. Tradition reports the Manor ILouse to have been the residence of ono of House to have been the residence of ono of that Quceu Anne was born at York Housc. In 1694 this same queeu (then only Princess Anne) borrowed the house of a Mra. Davies for a month, in order that her son, tho Duke of Gloucester might have change of air. This young prince
brought his regiment of boys with him, and brought his regiment of boys with him, and exercised them every day on an ait opposito the
house called the Swan Islet, whicb is now part of the mainlaud. It is rclated that Mrs. Davies a wealthy old lady, who lived chiefly on herbs, without animal food, "refused to receivo 100 ruineas which were offered her for her honse." Louis Philippe, when Duko of Orleans, rented Orleans House, on his arrival in England from Now York, in 1800, and it was here, on Hay 18th, 1507, that his son, the Duke of Montpensier, died. In this same year Louis Philippe wrote to Dr. Watson, Bishop of Llandaff, a letter, a passage of which is of great interest, when read by the light of his after-life:-"I quitted my nativo country so early that I have hardly the manners truth that I am attacbed to Encland not only by gratitude, hut hy taste and inclination. In the sincerity of my heart, I do pray tbat I may never leave this hospitable soil. But it is not interest iu the success of England, it is also as a man. The safety of Europe, of the world itself, the happiness and indopeudence of the human race, depend npon the safety and independence of Tagland" In 1816 Orleans House was honcht low tho ar 1816 Oke thered ly tho Duo dandio, wathered around him books. York Horge once the residence of the books. Yark House, once the residence of the great Garl of Clarendon, and long afterwards of tho Hon. Mrs. Damer, was purchased a few years ago by the Duc d'Aumale for his nephow, the
Comte de Paris. Another member of the Comte de Paris. Another member of tbe Orleans family,-the Prince de Joinville, third eon of Louis Philippe,-lived from 1866 to 1871 wh Mount Lebanon. "Haroes and kings" are warned to keep their distance on Bishop War hurton's monument to the memory of Pope, but in these instances the warning has been, it appears, unheeded. Wo cannot longer keep back mention of that poet who was the chief glory of Twickenhame He dearly loved his villa, which he called "my Tasenlam," and spent hoth bis time and his money on the adornmeut of his gardens with the greatest content ment. In 1725 his old nurse died, and he
rected a tablet to her memory, with tbe follow ing inscription:-"To the niemory of Mar Beech, who died Novemher 5t1, 1725. Aged 78 Alex. Pope, whom she nursed in his infancy, and constantly attended for thirty-eight yeare, gratitude to a faithful old servant, erected this stone." Eight years after, the poet's motlier, tablet tina Pope, died, and hericas erectag in a seclnded part of the grounds, with tho touching inscription :-

$$
\begin{aligned}
& \text { "Ah, Edithn! } \\
& \text { Marrum optima, } \\
& \text { Mulierumamantissima, }
\end{aligned}
$$

Nothing is now left of the poet; the grotte which cost him 1,0002. has heer stripped of the spars, shelle, and gems which adorned it, by his hieving admirers, tbus fulfilli

$$
\begin{aligned}
& \text { Then some small gem, or moss, or shining or } \\
& \text { Departing, arh shall nilfr, in fond hope } \\
& \text { To please their friends in ovary distant shore, } \\
& \text { Boasting a relie from the cure of Pope; 't }
\end{aligned}
$$

and his villa itself was ruthlessly destroyed by the Baroness Howe, widow of the sou of tho celebrated admiral, and wio of Sir Watben Waller. The vicissitudes of houses are often ery strange ; Pope's own villa liad wings added to it by Sir William Stanhope, and the end of the villa built by that "Queen of the Goths," Lady Howe, after sho had razed Pope's to the gronnd, was that its wings wore taken down nd the central portion divided into two the Secretary of State who succeeded Addison and died at the early age of tbirty-five, lived at the Grove The poct wrote his epitaph for the be Grove. The poct wrote his epitaph for the that Craggs was, -"Praised, wopt, and bonour'd by the muse he loved."
We now come to th
We now come to tho most noted of all the abitations at Twickenham, viz., the gimorack villa of Horace Walpole, the registras of the villago. The ortginal house wha buit by the carl of Bradford's conchman in 1090, and was the common people "Chopped-straw Hall." It was inhabited hy several men of note before Walpole bought it; one of the earliest of hese was Colley Cibber, and tho latest Pire Courayer. In 1747 Walpole took the romainder of Mrs. Chencvix the toy-woman's lease, and the next year bonght tle fec-simple. Ho then
gradually rebuilt the house according to his gradually rebuilt the house according to his
notions of Guthio, and filled it with curiosities, notions of Guthio, and filled it with curiosities, after wbich it attracted all the fashionable
world to it as one of the sights of the kingdom It thas became a very different place to tbat which Mrs. Chonevix left. Walpole described Mr. Ohenevix's library as "furnished with three maps, one shelf, a bust of Sir Isaac Newton, and a lunar telescope witbout any glasses.' Tbere was a small louse on tho estate which Walpolo bonght, in which Richard Franklin, the printer of the Craftsman, lived; and it is not a ittle curions that William Palteney, Earl of Bath, Sir Robert Walpole's great opponont, and one of the chief writers in the Ciaftsmant, should havo writtcn some verses in

## Some cry up Gunnershury, For sion some deolare

And some say tiat mith Chiswick House
No Filla can compare.
But ask the beaux of Middlesex,
Who lnow the country well
Who know the country well,
If trambry Hill, if Stravor'ry Iill
Don't bear whay the bell."
Nicholas Amulurst, the editor of the Craftsman, died at 'Twickenhan; and although 10,000 or 12,000 copies were sold weekly of this paper which brought his party into power, he was llowed to die poor, aud to bo buricd at the expense of Frantilin. One of the chief distinctions of Strawberry-hill was tho printing-press which Walpole set up in 1757 , and at which he rinted somo rood books and much rubhigh Iis last printer, Thomas Kirgate, who served is master for thirty years, was not remomhered in Walpole's will, in which 100,000 l. were he geathed in various ways. Kirgate wrote som stanzas complaining of his lot:-

> 'Adien! ye groves and Gothic tow'rs, Where I have spent, my youthful hours, Alas! I lind in vain: Since ho who coutd my age protect By some myaterious gad negleet, Has left me to complain.'.

Walpole beqneathed his bonse and its con. ents to the Hon. Mrs. Damer, with 2,000l. to keep it in repair; and she, after living in it for a timo, resigned it in 1811 to the Countess
Dowager of Waldegrave. In 1791 , six years Dowager of Waldegrave. In 1791 , six years
after Mrs. Clite's death, tbo two Misses Berry

Whom Walpole described as "the hest informed and most perfect creatures ho ever saw," came
to live at Little Strawberry-bill; and tbeir to live at Little Strawberry-bill; and tbeir called himself, bequeatbed the house to tbem at his death.
The list of the distinguished inhabitants of Twiokenham is still unoxhausted, but we most hurry over those that have not yet been men. tioned. Twickenham Park has already heen referced to as the residence for a time of Bacon; Stratton, the distiuguished Royalist, who was made a peer by Cbarles II., at Brussels, in 1658. His town-honse was in Piccadilly, on the site of Deronshire Houso, and Berkoloy Square and Street, and Stratton-street, take tbeir names from him. His brother, sir William Berkeley, au able governor of Virginia, died at Twicken ham, and was buried in the church. Marble Hill, as mentioned before, was built for Mrs. Howard, afterwards Countess of Suffoll, the mistress of George II. The staircuse is made entirely of finely-carred mahograny, aud some of the floors are of the same wood. There is a story attacbed to tbis malograny. certain oaptain had orders from the king to bring sone wood from the Bay of Honduras; mou carried out his instructions in so uncere. permissio manner, foling the trees withour was noorly the Sparin, Hablo Hill has rad vas one tho Marcuis Welvesley another. Son after the marquis left it it be. came the property of Genoral Pecl. Littlo Marble Hill stands on the site of a cottaye once occupied by Jlrs. Clive, hefore she removed to Bear Braw clerl- was or Dr. Johns in whose honour Walpole added a postscript to his "Parish Register," commencing-

## Here gening, in a later honr, Selectod its sequester'đ bo

Lord Byron's grandfatber, Admiral Byron, known amonget the sailors as "foul weathor
Jack," was buried at Twickenham on April 10, 1786. Dr. Morton, Principal Librarian of the British Museum, and Secretary of the Royal Society, died here in 1799, aged cighty-three. Sir John Hawkins, the historien of masic and executor of Dr. Johnson, lived at Iwickenham House; and the deluded Joanna Soutleott lived and preached in a small cottago ou the staines. road, pulled down a fow years ago. Of celebrities of on own days, we must not forget that rurner, the pawter, lived for some vears at Sandycomb Lodge; or that Charles Dickens took up his summer resideuce at Ailsa Parkinas in 1838. The Poot Laureato lived at wickonham in 1832 , whan his son Halkan, born.
Hounslow Heath was once a namo of terror oravellers and the noighbouring village of Whitton was a notorious resort of the highwaymen that frequented tbat place. Dr. Dodd was captured here beforo his trial for forgery. Scarcely more than twenty years ago the little villaro of Whitton was still quiet and seclnded, and at the chief house of the place a night watchman was kept, who went ronnd the house and grounds every homr, and called ont the! time. Twiokenham has always heen femons for its trees, and the first weeping willow known in tbis conntry is said to havo been planted in Twickenban Park in the early part of the cighteentb century. In many of the gardens there are marnificent cedars of Lebanon. Areh. bald Lord Isloy, aftorwards Dinke of Argyll, planted about fifty of these cedars at Whittonplace, and then erected on elegant tower from which the outspreading brauches might bo looked down upon. "It is said that the trees of Mount Lebanon itself are so shattered hy winds and storms, that they are surpassed by the cedars in the neighhourhood of London." Twickenham has had several histormans, hut the latest is the Rev. R. S. Cobbett, whose "Memorials of Trickenham, Parochial and Topographical," was issued last year. It is a careful work, full of information and interest, and wo have been grcatly indebted to its pages for much of the matuer contained in this article. We canits which has rown up by our beautifal riyer, that with the words of Thomson:-
"The silver Thames first rural grows
Fair winding up to where the Muses hatiut
In Twit'nam's bowers."
-

THE CONINGTON MONUMENT, ST. BOTOLPH'S CHURCE, BOSTON.
Sir G. G. Scott, R.A., Abchitect.

CHAMBERS IN LEADENHALL STREET, unusually ligbt and well ventilated, are mostly beliere that the favorr with wbich tho huildin LONDON.
The snhject of our illnstration is the street front of a block of offices on tbe soutb side of Leadenhall-street. The general plan consists of detached blocks, witb a corridor ranning throngh access to the in the centre block, giving tbere is a fore ground-floo tbere is a braneb corcidor running through another property into Billiter-street. Each of the hlocks averages about 50 ft . by 40 ft ., and is four stories higb, counting a lofty and welllighted basement, which really covers the wholo area, heing lighted thronghout by skylights. The wbole of the surfaces of the areas through. to he very convenient, and the offices, which are
unusually ligbt and well ventilated, are mostly believe that the favoar with wbich tho huilding
let, and from what we hear, at very hirb rates, is viewed arises from baving good access to all let, and from what we hear, at very bigb rates. is viewed arjses from baving good access to all
The front is huilt with Portland stone and cat parts, and the care bestowed by the architect on and gauged Fareham hrick. It is an excellent the provision of light and air.

Therl
Messra. Ashhy \& Heen entirely carried out hy desions and a Forner; of Aldgate, from the . N. Norman Shaw, A.R.A. Mr. James was the ontrusted to Mr. James Forsyth of Edward treet, Hampstead.road.
Treet, Hampstead-road.
Itmay he interesting tomention specifically that
Thenerally is executcd in veined
alaber, the subject being sculptured in white the ground-lloor of the back block,
gaineas a year, on a twenty-one years' lease, and Gilbert Scott, R.A., and executed hy Mesars. all the rest in proportion. We bare reason to Farmer \& Brindley, of London.

THE CONINGTON MONUMENT.
THE monument of which we give an en. raving has been erected in Si. Botolph's Chving has been erected in St. Botolph' Church, Boston, in memory of the late Rev. John Conington, Corpus talian alabaster.

a block of offices in leadenhall street.-Mr. f. Norman Staw, a.r.a., Architeot.

## NOTES FROL PARIS．

Statucs．－The Government ef＂Moral Order＂ will decorate Paris，if it does not regenerate the sopnlation．Napolcons in marble and bronze cligies－that of the Rond－point at Courbevoie， and that of the Column Vendôme，aro a present at the State depst of marbles in tho
ifue do l＇Univorsite surmount the new column ；it is for the moment in fifteen or twenty pieces，and looks like a mass of old iron．It is not broken，however，but nnscrewed，and，despite a few crovicos，can bo

de Ville il as that of the Rue do la Parcleminerie． Che reoonstruction will cost about one million $f$ frances．It was at first iutended to repair the unese and the Hôtel de Villo together，but it complcted before the plans ef MM，de Per－ Nes and Balln are put into execution．
Nerv Tramuay Carriages．－For somo time past the Paris Omuibus Company havo been demand－ ug models of a simple aud commodions vehicle， ritable to the tramways which are now being aid down in many parts of Paris．One was exhibited at the Trocadero a menth ago；but it
appoars that it was fonnd wanting，since a new model has been tried this woek on the rail which rnns from the Pont Solferino to the Pont de la Conoorde．This last invention will probably be adopted．It is a happy modification of the American form．The form is that of an elegant wagonette，that most sociable and comfortable of vehicles；it ean be drawn hy one or two
horses，and contains twenty－bix places，sixteen inside and ten on two platiforms placed at the two extremities of the carriage．On these plat forms travellers will staud and be able to smoke in the interior are parallel seats covored with grcen velvet，as in the ordinary omnibus．A
mineral essence has been adopted for the light ing of thesence has been adopted for the light fore no＂knife－board＂ few passengers will complain．The platforms are excellent substitutes．A curions feature is that the drivor will stand amony the smokers，a revolving handle within his reach which will act on a breals，and gratify obese ladies by securing a sudden stoppage．The carriage is uniform at both ends：arrived at a terminus，the shafts are taken out and affixed to the other cnd ；tho con－ ductor occupying the place racated hy the driver．Ventilators are affixed to the upper part of the carriage．The company is net yet satisfied，bowover．A new system，admitting of forty seats，and the orthodox imperiales，is to be Pro a few weeks．
learning Gorman La Reranche，＂－Apart from learning Gorman gcoyraphy，fenciug，and riding， the Parisian passion for revonge is leading
sober members of the Institute，savants，and scientific authorities into the mest extraordinary resourches and experiments．M．Mille has just announced himself as a partisan of＂detached forts，＂and M．Mille is，it should be stated，
tho ongincer intrusted with the tho ongincer intrusted with the condoet of the experiments being made in the plain of Genne－ viniers on waters and tetrius of drains as manure．His essays have boen thoronghly
snccossful，and the ploin wheve this nccessful，and the plain where this manure has heen tried is a veritable slice of Ttopia．Genne． viliers is a peninsula，－waste land hitherto－
jutting into the Seine．Theso facts have led the onginee to seive．Theso lacts have lo siege．He proposes that a large bolt of forts should protect the peninsula，which should be thus ha from the drains．The gronnd conld sufficicnt entirely fertilised，and would produco a wants of crop of vegctables to supply all the no longer force epicarean Parisiaus to pay 30 franes a busbel for indificrent potatoes．

## BARNACK OHURCH．

TaE east window of the chancel of this well Enown church bas been filled with stained glass， as a nemorial of the late Bishop Davys，of Petcr－
borough．The chancel is of the Latc style of arobitecturo，and sufficient Decorated rlass was found in the fine stont old stained wiudow to give a clue to the proper treatment of the new glass．The colouring of the tracery pieces is rather hoayy．The windows are light coloured grisaille－work，with subjects under low canopies，running across the window，forning string－courses of colour，as in the side－windows The echeme of Chapel，Oxford．
The echeme or the suhjects is，first，from the life of our Lord；zest，illustrations from the life of St．John tho Baptist，to whom the ehurol is dedicated；then subjects from the life of St．
Peter，－－these last have reference to the con Peter，－these last have reference to the con－ nexion from tho earliest timos that thore has heen botween Petorborongln Cathedral and Bar， ack Charch．
The two side－windows are also filled with stained glass，similar in character to that in the east window，but they have the figures of the pistleangelisus，and the four writers of the nce of the new work is remars．The appear－ tho old stained glass．
The church is best known from its haring the oldest and most interesting tower of any church in Euglaud．It is Suxon，of primitive form，and stood hy itsolf，the only entrance heing by it doorway，now a window about 15 ft ．from the ground．From the stone seats placed round the inside，it is surmised that it was used as a council－chamber by the East Anglians．The nave and chancel wore added after wards．The lower is surmountod hy a heautiful Early English Saxen ornament outsido．Besides the Saxon
tower，there is a very good font，and a most singular sculpture of the Virgin in contempla－ tion．It is rouch mutilated，but the figures of hay three persons of the Trinity，with separate rays proceeding to the Virgiu，can be clearly made out．The churchyard，covered with stone coffins，shonld be noticed．The neighbourhood of the churoh fnrnished the celebrated Barvarl－ tone of whioh Peterhorough Cathedral built．The quarry has heon long oxhausted
The three stained windows are the gift of the位，Marsham Argles，M．A．，canon of Pcter－ Bagn，and were executed by Heaton，Butler Bayne，of London．

## ARCHITECTS AND BUILDEHS．

## the manchester societt of architects，

The Report of the Council of this Society read at the last annual meeting already referred o in our pages，says ：－＂As regards the work－ the Building Trades＇Institate for given to education by the personal exertions technical ducation by the personal exertions of some of our members，and by the offering of prizes by he Sociely，has produced and is producing rood cesults．＇I＇ke workmen find that in pointin＇s out to then a courso of stady the architects are their best advisers，and the results of that study dre at present shown in the returns of the Government Science and Art Examinations，in Which the Manchester Instituto takes a high rauk，and will ne doubt in coming years be more apparent in the technical knowledge possessed the fatnre master builders of Monchester The value of the Society as an organised body It hewever，been sbown in other respects．
It will be remembered that some yoars ago paper was drawn up with the view of setting forth the principles that ought to oharacteriso building agrecrevents：this alone was a step in advance of anything that had previously existed， showing as it did clearly tho rously oxisted， that onght to be embodied in such ios equity Latterly，however，from cause which it unnecessary though not difficolt to phich it is the master brildes in inducing or compelling have sncceeded parts of the kingels arieus parts of the kingdom to introduce into their quantities with tho agreement，and introducing a thirl por ang introducing and they may he many，－the architect and builder may he many，一the architect and like cow may agree．A request to conntenanco Master Bes has becn made to this Society by the Jastcr Bnilders Assooiation，and refused．The original paper on buiding agreements has，how－ ever，been revised and some improvoments intro－ ducon，such as fixing the proportion of payments the proportion what te the valuc of work done，－ as secult for mich the amount rotained in hand amonnt of for completion should bear to the neaning of contract，－the aelinition of tbe tract，＂－the xesponsibility as to insurance con hut your Council has decined to agree to the incorporation of tho quantities with tho agree－ ment as a rule binding in all cases，because it must inovitably lead to laxity in toling them out and toh the employer of the security he ought to feel as to the annount of money lie may heve to disbnree ；and they lave likewise dcclined to admit an arbitration clause，except for sucly casos as cannot possibly be provided for boforehand in the agreement itself．It caunot he concealed that the renl motives for securing the offices of an arbitrator or referee are in regard te prices ing extras and omissions，and possibly in throw rejecting ohstaclos in the way of an architect him to accept what he might not asmay cause disposed to do，rather than have the conres of his work intorrupted and interfored with hy the intervention of a third party．Your Conncil consider that a very slight amount of trouble in framing the agreement，or in determining its hasis at the very outsot，would render the appeal ustice to both huilder and emporloger doing strict Drring tho hat Jand employer．
Dantio the paso year tho schodule for taking qnantities and measuring up works has been revised in conjnnction with a Conmittee of the Mastor Builders＇Association，and reprinted．The Society is to he congratulated on the fact，that onportwas the work done in framing this very important locument，now therecognised authority changes whatever havo heen istrict，that no only additions having been some few explanatory． paragtaphs．

SMOKE NUISANCE IN THE SUBURBS.
THERE are many people looking ont for thing to find fault with, some offering a remedy, other not. I beg to class myself with the latter kind of pests. My present grievance is this: The mode adopted in laying out ground for building large houses. I will ingtance South Keasingtion and its surronndings. Large bigb houses are now erected in wide roads, which houses, for example, I will call the shell of a nut. The kernel, middlo of the grounds at back of, and snrrounded hy such houses, is covered with low stables. These stables are inhabited, and the inhabitants must live, and so sometimes indulge in hot dinners, and uso hot water; consequently fires are burning all day, winter and snmaner, which cause an abominable naisance to the surrounding private houses, for no sooner are the windows opened than the rooms are filled with large biacks, or I may say lumps of soot. Why should bot the stables be fitted up with gas-stoves? Gas not the stables be titted up with gas-stoves? Gas sidered that the fires aro kept alight and burning sidered that the fires arokeptalight and burning
coals all day, while gas need only be lighted coals all day, while gas need only be lighted
when wanted to be used, gas must be cheaper when wanted to be used, gas must be cheaper
than coal, would keep the rooms cooler in than coal, would keep the rooms cooler in
summer, warmer in winter, prevent the fear of sparks flying out, and save inuch extra washing cleaning, and annoyance to the inbabitants of the houses. As the stables generally belong to the houses, arrangement for the payment of gas used could be made with the rent,-if let.

## GIVE THEM A RUB.

Wrile sauntering upon the Holhorn Viaduct the other day, I noticed what some people wonld cousider mischief, namely, the toes and other lower parts of the bronze statues within reach laving heer rubhed, no doubt by idlers both big and little; and it struck me bow much better the statues would look if such idlers had the opportunity now and then to rab them all over, or, better still, if the custoclians of such works of art, -not only on the Viadact, but throaghont London, -would employ some (even pauper) labour once a month to softly rab off, by cloth (wr hrush, the accunulation of dust and soot eonverted by rain into mud. No harm, I maintain, could happen if properly and regularly performed, but much beauty would be the resnl and reward.

## FALL OF BUILDINGS.

A Bridge at King's Cross.-The down traffic upon the Great Northern Railway has been thrown into disorganisation by the snbsidence of one of the ontside arches of the iron bridge that crosses the lino about 50 yards from the verminus. The aruh subsided to the extent of 3 ft . or 4 ft ., and completely obstructed the down main line. Two or three trains were delayed; and pending the removal of the debris it was found necessary to despatch all the down trafic from the centre platform. The bridge was almost a new structure. Fortunately no one was hnrt.
Houses at Brighton.-Workmen had been en. gaged in erecting some honses and shops, at the corner of Kensington Gardens, and while doin buckled and brought down the work, precipi tatine those engaged tbere into the street below whence they were picked in and sent below, hospital, but, after receiving attention, and being fonnd not to be much hurt, were permitted to go to their homes. The builders were Messrs Hoather. Mr. Hill, the architect, was summoned at the police court afterwards by the moned at the police court afterwards by the borough surveyor fur contravening the Act in the erection of the sbore bnildings. The evidence went to show that the huildings had fallen
down the week before and injured several down the week before and injured several men. Tined forty shillings and costs.
Roofing in Leeds.- At the oil and soap works of Mr. John Newall, Lady Bridge, Leeds, before the work of the day had commenced, a portion of the roof of the building, which is 40 jards in length, fell in, doing considerable damage to clemicals and things requisite in carrying on
tho hasiness. It seems that one of the cross tho hasiness. It seems that one of the cross beams supporting tbe roof had given way.
A Building at South Shields.-A large baild. ing, which was composed of hrick and stone, situated in Nile-street, and intended for exten. sive ale and porter stores and offices, for Mr.
W. H. Dickinson, was being finished, when a
loud erack was heard. Tbis alarmed the workmen, who beat a retreat. They bad hardly done so when the bnilding fell in with a loud crash, and became a total wreck. Two workmen sus. tained injuries. The cause of the accident is one of the main walls rested. The damage will amount to between 500l. and 600 l .
The Front of a Grand Stand.-At the Dunfermine race-meeting a portion of the front boarding of the grand gtand gave way, and prepersuns, all of whoun sastained cuts and bruises.

## CHURCH-BUILDING NEWS.

Cambervell.-A new chancel has lately been added to St. Saviour's Church, the accommoda. tion being fonnd inadequate to the rapidly. increasing neighbourhood. It differs somewhat in character from the other portions of the edifice, being of a later date. The chancel has been produced from the designs of Mr. Bartleet, architect, and carried out by Messrs. Woods as the builders. A new stone pulpit has also been erected in the place of one of wood, the carving on tho same, and which in the chancel is profuse, heing executed hy Messrs. Smith \& Finley
Woodbridge.-Mr. R. M. Phipson, the diocesan architect, has been consulted in the carrying pages tho alterations already referred to in our 1,5501 . A cominitteo was appointed to procure the necessary funds, and carry out the ohject in riew.
Hatford.-The chief stone of a new church has been laid at Hatford. Mr. W. Wigrginton the architect, and Mr. J. Falkner the builder. Britford. - The church, which has undergone estoration, has been reopened, when a piece of dded to the churchyard, wasconsecrated by th Bishop of Salishury. During the progyess of the restoration a Saxon arch of stone was dis. covered in the soutb side of the charch, not far from the west end; and this having been openel, forms the doorway to the edifice, a porch of Early English cbaracter having been placed on the outside of the chnrch. The nave is lighted on each side with three windows, some of which are composed of fragments of the origina Findows, which are of early character, the styl being preserved in the new onles which have been iaserted. The designs for restoration were
furnished by Mr. G. E. Street, arclitect, and urnished by Mr. G. E. Street, architect, and
Mrs. Hale was the contrantor. The cost of thie restoration was orer 2,000 l.
St. Laverence.-The foundation-stone of St . The sicklemore. The architect is Mr. W. E. Smith of London; and the builders are Messrs. Smith \& Son, of Ramggate.
the restoratiou of Gurleston Church is about $4,680 l$; and the total sam, within 300 l . or 400 l . bas been suhscribed.
Reauling. - The foundation stone of a new school chapel, now being erected at the west Ir or the school buildings, has hean laid by Gothie Water, M.P. The chapel will be wide. Mr. Alfred ahout 0 sense is the architect and Messrs. Wright, Brothers, \& Gondeliild, Croydon and Reigate, are the bnilders. The total cost will be ahoot 3 ,000L, and Mr C . . of Whitekniglts Park, has given the sum of 500l. towards the fund.

ARTIZANs' Visir to the vienna EXHIBITION.
The thirty artizans sent out hy the Societ THE thirty artizans sent out hy the Society
or the Promotion of Scientific Induatry to report upon their respective trades, as exhibited at the Exhibition, have retnrned, and from the with which they set abont their work, strong hopes aro entertained that a very practical and valuable volume of reports will be the resnlo of their visit. Mr. W. G. Larkins, the Secretary of the Society, indertook the entire responsibility of the arrangements, both of travelling and of gave him, when they bid him good.hye at Ant werp on the road home, he any criterion, the men must have been well satisfied with their
visit. It should be said that the expenses of
eleven Birmingham men were defrayed by the
Birmingham Chamber of Commerce, and the Birmingham Chamber of Commerce, and the W. C. Aitken, who was connected with tbe artizans' visit to Paris in 1867.

## CIVIL AND MECHANICAL ENGINEERS'

 SOCIETY.On Saturday last the Society visited Bretor's Farm, on which the greater portion of the sewage of the town of Romford is atilised.
The members assembled at Bishopsgate Station at three o'clock, and proceenled by train to Rom. ford, where they were met by Mr. Hope, the tenant of the farm, who conducted them over the whole of the property, about 121 acres in extent, and courteousily explained the various points connected with sewage-farming.
The members were mach struck with the variety and richness of the crops, especially when the extreme ratural poverty of the soil is considered. In one part was Italian rye.grass undergoing a sixth cutting, while on the next plot was maize or Indian corn; then wheat, well advanced, heavy with grain; and further on strawberries and other fruit, which appeared to thrive wonderfally on the liquid manure, ndeed, the members considered the strawberries to he of a peculiarly fine flavour.
The farm is abont three miles from the town, and the sewage, some $2 \$ 0,000$ gallons per diem, whence it runs into a chamber, setting*pits, fom fluid is promped by an encine of 8 .horse power o sufficient beirbt to flow by means of carriers some of wrought iron and some of concrete, to all parts of the farm
While observing
the favourable results of ewage-farming, as illustrated by the crnps, the nembensive no fly inder nder.drains. The results are such as can only tion, as practised hy Mr. Hope at Romford.

## THE WHITEHAVEN WET DOCK

These works were commenced in May lasi ear, by Mr. Phillips, the contractor, and fair progress has been made. The erection of the walls walls bas been forwarded. Tho outer alls on tho nortls and north.west sides have been completed, and joined at the place locally junction, also, shore is afforded hy some steps. The arches, three in number, at the "elbow," have dis-1 appeared, and a curved wall has been suhsti. tated. The west sea-wall, something like 270 ft long, and running very nearly at right angles from the north pier, has been completed, and heen commenced. west and new north sides hes Tias swest dock wall, when completer, will be surmounted by a parapet, 4 ft .6 in . high. It months. The new north wall will be a parapet of ahout 3 ft .6 in . in height, and a portion of this has already heen put on. A sample of the inner facing of the dock is to be seed opposite snecked rubhle. Tho fates of the shipg yard. It is of snecked rubhie. Tho construction of the return wall up to the placo where the dock.gates will be situated is in an advanced state, and con-
siderahly more then one-half may be said to be completed
During the progress of the excavating for the east wall the workmen came upon what is supposed to have been the wall of an old timber. dock. The wall faces seawards, and, whatever it may have been, it contaus many good blocks. of stone wbich the contractor can utilise with advantage, as they are of excellent quality for dock-work.
The contractor is represanted on the works by Mr. Charlton, and Mr. Brunlees by Mr. Williams, resident engineer

Church Builders.-The Rock is informed hat Bo rroa is the esteem felt for the Rev. $\mathbf{F}$ Whitfield, who has just left Wimhledon, that Beron Hambro, of Roehampton, has offered to build a chorech at a cost of $5,000 \mathrm{~L}$, to secure a continuance of his ministrations. It will, however, probably end iu the establishment of another "Free Church of Eagland."

ARCHITECTURAL ASSOCIATION EXCURSION.

## The programme of the " Newark and Liohfield

 xcursion," being the fourth undertaken ander ne conduct of Mr . Edmund Sharpe, has been attled upon. On Monday, August 18 ch, someours will be spent at the spleadid parish churoh St. Wolfran, Granthara; and Mr. Sharpe's angural address will be given at Nowark, here the party will put up for the evening. esday will No occupied in visiting village rant Bronghton and the church at Stanton ing among the number; the latter church is a Hlow of Navenby and Heckington churebes in incolns hire, as far as regards its fine Decorated rved and sculptured chancel, Easter Sepulre, altar tombs, dc. On Wednosday, the ollegiate Church at Southwell will be roached id on Tharsdiy the party will move by rail a rod why westward, stopping on the road at
ottinghan (St. Mary's Charcli), Derby, and tho ottinghani (St. Mary's Chareli), Derby, and tbo
te Norman remains at Tutbury. "Romantic shbonrne," near tho mouth of Dovedale, will use the travellers on Thursday night. Hence, ase the travollers on morning riser may reach the Reynard's ive and other notablo features of the Dule; d later a carriage-rido southwards will carry erybody to Mayfield, and to the good collection
old stained glass at Norbury Church. Stafford old stained glass at Norbury Church. Stafford
11 be reached hy rail, and somo lours spent at 11 be reached hy rail, and somo hours spent at
Mary's; and theo to Lichfield. In the even3. the cathedral will be open for organ citals; as also will the churches at Newark, uthwell, and Asbbourne, on the several cven58. Lichfield Cathedral, and the collection of chitectural drawings by the lato Rev. J. L. tit, which are to be shown to the members in a ball of the Bishop's Palaco, will supply copation on Saturday. The final dinner will London and at such.like distances may bo London and at such.like distances may bo
ched tho some ereuing. With good luck and ched the some ereuing. With good luck and
$r$ sunshine the fifty should find in this proumme rich material to be carried away in mories, sketch-books, and cymargrams,

SALE OF SURPLUS PROPERTY REAT EASTERN RAILVAY COMTANY. During the last three weeks a large quantity of plus property belonging to the Great Eastern ilway Cumpany has been sold by auction, at
Mart, Tokonhouse-yard. The property is Mart, Tokonhouse-yard. Thie proporty is
anted in the noighbourhood of the company's tropolitan extensions, which, with the excep1 the intended terminus in Liverpool-street, I the intended terminus in Liverpool-street,
ether with the great City station there, have * been completed. The aggregate value of Whole of the property is estimated at
wards of $120,000 \mathrm{l}$., produoing a present annual wards of $120,000 \mathrm{l}$, produoing a present annual
tal of $5,000 \mathrm{l}$., which tho anctioncer stated tal of $5,000 \mathrm{l}$, which tho auctioncer stated considerably below its annual value, owing the railway company not being in a position rrant lengthened terms of teuancy, $n$ opening the sale, Mr. Stapleton (the
tioneer) stated that the proporty was sold tioneer stated that the proporty was sold
ng to the Great Eastern Company baving completed their motropolitan extension 15 in the several districts through which they sed, and consequently they had no further asion to keep possession of it. He added that reserve put upon the property by the Comy was so low that he had every confidence in several lots being sold if the bidding was at
spirited. The first fire lots, oonsisting of ses in Cambridge-rond and Paradise-row it hoal-green, producing a present anuual rental [987., were sold for an aggregate sum o 151. Tho next six lots offered consisted of ses Bituated in Tower-strect aud Rrehmond150l., wero all bought in, with oue exception offers made not amounting to the reserve. The sold was a house in Tower-street, baving itage to lower-street of 58 ft ., and a return itage to a new road leading to London-fields tion, on the north side of the bouse, of about ft , and arailable for immediate building poses. This lot, which in addition to a large se, contains stable, ooach-house, and otbor buildings, with a garden and conservatory it 710 ? . Tho anal rontal being 63l., was sold red duriug the sale consisted of the Mall Eud ase estate in Walthamstow, Essex, near ing Forest, occupying an arca of seven-
has only been erected within the last few years, was described as "a very superior hrick building with stone dressings, fitter hroughout regardless of expense, built under ho superintendence of one of our most eminen architects, and standing back from the road, aud is approached by a carriage drive and handsome thight of steps, and from every window com mands magaificent views of the surrounding beautiful and pioturesque country." The house, garden, and pleasuro-grounds occapy an area of $4 . \frac{1}{2}$ acres, and on the west sido is the timbered park land, of 13 acres, the timber being ail included in the sale. The property was ultimately withdrawn. Its estimated value is 15,000l. Three villa residences, in Rectoryroad, Hackney, producing on aggregate rental of 156l. per anaum, wero next offered, and two of them sold for 380l, and 430l. respectively, which closed the day's proccedings.
The sale was continucd on Wedncsday, the -3rd ult., when a furtber number of houses in Bethnal-green and Hackney, and also in Stoke Newington, London-fields, Dilston, Stamfordhill, and Edmonton, was offered, and nearl the whole of the lots, sixtoen in number, were disposed of at pricos ranging from 400l. to 9002 per house. Tho argresate rentals of these houses amounted to between 650l. and 7002 . ne annom. An estate at Wultharustow, called Shern Lodge, and containing threo acres of land was also offered, hut the biddings not amounting to the reserve, the property was withdrawn The salo was resumed and concladed on Wed. nesday last.

Fiftcen lots were offored during the day, con sisting of houses in Edmonton, IIackney, Beth nalgreen, and Walthamstow, in addition to Honso, eatate in Edmonton, called Millbrook G,000l, was offered for the acres. The snm of 6,000l. was offered for this cstate, on which it was withdrawn. The property in Edmonton was Bethnal-grecn mot with purchasers inckney and Bethnal-grecn met with purchasers. The aggregate amount of the three sales is said to amount to about 70,000 ., and negotiations are also said to be in progress on the part of building com panies for the several cstates withdrawn.

LEICESTER MUNICIPAL BUILDINGS COMPERITION,
TaE author" of the design marked "Contra ando Incrementum" (Mr. A. Peebles), expurgated by the refereo on the ground of noncompliance with Instrnctions, has sent us a copy comphance with Instrnctions, has sent us a copy
of his protest against the decision, as the author of ${ }^{\text {s }}$ Simplicity ${ }^{\prime}$ protind the decision, as the author of "Simplicity" had previously, with a request that we should publish it. The writer justifies his departure from the Instructions, and points equally depart from them. We do not hesitate to say that it is only in extreme cases that we can be led to take part against the decision of a The first referee.
The first premium has been awarded by tbe Town Council to Mr. Hames; the second to Mcssrs. Ordisb \& Traylon; and the third to Messrs. Scott. $\qquad$
IMPORTANT IMPROVEMENT OF THE PORT OF BRISTOL.
ExTENSIVE and important improvements in the dock accommodation, at Bristol, have jnst been completed, nnder the superinteadence of Mr. T. Howard, C.E., at a cost, including the purchase of property, of rather more than $14,000 \%$. Since the introduction of an increased ize of ressels, and espccially long stenmers, the angle at the juncture of the old locks with the dangerous. " To remed

PUBLIC WORKS IN SUPPLY
lify courts,-National oallery,-Tranes емbankment.
In Supply, on tho Civil Service Estimates, on tbe vote of 57,8001 . for the new Law Conrts, Mr. Ayrton, in reply to Mr. C. Bentinck, said that the tender for the construction or tbe hulled ing, after Mred bat not sealed yot. The specinca that wero herng got out, so that th waipected the rreek would be hagua who two theo weeks. There would be stone groined cellings in the central ball, which wonld requiro heary hut. trosses and increased thickness the war could not undertake to exhihit the designs pub. liely, but wonld be happy to show a oopy to any hon. memher, or any one specially interestec, wbo wished to see them, and who had a reason. ahle claim to do so
In reply to Mr. Bowring, tbe right hon. gentleman intimated that Government adhered to their determination to cover a certain portion of the new National Gallery with wood flooring. Further questions were put hy Mr. Alderman Lawrence, Mr. S. Booth, Mr. Goldsmid, and Mr. Gregors, respecting the new Law Conrts, to wbich Mr. Ayrton replied that the oost would exceed the a monnt sanctioned hy Parliament by considerahle sum, on account of the increase cost of lahour, and that the accommodation wonld not he sacrificed to hring the cast within the estimate. An additional vote would have to he introduced next year. The work would he proceeded with as soon as possible, and thore would he no dolay on acoonut of the approaching close of the session. The vote was arreed to.
On a vote of $8,500 \mathrm{l}$. for the aequisition of land and the emhankment of the Thames to the anth.west of the Honses of Parliament, a short disenssion took place. The Chancellor of the Exchequer explained that some time ago the Government acquired land in the immediate viounity of the Vietoria Tower, and cleared it of viointyer of old buildiuge to save the House from the dancer of fire, and they now proposed from the danger of fire, and they now propose to emhan to building which would act as a and to orer property on screen betwean the coll sioners in reap tor wid ther now mid a considerahle sum for rent. There was to he a clear spaco of 150 ft . between the proposed new building and the Honses of Parliament. A eneral complaint was that the vote had not been hrought on hefore, and that there was no necessity for the building in qnestion, oecause there were many unnsed rooms in the House itself in which commissions might sit. The vote was agreed to without a division.

OPENTNG OF A BOARD SCHOOL IN BETHNAL.GREEN.
The opening of the new Board school, Wilmottreet, Bettnal. green, by the Right Hon. W. E. Forster, M.P., has taken place. In the same treet are, on each bide, Waterlow huildings of the Industrial Dwellings Company. The schools are of stook hriek, with red hriek faoing, and moulded hrick strings. There are Bath and Portland stono for heads and sills, while the roofs are covered with Penmoyle green slates. The mnllious and tran. soms are of fir polished. The contract has been execnted for $10,389 l$., and the school is almost all ready for occupation. It is the largest school yet contracted for hy the Board. The girls' and hoys' entrances are entirely separate. There are cloak-rooms, lavatories, and playgronnds, and the ventilation is good. There were present at the ceremony several members of the London School Board. Mr. C. Reed, M.P., Vice.Chairman of the Board, apologised for the Chaiman's ahsenoe, and also for the ahsence of the Lord Mayor. The hon. memher, addressing Mr. Forster, stated:-The school is constructed to provide accommodation for 1,500 children. The site, which measures 20.502 square feet, was bonght of the Industrial Dwellings Company The architects are Messrs. Giles \& Gough, and the huilder, Mr. Adin Sheffield. In addition to the particulars given by Mr. Reed, it may he be stated that the ground floor of the entire block is devoted to infants; the right of the first floor accorumodates 220 girls, and the left 240 boys. Between these is the Board-room. The second floor is disposed of in the same way as the first, but the hoys' and giris' schools as dive first, by a room to he used jointly as a
drawing class, having for that purpose an npper and northern light. There will ho 600 infants on the ground floor, 480 hoys on the first and second Hoors, and 40 gills on the first and second floors. In the sohool thero is a class room fo

LONDON SCHOOL BOARD TENDERS.
The following tenders for schools were re ceived hy the Sohool Board for Loadon on the 28th of July:-

BROMPTON AND FULHAM ROADS
Is treating this aubject last week, omissio was made to notioo a papahle delaul- $t h$ strait at the entrance of Marlborough-road, whic Chelsea principal traverse street lcadico street, is the widest and most importar horonghfare leading soutbward from our grea onth. wpest artorial road. It is narrowed at tb orner pposita the Admiral Keppel, hy th orner opposito the 20 ft . npon the bonse line of thorourchfare, havin fly 18 ft of 9 ft of fo ; and considering that the small angle she a 110 to fow mon ha it thers disoredit few esty ortifio in extent, and of spooious width. Tho constriction commences at Walto treet, extending 90 ft . to Fulbam-road, a consists of four shops and stalls, and the th mall honses already noticed, the first st: extending 6 ft ., increasiog to 20 ft ., next to th wo corner bouses and shops, thus a quad lateral 90 ft . Iong hy 6 ft . at one end, and 20 at the other, is excised from Marlhorough ror whicb if opened out would form a fine soe sory thorourhfare and busincss street, impro ing the whole neirbhourhood, whilst at prese the narrow end of tbo road is used as the da and nightly resort of costermongers' harrot The sight is deplorable; the hlot, "hiatus va deflendus."

## BRITISH WORKMEN.

Having recently been in contact with a tol ahle number of workmen, doing repairs $\varepsilon$ alterations at a house in which I am somes interested,-men from an acknowledged respe able firm,-1 was struck with the impro manners, dress, and deportment of the "Brit workman," since $I$ had an opportunity judging, and since the so-called "movement of the class have created such a sensation. Ty were exceedingly well hchaved to me, and peared equally so among themsclyes, severs them haring the addition of "Sir" to answer required from the others. Hero, $h$ their mental condition had not kept pace their improved personal hearing,-they $\%$ often doing rery bungling work, and, for $w$ of forcthought or corsideration, or sometkelse, making singularly stupid mistakes. should like to know for what we are pay should like to know for what wo are pay increased wages, and why wo are ormo to th itin it he to fire them more leisnre be nuprofitahly diaposed of and more time be nnproftahly ape amusements and reading that do not tent elevate them and make them worth morc ll 1 mon is in withont thern as long as I con.

THE MIDDLESEX ARCH FOLOGICA1 SOCIETY AT HAMPTON COURT. Tine London and Midalesex Archoolog Society made a pleasant trip to Hampton Co on Weduesday in last week, and held $t$ annnal geucral mecting at the palaco. party consisted of memhers and friends rchaological as well as of sood spriukling of fair sex, and the trip was performed on Thames. The Rev. Mr. Hugo, the viee-? sident, and his numerons cbarge, missed notk ither of the pictnresque, the historical, or rebmolorical element. The principal point rerard to the last and specisl sulbiect of g a mo the metius the preat hall of the palace. Prelimine we maticulars a over, Mr. Hago gave some particulary a me ear lescrihed in Doomsday Book, as ocer aanor, descrined in Doomany book, as oce ng the site of the $k$ qnently erected Henry VIlI. Mr. Hugo said that the prera: notion as to Wolsey baving hait the greare erroneons, them that the hall, as we still remaining to show that the hall, as that see it, is the work of Henry
short, wo owe the magnificence of the pa short, wo owe the magnificence of the ph
more to the king than to the cardinal. the proceedings in the great hall were over, the proceedings in the great hall were over,
Hugo slowed the company over the val
other parts of tbe bnilding, and a visit was paid to the chapel. Permission to use the great hall for the meeting had been obtained from ber
Majesty's First Commissioner of Works, and permission to view tho chapel wag obtained from the Lord Chamherlain. The company were taben throngh the quarlrangles and the gardens.
The duty of doscribing the splendid The duty of doscribing the splendid collection of old tapestry devolved on Mr. J. G. Waller, while that of expatiating on the rare merits of W. G. Rogers. Mr. Hugo took occasion to point out the beantiful brickwork of Sir Whristopher Wron in the eastern fagade of the palace, witb other traces of the hand of that brchitect. The marine fossils to be seen in the oaving stones attracted particnlar notice, and
altogether the oompany thoronghly onjoyed What Mr. Hugo very property called the "many narvels of this really wonderful palace."

## TAMBETH SCHOOL OF ART.

This scbool bad a visit from Mr. Marks and Mr. Hodgron, Associates of the Royal Academy, In Monday before last, who bad come for the murpose of awarding the "Cresy" prize, of the by Mrs. Cresy, a resident of Sonth London, who las long taken an intorest in this school, to the itudents of which the competition is confined. The subject given on this occasion, says the Fouth London Chronicle, was "A Victory"; and welve students sent in illustrations, consisting of models in clay and plaster, paintings in oil Mr. Marks said he and Mr. Hodes mhesitatingly come to the conclusion that the rize sbould be awarded to Mr. Frith for his roup in clay, on the subject of "The Death of fephtha's Daugbter." Having called Mr. Frith orivard and handod him a cheque for the amonat
if the prize, Mr. Marks addressed to him a few vords of congratulation and encouragement. 4r. Frith's work, he said, bad a high place in us estimation, and its ovident bonesty and sin-
terity proved that Mr. Frith had beun trying to serity proved that Mr. Frith had beun trying to
to lis best. He bad had experience of teaching to his best. He bad had experience of teaching
at the Royal Acadomy, and had found the desire of scamping to be very strong amongst students. iendency. We had found that the man who had endency. He had found that the man who had

## RATLWAY MATTERS.

Subsidence of Ground in Liverpool. -The traffic Berry-street has been materially interfered vith by a snbsidence of ground above the tnnnel Thich is being construeted in connexion with the for Liverpool and Manchester line of railway. or two or threo days it had heen observed that he street was becoming of unequal enrface, bnt ae sabsidence hecaine so serious as to induce ome persons to call the attention of Snperatendent Sibbald, of the borough police force, o the condition of the thoroughfare. On an ramination being made, it was found that the
inking had taken place orer an extent of from 0 to 15 yards in lengtll and 14 ft . in width, he extreme depth of the fall heing abont 6 in. We place has been inspected hy the depaty he engineer employed by the contractors, and hese gentlemen are of opinion that no further absidence need be apprehended.
Railway Engineering in America.- In travel. ing from New York to Washington heretofore, he passengers coaches had to be dragged
hroigh Baltimore by borses. To avoid this he Pennsylvania Railrond managers resolved to alled tho line from Baltimore to Waslington, toring a Baltimore and Potomac Ruilroad, aake the transit throngh that place rapid and asy. The tunnel bas been completed. It is
$1,512 \mathrm{ft}$. long, including 550 ft . of open enttings and from the northern to the soutbern end makes an asoent of 125 ft . Branches connect it witb all the railways torminating in Baltimore Tho work has been done in harely two years, at cost of 2,300,000 dollars.
tnnnel tbrongh the Rocky Ming. The projected begnn, promises to Rocky Monntains, already begnn, promises to he the chief of all the Tunnel astonished people in its The Box fnture the Mont Cenis Tannel itself, the lenctb of whicb is more then Tannel itself, the lengtb looked upon as a mere nothing. The Rocky Monntains Tunuel is to be twelve miles long and tbere will be $6,000 \mathrm{ft}$. of earth and rock or considerably more tban a mile, over its greatest deptb. It is boped tbat not only will most of the western railway traffic be drawn throngb this "short ont," bnt that large mining
profits will incidentally accrue. The bore is to profits will incidentally accrue. The bore is to powerful macbinery, and it is reckoned that tbe tunnel will be finished at the rate of 60 ft . a working day. Tho Mont Cenis work was fonrwill take no in constrnction, 一this, it is boped will take no more than four.

## NEW RAILWAY BILLS,

The Private Bill Committee business of Parwhicb has beb commenced in March last, and whicb has been very heary in conseqnence of the investigation into some of the Bills having the latter part of Motropolitau and of last week, the Bill of the Motropolitan and St. John's.wood Company, for extending tbeir line and also for powers to run
goods trains over their line, being the last Bill bronght before the committee. The power songht to run goods trains over the line were strongly opposed by owners of property in the district and several local bodies, but the committee ultimately sanctioned the Bill. The result of the inquiries is tbat 120 railway Bills have passed tbrough Parliament out of about 198 applications. Of the successful applications, 35 are for the incorporation of new companies. Amongst the nnsnccessful applications was, perhaps, tho most important Bill of tho sossion, viz, one called tho Hull, Humber, and West Yorkshire project. It embraced a proposal to construct a tunnel under the river Humber, of two miles in length, on the pneumatic principle, by the construction of working vessels in the river, porthons of which were to be sunls to the bod of the out of and the water having thon beon pumped river was and made air-tight, of the railsor beneath it and the tunnel then to he built, the materials being sent was by the working vessels. Mr. Fowns the engineer. The Bill was strongly opposed by tbe North. Eastorn Company, with the view of preventing the projectors securing access to Hull, and several eminent engineers were called on hotb sides, those on behalf of the opponents of the scheme contending that it wonld be an ongineering impossibility to construct the tunnel under tbe river as proposed, whilst equally well. mown enginears who gave evidence for the pro. After an investigation of twenty-eight days duration, the Commons' Committee passed the at the olose of an inqniry occopying fifteen days. It is the intention of the promoters to renew the application next session.

## UTILISATION OF TRON SLAG.

Ir frequently bappens that the iron cbemically combined in hlast.furnace slags is by no means insignificant in amount, and it tberefore what es interesting to know from time to time cult, and amount is. It is, however, very diff. these slags by means of acids. This is particn. larly the case with crystalline slags, the vitreous slacs bein mucb mors deags, the indeed, too the slag as a buildine materia for utilisation of portion of finely.pulverised vitreous slags, portion of finely.pulverised vitreous slags, leaving a silicious jelly, bat the crystalline leaving a silicious jelly, but the crystalline portion is scarcely affected. It is recommended. pose the slags.
The process invented by Mr. Woodward, of Darlington, and carried out by the Tees Scoria

Brick Company, has so far sneceeded, says the Darlington Times, that bricks have been made a half-past three in tbe morning, and walled at half-past three. Those wbo have charge of the process are very sanguine of snecess; indeed, it is asserted tbat they can now permeate a mass of slag weigbing three tons, wbereas before they could only ancceed with a comparatively small quantity. The company bave for some time past been experimenting at Eston, at the fur. naces of Messra. Thomas Vaugban \& Co., witb the result stated. Laying bricks in a wall fonr hours and a balf after they were made is certainly a novelty in brick-making.

## SANITARY

Fever at Yeovil.-Fever has broken out at Fuish, a suburb of Yeovil, and some deatbs Overcrowdit
Overcroving in Whitehaven.-At a recent hat in resolutions were nanimonsly adopted crowding in opinion of the meeting the over seriously injnrious wn walculated to prove and that it was bichly desirahle measures should be taken to provide additional bouse accommoda. tion; that with a view of carrying out this ohjoct, the meeting ventared respectfully to urge upon the Earl of Lonsdale the propriety and adrisa. bility of granting building sites upon reasonable terms to parties desirons of erecting bouses; and that the trustees for the town and harbonr bo requested to do all tbat tbey can to prowote the moverment.

REPORT TO COACKMAKERS' COMPANY ON COMPETITION DRAWINGS.
Tre judges appointed by tho court of tho worshipful Company of Coachmakers and Coacb Harness-makers of London, to examine the drawings of carriages and parts of carriages end in competition for the medals, money prizes, and certificates, \&c., offered by tbe company, ward as follows, viz. :
1st Prize (tho Company's silver ruednl, 31., and certiff-
cate), to Mr. Ceorgo Fleming Budd (tho winuer of rst prize last yenr), coachbody maker, of No. 3 , Came
 orougiam, with wrorking sections; and and underspring
Prd. Au elliptic pring lindau, with working seetione.
zad Prize (the Company'
silver medat 2ad Prize (the Company' silver medal, 22 , and certiff.
este), to Mr. Jamop Browa, foreman, 18, Kingsmead sreet, Bath, for a set of two drawings, as follows:st. A mechinical drawing of a landan, to open and shut design for a $T$ cart.
3rd Prize (the Company's bronze medal and certificate, Mr. Georde Ey the right worshipfal the master), to Dorby, for a drawing Holmes, foreman, London-road,
an elliptic spring barouehe showing the front side and bank elliptio spring barouche,
sections, and two views of a solf sections, and two views of a solf-actigg folding step.
In aditiong to the abore prizes, the judges a ward the Io adition to the abore prizes, the judges award the
certificate of the Company to esch of the following,
viz. To Mr. Benjamin Laws, foreman, 413, Liverpool-
road. Islington, for
 phaiton, showing front, baok, sind side siews. 2 nd. A

and underspring berouche, with like viers.
 Westminster, for tho drawing of a dress coach, with
working scetions working sections.

## THOMAS DOGGET.

The founder of the celehrated "coat and badge, ${ }^{3}$ prize is universally known, yet bis hirtb. place is notstated in our encyclopædias, and bnt few facts of his carly oareer are set forth. H was, however, a native of Dablin, having been born in Castle-street, in that city. As an actor We find he visited and played in his native city at different times np to tbe period of 1692, but after that period we find no mention of bis name in connexion with the stage of Dublin. The name Dogoit, or Doget, bas been found by Mr Gilhert (see " History of Dublin") in Anglo. Irish annals of the thirteenth century, and ono
Gilhertus $D$ oget is mentioned in connexion with Gilhertus Doget is mentioned in connexion with an unpublished Pipe Roll of the year 1261. Dogret's first appearance was made npon the Dublin stage, but he subsequently became a joint manager of Drury-lane Theatre, in conWilks. witb Oolley Cibber and Robert Wilks. The latter was a fellow-townsman Dogget's, and also a much-admired actor in his day. Dogget's share in the Drurylane management was estimated at 1,0001 .; yet be surrendered this in 1712, owing to a disagreo mont with one of his pariners. He was tbe author of a comedy, publishled in 1696, styled "The Country Wake." It is said tbat some of

Congreve's plays owed mnch of their success to the wonderful manner in which Dogget per formed the parts expressly written for him. dooht an intimacy sprany up between Dogget and Congreve, while the latter was a student in Trinity College. The performance of certain plays by Dogget was made tbe suhject of nuch study on the part of Colley Cihber, who, it is said, prided bimself when be was able to snccess. fully imitate tho former. Dogget appears to tuly imitate tho former love stature, from one hare been of rather ow him, which describes him "as a little, lively, spract man." Our hero died in 1721 , and, to commemorate the Han. orerian succession, ho hequeathed a sum of money, as we are all aware, to purchase a coat and silver hadge to he rowed for on the Thames, on the first of August anmally by six young watermen whose apprenticeship expired in the previous year. The public are already made cognisant by the daily press that there was a change this year in the conditions of the race. The Fishmongers' Company, who now have and have bad for some time the chargo of the arrangements, have augmented the prizes, and determined in the event of more than six men cntering, they shall row in trial heats from Putney to Hammorsmith to docide whicb six shall row from London to Chelsea.
If we mistake not, the Garrick Clnb possesses an original portrait of Dogget. Has it heen cyer engraved? Dogget, in politics, was an nncompromising Whigs and though a good actor in his day, it is his bequest, like Edward Allegn's, that keeps his memory green.

SALE OF THE METROPOLITAN BOARD'S LAND.
The Woiks Conımittee reported at the last meeting that, in acoordance with the directions of the Board, the land remaining undisposed of in Southwark-street was put up for sale by anction, ont realised from the property sold beina $24,310 l$. The first nine lots consisted of land already lensed by tho Board, at a rentn! of 8162. 10s., and produced, before deducting ex. penses of sale, $2 \mathbf{1}, 2501$. on an average of 26.025 years' purchase. As the Board only paid 27.2 years' purchase; and were the Board free 27.2 years purchase; and were the Board free
from Parliamentary restriction, as to holding from Parliamentary restriction, hs to holding
surplns lands on improvements, it wonld do well surplns lands on improvements, it wonld do well financially not to sell land at a less price than
$2 \tau \cdot 2$ years' purchase ; and looked at simply as a 27.2 gears purchase; and looked at simply as a
financial question, the land which was sold for financial question, the hand which was
$2 \mathrm{I}, 250 \%$. whe wortly to the Board 22,2081 , exclu. 21,2502 . Whs worth to the Board 22,2082 , exclu-
sive of the value of the rack-rents when the sive of the value of the rack.rents when the
leasos fall in. Put in another way, the value of the capital produced by the sale is only 796L. 17s. 6d. per annum, 80 that delay in realising ground.rents might be profitable
the Board. The report was finally adopted.

Workshop Appliances. By C. P. B. Seeleer, C.E Longmans, Green, \& Co. I873. Tais excellent treatiso is one of Messrs. Longman's text.hooks of science, adanted for the use of artizans and students in puhlic and other schools. It contains descriptions of gauging and measuring instruments, hand.catting tools, lathes, drilling, planing, and other machine tools ased by enginecrs, and is profusely illustrated with engravings; the wbole forming a very
useful technical compcudium of knowledgo of usefnl technical comp
workshop appliances.
Reports on the London International Exthitition of 1873. Parts I. and II. London: Published for the Society of Arts by Bell \& Daldy.
Tre Council of the Society of Arts, having been informed that Her Majesty's Commissioners do not intend to puhlish rcports on the different departments of the Exhibition of the present year, bave undertaken that daty. The first part in-ludes reports on machinery, surgical instrumonts, ancient objects, and drited fruits Tbe second part contains reports on carriages food preservation, and swords, military arms and stecl.
Long.spane Ratiluay Bridges, $\delta \cdot \mathrm{c}$. (Reviser' Edition). By B. Barer, C.E. London: Spon.
Tre portion of this work treating on long.spa Tre portion of this work treating on long-spay
railmay bridges was firat published about seses
years ago. The revised edition comprises, be. sides investigations of the comparative theoretical and practical advantages of the various adopted or proposed type systems of construction, also namerous formulæ and tables giving the weight of iron or steel required in hridges from 300 ft . to the limiting spans ; to which are added similar iuvestigations and tables relating to short-span railway bridges.

## VARIOREXS.

Tre Lancet says, as to tbe Westminster Law Oourts, -"In Palace Gardens, just opposite St. Margaret's Church, a square tumnel may be scen from road, whicb carries air to the Court of Queen's Bench. At the mouth of it a jet throws
a fine spray of water over the air which enters, a fine spray of water over the air which enters,
tbus cooling tbe air and saturating it witb aquoous vapour. The cold air enters the conrt through purforatcd zinc, which is fitted underneatb the seats. The upper part of the conrt communicates with a shaft 4 ft . in diameter, in which a large ring of gas.burners prodnces a
powerful upward dranght. It is obrious that powerful upward draught. It is obrious that on the exclusion of all air that does not enter through the tunnel. Until lately, howerer, it appears to have heen the custom to ignore the venfilating apparatns, and trust to doors and windows, which are utterly insufficient for the propose." - The Leisure How' gives a word or two in season as to the want of open epaccs in Dublin:-"Any rich citizen who wishes to do grood, and to obtain a good name, could not hetter bestow his benefaction than in supplying this public want. The name of Sir Berjamin Guinness has becn justly immortnlised by his munificent gift of $150,000 \mathrm{l}$. for the restoration of St. Patrick's Cathedral. The name of Mr. Roe is, in bunourable rivalry, associated with the restoration of Christ Church Cathedral. I heard an anecdoto of Mr. Jamieson, another well. sale of liqnor, his Irish whisky heing $A I$ in commerce. When asked what he was going to do, after tbe munificent henefactions of this liquor-sclling colleagues, 'I am going to build a lunatic asylum,' he said, 'for mon like Guinness and Roe!' I do not believe a word of the story, but if Mr. Jamieson wishes to do a good service to tho people by whom he has gained his wealth, he could not do it better than by providing an open space for health and recrea. cathedro The crovis of po haged cathedrals thot l , and chise crowing tho streets of that quarter would have grod canse to bless the service. There is no city of the size so deficient in open spaces."

## 觬iscellanea.

Street-Watering.-An estimate, fonnded upon private inquiry, tells ns, says the Mforning Post, that "tbe cost for labonr in watering the streets of London averages about $135,000 \mathrm{l}$. per annum, the cost of water being additional. It is contended that the whole of this watcring can advantomplisbed in a far more effectual and nently. laid pipes for by a system of less than 3,000t. per annum in lahont: while the int than upon the plant necessary for the purpose would not exceed 20,0006 ,-making the total yearly cost of watering (exclusive of the water itself) only 23,0002 ., instead of 135,0002 . An experiment, which bas been conducted upon the drive at the eastern end of Rotten-row, Hyde Park warrants the conclusion tbat, with the perma. nent system referred to, the services of one man wonld be amply sufficient for laying the dust over the whole of the drives and rides in the park, -a task which at present engages, as a
rale, twenty men witb twenty horses and carts rale, twenty men witb twenty horses and carts daily. Taking this area as a seventy.fiftb part of the total distance in London to be watered, we arrive at tho result that about seventy.five men, without any horses and carts at all, could water the whole of tbe metropolis, at the cost for labour above named. It is not surprising, then, that the Streets Committee of Commissioners of Sewers for tho City of London should he patented by Messrs. Isaac Brown \& $\mathbf{C o}$., of tbe British Rivers Irrigation Offce, India-buildings Edinbargh."
"The Fighlands," Nailsworth.-This man sion has been erected upon the site of the forme house, from the designs of Mr. Eran Christian architect, London. It may be described a helonging to the half timbered typo of Olc English house. On the 18 tb ult. a dinner was given hy Mrs. Frith, the owner, at the George Hotel, to the workmen--tho employés of Messrs Estcourt \& Co., contractors, Gloucester, whr hare just crected her new house. The site upor which "The Highlands" is hailt is $a$ fine one Timber is, of course, free'y nsed in the outware construction ; the upper part ovorhangs and i. corbelled out boldly from the lower floor. Th ahles are numerous, and the cut red bric Tho plazing of the windows was done by Mr Pepper, of London. Colour is sparingly intro duced, in sufficient quantities to give a cheerful tone. In the front façade of the house the win dows are glazed with plato glass in large squares xcept in the uppermost panels, in which colour and armorial bearings aro bronght to hear, anc bence the riow is not in any way interfered witb The glazing at the sido of the house next the Common, however, is so arranged, by the use o several light tinte, that while the occupants o the varions rooms can see all that takes place outside, it is impossible from the exterior to lool within. Tbe floor of the vestihule is paved with encaustic tiles, whilst that of the hall and corrido is of polished old English oak. The ceilinga o tbeso portions and of the various suites of room are of open panelled timher. The compartment upon tbe lower floor aro spacious, and open ou on to the terrace in front. The staircaso by which the ascent to the upper rooms is made $i$ of wrought oak. The architect has been repre sented upon the building since its commencomen hy bis clerk of works, Mr. John Griliths. Thi contract has heen carried out hy Mr. A. Estcourt of Gloucester. Mr. Godard has been his foremat upon the spot. What carving has been executed upon the hnilding has been done by Mr. Harry Hems, of Excter.

The Atrocities at Alcoy. - Further ac counts have come of the recent atrocities a Alcoy. The Daily News correspondent says:" A strike was organised. The men, numberin npwards of 3,000 , proceeded in a body to thei. masters, and first of all demanded an increase of wages and a diminution of working bours the masters, I believe, yiolded at once. Du insurgents, numbering 9,000 men and women propared to attack the municipality, which ban taken refuge in the Hôtel de Ville. Pctroleun was collected in large quantities, and it is saic that one individual was immediately seized immersed in the petroleum, and then sot on fire Having taken the inmates of the Hotol de Vill prisoners, they dragged the principal men tit tho window one by one. They then shouted tr the mob, asking, 'Do you want him dead o alive?' If tbey replied 'Alive,' the victirs was thrown ont of the window, rcceived on the merciless bayonets below, and carried ahoualive in tbat state, amid the shouts and insulto of $\mathrm{m}: \mathrm{a}$ and women. If the ansswer wa? "Dead," the individual was despatched with bayonets or knives, and thrown out. The petro leum was then applied to all the woodworl of tbe buildine, and the edifice was set on firc and completely destroyed, with all the persone that yet remained in it. From here they pro. ceeded to the Alcalde's honse, which they alsc set on fire, after having nsed the most brata violence to the ladies of the house. Many other houses and many other persons shared the same fate, and when the troops sent from Talenois arrived in sight of the town upwards of a dozer houses and five or sis manufactorios were in flames.'
Demonstration against Improvements. great demonstration, we are told, will he made by the journey tnea bakers of Londun on Monday next (tbe Bank holiday) in Hyde Park, against the Act to abato the smoke nuisance. Would it not be as well to get a ferw people together at the same time to protes cgainst improved drainage and a constant supply of water? Our readers may remember that some years ago the people employed in a cortain large manufactory protested arainst the im. provements on the ground that the change had in on it on the grouad it is wonderful what absurdities, even crimes, people will commit is thoir iguorance.

Pine Apple Nursery, Maida Vale.-The aildings which the Pine-apple Nursery Com. pany, at Maida-vale, have had erected, may how be considered as complete, and tho Kilburn times gives an engraved illustration of them. The onservatory has been designed and constrncted y J. Weeks \& Co., of Chelsea. One boiler heats 2,000 ft. of pipes. Tho hot-water apparatns is re twenty-nine large hothouses so heated, tbe ntire length of which bouses, if knilt in one ontinuous line, wonld measure over $2,000 \mathrm{ft}$. ast-iron pipe, which is npwards of two miles of fiping, and the power of the hoiler is so great hat every part is made thoroughly bot at the arne time, even in the winter. Many of these orne time, even in the winter. Hare what are termed stoves, and have ot-water pipes fixed beneath the beds for od in the pipes, to regulate the circulation of xed in the pipes, to regurate the circulation or alvos either side of a house can be hoated parately, tho top or bottom heat separately, the ho work is done in such a manner that the conho work is done in such a manner that the conalratory can be kept at a temperature of 60 ahrenheit, with a thermometer outside below
ero. The winter garden is also fitted up in such way that one sido may he kept at a bigh tem. erature, whilat the other side may betemperate, even frigid.
Elsham and Worlaby Estates.-Improveents have been effected during the last four ears upon the Elsham and Worlahy estates, in incolnshire and Yorkshire, nuder the personal iperintendence of Colonel Astley, the owner. wham been built; the mnd and thatohed cottages wo been built; the mud and thatohed cottages re being replaced by brick and slated cottages
1 pairs, with a garden attacbed to each. The omesteads bave becn enlarged and improved.
ne is in courso of erection at a cost of some ne is in courso of erection at a cost of some
$000 \%$. The parish churcbes are receiving tention: that at Elsham is being restored, arket Rasen. Worlaby Church is being rehuili arket Rasen. Worlaby Church is being rehuilt
Mr . Young, of Lincoln. It consists of nave d aisles, chancol, porch, and tower. The old aterials are supplemented by Kirton stone atside, and chalk, dug upon the estate, for tho terior. The walls are hammer-dressed on ated spire. The memorinl-stone of this churcb aid hy Mrs. Astloy, on the 12th ult.), forms inner sill of the tower-window. The works pon the estates are from the designs of Dessrs. unlop \& Bryant, of Westminster, exccpt the aurches for which Mr. Wm. Scott Champion, of
endon, is the architcet, and Mr. Honghton the endon, is the architcct, and Mr. Honghton the
erk of works. The district is greatly benefited $y$ the money spent upon those improvements.
Presentation by Working Men to the iaroness Burdett-Coutts.-A ycar sinco a mmittee was formed in the east of London to resent Lady Burdett.Coutts with a "romemmmittee, consisting penny subscriptions. The give the baroness a picture or bust of herself, at this her ladyehip declined, preforring to
we a picture of the seven principal men who ave a picture of the seven principal men who
ad worked tho committee. Mr. Sydney odgos was the artist selected, and a pioture is been presented to Lidy Burdett.Coutts at a ncheon givon by her to the committee and hers (ummhering 100), at Holly Lodge, High ream Mr. D. Godfrey and the hand of the Cold ir Thomas Dakin, as chairman for the com. ittee, presented the pieture. Her ladyship
ade a suitahle reply. The Archbishop of Can dhury visited the haroness during the after oon. The Highgate Forkmen's Clab, with eir wives, numbering somo 400 , and the police and joined the festivities. Dancing was sus New Church in Islington.-The founda.
Ner after eight p.m. of evening. on-stone of a new church, abont to he erected
the Clothworkers' Company, in Islington, en laid. This will form the thirty. first cburch the parish of Islington. It is to he in the ariy English style, and will consist of a nave,
ith north and south aisles, and an apsidal ding. The west end is lichted by five Inncet indows and a large wbeel-window over them. here are also clearstory windows. The church. to be surmounted hy a plain stone spire. ove, Brothers, ars the contractors.

Loans for Sanitary Purposes. - In reply
to Mr. Delahunty, in the House of Commons, tho Chancellor of the Exchequer said the amount of loans granted by the Publio Loan Commissioners, with the sanction of the Treasury, to between the 19 th of August, 1871 , and the 3 Is of Decemher, 1872 , was not 869,8332 , as stat by the bon. gentleman, but 8,389 . Amount had since been grantod for like purposes, to the extent of 262,5797 . During the tien present month, the Treasury had ohtained power from Parkiament to raise a further sum of $1,500,0002$ to enable the Loan Commissioners to grant addi tional loans at $3 \frac{1}{2}$ per cent. to local authorities in England for like purposes. Since the 19th of August, I871, the Puhlic Forks Loan Board had granted to the local authorities in Ireland for eanitary purposes upwards of 12,000l. maximum period for repayment of sneb loans in reland was fixed by law at twenty. five years for Ireland and fifty years for England. The distinction was one whicb he was not prepared to
justify. The Chief Secretary justify. The Chief Secretary for Ireland had prepared a Bill to do away with the distinction, and it was only the shortness of the time at his disposal that prevented him from carrying it throngh. He was not prepared to reduce the rate of interest charged on loans to Ireland, which would be made a precedent applicable to loans for other places than Ireland.

Technical Education and the Gold-smiths.-A atatement of annual prizes established hy the Goldsmiths' Company, at Goldsmiths' Hall, London, for the purpose of encouraging technical education in the design metals, is exter of works of art in the pramong workmen and artists, and goldsmiths and silver. smiths who have marks entered at. Goldsmiths' Hall. In the month of November last $250 l$. were awarded in prizes, and the company, Mr. Prideaux states, reoeived several designs of great beauty and originality. To obtain oither of the prizes for design, originality is necessary, and no copy can be the subject of a prize. The prizes are warded in the month of prost be and objocts competitors to Goldsmiths' Hall, addrossed to the care of the clerk, Mr. Prideaux, in the week ending the 25 th of October. The competitors must be British subjects. The company have also resolved that a Trarelling Scholarship of 100l. per annum may be awarded by the wardens to a student who has shown exceptional talent, and three successive years, in order to for design wor study art in the precious motals on the Continent of Europe.
The People's Music Hall, Hanley.-The wooden huilding in Church street, Hanley, knows as the ci cus, is now closed, the proprictors, Hessrs. Rogers \& Warrilow, having erected at the rear, and in the new street ronning out of Iligh. opened to the pubtret, a new hall, which has heen after the manner of a theatre, and externally presents a plain appearance. It is calcnlated to hold 4,000 people. Tho stage is 36 ft . hy The building is well lighted and veutilated. The cost, including the site, has been upwards of pit and boxes, and the ontrances, one for the Mit and boxes, and the other for the gallery. the arcbitect, and has also superintended the erection of the hall. Previously to the opening of the ball, the mayor went to it with the borough sarveyor, and one or two suggestions were made to Messrs. Rogers \& Farrilow as to alterations which were desirahlo for tho safety of the pnhlic, and they readily promised that tbeso suggestions should have their earnest

Recent Thunderstorms.-The north-west of England and part of Scotland have heen visited by severe storms of lightning and rain, and much property has been damaged and many lives lost hy the lightning. Sunstroke, also, has been remarkahly frequent throughout the counroofs, \&c., some more notable injuries to property have heen done, as at Coldstream, on the Scottish horder, where a statue of the late Mr. Charles Marjoribanks has heen sbivored to pieces, and 60 nearly the whole monument, a column about earthquake at Southport, and waterspouts have eorthquake at Southport, and waterspouts have
occurred.

The Attempted Charge on Postage-stamp Enclosures.-The perpetual interference of the Post-office anthorities with the public convenience is distressing. They no sooner propose and threaten, bowever, than they withdraw their annoying regulations." This, we hear, is already the case with the threatened special charge for transmitting postage-staraps euclosed in letters or envelopes. Tader the fostering Fing of the postage-stamp system itsell, a vas practice of making small purchases and payments by penny-post letters and postage-stamps enclosed has sprung upand nowprevails througbout the whole country; and this, at one swoop, the stop to : for what else conluco have all to put a top to ; for what else could haye hecn the result f their "ncw rule," which, instead of adding to their revenues, must have most materially diminished them, like thoir restriction of small parcel deliveries? If they would only go upon another tack, now, and afford now and extonsive facilities for the safe transmission of parcels or enclosures ordered and paid for through the Post-office, they might do something both new and worth doing.
Cottage Hospitals.-The hospital recently erected in Moreton-in-the-Marsb bas been opened
by the Bishop of Gloucester and Bristol, in the by the Bishop of Gloucester and Bristol, in the
presence of a large number of patrons and auhpresence of a large number of patrons and auhscribers. The building was cormmenced in July of last year, by Mr. G. Davis, of Chipping Campden, whose tender the committee had accepted. Messrs. Slatter \& Calloway superintended the work. The huilding is of stone from the gaarries of Mr. Gill, of Bourton-on-theIIill, the walls inside being lined with hrick The gronad-floor contains matron's sitting-room convalescent-room, accident-ward, two kitchens and surgery, with larder, fuel-house, and mortuary. The upper floor contains three wards for patients, matron's bedroom, bath-room, \&c The total cost of the huilding is $820 l$. It is proposed to commence with six beds, although there is accommodation for ton. The total amount raised is nearly $I, 000$., whicb will cover the contract and tho cost of furnishiug...... A scherue is beiag matured for the establishment of a cottage bospital in Frome, and a meeting will he shortly convoned for layiug the matter hefore tho puhlio.

## Crystal Palace School of Art, Sciencs, and Literature. -1he award of prizes to art

 students in the ladies division of this school was made on Saturday. Mr. Louis Haghe and Mr H. G. Hine officiated as judges of the water the paintings produced hy lady students in The silper conducted by Mr. Edward Goodall. Furquhar; the certificate of merit to Miss Mary Fownes Tarner, and special commendation to Miss Thwaites. Mr. Joseph Durham, A.R.A. and Mir. T. Thornycroft were judges of the sculpture produced by mombers of the olass for modelling in clay, of which Mr. W. K. Shenton is mas'er. The silver medal was awarded to Miss Helena Teulon for a model of the "Venns of Milo"; the certificate of merit to Miss Macduff. The judges also bestowed commenda tion on models hy hoth the abovenamed ladies, as well as on works by Miss Kate Green and Miss Constance Hoperaft. The drawings and models were afterwards exhibited to stuzents and their friends in the private studio of the schoolImprovements in Furnaces.-According to the patent of Mr. R. S. Casson, of Roundoak chamber Brieriy-hill, a preparing or heating chamber, the two chambers being separated hy a high hridge. In the preparing.chamher, the pig-iron or steel is beated to incipient fusion hy the waste heat or gases passing from the puddling-chamber, the heated pig.iron or steel heing charged into the puddling-chamber by ifting it over the hridge. The space at the be diminished or increased at pleasure so may regulate or control the combustion of the gases or Hames passing through the chambers, as well as their temperature. Air may be admitted into the chambers througb the arid regulators or reverberators, and they may bo kept cool by water or steam passed through them.

Rot in Iron Water-pipes, The town sureyor of Bath attributes a hursting of the waterpipes there to the effect of the soil in some parts f the city, whioh converts the pipes into a kiad of plumbago which cannot resist the pressure

Yarmonth Harbour Works.-Mr. Wm. A. Lyttle, C.E., referring to the haven works at Yarmouth, observes that the timber has every. where been maintained by the port and haven commissioners in splendid condition ; but points out that timber for such purposes is being discarded all over the world, as being too perish. able and costly. The harbour of Port Said for the Suez Canal has been constructed in a rockless sand, but not an ounce of timher has been employed, its place being wholly and most pro. fitahly taken by enormons concreto hlocks. Numerons important works show how concrete, botb in air and water, resists the action of timo. Ho recommends the adoption of the chernico. engincering course for Yarmontb liarbonr.
State of the Frescoes in the Houses of Parliamert.-Wo regret to learn that on a further examination of tho principal wall paintings in tbe new Honses of Parliament it bas heen ascertained that a similar process of dis. integration to that detected a year or two ago in the painting, by Mr. Maclise, R.A., of the "Meeting of Wellington and Blacher at Water100," has also hecome apparent in the opposite picture, hy the same artist, representing the "Death of Nelson," and that traces of decay are observahle in the work of Mr. Herbert, R.A., depioting "Moses delivering the Tables of the Law to the Israelites."
Bursting of a Canal. The Leeds and Liverpool Canal at Wigan burst last week into a condnit whicb passes underneath it at Meadow Bridge. Two or three tons of clay and several sacks of straw were thrown into the openine but the weight of the water carried all before it. In addition to the wharfs at tbe Wigan Deport being drained, it was impossiblo to work thirty. hree large cotton manufactories, which were dependent on the canal for the water supply, and in consequence hotween 6,000 and 7,000 opera. tives were thrown idle till mext day.

The Fire at the Fire-Engine Makers. Looking on, as we did, at the fire whicb destroyed part of the premises of Messrs. Merryweather \& Son, at the corner of Bow.street and Long-acre, it was not difficult to imagine it the act of the fre-dcmons in revenge for the check some. times given them by the fire.engines. It was strange and cisappomting to note wbat a small until all the combustible portion of it had been turned to charcoal

Alderman Cotton's Window in the Guildhall. - Mr. M'Georce, chairman of the City Lands Committee, stated, at the last Court of Common Council of the City of London, that Mr. Alderman Cotton had informed him that if the window which bo had recently placed in Gaidhall was not considered in keegiug with it in twelve montbs and replace it by another window at bis own expense.
Enlargement of the City of London Lunatic Asylum. -The asylum in connexion with tho City of London is about to be materially enlarged, and tho Coal, Corn, and Finance Committee, having presented a report reoommending that the sum of 4,000 . for the proposed enlarge. ment be provided out of the City funds, the recommendation was last week agreed to at a meeting of the City Conncil.
Poplar Wood.-Many despiso poplar as a timber, but it has one golden quality,-it will not barn. Some jeare ago a factory at Notting. ham took fire on the second-floor, and burnt out to the top furiously, but not downwards; although the floors lay a yard tbick with bot clinkers and melted machinery, yet it did not get down. wards, because the floors were of Poplar:- The Garder.
Six Millions to be Spent on the Liverpool Docks.-Mr. Langton, the Chairman of the Liverpool Dock Board, announced at the weekly mecting on Thursday, the 24.th ult.z tbat the Royal assent had been given to the Bill promoted by the Board for constricting new docks at each cost of about six millions sterling.
Discoveries in Rochester Cathedral.Interesting discoveries, we leam, have heen made at Rochester Cathedral, including portions of the first cathedral, erected in the year 604, two leaden contain the remains of Itbamar, Bishop of Rocbester, who died in 655.

VOL. XXXI.-No. 1592.

## A Few Words on Form.

HE word "form" is used with referenco to art in almost as many distinct senses as the word " oause" is made to hear hy Aristotle. Thus we speak of the form of matter, when we wish to distinguish between a solid, a liquid, and a gas; and we speak of material form, when we wish to denote the em. hodiment of an idea, or of a spiritual principle. Form, again, is used, with increasing frequency in the most modern English, to denoto style, and this application of the term is far from unhappy, But in asthetic writing it will he more oorrect to regard this importation from the Greek, through the medium of the Latin or French, into the
English language, as very nearly synony. mous with our vernacular word "shape." We find a beantiful illustration of this lontity in original meaning to he afforded $y$ the classical namo of the Dream God. The atin word forma is etymologically convertihle ito the Greek word morghe, by one of those anspositions which are common among the reek and Italic races. Thus, even at the pre-
ant day, the Neapolitan lazzarone is heard to peak of Garibaldi as Galibardi. Morphens, nen, is no other than the shaper-the power at gives, during the profonnd repose caused y Somnus, the Sleep God, "to airy nothings looal hahitation and a name."
We are, however, in the habit of using the ord "shape" as equivalent, or nearly so, to "outne." Form, at all events, includes outline, and 10 primary idea expressed by the word may he Lken to ho outline, but it also means something e. It includes modulation of surface. The lost accurate use of the word, then, is when it enotes the appearance of a statue. It is true at such appearance, as grasped by tho oharver, depends as minch on the angle and degree f illumination as on the definition of outline nd accentuation of surface. But with that wo avo not now to do. Form, strictly regarded, subjective. It exists, indeed, objectively, hut hat which impresses the mind is the picture on he retina, or the impression, however it is prouced, on the sensorium. In persons of vivid
ictorial imagination, forms may be conjnred up lmost at will, ou the closing of the eyes. We 11 know how vividly they are at times produced 3 dreams. However the vision be produced, shether by impinging light, or hy some operaion of the mind which is as yet obscure, form 3 the shape that wo see before us, and this hape must have surface as well as outline, even i surface and outline alike are shadowy and indefined.
It is worth remark that the different modes nder which form has been appreciated by those vho gave its present strnoture to the English anguage, and by the olassic writers, are ovinced
If the meuning of the adjectives inoidentally
derived from the word. Thus with Horace and Virgil formosus is one of the most distinguishivg appellations of the heantiful. It seems to imply a sort of stately regularity, a noble severity of form, proper to the image of a god, or the person of a noble man or beautifnl woman. With us, on the other hand, the word "formal" always implies something stiff, unbending, and to some extent unpleasant. The fine old English word "shapely" may he taken as our hest equivalent for formosus. When we can choose betweon a word of Teutonic, and another of Latin, origin, our hearts almost always are more stirred by the former.
Regarding form, then, in the restricted sense of shape, -or ontline and surface, as visible to our eyes, we still have to distinguish hetween the mass and the detail, between the genns and the species, In architectnre this double application of the word is most apparent. It may he taken as indispensable; nor, when once under. stood, can it lead to any positive error. Thnswe spenk with equal correctress of the imposing form of a noble hailding, such, for instance, as that prescuted by the Superga, with its shadowy dome and statcly turrets looking down on the broad valley of the Po , and of the delicate and massive forms of the mouldings of the cornice, or the volntes of the capitals.
Form may be properly regarded as the visible clothing or expression of an idea. Thus we can at once see how true architectural form, as presented to the eye hy the elevation of a huilding, must spring from the plan, as a plant springs from its seed. For whatever ohject a huilding is erected, it must have, in order to have any excuse or apology for existence, a defiuite purpose. Whether it he for war or for peace, for shelter or for luxary, for the workship of the invisiblo powers or for the memorial of the departed, there mnst he some ohject for which the building is framed. Its adaptation to that parpose is the craft of tho architect. When its adeptation is such as to strike any observer with in appropriate sentiment, whether of rast and rugged strength, of convenience and picturesque comforl, of dreamy and undefined awe, or of tender and mournful vigil, the skill of the archi tect has risen to genius. In this aptncss we may almost say that genins takes its highest flight If we except the psoudo-creation of tho mechanic, -the skill that makes moving creatures with iron limbs and joints, that devour coal and expire heated air and steam,-wo have no such examples of tho bodying forth of an dea, for the fulfilment of a definite purpose, as is presented hy a noble building. The vast though simple forms that have looked down for more than forty centuries upon the sandy plain of Gizeh may be cited as instances. Nothing on the surface of onr planet more powerfully impresses the imagination than the first view of hese ancient and enormous masses of masonry. If the outlines be at once reflected and relieved by the light of a hrilliant moon, the angles tipped with silver, and the shadows deepened into that of night herself, the effect is at its highest. In our own conntry almost as mneh may he said of the first viow of Stonehenge. The imagination is troubled by the presence of these enduring memorials of a mighty hut forgotten past. Man, as the maker of these nnivalled monuments, in which the material emhodiment of the design of the primeval architect has heen attained by such a costly expenditure of toil and of power, speaks to his puny desceadants, across tho long night of ages, with a vaice that is all the more im. posing from the fact that its words are scarcely, if at all, intelligible. The grand poetry of the megalitbic age mocks the scale of tho modern ritic.
The architeot and the mechanic, however, travel, by different roads, to cffect very distinct bjects. The former will soon sink bencath his task if ho be not fired and informed by the
appreciation of the heautiful. With the latter, beauty has no relation. That structural beanty which is, after all, purely mathematical is the only beauty wooed hy the great mechanist. To decide upon the mode in which the least quantity of metalor of wood can he disposed so as to give the stability, and to communicate tho movement, which he requires is his single task. Utility is the only beanty he knows. Elegance of finm means cconomy of material. Beauty of sarfue means the hest mode of escaping rust, and of aroiding friotion, even if it he only against the soft cushion of the atwosphere. Those forms that, as combinations of lines, curves, and surfaces, are positively harsh, meagre, or nurelieverl to the eye of the artist, are clothed with the structural beanty that arises from the sense of fitness to the eye of the engineer. The only beanty of mochanism is either statiend or dynamical. Thas he approaches, mose nearly than other men, to the wisdom displayed in the organisation of nature; hut he is a stranger, in 60 far as he is only a mechanist, to the spirit of beanty that rovels in every form of or xamic life, and that is at times indulged, in ite ntmost intensity, in structnres that are all but invisible o man.
The arohitect is a more wasteful distribntor of the material farnished by naturo. He regards time in a different light from the mechanician. With the latter, time and power are functions of one another. Velocity of motion and the overcoming of resistance are convertihle terins. The maxim of the mechanio is, that a gain in time is a loss in power, and the converse. Unnecossary weight, therefore, as meaning unnecessary power, is the great thing that the good engiveer seeks to avoid.
Weight, on the other hand, is the friend of the architect. Not that, even with him, it may not at times provo a snbtle and unsleeping enemy. The architect maintains a continmous straggle against weight when he nses the arch. But in other instances ho relies on the inertness of matter, or rather on the constant activity of gravitation. Time is his foe, as hringing atmospherio degradation and chemical change, and destroying his works hy a ceaseless though imperceptible tooth. In the conntries to which we look for the nohlest works of architecture, more. over, Time has a terrible ally,-an ally whoso power, often perfectly irresistible, brenks up tho structure that wonld long have defied tho inronds of Time alone, and yields him a ready prey in the fragments. This terrible foe is the earth. quake. In Egypt, Italy, Greece, lot a building outhast gencration after generation, it will hardly escape ultimate overthrow by earthquake.
Doaling, then, with massive materials, relying on weight as an element of stability, and yel preparing a defence against dynamio apencies that may suddenly test his skill, the architect has an imaginative side to his labours which is wanting to the mechanic. The vory ideas of repose, stahility, defence, shelter, if rightly translated into stractural form, have in them a certain poetic grandeur. "When the ailll and destiny of the most important buildings are bome in mind, the inaginativo asoociation is heightened, The simple, hut sharply accentnated form of the spire has an effect on our imagination, when it suddenly appears in a landscape, that is not due to the optical furm adone. We know that it indicates a ohurch; we instinctively associate the idea of peace, of light, and of promise, with its heaven-pointing aper. The faint echo of an organ steals upon the ear, the voices of white-robed choristers, and the words that speak of promise of a life the come. It is thus that, in dealing with the form of his building, regarded in the mass, the arohitect has snoh scope for the display of genius of an heroic order.
Form with the painter, has, necessarily rather difforent meaning. Here again wo bave to
the word. In the first sense it is difticult to rise above wat may be called technical. The form of a picture in the broadest sense of the word, is almost synouymous with its obedience to the laws of composition. It involves the even appreciation of two elements which we have hefore discussed (pp. 659 and 757, vol. xxx.), namely character and motive. It is the law whic dotermines the grouping of the clements of the
picture. No picture can be held to be rood in its general form if the structural lines, when reduced to the form of a diagram, are ill-combined. The faculty of seeing an object in its bined. The faculty of seeing an object in its true, and yet its hest light, is the first requisite for cxcellence in a painter. If he does this, if he has the real active appreciation of the unity, tbe barmony, and the scale of an ohject which
he seelss to represent, he will he sure to impress he seelss to represent, he will he sur
on his work an appropriate form.
When work an appropriate form.
Woscend with the painter from the When we doscend with the painter from the
motive to the detail of his work, we shall find the beauty of the minor forms to dcpend or throe elements. The first is expericace. The painter must see a beautiful form hefore he can paint it; not, it may well be, the actual form, but the type. Creative power, in tbis respect, is not given to bnman genius. Thus a painter who Was familiar with the most beautiful forms and faccs of England, but with these alone, would bo utterly unahle to draw a Greek Eero, Amazon, or god. Phidias could never bave im. pressed upon the marhle yet happily preserved in the British Museum, a grandeur and a glory that mock all modern art, had he not lived amoug a people formed hy blood and by climate into the worthy models for his chisel.
Besides this happy experience, the artist requires the eye to see, -to grasp the very duced, and the hand to exccute. The latter it is his craft to educate, hut the former must he chicfly instinctive,-capahle, indeed, like all instincts, of development by exercise, but originally minuto. When we bave this power cunning of the hand, we have, not indeed art but the criticism and scbool of art.
In sculpture, the distinction between form, viewed in mass, and form considered in detail, which is so wide in arcbitocture, and so conver. tfonal in painting, almost vanishes. The sculptor is dependent on the architcct in a manner un. known to the painter. The latter, indced, dcmands for the shelter and the exhibition of his works a chamber sheltered from the elements, and allowing a proper light to enter for their display. But there is no vory special inter. dopendence in the matter. A properly-bailt and properly-lighted gallery may serve for the display of almost any picture. Tho case is very rare in which, if tho painter were allowed bis choice, he would not hang his work in a suitahle light in a public gallery, supposing such gallery to deserve the name. But the sculptor depends more closely on special illnmination. The change of a few degrees in the incidence of light makes a difference in the effect of sculpture which is entirely unknown to the painter. Thus, in general form, in the first place, the sculptor has to consider the archivectural setting of his snbject.
That assured, the limits of sculpture are narrow. A group of three fignres may be con. sidered as almost the most complicated arrangement appropriate to sculpture in the round. In relief, the range is more extensive, but at the same time the architectnral limitation is more precise. A single figure is gencrally tbo favourite suhject of the noblest sculpture; and since the form knows no distinction into reneral and special, we now have to deal with a fresh order of oonsiderations. Ethnological type comes in to play. Expression, both of form and face, de mands a definite rendering which taxes the utmost power of the human hand. The scnlptor has to steer between opposed dangers, so subtle has disastrous, and so mearly approaching on either so disastrous, inc sor side, that sut of the 5,000 or 6,000 years during which this godlike art has been practised, from the date of the wooden eftigies of the monarchs of the fifth Egyptian. dynasty, to that in which ment of a successful colossal seated fichre, to ment of a successful colossal seated fignre, to be viewed from all sides-it can only be said to
bave been perfectly attained for less than a centnry.
There is a primary distinction between the character of the forms which engage the study of the architect, and those which are reprodnced by the painter and by the sculptor. In no other
three sister arts. The sculptor, in the pure exercise of his art, is restricted to the reproduction of animal form, and, in his noblest works, to the form of man. The painter adds to a repre. sentation of animal that of vegetable forms, and further commands the wide range of the land. scape. But the architect can obtain but little pattorn from nature. He may find, indeed, among some of the animal tribes development of a very high degree of structural ability; but the most signal instances serve rather as illustra. tions of, than as examples for, the work of the hnman hnilder. Thns, in the heaver ho may recognise a four-footed engineer. The dams constructed by that sagacious rodent, by means of trees felled by its teetb, and the double entrance, by land and by water, which is constructed for the island dwelling of the family, are analogons to those lake dwellings of the early European races to which attention bas only lately heen directed. In an entirely different sub kingdom of the animal world, that of insect life, we find long galleries excavated by ants, lofty pyramids reared hy termites, chamhers built by the mason-hee, and hung with splendid tapestry, furnished hy the petals of the poppy hy the apholstercr hee. Yet neither in these nor in birds, can we find any actual exemplar for the architect.
More, then, than cither the sculptor or the painter, is the architect the creator, - the

## THE ARCH FOLOCICAL INSTITUTE AT

 EXETER.The Exeter Congress of the Archroological Institute has passed off very agroeahly. There have been many interesting excursions, accom panied by competent men as expos
The President, the Earl of De
address, in the courso of which he said. " of us can ohserve such indications of the babit and physical condition of the earliest inhabitants of this island as are afforded by the remains of their sude dwellings, and hy the rude implements occasionally found, without a seuse of thankfuluess that our lot has been mercifully cast in times of improved knowlcdge, of advance civilisation, and more refined habits; or, as I ing the trath that greater adrantages entail ing the trath that greater adrantages entail greater social, moral, and rengious responsi-
hilities. Again, in examining the remains of hilities. Again, in examining the remains of
our early castles, and our later domestic huild. ings, we cannot fail to he struck with the con. ings, we cannot fail betwcen the numerous and carefully studied provisions for attack and defence, indi. cating a state of society where every man's hand was against his neighhour, and might held sway over right, and the indication of a more peaceftl, versal measure, as years pass on, by the gradual changes in our architecture. And, once more, the study of our ecclesiasticnl remains, proving, as it does, that our ancestors deemed it fitting to give, for the glory of God and the due cele. bration of His worship, whatever they had most to be prized in the natural material or in the conditions of art, may well stimulate the devotion of their descendants, and elevate and guide their judgment. Nor, lastly, ought we to douht thou the study of the past, if properly and moral influence. Living, as we do, in the fall enjoyment of all the appliances of modern civi. lisation, we shall yet he led, by archrological observations, to feel grateful to those who have gone hefore us for the treasures in art and in architecture which havo been handed down to respects, have heen onr condition had onr ancestors done nothing for us, and, unlike the man who seid he wonld do nothing for posterit because posterity had done nothin for him, shall ho pos mor sall to measure, to leavo something hehind
Mr. G. J. Clark, who was one of the main stays of the meeting, read an interesting paper Fered so Worthies of Devonshire," and deli sions.
Mr. E. A. Freeman read a paper on "The Place of Exeter in the History of England.' Exeter, said the reader, was among cities wha Glastonbury was among churches. It was one
of the few ties that direotly hound the English.
reat the Roman and the Briton. It was thi when from the fierc creed of Woden and Thunder, deemed it enough to conquer, and no longer sought to destroy The first plimpse of the city showed the travelle that it was one of a class common on the Conti nent, hut rare in England, and which amons west Sazon cities was absolutely unique. From Finchester onward the geats of the west Saxor bishoprics, as a rule, lay low, e, g., Mr. Freemar mentioned Winchester, Wells, Glastonbury, ano Bath. Ereter, at the first plance, told anothe tale. The city ind loke, at height loftior than itself but the city itself sat on heipht far above railwey or river. Ereter wa height Lar abo the Chartures and ot the sance chas as bourges o Chartics, and others the ages it ba prome the city on the lxe. In that respect its con tinuity had been rreater than that of the city a Northern Gaul. It had never exchanged it On the for the the whole, Lincoln was its nearest parallel the cities of England. Exeter, then, as a hili fort city, bad, more than almost any other city c England, a close analogy with the ancient citie of Gaul. But the greatest cities had almos always been the seat of some bishopric from th days of the first establishment of Christianity The hill-fort had growu up into a city, and th city had lived through all later conquests; hat, tho hishopric was something which, in the lon history of such a city, might almost seem creation of yesterday. Bishops of Exeter ha played an important part in local and genera listory; hut the city of Exeter had begun t play an important part in the history of Britai ages before Bishops of Exeter were heard o As to when the city first became a West Saxo posscssion-when Britain, Caer Wisc, the Roma Isca, passed into the Engliah Exanceaster-h could not say. He could find uo reliahle dat on which he could answer that question. Th first distinct mention of Exeter as a city was is the days of Alfred, when it figured as an Englis fortress. In Athelstan's day the city was part English, partly Welsh. John Shillingford to them that Exeter was a walled city hefore th inearnation of Christ; and although it was ne likely to havo heen a walled city in the sene that would satisfy modern or Roman engineer before Cassar lauded in Britain. In later agt Hooker told them how Vespasian hesiered th city, and wa driven away by the valour of th city, aud was drivea artions he added, wer heyond him, but stil he lnow of no evidence t heyond hini; but stil he know of no evidence ix the poiut wice Isca became Exancoaster any more than to Ir Freem Mr. Hee erall ell the great wall of Athelstan; hut the best proc of its original existenco was the record of it destruction. At an Freeman went on to say that thus it wa that Exeter stands alone as the one gree Eoglish city which had lived an unhroken lif
from pre-English and even from pro-Romal fom pre-English and even from pro-Romal
days. Whatever was the exact date at whic days. Whatever was the exact date at whic
the city first became an English possession, was witl the driving out of the Wolsh inhahitant ander Athelstan that it first hocame a purel. Eoglish city.
Mr. Scharf did, as he alpays does, goo ervice. There was a collection of portraits people famous in the western counties, ans amongst them Mr. Schari pleasantly discourgea He thought the majority of them fine specimen of the school of portraiture that ohtained in Lngland from its commencement to the presed ime. With the exception of the City of Londor o had never met with so complete a series portraits of mayors as in this collection. I Chese were not fine works of art, they wer natter.of fact representations. He remarned he cifferent "periods" which had previllo the curtain period, and the poker periou There was a period when it was customary $t$ have a hat under the arm. In one case a gentle wo wish to have bis portrait towen with hi at on, and he was so painted, but with a secon hat under his arm.

We take a few sentences from Mr. Ormerod paper "On the Hat Circlos of the south side o Dartmoor." The interior of the huts was frot 9 ft . to 36 ft . in diameter, and 4 ft . high in tir and Rippon Tor he had discovered four village
nd he believed they had been inhabited hy ieople who had been engaged in tin-washing. Ie described the hut village of Teigncomh, tanding between the North and South Teign,
nd now containing thirty-one liuts ; and also a onnd pound, consisting of two inclosures, the uter an irregular triavgle, and the inner a circle f about 3.4 ft . diameter, the onter heing ahont ft . in diameter, aud the space betweon the ircular and the outer wall is divided into six onrts, in one of which is a hut circle of about 0 ft . diameter. About 100 yards to the south alled the soud were the remains of what be ithin 100 yarde of either of these pounds. rohably the round ponnd was the dwelling of te chief person of the village, and the square ound a cattlefold or storehouse. He mentioned umerous other huts in the neighhonrhood. At oveycombe Head there were remains very milar to those at the ronnd pound. These pereral harrows, one of wich was opened by peral harrows, one of wich was opened by
[r. Spence Bate, last year, an account of which Cr. Spence Bate, last year, an account of whioh asociation for 1872. Four groups or villages ssociation for 1872 . Four groups or villages
xisted along the line he had taken, soparated, xisted along the line he had taken, separated,
ot by parochial or manorial boundaries, by hreaks in the country. At the first chief house was a hut with a chamber; the second, the round pound; at the third, 1e remains of Boveycombe Head; and at 19 fourth, he double semicircle at Tor Hill, ore the chief houses, those at the round pound uts also occurred in boing the chief stations. hining Dartmoor, which would places on and ad. te limits he had taken would not come within xistence of had taken. He conneoted the ie workings for tin. (as already stated) with aarchers for tin were extensive the huts were umerous, where they were but slight the huts ere few. Ho helieved these rude huts were wellings of the workers and washers of tin. sto the date of their erection, it was nseless ) speculato on it. If Mr. Ferguson was correct the idea that the circles and avenues showed here a hattle had taken place in defence of a ullage in the rear, the huts at Teigncombe ond have been in existence daring thies of the Christian area; and as the streazning" for tin in the distriot near Chag. prd appoared to have ceased by the time of aen Elizabeth, the time betwecn those periods ere abandoned
Archdeacon Freeman "dia" tho cathedral nd Mr. J. H. Parker led off through the town nd gave his audience
uowledgo of the suhject
The excursion to Dartmoor, under the guidance If Mr. Ornierod, was very satisfactory to the arty, but was found fatiguing by many. owat after luycheon Lord To, and was here pok tho opportunity of expressing on hehalf of ook tho opportuuity of expressing on hehalf of
imself and the memhers of the Institute the vanifold obligations which they were all under wards Lord Devon, not only for his hospitality "wards Lord Devon, not only for his hospitality,

HE NEW RAILWAY FROM MANOHESTER TO LIVERPOOL.
COMPLETION OR stiverton.
The large new oentral station at Liverpool phich has for some time heen iu course of erecjon by the Midland, Great Northern, and Man:hester and Sheffield Companies, in cornexion with their now line between Manchester and Liverpool, which was partially opened for traffic on Eriday, lst inst., is now rapidly approaching comoletion, and is iutended to he fully opened in the zourse of next month, together with a tunnel of ahout two miles in length nnder the south. east
portion of the town, and which will complete the portion of the town, and which will complete the
ontire length of the new railway between the ntire length of tho now railway between the
two great Lancashire towns. A notice of the
external features of the large new structure has already appeared in the Builder, and it is only necessary here to remark in this respect that the station is one of the largest in the country oovering an area of nearly 10 acres. The rool onolosing the station consists of eleven elliptical spans, and is nearly 800 ft . in length. The mag. nitude of its proportions and the light and airy character of its construction are exceedingly striking, and the London and North.Western Company's station, in Lime-street, as well as the Lancashire and Yorkshire Company's Exchange Station, are altogether dwarfed hy the new structare.
The arrangements of the spacious platforms at the new station have been carried out with every possible regard to the convenience of pas. sengers. Fiasy and convenient access is ohtained to the two spacious arrival-platforms, which are in direot connexion with each other. Workmen are now busy in all the multifarious trades required in the completion of the interior of the station, which is heing highly decorated. The whole of the girders and ironwork is heing colour of thaty painted in light blue, the provailing oolour. The columns wili he copper-hronze with a dark hase, and the capitals are picked out with gold. The platforms have all been laid, whilst the several booking-offices, waiting-room and other apartments in the station are nearly all ready for occupation. The refreshmentrooms, which are very large, are being elegantly hited up, and it may here be stated that their management has been entrusted to Messrs.
Spiers \& Pond. The works in the tunnel, from the station te its junction with the newn line ford which neoting as we have atready stated, is the con. the g-ink completing the new line between Al two towns, is making rapid progress. aid aly great portion of the lines have heen time and on Friday last an engine, for the first works traversed its entire length. Extensive progs in connexion with the new line aro also in now sess at the Manchester terminns, and a large bout station, called the 3anchester hetween which and Cornhrook-street a new hranch is in conrse of construction, in con. nexion with the undertaking.

LARGE NEW CONVALESCENT HOSPITAL NEAR LIVERPOOL.

A convalescent hospital, upon a large and exensive scale, has just been built and completed at Woolton, near Liverpool. The outlay rocuired has heen about $30,000 \%$., and the required funds for the purchase of the land and the erection of the hospital have been supplied from tho surplus of the Liverpool contrihution towards the cotton famine fund in 1862. The total amount of the Liverpool subscription was 102,6781 ., and the sum remitted to Manchester was $62,000 \mathrm{l}$, leaving aresidue with interest of $40,500 \mathrm{l}$. It was recommended, with the conourrence of the donors, that this sum should be appropriated to the rection of a convalescent hospital in the neighbourhood of Liverpool. The consent of the Haster of the Roils was necessary, and that functionary gave authority to expend $10,000 \%$. in the purchase of a site, and $17,0 \mathrm{0} 0 \mathrm{l}$. on the huilding, the remaiving portion of the halance to form fund for the futare necessities of the hospital. The site purch mis ing twenty aores, standing upon tho banks of the Mersey, and one of the most picturesque spots Mersey, and on
The structare, which is of Gothic design, is The structure, which is of Gothic design, is
square in form, the several elevations being eaoh 200 ft . in length, and it thus covers an area of 40,000 square feet. It contains a spacions central building and wings; and, besides basement, consists of ground floor and story above. Externally, the huilding is erected of grey brick, with Woolton red sandstone dressings, and bands and figured work of blue brick. The walls are all cavity wnilt, so as to ensure perfect dryness. One of the most intercsting features in the building is what is called the "Gladstone Hall, which has been erected over the dining-hall, and is precisely of the same dimensions as that apartment, hut more lofty. The "Gladstone "tall" has been huilt ont of the penny subscriptions of a number of working men in Sonthwest Lancashire, who determined to raise a testimonial to Mr. Gladstone when he was defeated for South-west Lancashire. The sum
collected amonnted to 1,200l.; and Mr. Glad stone having desired that it should he applied towards the erection of a convalescent hospital the money has heen expended on the huilding now just completed. A tahlet has boen placed in the hall, containing an inscription setting forth the circumstances under whioh it wa buit. It is intendod to he nsed for roligiou services, together with lectures, and other pur poses in connesion with the ebtabisshmont. Th the gronnds, from which there is a magnificent riew of the surrounding country and the Welsh coast and mountains. The grounds have heon artistically laid out, and the sloping gromnd on one side of the hospital has been divided inte threo terraces, the lower one having heen laid out as a croquet-ground for the recreation and amusement of the inmates.
Mr. Thomas Worthington, of Manchester, i the architect; and Messrs. Haigh \& Co., of Liverpool, are the builders.

## THE FLOORING OF THE NATIONAL

## Gallery.

In return to an order of the Honse of Com.
 Gallery of the llooring of the Now National保名 has heen pabisined. It was tect:-
The flocring of the present "Jannary 2, 1873. Tratalgar-square is formed of wood, the walle are hined
with the same material, and a partilly similar mode of
construction is provided by the picturection is providied by the contract for the new
direction. which are now io progress under my

## direction

It appears to me, however, to be well worth consideration, whe ther the foors, un the ease of the now gulleries,
should not be mado whully incombustible, and whethe parian ee ment or other timinar material, , ,hould not be Eubstituted for the wooden lining of the Falls.
The manin construction of the new florr The manin construction of the now diloor is already desigued to be lormed of iron beams and concerete arcleses
nnd there will he no diffloulty in making it completely incombustible, if the First Commissioner approsen of th Fughetion, , reference to the walls, a wooden lining is doubtles
. convenient for hanging pietures, but in the event of fire it would he a source of great danger. It the walls bo finished with cement, instesd of wood, as above proposed,
the pietures could be hung from a strong iron picture rod, the pictures could be hug from a strong iron picture rod
fixed to the walls, as is now done in the $p$ rincipal gallerie at Dresden, and also in parts of the Louvre in Paris, and in other places
the rooff of iron, alate, and glegalleries will be of brick, the roofs of iron, glate, and glass, the doors of iron, and
the skirtings and door architraves of marble. If, therefore, the First Commissioner should approve of the pro-
posal to relee the doors and wall linings also of incon posal to make the doors and wall linings also of incomquantity necessary to forch the corvo of the ceiling, and the building would be practically freproof.
I have not yet made an estimate af the cost of the pro-
posed changes, but any additional expense caused hy posed changes, but any additional expense caused hy mentary estimato.

Entard M. Barrx.
In reply, the Firat Commissioner informed the architect "that the Board desire that the arrengements on the points to which you refer provided in the contract, should ho adhered to. lowing course of the corresponde R , R.A., on Tile Floors in Pictnre Galleries :-
"I an requested to report my opinion as to the nse of tiles or mosaics, and of wood, as the flooring for picture galleries.

I consider tiles or mosaios as far preferable o wood for snch purposes.
1st. The danger of fire is very greatly de. cassd by the use of tiles, \&o
2ndly. Far less dust arises from tile floors an from wood.
3rdly. They are far more quickly, easily, and thoroughly cleansed than wood floors, and the moisturo necessary for such cleansing less fre quently needful than for wood floors. It is also far more easily and at once romoved from the surface of the floor, while the water nsed to scour wood floors is retained for some time in the pores, and given out, gradually injuring pictures, especially water-colours.
4thly. The colour of such floors (chosen jndiciously by the architect and director of galleries) enriches the room, enshrining works of art, gives a sense of comfort and pleasure, taking away any slight difference that may arise from the slightly greater conductive powers of tiles over wood.

I have never had a complaint from the students in our galleries of cold or unpleasantness arising from our tiled floors.
The following remarks were forwarded by Major Festing, R.L. :-
"The advantages which tiles offer in com-
bustibility is too evident to need explanation or cormment.
The next advantage of well-mannfactnred tiles for a publio gallery is, tho facility with which they can he kept clean and in good order.
They are more easily swept or washed with soap and water than boarded floors, aud are not stained by oil, paint, \&c.

The quostion of appearance may be an open one, although I should have little hesitation in expressing my own opinion on the relative appearance of the the foors here, and woodion
floors in any mnoh-frequented pablio gallery floors in any mnoh-freque
which $I$ have over visited.
I have often heard it objected to tile floors that they aro slippery to people who wear nailed boots. Bnt I do not think that this inconventence is mnch felt; at least I have never had brought to my notice any accident from th: canse.

It is vory commonly said that tiled are oolder to the feet than boarded floors. This idea donbtless arises from the fact that tiles feel coldor to the touch than boarde, and if poople went barefoot they would find wood pleasanter to stand on.
I have made a few experimente, from which I draw the inferenco that a person wearing moderately stout boots would not find tiles colder to the feet than wood, and this is borne out by the information given me by ono of the attendants in the National Gallery rooms here in which there always are a cousiderablo number of artists at work on studenta days. He tells me that he liears few complaints of coldness of floor, and that although mats are kept in case the students wish them, they are very seldom asked for.
Even supposing the tiles to be colder to the feet, I do vot think that considoration should weigh much against the adoption of cile floors. It would be very easy to supply each student with a mat or foot-hoard, or even with a foot. doing so would be less than tbe additional labour requir.
We have not yet had sufficient experience of marble mosaic floors in the Museum to jadge of their value. They are, however, easily kept clean, and a small piece of floor of this descrip. building, was laid near the entrance of the iron stood the wear much better than Minton's tile laid in close proximity to it."
All that the Trastees of the National Gallery say is this:-"With respect to the mode of flooring, although the Trustees and Director would prefer the use of oak, they leave the qnestion of material to the decision of the First Commissioner of Works."
In conclusion, "1 the First Commissioner deems it expedient to adhere to the contract, so far as regards the floors,"

## TEE SAND.BLAST PROCESS.

Tee main object of the inventor of this remarkable process, of which we spoke when it and other devices sharply npon plain and coloured glass, upon stone, and upon metallio snrfaces, in an expeditions and economical manner. The invention, which applies chiefly to intaglio and flat relief engraving, is based on the curious fact that When glass, stone, or metal is snbjected to the inuar arb equivalent hard granular substanco, the detrition of the surface exposed to its action will be rapidly effected.
Although the sand.blast acts with energy apon hard or brittio surfaces, strange to day it has little or no effect upon elastic and soft suhstances, such as indiarrabier, wax, paper, and lace ; and it is upon such substanoes, therefore that the patentee relies for protecting those parts of the glass, stone, wood, or metal which are intended to be untonched by the sand-blast. Thns, a piece of lace spread over and cemented to a sheet of glass will so effectually protect the glass when exposed to the sand-blast, that the threads of the network will, after a few seconds exposure, he imitated on the glass hy hright interlacing lines, while the rest of the glass surface will he reduced to a ground or frosted state.
The efficacy of the hlast depends upon its velocity. The sand may be propelled either hy steam, water, or air, hat strem is in general When a large quantity of material is to be
removed, as in the ornamenting of -stone, a steant jot of from 60 lb . to 80 lb . pressure is ased. In this case the stencil is made of iron rrabber; but when a small quantity of matenal is to be worn away, or the surface merely of from one.tenth to I lb. pressure is preferred. With a low pressure, soft and delicate substances uch as paper designs, lace, leaves, \&c., cemente n clacs may be need. With a stean jet using yo horse.power of steam at ro lb pressurg and one pint of sand, 2 oubic inches of granite, 4 cubio inches of marble, or 10 cubic inche oubio inches of marble, or fo cabic inches Flat or curved surfaoes may tee alike minnted Fy or curved surfaoes may be alike acted on directod at a right angle to the exposed surfaco
The blast process, hesides execriting ornaments in relief or intaglio, may be applied for cneting grooves in quarries and tunnels, for dressing tone, for catting stone in lathes, for cloaning cale from metals, for graining lithographic zinc, and for prodncing-by the aid of stencils or photographic gelatine,-pictures, any variety on design,
The following remarks are from the monthly scientific summary in Ohambers's Journal :-
"Readers will remember our mention of the sinprising
 y Mr. Xilghman, of Philadelpinis. This process may now
bo seen in the International Ezbibition.- 0 ne of the most interesting sights among the macbinery in mot:on. The rapidity with which the design 18 produced on the surface
of the glass never fails to astomish ull who wimess the of the glass never fails to astomish nll who witness the
oppration; it seeros iustantaveous. A few seconds, even, suffice for the production of in elatorate desigu on a
sheet of ghass 3 ft wide. Simple or complicated, it makkes
no difference to the machive : the blast is turned on, snd no difference to the machive: the blast is turned on, sn
pres'o! the picture appears. With a comhination
team and sand, jutricate designs can be stesm and sand, jutricate designs can be cut in a slab o
narhle in the course of a fev minutes; and a lar ariety of ornamental work hitherto done by the carve sac the sculptor can now be accomplished by a purel
nechanical method. Auy one who watcher the proce ill find no difficulty in believing the suggestion that the neient Egyptians may have carred the hieroglyphs o heir gtone montemsnts,-stone of exceeding hardness,
hy a jet of gand. One immediate etfect of the invention will be a large increase in the supply of ormamenta unind.

UNVEILING THE CHADWICK. STATUE AT BOLTON.

THE town of Bolton has again been en fele since the opening of its new Town-hall, on the occasion of the unveiling of the statue of Dr. Chadwiok, well knownin Boiton and thesnrrounding districts or his munificent gifts to the inhabitants of the square, with its face looking towards the Grapes Hotel. The figure was designed hy Mr. C. B Birch, of London, and was cast in bronze by Messra. H. Prince \& Company, Phcenix Foundry, It is $I 0 \mathrm{ft}$. high, and weighs a little under 2 tons The doctor is 29 ft high, the base heing of Coruish granit On thigh, the base heing of coraish granite ronze representing Mra Cbadwiek havib ronze, representig Mrs. Chadwick, having ander her care some orphan children. She is pparently chadwick orphanage provided for them hy her towards carrying out his benevolent designs in Bolton amounted to $22,000 \mathrm{l}$
The Bolton Guardian gives the following particulars of the course adopted to ohtain the design:-"After it had heen determined that the statue should he in hronze and a standing gigare, a sub-committee was appointed to procur esigus and estinates, and Mr. J. Hall was asked to write to the editor of the Buidder, requesting hinn to give the names of four artists who would e likely to compete, along with Mr. Calder Marshall and Mr. Noble, for the intended atatue On the 22nd of March, Mr. Hinnell was requested to write to the artists recommended by the Builder, and at a further meeting of the comrittee on the 20th of April, il was resolved that Mr. W. Calder Marshall, Mr. C. B. Birch, and Ar. Geflowski, should be supplied with a tracing of Nelson-square, photographs of Dr. Chadwick, and other information, it heing intimated that the cost of the statue would he about 1,000 l At the suh-committee meeting on the $24 t \mathrm{~h}$ of May, a letter was read from Mr. W. C. Marshall, with proposals to erect a statue for I,4002., and it was resolved that all the model designs should ee sent in by the lat of Augnst. A second meeting of the statue sub-committee was held from Mr . W, C. Marshell

Papworth, Mr, Birch, and Mr. Geflowski, th competing sculptors, who had atl sent in mode designs for the statue, Mr. Phillips asking a littl more time to fimish his designs, which it wa resolved to grant, the 25th being assigned as thr mit, and his instructions having been sent twi montha later than those to the other artists, The sub-committee then proceeded to inspect th models at the Mechanics' Institnte, and th models were then looked ap till the 25th. On the latter date, the sub-committee again met a the lectnre.hall of the Mechanics' Imetitnte when Mr. Papworth was allowed to repaint hi model, and on the 30th a general meeting wa: held of the whole oommittee, there being a goor attendance Mr. W. C. Varshall's estimate ano design was $1,400 \mathrm{l}$. ; that of Mr. G. E. Geflowsb 1,0 with three slto-relieras, and withor 810 l . Mr. C. B. Birch, 850 L . ; Mr. E. G. Pap 200l, with fignres in panels. Mr. Jos Darham, 1,050l. Mr. J. Birnie Phillips, No. 1 2,2002 . No. 2, 1,600l ; No. 2 with base devoid figures, $1,200 \mathrm{l}$. : if stone be substituted fo granito, No. 1, 2,000l. No 2, 4507 No. with baso devoid of fioures, 1,0502 Noble, Mr. J. Bell, and Mr. Woolner deolir. compets. This meting. Woolner declined being the hi anotig carne to no decision, 1 of the desight adrisable to defer the selectio? the desis until the Friday evening followiug a modela to be oper to the inspeotio of the pablic, the proceeds to go towards th
memorial fund. On Friday, September 30tb tho design of Mr. C. B. Birch was selected, snbjec to snoh conditions and alterations as might $b$ agreed upon between the committee and thi artist."
Mr. Birch had jnst previously distingniahe himself by a group selected in competition by the Council of the Art-Union of Loadon, Wood Nymph," and we have reason to believ chat on the present occasion ho has full ustified olr nomination of him to the Bolto Committee.

MURAL DECORATIONS IN
WINDERMERE PARISH CEURCE.
Since the restoration of the old parish churel of Windermere there has been considerablit decoration done in it by way of mural paintinp in encaustic, tempera, and oil. The architectur, of this church is of a very rude and simply character, the walls and pillars being merel rubble-work covered witl ${ }_{1}$ plaster, and before thit decorations were effected the interior presentet a very cold appearance. The east windor having been restored by Messra. Ward d Hughes, it was determined to intrust the deco rations to the same firm, and Mr. Hughes decider that the work should he carried out in frcehand The desigos are principally bands and scroll work in grisaille, heightened with gold. Thi chancel has naturally received more elaborate treatment than the nare, and here are twh paintings on the north and sonth walls respec tively so arranged as to form with the eas: window a triptych. The design on the north wall represents the adoration of the Magi, ano The in the south the entombmett of our Lord our Lord's history from His earliest yearst through His cross and passion to His rest in Wis honoured grave. The snhject of the resur rection appearing in a window in the church, it was not thought desirable to repeat it, bat on the west wall a moral painting has heen placed above the arch, representing our Lord in glory snrrounded by angels, the legend underneath heing "He shall come with all His Holy angels." In the mave the great feature has been tho studious preservation and resetting of the ancient inscriptions upan the subject of tha sacraments. These writiugs have heen carefully restorcd. The roof-timbers have boen cover.in with texts of Scripture, and in this way their rudeness is somewhat conccaled, and additional height apparently given to the hailding. There are also texts from the sermon on the Hownt, The whole cost of this deceration has been borne by MEr. H. WV. Schneider, of Belsfield.

Box-making by Machinery.-We have reeived several letters from Mr. James Brower, denying the corrcctress of a communication We mist Wormersley in reply to his first letien We minst, however, decline going further into pate is capahle of easy solution.

## THE COMPANY OF TURNERS OF LONDON

AT a recent court of the Turners' Company, Id in Gaildhall, the freedom and livery of the mpany were successively given to the followa gentlemen:-Mr: Alderman Cotion, Sir artle Frere, Mr. Benjamin Soott (Chamberlaiu) Mr. Horace Jones (City Architect)
Professor Tennant, the master of the com ny, oconpied the chair.
We have more tban onco of late drawn the ent:on of our readers to the movement o is wo take this opportunity of acain station the wo take this opportunity of again stating radal and the Freedom of the Company and of Qe City of Loudon to any one workman or iprentice in Eugland who may send in the st specimens of hand-turning for the yoar nere will be two compotitions this year, one rning in ivory.
Under the word "stone" is included any natara hstance of a mineral character, exeluding Wwerer, all those whioh, like ohina or pottery, quire baking or burning. Porphyry, granite sper, agato, sorpentine, marhle, spar, stalarite, alahastcr, jet, coal, ire amples of what may be used.
Carving is admissible ; and, if skilfully done, $y$ additional elfect produced hy it will he rning
In vases, tazzas, and similar examples, special geard should he given to heauty of form hy using the lines to run freely into oach other, that where they meet there shall ho no graptioss; and in each material sufficient rength should he give
ar ordinary handling.
In the competition for turning in hardenod and mepered steel last year, the successful candi. te for the silver modil was Lawis Donne, and cipients of Certificates of Mohn Mann. The cipients of Certificates of Me
thur Nelson, and Mrs. Mann.
The Lord Mayor of London will present the
The Lord Mayor of London will pre
izes for 1873 on the 13 th of Ootober.

## WANT OF WATER-SUPPLY.

Liverpoul.-According to a report presonted the Liverpool water oommittee, the water in ock at Rivington Lakes has deoreased 127 en in store $\mathbf{I}, 795$ million gations; last year at e same period there wero 3,180 millions, so that falling off to the enormous extent of 1,385 uions was shown as compared with the same
riod of last year. Householders are now on a ar hours' supply daily. Hull.-At a meeting of the waterworks com. ittee, a report from the engineer, Mrr. Dale, servoirs at Stoncferry was gradually lowering, chongh the engines at Springhead were kept
orking at full speed. The present storage at briking at full speed. The present storage at oncferry was about one million and a half tlons of water. The ohairman said tho only as to shat off those to the town. It was stated at there had been an averago daily supply to iserved, was more than the engines at Spring. yad could raise. It was highly important that ere should bo sufficient storage, in cass of fire. ais storage was gradually hecoming less, and it done. He therefore moved that the supply the town be stopped for two hours a day in reed to,

## THE GROWTH OF BERLTN.

Accorming to the Berlin Fremdenblath, the ppulation of that city (reckoning strangers) monnted on June 30,1873 , to ahout 930,000 ulis, as against 826,341 on December 1, 187I, to date of the last census. Of all the cities on ot oven London and New York. Berlin oocuies the fourth place amongst the oapitals of arope, and is only surpassed by London, with prpulation of $3,350,000$ sonls; Paris, with
795,000 ; and Constantinople, with $1,500,000$ thabitants. Fort5 years ago, in"' the year I833, se nine largest cities of Europe had the follow,
is numbers of inhabitants :-London, $1,624,000$,
now $3,350,000$; Constantinoplo, $1,000,000$, now $1,500,000$; Paris, 850,000 , now $1,795,000$; St Petersburg, 480,000 , now 691,000; Naples, 358,000 , now 480,000 ; Vienad, 310,000 , now
901,000 ; Dublin, 300,000 , now 360,000 ; Moscow, 901,000; Dutin, 300,000 , now 360,000 ; Moscow,
280,000 , now 611,000 ; Berlin, 250,000 , now 907,009 . It should ho added hero that these umbers inctude, in the case of Vienna, the population of the subnrbs, while for Berlin the latter are omitted. If the suhurbs of Berlin were reckoned, the total number of inhabitants would be nearly a million. In the year mentioned ahove (1833) there existed twenty-six citiea larger than Berlin. Of these, Berlin has surpassed twenty, and has only been out. distanced in the race hy one (New York). Berlin, therefore, as in Europo it is the fourth, is on the glohe the eighth city, as to number of inhabitants, viz.:-London, $3,350,000$; Peking 200.000; New York, with Brooklyn, \&c., $1,800,000$; Paris, 1,795,000; Constantinople, 1,500,000; Canton, $\mathbf{I}, 260,000$; Calcutta, hext Vienna with 800,000

## mon and other materials

Our of 2,100 pudaling-furnaces in the North of England iron district, about 700 are said to be out of hlast, and likely to remain so until conl and iron are lower in price. Per contra, however, it appears that a revival of activity in some branohes is anticipated after the reduction of the German tariff in Ootober.
It is a remarkable fact, remarks the Engineer, that the most ahandant material in nature,-ron,-is practically the strongest of all known substances. The following figures havo been given with reference to this and other sub-tanoes:-Made into best steel, a rod $\frac{1}{4}$ in. in diameter will sustain $9,000 \mathrm{lb}$. betore hreaking; soft 8 steel, $7,000 \mathrm{lb}$. i iron wire, $6,000 \mathrm{lh}$; bar iron, $4,000 \mathrm{lh}$. : inferior har iron, $2,000 \mathrm{Ib}$; cast iron $1,000 \mathrm{lh}$, to $3,000 \mathrm{lh}$; copper wire, $3,000 \mathrm{lh}$.; silver, $2,000 \mathrm{lb}$. ; gold, $2,500 \mathrm{lh}$. ; tin, 300 lb .; cast zino, $100 \mathrm{lh} . ;$ sheet zinc, $1,000 \mathrm{l}$.; cast lead, 55 lh . ; milled lcad, 200 lh . of wood, hos and locust the same size will hold $\mathbf{I}, 200 \mathrm{lh}$.; toughest ash, $1,000 \mathrm{lh}$. ; elm, 800 lb .; beech, cedar, white oak, and piteh-pine, 600 lh .; ohestnat and maple, 650 lb . ; poplar, 400 lh . Wood whicb will hear heavy weight for a minnte or two will hreak with two-thirds the force acting a long time. A rod of ion is ahout ten times as strong as hemp cord. A rope 1 in . in diameter will bear $2 \frac{1}{2}$ tons, hut in praotice it is not safo to suhject it to a strain of more tban ahout 1 ton; $\frac{1}{2}$ in. in diameter the strength will he one-quarter as much; $\frac{1}{3}$ in. ono-sixteenth as much; and so on.

St. gilles's at the present time.
AT the twenty-ninth annual meetiug of the Society for Improving the Condition of the Lahouring Classes, a report of which has heen recently published, Dr. Ross, medical officer of hoalth for the St. Giles's district, said I have peculiar pleasure in speaking hecause the Society has been concentrating ita operations in the parish and district of St. Giles's, of which I may he assumed to he a representative, being he medical officer of healch for that district; abserving what have heen the Society's effort bserving what have heon the Society's efforts to promote the well-being, physical and moral, of that locality. There is a remark in the report to the effect that continen tal nations are learning rom this Society what they should do in refer. ace to the sanitary condition of the working classes. I can rouch for the correctness of that statement from this circumstance, that during the past year foreign scientific gentlemen have waited upon me, in ordor that they might go hroagh St. Giles's and see the state of its population, and the sanitary regulations in force, o that they might go back to their own conntry and teach the lesson they had learnt here. Gentlemen have come to me from Switzerland, from Berlin, and from America, the ohject of the physicinns from America heing to obtain information wbich raight be nseful in rehuilding Chioago on good sanitary principles. We have shown these gentlemen that we have in St. disease and squalor than could be foumd within he same area in any other part of Europe. There they have found 2,000 persons who were chiefly mendicants, or some of them, perhaps, worse, living in common lodging-honses; and
although these lonses are under police regulations, and the police do their duty well, they are so unfit for tbe habitation of human beings that nothing can he done to prevent the disease and dass that arise in them. Then we have another class, somewhat above them in the social scale, but even worse off in regard to sanitary arrangements, living as they do in bonses over whioh there cannot be any efficient control. These houses are inhabited by flower-sellera, orangesellers, match-sellers, and others, who make St. Giles's their head-quarters, and who are living in the most deplorable ciroumstances. They are coustantly liable to disease, the seeds of which they carry ahoat with them; and the very violet which a flower-girl sells to a gentleman may be infected with scarlet-fever, which may thus he oonvered from her home where it exists. We little know or think of the variety of modes in wbich diseases are spread from these hnmble abodes into the houses of the wealthy All that can, to a certain extent, be romodied by adopting proper measures. In St. Giles's the annual rate of mortality is no less than 600 in excess of the average; that is, tbere are 600 pre. ventible deaths, or deaths which would not occur if proper sanitary regulations were carried out. What lies at the root of this ovil is simply the What lies at the root of this ovil is simply the
bad state of the dwellings of the poor. Withoat bad state of the dweilings of the poor. Withoat
pulling down the old dwellings and erecting nem ones in that district it is, in my opinion, im. possib to do ment of the health or the mal for tho improvoment of the healli or the moral condition of the This Society has done whom 1 have alluded. This Society has done a vast deal in the way of improvemeat; but the evil is so oxtensire that nothing less than some general legislative measure, some measure giving powers for taking land compulsorily, and throwing the expense on the ratepayers, mad the dnty of administration on the local authorities, will meet the necessities of the case. There must he, and I hope it will not be long hefore there will be, some general measure of that sort carried out. With regard to the operations of this Society in St. Giles's, I may remark that 1 have myseif takon great interest in them; ( have also taken part in hringing those operations under the notice of the publio authorities; and I have told them that they may see in St. Giles's, in the force of example, all that is required to enable them to proceed in the path of improvement. You have endeavoured as a society to improve existing dwellings; you have tried to secure the improved housing of the poor in that way; and you bave thus done a great deal of good, and no donbt much good may still he effected by that mode of proceeding. It has heen said that tho poor require to be hetter educated, in order to appreciate such efforts on their behalf. That is true, I know, of some parts of St, Gil , Wo have there a great many Irish of the wo class, and you will find in some of the residences of the Soliety inheritants hof the residences Irish and half English, and I would defy you to guess from apparaces which oom for pied hy the one and which by the other, The Irish occupants have nudergone a good process of training, and the result is that they are as careful with regard to sanitary arrangements as the most orderly class of English. Sureatham-streethuildings, Bloorshury, are hnilt on principles I think nothy of heing generally imitated. Indeed, think nothing hetter conld be done in the way of improvement than to follow the example pro-
sented in that excellent hlock of huildings. I am sorry to see that some persons are trying schemes which are not as good as the scheme apon which that range of huldings was constructed. The Lord Mayor has declared that if he wished to build a house, he would also have outside staircases, to protect people from fire and from the spread of disease, Last year the small-pox was imported into that blook of build. ings from a place near the Strand, A family of ive persons was attaoked; luree were sent away, and two remained in the house. There was complete isolation,-that is, there was no communication with any other part of the building, and the result was, that the persous who were attacked were recovered, and no fresh case of small-pox arose in the building. This shows the perfection of the plan adopted. If, with such facts before them, architects erect and coustruot dwellings for the poor with inside staircases, hy means of which disease may be carried from one set of rooms to another, they will incur deep responsihility, besides showing a great want of judgment. The population of this metropolis is increasing at the rate of 45,000 a year, aud of these 25,000 are working men and their families. I do not
see how any one society or company can deal with this accumnlating mass. The faster the population is increased tbe greater is tbe risk of
the centre of London being fearfully overcharged the centre of London being fearfully overcbarged with a poor element. Many honses bave been pnlled down recently, to provido sites for the now conrts of law and for raillway purposes, and the poor who have heen turned out aro congre. gating around and increasing the valuo of the
remaining property. The houses in Russell. remaining property. Tho houses in Rassell.
place and Coram. place have beon latoly destroyed. place and Coram.place have boen lately dostroyed. Considering what Bort of places those wore, ono ground cannot be need in providing hetter dwell. ings for the poor, and hence similar places may soon spring up elsewherc. What is wanted is, I repeat, compulsory powers to purchase land. Until powers are given, by means of which sufficient land can he ohtained for the erection of dwellings for tbe poor, the eril will not merely grow, but increase ; for, the more honses are pulled dorw, the more must the poor be crowded together, and the greater will be the nnmber of deaths. Something mast be done to secure im. provement. The bardon of doing it must be borue in some way. It is a question for the publin the other they will bear it on one shonilder to heavier poor. ratee, an increansed cost for raols at the same time encourraging a system of idle. ness and improvidence amongst the labouring clagses, or whecher they will assist in the erec tion of improved dwellings, by means of which such evils may be destroyed at their root. Until this be done, nntil better dyvellinga are raised foralty of nerlect in the form of rates the penalty of neglect in the form of rates and
taxation. I have adrocated will meet the evil to be deait with; and I trust that earnest and energetic efforts will he made to indueo the Government to pass a Bill vesting powers in some hody or Other to raise the necessary dwellings, and to do
on an extensive scale that which has been, to a on an extensive gcale that which has been, to a
certain extent, already dono through the medium of this society

## KENT ARCH FOLOGICAL SOCIETY.

ONE of the most enjoyable meetings that have been beld in connexion with this society took place in the district of Cranbrook, under the presidency,-first, of Earl Amherst, and suhse. quently of bis son, Viscount Holmesdale, -o Thursday and Friday before last. The weather was brilliant.
The preliminary meeting for the despatch of bnsiness was held at the South. Eastern Railway Hotel, Staplehorst, the president of the society (Earl Amherst) in the chair
The hon. sec. read the annnal report, and a number of now members were proposed and accopted.
Carriages were then in readiness, and, shortly after learing the hotel, Loddenden, the ancient manor-house of the Usborne family, was passed, and a halt was made at Staplehurst, where church was visited, and where also, Mr. Robert son read a paper on Staplehurst Cburch.
onoe more in the carriages, the party prothe wheel of one of the breaks came off, and cansed a slight delay, hut no injury was done to Frittencle itself. The next halt was made at were described by the rector, the Rev. TV IV O. Hallward. The Roman remains formed the subject of an interesting paper by the hon. secrotary.
Sissinghurst Castle was the next point, and here the Rev. Francis Haslewood, cnrate of Bononden, read a paper on the Castle. Mr
Georgo Neve, the occupier of Sissinghurst Castle, provided refreshments in a shady part of the lawn in front of the manor honse.
After a somewhat hot and dusty drive Cran. brook was reached. The sources of attraction were the temporary museum and the parish chnreh, whero the Rev. T. A. Carr, the vicar, read a paper on it. The temporary musenm contained some interesting specimens of anthe vestry-hall.
The dinner took place in the vestry-hall, under the presidency of Lord Holmesdale, M.P.
The company then adjourned to the George Hotel, where Colonel Colomb read a paper on the Royabist Rising in Kont in 1648, and Mr. Tarbatt on the Clotb Trade of Cranbrook.

New CUSTOM-HOUSE AT GRIMSBY. Sir Thomas Fremantle, chairman of her hionesty's Board of Cnstoms, built in connerion with the Gri, the proprietors, the Janchester. She Deks, by Lincolnshire Railway Company. The erection of the new huilding bas becn made necessary by the rapid development of the trade of tho port. A few years ago Grimsby was a mere fishing village. In 1851, the population was a little village. In 1801, the population was a
more than 4,000 ; it is now upwards of 27,000 The onstoms revenue, which in 1866 was only $24,000 \mathrm{l}$, is now $94,000 \mathrm{l}$. Tbe developinont of the place is chiefly owing to its connexion with the Mancbester Sheffield, and Lincolnshire Rail way of wbicb it it the enstern terminus and tho port. The docks, in wbicb ahout $1,500,0002$ bave been snnk, and whicb are being rapidly extended, are the property of the company. There are great imports of timber from the Baltio, and one of the peouliarities of the trade is the importation of ice from Norway, to the extent of 20,000 tons per annam. The total valno of British goorss exported, which, tbiriy years ago, Was $1,000,000 \mathrm{l}, \mathrm{y}$ and in 1871 ,
$10,000,000 \mathrm{l}$, had increased in 1872 to $18,000,000$ $10,000,000 l$, had increased in 18 nd is now nearly $20,000,0002$.
The new enstom honse is heing builk on a sito opposite to the Royal Dock Chambers. The frontage is $7 \mathrm{f} \mathbf{f t}$. and the hlock of bnilding extends towards tho old town. The building will be two stories in height, and contain ample accommodation for a largely angınented staff. The arohitect is Mr. F. Hadfield, of Sheffield, and Messrs. Longton \& Hemingway are the contractors. The ceremonial was marked in Grimsby by the proclamation of a general holidny, and profuse decoration of the streets.

DUGDALE'S ST. PAUL'S, AND HOLLAR'S ETCHINGS.
Ir is an observable fact in art-history that not only do tho art and architecture of a country perpetnally, as time goes on, change and grow, but the mode and languago of description It is a subject not a little noteworthy and in. It is a subject not a little noteworthy and in-
structive, and is especially interesting at the structive, and is especially interesting at the
present moment from the contrast which may he present moment from the contrast which may he the new and modern accounts and descriptions of St. Panl's Cathedral and tho old ones, snch as Dagd'e s. Mr: Longran's new book on St.
Panl's is one thing ; Williant Dugdale's book on St. Paul's is quite another thing. We do not here contend that it is the better of the two, but It is different, and affords another view of St. The very atmosphere Dogdalo is different fround Paul's of the present day. We do not here speak of tho simple facts of the building, of dimensions, and so on, but of the mental impression conveyed horgh the two books. Nothing can be well he day ook at St. Paul's, and thiuk about it, who car to look at it at all. But Dngdale's book quiie arries you into another world of things, and of fecings, venerative and otherwise
It wonld indeed be impossible
fo wonl, incea, be impossible to find a greater thereisbetween those twohog and another than Loncman's. Durdale's hook was printed sand itle-page informs ns, hy Thomas printed, as the ear of Our Lord God 1658 , and was ded in to the Right Hon. Christopher Lord Hatton, Comptroller to the Honsehold to Lord Hatton, It is notonly, in paper, printing to King Charles. It is not only, in paper, printing, and ty pography no slight things), the very opposite to the new book just puhlished, but the very langnage of it seems, as yon read it, to quite alter the character of the huilding talked about. We may, perhaps, he calling attention to a but little thought of matter if wo give an extract or two from this quaint book of Dugdale's. Dugdale is not satis. fied with mere speculations on the date of old St. Paul's, or even of the heathen temples of Diana before it, but he goes fairly back to the genesis of things, and says, "That solemn duties of publick service, to be done unto God, have had certain places set and prepared, in such sor as beseemeth actions of that moment. We pant not instances of the greatest antiquitie, as the Reverend Hooker well observeth." "For it is

Adam even, during tbat small continnance o his in Paradise, bad where to presont himsel before the Lord, and that his sons also bad, and the patriarchs." Thns he goes on through the whole of sacred bistory in his quaint and plain way to instance every text bearing on the snbject of sacred temples and placos devoted to public worsbip. To read is to be convinced No antiquarian doubts of any kind disturb bim; he goes straight on with his history till he comes to "the yoar CLXXXV, after our Savionr's in carnation, in which year Pope Elcutherius sen hither into Britain, at the instance of King Lucius, two eminent doctors, Taganus anc Damianns, to consecrate snch churches as ha beon dedicated to divers falso gods." Wba these eminent doctors did, which is curious, bat too long to gnote, "continued so till the time o Augustine, in the year of grace DCIIII., wb translated the Primacy to Canterbury, and con stituted Mellitus first Bishop of London."
"It was there this first Bishop of London," says Dugdale, "who in the days of Ethelbert King of Kent, erected here a church, as by the testimony of divers historians appeareth, dedi cating it to St. Paul, the Apostle and Doctoro the Gentiles, in the place of a temple of Dian tho Goddess." A little doubt certainly here disturbs onr good historian, for he cannot quite hring himself to admit that an idolatrons temple onght to be made use of as a Christian tomple bat, as he argues, persons may bo convertod, sc may places." A plain, sensible man was Dugdale It will he needless to go through the history of St. Paul's as given by Dugdale, hut it shoul be read hy all those who would really nnderstano the history of St. Paul's. He gives things as he finds them, and as doubtless tbey really were and his whole account of St. Paul's is so quain and full of curious and almost forgotton matter that it illustrates Mr. Longman's hook most usefully, and by contrast shows how differently times and men wide apart look on things, and or the very samo things. We conld go on witl our quotations to almost any length, and all is instructive, but must forbear; but one or two
more onght not to be passed by, so thoronghly more onght not to be passed by, so thoronghly
do they take one into the times in which this quaint history of St. Paul's was written. Dag dale is careful to name all the "henefactors of St. Panl's, and is evidently quite grieve when he comes to blank centuries in whiel nothing can be found; for, as he aays in on place, " After this good Bishop and canonise Saint, Erkinwald, the fontth bishop from Mellitus, for the space of two hundred and forty year I have not discovered any other benefactor that it had than Kenred, King of the Mercians, who onely ranted this immnnitie thereto: that it should be in all things as free as he himself desired to bo in the day of jndgement." Stout-liearted men these,-all they said they meant. Nothing atood between them and the huilding, which they determined to build up. They combined theory with practice in a singolarly bappy way. Tbey might dream, -as they no doubt did, -but they vere not content till they had realised, as far as hey could, their dreams. They were real pracical henefactors, and it is to them, and such as they were, that wo now owe all the great cathemechanical island artistic, mand poet
It is not to he forgotten that Dugdale is careful to go through his cathedral thoroughly, and to descrihe everything, from the floor to the and to dose enerythig, for tho lo ha hall at the foot of it would hold; the hall at the bead of the spire heing so large as "would conwithin it ten bush length of the cross ahove the said xp. foot, and the trayerse of the said cross vi. foot." All this he tells us was written up arge characters and hung on the north part of the quire, so that all might read and anderwhom the church was dedicated " st .. Paul, to whom the church was dodicated, " richly painted, and placed in a boautiful tabernacle of wood on the right hand of the high altar in Anno MCCCXCVIII., the price of its workmanship amounting to 12 ponnds 16 shillings." Dfr. Longman regrets in his book that there existano record of the cost of the old cathedral, but there are scattered through Dugdale's pages some very ourions items of expenditure which might gaido o a rough estimate of the cost of the old cathedral. Of the "fumiture" of the chmich ho has mnch to say, and notices the "splendor that it had, by the inward furniture in those ays helonging thereto: which consisting in a multitnde of glorions jewels, massic plate, rare

3stronts, magnificent suits of hangings, and hor ornamente, as are to admiration," the gifts : pious ancestors, as he explains, who "stuel ot at that charge for the adorning of this rde. gave two acres of land towards the main. rd gave two acres of land toward It wonld he indeed unfair to talk It wonld he indeed unfair to talk of Dugdale 1d his book on St. Panl's without mention, and small honourable montion, of his honest and
de dranghtsman, Hollar. If we owe some. he dranghtsman, Hollar. If we owe some.
ing, and not a little, to Dugdalo, we owe as ing, and not a little, to Dugdalo, we owe as en Dugdale's account of things in his own day ould he not a little puzzling aud tantalising is to Hollar that we owe pretty nearly all we an see of the London of his day, and too much nour can hardly he given to the man who has faithfully drawn for us the buildingrs he saw ound and ahout him. For ourselves we bave ways thourht those drawings of Old St. Paul's Dugdale's book, hy Hollar, to be likenesses of - building in a pcenliarly vivid and trathfa nso. We do not inean for strict accuracy of 388. There is no imagination in them, but ere are tho buildings themselves, just as they ould specially note the interior perspective ew of the Church of St. Faith, of which so ucb has been said, and not without reason, ork. Hollar shows it with a lifelike reality c seem to see the colour of the place as well printed helps this, of course, but there is a printed helps this, of course, but there is a
mething in the etched lines which shows us mething in the etched lines which shows us ien was. It is a masterly drawing. It would 3 difficult to exaggerate tho value of this hook Dagdale's. It is \& landmark in the history St. Panl's Cathedral which cannot be too often ferred to by those who wish to understand the great cathedral itself as it at present exists, - who care to compare it and its capabilities ith the old Gothic structure which it replaced is not the dull book which many, perhaps, at first glance might take it to be. It is full of mint and wise thoughts and sayings, characaristio of the author of it, a od of the time in
lich ho lived. Books such as this take you $t$ once into the times in which they were written nd priuted, and that in a way which no modern k, however able, can do. Even more than iis, they spoak to us with the voice and manner
the writers of them. There is truly no history, hether of architecture or anything else, like con imporary history, and more is to he lcarncd of any ertailu time from such present and living ac. punts as are fonnd in it than from any amount of fter explanation or amplification. All honour, nen, to "immortal" Dugdale, as he is called on im and to his ahle helpmate and illustrator, Iollar, of glorious memory. Through them we eally see old Gothic St. Panl's, and can listen ave its history, and can get insight into the elings and thouglits and aspirations of thosenthusiasts, may bo-who built it; and it i something to do tbis.

## A SCOTTISH TRADES BANNER.

Tae trades of Edinburgh possess hut one anner or standard to represent their entire . The populace of Edinhurgh has heen through mary ages for its readinoss to ouse itsel in the propting ause might he matte olitics, or motives of lesser importance. As far ack as the fourteenth century, these same itizons became an impromptn army, each itizen possessing weapons which he was able eady, and willing to use. These fiery denizens Dun. Edin are understood to haro rison in
182 to redeem their king, James III., from estraint in the castlo which overlooks the town, und for the services they rendered, becides vertain priviloges," he," according to Maitland, hom a banner or standard, with a power to lisplay the same in defence of their king, ountry, and their own rights." This banner was horne by the loyal burghers of Edinburgh to he hattle of Flodden-hill, and was hrought baok attered and torn. It was something more than 1 banner, it was a talisman in the keeping of the convener of the trades. To this day it is known
as tho Blue Blanket, "at wbose appearance therewith not only the artificers of Edinburgh are obliged to repair to it; but all the artizan it, and firht under the convener of $\mathbf{E}$ dind follow it, and fight under the convener of Edinhnrgh a aforesaid." In Aytoun's spiritcd ballad the hanner 18 thus alluded to. It is brought hom
from Flodden by Randolph Murray, the from Flodden by Ravdolph Murray, the provost son, who presents it to his father,
'Saying - That is all I bringye,
From the brayest of the land:.
Ay ye well may look upon it-
Else, be sure I Ihad not trought it
From the field of darl despair.
रever yet was royal banner Steep d in such a costly dy It balh lain upon a bosom
Sirs ! I oharge you tieen it hot
Sirs I I oharge you lieep it ho
Kaep it as a sacred thing, For the stain yered uper ing
Was the life.blood of your ling
This banner, along with that of the Ear Marischal, who went down to that same disastrou battle, is atill conspicuoas in the library of the Faculty of Adrocates.

ATropos of banners, there was one denominated the Banner of Revenge, which was first borne ahout the streets of Eidinburgh in June, 1507 to inflame the popular mind against Queen Mary. In 1601, when Laird Bargeny was slain by the Farl of Cassilis, the same banner was uplifted in the streets of Ayr on the occasion of the laird's funeral, " whereon was painted his portraiture, with all his wounds, with his son betwixt his hands, 'Judge and revenge ny cause O Lord.

Not a shred of the Bannor of Revenge remains but the Bluidy Banner, underneath whose folds the Covenanters marched to the fights of Drum clog and Bothwell Bridge, is still to the fore It is of blue silk, herc and there a littie faded, and is inscribed in Hebrew characters (gilded) "Jehovah Nissi" (The Lord is my Banner). The next line is painted in white, "For Christ and his Truths"; and then come the words from which it has received the namo Bluidy Banner, No quarters to $y^{e}$ active enemies of $y^{e}$ cirioom by a family in the neighbourhood of Dunhar
In the Museum of the Society of Antiquaries of Scotland is preserved a bauner which did duty at Bothwell Bridge, and some sixty-six years afterwards was carricd hy a corps of stanch Burgher Seceders, associated as a regiment of volunteers, who were posted at the gates of Edinburgh College when the Highland army entered the city in 1745. The college tbese Seceders guarded was not battered down till some forty years later on, in order that the present college,-the joint design of Adam and Playfair,-might arise. A banner which belonged to Mr. W. B. Johnstone, R.S.A., was in the thick of the combat at tbe battle, and also figrored at Bothwell Brig
At the great reform procession in August 832, the Edinburgh trades were anxious that the banner Which had been horne before their
predecessors for 400 years should be unfurled, predecessors for

## Kept it boly,

Strange it is that the Blue Blanket, the gift a king, should become a terror in after years to successor and descendant of that same sing.
When the Protestant faith came to stir np men's minds, the working classes of Edinburgh hecame a very formidable body. James VI., Who had more than once experienced their says, and conseqnently "Bnew them Doron" which be intended as a vade mecum for his son, "They [the workmen of Edinhurgh] think we should be content with their work, how bad and dear soever it be; and if they be in any. thing controlled, up roeth the Blue Blanket !
Than this Blue Blanket few trade banners can boast of a more eventful history.

THE FORTRESSES OF ALSACE LORRAINE.
Wite the provinces of Alsace and German Lorraine, the fortresses of Thionville or Diedenhofen, Metz, Bitsch, Pfalzburg, Strassburg, the German empire. It remained for the con.
sideration of the German War.office which of the acquired fortresses were to be retained on account of their strategical situation, as well as With regard to the conditions necessary for ortresses in modern warfare. Considering the beavy ontlay entailed by the construction of new Cortitications, it was thought advisable to raze only the smallest, weakest, and apparently most partly robrild according to partly enlarge and partly rebrild according to modern require. monts the larger and most important ones. It was decided to demolish the fortifications of Pfalzburg and Schlettstadt, the former of which was razed in 1872, the latter this year. A vast quantiry of brilding material was gained by these operations, which is now heing used up for at the erection of the remaimos (forts) commenced in 1872, of Strassburg the materials from Pfalzourg, and for the three water-forts, taken in hand this year, those from Schlettotedt are being used. The fortifications of Dieden. hofen, Metz, and Bitsch, which defend the approaches to Rhenish Prussia and the Bevarim alatinate, as well as Strasshurgand Neuhreisach, Which protect the grand-ducby of Buden, will have to undergo almost complete rebuilding, as they liad been left by the French in their formes condition, without applying the experieace latel gained in different campaigns to these for: resses
The only exception is Metr, the constraction f outworks (forts), lying a cousiderable distance before the encer proper; having beon berua war the war $18 \%$. At the ouchreak of that were those hor wor quite ready, but the pro capale or being defeadod, as the sequance proved. Tbere are no such oatworks to the othe ortresses, Strassburg especially wanting them; tbey ought to luave heen present in her caso years hecore the lasi disastrous war, considering its importance as a town and a fortress. The detached works (mnettes) lying before the encente proper conld not he considered as forts. since they were situate so close to the fortress that they could not protect the city itsolf from a bomhardment.
The forts now constructing, planned by the and $S$ Government for the fortresses of Metry strassourg, haye beez placed in such positions of theciuce all possibility of a oombardmen are situated about'six to eight kilometres from the city; they will all be armed with lonerange guns, and if the enemy should also employ the best long. range guns, he will have to place bis hrst battcries at least four kilomètres from the orts; and at the present state of the beavy orduance question, a bombardment at such a range is more than doubtful, nay, almost impos sihle. To place batteries for a bombardment therefore, it will he necessary first to reduce a number of the forts.

To protect the garrison of such forts, which resemble small military colonies of 600 to 800 men, effectnally from a bomhardment, which the hesieging army woald first direct against the forts, perfectly homb.proof casemates have beer provided for the whole oparrison, as well as embrasures in the parapet for the sentries Such a defending force may satisfy all the ordi. nary requirements of life without once leaving the bomb.proof rooms; it need not even cross the terre-ptein of the forts to reach the ramparts homh-proof stairs beneath the ramparts conrecting the terre-plein with the latter. Besides, it should he mentioned that these forts, even with extensive length of front, are as narrow as possihle, so that the artillery of the besiegers will find is a very difficult task to hit tbem, for any ball which may fly over the front parapet only by a little either falls into tbe gorge of the parapet or ties over it into the ground beyond the gorge without cansing any damare.
For those fortresses which will not he defended by such outlying forts, and of which only the enceinte will he robuilt according to modern science, a bombardmort may be avoided at the outset, as the enemy's light field artillery canno cope with the beavy ordnance of the defendia force; but if ho has brought up his siege train of heavy calihres, the defender will take up the combat with the attacking force, and make nse of the ordinary means of defence But eren then he will be able to confine within the narrowest limits, by means of a well-directed and energetic defence from ramparts constructed after the most perfect modern principle, the successes of the siege batteries, and so preven catastrophes of which the last campaign furnished so many examplns.

OLD BATH-HOUSES AND NEW ONES.
Amp the maltitudinous plans and suggestions for the improvement of this mighty metropolis, and the consequent "improvement" of those Who at all times and seasons of the year live in it, there is certainly not one that can claim to he more worthy of note and attention than that of public baths,--public baths, that is, on a scale worthy of the size of London and the numher of its iudwellers. It is really wonderful to think of the paucity of London haths; how far they are apart, and how impossihle it would he for all to bathe and he clean if the practice of hathing were as universal as it ought to be. Then, again, look at the poor places that have been provided for those who will and do persistently bathe. Draughts, cold and warm, waut of proper accommodation, and the disoomforts of pretby nearly every kind that can well he, are to be met with and endured as they best may. It is the well-known "Hohson's choice,"-that none. Fow cities, or even towns, in the world eem to be so ill provided with that which is ne of tho furst necessitics of a healthy life, us hope, now that some little attention is roused us hope, now that some intle attention is roused $f$ result, if not for the present year, at least for the next.
A few words and hints on the suhject of haths, ancient and modern, may perhaps scrve a good purpose, and help to practical resnlts.
Some of the ancient accounts to ns poor modern Londoners seem almost fahulous. The immense ize, mode of construction, materials employed, and the all-pervading magnificence of the Roman Therms put to shame all modern domgs iu hart. huilding anywhere. It is only in a kind of poetic dream that we can picture to ourselves suoh haths as those of Caracalla, or such vast "Therma" as those must have heen of which the present magnificent Roman Pantheon was the central hall or the vestibule. Such notions of baths and bathing belong truly to the classic past, and do not seem to he even compreheusihle, much less capahle of practical imitation, by the present time, with all its wealth and mechanical resources. We look down, in some respects, on the old Greeks and Romans, but perhaps have but small reason to do so, for they had their "meobonics" as well as ourselves; but they always, somelow or other, contrived to make art and architecture grow out of their neoessary mechanics,--an art truly not a little difficult to solve sometimes, when the work done is new and untricd, and "precedent" is not to he found.
But turning for a moment from these past efforts to provide baths for the people, we would, -for it is instructive,--say a word or two on what has hitherto been done by ourselves. We would in the first place assume it as a practical necessity that any structure devoted the purposes of a swimming.bath, for that is ne, in not the chier thing nodal, should be a solid and well-hoilt structure, lightly roofed in, with good substantial roof; properly floored or paved, and with doors and windows well fitted, and mechanically perfect, as far as may he, and all made of proper and snitahle materials. A warehouse is one thing, a hath is another; what is good and useful, and fit, in the one, is not necessarily so in the other. But if anyone will look carefully into the mode of construction and materials, and into the fittings of some of our metropolitan baths, it will be found that nothing can well be more inappropriate or unsuitable, and even daugerous, than are not a few items of the modern London hath.house. In one of them, to cite an instance, -a remarkahle one too, that in Westminster used hy the scholars of West. minster School,-a new floor has just heen laid down, composed of, - what can the reader sup. pose ?-nothing less than large sheets of rongh imagine a worse material for the harefooted tread; the rapid ahsorption of heat by the ever cold iron surface mast be surely enough to do serious hart to not a fow; to say nothing of the discomfort of it hoth to sicht and feeling We specially meution this because it is one of the specially meution this because it is one of the very last improvements effected inswimming-
bath arrangements. Nothing cau possihly he worse, as it would seem.
Another evil not seem.
light roofins intle noteworthy is the slight roofing common to buildings of this class, - of corrugated iron thin as cardhoard. Heat cannot be retained hy such thin roofing,
modern prohlem truly is there in bathohouse buillaing.
It is difficult to speak on the subject of haths, old or new, without dwelling for a moment on the open-air hath. It is hardly too much to say that one open-air bath is worth there of those enclosed and shat up in a room. Nothing but experience can evidence the effect, good at al times, of the fresh and invigorating and ever changing meter air. The proposition to construct baths in the Thames like those on the Seine is a right good one as far as it goes, and it is to be hoped that in them the roof will be left more or less open to the outer airand sunshine, when we luckily hare it. But is it not truly wonderful to to he done in the scientifio and expensive way when tho work is already done to hand by friendly natnre herself, without cost to any one ? There are not a few places up and down the rive Thames,-as opposite the dead wall of the had for absolutely nothing hut the keeping the traffic, small as it is, to the north or Penitentiary side of the road. It is now, even as things are used hy the poor fneighbourhood as bathiuggronnd, hat ander constant terror. Yet does it do a great deal of good in tho way of cleankiness where no other means for it are to be come at. But be things how they may, whether out of wonld earnestly urge the utility and healthiness wonld earnestly urge the utibty and healthines
of the open-air bath. There is nothing like it.
Butit is also, -and the subject is a little new, in their capability of being mode so appropriately receptacles of fine art and statuary, that curious to reflect on the immense importanco which to ren on the in portace which the old Greek and Roman evidenty attached to their great puhho baths. It has many of the great statues of the "antique," to ase the favourite Academy fterm, have heen found. Every musenm in Europe has been enriched from these almost inexhaustible sources. It seems to have been thought hy those in old Rome who had charge of such matters, that there could he no more fitting place for a fine statue than a puhlic bath. Indced, when we consider that the Roman Thermas were not haths, but gymanasiums, after the model of the Greeks, we need not wonder at the importance they were art.schools for the study of fine forms and graceful action; they had all appurtenances for athletic games, and even for lectures and poetic recitations! They had also libraries attached to them. We are expressly told that they were decorated with the finest objects of art, both in painting and in sculpture, and had over-playing fountains, and the grounds round and ahout them were planted with trees bike the groves of the Academy. Surely in all this there is something worthy of imitation, for why shonld not a "bath" be a fit objeet to "adorn" thought that these great doings of old Rome began and cnded with the Empire; but the trath prohahly is that they were normal things of neoessity, and only reached their highest form of expensiveness and art in the absolute days of the Roman Cæsars. M. Agrippa, the huilder of the Pantheon; Nero and Titus, Trajan, Caracalla, and Diocletian, were hath builders, so that it can hardly he said that the Roman emperors did not sometimes do good things. It may help to give some notion of an old Roman's idea of a
hath establishment, as contrasted with the modera idea of one, that the externel or bounding range of buildings in the Caracalla haths, or thermw, measnred just onemile in cirouit! So much in these days is talleed of education, hot in Parhament and out of it, that no one can do otherwise than attend to it, and feel interested in it; but we are sometimes inclined to ask, What is edrucation? Were the old Romans in the days or Cicero educated or not, and what sort of tion was was it? Here we see that the educa the same time, almost art-education included, in spite of yonrself; for the grand "antique" was could the in action, -living action. What more have? No studio, or formal school, could afford such opportunities for study. One can, indeed, almost reach the very highest idea of artistic education possible, for Myron himself might he supposed to not only go to the "Thermse" for true he had been to, buture. If this he now educate, artistically at least, what is? The educate, artistically at least, what is? The
antique, and that from which the antique
riginally sprang, were always present to the eye and mind of the Greek and Roman of old Have we a

## SHABDEN.

SEABDEY, a conntry-house just completed from the designs of Mr. E. M. Barry, R.A., is sitnated $n$ a pleasnnt part of Surrey, not far from Reigate, on the site of a smallor honse which has been pulled down to make way for it. Some of the old servants' offioes still remain, and these have been worked into the new plan, with modi. fleations.
The external walls of the new house are double, with a space of ahout 2 in . hetween thel outer and inner thicknesses. The outer walls are faced with Kentish rag-stone, in level coursesThe window dressings, cornice, and other archi. cotural details are of Bath stone, and the win ow cills and copings are of Portland stone.
The staircase is of oak, in short fight massive oak newels and balustrades. entered from the hall, and commences with a central flight of steps, flanked by columns, and rohed recesses, the whole being constructed of bak. The upper part of the staircase has a cove and a domical ceiling. One side of the staircase open to the ppper londing. Another side is ccupied by the windows. These are filled with risaille plass by Clayton \& Bell with colour risaine glass by Clay edalkio other two sides of the staircase are formed by ppen arohes partly filled with oak screens, and laborate mrought-iron scroll work. The latter labotate wrought-iron scroll work. The latter drawings by Mr. Leaver, of Mridenhead,
The garden. Leaver, of Haidenhead.
rawing.room and the lihrary, is screened the crandah from the lihrary, is screened by a fado, 4 ft 6 it has an oak walls is lined with tiles of artistic design by Lessrs. Simpson. There is an open tracery creec of oak hetween the garden-room and the all. The ball is wainscoted with oak to the eiling, and floored with wood so as to bo vailable as a reception or sitting room. The ceiling is of plaster, with massive heams markng the construction. One of the corners of the hall is occnpied hy the fireploce, the other three corners display family portraits worked into the oak panelling so as to form a part of the perma nent arrangements of the hall.
The dining-room has a dado of oak, with
Thed and panelled recess for the sideboard. inished in a simple, modern style
There is a warming apparatus underneath the taircase. It consists of a room about 12 ft . by ft., full of hot-water pipes. The temperature of this room is raised to $100^{\circ}$ or $120^{\circ}$, and from t walm-air flnes of wrought iron, encased in rood, radiate to the varions rooms and other parts of the honse when warmth is reqnired. These flues start from the top of the heating hamber, at the bottom of which fresh external ir is admitted by air-flues from two sides of the house. All the flues can be partially or wholly closed by means of ralves. The fresh air passes through the coils of hot.water pipes, and thence: is distrihated throughout the house hy means of he warm-air flues. The fresh air so admitted. entiates the house both in summer and minter, and heing only warmed by hot-water pipes, is ay contact with iron at a higher temperature. he ordinary water-pipes are plaoed in a vertical haft easy of acoess from the back stairs, and the boiler flue forms a portion of the shaft, thus avoiding risk from frost to the pipes.
The walls are btilt on concrete, and a layer of this material is spread over the whole surface of the foundation, as a precaution against damo. The roof is covered with tiles of a dark red colour. All the main beams are of wrought ron, and the wooden floors are plocroed and douhle framed. The windows are fitted with vainscot sashes of the usual type, and are glazod with plato glass in large sheets.
The first floor contains the fimily bedrooms, the hest of which are planned in suites, with dressing-room and w.c. attached. The npper tory contains the servant
The builders are Messrs. Holland \& Hannen, Bloonshnry. The warning apparatns was caried out hy Messrs. Haden from the desigu of he architect. The earving was executed by Tessrs. Mabey; and the interual decorations are by Mesers. Crace.

## SAXON REMATNS ATTACHED TO NORWIOF CATHEDRAL.*

In the reign of Edward the Confessor, Norwas a flourishing town. According to the Doomsday Survey, it possessed 1,320 hurgesses a the time of King Edward, and not less than hurch of St. Michaol, held whioh was the he church of the Holy Trinity, held hy twelve mrgesses in King Edivard's time, and by the Bishop William Belsagas, at the survey of the acient churches led. The record of so many ement churches led Mr. Riohard Taylor to emark ("Index Monasticus," page 6) that " in larches and chapels as early as the Conqueror's ime, it is somewhat siggular thot so few traces I ancient architecture are discoverahlo in the arly parocial churches." The discovery, ubject of this paper, in the west wall of tho loisters of the Norwich Cathedral, is in accordnee with probability; and our late respected eoretary, Mr. Harrod, states in his excellent ork, "The Gleanings among Castles and Conents of Norfolk" (page 235), that evidence exists -lich seems to him to go very nearly to prove to of a yet moro ancient ono dedicated also to 20 Holy Trinity. In proof of this he cites from cmhle's "Codex Diplomatices ævi Saxonici," n. iv. p. 282, tho following very conclusive exno sea" some forty his will "When he went over ad devised, among other things, "and ic on into Sancte Marian." And what and where as this Christ's church in Norwich? 1 iginal monastic church, called in Doomsday irvey the church of tho Holy Trinity, to the him and continued from his time dedicated reign of Queen Elizabeth. Indeed thest seem to have heen convertible, the 10 being used hy tho apper and the other hy - lower classes. Haxrod ohserves that, al. ongly in the wills of the upper classes the
thedral is referred to as the churels of the aly Trinity, in those of tho lower it is con-
old aly Trinity, in those of tho lower it is con-
antly called Christ's Church. Of this ho cites antiy called Christ's Church. Of this ho cites ration accounts, and the Session and Assemhly oks also. Ho inserts also a very droll account m tho aneedotes hy L'Estrange, published hy e Camden Socicty, which namistakahly conl.
cts and identifics Christ's Church with the hedral. He refers also to some parallel ses which are rery confirmatory; the Chnrch the Holy Trinity in York is stated in the omsday Survey to be held hy Richard, son of fast, and in the enumeration of his lands in Survey, all tho lands held hy him in right
this church are named as held of Christ's urch. The priories of Christ's Chnreb ndon, and Christ's Chnreh, Hampshire, were h dedicated to the Holy Trimity. I have statement made hy Ingulphus, the ebronidence Croyland, that when he was installed ther 1076 (twenty years hefore the foundation of rwich Cathedral) he found thero 100 "comom fourteen were from Christ's Charch, Nof in, because douhts have heen raised as thormineness and the date of his chronicl the minezess and the date of his chronicle, so ne may he attached to this account of the gration of the nonks from Norwich, and vos to prove that Christ's Church was a little en, at some time or other, to a roonastic ahlishment in Norwich. 1 pass by also metield's ohservation, that this titlo could not

- helonged to the present cathicdral, hecansc o helonged to the present oathicdral, hecanse that it helonged to the church of St. John ddermarket, whioh he identified with that of
Holy Trinity mentioned in Doomsday Survey, withstanding there is no record relating to John's Maddormarket Churoh, prior to the
reenth century. It is important to men1 that the Conqueror is said in Doomsday do have giveu to Arfast (1086), fourteen asura, or tonements, for the hnilding of principal see; and this plainly indicates the contemplated tho erection of a seo at
By the Rev. J. Gunu: read at a recent meating of the
foll and Norwich Archxological Bociely.

Norwich previously to the time of Herhert's Herhert in his foundation charter allusion hy sistent monastic church impresses me with the conviction that the removal of the monks, if at all, had taken place previously, and that the old monastic buildings had heen pulled down to also the church of St. Miohael, as we hare noticed, mentioned in the Surrey. It is admitted on all hands that Herhert was installed in it, and that it stood near Tomblend, hat it has since heen demolishod. It is evident, therefore, that portions of these Saxon huildings, which were snfficieutly strong and available for convenience of site, might have heen retained and utilised in the present cathedral or priory; and it is my beect in the ahove remarks to show, not merely the possibility, hut the prohahility that such was the case, and ondeavour to invest with degree of interest such ancient relios which intercsting such archoological details may the reality of tho Saxon remains in the west wan of the cloister does not depend iu the silightest degree npon them, hut it must undergo the severe scratiny of architectural knowledgo and experienco, and to these tests heg tosuhmitthe following lescription of the wall in question It extends n tho west side, covered and masked hy the the south aisle of locutory, at right angles with he south aisle of the nave, 180 ft . to the south. west angle of the cloisters. This entire length of wall is quite undisturhed, except where it has been pierced for more recent doormays, or Strangers' Hall, at right of huildings, as of the strangers' Hall, at right angles to it. On tlie horthern extremity of the Strangers' Hall it has heen out away for the reception of a quoiniug of ashlar, and for an internal Dccorated string, which is let into the old wall ahout 12 in ., with a return on tho north side. On searching with the spade, Mr. Spaall hit upon the foundation of the north wall, corresponding exactly with tho quoining of asblar and the strings, and marking the true houndary of the Strangers' Hall on the north sido. The string dies ont ahout 17 ft .9 in . agpainst the west wall, and 1 would suggest that this was at the termination of the dails, or raised to finist ornamented part of the hall. I propose hefore 1 proceed to continne the the wall. Besides the discorery of the of wall, Mr. Spaull ohserved a staircase, remnant of one, at the sonth-west anglo of the Strangers' Hall, which had been previously require further examination. Now of this will rals of 14 . On the external side, at inter20 ft . a ., there are circiar apertures about ofisters for and floor of the orsters. chese are continuous thronghout the removed for wall, except where one has heen above the string course of a larger window and another, prohahly, is concealed hy reall, fint-work adjoining the late concealed hy recent residence. These the late Canon Wodelonse's he usual size of Saxon work, 2 ft . ontaide, with in a wall 3 ft, thick. Thed 1 ft. in the centre, important point thick. Thero is one, and most persons who have iuspected tho all professional namely, that theso windows have not heen mado in the wall after it was built, hut have formed part of the original masonry. They are formed of flint uncut or worked, and scarcely a piece of riginally can be dotected. They wero plastered except where itso the west side of tho wall, and here also very rarely any freestone can he fonnd throughout it, except in recently-repaired parts, in the coinings and jamhs. I will next direct yoar attention to the east side of the wall. On ascending the staircase leading from the locutory, how used as a school, the sapposed on the lat reached, part of which, ahutting cealed hy plaster, but the northouso, is condiscloses one donhlo sporn extremity 19 ft .9 in abo the ido of the recent foor, and on the southeru there is a circular window are donhle splayed be studied to plaster upon it. Ahout 7 in. ahore thege is a dows, stretching the whole extent of the wall, is a line of interlacing Norman arches of the of the south is in the three westernmost bays of the south aisle of the cathedral. These inter-
old wall without jamhs, as in the rest of the cathodral, indicating that the wall heneath had desigut hefore the iuterlacing arches $d$, and there is an evident line of domar riving an mee Normaz and the beneath, ance to the upper portion. Another and im. portant point is that beneath the Norman inter lacing work there is no appearauce of ashla work, except at the tarmination of either end of next the cathera, it he northern extremily, freestone, and wall of the and work to tho like finishing of the and also on the southern, the Benee the the wall with asuar may ho seen. is a continnese double-splayed wiudows there lan a floor or lean to roor. Apertures in the wall at regulas joinds or joista. The interlacing arches were external, as also the Norman wrcades on the south side of tho coisters abutling on the refectory. Loug obser vation of similar donble-splayed windors con Finces me that they are Saxou, and that we hare here the remnant of huilduse of the Savon period. It might have served as an outer wall of houndary or defeuce. The double apinal the window was well calculated for archery, as commanded an exteusive view without as posing the combatant to attack, and the apertnre wras too small to admit of the ingress of an enemy. It has heen ohserved hy Rickman that the early ecclesiastical huildings were framed within ace against intaders. But it is not in this place, or for the uses the building miont have been applied to, or, indeed, to point out its possibio connexion with any other adjacent the suhject, Fere bistory altogetbor sileut on the pre-existence of any edifie on water to ion pre-existence of any editice on the foundateetural evidenco is cathedral, still the archipendently of any other, it would conrince mo f the certeinty of the Saxon oricin of this pieco of masonry. Of the Farious stics of Saxou work, none is more decharacterhe double splayed window without the than o cyery period and obe masonry is common overy period, and is had recourse to in build. woll as in Saron times. The present day as window is not uncommon in the straight-sided uso of flint and stones en in later work. The may be found in the meanest mered from land Short and long, and milaest modern huildings. towers of Saron, and pilastored work, occurs in Lowers of Saron character, and halustered shafts are all of wrought freestone, and may have heen (as I remarked in au article on Beeston St. Lawreuce Church, read at the meeting of the Institnte, at Norwich, and printed in the report) continued in Norman times by Sazon masons as prohahily is the case at Great Dunham Church. But the difference hetween circular Yormon an saxon windows is very ohyious. Tio Noman formed of freestone, well out and wrourht tho other of rude flints aud stones, Thougt, tho has a single splay, or none at all . the Nama almost invariably the double opla sistent is this charer of Slottisham St Martin (so called church Ordnance Map) the is a double apt the small window in tho north wall, which is only 1 ft .2 in. thick. It is singular that this characteristic, perhaps then not generally known characteristic, perhaps then not generolly known
from its 子arity, is omitted in tho ${ }^{33}$ Glossary of Architecture, ${ }^{\text {ti }}$ In Norwich, from tho ehan of and enlargements churehes have undergone, no Soxon characteristics have heen retained; the small churches in country villages may ho said small churches in country villages may ho said to ahound in them. Framlingham Earl had, at relics of this descriptiou, pointed out at a mect Mr of our Society hy our respected secretary Mr. Hamaiag. in a circular double-splayed window there, he ohserved tho remmant of a rim of oak, and a.so an oak shuttor, curiously closend hy leather thongs probably, passed through obas vas in general use. At Coltishall Church, coupled with coinings of Roman tijes, and also good examples of these windows over the seen doors precisely corresponding with those under ur immediate consideration.

The Iate Mrr. Perlins. - Wo record with egret the death, on the 30 th nit., of Mr. William Perkins, agod 605, for thirty years the principal and well known in the architectural profession.

THE LEICESTERSHIRE AND NORTHAMPTONSHIRE ARCHITECTURAT AND ARCHEOLOGICAL SOCIETTES. The Architectural Society of the Archdea. conry of Nortbampton, and the Architectural and Archæological Society of the connty of Leicester, selected Coventry as the place of their general nieeting for 1573. To that ancient city accordingly the members of the societies, with their friends, numbering some fifty or sixty perrons iltogether, betook themselves, and bere They were joined byalists' and Archzologists' Field Cloh The proceedinys commenced with Field Club. The proceertinys commenced witb a public meetiog at St. Mary's Hall, the Mayor of Coventry in interesting paper "On the Antiqnities of an interesting paper "On the Antiqnities of
Coventry." The objects of interest in St. Mary's Coventry." The objects of interest in St. Mary's Hall were then pointed out, and a temporary museum inspected. Nout, under the gaidance of Mr. Odell and Mr. Fretton, the churches of St. Michael and Holy Trinity were visited, and their chief architectural features pointed ont.
Then the remains of the ancient cathedral Then thi remains of the ancient cathedral wero shown. "Peeping Tom" was inspected, and Mr. Bloxam eonsidered this remarkable
fisure to be of Tenry VII''s time, and to have figure to be of Menry VII.'s time, and to have been originally in one of the Coventry churches, probably a figure of St . George or some other saint.
After the visitors had partaken of lnncheon a tbe King's Head Hotel, they went to St. John's Church, where the Rev. G. Ayliffe Poole pointed out the chief architectural features of the building, and strongly condemned the "catte-pens," as he termed the old-fashioned high pews. Bablake Hospital, fonnded by Thomas Bond, in 150t, whs next visited, and the Boys' Hospital, fonnded by Wbeatley, in I560. The Free Grammar School was then scen. Mr. Mat thew Bloxam gave a short account of the building. Next, the Carmelites, house now stands, was visited, and Mr. Bird, the master, showed the party the mouastic remains. The Carthnsiuns, or Charterhouse, zow a private the owner, conducted tbe party over the smal remaining portion of the old huildiog. The cemetery the Franciscins or Grey Friars monastery, and lastly, Ford's Hospital, a apecimen monasher fon in 1529, concluded the somewhat lengthy programme of the day
There was a publio meeting at St. Mary's Hall, when Mr. Borcess read a locally interesting paper, entilled "The Huuting Match at Dm. ehurch, IGOL." "Bells and Belfries" was the
title of a paper read by the Rev. G. Arliffe title of a paper read by the Rev. G. Ayliffe Toole. Mr. James Thompson was aunounced to the Rev. N. F. Lightfoot read the paper. On Wednesday an excursion took place. Th party frrst went to Kenilworth Castle, where a minnte inspection of the whole remains was made, minder the able guidance of Mr. Burgess. Nest Guy's Cliff was wisited; and afterwards Warwick Castlo; at both places the houses and picture-galleries were thrown open to the ex. cursionists. At Warwick, after luticbeon, the Dudley Hospital was seen; . likewise St. Mary' Church, and the Beancbamp Chapel. After thi the party visited Stoneleigh Abbey, where Lord Leigh and his brother condacted them through the remaining buildings of the ancient abbey, and throngh the modern rooms of the mansion. The excursionists tben returned to Coventry, having enjoyed their Warwickshire trip very zunch.

## THE COTTESWOLD NATURALISTS'

 Field cedb.Tris third field meeting of tbis clab for the present seasou took place at Weston-super-Mare for Swallow Cliff, to examine the geology of the coast line between the two places. The proeramme was attractive, and a goodly muster was the result. The point frst reached in the day's exeureion was tho Camp on Worle Hill, which immediately overlhangs tbe town. This large and important work is tbought to be very Early British, aud may mark the site of a town inhabited in with the larce traffic known to have been carried on in minerals raised from the mines of the Mendip hills; and it is not impossible that from Mendip hils; and it is not impossible that from tlis height primitive Britons may have looked down on earthagisian or veu Aceaician ships, drawn np on the shore of Sond Bay, and taking in their cargoesonded. The ramparts are very
numerons and very distinct, and are strongest at the east end of tho enclosure, which was the most accessible, the steep sides of the hill form ing withont wuch trouble ample protection in other directions. The interior of the fortified space contains a considerable number of hit circles, and these were some few years ago carefully examined by a Committee of the Somerset Archnoological and Natural History Society They are very like these of Dartmoor, and appear to have been made by forming a circular excavation a few feet in deptb, the sides of which were built up with loose stones, and surmonnted by a framework of wood, Gilled with wattle or
with turf.

BUILDERS' BENEVOLENT INSTITUTION. The twenty-sizth annual meeting of the subscribers and friends of this charity was held on Thnrsday nfternoon, the 31st ult., and, as unnal, was chicfly attended by the honorary officers of the Institution. Mr. Edwin Lawrence tho president, occupicd the chair. After the nsual preliminary business had been despatched the secretary, Mr. A. J. Harris, read the amnua peport. this document comraenced with an himilding trades, and who bad not yet identified themselves with the work of the Institution, to become subscribers at once. A large number of eandidates were anviously waiting to become he recinients of their bounty at the November lection. Tast year cight new pensioners wer locted,--fonr in November aud fonr in May. Of the inmates already in the Institation, five had died. The worshipful Company of Taylors had generously placed at the disposal of this Institution one of their almehouscs at Ball's pond, with an annuity of $10 l$. per annum, and a supply of coals. Since the lost general meeting the Institntion had bad to deplore the loss by eath of Mr . Geore Spencer Smith, who was ne of the earliest friends of the Institution. Mr. Henry Manning had also died and left the Institution a legacy of 5002 . which, when the duty was paid, amounted to 450 l . The financial statement sbowed a total income of 2,979l. 4s. 7d., which included a balanec carried forward rom last year.
Mr. Tichardson moved, and Mr. Jemes Simp. son seconded the adoption of the report and accounts, which was agreed to.
Mr. Waldram moved, and Mr. Richardson seconded, a vote of thanks to the patrons, and the addition to the list of the names of Mr. Edwin Lawrence and Mr. T. H. Poynder. This

## was agreed to

Mr. Plucknett, in moving a very hearty vote of thanks to Mr. Lawrence, for his presidency during the past year, commented on the necessity of such an institution to the important dentifier which it was more the trade had largely benefited by Mr. Lawrence's president. ship: and if all tho anbscribers were present, they would beartily endorse that opinion. Mr. placknett concladed, amidst cheers, by propos iug the resolution.
the resolution
r. Plucknett were confirmed by Mr. Richardson, in seconding the motion, which was then carried unanimously
The Chairman hriefly acknowledged tbe compliment which had been paid him, saying that his best services were always at the disposal of so excellent a charity as that whose auniversary they were then celebratiag, it was so excellently managed by its treasurer, secre-
tary, and other officers that his office had bcen tary, and other officers that his office had bcen
almost a sinecure. He only wished he had been almost a sinecure. He only wished he had been
able to render more service to the Institution.
Mr. James Simpson moved the thanks of the meeting to the vice-presidents of the Institution, and the forlowing -pentlemen were elected to that office for the ensuing year:-Mr. George Baker Mr. Alfred Lawrence, Mr. Sapwell, Mr. W Grifith, Mr. Mark Manley, and Mr. Pbilip Ainstie. This was carried, as was also a resolution appointing a trnstee in the room of Mr. G. S. Smith, deceased.

A vote of thanks to Mr. Plncknett, who it seems also fills the office of treasurer, was moved by Mr. Waldram, seconded by Mr. Richardson, and carried unanimously
Thanks were also voted to the directors. The list for the ensuing year is as follows:-1Xessre. George Dines, Matthew Hitl, George and Richard Head, Mark Manley, S. L. Mann, W. Nicholson, IV. R. Rogers, and Thos. Stirling

Votes of thanks were also passed to Mr

Joseph Buru, hon. sec. of the managing eom mittee, the auditors (Messrs. S. H. Head and J H. Hanter), and the solicitors (Messrs. Jacques Edwards, , Co .) and the meeting closed with hearty vote of thanks to the chairman.

## INJURED FRESCO.

Is would be well if the term fresco were not, as commonly is, indisoriminately applied to very kind of wall.painting, as by the having Il the imperfections of other processes beaped pon it one of the most ancient and best nethods of mural decoration is undeservedly brought into disreputo. Mr. Herbert's picture of the "Tables of the Law," recently referred oo in the Honse of Commons, is, Helieve, painted in water.glass, not fresco. The term fresco is improperly applied to any method of painting but that on $j$ resh mortar. As a rule, onr painters have not had sufficient practice and esperience in fresco-painting to master netiod, and to understand its maniphlation inder different conditions of the weather. A reat deal has been said abont the effects or and nglish chmate on fresco, but it shoulf is ecollected tbat the base of fresoo-painu never ood mortar, and that good mortar has Roman occupation to the present day. And, if per. mitted to indrlge in a very small joke, we might say, that in England good mortar has always exhibited the endurance of a "regular hrick."

## Autbor of the "Methods of Mural Painting."

## VENTILATION OF SEWERS

Havisg read all pubbished in your paper or最 ventilation of sewers, I fear tbat the whol question merges in the following incident. Las ear two men were working in a rosiu-still a保 they were fonnd in a sitting position, apparently: aslcep, but dead; a candle burning, and ni noxious vaponr percentible in the still. At tha inquest it seomed that the following were the temperatures:-On the top of the still, 103. Fabrenheit; on the ground, only $78^{\circ}$; and inside the still, $81^{\circ}$; the consequence was there wa no circnlation of the atmosphere. The air in the still, having more specific gravity than that above, would not rise; and that near thit arond still heavier, could not ascend through the bottom. The air within bccoming graduall. tharged with carbonic acid gas exlated fron tho langs of the unfortunate men, they we suffocated. A veldict by jnry accordingly
It is perfectly clear that exposed rain-wate pipes will not ventilate a sewer in the summen as the temperature of a sewer is colder; no can it in the winter. Being a small tube, sur rounded with a eold atmosphere, condensatio would check it before it rose balf.way, a thoroughly as Arnott's ventilators stop when tb fire is out and the shart becomes cold. To pass up bot air or gas wben it is surrounded wid. cold air, and not guarded, is a nut which all me? try to crack, but will assuredly fail in. Tbe onl? method, therefore, is either natural,-namely wind-pressare, by displacement and pressure; o artificial, - namely, subtraction. By beate shafts causing vacnnm by wind-pressure w sbonld gain equilibrium of temperature, th cases would be more dispersed, consequentl: less dangerous, being diluted by pure air; an greater circulation would help impu
pass off without hecoming poisonos.
M. Tosseld.

LONDON CEMETERIES.
Ir is stated that sites for two uew cemeteria have been selected for the purpose of formin additional burial accommodation for the wester: and sonthern districts of London; and that : limited company is in course of formation with th\} iew of carrying the same into effect. The site hosen are situated at Acton.green, in the paris of Acton, close to the Turnham-green Raima Station, for the western districts, and aistrict Eury-bill, Streatham, for tbe bouthern districe of London. Tbe gromnds of these cemeteries ar to be laid out by an emivent landscape gardenel and will be of an ornamental cbaracter. Whe the crowded state of the existing pablic cemeterig is reabsed, the preseat movement canno viewed as premature. The subject is now nnde
the consideration of Mr. P. H. Holland, thi Government Medical Inspector, wbo will repor as soon as practicabie.

THE DRATNAGE AND HEALTH OF MARGATE.
Goon resolutions by the dozen, mado hy - town conncil since the dato of the last ticle upon this subject (Buitder, Septemher d, 1871), have paved the way to some fiuto action in the very important questions
aholishing the old-fashioned used.up cessaholishing the old-fashioned red.up cessole ; and lately the perception of the cor. ration has heen quickened hy a visit on the pocation of tho resident medical men, from Cwynne Harries, one of the mec Previously, however, to the visit of Dr. Harri Previously, however, to tho council drew up a port on the condition of the town, which has on printed and circulated in the neighbour. od, and from which we mako the following oresting extracts:-
The physical contour of the town is that of two
ers and two hills. The suhsoil is chalk, mostly the ars and two hills. The suhsoil is chalk, mossly ite
ble Thanet chalf, hut in some ptices it is of a hard

The great offence charged against the whole. nenoss of the borough,-for of its general prevalence of the cesspool system and the al ahsence (save on the Royal.crescent and field Bay Estatos) of efficient tuhular inago. To this very serious chargo the
itary authorities pload puilty, hut with ex itary authorities pload gnilty, hut with or-
uating circumstances. Here is their plea :As a mater of fuct, independent cosspoots attached
imost every hon se, sund from 12 ft to to 40 ft . deen in
 es away by haorytion and filtration inte the inter
 oopencd at tintorrals of yenrs, off en at logg interryils en to twenty or thirty years, nad are theu found to
ain more or less of 1 uid and semi. solid matter, onen a fere feet of tenacious and frequently not very
niter nive matter, and it is remarkable that the operations
ho ceaspool sytem, trauplt as they are witb large he cespool system, traught as they are witb large

$n$ has been mout signaly exempted from dieases an hin every epidemle visitation which has oecarred in neil."
Totwithatanding tho fact commented upon in concluding pragraph of the above extract, feeling was beooming more and more general done district that the oesspool system was
donat some better system should be oduced; and those who, for the most part, - disposed to act on the "lot.well-alone ciple, and do nothing, were and are
iunilly coming to foel that the knowledge of inally comirig to foel that the knowledge of
great sanitary deficiency is oxtensive and rious, and that many of the wealthier and er-informed visitors and their friends were rred from making their customary sojourn e town in oonsequence, and thus it became rvahle that three classes of
esented in the council, viz.:-
esented in the council, viz. :-
Those who were convinced that drainage needed.
Those who were not convinocd, hut thought nage expedient.
Those who were convinced of the necessity
f those, the two former appear to have heen ys disposed to work in some sort of unison; the "do-nothings," - that is, the third of the - classes,-have hitherto had the numerical way.
we observe from tho various newspaper of the doings of the council, as they Keble's Gazette, that nuder the stimulus of Gwynne Harris's presence among them, the heing augmented from those of the third, the introduction of a general and compre. ive scheme of drainage for tho whole
agh seems now to be imminent, or, at least, ugh seerns now to be imminent, or,
ae Margato season is conspiccoonsly flat this , the numher and status of the visitors being a heneath the customary average. Possihly,
is in some degree owing to the well. ationed efforts of the resident medical pracners in puhlishing a memorial setting forth
"that the sanitary condition of the town is exceedingly bad," and adding that "low types who was working for Messrs. G. Gilhert \& Son, contractors, Oldfield.road, Salford, in a sower in Albert-street, Eecles. Preparations were being made for propping the sides of the excavation; timber for side picces had heen lowered into the hole, and the "strotchers," or cross pieces, were ahout to he adjusted, when a large quantity of earth on one side of the cutting fell, carrying with it several side pieces of timber which had heen fixed. Deceased and two other men who were at the hottom of the sower, which was ahout 6 feet deep, were partly huried in the fallen earth. One of the planks fell against deceased's chest, and, although ho was only parily emhodded five or six minutes, ho was quite dead when extricated. A. Week before the accident dcceased told his wife that he did not like working in the sewer as its sides did not appear to be safe. He did not, however, mention this to his foreman.-The jury retarned a verdict of "Accidental death."

## the trades movement.

Stalybridye.-The stonemasons have struck work. They have hitherto heen working $55 \frac{2}{2}$ hours per week, but demand that that numbor be reduced to 481. A con「erence has taken place hetween the men and thoir employers, at which the former agreed to modify their clemand hy one honr, hut the masters wished to pay by the hour. The nien refused, and demandod to he paid hy the day, and the conference hroke up without a satisfactory settloment being come to.
Blackbum.-Depntations of the journeymon joiners and carpenters have waited upon their emplogers to see if some arrangement could not bo arrived at in reference to the quostion of wages. The majority cspressed their willing. ness to pay $7 \frac{1}{2} d$. per hour, heing an increase of da per hour. This was reported to a meeting of the
Bristol.-For many weeks a numher of the carponters and joiners of Bristol had been on strike, in conseguence of having failed to ohtain from their cmployers what they considerod a proper rate of wages. They were getting bofore proper rate of wages. They were getting bofore which the masters declined to give, not seeing Which the masters declined to give, not seeing
their way clear to do so. The employers have now made a concession, for at a largely-attended meeting at tho Athonaeum, Mr. W. Brook in the chair, it has been resolved that the wages of the carpenters and joiners be 6at d. per hour. Tho carpenters and joiners be 6, d. per hour. Tho
secretary (Mr. Alsop) was requested to forward a copy of this decision to the executive committee acting on helalf of tho men, and it is hoped that this concession will he accepted, and hus putan end to the strike
Sheffeld.-The ongineers' striko still coninues.
English Assistance to Foreign Workmen on
Strike.-The locked-ont building Operatives at Strike.-The locked-ont building operatives at Hamburg have received the gift of 1,0007 . from the working men in the English coal districts, and have, on the strongth of that support, refused to resumo work.

## SCHOOL BOARDS.

London.-The London School Board have resolved:-
"That the tender of Messrs. W. Wignore, of Fuiham, amouting to 6,7000 , for the erection of a serool to po pro,
fide accommodation for 795 children, iu Sunders.
 of Lower Cilipton, amounting to 8, 6985 , for the erection of a segool to provide aecommodation for 1,107 ehildren, in Adglers. gardens, Isiugton be secpted; that the
tender or mesra. W. II. \& J. Manbridge, amounting to 6,7thl., for the erection of a school to provido eccommo-
detion for 799 children, in J ohnonoah-street, Lamboth, bo neeepted; that the tender of Messre. W. H. \& J. Manso bridge, amounting to 8,3581 ., for the crection of a school
to provide aceommodation for 1,110 children, in Camden. street, Marylebone, he aceepted; that the tender of
Mesers. W. H. \& J. Mansbridere, amountine to 6.637 , Messrs. W. H. \& J. Manshridge, amounting to 6,637L, for the erection of a school to provide accommodation for aceepted; that the tender of Messrs. W. H. \& J. Bisns-
bridge, amounting to 6 , $606 h$, for the crection of a school
to provide accom borough-street, Blackfriars-road, ho children in Marltender of Mesars. Coolo \& G Green, amounting to 5,770l., for the erection of a school to proride accommodation for that the tender of Mr. A. Shellield, amounting to $7,368 \%$; for the erection of a gehool to provide accomnodation for 920 obildren, in Bow-common-lane, Tower Hanmlets, be.
accopted; and that the 1 ender of Mr. T. Ennor, smount. ing to 3 ,201, for for the erection of a graded school, to he accepted.

Manchester.-From the minntes of the Sitos and Building Committee, it appeared that the
committee had considered the competitive decigns for new schools in Vine-street, Hulme, and Every-street, Ancoats, and had recommended that the Board should adopt Messrs. J. M. \& H, Taylor's plans for the Vine-street School, and that the first preminm be given to Mr. H. Lord, and the second to Mr. W. Dawes. The committee also recommended the Biard to adopt School, the first preminm to he given to Mr. H. Lord, and the second to Messra. J. M. \& H. Taylor, The recommendation in reference to Vine-street School was adopted without much comment, but on the second recommendation of the com. mittee being pnt to the meeting, Mr. Maclure moved an amendment, to the effect that the design of Mr. Lord be adopted. The amend. ment was geconded by the chairman, who said be should vote in farour of Mr. Tord's designs, becanse they were simple, and in accordance with the instructions issued to competing architects. Mr. Aldcrman Lamb complained that the tects. Mr. Aldects had not bcen fairly treated by the Board. Finally, the amendment was pnt to the Board. Finally, the amendment was pnt to the
vote and lost. The recommendation of the comvote and lost. The recommendation of the coma mittee was accordingly carrisd. Them the Rev. E. Hewlett, Rector of势 letter from the Rev. E. Hewlett, Rector of St. Paul's, Brunswick-street, in reference to the proposed erection of a Board school in Rusholme-
road. The rev, gentleman, in effect, stated that road. The rev, gentleman, in effect, stated that
the new school was unnecessary. The letter the new school was unnecessary. The letter
was referred to the Sites and Building Comwas refe mittee.
Leeds.-The report of the Sites and Buildings Committee recommended "The acceptance of the following tenders for the Cross
Stamford-street School, subject to npproval by the Eda-
eation Depsitment:-Carpenters and joiners', Work,

The committee further recommended the ap pointment of an additional clerk of works, and asked for power to advertise for and provisionally appoint such officer, at a salary of $2 l$. 2 s . per week. The Bewerley-street School being now completed, the committee thought it desirable being the first school of the Board, that it should be formally opened by"the Board. They had such opening on the 8 th inst., in connexion with the laying of memorial and foundation.stones of the new schools. They recommended that the Board sanction such formal opening.
Mr , Kendall moved, and Mr. Armitage seconded, -
That it be an instruction to tha Board arcbitect, in preparing further plans for schools, to provide, whereve practicathle, means of internal commanication between

As an amendment, Mr. Woolley moved, and Mr. Long seconded, -
That in the two-story baildings an internal commnniestion be reade between the achool, sud in schools on the ground. tloor such communic
the girls' and the iofante

The amendment was lost. Dr. Heaton then moved, and Mr. Wilson seconded, that the question be referred back to the Sites and Buildings Committee. This was also lost. The division on the original motion resulted in a tie, whereupon the chairman gave his casting vote in favour of it, and it wao adopted.

## PARLTAMENTARY.

South Kensington Museum.-In reply to Lord Eloho, Mr. W. E. Forster baid that Government were now in communication with the trustees of the British Museum as to the transference to them of the control of Kensington Museam, bnt that no arrangement had yet been arrived at.
The Frescoes in the Houses of Parliament.-In reply to Mr. Bowring, Mr. Ayrton said it was undoubtedly true that for some time past the surfaccs of these pictures had presented an appoarance which detracted from their elfect, hut appearanos had not been ascortained. There was very great difficulty in deciding whether it arose from actual decay of the picture, or Whether it arose from a mere efforescence on the conclnsion that it was only an efflorescence on the surface of the picture, which conld be removed, and which would leave the picture nearly as good as it originally was when painted. The question required chemical investigation, and Dr, Percy was now applying bimself in the
examination of the snbstance taken off the picture. He (Mr. Ayrton) had arranged to get the assistance of an eminent pictnre-cleaner, who was recommended by Mr. Richmond as best qualified for the purpose. He bad spoken of Mr. Maclise's picture, hnt with regard to Mr. Herhert's picture he did not wish to make any ohsorvation until he had communioated with that gentleman.
The Now Ofices in Parliament-street. - In reply to Lord Redesdale, in the Lords, the Duke of St. Alhans said, that the bnild ings in Parliament-street, in front of the new public offices, would be taken down hefore the meeting of Parliament next year, and that there was no intention to apply to Parliament for power to purchase property in any of Earl of Carnarvon testified to the importance of geeing after the sites referred to, which he helieved could be had on easy terms, and remarked exorhitant prices for land.

## THE NEW OLD STYLE.

Mr. Editor,-I have from the commeneoment ff the Buidder been a suhscriber and an occasional contributor to its pages; for I have over re garded it as the drama is ropresented by our immortal bard, as holding up the mirror to
nature; so the Builder refleots the passing nature; so the Builder refleots the passing
events and productions of the day in architecevents and productions of the day in architec-
ture. But I mnst own that as, I suppose, it would be the endeavour of the dramatist to avoid whatever is offensive in nature, so the Builder would not record the deformities, which crop ap day by day, hut rather give specimens of the genius of the profession for our admiration and instruction. Now, I must own that I have been taken aback by the illustration in you number last Saturday, August 2, of the hlock of Offices in Leadenhallstreet, and I cannot concive what motive conld have indnced its author, a man of ecknowledged talent, to rake up a type of the very lowest state of corrupt erection in the City of London, of a period that marks the senility of decaying taste. In the bistory of art, it is important to rescue any specimen that marks a plase of any special time. But to reprodnce such a contortion of every feature of architecture amazes me, for doubtless the talented author, in his search for novelty, must surely be aware that such bnildings mark the ahsence of high art (and there may he higb art eren in the humblest dwelling), the absence of the architect, and the ignorant handling of the mere meolanic, the carpenter, the bricklayer, or playterer; and I say this despite the opinion ot asere the the grenins or this chation seems like the last productions. This elevation scias lisene last omersault or gambol of the agio gymuast, who laugh from the spectators at whatever cost of contortion and personal effort. But such a work of the Gold Medallist of the Royal Academy and of the Gold Medalist of the Royal Academy and Silver Medallist of the Institute is a sad spectacle of the abuse of high powers in thate artist and Thos. Leverton Donaldson.

PROPOSED MONUMENT TO THE LATE BISHOP OF WINCHESTER.
Meetings arc being held to carry out a very general dosire to erect a memorial of the late Bishop of Winchester, and various sohemes bave favourite idea of the suggester, sometimes with favourite idea of the suggester, gometimes wath very littlo reference, or appropriateness, to the contemplates the cutting up of the bishop's dioceso into pieces,-an idea agrainst which his relatives naturally prolest. Sir G. G. Scott suggests the restoration or improvement of St. Saviour' Church, in Southwark, -an excellent idea in itself and by itself, bat not a proper channe into which to divert the feeling and tho fund expressiva solely of rogret for the loss of a good
and celehrated man." A third suggests a college and celehrated man.* A third suggests a college
for overworked clergy, and one for mission clergy,-both paluable ideas, and well worthy of consideration for their own sakes, A fonrt sugrests a scheme in connezion with the African slave trade and missionary scholarships, and so

* Wo have receifed a letter from Mr. F. T. Dollman
announcing his intention to publish ilustrations of this church; but as the lettor has already appeared in th
Times, it is quite minecessary for us to print is.
on. All such stray or errant auggestions ought to merge into the one simple idea of a monu ment useless in all respects bat the ono purpose of properly commemorating the deceased.

At the faneral, at Lavington, there came to do honour to hima a vast assemhlage of clergy. men and the general public. Tho Dean of Windsor represented the Queen, and the Hon, C. Wood the Prince of Wales. Scveral of the nobility and members of the Honse of Commons were prosent. After the ceremony a meeting was held in front of Lavington House, the Bishop of Chichester presiding; and it was aureed that at the place where tho bishop met with his accident a monument should be erected to his memory. A committee was appointied for carry ing out this object.
A sepulchral monument in Winchester Cathe. Iral has also been suggested.
The momorial, whatever it he, ought to be of distinctively personal character, and so in. separably associated with his name. A memorial o mark the spot where the Bishop fell has. been dosigned by Mr. Street.

## OPENING OF ST. CHAD'S COLLEGE, DENSTONE

Tirs ceremonial has taken place in the preence of a large namber of members of the Church of Encland in Staffordshire and the neighbouring counties.
The new schools-of the design of which we arve already given some accout-oceapy an elevated site, which was preseuted by Sir Perceval Heywood, bart. Mnch remains to he done to fit the bnildings for the reception of pnpils in October. When completed, the school will afford accommodation for 400 students; but it is intended to endenvour so far to complete the building at an early date as to receive 100 students to commence with. The building is in the Early Decorated atyle of architecture, with high roofs and dormers. The ground plare resembles in form the letter $H$, there being two quadrangles, of which one side is left open, the connecting central building boing the sehool room block. The wings of the western quad, rangle consist of dormitories and class-rooms, while those of the eastern quadrangle will con sist of the chapel and the diuing-hall. In fact the college will closely resemble that alreads existing at Hurstpierpoint, where the sime clase or hoys are educated as it is intencedries-eight in number-will accommodate fifty boys each; the rooms being lofty, well liyhted and ventilated and commodious lavatories \&c. being attached Libraries and a gymnasium for the masters and boys will be placed in the south wing, while residences for the head master and second master cenpy the ends of the north wing, rooms being get apart for the ossistant masters, the chaplain. the provosts, visitors, \&c. The dimensions of the he great selooll the the dining-hall below by means of a wide night of stono stars. At the angles or intersection of the central and wing buildings are two lofty for the supply of the huilding. The whole building is of white Alton stone, with red bands, and the roof is of tiles. A hathing place will he provided on the river Churnet, which flows at
tbe foot of the higb ground on which the college stands.

DAHAGING MASTERS' PROPERTY.
AT the Mansion Honse last week, John Bastin, plumber, was charged with an act of wilful damage. The prisoner was iu the service of Messrs. Hill \& Sons, builders, and was engaged, with other workmen, in repairing the roo of the
church of St. Nicholas Cole Abbey. On Thurs church of St. Nicholas Cole Abbey. On Thurs
day week he was detected in the act of spoiling day week he was detected in the act of spoiling and secreting a large sheet of lead, weighig 60 lb ., about to be used in the repairs, When asked what he was going to do with it, he replied that he was about to get beer with it, as he was auffering grcatly from hat. The value of tholl lead was about 12s, and the prisoner bad spoilt it very much for the pupose for which it wo: intended to be used, by cutting deeply into 1 with a saw. He was earning about 2h, a wee at the time. The Lord Mayor, rfter consulting with Mr. Oke, the chief clerk, siaid he feare there was among some workmen a very losters property. This case was one in point, and he
rged the prisoner, and all whom it might con. ern, to let it be a warning to him for the future. aking all the circumstances into considcration e fined him 50s. for the wilful damage, and 5s., he value of the lead he had spoiled, witb the Iternative of seven days' imprisonment. Before pas liberated
po

## NAME! NAME!!

Sra,-Having named every one concerned with 20 enlargement and restoration of Cheshunt burch but the architect, perhaps the Builder Joservant,
** We print this note, bat take tbe oppo unity to say that we do not consider ourgelves ound to publish the name of the architect of very work alluded to in our pages, or on all casions the names of those who have been oncerned in the execution of it. We have been o considerate in this respect. The fact is we ave given a poptlarity to some of our brotherchitects that they do not in any respect erit, of which good.natured proceeding some w of them, moreover, have shown when oppor. nities occurred bat scant appreciation.

## WISBEACI.

TEE town.ball here was rocently reopened, ter having been pulled down (excopt the front ale and rebui
The building now comprises spacions and Jofty uncil cbanbers, maristrates' and committe oms, police-offices and oclls, lavatories, de., e whole ligbied by gas with sunlight buroers. The works have been carried out by Mr. Jame Fest, of Melton Mowbray, from tho designs ander the superiatendence of the architects, lessrs. Mumford \& Townsend.

RECMASONRY, NATAL, SOUTH AFRICA Sir, - A building is now being erected in the pital city of the colony of Natal for the nses the Manonio Lodye, Prince Alfred, No. 956. ege building is inteuded to be used at onoc as a
age when the circumstances of tho lge will warrant the building of a suitable asonic remple, the former will be converted to purposes of a Masonic school. The designs are building is uow being erected. A notice of is in the columans of the Buitder will greatly tige the Masons in this part of South Africa.

John D. Burnett.

## ASPHALTE AND WOOD PAVEMENT

 Ar the last meeting of the City Commissionors Sewers, a repurt from the streets committee is brought up, recommending that Greshameet, St. Ann's-lane, a part of the Old Bailey, wrence-laire, Bow-lane, and Wood-street, be ved with asptralto by tho Val de Tcavers mpany ; that Old Jewry, Clement's.laue, toh-lane, and Castle-street, Holborn, be paved h asphalte by the Limener Company; and it, having considered tho memorial of theabitunta, they recommend that Houndsditch rabitanta, they recommend that Houndsditch
repaved with either asphalte or wood. They o recommended an extension of tbe wood rement in Great Tower-strcet and at the rance of Seething lane; and that a report pared by the engineer upon the oondition of asphalte pavements be printed for the use of commissioners. A memorial (which was Mr Church, manager of the London Omnibus mpany, and Messrs. Pickford, carriers, against use of asphalte on any of the public roughfares of the City, on account of tbe ger and injuries caused to horses by its periness. Souse discussion took place, in the rsse of wheb it was moved that wood be laid in instead of asphalte, but eventually the - Church stated wbile before tbe commis aers that the number of horses that fell on d paving was so few as not to be worth toing. This is remarkable considering the uplaints nade while wood paving was tried on $t$ few horses buve just now any opportunity either runuing or falling on wood parement.

An experiment is reported in the Aranchester Trarens as having beer tried with $V$ al de roofing asphalte as a fireproof material for of tbe Val experiment was tried at tbe work Ancoats, Manchester, and is said to have been severe, and entirely satisfuctory. Heat softened the asphalte, but it would not burn, and cold water immediately rebardened it, so tbat the flames did not even soften the asphalte where the water was thrown upon it. Representatives of warious insurance companies were present.

## ARCHITECT.CONTRAOTORS

Ar the Northumberland assizes, before Mr. Jastice Brett, and a special jury, the case of Hepple $v$. Greever
turned upon the important question as to the ripht contracoupy architects to commisaion upon the worlis The plaintiff,
commission, at $2 \frac{2}{2}$. per cent., on worles 250 l , as frehitect'e value of 10 , cooh: and Mr. Crompton, who appeared for the plaintiff, contended that the mere faot of his cliont
heing the buider of the works, did not compel him to act as architect nithout being remunerated for his services. would have had to retain the services of another gentleman, and paid him the $2 \frac{1}{2}$ per cent. on the 10, corol.
Mr. C. Russell, Q.C., said the defence works inemselves were tendered for, and exccuted by the foundation for a furtherclaim for archicect there was no The Jury gave a verdiet for the defendant commission.

## CHURCEES OVER RAILWAXS.

Si8, Yonr correspondent, " K ." is in error when he
states that St. Paul's Church, St. Leonard" $s$-on. Sea, is buil over the Hugings tunnol. This is not the cases ; the
chureh is on the north side of the tunnel, of it, as can he seen at any time. By a map of the borouth of Hastings, the figares
rasked thereon, showing the relative levels of places show that there is a considerably greater distance than
100 ft , between the lerel of the rails and the loor line of he charch.
soil on which the church is huilt is anything but "shitity
and had."

## Anotber correspondent writes:-

The church of St. Panl is not huilt npon tha Hastings tunnel, the south wahl of south sisle being nearly 20 it from the north side of the tunnel. There is much vibra-
tion ot times, hat no settlements have ocurred

MARGATE DEAF AND DUMB ASYLUM COMPETITION.

## Sir,- Referring to the complaint hy "A Competitor

 The partientars of thisThe particnars of this competition now hefore me ar to compete, waited on the polite occretary, Mr. Warwich at the oflices in Cannon-strete, and " bothered , him by a
lot of questions such as these:- Will you make the fol-
lowing or any similar conditions, viz, 1. Uniformity in the scale of drawings,
2. Exclusion of colour.
3. Exclusion of gold frames and plate-glass.

1. None or only two or three perspectives.

But $I$ found that no promises on any of these Would he made. Tho secrevises on any of these points one name of an architect, and as $I$ knew bo was rery
iutimate with a leading member of the committee and his iutimate with a lesding mernber of the committee and his
family, and Mr. Warwiek expressed a hope that the
number of design. number of designs sent in woupld be pery ampall, I Aet my.
self to work to find out aill I conld ahout the chances of the nemed architect, snd from all I l lcarned chances of conclasion that I should not druzo the prize. Irat. Drewe has friends, as well as talont, and this is nos his first competitive success; for do not the oolumns of the Builher of hat date annonnce by an advertisement that on the 21 st
of Feb, 187, tro fears ago, he won a competition for or reol, at Margate (since built), in a coropetition for a
sidenc, a coin-
cidence, his own cousin, or hig cousin' judge, I am glad that in the "A sylum". matier I have
not the right to subscribe myself oot the right to subscribe myself,

Another Comperitor,
$\mathrm{Sin}_{\text {, }}$ - My attention haring heen called to a letter in your inshe of the 2 nd instant from "A Competiter," I
heg to state that Mr. Drow ${ }^{\text {" }}$," of the firm of Drewe \& Bower, of Margate, is in no way related to the treasurer
of this asylum, Mr. Beriah Drew (the nemes are apelt dilferently); and that the same remark applies to Mr .
Watson, the second successful competitor, who
 A sub-co mmitteo devoted nearly a fortnight to examining difference of opinion; hut in the interest of "perfect impartiality "it was dccided not to present the pame to the geaeral committoo nntil the opinion of some emoinent Mr. Thomas ITenry Wyatt was hevited to examine all the plans. Mr. Wyatt presented a report which enabled the sub-committee (withont giving any further consideration awarded. I will only add that it wea not till the generat committee had moat carefully coneidered the two reports that the sealed envelopes contsining the mottoes of the accessful competitors were opened, and their names ascerfeel that the competition was conducted in the most honourable masner, and that (to use your correspondent's own words) the designs of the gentlemen referred to "were eservedly selected as the hest.
*ect is rendered unnecessary hy this very satisfactory

MOVING BUILDINGS.
Sre,-In your remarks in reference to moving huildings America, you mention my proposition to raise and to say that $\mathbf{I}$ am an Ense as by and American. I beg
London ; hut resided in America for some in Lamherg, where $I$ had the sdvautage of learning how to raise and move
huildings on to new foundations. Henby P. Pitcera,

FIREPROOF WOODEN HOUSES.
soda, comanan or infect wood with fixed salt, sulphate of sork wirhaon a shim, green vitriol. Coat alt the woodcost as thick as possible. Popiar will not burn."- Tines, $\mathrm{Sir},-\mathrm{May}$ I renture to draw attention to the above
extract, and to ask some of your correapondent to tell me if the facts therein stated are true ; or where $I$ could of wood, if tolerably fireproof, would, in the dearnesses brick be a great hoon to working men. I have hought a
bit of laud close to leeds, and purpose erention omall house of wood for myself. As erecting at once a dice againat them will be great at first, I am the prejuvery auxions to ohthin information on the point.
N.B. Is it true that popiar will not burn?

THE PALESTINE EXPLORATION FUND.
Tife Quarterly statement of this Fund, dated July, 1873, has been published at the Sooiety's Office, 9, Pali.mall East, and by Bentley, of Burington-street, The statement is an inte resting one. Besides the reports of Lieutenant Conder and Mr. O. F. Tyrrwhitt Drake, it con tains an account of the proceedinge of the New Amerioan Society, and Notes on an Interrapted French surrey, on our Lord's Tomb ont Hamath Inscriptions, on the "Second City" and the "Middle City," and on tbe mewly-fonnd Samaritan Stone; besides the Report of the Annual Meeting, and Lists of Subscriptions, Leetures, \&c.
At tbe time Lieutenant Conder wrote his "The talk
The talk of Jernsalem, and of the travellers then
crowding in and around it, was the great 8 huyirs collec tion, sinoo olast I wrote on this subject (he srys) many
important ereats hove occurred. The collection has important oreats have occurred. The collection has duli's, and the German surans have diente and incre-
 commo in Palestine ranking it with clumg Yorgeries on
Bnd with the Hamie Stone Snd with the Hamath Inserrptions. The expedition of Pastor Weser resulted in a great meeting of the $O$ rien tal
Society, iho eleated dim a member. The famoun names
of Hitzie and Redicer of Hitzig and Rediger are now. arrayed with that of Schlottmas in defence of the genaineness of the pottery.
Mr. Shapira bas received the oflicial position ir. Shapira bas rcceived the ollicial position of en agent
 rioe, I believe, of over $1,000 e^{\prime \prime}$
Mr. Shapira has sinve been able to lay the foundation of a secoud collection, containing already over 250 picces, of a cbaracter, if possible, more curious than those formerly found, and daily almost growing in numhers
Tbe note on the newly-discovered Samaritan "In Gaza there Pritcbett, who says:-
for eight years in charge of the toleargianmen resident for erght years in charge of the telegraph atation. One
of them, my friend Mr. Niman, received me bs usnal Into his house, and rery hospitnbly entertained Mr Hamilton also. Another, Mr. Pielkard, prodnced the
atone which yon mention, and Mr. Hamilton forwarded a stone which yon mention, and Mr. Hamilton forwarded a
aqueze of it to England. The stone had been accidentally found by men who were digring old foundations ont of the sand for building materiale, and Mr. Mickard
broufht it from thence. There can he lithr, brought it from thence. There can he lithlo doubt of
obtaing more if proper measurea are taken, throum Mr. Hamitor, if proper measurea are taken, through
and the people. The stone, who now knows the place
Picefully preserved hy Mir Pickard."

Tbis is at present the only information given except the squeeze itself, of the stone, forwarded to the Society by Mr. Danbar Heath, to whom Mr Hamition sent il. The iuscription is a passare from Deut. iv. 29-31. It has heen suggested that tbe stone belonged to a Samaritan synagogne at Gaza.

THE AESHETIC WANT OF_WATER IN EDINBURGE.
Sir,-It is passing strange to note the far from soher sanitary efforts that are now made in Edinburgh for removing instead of improving the conveniences so much required near every crowded thoroughfare. The public are compelled by atern necessity to resort to the houses or shops of the much-abused spirit-dealers and publicans, where licensed sanitary arrangements are too often defective. Gardy loo! from the French gardez l'eau!-"Save yourselves from toe water! -was of old an Edinburgh cry, wben all the sanitary arrangements of Anld Reekje were above board. Sarely, now, witb modern refined sanitary appliances, it is requisite for common deoency tbat the Sanitary Amendment

Act of July 31st, 1868, should at once be exteuded to Scotland. Water enough might thus gladden our eyes, by giving a fresh oharm to "gardens, fountains, palaces." Meantimo the enormous waste of water by lenky pipes, defective apparatus, and otherwiso, renders the costly abortive position of the Ross fountains upoz the buried North Loch an absurdity. Just fancy the uude naiads sitting on their nnsavory stagnant basins, and think of the old waruing, nasty water.cry of this city," "Gardy loo!"
recalling to mind the words of the poet Prior:-
"I know we must both fortunes try
And bear our evilis, wet or dry."
However, citizens and visitors alike demand in these days that some effort should be made during this holidny season to cover with a geverous spray of water tho graceful naiads, whose nude forms might then be gazed on with pleasure, when seen through the water rescued from ntter waste to sparkle in the sun. It has heen proposed to remove this unappreciated Edinburgh fonntain to the meadows, the site of the Sonth or Borough Loch, where any such artificial water display would be as much out of place over the buried Sonth Looh as at present it is over the North Loch, amidst grass and foliage. It is in the dry and dusty streets, and the excessively over-architectural dreary squares, circuses, and crescents of Edinburgh, that the lively, living, leaping spray of clear fountainwater is wanted. How much would such reju venate some of the open breathing. spaces in the older parts of the venerable dirty town now undergoing transformation. Why not a Scot Fountain in Chambers-strect?* And by way of wakening up the Knos Memorial Committee, I would hainbly suggest that the great imagebreaker should have an ever-flowing fountain reared to his memory near St Giles's Kirk.

## WORKMEN'S TRAINS.

Sur,-Much loss and ineonvenience is felt hy workmen engaged in the City, through the discontinuance of the carly trains on the District Railway. The times thoy run now may suit tradesmen and costermongers going to market, but to workmen (more espceially those in the building trade), they are of no service. Perhaps it may trade), they are of no service. Pernaps it may be necessary to inform the directors that we are
still old-fashioned enough to comraence work at six o'clock in the morning. To do so many of six oclock in the morning. To do so many of
us have to walk an hour, some an hour and a balf, to reach our employment, a task snflicient balf, to reach our employment, a task safficient
to take the "steam " out of any man before com. to take tne "steam" out of any man before com.
mencing his day's work; iudeed, many, rather mencing his day's work; iudeed, many, rather
than do it, submit to the loss of balf an bour than do it, submit to the loss of half an hour
every morning, and travel by the train that every morning, and travel by the train that
arrives at the Mansion House about 6.30 , thereby arrives at the mansion House about 6.30 , thereby
running the risk of being discharged. This is running the risk of being discharged. This is
not as it should be, because the constraction of not as it should be, because the constraction of
this railway has displaced many of our homes, this railway has displaced many of our homes,
making it more difficalt than ever to obtain making it more difficalt than ever to obtain company ought to carry us over the "gap" they
have thus created.
Geo. WYetr.

## PROFESSIONAL INQUIRIES.

S1R,-Your correspondent "A." (page 590) asks "if there is anything unreasomable, or out of the usual course of the profession, in an architect providing bills of quantities for certain works, and notifying the surveyor's fee at the end of the said bill."
Now, the contract system having rendered it necessary for quantities to be furnished to builders, a considerable number of architects, more especially in the provinces, have adopted the practice now in question, and, where there great risk of evil has resulted from it. There are however, obviously, openings for irregularities in the bands of dishonest and incompetent persons; and therefore the schedule of rules for published by the Institnte, and confirmed by the puasished by the fustitnte, and confirmed by the this clause :-
"When an rrchitect sapplies builders with quantities On Which to form tenderp for executing his desings, he
should do to with the concurrence of bis employer; and it ghoula do wo with the concurrence of bis employer, and it
is da esiable, when practichle, that the arehitect should
be paid hy him rather than by the huilder, the eost ol such labour.
6 per cent.:
*The birthplace of Scott was in Collego-myad, now Chamberu-street.

In my humble judgment, this clause fails to hit what it is aimed at; for the question of prime importance is not whether the builder should hand over to the architect or to some other person a definite amonnt which he must whether the builder, with the concurrence of the emploger or the employer himself, sbould pay the prchitect; but whether the architect pay the archlech; should turnish qua is under conditions which leave a possibial or disputes between himself nud the ber, employer. Ho wer, the the the of respectable archledr wo have fowed the system, though not large enough to give it sanc.
tion in the face of such an expression of opinion tion in the face of such an expression of opinion as that of the Institute, has been too large for one to say that it is "unreasonable or ont of the
usaal course,"- the usual course, that is, of those usaal course,"-the usual course, that is, of tios.
architects who are able to take out quantities.
architects who are able to take out quantities.
He asks also, " Provided the bnilder requires a second set of drawings and specification, is the architect justified in making an extra charge for the same?" Ie is clearly entitled to make a fair charge if he supplies them, and it is so much better that he should do so than that the builder should have to make his own set that this ought to be loft in the discretion of the
architect. architect.
B.

## ASPHALTE ROADWAYS.

Sir,-On Tuesday morning about noon, say $12 \mathrm{~h} .15 \mathrm{~m}, \mathrm{p} . \mathrm{m}$. I lay four horses prostrate in Fenchurch. street; all belonged to separate vehicles of the wagon class, and they lay within tho space covered by about twenty houses. The first fall
collision.
As usual, a slight drizzling rain came, and the roadway was immediately covered with a thick unctuous, glutinous mud, far worse than ice for iron-shod horses.
A. II.

SIR JOSEPII WHITWORTH'S PRIZES FOR THRIFT ESSAYS.
Our readers know that Sir Joseph Whit worth has offered prizes of the value of 100l., to be awarded by the Society of Arts, for the best essays on the "Advantages that would be likely to arise if railway companies and limited companies generally were each to esta. blish a sarings-bank for the working classes in their employ." With this offer Sir Joseph Witwort makes the following remark:-"I third of the period of man's existence should, if third of the period of $\mathrm{man}^{\prime}$ s existence shonld, if
possible, be spent free from the necessity of possible, be epent free from the necesslify or therefore, the time when man's energies should be put forth, and the greatest amount of wor should be done that strict obedience to tho laws of health will permit. The experience of in. dustrions men goes to prove that the most pleasurable existence is insured by following this course. It is, thereforo, wrong, in every sense, for the Amalgamated Engineers and other trade-unions to combine and endeavour to compe young and middle-aged men, in the prime of life, to limit and reduce their hours of labour to the extent now being attempted, and thus prevent them from saviug so much, and laying it by for that period of life when man's energies begia to is necessary ence. May not the case between the industrious working man who saves part of his earuinge, and the man who is reckless and will not save That of his earnings, be fairly stated thus? health and strength, robs the mau who does save, becanse the law compels bim to support those who have not eaved, and to bury them when dead." There will be two prizes, 70l. for the best, and 30l. for the second best essays. The essays must be sent to the House of the he iety Arts, Adelphi, Tondon addressed to the Secretary, on or before December 1st, 1873.

Kent County Asylum, Chartham, near Canterbury.-Tenders have been received for the above bulling from a num and contractors invited by the architects, and that or Mr. Furniss, of Victoria.chambers, Westminster, for the first portion of the work, is accepted, the
amount being 98,5002 . The architects are amount being 98,
Messrs. John Giles \& Gough, of Craven-street,
Strand.

## CHORCI-BUILDING NEWS.

Woodmancote. -The parish charch of this and Pind vilage, situate been recently re. opened consisted of three styles of architecture, but the restored charch bas been adapted to one style, namely, Early English. The present rector having determined upon restoring and improving the church, set to work in 1869 , and called to his aid the services of Mr . H. Woodyer, architect, of Graffham, Gnildford, whose plans, after receiving the pproval of the Bishop of Chiches. the the Diocesan Associa. tion, were accepted by the parishioners. The rork bes been carried on with virour. The addition from time to dime to bee hade from time to to the rem (ilh lil a boed a (with mathe at an aken screen pul $n$; an old gallery removed and the old high-backed pews bave been replaced by modern benches, the seats in wbich are fret and nappropriated. but the light, especially ir decorate the interior, but the light, especially ir the chancel, is bad, owing to several large tree at the north-oast end stretching out their
branches till they rest against the windows. Thi branches might be lopped or thinned.

Abingdon.-St. Helen's Church has been re opened, after baving undergone a restoration. The alterations and improvements which hare heor carried out at the church are considerablo, ant the edifice, previously to the work being com menced, was in a dilapidated and dangerons con dition. The chancel bas been rebuil, at th expense of Archdeacon Pott and his family. A1 east window bas been inserted, and will ulti mately be fitted with stained glass. The ol reredos has been removed to another portion o the churcli, where it has been placod to th memory of two brothers, namely, G. A. Gibb and S. V. Gibbs. Costiy hangings have take the place of the reredos, and the altar is vestec The chancel, which is paved with encausti tiles, is divided from the nave of the charch b an oak rood-screen, in the centre of which is large carved cross of the same material, all nem and the side aisles are also separated from th obancel by decorated screens, composed of on and stone. Temporary seats now occupy th place in the choir which it is intended to fit u with benches. The roofs in the chancel and entre aisle are new, and are lofty; the forme as received embelishinents, in the shape arving, shields, \&c. The piscina and sedilia an a keeping with the rest of the work, the whol f which has been carried out with a regard $t$ he style of the architecture of the church. TV oofs of the sido aisles, which are lat, are eithe ew or have been improved. There being r clearstory windows in the chancel, the woo vork of the roof has been extended on each sid fif the walls, so as to form arches. Eventuall he rood-screen, which separates the east en from the body of the chureb, will have a galler rected over it, with pierced parapet of ope racery work, with five niches in which will placed figures. The west wall of the chare has been rebnilt, and a new window placed the memory of the Hyde family, the expens bcing defrayed by the late Mr. Johu Hyde, Caldecot Honse. The sapporting columr throughout the edifice have had fresh bases pu to them, besides being othorwiso improved. Th fout is of white marble, mounted upon Forest Dean stone steps in the form of a cross; it wh esecuted by Peyman, and was on niew first Exmibition. The old onk pulpit has ja atilised and placed upon a stono basis yulloe the chancel. The seats are all fow how deal stained and varnished, and of mod shape. The church will be ligbted by tro the roofs, which have beco suad are no adapted for gas. In the chancel will be place two standards, one on each side of the altar, burn gas. The other improvements are numerous for detail. The restoration has oce pied about two years. The total cost of between 5,000l and 6,000l. have been collecte The architect employed was Mr. W. Woodyer, Graffham, near Gnildford, whose designs hai Grainam, near Guid Mr. Williams, of Abingdo buildor Mr G. Redfern acted as cterk of $t$ works. The Corving was executed by Mess Nicholls \& Lavegrove.

Shalk.foot It is Shalk.foot. It is roofed with Westmorland en slate from Mr. Postlethwaite's quarries,
1 shows extemally as one continuous roof A shows extemally as one continuous roof, Ch a small belfiy at the north side of tho west i, and a gabled vestry on the south side. On
north side it is intended to build a porch, for ich funds are now being collected. The now joints and arches are all of dressed nc , and the roof is open-timbered. The nave seated with a simplo form of opon seats of nished pine; but the fittings of the chancel of wainscot, the sedilia heing, as the brassDalston. The floor is tiled. An archod recess - been provided for the organ, for which the
ney has already heen raised. The chureh been carricd out from the design of Messrs y \& Ferguson, of Carlisle, architects, at a $t$ of about 800l. ; the mason work heing dono Mr. Wilson, of Gaitsgill; and the c
joinery by Mr. Pearson, of Wigton. Preemantle.- - At a reoent meeting of a com Freemantle Church, crection of a new spire ted that he bad heen unable to Mr. Bumpey quantities roady, adding that it was bis rion it was too late in the year to begin the *, it heing so near the time when tho onsued inkely to be unsettled. A discusmes said it would telke three months to comney said it would take three months to com-
te the work, even if they had favonrable te the work, even if they had favonrable
ather. Mr. Ingram ingnired if it could not done in two mouths, to which Mr. Bunney lied that it was inpossible, in his opinion, as oust have time to sct. It would oost more
ney to hogin it now, and, so far as he was cernod, he shonld require 50l. more to comnce now than if it was hegan in the spring ch disappointment was expressed at this rult, Mr. Bassett saying that they might have crtised for tenders in uext Saturcay's papers he hills of quantities had been ready, and Mr. Scott, the architect, as to tho advisahility ommencing the erection now, and be guided his reply. This was agroed to. loxby. - The church of St. Mary, at this ce, has for a long time needed considerable toration. The east window is damaged, and figured by being cut through with the ceil-
of the chancel. At the request of Mr, of the chancel. At the request of Mr. V. ed the principal inhabitants to meet and fido what should he done. Plans, prepared Mr. Fowler, of Louth, were examined, and it s agreed that, with some few alterations, $y$ should be adopted. The lord of the manor vicar, and the churchwarden, were appointed ommittee to receive subscriptions, and carry
out the restoration. The estimated cost 1,300l., and 1,075l. Wero promised at the meeting , of which the lord of the manor gives 500 l ., tho vicar, 200L., and Mrs. Cary Elwes, 1002 . Considerable altcrations and improvements have
been lately made in this villare, and geveral been lately made in this village, and geveral pairs of new coltages which give better accom. modation to labouring raen, have been erected. Cromwell.- The parish church, after having
beon closed for some months for restoration hat heen reopened. Both nave and chancel have been restored internally. The chancel appears almost as if it had heen rebuilt. In removing door a portion of the sonth wall gave way, and exposed to view two arches helonging to a ancient chancel aisle, which the rector decided on rebuilding, and this has heen carried out The chancel roof and east wiudow are new, 一tho new roof heing an open one of pitch pine, and the east window a large one of a Flamhoyant character, there heing one of that sort already in the chane 1 ; and as no old tracery of the former east window existed, it was decided hy the architect to fill the old head with tracery of that description. The floor of the chancel bas been considerably raised, and laid with encaustio tiles from the manufactory of Mr. Godwin, of Hereford. The architect for the whole was Mr. H. Parr, of Muskham; and the huildor, Mr. H. Clipsham, of Norwell.
Welland. - The roundation-stone of a new church has been laid at Welland. The walls of the new building are up to a height of 10 ft , at the east end, and 2 ft . at the west end. The Work is expected to he completed in the course of next summer; the total cost will probably he between $3,500 \mathrm{l}$, and $4,000 \mathrm{l}$. The huilding will seat nearly 400. It is being ereotod as near the centre of the parish as possible, namely, at the junction of the roads leading from Worcester to Gloucester, and from Ledbury to Upton. The site, the extent of which is ahout half an acro, was presented by Mr. Watkins, of Woodside Farm. The architeet is Mr. John West Hugall, of Oxford; and the builders are Messrs. Wall \& Hook, of Brinscombe, near Stroud; the foreman, Mr. Day. $\qquad$
DISSENTING CHURCH-BUILDING NEWS. Middlesbrough -The foundation-stone of a new Welsh Congregational Chnrch has heen laid upon the site in MarLon-road, Middiesbrough, by Mr. Joseph Dodds, M.P. for Stockton, in the presence of a large number of spectators. The half of which sum bas heen raised. The chapel will he of tho Corinthian order, and will seat 500 persons. There will be a school.room underneath for 300 children
Hentey.-The foundation-stone of the new Wesleyan Chapel, in Duko-street, in this town, has been laid. Mesbrs. Cattermole \& Eade, of Ipswich, are the architects. The huilding, which is comamenced, is in the Gothic style of architecture, and will be capable of seating about 160 persons, and also give accommodation for a vestry-room, provision being made for its future cnlargenent if required, and spaco reserved for the erection of suitable schools.
Norton.-Tho corner-stones (four) have been laid of a new Free Methodist Chapel and School at Norton, the former of which is intended to
seat 300 persons, and the latter to accommodat 300 cat 300 persons, and the latter to accommodate 300 children. The new huilding is expocted to cost 800 t . to 850 . The contract has been taken by Mr. Ward, of Middlesbrough, Mr. Frazer joiner work.
Guilden Sutton (Cheshire). - A Primitize Methodist Chapel has been opened at Gnilden Sutton. The chapel occumies an elevated position, directly in front of the road leading to Chester, the land having been given hy Mr. P Smith. The buildiag is of hriok, with blue and white hands and stone dressings. The cntrance is by means of a porch at the side, and the front to the road is that of a gable, with two two-light windows in the lower portion, divided by hut resses, and a circular one above. On the one side there are tbree two-light windows, and on the other side two; the windowhaving heen glazed quatrefed glass, except the circular window an unatrefoils, which are tinted. The bareness of running over the pointed window.heads and round the huilding, and there is an ormamenta] ood cornioe at the caves conrse. For the wood. urk thronghout, pitch pine, hnrnished, has been used; the seats heing open with sloping backs,
and in front, at the carved desk for the minister,
is open arcading. The chapel will accommodate about 120 , and, with the addition of the vestry, which can he utilised hy opening the folding. doors which separate it from the chapel proper, the accommodation can be increased to 150. The total cost will be prohably 450 l . Mr. Rawlinson was the architect; Mr. Vernon, the builder; Mr. J. Duckers, the stonemason; and Mr. R. Jones, the joiner.

SCHOOL-BUILUING NEWS.
Darlington.-The Skinnergate schools, Darlington, havo heen roopeued. These schools, which were established about fifty years ago, and have heen carried on in oonnexion with the British and Forcign Sohool Society, have lately been transferred to the local sehool hoard, who have improved them. An additional entrance has been made from Powlett-street, and two large playgrounds have been added, covering together 1,300 square yards. These grounds lave been fitted up with sheds and other conve. nicnces for the children. The work has heen carried out under the superintendence of Mr . Robinson, architect, at a cost of 3061 . Of this sum, however, only 1876 , have heon incurred hy he School Board, the recreation-sheds in tho playgrounds heing the gift of Mr. H. Pease and Ir. Grieveson, the boundary wall heing erected by Mr. Arthur Pease. The schools aro for boys and infauts.
Heaton.-The new Baptist schools, Heaton, have heen opened. The building is a plain ructure of one story. It has heen ercoted on ist cher ground in close proximity to the Baplacel and cemotery, Paradise-street, and ppro some distance lack from the roa, pain shed by two tights of stone st 35 ft., and is divided by a low partition into boys' and girls' divisions. This room has also a platform at one end, and is made suitable for holding betures, meetings, \&o., heing capahle of accommodating 400 or 500 . In the front of the large 15 ft . hy 11 ft ., and an in fants room, 22 ft by 15 ft . Thero aro also snperintendent's rooms and lavatory in the rear. The walls of the class-rooms aro wainscotod to a height of 4 ft . Cuderneath the school-room is a cottage for the school-keeper. The whole of the rooms aro warmed by a hot-air apparatus. The total cost of the school, including the ground, will be about 1,383l. 10 s .

## STAINED GLASS.

All Saints', Pocklington.- A stained-glass win. dow, executed hy Mr. J. W. Knowles, of Yerk, has boen insorted in the south side of this church, as a memorial of the late Rev. F. J. Gruggen, M.A., head master of the Graromar Sohool in this town. The window oonsists of two lights, in oach of which is a single figure standing under a canopy of the Docorated style of architeoture. In the dexter light is a ropre. sentation of Moses, with the tahlos of the law in his hand, in the attitude of teaching; and in the sinister light is " Aaron, robed in the garment of the high priest, and holding a thurible in his hands, as in the act of intercession." The cost, including the stone work, is about 102. , the greater portion of which has heen promisod.

PATENTS CONNECTED WITH BULLDING. Syore in Free-Grates.-T. Blocksage. Datcd 18th November, 1872 .-This invention relates consists in or domestio fire-grates or stoves, and tors, pro.erahly formed of fire-0lay which rest upon the grate and conduct air into the midet of the hrrning fuel.
Manufactlere of Parquetry.-S. TV. Worszam. Dated 18th Novemher, 1872. -For the purpose of edging and grooving tho separate parts, the inventor comhines on one machine two rotary cutters, one for grooving, the other for edging, wherehy the operations of grooving and edging ree efeoted at one traverse of the wood. $\mathrm{O}_{\mathrm{r}}$, if desired, a single cutter-blook, with suitable cutters may be employed for effecting the combined
eperations of grooving and edging, or of tongning eperations of grooving and edging, or of tongning and edging, in which case he employs a douhle set of tahles and guides, so that two operatives
may work at the same time at one machine. For may work at the same time at one machine. For fises it to a revolving disc fixed to an ani
carried by a poppet-head. In front of this diso ho fixes a cutter for aoting ppon the face of the wood.

Roors, \&c.-J. Riley. Dated 19th November, 1872.-In oonstructing roofs and otleer parts of buildinge of corragated netal the inventor fixes upon the framework of the roof or other part to be covered aeries of rows of hooks, and upon the anderside of the corrugated metal and spanming the corragations a band or bands of metal, which When the metal is laid acts as "eyes" to the aforesaid hooks, thereby securing the metal to the framework. Where the upper edge of each snccessice layer of metal overlaps the next upper serial row of hooks rectangular portions are cnt from the said layer exposing the hooks and allowing the bands, spanuing the under part of the next layer to engage with the hooks so exposed. When the roof is covered the metal is made fast at tho outer edges by screws as described in the specification,

The Trustees' Guide. London: Edward Stanford
TIIE second edition of "Cracroft's Trustees' Guide," jnst now published, contains a large amount of condensed aud carefully digested facts, and will be found of great assistance by trastees and others desiring investments, It
includes particulara of more than a thousand includes $p$
securities,

A Hundy-Book on the Ecclesiastical Dilapidations Act, 1871 . By Edward G. Breton, Diocesan Surveyor. 2nd edit. Rivingtons, London. 1873.

In the first edition of Mr. Bruton's book the Aot was set forth in spirit, but not literally. In the second, just now published, the author has wisely given the Act verbatim, together with a copiou Angust, 1872. Forms for working the Act are also printed, and make the little volume addition ally useful to all interested in the matter dealt witb,

## VARIOROM.

Some particulars of the newlaboratories of the Natural History Museum, Paris, are published, with an illustration, in Nature (for July 17th) William Gilbert has given, in the Penple's Moyga. zine, a very interesting and instructive accolut of Christian Shaw, who did so much to facili tate the manufacture of thread in Paisley, and so to lead to the aetting up of looms in that town and other parts of Scotland. The total alone exceeds 120,000 .-British Battles on Jand and Sea, by Jas. Grant; The Races of Aramanda, by Robert Brown, M. A. ; The Bibl Eaucator, edital by the Rev. E. H. Plumtre; seriala which continue to reach us from Messrs Cassell \& Co., and are a!l nseful publications. Cassell \& Co,, and are all nseful publications, simple story, called "Gretchen," delightfully told hy Mir. Erckmann. Chatrian.-Cassell's Househota Guide shows how to remove stains caused by scorching:-" For whitening scorched linen, it is orten sufficient to wet it with soap sads and lay it in the hot sun. Another method is, where milk is plentiful, to put 1 lb . of white
soap into a gallon of milk, and hoil the scorched article in it. Another plan is, to squeeze out the juice of two middle-sized onions, which is boiled in half a pint of vinegar, with 1 oz, of white soap and 2 oz, of fuller's earth: the misture is applied cool to the scorched part and, when dry, washed of with clean water." -.The Art Joumal for August inclndes an illnstrated paper on Ancient Stone Crosses. The writer says:-"There were probahly not fewer than 5,000 crosses in England, of the kinds already indjeated, at the time of the Reformation; and though they may admit of some such classifica. tion as that now attempted, they must have been erected for many other ohjects and on many other occasions than have beon enumerated. There were aome crosses, for example, that were supposed to have pecaliar claims on certain classes; like one at King's Weston, in Gloncestershire, most beautifully situated on the Severn, at which sailors paid their devotions after a voyage. This cross was celebrated far and wide, and a judicious hole was cnt in the
stone to receive contributions of those who had profited by it, or hoped to do so. Indeed, I am indebted to Canon Lysons, of Gloucester, for furniahing me with the following extracts, which show how universal, even at an early period, the use of the cross was:- Tertullian (de corona milis), writing A.D. 199, or 120 years before he conversion or Constantine, to which period hest writers have been in tho habit of tracing the use of tha cross, writes,-"At every com mencement of business, whenever we go in or come out of any place, when wo dress for a journey, when we go into a bath, when we go to meat, when lights are hrought in, when we lie down or sit down, and whatever husi ness we bave, we make on our foreheads the sign of the cross." And Cbrysostom, in 350 , says, -"In the private house, in the public market-place, in the desert, on the highway, on mountains, in furesta, on hills, on the sea, in ships, on islands,"' \&c. This last quota tion is extremely suggestive of the great variety of places where we find them."- The Garden takes up an old theme of ours, trees in the London streets, and says:-' What a noble effect might be created hetween the Marble Arch and Notting Hill.gate by an avenue of trees. They should not bo allowed to form a monotonous row, all of the same kind, elms, or horse chestnats, or Oriental plaues, as has been hitherto the too common custom, but should onsist of various kinds of suitable free.growing rees, among which many of the nobler treeorms of the American forests (many of them with magnificent pinnate foliage) might be selected, as several of them flourish freely in the London atmosphere. Of course, the horsechestnut, the elm, the spreadiug poplars, the riental plane, and even tho (hough ita oliage fades so early in London), should non them bo negleoted; but there are grand merican trees, too littlo Lnown in our Englis plantations, as well as trees of other elimatos, which wonld in all probability succeed admirmight easily he replaced by other novelties; the kinds to select from being, instead of restricte in number, as some might suppose, so extremely numerona as to form a positive embarras de richesse. Tho charm of merely single trees, i ome of the blackest and narrowest of the City thoronghfares, is felt at once in early snmme o be a soft and beautiful relief to the oye, the impression of the softening beauty being astinctively felt, even by auch as are uncon cions of the sonrce of the pleasant influenco which is cheering them on their way.'

## 解iscellamea.

Casting Metals.-Mcssrs. W. Wilkinson \& G. E. Taylor, of Birmingham, have patcnted some improvements in machinery orapparatus fo casting motals. The invention consists of ma chinery or apparatus to be nsed for casting long or continuons ingots, hars, or strips of metal, to be afterwards rolled into plates or drawn into rods or wires, The said machinery or apparatus consists essentially of a nearly vertical travelling or endless mould, composed of two series of end. less hauds of jointed plates supported by and working over drums or pulleys. The plates of one series are of a trough form, open at both ends, and the plates of the other series are flat. The said two series of endlcss bands of jointed plates are so arranged with respect to each other that, in their desceuding motion, they are brought together and constitute an endless mould, and in their asceuding motion they are separated from one another. The flat plates are pressed into close contact with the trongh. shaped plates by springs. The two series of plates are geared together and worked hy racks and pinions. In nsing the machinery a temporary hottom is fixed in one of the trough-shaped plates, and motion heing given to the endless bands of jointed plates, molten metal is ponred into the apparatus through a funnel fised at the highest point of the machine. The ingot or bar formed by the solidification of the metal passes ont at the bottom of the machine, the temporary
hottom of the mould passing out in front of the ingot or bar.
Holyhead Haxbour and Worlss. - The Prince of Wales has fixed Tuesday, the 19th of August, as the day npon which his Royal High Hols formally declare the public works a Holyhead Harbonr completed,

Postage of Newspapers.-Some nseful i formation and valuable hints respecting th postage of newspapers for transmission abroa 3 given in the Postmaster. General's report ju ssued. It seems that last year nearly 600,00 ewspapers, posted for abroad, had to be stoppe of fostage. Manf persons appear to think the of postage. Many persons appear to think the a penny, or even a halfpenny stamp, will carr ncwspaper of any weight to any place wha over, whereas, as the Postmaster. General point ut, no newapaper can be sent abroad for laifponny; and it is only to certain countrie and by certain routes, and when the weigl does not exceed a quarter of a pound, that eve peuny will auffice; whilc, as a rule, unless th all postage is prepaid, the newspaper cannot forwarded at all. As the post.office has gen rally no means of ascertaining who are th senders of newspapers insufficient'y paid, copi re necessarily destroyed, and thus not only tl newspaper bnt also the sum paid upon it acrificed. It cannot, says the report, be th strongly impressed upon persons sending new papers to their frieuds in the colonies, and oth places abroad, that the halfpenny rate is app cable to inland newspapers only; that on new papers going abroad the lowest rate is on penny, and that when the weight of any suc ewspaper exceeds four ounces, the lowest ra a twopence. The neglect of another rule,-一vis hat fixing eight days from the date of pnblic ion as the limit within which a newspaper mu e posted for foreign transwission,-also leads the loss of a large numher of newspapers, sne number last year having been more the ,000.

Bucks Archæological Society.-This 8 , which is in a very Hourishing conditio nd has for its patrons neary all the leadn nen in the county, has tiken its annmal arct iaconal trip. The Prolocutor of the Low House (Archdeacon Bickersteth) acted as cic one. The cortege was not very numerons, nore than half a dozen carriages, at the outsid mor brought into reqnisition. Niar Still, t expedition was aprinks, the day being fine, at some of the churches being models of antiqui The first halt was called at Dunton Churoh, $t$ whole party alighting, and jnspecting all t objects of interest. The party then proceed to Stewkley. The vicar seemed to think enlargement was absolutely necessary. I enlargement was absolutely necessary. rcrested a chapel of ease, but the vicar thoul So rishion wally take kindly the parishoners would hardy take kindly heir proposed domjcile. From sulbury and from So , bur lo , hospitahle entertainer, the party went to 1 combe Church, and then proceeded to Linsla
school-room, where the meeting proper may school-room, where the meeting proper may said to have taken place. There was, howevi very little speaking. Dr. Lawford exhihited number of interesting local relics of the Rom ocenpation. After re.electing the vice.pre dents, among whom are Mr. Disraeli, the Da of Buckingham, Sir Harry Verney, Mr Du Pre, \&c., and appointing a treasurer a
secretary, the party returned to Aylesbury secretary, the party returned to Aylesbury
way of Wing, having spent an enjoyahle day.
The Improved Industrial Dwellinf Company. -The twentieth half.yearly meeti of the members of this company has been held the Mansion Honse, Lord Mayor Waterlow, W, is also the chairman of the directorate, presidit There was only a small attendance.
for the last half-year was read. directors recommended the payment of the ast dividend of 5 per cent. per annum, fres income.tax, which wonld ahsorb $3,37 \pi$. $178 .$, a leave a halance of 2,9392. 12s. 3d. Contrad had been entered into for the erection of sevent five dwellings on the sites in Commercial-roa Whitechapel, and where works were then in pt gress. VOL. XXXI.-No. 1503.

The
Welsh Cathectrals.*
LIVAYS has the Britisl, or Celtic, Chareh prided itself mpon its priority to the Romish Charch St. Poter carried th Christian religion to Rome in the second year of tho roigu of Clandius, while Britain, it is always asserted, was in possession of the new faith while the Emperor Tiberins was living, some five years before the apostlovisited the city of the Cæsars. Gildas is the great authority quoted in support of this tradition. He says,-" We know that in the latter end of Tibcrius Crosar's reigu, when this island frozen hy its distance from the visible 1, Christ, the sun of righteonsness, the true 2, not from a temporal, but from an eternal mament, was first pleased to communicate his s, that is, his precepts, to our inlahitants, drast, hy some with more or less fervency,
the hot days of Diocletian." Upon this ssage the most far-fetohed speculations have on raised. Who commnnicated tbese rays, or cepts, in this early time? askod the monkish olar of old, as he transcribed the chronicle, well as the antiquary of inore modern times, he sought out the statement of the ancient torian. Was it Joseph of Arimathea? He st have left Jerusalems to avoid questioning the Jews, or we should have heard more of 1, they nrge. Or, was it St. James, the son ehedec, who, it was averred, came to Britain 4 his mother Salome, abont six years after Resurrection? Or, Simon Zelotes, who cam ut four years after they did, aud perished a havds of the Druids? Or, was it Aristous, the brother of St. Barnabas, who was $t$ to Britannia as hishop ahout the year 51 was it St. Paul himself? When St. Paul iu Rome, he was entertained hy a noble ish lady, Claudia Rusina, and what is more ly than that he was influenced hy her $t$ ceod to her relatious and countrymen in nicertainty as to the moans of communicahy no means detracts from the homuncar of fact; and in virtire of it the British clergy dined precedence over the Romish clorgy at ods they attended in very remote times. To o minds, the prosent Welsh cathedrals are bis tradition. It is supposed there were, at is seven suffragnan cluurches in Wales, under archbishop at Caerleon. But after tho mities endured at the Saxon inrasion, eccletical aftairs were gradnally rearranged, and - cathedrals now represent the reduced er. These four buildings,-Llandaff, St . id's, St. Asaph, and Bangor,-are minutely

Handhook to the Cathedrals of Wales. London
Murray. 1873 .
described in a fifth rolume of Mr. Murray' "Handbooks of Cathedrals," which we now introdnce to our readers. It comes at a very fitting moment, as some of the cathodrals have just now been reopened, after considerable work upon them, as mentioned in anothor page.
Are there any structural remains of the smal chnrclies that were first raised by tho founders of the sees prescrved in the present buildings? None whatever, we must reply, shonld this qnestion be asked. All four of the Welsh cathedrals were rebuilt in Norman times, aud suh. sequently extended. One of them was completely rebuilt at the end of the thirteenth century; and another, after heing rehuilt in Plantagenet times, was laid waste in tho rebel. lion of the fifteenth century, and raised up again in the Late Perpendicnlar period. The Norman bishops of Llandaif and St. David's effaced the small fabrics raised by their canonisod pre. acessors as effectrally as the Norman prior of Lindisfarne effaced the Saxon church that succceded the temporary structure erected on the Holy Island by the first missionaries from Iona; bat, as he did, they included the hallowed sites within the boundaries of thoir new buildinge. In the case of St. Asaph's Catliedral, the present edifice is so small, that it is not unlikely that the Norman successor of the fret British building covered the same extent of ground. It is but 182 ft . in length and 68 ft . in hreadth, including that of the aisles with tho nare, and is the smallest enthedral in Great Britain. It differs from the other three Welsle cathedrals in occupying the summit of a ridgo that rises between the two valleys of two rivers, the Clwyd and Elwy. Llandaff, St. David's, and Bangor all lio in low, sheltered places. A Norman bishop was appointed to Bangor, as to the other Welsh sees, but he appears to have heen received hut coldly, if not in a hostile manner, hy his flock; and, nntil the recent restorations, the only structural evidence there was that he, or his immediate snccessors attempted to improve the structure, was a Norman fragment in the south wall of the chancel. Bishop Anian, who was the favoured prelate chosen to haptise the infant Princo of Wales, born in Carnarvon Castle, appears to have built this cathedral from the ground, with the exception of the Norman fragment men tioned, and patches of Norman masonry left here and there as a core to Decorated work But, although there are no structural remains earlier than the Norman era, there are, in cach case, traditions of much greater antiqnity, which have heen duly noted by the anthor of the hand book, Mr: King.
The see of Llandaff, for instance, is fortunate in the presorration of a MS. entitled "Liber Landavensis," which contains mention of grants, charters, and records conneoted with it from its oundation to the year 1131. It is helieved to be the work of Geoffrey, the brother of the first Norman bishop, Urhan. From this we learn that the first hishop of Llandaff was Dyfryg, or Dubricius, the prelate said to have crowned King Arthur. Lilee most of the Welsh saiats, he was a scholar, and prosided over about 2,000 clergy, whom he instructed. One of his scholars, Teilo, succeeded him. This saint, accompanied by David and Padarn, went to Jerusalom, and was thero consecrated, according to the legend, in the place of St. Peter. He returned to Llandaff, and held supremacy over all the churches of South Britain till the time of kis death, when his body was multiplied into three bodies precisoly alike, to satisfy three churches desirous of the honour of receiving his remains. His successor was Oudoceus, who, with Dyfryg, made Llandaff. Their little chas the three patrons of Llandaff. Their little church, famous as it was does not appear to have heen more than 40 ft . long, if we follow the dimensions given in the life of the first-named patron in the "Liber

Landavensis." The same account mentions an eastern apse. But Urhan cleared it all away. His Norman church does not appear, however, to have been of any great extent, for it was speedily enlarged. In the Early English period, We may see (the "Liber" ceased its record before then) it was extended westwards as far as the west front; then a chapter-house was built; then, later, in the Early Gcometric period a lady chapel was added. In the Second Decorated period the presbytery was rehuilt, and soon afterwards the walls of choir and nave were repaired A north-wost tower was added hy Jasper Tudor, anclo of Heary VII. This mixed structnre is described in all its parts hy Mr. King, who then gives a history of the see, and a list of the bislops. This plan of progression is methodically followed, indeed, throughout the work; and a gronnd-plan of each building is given, as well as views of dotails.
St. David's is the largest of the Welsh cathe. drals. Like the other three, it has been recently restored. This was founded hy St. David, and was held in such high reverence that two pilgrimages to his shrine, which was placed within it were considered equal to one to Rome. It is a cruciform building with a central tower. The general aspect of the interior is that of a Tran sitional huilding. The nave has six bays. Over the rich Transitional arcades rises a feature not found in any other chrurch. This is a comhina. tion of clearstory and triforium, forming hut one stage, but consisting of two parts equally well marked. It is shown in an illustration. Ovor the nave is a fiee Perpendicnlar roof. The walls of the aisles of the nave are later. They were raised in the Decorated period; hut only one ancient window remains; the others are either debased anhstitutes inserted in the seventeenth century or modern restorations. The first contral tower foll shortly after its erection, and when it was rehuilt one of the Norman arches was retained. Hence, three of the arches are high and pointed, and the fourth low and round. The string courso is, conseqnently, carxied to two levels. The space bencath the tower was occupied by wenty-eight stalls, which were removed during the repair of the tower, hut carofully replaced on its completion. The presloytery has three bays. Beyond it is a closed chapel, ocenpying another hay. And boyond this is a vestibule, leading to the lady chapel, which occuples another hay. The sonth transept is fitted up as a parish church. The base of the shrine of $\$ t_{0}$ David atill occupies the third hay from the east on the north side of the presbytery. It is illas. trated. On this hase was laid the portable shrine, or feretrum, containing the relics. It consists of a stone slah, or table, supported on three arches about 3 ft . from the gronud, and extending from pier to pier. The arcles aro scarcely more than 1 ft . high, and in their spandrels are quatrefoils. Upon the slab upon which the shrine reposed rises a hackgronnd of a triplet of Early Euglish arches, with a solid wall hehind. The hack of the shrine projects slightly into the aisle. It is hut little more than a stone wall, having three round-headed arches, corresponding with the position of the three pointed arches on the preshytery side, with quatrefoils and squared wiches above them, which, though now closed, may bave had their special purposes. Browne Willis states that the Early English triplet contained woll-paintings in the days of Elizabcth. On the south side of the north transept is another monument of a similar character. This is the shrine or tomh of St. Caradoc. And in the centre of the preshytery is tho altar-tomb of Edmund Tudor, Earl of Richmond, the father of Henry VII. There are many other monuments, all duly mentioned in the handbook; bnt these are the most important. This cathedral, like that of Llandaff, is treated at great length by the compiler. In these accounts he has had
the advantage of more than one pioneer. But
with the exception of a paper contrihuted to the "Archæologia Cambreusis " on each building, he has had no antiquarian guide more recent than Browne Willis to assist hima in the examination
of St. Asaph's and Bangor. T'bese two huildings of St. Asaph's and Bangor.

These two huildings are dismissed, therefore, mnch more summaxily
St. Asaph had its book, the "Lyfir Coch Asaph"; but, with less good fortune than Llandaff, it has lost it. Not, however, before some notes were taken from it, whicb were used by Wharton, in 1695, in the compilation of his "Lives of the Bishops of St. Asaph. The building was visited, too, by Giraldua, who speaks of it as "the poor little cbarch of Llanelwy." Its exposed sitnation led to a proposal to build a new cathedral within the walls of Rhrddlan, where it would be proteoted from the dangers that often prerented the attendance of the con. gregation even on the most solemn festivals. But hefore this proposition of Edward's could be carried into effect, the Welsh Prince David resnmed hostilities, and St. Asaph's was burued to the gronnd hy the Engliah. Within two years, however, we find King Edward gave 100 L . stcrling to the chapter towards repairing the damages iucurred in tho war, and granted the
advorson of the church of Rhuddan to the Bisbops of St. Asaph. We hear no more of the proposal to make Rhnddlan the site of the see. On the contrary, Bishop Anian sot to work to rebuild the edifice on the old site : and the clerks of St. A saph exhibited a precious book of the field, Hereford, and Wales, as a means of raising funds for it. Then gradually uprose a cruciform building, with a central tower 93 ft . high, of which the nave, transepts, aud tower, remain to this day. The roofs and all the woodwork were burnt in the wars with Oweu Glendower; but successive bishops refitted it for worship, and it
flourished till the time of Oliver Cromwell. flourished till the time of Oliver Cromwell.
Browne Willis tells us,-"1n Oliver's days the post-road was not throngh Denbigh, hut St. Asaph, and one Milles lept the office in the bishop's palace. . . . Me kept his borses and
oxen iu the hody of the ohurch, and fed calves oxen iu the hody of the ohurch, and fed calves
in the hishop's throne and in the choir. He in the hishop's throne and in the choir. He
removed the font to his own sard, and used it for a trough to water horses." But the suc. ceeding bishops remedied all this mischief; and in tho year 1 inso the choir was "completcly
remodelled," which ureans that a plaster ceiling remodelled, Which ureans that a plaster ceiling
was put up, the east window filled with modern tracery, and the side windows blocked np altogether. Finally, tho roof of the nave was lowered, to conceal tho clearstory from within, early in the present century. "Such", says the Handbook, "is the architectural history of St. Asaph's Cathedral. consists of nare and aisles, central tower, and transepts and choir, is accordingly of three periods-the wole of the westera portion, in-
cluding the tower and transepte, Decorated, the work of Bishop Anian and his successors; the choir Early English and Decorated, with a modern restoration." Over and above all this are the rocetraces observed of St. Asaph's slirine, althourh there is early mention of the foar that its exposed situation micht lead to the loss of the exposed situation might lead to the loss of the saint's relics. The hrothers of Mrs. Felicia Lemans, in our own time, have placed a smail tahlet to her memory in the south aisle of the book furnish a few other associations connecting this outlying diocese with the wide world. The celehrated Geoffrey, of Monmouth, for instance, was one of the early bishops. We have already mentioned Anian, the confessor of Edward I., and William Lloyd was one of the seven bishops
sent to the Tower by Janes II. sent to the Tower by James II.
Bangor Cathedral is also ornoiform, with a central tower, now erecting, but it has, in addi. tion, one westeru tower. It had the reputation of being the meanest in the United Kingdom. Like St. Asaph's, it suffered in the wars with Edward I., and with Owen Glendower, aud was repaired after each devastation, but it does not appcar to have shared the same care in its later history. When first placed in the hands of Sir Gilhert Scott, he wrote of it in his first report, "While the neighbourhood has been constantly increasing in wealth, while it bas hecome the resort of tourists from every part of the king. dom, and has become possessed (to facilitate the vast amount of traffic which passes through it) of some of the greatest wonders of modern engi. neering art, its cathedral has gradnally sunk into such low estate as to becone almost a bye. word, -no cathedral in the United Kingdom being equal to it in meauness." The see was
founded by Deineol, who died A.D. 58.4. His Welsh prohahly cadured till 1071, when the Bangor was destroyed by a Norman army. A Norman building must have replaced it, for we next hear of King John's arny encaraping on tho Conway river, and burning Bangor, and carrying off Bishop Robert of Slirewshury from before the high altar, who was not released for lest hear of the building when Baldwin, Arch. nish hear a the luil wa bishop of Canterbury, was preaching the crusade in Wales. Tho archbishop celebrated mass in the catbedral, and the hishop assumed the cross at his urgent desire. Then came the cisasters
under Edward $I_{\text {. , and }}$ the suhsequent rebtilding. ander Edward 1 , and the suhsequent rebtuld old The new edifico was scarcely a century old
hefore it was burnt by 0 wen Glendower's troops. It appears to have suffered to a greater cxtent than St. Asaph's at this time, and to have re.
quired morce extensive renewal. First, the choir quired morc extensive renewal. First, the choir was rehuilt by Bishop Deane at the close of the
fifteenth century; then the nave aud transepts, fifteenth century; then the nave and transepts, by Bishop Skorington, at the commencement of the sixteenth, who added the westeru tower, and iuscribed upon it, - "Thomas Skevyntor episcopus Bangorie hoo campancle of ecclesiam fier fecit, $\mathrm{A}^{\circ}$ Partus Virginci, 153?." During the civil War, the woodwork of the interior was there was a thorough refitting, which left the chntrch "rery 1 ightsome," down to Browne which left then came various restorations, "The roof of the nare," enumerates the Hand. hook, "was altered during the episcopate of Bishop Cleaver ( $1800-1806$ ), nnd all its cruved work was destroyed. A cepair of the fahric 1827. The stalls wero then swept avay; and in the words of Sir Gilhert Scott, "the most cxecrable gimcrack subsstitutod that ever dis. graced a church." The carved roofs, described by Browne Willis, were replaced by plain deal and a heary closed screen carrying the organ oft was coustructed, entircly separating the clusively for English servicos. The Welsh congregation, driven from the worthiest portion of their own catherral, were treated likc Willis's "ordinary folks" (i.e., buried in the nave), and an occasional service in their natire tongue was provided for them in the nave. This was the stato of things in 1866, when the ing in the hands of an architect for restor ion. As soon as the new works were com full of the old materials of tho English church lestroyed by Owen Clendower's troops, and that there were sufficient wrought stones among the débris to indicate the design of Bishop Anian's transepts and part of lise choir. As far as it was possible to do so, every ancient stone has heca worked iuto the new huilding, and made to occupy its original position. "This exhnming and restoring to their places," wrote the architect in 1869, the fragments of tho beautiral by Owen Clendower 1 sed as mero rongh mate. rial by Henry VII., and re-discovered by us four and a half centuries after their reduction to min, is one of the most interosting facts I hav met with in the conrse of my experience. The foundatious of a Norman apse were also found, shorter than the that the Norman churcb wan string course in the sonth transent turned inwards 12 ft short of the extent of the present transept, and bereath the fontiations of the fourteenth.century piers of the crossing, those of the Norman piers were found. Tbus the extent of the eastorn portion of the Norman cburch was ascertained.
It is not a little curious that in neither cathedral has any vestige of the church built by the founder been ohserved by the recont restorers. Not a foundation, apparently, has come to light in either restoration. Not a fragment has heen found reused as rubblo. Can it be that the over. lookers were overlookers in eveny sense of the word, and suffered these relics to pass unde. tected because they were of no recognised or familiar form ; or must we assume that they were all four without tooling of any distiuctive character; or, were they all hust of timiber, as he eariest Saxon churches probably were. However, the restorations are not the suhject only with the handhook in which they are described, and this, it is no mean praise to
assert, is worthy of the rest of the series. The four cathoctrals themselves may not he so grand, so vast, or so rich, as some of their Eaglish conz peers ; hut the manner and method with which they are treated are precisely the same. First, in each case tre bave an architectural descrip. tion of the fabrio, with a suffecently full account of its successive alterations and present appear. finally, then a general listory of the see, and we presurue, is as much information on the suhject as any one cousulting a handhook i likely to require or obtain. After perasing its pages the reader will have acquired a clear pre. eentment of four small churcbes founded by four energetic scholars and teachers in tinies as romote as the idyllic days of King Arthur, and in places as out of the way as conld he selected far distant from one another, but all hehind the ranges of bills that kept Romaus and Saxon alike out of sight, and all near the western coast. In each case these four sites remair sared, and the graall churches are replaced chter the Norman conquest, wisappear, wit
 the exception of the nave of D. Davide, th choir aroh and north doorway of Llandaff, whio aro exceediugly rich, and a few immateria fragments; and still more superb structures ris upon the same honoured sites, now associate inseparahly with the memory of the canonise founders of the first hamble buildiugs. Llanda hecomes as severely heautiful as Ripon; $S$ David's, as it lics in the valley of the Alan, ov apon the most western point of Great Britain ave that of Laud's End, hecomes ns rich Decorated work with Perpendicular additior an make it, and royal pigrims flock to it, an ts hishops own a palace, close hy, that is unsu sassed hy auy English stracture of its kind St. Asaph's develops in the samo direotio only on a smatier scale ; aud Bangor shares i ate in good and ill fortune. Their earlie prelates attend conferences or synods on $t$ l Continent, and claim and obtain precedence place over other bishops, in rirtne of the great antiquity of the Celtic Church. This privileg however, gradually lapses, and the Archbishe of Canterbury travels through Wales, osticiati in the oalhedrals and preaching the Crusac. Armies come over the hills, and spread into t. valleys, and destroy all before tbeni, cathedra time that of Eder Glendower's; luat the result is always $t$ same. REPATR, OR PIOTURESQUE RUIN. Overe we to repair, as matter of princip the ravages of time and dechy in of piahrics our cathedrals, minsters, and great gistind, churches? or oughler and to crumble?
it may seem, to many of our readers, it to put such a question. They will de that it is, in the sense of the public speex a "question" at all. But when we writers in varions quartcrs adrocating latter of the two courses that we hare named, is clear that, in some minds at least, the qu tion does arise. And as the purport and am the ohservations to which we now refer and condemn and to discountenance, as far as pr being equal to it in meauness. The see was described, and this, it is no mean praise to
ible, a series of oporations to wbich some of us baro contributed money, some skill, and nearly
all (speaking of the habitnal readers of the Buifder) bearty good will, it is opportune to reflect for a fow moments, and to inquire whether we should or shonld not repair. This questiou involves, for its solution, tho definition of what true repair suhstantially ought to be.
We do not propose, in tbese remarks, to enter into controversy as to special instances which have been cited in support of the argumeut in favour of learing decaying structures unfor wide difference of opinion as to the justice of he remark,-"If we said that that groat church je trne, from the point of view of the antiquary or the historian." Wc may douht whetber "that craving for activity from which even the superior
clergy are not entirely exempt," "the good old English houscwively passion for ncatness and English houscwively passion for ncatness and shurches, in which one may spend one's life, put n thorongh repair by means of funds, a large mroportion of which is gathered out of other oeoplo's pockets;" and "an amatenrisb liking
or dahbling in ecclesiology and architecturo, aro or dahbling in ecclesiology and architecturo, aro he mainsprings of that mania which has seizod
leans and chapters throughout the land,-a leans and chapters throughout the land, -a
mania which has destroyed every thing veneralle n overy place which it has touched." ink that moro worthy motives migbt becredited 0 those who, if unahle altogether to emulate he piety of our forcfathers, have been desirous to epair the houses of God in eur land. The atterly barbaroas neglect in which some of onr
inest ecclesiastical monuments were until re. ently left (if it ho even now altogether a thing of tho past), had not cren the poor exeuse of oing picturesque. At St. Alban's Ahhey, for xample, a public footway led between the
hurch itself and the chapel attached to the ouilding; and filth, squalor, and neglect lone narked a spot sacred to some of the earliest Ibristian associations of Edgland. At the very xtremity of Wales, the graud archiepiscopal nthedral of St. David's was, a few ycarg hack, aned and desecrated in much the same mannor; rincipality, as contributing fower scraps aud Ifal than those which so rapidly accumulate in he waste places of more populous towns, heing ingered in Pembrokeshire, which had altorether vaporated in Hertfordshiro. Wo speak of the jeturesque, but, in cascs like these, the word lould bo distingnished from the piotorial; from liffers from grand. The true artist, or the ritio of adequately cultivated taste, will feel be due importance of preserving the pictorial ieauty of our great ecclesiastical monuments. icturesque, so far as it is expressed hy the ilapidations of buildings of such character and igaity. In a sketch by Morland, in a good rater-colour diawing, or a good etching, the batch of a cottagc, or the hroken outline of a batch of a cottagc, or the hroken outline of a
igstye. But trivialities of this kind, precious 8 they aro for the transient gratification of the aste, and for the service of the lighter hranches I the arts of design, are out of place when we Whe to speak of a cathodral. What then, we are led to inquire, is the history those nohle califices, by the possession of hioh England has so high a claim to rank in he foreground of the civilisation of the past ?
Yhat ja the true point of view, not only of the antiquary or the listorian," hat of the fully nltivated man, who reads history as the con. cibution of the past to the education of the uture, and who finds, in the study of monuaental records, valuable notes and illustrations
f that great undying lesson? What was the rigin of these fabries? What was their design? What relation do they hold to the civilisation, nd the needs of the day?
Unquestionahly the great claim which such uildings as Exeter, York, Westminster, bave on he living veneration of Englishmen, arises from iety of ourancestors. They carry us back to a ime when religion was not either a matter of ivergent and unimportant opinion, or a profes. ion limited to a certain order of men, hut when iving grasp. We may say what we will about eap mode of parchasing posthnmous credit willing awoy, on the death.hed, for the build ng of churches, the money which is almost that
dying man remains money which, so that the dying man remains silent, is that of his heirs and next of kin. But it is no mere qnestion of tious were made in chuch-huilding times by way of gift no less then by way of hequest. Nohle instances of the same nature occur in our own day, as our columas hear ritness. But there went to the erection of the great churches of the twelfth and thirteenth centuries, much that no moncy could purchase. The arcbitecture of those days may almost be called a religion It is the outward symbolisation of the religious spirit, the religious study, and the faithen devo thoroughly did tbe details and ornamentation of tho great churches corrcspond to the requirements of the ritual, and harmonise with the effect of the religious teaching of the day, that the visible fabrie might almost be said to bear tbe same relation to that mystic entity, the chnrch, that the human body does to its indwelling and informing spirit. Tbus, in every way, as paid for by muniticent charity, as designed of art, and as addin roligious and thoughtin men of art, and as adding pomp and heatty to ritual our great cathedrals are cuduring monuments of
the piety of eur forefathers. The piety of our forefathers.
The historic interest of many of our cathedrals may he easily over estimated, or, more accurately speaking, it is ofton mis.stated, rather than over. stated. There oxist, indeed, historic relations of tho higbost order, as matter of association,-as Westminster ; but these mef our Sovereign at Westminster; but these may bo termed with propriety rather sentimental than monumental ings as the Eleanor mental order are such build. not only for a definite roligious purpose, but to commemorate a distinct event. But the histories of our churches and minsters aro rather chronicles of the rule and character of bishop, or abbot, or local magnate and benefactor, than distinct chapters of the political history of the country. Their actual valne, in this respect, rather regards the pbilosophy, tban the detail, of history. It is and tho general hahit of the taste, the thourht, dioceses, at the periods of their foundation, oxtension, and repair, that our nohle old churches chiefly illustrato the history of the country.
It is otherwise as rogards the history of art Here we have not illustrations, but elementary facts; not momentos, but records. The live art of those architccts whon we term Gothic stamped its likeness upon its work. Here history speaks with no uncertain roice. The name of prior or been torn from his tom. The brass may have fervour, that had its roward, then and there in the poeket of the dilapidator. The memory of knightly and noble benefactor may have proved as unenduring as that of great churchman

## Their bones aro dust,

Their souls are with the saints, we trust, :"-
may be all tho epitaph left to explain the mouldering sentaheon, where, bend, or fess, or besant, onco a famous and woll.known blazon, is now looked at, with mantelligent eye, as an ornament of forgotten fashion. Bat in the delicacy or sharpness of a moulding, in the of light or of arch; or even, to some extent, in the relative proportions of plan and of elevation, we have records that cannot he obliterated, so long as the stone retaius its form. In the preservation of these structural records, no less than in the delineation, description, and em. balming in adequato architectural works of iterature, consists the truo coro of the history of that art in England.
Such we take to be the main claims of our cathedrals and minsters on the reneration of edifices in another light. They are not more monuments. They are preat civil structares ereoted for a definite purposo. Althouph varied in its exact bent, that purpose still holds. The utility of York Minster or of Canterhury Cathedral, thongh of a somewhat different motive, is not less at the present day than in the times of Wolscy or of Becket. Ritual has altered,-not hy the slow, constant ohange that attends many political revolutions, but by one great period of struggle. With the adoption of Protestantism nonder the Tudor monarchs, the structural motives of the great churches becamo less and transepts, the lady aplions. and transepts, the lady chapels, apses, side

Tudor churches, we had the strnctural adminisa stration of a ritual which reared numerous altars, inpoked numerous protectors and meditors, and placed much reliance on processions, as direct means of ohtaining divine aid. Fortby priest," writes John, Sire do Joinville, a Sothic art produced one of its most exquisite rems, the Sainte Chapelle, at Paris,-"A worthy pricst, who was called the Dean of Manropt said to us that he had never suffered in his parish from droncht or from too much min or rom any other scourge ; as soon as he had made hree procesions, on throe Saturlays, God ond is motber delivered him " This " an unim is lement of cirus ory tcstion as certain id ard, fond plan, no ess than the archi With the
With in VIII., ne great fer blitcrated. We refer to the rood-loft. At Westminster the large size of the elevated apart. ment at the east of the new reredos is known case fow visitors to the Abbey. The turrct stair. the remains, bat the gallery front, over which tho relics were exbibited by the priest, has heon obliterated. At tbe parisa church of Avebury in Wiltehire, one of those ancient pieces of church decorative architecture yet exists in very tair prescrvation. It is enongh to show what an important featare of our great churches the rood. lof must havo beon;-far more conspicuous than pulpit, or communion-table, or any element known to our contemporary huilders.
Processions, exhibitions of host or relics, mul. tiplied masses having ended, a great change in the use of the Eaglish churches succeeded, a chance which, for the most part, has left marks of its occurrence. So, also, has the pomp of the clergy in those solcmnities which wero rather creat extent of its Iustre. Nor, there seems little reason to doubt, were the changes thus made in the services and in the arrangement the churches unattended by a diminution of their use. Such is, at all eveuts, the testimony Swift, Such is, at all eveuts, the testimony of partiality to Romanism partiality or less thronged, the cathedrals of England have of the por. of the poor. To the poor ruan, the floor of the the Sunday has al the Sunday. That adaptation of the opera box in which elnow-room, separation from the low. readydisplay of fine clothing, were so comfortably secured that the ocoupant found it worth while to pay a yearly ront for what he called his pew, quished never yet thoroughly absorbed and van quished the nave of our cathedrals, though parish churches tell a different story. And of late years, there is no manner of conbt, a different tone from that of even the beginning of the present century, is becoming prevalent in society as to our minsters. Care has been given to arrange great services, and St. Paul's, West. minster Abhey, and other hnildings of this type are now all too small for the thousands who crowd what are called the special services, as distinct from the daily morning and even song in the choir.
We thus come to this point,-which, indeed we have borne in mind all along, -that whatever may he the importance of preserving our minsters as monuments (and we are not among hose who think that this importance can be easily over.estimated), there is yet a prior clain which these huildings have upon Englishmen of the present day. Tbey must be kept in going order as Christian churches. Eminently tho catholic sense the ehurches of the people - the lecent and reverent solemmisation of the services of the Cburch is the ohject for which they must first he maintained.
If, thon, for this prime reason, it hecomes expedient, in the opinion of those who are responsible to their countrymen, no less than to of our sreat chrcles to wobliterate with merilesg $h$ with of service, all sign of wer, scraping out erery mark, stain, slup or hlot". if scraping out every mark, stain, slur, or hlot; it the question arises between the religions utility of the building, on on one hand, and the purely picturesque effect on the other, there can be hut pittle hesitation as to what tbo decision onght to be. It will he on the side of the painstaking, and not of tho negligent, custodians of the fabrics.

For oursclves, while we have staked this issue on the plainest gronnds, we do not beliove that the question need thus to he decided. We liave, we think, shown that it is impossible, in the proseut state of society, to leave our great edifices to unarrested decay on pictnresque grounds. The question, then, narrows itself to that of the best mode of preservation, and of needfal repair. And bere two suggestiona present themselves, The first is, that all baildings are more durable, and actually do endure better and longer, when they are inhabited and pnt to their proper use, than when they are locked up. Even if the parish church he only filled once a week, that degree of inhabitation renders the building far more uble to resist decay than if it were never opened. When services are numerous, and when duc care is given to cleansing and to warming, the preservative effect is more marked. If, then, it were possihle to leare all the stains and slurs and hlots, which some writers so much admire, altogether undisturbed, it wonld be hut a short. lived piece of sclfishness on tho part of the lover of the pictoresque. Tnresisted decay would become more rapid from ycar to year, and the structures which we bad forhidden to be repaired hecause we wished to indulge the taste ho read ing the handwiting of antiquity, unruffled by modern punctnation, on its walls, would, for our childreu's children, be not monuments, but ruins.
First, then, we must repair our great churches becanse they are required for the religions worship of great congregatious. Secondly, we ought to repair then, if we regrard them merely durable if properly repaired, and if properly durable if properly repaired, than if they are left in picturesque filled, than if they are left in picturesquo
slovenlinces. All that remains, then, is the question how hest to repair them. How shall we so arrest the ravages of decay as to preserfe in its most authentic beauty the ancient and genuine cliaracter of our minsters and abheys,and not only to please onr own eyes, hut to hand down to our children, as perfect as may be, these noble bcirlooms, which tell of our piou forefatbers, now with God ?

VIENNA TNTERNATIONAL EXITIBTTION.* Tre maguitude of the Extibition is so great tbat the carefnl consideration of any one class of objects entails upon the student an amount of labonr that is greater than conld be sup. posed. I have heen perpetually tired, and geteam auxions to report fairly, and to mete out praise where praisc is due; and in order to do this I have to tinverse miles and miles through the numerous transepts of the building, and then, after all my care, I am often humiliated by find. ing that there are jet other objects belonging to passed monoticed. I long for the simpler passed mnnoticed. I long for the

It behoves the reviewer here at Yien. It bchoves the revicwer here at heuna to he careful how he metcs ont praise or apportious blame; for aftor he has spoken of works as the
finest in the Exhihition of their class, he may finest in the Exhinition of their class, he may
fiud otbers as fino, if not finer; and after cou. fiud otbera as fino, if not finer; and after cou-
demning objects as disgraceful to the Exhibition dewning objects as disgraceful to the Exhibition
and the country which has prodnced them, ho and the country which has pronnced them, ho
may find others much more deserving of censure than those alrcady condemned. The vastness of the display renders it impossible that justice can be done by any one writer : so I claim no absolute justice for my reports, all tbat I attempt to do is -the best that I can.
From my ohservations at the Exhibition, I have learned something of tea.kettles, and I now know that tea-kettles may be moro beauti. ful than they generally are, and more useful than tbey usmally are; and tbat a tea.kettle may differ essentially from the form that I am acquainted with, and yet serve its purpose as well or better than the forms in nse with us in England. There are here in the Exbibitiou kettles of many kinds-perbaps not of all kinds, yet certainly of more kinds than I haveever before seen. There are common kettles formed of iron, bottoms and witb small; there are kettles with long spouts and with short; there are kettles in which the spout is attached to the body by band of nietal; there are kettles which are tall kettles which are short; there are square ketThere is a lettle in the and polybedric kettles, in tbe form of a mountain, and a bird, a kettle with a tea-pot in it, on the principle of a carpen.
ter's glue-pot. There are elegant table. kettles, swing kettles with lamps underneath, formed of silrer and of tea-urn bronze. There are dainty enamel hettles; dainty Japanese hronzo kettles; dainty kettles, formed of china, of red earth, of black eartb. There is a kettle formed of tonder blue and white cbina, with silver monnts and bandle. There is a large earthen Lettlo, with a splendid raised, perforated, bronze lid, and hronze and gold bandle. There are kettles with two handles placed side by side, and rnnning parallel with each otber; there are two-handled Eettles, with handles apart, yet parallel. There a handle like a kettle, the latter crossing a right angles with the direction of the spout There are kettlos from China, kettles from Japan, kettles from France, kettles from Denmark, kettles from England, and I know not from where elso: truly, kettles need not be kettles, as Paddy would say; they may be what ever your honour pleases.
a kettle, considered as a ntilitarian object, readily introduced into which water can be poarly introduced, and from which it can be formed that it can easily be lifted, and, ahore all, of such coustruction that the water in it will boil with tho least possible supply of heat.
In a few English honses, a kettle of curio appearance is met with which is elliptical in shape, and with a large flat bottom,-the sides rising up from the bottom (which is of greater diameter, botb in length and breadth, than any other part of the kettie) in an arched form, like as if an elliptical basin were inverted upon the flat base. I think that the credit of this inven. tion beloogs to the Americans, bat of this I am not certain. Here we have a kettle of consider. able merit, for the largeness of the base gives
au increase of heating surface, and with the au increase of heating surface, and with the applied wo have rapidity in the warming of the water; but this kettle is not beautiful,-it is useful, but it is almost ogly.
Althongh an artist, I am no advocate of works intended for utilitarian purposes being beautiful rather than useful. I say, let all utilitarian objects be useful,-perfectly useful, and then, if possible, let them bo beautiful also. I want a kettle, but I am not content to have even a beautiful kettle if the water is twico the time boiling in it tbat it wonld be in a plain or even in an ngly ohject. A calabash. shell is vater and in this some savage trines hoil The wathongo the vesscl will not bear fre. kindled and stones are made hot, and these stones arc dropped into the water, and thus the Trater is boiled. Beautiful as the calabash-shell is, especially if adorued with rich savage.tribe carving, yet give me the common bettle aud the simple mode of heating water; bat if a kettle can be eqnally useful with that which is not comely, and yet beantiful, I say hy sall means let us have the beautiful object. There are few articles of domestic use which could arot be cqually nseful while yet beantiful, and in ne case does this remark more fully apply than in reference to kettles; but in order that the fulness of this remark be understood, it is necessary to seo a serics of kettles which the Japancse Fave contributed to the present Exhihition. The kettles to which I now make referenco are not serviceahle kitchen.kettles, varying in size from a pint to several quarts in capacity. Mere we hāve kettles which are beantiful, -very beanti. ful, and yet useful,-eminently useful. The form, in some cases, is excellent. The handle is well formed and well finished, and the lid is smooth and ornamentally trcated. First, as to atilitarian qualities. The body of one kettle shown is covered witb rounded excrescences, or, to use botanical phraseology, with tubercular eminences, abont the size of pcas, whereby the heating-surface is much increased, to say nothing of the beantiful effect achieved. Anotber has a sort of petticoat extending from tbe sides of the kettle dowawards, in spreading or divergent mannor, and leaving a space between the body of the kettle and it. This petticoat-like arrangement conducts heat, just as tbe flanges of the radiating stoves do, the one conducting from the extcrior and conveying the heat inwards, the other collecting within and conveying the beat outwards, but botb collecting from the source of smpply and acbieving to a degrco the equalisadoes not only act as a coudis cloak, or petticoat, a quantity of heated air between the body of the
lettle and this shade, and thus provents tbe tact of cold air witb that part of the kottl which the water is contained. But besides $t$ all-important qualities just noticed, whe spocial facility is given for the heating of water, there are other, though perbaps mi points tbat should not be lost sight of. oodies of these lettles are rough in their fiu while the handles and lids are most caref reated. In England we hear a great dea onsense abont bright kettles, and some car old dames are afraid that their kettles should on a fire lest they get black, and most cottag fike to see one bright patch on the side of cettle, whether it bo of copper or of tin. N as a kettle is an object constructed especi for being placed on a fire, and as a fire inevitably blacken a kettle if placed upou $i$ it not only reasonable and right that the hod a common kettlo shom be so formed as no suffer ininey from the fire and look well w blaok? But in these Japancse kettles handle,-which is to he grasped,- is invaria smooth and convenient to hold, and the lid also well finished; but neitber of these ps comes in contact with fre. The kettle be ominently o, work of utility, it is also beauti This is the perfection of art,- the construct of an object which is perfectly useful and at same time perfectly beautiful. The Japan kettles now under review come very near ideal perfection, for the rough body, wh useful, is so shaped that the form is also be tiful ; the shape of the petticoat, or the distri ion of tho dots, highly pleasant; and the han while agreeable to hold, is always of beaut form, and in some cases is highly ornamen In certain instances the lids and handles these rough, yet artistic, kettles are of bro inlaid with exquisite silver devices. I comm to the consideration of my follow-country the common tea-kettle.

TIIE PRIX DE ROME.
Tre annual exhibition of works by candidates for the Prix de Rome is I open at the Ecole des Beaux Arts, Fa For too last four months the Latio Quar bas heen taking sides and allotting prizes gentlemen on the soizes an important $r a$ For Art in every form is interested in competition: painters, sculptors, architec engravers, wards ; even those who have not dared to en their names as candidates. These mod aspirers are not numerous. Nearly ey student at a good atelier has laid formal cla to the Rome Scholarship after three or fo years' apprenticesbip. The Administration made the way easy to the tempest of juven amhitions. The wonid.be candidate hecome month hefore tbe Ist of April assiduous a attentive at the evening classes of the Ecole; takes notes of the lcetures, produces a cert number of "Académies." This is the fixst ste it softens the professors' bearts. Tben con the epretve préliminaire: drawings are sont to the committee of examination, and tbe autb of such as are pronounced correct are forma admitted as candidates for the Prix de Ron No exponse is entailed, not a document voncher rentived . the oxamination is ahsolut free. The arlmitted candidates have simply rise at five oclock on a cool spring morning, a carrying their easels and tbeir breakfast penny roll, -present themselves and penny roll,-present themselves at the Ecole the entree en loges. The loges or cells are si ated on either side of a long stone corridor. T
candidate wbo has obtained the greatest numk candidate wbo has obtained the greatest numb
of marks at the épreve nueliminaire has tbe rip of marks at the eprelve pretimnate has tbe rig to sclect his prison first, his companions follo pla order of merit. Directy all have be placed in separate loges, the professor apper
at the end of the corridor, and reads in \% lo voice the surject given for the Prix de Ron It is generally more or less my thological, -p haps a piece out of Plntarch, or, if tho co mittee happen to be in an excessivoly mode bumonr, a passage from Froissart or Comin After the announcement of the subject the do scnlptora, aro locked, the young painte months. An official walks up and down the e ridors, to see that no attempt at communicati is made. His watch is over, for this year, least. The result of the three months' solita labour is before the public, and the Rome schol
hips hare been anaratel. The ancocomfar onn. idates are now "des Prix de Romo," a title -hich Courhet's school has derided, but which, ke all official consecrations, is yet dear to the sart of the majority of Frenchmen. The aly represcntatives of high classic art to bo und in France, and thoy ocrtainly securo a rong arguments against the system. It nearly ways stitles all personal feeling and originality. has done nothing for the greatest modern
tists of Framce tists of France. Corot, Diaz, Gerome, Delaoix, Robert Fleury, Breton, Decamps, Vernet, d many other names equally familiar, are not

$r$, howeser, my contrihution to the general r, howover, my contribution to the general
of criticism will not pass unchallenged, for here is "art intustries," and my judgment $t$ favourable to our own position or progres-
less therein.

No one in the least degree familiar with American manufactures will be misled hy the
display sho makes. With her, woll-known display sho makes. With her, woll- known names in every department of art, science, and mannfactures are "conspicuous by thoir allsence"; and if she makes no mark, it is because she has, of conscious strongtb, noglceted her opportunity, or is purposely nursing ber energies and husbanding her resources for ber own great Centennial of 1876. In tho mean time she can well afford to join good-naturedly in the laugh raised
But Eugland must bo adjudged hy her work as exhibited by her best-known men, and thus julyed, condemned; for there is not only no evidcnce of progress since her record of 185!, but a strong presumptive evidence of decadence in somo most important branches of art indus. tries. Many of the principal works in the precious metals, brass, and iron, to be found here have been on puhfic exhibition any time duriugthe last quarter of a oentury, and have long since become familiar to tbose wbo have never seen tho originals, through the medinm of pbotography, lithography, and woodeuts. All that conld be said for or against thom has been said a hundred tines, and their presence at Vienna is an anachronism and a shmes anachronism or want of enterprise in of self-complacency or want of enterprise in our leading manufac. tures which cannot be too seriously deprocated. Setting the best of tbese well-known works aside, there will bo found vcry little iu tbe English
department at all calculated to advance ber department at all calculated to advance ber interests or enhance her fame. Objects in the precious metals are as thickly studded with
jewels as children's pasteboard hozes with sea. jewels as chidren's pasteboard hoses with sea.
shells, or so bedaubed with coloured cuat that their gold and silver substoured cname. valued only by their weight. In the latost do velopments of "cups" and " shiclds" the human form has becone distorted and crushed out of all semblanco to humanity. Our china, decorated out of all fitness for table use, has hecome picture books of natnral history, and all the semimonstrous forms of animate and inanimato hey are reproduced (reckless of tbe disgnst drey must onuse) upon our dinner-plates and to itself in the Glass has lost all somhlance eaamels in tho admixture of crude and opaque most ts, and will presently rival in ugliness the whilst easure specimens of its monstrous birth; been wooden furniture, in its highest phases, has reporade into the vehicle for the display of or any domestio, and rendered utterly usoless cately-carved mountings of ivory.
Nor does it appear in all this costly elaboration that harmony of colour, beauty of form, or consibtent combination of materials has in the least influenced or guided the designer or rould . Whecever originality is attempted, it the claboration of design has bent whiche simply no purpose of beauty or utility; or, rather, it migbt be said that both beauty and ntility bave been ruthlessly sacrificed to lavish cost and ostentatious display
If we pass from the British to the French dence of hicher aims we still find but little evi Italian coster aims; and the contents plendent in whe migbt fity shine re plendent in the classic neighbourhood of War-
dour-street, are utterly nuwortby of the position dour-street, are utterly unwortby of the position
tbey at present occupy. But here adverse crititbcy at present occupy. But hcre adverse criti-
cism ends. We must pass throngh the German courts witb increasing iuterest, until we arrive in the Austrian section, and there we find on in the Austrian section, and there we find on Vienna has unquestionably eclipsed all corn. Fienna has unquestionally eclipsed all competitors, not only in the variety, magnificence, highest excellence of design and finish. In every class of goods the Eamo simplicity and fitness prevail. Her fans and book-covers are well well applied that tho ntility of the object decorated is in no degree disguised or lessened. The gilt pier-glasses, cornices, and tables are in the bighest style of decorative art, and are not less remarkable for their simplicity of construc Thon than for the exquisito finish of every detail The drawing-room, library, or dining.room fur niture are oll alike characterised by boldness of design. Here are no far-fetebed and antiquated emhlems, suggestivo of after-dinner nightmares or lascivious dreams; no preposterous comhins tions of materials or violent contrasts of coloured woods and marbles, suggestive of the patohwork of our lono-decensed grandinotluers Here is yothing forced for effect, and nothing sacrificed for display The same consistency of design
oht same subordination of ornament to utility wbins hroaghout. Strengtb and massiveness ness stability is required, clegance and light. Every characy artiole is homogeneous, and the best with the unerrin each material are arous ous But it is not my parpose to write a detail crite cism upon Austrian any more than Bupor manufactares All I desive is of ats to the fact that there are abjects of intughi art witbin the Austrin section of thatustial Exhihition wortly and that whila wo our well- worn wad are complacoutly repeating vorld has wono rapily formes ar lhe past, the wehind in gono rapicty forward, and left us far hold her the raco: that if England wishes to awaken place a mongst the nations, she must ngs, ings, and hrace hcrself up to more serions efforts To heretoror
Nor is it to Anstria alone that we shonld look Cor instruction. Russia can read us lessons we bould do well to learn. There are samples of com enstings from St. Putershurg wbich our atmost akill and knowledge would fail to prowonders of Japaneso art ; and from Boscow hero are combining in sues of silver and gold work, bighest excellonce a rcmarkablo degree the pulative skill that if artistic design and manamples will be secured for our national museum at South Kensington.

NEW LEOTURE HALL AT LEWISITAM.
A New block of bnildings is ahout to be erected in Brockley-road, Lowisham. They will iuclucle a large lecture-hall, and other rooms and apart ments for public purposes; and the building, which will bo situated at the corner of the Brockley and Lewisbam high roads, will have a

Tho proposed frontago is objccted to by tho Grecnwich Board, in whose district it is, o the ground that it is desired to build beyond the line of tho frontage, the other property in the same street being bnilt 14 ft. from the pnblic way. Tbe proposal has heen before the Metro politan Board of Works, on the objection raised by the Greenwich Board, and the Contral Board have declined to allow the proposed building to The plans beyon he present street frontage The plans generally were approved of, bit the promoters were desired to submit a modified carried further back.

## ARCII 1 OLOGICAL SOCIETIES

The Canbrtian society have becu bolding their annual campaign, the scene of their operations on this ocoasion being tho neighbouring town of Knighton. The proceedinge were opened by the holding of a general meeting at the Norton Arms Hotel. Among those present were the Hon. Arthnr Walsh, M.P., the president elect and Professor Bahington, of Oxforl, as chairman the ont-going committce, in the ahsence of Sir Joseph Russell Bailey, bart. The Rev E. L. Barneswell, the gencral secretary, read the report for the past year. Professor Bab agton said the Association was in a favormble position, and that there was evcry prospect of successial continuation of its lahours. It had done good service by collecting togetber a arent numher of interesting obscrvations througb the medium of its memhers, and puhlishing the in its journal. Ho referred, too to the usefulones of the Society in proserving ancient monument and followed up bis remarks by reiteratiog his protest against what were designated chnrch restorations. Mr. Bloxam read a short paper on the little monntain church of St. Patricio, bont four or five miles from Crickhowell, the period of whose erection he attrihuted to the ime of Henry VII. It consisted, he said, of a nave and chancel only. Yet, though rudo and or the most unpretending character as to its external features, internally the bnilding was most interesting. There was a singular adjunct o the church at the west end, apparently more ncient than the clurcla which it adjoined or domus inclusi the imgined, was a rectusorium, anchorite At , he rechase or Bloxam gave a short deseription of paper, Mr. Bloxam gave a short description of an eligy of
a pigrima in St, Mary's, Maverfordwost. The

Rev. D. R. Thomas gare a brief decount of an inscription on an Ogham stono in No

AIJIININI
TOYISAUI
An animated discussion followed, in the conrse of which the diverse opinions expressed by arebreologists on the general question of Ogham stones were noticed; and as the the Bishop in particular, it was mentioned that of of Limerick, one of the high authoritios to whom it was snbmitted, had given a translation difering from tho Gaelic inscription upon the Wapley The Rev. James Davios read a paper on Wapley Caractacus to tho Romans. The first excursion Caractacus to tho Romans. The first excursion was mado next day, when the archwologists visited Castle-cwm-Arran and the British camps on the hill abore Llandewy. Several objects on interest were visited on the ronte. At the even. Lug meeting there was a limited attendance only. The chair, in the anavoidable absence of the Hon. Arthnr Walsh, M.P., was taken by Professor Babington. The chairman gare a brief description of the places visited during the day, and Mr. Bloxam made a few remarks relative to the abbey at Cwmhir, sugresting that excarations would probably reval the leading features of tho structare. Mr. Williams, of Rhayader, read a paper on Radnorshire cbnrches; and Mr. Bloxam delivered a brief account of some monuments in St. David's Cathedral. The Rev. D. R. Thomas read a paper on Grants made to the Monasteries of Merionethshiro, from which it appeared that one condition was that the prince should be lodged and fed one night in the year at one of the abbeys. Mr. Bloxam showed that the same practice prevailed in England. A paper on the Cross of Llowes, near Пay, was read by Mr. Ernest Martland, and, after some formal business, the proceedings torminated.
The Suffoll and Essex Societies made a joint excursion this yoar in the Falley of the Stour. Manmogtree Station was the piace of assembly, and a good number of the Essex members were members was smaller than usual, the place of meoting being rather difficult of access to some meeting being rather difficult of access to some these excursions. Lord John Fervey, the pre. sident of the Suffolk Institnte, Mr, E. M. Dowing, Bury, the secretary, and other Sufiolk gentlemen were prosent. The Esser division were under the leadership of Mr. H. W. King,
the hon. scoretary to the Essex Society. The the hon. sconetary to the Essex Society. The programme inclnded risits to Lawford, East Lergholt, Dedham, Great Fasham, nem, and Raydon, but it mas fond necessary to lam, and Raydon, but it was foand necessary to
omit the last-namod place. The party having turned to Jiunningtree Station, and there finally separated.

## RAJSGATE,

Tire town surveyor, Mr. Ellice-Clark, C.E., hns just presented a report to the Loonl Bond on the
ventilation of the sewers. It appoars that there are only seven ventilators on soveral miles of sewers, consequently many of the higher sewers are charged with gases. The report says :--"r The immunily hitherto enjoyed in Ramsgate from nuything like contagion sproad by sewer gases is dae to the fact that your town is not jet one quarter sowered ; that the sewers as they exist all deposit , that, in fact, with slicht exceptions, they have been selfocleansing, but that they will continue to be so without rentilation $I$ donht very much." Mr. Ellico.Clark then quotes Mr Latham's experience at Croydon, romarking, "Every word Mr. Latham says of Croydon applies in a singular degrec to our own town and sewers For some years past, in faet, so far as I can lentr been a wide.spread feeling against havine honses cenneted with them; in some instances, I holieve conuected with insen conmented with, the matos houses that have been connected with the mafos beine made to me as to the abominable amell boivin from the sorvers, either in the houses in the streets, through the gully gratings, and I wish the inlabitants to bear in mind that although t?e smell from a grating in the street may appear novions, and bo stopped by trappiogs, the gas asauredly fiud its way out through the wally will asauredly find its way out through the weaker or
al.fective trans in their honses, thongh being d-fective traps in their honses, thonmli being so foul; 'but sewer gas escaping iuto the streets,
combining with immense qnantities of fresh air, is not nearly so iajurious, if it is at all, as when allowed to escapo into the limited atmosphere of our dwellings ; all the organic poisons oan be dilated so as to completely palliate destrnctive effects, but they may ratain all their poisonous can be no reasonable donbt that large quantitios of gases find their way into the houses connected with the Ramsmate sewers unlcss they are well and thoronghly trapped: hence has arisen the disinclination to bave the honses conneeted with the sewers; for I cannot beliove that this dis. inclination has been on the score of cost. While speaking of this disinclination on the part of speaking of this colders to connect with the sowers, probably the idea that sewers were a uscless expense in Ramsgate arises in many instances from the faet of tho town being on a chalk formation, which has a large capacity of absorption, and that foecal matters were thus dispersed ; bnt this is great mistake : nature has been too kind, and yet not kind enoagh to us: doubtless a large quantity of sewage enteriug a eesspool would be alasorbed, but sooner or later tho chalis would
become completely saturated, and in a densely become completely saturated, and in a densely
populated town like Ramsgate the whole of the populated town like Namsgate the whe have become saturated in the same manner. Had we rested on a bed of clay, through which the sewarge could not have percolated an inch, the abomina tion of the eesspool system must have forced itself upon the inhabitants years ago. That prejndice against drainage should be deep-seated in Ramsgate never surprised me, after hearing a medical man, long resident in the town declaring that after using a cesspool for nearly a quarter of a century, when opened it was found empty. This certainly looked as if the absorbing qualities of chalk were equal to anything, and ror some time puzzled me; bat being colled to a house within 50 ft . of the medical gentlemans where a child had receutly died of fever, I found a ecsspool iuside the house withont any covering and fall to within 4 ft , of tho floorina Her was and to withe 4 fle tho tooring. Here was in case, drectly opposed to that of the further astonished me till within a fer days aro whon driving a heading at the rear of both promises, I found the ground near the modical premises, I found the ground near the mon's to be 'made' to a depth of more than 20 ft ., and there wero evidoncos showing that the oontents of his cesspool had found their way into this 'made' ground, while that of the other honse did not. This might also have occurred by the fact of the cosspool being drivon in the line of a fault or fissuro in the chalk (of which there are many in the neighbonrhood), and thus carrying off evers thingentering the cosspool, Cases of this description eoning to the notico of persons wbo either did not care to inquire furthor or were too mach engaged in other snbjects,
would naturally mako them believo that nature would naturally mako them believo that nature lad done everything for the drainage of the that art rras trying to undo it. havo daily experience, however, that clialk ha ay no means such a eapacity for absorbing as is generally imatincd; for there are numbers of cesspools foll and heing omptied every month The peculiar nature of the ontfall, tide-locked as is for several honrs oach day, renders ventila ion a poramount necossity with ns, more espe cially in the lower portions of tho town, where he gases, clisplaced by the intake of the sea water, nust find their way iuto the houses or out at the strect gollies; thongh, the former having much lighter traps, the probability that all accumulations of gas pass hy some moans into the houses either hy defectiva or mall traps, for the mere placing of a syphon rap will not insnve freedom for a honse from gases ontering from the main sewer ; the rush water, when flushing is taling place, fre wo or eren threo ordinary syphon traps on on connexion ... The rentrlators placed in ome few places in this town are complately seless during wet weather, as the charcoal is not protected from the rain, and in hot, dry op with dust. Tho ventilator* I have had fixed fir your inspeetion answers in every respeet the wo requirements of keeping tho clarcoal fre rom dust and water, so that no impedimen offered to rentilation, as there exists a free oommunication between the sewer and tho oxternal atmosphere. I therefore sngrest that
varying from 100 to 200 yards apart throughout he whole of the town and district. I had in ny mind an idea of connecting the sewors with arions chimney-shafts, such as the Granvilie Hotel but my mind is not fully made up as to ho effeacy of such connexions, for the dranght, hns cansed in the sewers might unseal the raps, and thus disarrauge all attempts to disconnect tho sewers from the house connections. I shall, at a futnre opportunity, lay the subject before you, after I have tried a few experiments as to the value of ventilation throngh largo himney-shafts, but at present I deem it unad. visable to do so."

LONDON INTERNATIONAL EXHIBITION OF 1874.
The Exhibition next year will include,-Civi Engineering, Architectural and Bnilding Con. rivances; Sanitary Apparatus, and Construc. ions; Cement and Plaster Work; and Heating hy all Methods and Kiuds of Fuel; and comn. mittees are being formed for the parpose of btaining good representations in these classes. The commissioners are also desirous of promoting the extubition of a collection of painta ngs, dawings, or diagrams of a scenic effect, nd on a large scale of important arehitectural and engineering works, both ancient and modern. They lave invited the Institnte of Architects to assist in carrying out this design, by inducing heir members to contribute representations of some of the more important works which have been executed under their direction.

NOTES OF RESEARCH ON MEN AND MATTERS.
from time to time there have appoared in the itaer papers by seroral writers, - the presen mong the number, -on men and natters, con cerning which very scant materials wero obaintional particulars is the object of the following notes :-

SIR EDWARD LOVET PMERCE, ARCHITECT.
Some months acro, a notice was published ir hase pages of the above overlooked arebitect out with the missing Edward Pierce, the authou a work on Friezes, concerning whom, alsoittle or no information ssemed obtainable. Is hunting through a variety of chaunels, wo came upon a few more scant partionlars of the archi. ect. During the viccroyalty of the Duke oDorset in Troland, who was a good patron to the stace, a new theatre was determined upon in Dublin, the site of which was Longford-street adjoining Anguier street. In the ceremonia attending the lasing of the foundation there was an incident worthy of rotice, inasmuch as the ceremony was not confined to the laying of one stone, but comprised the laying of four. Accord ing to Hitchcock, the anthor of "An Historica: Review of the Trish Stage," published in 1783 "Tho first stome of the now theatre was laid with great pomp and coremony, on Tuesday May 8th, 1733, by the Right Hon. Riohari Tifhe, the second by the Hun. General Napier the third by William Tighe, esq., and the fonrth by the Hon. Sir Edward Lovert Pearce, knt.
Snrvoyor-General of his Majesty's Works in Snrvoyor-General of his Majesty's Works in
Ireland, and Architect of the Parliament House. Ireland, and Architect of the Pariament
It is stated that a prodigious concourse of people attended and each stone was laid with a flourish of trumpets, drums, a band of music, and loud acclamations. Plenty of the choicest wine was provided for the gontry by the managers, and several barrels of alo were given to the popnlace. Under each stone were placed several medals struck for the occasion by Mr. Grimit, Mr. Elring. ton, and Mr. Layfield, managers of the old theatre, and all popnlar notors at the time. Eaet of the gentlemen who laid tho foundition-stones made presents to the workmen, and a sumptuout dinner was provided by tho managers for tha nobility who attonded.

## nationat theatre.

The subject of a national theatre and its esta lishment has been written upon and warmiy arvocated in the Buider, and it is somewher tained hy others, and measmres taken to carry ho idea into execntion, mearly a century and a
ese pages is nearly similar to what we are out to quote from Hiteheock's work already uded to. Speaking of the Anguier-street ore noble or disinterested desion than tha st formed of building and condueting tha gatre. Its principles wore the most liberal dextensive that can he conceived. The plan lat laid down by the subseribers, if properly ve produced tho grandest theatrical constituin in the world, even superior to the boasted an and gentlemen of the friet rank and conse an and gentlemen of the first rank and conseence in tho nation, who, actuated hy the cus of the stage, endeavoured to advance its ercsts, aud fix it on the most permanent and urishing basis, withont the least idea of emolu. ont or return. A committee was chosen from nongst them, a chairman appointed, and ever'y durday they met to appoint plays, distribute ss which unaroidably arises from so great an dertaking. All tho profits and emoluments cruing from the performances, instead of
ing into the purses of private persons, were ely dedicated to the puhlic service. - scheme extended, the best performers who uld be proeured wera to be engaged, pieces of ward, the wardrobes and scenery to be on ged, and evcry deeoration which the hand of ste could point ont to be adopted to adorn the datre. Such were tho outlines of a design ants as Greece or Romo ever exhihited. How rthy of imitation !
Alas ! the grand design was never realised in fiblin or elsowhere, nor is there any indication London, Paris, or Berlin that the nobility or atry in any of these places are willing to subin of the drama, and with it morality and art. is presumable that Sir Edward Lovet Pierce is presumable that Sir Edward Lovet Pierce hongh we are not authoritatively informed at the desigu was his. If he was the arehi. st, he was not so lirppy in his work as in that
the Parliment Ilouse. The architect failed two essentials-heariag and sceing. We are d it required uncommon power of voice to fill ery part of tho house, and that on crowded hhts the greater part of tho peoplo in both
lleries could neither hear nor lleries could neither hear nor see. Sueh
perlition was used in the building of this pedition was used in the building of this 1 months.
Sir Edward Lovet Pieroe died in 1733, the me jear as the thentre was huilt, and,

## tidy anine pierce.

This lady lived for several jears after her sband, at the family residence at Stillorgan,
unty of Dublin. The demesne is now known Obelisk Park, so called from a lofty obelisk, wards of 100 ft . high, erected by Lady Pieree, 17 H , to afford employment to the poor during scareity of that period. The obelisk is
heed on a rustic base, and on either side there need on a rustic base, and on either side there
a double staircase, leading to a platform, a donble staircase, leading to a platform,
hieh encompasses the obelisk. A beantifnl bw of the Bay of Dnblin and the Trish Channel w of the Bay of Dnblu

street dibt, or scatenge.
London at the present time furnishes very the valuahlo seavenge; but fifty years ago and ies was muel souglat after by farmers and arket - gardeners. The various health and ars havo led to vast changes, and our leading oroughfares, at least, aro hetter looked after. nce the adrent of the asphalte pavement horge d cattle "droppings" in the City are specially Ives what the streets of London were 100 ars siuco. One of the authorities of that day, ther, in his "Cardener's Dictionary," writes, jansing of London streets for all stubborn, lyey soils, which will be hetter separated, and mnch less time, with this manure than any
mpost whatever, and it is extremely well mport whatever, and it is extremely well,
orth procuring for corn, grass, or garden land." se ashes of pit coal and the soot of the same al were also recommended for their special lalities, which they are still credited with and
issess, to a certain degree, acording to the ssess, to a certain degre
commatances of their use.

The sweepings of our London streets at present, minus the "droppings," are not of much value to the hasbandman. With other carted to suburban "shoots," ashpit, they are tions for future streets and houses, where land may be had cheap, and dwellicgs are built to sell and to kill.

## A NEW SISTEM OF IRRIGATION.

The Duke of Somerset, Lord Chesham, Sir Henry Montgomery, Sir Erskine Perry, the Hon, Leslio Rathren, and other agriculturists assem. bled recontly at Stoke Park, Bucks, tbe residenee of Mr. E. J. Coleman, for the purpose of witnessing a new system of irrigating pastare-land carried ont by Mr. Brown, a Scotch gentleman. It embraces, first, an increased produetion of grass; and, secondly, an improved and more conomical method of consnmption.
A force-pump worked by a 12-borse power steam-ongine draws water from the ornamental lake, and waters the whole area with jets of "arlifioial rain" squirted from small perferations in lead pipes, which are laid down in parallel lines 16 yards apart. With a pressnre of 60 lb , to 70 lb . per square inch, or a head of 120 or more feet, the engine maintains a shower pon a plot of about an aere and a balf in extent, plot ying 10 tons of water in 15 minutes. And whole is thns irrigated, the work proceeding for the most part in the night, so as to avoid any ill effect upon the lerbage from watering under a hot sun. Six acres, parted off for the present experiment, are watered every night. Mr. Cole. man, reqniring hay, has hitberto used the system cbiefly for promoting the growth of hay crops, and thas the natural leerhage has been injured for grazing purposes. Nevertheless, the appearance of the fryl green aftermath, from which an enormous bulk of hay 3 ft. bigh was taken in one, was surprising when compared with the djaeent gronnd, lying withered and hare on its dry loamy soil. The six-aere portion was dreased then watered.
Here is also being condacted another nove experiment, designed to secure in sheep-grazing system of tethering cows. Two hundred fatting system of tothering cows. Two hundred fattings
sheep (togs of the Leicester and Cheviot cross) are inclosod iu a fold whieh reaches aeross the whole breadth of the fiold, namely, 300 yards, but with only seven yards space between two
rows of hurdies, so that the area oeeupied by the sheep at one time is less than hnif an aere Instand of confiniug the sheep to this plot until it is quite exhausted, and then shifting te another plot of high grass, ns in ordinary folding, ono yard forward at least four times per day Thus the animals have always access to a strip of strong, flesh, sueculent herbage; they never foul their food; they walk and lie only upon What thay have already cropped short; they up into a hiado of grass, or a stem shooting ample roam as a hent, and yet they have down in search of new monthfals or special grasses. To ease the labonr that would other wise attach to this rational proeess, Mr. Brown has constructed a limrdle in the form of a cherans de frise, consisting of a horizontal central bar, with spells or bars at rigtt angles, in cross section like the multiplication sign $x$, each side of the square boing 3 ft . across, and the hnrdle 3 ft , long. Made of Norway fir, these military particularly if creosoted wood wet very dimable the process of shifting hy rolling eaoh hurdle one-fourth of a rotation, or on to its next face, is so easy and expeditiou*, that tho shepher turned by himself 106 linrdles, being a length of 300 yarda, in seven minutes.
The slieep graze hy putting their heads be and after ten drys of or slats of the hurdles, doing exceedingly well. fudeed were evidently oing exceedingly well. Indeed, Lord Chcsham, ho is pre-emineat as a breener and feeder of hese hurdles expressed bis high approval of these hurdles as the rery thines most suitable ten days, about fort The fold had adranced iu moroyped and forty yards, leaving the grass onoropped and untrodden in the portion belind to grow up rapidly under the etimulns of the of the flock. The earliest for a repeated risit of the flock. The earliest eaten grass is already
(in the ten days) a fair sheep bite: and it will bc
ready for refolding long before the expiration of tho fourteen more days which are required to complete the first course, It is affirmed that with "growing weather," always at command by means of tho steam pump, a growtb of half an inch to 1 in . per day can he obtained, and that, with a proper attention to the watering the 6 acres in Stoke Park are able to feed double the present number of sheep, or sixty-six per
acre. At this rate the six acres would carry acre. At this rate the six acres would carry abont 400 sheep for sis months, from April to 40 Oetoher; and the summer stocking bo no less than a flock of 2,600 tegs, shearlings, or other fatting sheep. Without the watering, mannrino and hurdling it would probably be overdone witb $2 G 0$.
Thus upon a tenth part of the area of grass may hitherto required, the supply of mutton times as wonderfally inoreased, leavilit niue aroa nsed for breoding flocks
The estimate reck nocks.
acre; manual labour, 5s, per rent at 30s. per per acre ; acre; eoals, 103 interest and maintenaneo apon permanent plant, maehinery, aud engine-poper, 40a. per acre; in terest and maintenance upon lurdles, 20s. per acre; total, 11l. 5s. per acre, for the season The return is, the keep of 66 sheep for twenty would week, which, at 6d. per head por week Looked at another way, the shoop may reason. ably he expected to make one pound weight of mutton per bead every week for twenty eight weeks ; and this, at say 8l. per pound, will he 18s. Sl. per head for the season, giving,
at Mr. Coleman's rate of stocking, 30l, or at at Mr. Coleman's rate of stocking, 30l., or at
oUr silk manufactures.
TaE last of the reports on the difforent departments of the International Exhibition
yet writton for the Sooiety of Arts is one yet writton for the Sooiety of Arts is one Mr. Franeis Bennoeh. In summing up his ohservations, the writer inquires why it is that as a rnle, the foreign mannfoeturers excel
us in all the higher brnnches of silk facture ? In his opinion the answer is at band We aye as well, wo weave as well, bint, as a rule, the scientific manufacturers of France Germany, and Switzerland have their silks specially reeled in a manner sutitablo for the goods required, whereas in England the mannfacturers are, to a large extent, at tho mercy of importers, brokers, and dealers, who eare littlo for the sueeess of our mannfaetures, so long as they can, without much thought, secnre a profit in their ewn department of the trade. This is a fact so patent to the initiatod, and so disastrons agraingt it, and deny the atatement ; bit it comes withiu the experience of too many to be suecess. fully disputed, and the largest mann facturers in the kiagdom deplore the humiliating faet.'
Mr. Bennoch refers with great satisfaction to Cove works produeed by Mr. Thomas Stevens, of (oventry, and adds, " Mr. Stevens evilently possesses a restless spirit, not easily subdued, he digs ont a new ehannel for himself nud thos he has ereated a trade peeuliarly have taken unusual interest in lis his omn. I hote taken unusual intered in his prodnctions, dueing them, and I find the looms $p$ - Forester's scarf,' as exhibited, 2l yards long and 6 $\frac{1}{4}$ in. wide, reguires the use ef 16,000 perforated cards to make the figure, which is 1 ft .3 in . long, and for the ploin part 14,000 cards, making a total of 30,000 cards. The number of threads in the warp of each scarf is l,S00, and thore are fifteen different colours in tho shntos; these figures are multiplied by the number of pieces being made at once; so
that if ten pieces wote making, 18,000 threads of warp wonld be in the loom. Hence the involved, and, to the nntaained eye, the inex. tricable confusion of threade, as slown in the harness of the loom.
It requires ahout six months to fit up such a nom, and when it and the cards are all ready ocoupies a month to ohtain one complete pattern. Eight pieces are made at once iu tho loom now at work, and with ten hours' labour a yood land will make the length of one scarf anch day. The cost of the lom, the dmft or lesign, the cords, and the valne of sitk in the .00 nj , would make a total ralue of gool.

THE GRIP OF GENIUS OR INTELLEC. TUAL GRASP.
Grasp is tho distinctive characteristic of tho astor-mind; tho antithesis of feeblc, rancorous esidedness ; of rarrowness, littleness, eccen-
city. He who possesses this grand and mas. cful quabity is not unmindful of, wantonly blind mere individual facts; bis vision is neither reted on, nor bounded by, them. Having the ip of genius, le binds isolated traths togethor rmoniously, orderly; extraets from them an
sential form, a feneral ality of intelleet, or the principle. This mind, is diless till it clatcles and holds fast the ruling dimmutable prineiple of the work it is pro. cating; soon discovers what is trivial, acciased by either fashion or prejnclice tual grasp characterises greatness in philo. hy, politics, science, art, poetry, and litera. ; therefore what the mind so gifted carries is for all time.
Gieatness is rare because grasp is rure; it is ine gift of grasp is bestowe upon whom this quently bestowed than we seem willing to nit, it ia becauso we are unacquainted with all t grasp aecomplishes. The greater proporlion tho men of any epoch are too narrowly
gaged in the crowded arena of life eper to am that there is a wider and higher outlook in their there is a wider and higher outlook ich they and their labonts sink into insit. cance, into sueh atomic minuteness as to be rk which has beention and continues to beally admiration of mankind, and unmistakablo dence of this masterful quality of grasp shall cartoous of Paffaelle, tho decorations of the tine Chapel, Newton's "Principin," Shak. are's dramas, "Paradise Lost," \&.c. Beside it appear fragmentary and purposeless, and the admiration only of sects as nerrow and tial in view, or perhaps narrowor and more are taken to be the workers they admire, and nen, for they have their at rentative ptions, receivo and roturn the homage of corn kith and kin in opinion, and dream in eternal rosting.place in the Temple of , but wheren they will havo neither frce. $r$ have not worked upon priaciple, havo aken an aspeet for the grand whole ard metrical trath. Thoy never cluteh the cen. forms, but merely cmphasize the aceidental ime, fashions, opinions, and individualities go their philosophical meanderings, their narrow politics, will sink into oblirion science it during all this futing into oblivion. using of serene intellectual fittlewing, and sometimes happen that one or two men $d$ with mental grasp aro silently working r diffeulties, -men who are scldom seen, or en, are passed without those marks of trition which should be their due in the ral pagcantry and panoply of the time. est, and their fame ripens into a plentiful est, and their fame grows and expands dles, shrinks, slarivels, and decays. These men lay the solid foundations upon which oro discriminating futuro safely builds, tho means of power to or save their eountry; yet, as we have said, they, of all men having attribntes of intellect, shall be the most un. cyed of all observers of their own day. Nay, for centuries, and when tho material value
eir work is fully understood, of the homage which is paid in snceession ose servants of the State who are appointed e comparatively easy task of watching and lating the resulta of the greater men's
ghts. Who now ever thinks importance of the inventions of Watt Stephenson to this conntry? Do we yet ociate the greatness of the few men who vered tho means by which it was alone her own, 一 the mon who, irameasurably ad all others in this century, have con. ted to tho advancoment of civilisation? We hearing, in respect to the memories of our tectaal giants. It was bat yesterday re actaal giants. It was bat yesterday re
that heer removed no one linows whither, and been consirned to neugh well known, has long that the greatness of men of grasp, like Newton hailds its own monument; that marble and bronze aro of no moment to sach men,-are nat required to perpetuate the memory of the truly great. But though public monuments can of trne fame, ther contrihute to the perpetuation and visible signs of a nation's sensibility and the comparativo deartb of public monnmen and our greatest men, whilst they abonnd to lesse benelactors, manifests a defeetive apprcciatio and a low state of civilisation. It is said that Thirtar : it is not said, but you shall discover the you have only to serateh an Enclishman that reveal the barbarim,-to find that he is easily diverted by noise, lond colour, and glitter, - that quantity and ocdity are in bis eyes snperior to quality, -that he is always ready to run and see tho great this or the monstor that, the clwarf and listen tomity, Ho it is who is now readior to or think for himelf. He it is who ponder driven he knows not whither; it is he who, more than any otlier European, is insensible to the alue of intelleetaal grasp.
Mental grasp is an inclimpensable quality to a statesman; in fact, no one deficient in this sense. For a man, no matter wat the true is, or what bis education mar hat his gtation the foresicht which is the bave been, withou intellectual country in deference the imperil or ruin his party, or the vested interests of weal views of a grasp enables a statesman to divine whither pro. ress is inevitably tending, and, without pro. tho helm hard down, to steer wisely, and thus to aroid mutinous revolation and wreck thus to mental grasp which makes the preat. It is which gives tho nower to disearn great genoral, disposition and intent of diseern at once the and weak pointa, and to perceive at strong proper mode of attack, which at onee the organjze, and confident of vietory. it is arosp of intellect in literature, painting. in is grasp which seizes the general form of a subject, and combines all subsidiary elements into one organic and compacted whole. It is nrasp, in faet, which makes any work a work of art. In brief, there is no voeation in which intellectual grasp will not confer mastery. Grasp is power intellectanall as well as physieally, and without lesser spirits precisely knowing what aubtle and compelling influance is working upon them, they are chafed and worred by its manifestation, and ore some times imprudently and rashly impelled to attaek men who possess it, who, if they be vindictive, as they very seldom are, take their opponents, give them one rude shake, and it is all over; but more frequently gentle and merciful, they smile at antagonistic lillipntians, and hand Erer to the tender mereies of posterity. wit of in respeet to the more material pur and trade prinoiplos which olone leads great suecess. Withort intellectual to any pmonit of gold sinks to mere miserly grosp the greed. It is mental to mere miserly grovelling of inquixy which will eventually department to nations thet their bost interests demonstrate with those of mankina interests are identified heviag the Grip nation is Grip of Genius be unheeded, and a it will never and policy, history of the our a mportant place in the trere and decadenco of a power will be transitory. The position $n$ wealth position, and power believe they can do and men of genius. $\qquad$

## NEW GOTHIC OHURCH

FOR THE HIGH PAVEMENT UNITARTAN CONGREGATION, NOTTINGHAN.
Eighty.one sets of designs, from all parts, were sent in 'competition for this churcb. The committee, assisted by Mr. T. H. Wyatt, chose the one by $\mathrm{Mr}^{2}$. Stuant Colman, of Bristol, for adoption, and awarded tho premiums of 752 ., 50l., and 25l. to Messrs. E. T. Robins \& G. F. nd "I Aspire." of London, in the order named. The whole of the designs will remain on view anring rext week, in the large hall of the School
of Art, Nottingham.

PROPOSED RAILWAY EXTENSION AND NEW STREETS IN THE CITY.
As important railway project in the City involving the construction of a now street from and also of eastcheap to Fenchurch.street, street tho wilening of a portion of Fenchnrch and it just been brought before the public sossio intended to apply to Parbiament next proposer fowers to carry out tbe objcot. The as thed railway would complete what is known polita Inner Circle, by connectino the Metro City, and Metropolitan District lines in the Bow,

The proposed line commences by a junc tion with the existing Metropolitan District line at the Mansion Houso station, following the line of Cannon-street to Eastcheap, and thence from Fencorner of Eastcheap to arother point in junction of Ald gate IIigh. whicb it passes to the street, where, by a curved with Leadenhall street, Where, by a curved line, it joins the leading from Aldrate to Metropolitan Company From this point it is contin Bishopsisate-street, Erom this point it is continned underneath the Whitechapel and Mile End road, to the North London Railway at Bow.
The proposed construction of new streets and the widening of otbers form an important element in the undertaling. This portion of the seheme involves, as we have already stated, a
new thoroughfare from the comer of Eastcheap and Fish oreare from the comer of Eastcheap widening of Feench to Fenchurch.street, and the in contimuation by the Cit Cor widening already effected Metropolitan Board of Wers of Sewers and the $1,010,0007$ erpers this portion of the nudertaking in explanation it should here be atated, by way of or pantion, that there are two distinet parties ane almost of the uudertaking, whose ohjects of promoters is ical with each other. One sot Dale, \& Stretton, and Mr. C. Barlis The pro posal of these parties cmbraces the extension to Bow. The other promoters are represento to Sir Edward WFatkin, chairman of the Motropolita Company, who are desirous of aeeomplishing precisely the samo ohjeet as the first-named parves, with the cxception of the extension to pinion Edward Watkin, however, being of by the junction once the circle is completed Bow must naturally follow. One body of promoters proposes that the railway company should make the stroet improvements, and the Metro politan Board of Works and the City anthorities chould contribute part of the cost; whereas tho party represented by Sir Edwayd Watkin uggests that the local authorities should carry way nderneth the right of making the railway lond recent interviey require for stations. But at mitterliamentary Com ir of board of Works on the suhiect ir edware Watkin intimated that if the Board hould think the company ought to pay under the street, the directors wake the railway he ready street, the directors would probably he ready to entertain any proposition to that that the Board ghould make further suggest Bishopsonte.street to Allgate on theet from over the railway
The subject was before the Motropolitan Board of Works last week, when the undertakin appeared to be favourably received, the Boad being strongly in favour of the completion of thard railway circle as a creat conpenience to tho inhabitarts of the East-end. The untter the referted to the Works and General Purpese Committee, with instruction and architect of the Board he instrugneer examine the plans and estime instracted to posed undertaking; but it was suggested that as one of the two rival schemes only conld bo sanctioned, unity of action on the part of the respectivo promoters was desirable. The scheme also appears to be under the consideration of the City Corporation authorities. We under. stand that the necessary plans and documents are being prepared by both bodies of promoters, preparatory to their being denosited in anticina cion of the application to Parliament next probable, and a fusion of the two schemes is will be asted for sanction of Parliament in its integrity which has been fnlly decided upon.

ST. LUKE'S CHURCH, SOUTH KENSINGTON. - Plan.

ST. LUKE'S, SOUTH KENSINGTON

St. Luke's Church, in Redcliffe-square, which was consecrated last week by the Bishop o Lundon, accompanied by a large body of the clergy of his diocese, has been bnilt to supply the spiritual wants of the Redcliffe Estate, a neighbourhood recently created by Messrs. Corbett \& McClymont. The land upon which this church and surrounding buildings have been set up was occupied scarcoly ten years ago as market-gardens. During that time 980 houses of all classes, of rentals varying frous 400l. to 50l. per annnm, have beon erected This has been done by Messrs. Corbett \& McClymont and some few undor tenants. The freeholders of the greater portion of tho estate are Col. Gunter, and bis lurother, Major Gunter.
The site had unfortunately been excavated for brick.earth some years back, and it was found vecessary to take out the loose soil in some places to the depth of 24 ft .; 10 ft . of concrete were thrown in, and piers built connected by brick arches. The whole of the church, with the areption of the tower and spire, in fact stands ppon brick piers. To bring the founda
 ware the architects knew perfectly the atire of the gronnd before com precing the works Tbe second contract wes mong the works. The chure is omenced ia July last year. The mather freely The early Decorated style, treated rather froely Box.ground stone.
The total length of the nave, which is in sir hays, is 102 ft .8 in ; the span is 33 ft . It is 5 j ft . high to tho underside of the ridge, and 31 ft . to the top of the wall-plate. The widtb of the nave, from centre to centre of columns, is 35 ft .4 in , and tbe width of each aisle is $1 \pm \mathrm{ft}$. 3 in .; making a total of 63 ft .10 in . The chancel is 40 ft . in length, and 26 ft . wide, 40 ft .6 in . bigh to the anderside of the ridge, aud $20 \mathrm{ft}, 6 \mathrm{in}$. to wall-plate. The cbancel arch springs at 16 ft .9 in . from floor of nave, rises 16 ft ., and is 22 ft , in apan. The organ is placed a the lower portion of the tower; it is 16 ft . by 16 ft ., and 20 ft .6 in . high. The tower is 67 ft .9 in . to the starting of tbe spire, whicb is 77 ft .7 in ; the stone finial is 4 ft .8 in . high,
the iron termination is 8 ft, giving a total height Peard, \& Co. may be mentioned in connexion The the 23 ft , by 15 ft ., and a with the ironwork; and Messrs. Minton, Hollins of 158 k . The vestry below. by 15 it , and

The columns of the arve-drcade are of Hul ington stone, the shafts being 1 ft .10 in . in diameter, and $6 \mathrm{ft}$.2 in . in height, the total height of each columan, with capital and base omplete, being 9 ft .6 in . On each of these columns there is a bout 45 tons weight, and inas. much as when the stone came upon the ground looked less hard than its strength, and an ments were made to test its strengih, and ab antire shaft, consistigg of three piecos, was subis ected to prossure. 100 tons wis apple haft without causiag it to yield in the slightest degree, and as this was more than double the velght which it would have to bear, no further the building journal. We learn that of latly veight was put pan it, the test being con. spoling bas been dereloped witb rreat rapidity idered was put upo dered sumeient. In this experiment thin slips and has assumed an Thertancend for labour, too of deal were placed between the joints of the provionsly possess. The demand for labour, too haft in lien of the lead whicb is used in situ. in this direction, has been 80 great as to lead td Sitting accommodation is provided at present the importation of southern navvies, wbose or about 1,000 persons, but by a rearrangement services bave been fonnd useful in the conof the seats hereafter many more may be struction of earth-banks, \&c. Witb regard accommodated. The total cost of tbe foundations the relations of capital and labour, though it isil was $1,732 l$, and the contract for the rost of the stated that the labourers seem to have bad work, including the tower and spire, brought things pretty much their own way, and all he total cost of the building up to about 15,800l. Wages have risen proportionately, sell the The spire, it may be mentioned, is sold for results have, for tbe most part, been arrived ome 6 ft , or 8 ft . down, and at 30 ft . from in an amicahle manner, and without recourse be top there is a York landing across. The the costly expedient of a strike. It appears, thickness of the walls at the bottom of the indeed, tbat tbe bnilding trade of Wurtember tower is 3 ft . 9 in . ## RIOUS OUTBREAK OF TYPHOLD FEVER

 in marylebone.try of St. Marylebone previous to the recess Whitmore, tho medical officer of healtb, orted that at the present moment a very ions outbreak of enteric or typhoid fever was valent in the parish, wore particularly in the
vendish-square district. Eendist-square district. Every day, and
vost every hour, for the previous threo or four s, fresh cases of this diseaso bad heen nght to his knowledge, and it was most ortant to trace, without a moment's delay, disease to its sonrees. Suspicion already
nted to a particular cause, hat in order to vert suspicion into proof, the investigation 1 inquiry required would necessarily he of a y extended character. For the satisfaction the Board, and to allay apprehension in the sic mind, he stated that the suspected canse sanitary condition of the houses in which sanitary condition of the houses in which rers. All these had been carefully examina 1 found to be in good condition. In his nion, the source might prohably he found
he many miles from London he many miles from London. At the it, hat he was about to hring the matter nediately under tbo notice of Mr. Simon, the nediately under tbo notice of Mr. Simon, the
dical officer of the Government, who, no dical ofonld afford him that assistance in prose. int, wonld aford him that assistance in prose.
ing the inquiry which the importanco of the ject urgently demanded. The statement duced a deep sensation in the restry, and it
ananimously resolved that their a nanimously resolved that their medical cor of health he authorised to prosecute his
niries without delay, and that the necessary euses incurred be paid hy the Board. The ash sledical Joumal, referring to the out.
, says its canse is still in doubt. Our consporary pnhlishes a Ietter from Dr. Whitmore
on the subject, and says its information throws considerable doubts on tho statement in it that the epidemic is conterminous with a paradds, believes itself to implicatod company, it adds, believes itself to he in possession of infor. mation indicating quite another source of the epidemic. It must at least be remembered rhat
typhoid fever was not long since distiuctly traced typhoid fever was not long since distiuctly traced
from a provincial town to a country farm. house which supplied the infected town hoases with milk.

## MACIINERY FOR MAKING PARQUETRy

 Messrs. S.bubri Worssny \& Co, exhihit at Vienna some machines patented hy them for makilug parquetry flooring. At present the series comprises three machines. The first is a single grooving aud edging machine, for preparing the skips or angular pieces which are to form the squares. The wood to he acted npon is lixod to the tahle, which can be traversed past the cutters, wherehy the operations of groovingand edging are effected. The crooving is per formod by a catter on a vertical hlock; and edrging, in this case, is effected by a revolving cutter with lancet-shaped teeth, somewhat rosembling a circular saw.
The second machine is for performing the same operations, hut is on a larger scale, and so anmod that two operatives may work at the same time. It can also ho used for edging the a sines after they are glued np. In this machine conjunction vertical cutter-block is employed in Wbich the stuff to be operated upon is cramped.

The third and most important machine, and one which attracts notice at the Yienaa Exhi. hition, is the surfacing-machine. After the parquetry square has been edged, grooved, tongued, and put together, it is secured to a poppet head, phitr to front of the face-plate, cuttors, somewhat similar to a plane iron, are held at suitable angles for acting upon the face of the square. These cutters are fixed in slides, which are traversed across the face of the revolving dise by mean of a square thread.screw and bevel gearing.

## A NUT FOR CHLCHESTER.

IF we accept Dr. Darwin's theory, we once were unacquainted with cooking and ablutions,
to say nothing of habiliments and habitations when, hor weter off, we is course of timo, covered our epidermis with the skius of "our poor relations," and garments of vegetahle suhstances, made hahitatious of mine. rals, and, cooked our food and consnmed it under the roofs thereof. We crected cities and lowns, and in them reared churches, theatres, baths, gymnasiums, markets, halls, reservoirs, hospitals, schools, and factories. We did not wash our dirty linen at home, and we sent our oftal and fith miles away from our domicilesat least, some of ns. Wo were very young at first, and know no hetter; hut now that we have grown up, we are conscions of heing hig pirls, and hlush at our former indecencies-at least, most of ns. It is rery doplorahle that we were "in the bering" much hetter than filth at our elbow gntil we are slin retain oni it. To the eye of the stranger passing through Chichester, it appears a clean city; hut his nose knows it is not. He blows it, and he "turns it up," and nevcr dreams of going thore to live: new villas are springing up everywhere away from this city of cesspools, and in it "thero is nothing now under che sua, although, besides the cathedra and re hit of the upon a gravel fat, and the houses East huilt of the largest boulders from this gravel. is thtstreet is a noble one, hut the architccture is that of the country carpenter; in front of the corn-exchange stands a very protontious Doric portico, under which all East.-street and his wife can find shelter from tho rain, which can be the only purpose it was huilt for. The Swan is the greatest ornament to this Oriental thorough. fare; hut, bke the theatre, it has heen meta. morphosed, and "mine host" now administers to the external requirements of his patrons and matrons. The council chamher in Nortb-street is an insignificant building in the Qaeen $A n n e$ style, surmounted hy a lively lion large enough oo stwallow the chamher, town-councillors, and all. There is no free library nor free baths, aud
classes, whicb are the largest class, have been washed since they were weaned. The nearest the city, to whith is a creek, some distance from he city, to which there is a pretty walk, much requented by sighing swains and confiding maidens, across some felds full of lowing kinc. This would be a pleasant walk, and calculated to provoke the tender passion, but for the meandering hrook, which is crossed and recrossed hy the billers and cooers who wander along its sedgy banks. This stream is one of the most polinted, disgusting, and abominable rivulets in England. It is, in fact, a sample of the contents of the Chichester cesspools.*
As may be imagined of such a lagging place, the wages of the great unwashed are scandaously low, and their propensities on a par with heir pay; property is valueless, and there is a lethargic air ahout the inhahitants which indicates that to them to day is just like yestorday and tomorrow will be like today. They will take their shutters down and putthen up acoin, as their benighted ancestors did before thom antil the lion loses his good temper, and swallows up their connoxions in his indignation.

Grrgorier

## CURING ECHOES

We mentioned not long ago that echoes in rooms had heen destroyed hy the introduction of a few wires. There is a very trouhlosome cho in St. John's Chnrch, Limehousc, and an experiment as to the effect of wires has been ried there. The St. John's Chironicle says,--Tt was difficnit to know how and whero to bogin; or the learned, if indeed any one can he said to he learned in this raatter, are not at oll agreed is to the cause of the echo. One authority attrihutes it to the wall, anotber to the roof, Whist a third has no manner of doubt that the echo proceeds from the floor. Under these circumstances we have been ohliged to string up he wires at a veliture, and we began hy stretobing half a dozen, about 6 in . apart, lengthways rom the chancel to the west wall, formine a ort of invisible fence, from pillar to pillar, jusb about the middle hetwoen the nave and tbe aisle. It ssems to be admitted by those who sit in the aisle tbat tuis arrangement, so far as they are concerned, has had a heneficial effect. Indeed, some who were not aware that the wires had heen put np, said that they perceived a marked improvement as soon as the reader began to say the prayers. But these wires made no differ. ence to those who sat in the nave. Accordingly other wires have been stretched from north to south across the nave, but with no perceptiblo result. Further experiments, howevor, will he tried; and the results will be recorded for the benefit of clergrmen or charchwardens who may he troubled with echoes in their own churches.
tife mural patntings in mempley CHURCH.
Last antumn an interesting discovery of mural paintings was made in the Church of Kempleg, a small village in the diocese of Gloncester and Bristol. The church itself, says the these paintings, is an giving an account of these paintings, is an extremely interesting specimen of Norman architecture. It had under gone, like most of our ancient churches, periods of "heantifying," in the style common enough in the last 200 or 300 years,-whitewashing On removing the several layers of this useful but scarcoly ornamental, material, colour was found. This encouraged careful and persevering efforts on the part of the Rev. Mr. Drammond, which havo resulted in the uncovering of wall paintings, alnost, if not quite, nnique in this country. The chancel is wagon-roofed. The ceiling of this, as well as the walls, were covered with paintings both of fignres and ornamenta designs. Tho general subject is the worship of Heaven. On the ceiling is a large figare of our Saviour, surrounded by the various suhjects as descrihed in Revelations iv. 4,-Seraphim, th four living creatures, cmhlems of the Evangelist, seven candlesticks as the Spirit of God, the sum the moon, and stars, a figure of St. Peter, and opposite one of the Blessed Virgin. Beneath, on the walls, are the twelve Apostles, six on either side, seated on thrones, pazing upwards to the Saviour, with hands ontstretched in attitudes of
*The Priory inclosure is a redeeming fenture; but
boing supported by subscribers instead of rates, it is boing supported by subscribers instead of rates, it is
tabooed to be horny-handed as much as if they were still
ecstacy and adoration. On the east wall is a figure of a bishop, in eucharistic vestments, in the uct of blessing. There are also other figares of equal size and interest, which are not easy to explain. The nave has been equally adorned; ont more attention had been given to the wbitewashing, whicb adhered so closely that the prowashing, whicb of scraping was more difficult, and attended with less satisfactory results. In the splay of one windor, howover, which had been blocked up, a capital snbjeci was revealed, -on one side, the A a rchangel, weighing a soul for judgment; on the other, the figure of St. Antony. The date of these paintings has been fixed by com petent authorities as not later than towards tbe ond of the twelfth century. They have been photograpbed by Mr. Abralam Thomas, of College-green, Gloucester.

THE EAST LONDON RAILWAY EXTENSIONS, AND TEE VALUE OF LAND IREQUIRED FOR THE WORKS.
Ir transpired at the half-yearly meeting of the East London Railway Company that the price demanded for the land required by the Company for the execution of their new works now in progress at the Whitechapel, is enormously high, and in many cases unreasouable, as the arbitra tion awards have proved. During the last six months the directors bave been giving grea attention to the purcbase of land, In one 3nstance, six persons asked 12,000 ., and the lodged 5,800l, in eonrt, and on the oase going to arbitration a still smaller sum was awarded. In another case twenty persons claimed 28,0001 . and ultimately the whole was settled for 14,000l But the most remarkablo case was one where tbe owner in the first instance claimed $4,000 \mathrm{l}$. for his Iand, which he afterwards rednced to 2,0002., but the Company still thinking it was far above its value, the case was sent before a jury, when a verdict for $25 t$. was given as the ralue of th land.

## GUPPLYING BUILDERS WITH TRACINGS

## professtonal inquiries.

"B.'s" answer (p. 63-1) to "A.'s" question (p. 590 ) might be accepted as it stands, and still supply no very practical guidance. "A." set of dravines and specification, is the archite justified in making an extra charge for the same, and notifying the same on tho bills of quantities ?" " 13. " stiys, if tho builder requires these the architect had hetter supply them, and of conrse ought to charge for them. But the question as it stands appears rather to be: (1) Is an architect, snpplying the bills of quantities himself, entitled to conclude that the builder wil want a second set, and provide payment for
himself in the quantities? I think that the himself in the quantities? I think that the General voice of the hest part of the profession would answer that he is not to do this ; certainly not without special authority from his client. In the case (2) where a builder having obtained a contract hy competition tendering on quan. tities, applies to the architect for copies (say for use in his shops and office), circnmstances monst guide as to the answer. It is clearly a service rendered to the builder, for which he
will have to pay directly and finally, not re. will have to pay directly and finally, not re is one of his expenses in carryinc out the work -on the sane footing as his time-shcets an other stationery, his own travelling expenses and so on. If the architect has reason t believe that the builder looks on the work as a sop,-a little piece of work made to do the architect $a$ serviee, -he will be entitled to fee some resentment, and (if he does without heroics) he can decline work tbat his pressing business does not allow him to undertake. If the application is made in all honesty, I think he should arrange the charge, then tell his client, and get his approval. The character of the drawings will be often the best guide tho architect's judgment will tell him how far it is difficult for a builder in active business to get the services of a competent tracer of right lined plans and sections;-anytbing with much art-character abont it will he on a different footing. Most Londou huilding firms have in tbeir own office tbe means of producing all ordinary tracings; or cau get them dono quickly and
fimes when they will be glad to have this help rom the architect. And this will apply still more strongly
uiders.
Tbe client should be told everything. To be completely caudid, I may add tbat it will generally be well for the architect to charge ittle if any more than the cost of bis clerks' time. He should consider that he gets bis main profit on the transaction in the more complete fllowing of his instructions in the execated work.

## IACADAMIZED ROADS AND THE

 STEAM-ROLLERTuF making and repair of these roads is a subject of increased importance, throngh the great increase of traffic abont the snbuibs, \&c. The use of the steam-roller does not appear to tend to their durability, altbougb most desirable to produce a good surface with despatch. The mistake seems to mo to be tbis,-the hoggin is merely tbrown on the top of the broken granite, instead of being thoroughly mixed np with it like concrete, before the roller goes over; the bits of stone are jammed together for a time, bont the interstices are not filled up, and the traffic a few weeks loosens the body of it, causing parts to sink down in hollows. The slushing withwater at the time to wash in the hoggin tends, no donbt, to soften the foundation.
A. OFPIChat Looher-on.

## THE SURPLUS LANDS

OF THE OEATHAM AND DOVER AND METROPOLITAN COMPANIES.

AT the balf yearly meeting of the London, Chatbam, and Dover Company, held last week the charman stated that sales to the extent of 450,000 . had been effected since the award of Lords Cairns and Salisbnry, and that the debt pon what remained, of the valne of 1 lo,000., $1.10,0001$ to meet so,0002. ; bit, owing to the increased cost of building materials and labour, it was not so easy to find purchasers as formerly and the Board of Trade had extended the time of sale for twelve months longer:
At the meeting of the Metropolitan Compan twas stated that the letting of unocenpied, and the sale of smrplus, property had proceeded satisfactorily during the half.year, and that the company had let property on lease and under agreement, including a portion of the surplus and, to the Great Northern Company, aud also treet, to the sidind dompons for a ultimate rental and payment of toll of $16,634$. per annum.

ST. PAUL'S AND THE LIGHTNING.
Anthorge much had been done to protect St. Paul's Cathedral, recent examination showed Upon it was in a very daugerous condition. Upon the report of Mr. John Faulkner, Associate of Telegraph Engiueers, of Manchester, the authorities commissioned him to prepare a plan for the fitting of the cathedral with an efficieut system of conductors. The plan submitted nas approved, and the fitting is now completed. In metallic connexion, witb cross and ball, and scrolls, are eight copper couductors, each being a half-inch strand of copper wires. The octagonal strand has been adopted as giving most motal in tbe least space. These eight conductors tben pass to tbe metallic railing of the Golden Gallery, with which they are in metallic connexion. Tbence tbey are carried down to the dome, to the metallic surface of which they are again connected at seve. ral portions of their length. Then down the rainfalls, over the leaden roofs of the aisles, in the anglos formed by the aisles themselves; again down the rainfalls to the sewers. Further the choir and nave roofs are connected together by a saddle or conductor stretching over them botb and joined to the condactorsproceediner from the summit of the West Towers. Eren this, it is said, did not satisfy Mr. Faullener, who tested sheet by sheet, the electrical condition leads connecting the worse insulated sheets by copper bands to the better conducting surfaces Thus the dome, aisle roofs, and ball and cross, and the doo, metallic conductor, and the damen interior gas-piping is removed; for it is proved
that electricity accumulates upon the surf only of bodies. In the sewers, wbich alm afford a moist earth conuexion, the copper stra are riveted to copper plates, and these again pegged into the earth. By this means as $g$ an earth connexion is obtained at the top of cross, at the very eummit of the onthedral, at found in tbe seprers at its base. The misfort is that if another electriciau wore sent norrow to report on the condition of the cat dral, he would, doubtless, show that it was weak points. However, we must trust Mr. Faulkuer, who seems to have gone into subject very carofully.

A LARGE NETV COAL AND GOODS STATION AT WANDSWORTH.
Tee Midland Railway have this week oper a very extensive coal-station at Wandswor which they have constructed on a plot of 1 a four acres in extent, running along the east 8 of the London, Chatham, and Dover Railw near tbe TFandsworth.road atation. The la on whicb the coal. depot has been formed is a siderably below tho Chatbam and Dover R way level, and it has been connected with t latter by means of a single line on a descendi gradient, which leares the Chatham and Don line between the York road and Wandswor road stations. This line reaches the love level tho ooal-depot abont 200 yards from its leavi tbo main line, and from this point a netwo of rails, each about 700 ft . in length, radi right and left from the connecting. line, and carried in the drection of Wandsworth-ro Tbele are altogether six of these lines for com-wagons and trafic, in addition to a sever line between them, carried the wholo lencth the depot, and intended solely for the work of a travelling crane to facilitate tbe dischas of the coal.
Tho intended new worlis of the Company h will be carried considerably beyond the on station which has just boen completed. T Company have parchased altogether ten acres land in the locality, and six acres of this spa which lie immediately to tbe castward of t coal-depót, are inteuded as the site of a Io merehandise station which is immediately to erected. On a considerablo portion of this large warehouses and ofer toreth extensire sheds are to area being corered witb lines of rails for working of goods.trains.

## REOPENTNG OF BANGOR CATMEDRA

 AFTER undergoing a partid robuilding a restoration, a work when her occupiod near geven years in completiou, Bangor Cathedral h been formally reopened for Divino service. The work of restoration has been carried from the designs of Sil- G. Gilbert Scott, R.A who presented a report, whicb was adoptod, at public meeting convened in 1866 by the De and Cbapter, for concerting zooasures for t] restoration and improvement of the cathedra Sir Gilbert estimated the whole cost of the wo at 25,0001 ., towards wbich upwards of 22,000 havo heen contributed.The original structure was, with the exceptio of Llandaff Cathedral, the oldest in Wales, havi been erected about the year 550 . In 1071 it wa destroyed by the insnrgent Saxons, and th edifice was rcbuit in 12m. In 1102 it was agna rednced to rnins by Owen Glyndwr, and nothin was done towards its restoration for nearly century, when Bisuop Dean undertook the hailding of tbecboir. In 1532 Bishop Skeffingto revived the work and rebuilt the tower an nave. Subsequent alterations wero made i later years, bnt they were 80 completely ont harmony with the rest of the huildiur that character as an old church structure was alma effaced. By the process of iuvestigation and th application of each discovered detail, whereve possible, to its original position, Sir Gilbert Scot was enabled to discorer meorly the entire desio of the transept as erected in the days Edward 1. Many green encaustic tiles wer found in the chancel green encaustic tiles we levels of the sanctury at three points, an levels of at three points, and towards the to ha
The first step determined upon by the restora committee was the reconstrnction of th dilapidated transepts, with so much of the tow dilapidated transepts, wine the ridic of the roof (tho remair
portion, with the spire, having to ho post. din consequence of the want of funds), and restoration of the choir, and the chapter lings. This thoy have been ahle to accom, with the exception of the chepter buildings. total cost of theso portions of the work is ards of $20,000 \mathrm{l}$. In addition to a donation 0002 . to the general fund, Lord Penrhyn yyed the cost of the docoration of the roof walls of the choir, togother with two stained. gh as the elhows, with ono canopy on each gh as the elhows, with ono canopy on each
at a total expense of $2,865 l$. The floors heen paved with encanstic tiles, after the heen paved with encanstic tiles, after the
arn of those found during the excavation an of those found during the excavation; a new organ has hoen built which will cost emains to ho done. The chaptor buildings, nave, chapel, tower, and spiro, have to be
r restored or reconstructed, and npwards of r restored or reconstructed, and
12. are required for these objects.

THE MEN IN THE SEWERS.
IE inquest on the two poor fellows whowero nod in a sewor in Beanfort-street, Chelsea, ig the sudden storm on Tuesday, Augrust 5, cod ohsorvations censuring tho foreman 10 contractors. This rolates to sewors in ght of the miles of sewers under the care of h surveyors, who took no steps whatevel to the hundreds of sower-mon groping about Y, and far from "man-holcs," and who Inot foresee the dangerous storm appronch It is a "God's proridence" that men were drowned in overy parish; scores had not to pick np their tools; and at Dalwich one rman had to swim for his lifo.
uld not some step he taken to warm mon in dangerous position of approaching storms - the floods rash down upon them in the $\mathrm{s}^{\prime \prime}$ it did on Tuesday? Surveyors may not all jurymen so easy as the Chelsea ones.

RALLYAYS IN GERMANY.
TENTION is called hy tho British consul intzig to the large increase of late in ay communications thronghout Germauy, th has materially contributed to the de.
ment of trade. The construction of rail. in the country has heen very active ig late years, and still oontinues to be so, in immense amonnt of capital is employed 40 work. As an interestiog fact, showing idvance which bas heen made in Germany ioned that in the year IS55 Germany had 7,826 kilometres of railway ; in 1865, she had 0 kilometres; aud at the oud of 187 I the nt was 20,980 kilometres, thus showing a important increnso. It is also pointed ont Brunn (the largest manufacturing town in ia), Prague, and Lensberg have more
bourse with the Hanse Towns than with te, and when the railway which is heing to, and when tho railway which is heing hau iu Central Hungary is finished, Breslan aua central Eungry is finished, Breslau 's of Hungary than Triosto, and though au is not a seaport, its facility of com. au is not a seaport, its facility of com.
kation with England is very considerahle.

## WORK AT TOME AND ABROAD

,--In a recent numher you have an account work is hastily constructed in Amorican A workman a few days sinee hy chance gland a fair plumher, having saved 100 l . or rat to America in the hope of hettering his on. He found the methods of execnting 4 in his trade so different (and probahly the after spending what he was accustomed to toring in search of work and maintaining dilf in idlouess, he retnmed in despair. a 1 yon permit me to snggest that a com. Bn of the methods of executing details 0 ng of various ceuntries from some of your pondents would he just now of the highest
ist, and possibly of mnch value ? tplumhing, I know the spirit blow-pipe is Won the Continent largely, where the English nen must lose time in preparing the
hrous large fire for heating tools required, rpous for making one pipe joint.

VEGETATION ON STONE FLAGS.
Your noto (p. xi. of the last numher) as to the water omployed for hoiling potatoes oalled to mind another nse to which that liquid has been put. Pour some of it on stone flags every day for abont a fortnight, and they will essume their original colour, thongh the vegetation may
have seemod very strong. This information I had from a very worthy lady who had directed the application many times with success; hut I think it would he as well if any of your readers, who are tempted to direct this remedy to he tried, wonld let us also know their experionce. One is inclined also to suggest that the "Stone Broth" of excellent fahles may perhaps here he paralleled. Does the virtue procesd from the earth-apples, or would simple boiling water have the same effect?

## LOCAL BOARD SURVEYORSEIPS

Str, - A so.called election has just taken place for the Asten (near Birmingham) snrveyorship. There were sisty-six candidates in ansiver to the advertisement of the Board, and after giviug
these the trouble (to say nothing of the expense) these the trouble (to say nothing of the expense) of getting up testimonials, which would prohahly numher say six each, making 396 , lialf of which
would, perhaps, ho written specialy, the Board woald, perhaps, ho written specially, the Board
have elocted tho former surveror. Is not thi have elocted tho former surveyor. Is not this
sort of thing a farce? After a certain timo hoth Board and surveyor must be re-elected. The clerk to the Board advertises for a surveyor, and consequently numbers of persons apply thinking it a dond fide appointment, when the fact is there is not a shadow of a chance for them. I think so many were generally known there would not he situations, as it is only waste of time and can servo no purpeso.

A Candipate.

## MASTERS AND MEN.

Sin,-Onr joiners having been on strike a weele, and 80mo or the daily ptapers conveying a wrong impression, The men are striking for what no other employers in
London give, viz., 9id. per hour. We are willing to pay London give, viz., 9id. per hour. We are willing to pay
gi, the trade rate, and as we obtain the bulk of our coniractors, , yon will at onco oce the great injustico of the
olaim; but we pleased to say that our shops are filliag,

NETV METHODS FOR THE SEARCH OF SPRINGS OF WATER.
Sir, - A fow months ago you wcre kind enough to insert
in your faluable journat n letter of mine in which I gave some detaild about certain modern methods now mos successiny resorted to on the Continent, to ascertaiu in water-bearing stratn.
Siuce theu, I have received from all parts of Epgland a
number of letters requesting me to number of letters requesting me to pive further purti
culars, thereby illustratiag to me the interest which the public take in the mattiariag to mowe the interest which the question bing
one in which I myself take great interest, and to which have paid fur years considerable atterention, and to whill End
natural that $\mathbf{I}$ Hhould be particularly ansious, inde natural that I should be particularly ansious, -indo
pendently of any pecuniary object, - ot make it as popolar AB possible, especoilly through its pratical resullis.
Haviug now some spare time at my disposal, I beg to offer Hiviug now some spare time al my disposal, I beg to offer
this to the publhc. Should ayy owner of land or property
insuflicienty of my experieuce for turvering his land in tearch or foource of my experieuce for turveying his land in gearch or ource
of wr ter supply, I affer my pervices gratitutowsly, reqnest ang only that the results oliould be made as widely know as May I add
add that the methods to which I refer are now
tested. In Franee and Algerib, as can be proved by official documents, thousands of fountains and Wells haye beea successfully dug where previously mos
inconvenient scarcity of water prevailed.
L. Journ'Hur.

THE LATE MR. THOS. PIPER.
We cannot allow the announcement of the express of Br. Thos. Piper to pass without an regret. He had been a manager of the great Institution for many years, and in 1867, after he had left husiness, as a huilder, hon. secretary, on the retirement of Sir W. Tite He held the position of surceyor to the North Britiah and Foreign Mercantile Insurauce Cont pany. He was also hon. secretary to the Builders Society, and took an aclive interest in many other institutions. Mr. Piper was one of the earliest and most active momhers of the Builders' Benevolent Institution: he was a good speaker and a clever man, and it might not he unin. structive, if it were practicahle, to examive into the roasons why he did not, like some of his contemporaries, make a large fortune as a con-
tractor. We highly esteemed In. Thos. Piper.

SCIEJCE AND ART DEPARTMENT.
Tнв examination of students' morks frem ight-classes for drawing, and from schools of art, suhmitted in competition for payments and prizes, has just boen concluded.
From 402 night.classes 76,943 works have heon received. From 124 achools of art 93,672 works have heen receiped, making a grand total of 170,6I5 drawings, models, or paintings which avo been exeonted in the classes during the yoar ending in April last. This is an increase over 1872 of $4.1,366$ warks.
"Theso works were first submitted to a preliminary examination, those of each achool being taken separately grade prizes, and at the same time selected from the mass
1,480 of the best and most adranced works for refarence of all the Schonls of Art th, which is open to the student of all the Schools of Art throughout the kingdom, On the rasult of this competition, toa gold, thirty-two to ether writh a number of prizes of books.
The prize-works of this competition, tog

the ground floor of the South the ground floor of the South Kensington Maryenm, where they will remsin open to the inspection of persons
intereated in Art edueation, and the publio, until Sop.
tember."

## Re EENSINGTON GARDENS.

Str, -May I he permitted, through the medium of your influential columns, te call the attention of the "powers that he" to the dilapidated statc of the engine.hohse at the head of the Serpentine. This building illustrated in your pagcs at the time of its erection, is, or rather was, covered with ornamental tiles, which, when perfect, had a very pretty and suitable appear ance; but they are now broken and off in all directions, and the roof is patched with tiles of various shapes and colours, giving the bnilding a most poperty.stricken appearance. If the Government cannot afford to have a supply of these tiles mannfactured (I helieve they are not now in the market, thongh there are plenty of people who could make them), I would suggest that, for decency's sake, the roof should he stripped, repaired, and covered with tiles of a suitable, hat less uncommon, pattern hefore the timhers get too rotten, to prevent the whole falling into untimely decay.
T. C. S.

## THE TRADES BOVEMENT.

Lombon,-On the day upon which, in accord. ance with the resolutions adopted at the meotin of master huilders on the 18th of July last, the adranced rate of wages-from $8 \frac{1}{2}$ d. to 9 d , per hour,-was to be paid to the building operatives, cousiderahle excitcmont prevailed amongst the men, it having heen very generally rumoured daring the week that several of the large firms intended refusing the payment of the $\frac{1}{} \mathrm{~d}$. per hour advanco, upon tho ground that no agree-
ment had heen signed to that effect, hut that the ment had heeu signed to that effect, hut that the matter had only taken the form of a recom. mendatory resolution, carried hy a simple majority. The masons' committee sat at the Pariors' Arms, Westminster, for tho parpose of receiving roports from tho men as to the action of the employers, hat np te a lato hour on the same cveuing it was found that, with a few exceptious, the employers had aded up to the spirit of the resolution, and paid the $9 d$, per hour. The carpenters and joiners held a delegate meeting at tho Brown Bear, Bloomshury Upon giving in their reports, it was found that the advance had heen very generally given hy the cmployers, but that some firms, including tho large estahlishments of Messrs. Farmer \& Brindley, Westminster-road, and Mr. Robinson's, Rockingham Works, New Keut-road, had refused to pay any advance, and that in these two firms the carpenters, to the numher of ahont 100 , had struck work. From many shops no report was given in. In a discussion which ensued, it appeared that the men in the employ of Earmen 5 Brindley were chiefly employed on church anu ecelesiastical work, requiring great care and skill, and that in cousequence their warges had always heen in advance of those generally paid on trade, some of the men receining $8 \frac{9}{3} \mathrm{~d}$. per hour, others 9 . and gid. per hoar. The firm declined to give the $\frac{1}{2}$. adrance upon these prices, but stated their willivgness to pay the Sd. per hour all round in accordance with the terms of the masters resolution. This offer the men refused, claiming the $\frac{1}{2} d$. per hour advance on their existing rate of wages, contending that reir work than the standard rate of wages hefore the advance, they had a right to participate in the full advance which
had taken place. This heing refused, the men to tho numher of ahout fifty, struck work. In the case of Mr. Robinson, of Rockingham Works adrance, and tho action of the meu in leaving their cmploy was approved, and notices ware ordered to he issued to the trade cautioning men from applying for work at the firm. men from applying for work at the firm-
A largely.attended meeting of bnilders' lahourers A largely-attended meeting of bnidders lahourers
has been held in Trafalgar-square, Mr. Halloran occupying the chail. The chairman said the occupying the chail. The chairman said the ohject of the mecting was to ohtain for the lahourers employed in the huilding trade a smal adrance npon their present low rate of mages which were now od. and sid. per hour. skilled men in the trade, by nnion, had ohtained an adrance of $\frac{2}{2} d$. per hour, and he thought the lahourers were quite justified in desiring to participate in that adrantage. The pleas put forth by the skilled men for au advance of clothing. The lahourers put forth the same plea. Mr. John Konny, the Secretary of the Lahourers' Union, read the correspondence which had passed between the committee of the union and the committee of tho master hnilders, in which the latter declined to entertain the memorial of the inen for an adrance from $5 \frac{1}{2} d$. to 6d. per hour before Mrarch noxt. He proceeded to complain in strong terms of the manner in which they had been treated by the employers, and eaid that if the men wanted justice done to them, they must, like the masons and the men in other branches, act togethor in union. Several labourers then aldressed the meeting, and a resolution was unanimously adopted, and ordcred to be sent to the employers, to the effect that unless 6 d . per honr was con. ceded to the men on Saturday, the 16 th inst., teps wonld he taken to enforce the same in all he firms where it was refused.
The Trade Outrage at Gorton.- James Scholes, 33, Thomas Coady, 28, and Joseph Edwards, 22, were indicted at the Sonth Lencoshire Assizes or hering, at Gorton, on the 10th of May last wilfully destroyed 40,000 unbaked bricte the roperty of Georce Forster The domare amounted to 20l. We need not enter into the mounted to 20 \% We need not enter into the particulars, hut shall merely state that the jury, guilty against Coady and Edwards, and acquitted Scholes, who was discbarged. Sentence was deferred.

FROM IRELAND.
Opening of St. Patrick's (P.C.) Cathodral, 4 magh.-The New Roman Catholic cathedral of St. Patrick, at Armarh, which has heen some thirty pears in course of erection, and has a) ready cost ahout $50,000 \mathrm{l}$, is now so far com. pleted that its solemn dedication and opening have heen fixed for Sunday, the 24th of the present month.
Consecration of Bollynafeigh Church, Belfast.-
The new ohurch at Ballynafeigh The new church at Ballynafeigh has been erected, according to the Belfast Newstetter, within half a dozen years, hy the liberality
of churchmen in Belfast and neighourhood. The parish of St. Jude, Ballynafeigh, is new one, taken ont of the mother parish of Knockhreda. A free site was given hy a parishioner, Mr. Fitzpatrick, and the late Ecclesiastical Commissioners gave a grant of $600 \%$, several friends also liherally contribated, the result heing the erection of a clonrch at a cost of nearly 3,000 ., and capahle of holding 100 persons. The architect is Mr. Thomas Drew.

## DISSENTING CHURCH-BUILDING NEWS.

Hillmorton.-The Wesleyan Methodists in this village, baving secured a site in a conveniently. sitnated field, obtained plans from Mr. Enoch Underwood and Mr. Tom Walton, for the erec. tion of a plain, but commodious ohapel, with school.room attaohed, and Mr. Rathbone, the builder, made such progress with the foundations and walls that the laying of several memorial stones has taken place. The estimated cost of the chapel and school-room is 3302 .
Brampton.-A. Congregational chnroh has jnst now heen erected and opened in the populous district of Brarppton, near Chesterfield, at a cost of abont $1,500 l$. The chapel is intended to accommodate 300 persons. Mr. Kent is the architect; Mr. Heath, the builder; and Mr. Marsden, clerk of the works.

Orey the Dovrefjelids. By S. Shepard. With illustrations. H. S. King \& Co., Cornbill and Patcrnoster.row. 1873.
How to take a month's ran through Norway Fith a 20 l, note in the pocket, the pnrpose of this volume is to show; and it doos so pleasantly, smoothing the way for a trip mnch more easily aken than many suppose.
While at Drontheim, or Trondhjem, the state of the eathedral attracted the anthor's attention. "At present," he remarks, "hetter days soem o be datring for it, the direction of the work having recently heen placed under a young and ising architect, - Herr Christie, of Christiauia, escendant of a Scotch family, who, if we may judge from what has already been accomplished ider his supervision, is the right man in the restore the hirh choir have now commenced to for this purpose erected all ronnd the has been a series of stages. The most complete wreck of all are the nave and west front, the walls of hich alone remain, kept up by many hute brick buttresses.

Hambonk of Sewage Utilisation
By Ulick Ralph Burie, M.A., Barrister-at.Law. Second edition, revised and enlarged. Loudon: Spon Charing-crose
A Considerable amonnt of new matter has heen added to the first edition of this compilation, the creat portion of scoms to be appreciated. great portion of tho information contained in jt has heen collected from the Reports presented to Pariament by various Commissions since 1858 To a certain extent, this is an epitome of much that has already heen writton on the suhject of which it treats. The author thus sums up, in conctusion, as to the system or combination of systems which ae thinks onght to he preferred:As a general rule we would recommend the adoption of a system of prccipitation on General Scott's process, in combination with a system of irrigation in places whore tho natural circnm-stances,-a proper fall, suitable land, \&c.,- are tion. The moro ne adds], the more apparent rill it be that the rrue secret of success is to he found in Combina tion."

Treatise on the Setting Out of Railway Curves with fult Tables ơc. By David Livingstox, C.E. London and New York: Spon.

The most part of this volume is filled with tables of the angles, distances, and offsets in feed, speeially arranged for measurements uso in and imperial links, hat also adapted for were pay other unit of measnrement. They use in epared for tho authors own practical rgged tract of conntry and he helieves them to be of more practical ntility than any known to him as having previously been published Prefixed is an account of those methods of ranging railway curves for use in which the tables were more particularly compiled.

## YARIORCM.

The Garlener's Magazine has a few observa tiens on "Propagating Epergreens," which may be nsefnl to some of our readers :-"Now is th time to make stock of evergreens, and the hest way is to make up frames and hoxes in shady ont.of.tho way places, where the cuttings may bo allowed to romain twelve months at least and the slowest of them, such as hollies, two years. Old framos that are past all ordinary uses will do; hut there are no contrivances fur this purpose so well adapted for small gardons as Reudle's propagators. A few inches of sandy soil, the hox fittud over it, and the glass and bar heing ready, the rest is simple work enougb. seas cuttings should consist of wood of the season 3 in , to 6 in . long; the lower leaves minst he removed, and they mist be dibhed in closo Give them $a t h e r$ deep, and made quite firm. close, and for the rest of the season them up once a week to give water if needfok at them them np close as soon es that is done. ane shat hest paying things bere for this. pratiotwo variegated bollies, variereted enonymus, and are better kinds of lirustram and 0smand the Coarser things may be moltinlied in thanthus, way. We trust to seeds and payer the same want aucnbas; of common herberis self.sowt seedlings appear in plenty.

## Miscellanea.

Acciclents. - The hodies of the si huried alive by the accidental falling in of at the works of the East London Railway pany, lapping, had not heen recovere and others, in the removal of the hind and others, in the removal of the hund hodies. The cause of the disaster is sa to have heon the shifting of the sand formed the suhstratum whero tho enrth way. If the accidont had occurred $t$ four hours later, sisty or sevonty lives mevitably havo heen lost, as arrangemen been malo for nnmher of hricklayer to work at six the next moraing at the where the accident took place,-Dr, D has held an inquest at Cheisea, on the bod two "navries," who were killed in a son Duke-street. The men were at work in
sewer during a heary storm of rain, and in sewer during a heary storm of rain, and in sequence of the great flow of water they rowned before they had timo or warmi effect their escape. The ontlet into the it appeared from the plan, was smaller tha sewer itself. The foreman of the jury th there should ho more "man-holes" in sewer. The j

## Proposed Covering in of the Fidini

 Vegretable Market.-Tho Lord Provost's council the resolved to reconmend to the councin carrying out of a schem ith ing in Vegela Market, in accor the the gardeners the market that they should bo provided tho shelter from the weather. Accord tho plan, prepared by Mr. R. Morham, jun. city superintendent, it is proposed to cov the area with a tat platform, which would the form of a promenade on the level of Pr street. The surface of this platform is posed to be formed of asplalte pavinc, oa upon concrete arches, which again would upon a system of iron beams and main gir crossing the space in two spaes, and supp in the centre hy a range of iron column series of wells, six in aumber, with glazed and glass roof in the hottom of each, afford light to the interior, and these aper in the platiform could at the same time be $t$ to account for ornamental parposes. In to raise the estimated cost ( 23,0002 .) it wil necessary to obtain Parliamentary sanctionThe Adulteration of Food, \&c., Act. Westminster Board have received a report their Street-cleansing and Sanitary Comm persons for selling ad been taken against heavy penalty was imposed in each case. have satisfaction in stating that samples of b and heer have heen analysed during the month, and found unadulterated. They the tale steps already taken will tend to sec it was contemplated hy the Adulteration of $F$ Act the penalties should ho pid to listrict boards, yet, under the Police Court the magistrate decided that the penaltion The the receiver of the metropolitan po The question has been mooted in the Hou Commions by Mr. W. H. Smith, M.P. ; and oommittee suhmit a letter received from offering to take the necessary steps to endea to effoct an alteration of the existing law in next session. The committee recommen that the solicitor (Br. Warrington Rog place himself in communication with Mr. Sm and move in the matter accordingly
Newenstle Society of Antiquaries. the monthly mecting of the Newcastle Soci of Antiquaries, held in the Old Castle, Mr. J Clayton presidino, a present was received fr ir Walter. $C$ Trepelyan of the series of volu pablished hy the Archrological Institute Rome. These volumes contain papers elucidat some of the iuscriptions helonging to the No f Encland. Two papers were read hy alph Carr-Ellison, elncidatory of the name he deities Nociticus and Antenociticus, fo pon altars at Benwell, and of the name B Hoader, wbich occurs on altars found in We moreland and elsewhere. Dr. Brnce mention that the Duke of Northumberland had giv directions to have the map of ancient Northu berland, which was prepared under the auspi of the fourth duke, engraved, with the vie
forming a frontispiece to the Lapidarium.
ther Great Engineering Froposal. proposed to cut one of the most famous of land in the world, tho Isthmus of Its sevcrance by a canal bas bocn ted from very ancient times, and Fwas ly attempted hy the Emperor Nero. A anos Xenos has obtained " a concession for qualisation of tho 1sthmus of Corintb." reek Government bas gravted to Messrs. $i$ and Xenos, the concessionnaires, land for a and docks as well 18 for the canal, and so of unines and forests, together with
privileges. The Isthmus at its narrowest privileges. The Isthmus at its narrowest
is a littlo more than four miles broad. d this spot be selected for the proposed travellers from the west to Athens throngh classic ground as they travers pace between the gulls of Corinth and
ctro-Telegraphic Progress.-Not long was thought to be impossible to send two ges aloug a telegraph wire, in opposite that it could be done; and now, by ingearrangement of coils and batteries and connexions, circuits can be formed through cross-messages are sent as ordinaly busiand "duplex telegraphy" has passed into ts ouly. Mr. Heaviside, of Newcastle-on. says, in the Philosophical Ifagazine, that yays, is theoretically possible to send any cr of messages at onco along a singlo wire, a opposite directions, and without internes, " $I$ find it is not at all a difficult r to carry on four correspondences at the time, namely, two in each direction; and ims not improhahle that
ecome an established fact."
e Countess of Huntingdon's Chapel aton. - A stone reredos was recently been din this chapel. Tho structure, which is in stone, rests upon a hase of fonr courses nlar; with carved pateras, and ahove this ve panels of polished hlack marhle, on $r$, and the Tcn Commandments. s aro surmonnted by canopies, embellished carving, terminating in carved finials, and uted by six columns of Aberceon granite, tone capitals of which aro carved with harity; Love, Joy, and Peace. The whole ported hy side buttresses, ornamented with d panels. The reredos was designed by rimblo, of Walbrook, the architcct of Pinker, of Cliftonville, the carving heing H. R. Pinker

## e Ross and Monmouth Railway.

 dew railway has been opened. The line i niics in length, from Ross station to y ye e, Monmouth. There are two tumnels, the pal one being at coppet, wbich is 628 nds' Yat, aud is cut throngh a quarter of a of solid rock. At tho Coppet cutting the tions were commenced at each ond, and oring parties met in the centre within an end of the tunnels there is some heavy cutting, bat beyond this the groundwork however, will span the Wye in conwith the line. There arc four stations, ling the Wye Bridge, viz., Symonds' Yat, Bridge ye Junction, or Lydbrook, and of old red sandstone, from Tudorvillenblane Cathedral.- While tho workme s cathedral wero engrged in tbo cbapter. in preparing a bed for an ancient re. about 2 ft . below the surface of the foor add of it cxteuded for somo distance belon sundation of the catbedral. It was found , a sculptured stone, about 6 ft . long and broad. A finoly-carved cross occupies it the whole of the onc side of it, and the is marked witb a variety of sculptures,-a on horseback, a dog or pig, two crosses and sques of different patterns. Tbis stone
have been placed where it was found hare been placed where it was found
e the building of the cathedral, more than mturies and a half ago. It is unfortunately in across 2 ft . from the top.

Opening of Cleethorpes Pier. - This with pleasurable interest by the inhabitants of the rising little watering-place, Clecthorpes, named the Margate of the Lincolnshire coast has taken place, amidst much cercmon and rejoicing. The new pier, which is a ligh structure supported hy iron pillars, was commenced by a limited liability company in Dccem ber last, from designs by Mcssrs. J. E. \&. $\Delta$. Dow on, of London, engincers, the contractors being Messers. Head, Wrightson, \& Co., of Stockton on-Tees. It is 400 jards in lengtb by 20 ft . is width, and at the end is a platform, 120 ft . long hy 85 ft . broad, with steps descending to th

## vater for the accommodation of passenger's.

Mr. J. W. Anson, of the "Adelphi."villing, and not merely willing, but able to hel on onj project or motter in which the thentrical on any project or matter in which the theatrical profcssion are concerned, and we are therefore not at all surprised wo bear that number of the recontly cutortained him at a hanquet, and prerecontly cutortanned him at a hanquet, and presented him with his portrait, painted by Mr. F. sydney Muschamp, in acknowledgment forming the club. When his successfu? labours in assisting to found the Dramatic, Equestrian, and Musical Sick Fund, the Dramatic Barial Necropolis Cemetery, and the Royal Dramatic College are also remembered, the profcssiou may, one of these days, even do something moro than has yet been done.
Overcrowding in Westminster. - Mr. Brnard Holt, ir.C.S., in his report to the Westminster District Board, Bays, " During the month (June, 1873 ), I have examined the bouse f the Rev. Mr. Harford, Dcan's-yard, Westminster, and I find it so closcly abuts on tho bouses at the back, in Great Smith-street, as to prevent any free admission of air, and conse fillus $f$ ere 1 illuess are frequesply see no other way of rendering Mr. Harford house habitablo than by removing tho houses in Smith-street, and so secure him that amonnt of ventilation which is absolntely necessary for the
due maintenance of health." The report was due mointenance of health." The report was refcrrod to the Street-cleansing and Sanitary

Antiquarian Discovery at Lyminge, in Kent. - The recent discovery of the wibl of a Roman basilica in the very ancient village of Lyminge is announced hy a contemporary. The discovery is the result of excavatious undertaken by Canon Jenkins, a well-known local antiquary. The wall is of great solidity, and, if possible, the conercte (which is compounded of limo and chalk) is harder and more massive than the stone in which it is embedded, - a circumstance done, no donbt, 2, much to its antiquity as to the orcellence of the concrete. The site of the remains is a short distance from the chureh in which the Northumbrian princess, St. Etholburga, took the reil in the scventh century The church itself is built on a Roman foundation.
Walsall: the Surveyor.-At tho last quarerly mooting of the Town Conncil a recommevdation of the Finance Committeo that the Salary of the Borough Surveyor (Mr. Boys) he increased from 200l. to 3001 . a year, and that an additional aesistant, or officc clerk, in his office, be appointed, at S0l. a year, was considered. Complaint was mado by a profossional townsman, that Mr. Boys had undertakon privato practice contrary to his agreement, out first obtainiug sanction;" and that he had recently prepared drawings "unsolicited" by the committee, for the intended new wing to the Cottage Hospital. The aurreyor, however, gave a very satisfactory reply, and the reconmenda. tion was agreed to.
Appointments.-Mr. William Batten has been re-elccted survejor to the Manor of Aston Local Board, at a salary of 250 l . per annum. Sixty-six applicants solicited the appointment. -Mr. Banister Fletcher has been elected surveyor to the Planet Building Society, in the room of Mr. W. W. Pocock, who lately resigned. There were seventy-eight candidates.
The Joiners' Company and Building Construction. - The Joiners' Company, who are also carvers and ceilers, have intimated upon buildina construction, wood-carving, and designs for ceilings, to be competed for by students at the several schools of art and students
colleges.

Laying the Foundation-stone of a Eamily Chapel at Tyntesfield, near Bristol.-The Coundation-stone of a chapel at Tyntesfield has heen laid by Mr. W. Gibbs. Thongh intended field will be a massive and costly structure. The general style of the building will be the Decogeveral style of the bulding widhe the Decodows of stained glass, and a spire will rise from the roof, though not to a great height. Under the roof, though not to a great height. © $n$ neaded neath the cbapel there will be a rault, intonded Gibbs family. The arcbitect is Mr. Blomfield of London; Mr. G. W. Bootb, also of the metropolis, heing the builder.
The Whitworth Scholarships.-The folowing are the names of the successful condidates in the competition for the Whitworth Scholarships for 1873, in the Science and Art Department, South Kensington:-Samuel Dixon, draughtsman, Manchester; Roger Atkinson, cberytical chemist, Crewe ; Joseph Amscow bridge; W. H. Warren, engineer, Wolverton; William Barber, draughtoman, Nottingham: William H. Fowler, engineex, Oldham; Thomas Susrden H. Fowner, Engldham. Cyras Bnllock millwright, Worsley, near Manchester: John Lockie, engincer, Glargow.

Wood Paving.-The portion of roadway in Piccadilly between Berkeley-street and Albe marle-strect, the paving of which is to he renewed, is to be covered with wood paving, to bo lcid by the Iraproved Wood Paring Company, at an estimated cxpense of 1,120 . The wood paring has been on trial for twelve months in the city of London, having heen laid down from London Bridge to King William's statue, and it is said tocre aro no signs of decay, and the polico state that they knew of no cases of horses falling upon it since it bad been laid

Expenses of Fortifications.-The outlay at outh has been 2,504,5811. Os. 5d.; at Plymouth, 1,489,431l. 16s. 11d.; at Pembroke, 305,0987 . 9s. 4d. ; at Portland, 362,337l. 19s. 2d. at Gravesend, 276,1562 . 1s. 1d.; at Chatham $275,3981.18 \mathrm{~s}$. 5 d .; at Sheerness, $338,297 \mathrm{l}$. 5 s .7 d .; at Dover, 293,525l. 14s. 10d. ; and at Cork 150,0222 . 9 s . The cost of providing and fixing iron shields has been $324,8746.2 \mathrm{~s}$. 5 d .; incidental expeuses (works), 145,729l. 7s. 2d.; experi ments, $14,393 l$. 4 s . Gd. ; surveys, $23,5247.4 \mathrm{~s}$. 9 d . and legal and otber incidental expenses ,024\%.10s. 11d
Art-Union of Inondon Exhibition.-A we have already given a list of the principol pictures purchased by the prizeholders in the Art-Union of London, we need now do notbing more than mention that the collection is open to tho memhers and their friends in the gallery of the Institute of Painters in Water-Colours, Pall. mall; and in the conrse of a wcek from this time will be free to the pmhlic withont limitation. It inclndes a number of very good pictures.
Cole Testimonial.- We aro glad to bear that H.R.II, the Prince of Wales will snhscribe to the testimonial. The Duke of Edinburgh pnts his name down for 25t. The very day Lord Ripon resigned, he wrote, subscribing 252 . The Duke of Buccleuch also sent 251. Active steps will case till people roturn to town, when an important consideration will have to be settledthe shape the testimonial is to take.

The Burgoyne Memorial. - The fand for raising a memorial, by the corps of Royal Engi. neers, of the late Field-Marshal Sir John Bur goyne, has now nerrly reaohod 1,800 l., and the Burgoyne committee have determined that the memorial shall consist of a bronze statue of the Field Marshal, to be erected at the School or Military Engincering, Chatham, probably in front of the new Nalls of Study.
James A. Lee's Paper Mills Machinery Company.-A company has been formed for the purpose of acquiring the business of Mr. Lee, until recently carried on at the Severn Engineering Works, Lydney, Gloucester shire, and now at the new works ander the same name at Derby. Mr. Lee has patents for im provements in machinery for reducing wood-fibre into pulp for paper-making, and for improve ments in the manufacture of paper.
Anotler Millionaire Philanthropist. Ir. James Baird, of Auchmedden, the Scotel ironmaster, has pnid over to a body of trastees, to be called the Baird Trast, the sum of 500,000 d. to be applied for purposes in connexion with the church of Scotland.

The Crystal Palace School of Fractical Engineering.-The school examinations of the engineering branch of the Crystal Pulace School of Art, Science, and Literature, for the Easter 8th. The Autumn Term will commence on 8th. The Antumn Ter
Monday, Septemher 8th.
The New Workhouse for Ehayader, Radnorshire.-At i meeting of the Board of Guardians of the Rheyader Union, held at their board.room on tho 30th ult., and which was largely attended, Mr. Stephen W. Williams, county sarveyor of hadnorshire, wos unavi. mously elected architect for the new workhouse.
New Canal in the Baltic. - The Russian Government proposes to construct a navigahle canal connecting St. Petersburg with Cronstadt. The canal will measure 20 ft . in depth, and therefore be navigable to large sea-going vessels. The cost of construction is estimated at $7,000,000$ roublee.

VOL. XXXI.-No. 1594.

A National School of Art
"The pat of a comman buider was five or six mive; more than ten thousan drachms., - Plato.

EFORE now wo havo urged, in centroverting the conclusions of certain recent critics, that no fair judgment could be formed of the prosent status of English architecture, without keeping in riew the actual facts of its history within the very limited period of its modern developmeut.

When it is renembered that any native architecture worthy of the name bad died out; the part of the public at large no hedge of or taste for art, as we now stand it, existed; that there was nothing literature of art accessible, much less fative oxamples; and that travel, as now fised by our architects, was a thing an unown; it is not surprising that in hovitablo stages whioh had to be passed Ih, they might he expectod to prove I fruitful in mistakes than othervise. I pacb questions of style and systems of art re $i$ priori, when the whole domain of art as it were, to be reconquercd. Exporience I became the necessary teacher, and we now o present timo, with tho experience thus $d$, and with all the naterials then wanting dantly supplied, scem to he placed in the possible position for forming a just estimate Hoults thos far obtainod, and for discerning heeds and conditions of a future and nobler rogress.
Hy reviow of the development of onr modern itecture will lead to the conclusion tbat I whatever success we have resorted to past icomplete styles,-ready to our hands, as a
if from which we could draw all manner of 'tic wealth,-wo have not obtained that liery over thew which can for a moment 13 our works upon a par with the achieve. ts of the past. Taking into account that present always stands at a disadvantage in rd to tbo past owing to that glamour which, fome mysterious tendency of our naturo, we W over the past, and foel disposed to deprethe present, yet it must bo confessed that in all our facile combination and imitative :ess, our works very rarely answer the only lest of real fino art, viz., that it should be ubing of beanty and a joy for over," to he med to again and again witb a sufficing so of unwearied delight. Their secrets of jortion, beauty, and variety, which in sameo wcre never plagiarism, - seem to have eluded It may be that styles of art, the grow th of indwelling tbought of a past age, once dead, beyond restoration to life; and, if so, that we on a useless quest to see how far we can bo our modern and altered requirements
with the forms of the past; theugh as imitative revivals in certain stages of art-culture they
so urgently demanded, if art amongst ns, and especially architectural art, is to rise and not to sink, and to find scope for a satisfying and nobler devclepment. It may be said, iu passing, that real genius ever preserves its individual originality, and does not lapse into imitation, theugh quickened and inlluenced by cerrespond. ent genius, and that in what it borrows and in what it gives lie the life and pregress of art. Mediecrity alone is the creature of base imitation, and tho problem of all art-culture is to call out genius, or original creative capacity, and to repress modiocrity to its subsidiary place and level, eften a helpful one, It is just this we seck to establish.

We contend, then, that all we understand by fino art, as distinguished from science and teehnical art governed by sheer utility, is the product of genius. It has ever been a law of human progress, in all departments, that certain master minds, from timo to time, appear endowed with that innate extraerdinary capacity we call genius. Cenfining ourselves to formative art, whether painting, sculpture, or architecturo, it is evident that while the rauge of their expressien lies within those adjusted rclationships between the scnses and mind, and the external order of things whioh bring to us impressions of beauty, sublimity, and the like, that genius comes in as tbat peouliar susceptibility to theso influences, accompanied by an indwelling creative power of exprc-sing itaclf in now combinations of form, proportion, light and shade, colour, \&c., which by human art reacb the sources of thought, emotion, and pleasure, which nature and lifo themselves yield after their own mode. Architecture, -in one sense the most utilitarian of all the arts,-is yet also a mean between the real and ideal, and demands, if anytbing, a far larger measure of essential genins to make it a fine art in the senso we have pointed out, i.e., as capable beyond its utilitarian objects of jielding impressions of beauty, character, grandenr, or whatever expression of indwelling thought can hy such moans rewoh the mind through tbo eye. The main elements here must ever be form, propertion, and light and slade, mingled in wrays to create impressions of admiration in the minds of others according to the character of the building intended. But fixed laws in optics, \&c., govern all these sources of impression, and it is genius that, consoiously or unconsciously, seizes upon these and works out with them its own creative results. It cannot be pretended that, while much in all art as simple seicuce can be aoquired by tho many, these suhtler harmonies, these grander powers of expression, can be discerned and enployed by any hut the few.
Here, then, we have the key-note by which to tost any trao system of art culture: (1), the means wo employ to discover genius, and to cultivato to tho utmost extent its powers and (2), tho ranging of all other exccllence in its proper scale, and the kecping mediocrity, however amhitious, or under whatever factitious influences or pretences, from being allowed to usurp tho place of real genius. Witboat these, imitation and plagiarism, and a false pretence at originality, can be the only result. This is abuudantly illustrated in all Fine Art, whether poetry, painting, scalpture, oratory, or the drama.

Ia turning then to the system which has prevailed amengst us, what do we find? First, that the artistic professions have heen open, in a sense, to all comers; that there bas been nothing occurrent whicb, as in other professions, compels the passing through an extended course of education specially designed for a given eud; no crucible, as it were to test the ore, turuing out the true metal, and rejcoting the dross; nothing charitably to cbeck those who had mistaken their vocation, to assess mediocrity at its real value, or to assign to genius alone the commanding place. Architec.
ture, of all the arts, has heen the greatest sufferer frous this state of things. It caunot, in all charity, be supposed that the source
from which the ranks of the professiou are from which the ranks of the professiou are
mainly recruited, namely, those who hare passed mainly recruited, namely, those who hare passed
so many years as pupils aud assistants in archiso many years as pupils aud assistants in archi-
tects' offices, fulfils the ahove objects. It is impossible to say of those who thus enter upon the profession,-under the prestigo of a great name, possibly, as their master,-that there is any real guaranteo of the pcctilar genius which makes the architcct; that they have reccived
tbe necessary cultivation wbich shonld accom. tbe necessary cultivation wbich should accompany it, or that their futare status will be determined by merit alone. The rev
We conclude, then, that the system hitherto pursued of allowing things to take their own course has exposed architecture to some of the worst possible conditions for evoking its bighest
products products; and when we come to look at the arena ceeks its status nad reward, we find that these are dictated by the most chance, and ever nu. worthy inlloences; that, as a rule, the criticism which often guides both has been too unsound, contradictory, and unfair, to leave any other con. viction than that of its incompetency to deal with what makes for tho pure glory of art. vail; favoured uances have their day, not alyoys indicative of geuius or beneficial to art progress. Tbis has been true in a marked sense of other had its riso and fall of fashions and rames and the noble scbool of English scalpture has been allowed to languish muder neglect and the parrot cry tbat it was belind-hand, and was a sorry aftair at hest; while nothing could be furtber from the trilh, as we have had but recently, and still have amongst our sualptors men who, nnder due encouragement, are equal to works all but the highest, and rarely lacking in some sweet expression of thought and beauty
Is there, then, any remedy which can he applied to a state of things which we cannot
suddenly revolutionise, but suadenly revolutionise, but to which a corrective must be applied if other and better results are
to enstue? Wbat can free art flom the to ensue? Wbat can free art from the trammels to which it has become subjected through false cliticism, ignorant patronago, and a depraved
public taste? Experience answers, and the public taste ? Experience answers, and the assent of all thoughtiul minds unites in the contrace the heterogeueons and confused results with which wo are now presented, it is to a reversal of the process we bave first to look; and that it is comparatively useless to be arguing qnestions of style and other details while the one main qnestion of a proper system of a noble and national art-culture remains in abeyance. TVe chiefly of isolation and wisch teas ween one become the creature of circumstances,
An attentive consideration of all that has recently heen advanced convinces us that it is more and more felt that the one thing now is for art to organise itself; to take the lead where it has hitherto followed ; to bave in its own shall avail to discover genins and ability in all its varied forms, and to give it the stamp of currency, and to bave tho powcr to confer its own honours and rewards upon its own

## There seems but one a pency bes.

ends can be reached, and that is the these ment of a really National School of establishwould occupy the snmo position all which art that the university does to the learning of a country. It may be said that we learning of a cour sebools, meademies institntes, already have however good a work they have do., but these, and partial in their results and done, are local and partial in their resulte, and bave by no so imperatively demanded to gire that diguity, so imperatively demanded to gire that dignity,
status, and progress which wo have found to be so uncertainly apparent no nder the divided so uncertainly apparent nnder the divided
system which now obtains. The analogy for system which now obtains. The analogy for
such a national school of art is farnisbed by snch a national school of art is farnisbed by
other learned professions. These all have a curriculum of sercro stady, of examinations, degrees, \&c., step by step, as the means adopted to bring out and equip ability, to grarantee fitness, and to confer honour and status in vary. ing measure. It wonld he deemed well nigh idiocy in professions which have charge of important public interests to pursne a policy of letting things take their course. Wby it should calt to eay. Certainly architecture, of all the
arts, is concerned with important public interests in every way, and not least as the ontward and visible sign of our national taste and cultare. Yet we dare not cay,-looking at our architecture during its modern period,-that it has faithfully reffected all that we were capahle of achieving; in other words, that it affords no assurance that the best genius has been engaged in its production, or even heen recognised,much less received its dioo meed of reward. would point to verfages of the profession
But in such a national conclusions. conteruplate-having thuagbt specially to archi tecture-all this miyht be changed. Inviting attracting, as it would, all the art ability of the country for the advantages it bad to confer opening its doors wide, with every facility t students, they would become speedily close again against all who could not pass the ordea which would be imposed by an crhanstise course of study and examinations. Thus the first reeded condition would be crincd inus the tho aspirants for artistio honours and those could pass along to a corer in ant wher genins, or positive talent of some bind claimed them worthy. Tben wonld follo the second needed condition-combined stndy and the mingling of genius in art, than which nothing, it is obvious, is more reqnisite in architecture, where varied gifts and the com bination of them nnder common effort to common end are a sine quil non, and without Which a national style of arobitecture canvot pring $n$ or be pursued to its noblest develop ments. The third condition would also follow in art being thus enabled to stamp its own mprenain upon gemins and merit with ao uncertanty, as now, and the honours and ewards of such a school would become synony. cousfer, and the highest distinetions art could real geaius would hecome its natural possession as a matter of conrse.
It is impossinlo to do more than hint at snoh a scheme as the one thing needful for Evglish architecture, as in analogy with past systems of art calture, as taught us by our own moder expcrience, and as being the felt need of all who have the real interests of art in tiem. osganisation
The one question remains of ways and means Endowment, to hegin with, would be the first step; but with such wealthy and lavish patrous as ne now have for our present art, and such ccumnated wealth on the part of many of our ifficultonal mex in all branches of the arte, no ificulty need bo feared here, if a patriotic love If thor its own sake can be reckoned upon. which has and the principles we liare adverted to in this article bo correct, we do zot think there can be two opinions as to the course it has now become imperative to adopt. The choice simply les between letting things take their course witb bnch results as we have seen, fruitful o complaints from the most competent judges, and such an organisation of art for free and iddependent, but no uncertain, dovelopment to and dignity and consistont future progress.
tite sherfield congress
OF THE BRITISH ARCHEOLOGICAL association.
TeE week bas been well commenced, and promises to be full of iuterest. The Corpora. tion received the Members in the Cutlers' Hall, and the town clerk read this address:-
"To the Most Noble Herry Duke of Norfolk, the presi
dent, and other the menibera, of the British ArchaoWogical Association.
We the mayor, aldermen, and horgesese of the borongh Shelield, tender to the British Archwoological Associa.
tion onr most hearty welcome on its assembling in our horough for the first time to hold its annnhl congress, and
beg to fypress our ationaction that Shelield and its
adjucent districts have been selected for the purpose of autiquarian research.
We assure you that we are fully alice to the adrantages to be derived from archereological inveestigation-
believing that the researches made by your A believing that the researches made by your Association 1ato the history and nsages of our forefathers, the rise adranco of cinlisation are of deep interest and great practical utility, and camnot fail to prove beneticial to the
present and future generations. We have no doabe that the in
 diatricta, with the information hatained duaring the holding of the Congress here, will bo produtitics of oroth interest
snd pleasure to the members of the Asocistion

We desire to take this apportunity of assuring yo
Grace of our fecbine fo personnel ressipct and ree Grace of our feebing of personel resspect and reparar,
we oongratulato the
Association on lazing as ther pre dent agreecendant of tho illustrious fanmily of Mow war Which has for centuries bo
the town and ueiehhorbs
解
The Mayor strengthened the address with ferv words, and the Duke graccfully thanked t Corporation in the name of the Association. A adjournment then took place to the parish chure where the Rev. Dr. Sule descanted on the alt toml and monnment to the founder of $t$ cbapel, the fourth Earl of Shrcwsbury, with t marble effigies of that earl and his two cou tesses on the top,-the earl with his coronet a in the rohes of the Order of the Garter, his fe resting on a talbot, and his lands joined prayer. Against the wall is the monument before his decected by himself some tin before his decease. The effigy of the earl, plate armod, is somewhat cefaced; above is of hat inscription, surrounded by all sor only a list of the earl)'s illustrions titles an deeds, but refers to bis enstody of Mrary Quee $f$ Selt reports. The members did not fail to perceiv the difference in taste between that monumen and the fourth earl's tomb. A third mornmen as to which doultt existed, Mr. Planché had n hesitation in saying commemorated the earl first wife and her son.
Carriages took the party to the "Manor, he huildings on which were erected by th fourth Earl of Shrewsbury, and became th placce of confinement both of Wolsey and and staarl, and afterwards fell into negle nud decay. a residential building, with mul the windows and a staircaso.turret leading the roof, built, as some think, for the queen oupation, is in course of rescoration, hy areo panellcd ane of Norron. A ceiling and chimneypiece, is pointed to as her particula apartment, hat the heraldic bearings seem ittle more recent. The luilding itself is tone, but the turret above the roof is of bric The party then proceoded to Broom Hall, th residence of Mr. R. N. Philipps, F.S.A., who rea a paper on the history of the hall. The bnildin includes a half-timber gable, with handsom carved hargc-board
At the dinner which was given by the duke the evening, in th
persous sau cown
lord Houghton, in the coarse of his speech proposing the health of the president, said i roid be difficult for the Association to light o degree accomplish their expeotations. For thi egree accopish the exped to holds within itself almost the whole of British bistory ; and from the very earliest times when it was inhabited by conflicting races and various emigrations, it has heen the scene of all those emigrations, it has heen the scene of all those resulted in the present condition of the English nation. It is difficult to say what portion of it has not contributed to British history. On previons occesion I had the plensure cecompanying this Association over the histo rical bridge of Wakefield, which has added one tower to the Tower of London. I took them to my own neighbourhood, and there we fonnd in the bridge of Fairhriage the plaoe of those continual conflicts from the Aire river, which ended in th battle of Towton. When we come into thi country we find ourselves, perhaps, not so imme. diately connected with particular conflicts; but, nevertheless, this town and this neighbourhood are full of those great associations of the difforent times of English history which still remain vivacious in tho mind of the English people. Yon will recognise that on all those orea occasions Yorkshire men and Yorkshire noble men bave been preeeminent. Tbey have contributed much to archrology, - very often their own lives. We know the great interest that hals always hung ahout a slain or decapitated noblean, - and how weal ways feel for them, -whether the thorough-going Eiarl of Statiord or any allen nobleman of a still carlier time, who ha associated with poitical confict,-render the locality in which he lived a matter of general and universal interest. We have to day been seeing the old Manor House, where the Earl of Shrewsbury was the guardian,-it may Earl of shrewsbary was the guardian,-it may of the romantic Queen of Scots ; and we find that property transferred to the care of a noble
$\operatorname{man}$ whose familg happened to take very much the other sido in those historical periods, and who would prohably, if they had had their own way; princess. But so has turned this wonderfal English history of onrs
The Duke of Norfolk made a spirited reply Sheffield, said his Graco, is a rery great and increasing centre of a particular branch of trade, and a singular faot in connexion with it is that no town in England has grown so rapidly. For that reason it entertains, perhaps; more thar any other mannfacturing town a feeling of affco tion for tho old things which have not yet heon ohliterated hy the advance of varions hranches
of industry within it. At the same timo, as so much is given np to tho parposes of trade, there much is given np to tho parposes of trade, there
is a great danger of old things hecoming more and more ignored, and that very much so from the character of the trade carried on in the town and neighbonrhood

We orght, therefore, not only to welcome the Association for coming here,
but to sincorely thank it for coming. According but to sincorely thank it for coming. According
te modern ideas, towns given up to snch indnste modern ideas, towns given up to snch indas-
tries as those in Sheffiold are not the places tries as those in shefriold are not Not only is
likely to attract the archzologist. Not every thing here given up to activity and hasiness, but the manufactories carried on hore tend to proplaced hy others. Buildings which do very woll for one kind of trade are allowed to exist as leng as that trade is flourishing. It may be that a staple trade is carried on with them; that trade fails, and then the buildings are putled down for others more suitahle to trades which are active. I cemember ahout twelve years ago Sheffield was largely engaged in the rolling out of wire for orinolines. Now the great thing to look at here -two very different things. Xou will therefore seo that things here change rapidly, and that in his constant change tho long gone-hy past is apt to he forgotten. At the same time, there who ohjects in this town and neighhourhood Association for having come here. Wo have already seen the monuments in the parish church, and the romains of the Manor Lodge,-preat names, Cardinal Wolsey and Hary Queen of Soots, - names historically famous througbout he world. That is especially so as regards Hary Queen of Scots, ahout whose life and times verything which can throw light apon her aistory is always regardod with great interest ind curiosity, and looked into with care. I hope rove nuproductive of interesting results. In reply to "Prosperity to the British Archroo. ogical Society,' proposed in hearty terms hy
be Bayor of Sheficld, Mr. Godwin, as a vicc. be dayor of Shefficld, Mr. Godwin, as a vicc-
wesideut, said it was many years siuce he ssisted at the foundation of the Association, at during tho whole of that timo he had never cen present at a finer assemhlage in a finer
oom than the present. He hoped, however, when they next camo to the Cutlors' Mall, to soo a tho panels of that magnificent hanqueting oom paintings hy some of their local artists, or hose connected with the town, of places and Te was sure they would not think he was tra. elling ont of his course in suggrasting this. A own which had produced Gcoffrey Sykes as a ecorator, Montgomery, and others, mnst surely o capahle of finding men who would render that all an instructive hook for all who entered it. Fith regard to the Association, he mast consider ouncil to appy determination on the part of the wras whioh did not, in the first instance, seem offer the most material for investigation. hoy had heen to nearly all the cathedral towns, ley wore hundreds of yed, remainiog much a nised to he suitablo places for tho researches of se archaoologist. But it was a happy thought a come to Sheffield and other large towns which ley had recently visited, occupied wholly, as a such towns they desired to surgest to 10 inhahitants that thes should preserve all tomentoes which connectod thom with the ty that man shall not live hy bread alone, and cst met the eye. The mind perliaps, than at est met the eye. The mind and the heart quired food and sapport, and those who pooh
oohed sentiment were only half tanght. The whed sentiment were only half tanght. Tho
hahitants of a town like this should preserve
every record which tied them to the early por tions of our history as if it were the apple of their eye,-their heart of heart. He trusted the visit of the Association would lead some who bad not heretofore looked at matters in that light to preserve everything that related to the former history of the town. Though that and similar Associations had heen working some years, they were as much needed as ever-per. haps more se. Destruction went on in the most harharons manner. Earthworks were turned tp, old hnildings were knocked down, walls were destroyed, and landmarks in our history were ohliterated. It was very difficult oftentimes to persuade the owners of these remains of their great value archreologically. In coming to Shefficld they could hardly hope to make such : discovery as he had been informed of that day hy a private lctter from Germany. In searohing upor the plains of Troy, Dr. Schliemann had made one of the most remarkable discoveries of modern times. If he had not turned up the shield of Achilles described by Homer, at any rate he had found one something liko it. Besicics he had discovered hundreds of copper, silver, and gold implements and chains of a most remarkahle character. Although thoy conld not expect to turn up anything quite so remarisablo, he was sure they would soe very muoh to juterest them, and might perlaps leave a thonght behind to bencit others.
Mr. Gordon Fills made an interesting and sacgestive speech in proposing the health of "the mayor and corporations" and Mr. R. N Philipps, tho Mastor Cutler, Mr. G. Wright, F.S.A., and Mr. Robert Merriman, also spoke. On Tuesday the memhers of the Congreas went priory by bistory and description of the huilding At the conclusion of his account, Mr. Hills pointed out that the supply of water to the abbey was was convered a mile away, up the hin, and hy a sories of rescrvoirs flowing into each other. In conclusion, ho described the ruins as affording a most valuahle illustration of the few chnrches of the kind in the kingdom. Retnrning to Sheffield, the party was larrely increased in numher, and then went off by special train to Worksop Priory; and in the picturesque gatebouse there the Rer. J. Stacyc read a full church, a clasmincrs. The nave of the ancient church, a clarming specimen of the Trangition period, which is cut off at the transept and parish charch. One of the priory huildings displayed a number of masons marks, which elicited a discussion. The sensation of the day was the examination of Steetley Cbapel, a heautiful little Norman structure once a parish charch, hut now unroofed, and scaroely known. Mr. Stacye said the name did not appear in the Domesday Survey; hut from the register of Wclheck it appeared that shortly after that survey was made, tho place was hold hy Onl Gloy de Briton or Brett. Gloy had four sons. Only one of them had issue, namely three sons reir a daughter, the latter of whom becamo Rohert of the family. Sho was married to Lord of Strelley and Denrougl her hecarne mortem inquiry taken at Chostorfield, after tho death of Ouker Freshvill (1391), it was gathered that he was seized of property at Strelley, together with the arowson of tho Churoh, and or all services. Tho property continued lome in the family of Freshvill, some of whom resided at the hall near the chapel, and now used as a farm-house, From that family it passed into he bands of Sir Thomas Wentworth, in the to the Earls of Shrewsbury his representatives ants, the nohle house of Howard. There it re mainod till, to go with the Worksop estate, it was sold to the Duke of Nomcastle in 1840 . The date of the building is the twelfth cenury. Mr. Blashill produced drawings of five hurches, which were yery similar hoth in dat Ioccas, in they were at Kilpeck, Herefordshire Loccas, in the same county; Dalmeny, Linlith Tulien, near Rouen. On the London; aud St. win, a resolution was the motion of Mr. Godwin, a resolution was passed unanimonsly expressing the desire of the Congress that the chapel should ho roofed in and otherwise pro. tected from the weather.
A very intoresting visit wns paid to ThorpeAt the first evening mecting the Duke of

Norfolk presided, and there was a large attendgiven, and then
Mr. J. R. Planché, Somerset Herald, read a paper on "The Early Lords of Holderness", in which he treated a somewhat dry genealogical whiect in so pleasant a way as to intcrest all his listeners. After disposing of varions mistakes made. by previons writers, he said, justly enough, that it was remarkahle, considering the position and connexions of Adeliza, sister of the Conqueror and Countess of Ponthieu, that the discovery of her triple harriage shonld haro heen left to reward he diligence of an English antiquary of the aneteenth contury, every previous acconnt of her and her iesue heing, through ignorance of that simple, hat important fact, full of ertors and contradictions. It was perhaps still more emarkahle, this faot having been clearly set orth hy the anthors of Reserches sur le Domesday in 1812, as well as hy Mr. Stapleton himself, in his notes.on the "Norman Rolls of the Excheqner," that so critical an antiquary as Mr. Edward Freeman should have overlooked the information, and in his second volume of the History of the Norman Conquest," pablished in 1870, shonld have married Odo to his step. danghter Adeliza on the misrepresentation of Mr. Stapleton, in the 24th volume of Archaonlogia, thongh Mr. Stapleton had suhsequently discovered and acknowledged his error thirtythree jears ago. I conclude, said Mr. Planche, throe years ago, I was present in Covent Garden Theatre at the representation of "Romeo and Julict," prodnced for the fird appcarance and young lady in the character of the jll-fated danghtor of Capulet. I sat in the hoxes (there were no stalls in those days) immediately hehind and unneticed hy on old friend of mine dereted admirer of had an anfur hab of talling aloud himself In aet 4 Toly Copulet is informe thimelf. In aet 4, Lady Capulet is informed that. "they call " daves pastry. "mph, ejaculated my friend, to tho mrprise of the people near him, "dates are nom" them I am anval I have dosed you with ates heyon an or r them that we can distinguish faot from fiction and their verification is one of tho m duties of the modern archerologist.

The Rev. Di: Gatty aftorwards read an ex. cellent paper on the Town and Parish Charch of Sheffield, a portion of which, namely that relating to the history of the lown, we print separately. At the close of it, -
Mr. Edward Roherts said ho wished Dr. Gatty bad gone a little further, and had asked that the Work which was done in the parish church ahout the year. 1800 might be undono as far a possible. He was expressing the general feelin of the Association when he said that if the galleries were removed it would very much add to the heanty of the building. The high pews also micht easily he replaced hy others, which would ocenpy less space, and quite as many worshippers could ho accommodated as now Tho ohsorvations were generally assented to, hut the Rov. Dr. Sale said there were more diffical. ties in the way than might he supposed.
Mr. Tucker, Ruuge Croix, said all the grave. stones were now flat on the ground, and urged that the inscrintions opon them, which were fast disappearing, should be recorded.
On Wednesday the Saxon Church of Langhton. on-le.Morthen and the ancient earthworks at Laughton were Fisited and examined, and then cheon was provided by the Mayor and the Master Cutler of Sheffiold, and the Ahhey was woll desorihed hy Mr. Gordon Hills. Rotherham was then descended on, and the Church and the Chapol on the Bridge were commented on hy Chapol on the
In the evening, after returning to Sheffeld there was a convorsazione at the Cutlers' Hall, iven hy the local committee, which went off saily, and some papers were read, to which we sill return.
The inhahitants of Shefficld have opened their honses most hospitably to the visitors, and in so doing have made known some of the treasures in the town. There are many capital pictures spread about, and Mr. W. Bragge, F.S.A., of Shirle-hill, has a remarkahle and heantifal col.
lection of Medinval MSS. The same mentle. lection of Mediraval MSS. The same gentle. man's colleotion of pipes, now at the Interna.

Sheffieldians describe themselves as a house. prond prople : the first ambition when fortune cones is a grond house well fittcd up. The reeidence of Sir Jobn Brown, where all tbat
wealch could do has heen done, may be pointed wealth could do has heen done, may be pointed
to as the culminating exposition of this feeling.

## THE TOIVN OF STEEFFIELD.*

The town of Sheffield is peculiarly interesting fimes and personact that its history includes times and personages teeming with romantic
jucident ; whilst there is the second era of long and laborious effort in the workshop, torminating at last in a hrilliant success. There can be no doubt of a Rowan occupation of the neigbbourbond; their earthworks, solid as the natural lills, still attest the former presence of that term Campolane gives countenance to the tradi. tion that there was a Roman camp on the site of the old cburchyard. If the derivation be Latin, the name would rather refor to the field in nhich De Lovetot placed his church, and where trees may have heen felled to give room for the structure. However, in several parts of the town pots of Roman coins have been dug some purpose, and possibly by the Roman some purpose, and possibly by the Roman
goldier, who intended to exhume them again. It is also said that urrs with burnt ashes have is also said that uris with burnt ashes have
heen discover here, and if so wa bave in hubitalle traces of tbe Roman. One interesting point about wbicb some ohscurity continues to hang is the date when Shelfiola bocane the capital of Hallamshire by baving the residence
of the lord paramount within its precincts. On of the lord paramount within its precinots. On
this point the entry in Domosday Survey is this point the entry in Domosday Survey is
so brief and general, that it leaves ouly conjec. co brier and to toneral, that it leaves only conjec. bistorical authorities of the samo date allude to the presence of Earl Waltheof in Hallamshire. He was Earl of Northampton and Tantingdon at the time of the Conquest; also Earl of Nor. thumberland in tbe right of his mother, Elfreda, whose ancestors had held the oanldom; and he was also Lord of Hallamsbire, or at least he was ene of three Saxon lords who owned the four manore whicb now formed the parish of She fiold. In Callam, Eays tbe Survey, was tbe aulla or man. sion of Wattheof. Whother tbis was in Sheffield as heing demesne land, inland of Hallam as it is described, or whether the hall of the earl stood somewhere in Rivelin cannot be decidedly said, Dut it may be questioned whether he cver per-
sonally resided here at all. Why not at Nortb. ampton, which I have seen spolsen of as his residence? It seenis'scarcely crediblo that the clief mausion in the district should have been placed on a spot so remoto as Rivelin Yalley, too, Shefteld, protected by hills, and where the site of the grent larde claimed at once to be the resident. The life of Waltheof is became perfectly known. Who can even tell whether he fought against the Conqueror at Hastings? We know that he submitted at the Conquest, and in Decemher, 1067. Did ho settle down in Hal lamkhire after his return ? Who can tell? We ouly knew that be rehelled and joined Atheling and the fugitives from Scotland when they came back in the summer of 1069 with Danish allies to expel tbe Normans from the north coantry that in the second attack upon York, which they took, Walthoof was the great hero in the fight. Then followed the dreadful vengeance of the King, who made a waste of all Yorksbire and
Durham by fire and sword, and the land in Durham by fire and sword, and the land in
Fallamshire lost five-sixths of its previous value. But Waltheof appeared in person hefore tbe Conqneror, and was again pardoned; and was raised to bigher bononrs than he had ever before enjoyed. Probably it was in 1070 that he was
married to Judith, the King's niece. All Hal. married to Judith, tbe King's nicce. All Hal.
lamshire was then given to him , and in 1072 the lamshire was then given to him, and in 1072 tbe government of Nortbumberland, a most important
trust, was placed in his cbarge when Yorkshire trust, was placed in his ebarge when Yorkshire was deprived. Tbat the Conqueror watcbed him
and kept bim ahout his person as opportunity offered, there can, I tbink, he little doubt, and so it woold happen that ho hecame intimate with those who formed the King's court, and had his eonfidcnce. Hencehis implication in the treachery
of Earls Ralf and Roger, and his hurrying over to Normandy to Roger, and his hurrying over his wife. Though seemingly pardoned again, Te\{erred to, ${ }^{3}$ paper by the Rev. Dr. Gatty, already
his wife, the Countess Judith, urged her royal incle against bim, and ho was bcheaded at Winchester on May 31st, 1076. I bave tried to Hantify this remarkable man with a residence in Hallamshire, hut my preseut impression is that his personal abode here is donbtful. He had
other property before the Conquest hetter dapted for the habitation of a great nohlenan After his suhmission, he was taken to Normandy by the King, and soon after his return he was in rebellion. The harrying and waste wbich fol lowed this outbreak must have made these parts ninhahitahle; and when Waltbooi rose, after being pardoned, under the patronage of the Conqueror, to be almost next to bim in influence and rank, he would not be likely to make his home, with the Countess Judith as his wife, in the depths of Hallam. Is it not probahle that tbe aula of Domosday may have been little more han the aula baronis of later times; the price which tbe representative of the owner settled all matters connected witb tbo property, that the great dignity of the last English nohleman and his unique deatb (for William dees not appear to bave punished any otber conspirator judical deatb) may bave caused its mention Mr. Hunter, with involuntary partiality for hi own hirthplace, may have given to the torm aula rather more definite meaning than it was in ended to express? From the timo of tho Lovetots, Sheffield has been the acknowledged capital; and wbat they did at once for the own and district sbows what a desolate place it was where tbey came to reside. Their castle as huilt in the angle wbich is formed by he junction of the River Don with tho Sheaf nd their piety and heneficence were now dis played with a zeal becoming the residontial pro rietors. They founded the parish cburch of heffield, and charged its services on their own priory of Worksop; they huilt a hridge over the Don, the Lady's.bridge; tbey erected a hospita on Spital-hill, and a mill for the tenantry ont ide the castle walls; and I am persuaded tha hat is stil called ; he Iown Mill," at Mil) ands, which used to he turned hy the waters o of the original mill of De Lovetot. In nine renerations this amiahle family ended in an heiress wbo married a Crusader, Gerard Fur aval. A different character appertains to thi mocceeding race. The Furnivals were not quie nd domestic, hailding clinrch and bospital, mill nd bridge, for the use of their dependents, as their predecessors had done; hut they were en. gaged in war, both at home and abroad, and one of them at least was slain in battle. Thomas de in tbe rar's of the barons against the King and is sucars of the barons against the King, and actor to the town. Ho granted lands to his ree tenants, released them from vassalage, and nade them owners of the property, and hoth the cburch hurgess and the town trust are the offspring of bis hounty at the present day. This amily also onded in an heircss, who married the Mlustrious John Talbot, the founder of tbe Shrewshury peerage. Tben camo a line of sere secud tor wealth, station, and honour, higbest trusts were confided to them hy the suc. essive sovereigns in whose reigns they lived.
Hanor, which was in connesion with Shemela f Shrewshuy, in the reign of Heury VIII thi fine mansion was made for eighteen days the resting-place of Cardinal Wolsey wben ho was ammoned by his Royal master to London to nswer for his pride and contumacy. There the arl entertained the hroken prelate nntil the Governor of the Tower arrived with a guard to onduct him on bis way. There, too, about forty ears afterwards, was the nufortunate Queen Hary of Scotland occasionally taken hy George ixth earl, when her apartmenta in the castle required cleaning, or the state of her health aeded change during the fourteen years of her aptivity at Sheflield. Nor can I, in naming thi he expression of bistory of Sheffield, withhola hefore portion of the old Manor House from utter decay in which the captive Qneen was detained in her occasional visits. The original doorway has heen occasional visits. The original doorway has heen Fe have the narrow entrance exposed, through Which the prisoner bad no sooner gone than the bottom step of the spiral staircase met her foot, and up this she had to climh to her apartment,
which was some 18 ft . by 13 ft . in size. In the
walls of this small chamber are the very nails yet fixed on which the tapestry of her own working was probably suspended; and the ceiling ahov rilly ewlosed with heraldic ornaments, is being carefully prescrvcd in the
state when Mary knew it. The prescrvation of state when Mary knew it. The prescrvation of a relic so interesting to every intelligent person is a good work, for wbicb the town will feel deeply gratcful to the Duke of Norfolk. Lard Arundel was the most accomplishod nobleman of his time, and whilst be was in possession of the ostate, the civil war broke out, and Sheffield Castle was held by the Royalists, and underwent a siege. The incident of great interest in this event was that the Governor's wife, Lady Savile, who for sir months had heen a widow, bat. romained in the castle, owing to the disturhed state of the country, courageously exhorted the Garrison to hold out, although sbe was herself. on tbe point of becoming a mother. In consideratiou of her condition, the defenders at longtb yislded, hnt honourable terms werer ranted by tho conquerors. The castle was then frer to ground, the Manor House was dord of Hallamshire resided and he Sheffield cutler that I would brielly speak, or he hecomes the chief actor on the stage as an istoric nobility pass away. Through all times he smitb bas been an important memher of ocioty. Never was Kiug Sanl in a greater trait than when it was said of his people Now there was no smith found in all the land " Israel" The Isroolitos had been subdued by he Philistincs, who had taken from them the he filstincs, forge surds and spears. this rendered thom powerless to release them elves from their Shen Shent the Midlle A he the The common arms of the soldiery; for arrow-heatls they were famons ; but their crowning achieve. ment was the whittle,-the common knife which served for every purpose, except making pens, which few besides the clergy could use in: hose days. Chaucer could not have written 500 years ago of tho Shefficld wbittle as the Cambridge miller's hose, if it bad not heen the nstrument everywhere carried; nor wonld LordShrowslury, in Queen Elizabeth's reign, have presented a sct of Sheffield knives to Lord Burghley, and boasted that thare was "fame
thereof throughout the realm," unless the Shefthereof throughout the realm," unless the Sheifield cutler had heen a first.rate oraftsman.
Still, the extraordinary fact remains indisputahle, that up to ahout the middle of the last century he town of Sheffield continued to he a mere settlement of forgers and grinders of steel. The man with 1001. a ycar was in the first grade of society, and the bonest cutler rotired from buaiaess, perlaps to cultivate a bit of land, when he wad amasned a fortune of 500 l . The lord of the manor worked what coal was got, and at ant earlier period be bell the forgee in his ownhands hy deputy. The restrictions imposed y tbe regulations of the cutlers' gnild kept 11 down to oue mean level. But in those: simpler days to ride in one's own carriage was ant in the ruhicon which bad to be passed efore gentinty was attained; nor was a man measured by what he had, but by what he was. If reapectable, be was made churchwarden or -ollector of the town burgory rents, or elected to the bighest dignity of Master Catler for the year ; and I have a strong persuasion that nnder oat ree-coraered bat and wig, broad-tailed the dress of the old cutler on Sunday, when he led his leather-breecbed apprentices to the parish cburch, there was often as much bononr, ntelligence, and old.fashioned conrtesy of the more remunerative trade. Prior to the Reformation, these borny.banded hurgesses bad asintained their own three priests to assist the icar, and the very fund which, from the time of Queen Mary, bas supported these chaplains the porish churcb is in a freat messure the essilt of the pions rits and lepacies of the needy knife. pininders gits and lere they withont, education. There was a school at sheffeld
 hefore good Thomas Smith founded tbe Cramprior to this date a poor sclolar was helped to the University of Cambridge out of the purse of the Church Burgess Trust. Moreover, the tringent rules of the Catlers' Company, which from importing a little capital into the trade, from importing a little capital into the trade, the pedlar's pack, "a razor made to sell and not
to cut." Tho cutlers themselves were so seru. palously partioular about the quality of their steel and the fineness of the edge, that I almost wonder we do not find some of their penvine hlades in use even at the present day. The life of the old cutler was hard and thrifty; for,
though an cmployer, he earned less money than though an cmployer, he earned less money than
we sometimes pay for lahour now; but I am We sometimes pay for lahour now; but I am
convinced, after a close study of the social history of Sheffield, that the existing generation may safely look back with pride on the integrity and respectability of their rude forefathers. What opportunity will do for a locality lik this, which abounds in coal and iron, wirh plenty of water, may he estimated from the fact, that instead of tho cutler, with his journeyman and two apprentices, we have a limited company, cmploying 7,000 men and boys, and paying $8,000 l$. a week in wages. This is the groat com mercial chango which has heen wrought ir venture, operating on local capabilitics, and it has all heen actomplished within a quarter of contary.

## TYPHOID FEVER AND SANITARY PREVENTION.

The recent outhreak of typhoid fever it Mayfair, Marylebone, and the neighhouriag
districts has been an importance as regards the question of sanitary protection and reform, We are far from a eynical and callous disregard for the lives or for the welfore of their pregard for the lives or for the welfare of their poorer aeighbours. The
nohle manner in which the incidence of almost nohle manver in which the incidence of almost
the heaviest tasation in the world,-hy far the the heaviest tasation in the world,-hy far the
heaviest, in as far as the relief and support of the poor are concerned,-is supplemented by
private charity, is enough to forbid any such private charity, is enough to forbid any such
insinuation. But even with the most open. handed the adoge must he rememhered that charity begins at home; and it would be only affect to pay that the philanthropy that should afet the sat the healh of his own family is aot, and ought not to be, a more direct ohject of interest to the head of each household than that of the families of his neighbours. Thus, while it is true that many a man may take more or less solace from the oonsidoration that, in any access
of pestilence, it is the neglocted, ill. drained of pestilence, it is the neglocted, ill.drained,
unventilated bouses that will hear the hrunt, and oot his own well-regulated and daly disinfectec ahode, wo do not admit that ho is on that accoun ahargeablo with selfishness. On the contrary, uluch a man is, 80 far, a sanitary reformer loes what in him lies, - if not altogether, yet to of that part of exty or, - to preserve the healt esponsible. While chiefly caring for the pro. ection of his own fireside, he is a puhlio benetactor in two distinct ways. First, ho prevents is own domain from hecoming a secd.hed of tontagions diseose. Secondly, be sets a good xample to his neighbours, and throws his moral nfluence into the scale of duty.
To this large class of conscientions and houghtful men, the actual outbreak of fever uddresses a specinl lesson. It tells them that, nough they may have done much, they have great public dangers arise, the citizon cannot neet them in his private capacity alone. He he ordinary atta ks of disease, the care of the arudent father and the servico of the family nedical adviker may suffice. Against opidemic aratively little avail. The master can only rotect his own bome hy keeping the enemy at oertain definite distance. And be can only do asist on a competent and regular administraion of the entire sauitary arrangements of the ion of the entire sauitary
listrict in which be dwelle.
Nor is this all, or nour
Nor is this all, or noarly all. We took occalanger that weeks ago, to point to the great anger that exists that one neglected locality
aay prove the seed-hed of discase that may ecimute the best.regulated districts. Such ppeats to be now the case. We desire to spenk
fith all reserve, and not to state as absolutely rith all reserve, and not to state as absolutely
ropen that which nevertheless has the weirh f probibility in its favour. We should bo sorry a pay a single word that might injure any f any- landor or take the bread out of the months I any- landowhing men, hut we have the less
esitution in wlerring to the suhject from the esitation in w-lerring to the suhject from the
act that we are entirely uaacquainted with the ames of any of the purveyors of milk who may
he intcrested in the matter, and thus conld not, if we would, treat the subject on any hut the hrondest medical grounds.
Our contemporary the Medical Record was the first to call attention to the fact, that the peculiar circumstances of the recent outhreak had led a pbysician, of great eminence and extensive consulting practice, to suspect that infection had heen communicated by the milk.sapply. One hundred and sixty.five cases of fever wero known to have occurred in forty-seven families, and, without citing statements which may be only prdinally founded on fact, it was evident pected as drain-poisoning could hardly be sus. tho families attacked were thase of medica men. In many, if not in all, special care bad been directed to the hygeian state of the houses, and sanitary engineering had, in more than one nstance, been specially appealed to, to exert its hest skill.
became clear, on investigation, that the disease had not localised itself along any par. ticular line of sewers. It is stited that the sewers in the neighbourhood of Cavendish. -the very Pays Latiz of the medical profes. -the very Pays Latin of the medical profesuse of disinfectants is strongly recommended to the inhabitants. Still the distribntion of the fever cases is too wide to he in any way directly connected with the stato of the sewcrs of this itstrict; St. John's Wood, for example, being The outhreak of the ferent part of the system. The outhreak of the fever in his own nursery Murchison to the directed the attention of Dr . Murchison to the question of milk. But, on the sueh and, the delicato organisation of children om as requenty to expose them to danger constitutions of infection which more mature he question being mooted, the milk purveyor stood on their defence, and threatened any per sons who attempted to depreciate the excellenco of their wares with actions at law.
A committee was, however, formed, in which tho medical officer for Marylehone intervened Dr. Corfield was engaged to look after the interest of the vendors of the milk. The com mittee proceeded to take the only proper course from riting and investigating the soveral farm fom which tbe milk consumed by the families Dr. Corfield had heen supplied. On the 13th that, in company with Mr. Taily papers, to say he had inspected all the farms which supplied the districta risited hy fever; that no suspicion whatever could attacb to seven out of eight, hut that in the case of the eighth, such probability that the supply of milk from that farm had heen stopped.

Athe same time Mr. Sedgwick called puhlio attention to the circumstances of an outbreak of by ns at the time, when, in 1870, mentioned indicated as the source the milk supply was indicated was four source of infection; and when supplied with water fron an anderground tank lined witb wood, which had been eaten by rats and that a communication with sewaten by rats, thus effected. The question se wage had heen cided whetber in every soch yet remains undo from the shameful hut generally condoned iniquity of adding a definite quantity of water to the milk from the cow, before it is sent out to the customer ; from the more venial carelessness of washing the milk.cars in the water in question, asuggestion that assumes the presence of supplying theriy active venom; or from the If tho latter shonld prove to be a possible cause of communicating infection, it is evident that we have betore us a physiological investigation of extreme difficulty, no less than of the highest importance.
The direct medical and chemical details, however, are rather subjects for the pages of our contemporaries, the Lancet and the Medical Record, than for our own. The point on which we are most anxious to insist is, the close and intimate connexion which is thus shown to exist hetween the sanitary state of districts lying very wide apart. Dr. Corfield does not mention the locality of the farm put ander quarantine. Thanks to the convenience afforded by railways, wenty or thirty miles do not make much difference nowadlays in the locality of a milk can . From whatever part of the country milk ultimately proved correct, that infection may be
imparted. We may go a step further. If mill may prove a sonrce of infection, so may butter so, perhaps, cheese. This consideration makes it highly important to ascertain whether the evil comes direct from the admixture of water, or indirectly, through the animal economy. If the not propared as pet he the case (whioh we aro little douht that the her to carry in loction the earry infcction as the milk. In fact, such is butter, that we think it himh receptivity, of this substance may in unsuspected may he the cause of miscbief in onsuspected instances. We can cite a case in our own personal experienoe, to which no donht many dairy masters or mistresses would quote parallels, where an entire make of pure fresh Welsh hutter was rcadered uncatahle from the simple pact that the ontside of tho doors of tho dairy had recerved a coating of fresh tar. The hatter ahsorhed so much of the vaporised carholic acid (or whatever be that prin ciple in tar whoh makes itself sensible to tho nose) as to be, though prohably not nuwholesome yet entirely inedihle. If such a case could occuz without any contact, in an open dairy, from the mere admission of the air through the window what subtle poison may not be ahsorherl hy this receptive sahstanee without any waraing heing given to the consumer
But are not, indeed, helpless in this mattor Now is iacnmbent on as to help ourselves. carefully tended mansion and the pulsat, the hovel, is it not time for us to insist on stamping out the slovenly sources of preventihle disease. Disease, too, that seems scarcely to stride with the "equal foot" of the Roman satirist. The highest in nature, the noblest in intellect, the most delicate in nurture and in constitution, -in a word, those whose cerebral system is most highly developed,-appear to bo the chosen ittless of the typhoid fever. We spoke, some small-pox, cholera, and searle special dangers of smal-pox, eholera, and scarlet fever. Typhoill, precautions that are not special, but nniversal. precautions that are not special, but miversal. from aursery, so long as its pestiferons seedbeds are supposed to exist at whatever distance. It is on this account that the principle, if such it may he called, of throwing on each district what the Local Govermment Buard sardonically calls responsibility, is so puevile-so mnch worse than
puerile. We have insisted on this important truth from the first moment when it because pparent that Ministers were about to negleot tho reat opportunity which tho illness of the Prince Wales placed in their hands. We have now, if possible, a more striking lesson than any we have yet reccived of the madness of allowing the looal "sanitary authorities" to take their own conrse-to do any thing, if they like; or to do eport indicates, is generally tho caso.
There are not a few signs in the political horizon tbat an nnpleasant reckoning is at hand or this negligence. We confine our remarks to anitary legislation and administration, or rather non-administration. A wise statesman, it is true, regards not so much what it is ahsolutely hest to do, as what is the hest thing that can bo done under actual circnmstances. He presents to his own mind the theory of the case. He decides what would he the proper course if verything had to he constructed from the forn dution, and he then decides how nearly, regarding either the disturbance of other isteresto ar power at his command to overcome opposition, he can approach this ideal. At times it may he only within a humble distance; at times he mas seizo a lofty opportunity; hut to the true etatea man these two distinct elcments of condoct nre always clear-the end at which he desires to arrive, and the means which are, under varyine cirenmstances, within his power in order to attain that end.
Now, the substitute for the stat emanship which has dictated the proceedings of the last two years (we confine our remarks to sanitary princistraton) has heen guided by a different srinciple. It does not appear, judying from re rulated ' eitber by the depired have heen best or by the knowled for for what was able. The ruling principle has bo was attainfor what gronnd can the ahsolnte popalar. On no other tion he explaind whe lation day to suppose that it is neosesery to inte in tho any man of sufficient edacation atd knowledge
of the morld to have crossed the threskold of Downing-street, on the propriety of compulgory sanitary measures. It is porfoctly certain that Parliament and the couutry at large, in the alarm that was spread by the Prince's illness, would have hailed tho proposal of such oompulsory measures ; would hare strengthened the hand of the Minister who bronght them forward; and would have enabled him to draw a line of dofonce agninst an enemy more to be dreaded than any who marches in military order, for which Fe, and those usho may como ufter ns, would ha, en been grataful. The object of the statesman was plain-prevention of preventible disman was plain-prevention of preventhile dis.
ease. The means of attaining that olject was ease. The means of gttaining that object was
clear - compulsory legislation. The practical difficulty of ohtaiuing the power so to legislate was removed. The coun'ry was in alarm, and wonld have endorsed any measure that was at once enlightened and vigorous. Why was the occasion wasted? Because a certair amonnt of popularity was, or was thonght to he, attainahle, to the ratepayer. That the ohject thus songht to the rastepayer. most illusory, we think there is acca. was most illusory, we think there is acca.
mulating evidence. But that is not the point. If popularity is to be the ultimar ratio of the legislator, we have entcred on that headlong and rapid course which has bronght natious
older and more oultured than ourselves to de. older and more oultured than ourselves to de.
strnction. The moment that the idca of pleasing strnction. The moment that the idca of pleasing the people,-that is, of pandering to the caprice
of the hour,--is substitated for that of the steady of the hour,-is substitated for that of the steady pursuit of wise ends, the power of legislation is
invoked only for mischief. To do nothing when action is necessary, is only one degree less reprehensible than to do what is known to be mischievous. Fach is only a cose of that con-
duct which is described as doing evil that good may come.
We think, then, that two very practioal and important lessons have been enforcod on us, at a cost which, though less than might have been inflicted, has still in many casos proved heary to endare. Are we to continue to sanction an admitted adniteration of one of the main sap. ports of infant life? Ten per cent. of water, it seems to be taken for granted, is regularly added to what we buy as milk. That is to say, that
if, for what is sold as ton quarts of milk, we pay 4s. 2d., we receive nine guarts of milk and one quart of wator, for that price. And, unless the dary from which the supply is derived be in a of water, -regalarly added by the "respectablo" vendor,-may exist the elemente of contagion. Why should this be allowed? If nine quarts of milk are worth the selling price of 4 s . 2 d ., why not say so honestly? Why not fix the fair price, sell the genuino article, and snhject to heavy peralty, and tho vigorous action of criminal law, lasve heen called by our plain-spoken and right. thinking ancestors compromising folony. It is in yery trath sanctioning a swindle. It is pntting temptation in the way of the tradesman. If of one quart of water in nine, we hear,-" of course, every one knows that,"-a quart and a half is only a question of degroe, and so on in the descending scale. This wo have known long enough, and yet have allowed snch a slur on our commercinl morality to romain withont reprohation. Now that we are to a, on the highest authority, that we not only pay 5d. out of every 1s. 2 d . for water, hut pay it for impure, infectod water, is It is, at least, as mnoh the interest of society to It is, at least, as mnoh the interest of society to be a just halance, and that a ponnd shall weigh sixteen onnces.
This brings us to anothor mattor. We mast help orrselves. We must not trast to the patriotism of one minister or to the intelligenoe of another. We must not depend on depart. ments, or resign ourselves to the paternal car of some Government Board or Privy Council. Here is a question that come3 home to every man. TVe speak of fathers of families, hecause it is among children that the vietims are for the most part found, and because many now will be nervonaly alive to the danger of their children who may neglect their own. But it is "deat" in the pot." Not one of us is safe ; and if there he one man whose life is more valuable than that of another, -one whom the anxiety of life, the care of a numerous family, the scientific o literary toil that fatigues the brain more than ordinarily, tends to depress, -he is the one marked for the first victim of this subtle danger We give, then, earnest connci to all those who
regard the lives of theil clildren, their wives,
and themselves, as precious, to lay this lesson heart, and to extend the limits of their care Let them not cease to look to their water and their drains, to disinfect, to purify, and to kee on their guard at home ; but let theta do some thing more. When thoy meet in public or in private let them make the sanitary question a theme of conversation. Above all, in those votes which before yery long they mnst be called on to give, let them learn from the candidates who ask their support how they will deal with the sanitary question. What were once grea party questions are now no more on the tapis Great practical differences of opinion in home or foreign policy are now hardly anywhere dia personal Sunitary policy in a question that take rank above all ther points now under debate. I ass belved for more abtract matters, -for changes of law as to which it remains to be seen whelher they are for cood or for evil. ret the true sanitery true sanitary reformer be the candidate for politics be to him, for once, not a matter of speculation or of habit, but of the earnest, discharge of a duty. Let him regard the "do nothiag" candidate as he would regard one who should prepare to dismantle a fortress or to dis band a garrison when the standards of the enemy were to be discorned on the horizon, or
when the line of the invaders' march might be traced from his watch.tower by colnmns of smonldering amoke.

IMPORTANT DISCOVERIES AT TROT.
Dr. H. Schliemann, who has now spent some time and a considerable sum of his private mean in excarations on the site of ancient Troy, has at last been rewarded for his perseverance and bannot the 471 too highly estimate. free from bold conjectures, and which we translate, he write as follows from Troy, undor the date of July 174h:-It seems as if Providence had intended to recompense me for my superhuman efforts during three years' excava tions at Ilios in a bountiful manner, for at the boginning of this month, at a depth of nearl 28 ft . on the great Trojan enclosure.wall extend ing from the Scraan Gate in a north.westerl direction, and close to the honse of Priamus, came npon a large object of copper and of re. markable torm, which attracted my attention a Upon it a layer of red ash and calcined debri from 4 ft , to 6 ft . thick and as hard as stone, rested, and npon this an enclosure.wall, alout 6 ft. thick, and nearly 20 ft . high, consisting of large stones and earth, and probably dating from the period following the destruction of Troy. To workmen, and preserve it for science, the createst cxpedition was imperative; and although time for breakfast had not yet arrived, I let "païdos" (a word of uncertain derivation passed per into Turkish, which is nsed hero insterd o rámavac or "restinctime") he callod ont and while my workmen took their meals and rested, I cat ont the treasnre with a large knife, an operation requiring the greatest exertion, nd porformed under the most terriblo danger, or the large wall, noder which I was working hreatened every moment to come down npon mo. But the sight of so many objects, of which ache on incalculahle value for arehwo gical science, inade me reckless, and $I$ did no mink of dangor. Bil tho removil or wiet treasure wonld have been an impossibinty without the asistance of my devoted wire, who stood eve ready to pack the objects cut out by
The object first and carry them away
The object first seen was a large, lat utensil
 Fooa), in the form of a targe waiter, in the middle of which was a boss surrounded in in groove (av่a5). It is abont 20 in, in
 high, and $4 \frac{3}{\sigma} \mathrm{in}$. in diameter; the groove sui ronnding it heing 7 in. in diameter, and $\frac{1}{8}$ in deep. Thost likely it is a shield, reminding us

The second ohject which I took out was a round copper basin, with two horizontal handlea, Thich reminds ns of Homer's $\lambda \dot{1} \beta n \mathrm{~s}$. It is 16 in in diameter, and $5 \pm$ in, high ; its bottom flat and 8 in. in diameter.
thick, 4 in. broad, and 17 in . long, haring a xim a little over $\frac{1}{15} \mathrm{in}$. high ; on one of its ends are wo lixed wheels, wis alle. This plate is strongly bent in two places, but I believe these bends to have been the effect of the heat t which it was exposed during the conflagration A silver vase of the height of $4 . x^{3} \mathrm{in}$., and of the same breadth, is joined on to the plate; this uppose to have been likewise caused acciden tally by fire.
The fonrth ohject fornd is a copper vaso o the height of $5 \frac{1}{2} \frac{1}{2} \mathrm{in}$., and $4 \frac{3}{8} \mathrm{in}$. in diameter.
Then came a globular bottle of purest gold 6 in. high, $5 \frac{1}{2}$ in. in diameter, and weighine 103 grammes, with a zigzaç ornament com menced, but not completed; a gohlet, also o pirest gold, $3 \frac{1}{2}$ in. high, 3 in . broad, and weigh ing 226 grammes; as well as a goblet of pures cold in tho shape of a slip, with two large andles, weighing exactly 600 grammes, 3 立 in high, $7_{2} \frac{1}{2}$. long, and $7 \frac{1}{8} \mathrm{in}$. broad ; on one sid 3 a mouth $2 \frac{3}{3} \mathrm{in}$. in width, on the other one $1 \frac{1}{8}$ in 7 width. It is sugrested by my friend, Pro fessor Stephanos Kutmanudes, of Athens, tha the person offering the filled cups drank first ou fthe small moath, and to do bononr to thi nest by letting him driak out of the large on The treasure contains further, a goblet of gol alloyed with 25 per cent, of silvor weichin 0 grammes, $3 \frac{1}{\frac{1}{3}} \mathrm{in}$. high and $2 \frac{5}{8} \mathrm{in}$. broad, th foot of which is only $\frac{3}{4} \mathrm{in}$. high and 1 in . broad and is besides not straight, as if the goblet wa intended to rest on its month only for and silver ( $\alpha$ and ) wieces an the gor nd silver (spapa), wrongl what hame in the form of large hlades, of which one en was rounded off, the other being cut ont in th shape of a crescent. The two largest ones ar
$8 \frac{1}{2}$ in, long and 2 in . broad, and weigh eac: $8 \frac{1}{2}$ in, long and 2 in . broad, and weigh eac
184 grammes. The next two pieces are $7 \frac{3}{3}$ ir 184 grammes. The next two pieces are 78 ir
long and $1 \frac{1}{2}$ in. broad, and weigh 173 gramme long and $1 \frac{1}{2}$ in, broad, and weigh $\frac{1}{2}$ in. long an eacd. The remaining two are 171 gramme Host prohably they are the Homeric talant (á入 $\alpha \nu \tau \tau \alpha$ ), which could only be small, as Achille or instance (Iliad, xxiii., 269), proposes as fir prize for the victor a woman, as the seoond horse, as the third a basin, and as the fourth priz wo golden taleuts.
Partly on the top, partly by the side of thes gold and silver articles, I fornd thirteen lance eads of copper of a length of 7 in ., 8 , in., 8 , in in., and $12 \frac{2}{2} \mathrm{in}$. long, and from $1 \frac{1}{3} \mathrm{in}$. to $2 \frac{3}{3}$ i broad at their widest part. There is a holo the lower end, in some of which the nail or till remains, with which the lance.head wa fastened into the wooden बhaft. The Troja pears were, therefare, quite ditferent from thos of the Greeks and Romans, for the two latte nations put the shaft into the spear-bead, whil the Trojans put the lanoe. head into the shaft, As I found all the ohjects onnmerated ahoy packed togrther, or into one another, on the to of the coclosnre wall, the construction of whic is attributed hy Homer to Neptune and Apollo it seems certain that they were put into rooden box ( $\phi$ wola $\boldsymbol{\circ} \mathrm{s}$ ) like those mentioned it he Iliad (xxiv., 228), as being in tho palace Priam. This seems all the more certain, as cound, close to the articles descrihed above copper key, $4 \frac{1}{4} \mathrm{in}$. long, the bit of which, 2 in long, and of the same breadth,-mas the greates resomblance to the large safe.keys nsed in moder banke. Curionsly arough this key mast hav had a wooden bow, the end of the shank heing heut at a right anglo, as in dagger-knives leaving no douht on this point. Probably some member of the family of Priam packed thr valuablos in a great hurry into the hox, carrie ho latter away, without having time to take ou the key, was overtaken on the wall hy the enery or hy fro, and had to leave the bor belind was buried at onco to the depth of 5 ft . or 6 ft . with the red ashes and the stones of the roya honse closo hy. Perhaps the helnuet found by ne a short time ago, along with a vase and gohlct of silver, in ono of the rooms of the roya palac, belonge to tho samo nofortunawo ried th savo th 5 fise. Mio micescossur tho Trojzas buits 5 . of $f$. 6 the enclosuro 1 , 5 , K . high ana $f$, thick, 0 large hewn and unhewn stones and earth, reach ing more than 3 ft , noder the surface of the hill A proof of the treasure having heen packed af ander terrible danger to life, and with a tremb ling hand, is tho contente of tho largest silve vase discovercd, in which honna tho bot two splendid gold head-hands (spipe $\bar{f} \mu \nu a)$, rontlet, and four very arcsicaly. wose fifty hangings of gold; on tho top of these lay fifty
thousands of very small rings, cabes, buttons,
sco., of gold, which evidently formed part of other jowelry; then followed six gold bracelets; and on the top lay the two smaller gold goblets. One of tho hoad.hands is 20 in . long, and con. sists of a gold chain, on each side of which eigbt small chaing, $15 \frac{1}{2} \mathrm{in}$. long, and oovered all over with small gold leaves, and intended for covering the tomples, are hanging down; on each end of theso sixtoen chains a gold idol ( $1 \frac{3}{8}$ in. long), with the owl-head of the llian tutelar goddess, is suspended. The fifty-six gold ear-rings are of different sizes, and three of them seem to have been used also as finger.rings by the princesses of the royal house. Tho forms of these ear. rings have no similarity with those of He
Roman, Egyptian, or Assyrian ear.rings. Roman, Egyptian, or Assyrian ear-rings.
Me who tried to savo this treasure fortunately had the presence of mind to place tbe large silver vase with tho valuables described upright into the box, so that not a pearl has been lost, not a ringle thing been destroyed. My esteemed Friond, M. Landerer, of Athens, well known for
his disooveries and writings on chemistry, who has examined very carefully all the copper objects belonging to the find, and analysed frag. monts of them, says that all of them consisted of pure copper, without any admixture of tin or rinc, which, to make it more desirable, bas been wronght ( $\sigma$ рupínatoz),
Hoping to find further treasures, and wish. ing to hring to light the 'Trojan wall of the gods as far as the Scæean Gate, I have had the upper wall resting partly on it for a distance of abont 50 ft, entirely taken down, Visitors to
the Troad, however, recognise it still, opposite the Scwar gate, by the north-western earth wall. I bave also had the gigantio mass of earth separating my western and north-western onttings from the large tower completely reone of my houses, and also, for easier transport of the debris, to carry a bridge across the Sceran Gate. The result of this new excavation has heen of great henefit for science, for I have room, 20 ft . hy 20 ft , of the royal house, on room, 20 ft . hy 20 ft , of the royal house, on
which no buildings of a later period rest. Amongst tho ohjects found there, I mention Amongst tho ohyects found there, I mention
only the following: - A square piece of red slate, with two holes, not penetrating, at the slatc, with two holes, not penetrating, at the
top, nud a groove rnnning round it, with an top, and a groove rnnning round it, with an
inscription excellently engraved, of which neither my learned friend Mr. Emile Burnouf nor ther my lcarned friend M, Emile Burnouf nor belongs ; farther, a few interesting terra cottas, among which a vessel of the exact form of a modern barrel, and with a pipe in the centre Tor pouring in and running ont the liqnid. There wero also finand on the Trojan onclosure wall, 20 in . Inderneatb the place where the
treasnre was discovercd, three silver bowls treasmre was discovercd, three silver bowls
$(\phi \dot{\alpha} \lambda a L)$, two of which were hroken in excavat. ( $\phi \dot{\alpha} \lambda \alpha a$ ), two of which were hroken in excavat.
ing, hat whicl may be put together again, as I ing, hat whicli may be put together again, as
have all tho pieces. These howls seem also to have belonged to the treasure, and if the latter has been so wonderfully preserved from our picks, it is thanks to tho large copper atensils mentionod, which projected, so that I was able to cut everything out of the bard débris with my knifo.'
So far the indefatigablo explorer must be
beartily congratulated on his success. How far he is right in his surmises furthor inveatigations will no donbt fully establish, hat that his dis. coveries are of the greatest importance to the archaoologist as well as to the historian admits of no doubt. He intends publisbing fall details of the trensure in a work on his oxcavations at form part of this publination will whe increased by 216 photorraphic plates, in consequence of the additional illustrations of the many remarkable objects of this treasure-trove. The worl of I. A. Brockhaus, at Leipzig.

Wooden Pavements in New Yorle.-Nerv York has giveu the patent wooden pavements a thorongh test, says the local Tribune, and found thom expensive and inadequate to our nses. The official report of Commissioner" Van Nurt
confirmed the concluaions already very generally coafirmed the concluaions already very generally
reaohed, that the city must retnen to a good stoue pavement, and waste no more money in testing a material which answers in Chicago or Brookyn, or other cities where travelling the heavy traffic of the metropolis.

THE UNITARIAN CHUROI COMPETYTION NOTTINGHAM.
Tre Unitarians of Nottingham desire to build new church in that town, on the High Pave. mont, to oost about 10,000 l, and seat 1,000 persons ; and so, to prove to the world the small value architects sot upon their own skill and ime, eighty.one of them went to work, and haro fled the large room at the School of Art witl hundreds of drawings utterly wseless for any ther parpose. It is cuite true that tho large majority of the designs are obviously the works of persons egregiously incompetent, and the ompetition may be looked npon as a sort of axercise set tbem in the course of their stiddies. After doducting these, bowever, a sufficient umber of creditable designs still remain to nake one grieve for tbe time and energy wasted. The committee have selccted for the first premium, and it may be snpposed for execntion, a design sent hy Mr. Stuart Colman, Bristol, nnder the motto "Nulla Vestigia Retrorsum."
The second premium is awardod to Mr. E. T. Robins, of London ; and the third to Mr. George Ogden, of Bradford, for a somewhat fceble and inferior desig.n. Mr. Rohins has a boarded roof panelled, and tie beans; and gives a flêche to mark the commencement of tbe chancel, as well as a steeple.
The selected design is Early Englisb in style, cruciform on plan, and has a handsome towe and spire. The aisles are covered with span roof, an expensive mode, adopted possihly in order to ohtain lofty clearstory windows, light heing one of the difficulties of the situation he designs marked "Sans Diou Rion," "Faith," e may add, are all in pen and ink, or pencil

## PROPOSED NEW CEMETERY AT HAMPSTEAD

The Hampstead Burial Board are dosirons of onstracting a new parochial cemetery for the istrict, and propose to purchase for the purposo piece of land near the Flect.rond, Gospel Oak. gelds. An opposition to the project was offered y a number of the inbahitants, at an inquiry as o the suitableness of the proposed site held last reek hy Mr. Holland, the medical inspector appointed hy Goverament. The inquiry gtand appointed

HE IMPORTANCE OF APPRENTICESHIP AND A PLAN.
To the importance of extending apprentice hip, Mr. T. H. Hartley, of "Marble Hall," Westminster, has drawn attontion more than nce. It is a subject that will pay for discus. tow. When we look around and throngh oux owns and see so many idle young people growing up without learning any trade or skilled ccapation, it is indeed a wonder how they live. If such, then, instead of being left to them. selves, should he taught some bnsiness or occu. pation, they would cease to he mcre buman machinez, and liaving ecquired a knowledge of a trade or some skill in handioraft, they wonld become at once elevated into a higher seole of social position, and by their indastry and skill would incrcase to a great extent the national and of wealth. This is his argnment. He thas sets forth his proposal:--" It is to provide boarding-houses or homes for lodging appren. tices, and my experience of suoh an establish. access, for the system has bean in operation at 26, Page-streft, Westminster, for the last sisteen years, and has therofore been well tested.
The following is the plan of this establish. ment, set on foot hy me, and would serve as a model for the working of the proposed homes. The boys are taken as apprentices, and placed in a small honse, in which a persou resides con. nected with the worls, who acts as a master. His wife is the superintending matron, and the coutrol of these lads is placed in their hands. They are called in the moraing to go to their rork; they return at stated times to their meals, which are always ready for them; there there are books and newspapers fork is done, read, or occupation is found in for them drawing. They are allowed full liberty ingress and egress, being fiued, bowever, if not the season, and they are allowed a sramell sum a

Week for pocket.money. They are thus placed in a position which must have a very material effect in qualifying toem to fulti the duties properly when arrived at manhood. The boys are taken at about thirteen or fourteen years old, and retained antil twenty-one, at which age they ought to be able to take care of them.
selves, and make room for others; and darino thelves, and make room for others; and daring bome, and, at tho same the advantages of a bome, and, at tho same time, a surveillance is exercised over them which others in the sams station of life bave not at their paternal bomes."

In order, therefore, to bring this mattor more prominently before the public, and, if possible, to restore this ancient custom to its former position, he proposes the following regulations or consideration:

1. That come competent person or persons should be appointod in the different towns and provinces, whose business it shonld bo to perform duties similar to those of the Chamberlain of the City of London.
2. That bomes should be provided for all apprentices, with a mastor and mistress ovcr each to superintend the necessary domestio arrangements.
3. The masters or employers of thase apprentices to train then ap to some craft and provide work for them, and pay for their support in their bomes.
In this way, by adding to our skilled labour we should bo adding to our national wealth, and this most important result woald follow as a necessary consequence, that wo shonld greatly diminish the amount of our panper population and by thus striking at the root of the induce ments to crime we should lessen the number of our criminals.

RAILWAY SALES OF SURPLUS LANDS.
In last week's Builder we gave particulars of the sales of surplus lands which had been effected by the London, Chatham, and Dover, and Metropolitan Companies, as disclosed hy the proceedings at the late half-yearly meetings of the companies. We now find chat the Metropolitan District Company bave sold a largo quantity of their surplus lands within the half year just ended. At the meating of the Comthat tho Charman (Mr. J. S. Forbes) stated lands, within that period they had sold surplas since, for which they had realiaed 67,0001 , and more the half.yenr ended they had sold 40,000 . deal learing them a balance of 15,000. to posed of lands also stated that they bad disof more lhan in the form of leases to the extert 80,0002 now to be disposed of leaving abont in aboat a year he hoped they would bave sufficient to yield them between 6,0002 , and 7,0001 . for interest on the purchase of lavd.
It also appcars that the Great Eastern Company are making considerable progress in tho sales of the large surplus property connected with thcir metropolitan oxtensions. It trangpired at the half-yearly meeting of the Com pany beld last week that of 350.000l. worth of laris property they havo alroady disposed of a 200,000t.

THE NEW CHURCH IN NEWINGTON CHURCHYARD.

Wituin the last two or three weeks the pre. Iminary steps have been taken towards the crection of a new church which is about to bo As is on a portion of Newington churchyard Newington, which immediately adjoins Newwiden Butts, is abont to be are a parish chnrch is to ho orected on a site secured iu Kenuington Park Road; but in adolition to tho now parish chnrch it has been decided to erect a new mission church on that portion of the churchyard firthest removed from the main roarl In order to effect this it is necessary that some of the bodies and remains in the chnrchyard should be exhamed, and this is now heing done, the remains being re-interred in a number of vaults which remained alnost empty when tho churchyard was closed for interments. As, how ever, the new church is to be built on piera and arches raised some feet above the ground, the axhumation only extends to the spaces necessary or the foundations of the piers.
limensions, will bo Gothic in charable la'ge
built of red brick, with stene dressings, wad the roof will he snrmounted at the chancel arch by a gable, containing two hells. Internally the walls of the church will be faced with red brick, decorated with moulded strings. Four arches on blue stone columns will support the roof of the nave, and divide tho main body of the church from the aisles. The clancel will be raised between three and four feet above the main body of the church, and an approach from the latter to the altar will be made by means of seven steps. The roof will he an open one, and besides the windows in the nisles, thero will also be eight clearstory windows on each side. The $\mathrm{pu}^{1} \mathrm{p}$ it will he of wood on a gtone base. The reredos, which will be chiefly of stone, will be elaborated, carved, aud adorsed, and supported on each side by ornamental columna, returning several feet into the chancel. The extreme langtli of the charch, without including the vestries, will be 119 ft . The nave is 76 ft . long and 25 ft . wide, and tho width of the aisles 11 ft . each. The chancel will be 31 ft . long, and tho height of the nave 32 ft . to the spring of the arch, and 56 feet to the apex. The edifice, which will be dedicated to St. Gabriel, will have accommo dation for 800 persons.
Mr. Edward Cutts, of Waterloo Place, Ham. mersmilh, is the architect; and Messrs. Lathey Brothers, of Battersea, are tho bnilders. The estimated cost is $5,000 l$.

THE ARCHITECTURAL ASSOCIATION ON TOUR.
The Newark and Lichfield excursion is being this week carriced on with good success: a fair namber of students taking part in the expedition. We give elsewhere part of Mr. Sharpe's
inangural address. We shall hereafter bave inangural address. We shall hereafter have
something to say of the churches and other bomething to say of the churches and other party.

## MANCHESTER CATHEDRAL.

## memortal mindow

One of tho five-light clearstory windows on the north side has been filled with stained glass. In the tracery are shown angels bearing appropriate cmblems of majesty, also bearing scrolls
for suitable text. The five openings are filled with a subject taken from the life of King Solomon, in the temple. No. 1, left-hand lightsThe priests bringing in the ark, also worshippers. No. 2,-The bigh priest, with priests and Levite with censer. No. 3 , centre opening.- King Priests, with worshippers, and Levite with a ram for the burnt offering. No. 5,-Priests blowing trampets, with worshippers. In the foreground in the backgronnd of the subject is shown the onter conrt of the Temple. The figares are drawn large, to suit the height of the window Under the window is a brass plate, placed upon Under the window is a brass plate, placed apon nne of the piers, with the following inscription: Woodcock, in loving memory of by Susannah Woodcock, in loping memory of her husband, William Henry Woodcock, who died No 2 , 1870 , in the 73 yed year of his age." 2nd, 1870 , in the 73 rd year of his age,
The work has been exeouted by Mr.
Gibbs, of Marylebone-road, Lendon.

THE ORGAN IN THE CHOIR OF ST. PAUL'S CATHEDRAL.
The accompanying engraving represents one side of the organ,-we might say, the new organ, -in the choir of St. Panl's as it now stands; but before entering upon a description of the iustrument, it will be interesting to give a short history of it from the commencement.
Originally the organ stood at the west end of the choir, tbe stalls returning at that end, and the entrance to which was by two pairs of very
beantiful iron gates. Above these stood the organ, supported on eight Breccia marble columns, of the Corinthian order, the whole forming, as it did, a fine feature in the eentre of the choir, immediately beneath the woronvaulting. The side facing the choir and that vaulting. The side facing the choir and that also towards the dome area presented the same appearance, except in minor details, snch
as the figures, some of which have books, others trumpets, in their hands ; but otherwise the two faces or fronts were identical, As viewed from
the end of the nave, or even beneath the dome, it was a fine object of its sort.
This organ was the work of one Father Smith a man of great ability in his day. A quotation from Eilis's "Dngdale" (p. 183) will further explain:-" Sir John Hawkins says the organ of established the character of Smith as au artist establisbed the chacter or Shich as au artist Whether Harris had been his competior for buildivg an instrument for that cburct, as he had been before at tho Temple, docs not now appear; but in the Spectator, No. 553 , for December 3rd, 1712 , is a recommendation of a proposal of Mr. Renatns Harris, organ-builder, in these words, - 'The ambition of this artificer is to erect an organ in St. Panl's Cathedral over the west door, at the entrance of the
body of the church, which in art and marnifi body of the church, which in art and magnifcence shall transeend,
aver before invented.
The proposal, in perspicuous lavguage, sets forth the honour and advantage such a perform ance would be to the British name, as well that it would apply the power of sounds is a manner moro amazingly forcible than perhaps has yet been known, and I am sure to an end much more worthy. Had the vast sums which havo been Jaid out on operas without skill or conduct, and to no other purpose bit to suspend or vitiate our understandings, been disposed this way, we should now porhaps have an engine so forme as to strike the minds of half a people at onc in a place of worslip, with a forgetfolness o present care and calamity, and a hope of endless rapture, joy, and hallelujah bereafter."-Hist of Music, vol. iv., p. 356
By this description we fud that it was onee contemplated putting the organ at the west end of the cathedral.
The Smith organ, then, as it is commonly termed by the initiated, remained in the position described natil the year 1860, when, by the order of the Committee for Decoration, and with the sanction of Dean Milman, the organ was arches of the position under one orion of the arehitect to the fabric, and also to the committee, Mr, F. C, Pcorose. At the same time the stal? ri, C. Pcorose At moment, so that an romed from end to end interrapled vita was abo f the charch, the apsiol with its wirdows This idea of placing the organ nuder one of the arches was not a novel one; the notion was entertained hy Wren himself, or his advisers sthere is a drawing in his own or papil's hand till extant, designed for this very situation Iowever, the instrnment was found but ill daptad to such a situation, and it became, in he view of many competent judgea, a necessity to remore it from so nosuitable a position to one moro worthy of it, both in a musical as well as an architectural point of view.
The idea of dividing the organ longitudinally seems to have originated in the mind of onc, if not two, of the dignitaries of the cathedral, and if is certain that one of them did actually work the is certain that one of them did actually work the enable the architect to adapt the organ to, and reconstruct it in, its present position.
Mr. H. Willis was the organ-builder, who from the origin of the plan worked out the project of uniting the tro sections, so as make one har. monious whole.
Mr. Penrose bas designed four stalls for the principal clergy to each half, and has likewise designed some beautiful new carved work in parts to agree with the old work of Grinling Gibbons. He had no easy task to perform, also, in supporting these separate sections with other pendent or hang-over organs. Some stout iron columns, with cantilevers of iron encased in carved woodwork, take the real hearing.
Mr. Willis's work is as follows, and comprises the organ as it now stands, and which is mach enlarged and increased in masical powers.
The organ being thus divided, means had to be adapted to enable the organist, who could site to him, and the means that the organbuilder preferred was the poeumatic lever; bnt this had to be very considerably modified, and it is in this case constructed with an inter. mediary note of great length to each note or key of both swell and choir organs, which are placed on the sonth side, the organist being on the north side. A valvular apparatus exists near the keys, and these tubes receive the compression of the air, and inflate a flexible diaphrarm to an extent sufficient to transmit the mechavical action of 0
ho valves of the swell and cheir ergaus ; and se marvellously rapid is this in its operation, that eiteration is perfect; nor is thero auy loss of me between the tonching of the key and the hat this plan, so successful here, was furs leveloped at the Royal Albert Hall, and it ha evol sis singular permanent. The same principle is also car to s the tops and the pedal-organ, which is placed is he body of the stall-screen under the first arct contrivance operate that the organ, thougl contrivance operate that the organ, thoug cattered as it is,

ST. PAUL'S CATHEDRAL: DETAILS OF ORGAN.

THE ORGAN IN THE CHOIR OF ST. PAUL'S CATHEDRAL, LONDON,-AS NOW ARRANGED.

ON HEALTI AND COMFORT IN HOUSE BUILDING.*
As implied in the title, my subject is not
house-building itzelf, as sucb, hut only certain house-building itself, as such, hut only certain arrangements for healch and comfort therein. House-building has at least two aspectsarchitectural and sanitary. The former belongs exclusively to your own profession, but the latter sion also. It is the arehiteot's province to provide dwellings for the people, and to see that
they are mado protective and gafo ; and it is they are made protective and safe; and it
part of tho medical man's province to help to make them healthy and confortable. In this respect the medical profession has lately been very forcihly reninded of its duty by one of
your own Fellows (Mr. George Aitchison) who, your own Fellows (Mr. George Aitcbison), who,
in the Builder of December 2, 1872, made the following observations:-"No greater benefit could be conferred on mankind than tho teach. ing them the necessity of ventilation, but that lesson is more likely to bo learnt if it come from the dootor than from the architect. lif is shortened and serins diseoses that thei lifo is shortened and serious diseases are brough on by
chance."
House-building being the point in which the dnties of the architect and tho pbysician meet, it becomos necossary that architects and medical men shonld occasionally discuss together the requirements involved in this art. Mach publio
and nueb mutual benefit would, I am sare, and mucb mutual bonenit would, I am sure,
result from such a practioe. Under this impresresult from such a practioo. Under this impres-
sion I willingly accepted your invitation, and I am pleased that I have been able to be presen myself, because I look forward to much interesting and profitahle discussion this evening. The objoct I have in view is to iuvite your considera-
tion of a fer conditions of honse.huilding that deem of particular importance in a sanitary and medical point of view
In building a dwelling-house, the conditions deem of essential importance are tbe following First.-That the bouse sball he so plaoed as to be as much as possible exposed to the fresb air and sunligbt; becouse fresb air and sunlight are essential to the health and growth and life of the occupants. The site, therefore, sbould be cather elevated, if not ahsolutely, at all ever Second. -That it shall bo absolutely froo from damp ; because a daup houso is a most potent and active and ever-present canse of disease, conghs, consumption, and such like. The site, lherefore, if not natnrally dry, must be reudered by means of asphalte or cement, throughont drainage mast be perfect. All the butters lrains sbould terminate outside tbe house on in open grid or trap; that is, they should ho ut off from the street drain, and they should bo entilated hy having a pipe run up fo Third - The every bend in the house
Third- - That it shall bo so placed that the lirect rays of the snn shall have free admission ays impart a healthy and invigorating quality and
oo the air, and stimulate the vitality of quality
and peings as they do those of plants, and without unlight buman heings, as well as plants, would icken and dio. Tho aspect, therefore, should be outh-east.
Foarth-That the look-out from the living estingents shalt be cheerful, lively, and inteesting; because much of the time of the family anst be spent in-doors, and a cheerfnl look-out 8 as necessary to ronder indoors attraotive and ven endurable in tho daytime as sooiety is in
he evening. The prospect, therefore, sbould he evening. The prospect, therefore, sbould he sextensivo and varied as possible.
Fifth.-The apartments shonld Fifth.-The apartments should admit iuto hemselves a great quantity of light; because ight is essential to the health and vigour of the nmates. The window openinys sbonld, thereore, be large; but as the greater the surface of lass, tbe oolder the rooms in wintor, and the otter in summer.
Sixth.-The window openings should bo well played, as well outzile as inside, so as to do ritb as little glass as possible.
Soventh.- The windows should be so arranged s to admit the direct rays of the san at the imes when tbe apartments are in use; because is when the apartments are occupicd tbat they inire the cheeriug and invigorating influence
ithe sun's rays. Fur instance tho brenkfast-
*From a paper by D. Joln W. Hapward, Liverpool
ead ut the Royal Iustitute of British Arcbitects.
room window should admit the carly morning room window should admit the carly morning
rass; the dining-room windows, one should rafs; tho diming-room windows, one should
admit tbe morning rays for brenkfast time, and admit tbe morming rays for brenkfast time, and
the other the noon rays for dinner time; and the other the noon rays for dinnar time; and
the drawg-room windows, one should admit the drawing-room windows, one should admit
the moroing rays for callers, and another the the moroing rays for callers, and another the
evening rays for company; and the bed.room evening rays for company; and the bed-room
windows sbould, if possible, admit tho early morning rays.
Eightb. - The interior of the apartments should provide wall spaco for the arrangement of furnitare; because without wall space no manner of furnishing a room can make it either handsomc, elegant, or comfortable. The windows, tbercforo, slould be few, and they and the
door and fireplace sbould be so arranced door and fireplace sbould be so arranged as t provide as mucb wall space as possible.
Nintb.-In the bed-rooms the window, door, and fireplace, sbould be so arranged that the bed can be fixed entirely out of the draught, and not have to he placed between the window and door, the window and fireplace, or tbe door and fireplace; because a cold draught playing on persons whilst sleeping is often dancerons life, and always destructive of comfort.
Tentb.-The doors of the apartments, besides not admitting cold air when shut, ought not to admit cold air when open; because the draught thus produced not only destross the comfort of tho apartment, but produces lumhago, rheumatism, neuralgia, \&e., in tho occupants. The doors should, tberefore, open out of a warmed lobby or corridor.
Eleventb.-Tbe apartmients sbould provide large cuhic space for air; becaruse plonty of air is essential to the bealth aud comfort of the inmates. The apartments sbould tberefore be as large and lofty as possihle.
large cubic space for apartm, hesides providing a large cubic space for air, should also provide
for tbe escape of the foul and admission of fresh air; because, however large an apartment is, the air is sure to become deteriorated and contami. nated when the apartment is occupied by living
beings. There sbould, therefore, be turo special beings. There sbould, therefore, be turo special
openimass to each apartment, one for the escape openings to each apartment, one for the escape
of the fonl air, and another for the admission of of the fonl air, and another for the admission of
fresb air. Tbere must wo two openings, an ont. fresb air. Tbere must be two openings, an out.
let and an inlet. It is useless to make ono with let and an inlet. It is useless to make one with. ont the otber; it is useless to make an outlet out if none comes in. This is a self-evident fact still it is very frequently disregarded in attempt ing to veutilate aparments. There will, for instance, be a perforated or louvered pane in the window, a perforated brick or grating in the wall, an Arnott's ventilator in the chimney
hreast, an opening above the gas, with a tubo leading to a grating in gas, with a thue cbimney smoke.flue or ane wall or into the for the escape of the foul air, whilst there is no opening at all for tbe admission of fresh air and tbe doors and windows are made to fit as to py as possinle, and even list pat round them them, as though that could air getting in by got in! In these cases, if the ontlet act at all as an outlet, it ml1st obtain its supply down the chimney--hence a smoking chimney; but renerally, instead of acting as an ontlet, it becomes an inlet to supply the carrent np the chimney, and always 80 when the firo is burning-lience from the draught so generally complained of from tho ordinary ventilators, and hence the closed up in disappointment and disgust, und ventilation decried as a nuisance, failure, and farco.

Thirteenth.-These openings providing for the esoape of foul air and the admission of fresh air should, both of tbem, be special and permanent, arrangement of the honse, such as opecing the windows, doors, ohimneys, \&c.; because the escape of fonl air and the admission of fresh air are most needed when, in consequence of the coldness of the external air, we close tlie doors and slut the windorvs. Special ventilation is most needed in winter, in cold frosty weather witb an east wind blowing, and when we are adopteren to shat the doors and windows, and nof exy for meals, or ronud the fire for sitting at table for meals, or ronud the fire for evoning enter-
ainment.
Fonrteenth. -The outlet should take the foul nir from the upper part of the room; because the foul air being moro beated is specifically
lighter than the fresb air, and so rises to the upper part of the rooml. Tbe outlet shonld, upper part of the room. Tbe outlet shonld,
tberefore, be in or near the ceiling.

Fifteentb.-The outlet should bo effectually protected agrainst any possibility of hack draught indeed, it should bave a considerahle amount of snctiou; because any liability to back drangbt
is quito incompatible with is quito incompatible with an efficient outlet Tbe outlet, therefore, sbonld not communicate directly with the ont of-doors air, but, by means of a tobe or flue, slould pass tbrough some per manently heated contrivance. If the outlet go directly to the out-of-doors air, -as, for instance, a tabe from over the gas to a grating in the outer wall,-there will certainly be back draught and so also will there be if tbe tube lead to an opening into the chimney tue ; at any rate, when the fire is not burning, and particularly if the room door be also open, and most certainly if tbere be also a strong draught up the chimney of another room opening out of the same lobby, as, for instance, a dining-room or a kitchen. To prevent any possihility of back draught the outlet uction provided witb some means of constant foul air the mare suction the hetter provided tbero is also an ample inlet for frosh air : if not ample, the suction would produce a smoking chimney and draughts from aronnd the windowe and doors, and perhaps draw in air from fonnda. fion and drains. The necessity for this suction is generally acknowledged, and it is sometimes attempted to be gained by carrying the tube before mentioned up a little way in the smoke. flue, and even by bending it down and round the fireplace. Bat a fatal objection to tbis plan is, that it is quite inoperative for the greater part of the year, and is of no use whatever nnless tho fro is burning; when the fire is not hurning it may, indeed, become an inlet, and then an addiional objection is, that a hack draught down tho moke-flue carries the soot into the room to the spoiling of the eeiling, paper, and furniture. And to be really effectual the suction referred to must be constant and permanent, and opera-
tive both winter and summer, and day and night and whether the apartment is accupied or not, and whether the fire is uttet must, therefore, pass throusb some conrivance for keeping it constantly and permanently heated.
Sixteenth.-The inlet should admit only warmed nir ; because the admission of cold air would produce dangerous dranghts, and tbese specialy direoted towards the part of the room occapied by tho inmates in cold weather, viz., the neighbourlood of the fireplace. The inlet should, therefore, open out of a warm lubby or corridor.
Seventeenth.-Tbe outlet should be sufficiently large to carry off all the foul air at the time when the apartmont is being pat to its maximum of use; because it is just at that time the cutlet is most needed, its capacity for other times could be regulated hy a vaivc. The outlet for a年有
 and sbould ho suffeiently capacions to at the very least, 15 cubio fect per minute for eacb occupant. The ontlet slould, however, be considerably less than the inlet, or it will produce draughts.
Eighteenth-The inlet, on the contrary, should eas capacious as possible ; becanse it has to provide not only for the ontlet in the oeiling bnt also for the cbimney, and that when the fire is burning aud requiring for its supply alone from 600 to 1,000 cuhic feet per minute. Indeed, the inlet should he ahle to admit more air than cal possihly find its way out hy botb these outlets, otherwise it wifl produce draughts. When the air can get out of an apartinent moro rapidly than it can come in there are sure to be currents but when more air con come in than can get our speak, - there will he little or no ourrent. Aus? spenk, - inlet should be throuyh tho wall of the opyonsite side of the room to the fireplace, becus the fire will then draw the air into and across the room, and tbus cause it to circulate thronglt out the whole of the apartment. If the fireplace be on the same side as the inlet, it will nom only not assist to cironlate tbe air throughont ciroulating hy draving it dire prevent it from Eo ciroulating hy drawing it direotly up the smoke. fue; and it should, moreover, bo split up into 4 . many divisions as possible so as to distribute the supply along the whole side of the room, anil thus asme to pavan any perceptiale carrmen and this will be furtber belped by having tho openings through the cornice instead of through the skirting, beoavse then the fresb air will in, the warmest that is in the corridor, and it wil
also have to descend through the warmer air of the room before it can come in contact with the pergons therein. When throngh the Ekirtiug it through the coldest air of the room, and it comes firgt to the part of the hody where it cau least be borne, viz., the feet.
In this country it is necessary to provide specially for ventilation. In conseqnence of the nature of our climate, the doors or windows can very seldom be left open, even in the day, and very seldem in the night, without risk. Indeed, no direct admisaion of the external air into the apartmente of the honse can be endured during at least cight or nine months of the year,-in at least cight or nine months of the year,-in fact, the great prevalence of oold, searching, and shriveling east wind renders absolntely dangerous; 日o that no kind of arrangement of openings directly to the ont-of. arrangement of openings directy to the ont-or. doors air, such as drawing down the wincow. eash, perforated bricks or gratings in the wall, perforated or louved square in the window, the wire.ganzo at the top of the window-sash, patent ventilators, or any other contrivance that communicates directly with the out-of. a conntry like ours. In this country, where eight or nine out of the twelve months in the year are cold, windy, and winterly, houses should ho built with referonce to winter, and not with reference to summer; and they should he planned and huilt with the ohject of keeping out the cold air and not with the ohject of letting it in; ventilation should he provide.d for specially; and in making this provision it should be borne in mind that we are living at the bottom of an ocean of air, and that the same manipnlation is required as though we were living at the hottom of an ocean of water, and were endeavouring to make it come in at the bottom of the house and go out at the top in a continnons stream.
From the foregoing remarks it will he seen that I maintain that ventilation is the great and main necessity of honse. huilding; and that whaterer else may he left undone this should he attended to; and whatever else may he left mperfect this should be made perfect and complete; and that it should include the whole pensive. It should, I ropeat, he perfeot and complete, inclnde the whole honse, and be selfacting and inexpensive.
Ventilation is the point for discusaion between the architectnral and medical professions, for it is here in particular that their dutiea meet and combine; the education, knowledge, and expeHowever much the medical man may be in pressed with the ahsolute necessity of rooms and pressed with the ahsolute necessity of rooms and vide it,-this must be done by the architect; ride , the other hand, the architeot canmot be expected to provide fines and tubes, which expected to provide naes and extra expense, except under the certainty that they are absolutely necessary, and required that they are absolutely necessary, and required trra mont honse. But there is a third party interested in this suhject, namely, the puhlic. The public are, after all, the "yea" and "nay" in this matter; it is, indeed, for them that these
arraugements are to be made, and they are the arraugements are to be made, and they are the paymasters. Whatever extra cost is involved, it is the puhlio that will have to pay it; and it is of little use for a doctor to prove tho neces sity, or for an architect to design the arrange ments, unless the puhlic he persuaded to adopt them, and pay the cost involved. That the public can ho thus persuaded I have no doubt, hat that this will take some time I am equally reaty to admit. It will take some time thoroughly to educate the puhlio into the abso late necessity for special provisions for ventila tion, becanse they have hither to heen left under the irapression that special arrangementa for ventilation are nnnecessary and superfinous, on that they are impracticahle, or at least incom parible with warmth and comfort; and I am surry to have to add that they have been - 0 -anuraged in this impression by many arohi. tects aud engineers, and that medical men have not $\mu$ rotested with sufficient force and intelli. gave. Medical men have gone on from genera. tion to generation silently monrning the resulting evils of the want of efficient and practicable mush of ventilation, and architeote have contimned to design houses with very little regard to these absolutely necessary provisions; whilst the public havo snbmitted, and if they have not thought it was all right, have at least
thought that the evil was quits heyond their
remedying, hecanse every amateur (if not every professional) attempt hitherto made had only ended in failare, disappointment, and loss of money.

## "LA FANARELLA."

Is even a cursory review of the Vienna Exhibition, something should surely be said uader the head of "Sculptnre." So important a brauch of art must no doubt he largely repre sented. The Italian, which is classio and tame. the German, which is heroic and massive, or domestic and tender ; the Frenoh, which is poetic and sensual; the Euglish, which is academic and academical;-each nation has no donbt availed itself of so favourahle an oppor tnnity of hringing its special characteristics prominently before the world.
If it be so, I confess that I failed to observe it. To me, the display in this department is remarkahle neitber for ita quantity, nor, with one exception, for its quality; and what there is of it lies scattered up and down, here, and there, and evcrywhere, apparently uncertain of its claim to a position at all. I admit that as an art, per se, it has rery little hold upou my affections or respect, and that, severed from its natural connexion with architecture or decora. tion, I more frequently turn aside to avoid than to view it. It may be that circomstances and surroundings have imbned me with a morbid distaste for our modern rendering of the Phidian art, and that a judicious retircment from the purlieus of Trafalgar-square for a season or two would restore my mind to a more healthy tone in matters soulptiral; for certain it is that the intensity of my feelings is in inverse ratio with my proximity to that vortex of mona. that I phenomena. Indeed, I am not sure hut admiration of a few foreign specimens of this difficult art, and I am certain that I have well-founded and gennine admiration for very many of those naturalistic renderings of the Belgiang figure in red terra cottas for when remarkahle in our own "International" Sonth Kensington.
The confession of anch views as these will not, I am aware, tend to make my pretensions as a critio on such snbjecta unaasailable, hut it will perhaps bespeali for me in advance the onsideration which is duo to candonr and modesty (qualities not insoparahle from the comments are to bo confined to a aingle work In my rery brief and imperfot revier. Ia my very brier and imperfect revow weeping denuminton 1 , a weeping denunciation which, I hope, will no that nation. I was aware at the time that I should have to recur to her exhihits in a gentlen mood, hat I did not wish to weaken the force of my criticism by any distracting exception, no o indicate in a parenthesis that I had a bonn bouche in store for all true lovers of perfect ar which I dsemed worthy (as our novelists put it) of a chapter of its own.
Yet, I confess, I approach my auhject with extreme diffidenoe, well knowing that my best efforts at word-painting mast, in this instance, miserahly fail to convey an adequate pictare of
the object described. If, however, I can so far interest my readers on behalf of my pet, that they will give it a moiety only of the homage to which it is entitled, I shall have done a servioe
for which in due course they will no donbt he for which in due course they will no donbt he praternl. Let me, then, beg attention to a singlo La Vanarella, by F. Barzachi, of Milan. There may be, and no doubt are, other statnes worthy of your study and your praise ; hut this one is, in the estimation of the writer, incomparable. It is the figuro of a young maiden, of "high degree, fnll of joyous and irrepressible lite, who has slipped impatiently hut playfully (her her tire. Womanished) from the fonk ahout this for althongh one hand already with mimic gesture flirts with a fan, her delicately dimpled feet, as vet shoeless, peep ont from benoath her robe. Her pretty head is thrown with exquisite coquetry orer her shoulder, as she turns grace. fully baek and admires, anaffected by pride in her own loveliness, the craceful sweep of her silken rail. There is no need here to refer to your catalogue: the marble itself is eloquent with the poetry of motion, and plag fully prattles to you
you gaze. You already koow as plainly a words can tell that she is the darling of al is inocently er arrayed for her ing the inevi ab'e triumphs of the night. It is a fascination ou will not easily ghake off, nor would if yor conld, for it is full of pleasant fancies, rich wit? he sanguine hopes of young life, and fragran with the perfume of roses.
I have spoken only of the work as regards it design and poetic rendering. I might als expatiate upon tho technical skill displayed is the aurface treatment of the several parts. Bu that is not my purpose. The hair, and the flesh and the flowers, and the dress, are, each in its turn masterpiece, -uot less so hecause no on btracles itself at the cost of another, and th marvellous skill of the artist is ovidenced bis, that we are at once so charmed with th result, that it never occurs to the
I quire into the means of production moves and breathes and that jolle statu Ion nisel, by hair and ores air and eyes, and the material of will be retorted that this work has travelled out side of the tmue sphere of sculpture, and is mere ricions. that colour is for tho painter, and the tone "demands" repose. I know that thee re the conventional and traditional require ments of art, and I have in ouy mind man atatues worked ont with sorupulous adherence the scholastic canons; and, considering them. an tempted to ask for what purpose they wer executod, and to what particular section humanity or particular faculty of the huma mind they aro addressed? It would almo appear that in some minds a helief prevails the an armed neatrality exista between the seror arts of painting and of sculpture, that we m our materiala on sufferance only, and within wel defined limitations. I recall the fact that opaqi pigments were once repudiated by the legitimi In water colours, and offects prodnced by the a of solid colouring were stigmatised as the d hasement of the art, and trespasses noon th horder land of oils; and I am not aure hist then are still those who hold that transparent colou ig is inconsistent with the dignity of this latte art, and worthy only of the aqueous brotherhoo We an know that aroongst sculptors the questio ef sightless eyes and incided papils is still un pelled, and thinking of these things, I am refusing to he trammelled hy any dogmas of $t\}$ schools, seeks to compass the hroadest aims art-the humanising of onr hearts-by ever means at his command. If this be so, thien "I Vanarella," is worthy of onr highest admiratio and Sig. Barzachi is entitled to our most since thanks.
C. Hemby Weftakibr.

## SCHOOL-BOARDS.

London. - The Works Committee invite teuders for the erection, in Northey-streat, Lims
house, of a graded school (for boys and girl house, of a graded school (fo
and received the following:-

Certain modifications wero mado redroing tl estimated coat of the huilding hy 318\%., and ti committee recommended the acceptance of $t$ amended tender of Mr. T. Eunor, amounting 3,2107. Cost of interests so firr as purehase 3,036l. 14a. 6d. Cost of building per hea 82. 15s. 5d.

St. Thamas (Devonshite). The girls' scho erected on the Cowick estate, has been open hy Dr. Temple, Bishop of Exeter. The style Gothic. The plinth of the building is of We leigh limestone, the upper part being of red an black brick, relieved by Ham Hill stone dressin A hell-turret, of moderate height rises from o of the gables. As yet only the girls' schoul h been fuished, hat when the whole block is con pleted it will consist of a girla and ivfan school, with residences for two mistresses a tached. The latter will not prohably be oomplete
before Michaelmas. The main school-room is 70 ft . in length by 20 ft . wide, with a wing abutting on the south side 23 ft .6 in . by 20 ft There aro two class-rooms attached, one 18 ft by 27 ft ., and the other 18 ft . by 24 ft . The arohitect was Mr. R. M. Fulford, of the Close Gwyddelwern. - The Board sohool of this hamlet has been opened. Some difficulty was xperienced in finding a suitahle plot of land, but the chairman of the Board offered a oonvo. uient site at a low price. The school is capable yost will not exceed $150 l$., including the money baid for land. The architect was Mr . R. Owen, liverpool, and the builders were Messrs. Jones Liverpool, and
Leeds. -The first school of the Leeds Schoo Hoard has now boon opened in Bewerley.street. Sheard has now beon opened in Beworley. street.
Che foundation stone of the sohool was laid on Che fonndation stone of the sohool was laid on
he 31st of July, 1872. The boys' and girls' he 31 st of July, 1872 . Tho boys and girls rovision for 281 children, the dimonsions of the
rincipal school-rooms being 46 ft . hy 30 ft , rincipal school-rooms being 46 ft . hy 30 ft .,
vith three class-rooms attached to each depart. vith three class-rooms attached to each depart.
nent. The infants' room is 56 ft . long, and 16 ft . wide, and provides for 292 children, thas naking a total provision for 851 children. The
ite of the school was purchased from Lord ite of the school was purchased from Lord
Joughton, at a cost of $1,377 l$., and the builders' ontracts amounted to $8,651 l$., making a total ost of $10,028 \mathrm{l}$. The provisional schools, which will be transferred to the new building, are attended by 698 childron. Tho foundation or nemorial stones of six other proposed new chools were laid on tho day of the opening of the 3ewerley.street sohool. On the 15 th May, 871, the Leeds Board roported a deficienoy of
ohool provision of 12,149 , which pas not met oor intended to be met by any other achools, ad they proposed to orcet twenty.four new chools to meet this deficiency. The Edncation epartment signified their general approval of he report of the Board, and arrangements have tready beon made for the erection of nine rovisiou for 6,235 children. Plans for two chools, each for 700 ohildren, in the Leylands teantime the number of provisional schools has cen increased to 35 departments, with 9,253 hildren on roll, and 5,668 in average attond. nce. In addition, 11 schools, ombracing 17 epartments, have been transferred to the
oord, and have now 2,896 children on roll, and , 975 in average attendauce. The total numher f children accordingly at present on the roll of nee, $7,6 \pm 3$.
Northampton. -The following tenders for tho rection of Vernon.tcrrace Schools wore opened : 4. Redshaw, schools, $3,459 l$.; houndary. walls od asphalting yard, 2491. ; total, 3,7087. John
7 atkin, schools, $3,361 l$. ; boundary walls, $56 l$. . Tatkin, schools, $3,361 l$.; boundary walls, $56 l$. ;
sphalte, $233 l$. ; total, 3,650l. Frederick Good. sphalte, $233 l$. ; total, $3,650 l$. Frederick Good.
ian, Kidderminster, schools, $4,567 l$. 5 s. ; houn. lan, Kuderminster, schools, 1951 . 15 s. ; total, 838t. David Ireson, schools, $3,615 l$.; boundary. alls and asphalte, $275 l$. ; total, $3,890 l$. Charles laridge, Banhury, schools, $3,575 l$.; boundaryalls, 58l. ; asphalte, $262 l$.; total, $3,895 l$. Dover Co., Cemetery-road, Peckham, schools, 3,703l.; conndary.walls, 63l.; asphalte, 233l.; total, 1,9907. Thes. Cosford, schools, 3,560l. hounary. Wails and asphalte, 2901 ; total, $3,560 l$. [r. Bland, the architect, stated that he had lowed $2 \mathrm{~s}, 3 \mathrm{~d}$. per yard for the asphalting. Mr. ush oonsidered that quotation too higb, and rentioned that ho had had thoronghly good
rork of this kind done at 18. 3d, a yard. Mr. land remarked that there were different kinds If asphaltiag. His exporience taught him the dvisahility of having the hest, although it aight be dearce in the first instance than comwon +r sorts. Ho mentioned that no town he new of had better asphalte pavements than ottingham. The man pho gave him the estilate rcsided in that town, and had done a quan. ty of work for him in Kidderminster very wuch to his satisfaction. Of course the matter as open for consideration. Mr. Lees thought 1e work might be thoroughly well done hy a
wowman for 1s. 6d. a yard. Mr. Gurney slieved Mr. Scudamore would do it thoroughly ell at that price. Mr. Bland, alluding to the inders generally, said they included the whole lat Mr. Watkin's tender (leaving out the nount for asphalte for future consideration) he sopted.

The School Boards in England and Wales.A retnrn published in the first part of the Appendix to the Report of the Committce of Counci on Education for 1872 supplies a list becn formed $n p$ to the 30 th of June last W give the total number in each county :-Bedford Cheshire, 6; Cornwall, 72 ; Cambridge, 7 Derby, 10 ; Devon, 31 ; Dorset, 5 ; Durham, 7 Fissex, 18; Devo, 31 ; Dorset, 5 ; Durham, 12 Nssex, 18; Gloucester, 5 ; Hants, 10 ; Hereford 3 ; Lerts, 2; Huats, 2 ; Kent, 20 ; Lancashir 13 ; Licicester, 9 ; Iincoln, 10 ; Middlesex, 2 Nonmoutli, 10 ; Norfoll, 23 ; Northampton, 15 Northumberland, 5 ; Nottingham, 13 ; Oxford 5 ; Shropshire, 1; Somerset, 9 ; Staffordshire, 16; Suffolk, 10; Surrey, 7; Sussex, 9; War. wick, 4; Westmoreland, 2; Wilts, 4; Worcester,
3 ; Yorkshire, 50. Of the total of 404,92 of 3 ; Yorkhire, 50 . Of the total of 404,92 of
the Boards are in boroughs, and the remainder in parishes. The general number of member in the parochial Boards is 5 ; in the boroughs the number varies from 7 to 15 , except in the case of London, which rises to 49 . From another table in the appendix, we find that 132 School hoards have been formed in Walcs up to the same date, of which only 12 are in boroughs some of the remainder being in very smal parishes. A roturn is also farnished of the School-ioards rccommended for loans from the Puhlic Works Loan Commissioners, with the last. The number of Bup to the slasisted in England and Walos is 186, or nearly one.third of the total number formed, and the gross amount of the loans is $1,311,170 \mathrm{l}$. 8s. 6 td tondon heads the list with a loan of 250,0002 , and the only other Board borrowine more than 100,000 is Bradford, which takes 116,0007.

THE TYPHOID FEVER IN MARYLEBONE Dr. Whitmore, the medical officer of health for the parish, has cansed the whole of the deodorised to be thoroughly cleansed and instances twice, daily. He has also issued, posted, and distrihuted thronghont the parish the following sanitary code :-
"1. To examine the state of the hodse-drains an properly trapped. 2 . To pour down every motning properiy trapped. 2, fo pour down every morning a oisteras and other water receptactes, nad if not found
perfectly clean, to have them oleaned at once. perfectly clean, to have them cleansed at once. th T.
aseertain whether any of tho overdow.pipes from th
water receptacles pasa into water receptacles pasp into the drains, and, if so, to hase
themo cut off immediately. (This is most important.) 6. Strictly to forbid any vegetable or animal refiso bein the latter can be removed in the streetosmeser' can Dust-bins are not objeotionable when they contain olly
dust and arhes, but decomposing regetahle and anina dust and a-hes, but decomposing regetahie and anina
matter very frequently causes diarrhos, and often leads to catter very frequently causes diarrhces, and often leads to
fever. 6. To limewash or whitewash all areas and basement passages, and sprinlile the carbolic acid powder
daily orer the contents of the dnst-bins, and in other parts of the house or premises where offensive smells
Whatever the final decision as to the milk question in this case may be, great differences in the risks run exist according to the accomare on a dwelling and dairy both together often constitute one small dwelling, in which both the siok and their milk are oaveloped in one common and often ill-ventilated atmosphere. Ought there not to he a licensing system for the regratation of such dairies if it is now again clearly found that in any one of several dairies where the milk in his case has been kept, fever cascs have been in close association with that dairy, as has been said with respect to one of the six or seven sources whence the Dairy Company, a bitherto drawn large quantities of milk. In spectors might thas restrict any one of theso several sources, while not injuring the general the material admitted company; but once have establishment, and the whole may hecome con taminated; whereas the dairy proprietory if they ouly were made acquainted wroprith the risks ran,-the whole affair being still obscure and no. certain even to professional men and sanitarians in general, far less to dairymen, - wonld willingly in genera!, far less to darymen,-wonld willingly circamstances, their reward would be a legal icence to sell milk obtained from superintended ma approved sources. Analysis, we fear, of the
milk, is of no use; the infectious minsm is far too mik , is of no use; the infectious minam is far too
suhtle to be thas hunted ont; the suppression of
many poor and miserable "dairies" may alone suffice to guard the public bealth.
We seen no reference as yet to the rather diarrea is not only related to diarrhooa, but to fever, in its stages of prelimi. fever where the cold stame of the collap in fever where the cold stage of the collapse is got over; and although typhoid fever is no stage of cholera at all, it is enteric or bowel fover, just as cholera is, and typhoid fever itself is asso ciated with diarrhcea. In the present season we have not had snch valuahle thunderstorms as in previous ycars in London, although the season cannot be called a very close or at all an un
Typhus fever is said to exist in St. Olave's.

## HOLYHEAD BREAKWATER AND HARBOUR OF REFUGE.

Ten new breakwater and harbonr of refuge at Holyhead have been formally declared by the Prince of Wales to be open. In honoar of his royal highness's visit, with his brother, the Duke of Edinburgh, tho streets were prottily decorated with Fenetian masts, bearing trophies of flags and loyal inscriptions, evergroens, and wreaths f bunting hagging from most of the honses, whilst near either end of the town a triumphal aroh of evergreens was erectod. Most of the hips in har'bour showed a profusion of banners and the day was observed in Holyhead as a general holiday
The new harbour and breakwator have occue pied about twenty-five years in construction, and form one of the most important public works upon onr coasts. The original plan comprised a north hreakwater of $5,360 \mathrm{ft}$. in length from the coast line, and an east breakwater $2,000 \mathrm{ft}$. in engit, the two enclosing hetwoen them an area of 267 aores of available water spaco, with a packet pier $1,500 \mathrm{ft}$. long. As the works pro. ceeded it was found that the harbour would be too small even for purposes of refuge, and it was herefore determined to extend tbe northern breakwater to $7,860 \mathrm{ft}$., and thus shelter an additional roadstead of 400 acres of deep water. The breakwater is terminatod hy a head on which is erected a lighthouse.
The fonndation of the work is"a great rublile mound of stone, 400 ft , wide at the hase, and aowhere less than 250 ft . in width at low- water ons of contains allogether abd having been consolidated by structure of a solid central wall of massivo masonry, huilt of stone from the Holyhead mountain quarrics, was erceted. Many of the tones are of great size, some weighing or the fifteen tons, and the work is get in lins lime mortar. The wall was buitt as nerr as posgiblo to the inner edge of the stone deposit, the foun dations heing laid at the level of low water, is oarried to a height of 38 ft .9 in ., and upon it is a promenade, surmounted on the sea.side by a parapet. At a lower level, 27 ft . above lowpater, there is on the harbour side of the central vall a terrace or quay, 40 ft . wide, formed hy an inner wall. The head at the end of the breakwater is of ashlar masoury, 150 ft . long and 0 ft . wide ; and the foundations rest upon tho rubble mound, at a level varying from 20 ft . to ft . helow lo
The head of the Breakwater was selected for the formal ceremony of the opening, and on the pier was erected a crimson.draped dais, covered ith an awning of flags.
inc. Hawkshaw, the engineer, represented the Board of Trade

THE TRADES MOVEMENT IN LONDON. A General meeting of the masons' com mittee has been held in the Falstaff Hall, for the purpose of receiving reports as to the way in which the building firms had carried out the resolution to pay wages at the advanced rato of 9 d . per hour. Attcr some preliminary basiness 9d. per hour. Atter some preliminary basiness had heen transacted, the secretary stated that, from the reports sent in, it was found that tho payment of the extra $\frac{1}{2} d$. per hour to the masons had been so general throughout the trade that it had not been necessary to strike even one mployed in different firms to about fifty men employed in diferent firms to whom the 9d. per hour had beon refused. These men had conse quently left the employ, and were receiving the obtained ro.employment at the advanced rate.

In some casos where the men had been allowed to work under the new terms withont any notice having been given to them that they wuuld not be paid the advance, summonses world bo takon be paid the advance, summonses woild be taken
out to enforce the adranced rates. Gencral ont to enforce the advanced rates. Gencral mous manner in which the employers bad given mous manner in which the employers bad given
the advance to tho masons. - At an adjourned meeting of the delegates of the carpenters and meeting of the delegates of the carpenters and
joiners, hold at tho Brown Bear, Bloomsbury, to joiners, hold at tho Brown Bear, , loomsbury, to
receivo reports from the men in any frm who might have refuesd to pay the 9 d . per hour, and to decide npon the case of the men who had
struck at Messrs. Farmer \& Brindley's, Weststruck at Messrs. Farmer \& Brindley's, West-
minster-road; the delegates having given in minster-road; the delegates having given in tion of the firms of Messrs. Robinson, New Kent-road; Foxley \& Co., King-street, Regeutstreet; and a few small firme, the advance had been generally given. A resolution was then adopted that the men who had turned out from the firms refusing the advance receive tho strike
allowance until they obtained employment at allowance until they obtained employment at
9 . per hour. The case of Messrs. Farmer \& Brindley then came under consideration, and some difference of opinion prevailed as to the action taken by tbeir men. It was ultimately resolved that, looking at the peculiar features of the case, a depntation of the dele. gates, accompanied by a deputation from tho men, shonld obtain an interview with Messrs. Farmer \& Brindley, for the purpose of effecting an amicable settlement; but that pending such settlement, tho men who had turned out from the firm should receive the strike allowance. It was expected that the threatened strike of the lahourers would be averted. The carperters and joiners in the omploy of Mr. Sweet, of Rioh. mond, have resolved to strike for an adrance. A crowded delegato meeting of bouso deoo rators and painters representing the various Shipton in thras, measures to ensure an adrance of one halfpenny per hour on the present rate of wages. The chairman said that when paid the additional halfpenny per bour painters woald be receiving bnt $8 \frac{1}{2} d$. per hour, boing a halfpenny per bour undor all the other branches. After some dis. cussion, it was resolved that a memorial be at and painters, reqnesting that on Saturday next they would pay the additional halfpenny per hour, thrs making tto minimam wages for hour, tbirs making the minimam wages for
decorators and painters $8 \frac{1}{2}$ d. per honr. A reso. decorators and painters $\frac{1}{2}$ d. per honr. A reso. firms or on jobs not to take any further action in the matter except throngh the committee.

## AGAINST "RESTORATION."

In the course of an inaggoral address delivered in Newark Town Hall, on Monday last, August 18tb, those taking part in the fourth annnal
excursion of the Architectnral Association, Mr. excursion of the Architectnral Association, Mr.
Sbarpe gave expression to his views on the sub. Sbarpe gave expression to his views on the sub
ject of "Restoration,"- of course mainly with referenco to churches, but applying to national monuments generally. This portion of his ad dress we give at large:-He wished to make a
few general observations on the sabject of restoration-an operation which had become so important a one during the last twenty years which had been carried out in so different manner in different cases-and which had ex cited of late so moch attention and discussion The meaning of the term itself had, in fact heen stretched so as to comprehend much moro than its primitive signification would imply, for not only had it been used in cases where work had beon repaired, and even replaced and re. newed, but also where work had actually been altugether remored and destroyed, and wher fresli work had been introduced and constineted fur which no authority or precedent previously existing in the building itself could be alleged. Indeer, some of these so-called restorations had consisted simply of tho rearrangement of the sittings of a church, and the introduction of completely new set of fittings and fixtares, and of decorative features which never existed before a!l of which might or might not be very good not be called, in tho proper sense of the word restorations. What, therofore, it was very desir able that those who were interested in this mat ter should do was to arrive at an understanding -firet, what this word "restoration" reall menins, and secondly, what kind of restoration is
a legitimato one, and what is not so. In the
first place, he asked the question, why do we refirst place, he asked the question, why do we re-
store at all ? Why, when a huilding, or a portion of it, had become hy age, or from other causes, unsuited for its purpose, did they not pull it down, and build another? They wonld certainly do so, in five cases out of six, in the case of a honse. Wlyy did they not do so in the case of a chnrch? Well, the answer was, he thought, very simple and obvions. It was impossible to do so. The attachment which the peoplo of this country fortanately had for their national monu. ments was so strong that no one would ever venture to propose such a thing. This universal rezard for these ancient baildings was, more. Encer, not condined alone, mat was shers of the Church of England alone, hnt was shared by all classes of the community alike; and he was happy in the thought that the recent use to which the naves of our cathodrals had been applied in the adoption of simple services that the working classe could nuderstand and take part in, was likely sreatly to increaso and intensify this gencria feeling of attachment in a class, which occupiod as it mainly is with a bare struggle for existence,
would bo little suspected of possessing a national would be little suspected of possessing a nationa feeling of any kind. It was for this reason the that, whatever the nature of the works proposed monuments, "restoration" was our nati nal masmencs, restoration" was tho term that was always omployed to cover them when wonld be accepted. Preservation, and plea removal, or even renewal, was tho professed object of all such appeals. No other would be successful. Let them take care then that neither the proper meaning of the term, no the national feeling in this matter, be ahused What were the sources of interest, apart from that derived from these huildings as places of worship, upon which this general attachmen was based? He thought they might he chiefly stated to be of thrce kinds; ( t ) one class liked them becauso they were old; (2) another hecause they were picturesque; and (3) becanse they contained the history of a great art. He nee not tell them to which of theso three classes they belonged. They did not search out measure, and sketoh these haildings, either becanse they were old or because they wer picturesque, hat because they were excellont and becanse they tanght them lessons in the particular walk of art which they cultivated, that they could not learn olsewhere. And he conld not help thinking, when the matter of the preservation, or removal of one of their early works of art was in question, the reasons they had to arge for its preservation would prevail where those of the antiquary and artist might fail. For its loss was, in this sense, a national loss; it was the annithilation of a link in the vidence upon which their knowledgo of the history or our national architecture is based, and which wou'd justify its destruction. Buts it which wou d justify its desuruction. Bin, might be said that there were cabes in which Hiether for the suke preserving from destrac ur the the of such as the convenient practical use huilding for parposes of modern worship he removal or destructon of this or that Tragment of early wrim became a necessity Undouhtedly this necessity might arise, and howerer much they might deplore it they muse in such a cabc, accept the plea. But what they bad a right to insist upon and to demand sloonld he first clearly established. Finally, should removal and reconstruction have thus become absolately necessary, some mode should he found of prosorving, even amidst the now work, some such record of the old as might give authenticity to the new. One mode of duiner this he strongly urged npon those who might bo introsted with such a restration. It sulilom happened, where a hailding had to to be replaced, either in consequence of a sudden calamity, or from long deeay, that the whole of its oruanenta parts was 80 completely deteriorated, as that particalarly the case in regard to monlded work, which as he had often observed, ponsessed more bistorical valne, as to orugress in art, than any other portion in a huilding. In the last chapter of his smpplemental editinn to Professor Willis's mono. raph on Chichester Cathenral, which was publislied a few months after the fall of the spire, and the demolitiou of portions of the fonr arms tronerly cross, he not inerely suggested, bur: vorz, of which a conniderable quantity, in an undamaged condition, existed amonust the ruins,
shonld be used again along with the now in tis restoration of the church. This advice w followed, he believed, in every part of $t$ restoration, and the new work tbus jooculat with the old had derived from this ciroumstan a value and an authenticity that it would $n$ otherwise have possessed. But it sometit happened, where a building, or a portion of
was not in such a condition as to endanger was not in such a condition as to endanger safety, that work was nunecessarily removed from ground of its defective appearance, arisis from decay. Now he would confess that in suolh eases he was in favour of the utmost possib conseryation. In the case of moulded or carr work he preferred infinitely to see esen a portic only of the original capital, for example, rath than a new member, and for this simple reaso He drew an instructive lesson from this fra ment of early work; it was a genuine examp of the Porion to which it beronged, whilst $t$ dew one, howover well copied and careful. restored, taught him nothing; it possesse no athentioity; he could not tell whether was a correct copy of the former one or n The designer or carver was not at his elbow vouch for this, and he did not know if he shon believe him if he did. He should not forg soon the lesson on this heud which he leame in oue of the churches that fiolet-le.dne w eugaged in restoring. It was at Poissy, ne Paris. A carver was working at one of the ci cular ohapels of the apse; ho had got the fres lock of stone which was to serve for one of t was her a vausting shaft in its place, and Romanesque foliage, withont once casting glanco at the discarded fragment of the capital, which lay on the ground near him, an evidently without a thought that it was eith necessary or desirable to do so. What, ther fore, he had to urge was, that surface-deca even when considerahly advanced, should not considered a sufficient plea for the removal ancient work; and that if its condition we such as to canse a positive eyesore, it should patched, rather tban removed. The most fat process, however, to whicb the chutch could b sumitted, was that of which they saw son ehurches of before last, and hy which, in arder to reme the paint, an hyich, in order to remo whole of the work had been tooled over in san whole of the work hal been tooled aver in sa and modern appearance to the surface of th stone.work, and to damage the trise prufile the original mouldings, hat also to destroy a remove some of the most characteristio foatur of the carved work of tho capitals. Ile w orry to say that these cases were not rare ; an though frequently done with greater care tha in those to which $\mathrm{h}_{\mathrm{e}} \mathrm{h}+\mathrm{d}$ referred, this proce of dressing over old masonry was rather the rut than the exception. What, therefore, they ha use protest against, in the second place, was th of an any qescription on the surtac of oarly work, and ho nemund that the equal efficaciolus, thongh somewhat more todious pr cess of the carding.omes and at chemical was should atone be msed for the removal of pai and whitewash. After all, perhaps the best an siniplest counsel to offr those engaged in building, to do as litile as possible.

CONGRETE AND STONE FACING. Sie,-I am about to build a few houses, wit dressed sandstone extorior, and brick inne walls and linines. As bricks are now so dear could I not substitate concrete for the ion walls and limings? or are there any in
$\qquad$ Yorkshine.

## ORGANIZED DWELLINGS.

In your issue for Joly 19th, I was intereste in a report of the Specisal Depellings Committe of the Charity Organization Suroiery. The r marks made ther by Dr. Greenhill aud 11 Gatliff show that thane fentlumon are really in tercsted in the matter, but bave evidently nev heard of the succers of itt Sucial Palace Gaise, France, bult by M. Godin, a large man facturer at thw $p l a * H$. Aa: demonstration uf 1 possihility of provilitug for the phor a dwalling which, by organizilim, the coanorts and ina aries of I fe can bir afforded to the pnor, within any odour of charity, and without any sacrific
f earuital, this hnilding is wortby of devoted uily. It is really the first specimen of social rellitectare constructed in the world, and I am ure the ahove-namod geatlemen wi
s have their attention called to it.

Edward Motmand. P.S. M. Godin, in his "Solutions Sociales," as given an account, with illustrations of tbe ocini Palace.

## HOW SEALL I BUILD?

$1 \mathrm{R},-1$ arm about to build a house for my own
lonce. It will contain abont twenty rooms e of them large. Beforo heginning, I am rous of having each room thoroutghly venti$l$, and 1 want so to construct the chimney c pages 1 oan got no thorongh plan for igh to purpose. Will some one he good laced; at the top or bottom of therooms, How far shonld the chimney project the room? What width and how soon conted to tho size of the chimuey? And what
the chimney should be? Should a fue tructed below the grates to communicate "ructed below the grates to communicate
the external air? By giving the directions the external air? By giving the
our columns you will much oblige

An Aymteur.
rand Stand for Oxford Races.-Arrangets have heen made with Mr. James Hall ler, to erect a large and commodions grand a smalier stand for the nas of the stemards heir friends.

## Hiscellamea.

Iron and Phosphorus.- A new light has been thrown upon the manufactnre of finished iron by Professor Scheerer, of the Mining Acadcmy of Freihurg. The Professor recommends for the removal of phosphoras from pig. iron during the pnddling process, that chlorides of culcium and sodium in equal parts he fused together and introduced into the puddling furnace in the proportion of abont three times as much as ths phosphorus contained in the iron. The phosphoras and the ohlorides combine and are removed in the slag. In these days of dear coal, the discovery of Professor Scheerer assumes considerahle importance, inasmuch as one of the principal ohjections urged against tho use of peat and proparations of peat for smelting pur poses has been the presence of phosphorus-in fuel. If the elimination of phosphorns is reduced to the simple process described, its presence in such pigition as is intended to be suh. sequently "finished," will hecome of minor importance, and the long-predicted rivalry of peat with coal will at last assume a formidable appearanco.-Iron.
Accidents. - A labourer has met with a serious accident while at work on a scaffold in New Cavendisb-street, Marylehone. He was in the cmploy of Mossrs. Key \& Heads, builders and contractors, Marylehono, who are doing some going to a hollse, and just as the men were scaffold and broke it, the labourer heinir thrown heavily to the ground and rendered inscosihle. He was picked up and taken to the Middlesex Hospital, wbere he lies in a dangerous state.three men hy burning in a well. They were at work horing for oil. Three men were in the well at the time, when suddenly oil was struck, bursting higb into the air. Scarcely had it sponted ahovo the scrvice when the oil took fire sending np a blaze to a height of over 100 ft , The men were hurned to death, and when their bodics were recovered they were a horrible shrivelled mass. The derricks and machinery thousand dollars, involving a loss of several

Improved Industrial Dwellings. - A large numher of improved model dwellings for mechanics has becn recently erected at Halstead and Bocking, in Essex, from the designs built of J. Birch. The dwellings have been built of red hrick, with white brick dressings to
doors, windows, constructed hollow to prevent damp. Each divelling contains a livinercnt damp. three bedrooms (those at Halstead bour, and bedrooms to cach dwelling), with wash fourg four coal and wood house. Each living-room contains a cubical space of $1,400 \mathrm{ft}$., each parlour tains a cubical space of $1,400 \mathrm{ft}$., each parlour
$1,200 \mathrm{ft}$., and ench hedroom an average of nearly $1,400 \mathrm{ft}$. The Gonx eartb-closet system, neard by the authorities at Halifax, las been introduced to the dwellings at Halstead. Similar buildings, out of a more agricultural character, are in course of erection at Bilton Grange, Warwickshire; at Thorpe and Effingham Hill, Surrey ; at Compton, near Petersfield, Hampshire ; on the Heathfield Park estates and Mr. Freeland's property, Sussex ; on the Barr Hill estate, Madeley ; and at Tain, Rosshirc, N.B.
Pollution of Rivsrs.-The fonrth report of the Commissioners appointed in 1868 to inquire of rivers has beens of preventing the pollution Scotland, and consists of It has reference to Scotland, and consists of the oral evidence taken in 1870, wben Major-General Sir William Denison (wbo is sinco dead), Dr. Edward Pranklin, and W. O. Chalmers Morton held courts of incuiry in Edinhurgh, Glasgow, and all the principal towns of the country. It also containg retnrns, giving the answers sent to ertain queries issued hy the Commissioners to local authorities and manufacturers.
The Narrowest Gauge, or Single Central Rail, Railway.-Wo nnderstand a project will Ae hrought hefore the British Association for the riages to be constrncted with a single row of central wheels, ranged $i d x$ with a single row o single line of rails. The adrantares trarel on for it are economy in Toustruction, adages claimed greater safety, and the facility which it offers for rapidly extending railway commnnication a home and abroad.

Gigantic Fungus on Pitch Pine Joists.Mr. Alfred Smee has sent to the Gardener's Chronicle a huge fungus, found growing para-
sitically upon the pitch pine joists of the Bank sitically upon the pitch pise joists of the Bank
of England, in Threadneedle-street of England, in Threadneedle-street. The entire growth was so large that when packed in a box
for transit, it was as muol as two strong no for transit, it was as muoh as two stroug men 6 ft 3 carry. The largest piece was no less than 6 ft .3 in. in cirenmference, 7 in . thick, and weighed 32 lb ., growing upon a piece of joist
weighing $6 \frac{1}{2} \mathrm{lh}$. The fungus weighing $6 \frac{1}{2} \mathrm{lh}$. The fungus turned out to be
Polyporus annosus, Fr. a plant Polyporus anmosus, Fr., a plant peculiar to the coniferr, and perhaps not uncommon in similar situations beneath floors, \&o. The
mycelium had completely destroyed the wool of mycelium had completely destroyed the wool of the pitch pine joiste, and in the decayed parts was found an ubundant crop of young cockshown at the fortheoming fungus exhihition of tho Royal Horticultural Society on Octoher 1st.
Antiqus Vases. - A communication was made to the Academy of Inscriptions and Belles Lettres, at its sitting of the 1st. inst., hy M. do Whitte, on two amphorao recently dug up at which used to tuscany. They pertain to the sort which used to he given as prizes to the victors at the Panathenaic games. One of these PanaPallas standiner bears a painting representing Pallas standing and turned towards the left in a fighting atitude, with the lance in her right hand and the shield on her left arm. The vase is marked "Pythodelos archon." It is known that this magistrate governed in the 111th Olympiad, and more exactly in the year 336 hefore onr era,--that is, the very one when Philip IL., King of Macedonia, died. Theso wo vases are valuahle, as they show Grecian art just before its decline: othor specimens three years later, under the archontate of Niko. krates, are mneb inferior to them.
Welverhampton Fres Library. - Ths Wolverhampion Freo Lihrary, which proviously had its home in the old Athenoum building in Queen-street, has been roopened to the public been moro extcnaive premises to which it has been removed, in Garick-streat. The building and for new one, having originally been crected, and for many yoars ased, as the borough police station, pablic offices, dic., superseded hy the new Town-hall in North-street. The building, however, has heon altered and adapted for this purposes of a Free Library and Reading-rooms, the Athenreum huilding in Qneon-street being much too small for the incrcasing reqnirements of the town. The contract was let in the spring of the prescnt year to Mr. Grove, of Wolver. hampton, builder, the plans and specifications heing prepared by Mr. Johnson, also of Wolverhampton.

Sussex Iron.-In allusion to the improvements in progress in the precincts of St. Paul's and the old railings to bo suhstituted hy new ones, "Ramhler," in the South London Chronicle, says :-
"It may not be generally known, perhaps, that thepe very railings have a certain historic interast They are
made of Sussex iron, dug up in the vicinity of mand smelted with the wood of the forests which hundreds of yeara ago covered that country. Since those forest hape gone sussex iron has not beed in the merlset, for the cost of transporting coal to smelt it would be too great to it is rery possible that shortly, it ap rempanerative. But perhaps,- Sussex may agnin becone a : blacit country; and, with the aid of the veins of coal which undoubtedly lie beneath its surface, produce all that is required for
the establishment of vast foundries sad factories which shall rital those of sheffeld and Wolverhampton. At

Railway Accidents.-Mr. Robert Fairlie Tine wal-known railway engineer, writes to the cimes on a subject of interest to all who are oncerned in railway-construction or value their ives. Taking for his text the recent accident at Wiga
tions:-
" 1 . That the space or opening between facing-points nothing and gains mach. 2, That this space of clearance should be definitely fixed and maintainod. 3 . The the the
flanges of all wheels should be uniform in thickess. danges of all wheela should be uniform in thickiness.
t. That the play or clearance allowed between wheelanges and rails should be the same on all raitloays.
. That these dimensions ahould be definitively sottled by a committee of engineers 日alected for this parpose acting

## Memorial Window to Bishop Wilher-

 force. - A stained-glass window to the memory of the late Bisbop of Winchester is ahout to be placed in St. John's Church, Angel - park, Briston. The estimated cost is ahout $150 t$, the larger portion of which has already been suh.Fire at the Leeds Town-hail.-After the night policemen had deposited their lamps in the room set apart for tbe purpose in the basement of the Leeds Town-hall, on Thnrsday morning before last, a fire broke out in that portion of the building. Witb much difficulty, hose reels were laid into the lamp and store rooms, and the flames were then quickly extingnished, but not before considerahle mischief had been done The roof, forming the floor of the connoichamher, was considerahly bornt, a hage heam
of wood, 22 in. thick, heing burnt nearly through of wood, 22 in . thick, heing burnt nearty through at one point, and the laths and plaster more or less consumed. The lamp.
Mronumental.-An obelisk of polished Aber. deen granite bas just been erected over the tomb of tho late Mr. James Carson, in tho parisb churchyard of Narlow. It is about 11 ft . kerb. On the east side of the obelisk is a figure of an angel kneoling, soulpturcd in Sicilian marhle. This piece of work was executed by Mr. Lauder, of Kensal-green. The Monnment of Victory, at Berlin, numhers among the commemorative fresooes with which it is embel. lished, one representing the German princes William, at Yersailles. It is now stated that at the Emperor's special command, the design has the Emperor's
The Wilberforce Memorial. The secretary to the memorial committee states that two great diocesan works are in contemplation as memorials of the late bishop, the one by a large and influential committeo sitting at Winchester, for the erection of a monument or effigy of the late bisbop in the cathedral; and the other by a Largo central committeo in London, who propory clorgymen to work amongest the dense masses of the poor, amonnting to about 700,000 , in the South-London portion of the dioceso of Win. chester. Botb committees will act in harmony.
A Lump of Timber.-Chicago papers recorded recentily tbe arrival of a raft containing $650,000 \mathrm{ft}$. of rongh loge, from Ladington, on the castern shores of Lake Michigan, a distance of 160 miles. The raft was towed by a steaming, making the whole cistance in sirty. taree hours. The raft was $1,100 \mathrm{ft}$. long and 75 ft . wide. The number of sections was forty-nine ; the number o logs in each section varied from fifteen to twenty The value of the timber was about 25,000 dols, the cost of transportation from Ludington by this raft was 500 dols.; the cost of the transportation in the old-fasbioned way would bo about 2,000 dols.
The Iron and Steel Institute.-The meeting of the Iron and Steel Institute of Great Britain was opened on the 18th instant at Liége, Belgium, to be concluded on Friday, tbe 29nd inst. It is tho first meeting beld on the Continent hy this Institnte. The committee of reception prepared grand fetes, including concerts, illuminations, and other entertamments, and a ban quet, for 600 persons. The congress was for mally opened by Mr. Lowthian Bell, the pre sident of the Institnte. The following days were ocenpied in lectures, discussions, \&c., as well as visits to tbo principal mines and iron foundries in the neighbourlood.
The Vienna Exhibition.-Tbe nnmber of prize medals which were to be distribated this week at Fienna, by the Archduke Rainer, in the Eimperor's name, amounts to 2,000 , bosides 600 diplomas of honourable mention for deserving exbibitors. The prizes rank in six classes, the diplomas constitnting the seventh. Class $\mathbf{1}$ is the diploma of honour ; class 2, the medal for progress ; class 3 , the medal for merit ; class 4 the medal for fine arts; class 5 , the modal for good taste; and class 6 , the medal for co. hear that Mr. George Jennings has gained the hear that Mr. George Jennings has gained the
medal of progress for sanitary appliances and disinfecting apparatus.
The Designs for Laying-out Troundhay Park, Leeds.-Ahont twenty plans for laying. out Roundhay Park have been received in Leeds by the town council, in competition, for the preminms offered for the best designs. The the Corporate Property Committee, after exa. mining them, to throw them open to the inspec tion of the ratepayers. They will ho arranged in one of the apartments of the Town-ball, at the conclasion of the Assizes.

The West Front of Wells Cathedral. Ir. B. Ferrey, F.S.A., the architeot who has the irection of the restoration of Wells Cathedral, nent in tor the Athencu um, coneradicts a state front have been restored. Not a figure, he nays, "bas heen touched, nor has any ancient sculpture heen meddled with whatever. The trork there bas heen confined to the reparation and renerral of the constmetive features, which are essentio the stobility of the front"

The Duplex System of Telegraphy. tbe new system of "daplex" working, by meani of a new condenscr, which splits the current of electricity and enables the operator to send messages tbrough the cables in contrary direc tions at the same moment, has now, we learn, been successfully applied by the Eastera Tele. grapb Company.
Wycliffe and Tyndale.-It is intended to erect, on a suitable place in the centre of London, statues to the menory of Wycliffe and Tyndale, in connexion with their efforts to
and open Bible" for the people.

## Sheffield and the British Archeological Association.

IE greatest discovery mado hy the bulk of the inhabitauts of Shefficld, in consequence of the visit of the British Areh. roological Associa. tion, appears to be that they have architectural remains in their neighbourhood deserving of admira. tion and preserva-
3, and men amongst themselves ahle being listened to when they speak on subject. This knowledge will have its d eficet heroafter. So much was seen and 10 during the week, that in continuing our ice of the proceedings," wo shall have to fino ourselves to the more salient points and org, giving a little of the actual information arted, rather than a list of all that was seen dono. One of the most interesting buildiuge ted on the third day was tho

## Saxom Churelh of Laughton,

aco which, as the Rer. Mr. Staeye said, from loftiness of its site, caught the first heams the risugg sun, and had loug gone hy the niar and eheery description of "Lighton in
Morning." Its true name was Laughton-e- Morthen, which was, as Mr. Funter inter. ed it, "Law.town," implying that in early es it might have heen the seat of a local sdiction, thongh perlaps it might be derived a the Anglo. Saxon "hlaw," a hill; "en-le.
then" denoting jts situation in the moorlaud then" denoting its situation in the moorlaud rict, as they situation to have long continued after moro sheltered and richer lands around heen hrought into eultivation. It was oubtedly a place of great antiquity, for secmed reason to suppose that thoy in tho remarkable earthworks which
remaiued, the site of one of a series of jantian strongholds, whioh a late local anti. ry who had much studied the subject (Mr. Sitchell) well pointed ont, formed as it were outwork of the southern portion of that terful people, romains of other of these for. sees being found at Tickhill, Roche Abbey s, Todwick, Beighton, Moshorough, Holmes 1, Carlawark, Hathersage, and Hope, the ial formation of the Brigantian territories owing the line of the valley of the River Don. this as it might, there could bo no gucstion t Laughton was a place of eonsiderablo im iance in the Saxon times. The first mention 5 had of it was probably to he found in the ameut or will of Woffric Spott, who was elred have heen the Minister of King ourty in this and the other noighhourlioods. im the Domesday Book they learnt that it
was the propcrity of the great Saxon, Edwin, Earl of Mereier, as was the neighhouring mauor of his hrother.in-law, Earl Harold, afterwards Kiag of England. In that important document they were also informed that Edwin had a hall here, which was doubtless seated on the remark. able earthwork already alludod to. He referred to the remarkable doorway on the north side, ncar the west end; which was of such rude and peculiar character, that it might well bo considered among the very earliest of our ecclesinstical remains, and as dating to a period hefore the Conquest. Mr. E. Roherts remarked that the porch of tho north doorway was unquestionably Saxon. It hore a strong resem. blance to the stoncrork of the seventh and oighth centuries.

Roclue Abbey
was fully descrihed hy Mr. Gordon Hills, who said that tho foundation eharter of the abbey bore no date; but it conld ho shown from the sig natures to it that the ahbey was fonnded in 1117 hy Richard de Busli, a great nohleman in thoso parts; and in the eharter it was stated that he "gave his land for the ahhey." It appeared, however, that tho ahhey had two foundors, Richard de Busli and Richard Fitz Turgis, who were tho owners of the soil on either side of the stream. They joined their lands in order that the monks might he able to choose a sito on whichever side of the stream shonld ho most convenient. They decided on this side of the stroam: and, as at Beauchief? Ahbey, they therc. upon turned the domestie offices of the abbey towards the stream, that they might get a due supply of water, and have their sewage carricd off in the then proper way. Tho domestic buildings were on the south side of the abhey, and therefore most open to the sun. Roche Ahhey was the thirty-seventh ahbey of the Cistercian order founded in this kingdom. Their first abbey was fonnded in 1128, and the last erected in this conntry by them was in 1250. He said the buildings were not erected immediately after the actual foundation of the hody, as he found that a very considerahlo part must have heen erected in 1181. The date of the huildings was not therefore to he precisely fixed; but it niight be very nearly ascertained. He directed special attention to the great solidity and majesty of the work, and to its simplicity. There was no fancy or showy architectnre in any way: the builders trasted entirely to its actual solidity aud goodness. The walls were ahout 5 ft . thick. The ehurch was anongst the first of the bnildings crected hy Abhot Osmund, aud towards the conclusion of his time was erected tho gatehonse at the en tranee to the grounds. It was a very admirable specimen of architecturo of nearly the middle of he thirteenth century.
The fine church at

## Rotherham

was elucidated hy Mr. Alderman Gucst, who has made tho history of the neighbourhood a long study. IIo said, in conclusion,-"In giving ample honour to the heneficence and Christian institutions and religious sorvices of the olden times, I have the high satisfaction in relation to this self-same suljeot-the parish cburch of Rotherham-of heing ahle to do equal honour to the present time, which is now doing honour to itsolf in nobly resolving that this grand monu. ment of past munificence shall be so repaired and so restorcd, iuside and outside, as to make its "hold and lofty proportions," its wide and lofty arohes, its clegantly designed and finely. chiselled capitals, once more develop in restorcd heauty the splendid and harmonious effect of 'the best style of the best age of perpendicular work"-the close of tho fifteenth centurybefore it morged into the more elaborate but less heautiful Tudor. It is now in Sir Gilbert Scott's hands, and he reports-"The jnterior is,
rery fine, and well descrves a careful restoration." The work will no donbt be proceeded with with the least possible delay. A structare liko Rotherham Cbarch is an hononr to Yorkshire, and deserves not only county, hut general support.
From the papers read at a conversazione given
in the crening, wo take a portion of one by Mr. In. N. Philipps,

On the Mrunufacture of Hardware by the Celts and Romans.

The reader proceeded to review the process of the manufacture of implements in the earlier ages, exhibiting from time to time specimens of ancient stone and hronze wcapons, in illustration of his descriptions. The next material that was used after stone and fint was copper, and afterwards hronee was hronght into requisition, and applied to the process of cutting tools, de. The reader believed that the material for hronzo was found first in Britain, that without our tin-mines it could not have heon made, and that the ironstono of Britain supplied the iron worked so successfully hy the Romans for tho then civilised world. Theso Romans were the men to whom in after ages had succeeded our own ironmast crs, who, as Englishmen, had developed this great mannfacture in its various ranches for the world. Passing from the con. sideration of the hronze to that of the iron age, he thought it was somewhat extraordinary that ronstonc, which abounded so much in this country, should have been so long noused. In many parts it even cropped up on the surfuee, and its very weight, if not indeed its actual appearance, ought to have suggested a mineral. What, then, was the reason for its non.employ. ment? The diffeulty arose from the want of those mechanical eontrivances which were now cmployed for the purpose of smelting the ore. Tho "hlack diamond," productive of more wealth than the clear sparkling form of carbon, was not nnearthed, and the wood of the forest was the only material at hand. They eould therefore readily eomprehend the disacivantagcs arising from the want of properly constincted furnaces, of a proper blast, and of the proper material for smelting purposes. But when the Romans took possession of Britain, they at onee began to improve its condition, and to utilise its products. They were indeed a wonderful people. They did not conquer a country and thero loave it. They had sought for its hidden wealth, they had hrought it to the light of day, and whilst they had henefited themselves, they had at the same time intro. duced their civilisation amongst the inhabitants. The Roman stamp lad heen found en pigs of lead in Derbyshire and elsewhore. The Roman ironworks existed priucipally in the Forest of Dean, in Glocecstershire, and in tho extensive distriets of the Weald of Sussex and of Kent. Mr. Philipps introduced specimens of metal mado nearly 2,000 years ago, and argued that hecause of its great lasting powers, this iron mnst have possessed toughness and mallea. hility in a remarkable degree. They might fairly eonjecturo that when the power of the air blast itself was inconsiderahle, a hetter plan would be substituted by exchanging the wood fuel for the more extensive use of charcoal in their furnaces. Archwological investigations had disclosed the mode adopted, which was this:-Placed within a square formed of stones, were a quantity of pieces of oak.wood erossing each other, and over these was a covering of carth or clay. This pile of material, so constructed, a simple mode was adopted of producing ebarcoal simalar to that now pursued for producing coke from coal.
At Kirkburton. Church, visited on the fourth day, there is on tho north side a hagioscope, so that any iufected person could sit outside the ohurch and yet he ahle to see the olevation of the host at the altar. This is a remarkuble
featare. The party entered the charch noder the guidance of Mr. W. S. Barber, under whom the church had been receutly restored. The
church, be said, was thoroughly Early English; church, be said, was thoroughly Early English;
there were traces of Early English work throughthere were traces of Early English work through.
out, and the chancel was unequalled in this out, and the chancel was unequalled in this neiglibourhood. In carrying out the restoralions tion, aud so fur as be was aware none of them had been retooled. The register hooks were
shown in the vestry, as was also an old religious shown in the vestry, as was also an old religious
work, which had clains attached to it, and which work, which had clains attached to it, andl which had evidently hecn clained to a desk or pulpit. Before leaving the church Mr. W. de Grey Birch took occasion to remonstrate with the vicar with regard to the ruinons condition of the early register. book, which was as old as the reigu of King Henry VIII. Without care it would hardly last to he of interest to many more archnoological most cordially welcomed the late president of the Association, tho Earl of Dartmouth. A the evening meeting, after a memoir by Mr. S. Tucker (Rouge Croix) on the "Descent of the Manor,") Mr. J. D. Leader (of the local Inde pentent') read a paper on

## The Remains of Shefield Manon

Mr. Leader gave an interesting account of the buildings and their history, not forgetting proper comment on the wretched, squalid, and dangerous buildings now on the spot; and then after referring at some length to tho confinement
of Cordinal Wolsey and Mary Queeu of Scots at of Curdinal Wolsey and Mary Queeu of Scots at the Manor-honse, Mr. Leader continued,--We have eeen enough, however, to conviuce us that
the Queen of Scots did pass some portion of her the Queen of Scots did pass some portion of her
time at Sheffeld Manor, and a curious qnestion time at Sheffeld Manor, and a curious qnestion has lately arisen whether we do not still possess
the identical building in which she was there the identical building in which she was there
confined. The idea was first thrown out by the confined. The ider was first thrown out by the
Bor. J. Stacye, and further reflection and examiEer. J. Stacye, and further reflection and exami-
nation tend to encourage the belief that in the nation tend to encourage the belief that in the restoration, we see a prison-house especially erected hy the sixth Earl of Shrowshury for the Queen of Scots., Mr. Eunter, in his "History
of Hallamsbire," speaks of that building as a porter's lodge; hut, judging from its decorations it must have been a much more important crection. The narrow tirret staircase, and the
strong crools on which the doors formerly hugg strong crooks on which the doors formerly hung, suggest the idea of security; While the xichly particularly plasion that the huilding wha intended for the use of no suconsiderable person. If the ment bers of this Association had visited Sheffeld Manor a few montha ago, and had inquired for the Queen of Scots's room, they would have been glown by the farmer's wife the two chanbers on the upper floor, the outer one ocolupied by a few old hozes, and quite darls, the innee one lighted by one window on the east side, but adorncd with a rich heraddic ceiling, and over plaster cast of the Talbot arms. The old plaster thoor was still entire, if a little unevou. In some and the place had a melancholy nppearance of decay, strangely contrasting with the ceiling and with the remains of hooks on which tapestry of Sheffiela Manor years more and this portion as the rest. Fortunately however, as mons already mentioned, the Duke bas taken it in hand, and it is now, being restored.
There seems to he no actual eridence in sup. port of the existing beliof that the Queen of to. It is to be hoped that fnrther exannination of the Talbot papers and in other directions may establish its truth. An extract from one of the Shrewsbury letters, which referred to "all the lord's," read by Mr. Tucker, would seem to show at any rate the existence of two estallishments During the excarsion next day, the ruins of Couishorough Castle and Church wero inspected under the guidance of Mr. Edrard Roberts, who gave a description of the architectural and other
features of the brildings. Sented as it wns or nearly the highesi ground of the neigthonrhood Conistorough Castle occlupies a site remarkably well cbosen, and one which does much credit to which it was erected. The castle was built by Isabel, sole danghter and heiress of William de Warren, the third lord of that name. The chureb is of the Norninn period, and was $p$.
bably built betreen the years 1187 and 1190 .

The papers for the evening inclnded two of particular interest, by Mir. J. W. Grover and
Mr. Llewellyn Jewitt, F.S.A. Mr. Groper took Mr. Llewellyn
for subject,
Some Modem Lessons from Ancient Masters.
His object being to show that the ancients are really our masters in ideas and inventions, and to recommend a more careful study of the ancients with a view to modern improve ments, e vindicated the Romans from the assumption hat they construoted expensive aqueducts and masonry throngh ignorance of the law of hydrostatics that water in a tube will find its owe evel. He appealed to the extensive system of eaden piping found in the baths of Rome and in Roman villas in Eogland, to Nero's works nea Lyons, where the valley, being too deep for an queduct, was crossed by immouse leaden pipes, and to 6 -in. bore leaden pipes found in the Yitruvins's mention of a bent pipe, in which th fuid reached the same level at hoth oxtremities and Pliny's statement that in leaden pipes wate ises to the lerel its sonce. He attribute the general adoption of aqueducts to sanitary he general adoption of aqueducts to sanitar sparkling pority for noy distance, and the fric sparkling pority for nay distance, and the iric-
tion also being much less than in a closed conduit. Tho American engincer, General Meiga las constructed tho great Washington aqueduct on this principle; and Sir W. Armstrong ha ecommended this plan for Newcastle. Mon tioniag the proposal of Mr. Bateman and other o supply London by nn aqueduct from the north-west, Mr. Grover remarked that though wenty great aqueducts at Rome were of greate extent. Having got a good Roman aquednct, Roman forntrins shonld follow, such as Acan Felice and the shan Trafol and the Trevi, not absnraties arinking square, or such miserable apologies as rovidg.ountains. Pullic baths, too, would macouif. Ancient Rome had 800 , some or anazang he Pantheo, such as the thermue of Agrippa, ina or Diocletion, or those of Caracal., A. הuare surmounted by sumptuous porticos, with 1,60 seats of marble or porphyry, some extant, fifty vaulted bathing-chambors, ench consisting o restibule and bath, 3 ft . by 1 ft ft . It had also swimming hath and a rotunda, 111 ft, in length Spartinn remarking that architects and mathe maticians considered the Cello Solaris inimitablo. 18,000 hathers could he accommodated at one me, $1,000,000$ cuhic feet of warm water being supplicd. Mr. Grover then noticed the recen oilcloth or encnustic tiles, aud stated that oun parements. He recommended, however, tesselated floors, combining durability and cleanliaess, dispensing witb dusty carpets, and being olso fireproof. The ancient floors werc supported on beds of concrete, resting on tiles, wbich stood on a small forest of short pillars. The fire was outsile, the heat passing under the floor, and the hot air escaping through the walls by small Ale-pipes. The Roman roads, with their postiog houses at regalar distances, inns, and mansiones, whence our word mansion,-places wher iplomata possports were eramined,-were next noticed, and then tho public playgrounds where games were carried on. The great basilica郎 o of public gardens. While the ancients reperence the human form, we cultivate the mind, hut have no thought for the body save as to food and clothing, though we improvo the breed of
doge, horses, and poulcry. At least two hours a dogs, horses, and poultry. At least two honrs
day should be devoted to training the muscles. ballad

## The Dragon of Trantley, -

the scene of which is laid at Wharnclife (visited by the Congreess), and the name Wantley appears clear that the dragon typified Sir appears olear that the dragon typified Sir
Thomas Wortley, who is supposed to have Thomas Wortley, who is supposed to have
allowed nothing to stand in tlic way between him and his fondness for the chase. How well this tradition of the destruction of these tomns is carried out in the ballad!-

> Were to him deese and turkeys,
> Ate all, and left none belin $\begin{aligned} & \text { But sombe stones, denc Jack, } \\ & \text { "hiich le coull not crack, }\end{aligned}$ Which on the billa sou will find.

The "stones" on the hills being, withont doult, the remains of the bouses of Stan, or Stonefield.

Then, again, the violent disfranchisement anoient
lines :-
" Devour did he
Poor children threa

n the breaking np of the pastures arous the homesteads, and the felling of the trees $f$ purposes of the chase, are clearly meant in the warposes

All sorts of catlle this dragon did eat,
Some say he dizent Some say he did eat up rees,
And that the forest mure he heuld
Derour wo by Derour up by degrees
The popnlar expectation being that in his gre he would not stop at destroying the villages a seizing lands, hat would altimately take violent o himself Losley Chase and Sherwood Forest Sir Thomas Wortley (son of Nicholas Wortle Isahel his wife, daughter and heir of Willia Tunstall, of Thurland), was Knight of the Bo to four successive kings-Edward V., Richa
III., \#enry VII., and Heary VIII, He died 1514.

Moar or More Hall, still standing, is situat in the Yewden Valley, and may be distinot seen from Wharnclifio Lodge - the apocrypb den in which the dragon, Sir Thomas Wortle resided, and naturally within hut a short distan of the site of the destroyed towns. The Drag has, in all ages, been the symbol of the Devil, tyranny, of oppression, of cruelty, and of wron
Hence it is that this monster has been chosen Hence it is that this monster has been chosen
the emhodiment of wrong in the "Dragon the emhodiment of wrong in the "Dragon,
Wantley". in "St. George and the Dragon", the " burn" " We can givo but a few lines mere. At concluding meeting on the sixth day (Saturda 23 rd ), -
Mr. W. de Grey Birch delivered a short a aress on "Coleography," in which he examin and exprained the Mss. of Mr. Bragge, me oned our last, and which were exarbited inspection. He showed that shorthand was a a modern invention, but was nsed by the ancien he said he had no hesitation in stating that nin euths of them had heen prepared hy monl and some wcre as fresh, after a lapse of 500 Goo years, as if they had just emanated from t printing-press.
Mr. Gordun Hills then offered a general vo of thanks to all who had aided and assisted: the congress, specially naming the Mayor ar Master Cutler and the Local Committee, and telling speech addressed by Mr. Roebuck to tl erahers of the association and the people Sheffeld, agreeably ended the agreeabie weel.

## THE VIENNA EXHIBITION.

It is not withont feeling of shame that write of goldsmiths' and silversmiths' wares : displayed here in the Vienna Exhibition, for must at the very outset admit that in th branch of industry we are complet
hamefully, heaten by foreign rivals,
\& late suffer sho could he poudoud als of industry; but instead of misfortune leavio ber a wealk competitor, wo find her not enly is oreditable form, but in some departments of art mannfacture taking a leading and esalted place mannfacture taking a leading and exalted place
But in no art-manufacture does she reveal he strength so powerfully as in that now underoon. ideration, for as represented by MM. Christoild $\&$ Co. and M. Barbédienne, of Paris, who aro thu eading exhibitors in this department of manu facture, she is far in advance of all the othe competing nations.
Few of the works shown by M. Barbédienne cas strictly be regarded as coming from the suith who works in silver or in gold, for the majority of his works are in enamel; but as ename wares are made almost exclusively by silver miths and goldsmiths, I shall include these in my present considerations. By classifying enamels witb warcs in silver and gold, it mus not be thought that I do our own metal-worker a wrong, for Messrs. Flkinaton, who make mucl the best display of any British firm in silver smiths' wares, exhibit enamels somewhat argely, aud most of the Russian goldsmith also show enamels, hence the displays of the French bear direct comparison with those fron ouromnand other countrieg. MM. Cbristofe \& Co
and M. Barbédienne each have their specialtice and each produce works alike raro and beautiful in their way;-

## Not like in like, but like in diforence";-

but as the exhihit of the former firm is most Faried, I shall notice its works first.
There is scarecly a hranch of metal-work in which MM. Christofle \& Co. do not shew rare 1.0xamples hoth of art-knowledge and manu.
facturing skill. Although eur Elkingtons show facturing skill. Although our Elkingtons show
a large and truly admirahle work in repouss which of deservedly worthy of careful study, and ris one of the few works shown in the Exbibition
when do us credit as workcrs in the precions motals, I jet feel that there are examples of nammered work on Christofle's tables which, if lif Elkington's, and some of the smaller works In repoussé hy Christole \& Co. have the merit of peing heth useful and heautiful, while the one mportant work by
mercly ernamental.
I confess that I like useful objects hetter han those which are merely ornamental. Give at let it he a vessel. which will contain iny ine, $a$ vessel which is useful as woll as heallbiiful. I have seen champpagne-oups of silvcr, served in ressels of gold and of silver. To heither of these do 1 take exception: only let
hem serve well the parpose for which they are ntended, and then let them he as heautiful as
ou please. A heantiful ten-cup in a ou please. A heautiful tea-cup in a tenderly.
Mreught saucer I prefer to an ohject which is morely an ornament, For this reason I givc breference to soroe of Christofle \& Co.'s wine.
bops and tea-services, and regard them, in a fops and tea-services, and regard them, in a
sense, as greater than Messes. Elkington's mag wificent figure-subject, wbich is intended morel 28 a tahle-ornament.
No exhihit in the entire Exhihitier here at
Wienna shows more fully than that of Messrs Christofle \& Co.'s tho favourahle influence wlich thasteru art has exerted upon that of Western ations. Everywhere in the Exhibition we see
ho iuflience of Eastern art manifested, hat in no instance is it more apparent than in Christofle \& Co.'s oxhibit, and in no care has Eastern art been allewed to influence European mannfac. ander consideration
What is ealled "Damascene" work econrs alike frequcntly in Arabian, I'ersian, and Indian metal-work ; and nothing is more pleasant in netal in another. In India wo generally find iilver inlaid in iron; but, gold as an inlay in requently have gold inlay in a dark metal, and not unfrequently in steel. In Arahia both gold und silver aro inserted into iron and other dark netals; and in Japan, aso, this practice of
mlaying metals of ene colour in another is :ommen.
Messrs. Christofle \& Co. have carefully conidered these works from the East, and have pestowed npon then that consideration which
heir beanty and just treatment deserve, and he result of this study is apparent in their xhibit. We have now Damasceno work in its
best forms, and much of it, hut there are no pest forms, and much of it, hut there are no
eervile copies of Eastern works to he fonnd, hut peantiful works, the first thought of which has prung from a considcration of Oriental oxamples, works which are as fresh and new in appearance as if they were altogether of novel manuacture.
While the Eastern werks consist, almost exlusively, of silver or gold, inlaid in a dark
netal, Christefle \& Co. show many examples of mixed metals, inlaid in copper, hronze, and lark metals; and golds of two colours,
sale and deep, are employed in sereral of theil Jale and deep, are emy
works iu Damascene.
Eastern examples are known which afford orccedent for almost all forms of inlaying, which his firm has adopted, but credit is nono the
less due to this enterprising firm for adoptng desirahle suggestions from any ronrce of mowledge open to them, and for utilizing these zaluable hints. Oricntal examples are alike open to us and the Freuch, hut tho latter make nuch more use of them than we do: indeed, I io arail itself of the suggestions made hy foreiga countries, however valuahle those suggestious may be, than we English are. But, mark, there is a strange difference he. ween copying works and deriving snggestions
from them. To hecome a copyist is to become servile, and to acknowledge inferiority to the creator of the work copied; hat to derive an idea, and then give new cxpression te the work, -a work the mere thorght of which has heen snggested by previous examples,-is right and
desirahle ; and especially so if the new form or desirahle; and especially so if the new form or
character, which the original thought now assumes, is exalted and refined.
The trays in copper hronze, which Christofle \& Co. sbow, are almost, witheut exception, of great merit, and are, for the most part, founded on Japanese examples. A tender spray of some ornamental plant is spread over a salver, the spray as silver, the salver as copper-hronze. attempt to rive fictitious relief, hat is a flat and consistent decoration of the flat surfaco which it ornaments, and is yet sufficiently suggestive to call up the thought of flewers.
The firm have studied Japancse ornamonta carefully; the ernaments found on metal work, on lacquer wares, on china, especially that from the Satsuma district, and have had them intreduced into Europe,--a new and beantifu] manufacture, derived from the considcration of Oriental oxamples, hut a mannfactnre having all that freshness and heauty whieh results from the passage of the oricinal thenght through refined and educated mind, from which Somes in new form.
Some of the vases shown hy this firm are of great hoauty, and present a variety of inlay
gnch as I have never before soen, for instead of snoh as I have never before soen, for instead of
gold and silver heing simply set in a dark mctal, wo have geld and silver inserted in hronze of various colours, and the gold is in some cases of lomon colour, and in ethers of orange hue.
Of Damascene work, Barbédieune shows little that is new, and the little that he does show is of the same character as that of Christofle, and is, I think, hut a copy of his work; and Elkington also shows nothing that is novel in this way,--the small portions of Dawascone work upon the heautiful Milton shield are net new in character, and the shield has heen shown t previous exhibitiens.
I have speken of Eurepean Damascene work; hut, as yet, have made no mention of that frem ations, although Japan, and other Oriental notably Persin, show excellent examples wind of the most careful study; hat I do not intend in this paper to deal critically with the merits of Oriental examples. Besides, it is scarcely fair Oriental oxamples from whiks with the grand practised hy us have heen derived. All I will now say on this subject is this: let ns carefully consider the heautiful works of the East when ever opportunity occurs, hat oot with the riew copying ther. Let us seek to gatber from about the examples hefore us, zud having thus hecomo imhned with a true art-spirit, the manifestatiens must ho new througb bearing nper hem the impress of a fresh and well. informo aind: thns beth personal and natienal individuality ef style will he stannped on the works
produced. roduced.
We will pass now to 2 consideration of ename vares, and here, again, we have a beautiful art dorived from Oriental works. It is curieus to notice how many of our heautiful arts have heen suggested hy the consideration of examples from countries which we are in the habit of despising, or regarding as of imperfect civilisation. Cloisonn enamels from China, have heen long known to of refined taste. Chineso cloisonne waro had its higbest development about 150 years since ander the patronage of an emperor to whose oxcollent taste wo are indebted for many fine works both in this mannfacture and in ccramic wares also. Bat it is only during the last few years that we have become acquainted with similar mannfacture in Japan.
A vessel of cloisonne enamel consists of core" of hrass, with enamel work upon it required a brass vessel is formed of the pattern is soratched with a noint. narrow hrass riband, or flat wire, ahout the one-sixteenth of an inch in width, is soldered to the "core," or hrass shape, edgewise, so that it projects from the surface of the hrass "core" wn extcnt of one-sixteenth of an inch (its wis hrass rihand a plastio maces now formed by where any space, both of ground and ornament, is filled with this plastic matter, it is
exposed to heat, which, owing to the natine of the paste, causes it to vitify, and hecome an
opaque glass; the glass heing of varions colours opaque glass ; the glass heing of varions colours tie pattern is formed, hut all is yet rough. The surfface is new ground down till it is smeoth and level, and thns we have a vessel variously coloured, and with tho colours separated hy a fine metal line, the line being the edge of the wire riband.
With Chinese cnamels wo gencrally have a lith blue or tarquoise ground; yet examples miv yellow, morone, grey-white, and dark hlue ground, are hy no means uncommon: in almest delicineso examples known to us, there is a very ple oloar, coolness of colouring which is disting pleasant. Japanese enamels are at ouce charneter from Chiuese, not only hy the tinctive, - so distinctive indeed that when one specimen has heen seen, all futur works of similar character can at in be this ane ferture - hut ole he forised iy Jopanese cloisouns enamels are dort an warmer in colour then the darker and metrical in constrution, thouct the more ger cally.arranged parts are distrihuted geand cally.arranged parts are distrinuted irregnlarly by the surn by hee extreme toeness of the metal lines (the edgcs of the metal ribands) separating the colours, which in these examples are scarcely thicker than the edge of ordinary note-paper
while in the Chinese enamels they aro about While in the Chinese enamels they aro about Three times this thickuess. So eamest were
Messrs. Christefo \& Co. in their endcarour to Messrs. Christollo do. in their endcavour to that they sent a man to China to nurestigature, procesey scat a man to China to investigate the facture , and the inquiry into the mode of mannwere produc been successich, ctofle, and they have also been produced in Eugland hy the Elkingtons.
Speaking first of the works of Christelle \& Co. we cannot hclp admiring the rare heauty of some of their samples of this interesting and hut wic manufacture displayed here in vienna wer what is most he commended is this, - that the Chinese Japan, but are worlss new iu style, while rich in art-feeling,-they are heautiful, they are new, they are Eurepean, and jet they have about them a quaint dash of Oricntal feeling which gives to them a character which is novel; yet hey are in uo way copies of Oriental examples, I wish, for the honeur of our country, that I could speak as favourably of Elkington's similar enamels. I speak as an artist, and as an artist only, and as an artist I am hound to eay that art feeling is scarcely to any degree present in these works; that, as art productions they are childish and poor, and do little or nothing towards upholding the national name as prodncers of works in enamel. It would be very wrong ef mo
to write in praise of werks which are indifferent hecanse they arc by a fellow-couutryman (and I fear that this has heen done hy some of the nembers of the English press out here in Vienna) for such a course of procedure can only result in national humiliatiou. To he hehind onr Continental frionds, and to delude ourselves into the ranco, is worse than folly, for then we cease te make those efforts which are necessary to success. I would that I. could say that we were eqnal witb the French in the heautiful manufac. lure of enamels ; but it is not so. We are far, very far, inferior to them.
The exbibit of Barbédienne is, like Christofle's, of great merit, and is a display such as any country migit well he proud of. Bnt here we have no cloisonné enamels, strictly so callod, of rench manulacture. M. Barbélienue achieves his robults hy casting a hrazen core, npon the surface of which are interstices which are sub. process no soldering of a metal rihand to the body, as the hody, or core, is produced in the Grst instance with a pattern wrought upon it hy projecting lines. The process of Barbédienne has his adzantacs aver prose comenne has can leape hrass ornaments pon the turf mingled with the enamel work, and not finc lines only; and hy the hrass forms having detail added hy engraving, and colour given hy a de. posit of gold, great beauty is achieved. IN. Barbedienne shows works of yreat loveliness, and the stylo of ornament employed upon his enamels has, from the very first, heen hoth vigorous novel, and olegant, and it is now hecoming cha. acteristic of his beautifal works.
Russia sends some little works in enamel,-a
few excelleut spoons, wine-cups, and salvers, hut
nothing worthy of any special nute, and Vienna nothing worthy of any special note, and Vien China sends a wonderful collcction of splendid clrisomic enamels, and Japan furnishes many excellent examples of its treatment of cloisonmé wares, and other Oricntal nations give us a fum examples of similar work. Let us them, but on no account let us bo mere nco imitators of even beautiful examples,
One thing, I regret in all European exhibits of silversmiths' work is the ahsence of beautiful works of ordinary cost. Many tea-serrices are shown which are of great art-merit, but they are invariably of great cost. Why cannot a tea. service which is worth but a few pounds be also sive serrices, while the many have those of lesser. cost: why cannot the many have that nobich i beautiful as well as the few? Beantifnl objects of medium cost are almost Beantifnow objects exhibition of silyeremiths' ware lere in Vienna, but our endeavours to meet this want again foli short of our Continental neighhonrs.
It is with mach regref that I write as $I$ do of our displays of the works in goldsmiths' and silversmiths' ware, but I muat be truthful. Of silversmiths ware, but I must be thathith. Of
some of our exhibits I am ashamed, of none am I proud; while of the exhibits of the two great French frms which I have so often named in French frns which I have so often named in this paper I can scarcely say too mneh, for their
worlsare of rare merit. I feel that in looking at them I learn; nhile I fail to perceive in any English exhibit in this class, excepting one or two solitary ohjects, anything upon which I English energy is suflicient to meetany life that English energy is sufficient to meet any diffeulty and to make any adrance I have comfort, and I look with hopefulness to an effort which slaall place us, as workers in the precious metals and enamels, in a foremost place amidst our Conti. nental competitors.

## FODDER AND FEVER

WHEN the rising of Parliament relieves the public press from that deluge of talk for which its columns have been tasked to make room, it often lappens that some suhject which, a few weeks before, would have becu squeezed into an obscure paragraph, swells, like the frog in the fable, till it demands the entire marsh for itself. Sometimes a literary dispute thus eeizes the attention of the puhlie; sonctimes a lnckilytimed scandal. The present dend season hos been hitherto chiefly enlivened by a subject for once of great interest, and one which, beyond a donbt, eo
This question concerus the mode in whieh health may be affected by the application of sewage as maure. It is one that il is essential to settle, ard that not in an off-hand manner, either ono way or the other; but exhaustively, conclusively, and judicially. We have long since pointed out that it was difficult to understand the priuciples on which any administrative interference with the smbjeet of draibage and river could be guided or justified.
A gentleman whose name is known as that of a man of science and of practical experience, was the first to open the conflict, and to drag across the columns of the daily papers the coat upon which advocate after advocate has rushed eagerly to set his foot. Wo shall be glad if we are finally able to placo on reeord, once and for all, an admitted and proved conclusion in a matter so closely a
wealth, and purity.
It is worthy of attentive remark, as teaching caution in accepting ex parte testimony, from however respeotable a source, that a eontliet has been waged, at the same time, in the journals, as to a suhject far more casy of settlement than any quasi- eliemical inquiry. The state of the dustbins in Marylehone is a simple question of fact; as to which one wonld think that half au hour's be enongl to ascertain the rights. Aud yet we have letter after letter bearing responsible sig. natures, which flatly contradict each other as to that question of fact. If nn issne can be raised whether a certain number of dusthins are or are not duly cleansed, and if we find, as we co find, that the people who are responsihle for cleaning them, say that they are properly cleaned,
white the people sho are in the habit of nsing
them assert that they are neglected, and not properly cleaved, it is only too certain that we shall bave to look with a very searching Whether mo or con
The first letter which has again brought this subject to the front was to tho effect, that a emall herd of cows at Wallington were fed, during the spring of this year, with a small pro. portion of sewage grass; that their butter thus became so offensive as to he uneateable; that the nse of sewage grass was then discontinued that the cream, milk, and butter then resunted their former excellence; that on this the experi. ment was repeated, and that similar resnlts followed. It is added that the milk has a slightly raried odonr when twenty.fonr hours old, that the butter becomes bad on the second or third day and that no care in the preparation can avert the rancidity. Tho writer adds that he has long the qu that the use of putrid mavures affect the quality of vegetables, bat that he was not previously aware "that the putrid matter could he taken by animals, and communicated, in therons putrefactive state by their milk." valuable we have litele douht that many valuable piece of information is long kept whe fear that if, heing of the discoverer from the fear that if, heing very likely naccustomed aitogether to writing for the press, he should simply state all that ho knew, some annoymous critic would pounce upon him like a hawk, question his facts, mako fun of his langnage and leave him in a stato of puzzle almost as to his own identity.
But when the person who communicates starting information to the public claims, as in tho present instance, to belong to the literary guild, the cross-exnmination shonld he applied by himself to his letter before it is committed to the post. The prudent delay of twenty-four
hoars, and a second reading of the communica tion at the expiration of the communica save much dispute. In the prosent casc it might have seemed admitable, before opening so very eonsational as well as important a controversy, to have taken care to give a fow parti culars as to the state and quantity of the food eupplied, whother it was hay or grass, -if the latter, whether eaten on the ground or how sup. plied,-whether fresborotherwisc ; and also som cenaition of what was meant hy "putrid already has desirable. As it is, the wro noder eertain eonditions may bo safely applied over large surface of land without injury." Had he recalled the system pursued in China, or even the history of the well. known neadows at Edinhurgh, he would not bare raised a douht on that point in his frst letter. Those details, howerer, have been since supplied.
In elncidation of the question whether mith may be reudered onfit for humau food hy peen. produces it the pastnre of the animal whieh produces it, Mr. Sedgwick cites eight local out within the last three years, all of which havo heen more or less traced to infected milk; and lie further states that the dangerous quality has not heen communicated by mixtnre with inpure water, hut has been inherent in the mill itself. We may add that the experience of every careful mother is enough to induce her to take extrome care of ber own diet while nursing, as sho is aware that an nuusual proportion vegotables, fruit, or acid food, even if not of sufficient amount to be sensihle in her own person, is at once perceptible in that of the child, readily cansing dinrrhoea in the infant. This taken as one of the first points to onght to be when as one of the first points to bear in mind, When considering the possibility of the partial poikoning of a liquid so exceptionally delicate as
milk. The French men of science, who are generally in the ran as regards pliysiological iuvestigntion, havo collected much curious information on this sohject. It appears, that
most of the cases which have been investicated, most of the cases which have heen investigated, Where mik has been affected by the browsing hare been those of conts or less poisonous to man rally the rock-hamting type of ruminant, and is hy preference a browser, rathor than a grazer it thus, in a state of nature, consumes a much wider rariety of vergetation than does the cow. Thus tho lialility of the mill to be affected is much greater in tho ease of the former than in that of the latier auimal. At the same time, it way suitable to the constitation of the bid which is not wholesorne for a human child.

If, in the caso of a freely pasturing animal, we find that the natnral instinct has not prevented the groat from browsing on the sea spurge or the foo s parsley, with the result of secreting a milh that produced choleraio symptoms in the firs case, and typhoid in the second, our care onght with which we supply our domestic animals, the terms of Hobson's choice.

We could cite examples, from onr own per sonal experience, of the effect on human infant of the mills of cows fod on mulberry leaves, a diet often given in Italy. These points are rather medical, or indeed practical, than chemical. No chemist, in the present state of his science, car chemist, in the present state of his science, can impurity, the resplts of a cegreo of iofectived mpurify mon an esperienced and watchful nurse. As far, then, as this part o the case groes, we apprehend that there can b roadily and positigely doubt that milk is vor readily and positively affected by the food con sumed hy the milch animal, and that it may even hecome highly deleterious, or absolutel poisonous, to the haman infant, while the es ternal appearanco of the animal in question The adrocates good health condition
The advocates of the sewage-farm system have not been slow to accept the challenge held ont to them as ahove descrihed. From Hay hution of 35,000 comes the information of a distri hution of 35,000 gallons of sewage per dien o eight acres of land. Two portions of this ar regularly under rye.grass, and one third nnde root crops. The rye.grass grows luxuriantly, often reaching 4 ft . high, and is cut four or fire Limes in the year. Tbirty cows and horsc thrive on this grass, and the condition of th dairy is said to be excellent
If is not stated in what manner the sewage i applied in this farm. This is one of the mos important points in the matter. We will assum nothing beforehand; but it is nndeniahle tlat i at all events quite possihie that the rosult o applying any manure to tho earth on which crops are afterwards grown, and to the growin crops themselves, may be extremely different The good liealth of the animals themselves has not been called in guestion in cases of proved milk-poisoning, and is thereforo foreign to the iuquiry
The manager of another sewage farm ealls attention to tho danger of eonfounding the posi hoc with the propter hoc, and asks pertnent guestious as to the grass consumed in the case asks how the frst complaint was made. He was given oo grass had becu cut before royed from the scwage farm ; how stored; and in what way the sewage had been applied to the land. To the last question wo shall have, no doubt repeatedly to reeur. But the very inguiry scens to admit the possibility of a speeies of infection of the grass grown by sewage, that will be imperceptible, or nearly so, when the grass is fresh, hut that will develope on the keepinc and stacking of the grass. It is clear that, if any evil be communicahle, it would be almost certain to take this course. The questions are most proper to put; hnt tho faet of their beiog put by a warm adfocate of sewage farmiug has a very marked significance
A third writer comes to the important question of the method of applying sewage as maznre. He states the fact, which wo may take to he fully in evidenec, that "when sewage passes through
earth it becomes considerably changed as earth it becomes considerably changed as regards its chemical and physical qualities.
This happy law of nature is one of the primary elements of sanitary scienco. Its import. tance it is not easy to overeestima'e. Its moulus operdudi has not, as far as we aro aware, recelved the attention it deserves. But whatever else he in dount, and whatever elso may bo taken for granted, we take it as a postulate in sanitary engineering that sewage must go throngh the earth, and that in no other manner can water onoe polluted with sewage misture bo rendered non-delctcrious to health.
In the oase, on the contrary, of the flooding of growing grass with ecwage, this writer, who is an officer of health for tho combined districts of Leicestershire, is of opinion that if a cow eats tho grass so treated, the butter may he injuriously affected. The writer gives opinions, instead of facts, hut they are opinions in themselves prohable, and point in the direction which we have bofore indicated.
Another witness eomes formard to speak to the dimiuntion of typhoid forer in the Croydon district since the sewers have been properly
ventilatod, and to the health of the animals fed on sewrage grass in that noighbourlood. He also bears trstimony to tho excellence of the lairy produce. A sixth writer, also a C.E., auts the question fairly and pointedly, .." "Is the
pplication of raw sewage to grase-land proluctive under any circumstances of evil results und is not some chemical treatment of the eware necossary previously to its utilisation on As to this, it may perinps at once be eplied,-that not chemical, bat mechanical iltration, is genorally necessary to prevent th logeing up of the natural tilter of the earth. Noxt in order comes evidence from the physiian of the Devon County Asylum, aud from the Sonth Metropolitan School, with a popalation of ,660 souls, as to the excellent condition and s to the purity of that test-prodnct, the batter Ve pass over tho personal incivilities that come hey surface at this stage of the discassion, ersons who allopt such a method of controversy text we find the manager of a largo sewageurm offering to placo its contents and stock a he disposal of seientific experimenters; and testify in favour of the milk from cows fed on awage-farms.
It is proper to bear in mind that evilenoo in wour of the excellenco of milk, butter, \&ce, in rder to be entitled to much weight, must oome com the cousumer, and not from the producer here is an old proverb about the sale of fish. nd, wity the best iutentions, thero is a ons for shutting their eyes to any view but that hich is most favourable to themselves, that wo iu hardly take the evidence of any farmer as the quality of his own produce. It is clear, 1 the evidence, that the milk of cows is greatly icreased in quantity by the feeding of the simals on full crops of suceulent grass. With dis increaso of quantily is combined, it also
soms clear, an iucroased richess and excol. Other things being aliko, the mill of a vell fed on luxnriaut grass is the best. But Ie chestion is not as to that; it is simply dether, in attaining this desirable result, any tho papers bears on the first point, as to which ere is no real dispute. Very little touches o 10 second.
We have still, however, to refer to the comunications of two rentlemen, whoso names are ell known, as well as highly respected, iu ooni. Donton, whille protesting a arainst groundless arm, admits that it is quite within the limits possibility that if sewage irrigation is so conreted that the blades of the growing glass are thed hy the Anid, they may become the agents infection. Mr. Rawlinson cites conclusive idence as to the fact that the loug.continued e land. Tho two views are in perfect keep$s$ with one another, and, in our opinion, point the trne issne.
It is, as wo before stated, a fundamental prin. le in sanitary ongincering, that water, once llated in any way by sewage mixtures, must through the earth before it can be regardod safe trom infection. It is not true that im-
re water at all times equses infection. ould be in a fearful position if such were the se. But it is certain that occasionally, in some utes of the atmosphere, or in some states of e public health, water contaminated by sewage es spread infection. Further, it would seem if the special scourge, typhoid fever, was
rays connected with sewor or drainage poison, tid or gascous. Again, we have ample idence that fitered sowage may bo turned for "ery long time througb tise same bed of gravel, d that the gravel does not thus beoome foul, lose its power of disinfecting the flnid,-or, body of water with oxyren as to burn e organic matter wy with oxygen as to burn this way alone can the action of the gravel er be explained. If the flaid be unstrained, wilt, in conse of time, close no the interstions the gravel, and arrest the good effect. Every argument, then, that is ruised iu farour disiufectiog foul water hy passing it through A earth, is an argument of equal weight as to danger of allowing such water to touch the
twes of growing regetahles. If sewace may sprinkled over growing expps with impunity o necessity of earth purification is negatired. se adrocates of sucb a process may urge that
the plant itself has a purifying influence, and that it must be as destractive to organic matter
to pass it through the cells of the veratable tigsue as through the carth. But that is to give the go.by to the real question. We havo no assurance that the matter does go through the plent; we havo no reason to suppose that the grasses imbibe natriment except throngh their roots. The leapes of most vegretables are con sidered rather to he expiratory organs than alimentary orrans. Bat even that question need not be raised. Knowing as little as we do of the intimate natare of the impuritics found in polluted water, it is as probable that the viris may continue, if a plant or other object he any ovaporation in the air, as tlat it may be destroyed by the simple process of drying. may be difficult to collect facts either way, is very little to the point to say, "Here are so many instauces of sewage grass being used, and ine." Of conrse this is the case ev follownot otherwiso be now in any douse. Wo should ject Fruther, as to one soure of ovil suluvas anticipated, to entozoic parasites, it seems well supported that hore is no good cause for alarm. Thus tbe offors that are made to submit animals fod on sewidge grass to microscopic oramination are
idle. They only serve to turn the attention from that whicb the microseope cannot dotect, but the physician will. But whichever way oreed,-Sewago through the earth is disinfected; sewage not passed through the earth is always liable to snspicion. Sewago, however ilute, thrown upon tho leaves of grass or growag herhs, is not disinfected in tho ouly way on whioh we can rely. It is only dried in. We are fithout circet evidence, so far as wo are aware, that sewage dried into grass, hay, or any othor matter, does communicato infection. We are -ithout any evidence that it does not. Precauion, then, suggests that it is mischiepous reokloss. ness to assume that it canuot. Further evidence no donbt, will be forthcoming ; and tho matter an only come to the conclusion that sowage sent through tho eartls is purified. That the earth, which serves as filter, is capable of sustaining growing crops without danger to health But that sewnge, flooded over grass meadows, or upplied to the leaves of growing vegetables by well ho regarded with suspicion, as a pos sible agent of iufection.

NEDARK AND LICHITELD TOUR OF THE ARCHITECTURAL ASSOCLATLON,
Tief following notes made on the spot by one of the tourists will give a general idea of the couduct of $\operatorname{lonrth}$ annual excursion under th Mondur Hr. Edmund Sharpe
Ron - The reciltse Newcas le, Yorkshices appear from Ireland, batch from London. The A mel botel (figood batch from London. The Angel Hotel (fifteentl century domestic), symmetrical, arohway in centre, bay windows, buttresses, gurgoyles animal grotesques, and a picturesque look. The (Abbeville also associated wt. Wolfran of Sens (Abbevile also associated with him). In centre,
threo bays of Transitioall (1170) church,threo bays of Thansitioual (1170) church, maiutained in thirteenth ceatury, and surrounded with new work east, west, north, and south Now, alcogether, one of the most spacious best lighted churches in the kingdom (the extensions carried on eastward till completion, 1100 ).
Window, west end of north aisle, noblest of Window, west end of north aisle, noblest of church (cusped,-that at Raunds not). Tarish majestic: spire graceful. Profuse ball (or bell) fower at west end-full 1800 in all. These rare before 1310: this earlier,-in fact, one of the very earliest examples. Was an entasis de. signod to spire? At Clinton, Caythorpe, \&e., the cucuniber-top the result of accident,-started the spire too steep, and pulled it in suddenly (Mr. F. C. Penrose suggests). A crypt (late); font, late fourteenth century; incised stones. Two libraries, - in that over the sonth porch wooden book covers, iron chains : active worms appareutly northly constant relishers. The school house horth side of the clinreh:-the value of a bold Rail to Nowark,-called, "temp. Ed. Confessor, New work, to distinguish it from some town of older date,"-as Thoroton with ag lity suggests.

The assembly-room:-Hung with plaus and montdings. Mr. Sharpe ou the plan of the week,-the sia very important churches to be visited may bo ranged as (1) Lichifieln Cathedral, (2) Southwell Minster, (3) Grantham (Collogiate Church) and parish churehes, (1) Nownk, (5) Stafford, (6) Ashbourne. Then tho work taken in chronological order,-from the Illust 1100 onwards, nearly a complete sernes ings, tho Eorlig from cymagraphed of dat (history), and (2 ant) admied in of dato curve and intrioze art andapted in natnre of other features main sumpling to the fuliage, \&c. "IRcstoration." window traceries, Tuescuy, Ausust 19th - N
andsome, well-windowed parish church great, handsome, woll-windowed parish church, on the plan of the fifteenth century. Designed for large parish,-large spang, piers flattened north to sorery dimencionst to west) ; hoight,-plenty of original centro tower remain piers (1170) of servatirentro tower remain. Were there con or was the from time to time on crery wide bailt agaiust Crom time to time on every side? or was there rugatity? West tower,-in the lower stages a problew:-how came these side arches (north the south) in a tower designed to stand clear of and (unles. 1hey aro (uneathered) piers, caps, wad arches of 1230, -the west front earlier Wauted, an account of a ire; alterations shor of tota rebuidur would then look feasible. But how to account for the insertion of Rectilinear wiadows ia aisle within fifty years of the building of it ; 一little, if at all, largor than the Curvilinear windows. A seoond conjectural fire? Sir-light Curviluear window west of south aisle very beautiful (liko Heckinerton, Navenby, Sleaford) Nave piers, arches, clearstol'y, sc. ; and a little later those in the chancol,-all Rectilinear. Black old oak soreens of much size and character The earnous "romish bress, - the hottom a good 7 ft . up the south transept wall, -a hint that walking over it should bo aroided crypt (1170) under the altar, - a hit of vigorous clouds suggest wat sketcli-books.-but The move mude eastwards for (1) Beckingiam (hest Beacur Hill, the highest land of Fist Vatts
 the Witham, and across into Lincolusbire. The church a rare example,-navo arcades 1175, just clear of Lancet: all well moulded. A pris of piors have monolithic shafts in mooks, -alk the look of banded shafts-the universal fashion a short generation after. (2) Broughton, on tho tiny Brant, a fceder of the Witham:-crocketed tower and spire,-thought the finest hereabouts; now wants a longth at top. Backed by trces, roofed in stone, - a picture. Thonorth side,-para. pots pinore . Pichre. Thonorthside,-para nother. Mostly Rectilinear. Our "lossy stone, " noser long-range markstuen, with tho proper toons, would at three miles hit, "home of firs (1870), - blit second church pisited in the first (1870) expedition. (3) Claypole : fine early fectilinear east window : mouldings Curvilinear, pe-light, well pointed, -121.5 in , clear, jamb o jamb. A rough flat roof cuts it at top. Late Deorated caps in nave, - crumpled leaves Curviling round. Sedilia in chaucel of very perfect curvilinear vork, -rare beauty. Altar.slab with sunk crosses ( $3 \mathrm{ft} .1 \frac{1}{2} \mathrm{in}$. by 7 ft .2 in . by $4 \frac{1}{2} \mathrm{in}$.) a little chapel, now a restry north of chancel. Bellinging, and people in holiday mood;-rich aby display. (4.) Balderton. Tivo Norman doorways, 1120 , about as at Southwell. Late oak benches, with raboits standing down the neper slopes of onds. Bit of a figine of purestart ore notth porch; how here? (5) Kavton, Lancet nave, -nail head in hood mould (rare). But the chancel! North stde,-sacristy-door, memorial arch, E:2stor sepulchre. South side,-double piscina, three sodilia. In all crumpled leaves of 1320 ;-fignres with grace and dignity, and traicht drapory,-angels, bishops and groesques, diapers; Romau soldiers, - humour shown in shaping their dozing forms. Who was tho (one would hope) native genius who mado all this? and liad wit enongls to leave nain walk in plenty ahout for the eyes' rest withal? Was he at Navenhy and Heckington also? aud did de die all too young? Back to Nowark:-to dinner, and a lighted charch, and the fine organ. The town nearly awake.

Wednesday, August 20th.-Newark Castle in the grey morning. Tall walls next the loop

Mr. Sharpe's remarks on this we gave at lengta last
from the Trent. Hall, and large-vaulted ergpt, Norman towers, and ivied ruins. Out by tho westward road, and the carriages draw up hefore (1) Kelham Hall (Manners Satton, Esq.) ; Sir G. G. Scott, architect. Red brick and stone, many shafts and carved caps. The great entranoe, - the Spanish parto,- glass roofea, and with grecnery, and carriage-drives in and
out. Vaulted rooms and corridors, real woods ont. Vaulted rooms and corracrs, real woods and large plate-glass; gilding and colour; the

## PROPOSED RESTORATION OF KIRESTALI

 ABBEY, YORKSHIRE.AT the closing meeting of the annunl excursion of the Architectural Association in Lichfield, on Saturday, August 23 , rlroady referred to , Mrr. .
Sinarpe said,- You would hardly bolieve it, but Sharpe said,-You would hardly believe it, but
there is really a plan on foot for tho conversion of the ruins of Kirkstall Abbey into a modern
of man on Anglican church; and no less a person thau Sir Gilhert Scott has undertaken to carry this almost incrodible proposition into execution. In the first placo, as regards the employmont of the term which constitutes tho chief plea
knder which this proposition is broaght formard zan a more unreal and nutruthful application of his word "Rostoration" he imagined? For what whs the primitive condition of this build. ing ? Woll; it was the conventual churoh of a Cistercian monastery; and most of you have, I laro say, learned, from what I have already published on the subject, what such a charch was like, with its simple ontlines; its massive roportions; its peculiar divisions to snit its iwofold oocupation; its atterly plain appear.
ance, devoid of all colonr and ornamentation; its puritanic, even poverty-stricken simplicity,
and its anmusical ritual. Wo all know, other hand, what sort of we all know, on the church, that we shall have at the hands of Sir Gilbert Scott, will present,-with its alabaster rercolos, its gilt choir-screens, its painted vanltbrilliant eacaustic floor after the 40,0002 . $50,000 \mathrm{l}$. are expended that he proposes to lay ont upon it.
Can a more striking contrast, or a more untrathful "Restoration" be conceived? Nor is cren of ass case, the pretext of necessity, or chureh accommodation in this district, nor is this, indeed, the pretence for this large expenditare of raoney. "Restoration" is apparcutly the sole object the proposers have in view: they have, in fact, apparently, to cast about for the use to which they will turn tho building when completed. It is trine that Sir Gilhert Scott, in collerg for the education estabishment of a further utilisation of the remaining conventraal cuins in this woy unhealthy site, in the smoky suburbs of a larye unlealthy site, in the smoky suburbs of a large
manuflacturing town, conld zearcely bo found mannafacturing town, conld zearcely be found.
Nor would one of these additional huildings, Nor would one of these additional huildings,
admurably planned as they were for the requireadmurably planned as they were for the require-
ments, the dities, and the occupations of a body ments, the duties, and the occupations of a body
of cloistered Cistercian monks, be at all suitable of cloistered Cistercian monks, be at all suitable
for the modern requirements of a college of for the moder
Cnglish youths.
Who then are to be the gainers of this so.called restoration, if at all truthfully carried out? It is diffoult to say. As to who would be the losers, it is casy to answer. To tho archro. logist, the artist, and the art-student, the loss Firkstall Abhey is abe To them the glories of Kirkstall Abhey, as an object of picturesque interest, and as an autheatio record of a pecaliar phase of the art history of the middle ages, wilt be a thing of the past; for I need scarcely repeat, that whatever the tool of the modern restorer passes over, loses at onco its authentic character, and its historic value; and that Firkstan Abbey will, from the day that its restoraspick and span, to the bishop of the dionese, for consecratiou, ho to all intents and parposes a modern church. That on that day there will bo uouo so painfully conscious of the grievous transformation that their ill-advised prodigality bas produced in what is now a grand national monnment, than those who hare brought for: ward this proposition, I am firmly persuaded; and I take this opportunity,-the first publio one I have bad, of protesting, in the name of the thousands by whom Kirkstall Abbey has already been visited, and of the thousands to whom herenfter its picturesque ruius would have been a sourco of pure onjoyment and interesting of their remsins into preposterous conversion of their remans into a form which they never tion to a use for which they are ill.suited, and to satisfy whioh a buildiug infinitely more con. satisfy whioh a buildiug infinitely more con
venient conld be constructed at half the cost.
To my mind, there is ouly one use to which these ruins could, with any degree of con sistenoy, be applied, and only one in which the term "Restoration" could be really said to be justiâed.
An incident which occurred to me once in the south of France will enable me to realise to you the nature of this restoration, if thus carried into effect. Most of you, I dare say, know that I have made tho buildings of the Cistercian order of monks my particular study. I hare Eullowed these monks and their buildings all over Europo; and there are, I bolievo, few, if any, of their principal abbess in France, Germany, Italy, and Eugland, that I havo not visited. The whole of them are in a more or less ruined con. a compand nntenanted. I never irasel withont ahboys conturies of the existeuce of the order, and a description of tho particular locality of each years ago, I consulted my list to find whether a Cistercian abbey had ever existed in that dioceso. I found one under the designation of Fons Frigida, and, on reference to my Ordmana Map, I found, after some search, a village named Fonte-Froide, abnat six miles from Narbonne ; and hearing, on inquiry, that there existed soun royage of discovery to Fonte-Froi le. Following for some distrece the high roal to Lesiguan
my driver at last turned up a small valley to the south, in which I soou recogaised all the special features of a genuine Cistercian valley, with its cultivated bottom, its wooded sides, and its pretty wandering stream, jast like that of Fountains or Farness ; and after following it a mile or two, we arrived at a group of balf-ruined buildinga, planted, as ustal, is the narrowest part of the valley. Knocking at the solid hroad door of the old gateway, it was promptly opened, and I was struck dumh at the sight which presented itself: there before me stood the figure of a veritable Cistercian monk, that I knew so well by the drawing and description, but bad never seen and never expected to see in living form as secn and never expected to see in living form as
long as I lived. There he stood with his long, long as I lived. There he stood with his long,
loose white woollen robe, a cord round his waist, his cowl, his rosary, his hare bead, and his his cowl, his rosary, his hare bead, and his
shaven orown, looking more like an object from shaven orown, looking inore like an object from
the other world, and a vision of the per living being of the present day. On recovering my senses, $I$ inquired whether $I$ conld see the onilding, the silent figure motioned me to enter, and I soon found myself in the midst of an extremoly interesting group of conzeutional buildings, of the iwelfth centary, which had been, it appeared, disestablisled, like the rest,abandoned, ruined, purohased, within a recent period by a neigh bouring laadowner, and restored to their primitive ase by the fatablishment in them of a brotherhood of thirty Cisteroian monks, who had begun to restore the chnrah, and repair the monastery buildings, so far as to make them habitable; realizing thus, in an by whis ideatical manner, the primitive process, been ficb the earliest abbeys of the order had been founded and peopled. They were miserahls poor, and completely isolated, and their very existence, eveu, was almost unkuown to those livigg in their ncighbourhood; they subsisted on the produce of their gardens and tho few acres of land attached to the convent, and carried out tie original regulations of the order, as regarled diet, isolation, and silcnoe, to the fullest extent the "Hotelier", or receivor of guests, and tho principal, being the only persons allowed the privilege of speech, except during the half-hour permitted to all for conversation on Sundays. I spent three days of a very singular and interest ing existence in this retired oonvent, mcasnring and drawing its huildings, listening to the chant ing of the monks, watching their noiscless processions, and the silent wanderincs alons the cloisters of these voiceless, chost-liko, white figures, and realising conpletely all that $I$ lade imagined of Cistercian life in its earliest and trucst aspeot, thercan lire in its earliest and severity of which especial, the isolation, and for the latter part of a man's life, must be appalling.
Of the asofulness or profitablones of such a state of existence, as that of theso poor monks,
this is not the time or placo to inquire ; bat of this is not the time or place to inquire ; but of tion as that uruthfumess of such a restora. applied to which I have just described, if Ahbey, there could be no remains or kis shall Yorkshire gentlemen are really animated with truo desire to restore these buildings to what they orimally were, this is the only dipection that their efforts can take. I would, in that case, counsel them, whea they havo correctly restored the conventual churcll, with its attendant huildings, to its original condition in the twelfth contury, omitting all those disfiguring ineortions of the fifteenth contury, of which Sir Gillons Scott adyises the perpetuation, to send for co'ony of roal Cistercimm mouka from Fonte. Froide, and so to earry out in this nineteenth century the intentions of Ifenry do Lany and its origival fonnders in the twelfth century. This, at all cvents, wonld be a genuine and honest realisarestor the pretensions on which this so-callert cation for tho based, and the only possible justifi. romance which at renerae whan preseal sarround these many thousand visitors and admirers to their neighbourlood.

The Dute of Brunewick. The enormons fortare left hy the late Duke of Brunswick to the ciry of Genera (some say eight millions sterling), and builders, nad builders. A new theatre and university are Lalked of, and his monument is to be elaborate and costly. It seoms very terrihle that the wourt of Quecu Victoria of England shonld be ordered to go into mourming for such a con-
tomptible wreteh as this Duke of Brunswick was.

AWARDS AT THE YIENNA EXHIbICION
We have been favoured with a long list of nwarils to exhibitors in the British section of the Vienna Exhibition, extracted from the Londom
Gazette of Angust 2Gth. As, horvover, it bas Gasette of Angust $2 G t h$. As, horvever, it bas
been already extensively reprinted, we do not been already extensively reprinted, we do not
think it necessary to fiad space for it. Of the six or eight arclitects who exhibited. two have received nedals,-Mr. Street and Mr. Water honse. Medals have been given to nineteen of our painters in oil, to nine water-colour painters,
elcren enyrascrs, and five sculptors. Ir. Owen elcren engrasers, and five sculptors.
Jones receives the diploma of honour.
We may mention that Messr3. Doulton \& Co by their tivo firms, bave obtained five medals for general stone-ware and architectural materials and nypliances.
Fifteen hundred pounds, in sums of from 11. to
20l. have beanabscribed by the British eshibitors 201., have becusubscribed by the British eshibitors as a testimouial to Mrr. Philip Cunliffe Owen, secretary of the British Commission, in recogni-
tion of his exertions and attention. This well. deserved testimonial, consisting of candelahra and taazas by Elkington, and jewelry for Mrs. Owen, the remainder in a purse, will be pre sented in London on October the 1st.

WHO IS TO BLAJIE?
Ir wonld appear that there are no justgrounds of appeal acgainst the julgment of a contemporary,
that for downright ruffanism no nation under the sun can bogin to compete with our own. The late clarge against one of our unique fraternity for wanton destruction of iron railings upon the Victoria Emhankment, is not perhaps a very bad case in point, hut it is important as indicating case in point, hut it is important as indicating
the inherent spirit of Vandalism which still pre. the inherent spirit of Vandalism which still pro-
vails amongst a large section of our population in spite of all our educational efforts indoors and in spite of all our education
out to reolaim and cirilise it
Throughout France and Germany the entire population-men, women, and children of all classes-has the almost unrestrieted ran of the
public squares and imporial and royal palace grompds; and thongh they he laid ont with all the lavish art of modern horticulture, nnrestricted by any considerations of lahour or oxpense, there
ave required no iron barriers nor wordy cantion are required no iron barriers nor wordy cautions to preservo them. There the individual respects
that which is the right of the community ind that which is the right of the community; and the good sense of the people is barrier enongh
against encroachments which wonld he liable to against encroachments which wonld he liable to injure property manifestly intended for their use
and enjoyment. To the foreigner the very and enjoyment. To the foreigner the very
prosence of iron railings within our public prosence of iron railings within our public pleasnregrounds must be a matter of surprise
and an eyesore, as the absence of them in Continental parks is a sulject of delight to us who are apt to regard these things from an æsthetio point of view. It would no donht be argued by our irreclaimables that the easy preservation of all this property is due, not to any real respect the popnlace have for national institutions, nor to any superior sense of the beautiful in nature and art, bnt to a slarish fear of trausgressing the "arbitrary laws of despotic governments, and by a parity of rcasoning they would justify their own vandalic tendencies by the assertion that free-born "Britons never never will be slaves." The falseness of such an assumption is, however, shown in the fact that the same considerations by which our Continental neighbours are actuated towards puhlic property, until the distinction of c'ass is almost lost in the nniversal conntry and rood fecling which prevails in all large assenbblies or popular places of resort.
Nor doos it appear that we suffer more from the premeditated ruffianism of our adult popula. tion than from the incorrigible ignorance, insolence, and daring of our Yonth. Probahly iu no other city of the civilised world would it he possihle to witness a similar exhihition to that Which is on puhlic view nightly at Trafalgar. Equare. Whatever may bo our opinions of the fares, from an art point of view, we have a richt to expeet that so pong as ther erist they a right he sife from the wanton ey exist they should he sire from the wanton assaults of the un. reasoning rabinlo into whoso bands the Nelson ignominionsly sarrendered. Wesayignominiously, ignominionsly surrendered. Wesay ignominiously, some show of resistance to the gamin horde that laid siege to it, and it is dificicalt to helieve that the immunaty with which it is now held and atillised as a compendions centre of atbletich
sports could exist for any length of time withont the knowledge and tacit assent of the authorities at Scotlaud. yarcl. One thing is certnin, that it is nightly the resort of scores of youths, who with all the insolenco of victorions ruffianisn, lisport themselves orer every acceasible poiut of the hase, clirab upon or cling to the bas-relicros, and heard the British lions even under the very pose of Nelson limself, and that all pretcuco at resistanco by the polico has heeu withdenwn. Shall we charge this to the acconnt of our muchenduring late First Commissioner of Public Works? Is it possible that ho bas beeu induced a take a physiological and philosophical view of the matter, and agreod to concedo this monument to the aspiring gymuasts, helieving that therely the nation will be reprid for its ontlay in the bone and sinew of tho hardy athletes henco developed? Wo are hound to say that the suggestion, although our ovv, is not a ba one, and it has the supremo merit of practical conomy. It does, however, like most expedients, bear within itself the seet of future difficulties, and the question may reasonably be askell how ong it will bo before the Albert Hemorial is appropriated to a simikar parpose? By its superior sizo alone it would seem admirahly suited to the growing requirements of the case aud there really does not appear any sufficien reasou for drawing the line betweeu them Perhaps, uuder the circumstances, and scein his danger ahead, it wonld be well to reapitat the question of public gymnasiums. The present writer has a youthful recollection of more than once walking many miles for the purpose of practising in tho arena then open at Primrose. ill, but failing hy reason of tho numbers ways there in advance of him to get more than his walk for his paius. It does not appear that healthy ont-door plysical exerciso is less neces sary for our growing population now than then and it is very painfully apparent that it is as eagerly sought for. The question then remains, shall we perpetuato tho scaadal which attaches to such scenes as those nightly witnessed at rrafalgar-square ; crush out with the strang arm the law that normal tendency of youl to musealar sports; or, hy aforwng log mate outlets, give it that aid and nirection which in the future prosperity of the nation
C. Hemhy Wuifager.

NEW BOARD SCHOOLS IN SOUTH LONDON
Anowgst other portions of the metropolis in which new schools in connexion with the School Buard are being crected, great activity at present prevails in South London. A large school in the Yew Kent-road is rapidly approaching comple. ion, and the erection of three others is about to be commenced. One of these is in Johanna street, Lambeth, and the building will accommo date 800 children. The cost of the hui'ding is estimated at 6,7.10l., Messrs. Manshridge Brothers, heing the contractors. The same firm have heen engaged to erect another school in Narlhorongh. street, New-cut, for 1,021 children the estimated cost being 6,6061 . A third school is about to be huilt in Laxon-street, Long.lane, Bermondsey, to accommodate 784 chisdren, the estimated cost heing 5, 720 . The contractor are Messrs. Cooko \& Green, of Marlborongh. street, Blackfriars-road.

## ART COYGRESS.

Fross the 1st to the 3rd of next month a novel congress will be held in Vienna,-a Congress of Artistic Sciences. On several occasions finc.art writers and sarants have manifested the intenlike most other scientifor at periodical epochs, cuss professional interests, and form professiona acquaintances. The exhibition consecrated to Holbein, and held at Dresden in 1871, was a partial and provisional realisation of tlis project. There it was decided that the original plan should be fully executed, and a committee of beranese savants, -MM. Eitelberger, Von Edel This Lippmann, Lukow, de., was appointea to ho held in the Austrin Wuscom of Induatres Art The foloming ohject of the deliherations :-1stly. On the manner of classing, cataloguing, and administrating miseams. 2ndly. On the preservation of Forks of art, pictnres, public monnments,
objects of religious art, miniatures, drawings,

Se.; thirdly, on the teaching of art history establishments of superior education and middlc-class schools; fthly. On the format of a repertoirc of fine arts, and the necessity
forming an inventory of their bistory; 5 th forming an inventory of their history;
On the teproduction of warks of art, and On the reproduction of works of art, and
their propagation in the interest of the museun their propracation in the interest of

CHURCHES OFER RAILTVAYS.
SiR, - Having observed some oorresponden on this subject, and in which my name necessarily well you permit me, as one who who is also anxious lrurels, to say that your correspondents, " $Z$ and "II. A. R.," are perfectly right, and th " K ." has committed so far an error in describiu St. Payl's Chureh St. Leonard's as heing ionn Tietely over the Hastings Tunnel
The outer wall of the south porch is as near as possible over the sido of the tunnel, and th places the charch north of the tunnel, as yo correspondcuts state.
As regards " $K$ 's" appreciation of the dif cultics overcome, and refering to your oth correspondents' statements, I may mention tha the underlying strata were of an extreme treacherous character (exerpt, fortunately, who the tower stands), a very largo sunı havin been expended on the foundations in cons quence
The distance from tho fonndations to th tunuel varies considerahly, as does the naturo the subsoil; and as at tho west eud the floo lerel of the church is considerably above th level of tho gronnd, and tho foundations co siderably below. The di-tance from the "to level," as alluded to by your corresponden " Z .," affords no critcrion as to the relativ positions of the railway and the church. T south-west corner of the latier is, I should sa abuut 25 ft . from the hannch of the tunuel. may add that, from the nature of the stri (clays and sands), it is quite a question if t chwroh is not iu a more critical position, as gards the stability of the foundations and pos bility of vibuation, than if it had beeu itan diately over the tunnel.
I have never experienced any vihration resul ing from the traffic through the latter, nor bav I ever heard of any suoh existing ; if it be so, ho ever, it is gratifying to me to know that settlements havo resulted.

## THE DRALNAGE AND HEALTH OF

 mARGATE.Reverting to this subject, and in continuatio of the article which appeared in our columns the 9tb instant (p. 631), it is interesting to not the result of sorae investigations made by th members of the sanitary committee of then horough on the death.rate and morphology the district. Mr. Councillor Mottley, wha h for many years given grent attention to statistic of the health of the borough of Margato, th council of which cansed his por trait to he painte and hung in the corncil-chamber of tho Tow hall, in recognition of his services in getting op very uscfal little work ou "Tho Vital statistic of the Borough," the compilation of which ocen pied some years, has again come to the assistanc of the Local Government Authority hy subiect in of eone further stifing the case of disease which have had a fatal tornination. Of course, Margate, risited as it is by thou sands and tens of thousards of our Loudo citizens in the sammer of every succeeding yea has a mortality in largo excess of its own many a pror soul hastens to its waters, and inhale the fresh sea-hreezes which bring renewe life and vigour to others, when, alas! ali hop of life is waoing or gone; and iu this manne the mortality of Margate, more, indeed, tha to many othor sea.side resorsa, is augmente will speak for itself :-

Denthg from nill Careses.

| Year. | $\underset{\text { Total }}{\text { Popration. }}$ | Denthg from all Curses. |  |
| :---: | :---: | :---: | :---: |
|  |  | Vistors. | Imbabitanta. |
| 1870 | 13,600 | 98 | 217 |
| 1871 | 11,000 | 83 | 230 |
| 1872 | 14,555 | 93 | 203 |

And this shows a total of 928 deaths from causes in a population of, say, 42,155 , or 22 t

1,000 ; bnt of the inhahitants only 655 , which is an averege of $157 \mathrm{pcr} 1,000$ for the three years of 1870,1871 , and 1872 ; and as tho normal average for England during the three years in question was 17 deaths per 1,000 inhahitants, it mast be admitted that the resident population Margate are exceptionally healthy.
Theso facts, whicli we believe are unquestionable, must be of considerable interest, not only the 14,000 residents of the district, hut to the normal population of sors; for with a resident the returns of the South + , only, we find pany show no less than 898,093 passengers to have arrived and doparted hy passengers to within the ycar 1872 , and it hy that line alone that the London, Chatham, and be rememhered convoys at least an equal and Dover Railway convoys at least an equal number to the town, harking from the of visitors lauding and om. loats (of which there and jetty by tho steamcourse of the day), from London live in the reached the high figure of 3,000 and unwards in a single day of July this year. It has heen ostimated that a consus taken, say, about the the population of Margate at year, would show the population of Margate at the height of her three times the winter average. Few watering places on the entire English coast con at all compare with Margate in her great popularity as a resort hoth for health and amusement. To ther cspecially the rox propuli is and has been on her corporation mace, "Porta Maris, portus

But there is among the memhers of the town council too much disposition to bask in the sun for tho evil dey to come and make no preparation and fair repntations will be at loast tarnished, if uot wholly lost, so soon as the report of Dr. Gwynno Harriea, the Government Medical Inspector, who has lately made an official nnderstand that Dr. Harries has given the Sanitary Committeo of the horough a semi. official intimation of what the nature and purport of his report will be, and we can assure the council that it will not he a flattering one. The cntire a representation to Mr. Simon the concerred in a representation to Mr. Simon, the Chiof of tho
Medical Staff of the Office in Whitehall, pointine out that the ere Act system of drainage has heen worked heespool gystem of drainage has heen worked here to its utmost verge of safety, and that the tone of puhlic health in the district is lowered by its con. tinuance, and yet we ohserve that at an election of
councillors, which has taken place since our last article upon this subject, one of the two elected candidates swims into offioe as the reprosentative of the Pior Ward, saying, " $I$ shall opposo the introduction of tuhular drainage, heliening that our existing samitary arrangemeats" (i.e., the
overdone cesspool system) "are capablo of heing overdone cesspool system) " are capable of heing
made equal to our necessities." Of the s ing sanitary arrangements" of the Pier Ward which has elected this gentleman as its repre. sentative, we may have something to shy on a
future occasion. Iteantime, we aro glad to kno hat Mr. Councillor Fagg will meet in the council Nith some other memhers who do not coincide vith his opiniou. The corporation, we helieve, nambers sisteen members, among whom
dere is an M.D., an Architect, and a momher of the Society of Engineers, nd wo certainly look to them to give a lecided, and we trust a successfal, opposition Hholesome cesspool system that has now hecomo puhlic reproach to the anthorities of the -

THE BRANCII INSANE ASYLUM, NAPA CALIFORNIA.
Ar asylnm for 500 insane patienta heing re petition Napa , designs were invited in com now illustrate was selected, and will ont. The architects are arried Sanders. The architects sayessrs. Wright $\&$ on the principles laid dows say they have worked of hospitals, at the convent for the construction intendents of American ion of medical super. insame, in 1871.

The new asylum is intendod to face the west, and consists of centre hailding with wing extending on each side, and exaotly alikewards on ench the sexes heing eqnal; twelve and one each side, exclusive of the infirmaries, huilding, huilding, and has accommodations for 500 patients. The stylo of architecture is Domestio Gothio. The bnilding will aceommodate :-

of them，or whether Istí was not Eve＇s husband There is n curious legend in Mr．Smith＇s norra． tive as to the stripping and re－clotling of Ishtar ivhich may have so no relationslipip to the nalked Islatar was＂thothing of Eve．The husband of Islitar ans bad son or kife whom she treated wote that the＂oll and desertod；and we may woute，＂hat tho old Adan is the＂Living soul，and that Adam was betrayed hy Ere in points in this mythical narrative of Ishtar．；to which we cannot liere more particnlarly refer．

REBUILDING THE ALEXANDRA PALACE． We understand that the p＇ans for the re－ construction of Alexaudra Pulace laving heen drawn up and agreed upou，the ruins bave now been hauded over to the huilders，and that the rebuilding of the palace will bo cormmenced as soon as the dibris can be clearcd away．It is said that，with toe excoption of the walls of the centre transept，the hiniding will be entirely reconstructed．The new palace is to he larger than the old huildisg，heing both longer and hroader．It is to have tbree transepts，one forming a concert－hall，another is theatre，and the third is，it is stated，to be devoted to hazaur purposes．These will be connected by corrilors， it which light goods will ho exhihited for sale In some respects the now building will resemble the Crystal Palace，it having heen decided tbat iron and class shall he largely used in the con－ straction of the building．It is expocted to be completed and ready for opening in June next．

CAUTION TO ARCEITECTS GIVING Credit．
In the Bloomsbury County Court，the case of Thomas $v$ ．Dean afforded an unfortunate instanco of architeets giving credit to speculative concerns
The defendant，Mr．Dcan，carries on business as an architect and surreyor at 5 ，Mark－lane隹立，and now stated that he had no means of dredit ther Elephant and Castle Theatre and whitect of the Elephant and Castle Theatre，and which he de－ Ir．E．T．Smith，for whom he did any money from Mad i．Smilh，lor whom he did tho work，and lie had given it up as a bad delot，His earninga，with Christmas exceeded Chices in offices in chark－bane，and lived at Kew in furoished partments，at a rental of 16 ．a wcek．He had ix judgment sammonses against bim in the City Courts，to tbe extent of 91 ．a montb，and tbere was a hankrpptey summons out agaiust him for 50l．This unfortunate state of things Fas brought about by his not being paid by Mr． Smith．
The Judge，Mr．G．L．Rassell，commiserated per month．

## OPENING OF THE ALBERT BRIDGE

This bridge，wbicb crosses the river at the Cadogan Pier，Chelsea，and councets that part of the metropolis with Battersea，near tho west side of the park，was opeued to the public on Saturday last．The design was prepared hy Messrs．Ordisi \＆Le Feuvre，engineers，and we S65 a view of it，with details，so long since as ormal ceremony at the opering．The firat toll Pas paid by the youthful doung．The arst toll Pliillip，sculptor．The bridge is on Mr．Binse sion principle，somewbat resombling the struc ture a iittle farther down the river struc opposite the Chelsen Hospital and river，nearly opposite the Cheleen Hospital and Barracks ；brt inasmull as it cill masuension principle re example of the uspension pricecple．He cotal length of th width，and two footways 8 facime－way 25 ft ，in There are four ornamental 8 ft ．in width eacb the main chains of the bride towers，which carry the main chains of tbe bridge．Tbey are placed in pairs at the east and west sides of the hridge respectively，some distauce from the shore． Eaccl pair is connected hy the suspension－chains and an iron archway，at an elevation of 60 ft above the rondway．A special feature in this portion of the structure is that the towers are placed ontaide the parapet girders，wbich leaves terrupted tbe entiro length of the bridme．anin． errupted the entiro length of the bridge．Each lower is carried on a pier constructed of cast
ron cylinders, sank down to the London clay and filled in with concrete. The foundations of the piers also consist of cast.iron cylinders, th bottom or entting ring being 21 ft . in diameter The towers are also of cast iron, and have a light and ornamental appearance. The car-riage-way over the bridge is laid with wood
pavement, and the footpaths with large, varied. pavement, and the footpaths wit
coloured tiles in diamond form.
coloured tiles in diamond form.
This bridge forms an important link in the line of clirect com muvication hetween the districts of Kensington and Chelsea on the one hand, and of Battersea and Clapham on the other, and one advantage which it confers on the residents in Chelsea and Kensington is that it gives them immediate access to Battersea Park, and renders unnecessary the river jonrney between the Cadogan-pier at Chelsea and Battersea Park. pier. The opening of the bridge also completes Oakley.street, King's-road, Chelsea, and York. road, Battersea, skirting the west silo of Batter sea Parls and it is by no means iniprobablo that the opening will, ere long, render it neces. sary to make a good thoronghfaro from the top of Oakley.strect to the Filham. rond. This could he accomplished by widening Arthnr. could he accomplished by widening Arthnr. treet eloso to the western side of Onslow.square by the Hospital fur Consumption. This wonld open out a rery direct thorouglifare between Clapham and the South Konsington the Albert Hall, and Kengington.gardens, and it cannot now bo very long before it will he called for.

## IXPHOID FEVER AT BRGGOOUSE

Acaris has been cansed by the outbreak of typhoid fever at Brighouse. Dr. Brittou visited the district, and fonnd that there werc milk from a certain farm. fire of whom had received milk from a certain farm. The sale of this milk has been pnit a stop to, and, it is said, there aro very fow fresh cises: in all, only six deaths had found th. Dr. Britno had risited the farm, and found the cesspools filled up, as well as the drains plying his cows with rood water; and the suctor had no doubt that in a few days the milk from the farm would bo all right.
Other precautions were being used to prevent the spread of the disease; and it was hoped, by a vigorous application of disinfectants, the cleansing of drains, ashpits, \&c., that the town would soon become free from the scourge.

TIEE "TRIBUN゙E" OFTICES, NEW YORK.
A large building, eight stories in height, and with a lofty turret, marked by piers rannins down to the ground in the principal facade, is in course of erection at the corner of Sprnce. street and Nassau-street. Tho Now York Daily Graphic, which gives a view of the intended huilding, says,- 'When completod its height will he greater than that of any other structnre in New York, the new Western Jnion Telegraph building excepted. The upper stories will tower high above tho new Post-office, Conrt.house, and the City Hall, and from the upper windows of the clock-tower, whicb summounts the whole, grand view of the city, New Jersey, Brooklyn Staten Island, and away ont to the Narrows, wil be obtained. The new huildin will he supplied with three elevators, and furnished with everyimposing and convenient nemspaper office in th city." credit for the design.

ASHBY AND NUNEATON RAILIVAY. This line of railway, the constraction of which has ocenpied some three years and a half, ha recently been opened for goods traffic, and
will be opened for pagsenger traffic on the 1st proximo. Railway No 1 commences thear Moira Station, on the Railway, three miles from Ashby de-l Burton and terminates with a junction on tbo South Leicestershire Railway, near Hinckley Station. There aro in all five railways, with ten junotions the total length heing twenty-nine miles. There are ten passonger stations.
John Barnestor for the general works is Mr . station buildings on the soutbern half have been
erected by Messrs. Geo. Lilley Son, of Ashby de-la. Zonch; and on the northern half hy Messrs
J. \& E. Wood, of Derbe. Mr. John L. Crossler J. \& E. Wood, of Derby. Mr. John L. Crossley, of the Midland, and Mr. William Baker, of the Loudon and North Westerm, are the joint engineers, and Messrs. W. D. Robotham \& E. B. companies.
The general work executed inclades pbout noty-seven bridges (twelve of which are of bout seventy miles of fencino 450 gates, fift miles of drains, $2,000,000$ cubic yards of excava. ion, 300,000 cuhic yards of ballast, sixty miles of single line permauent way, and 60,000 tous of metalling to roads.

## THRIFT AND HEALTT

THmpt is a virtue that fow posses, In the days of their youth, I mean Thrift is a hlessing, nevertheless,
That stands to a man in his sore clistress And saves him from crime and wretchedness,

And from pancs of remorso more kem,
Oh, would that all mankind had this gift, What \& mine it would be of wealth The lowliest worm to power 'twould lift And, come indigence however swift, 'Twonld nerveless drop at the feet of thrift And its rohust companion, health.
Health is a prize tho many may gain With a stcady and thriffful cere Health is a fortune man should maintain, And keep, like his honour, free of stain. If tho world can he made pure anain,
TTis by cleanliness, light, and nir.

STEAM IN GAS MAN゙UFACTURE.
As invitation to visit Chichester on an after noon reoently, returning at uight, all at the rail way and other cost of "the New Gas Compans, imited," in order to witnees tho way in which have bean largely distributed in the form circulars and railway and dinner tickets; for it is said that something like a hnudred persons went by specind train, and 130 dined with the company at Chichoster. We have alrendy spoken not unlavourably of this gas, in the pro untion of which steam is used, with ooke or petrolenm, and iron oxide, nod without any coal or with any sort of small coal instear of othe cal, coke, or petrolonm. It so cheapens the cuhic feet is only 1 s . 81 . The gas compnnie appoar to he much interested in it, sinco they ere represented by more than twenty persons the meeting. These companies, at least, may perhaps make a cood thing of it; if, as appears merits cheir adoption; batit remains to be seen in any reduction of price to consumers.

THE STRENGTII OF ODOURS
Sir.- Permit me tn bear testimony to the efficiency of he odour from the deodsrising pits that are situnte about side of the line of the Midland Railway, that goes from Glnucester to Derhy.
Merely pasing hy death of a relation. It actnally train noarly ceused th two doctors' bills, intense suffering for four daye, gn
much tweakness for an many dinys more.

TEE PAINTERS MOVEMENT IN LONDON Sir, - In your report of the ahpve movement in yout
last issue, the chairman of the Decorators' and Flonge psinturs' Society styted, "When the workpeople had received the $\frac{1}{3}$ d. per hour which they now requested, they
vould be bid. per hour under all othor trades." I do not think that house. painters trades.
receive so much as joiners, strnemssons, or plasterers Before a joiner can get employment he must provide bim. che with a lot of very expensive tools; the stonemason
the same. Wherens the painters have nothing but a patty and ctisel knife, st the cost of 25 ., to aopply, and I a am soryy tr say that nine ont of every twelre have not pre these two articles. Thus it is that nmong painters there Guct ; it is so very easy for a man to become what he call a painter, hecaus. he has nothing to provide. When a shoemaker is tired of his last, or a tailor his needle, he turns painter; and it is a well-known fact that there, ar
numbers of so.called painters who hava never served a numbers of so.caled painters who bava never served a
apprenticeship. but are secedera from the last, the needle or mere hricklayers' lahourers. I contend that such men sre not entitled to the wagns they are receiving, and they still
want more. It is very unjust to employers. But why sre ant more. It is very unjust to employers. But why are
they empinged, is asked? An emplnyer is not a war anch mea nreo, on his johs. Thay are mixed up amoug fort
or fifty others, and pasa with the rest, and are in man
instances protected by the foreman of a job, opon payin o him certain moness. I have seen such, men upoot m capahilities, and ordered their discluarge, I am simp capsilities, and ordered thir disclarge, I am simp
told that if ho is ordered off, the rest would leare th work. There are some men who are worth all the mone they ask for, whose mind in in their business, and wh
thoroughly understand what thev are doing and what the hare to do. For such men to be brouglit to worlis, pe aps in the same rooma, with oonc of the before-mentione men must be simply diagusting. They must hear it h passed "requesting the men in flrms or on jobs not,
 hould $a$ olever man be compelled to work for 8 ld, $p$ be forced to pay $8 \frac{1}{2} d$ per hour to a man that in not wort

in eight or niue different places, and, as I hare sadd in eight or nine different places, and, as I hare sadd 3. A storm of rain in Northampton, instend of reliexing drains by dnshing, actuatly increases the evilis at Comaisqioners. The extra water drires all the

This evil, he adds, is an over present one, in nsified, horvever, by the very rainfall, whioh ond cleanse and purify every othor town hu uert his authority for tho sake of the pablic oo 1 , and not allow the lives of his fellow. wnsmen to ho jeopardised or sacrificed, as ey have hoen in former years; hut rather let esad experience of the past teach him that in is matter promptitude in action will alone thorities of the town from censure.

THE STOMACH AND ITS DANGERS.
Ir is, of cearse, only where it is believed to ntain the subtie fever ferment that milk is now ipposed to be claugerous; and for all that ny one yet knows, if this he so, otber substances, und fivi and solid, the number or kind of which qually capable as milk of conveying tha ament. This may apply to a penny loaf no ss than to a penny worth of milk; since, in the norance of medical mon still as to it, there is lerefore it would bo quite as unreasonable to arelore it would bo quite as unreasonable to co abstract, as upon the batoher, the haker, the infectioner, \&c., who may have typboid fover their promises. Wilk has been especially Uortnate of lato in other respects. The who appears to think it a fiting subjec "analyse" so as to estimate the amount of ostly liarmless though cheating water which it ay be " adulterated "with, or charged with con. ing, while poisonous maddening beor and gin, leaded cayonne, aud a host of other danger. hings esoape dotection.
Let us also gently remind West-enders that 3h and highly stimulating foods and drinks, en perfectly pure from stomaoh fever taint, are nost ns dangerous as ty phoidal or stomach-fever ed in what may be reconded ne te degree. Ther must keep the quite a mode. $d$ bowels in a perpetual state of feyerish ex. :ement from overwerk, preparing the way hat o well for the aotion of the subtle stomach. rer enterio or typhoidnl ferment, whether at comes slyly in with a pennyworth of milk, first-rate juicy rump.steak, or a twopenny ater. It is thas that the rich and the poor provalence of typhoidal ferer among the Ill-to.do can but too roadily be accounted The ideas that prevail among the npper lsses as to what is ahsolutely and essen. lly roquisito to support tho organic framo ongh the aisfully overworked and fevered maoh, are really most surprising. A westgentleman lately excused a lady for having
led to come up to the expectations of her ad. rers, on a certain occasion, by saying, apolosically, that she was somewhat exhausted (and pired a stimulant donbtless), having fasted for ee or four hours! If stomachs could only ir and think, one can imagine the horror with ich such an apology would be received amongst "whole party of them

## OLD SCOTGH HOUSES IPEDVIVUS.

Sim,--Year hy year we see in Edinburgh mor freedom of design and less servile imitation in bodge-podgestyle of the ideas of many Scottiah generations, where tho various builders' hands bad managed to combino beauty with utility unthought of hy the wosthetic architect of ons day, whose many excrescences and stuck-t eatures in costly stone havo as yet been unable to rival in romantic effect the quaint timber lath-and-plaster projections of the historic old honses of Edinburgh.
Strange to Bay, the old rugged side of S Mary-streot is more offeotive to tho eye than the extravagantly Scotch haronial side, which puzzles the weary sight in the search for some plain space free from imitative effort: happily a change has now come over the spirit of our old Scotch dreamers, which will ere long enahle them to concentrate their architectural skill with more telling effoct on the street architecture of Edin. burgh. In too many cases one sees with regret much effort, hoth of design and exectution, lost in reproducing some tumble-down.looking effect in towers and turrets and wall projectious, that only shows some skill in hanging one stone over anly shows some skth in hanging one stone over We have also some nondescript efforts made for effect where often it is not at all required. The adaptation of street buildings to their sito in relation to high or low localities seems little thonght of nntil somo glaringly abortive erection
is reared up. Where some nohle vista wants a is reared up. Where some nohle vista wants a
tower or spire, wo find a slioal of stunted details, too often neither new nor very true in style or taste.
Seeing that the old Scotch house arcbitectnre mnst be imitated in our new street and villa erections, they might be marshalled more effectively so as

## "To catoh a grace beyond the reach of art."

even in a city that is beautiful for situntions Tho towers and turrets that, aro now being huilt
anyhow might have increased the obarm of anyhow might bave increased the obarm
many a site and vista, many a site and vista.

## THE TRades movement.

Hondon.-A general mooting of the paintors Wignocorators in the employ of Mr. Crace, Oxford.strect, was held on Monday nioht at the Three Doves, Berwick-street, Soho, to receive report of a deputation appointed to wait upon rra firms, to effect, if possible, an amioablo arrangemeut as to the required andvance of $\frac{1}{4} d$. per honr, making the wages $\mathrm{S}_{\frac{1}{2} \mathrm{~d} \text {. per bour }}^{\text {There was a crowded attondance }}$ occupied the chair, and briefly stated the ohject of the meeting.
Mr. George Shipton then reported on bohalf
$f$ the depatation. He statod that Mr. Crace not only agreed to the terms asked, but at their request handed to the depatation a written memorandum $2 s$ follows:- "I propose to pay the painters in my employ, from the 30th Angust wext, $8 \frac{1}{2} d$. por hour, and none lebs.-JoFn G. pledge himself to give the additional $\frac{1}{3} d$. per hour to his men who were now in receipt of $S_{\frac{1}{2}} \mathrm{~d}$. per hour, but must hold himself at liberty to make any selection he thought proper. After this satisfactory interview, the depatation
proceeded to Messrs. Jackson \& Graham, hat proceeded to Messrs. Jackson \& Graham, hat
that firm decliued to see them. Before adopting ulterior measures the depatation at once proceeded to visit the men employed road, and having ealled the men together, they were informed that the hoad foreman had just been to his joh, and offioially notified to the men that the firm intended to pay the $8 \frac{1}{2}$ d. per honr to the painters in thoir employ
from the lst of September, be no classificatioptember, and that there wonld tation were informed then or prices. The depu been given to the men on the other johs. The deputation, therefore, had not the disacreenble duty of calling any men out, and they believed and hoped the example of the two firms in ques. tion would be followed by the fire ether large decorating firms who had not as yet given the advance.

Mr. Murdoch moved,-"That this meeting considers the terms uffered hy Mr. Crace and Messrs. Jackson \& Graham to he satistactory society are due to that the best thanks of the
pleased to think that a strike of several bundred men had been thus aroided. was adopted.

## SCHOOL BOARDS.

Liverpool.- A great scheme of school extension projected at Liverpool. The local School is projected at Liverpool. The local School i he manner in which they should meet a deficiency of Echool accommodation for 10,496 children. Tho Board had to provide for the education of 71,597 children. There is at pre sent, or there is heing prorided, accommodntion for 72,518 childron, hut after deducting the school space which cannot he utilised on accoant of the population having migrated from the districts in which certain schools are situate, the sub-committee reported a net deficiency for 870 hoys, $1,020 \mathrm{girls}$, and 8,600 infants-total, 10,496 They therefore proposed tbe immediate erection of schools for $1,4.20$ boys, 1,470 girls, and 2,460 infants-total, 5,400, and reoommended that preseut schools should he re-arranged so that they would be able to accommodate \& larger number of infants. No estimate of cost was embodied in tho report, hut it was stated hy the chairman of the Board that the proposed ontlay addad to the cost of schools now being built by the Board, would bring up the expenditure to about 200,0001 . An amendment was submitted propo-iug to postpone the further consideration of the mattor for six months on the ground that there wore 21,522 vacant places in existing schools, irrespective of accommodation of 8,000 or 10,000 childran in sohools not recognised by the Board, and the dehate was adjonrned in order that public opinion on the matter might he ascertained. The discussion termiuated in the adoption of the report of tbe sub-committee by a majority of 10 to 5 .
The Istand of Lewis.-The School Boards of Stornoway, Lochs, Barvas, and Vig, have agreed to erect twenty.four new sohools, and the Bame number of schoolmasters' dwelling-houses
throughout tho Island of Lewis, at a cost of fully $15,000 \%$. As all the Boards in a cost of fully 15,000. As all the Boards in Lewis have per $1 \%$., they become entitled to rate of 9 d . prant given become entibled to the special grant given to Boards in the Highlands for building purposes, and as these grants will in the uggrognte amount to nearly 10,0007 , the burden upon the ratepayers will not be so great as it would appear at ferst sight.

## CHURCH.bDILDING NEWS

Scarborough,-Christ Chnrch, Scarborough, has been re-opened. The alterations comprise the erectiou of a chancel, which has been effected by contivuig the structure eastward from tho limits of the old building. On the left of the new chancel bas heen erected a vestry. The borne cost of erecting this reon bas heen borne by Br. J. Eley Sykes. A new organchamher has been erected on the seuth side of the chancel, and will berenftor bo oocupied by a new organ. Two of the lights of the chancel window have already heen filled with stained glass. The eentre light, given by
Miss Williamson, South Cliff, in memory of ber to dason, South Chif, in memory of of Lazarus, the raising of Jairus's daughter, he widow's son, and Christ appearing to Mary before the Ascension, The light on the right, contributed by Mr. W. S. Tbeakston, in memory of bis late wife, embraces tho four ancestries of our Lord. The remaining light, with the exception of the tracery, has not yet heen filled with coleured glass. This portion of the vork has been carried out by Messrs. Clayton E Bell, of London, The sittiugs ecemping the body of the church have been replaced by open sittings, by whioh 100 addition seat have heen gained. The flooring of the seats and the mave has heen laid with teselates iles. The organ of St Marg's parish soch is ahout to he rebuilt and enlarged at a cost ff 5001 , and when cemplete will be at cost the now organ.chamber of Cbrist Che placed in chnroh has also been suppliod with Charch. The apparatus, hy Messrs. G. Haden \& Son, of Trowhridge. Tho total cost of the alterations, inclusive of the stained windows, is estimated at 1,500 t.
Mristnl.
Philip's. $=$ The new churel of St. Silas, St Philip's Marsh, has heen opened for divino wo ship. The old strncture had to he taken down
which rendered the walls and roof so creoked that it hecame dangerons to enter the chmel. The wort of taking down the former church and rebnilding it has cost about 2,0007. The foundations have now been piled to a deptly of 32 ft ., at a cost of 4 Cll ., and the weight of the side walls has been greatly reduced, so that there is now no danger of a recurrence of the calamity. The parish schools, which will nccommodate 750 children, and liave cost 2,500 ., are also completed.
Botlcy. - The chief stone of the new chnrels of St. John, Hedge Eud, has been laid by Mrs. Haselfoot, of Moorhill, who has not only heen a large contributor to the funds, but has also offerod to complete the tower and spire at her own cost. The sito selected for the church is the gift of Mr. William Warner, of Botley, and stands on rising ground commanding an extensive view for mans miles around. The architect is Mrr, Jolm Colson, of Winchester, F.R.I.B.A., and the huilder, ALr. Thomas Robert White, Soutbsea. Clert of Works, Mr. J. C. Farrison.
anowcester:-The chapel recently erected to County Lunatic Asylum has been formally opened. Mr. Medland is the architect, and th building in design and construction very much resembles the new church of St. Catherine, Gloucostor, of which Messrs. Medland \& Son were also tho architects.
Lyonsiadl.-The parish church of Lyoushall, says the Hereford Jowrnal, after undergoing partial rebuilding and restoration, has been reopened for divine service. The church is dedicated to St. Michael and All Angels, ant occu. pies a pictaresque position on an eminence adjoinigg the rains of the ancient castlo of Archwological Society, in the antumn of 1863 , it was pronounced an interesting church, and worthy of attentive observation. While it has undergone one of the most completo restorations tho ancient chameteristics of tho phrected, been retained. The building is chicfly of the thirtcenth century, though there are remaios of an earlier edifice on the same spot. Owing to an earler ediace on the same spot. Owing to advisahle to rehuild entirely tbe sonth arcade, as also the north and south outer walls, which, perished. The work of restoration inclndes two perished. The work of restoration inchaes two new arches, with four columns, fiftecn new rindows, and now hon, too, of the in the the roofing is new, employca is, in both cases, als. A warming. apparatus has been supplica; tbe upper part of the tower, which, with the roof of the same, was in a dilapidated condition, bas been rebuilt : the tower itself has been raised some 10 ft ., and the old roof replaced by a lcad flat. The work of renovation likervise includes a now porch on the soath side of the churcb, new doors, the reglazing of the windows, the supplying of new church. furniture, \&c. The cost of tbe rebuilding and the restoration is, exclusive of specific offerings, 2,7002. The architcet omployed was Mr. Bodley. A series of five memorial windows in stained glass have been presented by the Rev. J. Davies, Moor.court, the Rev. J. E. Cheese, Mrs. Robinson, Colonel Fellowes, and "A Lady," respectively. There is a now organ, tbo result of the personal exertions of Mrs. Maddison Green, wife of the vicar. Tho instrument was built by Messers. Walker \& Sons, from plans and spocifications prepared by Mr. Charlesworth, the organising front is of carved oak; and the orcan comprises two mannals, great pedal and swell organ, with the necessary couplers.
Bishop's Itchington.-The Bishop of Worcester has opened a new chareh at Bishop's Itchington, a small villere about eight miles from Leaming 1011. The church is in the Gothic style, and Christian, architect to the Ecclesiastical Com. missioners, is the architect: Mr. Matson, of Napton, the contractor ; Mr. Dieke, of Derby, clerk of the works; and Mr. G. Eyres, of Luamington, has carried out the ironwork, plumbing, fc. The total cost is $3,000 \%$., of Ernted 1,000 l. The edifice is constructed of Warwickshire blue lias, with Bath stone curssings for the windows, the roof being covered in with Broseley tiles. The interinn a restry. The old church, a north aisle, and sigbtly structure, had been in existence for more
than 1.00 years. With it were associated his Justice Willes. The new building is the last of Justice Willes. The new building is the last of three worles just carried out by the parishioners, at a cost of $6,000 \mathrm{~L}$; namely,
vicarage, and a new chureh.
Jevinuton.-The parish church here has been restored, and reopened for diviue service by the Bishop of Chichester. Jevington is an agricul. tnral village in the Eastbourne range of South downs. The church formenly consisted of nave, north aisle, chancel, and at the west end a massive square tower, with tho remains of somi circular arches. It was erected, it is heliored, in tho cleventh century, bat there were traces and romains of eurlicr Sazon work. The plans,
furnished hy Mr. E. Rumble, of E.stbourne, preserved tho best features of the old church Somo of the windows in the tower and the three semicircular arches separating it from the nave resemble tho restored Saxou churcb at Worth. The chancel is lighted by an oastorn aud three othee windows. The rave has two wiulows, one Poiated and the olher Decorative, and in the nortb aisle are a series of narrow lancet lights. In the chancel is an arcbed recess for the orgna, and beyond that on small vestry. The material employed is mainly flint, with aressings of the hard green stone found is the neighbourhood of Beachy lead. The floor has been paved with replaced tiles, and the old pers have been cold weather the building will be heated by the patent stove of Steward \& Sinith, of Sheflield, and lighted for ovening sarvice with pendants. The belfry now contains but two bells, one of "Saunctars the inseription in old English formerly a peal of eight hells, which no doub furnished the sign for tho village inn, but we are told that more than a lmndred years ago the funds for repairing the church. A loeal legend eays that all the horses which drew the bells out of the chnrehyard diod, and the men encraged in the removal came to unpleajant ends. Previous to the work being taken in hand, the church was saturated with damp, all the wiadows had decayed, and the sittings were the usual high pews. The lower and west end of the nave had large square windows, with a brik-and-plaster entrance-porch. Tbe tower is the oldest part, arving Saxon belfry wiudows and "long and short" masonry up the quains. The old plastered roof has veen opened out, the oak ribs and heams restored and boarded over with hattens, and new oornices all in oak. The
chancel and aisle roofs and the vestry are all ew. The stalls in the chancel, the screens, iulpit, and reading.desk are of carved oak. The aisles and passage-ways hare been repaired out bas been restored, and the windows have been filled in restored, and the windors have The ground ontside has heen catherial glass. 3 ft . and 4 ft ., and drained. On the south side there is a new open.timbered and carved porch, the tracery being filled in with green cathedral glass. The tower has been pierced with two extra arches, and thrown open to the charch.
Tbere is also a new organ build expressly for and fitted up in the organ.chamber.
Little Dunmow-The parish church of Little Dunmow, which for some time past has been closed for the purpose of restoration by Mr. James Brown, of Braintrec, builder, has again been opened for divine worship. All the windows in the south side have been restored, the all Gothic in the style of architecture, and are tbe east window a reredos has been exposed; it had once been an elahorate piece of carved parts. The spandrels under all the windows on the sonth sille are filled in with varions orna mental carvings, some very grotesque. The pillars which formerly divided the nave from the the wall on the north is now carried some did tance further out than formerly; these pillars, which are of the Tuscan order, stand in the pitclued The roor is of aper timber, high The The benches are of varaished pine. Saitable situations have been found for the monuments o The Lady Juta, of Matilda, second daughter of Sir Walter Fitz. uf Matilda, second daughter of Sir Walter Fitz-
Walter, who, according to the Monkish story, was poisoned by contrivance of King John, for was poisoned by contrivance of King John, for
refusing to gratify his illicit passion. She als,
a legendarily famous as the wife o
he outlawed Eirl of Trantinctlun.

s about to (uecostershare. Tho parish churel intendence of Mr: R. W. Johnson, of Melto Mowhray, architect. The works comprise new Howhray, architect. new benches, pnlpit and reading-desk, restoration font, fre. The contract has becn takon $b$ Mr. G. Chester, of Waltham, builder.

## SCHOOL.BUILDING N゙EWS.

Eerrough -on-the-IIll.-A new school is beins uit here. It is of brick, with Bath ston dressinge, and has porch and bell-tnrret. M R. W. Johnson, of Melton, is the architect, anc the coutract for tho works has
Messes. Hayes \& Sou, of JCelton. Messes. Hayes \& Son, of Malton.
Pictuell.-The parochial school and art build mgs have been undergoing restoration and enlargement. An entirely new roof has bee put in, and new three-light windows inserted i. each end. Mr. R. W. Johuson, of Meltou Mow bray, is the architect employed to supcrinten the restoration.
Earlan (he-Fate (Berts).- $\Lambda$ new Clurel agha schoul has just been completed i ren parish, for the accommodation of 190 chil livisible consists of a mixed school-roon lass. room. The matecials used are local stone with Bath stone dressings, Broseley tiles, witl Cooper's ridges and finials, and dcal casementec windows, all- woodwork being stained and ran mished. The total cost, including fence-wall and gates to large playground, and Nationa esk-htinge, \&c., was 70 hc . This sum wa aised by voluntary contributions, aided hy ood by a poluntary the deticiency being rosented by Mr. Chas. Morison, of Basildo ark. A master's house has also been erectec a cost of 300 . Mr. Edwatd Williams, binglon, has carried out the works, from th lans and under the sumerintendence of Mr Vin. Penstone, of Loudon, architect.
Britport, - The foundation stone of nev National schools has beeu laid in the parish o Allington, horongb of Bridport, on a site nea he church. The plans were drawn by Mr Wrnick, architect, one of the churchwardens o Allington. The contract was taken by Mr Gerrard, of Bridport, the amount being ahou 960t. The building, which is desioned in th Gothic style, will consist of a principal school room, 49 ft . long and 20 ft . wide; an infant room, 39 ft . by 20 ft ; and a class-room, 20 fl oy 12 ftr ; with a cloak.room, lavatory, and othe ffices. It is being built of local stone, - Bothen ampton stone outside and Loders for the insid ace of the walls,-with Fam Hill dressings The roof will bo slated, avd the rooms will br ighted by eighteen windows, and well venti ated. In front of the building is sufficient pace for a playground, and the premises will be

## closed by a wall 8 tt. bigh.

Derby. - Tbe school recently erected it Gerard.street, hy the Derby School Board, havo been formally opened. This school is the first which has been built for the Derby Board. The lesign was by Mr. T. Coulthurst, and was elected by tbe Board in open competition from among eleven scts of plans submitten. The chools have been built by Mr. R. Bridgart, Derby, whose tender was 2,8957. Accommodaion is provided for 750 children, tho whole of he entrances being in Gerard.street. The noys' school, waich is $L$ shaped, is on the growad floor, the total length being 77 ft . by 20 ft ., and 5 ft . hich; there are also tavo class-roome, each 0 ft . by $15 \mathrm{ft} .$, and 15 ft . higb. The lavatory and hat and oloak room adjuin the entrance. There is a spacious play-ground at the rear, the space underneath the class rooms being conschool is immediately prey the boys' school, the size and arrancement beiug exactly similar. so-ss is atained by atone staircase Suitable loak and levatory accommodation is prorided on the ground floor adjoining the entrance. The fauts ${ }^{2}$ chool is on the ground floor, and is 50 ft by 30 ft and 92 ft hich by the collanhanm. There are also two class-rooms, each 20 ft . by 15 ft , and 15 ft . hich, with the necesary cloak and lavatory accommodation. There is a spaciozs open playeround in the rear, with overed playgronnd underneath the class-roums oth of wich will be used by the girls and in fants, eacb school being prorided with a distinct
trance from the playground．The total cuhic ace of the extire building is 101,300 cnbic t．The whole of the school and class rooms $: \theta$ wainecoted to the height of 4 ft .6 in ．，and the inside woodwork throughout is stained d varnished．The desks provided aro Colman Clendenzing＇s patent，which aro mado 80 as 0 school，inclusive of land，furniture，and ings，is $4,502 l$ l，made up as follows ：－

Monmouthshire and Caerleou Anti－ quarian Association．－The annual meeting of this asseciation was held in Usk Castie．The ladies and reentlemen was a large number of were on the monuments on the publication of a work presidont gave he traced from tho time of William the Con． queror．He also sketched its chief architectural features，and spoke of tho priery and the church．

Archæological Discoveries in Warwick-shire.-During the present week a party of archroologists have been inspecting a series of oamps, monnds, and carthworks, which hoave been discovered during the past twelve months
by Mr. T. Tom Bargess, the author of "Historic Warwiokshire," in the woodlands of central Warwickshire, all within an casy distance of the Royal Spa of Leamington. According to the
Leamington Courier, these earthworks, strange Leamington Courier, these earthworks, strange
to say, have hitherto heen unknown to any to say, have hitherto heen unknown to any
local antiquary or wandering archæollogist. The local antiqnary or wandering archæologist. The
first of theso (which was visited in company of first of theso (which was visited in company of Mr. Matthew Bloxham), is a large entrenched camp near Claverdon, situate in Barmoor Wood. A deep fosse sarrounds an elliptical area of some four acres, which is connected with a level plateau of faha of much greater extent on the north, by a narrow causeway. On Yarningalebill, to the east, there is a twin tumulus, and some three miles to the north is the great monnd of Donnilce, near Henley-in-Arden, on which the De Montfords erected their Castle of Beaudesert. In Oakley Wood, on the road betwcen Banhary and Warwick, the party inspected a formidable vallum and fosse, enclosing an area of somes six acres, and it was pronounced of decidedly mili tary character.

Costly Plate-Glass Windows.-The magistrate at Woolwich Police Court has expressed himeelf strongly with respect to the practice which has grown to such a large oxteut since the introduction of plate-glass insurance, of fitting up shop-windows in a costly style. receut case a person was summoned for throwing a stone in the puhlic street, and breaking a pave of glass worth 5t. in the window of the Mitre Tavern, High-street, Woolwich. The defendaut, in orcer to drive off a dog which threateued to striking the dog, went through the tavern window, and the landlord claimed $5 \ell$., saying, however, that the insurance agent hac offered to let the defendant off if he would pay $2 l$. The of allowing any snch sum of anlowing and. and, athourh it was itleral throw stones in the streets, persous who put such expensive panes of glass in their windows ruust understand that they did so at their own risk. He adjourned the case, in the hope that it might be arranged.

Inscription on the Wall of a House in Tewkesbury High-street.-Daring the progress of the alteratious now heing carried out at Hisch-strect, the following inscription son, in found on the wall forming a mantelnas hecn fivenlaco (now hricked op) in mantelpiece to a firep inscrintion which is , in an upsairs room. bricks, is painted in black old English characters, with red initials. It measures 3 ft .2 in . wide by 1 ft .6 in . deep, and is still in a fair state of preservation. It is anpposed to he nearly threo centuries old:

Three thinges pleseth booeth god and man:-Concorde
Be twene bretheren: Amytie betwene nayphbowers.
Be twene bretheren: Amytie betreene naykhbowers :
And \& man and his wy fo that ngreeth well to gether.
Fower things hurt much the site of man. Teares,
 rare sens:-A fayer yonge womane with ought a lorer, $A$
yonge man with ought myerth, An old ueeeror without yonge man with ough myerth, An old ueseror without
money, Aney great hayer witl ought thetes, A fare harne with ought tuusic.
Promenade Concerts, Covent Carden.Miadde.aged playgoers who recollect the prome. nade concorts with which Jullien pleased the puhlic for many seasons, and will compare his programmo with that provided by M. Riviere on programmo with that provided by $M$. Riviere on
the present, will see how much more the public the present, will see how much more the public
now expect than then contented them. In now expect than then contented thom. In sufficient variation from the instrumental staple; now Miss Rose Hersee, Malle. Pitteri, Malle Kortense, Mr. H. Pearson, and three others, besides a chorns of fifty voices, and tho "Bijou" choir of hoys, lend their aid every night; Mr. J. Lery, the prince of comet-players, taking the place of one equally celehrated in the earlier days. Suffice it, M. Rivière is providing a very attractive and varied entertainment, and the pablic show their appreciation of it by filling the honse every night, though "every one is out of town."
Herne Bay Pier.-On Wednesday last new pier here was opened hy the Lord Mayor. some time ago the agitation in onr columns contributed to this result we are not aware.

Boarding-out rersus Farming-out Pauper Children.-The National Committee for Pro moting the Boarding-out System are ahont to "Pauper (gratuitously) a pamphlet titled Pauper Children, their Training in Mode boarding cut system of poringrion on lis boarding-out system of placing children, one or wo-not more taa two-in one cottage, by contrast with the farming-ont plan, which wa a gross abuse of the Poor Law system in former years. The boarding.out system has heen nni ersai in Scotland for many years, and is genera Ireland. Its success in these parts of the kingdom is fully proved by long and wide-spread experience. It has also heen extensively tested States, Australia, and other conntries. The committee's secretary other conntries. Mis, Many J. Catlin, an he address 21, Arthur-road, Stoke Newington London.
Algeria.-The forests of Algeria are very aluable, though they are occasionally injured by periodical conflagrations, causod by the Arahs, in orcer to gain hetter pastnrage. They produce several species of oak and cork, the Aleppo pine, from which resin is extracted; the cedar of the Atlas, a most valuable timher for building purposes and cabinet-making; the thuya, celehrated even in the time of the These forests corer an area of about $3,500,000$ cres, and of these 376,355 acres have already been concoàed to private individuals, and 200,000 have heen given $u p$ for the 1380 of the native population; but it has heen determine that in future no forest land is to be alienate from the state. The mineral resources of Algeria are very considcrahle, and British capital is largely employed in this direction.
A New Town on the Lancashire Coast.A new church has been built at Heyhouses, near Lytham, by Lady Eleanor Cicely Clifton, and it 8 proposed to estahlish a new seaside resort at hat part of the coast, to be called St. Anne's. he bend of the coast abont wall staud just at the bend of the coast abont halr-way between Lytham and south shore, and the lord of the manor, Mr. J. Talbot Clifton, is now having laid ont a new road from Lytham, in continaation on that which gives access to the mansions at the west end of Lytham. The new road will he continned through the sand hills, and will he two miles and a quarter in length, making the disu.the. Sea ahout three miles and a quarter. I is prohahle that the first huilding to bo erected St. Anne's.on-the.Sea will be a large hotel.
Shoclcing Fatality.-A terrible disaster has Jast occurred at Busto Arsizio, in the province o Helan. In the Via santa-Croce existed a house velonging to the church of that name, and which had remained empty for a long time, heing in. secure. The cure opened it as a school for young gifls. On the 17 th , about 100 of these, of from n the first and second stories. All at once the loors gave way, and the unfortnnate pupils fell in heap, mingled with the beams and rubhish. Six were taken out dead, and somo twenty noore
seriously injured. The priest took to fight, but a warraut fur his arrest has been issued.
Memorials.-The fund for a Sorby memorial of the late Earl of Galloway has now reached the sam of 1927. The memorial is to take the shape of a stained-glass window, which is to he placed in the new charch about to be erected for he parish of Sorhy. This memorial is indo. endent of the public one to be erected Newton Stewart.-The monument at Hawkes hury Upton has had a new gilded cross fixed upon its summit. The cross itself is made of shect copper, $\frac{1}{8}$ in. in thickness, Weighs upwards of $I 20 \mathrm{lb}$., and is 6 ft .3 in . in height. The old cross, which was a stone one, and wcighing ahout 10 cwt., was hlown down during a gale of wind on December 9th, last year.
The Assistant Surveyorship of Leicester. new assistant surveyor to the horough of Leicester was recently appointed, but did not make his appearance at the time agreed upon, and mauaged to keep the place open for himself by tarther postponements, till at last he declined he appointment altogether. The consideration ways committee. It was said the candidate had aiready been paid his expenses to Leicester and back, and ought to be made to refund the back, and ought to be made to refund th

Old London.- In the course of excavatin or the foundations and hasement of the intendie new building for the National Safe Depos Company, at the bottom of Queen Victorit street, the contractors have laid bare a portic of the course of the Old Wall Brook, and har also come apon some specimens of ancier pottery, as well as a few gold trinkets, and number of boues, considered to be those Sarons, Romans, and Ancient Britons. deep have the cxcavators gone that the
hare reached the London clay, opon which. have reached the London clay, opon which.
thick bed of concrete has hcen placed, at thick bed of concrete has hcen placed,
flagged as a sub.basement to the building.
Opening of the Exeter Licensed Vi, tuallexs' Asylum.-These huildings, in tI Union-road, are now completed, and the oce: pants have heen formally installed by the May heing of red bestyle is Gothic, heing of dress ws, freely used. hnilder. At present the block oonsists of on fonr houses ; hut it is proposed, if reqnisite, add another hlock. The cost of the buildim has been ahout $1,300 \%$., and the amount su scribed up to the present time is 950 l .
Path Stone.-The great extension of $t$ demand for Bath stone during the last ft years has led to the apprehension that $t$ t aristing quarries would soon be exhausted. Tl of a larsen has heen dispelled by the hourhood of Corsham, which is opened by Messrs. Randell \& Saunders. T quantity is sufficient to supply the existil and for half a century. It will he connecta hy railway with the Great Western system. Bristol Duily Post.
Royal Masonic Institution for Boys. considerable addition is being made to th lavool, cousisting of dormitories, haliseou to meat the and a new block or whts of the ins tution. According to the Freemason, the wor which, since its commencement, has proceed rery rapidly, has heen carried on under $t$ Mr. J. W. Demperintendence of the archite hy Mr. Thomas Boyce, huilder, Hacknoy, and now fast approaching completion.

Oxiental Congress and Exhilition.-T organisers of the coagress which is to he held Paris on the lst of september to discuss vario questions connected with Japaneso literata and tho best means of bringing the Japane intellect into prostable conjunction with that Europe, havo added another feature to its pr crammo which cannot fail to be an attraction, namely an exhibition of the products of Chine and Japanese art.
Office of Works. -The Civil Service Cor issioners have issued regulations for an opx competition, to be held on the 7 th of Octohe for two appointments as assistants to th salary attached to one appointment commenc at 210 l. a year, that of the other hegins at 1006
Mr. Hawkshaw, C.E.- It is nnderstood the her Majesty intends to confer the honour : knighthood upon Mr . Howkshaw, superiutenden engineer of Holyhead Breakwater,

VOL. XXXI.-No. 1590.

The Railway Moloch
AINFUL and distressing aro the accounts, flashed week after week ovor the wires of the telegraph, of fatal and disastrous occrrrences, called by the name, not always strictly correct, of rail. way nccident. Railway calamitios they certainly are :-calamities to the corporate hody of shareholders as well as to the individual sufferers. But in the use of the phrase "accident" there is, consciously or unconscionsly, a begging of tho question. Accidents, properly so called, are casualties that arise from causes beyond control. At least it is in that sense that we gererally uso the term. In. jurios to lifo or to limb at arise from carelessness, or from canses ought to be, but are not, within conll , are not true accideuts, hut offences. In (e caso of tho gravest crime, except treason, own to onr law, a person may be brought der the penalties of murder for a sheer act of anton carelessness. When disastor follows sastor, under circumstances that have a corin family likeness, the question will force ielf on the mind,-Is this the result of gligenco or of incapacity? Have we, as a ilised people, neglected to take the proper ecantions to protoct life and limb, or are we, an educated people, in a stats of too great roranco to know what precautions we ought to ko?
We nso no editorial plural. We speak of cselves, moaning the English people. The estion of personal safety, in the only mode
travelling by which long distances can w ho traversed, is one that oomes home to sryhody. Few are there among us to whom 3 large black letters,-now, alas! but too biliar to tho eyo, - in which the damp cards that dangle et the railway stations or up from tho mud at certain well-known corners, teli of "Terrible Railway cident," or "Fatal Railway Aocident," or hothor Railmay Accident," do not causo a ill of alarm, or, at all events, of pity. A son is thas given to the dullest ; and an rm, used in its real sense, a l'arme, to arms, lo the most inteligigent and to the most
irageous. rageous.
press is almost mute, in face of the magude of tho evil. Mute, that is to say, as far practical and hopeful counsel is concerned. ough, indeed, is said, but poople are hardly ficiently aware how sure a method of con. ling an evil it is, to euvelope it in a clond of rds. There are no means of choking off an Nelcome inquirer that are at once more plaule and more effective than to smother him in ails. So it is in the present instance. What he cause this time? is the inquiry. Are tho oints' ${ }^{\text {oll constructed, or out of order? Is }}$ signal-man to blame? In what minuto signal-man to blame? In what minuto
ail has the enormons and delicate mechanism
| of tho railway system failed this time? In this sort of inquiry time nay be absorbod till the puhlic attention is wearied; and with what result? Generolly with the satisfactory one, to some persons,--that the cause of mischief was altogether exceptional. It was something that has been hitherto overlooked, and that will be attended to in future; something that has always been weak, hat will now be made strong; or something that, as its natnre eludes all attempts at detection, is, of conree, never likely to occur again.

Let it not for a moment be supposod that wo aro ahont to attack or to depreciate the railway system of this conntry. Nothing can bo further from our wishes. In every way we have a right to feel, to a great extent, proud of that system. Erery Englishman feels, or ought to feel, an honest pride that Watt; Stephenson, and Brunel wero his countrymen. We say Brnnel, because England elaims, and indeed num. hera among some of her greatest benefactors, many of these families, of French origin and name, who were driven to her shores by the intolerant cruelty of pricst and king com. bined, and to whose members her stormy and uncertain climate seems to have imparted the sturdy perseverance of her own children, with. out depriving thens of the brilliant qnalities which they brought from the land of thoir birth. That English enterprise should have carried to so admirable an excellence, in comparatively so short a time, tho machinery nsed for producing rapid locomotion; by land and by sca, is matter of just satisfaction for Englishmen. And to those of us who have stood by tho very oradle of the locomotive; who have heard its first whistle in many a fair connty thronghout the kingdom; who have witnessed the open-eyed awo with which the rastio population came out to watch the strange advent of tho iron horse; who have, may he, accompanied the last jonrney of the once cheerful and well-appointed stage; and who have yet fresh and pleasant remi niscenses of postchaiscs-and-fonr; the locomotive has that sort of fascination which is eserted over a man by the horse reared in his own establishment. Every fresh triumph is a cause of self-congratulation. Our speed, our comfort, onx choapness, all are admirablo. And although we believe, and have before expressed the opinion, that we are yet at the first, rather than tho last, letter of the alphahet of mechanical progress; that we hare, in many respects, been really at work in the wrong direction; and that the railway system of 1973 will be as unlike that of the present year as our actual arrangements are unlike those that provailed a century ago; this does not prevent us from admitting that we have made a wonderful progress daring the last fifty years.
Arain, it is perfectly true that the percentage of accident, or calanity, taken as regards the actunl number of travellers, is small,- far lower than that by any other method of conveyance. When last we looked at the statistics of this question thoy showed that the mathematical expectation of accident was less to the traveller who set out on a long railway journey, than to him who set out on a stroll from Hyde Park. corner to St. Paul's Churchyard. It was far moro likely, as matter of figures, that a man should bo knocked down and run over at a cross-
ing in the streets of London, than that he should ing in the streets of London, than that he should the simplest rules of care. And, whatever may be our personal exporienco, and however बistressing individual calamities may prove,-we must always bear in mind that safety, in proportion to the number of passengers conveyed, is a marbed characteristic of our railway system. The question is, - can that safety bo made abso. late? And if not,--why not?
The rate of average and percentage explains the comparative immunity from acci- is actual
dent of foreign lines. Comparative, as far as the returns that reach ns go. Comparative, more certainly, with reference to the actual number of passengers. For it is well known to those of us who are familiar with the Continent, that the care and respect shown to the English railway traveller hy the officials and servants of the railway companies, as a general rule, are nnknown across the Channel. On many a lino in France or Italy, or Germany, the unfortunate passenger is dealt with as if he were a criminal. He is locked up in a pen, into which he is com. pelled to enter, -at all events if he has any luggage,-perhaps fifteen minutes before the time for the startiug of the train. From this pen the inmates aro harried, like so many convicts, by tho imperative and contemptuons command of some semi-military official. If dehicate health or advanced age require deliberate movement,if youth and inexperienco are in doubt which way to turn, the sharp, shrill, angry "Sortez, messieurs, vite! vite!" of the conductors does not mend matters. All that we are spared. All that is, perhaps, only possiblo among people who are enamoured of a kind of liberty and fraternity that have never taken root in England. Most haste, quoth the proverb, worst speed. There aro haste and hurry enongh on the French railways. But for speed, commond ns to our own, for speed, and for safety too. For, in spite of the groat severity of the Code Napoléon,-and we have known a French engineer-in-chief of the highest eminence condemned to fine and im. prisonment because an accident happened on a line of which lie was engineer, althongh he was in no way cognisant of the circnmstances of the special case,-the comparative safety of the passonger we believe to bo greater in this conntry,--fower individuals, per million, of travellers, are killed or injured, than on the Continental routcs.
Por centage, however, may he differently regarded; and there is a very important difer ence, which lios at the root of the question of safety, between a rate per thousand and a rate per million, if the thousand and the million aro regarded undor different conditions. Thus, if the arrangements of a steamboat were such as to convey with perfect safety say 300 passengers, the risk of the trip would be considerably enhanced if 600 were crowded on board. We could analyse, in this instance, some of the reasons why this should be the case. We ahould find the vossel to ho suhmerged below the proper lino of flotation; ynduo stress would he thrown on every part of the propelling machinery; the signals of thestcersman would be liable to interruption; some foreign object might he thrown down into tho engine-room. In a dozen ways we may see that the danger per cent. to tho 000 passongers would ho appreciably greater than to the danger per cent. to the 300 .
The same rule prevails in our railways. There is a certain maximum amount of traffic which each line can oonvey without strain. Augment the amount, and you put on strain. Where this strain will tell is probably nnknown. It will find out the weakest place; and then occurs what we call accident. We ought no onger to deal with the causo of that individual accident, like the physician who sets himself to deal, not with a disease, but with symptoms. We want to go to the root of the matter.
The occurrences of railway calamities in this country are chiefly notable at two periods of the year. Themost serions are thoso of the augmented summer traffic and of the blinding Novembor fogs. In the first case we seo a direct addition to the strain to which the system is exposed. Every portion of the great machine has to work harder. Every porter, switchman, guard, or other sorvant has, if uot to work for longer hours, at all events, to do much more while he actually on the service of the line than at other times. Tho jaded aspect of the men tells
this story pretty plainly. Every carriage has to carry more weight; every eugine has to draw heavier load; every joint and fitting of the per. manent way has to nndergo more service, -in a word, the strain is increased, and often enor-
mously increased, everywhere; and so the woalk mously increased, everywhere; and so the woak point is
Oumity,
Oue portion of the remedy for this evil lies in the hands of tho companies themselves. Of that we have not now to apeak, It would be idle to attempt to prescribe rules, whicb must either be so general as to be vague, or so special as to require spocial knowledge of each caso to which they should apply, before attempting to frame them. Not to overtask the men;
not to underpay them;-not to attempt a not to underpay them; - not to attempt a
false economy, -in a word, not to he greedy, is false economy, - in a word, not to he greedy, is
the frist of those laws of action for the managers the first of those laws of action for the managers of all railrays, which are imperatively called this general law, the application of it must be left to each individual authority. It is only in some case of terrible break. down from the over-driving of the personnel of the railway (a case, indeed, which is far from rare), that public indiguation is aroused, and that directors are tanght tbat there is such a thing as penny wisdom and pound folly
Bat we come to a moro practical matter,- to one in which, in our deliberate opinion, legislativ intelligence is not only proper, bat necessayy.
We have seen that either great augroentation powers of a system to convey traffic (as in the powers of a system to convey traffic (as in the
case of fogs, rendering slackness of speed case of fogs, rendering slackness of apced
necessary) as comes to the same practical re. sult, may he taken as a predisposing cause of ruilway casualties. Next, we find that the main effective canse is the collision of trains main effective canse is the collision of trains. It is a natnral inferencc, that we ourght to ayquided but that it not that conision is not avoided, but that it is possible that it should occur. Wcre we working ont a railway system on paper, one of the postulates would be that,
under the arrangements proposed, collision ander the arrange
shonld be impossible.
When two trackse of railway are laid side hy sile, at a distance of only a couple of yards apart, it is clear that if a train ronning on one of them is thrown off the rails, the carriages may so fall as to obstruct the other line of
way, and thus to be run into Way, and thus to be run into by a train on that
line. This kind of collision has occurred, but line. This kind of collision has occurred, but does take place, of the failure of some element either in the frat train, or in the first line. If the wheel of an engine flics, if an axle breaks, or if the plate-layers have left a hole in their work, this aceident may occur. It is
to be guarded against by a careful iuspection, to be guarded against by a careful iuspection,
both of way and of rolling stock, and in point of fact, it is not a dangor that we belicre now to be very pressing or alaming.
The most frequent causes of collision some years back, were singlo lines of railway. That such should be the case was almost incredible. It may be added that it was totally inoxcusable. This has been tacitly admitted. By the constant use of the telegrapl, and by the adoption of the blook system, this cause of what formerly were frequent accidents bave boen brought, as a rule, under proper control. It is a cause, more is surely fit that the utmost sererity of the law should visit sucb departure from well-known rnles as alone renders collision on aingle lines pos sible. And in this severity there will be a great safoguard for the pablic.
Oper.tranc, then, to the sore place at last Orediaposing canse Collision some kind is the prediaposing canse. Collision is the active oause. rule from the breat down of tmins. rule, from the breakdown of trains; not from the nse of single lines. It occurs, in the great majority of instances, from the prssage of two lines of traffic, in difforent direction, over the
same spot. If we prevent this, wo shall prevent same spot. If we prevent this, wo shall prevent
collision; or at least wo shall so far rednce the possibility of its occurronce as to render it almost a lusus nuture.
Can this be done? the render who is not an engineer may ask. Certainly and absolutely, is the reply. It is a question, not of engineering "Dontrivanoe, but purely and simply of expense. "Do you mean," our querist may proceed, " that structural arrangements are within the skill o the engineer to effect what shall render col lision, from what we may call the nsual cause, impossible?" "Certainly, is the reply. "And
that the non-adoption of such safeguards is a
more questiou of saving money P" "On. tho metedy." Such is the real state of the case; let once get thoroughly hold of that trath, and rail. way collisions will cease to disgrace the civilisation of the day.
It is no mere
IU isno mere matter of theory or of opinion that we now, and that not for the first time, hring forward. When the railway system was first inroduced, extremo care was taken that ordinary highways should not be crossed by the locomo.解 where built to carry the road over the railway, or the railway over the road; and, speaking at a venture, wo may say that at least a third of the cost of the formation of what are called the works of our railways (not inclnding the metal Way) was cansed by the rule that railway and road traffic shonld only cross on different planes of elevation. Thon collision was impossible. In
some places, where trafio was small, the right some places, where traffio was small, the right to make a level orossiug was fought out in com. mittee; hut a lodgo and a permanent porter wore, in those cases, made imperative. What is the resnltiug exporience? We cannot cite a single instance of collision between road and railway trattic that has talsen place at a bridge. All that have occurred, and the total will be found to be considerable, have taken place at level crossingg. And with this plain truth staring ns in the face, we allow one railway to run across another, or to run over its own lines, in a mananer to render collision possible; if we onght not rather to say, to rendor its prevention matter of extreme difficulty
Wo have an example of how this may be A perfect web and tan,lo the on that metropolitan centre. Loolied at from a ba loon, it would seem as if they had been planned for the very purnose of homicide. Bat there is a method in their madness. Viowed on the earth, they will be seen to occupy three distinct planes of level. We believe that it is to the ingenious suggestion of an engineer to whom England owes many usoful inventions,-MIr. J.C. Haddan, -that the arrungernents are to be attributed. It was by the long experience, and tried mechanioal ability, of Sir Charles Fox, one of the few surviving assistants of Mr. Robert Stephenson, that they were'carried out. But the fact is, that the numerous inlets and outlets of three great main lines, and we cannot tell how Victoria Station, are so carried above and below one another, that the ordinary canse of collision is reinoved, and tbat, come fine como fog, the rains may ran at full speed, confident that they sball not cat into one another at some half We switch or ill-signalled crossing.
We do not of course say that in a terminal station it should be impossible for a prope exchange of carriages to be made from lime to ine. Whore a slow speed is invariably main tained, we think it permissible; but in any case where rapid through trains at any time pass, we hold that it shonld be absolutely prohibited so to lay the way as to make collision possible. In anc case of a well.known metropolitan lme, here anotier crosses on the level jnst witcout isa ternibal station, we think that the autho It is a should have been retused by Parliament, or morese where, now, most or the traius in the word "most"; safety lies in all or none.
If in the costly precincts of the metropolis, where a paving of silver, if not of gold, would not equal the money-value of the area of the cround it covered, it has been found practicable o carry railways on different planes, and tbus t emove the danger of collisions; if in the cases we name the wise and salutary rule of tuted for provision for tramichamen sare and industry, which renerally results, sooner or later, in diaster; whit be said as to seat tations and junctions in the country? Take cthal 4 well linown station planned that than tram fond running on the left hand of the line bave their platform on the same side of the mil way then which it in the same soy tor tho may a which it is ahso employed cor tho up.trains to nd left hand of the main line bat both them na left band on the main line, but boun or the The saue is furb is not an imaginary example The case is further complicated by the entrance of branch lines close by. Now, in all stations unnin thro if we take tar the mathematical expectation of collision to be very great. Constant care and skill may prevent
mischief. It may be the case that no accident has mind occurred on such a spot as we have in ou mind But the application of a certain aunount or skill and of cost would proride sncl Trould render collision streams of tran in thr case of a road hridge. Oupht this precantion to be neglected because of its expeuse? Tha expense considerablo, but it would be incurred onc consill ind in mane roconped within no very long time by diminu to解 expenses to
stantly liable

## Santly liable

So many lives for $1,000 \mathrm{t}$. sterling? We hav efore suggested that sanitary authoritios weri doubt as to the solution or liat equation. W fear it is the case with somic obler anthorities If it be true that, in a recont case of disaster
the company bad one station-master, whos the company bad one station.master, whos
honrs of duty extended from six a.m, to balf.pas honis of duty extended fronk six a.m, to bairopas nive p.m., -latiat one man from whom, for th pay of one man, they demanded the work two,-we think that the persons who authorisor the time-sheet and the pay-sheet deservo tha the notice of the Corowir sbould be turned it their direction. If "mauslaughter" should b a verdict in suck a caso, we should be disposer to attribnte to the Directors of the line the firs: degree of blame, to the fifteen-hours.and-a.half per-day official only the second.

THE BRIGHTON NEW FREE LIBRARY AND MUSEUM.
Tre sleeping population of tho City of Londo s constantly diminishing, as appears from eac nccessive censns, but the day population kcep on the increase. In 1861 the sleeping populs on of the City proper was 112,063; whereas S71 it had sunk to 74,732, with a day or ocet ation population of many times that number ven in such districts as the Strand, St. Mau garet's, and St. George's, Hanover-square, cor iderable reductions in population were show by last census. Otber districts, however, cspi fially suburban,-and London's suburbs haw ng stretching radii, -show a large inoreaso be population. Brighton, otherwise Londor uper-Mure, can scarcely bo regarded as nburb of London, but it is, par excellence, th easide resort of the Londoners, and the kaleid cope popalation of Brighton presents probabl more curious phenomena than those of almo ny other town in the United Kingdom. 1801 the population of Brighton was 7,339 ; 1861, it had risen to 77,693 ; in 1871, it reache with the western suburb of Hove, 101,23 These figures do not, however, give an accura dea of toe summer and "season" popnlation Brighton. The last census was taken on tl rd day of April, 1871, as for several pa lecades the census bas been taken at th eginning of that montb. The contrast betwee the population of Brighton at the beginning t April, 1871, suggestive of the bleak and disma and the popnlation of Brighton at noon of any fir day in Soptember, 1873 , is very remarkable. TI sleeping population is probably trebled, and th day population quadrupled, at the one period a compared with the other. If it be asked cor cerning the enormons increase "whence, and ft What come they " it may be answered broad rom London, and for change of scene and ciu amstauce, and for recreation. Well, chaugo o but what of the recreation? Both piers ar, open, and promenading can be done to one heart's content, excellent music being discourse on the west pier ; there are brilliant shops, equa to many in Regent and Oxford streets, Londou? there is tho Aquarium, with first.rate masin again, and the best institution of the kind it the world, to whicb, by the way, important adal ment have been mado and of the last twelr montle ac witness the additional sea anemoues rontus, as winess che adional sea an the alli the sturgeou, the seals, tbe porpoise, the aur Failing Failing satisfaction from pursut of these mean of catching pleasure" "a wing, there araders rival tow bands, "and a trip to the Devils Dyke, and fickiaus "doing" Brighton. No, we had forgoten th ever.delightive recreation of reclining upon shingle aud shying, with a one particular stono, or or ints rapid succession sithing the while the rising tids
ut having done all this,-tbe lounging on th arade, on the piers, and at the sbops; baving
no "the Dyke," and the Aquarium, and the mno "the Dyke," and the Aquarium, and the
one.throwing, what is left for a visitor? Not uoh. It is well that the corporation of righton should take an anxious and enligbtened ow of this inquiry, as they seem to have done,
$r$ the establishment of a Iublic Frea Library the establi

## Ma Musenm.

Few public or private buildings, or properties of te, lave undergone more romarkahle, and withal latary, changes in their character, and tbe es to which thoy bave heen applied, than the fighton Pavilion, alsurdly fantastical in design, did worse than foolish in the uses to which it fis originally applied. The Pavilion, with the thouses and grounds, were purohased from tbe own by the corporation of Brighton in I850 e for liberal municipal autborities to make, hough it may not give promise of dircetly rofitable occupation "in all the uses to which property is applied. The Pavilion proper is d part of tbe premises are loased to the ighton School Board. The grounds are thrown to the pullic as a people's garden; and
convorsion of the stables, coach-houses, to the parposes of a Public eo Library and Musenm, is on tho point of impletion. If the corporation has desired to mote tbo interests of the people of Brighton,
a to continue or increase the attractions of the vn, they conld not have done better than by utituting the New Froe Library and Museum 1 Pictnre Gallery.
[To those who know nothing of the Pavilion the grounds, and what were formerly the
bles, coach-houses, and thoir adjuncts, it is bles, coach-houses, and thoir adjuncts, it is
incult to convey a correct idea of the trang. mation that bas been made. The Pavilion, royal reeidence, stands distinctly, although widely apart from what were the stables, at not, that are in a separated grozp of build

Between the Pavilion and the stables re was a subway that allowoc zmeans of com. rioation between the one place and the other, hout the necessity of stable-men, on the one d, or the august occupant of the premises, or ralets, on the other, appearing in the grounds. us subway, 8 ft . high, it may here be mentioned, been utilised as a chamber for warming and tilating the New Library and Muscum, which part of what were once the first gentlo. space now utilised for such a grand purpose ing been open to the sky during the original ruation
he skilful adaptations of what may he called stable huildings of the Pavilion, are highly Hitable to Mr. P.C. Look wood, C.E., architect aurveyor to tbe corporation. The style of
Pavilion-if it has a style-may be pronced a sort of bastard or outraged Moorish, Arhich Mr. Lockwood was bound to conform ar as he could do so witb self-respoct. His ptation may be pronounced a species of is intenced
It is intenced that the entire snite of rooms yude the rooms of the free library and museum, premises should, and a general reference to premises should include notice of the whole, or less particularly. The dome, originally stable, which furnished stalls for forty-eight see in the time of the Prince of Wales, afterds George IV., has been converted, with ndant decorations, into what singers and sicians pronounce a capital ooncert-hall, tbe ustical qnalities of the apace being very good first-class singers, hut vory bad for third-class
cors, who cors, who fail to keep en rapport with their
ioucos. Mr. Loek wood was concerned in aing this grand rotunda to account to make erimanently available for publio usea at the ulest cost in first outlay and for maintenance. lon he took it in band, the light received was In dnll green glass. He introduced stained 3a groups, arranged betwoon the rib epaces
the dome, and above these, at a sufficient fht not to obstruct the play of hight, he fixed uppor and outer glass roof. The effeot is ipulation of blinds, rendered nnnecessary he cleaning of glass. Tho party colours and ling of the dome remain at the end of seven rs absolutely untarnished. Great changes o been made in this rotunda in constraction, vell as in decoration, as any one woold detect
visited it now, and was present in it about
two years ngo, when it was temporarily used a a place of worship. The inner periphery was
then enclosed by felt curtains. It is now opened 12 and the grand diameter of the dome is 121 ft ., with a diameter between the pillars that hayracks of the stablca remain, only appropriately coloured.
Another fino room, with which the dome is to he hronght into immediate connexion, is what was known formerly as the Riding School, bnt is now used as a corn exchange. . In tbis hall, 172 ft . long by 72 ft . wido, the British Association beld their aggregate meetings in August last ycar; somo of the decorations are still remaining. The rooms, even as they existed then, gave most satisfactory accommodation to the Association for its aggregate and sectional neetings.
The entrance to the Now Library and Museum is from Church-stroet, by a pair of cast-iron tates. The entrance.hall is about 25 ft . long by 16 ft .9 in . wide. To the right and left of the ontrance hall are committeo-rooms, 291 ft. long, ibe one to the right 22 ft , and the other 18 ft . 5 in. wide. On the left of the entrance.ball thore is abundant accommodation in the way of Thesets and laratories.
The oentral hall is 115 ft . long by 30 ft . wido, and is a splondid apartment. It is ligbted entirely from the roof, which is double; the ribbed glase employed for the onter roof entirely
prevente glare. At each end of the central prevente glare. At each end of the central hall, a ppace, andor the galleries, of about 12 ft . wide, is laid with parti.coloured tiles.
Tho rooms to the right of the central hall, and ranging with it, arc tbree in number on each lloor, and rospectively $31 \mathrm{ft} .5 \mathrm{in} ., 24 \mathrm{ft} .9 \mathrm{in.}$, and 41 ft .10 in , in length. These (six) rooms are on tho gronnd and first floors, the eame in length, and all about 19 ft . wide. To the left of the contral hall, on the ground floor, there are two library rooms, each 50 ft . long by 20 ft . oxcellent standard works, and many scarce, curions, and valuable publications, all inclosed in onk vases glazed. The cases secure the advantages, amongst others, of preventing the ahstraction of the books and of defending them from the injurious effects of the products of combustion. The books collected, as yet, are almost ontirely contrihutions. Amongst the contributors are Dr. Ormerod, who has given a vory large and fine colleotion of books; the Rev, Henry Venn Elliott, from whose excellent library book. cesee as well as books were recelived and Mrs. Richard Cobdon, who has contributed a uniquo collection of the works of others and the writings of her lato eminent husband The stook of the Albion reading-room and library has also been acquired by the Corpora tion. The reference dopartment will be rich in the possession of publications that cannot be
purchased. Amongst others, we noticed purchased. Amongst others, we noticed a
valuable collection of London aud provincial directories; forty volumes of the Times ; fine sets of Lords' and Commons' journals ; vols, of oollated newspapers from the introduction of the Reform Bill, March $2,183 \mathrm{I}$, to the prorogatiou of Parliament, April 22nd, I831; newspapers "Annus Terribilis," 1818, 2 vols., that include a groat variety of papers of the period, carefully collated, inclnding numbers of the Times, Le National, the Illustrated London News, the numero Cimes, Daily Neiws, Standara, and materials for a bistory of tho French Devolution of 1848.
Before diaposing of this portion of the snbject we feel disposed to say that, in our opinion, in the allocation of space, the library, as oompared with the museum, has scarcely had its fair share allotted. For visitors, the museum will be of course the chief attraction, but the permanent vord hits of Brighton, tho ratepayers in local have to be cared for primarily by their lending and referenco departments, is tho por. thon of
them.
It has heen already stated that to the right of the central hall there are, on the groand and library reo me roma, thered each hoor. The floor have over them two room of the ground devoted to mnsenm 50 ft . long by 20 ft wide. Co . the 0 . the mnsenm gallerics there is a fine room, poses. It is poses. It is $60 \mathrm{ft}$. long by 29 ft . wide, and has
floor, that is lighted from the roof, and gives a. excellent light for tho exhibition of paintinge, sculpture, and other works of art ; it is sur museam rooms, and on the first floor by roum of like dimensions, the two end rooms beine of galleries of the central hall. The west side of tho museum and lihrary rooms adjoin the parocbial offices, and Mr. Lockwood bas, on that side, obtained bis lights from glass roofs, and wells for the ground.floors of the three museum whlls for the groand.floors of the three museum between the intencum to make a commanication of the dome mhich can whole of the, which can be easily eftected. The then bo in spacious roonss wo have named wil thon bo in direct commanication with eacb The
dopartmente, and is open rery strong in varions dopartmente, and is especially rich in fossits from the chalk formation, with very good collec-
tions in general natural bistory, including ornitions in general natural bistory, including ornithology, iohthyology, entomology, and the other The Bri
The Brighton Free Library and Musenm is not established under the provisions of any
oxisting Acts, but is provided by and is nnder the control of the is provided by and is nnder signed I8th October, I871, Messrs, V. P. Freeman 871 , are prizcipally with for 6,3002. The total and C. \& $E$. Cheesemna, something less than 10,000 . The lighting o the building will include 983 lights in all. Tho burners, 756 in all, from a 1 along under the roof. A basement chamber in the north.west coruer accommodates the boilors for warming the rooms. The contracts haye been executed ander the direotion and anthority of Mr. Alderman Lester, chairman of the Payilion Committee.
The Free Library and Museum are to be publicly opened on the 8 th of September.

Street iron railings and streer ARCHITECTURE.
Ir has been often enough remarked that things alwaye in sight are not very curiously looked at, and do not ohtain that amonnt of attention which they sometimes well deservo. It is a rite remark, and if ever it should stand in need of proof it would be found in the scant nutice given to the oommon street iron railings, whether
oruamental or plain. It may, perhaps, be difîcult to aocount for this, for it is inmpossiblo to novo a few yards through London streets with. out seeing, and even tumbling up against them, Other thinge, whether architectural or not, may 'railings'" cannot be. And, more than this, there is a fashion growing up to make of these bitherto plain and unornamentod objects works of art, and no small itoms of expense. Indeed, fo look closely to the matter, it will be found not a littlo bignificant of the tondencies of the time, and indicative of the way in which its artistic energy exerts itself. We have been at some pains, and spent some little time in tho effort to grasp tho railing question; and it may interest a thonghtful reader here and there to follow as in our inquiries. They are not a littlo cnrious, all tbings considered. The ordinary ouse area railing, as everybody Enows, was, up
very lately indeed, a simple square bar iron, let into a stone curb at its base, and kept upright above by a cross piece or iron fillet. It is cntirely without "ornamentation,"-to use the favourite word, of any kind, except at the top, where it is hammered into a bluat point. A nseful object, no doubt, but hardly a striking one. But if we go hack in time, wo shall find that this plain bit of iroz work sprang out of a far more elaborate olject, for every bere and there in the older and "unimproved" parts of London are fragments of irou railings of quaint design, and oven elahorately.designed scroll. design, and oven elahorately-designed Bcroll.
work. Many will, of course, have noticed this, work. Many win, course, have noticed this and will havo perhaps been puzzled at the "extingnisher," wbich fortus, with the ring for an lamp, so marked a featuro in it. This extin. guisher, by the byo, was for the purpose of put-
ting out at night the torches or links which ing out at night the torches or links which were carried by the scrvants wlo attended the sedans" through the ill-lighted streets, and through some douhtless not lighted at all. This ronwork is at times-as may be yet seen in some a little elaborate, and cleverly designed. The ron gates may be cited in st. Paur, , both thoso that are yet visible, and those which have been
remored in the late alterations. It would be difficult to find finer specimens of elahorate and carefully-desigued and well wrought ironwork. But this by the way, for orr present ohject is to ote what is now doing in the "railing" way.
The equare and plain nnornamented iron har niling is certainly dying ont, for in most new and improved localities there is to he seen sub.
stituted for it some ornamental patterned railing stituted for it some ormamental patterned railing of cast metal quite in the spirit of the time, for it shows none of that hand-work for which the old ironwork of whaterer date was so famons. good sign? But the manner of the death of the good old plain matter-of.fact railing is in some cases not a little ourions to note. Round Westminster Abhey, for example, thisiron square bar was to be found in all its primitive simplicity, and it seemed to do its work of separating the little plot of green grass close to the venerable
walls of the abber from the adjoining churchyard full of grare-stones. But the spirit of improre ment is now everywhere, and this plain ironwork has felt it with tho other thingg round and ahout and in theold abbey. Small scrolls of wronght iron have been added to the npright square hars, and civeted into them and the cross.piece ahove, so that this railing may show how to ornament hefore it is too late, a plain piece of construotion. IVe allnde to it because it was among the first of the old square bars which felt the magic touoh of improvement. Tho iron gates in the archway leading into the cloisters, as plain as the aforesaid hars, were at the game time made not a little ornamental by the same process, and hy the addition of some cast-iron details screwed on to the wrought-iron uprights. How far this is from the old way of work we need not hint at. It is modern imitative Gothic, but it shows what onn he done with the square har work in poor elahorate ironwork which is so fast displecio the square har, as round the plote of grass and flowers in New Palace-yard, and the yet more ornamental ironwork enclosing New Palace-yard itself, and decorated with gilding in a lavish mbiney and the Palace of Westminster is a perfect paradise of iroowork, as far as we modern mon parathse of irouwork, as far as we modern mon this expensive work is a very long way, indeed, from the idea of the genuine wrought metal as it has come down to us from the past. lronwork, even "jron railings," offer cbances for the
display of rcal artistic skill and taste, not only on paper, and as matter of design, but in the actual metal, the hard iron itself: not a mere series of repetitions of the same forms and details, as though cast in the same monld by a firm, but as olfering opportunities for artist work manslip, not a little tempting and attractive
Are we really improviog and progressing in Are we really improving and progressing artistic matters ? Is it not better to leave th old square har to do its nseful work, and to remove it only when it can be supplanted by real art.work in iron, in small quantities may be but still real, and true, and cxpressive, and

The public, it is true, have yet to be tanght what is real and what is falsc in these things but the publio is right willing to learn, provided only that the teaching ho practical, and eventu ally visible and tengible in result. It is the artist workman that is needed for these things. Another remarkable differenoe betreen the old and the new frshioned system of treating railings is the prnotice newadays growing un of colonring and gilding them. Dtll iron-coloured oil paint seems to hare gatisfied the artistic longings of our fathers and grandfathers, but now simple iron colour, or dull green, for bronze, is not enough. The fashionable colour is a dull chocolate or reddish brown, with plenty of gilding. Iron, conld it but he kep destruction, wonld he all that conld he desired Nothing can be better in its way then the colour of cood iron. It tells its own tale of hardnese and strengtli, and durability ; bat the rustines of it compels some sort of protectire coating varnish or paint, and it is an art misfortung earvish or paist, and it is an art misfortuno, a parent has been found or invented that shall aufficiently protect the metal while presorvin the colour of the the metal while preserving natural surface being seen through it. Mirght natural surface being seen throngh it. Night not the finding out of such varuish, or other aubstance, be a grood snbject for a Society of
Arts prize? It might, too, be not a little usoful for other metals, as silver, liable to tarnish.

Shonld not all patural material, as stone, wood, and metals, be allowed to show as such where possible,-decoration not hiding wholly the possible,-decoration not hiding wholly the It js, of course, useless to try to stop t course of building improvements, but it is unfortunate that there is no one to care a little for the things necessarily destroyed in the act of pulling down so much. Surely there ought of pulling down so much. Surely there ought
to he some public official sufficiently qualified to lo he after these thincrs, and to savo a fragment look after these
here and there.

THE NEW OPERA HOUSE, PARIS.
or gome time past the works of the new Opera bonse, -that dream of the Haussmann era,-bave been performed in isolated sections There was a lack of funds and workmen suffi. cient to continne operations simultaneously in all parts of the building. Thus the greater portion of the proscenimm was completed several monthe ago, as were the actors' and actresses dressing-rooms, the foyer des artistes (savo the medallions which are to contain the portraits of all the artists employed in the building of the Nourel Opera), and the mosaics of the pillars and pavencents, for the execution of which a troop of Italian workmen was expressly engaged. The contractor's staff is at present employed on the grand staircase leading to the anditorium. As it may be seen now, this part of the building, with seaffolding here and there, and peopled by a legion of workmen, offers one of the most picturesque spoctacles inarginahle. In one corner the sculptors are at work by the light, even at noon, - of numerous gaslamps fixed on movable snpports, and fed by india-ruhber tuhes On the stairs, marble-outters are polishing the balusters; othors, by the aid of an ingenious contrivance, hollow out the marhles which are be traversed by gas conduits : a tube of iron plate, to which a rapid rotary movement is communicated, penetrates the marble hy the force of its own weight; and when the piercing is complete, instead of the adbris left hy other processes, a little colamn of marble is with rawn from the block, cut and polished hy the ho thickness of the marblo, has made, in tra versing it from 60,000 to 80,000 revolutions Above, the hronze-workers are constructing the balconies of the upper stories; lower down, the lever carpenter, Saintonge, and his gang, move heary madriers withont an accident, amidst the nest pieces of sculpture and delicate decorativ work. Every where the noise of hammer and the screech of machinery add to the animation of he scene.
The works are sufficiently advanced to enable one to foresee the effect that will he produced by the grand staircase. The thirty columans of Larancolin marble, with capitals and bases in White marble of Saint-Béat, glitter already, and harmonise marrellously with the tints of the pilasters in violet brecke. The carving of the tympans of the arches, faces in bas-relief, exe cuted by ME. Chahand, is quite finished. Little remains to be done to the details of the balusrades and raults of the staircase. At the nin paronies of the first story, balusters in soft ny are being placed, surmounted by glah.s of por. This is only one of the many fansted prious which already give the building an air be added. brought from the quarties of Gerravezza lie already ont in the ceses, just as they arrived. The balustrades in antique red marble are yet in the municipal warehouses, awaiting the moment when they shall be placed on their masement of green Swedish marble, and sur of the staircase the marbles are beinc adjusted on which will stand the two large orouns of II. Carrier Belleuse, supporting candelahra the entrance of the paiterve the architectur lines are interrupted at the space left for II. Inles Thomas's two caryatides, executed in varionsly.toned bronze, and draped with marble flumerent colours. Abore every gronp of onnmotled lawa reserve ro a blue ground, designs of musical instruments of all times and countries
Lastly, the ground is not jet quite levelled and sufficiently to receive its marhe paroment and on the ceiling four large oases alone indicate

The most hopofnl among the architects will n ronch for the hnilding being completed hefo eighteen months. The new Opera-honse w then have been about ten yenrs building.

NEW RAILWAY EXTENSIONS AND BUILDINGS.

## STARTLING intentions.

An analysis of the proceedings at the rece Lalf-yearly meetings of the several railway co panies throughout the country, reveals the fa that on many of the leading lines new works a
extensions on a scale of considerable magnitud extensions on a scale of considerable magnitad are abont to be entered
mous outlay of capital.
Commencing with the London and Vestern Company, we find that the sharehold in this leviathan corporation, at the meeting the 23rd ult., authorised the expenditure $44,250 l$. in the enlargement of stations and purchase of land. These extensions inolu 3,000l. for additional offices at the Eust tation, 8,0007 . for a new station at Old Fo ,000l. for new permanent goods offices at Bro treet, 16,000 l. for the rebuilding and conlar ment of the Nuneaton station, 7,6002 . for additic the works at Crewe, together with the sum $8,36 \downarrow \mathrm{l}$. for additional accommodation at otl stations along the company's lines. The estima cost of the land alone for these now work 115,5592 . At the meeting of the company, chairman made an interesting statement. specting the company's present rolling sto Ho said that the numbor of locomotive engin which in 1862 was only 1,000 , had increased 1,900 at tho present time. The number of 0 iapes which in 1862 , was 30,000 , was I 40,000 . The number of wagons had increa dithin the past ten yeare from 18,000 to 36,0 and the traffio teceints Which in 1862 , moun $2,00,0007$ now mounted to 4,038 , 0 During thoge ton pears they had conver Durn bot outlay of 59,0 roode bow shont fire yeare sino they troduced the locline np spparatuc, and dur trod hay her hat perfol they hat anterat they bat been iotroducine the block syst hey han heen in ailes of their lines 381 other mites of the lieved to he the best system of the two. T ery vearly 900 miles were on the hlock ayst at of a total length of line of 1,600 miles.
The sanction of the shareholders at the m g of the Great Northern Company was gio lo the expenditure of stations and other works. These inol $50,000 \%$, for new offices and platforms, and new engine-shed and sidings at King's-or 5,0002 . for a new goods depót at Farringd stroet, on land which the company have lea from the Metropolitan Railway Company. I depot includos the erection of largo new go
warehouses near the junction of Charterhou street with Farringlon-street. The inteu new work also inolude the construction o duplicate tumnel at Maiden.lane, King's-cross an outlay of 50,0002 . ; also the enlargement Lincoln station, at a cost of 4,000 t. ; the rec struction of Ratcliffe Viaduct in iron and bri ustead of timher, 4,000t.; new signal-lock apparatus, offices, and water-cranes, at Gra ham, $3,990 t$; proportion of cost of new sign hox, locking apparatus, and additional sidings Leeds; $6,200 l$. for proportion of paving yo road, King's-cross; together with upwaris railwat for exvensions at sundry stationsidera saving in the working of the London goo traffic will be effected hy the erection of the I dopot at Farringdon-street, consequent on great reduction in cartage; and with rofore the extonsions at King s-cross, it st twen three years ago, requires enlarrement, da oxperience proving that the existing accomn dation is inadegnate to the traffic, and also $t$ the duplicate tumnel under the Rerent's-ca has become indispensable. It may be add thet, beyond the extensions at Fing's-cn above named it is pltimately intended to ear ont atill more extensive and importent enlar ments, by tho construction of a large cent platform rapning the entire lenath of platform running the entire lengt of a frontace towards the Euston.road, in a line w he Midland Station and Hotel. These
es, board-room, refroshment-rooms, waiting as, and othor apartmonts. In addition to outlay above stated for new works, $144,1622$. 21,600l. for new engines, $21,505 l$. for new iages, and 101,057l. for now goods watons. t the Great Western meeling the share ors sanctiened the expenditure of 199,6452 aew works and stations, and purchase a fyddfa canal; and 80,000 l. for new engines carriages. The intended outlay for new : includes 103,849l. for an cxtersion line aew atation at Birkonhead; 16,270l. for a station at Stonrhridge; $9,400 \mathrm{~L}$ for engino goods station at Bristol; and 20,000l. for F tolegrapb for signalling and locking ratus on the line ginerally. The new line Act of 1861, the estimated cost of wbich 000l., is also at once to be proceeded with. eport also states that the permanent shaft e Sovern Tunnel railway was commenced lepth of about 60 ft .

Midland Company, however, almosh 108 all others in its past and prospectivo
hditure on works in progress and intended. iditure on works in progress and intended.
utlay wbich this grent cornpany js incurring putlay wbich this great cornpany is incurring W works and huildings is something fabu-
as is proved hy the romarks on this suhject by the chairman at the balf-yearly meet. He atated tbat tbe Midland Company had laying out capital during the last few years ery large extent. Indeed, he did not know rate tbat the Midland bad done during the :x years. He went on to ahow that within oriod named the company's capital ontlay poen between $2,000,0006$ and $3,000,000 l$.
ig annually. In 1867 their ontlay 0702. ; in $1868,2,012,0632$. ; in 1869 , in 1870, 2,037,0597. ; in 1871, expenditure on works, in six years, $698,814 l$. The capital expenditnue during $x$ months ending Jnne was $1,355,850 l$. onths was $1,358,000$ l. and $4,007,385$ l in went lialf-years, making $5,366,286 l$, more 1 to be expended. Several of the new lines havo for some time heen in progress of nction, are to he opened within the current and now central station, whicb is advanasly aituated in Razelagh-street. Also that $a$ of tho Mansfield lines known as the top and Shireoaks line; the Radfield and 11 ; the Duffield and Selston; the Breedon sbby; the Ashby and Nuneaton; and the mond have been expended. On the Sest lines 9002. have been expended. On the Settle
arliale lino, now in progress, $1,620,0721$ Iready becn expended, and a still further 2rge ontlay is necessary. The works are ding actively towards completion, h
difficulties have heen encountered difficulties have heen encountered in line. The company have made an engage. vith the Forth Bridge Railway Company, iranteeing a certain amount of revenue to over formed for constructing the great f Edinhnrgb. The amount of revenue stee in all is $75,000 \mathrm{l}$., of which the North grarantee 60,0002. and the Midland the coustrnction of this bridge as a most aut improvement of the througb ronto to rth and east of scotland, in wbich they Midland Company) are very largely ted. Referring to the ultimate cost of he contract prico for the hotel wno ll., but that the completion of the build1 cost between $30,000 l$. and $40,000 l$. more be contract price in consequence of the months hefore the building can be fiually 3. It tranepired at the meeting that the $000 \%$.
rding to the proceedings at the meeting South-Western Company powers have ations at several points on the line. nclude the improvement of the approaches depot and the loconotive cstablishment - Elms; additions and extended station
accommodation at Clapham Junction, at Basing stoke, and at Poole; and an extension of the Southampton Station. The werks on the Bara completion, and the line is expected to be read for opening at the end of the jcar. New railways in tho districts of Windsor, Ascot, and Aldershott, are also about te be commenced, as well as the extension of the Joint Portsmouth taken in conjunction with tho London, Brighton taken in conjunction with tho London, Brightor and South Coast Company
Tho North-Eastern Company aro about to cxpend the anm of 679,6991 . during tbe next half-year in the erection of new warehouses, gress and about to be commenced. Of this sum 200,000l. are to he bexpended in new. Of this sum and stations at. Newcastle, Leeds, Hull, Gates and stations at Newcastle, Leeds, Hull, Gateshead, Hartlepool, and Middlesbrough; 286,699l
for additional sidings, cottages, atation accom for additional sidings, cottages, atation accomand 193,0002. in tbe construction of entirely new lines. In addition to these sums, the shareholders voted 468,263 l. for stock actually ordored hut not dolivered, wbilst the obairman gtated tbat in subsequent half-years they would require to spend an additional som of $2,136,302 l$., making altogether for new works yot to he executed, $3,281,9927$. The new lines in progress of conKnarion, are the Helmsley and pickering, the Melmerb and Boronghbriage, tbe Mab and Castle Eden the Loeds and Wetherhy, and Lbe aion works of the Hartlepool docks, and a large now station at York. Tbe directors have algo entered into an arrangement with the corpora. tion of York for the construction of a new line of railway to the east side of the city, and it is intended to apply to Parliament in the next sosaion for the necessary powers.

At the meeting of the Great Eastern Com pany, the chairman stated that the cost of the metropolitan extensions would not be lese than 3,600,000l. net, but that if they exceeded it hy 100,0002. ho.should consider the expeuditure treet the estimate. Ihe cost of the Liverpool. porary gation is temporary station is to be first erectcd, and the contho works and noder notice to proceed with which works at this temporary terminal station, which is expected to he completed and opened permanent new station at Iiverpool-street will take upwards of twelfe monthe to buikl.
It was stated at the meeting of the London Chatham, \& Dover Company, that the new warehonsos at Blackfriars are completed, and will he opeved this month, along witb the necessary connecting works and sidings for goods trains and wagons. Six lines of metala have been laid down on these sidings. The works in connexion with the new Holhorn Viaduct station have not progressed as quickly as was expected, and it is believed that that atation will not be opened before November. The chairman stated at the meeting that under the award of Lord Cairns and he Marquis of Salisbury, they had sold surplus property to the amount of 400,0001 ., and that they had still to soll property which was valucd by Messrs. Vigers at 150,000 l. With reference to the surplas laud yet to he gold, the chairman ohserved tbat the sale of land of this description in London was a very difficult thing if they tried to get its full yalue. Tbe increased price of lahour and building materials had so completcly revolutionised the building trade, that they had had a very anxious time with regard to this snrplus property.
The proceedings at the mocting of the Lancashire \& Yorksbire Company showed that uring the past balf-year a considerable quantit tation had been purcbased for new and cnlarged company demanding further traffic of the The meeting sanctioned the expenditure of 200,0007 . for station extensions during the current half-year.
It was stated at the meeting of the North London Company that tho widening works on and Bro Extension line hetween Haggerstone and Broad-street are now rapidiy approaching The chairman, will shortly be opened for traffic The chairman, referring to the competition with contend in North which the company had to cood good canse of complaint with regard to that competition. Tramways paid no Government daty, nor local taxes to any extent, and they evon coutributed very largely in the shape of losal
rates. The tramwaya, without any restrictions whatever, were allowed to deprive the railway petitorg large portion of its traffic. Their com. petitors had not oven to pay for tie land they nsed, withont having further privileges. Tbe conairman added that the land required for tho construction of their line had cost tbo company more than a third of its entire capital.
At the meeting of the London and Blackwall Company, the chairman stated that tbe two Bills in Parliament for improving the Stcpney Station, Millwall extension a pior in connexion with the Grom Bow, extension, the making of a short branch from Bow, and the nsing of steam vessels, having received the Reyal assent, the works renld bo at onco commonced.
It was stated at the meeting of the Mctropolitan District Company that during the Parliamentary sersion they had succeeded in getting保 fammersmith, and that the construction of that was now proceeding. It was also stated y cxtending the line from the the inner circle Station to Aldgate, would come before Porlia nent next session, and be prometed by on inde pendent company. The Metropolitan Board of Forks were anvions that something bould be lone in the matter, and it was erpected that be sohermo would he aider by a considerable contribation from tbe Board and the City.
Tbe proceedings at the half-yearly meoting of the Furness Railway Company abow tbat extensive works are in progreas in new hranohes, and also at the dock worka at Barrow, with which the railway company is connccted. The Stank branch railway has heen completed, and satisfactory progress has alao been made with tbe foundations of has also been made with the cipal work of the Bela Viaduct, the principal work on the Arnside branch. The
main line is also boing widened at various points, which will ho completed this year pointa, which will ho completed this jear-
Very active progress has also been made with oo Devonshire and Buccleucb Docks. Tbe valls for the lock nad ocean ateanship berths in too Ramsden Dock and Basin have likewise ment for reclainging the outer. aca embank is well acclaimiag the whole area of 250 acre yards resanced. 1 prards of 210,000 cubic ing during the have heca removed by dredg age for be anf-year, and aduitional anchorThe sum of 500,000 l. for the exocution of thes works is required.

## THE REBUILDING OF ANTIOCH

## providing for earthquakes,

Ouk readers will doubtless remember that, in dhe spring of last year, disastrons earthquakes occurred at Antiocb, which devastated almost toe whole of the town, and which certainl flered an opportunity, in the rebuilding of the piace, for considerable improvement. We note, However, that the enginecr-in.chief of the province of Aleppo (Mr. Hidian, an Englishman) has in vain displayed both scienco aud energy io his efforts to introduce a mode of strengtheniag Antioch wid widening the streets of ill-fated a repetition of its dangers. records several such calamities at Antioct, and, they which appear o have a perioaical recurrence proper dovices for of is a significant for the preservation of life. It the sictims on escaped if the walls of thehonars might have with lim or woud with bood, hif been buit with or bound with wood, and if the streets had not been so narrow that the rows of falling huildings met as they crumbled down, to forms who destructive heap over the crowds of people who were thus engulfed. Mr. Haddan has spared no exertion in pointing out theso defects to the Governor-General of the province, and oven devised a special mode of construction of tbe town on a new plan, with improved lines of internal communication. He proposed that skeleton houses should $h e$ erected witb timherbattens, well-tied together with won bands, on whicb overkangine roofs would rest. Stone walls cemented with lime were then to be run up around the wooden frames, in ordor to afford proection from sin or rain. A shock of eartbquake, how formidable soever it might bo, could hus do no more than throw the stone-walls ontwards, while none of the falling stones could injure those in toe bouses. The new plan of the town, by straighteming and widening the lahy. rinth of tortuoas lanes whicb previously existed,

Fonld sare the inhabitants from much of the danger aftur escaping from thoir houses; but we regrat to siny that these sugrested innova. tions hava beea disreg urded, and the town is beginning to rizo again ou its old foundations, bnilt with mad instead of lime, and likely, as one writer states, to destroy its futnro pnpulation in even greater proportions than it did last year, for increased poverty makes the
houses weaker than even the old ones wore.

NEW LICHTHOUSE, BIRD ISLAND, CAPE TOWN.
Tre Bird Islands aro a gronp of small islets sitnated in Algoa Bay, ahout thirty-three miles E.S.E. of the town of Port Elizabeth, South Africa. Besides the three largest, which are
called the Bird, Seal, and Stag 1slands, there are a number of lialf-sunleen rocks around these larger islands, extending ahout two miles in different directions. The group are ahont seven miles from the main land, the nearost point of wbich is Woody Cape. The farthest rock to seaw wh is the Dorington Rock, where the illfated Eist Indiaman was wrecked rather more than a centiry ago; the anohor and gun of which ressel is still to be secn lying between the rocks on Bird Island at low water. I have seen them many times. They must have heen carried by the current from the spot where she struck to the place where they now lie: the distance is about a mile.
Bird Island is still the resort of thousands of sea-birds, principally penguins, and what they like the ganat, orea-goose. Those birds make their nests in the guano, and sit together in one largo flock, covering the greater part of the island. Any one attempting to go among them stands a chance of having his legs torn and soratcled, for while the female bird is sitting on her one egg, she is very vicious; sho sits on her one ergg, she is very vicious; sho sits
all the time, whioh is ahout five weoks, and her food is brought her hy tho male hird. When tho younc ones are old enough to fly, they are takeu away by the old ones in large droves, and it is supposed that they go to sea, for ther do it is supposed that they go to sea, for they do The penguins are a curiosity to look at, with Tbe penguins are a curiosity to look at, with beir little tlappers, with which they are very activen for they run. When they are pursned, they alwnys nake for the watcr; when once they are ther hey are site. One would think at night that here were thonsanda of donke lot loose upon he island, for the noise which these hirds mak scry much like the hraying of that anima The eggs ef both these birds are eaten by the ight keepers and those who risit the island hoy are very wholesome, and not nupalatabl.
There is a regetahle grown in the guano, and
which covers a part of the island. It is very which covers a part of the island. It is very nunch like spinach, and it is eaten by those on the island. There is a large qnantity of guano, which in somo parts is as deep as $14 \mathrm{ft}^{\text {. There }}$ is au abundance of shells, hut not a particle of sand or carth of any kind. There are a largo numher of seals, on one of the rocks, called the Black Rook: they are seldoun disturbed, excepting by partios who go there sometimes or ghano.
In 1851 the Cape Governor erected a wooden lighthouse npon Bird Island, for the henefit of vessels going in and out of Algoa Bay. It was a rather curious-shaped-looking huilding as seen from the sea. There wero exhibited from the tower, in different positions, two fixed white lights. The tower was a pyramidal-shaped billaing, with a projecting landing or platform, unon which each of the lanterns was fixed. It lind been neticed for some years past that this building was fast going to decay. It was built of wood, the framing part of which was connected with iron bolts; the iron seemed to bo very much affected by the action of two Galts, one arising from the water, and the ther from the ammonia.
This huilding has been taken down, and close o where it stood a new and more surstantial unilding lias been erected. In 1871 the Colonial Government granted the money for this work. 1) inwings were at once prepared for the same, 114 the contract was simed in November of the same senr, hut the works upon the island did int actualls commenco until March, 1872 ; and the whole of the work would have been com. fare whole by the cad of last year had it not been firr the delay which took place in getting the

Encland. But it was so far finished by the 1st England. But it was so far enished by the 1 st
of Jay last, that the new lighit was exhibited of lay last, that tbe new light was exhibited
for the first time on that day. It is a fixed red light, of the Third Dioptrio order, the height of light, of the Third Dioptrio order, the height of
which is alout 80 ft abovo the level of the sea, which is alont 80 ft abovo
cen about twelve miles off.
The haildings nre now
The haildings are now entirely finished, and he workmen have all loft the island.
The wbole of the work has heen carried out according to the drawings. The tower is 60 ft . high from the level of the rock to the focal plane, or centre of light. It is a square building, quite perpendicular, showing on its north and south sides four circular apertares, whicb are connected with each other hy a reces ormed in the work, and a large moulding form ing the whole into a cross, which is intended as day mark; on tho east and west side there is only one aperture.
The parapot is finsled in the form of battle ments, with small coved recesses nnder th cornices. The outside of the tower is colonre gray or light stone colour. The inside of the watch-room and cleaning-room is fitted with oupboards and other fittings to hold the cufferent articles required for the estahlishment. Tbe whole of the inside fittiugs are of teak an mahocray, and varnished.
All the lighting apparatus, as also the iron watchroom, lanterns, iron floors, girciers and stairs, were supplied by Messirs. Chance Bros, of Birmingham. Besides the tower, ther aro two cottares (which are connected on each ide with the limhthouse) for the use of the light-keeper and his assistant
The greater part of the huildings have heen onstructed with the stone found non the sland and pointed ontside an? plastered insido The arches are of hrick and cement, which had the arches are or hrick
The roofs of the cottagos are covered with slate, and provision bas been mado for preserying the water, which is a very scarce connmodity at times. To each keeper's quarters an undorrround tank, holdini ahont 2,000 gallons, has been constructed, and a 400 .gallon iron tank has also been supplied to each house
In connexion with the establishment a flag. staff and signal-house have heen erected, so that the light-kecper can communicate with vessels passing
The works have boen carried out nnder tho superintendence of Mr. Joseph Flack, of the Colonial Engineer Department.
The cost of the wors is nnderstood to be ahout 7,0007. Mr. B. Godfrey, of Cape Town, was the contractor for the whole of the work, excepting the part supplicd hy Messrs. Chance Bros.

ARMAGM ROMAN CATHOLIC CATHEDRAL
This Gothic edifice, which crowns the crest of Armagh, has heen dedicated. Its erection has extended over no fewer than thirty-three years, the foundation-stone havinct heen laid in $18 * 0$. This delay is accounted for hy the natnre of the andertaking and local financial difficulties. huilding has cost upwards of $60,000 \mathrm{l}$., a sum which may he regarded as equivalent to 80,0007 . considering the period over whlich it has extended, and the enormous increase of late in the price of labour and matcrial. The original designs for the church were prepared hy the late Mr.
Duffy, of Newry, and were of the Perpendicnlar Duffy, of Newry, and were of the Perpendienlar Cothic style. The work executed during bis aisle extended only as far as the top of and hisles rrested to erection of tio bulding havic professor or seven years, 1 r. . . No Catholic University, was entrasted in 1854 with the completion of the cathedral. In the fourteen years which had elapsed botween 1840 and 1851 , a revolution had taken place in ecclesiastical architecture. Mr. MicCarthy, therefore, modided very pinnacled huttresses of the clearstory, flat roofs of towers with angled pinnacles, and other features of the Perpendicular style, he discarded for the simpler and phrer form of Deoorated Cothic. He omitted the pinnacles of all the buttresses, suhstituting prometrio and flowing for the stiff forms of Perpendicular tracery introduced for the first time in moders lrish architecture the triforinm ; raised the roof from an almost imperceptible pitch to nearly an equilateral trinagle; and, instead of towers rising an altitnde of 128 ff . irom the ground-line suhstituted towers rising to the height of 210 ft

The plan of the cathedral, which is crnciforr comprises nave and chancel or choir, with aisle to both north and sonth transepts, and tw western towers. Tho south transopt is at pr sent screened off as a provisional sacristy, by it is intended to erect suitahle sacristies and chapter-house at a future time. The dime sons within the walls are:-Total lengt 10 ft .; width across nave and aisles, 72 ft across transepts, 112 ft .; and height from flo to ridge, 91 ft . The nave is separated from i aisles by threo bays of similar shafts and arohe Over these arches are the triforia, consisting marhle shafts with moulded bases and carry capitals, with monldod tracery filling up $t$ arches Above the triforium rises the clees story, containing in each bay threc-light tr coried windows. The principal entrance to $t$ cathedral is hy a moulded doorway in the we end of the nave, and also hy similar doorways the towers. Over the west door of the nave series of moulded and canopied niches, to herenfter fllod with statues of the saip Rising above the niches is a seven-light traceri window, whilo the west gahle terminates in foriated cross. The towers rise in grades uv they terminate in the bell stages, contaiuiug $t$ doublo-light mullionod and traceried opeuiugs each faoe. From these stages rise the spir with tiers of lucarnes on alternato faces, ea Incarne terminating with a gilt cross, till $t$ entire is surmounted with heantifully wroug ron gilt crosses. Armagh was anciently t ceclesiastical metropolis of the island, and make it willers of he cathel position, wh is rendered increasingly interesting tradition that on this spot, fourteen centur since, Ireland's Apostle stood to defend Christian religion.

LARGE MALT-HOUSES AT SHOBNALI ROAD, BURTON-ON.TRENT.

Mrssrs. T. Lowe \& Son, and Mr. E. Mas hractors, of this town, have heen engared the past twelve montha in the erection of bock of four malt-houses and engine-house, Messrs. Bass, Racclyfe, \& Gretion, which now near their completion. They were to as been completed in the boginning of this ye bnt owing to the excessive rains of last seas nd searcity of building materials, 0 hricks, 400 tons of ironwork.
The honses were commenced in the first m of June of last year, and will be quite ready the malting season of this year. The buildix are from the design of Mr. W. Canning, frm's engineer, and have been carried out un his superintendence. The dimensions of et of the huildings externally are 2.10 ft . 90 ft . and 35 ft . high to the wall plate. I elevation presents no grand feature, hat huildings, though plain, are snbstantial. 7 materins used are common stock bricks, with light sprinkling of Hollington stone dressings The external elevation is divided into hays ft . each, with a 3 -ft. pilaster, which termina with a stone impost, off which spring semic cular arches, tho crown of which carries a lif ahout 12 in. below a substantial brick corni The roof is divided into three spans, and cover with Bancor slates, 16 in. by 10 in . The gab: have stone springers, which form a return t the brick cornice that rnns np the gables. gahles are coped with Hollington stone
The huildings have four floors, three of whi are for the growing of barley. The dimenaio
of each are 126 ft . by 86 ft .9 in ., and 9 ft .2 i from floor to floor. Each floor is lighted twenty-four sash windows. The cistern is the west end of the ground.floor. Its dime sions are 81 ft .6 in. hy 9 ft. 5 in., and 3 ft. 4 deep, and it is capahle of wetting 200 quarte of barley. It is constructed of brick in cemer with pressed brick lining; the channel is form. of white Minton tiles. Immodiately over $t$ cistern are two garners, provided for the soreen barley to snpply the cistern; their dimensio are $83 \mathrm{ft} .9 \mathrm{in} . \mathrm{hy} 22 \mathrm{ft} .9 \mathrm{in}$.
The third floor is wholly devoted to storing of barley; the dimensions of which a 119 ft . 3 in . by 86 ft . The floms are support by iron colnmns, which stand $10 \mathrm{ft} .6 \mathrm{in}$. apa oarrying heams of Memel timher 11 in . hy 7 i and joists 7 in . by 3 ia. Barley.garners store-rooms have heams, 44 in. by 9 in., and joi 11 in . by 3 in . The floors of each are hid w
$\frac{1}{4}$-in. grooved hoarding, tongrucd with hoop-iron. he working-floors have $1 \frac{1}{2} \cdot \mathrm{in}$. rough boards, ver which are laid 9 -in. red quarries, 2 in . thic
oudded and jointed with Portland coment. olded and jointed with Portland coment. At the sonth-east end of the working.floors is
le kiln. It is provided for drying the grown 1e kiln. It is provided for drying the grown
arley. The kiln is of modern arrancement, arley. The kiln is of modern arrangement,
ad stunds transverse with the main block of 1d stinds transverse with the main block of y 50 ft . Tho roof is divided into two spans, ad anpportod in tho centre by octagon colnmas, hich have intermediate flanges cast on for urrying the floors, which are constructed of ist iron, having girders which run longidinally with the main building, 9 ft, apart,
rrying iron joist, npon which Fern's kiln. les aro usod. The fire-grates are Albird's ratent, of this town. At the south-easi ond of ne kiln are store-rooms for recoiving the malt ft. by 35 ft .10 in . Thernal dimensions are ound, first, and sccond. Tha ground-floors aro ond first, and sccond. The ground-floors aro e first floor for storing malt; and the second $r$ screening malt as it leapes the kiln. The ors are supported by iron columns, 7 in . in anms 9 in. by 11 in ; flitehed with $\frac{1}{2}-i n$. boiler. anms $9 \mathrm{in}$. by $14 \mathrm{in}$. ; flitched with $\frac{1}{2}$-in. boiler. ates; joists 11 in. by 3 in., and boa
Tho houses are divided by stroots 30 ft . Wide, at a gangway is provided from house to house the top harley-stores by a bridge, formed of on la
The engine-house stands at the south-west glo of the fourth house. Its intornal dimen. ms are 37 ft . by 30 ft . The external clevation the same as that of the malt-honses, but has bold cornice of Derhyshire stonc; it is oovered - a large cast-iron water-tank, 4.1 ft . by 34 ft , d 4 ft . deep, for the sapply of water to the alt-houses. The water is obtained from two ge wells, 20 ft , in diameter, and 25 ft . deep. water stands in tho wells about 18 ft . deep. engine-house is fitted up with four three. w punpr, for pumping the water into the ak, and two 25 -horse-power ongines for the irking of the honses. The engines are being ell, of Derby, ougineer, \&c., who has supplies $I$ fitted up the whale of the machinery and asfting of the hoases. There is room in e2ch nse for storing 3,600 quarters of barley, and ont the same quantity of malt, The estimate - the four houses and engine-honse was $40,000 t$. on floor, which is about 210 tons, nor the fitting tho houses. The houses promise to be when mpleted four as fine maltings as any in the igdom. The total outlay will be about ,000l. It ild four intention of the firm, next spring, to id four more houses on the south side of tho
gine-house, precisely the same as those alroady scribed.
The whole of tho work has beon done in bstantial manncr. Mr. C. Garliok is clerk of Works. Messes. T. Lowe \& Sons are the gatractors for the brickwork, earthwork, and
asoury; Mr. H. Mason does the carpentry, asoury: Mr. H. Mason does the carpentry,
nery, and ironwork; aud Mr. T. Turner is the umber, glazier, aud painter. Messrs. H. wards and laynor are the foremen.
To minke the work complete, Mr. G. Woorlerlss, of Derby, huilder, has entered into a contct for huilding twelvo houses and six blocks
offices, and mess-rooms. The estimated cost ahout 6,0002 ., and will be completed about wistmas next.

## NEW COUNTY POLICE COURT AND

 LOCK.UP FOR BL,ACKBURN.A commodious structure has just been erected King-street, nearly opposite Montsrne-street, bekhurn, combininft a maristrates' court, ices for the police, and cells for prisoners. The cornal arrangoments aro not wholly finished, tho magistrates' court has beon occupied. Le style of the bnilding is Venotian Gothic, aely treated, with rod bricks and stone dressgs to the doors, windows, string-courses, and ruices. Abovo the label-monlds to windows 1 doors, which? are terminated by foliated sses, are relieving blio Staffordshiro arches. front of the building is set back from the reet, and inclosed by ornamental iron railings, tes, and moulded stouo pate-posts.
The ground-floor is divided into tw
buildings by an entsance-passage, 10 ft . wide, the walls being built of red bricks, with stone dressings to doors, having a varnislyed boarded ceiling, -with doors leading on the right-hand store-room, 24 ft . by $7 \mathrm{ft.}^{2} 6 \mathrm{in}$; magistrates ${ }^{3}$ and adrocates' stnircases, leading to court-room and weights and measures office, 19 ft . by 16 ft . On the left hand of the entrance-passage is placed tho charge-room, 18 ft . by 21 ft ., having a bay-window to the King-street front. Adjoin. of police suom is the office of the superintendent passago, 7 ft .6 in . prisoncrs' exercise-yard, and staircaso leading direct from tho cells to the prisoners' waiting rooms, adjoining the dock in court. A stone staircase, 7 ft . wide, lcading to the conrt-room for the use of the rencral pnblic, is placed at the extreme east end of the building. Behind the prisoners' exercise-pronnd is a gir-house loose box, urinals, closets, \&c.; and at the cxe, ond of thodrill-ronnd, and facing Chapel-street are two dwelling-houses for married oonstables, Above the offices and cells is the court-room 45 ft . by 40 ft .; and adjoining are the magristrates', adrocates', and witnesses ${ }^{3}$ retiring-rooms avatory, clonata, \&e. Tbo court-room is lighted by ten large windows, glazed with embossed plate-glass, having the arms of the county palatino in tho centre of each window. Pilas. ters, supported on monlded stone corbels, divide mon windows, and the ceiliug is plaster. In thelled and monlded in plaster. In the centre of each pazel is a perforated medallion, for tho purpose of ventilation. The henches and other fittings have the panels in varnished pitch pine, contrasting with the painted panel-work. The seats for the aso of the publio are open benches, having Macfarlane's bench-standards.
Ventlation is provided by grates in each window-bottom, and perforations in the coiling. The court.room is lighted by gas brackets fixed in each pilaster and by standards fixed on the dock and the attorneys' tahle. The whole of the offices and retiring-rooms are heated by open fireplaces. The court-room, cells, store.room, adrocates' room, \&o., are heated by hot water.
The whole of the works were let to Mr. Beajamin Abhott, hnilder, Blackburn, in June, 1872. The snh-contractors have been Mr. Peter Walsh, plumber and glazier; Mr. A. Airey, plasterer ; Messrs. Embley io Pilkington, painters; and the whole of the hot-water appaand gates hates, ohimney-pieces, iron railings \& Thompson, of Northgated by Messrs. Mercer magistrates' onther tiles of Messrs. Malkin Edge, of Burslem Sta fordshire. Tho carvine has been exem, StafMr. Gregg, of Darpen. The whole of the work has been designed and carried out nuder the supervision of Mr. W. S. Varley, architect Blackburn, at a cost of about 4,0002 , architect,

## HEALTH AND COMFORT IN HOUSE.

 BUILDING.Sir, -I have read in your pages Dr. Haymood's paper "On Health and Comfort in House-build. ing"' brt I fail to observe how honse-huilding for the million can he obtained, insuring either health or comfort, if such expensive plaus for ventilation as he snggests must be adopted. The first and most vital question which the architect has to consider is,-" How can I bnild a honse which shall prevent the ocenpier from being slowly poisoned from breathing nu impnre atmosphere." Your ranks are now filled with snch educatod scientific men,-is there no one of these who cau lay dowu a chenp bat really effictual plan for insuring the health and comfort of the people?
After all these years of disenssion, and the full recoguition by the public of the immense mportance of thorough ventilation in all baildcan how is it that as yet there is no one who thinking man? Dr. Haye aspirations of every the dity of evory medical man to imbne the minds of the public with the great importance of ventilation; to me it seems moro desirable to imbue that of the architect. As an amateur, I have had for years experienco in buildingffteen years ago I built several louses ; and of Sheriuchamery, my architect jut in three useless; and now, heing ars, which soon became useless; and now, heing about to hnild a rather
large house, nuy architect,-a gentleman of the
anded most position in his profession,-has whatever to his plans, which contain no plan able or healthy."
Dr. Haywood tells us "that we must have an inlet for fresh air, and an ontlet to discharge the ased-up atmosphere in every room in the bouso" The public are sufficiently educated subject to give their nniversal assent the proposition. To effoct this ojrject it appears to me that he like all arehitects is ouly caterin or that he, like all architects, is only catering wealthy promrietors houses by noblemen and must pass throngh some contays, - The outlet must pass throngh some contrivance for keeping aud constantly and permanently hoated," night aud day, winter and summer; and, "the inlet hould open ont of a warm lobby or corridor." very room in the house is to have a shaft through tho ceiling, and, to promote suction, tliese aro to be constantly aud permanently heated. How less pretentious honses are to bo snpplied with heat to keep the shaft in action in every room, and how corridors and halls and passages are to be built, aud how the warm air to supply all tho rooms is to be procnred, he does not tell us. Before the doctor and architect argain consult upon a plan for general and nniversal ventilation, I suggest that some of the "plebs" be taken into their conffdence.
No one now denies the paramount importanco of supplying every room with an abundanoe of nncontrminated air, and the gexeral publie erpect that architects will settle the most effeclive plan at the least possible cost. If the large and lofty rooms of the rich require rentilation, how much more imperative has it become to afford some thoughts upon the overorowded, suffocating rooms of the labonring clanses, where sickly women and children wo slowly hat certrinly starved to death from the want of an contaminated atmosphere. Practically there is no plan yet sargestad for renderino honse haildings "comfortahle or healthy." If archi tects wonld pay a little more attention to tects wonld pay a little more attention to the the huilding, and less of advertising themselves hy an claborate exterior, they miont possibly aucceed in furnishiner such a plan as pyond he once effective and of such a plan as would he at some time some the for paper, a simple plan for the bal or passace a cenling opposite to the fireplace; in the centro of the cailing let the air pass ont through a ventilator into a shaft running throagh each floor; or the fonl air might find its way among tbe joists, and there deposit its carbon and other impnrities This plan is very simplo, but is it practicable?
How am I to solve tho question as to setting the grates, so as to throw as much heat into the room as possiblc, and at the same time aroid a smoky chimney? My architect gives the size of the openings, but leaves the construction possinly to some ignorant sub contractor.
How far, then, shonld the fireplace projoot into the room? How soon sliould the open fireapace he contracted to the size of the chimney. flue ; and what cuhic space should be allowed to oach chimmey should the space be the samo in all tho flues, whether the opening be $4 \mathrm{ft}_{\mathrm{t}} 6 \mathrm{in}$. or 2 ft .3 in ., or should all these details he left te the hazard of a man who takes the joh, and whe only seeks to make as much money out of it as possible?
If I happen to get an intelligent and carefal meahanic, I shall owe no thanks to my architect residence.

An Avatevr."

## HOW SHALK I BUILD?

IT is, perhaps, not a littlo remarkable that the Hestion "How shall I huild ?" and an essay on the subject, shonld appear in the same issue of the Builder, Doubtless the paper of Dr. J. W. Hayward, of Liverpool, will be read with interest, cspecially by "An Amateur," who is abont to erect for himself a residenoe. Indeed, the eighteen "points" have been often insisted upon in the pages of tho architeotural journals, and although it may not bo novel reating for architeots, it is at the same time highly refreshing to find the medical profession aiding in so desirahle an object.
About three years ago tho reports of a very intoresting discussion on the ventilation of hos.
*In reply to a letter from this correspondent in a recent
issuee, three patentees or munafacturers, notably Messrs. Compgr Ching \& Co., aly he can hare the informantion ho
dessires if he will apply to them. Thia, linwever, is not
the sort of reply the lettor was inten led to elicit.

Dr. Hayward adpocates a system of spes aimed at equaly in each
Do rentilation at tbe ceiling, and the ceiling only that is, the inlet of warmed air, and tho exit of vitiated air to he in justaposition, or of necessity nearly so. Tbero is, to my mind, not only a doubt as to its thorough effieacy, but it will for certain involve considerable expense by a vas and complicated system of pipes and perforated cornices, and which may possibly reqnire con. siderable looking after and repair. The curront of warm air, because it is warm, would bave a tendency to escape, and to drive the vitiated air back on the beads of the occupants, so that there would be no direct unimpeded course for the ritiated air to take. When, moreover, the details of the system come to be worked ont, I think it will he fond that Dr. Hayward, lik many other thoorists, has described a system (fai easier to do than to adopt it), hut which even on paper appears too complicated, involved, and nucertain, to recommend itself to ordinary houso proprietors for general adoption.
The arrangement I propose would he simple permanent, and cheap. The walls are to bo built hollow, to prevent the percolation of damp and along the hollow space passes a, hot-air pipe They are thus renderod less subject to chance of atmosphere by the current of warm air con tinually passing up the cavity from the hot-air pipe. The warm air, therefore, not only keeps admitts dry, it also keeps them warm, and pare air is adme room at dawo more grating either from the esterior or from the coiler and passes over tho hatair or water pipe. It mn be contrired for the air to pass a considerable distance alone the course of the pipo hefore listance distance from the floor Pasing unward throug istance from thor. Pait nds its , 1 the tho wain nde ar prow for that purpos. . ues, bo carriod higa ind in herause the ir at consider ther thay that hear or are the heibht the greater the suction of warm or tiated ar, and the ion, and cess saju the the plan is eqnally applicable to all the hoors of the onso, and that, too, with any or but trifling additional espense. $i t$ is easily controlled b he inlets at tho hotlos.f in wall, or hy th mete into the rooms, which would be simitar the athor does not claim originality for such system; it at once suggested itself when ar anging for the heating apparatus and pipes for a conservatory to be built along with the dwelling house, so that hy an estra expense of about $35 \%$. in pipes and sliding rentilators, a honse of considerable size will, I trust, bo hoth warmed and veutilated, without additional continuous expense, a system as permanent as the Luilding, almost self-acting, and so simple as to commend itself to ordivary intelligonces for adoption.

## Hices.

Tue following snggestions are for the use of "Amateur." I have given each system praotical test, and can in confidence place them before his notice:-
For ventilating near the centre of basement of bnilding, have a bricked wallod room 10 ft . hy 6 ft ., with a plato.iron door. In this fix a coil of high-pressure pipes, 8 ft . hy 4 ft., heated. One
of $J$. I . Bacon C Co.'s would bo very suitahle. From the centre of this coil rua a tunnel of 8 -in Farthenvare pipes to ontside of bnilding taking arthenvare pipes to ontside or bniling, taking great eare to have the mouth a way from all drains
or other ohjectionable matter. Over the external or other ohjectionablematter. Over the external month fit a fine-mesh perforated zinc eover, and in any convenient part place an iron throttle-ralve-an inexpensive one, formed of $p$ pla
Have all joints made good in Portland,
Have all joints made good in Portland,
Orer the coil fix a sheet. iron hood, with $4 \frac{1}{2}$.in.
Orer the coil fix a gheet.iron hood, with $4 \frac{1}{2}$-in.
fange all round, to he bedded in side and end flange all round, to he bedded in side and end
walls; three or four conrses of brickwork to ran
on the flange. From the centre of crown of hood run a diagonal sheet-iron tube, 1 ft . $10 \frac{1}{2}$ in by ${ }^{\frac{1}{5} \frac{1}{5}}$ in., ap one of the ascending walls, hrancb. ng from tbis to each room with samo shaped pipe, to under the window ; the end of pipes to be $T$-shaped, parallel with the wall. Tlio skirting to be iron trellis, or if required, a dado of same $A$ simple valve introduced would be useful as check to beat. Have all joints branching from asin rising pipes maped. By this main rising pipes mailo Y-shaped. By the and cold withont dranght in summer.
For egress bave a perforated centre in ceilings, For egress bave a perforated from which carry a tube, as for ingress, to rising tube вame size. Let the end of this egress-tabe pass through yonr hotwater eirculating cistern, which bave ixed in roof. I take it for granted that you will not havo a 2 .roomcd honse withont hot vater for hath, \&c. Let tho tube be largo in cistern, and from the top take a pipe, witb cowl top of all, into outer ai
For stoves, let "Amateur" have register stoves, with a well.fitted register on top, and on line of fire bars, or bottum, have a 3 -in. opering. This opening to go direct into a $4 \frac{1}{2}-\mathrm{in}$. by $4 \frac{1}{2}$-in Sue runuiug up the hack of cores; on top, or nearly so, fit a small damper to each sido o tore. In ashlopit under flues, fit a simall clean ing door. By these means you will bave no down-draught, nor any boot blown over your furniture, save balf your eoal, and gain twico tbe heat as from a common register. The to dampor to be kept shut ; only used for oleaning $\begin{gathered}\text { Bosel A, Evans. }\end{gathered}$

## SOIENTIFIC INSTRECTION.

The Third Report upon Scientific Instrnction and Advancement of Science, in connexion with the two Universities of Oxford an missioners appointed to inqnire into this subject. The report tnkes a hopeful view of the future. In dealing with the relations of the universities with science, the Commissioners eay that their use of the word was limited to the "Sciences of Organic and Inorganie Nature vcluding under that reneral desionation the acluding und orer general disigsation tha with those which depend on observation and wo then borol ling the mental and moral experiment, hath all cionces, as knowledge and culu win not usuall" They state their opinion that neithor the literary They state tif pmol 0 dueation and reench mor the scicatia bachot ducaliont and thearc an heglactod tho the rollos The str vidence:-1. The sory and the Scientific Institutions within the Universities; Scientiac Institations win lae . The Colleges; 5 . The Kelation of he Tnition for Soientifio Professions; 6. The Daty of Universities and the Colleges with regard to the Advancement of Science.
Proposed Examination on Leaving School.The Commissioners are favourahle to an examination, at Oxford or Cambridge, on leaving school, as open to fewcr ohjeotions than a matriculation examination on eutering the university.
The Scientific Curriculum: Proposed Arrangenents. - When Mr. Mark Patteson was asked if he would allow a young man without literary craining to exter himself on the scientific side n the University of Oxford, he replied that he would have the University take no Cognisance of the matter if he chose to enter as a scien. tifie student. Professor J. C. Adams, of Cambridge, thinks literary culturo extremely im. portant, as without it the mind is apt to become narrowed, especially if it he deroted exclusively to material objeets, and that, in consequence, even physical studies themselves are likely to he pursued with less snccess.
University Scholarships in Natural Science.It is proposed to found these seholarships at hoth Universities. The Commissioners sugcest three every year, -one in physics, one in chemistry, and one in hiology. The natural seience tripos has not proved so attractive as the mathe. matical tripos. The estahlishment of University cholarships wonld foster its growth.
Technical Education.-With regard to teehni.
edncation the diffionty of making either Oxford or Camhridge into a great sehool of medicine is very considerable; these places
are both comparatively small, and their hos. pitals, therefore, inadequate for large medical chools. The absence of manuraelorios raises equal ohstacles to the stady of eivil engineorboti Preliminary scientific traiming, however, given civil ougineoring is a dosideratum, tho Commis. sioners think.
General Adwancement of Science.-On no point are the witnosses examined by tbe Commissioners more anited than tbey are in the expression of feeling that it is a primary duty of the Univer. ities to assist in the advancement of learning aud science.

GREEN LANES WESLEYAN CHAPEL, HIGMBURY NEW PARK.
Four architects were invited to submit designs competition for this chapel. The selected one manates from the offices of Messrs. Satchell \& Edwards, under whose supe
bapel is in course of erection.
The huilding is planned to accommodate 1,000 persons, viz., 700 on the ground foor and 300 in the galleries. Two vestries and a lavatory are provided in the rear. The interior consiats of a nave and side aisles, dirided hy an arcade of five arehcs execnted in Bath stone, resting on columns with richly-foliated caps, which carry the clearstory walls. In the rear of the pulpit and reading-desk is the communion-tahle, in an apsidal recess which is railed off with ornamental iron standards surmounted hy an oak rail. The scaus are 20 in . wide, with bookshelves and hatmrails. Umbrella-stands will be affixed at the ends of the pews. A most spacious vestibule is provided in connexion with the principal entrance, the walls of which are 4 ft .6 iv . deep, acting as a covered porch, into which a liboral amount of carving will he introduced. This vestibule, while leading into the nave and aisles, will also communicate with the side entrances which serve the galleries. The sub. story, standing 8 ft . ont of the ground, is 14 ft . in height, and contains a schoolroom (acting also as a lecture hall) for 300 children, distinet aud commodious lapatories, and a chapelkeeper's residence.
The building, from the ground floor to the collar of its roof, at which point it is boarded in, reprosents a height of 56 ft ., the height from the basement to tbe ridge being 80 ft . The tower rises to a height of 150 ft ., the sit
The internal fittings will be of deal, stained and varnisled. The windows will he filled in with leaded lichts, harig rolled cathodral with leaded lights, having rolled cathodral glas means of auspended otar burners and brackets mader culleries, ond will he heatod on tho warm ir air system by Mossrs. Haccen \& Sons. Ampte provision is made for ventilation by means of a mbers in tho roor and tower. The whole of he exterior will he faced with Kontish rag stone, Bos-ground stone heing employed in the ontrances, windows, dressings, quoin-stones, \&c., and red Mansfield in the shafts of columns. The boundary-walls will be similarly treated, surmounted with ornamental ironwork and gates.
The contract has been taken by Mr, Chessum, The contract has been

## ASSESSMENT OF

RATES ON GOVERNMENT PROPERTY.
Tue paroohial anthorities of Chelsea and Woolwjeh, being parishes burdened with bar. racks, are again at issue with Government with respect to the insufficient contribution paid towards the parochial rates. The local Board of Health at Woolwioh have been in. formed that an appeal which they made for an increase of the contribution paid by the Govern. ment in lieu of rates, on the ground that new properties have recently been acquired by the Crown, and that nothing is paid towards the highways and drainage, is under consideration. The half-yearly payment of the War Office towards the relief of the poor of Woolvich is 2,5002., but if the Government property were ratod in the same proportion as that of trades. men, the amount would reach ten thoysand pounds a year. In Chelsea, the rating of the barracks and hospital is much less, and the parish are threatened with a cavalry barracks or tumble down.

## ARCHEOLOGICAL SOCIETIES.

The Bedfordshire Society.- The locality choscn his year for the annual excursion was St. Alhan'日,
Ve glean from the full reports in the local Ttmes. Ve glean from tbe full reports in the local Times.
'he excersiou party upon their arrival fiom he axcorsiou party upon their arrival from
Bodford proceeded to St. Petex's Chulch, where hey were net by the rector, the Rev. II. udding, and ene of the churchwardens, who
indly poiuted out the most prominent features f the huilding. The company next drove out f the town northward in order to take a carsony new of Barnard's Heath with its earthworks,
oputed to have becn the scene of the Yorlists eputed to have bech the scene of the Yorkists'
efeat nuder the Earl of Warwick at the hands f Margaret of Anjou in 14.6I, in what is comionly called "the second battle of $\$ t$. Alban's." pon their return tbey alighted at the Clock ower, said te have been buiit between 1402 and 42.: possibly it may bave been erectcd at first bring the curfew bell ncar to the centre of the Swn. Sir Gilbort Scott considers it to havo
 ory curious structure and unique in this puntry. The party enjoycd the great advanMr. Lloyd Ridgway, local honerary secretary the Hertfordshire Archaeelogical Seciety, and r. Cbapple, the clerk of the works, Uuder arce hours spont within this wonderful pilo hiogable and instruetive which conderd be sup. lied by an intimate acquaintance witb its story and stractural features, and an enthusithic admiration of its grandeur as a whole and

ramining the foundations of the piers suporting tho enormous tower : one of them had sen hollowed out te a considerable distance
dd tho cavity roughly filled np with wood, parently witb a view to the destruction of e tower by setting fire to the wood and so moving onc of its supports. Happily by scovery leads te the suspicien that many of ose majestic buildings of which wo now know thing except from history or tradition or Du the silent witnesses afforded hy their
ins were thus undermined and laid oluctantly turning from this enduring memorial the pious munificence of its respective builders company, after partaking of luncheon at the a.hen 1Iotel, made their way to St. Michael's hurch, on the south-west sifo of tho town, thin the beundarics of the city of Verulam, hin which the materials of its ourlier romaining
rtions wero derived. Those who lad pro uasly visited St. Michacl's, the object of batest interest, after the Albbey Church, traced th satisfactiou the judicious hand of Sir Gilbort itchinson, vicar, was present, aud obligingly scribed the work of restoration which bas ?n carried out. Apart from its antiquity, this rd Bacon, Baron of Verulam, and Viscount of 1 Alban's. His alabaster statue fills a recoss the north wall of the chancel : he is reprethed in his Chancellor's rohcs, reclining in an
How. chair. Within sight of these ruined walls ow. chair. Within sight of these ruined walls rld of Ahhot Wulsin's foundations, the church St. Stephen, on the Roman road of Watling eet, where the Rev. P. U. Brown favonred ma with particnlars. The return-path to Alban's afforded a distant view of tho ruins of owell Nunuery. Camden and Stakeloy record tradition that Henry VIII. was here married Auna Boleyn. Sir Richard Leo, who becamed sessed of this house, rcpaired and enlarged it h the materials of the dissolved Monastery. Cell into decay in the reign of Charles II. In licld near the town, between these rnins and abbey, is the ancient well from which the h of brickwork, and indicated by a tree nted besido it. Thus concluded an excursion ich will long be remembered with interest I satisfaction.
The Sussex Society.-The annual meeting wa,s iety to that place $n$ in the vear 1851 the previous one having Isea Station, the memhers proceeded at ence the town. The first place visitod was the ory, which is in the grounds of Tho Friars,
ore juging to Major Stileman. Tho only part of Priory whicb remains is the chancel of the
pel. Major Stileman gave particular
the Priery. The party next proceeded to tho church, where an interesting history of the building and of the town was given by the Rev.
E. Whitebcad (the vicar). They tben praceded to inspect tho church and the churchyard, aud afterwards the old gates ef the town. The dinner was served in the Town-hall,--originally taken by Mr. G. B. Grecory, wbere the chair was Somersetshive Archeopory, M.P.
tory Society. - The twenty-fiflh and Natural His of the members of this sucicty wos licld meering on Tuesday in last week Mr. W. A. Sandford, the president, vacated the
chair in favour of tle new prosident, the of Bath and Wells, who delivered, the Bishop address ; iter what the cbapter-holise, where Mr. J. T. Irvine rcad to paper ou the architecuro of the cathedral, and paper ou the architecturo of the cathedral, and the building, pointing out its meculiar featnres and practically illustratine his peculiar features the relative agos of the difis paper by showing structare. In as the aiferent portions of the meeting at the evening there was another were read. Iu connesion when several papers museunn was formyexion with the roeeting a versazione on Tued at the town-hal. The consome interesting communications were made Tho Rev. Prebondary Scartb read a paper descriptive of au inscribed stone which was found within the Roman station at Sea-mills Ho combated the idea of a Fellow of the Society Antiquaries, that tbe stone was Mithraic con tending that it was a Christion tombstone. In this view he was supported by Mr. Parker, and the Rev. Prebendary Eirrle gave it bis op, and that the word "Spes" engraved on opinion was a religious sentiment fud not the stone had been surgested. On Wednesde, the excursion of the meeting was mady, he first country, the places visited being Oompton Martin, West and East Harptroe, and Chewton Mendip. The escursion party was a very numefous one. The grcater pari of tho drive was uccomplished in a pouring rain. After dinner at Wells there was another meeting atter dinner hall, when Dr. Beddoe, of Clifton, read a paper allo Ethuolugy of Somersetshire. Then . Ferra brief discussion and a paper by Mr. in the west front af thitect, on the sculptures minor west front of the cathedral, and other minor communications. On Thursday, the concluding day of the meeting, the first place visited history of which Mr. T. Serel rent, upon the account, while Mr. Freeman described a short tectnral features. Freeman described its archiMedioval house, A very old canon's barn and Ir. Parker, were whico bas heen restored by najority of the party tben teok carriages for Woukey-hole, while others bent their sters towards Wookey chnrch, lately restorcd. On
their return to Wells they going orer which Mr. Parkern to the palace, This work accomplished, tho party, numbere. upwards of a hundred ladies aud gentlemen, by nvitation of the Bishop and Lady Arthur Mervey, bad luneheen in the crgpt ef the palace.

## BRANSGORE CHURCH.

Tue district church of St. Mary, Bransgore, nearCloristohurch, Hants, has lately been reopened atter undergoing the additinn of a chancel with a semi- octagonal apse, togethor with reseating the nave, the bonches being open and of stained brick, with Baxs material of the walls is red the roof being covered with Benger dressings, has been found difficult to deal satisfuctorily with a charch, the body of which is utterly at variance witb presont notions ef architectural propriety, hut the addition of a ehancel has somewbat made an improvement. A stone arch the cbancel. ribbed semi-circular ceiling has a panelled and lectern and altar-table ne of staiued deal. The lectern and altar-table are of pitch pine, and
fromi the architect's desige of with prayer-desk design. The chancel-seats with moulded and sbaped of the same wood, mith moulded and sbaped ends and an arcaded The pulpit is of Box-gronnd of encaustio tiles. The pulpit is of Box-gromnd stone, with sqnare ornamental panels. The organ is placed on the for that side of the chancel, in a recess contrived for that purpose. The total coat has been about r,000l. Mr. J. Lander, of Burton, near Christclurch, was the builder; and Mr. Ferrey, F.S.A. the architeot. The warming is managed by ene
of Porritt's stoves.

## A CLASS CAJIEO VASE.

Mr. Joun Northwood, of Wordsley, near tourhridgo, has completed, after nearly ten
tars'
labour, a vaso which will doubtless lked obout. According to the Birmingham Daity azette, it resembles in its general character the andlad or Amphora vase, docorated with Greeb nament. Around the hody is a broad haud of
nate imeo ornament, consisting of two well-selected luestrian groaps from the frieze of the Parnenon, more generally known as the EIgin arbles. The vase is made of pure flint glass,
$1 d$, therefore, is much more buittle and difticult 1d, therefore, is much more brittle and difficult
work upon than ancient glass. "The groups woik upon than ancient glass. "The gromps
relicf are finely deadened, raised against a ore densely dcadened ground. Each portion delicately and perfectly fiuished, the action the horses, the accurately delineated fignres the riders, whose features must be examined Ider a magnifying glass to be fully appreciated, o nostrils and the hoofs of the horses, and the arious trappings, all alike display the marvel eaking off accidentally of a small pieco wonld we spoiled the whole work, tho loss of a horse's mof, man's hand, or any similar acoident
ould have been irreparable, and it is in the ct that the vase is completed, and complete arfectly that value is given to tho work.

## THE PRESENT AND FUTURE OF THE COAL TRADE.

Tre inquiring mind might find a good deal o od for rellection, if ho chose to turn his tention to the question of tho fature of the cood deal of speculation has already taker ace. This sulject seems just now to be more the erer complieated, inasmuch is the returns onth of July, showed that eren in the midst summer the domands from the metropolis ere greater than they wero in either December January, or, in other words, the tonnago sent
as larger than at the period named. At the esent time the domand on the collieries in th Yorkshire and Dorbyshire is fully as large it was last month; seeing then that stocks of als to the extent known in pust years are not becomea a question of more than ordinary berest as to how the coming winter will find coal consumer. It is, bowever, pretty nerally admitted that the public are laying in nerally admited that the public are laying in on as they were but a short time ago; and ere are thoso to be met with who hold that ristinas than they are at the present time.
grod if not boter to buy at pursuing sucb an important. theme as the uro of our coal field, it may not be uninterest; to glance at the progress whicb is being mado the various parts ef Yorkshire and Derbyshire,
im which a large proportion of railway borne mh which a large proportion of railway-borno 3 Derbyehire district several new collieries ard ing opened out, which whon properly at work add to the output to a large extent. tho county of Leicester horings are, it $\rightarrow$ measurers. Aroand the ancient town of akefield, and more particularly in the diatricts Walton, Crigglestone, Harbury, and Ossett, rood deal of coal is being raised, for the most it from thin beds near the surface, which a v years ago were counted as worthless. It is, wever, from the South Yorkshire district that ief is to be obtained in time to come, if such les of Barnsley, four or five very large collieries now either in the course of being suuk, propurations are ooning on to that end. In 3h case the seam of cool to be worked is the kstone bed, which is known to be one of the tween tho Barmen seam and the Silkstone y be said to be from 370 to 390 yards. In reral places in the district, large coalfields ve heen leased by important and well.known kings hore commenced to the Barnsley uns. At the present time the Barrow matite Iron Company are sinking to the aswons seam. At Worsbro', Messrs. Newton, , going down to the same bed, near Hoyd Common. A new oompany is going down
with two very large shafts at Darfield, on the Midland Railway. Near to Barngh, the same woll-known seam is about to bo suuk to on the estate of Mr. J. S. Stanhope, of Cannon are also beiuce pat down to the Barnse scale within a few miles from tho town of Barnsley Doubtless one of the most interesting problems counected with this rapid extension of coal mining, and one which will require solution is that of moeting with lobour in the present state of the market. To many the only risible relief is to be found in the derelopunetit of coalcutting machinery, wlich has not mado so mneh progress as it ought to have done, and which thoso wbo have devoted their time, talonts, and money to accomplish had a right to expoct

## THE CENTRAL RAIL RALLWAY.

We have no sooner concladed that human invention has attainced its limit in this, or that special dircetion, than all at once we are startled by some announcement which shows that what Fe supposed to bo its ultimate form was only a stage in development. Who would have thought "ill a ferv months since, notwithstanding the pannier railway proposed last jear, that trains would ever run upon other than two rails? And now such a project is hefore the world, which, its promoters assert, will probably revolutionise the prosent system. In this project, which we noted in our issue of tho 23rd ult., the inveutor atilises the principlo by which the hicycle rider ravels balanced and steady above two narrow wheels. In the proposed single line of rail system the carriages and engine will havo single row of central and donble-flanged who triding or saddling the single central rail
The recolloction of mishaps and u
bicyle riders in starting will probably excite coder's smilo as soon as the project is propo
his oncines and carriages shall strugcie into steadiness like the bicjcle rider: he provides balanoe-rails and wheels. The balance-rails are provided for some distance in and out of stations The carriages and engines will be bronght very mach nearer tbe ground, and many other sonrces of danger in our present railway system will be miligated, at least so saps the inventor, whe pro poges lighter trains and engines, and that traing shall run more frequently Existing lines would o able to aco of the new style within the compass of the "up" and "down" lines.
The inventor suggests several forms in which, ander different circamstances, the system may be worked.

## OPENING OF A JEWISH SYNACOCUE IN

 MIDDLESBROLCH.On a site in Brentnall-street, the foundation stone of a Synagogue has been laid in Middles hrough with fitting ceremony. The sito runs between Brentnall and Baxter strects, 100 ft . by 44 ft , and will contain in the basoment a large kitchen for the "reader" (who it is intended hall reside on the premises), hath room with Miva" or dip, pantry, closets, and other conveniences, and is approached by a flight of stone steps through two arched doorways flanked with brick piers and stone capitals, with an ontrance-hall 12 ft . square, laid with Webb's encanstio tiles to a pattern, out of wbich are the entrances to the committee-rooms, staircase to gallery, synagoguo proper, and reador's sitting room. The commitiee.room is 15 ft . by 12 ft , and will also bo used as a ladies' cloak-room The synagogue proper will be 32 ft . square, and is laid out with the intention of inclucing an additional 32 ft . as soon as the room is requited It will bo seated for 132 male adults. On the ground floor the seatings throughont will be of pine, and the seats will have solid ends, penelled ronts, and book-hoards. The whole of the interior woodwork will be stained and varnished
The Almemar (or reader's desk) will belighted by eight small standards, and a star or sun light pas brackets will from the contre. Twelve The synaregus is lirhted with sir the galleries headed windows on the ground and fourtonlar. the gallery floor. The fround and fourtoen on the gallery Hoor. The first floor is approached rail to architect's design, aud is lighted by and windows with margin lights. aud is lighted by oricl 12 ft . in height, will contain a large room will be ing, and a schoolroom 25 ft by 12 ft land.
room is lighted with two double windows, witb a front aspect, and one facing the yard. It is estimated to hold npwards of fifty scholars rccording to the regulations of the Educational coard. The gallery of tho synagogue is appallery from the landing on tho colume and is seated for 120 female adults. The seats will be similar to the ground foor. Tho sallery front is panelled and finisbed witb tep-mil. Tho ceiling of the synyegre will be a constraction A ghater cornice will be rait ronnd the the rav will be a coved ceiling, springing from which with born panelled beams, tho centro having au elo plaster cop is insert and a plastor ears is run ronnd inserted, and a plaster earichment the windows. the windows. The panelled beams have ventithe building will periorated zive. The front of the building will be set back 5 ft . from the street line. At the outer edge of this area there will be a dwarf wall, with stono coping, and an ornamental iron railing. The height of the synagogue, from the pavement to the eaves will be 31 ft ., and from the eaves to the ridge will be 11 ft . The materials used in the constraction will be brick and stone, the front facing to be of red pressed bricks, with Forcett stone freings. The design is Classic in character. The windows are donble, having flat heads with stone column between them, and caryed capitals. Tho syna gogue is ventilated with Archimedian screw ventilators. The contract has been let to Mr Joseph Lord, of Middlesbrough, who is to com plete the work by January, 1874, for 1,650l. rorn tite designs prepared by Mr. E. Tidman quelitect, Middlesbrough. The amoant already thised by public, subseriptiops exceeds 1,0002 .

## DOOM OF THE CITY CHCROHES

 Outwhen, Tear The Bank, in Thread MeedleHall; ; St. Antholm, Watling-stroet; and All Hallows, Bread-street. In the last edifice our great John Milton was baptised, and the "The 20th day of December, 1608 , was baptised John, the sonne of John Milton, scrivener." The font is still in the church. Milton was born in the same street.
A visit round last Sundny showed most of the City churches to be froe of worshippers, except st. Mary Woolnooth, Lomhard.street, of which the late vicar of Holy Triaity, Brompton, the Rev. W. J. Irons, D.D., is the rector. We are disposed to believe thint onr City churches would not be so empty at service hours but for the quality of the ministration.

## IRON IN SUSSEX

Sir,-In reference to a recent notice of the abore suhject in your paper, it has been gencrally supposed that the railing around St. Paul's Cathedral was cast in two different localities on the borders of Sussex, viz., some at or near Lamberhurst, in East Sussex, upon the borders of Kent, and some at Chiddingfold, near Hasle. nere, in Surrey, but on the borders of Weat Sussex.
Haring resided some time in this locality, I have reason to think there were several small ronworks in the neigh bourhood, as Burnfold and Chiddingfold; whether these folds designated ronworks or not I cannot say, bat some persons hink they did, as there are Lichfold, Dunsfold, nd Aldfold. Even at the present time there is cidence of the country roads hariog been repaired with furnace slag. Of course, the iron ore of the Sassex district was smelted with oak charcoal. There are some ponds near Hindhead, apon the Portsmonth and London turnpike road, alled Hammer Ponds to this day; and it is worked byere was a tilt hammer thaners and they Ind
examined they contain about 25 per cent of ron ittlo Tho Clovelond iron ore cong great deal porer. oent of ion and thes contau abont 28.57 per cuantities, and not from the Durbam vast pits. Yot ane brin forn coalBilbos Spur ilooa, Spain, to mix with the Cleveland irou per ton of Cleveland ore ; and also peroxide iron
ore from Northamptonshire, and prohably from other localities. Tberefore, unless the Susse ron ore possess special qualities there is littlo prohahility of its heing used, as its carriage to iron-making districts for admixture would be too expensive; were it near the sca perhaps it might answer to ship it to the north, hut, I look upon it, the carriage would he too great for the
P.S.-I think your correspondent must labonr nader somo misconception about iron deposits near Brighton. I know of no iron deposits except on tho north side of the connty: stil there may be some; but all around Brigbton is of the chalk formation.

RE.OPENING OF ROLLESTON HALL, DERBYSHIRE.
Festivities have recently taken placo at Rolleston Hall, in colebration of tho restoration of the old hall, and in honour of the marriage of Mr. Mosley.
The diving-room and morning-room are re. stored, and the new works alrcady finished con. sist of a billiard-room, 36 ft. long by 21 ft . wide, and commnnicating hy glass doors with a con. acrvatory, 60 ft . long and 40 ft . wide. Thero are also mahogany doors, with plate.glass upper panels in the conservatory, leading to the main passarges and an adjacent saloon, abont 50 ft . long, over 30 ft . wide, and about 25 ft . in hoight, and fitted with oak floor, and gallery or orchestra. This saloon has a roof, with a lantern light, from the sides of which it is wholly lighted, and can he ventilated, supported on ornamental iron principal ribs, with scrolls at the bearings leading down to the caps of pilaster on the walls. The exposed woodwork of the roof covered with parqueterio hy Messrs. Howard Sons, London. The decoration of the walls is not complete, but we hear that marble will be introduced. Near to this saloon is the private ontrance to a snite of rooms ou the ground floor, with cellars below, fitted witb Farrow \& Jack. son's iron bins. On the other side of the saloon are gentlemen visitors' offices, baths, de. ; also general offices for men-servants, and their working rooms. The kitchen, which has heen ontirely remodelled, is fitted $n p$ in a complote manner with roasting-range, ovens, hot plates, steaming apparatus, hot table and cleset, smoke.jack, \&c. (furnished hy the Derwent Fozndry Company, Derhy), gas stoves, ven'ilators, \&c. The entrance, or west wing, is still in course of cou. strnction. The external face has a large carriage porch, supported by Ionic columas and pilasters in the centro, with balnstrade parapet, and the superstructnre is of Italian architecture. The plan contains large entrance.hall, or vestibule, in character to suit the front, separated from the inner hall by opaque glass and mahogany screen with folding doors. The floor is to be laid with squares of markle to pattern. The inner hall will contain a rich oak staircase, now being prepared hy Messrs. Slater, of Derhy. landing (ahont 11 ft . in width), it contimes on each side to the pper landing. foot and landings are six large hronze firures (supplied hy Messrs. Haywood, of Derby, and made expressly for the purpose), cach support. ing a cluster of gas. lights. The hall has a large ing a cluster of light at the top, and a coved coiling lantern light at the top, and a coved coiling
beneath the whole. The walls will contain a large numher of family portraits and pictures, large number of family portraits and pictures, forming a gallery. On either side on the npper the principal entrance is the librery nearly the principal entrance is the library, nearly 40 ft . long and 22 ft . wide. On the south side besides a smaller room, is the drawing-room, ahout the same size. The chandelicrs in the conservatory and all the principal rooms are Benham Co.'s patent, which secure perfcet ventilation, and are supplied with fresh air from the external walls. These have been put up under the superintendence of Mr . Church, dis. trict manager. The passages, staircase, and rooms generally are warmed by hot water, and lighted with gas, for which purpose new works have heen erected just outsido the park. The sonth front is 250 ft . in length; the west, 115 ft .; while the whole of the bnildings, \&c., occupy just one acre of land. Along the south front of the hall a terrace has heen formed, with broad gravel walk, having on either side vases filled with flowers, and monated on stone bases. The gardens, lawns, and grounds generally, as well as the glass house日, which are very extensive, and the produce large, are all in order. All
the gas works and fittings, hot water gnpply, and plumber's work have been executed by the briclecmp, of Derby. Me. Dptron has aonc the joiner's work ; hr. Forbes a portion of estate, with their foreman (Mr. Rushton) are completing the remainder. The painting and decorations have also been executed hy the men on the estate, with $\mathrm{Mr}_{1}$. Rushton (brother of the foreman) as head of the staff. Messrs. Clarke of Burton, have cxecated the mason works, and Mcssrs. Bird \& Dyer, of Ashby.de.la Zouch, the plastering. The whole of tho works throursout plastering. The whiole of tho works throughout direction of Messrs. Giles \& Brookhouse, of Derby, architects.

FOREIGN LOANS AND VENTURES
ehe writer thinks this a fitting opportunity to direct attention to the enormous losses that have been sustained by this country under this head; he moreover trnsts that Government may initiate plans for the employment of surplus capital and gavings in the reclamation of waste lands, the cmhanking of rivers and coasts, and works of publio utility, in place of investments in the sinking funds of Foreign Loans, at present as rifo as ever.
Some time hack he was induced by a relative to invest nearly 2,000l. in Anmerican State Stock Securities: be received two dividends, and the principal is now hopelessly gone, althourd the faith of the Sovereigr State was inviolably pledged.

Previonsly to another exodus of British capital, let holders of money reflect whether an secure, at all events moretry may not he more HERNE BAY.
The preservation and reclamation of the coast ine hetween Herne Bay and the Reculvers is becoming a serious question. The inroads made hy the sea, and the want of land drains, are making ravages that can only be met by the erection of a proper "sea emhankment wall," and the trimming of the slopes of the ground to 150 ft ; ; and a carriago road might he formed in connesion with the sea.wall, of say 50 ft . in width.
Some remariss in your colnrang, some time hack, have apparently been attonded with good reaults. May we hope that the attention of the proper anthorities -query, who are they? -will be directed to the "preservation and roclama tion " of the coast line of Englaud.

Cavexdo Tutus.

## BOARD SOHOOLS.

Croydon.-The Bynes.road Schools, the first get of achools erected hy the Croydon School Board, have been pablicly opened. The total numher of children belonging to the Bonrd's schools is 999. The group of buildings, which are yelow stock hricks, relieved by Bath-stono ressings and red bands, hare heen erected by 11 . Hyde, under the superintendence of Mr . . Berney, architect. They consist of two residences, one for the head-master; and the schools, when are divided into fonr sections,--a senior boys, a senior girls', a junior mixed, and an 51, child school,-are designed to accommodate 5 h. children, of which nearly 200 are already on the hooks. A spacions playground is attaohed to each school, and a covered shed has heen pro. vided for wet weather. The rooms are fitted ap With the necessary school appliances, and the arrangements for lighting, heating, ventilation, and drainage are of approved modern character Liverpool. The first of the School Board's temporary schools has heen opened. It is sita. ated in Lovelane. The construction of the huilding, which was designed hy Messrs. Reade \& Goodison, architects, is peculiar. It is almost entirely composed of American spruce, and is capable of heing remaved from one site to another, whenever occasion may require, with out damage. In fact, with the exception of the glating, the whole may be taken down and re. crected withnut driving or drawing a mail. The whole is constructed in sections of 10 ft . long so that the schools can be leagthened or shortened at will. The original atructnre has indeed, been already divided into two parts, one of which is already finished, in Love-lane, and
intended to accommodate 400 pupila. The ther is placed in Mill.street, and will hold 300 we contract price for the work was $1,145 \mathrm{l}$, and Liverpool.

## SLIGHTLY DEFECTIVE RAILS.

Sir, -Apropos of the shockjng waste of life by railway accidents at this moment, I have just read in one of our most largely circulated Morthern newspapers the snbjoined advertisement, which, under the most anfeigned hope that it may be capahlo of some other and poss gibly more technical interpretation than that which I am compolled to put upon it, I leave to the meditation of your readers who are in the slightest degree interested in the vital questions arising from railway accidents :-
7 ightly defective, of various sectious and weights, from $7 i g h t i y$ defectice, of warious seetious and weights, from
30 lb . to 80 lb . per yurd,-Address," \&o.

THE TRADES MOVEMENT.
Messrs. Jackson \& Saxw, hnilders and con tractors, of Earl-street, Westminster, were Reuben Lee, one of their stonemenons, hy 2s. $4 \frac{1}{2} \mathrm{~d}$. due to him as wares. Mr. Morton harrister, appeared for the complainant, and ir. Braid, chief foreman, represented the firm It appeared from the openiag statement of he counsol and the evidence of Lee, that the omplainant had been in the service of the lefendants for eighteen months. When he first went the wages were 8 d . per hour, hut after. wards were raised to $8 \frac{1}{2} \mathrm{~d}$. In Jaly of this yean a deputation of the men employed at the nem Midland Motel waited on Messrs. Jackson \& Sbaw for an increase of waces to 9 d . Messrs Jacksor \& Sbaw gaid they wonld he guidod hy the decision of the masters' meeting and that decision was that from and after the first Satur day in Ancust the pay should be at the rate e dd. per hour. On the 9 th of Aucnst some of the men wero paid 9d., but tho complainant, with out any cance heing assigned, only 81 , with tho snmmons. These factsed, only $\delta_{y} d$. : hence Mr. Braid admitted that the resolution proved by tho masters had heen onioscel intion passen Jackson \& Shay who wessrs lackson \& Shaw, who wero paying tbe best 8ld yard were paid from 6d. npwards. Mr. Morton said tho man had drawn Eirst.class per for eaighteez months. Mr. Braid said, after the eignteed months. Has settled the complainant left the job foreman in the yard. Mr. Arnold said, if the firm had not intended to pay the complainant firm had not intended to pay the complainant
9 ., they should havo had a contract to that Sffect. effect. Mr. Braid said that was impossible This was a case, aud would overn hundreds of others, and the case was that Ithe Socjety of Masons, not of the rann Lee Mr. Arnold agreed that it was a very important ase, and it was very hard that the master or any one should pay for work not done; still, the frm had agreed to pay the advance, and had shown to oxcuse for net doing so. The case was
extremely clear, and he wished one of the firm extremely clear, and he wished one of the firm had heen present to explyin the circumstance. Tho defendants would have to pay the $2 \mathrm{~s}, 4 \frac{1}{3} \mathrm{~d}$, and 22. 2s. costs.

## WATER FOR LONDON.

THe water cxaminer, Mr. Frank Bolton, in is last report, says that the Kont Company are giving conssant supply of water to ahorat , 000 bouses in their digtrict, situated in the arishes of St. Mary, Rotherhithe, and St. TaIl and st. Nicholas, Deptford.
The New River Company have now the power of affording effective constant sorvice in their district. They bave also commonced a new igh-service covered reservoir to contain $1,000,000$ gallons at Southgate, in anticipation the requirementa of the water sapply to Edmonton parish.
The East London Company, in accordance with their notice previonsly given to a special istrict of 6,328 honses, tarned on the constunt upply on the 20th of Narch. The distriot was intogether unprepared for the constant supply, and the Company has had to overcomo the tardiness of the small landlords by cutting off the water supply of nearly 500 houses in this block,
and the ownors of snch houses have thereby heen compellcd to amend tbe fittings. Tho district is under rapid improvement, and the tenants are graduall The Southwark and Vauxhall Company are constructing covered servico reservoirs at Nunhend, to contain $18,000,000$ gallons, and are orecting additional engine power for high presorecting additional engine power for high pres-
smre constant supply. Additional boilers and snre constant supply. Additional boilers and
works are also being constrncted at Hampton. Works are also being constrncted at Hampton.
The West Middesex Company are giving The West Midalesex Company are giving
constant sapply to a number of bonses on the application of the owners, who havo provided tithings according to the Board of Trade regula-
tions of propared to extend tho constant supply when called upon. This Company is also construeting additional engino power at Hammersmith and at Hampton to ensure effective oonstant sapply. The Grand Junction Company havo completed a high service reservoir near Kilburn, to contain
$6,000,000$ gallons for constant snpply, and are $6,000,000$ gallons for constant snpply, and are
now laying a line of main pipes to connect up now laying a line of main pipes to comnect up and are likewise erecting additional boilers and works at Hampton,
The Lambeth Company are earrying out ex. tersions and improvements in their works. At Molesey, the construction of reservoirs is heing proceeded with to contain $110,000,000$ to
$120,000,000$ mallons of water, with pumping engines to fill them to a level of 12 ft . abave the river.

If the following clause of the Board of Trade Regulations, 1872 , relative to waste-pipes is carried out in its integrity, it will prevent contamination of the water from the gases penerated by seware, which are extremely liable to flow back into the cisterns and become absorbed by the water.
Regulation 14. "No overilow or waste pipe other tha
B 'Wanning-pipe' shall be attached to 'Warning-ppes shall be attached to any cistern sip.
plied with water by tho company, aud every such overitiow pr waste pipe existing at the time when these rcgulations
come into operation shall be removed, or, at the option come into operation shall be removed, or, at the option Warning-pipe, within two calendar months next aftel the compeny shall have given to the occupier
The particular object of the above is to prevent any waste of water, bnt it will also effeet an object of far greater importance by getting rid of tho poisonous eftluria and gases from the drains which would otherwise ascend through
the pipe, and not only be partly ahsorbed by the water in the cistorn, hut bo partly mixed with the air in the honscs, thereby becoming a cause of fever and diseaso.

NORIH SURREY DISTRICT SCHOOLS, ANERLEY.
THeste schools, which last year snffered much from ophthalmia amongst the ohildren, are about undergoing considerable alterations, with a view
to stamping out the disease and providing against its spread in future. The existing buildings are to be thoroughly cleansed and disinfected, and means taken to secure more perfec reutilation.
A new swimming-hath will be constructed, in addition to ordinary baths, and the washing of tho children will take placo under jets o water constantly running, basins boing entirely
aholiahed. New play-sheds for boys and cirls, aholiahed. New play-sheds for boys and girls,
achool and class-rooms for infants, workshops, school and class-rooms for infants, workshops, and extenderl playgrounds are also to he provided.
The works are being carried ont, at the sugThe works are being carried ont, at the sug-
gestion of the Local Government Buard, at cost of over 10,000 l. Mr. A. G. Hernell is the arolitect.

## THE CHILDREN'S HOME,

The Lancashire branch of the ahove institution, at Edgeworth, near Bolton, was formally inaugurated on Satnrday last, the 30 th of August, when a memorial pillar was placed in its position in a conspielous corner of the gronnds
by the Rev. W. M. Punshon, LIJ.D., in the pre isence of a large conoourse of people. On the same oconsion the corner-stono of a new hollse for girls was laid by the Rev. Charles Garrett, Wesleyan minister, of Liverpool. The third house now boing erected will be a detached building, and is intended to be a house for a fatuily of girls, who will be trained in launery work, and will have suitablo outbnildings erected, and drying.grounds, \&c., attached, fer cancying on that work. This house, with
outbuildings, will cost upwards of 1,000 . contributed or collected by tho children of the Wesleyan ministers in England and Ireland, and will be known as "The Ministers" Children's Gift-house."
Additional farm-huildings have also boen ercoted, and a house for a farm bailiff is in course of erection, in addition to those already named The whole of the buildings aro of a plain but substantial of stone got from a quarry on the estate. The of stone got from a quarry on the estate. The
works have been carried ont by local contractors, nader the direction of Mr. Thomas Ormrod, architect.

## A NATIONAL SOHOOL OF ART.

Sir,-A national school of art, as England is at present constituted, is a moral impossibility No country in Europe,-in the world, -has at the present moment more schoola and machinery for art-instruction than England; but England is too soctarian, too divided in its foundations of thought, for that at-one-ment of opinion and parpose essential to develop a national art, a school in the same sense that the Grecian and Italian schools were national schools of art. We hegin by grafting instead of growing, and "marry a gcion of a nobler stock to bark of baser kind," and the consequence is that we get neither the native crab nor the splendid old fruit, but a hybrid, which advanced taste prononnces unsatisfactory.
If, however, we wonld only be patient, and grow art from the very seed and root, and ont of some future unification of opinion and purpose school of art in courso of time, axiom, and I have intently studicd this sub. ject, is that in order to obtain a school of art such as desired, we must first look to the national school for intellect, and see that our system of general education is right. If this is right depend upon it art will take care of itself.
W. Cave Thomas.

## COVENT GARDEN.

Place of wondrons recollections, Noblo deeds and imperfections, Haunts and homes where art and finoy, Liver and moved, and hancy, Lived and moved, and had its being, Hallow'd Lround of facts and fabl. Hallow'd ground of facts and fables, Antique crypts and crowfoot gables,
Churches, sohools, sud hatls of lecture Churches, sohools, and hatls of lecture And dead and living architecture; Works begot of men's bigh caltar Still outliving their sepulture Shorn of Howers our hearts would harden, Bless thee for them, Covent Garden

## "A NTT FOR CHICHESTER."

 Srr, -r opened my Buidder this morning in the hopeindiug some reply to your correspondent "Gargoyle" but none having appenred, permit ne a ferw words. begin:- सe is not very happy in his nom de plume, for it
is clear that either he haa nover fisited the city ho has undertaken to lectare on matters sanitary and architec.
tural, or, as bis name would imply, he has viewed it from so lofty a position that his sketeh, he has fiewed it from hy those who really know it. Ho telle wa that ", jt stands
on a gravelly flat, and that the houses are bailt of the largest (sic) boulders from this pravel." Now, sir,
Chicheter is brilt almost entively of brick, chiefy ret, and notsbly has two or three houses of thut material, of
Anee eleration (said to have been built hy Sir Chriatopher Wren), nor can I at this moment rememher any bult
the "largest boulders." Eastostreet, as he admita, is
noble one. Unfortnaately, as in many other town
 that modern abomination cemant; and although its arch
tecture camat be said to be of a very hight order, yet there are few more picturesque cities, Its four streets
of unuanal width, meet at tbe exceedingly beautinu
market cross, which has recently undergone considerable market cross, which has recently undergone considerabl
improvement. The unsighty iron railing so long enelos mprovement. The unsighty iron railing so long enelos
ing it liss been removed; the stone steps and psring are
restored, the former giving it a well. detined base line restored, the former giving it a well. detined base line;
and it is hoped that reviving thste will ere long decree the
removal of the white olock removal of the white olock dials and other distigareenents
which now so mar tis beauty, I will pass over his re-
 proportioned. The chief charge against tus, however, in that
we are a dirty eity. Now, sir, I am no de fender of dirt, and here permit me to sclnowledge hoor rauch wo are all
indebted to the Builder for the sanitary lessons solon and ably taught, - lessons, I truss, not alkogether lost on
us,-but this charge is contrary to faot, and let me suy that us,-but this charge is contrary to fart; and let me say that
the "stranger passing through" wfill not bo offcnded
either in sight or smeil. We bave an unusual amount of open space in proportion to our area; indeed wo hav been called a "cily of gardons"; and in old coaching
dass I have heard it said that we wro celobrated for
pretty faces, clean pavements, and windows. We prettuinly no moderu oystem of deep drawa, of ; but this
question, in connexion with of her sanitary mattors, has
been mnch debatod, and it is doubtful whetber, in the
present not very enconraging state of things exhibited in Dther cities, our governing hody would have shown much Hisdom in adopting extensive drainage works. Let it not bo supposed, however. that we are quite so lethargie bs
represented. Mr. T. Hawsyley, one of our most eminento engineers, has been the adviser of the council, and we have removed from the streets our large cattle-markot; and,
under his superintendence, congtructed, at a cogt of under
15,000 ,., one of the finest $t$ and best-s rannged markets in England He states, in his report on tho sanitary conheen unjustifubly charged dith being an anhealthy and ancleanly eity." A BIII has just been passed for the consanitary of waterworls; and the recent reports of our rience, are singularly favourable, showing ang and oxpethose diseases of a zymotio type which so surely follow a eturn of last quartcr is one that few oities can boast. The Largut atream, as its name implies, is intermittent, petent enginoer, with a view to its improvement; bnt until very recently a full volume of water has heen howerar, that our goveruivg body will not negleet this
important master. As to onr social shortcominga, the artizan olass, or as he pleases to call them, the "great unWashed, ', aro neither worse paid nor are they worse conducted than in other towns, nor is "property valuelcsa." ho fully recognise our grest want, that of new houses inquiries for them are frequent; hat to bulld bouses we must have land; and, sir, if you will walk round onir city, you will find that nesrly all the building land is in the astieal Commission, Lst these lands be enfranchised on fair and equitsble terms, not on their o wn valuntion, and our critio "Gargoyle" will perhaps see, as in other places, selves as others see we," and fsir eriticism is at all times ngeful; but $I$ trust, sir, you will admit that we are not quite is benigbted "nor so blaok as we have boon painted. * * Eren if we go so far as to admit the "not quite," wo must still oarrestly edrise Chichester to set itself attempt to defend its present condition.

## GRINDING MORTAR.

Str, - Most of those who, like myself, are connected with the building trade, must have commented on tha
frequant insertion in architecta' and engineors' specifications of a elause to the effeet thst the mortar used in the
building must be ground in a mill, Now I should like to boilding misst be ground in a mill, Now I should like to in the ordinary way. It think it questionable. Wre know thast in the best of lime there are certain hard lumps,
unyieding to the water, and destitute of all the properies unyieding to the water, and destitute of all the properties
reqnisite for forming cood mortar, which the men affrays reqnisite for forming good mortar, which the men always used, these
and bamps are never extrscted, but the lime, good
all ghot in end mixed up together. Doubtlogs and bad, is all ghot in and mixed up together. Dobbtloss
this method is not so wasteful and even more coonomical this method is not so wasteful and aven more cconomical
for the contrator, but is it oaleulated to produce as
otrong and durable work for the omper in whose interesta I suppose the clanse is inserted? $?$
strong and in whose interests
A, B.

## CHURCH-BUILDING NEWS.

Huttors. - The new church of Hutton has been consecrated by the Bishop of Rochester. The edifice is robuilt upon the old foundations, save that the chancel is an extension over and beyond the anoiont site. The hailding is entirely new, except that the old tower and porch have been
restored. The former is done up with new oak restored. The former is done up with new oak
shingle, and contains the old five bolls, which shingle, and contains the old five bolls, which
have been relung. The porch is of ancient oak have been rehung. The porch is of ancient oak carving, elevated on a new hase, and restored in accordance with its former character, The edifice is in the Early English atyle, with flint walls and Bath stone dressings, and pointed arched windows, several of which are filled with stained glass hy Messrs, Clayton \& Bell. The interior is divided into chaucel, nave, north and south aisles, and there is separated from tho chancel, by a carved oak soreen, a sonth chapel, and on the north side are the organ ohamber and vestry. The steps leading to the altar are in Mansficld stone, and the chancel and aisles are paved with Godmin's tiles. The roof is open. timbered, in oak, with oak boarding upon the rafters throughont the nave and clianoel. Below the line of the east window the chancel is decoated with ormamental tiles. The seating is by moans of plain oaken benches, and the evening ighting by bruss candelabra. The woodwork was left as it came from the joiners' tools. The Cross of Was Mr. Strect, and the huilder Mr. did the stonework for Mr. Cross. The cost of the huilding emounted to 2,500 ? of whis 2,100\% were subscribed prior to the opening , 100 . were subscribed prior to the opening. The wing ere than a pinarer of an a, of ncinding there ma, on granted to make an addion to the hurial-ground. The cw portion has, with tho old, been inclosed within a ring fence of oak. The stained winows referred to are six in number. The west Adoration of the Wise Men from the Enst, and Adoration of the Wise Men from the Enst, and
the Presentation of the Infant Savionr in the

Temple，is the gift of Mr．OMin，of Hutton Park． That in the south aisle tells of the Conversation of Christ with the Samaritan Woman of Sychar， at Jacoh＇s Well，and was presented hy Mrs． Baker，the Lady of the Manor of Hutton．In the chancel aisle，in memory of two infant chil． dren，two windows have heen placed by Mr． Johnson，of Hutton，one representation being that of the Virgin and Cbild，and the other the Good Shepherd；while the south window in the sacrarium，which represents the Visit of the
Holy Women to the Sepulchre on thc Morning Holy Women to the Sepulchre on the Morning
of the Resurrection，was presented hy the wife of the Resurrection，was presented hy the wife
of the rector of the parish．The large east of the rector of the parish．The large east
window，consisting of three lights，contains the representation of several of the principal inci． dents recorded in the story of the Cruciexion of onr Lord，and seems to bo an offering in memory of a pilgrimage to the Holy Land by the rector． Frickley．The church of the villages of Clayton and Frickley has been reopened after having hcen nearly rebuilt at the sole expeusc of Mr．W．Aldam，of Frickley Hall．The walls were cracked and rickety，the roof far from perfect，and the whole falrio in a very dilani． dated and unsightly condition．Most of the walls have becn rebuilt，the interior partly exception of the west end of the charch and the ancient Gothic tower，most of the edifice is now entirely new．In the interior of the church the old Norman arch leadine to tho chancel is still preserved，hat thoroughly cleaned．Two other ancient arches，said to be of the thirteenth cen． tury，also remain as in former years，hut the south transcpt arch has heen rehuilt．Most of the roof，particnlarly the portion covering the nave and part of the chancel，was found to the whole of the repairs tho ancient style of architecture has heen adbered to．A new hap． tister＇y has been added for the accommodation of the old font；the floor of the room heing laid Wit encanstic tiles．All the south transept has heen rostalled，and the old pews made to look like new．The architect selected to carry out the work was Mr．G．Williams，of London，and Doncaster．The cost of the whole was about 2，500t．

## DISSENTING OHURCI．BUILDING NEIVS．

Dripheld．－The fonndation－stone and somo special hricks of a new Primitive Methodist Chapel and Schools have heen laid，on a site recently purchased in George－street．The chape is from designs hy Mr．Wright，of Hall，archi－ are ：－Mr．M．Gage，hricklayer；Mr．T．T Dickinson，joinor；and Mr．J．Hickson，stone． Dickiuso
mason．

Harl Harlestone（near Northampton）．－The founda tion．stone of a new Baptist chapel has heen laid at Harlestone．The eld chapel and site was taken by Earl Spencer in exchange for a piece of land midway hetween the two portions of tho villige，and which is sufficiently large for the erection of a chapel and for a hurying．groand． The plans for the chapel were prepared hy Mr： Ingman，of Northampton，and the contract for its erection was given to Mr．G．Hall，of Har． diugstone．It will be a plain，unpretending strmeture，built of the local stone；and，when completed，it is ealculated，will afford sitting accommodation for ahont $\mathbf{I} 50$ ．Its floor mea surement is 31 ft ．by 24 ft ．It will have an open roof；will be lighted hy side，hack，and flout windows，which are to he filled in with green－tinted glass；and will have open movahle seats，the ohject heing to readily remore them， so that the epace may be convcniently arranged for toa festivals．The total cost will he about 2501.

Rralford，－The range of bnildings erected in Harris－street，for the congregation who have Hitherto worshipped in Sion Baptist Chapel， Bridge－street，has heen opened，with a pablic prayer－meeting，in the large school－room．The modate the people and scholars，and henco the necessity for new haildings．The chapel and schools have heen erected from the desions of Messrs．Lockwood \＆Mawson，Brudford．The chapel，which fronts to Harris．strest is in the Italian style，and in the rear are a large school room and nine class．rooms．The proportions of the structure are large．The front is composed of Corinthian columns and pilasters，supporting
an ornamental pediment，the tympanum cos taining the name of the chapel and the date When it was erected．A flight of steps leads to a roomy vestibule，in which are the gallery staircases，and the entrances to the body of the chapel．Two other doors，at tho ends of the vestibule，facilitate the means of entrance and exit．Two other staircases are also provided，hy Which the galleries can he gained from the rear The chapel will seat npwards of I，200 people The fittings are all of pitclı．pine，varnished，and the pews are so disposed that the whole congre． gation can see the minister．Ahove the baptistery is the pulpit，and the haptistery is so placed that as many peoplo as possible can see the act of immersion．Behind the pulpit is the choir gallery and a large recess for an organ．The chapel is well lighted．The front of the gallory ironwork，gilded．Light is mained at night from sunlights in the ceiling and from pendants ander the galleries．The ceiling is panelled，containing ormaments，and round the walls run a frieze and cornice．The large schoolroom is lighted from the top and sides，and hy the romoval of sliding－doors a room at either end can he added to it．In the basement are the chapel．keeper＇s house，heating apparatus，and other conveniences， The entire cost will be alont 18,000 l．The con land；for masons＇work were Messrs．Bean terers，Mess，Messers．Illingworth \＆Son；plas chapel is surronnded hy an iron palisadiug．

Professional Papers on Indian Engineering．2nd Series．Edited by Major A．M．Lang，I．E． Nos． 7 and 8．London：Spon \＆Co． 1873. TaEse papers，printed and prhlished at the Thomason College Press，＂Roorkee，are issued quarterly，and if more particularly useful in India are interesting in England，as showing the suhjects which occupy our engineer elficers in India，and the progress of some of the phhlio works．No． 7 bas as frontispiece a photograph of the Mysore pnblic office，Banga－ No．8，one of the Delhi clock．H．Sankey jand and built by Mr．E．J．Martin，of the Rajpoo． tana State Railway．Of the latter we have an engraving in hand，and rwill hereafter give some particulars of the work．The offices of the Mysore Government，at Bangalore，form a large building，with wings and a central hlock，in the whole 636 ft in length．The con－ chactors were Messrs．Wallace，Bumselal Abeer． greater part of No． 8 is occupied with a＂His． tory of the Water．Supply of Bomhay．＂
Wo have sereral works before ins connected with India，particularly Lient．－col Medley＇s usc＊ ful lectares on＂India and Iudian Engineering，＂ and Lieut．－col．Tyrrell＇s＂Puhlio Works Reform in India，＂and will find another opportunity o speak of them．
The architect and engineer must play im． portant parts in india for a long time to come， and much will depend on the way in which they
do so．Enormous interests are do so．Enormous interests are at stake．

On the Arrangenent，Cave，and Operation of Wood－working Factories and Machinery，form． ing a Complete Operator＇s Mandbook．By J．
Richards，Mechamical Engineer．New York and London：Spon． 1873.
Mr．Richarys is tlie author of a treatise on Wood．working Machines，noticed at some leugth in our columns at the time of its publication． That treatise is supplemented hy the less expen． sive work now under notice，directed to the care and management of snch maohines，including the plans of arranging and eqripping factories or wood－work，and particularly the details with work the practical workman has to deal．Th but is by no means a compilation，this author＇s previous werk heing the fire an the kind．The present treatise moreover is their more than a mere operative＇s handbook for the care and management of wood．Working machiues．
If wood－machine workers will only look into this volume，they will find something decidedly to their advantage．The information given is himself，and personal experience of the atthor himself，and is not gleaned at second－hand from

Elements of Mineraloyy．By Jabres Nicot F．R．S．E．，F．G．S．，\＆c．Second edition，illus－ trated．Edinburgh ：Adann \＆Charles Black 1873.

Tris treatise，which contains a genoral in roduction to the soionce of minerals，has been improved，in the present edition，as the author states，by new matter and care． ful rovision and correction．The call for a new edition shows that it has been appreciated． In the last few years important additions have beca made to the scienoe of mincralogy．Its facts and principles aro here stated in the smplest language which the author deemed cousisteut with scientific accuracy．It treats of the chemioal as well as physical properties，and the crystalline forms of minerals，their classifi． cation，and a description of mineral species．

## VARIORUM．

The new part of the＂Journal of the Royal Historical and Archrological Association of Ireland＂contains an illustratod account of the ancient cemetery of Kille日n Cormac，which antil a few years ago liad heen nuacconntahly overlooked．An existing mond appears to have heen triple．terraced and crowned by a primi－ tive ohuich．Beforo the introduction of Chris－ tinnity，Killeen Cormac was nsed as a placo of Pagan sepulture，evidences of which appear to remain．－The Contemporary Revieve is meant for the thinkers and searchers，and discusses all sides．Thus the Soptemher Numher，while it contains an important article on the study of Sociology，hy Mr．Herhert Spencer，includes another，signed St．George Mifart，to prove how very wrong Mr．Herhert Spencer＇s chief views are．Out of collision，the truth is to be hoped for．－The value of Hardwicke＇s Scrence Gossip is well kept up．The September Numher con． tains some capital matter．In the Antiquary， Mr．Walter Thornhury continucs his accounts of London Riots．Those hrought ahout by John Wilkeg， 1763 ，are now engaging him．The People＇s Mapazine，the Leisure Hour，and the Sunday at Home，all contain their usmal amount of safe and pleasant reading．The principal story in Cassell＇s Magazine＂Hoster＇s Promice＂ is gathering to an end，and with increasing interest．

## 篂tiscrllanea．

Leeds Theatre Royal．－This theatre has been redecorated，papered，and painted．The new ceiling is elaborate．Round the centre light is a band of hlue，from which spring twelve circles， each circle heing cosped to a centre patieru，the points of the cusps studded with gold stars The circles are agrain inclosed with of hlue，hordered hy red and stadded hy gold stars． The ground of the ceiling is a warm vellum，the whole being finished hy a broad soffit ormament in green，red，and gold，on a hlue ground．The square inclosing panels are in white and gold， picked out with red．The cove of the ceiling is diapered in vellum，chocolate，and red，springing from a band of leaves in green．The walls of the upper hor．stalls are tinted a green shade， with Pompeian red dado．Tho walls of the private and family hoxes are intended to he draped with crimson and gold curtains．The pit walls hare been hnly witl a choice paper． The prosconium is in white and gold，with delicate tints of grey nod warm red．The fronts of the boses aro decorated with a diaper of green quatrefoils and gold ornament．The hox． entrance and staircase－wails are painted a delicate shade of green，and have a dado of chocolate and gold．The decorations have heen carried ont hy Bessrs．Wood \＆Sons，of Sher． wood＇s Yard，Leeds，from drawings supplied hy Mr．J．R．Watson，architect．Mr．James Wood， of St．Columba－street，has exocuted the genoml alterations．
Scarlet F＇ever from a Dead Horse．－ Scarlet fover having attacked a whole family at the port of Amblo，one of whom has dicd， Dr．Easton，the medical officer of health，has reperted to the local authority his belief that the fever was produced from the family residing near a pond in an old quarry，in which was floating a dead horse．The family lived over a hoat－house on the links，and heing quite isolated， the fever has been confined to the inmates． Orders have been given to preveut dead animals
being thrown into the pond being thrown into the pond．

Dyers' Mall Wharf.-The huildings here are approsching completion, and the Metropolitan gives some particulars. The land has a frontage
towards the river of more than 100 ft ., and a depth of 120 ft . Reekoning up tho area of the depth of 120 ft , Reekoning up tho area of the used for tea-warehouses on the npper stories, and for wine-vanlts bclow, we get a total surface of two acros and a half. The works have been II. \& J. Eastman, architectg, by the contractors, Messrs. Crockett \& Dickenson. The hasement is laid with asphalte, by Mr. J. A. Lawford, of Leaderhall-street. The publio passage, with fhich many of our readers are doubtloss familiar, as leading away from the landing-place of tho river boats on the right, has been lined
with white glazed tiles. As a motropolitan with white glazed tiles. As a motropolitan
improvement of detail, we may recommend this improvement on public authorities who have "dark entries" to deal with. The tiles were supplied by Mr. W. England, of Bnry-street, Oxford-street. The iron girders and joists of Gracechureh-street. A contrast of colours in yellow and dark-red hricks marks the front; long piers lof yellow bricks, with the windows inter-
vening, and the space hetween head and cill fitted iu with rod; wlisle round the pointed arehes that surmount the varions hays there runs a single line of blue Staffordshire bricks The facing is of Medway ganlt bricks from the West Kent Company. The cast-iron colnmns roquired in the erection, weiphing altogether about 350 tons, were from Mr. Thomas H. Head,
of Cannon-street. The regulations of the new of Cannon-street. The regulations of the new
Act for constant supply by the wator companies Act for constant supply by the wator companies
liave been complied with by the adoption of fittings from Mcesirs. Tyler \& Son, of Newgatetreet; and somo terra-cotta enrichments and decorations have been supplied by Messrs. Doulton \& Co
The st. Gothard Tunnel. - The route through this tunnel is designed to carry the traffic of Germany and Northern Earope to the Mediterranean hyavoiding France, and, to further the project, Germany has contrihuted twenty millions of francs, Switzerland a like sum, and Italy thirty.five millions, the rest being made ap hy tho shares of private individuals. Whilst the liont Ccnis tunnel is $5 \frac{1}{3}$ miles longs that of St. Gothard will bo $9 \frac{1}{2}$ miles. The whole way
from Gösehenen to Anstag will he one succes. from Gnsehenen to Anstag will ho one succes-
sion of hridges and viaducts. The workmen, mostly French and Italians, number at present mostly French and Italians, number at present
some thousands, on hoth sides of the mountain; some thousands, on hoth sides of the mountain;
but it is hoped that shortly twico that number but it is hoped that shortly twico that unmber
will be employed. The boring is conducted ou will be employed. The boring is conducted ou
exaetly the same principle as it was on the Mont Cenis, aud is worked, as there, by hydraulic power, which, however, is not yet strong euough.
The line will be in working order, it is estimated, The line will be in working ordcr, it is estimated, in seven years. The routo will probahly join
the Italian system of railways at Camerlata, and the Swiss at Zarieh, with a hranch line to Luecree, and the tunnel will pass exactly below the parish church of Andermatt. The project will, it is helieved, completely eclipse the Nout Conis route, for two reasons : first, becausc this will xaise Brindisi to the levol of Marsoilles, and will shorten the jonrney to India; secondly, heennse whilst the Mont Cenis route has only a single line of rail outside tho tunnel (the cause of endless bloeks and unpmotuality), this will have two. The enterprise has nothing to fear but the opening of the Simplon route.
The Waxwick Water-supply.-Thehorough surveyor, Mr. Pritchard, baviug prepared plans and a report, as engineer to the corporation for were appointed by the conncil to report ou tho soheme, and havo now dono so favourably, with some minor modifications. The two reservoirs and other works connected with Mr. Pritchard's estimated cost of 15,0001 ., including land but estinmated cost of 15,0002 ., including land but
not water privileges. Mr. Nerton, who was not water privileges. Mr. Newton, who was
present, conuplimented Mr. Pritchard on the excellence of his scheme. Tho supply will
oqual 300,000 gallons i day, or 25 gallons per oqual 300,000 gallons a day,
head for a population of 12,000 .

Ancient Ironworks. - An English gentleman has recently discovered, near the Wells of Moses, by the Red Sea, the remaius of ironworks so vast that they must havo employed
thousands of workmen. Near the works are to ho seen the ruins of a temple, and harracks for the soldiers protecting or keeping the workmen in order. Theso works are eupposed to bo at

New Bowling-green at Heaton Chapel
New and extensive premises have heen opened by tho Bowling.green and Billiard Cluh Com pany, at Heaton Chapel. The premises are the extent of the ground heing ahont two acres A howling. green, measuring 60 hy 50 yards, is separated in the centre of the grounds from the croquet lawn, by a horder, planted with flowers, shruhbery, and young trees. On tho sido nex the Derby-road, the premises are erected for in-door amusement. In the centro is a large pavilion for gentlemen, with hilliard. rooms and refreshment-rooms. The left wing from the rooms, \& $c_{\text {, }}$, and the right wing will be occupied as a dwelling-hoase by the gardener. In the sonth-west corner, adjoining the croqnet lawn, is the ladies' pavilion, and at each side are and the scribers. The opposite comer is set apart for quoiting ground, a wooden enclosnre surrounding the whole. The huilders were Mcssrs, Davison \& Mawdeley, Chorltom-upon.Medlock, and the gronnds were laid out hy Mcssrs. J. Xates Dickson, \& Co., of Stretford-road, Manchester. The whole of the work cost hetween $16,000 l$, and The who
17,000 .

Working Men's Club and Institate Union.-Mr. Buckmaster has delivered a lectur at the Sebool of Cookery of the International
Exhibition to tho members of this union. The Exhibition to tho members of this union. The the pot-au-feu. He had had prepared that evening a sufficient quantity of this dish to give 200 persons a good supper. This was the choapest and most palatable way of prepraring food for the peoplo. He then showed how a good dinner could bo made for a family of five persons, at a cost of $18.2 \frac{1}{2} \mathrm{~d} .,-$ about 3 d . each, 2 d , bread 20 took of some of the potar-feu, a dish of tripo, onions, and potatoes, and afterwards somo stow. Mr. Hodgson Pratt mentioned that, con gequont on a meeting held at tho house of the Marquis of Westminster, a national school of cookery hed been formed, to which all classes wero to bo admitted.
Society of Axts Teclnological Examina-tions.-At these examinations, which have been leld this year for tho first timo, the subjects selected being the manufacturo of cotton, stcel, carriages, silk, and paper, the examiner have reported favourahly of tho following can didates:--In stecl manufacture, W. H. Warren $02^{2}$ Dublin, who obtnins a first-class cortificate, with a prize of $10 \%$, and the offer of a student. ship of 50 t ., griven hy Her Majosty's Commis. gioners for tho Exhibition of 1851. In carriaco building, T. F. Mullins, of Preston, who obtains a first-class certificato, with a prize of 52 ., and M. Nffer of a similar studentship of 507 , ; and certificates and prizos. In cotton manufactnre, Thomas G. Mills, of Longsight, near Manchester, who ohtains a firsteclass certificate, with a prize subjocts will be examinations of 1874 the same glass mannfacture, cloth, pottery and porcelain, and gas-making.

## The Monmment of Victory at Berlin.

 Tho colossal Mounment of Victory, on the King's-square, at Berlin, is now for the most of dark-coloured granite, ornamented with re lievos, stands a round hall in the shape of a temple, also of granite, the roof of which is sup of this rises the principal column, in the interio of which an iron staircase leads to the gallery around ita top. Three rows of gilt, pieces of cannon, taken in 1861, 1866, and $1870-71$, con nected by garlands of leaves, and crowned hy wreaths of laurel, form the ornament of the shaft of the column, the capital of which is ornamented with eagles. Upon a socle stands the statne of Victory, a work of Professor Drake, clevating with the right hand a laurel wreath, and carrying in tho left the victorious banner. The column measures 195 ft . RGrimsby Docks.-The construction of : canal to connect the Royal and the Old Docks at Grinshy has commenced. The work is of some magnitude, and will occnpy two years and a

Trees in Piccadilly and Metropolitan Streets.- Tho vestry of St. George's, Hanover-
square, have consented to a liheral offer of Mr square, have consented to a liheral offer of Mr.
Barlow, a vestryman, to plant trees in Piccadilly Barlow, a vestryman, to plant trees in Piccadilly,
on the footway running from the Hyde Park on the footway running from the Hyde Park are planes, similar to thoso on the Victoria Embankment, and which stand the London smoke hetter than poplar or elm; in fact, the playe species are partial to soot, and the leaves keep green longor than the elm, which rots at the core, and heeomes dangerous to life in ligh winds. The trees standing beside the roadway in Piecadilly were sayed, as our readers may remember, throngh the Builder, some years ago. The example thas set in Piccadilly might very usefully he followed in other parts of London.
Freemasonry in Palestine. - The first Masonic Lodgo has heen organised in Palestino the locality chosen heing the Royal Quarry, heneath tho city, from which may have been taken the stone for Solomon's huilders. Tho New York Horald gives a long acoonnt of the ceremony, and adds, -- It has been demonstrated hy instruments that the floor of this eavern is higher than the surface of the temple site, a quarter of a mile fonth, and as the great stones which still remain in the walls around Mount Moriah unquestionably had their origin in this quarry, much light is thrown by this fret upon had only to of moving them. The operatives theso blocks, which are 20 ft ., 30 ft ., and 40 ft in length, down to their places."

Grift of a Paxk to Birmingham.-Tho Cannon-hill Park,-a gift by Hiss Ryland to the town of Birmingham, -has been opened to the public. By the wish of the donor, there was no opening ceremony. The park covers sisty acres of ground, and has been laid out by Mr. bihson, landscape gardener, London. Pools for deed of conveyance to the Corporation provides that no intoxicating liquors shall be sold witbin the park; that the hoats shall not he used on Sundays; nor shall any bands of mnsic ho played, nor athletic exercises or games be permitted on that day. Mise Ryland has previously made scveral munifieent gifts to the town, its churches, and charities. The value of this latost ift is over 30,0002 .

Bricks and Mortar for Clapham Com-mon.- The inhabitants of Clapham and suhurbs aro up in arms with respect to probably a wellgrounded rumour that Clapbam Common is to ho handed over to speculative huilders. The ponds on the common are now used as a recepaclo for dead cats, dogs, and stinking figh, and no one appears to he responsible for the common, Which has now hecomo a "No May"s Land. mission" will stop the contemplated villas and treets is not yet linown, and it is diffient to find out an owner nearer than the lord of the manor. If the common he dedicated to the parish, the latter certainly ought to keep the ponds clear of the abominations that poison the neighhourhood with fever and cholera.

The late $\mathbf{M x}$. Henshaw. - The will and codicil of Mr. William Henshaw, huilder and contractor, of Nos. 13 and 15 Wharfs, City-road. basin, who died at his residence, Tottenliamlane, Hornsey, on tho 13 th ult., were proved on the lst inst. by Messrs. Harriet A. Henshaw, the widow ; Mr. G. E. East, Mr. S. Fletcher, and Mr. J. W. Clarke, the executors, the personalty being sworn nnder 40,000 t. According to the City Press, the testator gives to his mother, Mirs. E. A. Hertshaw, a legacy of 2002., and an annuity of 50l.; he also gives an annuity to his wife's mother; to his wife he leaves 5001., all his honsehold furniture and eficcts, and one. third of the income of the residue for life; the residuo he gives to his childron.

St. Mewan, Cornwall.-Pablic elementary schools are boing erectod in this parish from tho designs of Mr. Silvanus Trevail, architect, for the local School Board. They comprise a mixed school, 58 ft .6 in . hy 18 ft ; class. room, 18 ft . hy 16 ft . ; infant-echool, 18 ft . by $16 \mathrm{ft}_{\text {. }}$ with the necessary cloak-rooms, offices, \&c. Acconmodation is provided for 180 children, at a cost of $852 l$. 13 s ., including boundary walling, fittinge, Ge., complete. The style adopted is a plain wall Polyte hronze medal or the Royal Corn Mr. Trevail for his designs for the St. Colomh Ceutral Board Schools.

New Process of Iron-malking.-This process, which dispenses with the blast.furnace, has been practically tested, and specimens of its produce shown at Wolverhampton. The bloom is made direct from the ore, which, is appears, is ground, mired with lime and pitch, and baked in a coke-oven. This is treated as pig-iron, and, a furnace being charged with it, it is ready for the helve or the squeezers in half an hour. The inventors claim that hy their process they can inventors claim that hy their process they can make a ton of firished iron from the ore at an expenditure of only two tons of coal; that they and can, hesides, make the latter equal in purity to charcoal iron,

Accident at Tay Bridge.-A fearful accident has occurred near Dundee. The North British Railway Company are engaged in the erection of one of the largest hridges in the word across the Tay at a point where the breadtl nearly three miles. Ten men were engaged doep water at a distance of about half a milo from the shore. The work was boing done on the compression system, the wator being excluded by the pumping of air into the cylinder. The by the pumping of ar into the cylinder. Tho and the water rushed into the aperiore way, result was that six meu wore dromned.

Fungi in a Church Roof. - At the last meeting of the Royal Horticultural Society (Sept. 3), Sir Gfo. Gilbert Scott sent a group of leathery fungi found growing from the interior of the roof of Croydon Charch. They proved to be specimens of Lentinus lepidens, a species considered to be rare in this country until quite lately: it cannot grow without a good supply of leak in the roofe can be little donbt of a seriods recorded the ocourrence of this agaric upon tho fir timber of railway hridges in Wales, and npon the sleepers of the North London Railway iu London, where it has been again seen quite recently.-W. G. S.
Hall-marking of Jewelry.-The Council of the Society of Arts, learning that what is termed "Hall.marking of jewelry and articles of gold and silvor is anadequate to secure to the public that protection in the quality of the materials for which it is intended, have accepted the offer of ono of the members, Mr. Edrin W. Streeter, to place 25l. at their dis. posal, to be awarded as a prize for an essay treating on this suhject, with suggestions for an improved system.
The Painters.-Messrs. Pitman \& Cuthbert. son, in notifying to their workmen that on and after Friday, August the 29th, it was their intention to increase the pay of their journeymen one half.penny per hour, and tho labourers one farthing per honr, alid,-" Wo hope every one will take interest in his work, and exert himself to do his best, that the alteration may be to our satisfaction, and the increase of wages a mataal advantage." We shonld rejoice indeed if such wero the result.
The Science and Art Department.-The number of persons who have during the year 1872 attended the schools and classes of science and art in connexion with the Department is as follows, viz. :-36,783 attending science schools and classes in 1872, as against 38,015 in 1871; and 244,134 receiving instruction in art, showing an incrense npon the previous year of 31,633 , or nearly 15 per cent.

The IIyde Park Menorial.-Mr. Foley's model of the prince Consort statue, for the National Memorial, Hyde Parls, is now completed, and will be forthwith executed in bronze. According to the Art-Joumal, as a separate statue, it is grand in line, and regal in aspect and bearing.
Mr. Buckeridge. - The death is annonnced of Mr. Charles Buckeridge, architect, of Osford and London, at the early age of forty

VOL. XXXI-No. 1597.

The Ruin of the Rivers.

HE pollution of rivers is one of the evils hrought ahout by a century of neglect of public interosts, while individuals have been sharp enough to see the opportanity and to ponetrate the weak places of public law. So do thieves where there aro no policemen. In this way an unpatriotic spirit has heen begotten, and selfishness has taken root in the publio mind. The natural advantagce of the country hare almost a turned nuto a curse to ns, for want of roguon and of law and order. We see this every o the subject of river-pollntion is broached. us sce what we can by the light of the rt of tho Solect Committee of the Houso of ds on this subject, dated July 21, 1873, which recently heon issued, together with minutes videnco. It will be rememhered that the crs Pollution Commission of 1868 proposed hoir first report, in 1870, standard degrees of ation beyond which no rofuse liquids ought
discharged into streams of water of goneral
The refuse of manufaotures as woll as n sowage was emhraced in these proposiis, and it has hoen pretended by the manaurers and others having private intcrests gonistic to thoso of the publio that the prod standards would be nnattainable.
1r. Lyon Playfnir, a chemist, a manufacturer, a member of Parkiament, says that the dards proposed by the Commissioners are is opinion not severe enough, although they expressed in such scientific langunge as to hten tho manufacturors, who think thern c severe than they are in reality, and he has
n np another set of standards meaning the - thing, but couched in more popular ;uage. These amendments of Dr. Playfair e approved by Mr. Stansfold, the president the Local Government Board, but he thonght csirable, hefore embodying them in any Bill e suhmitted to Parliament, that they should submitted to public criticism. Wo have oretimo given the standards proposed by the 1mission, hut we repeat them here in aposition with Dr. Playfair's amendments. aids exceeding the following degrees of antion are to be prohihited from discharge watercourses in the purity of which other sons than the polluters are interested.

It is proposed also to prohibit the discharge into any strcarn, of such manufacturing waste products as will raiso, whether in susponsion or solution, the foreign matters in the water of the stream to the extent of five grains in the gallon, providod that the water so polluted is not taken for examination from any part of the stream (and in the case of a tidal stroam at low tide), at a less distance below the place of discharge than the broadth of tho stream opposite to it, and at no greater distance than twice the hreadth of the stream at the place of discharge. This last precaution, of probibiting the discharge into a stream of such refuse as would raise the foreigu mattors in the stream itself to fire grains in the gallon, is aun addition of Dr. Playfair's to "catch the stream itself,", for the other standards merely catch the drains going juto the stream. "I want to catch tho stream, and sce that the stream itself, as an additional procaution, is not pollated hy a number of drains going into it."' And as to the precaution of taking the water for examination from within and without certain prescrihed distances from the outfall of a drain, as desoribed ahovo, the object is to prevent tho sample intended to be analysed heing taken too near the drain's month; and so not indicating fairly the state of the bulk of the stream water for some short distance below tho point at which the impurity is discharged into it. It apperrs that it is a practice at many works to diseharge during the day very fair waste water into the stream, and thon when nobody is watching at night to flush down a great quantity of impurities; but by adopting this additional preeantion that practice would be discovercil, and the manufacturer beld account. ahle. None of these standards represent per. fect purity at all; they only represent a mnch greater purity than is attained now.
Dr. Lyon Playfair is a director of Young's parafine oil works at West Calder and at Bath gate, in Scotland, and he confesses to the committee that he is himself a great polluter of streams. But he wants to see the prohilition carried out which affects the pollution from this very manufecture, which is the most difficult of all to grapple with. "I think that if you forco us to purify the water which we discharge fouled in this way, before long wo shall find efficiont modes of doing it. At the present moment we have not efficient modes of doing it, and yet ats one of the largest polluters of water in the kingdom from this very thing, I advocate that you shonld make mo purify the water hefore I discharge it." It is a carious proof of the want of law and order amongst manufac. turers that Government should be appealed to in
this manner. One would at first suppose that a director of one of tho largest mannfacturing works in the kingdom, who should acknowledge that he is himself a great polluter of strcams, would put a stop to it at his own works, and we may well suppose ho wonld do so if his were the only case to he dealt with; hat he wants a graeral law to be enacted which shall compel those who are reluctant to assist in the public welfare.
When large quantities of wator are required in mannfacturing operations, it is usually taken from the stream immediately above the works, and rotnrued to it immediately helow them. From the bad state of the law at present, with regard to pollntion, any man may have a pure stream fouled by works heing huilt above him and very of ten water is sent down fouled to the extont of these standards, or nearly so, and the manufacturer has to commence hy a purifying process hefore ho oan nee the water for his own works. If the law of pollntion were renderod ccnoral, he would save the enormous amount of reservoir room which he now requires to pnrify the water which other people have fouled, and which he must purify before he can use it.
Dr. Playfair believes that if the manufactnrers wore compelled to follow these standards, they would find, as in the Alkali Act, that they would in a very short time exclaim against their being too light, and not against their boing too sovere, hat ko thinks that at present, until the mann. facturers soo that great advantages to thomselves will accrue by purifying the rivers, it is desirable not to be too extremo in the first instance. As to the Alkali Act, which was at first mueh opposed by the manufacturers, he bekoves there is not a manufacturor now in tho kingdom who does not remove the muriatic acid (one of the chicf sources of pollution of the atmosphere formerly from the alkali manufacture) to a greater extent than the Act requires, and who does not find it to his own profit to do so. And ho helieves it will be the same in the pollution of rivers; it may not always be a direct economy, hut it will he an indirect one, giving the manafactnrer security that the people helow him on the stream will not prosecuto him for a nuisance, and that the people ahove him will he obliged to purify the wator bofore it reachos him.
Dr. Frankland states to the Committee, that, as ono of tho Rivers Pollution Commission, and haring now heen engaged in this inquiry for five years, the chief canses of the pollution of rivers in England and Scotland are, first, the casting in of solid ruhhish of all kinds. The Commissioners fonnd that the watercourses generally in the kingdom are made use of to carry away worthless stuff, which would he otherwise expensive to get rid of, or to cart away to waste land. This is cast into the stream, and in time of flood is washed down into the lower and stiller reaches, and there it silts up tho river, raises the hed, and in many cases causes the flooding of the adjoining lands. The second cause is the discharge of the sewage of towns into rivers. That is a liqnid somewhat peouliar, although not differing very essentially from the discharge from some manufactories. Then comes, in the hird place, the refuse from manafactories of various kinds, some similar to sewage, others differing from it in their qualities. Fonrthly, and lastly, there is mining refuse, which spoils completely for fish, and also for human use, and for agrionltaral purposes, many rivers in the mining districts. The Commissioners have investigated every river basin where pollution to any considerahle extent has already taken place, and they have had abundant evidence that the evil is very great at present, and that it is rapialy increasing both in quantity and in intensity.
In tho town of Birmingham at present, Genoral Scott's process (throwing down the sokid matters in suspension with quick lime, and
converting the solid residue into cement) is partially applied to the sewage, and the effuent water is discharged into the River Tame; but, as the process does not much affect the matters in solution in the sewago water, the river is still highly polluted. It is necessury to take out the matters in solution, either by irrigation
With regard to the mannfacturers, Dr. Fra
and states that the Commissioners hare in all cases indicated bow each specific form of pollu. cases indicated bow each specific form of pollution may he obviated and got rid of in a manner Whioh shall not be unreasonably expensive to tho manufacturers, and in most cases not expensive at all, but profitable, be believes. an entirely new subject, and it cannot be paid attention lo fur the nest few years withont new being made, which wonld enable a manufactorer at less cost, and, in most cases, at greater profit at jess cost, and, in most cases, at greater profit to himself, and with a smaller amount of plant, purification, One may reasonably hope for that, purification, ana Dr. Frabland, as soon as the attention of says Dr. Frankland, as soon as the attention
manufacturers is directed to purification. present, they care nothing about it, but send the water into the stream just to suit their own convenience, without turning their attention at all to this subject of purification.
Mr. J. C. Stevenson, M.P., representing the views of the aikali manufacturers, says, in answer to the question, -

What is the coluuring matter which consti. tutes the manufacturers' ohjection to the third test [as given ahove, it is the fifth] ?-A. It is of a brownish colour.
Q. Would that be a very poisonoas solution? -A. Undiluted, it woutd be a strong acid Eolution.
Q. As yon pour it into the river, would it be poisonous? - A. In point of fact, it rets so enormonsly diluted in the river into which we ponr it, that no evil oomes from it.
Q. It is not diluted, is it, when it passes from the manufactory? - A. No, it is dilutod from the volume of the stream."
No comment is nceded on such evidence as this to show the enormity of the practice. One of the olijectious of the manufacturers is that they onght not to be ohliged to employ a patent process in order to comply with the requirements of an Act of Parliament, and that seems a very reasouahle oljection. There are only a few known processes by which the refuse patented; there are indeed only two in are Now it would seem that patents for inventions of a charaoter beueficial to the public health ought not to be granted, and yet encouragement ought not to be granted, and yet encouragement Could there then be any more legitimate object of a Ministry than to encourage these iaventions by setting aside a sufticient sum out of the by setting aside a revenue for this purposo, or to buy up and make free to the public any patent already taken ont by an individual at his own expense, the pateut being one of recognised value, as the pateut bengr above-mentioned are, on the anthority of Dr. Edward Frankland, one of the Rivers Dr. Edrrard Franklan
Pollution Commission?
Mr. Richard Nickuls represcuta the tanning trade of Leeds, where thero are, within the borough, twents-six large tanyards, employing 2,100 hands. B $\gamma$-the-bye, how suggestive of human machinery, merely, is this nord "hands," when used in this sense, and how strongly, though nuwittingly, it shows the actual relations that exist between the master and the people who work for him!
Mr. John Botterill represents the dyeing trade, and both these witnesses advise that the refuse should be run into the sewers, and be dealt with hy the corporate body, there being no room sufficient for the parpose on tho premises of the works; and this view is supported by Dr. Frankland, who eays that, in cases where the manufacturers are so situated as to be unable to perform the process of purification themselves, it should be undertaken hy the commmuities in which they live, and that surely some arrangement could he arrived ab between the munici. pality and the individual manufacturer, by which contribnte a little more to the rates if needed. With the exception of galranising worke, tin. plate works, and wine.drawing, there are no manufactures carried on in this conntry from which such portion of tho discharges as would be pollating under the suggested standards could be treated at the outfall along with the sewage.

And this witness, having heard all the object tions which were stated to the Committee, some of which are giren above, says he has heard no objection that he has not repeatedly heard previously from manufacterers; but he thinks there are very few mannfacturers in the conntry who understand what these standards really requir them to do; what amount of purification is more they look upon them as very really very lax, and than they are. cases with very great facility. If the manufac. threr bona fide desires to prevent pollution, he has so difficulty in complying with these stand. ards; hut be has difficulty if he only wants to make believe that he is prerenting pollution. There are sometimes, for provence attached to works, small catch pits, that pretend to he puri fying the liguid from thase worls. liquid flows out of such little catch.pits just in liquad flows out of snch litte catch-pits just in only a pretence of purification.
Mr. William Crookes, F.R.S.
therf gives his evidence to the effect that he wonld make the standards "elastic," varying them to suit circumstances; that it is desirahle that Board should have power toexempt, for a certain Board should have power to exempt, for a certain
length of time, at all events, manufacturers who length of time, at all events, nanufacturers who locality for carrying out the provisions of the Act; but not that clasticity slould be given in the standards. He does not see how the standards could be mado elastic and effective at the same time.
The minutes of evidence upon which the third report of tho Rivers Pullution Comnission was based has also rocently been issued. The Commissioners addressed questions to the manufacturers and traders which were intended to help thom in framing their report, some of which only were answered. One of them was whether the manufncturers had anly suggestions to offer as to the best means of avoiuing pollution in future, and as to the conservancy of rivers and strearns. It is curious to observe the chorus of their answers to these very civil questions. suggestions to offer as to the best nueans of avoiling pollution in future," and "No suggestions to offer as to the conserrancy of rivers who could have offered valuable suggestions on both these questions, and would hare done so i they had had nny public spirit at all; but selfish ness fossesses them.

## mottoes on masonrt.

The custom of inscribing legends upon honses appears to have been most in vogne in the sixwithout many instances of earlier and later dates, hut the great bulk of examples left to us helong to Tudor and Stuart times.
In the days of Sir Christopher: Wren, we may assume, they were beginning to he removed; for", in his "Parentalia," ho quotes a particular motto as a thing of the past. This was "TUR. with the family crest, - a wren and coat, -stooit he sajs, in the south-west window of tho lodging at the north.wost corner of the inner cloister at Windsor College, in the jear 1633 , "having stood there," he computes, "full 116 years, viz, from April, 1527, in which year and montli Geoffrey chapel twelvo years." The fashion for Classic chapel twelro years." The fashion for Classic art so freejy followed in his day led to the obsiteration of many more important f
is old works than inseriptions, we know.
Many of the mottoes we find on ancient masony in this kingdom helong to the heraldic insiguia of the owners of the property; but not all. Some inscriptions are simple statements of proprictary interest, snch as that which occurs
above a window on Dalston Hall, Comberlaud, which runs thus :-"John Dalston Elsahet wiphe mad ys byldyng." Others combine the pride of proprietorship with a sense of the aid to remem. hranco furnished by rhyme, as in the inscription on tho grey old manor-house of Hewthwaite, near Cockermonth, in the same county, which says:-
"John Swynburn, Esquire, and Elizaheth, his wJfe, Did make cost of ibis work in the daies of ther jy fe,",
Ano Dom 1531. Ano Reg 23 ." The pleasant jingle of "wife" and "life" had ccurs on several buildings. those times, for 1 merchant intending to build an almshonse with
a portion of his gains, in 1519 , possibly had th same rhyming sounds in his mind when, lik John Swynhnrn, esquire, he " did make cost o this nork ; but, before his scheme was accon different was cause for anothcr coupleb conclude, was composed by another hand:John Waldron, merchant, Richoard, his wifo, At such time as the walls were fourtyn He deparded this worlde, even the eigheynthe of Jul

Other inscriptions, again, are admonitory There is ore on the front of an almshouse Leominster, beneath a figure of a man wit a axe, of this kiud:-
"Ho that gives away all before ho is dead,
on yo head. There is a curious example of a disputation legend over the door of a honse iu Galligat: Hexhata:-

## Reason doth wonder, but faith he teli cen

Like the Cumberland legends we have quoter his iuscription partakes of the character of tatement. It is one of the most freques escription, and similar testimonies are to k und on mady a sun-baked old almshouso npretending ancient school.house in out.on. ay places, domn to a late pers. On the rive you have crossed the bridge and passed throug he old gatewiay, defending the stecp, wide strec between the water and the castlc, yon will ses: aquare grey old house. Oper one of the window there is a high lintel, with this sentence incise apon it:-"In 1736 Mr. George Lawso", Gloste Hill, built this honse and gave it to the town ff school house." In earlier times there was blending of piety, and sometimes loyadty, in ti wording of similar notifications of charity tha renders them more interesting. On the front fonnder caused to he inscribed these words : $\rightarrow$.
"God save oure suppreme kyng Henry the Hyght.,
Pray for the goad prospery te aud asstate of Euberd Marsham and Jone his wyio the wiche this house they cerweed to be made to the hozor of the

Here is another inscription with a supplicat a it. It occurs on a strong and large squan ower, built by one of the ancient Percies withit the walls of Hulne Abbey, on the wooded bank of the Alne, in Northumberland:
In the yeer of Crist Iha MCCCCEXXXVIII.
This towr was bided by Sir Henry j'ercy,
The fourth Earl of Northumberland, of great hono The fourth Earl of Northumberland, of great hono
That north, espoused Mand, the good jadg full of vertue ati That espo
beauty,
Damghler to Sir William Harbirt, roble and hardy,
Erle of Pembroke, whose soulis God sare, It wonld not he difficult to guess who composec this iuscription. There is a document extant among the acconnts of the Farl's receiver o rents aud revenues, stating the exponse o buiding this tower, in which it is set forth thath he prior of the house of the Carmelite Brethrer within the park of Hulne, recoived 10l. 6s. 4 d , or cartage and a portion of the materials for it, Were these lines a grateful tribute from thi prior, or were they a specimen of the scholar: ship of one of the monks whose grave-slahs now. lie so peacefully among the ivy and mosses anc ferus in the ruined priory close by?
The later the inscription, as a rale, the lightel Is tone. In the heart of London, in St Martin's.le. Grand, is a row of large, lofty hrowr brick honses, of the Harley-street and Baker street type. Two or more of them are now rofn into one to form an hotel. Berweorciar town-mansions is a large panel, wreathed with
foliage and surmounted by a bull. On the panel are incised this astonishing narrative and amusing reflection:--
" Milo, the Crefonian,
An ox slew with bis fitst
And ate it up at one meal:
Lighter still is a later inscription, said to he seen on a slah built into the middle cottage in a reow erected by the artist of tho oork model of 1862 :

## Perseverance, cork, und giue Brailt hhese cottages you vier. See what these tes <br> Built these cottages you vie

This is altogether removed from the dignity and poetry of ancient inscriptions. It reminds as of the comic ntterances of Dutcb wits on the gateways into their Dutch gardens, "Not so so ad," "Jolly enough," "Plea
The chief centre of ancient inscriptions, now. all days, is Edinburgh. Many of our readers mill all to mind that William Chamhers accredite honses, "He yt tholis overcummis," with the nucouragement that onabled him to persevere in is wonderful industry and self-exaction. Roher Shamhers, too, describes several of the old edinburgh," for the sakc of the former residents a them ; and in an essay on "General Invita. ions" he quotes a motto npon another as a aideliments should he viewed, "Tecum Habita."
omple omplimeats should ho viewed, "ecum Habita." nite recent times, the regal city has, perhaps, aventy or thirty left for us to admire. When the ouses upon which they occur have heen tbe Twn mansions of Scottish nobles, the motioes re generally those belonging to the heraldic earings of the ir former owners; but when the
welliugs have heen erected by prosperous merwelliugs have heen erected by prosperous mer-

It is difficult to trace the custom to its source. the Jews, we know, were told to write their laws upon their doorposts: consequently wo are not pon that they still wite the name of Goo them the originators of the fachion but for the circumstance that the Mahometans in Egypt have the same practice. Their doorways, enriched with arahesque ornament, and of the Arabic. "God form, are often inscribed, in or with passa is the riaus placed iocerint or of art The Eapting vailed themsel work them. In fine, wo must go a long way up the stream of time to come to the authors of the first motioes on masonry
Not only did the ancient Romans nse them as matter of course, to welcome strangers, to bid well, but the modern rogliand wish them fare woll, but the modern Italians seized the opportanity they gave to convey advice, or make re-
flexions, permanently. There are many examples in Italy. One occars over the doorway of a fine palace in Perngia :-"Qve: Tevoras tace." In ono of John Stirling's letters to his great friend, Thomas Carlyle, there is this account of the house of the grandest of French essayists :Of my cxpedition to Montaicne's old houre I cannot aay much, for I indited notes thercof for my own uso, and also wrote something about it to Mr. Dunn, which is as mach as tho old walls would well bear. It is truly an intereating place, for it does not secnu as if a stone had heen tonched since Montaigne's time; though his house is still inhabited, and tho apartment that he describes in the 'Essaid des Trais Commerces' might, barring tho ovident antiquity, lave been built yesterday to realise his account. The raftera of the room which was his library have still his inscriptions on thair lower faces; al Tbus characteristic ; many from Leclestast the South of France. Neither M. Violletle Du nor any other French antiqnary, so far as we are aware, mentions inscriptions. Furthor inquirics would, doubtless, lead to many intcresting discorories, both in this region and elsewhere. Our present notes are hut an additional instalment of information on the subject, given in these columns in 1868, and at other times.

NOTES ON FOREIGN PUBLIC WORKS.
A coon deal of interesting information with Forei to this subject is contained in several Foreign Oftice reports which bave jnst been salient features for the benefit of our readers. Commencine witb Germany, we note that, in connexion witb a new harbour whicb is being constructed at Cuxhaven, the works are heing vigorously pushed forward. The capital of the company whicb is uudcrtaking the work has, it is mentioned, been chiefly suhscrihed in London burg, although it granted the necessary land, declined to voto the annual sabsidy of 9,000 , for twenty years, which originally formed an attractive feature in the programme. Tbe enghoer of the works is Mr. A. Giles, under Those superintendence they are being carried oul. The new barhonr will be 1,590 ft. in
diameter, and will contain two solid jetties, each 400 ft . long and 100 ft . Fide, and one pontoon 400 ft long and 100 ft . wide, and one pontoon
about 300 ft . long, and 80 ft , wide. The depth will he 20 ft . nnder the ordinary low-water line on tbe tide-gange at Cuxharen, and 32 ft . below
the highowater line. A proposed large iuner dock,

2,000 ft. long and 670 ft . wide, will be connected with the tidal harhour by a lock 400 ft . long and 66 ft , wide. This dock will he kept to a depth of 17 ft . helow the low.water mark, The new harkour will be constructed so as to he ice.free largest vessels afloat ; and the tidal tide to the will have an area of about 45 acres, will, which vided with dry docks about 45 acres, will be pro needful and in Hambunanes. Whar to public work
 quays and docks for the loading aud discharge of vessels. A new the loading aud discharge Kaiser, has been constructed, and has heen found exceedingly asefnl to shipping generally. A company has also heen lately formed in Ham harg for the construction of extensive docks and warehouses at Steinwarden for the use of sailing vesscls, but the project has made little progress as yet, owing mainly to the difficulties of have arisen from the unsatisfactory nature fhe soil From Bremen we also learn that being wors liere of various desoription these is thely carricd out, Important amonfs. terminas, the building operations in connexion witb which are being very vigoronsly pushed forward, bat it is not expected that the work wil Englispleted before two years have elapsed. An trighish company has constructod large new improve and facilitate the water supply of the improve and facihtate the water supply of the of its kind-whicb is intended to connect more closely the commercial quarters of Bremen, is beiug constructed, and will be finished, accord. ing to anticipations, in ahont two years. The construction of a wide strect leading from the new hridge to the central railmay terminus, is being at the same time carried out by a private conupany. In addition to thesoimportant works tructure for a hicher being built an extensive structure for a higher clays pnblic school, while the erection of several other publio buildings is projected; but it is feared that the state of the public finances will not allow of snch projects being carried out just yet. Railwey works are
also cxtensive here, and are boing cneror also cxtensive here, and are being energetically
pushed forward to completion. What is termed pushed forward to completion. What is termed the Paris-Mamhurg Railway is finished, witb and Hamburg, which portion between Bremen pleted by the end of the prosed year. Thi ine is a vory important one and will shorteu the distance hetween Hamburg and Bremen by about nine hours, and the distance between hours cities and London or Parie by several heis. Othor important hines bave been or are To Stado built by The railway from Cushaven dendo, built by the Prussian Goverument, bas ben entirely laid out, and the works have been ship, and Пarhonr Company
The next roport to which we shall briefly give attention, refers to Gemio (Italy), whence wo learn that public works during the past year have not been particularly aotive. The exceptionally bad weather which prevailod ther bat it is atnted that tion little attention hy tho authorities to the question of public worke, and that instead of progressing they are rather rotrograding in this respect. A new line of railway is being constructed from Savona to Turin, but it has advanoed very little; while a new line from Sestri to Spezia, which was to have heen opened in June last, has been de layed in constmetion by the Government till the end of the present year, and it is stated that it canuot be finished even by this time. In fact, publio works in Cenoa scem to have had rather a bad time of it during the past year. A great quantity of money has been, and is being, ex pended on so-called improrements and embel lishments of doubtful taste and questionable utility whereas little or nothing of practical use is done to meet wants which are absolutely pressing. The threo principal wants of Geno aro described as quay-room, additional ware houses, and casy communication with the in terier, requirements to satisfy which little or nothing is being done, or even proposed. Turning, howover, to the report which refers to several praoes in Russia, it is sat:sfactory to find tbat a healthier state of things prevails witb regard to public works. The construction of new rankwys is an important feature of such undertakinga. A new line (extending a distance of 130 miles), from Nicolaieff to Znamenka, has been completed, and witbout any difficulty as
© tunnels and bridges, as the ground was very
adrautageous for the purpose. Other new lines adrautageous for the purpose. Other new lines are also projected in this part of the country.
The municipality of Nicolaieff aro interested at 1nesent in the coustruction of new dooks and wharfs, and designs have heen prepared for the purpose, but unfortunately the want of sufficient funds will not even admit of the work being commenced. House-huilding has bocn carried co with much greater activity at Nicolaieff of late years, and the appearance of the place, architecturally speaking, has heen considerahly iruproved. The scarcity of hands, however, in. creased warees, and the dearness of materials keeping up high rents. From another Russian port (Poti), we learn that extensive harbour works, which were commenced there some years since under the direction of a Russian military an expenditure of more than $1,000,000 \mathrm{rs}$. A now railway hetween Poti and Titlis has been recently opened, but uo tunnel having been made nnder, the moustain of Surbam, and tibe pass over the mountain bcing considered dangerous, the passengers are obliged to cross in diligences, and to pay au extra charge. The distance is ahout eighteen miles. It is the intention of the company to make a tunnel. It is stated with respect to Poti, that the climate is of the worst
kind; that fevers prevail all the year ronnd; and kind; that fevers prevail all tbe year round; and
that the houses, which are all made of wood, that the houses, which are all made of wood,
stand on wooden pillars over a marshy ground. stand on wooden pillars over a marshy ground.
They are very low, cold, damp, and nncomfort. ahle, generally speaking. With regard to Tagahle, generally speaking. Woth regard to thg.
anrog (another Russian port), we find that anrog (another Russian port), we find that
nothing novel in respect to public works was nothing novel in respect th public works was
undertaken there during the past jear. A new undertaken there during the past year. A new
mole is being constructed, but littie progress mole is being constructed,
was made with it, owing, it appears, to a temporary inadeqnacy of funds. The main railway lines connected with this place are completed while a new line, which will put Taganrog in connexion with the Caucasian possessions and the Caspian, is to be taking in hand immediately, and will necessitate a large importation of railway matorials. Building operations have heen very active here, and large rauges of warehouses and commercial premises have been erected.
We liave next to tnrn our attention to Spain. The report referring to Corunna states that with regard to public works there is a sad want of local euterprise. Thero is indeed very little activity with regard to building or to improve. ments of that character; while as to the roads, it is stated that they are in a very had coudition, and are continually getting worse, owing to the total absence of repairs from want of funds. Travelling thus hecomes a work of considerable difficulty. From a second Spauish port, bowever (Palma), we get better news.
Here public improvements are carried out with conimendahle perscverance. A fine building for the Balearic bank is heing constructed, and many new houscs of an improved style have character of the are entirely changing the narrow streets, too, have been widened, and given place to convenient and respectahle since for extending the port of Palma, but it has not yet received the necessary sanction of the Curtes. A new railway is also projected from Palma to 1nca, and the proliminary works are being proceeded with, the company having heen fnlly formed and the required capital subscribed The water-supply of Palme is soscentible improsoment, and it is mentioned that a field of enterprise is open for providing the inhahitants with on adequato copply of $\%$ the They are at present dependent pon water They aro at present dependent upon wells and the summer.
as a
As a rule we do not hear much of the publi works of Morocco, and consegnently some infor mation upon this subject may not bo nnaccept. nhle. From Tangier we learn that the custom. lionse there, which for some time past has not been suffeciently commodions, has recently been ewlarged, an extensive and commodious ware house having been added to the buildings pre. viously existing. The great desideratum, however, of the port of Tangier is a mole, there heing no kind of pier or landing-stage either for goods or passengers. The remains of an old mole, which was destroyed hy the Enclish when evacunting Tangier in the year 1683, are still visible at low tide, and serve partly as a hreakwater. 1 t was proposed shoitly after the termination of the late war between Spain and
Mrococo to coustruct a new mole, and the con.
sent of the Sultan was obtained for the purpose hy her Majesty's representative; but the project unfortinately fell through, owing to the oppo. sition of foreign representatives.

HOUSE-BUILDING AND THE CENSUS.
The fact that the population of England and Wales has been constantly increasing ever siuce the first census was taken, in the jear 1801, and that there appears every reason to bolieve that it will continuo to increase for many years to come, is one which cannot fail to posses peculiar interest for the architect and the builder. For as we may have to honse two and a half to three millions more people every coming ten years than in the ten jears preceding, our builders and architccts must provide ns with a proportionate increase of houses or dwelling acconmodation. And this, it must he understood, is qnite independent not only of all uninhabited edifices, including shope, Horkshops, factories, and public buildings, but siso of the large number of dwellings which must be erected in order to replace those whio bave hecome
In the following lines we purpose to collect from official and other sources * some of the principal facts and fyures hearing upon this subject, so that, by reviewing what is actually nown to have occurred in the past, we may expected in the future. It must not may for specten that we are not abont to deal with every ind of building that is erected, but calusively ith houses and buildings in which peroons are omiciled. In buegs wors persons are been taken in this country, large classes of edifices havo heen entirely ignored. No accomnt whatever has been taken of churches, chapels shoolhouses, warehouses, factories, slops, workshops, or public halls or other edifices, except in shops, or puhlic halls or other edinces, except in
those cases where persons have bcen found residing and sleeping on the premiscs.
At the first censns, in 1801, there wer , wha, Houses standing in Englau and Wales of which there were $1,5 r 0,923$ inhahited and 7, 476 uninhahited. At the last census, in 1871 , tho total numher of houses standing was no less than 4,520,462 (1,259,117 inhabited and 261,315 ntenanted). Hence it appears that, in the
interval of seventy years, hesides replacing all the old houses that bad hecome uniuhabitahle the old houses that had hecome uniuhabitahle, f 2,887,063 new and additional housce. The umber of dwelling-houscs, in fact, has been very nearly trebled since the commencement of the present ceutury. Botween 1801 and 1871 the population of England and Wales had increased from $8,892,536$ to $22,712,266$ persons, an addition of $13,819,730$ to the inbahitants in the seventy years, so that our builders have had not only to keep up the requisite dwellings for the original number of $8,592,536$ inhabitants, but have had to ereot adtitional houses sumicient to accommodate an extra population of $13,819,730$ which bas since been added to; and, as a matter of fact, the census returns show ns that they had actually provided $2,887,063$ new honses for this purposo. When we ask how many houses altogether have been huilt in England and Wales during the seventy gears 1801-1871, including hoth the additional houses required by he increased popnlation and those which havo been erected in placo of dwellings which have fire demolished on account of dilapidation, age fre, or railway, street, and other improvements, length of time for which a house will stand This, however, is a question in which we are lef principally to conjocture. In the General Report of the last censns the Commissioners assnme that, taking all canses of demolition and all classes of honses, from the palace to the cottage, into account, their average dnration or "life" may he roughly estimated at 100 years. If this estimate he adopted, it follows that in the seventy years from 180 l to 1571 , seventhe be the $1,633,399$ dwellings in existence at he beginning of the century have beeu rehuil or replaced. This would make the numher of add this to the additional houses ( $3,587,063$ ) rected within the same time we find that the total number of houses built in England and

Somerset Houso." London: Stanford. 1sis.

Wales in the seventy years since 1501 $4,030,442$, or rather more than $f, 000,000$. If th arerage cost of erceting these houses, includin everything, from the most splendid palace to th ueanest cottage, be taken at 250l. apiece, ollows that, in the seventy years, upwards $1,000,000,000 l$. (a thousand millions) have bee spent in England and Wales on hricks an mortar,
To arrive, however, at any adequate notion what we are doiug at the present day, we mus contue our attention to the changes which ha aken place witbin the last few years. Takin le period between the last two censuses, an bang hack as far as the year of England and Wales had increased fro $20,066,224$ to $22,712,266$, showing an addition $2,646,042$ persons to the population within $t$ en years, and this was the numher of persor or which the building interest had to provid additional dwelling accommodation in thi period. The number of additional honses whic were built between 1861 and 1871, was 596,26 as there wore $3,924,199$ houses standing 1861, and $4,520,462$ in 1871. In addition enle, 996,263 new houses, our builders bad during the ten vears; and if we assume, efore that this was at the averace rate of 10 before, that this was at the a arerage rate of
cont., they had to rebuild 392 , 420 houses, $b$ sides the 596,263 required hy the increased popi ation. Altogether, therefore, in England an Wales, there have heen 988.683 houses erecte between the years 1861 and 1871. This is ver iitlle short of a million houses erected with en yeare. If the cost of these has averaged, we assumed before, 250l. a-piece, it is clear th upwards of $220,000,000 \mathrm{l}$. have been expended c he erectiou of dwelling-houses country, hetween 1861 and 1871.
The substance of what we have said abo may be very hrietly summed up as follows :We have huilt in Eogland and Wales, in the wa of dwelling-houses alone, npwards of one tho saud millions' worth of property, ronghly speal ing, since the year 1801; and within the te cars onty between 1861 and 1871 we ha huilt dwelling houses
$220,000,000$. sterling.

## $20,000,000 \mathrm{l}$ sterling.

What, now, have onr bnilders to do hy 188 When the next census is taken? How mar how large an additional population will the have to provide? Is thero a prospect of $t$ same rate of increase continuing thl the el of the present century? All theso and oth cognate qnestions wo shall recur to on anoth occasion.

THE LAST OF THE "GAFFS," AND A PASSING THOUGHT ABOUT IT

We suppose that we shall hardly be likely meet many objections to the dictum that if the be anything more interesting to tho world arge than tho "works" of a great man, it low he long, wbat his express money.earning professio was, what sort of housc he lived in and whe nd neighiours he had, what he said to the fhom he was on said to him, and, lasty, wis terms. And if this be matter of interest : regards most areat men, thon is it speciall so of Shalispeare, whoso place in the roll the createst it is needless to refor to, but of hi he reates and sproundings, theatrical ani "building" surrondince and otherwise it ane not a littlo curious to pol a號 shint resemhlance. We some short time bact endeavoured to do a little in this way hy giving | cndeavoured to do a little in this way hy girinf |
| :--- |
| eaders a "section,"-a correct one, as mi | believe,--of the famons Globe Theatre, as in existsd in Shakspeare's day, and as he himsel performed as an actor in it. We compared it as far as is possihle, with our groat theatres in these improved and advanced days. We thu

tricd to realise to ourselves, if not to others rice to realise to ourseives, if not to other some idea of the meacre of Sbakspeare, ank the oards of it, aud thins further to see, in a dim sor of way, perhaps, what the immortal play-write nimself did as an actor in it, and that he him self was,-how he worked; in short, what sor and manner of man he was. We are now agai ed to the sabject from the fact of sorue disca veries mado hy Mr. Halliwell as to the commexio

Shakspeare with the Glohe and Blackfriars satres, and to the certainty, as proved by suments still extant, of the great dramatist ing a regalar hired actor, and one of a regular ompnny" of playors. It is indeed most eresting to know this for certain, and thas to quite sare of a fuct here and there in the life otivate all Enrrlish.speaking people all the rld over. It is in some sort, too, a subject of rohitectural" looking into and curiosity, for London of Shakspeare's day was as unlike London of the present day as any ono thing ises, and the rooms in them, and the streets! 1 worn prints give a little of this, but only a le, and that little but dimly. Tbere is indeed tone way in which Shakspeare's localities, pitation, and playbouse can in these days he lised, in London at least, to those who loag to cren a pas
reo at him.
Wo did, as we have said, try to find a way to and an entrance into the Globe Theatre in and an entrance into the Globe Theatre in
s way, and then contendod that to do so no nor theatre, as theatres now are, and most ccraly no major theatre, as Covent Garden, or ary Lane, wonld or could avail;' for Sbalsare himself ootld never even have imagined liences, or their stages, or their aotors. Comed with his little Globe, the stage of Covent rden is a vast palace, or a wide battle-field,
Garden of Paradise, as tho play might need Garden of Paradise, as tho play might need
o be. And this being so, and none will cer. aly dispute it who will make for themselves soction and plan" of the Globe, we mus , as we then did, go lower down in the scale hiugs, and wo found in tho "Gaff," as it is ed when talked ahout at all by the enlightened the oarth, a very and living counterpirt and be or Blackfriars, with pretty nearly all its loundings, its needs, its actors, and its plays n , and more than all, perhaps, its audienoe, its door,-a something in theatrical life, hy the "oundlings" found their way into its pit, may io stand all the time as in the open street w. It may be not a little dificult for the uniated in matters architectural to realise to mselves from mere geometricnl drawings, the ckefriars of tho interiors of the G.abe or the which they were situated. But in tho genuine II, as jt exists at this day, this might be done th no small an amount of vividness and trath. eess, and power of life-like reality. And this, ides being a something in itself, and for its 1 sake, pats the man Shakspcare on the lly was, and as he walked somewhat ill at e through life, and on his stage of it! So erent from the fashionable present, and yet great thing to have proved beyond possibility doubt or dispute any one thing or item in the , obscure as it was, as the world then went such a notablo man as Shakspeare. All m when grithered together, from Stephens,
ce, Knight, and not a fow others, ap to Mr. liwell, make np the proved lifo of Shasspearo, I we can but feel rejoiced at it; hut still it is reat thing in the life of a great man the being 3 to get at the capneity in some way or other of ring at him, and the precise circumstances in ich he was ; and at the character of those at himself may be. That is as it was, and know that Shakspeare rented thonse, and to sure of the dates of entering suoh house and fing it, to know the name of the landlord of and all down to the minutest particulars as ald indeer be rater andigned documents, a dimly be raluable. But to be able to see it, in which Shakspeare dwelt, to catch but limpse of tho honse in whioh he lived, and In thence at himsolf, going to and fro. I ch sight of the Globe, or its countcrpart, as certainly can do, and its little strge, and to ler difficultion stage with reritable actors, ikspeare's day, is auroly a gain. as they in
only for a nont let us imagivo tho "Globe" to be still actual existence, and the narrow street in ich it stood to be intact-buriod in some sure region of London, out of the way of hing to be known of the poet hat his portrait
he was an "actor" by profossion. What a reve. ben would reeds be of him and his work to whice the streot and the little play-house in life. And if his strange part in the battie o natural street of dull, quaint, out-of-date houses and impossible theatre, we canght sicht of actors and audience not a little like to those with whom be lived and worked, how this would realise to us the veritable man himself; and take the world, as by touch of magician's wand into the very time and place itself, and well nigh into his very presence! And it was this that tho Gar collect the a. If tho acute reado will only exist of the Globe hood ir whe it weighbour poople who lived there and who of the sort of quented the small auprise hos the pret aill me ins no present, and how wo past still runs into the peo into that dead past by looking into the ofter despisod present, noglected by all that is repntable may he, bnt still there in living reality.
We should senrcely have ventured to say much, if indeed anything, on the final disappearance of the last of the veritable "Gaffs," even with a Saaksperian excnse for such, had it not heen for one or two things connected specially with it not a little noteworthy and significant. It is to be borne in mind always that as an idea dies out, however it may have originated, and whoevor may have been the author of it, it is compelled by dint of sheer necessity to come down lower and lower in the scale of things mundane. Ihe Gaff all may he sure is at the lowest point at hest, and the "house" gets to be shabbier and shabbier, and dimmer and dimmer, and to present to the eyes of those used to the garish lighting up of the fashionable thentre a aud noarer resemblance to the candle-lit Blackriars! Its andienco gets more and more into tbat primitive order which nature and not art produces. In short, it is, if truth must be told, of the vory roughest possible even in iminevitable and certain, - the whole thing collapses, and comes to an end. More is tho pity; for there may ho a something in it better worth the keeping thau the thing which replaces it. The known as the Garrick Theatro, Whitechapel. It had been in its day a somowhat grand and respectable place enough, so it is said. But down it went, from some canse or other, from which thers is no risings of poverty soem. Down it went into ruin and dull shabbiness, till, suddenly taken to by a company of players, and got at onoe to be a "penny" house, with all tbose surroundings which that term implies. Indeed, it wonld be not a little in that magic word, penny. It seryes to characterise the andience, aud the said andience, whatever it may be, get to he redected on to the stage, and actors, and we may well add the sccnory, and all else. A wonderful process, if wo will but hring onrselves a little to think about it, and ponder over it. For it is never to be forgotten that, as are the play and the actors, so are the audienoe; and as are the audience, so must be the play and the actors. Like to like, even in these dass, and in Shakspeare's.
Shakspeare's Globe and Blackfriars ate both gone, that is certain, and so now is our Gaff. "Improvement" and more gas-burners are now. adays everywhere, and they have overtaken our little playhouse, and completely turned it topsyturqy, and into something else, -mnst we say it ? into a right respectable minor theatre of a certain sort. It is really quite orthodox. Its queer antecedents stick to it a little awkwardly at first, in spite of gas and new "decoration," for the word "Garriok" being got rid of at once, with the dust of it, the Lord Chamberlain was petitioned, so says the poster, to allow "The Royal Albert" to be loyally substituted. But this could not be. Another name had to hesubwcrld's "pilgrims" come to life again juat to look at things as they "now are,-at improvements, railway travelling, theatres, musical instronments, orchestral hands, and even new namos of places,-what would they say? All was vanity, that is certain, in their own day; now all is
gentility. How can such things ever he to harmonise together, as old-world nsiges and modern outward mechanical surroundings? And yet, for another memory, did this rough abod of the Muses,-rough and ragged, and full of
discords as it was,-hold within it the germ at least of a reaily fine and magnifioent dramatic dea. We have touched on it before, and it rould need considerable space to do full justice of the orchestra as accompanying the action the play - the tragic play bo it notio for play play, - he lagic play, bo ithecd, for the play at a lin mat heeds bo tragio. Music to accompany and go along with the actiou of the satches of "tunes" somb as all snow. The neatches of tunes and popular melodies hot only no analory to it but of a burlesque has not only no analogy to it, but is, in faot, almost
ts opposite. So, too, is opora, properly so its opposite. So, too, is opera, properly so ansic heing set to the words are sung, the asic heing set to the wordg. All benatiful nough in its own way, hat here in this ocld and nexpectcd place, where no mortal conld aver ras, as we have said amed of its heing, there indeed, which Beethovea himself almost tried after, and had inded every now and then in his mind's car, but never realised. It is the dramatio expression of im idea in music, i.e., y an orchestra, hat without special reference to the words of it, and while the wttered words ad action are going on simnltaneonsly with it. he ddea is, likely enough, as old as the hills. There are magnificeat suatches of it in th works of the great masters of musical drama which some may call to miad, but the completed and finished idea, great as it is, does not exist It is strange, indeed, that it should have found atteranoe and a cadence in sach a plaoe, and with such au audience,-but it was never lost!

## Melbourne, victoria

public orfices, -TECENological comimission.
TuE Colonial Goverament, several months ago, ohtained the conourrence of the Parliament to a scheme for the erection of publio offices on the spacious and costly foundations laid fifteen or sixteen yeara ago in the Treasury reserve, at the rear of the Treasmry bnilding. The contemplated structure is intended to accommodate the various departments of the publio service, which are at present scattored nver the enstern and western parts of the city, iz., the Public Works, the Crown Lands, the Crown Law, tbe Mining, the Water Supply, and the Treasnry departments. The amount needful for its constraotion being provided for by the Public Loan Act of last session, competitive plans wore called for. The designs having been ramined, the choice fell upon that of Mr i. Egan, Collins-street; Messrs. Fox \& Oakden, f Bullarat, obtaining the second premium of 150l. Some alterations of detail may probably be made before tenders are invited. The new offices, as desigued hy Mr. Egan, are a plain barrack-hk ath with two wings of lower height, and will be very mueh larger than the Treasury bnildings. They will face Wellington. parade, and stand directly hehind the Treasury. The fact that the new offices will stand close to the Treasary and the Governmeat Printing office, is said to heve limited the architoct in his ehoice of style, and obliged him to propose a group in keeping with the edifices named. Therefore the stylo is Italian, of a plain cha racter. The offices will consist of four stories high in the centre, and three stories high at the wings. Tbe total lencth along the front i 375 ft ; the depth of the wings, 150 ft . the deptb of the middle part, 75 ft . The basement story will be divided into storerooms for the various departments, and nccommodation will, moreoter, be provided for the Stores and Trans. port branch of the public service. The internal arrangements upon the floors above-ground mas be said to resemble, pretty closely, the arrance ments at the Treasnry. Three large entrances have been provided. The principal is in the centre; the other two are in the wings. The first-floor will be reached by four staireases, namely, one staircase opposite each of the wing entrances, and two opposite the main eatrance. The from foor to floor will consist of ffices which the prowlic will be divided into requent. The first-floor will contain the to $f$ the Binisters, the permanent heads of depart ments, and the principal officers under thern The second-floor has beerr allotted to elorieal taffs and dranchtomen The elerical and tech tical branches of the Crown I nds departmer are to ocenpy the room at the top of tho widl lock Tho yous ill the works are oompleted. As the new offices
will be reared on the highest part of the Trea. sury gardeu, and as they will have a front over
100 yards long, and be correspondingly lofty, 100 yards long, and be correspondingly lofty, they will be decidedty more conspicuous than ornate. At the same time, the presont Treasary will hide them from the view of persons in Collins-street. As to the approach from Collinsstreet, Mr. Egan has arranged matters in snch a way that the traffic will not be through the gardens, lest they shonld he injured. He proposis to commence an embankment at the sonth end of the Treasnry, and extend it in the direction of the new offices. Another emhankment will be constructed along the front of the offices, and ad vanced to moet the embankment from the Treasury. The two will then bo connected by a casticon pillars. The emhankment will be on cast-iron pliars. Come emuanki
By way of contrast, the Illustrated Australian News gives two views, one of the accepted design, and another of the design of Messrs. Crouch \& Wilson, which is more ornate in ont. ward appearaace, hut contains the samo apart. ments as that of Mr. Egan. Messrs. Crouch \& Wilson snhmitted a moditied elevation, showing how their design might he shorn of some of its oruateness, and yet retain its leading charac teristics. The central tower, too, conld have been omitted, and with these alterations the desigu of Messrs. Cronch \& Wilson, says our than that of Mr. Egam. A good deal of puhlio oormment has heen excited in one way and another about these new puhlic buildings. The appearance in tho Sketcher of a picturo of tho proposed building drew attention to tho edifice. the desigu carried out.
"Notwithstanding the scandal whioh arose concerning the designs for the new law oonrts," says tho Sketcher, "the plan which was accepted, Mr. A. E. Johnson, of the Pohlic Works Office, made a confessiou that he had assisted Mr. Smith indrawing his plans, and an unfair advantage was thus taken of the other competitors, in addition to which Mr. Johnson was the officer aclected to report npon the designs. A Board is now sitting for the purpose of ascertaining the precise nmonat of blane which is to be attached to Mr. Johnson, hut as it appears that Mr. A. L. Smith's design is on its merits hetter than any of the others sent in, the Gorernment bas determined to have it carried out."
Fromi circnlars sent ns, wo note that the third annaal exhibition of the works of pupils in the rarions schnols of design associated with the Technolocisal Commission was to be opened on the 1st of Julr, and the exhibitious held at the
Public Lihral'y, on the 8 th of July. The draw. Public Lihrary, on the 8 th of July. The draw. either in pencil, chalks, or colours. Prizes were to be arravded to senior and junior stadents exhibiting the hest works in the following clnsses:- Drawing of the human figure; orna. mental drawing; landscape drawing, comprising finished landscapes and details of landscape, as stalies of trees, rocks, flowers, frnit, leaves, \&c.
mechanical drawing; architectaral drawing drasing from pature or from the round; per apective and isometrical projection; and a prize a certificate of honourahle-mention for the com. mission. Examinations, open to all students who had heen memhers of a school of deaign for six months previous to 30th of June, 1873, were July, in practical geometry, meohanical drawing, In the mechanical and architectural examinations the candidates were to he examined as to their knowlenge of the nso of instruments, and drawing of details. In the frec-hand examinations there was to he set, either a group of models, plaster casts of ornament, figures from the round, or flat examples. "Cassell's Linear Draming," "Gleig's Practical Geometry," and
"Daridson's, Drawing for Carpenters and Joiners," wero recommonded as the hasis of examiuation. Special arrangements were to bo made with the railway department to enable made with the raiway cepartment to enable studputs to attend the extihition and examiua-
tions. Not more than two prizes were to be tions. Aot more than two prizes were to be excellency wonld he given, in addition to prizes, to those who were excluded from taking more
than two. Mrr. Sammel IF. Bindon is the chairman of the Commission, aud. Mr. S. H. Roherts, man of the Commission, aud Mr. S. H. Rol
inspector of schools, the acting secretary.

## THE FINE ARTS IN LIVERPOOL.

 AT a recent meeting of the Liverpool town council a long discussion took place upon a report prepared ly the library, mnseum, and arts committee, recommending the erection of a gallery of arts in the town. The committee pro. posed the laying of a general rate of Id. in the pound for the support of the gallery, by which an annual sum of $9,000 \mathrm{l}$. Would he raised. The cost of the proposed buildings was estimated at 18,000l, and the expenses at $2,065 l$. per annum.The majority of the speakers wore in favonr of The majority of the speakers wore in favonr of the scbeme, bnt thought it unwise to press it in the face of the prosent state of publio feeling; and it was ultimately docided not to receive the report of the committeo. It was stated in the course of the disenssion that there was a collec tion of pictures, valued at 20,0002 , waiting to be given to the town as soon as a proper huilcing conld be erectod. Mr. Picton has since offered 1,0002, towards a subseription for building a permanent fine-art gallery for Liverpool, in supercession of the proposal to attain the same end by the unpopnlar expedient of a rate npon the hinrgesses. And olready his example has been followed hy similar offors from Mr. Kurtz, Mr. Jamos Houghton, and Mr. John Parrington. The autnmn exhibition of pictures collected hy the arts committee of the corporation, bas ings. The at colonr pictures, and some sculpture hy modern artists. The collection has been formed with much care and judgment, and the result, it is said, hids fair to be even more finanoially snc. oessful than collections on previons occasions.
A letter was read lately at a council meeting, from Messrs. Thomas Agnew \& Sons, offoring to present to the town a set of the Turncr proof the representatives of the Turner estato. The offer was accepted with thanks.

THE NORTH SOMERSET RAILWAY. The railway between Bristol and Radstook, after long delay and many difficulties, is at last finished and opened. Messrs. Perry \& Co. were he contractors. The failure of tho Pensfor iaduct, the most expensivo part of the line, and the viaduct is reconstrncted. It is of six. teen arches, its heicht to the level of the rail heing 95 ft ., and its length 995 ft . The viaduct is of stone, and it is surmounted by a parapet wall 18 in. in thickness
The length of the line is $15 \frac{1}{2}$ miles. The junction with the Great Western at Bristol is opposite the 'Avongide Tannery, in St. Philip's Marsh. There are stations at Brislington, Whitchurch, Pensford (for Chew Mamna and
Chew Stoke), Clatoon, Welton (for Midsomer Chew Stoke), Ciston, Welton (for Midsomer Radstock, which is the terminus. At present ouly a single line of rails has heen laid, but the ouly a single lue of rais has heen are wide enongh for a douhle line if arches are wide enongh for a douhle line if
necessary. The narrow.gange system will be adopted.
$\triangle$ LOW. BREAST WATER.WHEEL.
A sew lor breast water.wheel has recently
een erected at tho Molewood Mill, Hertford. It has heen constructed to work four pairs o stones, 4 ft .4 iu . diametor. The old wheel barely did that anount of work with the supply of water, which at its fullest flow did not exceed peripheral velocity of between 2.5 ft . and 3.5 ft per second. To enanro efficiency, a velocity of ahont 4 ft . per second was requisite, to ohtain which the now wheel has heen constructed with curvilinear rentilated bucketg, accurately pitched to the flow of water, with a special means of ensuring an enonomical delivery of The body of tho wheel consists of Enclish oak: main arms, 5 in. by 4 in.; suhsidiary bracing arms, 5 in . by 3 in .; all halved at the crossingg and secured with iron cover plates bolted through; rings, 5 in. by 5 in., similarly secured t the hutts. The arms are attached to the ings hy straps capable of adjustment, in parts Sts being requisite to tighten up the pris, Straining pieces are inserted at right angles to the arms, dovetailed transversely thrust at the eye There are the ocmpressive and rings. The shaft is wrought iron, $7 \frac{1}{2}$ in, hy
$7 \frac{1}{2}$ in., with forged and turned bearings. The buckets are No. 12 B. W. G., forty.eight in number, fixed directly on to the oak rings by holts, with washers, passing through. Pitch of holts, with washers, passing through. Pitch of buckets, 12697 in .; depth of shrouding, 16 in.,
which is riveted to the huckets by angle.irons, which is riveted to the hickets by anglearons, $1 \frac{1}{2}$ by $1 \frac{1}{2}$ by $\frac{3}{\frac{3}{6}}$ bent to tbeir curve. Stays are
also rivcted betwreeu the bucketa in the centre. to maintain them in an ecuidiatant position. The total diameter of wheel is $17 \mathrm{ft}$.6 in , width, 9 ft . bearings, 10 ft . 4 in . between centres. There are several improvements in the method f connecting the arms with the rings, and also: urronnding the shaft calculated to ensure great tability and rigidity under the never.ceasing and often irregnlar strains to which these achines are exposed.
The pen.trough and sluice. gate are of iron, fitted closely to the curve of the wheel, and arranged to allow the water to be drawn off with acility at any level.
The actual effectiveness of the wheel justifes, we believe, tho anticipations of the engineers, who were Messrs. Archihald D. Dawnay e wryman, of Walbrook and Hertford. Tho conractor for the works was Mr. Cook, Millwright, f Hertford. The works have occupied nearly six months.

OPENING OF BRADFORD TOWA HALL.
Tats costly edifice was opened hy the Mayor on Tuesday with pnblic ceremonial aud rejoicing. We gave a view and plan of it, with aketches of scalpture, in our last volume, pp. M06, 9o7. The style is Medizeral.
The structure contains no large room, bat comprises a multiplicity of apartments arranged. or carrying on the work of the corporation, It ailuaced in the centre of the town, on a and halar piece of ground 2,000 yards in extent, road, and Chapel-lanc. The principal front towards New Harket-street is $27 \overline{\mathrm{~T}} \mathrm{ft}$. long, 70 ft. bigh, and is broken by projecting gahles at each end, and hy the centre entrance gahle, imme. diately hehind which is tho clock tower. Thel centre gahle is adranced and forms a porch where the principal entrance is. The end gahles re flanked with buttresses and pinnacles. The Leeds-road side is in the sbape of an octagonal apse ; whilat the Chapel-lane front is plainen. han the other portion. The westward end is carried up to a bold gahle and finishes witht stono finial. The grand entrance, in New: Harket-street, is through a moulded, carved, and shafted doorway. At either side of the entrance re canopied niohes, in which are statues of Queen Elizabeth and Queen Victoria. Ahove be doorway is a large oriel window, 17 ft . across nd 37 ft . in height. Round the top of the win. ow is a machicolated cormice and parapet. The Ganked hy octargonal huttresses, with pinnacles, 6 ft . square, and hearing gargoyles. Behind the 6 ft. square, and hearing gargoyles. Behind the gahle rises the tower, 23 ft squaro, and 200 ft . in height. The design of the tower is based, on that of the Palazzo Vecchio at Florence, and is placed much in the same position in the valley of Bradford as its original in
the valley of the Arno. The hall comprises a the valley of the Arno. The hall comprises a hasement, gronnd.floor, first and second floors, and attic. The ground-foor windows are sqnareheaded, ceeply moulded and recessed; those of the first-floor have pointed arches, also deeply re- : cessed and shafted, forming two.light windows, ; witb cinquefoil heads. Between the windows are clustered shafts and capitals. The next foor is treated as an areade along the whole front, with openings for the windows, niches between each window heing occapied with statues of the kings. A machicolated cormice and open parapet terminates the façade, above which are dormer wiadows, lighting the attic story. The high-pitched roof is covered mith green and hlue slates, with ornamental iron cresting along the ridge, and the chimuey-stacks are a suitable appendage. On the buttresses are canopierl uiches. In these and in the niches between the windows of the third-foor are ranged the statues of the sovereigns who have reigned in England, and also that of Cromwell. The statues, thirty-five in numher, begiming with William I. and euding with Queen Victoria, have been executed at the works of Messrs. Farmer \& Brindley, London. They have been which the hall is built, from the Cliffe Wood quarries, near Bradford. The figures hegin with William I, at the corner of the apse in Chapel-
lave, and atand round the hall in chronological order, William IV. completing the gronp on the westerly gable. An exception to this arrange ment is made in the case of the statues of the two Queens gracing the grand entrance. Th carved stonework on the exterior, as well as
that in the horough court, oonncil-chamher fand corridors, was done hy Messis. Farmer Brindley,
The masonry, joiner. work, and oak fittings for the borough court and committee-rooms were executed hy Messrs. Ives \& Son, of Shipley, the general oontractors for the building; the orna mental ironwork and the gates for the front
lentrance, hy Messrs. Hodkinson, Lester, \& Poynton, of Coventry; the oak panelling and furniture of the mayor's rooms, the decoration of the borough court and council-chamber, and the fittings of the latter, by Messrs. Gillow \& Co., of Lencaster and London. The stained ghros., Smethwick; the carving genorally was done hy Mossrs. Farmer \& Briadley, of London; the whole of the decorations of the hall, hy Mr. Wh. Brigga, of Bradford; the furniture of the offices thronghont, by Messrs. Marsh, Jones, \& Cribh, of Leeds; the parquet floors were
fexecuted by Messrs. Arrowsmith, of London; fexecuted by Messrs. Arrowsmith, of London; the grates and ranges, by Messrs. Longden, Messrs. Stake \& Co., of Bradford; the plas. fering, by Mr. B. Dixon, of Bradford; the Bland, of Croydon; tho bells, by Messrs. Taylor, of Longhborough; and the linolenm, fur the floors of the offices, was from Mr. C.
Illingworth, of Bradford. The total cost of the hall, exclusive of site, which was estimated to bo worth 20,000 ., hut is renlly worth douhle that sum now, will be about 100,000 l. Mr. J. S. Wilson has actod as clerk of the works, and Mr. W. Spenco has been foreman under Messes. Ives. No serions accident has occurred daring the progress of the works.

THE BRADFORD TRADES PROCESSION. Tre great feature of the proceedinge on the
loccasion of opening the new Town hall in Brarloccasion of opening the new Town-hall in BrarlFord on Tuesday last was a procession of trade tropbies. Wo condense a few particulars from a vory full account in the local Obsevver. The staple trades of the town made, of course, the
most important display; hat we shall confine most important display; was dono hy the building trader. They wero headed hy a band of musio, - and a wagon bearing a large banner of orimson cloth, with yollow frince, bearing on both sidns the insoription, "Tho Building Trades of Brad. ford." In this wagon was the trade troply of
the brick makers, who camo first of the huildin trades. The trophy consisted of specimens of hricks, pieces of terra cotta work, \&c. The camo next; and operative hrickmakers on foot Oronglat up the rear.
The Quarryowners and Quarrymen were headed by a number of the masters in a wagonphies in the shape of two wagon loads of stone, each drawn by four horscs. In the first was a quantity of rough stone, as talsen from the quantry, and in the socond a number of flams half quarry, and in the socond a number of flags half
worked up. The workmen, to a considerable worked up. The workm
number, followed on foot.

The Masons and Bricklayers presented an impasing appearance. They were headod by a which came a wagonnette, drawn by five grey which came a wagonnette, drawn by five grey
horses, and carrying a numher of the employers. Therses, and carrying a numher of the employers.
The trophies of the trado then followed, and conThe trophies of the trado then followed, and con-
sisted of the following articles:-In the first sisted of the following articles :-In the first
wagon, drawn by four horses, wore numerous Wagon, drawn by four horses, wore numerous
samples of worked stone, including two balustrades, fluted pilaster's, two perlestals, two fluted columns, four sawn mullions, just as they come from the saw, a heautiful head for a circular winlow, \&c. Two or threo apprentices were
seated upon the lorry in working attice. This seuted upon the lorry in working attire. This
first lorry was followed hy a second, ou which inrst lorry was followed hy a second, ou which
were exbibited three masons at work on a corre. sponding number of flated columns. By their side was a kit of the tools ther employ. Buth of the wagons were appropriately decorated with small flogs, \&c. Not less than 600 masons, all attired in their wash-leather aprons, mavehed on
foot. Mr. Wm. Pyrah and Mr. Samuel Clarke foot. Mr. Wm. Pyrah and Mr. Samuel Clarke
were the marshala for this portion of the building were t
trades.

The Timber Merchants also came out pretty
"strong." They had a neat banner, after which camea wagonnette containingseveral of the prin.
cipal employers. Their trophy oceupied two cipal employers. Their trophy occupied two
long wagons, eaoh of which was drawn hy four horses. The one wagon exhibited a quantity of what is called "heary" timber, while the other contained samples of"light." Nearly 200 hands, on foot, followed the trophies.
The Joiners followed, and after a wagonnette and four horses, containing some of tbe employers, their trophy, consisting of some specimens of joiners' work, was placed on a lorry drawn by two horses. The trophy oonsisted, in the first place, of an oak door, which had heen Duke for Holker Hall, one of the seats of the ixte of Devonshire. This door was divided into ordinar panels, which were not made in the cut throngh, as in the old style, tho amount of work being far greater. Each of the panels was carved in imitation of folded drapery, and was a good specimen. Each of tho sides of the wagon disolayed a massive oak window-sash, sashes were carved oak pilasters, with capitals, and in the rear of the whole was another win. dow-sash, which had heen made for the new District Bank, Market-street. The lorry coutaining this trophy was appropriately deoorated, Another lorry followed, carryiug a second trophy, Another lorry followed, carryiug a second trophy,
in the shape of a portion of a staircase, wbich had been constructed for the house of Mr. Henry Yewdall, solioitor, in Manningham-lane.
The Slaters were headed by a wagonnette with two horses carrying a number of tbe employers. Immediately following came a warou, also drawn by two horses, hearing the trade troplyy. Tlis consisted of a very neatly consuructed model of a roof beautifully slated with different coloured slates. On the rool was a gilded properly delineated. In addition to this there were a numher of pieces of varions kinds of Welsh and Westmoreland slate tiles, stone ridges, worktien's tools, \&c.
The Plasterers were as successful as any other hody in proluciag a graceful emblem of their handicraft. First came a wagon, on which? was a desigu in plaster. Tbe object selected for representation was tho model of a pavilion, ground. The parilion represented four pillare, of a conıposite stole, supporting a roof, and cornices heine all completely imitated. Between the colamns what would have beon open in the real parilion was flled ap with an entablature, on which was executed, of arms ery detail, a reliof of tho brado columns were figures of children, and in front and rear of the pavilion were placed a numher of other speoi. mens of plasterers' work, in the shapo of capitals of columas, figures, \&c. The lory was otherwige decorated
The Plumbers, Glaziers, and Cas and Steam Fittors, who came nexte, hal evidently given attention to the introduction of something worthy of their trade. The first part of thoir measuring 9 ft . by $7 \mathrm{ft}, 6 \mathrm{in}$., and made of hlue silk with yellow fringe. This hanner displays in the coatre, on hotb sides, the plumbers' coat of arms, consisting of a shield, on the inside of which are a nomber of emblems illustrative of the soveral branches of the trade. The inscripion, "The United Plumbers of Bradford," surrounds this coat of arms. Underneath the banner was placed the trade trophy. On the body of the waron was placed a kind of bank, some 2 ft . hich, coverod with green baize, and With rich gilded monldings running along tho edyes. On to this hank were attached specimens of workmanship in all the departments of the
trade. In front of it was stationed an ale-pump rade. In front of it was stationed an ale-pump
in mahogany, with ivory handles. On tbo front of the bank weretwo ornamental conductor-heads, and standing at each side were portions of the sfand-pipes and other apparatus in connexion with fire-extinguishing. On the sides of the hank a large number of small articles, such as water-taps in polished brass, ronigh brass, and in electro-plate, ale and spirit taps, steam.cocks
of all sizes and in every style of workmanship fas and steam fittings, ornamental gas.brackets, ateam-danges, and a variety of articles of a similar kind. On the hack of the frame in the class, which reflected the rars of the sun. On each side of this was a design for gas.brackets
in the shape of a winged figure in bronze holding the gras.bnrner in his tiro liands. On the top of the hank, at each coruer, was a suall bronze figure; in the centre is a crate of glass, as an emhlem of the glazing portion of the trade, and ono of the Jomnings's pacent tip-up lavatories.
The Painters and Decorators unade a gay display, although a portion of it was got ap rather hastily. The order of procession was as follows:-The marshal, then a wagon on whicl! was displayed specimons of varions kinds of painted woods, in oak, waluat, marble, \&o decorative screens, and paper-hangings. Orer this trophy floated the banner of the operatives ${ }^{\prime}$ society, which is 11 ft . by $9 \mathrm{ft} .6 \mathrm{in} .$, and painted on botb sides. On the front was the painters coat of arms, with tho motto, "Amor et Obedientia," and the insoription, "The Bradford Operative House Puinters' Association" On the reverse was a representation of Art in the form of a Cupid witb palette and brush, sur monnted by the Bradford orost and boar's head, and encircled by the inseription, "The Genernl Alliance of Operative Kouse Painters, Bradford District." Then followed the trophy furnished by Mr. Henry Brigga, mounted on a lorry drawn by two horses, whioh were decorated with rosettes, \&c. Tbis trophy oonsisted of practical specimens of workmanship as applied to house decoration, the front representing a library-room door in mahogany, with ornamental door-hend and casing in silver bronze. On one side was a handsouns drawing-room door, also with oraa mental door-head, with cornioe and pilasters decorated with floral deviees. The opposite side of the trophy consisted of dining-room door,
decorated witb ornamental panels in bright decorated

The Marble Masons and Carvers were headed hy a hander ontainiug an inscription of the name of the trade. This was succeeded hy a wagonnette and pair, containing some of the employers; after which came the trade trophy. This was containod on a wazon drawn by two horses, and consistod of several specimens of marble work, somo of them in the rough, and some of thom polished op. Some 150 of the workmen then followed on foot: as in eaob of the previons cases.
The want of real art in all that was done was, nevertheless, very striking.

FROM SEEFFIELD.
The annitary condition of Shefield is not what it should be,-vory far from it; and this is not unknown in the town. The local Iniependent, in one of its articles on the recent visit of the "It is not, perhaps, the husineas of an archreological ammig the visitors to shethicld some sanitary reformera amming the risitors to Shetbicld some sanitary reformera
of the hifthest oxainenc. One of the vice-presidents is a
host in himself; and when wi remamber that one of the
 horough, and as a new broom, ought to he sweeping very
clean we feel it is not out of place to refer to the aninitgry
condition as well as to the archasological intereat of the places we have mentioned. Let us hope that tha peculiar
aroma of the Manor reached the olfsolories of the gentlearoma of the Manor renched the olfeolories of the gentle-
men we hare nupued, for they will the better nuderatand men we hare nubued, for they will the betfer understand less choice may be found hard hy 'The HEswle at the

fying mud nad whiter. The sheaf.
 throw of its watls, exhaling odours disagreenhle to the
nose, eickening to the stomach, richly charged with the germs of disesse, which are deposited with fatal thect in
bodies susceptible to their action. Whale we look at our antiquities let us niso enntemplate our ancient dirt ; and if from this enngress we may dite the more reveren presercation of tos orasade against the other."
It would be a fortunate thing for Sheffiold if this shonld prove to be the caso. Several parts of the town are in as bad a condition as they Science the social Science Association in 1865, when we felt com pelled to oomment somewhat strongly on the neglect that was evident. The river Sheaf, too, is still in a frightful condition, rnd calculated to produoe much evil. We would call it a Sheaf
of deadly arrows, but the snbject is too serions Turning in another direction, we are very sory to hear tiat Mr. W. H. Sounes, head mastier of the Shelfield School of Art, died and denly in the town last week. Mr. Souncs was
bont forty-three fears old, and had done much for the school.

The Improvement Committee of the Town Cuncil has ado, ited a report stating the
negotiations that have taken place hetween the committee and the Town Trnstees, with a viers to agreeing upon a plan of strect improve. ments, and the final adoption of a number of proposals for that purpose, prepared hy the
town surveyor and the surveyor of the Town Trust, towards the carrying out of which the trastees have agreed to contribate 40,0001 ., trasters have agreed of twelve years. The Improvement Committee recommend the plan agreed npon to the adoption of the Town Council, and present a lithographed plan of the proposed new streets and widening of streets Theposed new streets and widening of streets. will move that application he made to the Local Government Board for permission to put in foree the powers of the Lands Clanses Consolida force the powers of the Lands Clanses Consolida-
tion Act, 18t5, to enable the Conncil to pnrchase certain lands, buildings, and premises, for the purpose of making new streets, and for street purpose of mak.

## YORKSHIRE ARCHEOLOGICAL Assoctation.

The archacologists of Yorkshire visited York this year. The visit was the first one by the society since its constitution in 1865 , and it wab
arranged in a manner which did great creait to arranged in a manner which did great creait to
the cnergy of Mr. Fairless Barber, F.S.A., of the cnergy of Mr. Fairless Barber, I.S.A., of
Brighonse, the honorary secretary. The party, Brighonse, the honorary secretary. The party,
who were from all parts of the county, though mainly from the WCst Riding (where only within the last few weeks the annual meeting of the British Archeeological Association has been heldi), numhered 200 ; and, in accordance with the arrangements, which were set forth in a complete and model programme of the day's proceedings, with a key map of York, they assemhled (in something like equal proportions as to sex) in the Guildhall. Here they were welcomed (in the unavoidablo ahsence of the Lord Mayor) hy a deputation of the Corporation. Mr. Barber read a paper from Mr. Davies, ou the Guildhall and guids.

The excursionists were then directed towards tho coancil-chamber, with a view to an inspeo tion of that place and of the ancient records of the city, which had been arranged by Mr. R. H. Skaife, and were exhihited in the charge of Mr. Giles, the depaty town-clerk. The latter in. cluded some interesting documonts in connexion with the rights and privileges of the citizens. An inspection of these curiosities appeared to aftord considerahle interest to the excursionists; the next went to the Mansion House, where in Lady Mayoress, and partook of champagne and light refreshments. Here they inspected the civic regalia and plate, laid out in the state-

At one o'clock the blast of a trumpet told them that the next item in the programme was dne, and a movo was made to the cathedral. There they were received at the west door by Hey, and proceeded Jones and the Rer. Canon edifice, the order in which it wast taken being the nave, the nortb transept, tbe chapter-house presbytery, choir, and crypt. As to each of presse features the prooramme contained interesting information, and for the use of the members of the Association it contained the valuers of the Association it coatained the valuable Wiock plans prepared in 1816 by the Rev. R. wind M.., F..t. in the University of Cambridge. These were
five in number, and afforded a capital idea of five in number, and afforded a capital idea of
the various changes which the cathedral had the various changes which the cathedral had
undergone from 1150 np to $\mathbf{1 4 7 0 \text { . The pro. }}$ gramme also contained the following chronological table of the history of the cathedral:-Saxon church, begna by King Edwin, 633 A.D.; Sa.ion ehurch, repaired hy Wilfrid, 699 ; Norman nave, transepts, \&c., by Archbishop Thomas, 1030 , choir and crypts, by Archhishop Roger, 1154sept, 120t1-1260; nave (except west front), 1291-1324; chapter-house, 1320 ; west front o nave, 1335; wood vault of nave, 1354; presby. tery, 1361-1370; choir, 1350-1400; lanthorne tower, $1400-1418-1423$; sontb.west bell tower, 1433-1447; north.west bell tower, 1470-147. Principal monuments of archbishops:-Arch bishop Gray, died 1255; Archhishop Groenfield monument was erected before 1415 ), 1423 (the bishop Savage, died in the sisteenth ; and Arch. Archdage, died in the sisteenth century. plained that he had been requested to conduct them over the minster, and had pleasure in acceding to the request. He took it for granted
that most of those present were familiar with the history of the general church, but for those who were not he explained that the general outline of the bailding was a cross of the simplest form. When they had gone through it, they would ohserve that it consistad of a main central member of one design, and another member of earlier design ; that was to say, that the nave and choir were of one design, and the transepts fanother. He then entered into verhal explatensions which diferent parts of the edifice ha undercone and in the interesting occupation inspecting and listening, nearly a couple of hours passed away.
The trumpet once more summoned the party a frcsh scene of the day's proccedings in the De Grey Roms, where under the superintendence of Mr. Ellison, the steward, an excellent uncheon had been prepared for them. Thence the party were summoned to the Maseum Gardens, where they had the opportunity, under the gnidance of the Rev. G. Rowe, Secretary of the Yorkshire Architectural Association, of inspecting the well-stocked and arranged mu. senm of the Yorkshire Philosophical Society, as well as the remains of the multangular tower, part of the Roman walls, part of the moro
subsequent city walls, St. Marg's Abbey, St. Leonard's Hospital the Hospitivm sn
At half-past four the company assembled in he Lecture Theatre of the Musenm, where the Archbishop took the chair, and the Rev. Canon Arine, of York, read a paper on "The History of St. Mary's Abhey
A full and good report of the meeting, and of papers, de, appears in the York Herall.

OPENING OF THE WORCESTER SCHOOL bOARD SCHOOLS.
The Worcester School Board Schools, situated in Hounds'.lanc, have been formally opened by the Mayor of Worcester (MIr. E. Wall), in the presence of the memhers of the School Board he corporation, and a large number of person interosted in the event. The bnildings are not situated in a part of the city where the will attract attention on account of their archi ectural proportions ; but they are in tho mide of that portion of the population of the city who are most likely to henefit hy their erection. The haildings are central. Under the provisions f the New Education Aot children cannot be compelled to walk farther than a prescribed distance to school. The bailding is designed fter Gothic models, having its principal front in Hounds'laue, Group.lane, and Hare's.lane. The Hounds'lane front is composed of a lar ne-story gable with tracery window, and hell. turret surmounting it; girls' entrance and ong range of huildings, two stories in height ne skyline being broken to by gablets and limney-stacks. The Group.lane portion of the ite is chiefly nsed as an entrance to the hoys shool and play.ground : portions of ench play round being oovered in for the convenience of the children in wet wenther. From Hare's-lane the approach to the infants' school is obtained The entrances to the schools are protected b overed porches, which have been ntilised an fitted up as hat and cloak rooms. The infants' school is 73 ft . long and 30 ft .6 ia . wide, having wo large gable windows and other smaller ones. The roof is partially open, the principals being isible, aud from thence are suspended gas. pendants of a Medireval pattern. This room has so two class-rooms attached to it, one 24 ft . by 18 ft ., and the other 18 ft . by 13 ft .6 in . Each chool is supplied with a lavatory, with hot and cold water supplies. The boys' and girls' school are both the same sizo, viz: --86 ft . 6 in . by 8 ft ., with two class-rooms to each, 18 ft . by 18 ft . The boys ${ }^{2}$ school is on the ground.floor nd the in abore; eacb room has two fire places, in the chimney.breasts which ar inserted a series of lias or trap.doors, which dmit hot air from the fireplaces and cold from the exterior, as the case may require. In addi.
tion to tho fireplaces, the huilding can he heatell tion to tho fireplaces, the huilding can he heated
by a hot-water apparatus in the basement. The by a hot-water apparatus in the basemented is that of Mr. Ballard, of Colwall. Farther ventilation is. Balard, Colwall. Farthor ventilation is provided by
having hopper casements in each window, also having hopper casements in each window, also an arrangement for extracting the vitiated air
from the various rooms by means of an exhaustfrom th
The building is of red brick, relieved by longi. tudinal bands of various coloars. The windows and dressings are of Batb stone, and the roof i
covered with Broseley tiles in bands of red and blae, the whole building being fenced in with Houndsalls, excepting the Hare's-lane and surms laue fronts, which have draart walls apon thed with iron fencing. The old cottages tho custodian, and as w.c.s for the infants. The accommodation is as follows, allowing 8 super. ficial feet per child:-Boys, 297; infunts, 362 ; making a total of 956 . The dosk and gallery accommodation would he about:Boys, 200 ; girls, 200 ; infants, 300 ; totol 700. The works have been executed by Messrs., Weod \& Sons of Worcester; Mossrs, Goolman Ward, of the Butts, were the contractors for tho hot.water apparatns; Mr. Forsyth, of the Tything the carving. Mr Gearge Hammer, of London, supplied the desks; and the ras works and fittines were made by Mesrrs Greenw Son, of Worcester. Mr. Adams was the foreman of works ; and Mr. Ernest Augustus Day, of Worcester, was the architect. Tie amount of the contract for the works was 4.937h. The wor

CHICHESTER CAMPANILE AS A WATEE TOWER.
A supposed agreement hetween the New Waterworks Company and the Dean and Chapter of Chichester Cathedral for converting the canpanile into a water-tower is exciting no small interest at Chichester. In order to get at the facts of the case, the editor of the Sussex Express
and Surrey Standard applied to one of the and Surrey Standard applied to one of the solicitors for the company, and that gentleman informs him that the Dean and Chapter have for some time had under their consideration the adisability of constracting a tank of their orna on this tower, to be flled by hydraulic pumps, When protection of the cathedral from gre. resolred on baving a tank, and this coming to the knowledge of the company, that hody proposed to the Dean and Chapter, that instead of having a tank to hold 2,0ut gatlons, one capahle of holding 20,000 gallons should be constrricted, the company nndertaking to erect it, free of cost, in consideration of the saring they would effect by the abandonment of a tower (though not of a reservoir) at the Broyle. The companyalso offer to carry hydrants round the cathedral; and in he event of the Chapter adopting hydranlic machinery for blowing the organ, to supply the necessary water free of cost. There is a strong feling against the proposal. The Dean and Chapter, however, adds our authority, have been advised by an encineer and architect that there can be no possible injury to the strncture, and hat the tank will he concealed from viaw, is heing intended to place it in the story beneatb the lantern, and ahove the bells. The pipes will also he concealed from view. The Dean and Chapter have not given their consent to the project at present, hut are waiting for counsel's pinion as to their power in the matter. The campanilo, it will be remembered, stands at a short distance from the cathedral.

## ROCNDHAY PARK COMPETITION,

 LEEDS.The designs of the various competitors are on fiew in the law lihrary, in the town-hall, Leeds. We give a list of their names :-Messrs. Charles Owen Adkinson, Battersea; T. H. Clarke, Putney; Stuart Coleman and William Pountney, Bristol; George Corson, Leeds; H. Goddard Edgeware, and Stewart \& Robertson, London A. G. Hennell, London; Lewis Hornblower Son, Liverpool; William Milne, Belfast; Edward Milner, Norwood; Pearse \& Rake, Liver pool ; Usill \& Willcocks, Westmiuster; William Perkin \& Sons, Leeds ; Thomas Shelmerdine, Liverpool; Page Spencer, Dewsbury; Willinm Wing, Henley-on.Thames; and George Albert Milling, Hoibeck. The cstimates vary from 29,0001 . to 165,0001 .

Chelsea Bridge.-A correspondent says the ron curb of Chelsea Bridge, as designed by the engineer, has perforations to take away the rainwater from the roadway, and that many of theee, during the repair of the rondway, bave bee industrionsly stopped up. He wants to know why this has been done; to the obvious injury of the bridge?

## MANCHESTER WHOLESALE FISH

 MARKETS.Tuese markcts, built hy the Manchester Corration, are situated in High-streot and Little Itablo-street, Shudehill, and were opened for isiness on the l4th of February last. They iokson, architects, of Manchester, and cost rout $20,000 \mathrm{~L}$. The main elevations on Highreet and Little Stahle-strect are alike formed stock hricks and Yorkshire stone dressings. o base, which also continuos alone the whole Edge-strcet, is of Bolton stone and fine cked. The Edge-street elevation, ahove sill formed of iton and wood framing, filled in rought ironwork.
The whole of the ground-floor is devoted te e sale of fish and poultry, covering an area of sufticiout width to admit of three lorreys of sufticiout width to admit of three lorreyb,
10 lyy side. The whole of the area hencath is votcd to storage purposes. The small cellars voted to storage purposes. The small cellars
o entered through wrought-iron trap-doors in ors, and iron ladders to descend by. The ors, and iron ladders to descend by. The
ge cellar, next Edgestrcat, is approached by eways and stone steps from High-btreet d Little Stable-street. Offices are provided ithe salcsmen, as shown on the ground-plan, ntains desk and drawers, and all are built alike eharacter with the haildings. Tho larger lcarmen have offices providod above, noxt to the ank wall, and which are approached hy stone pps. These offices have conmand of the whole dirket. Ifvery wanhole is provided with hlocks d palleys, for lowering and raising the hoses skets, and so forth.
There are eight ice-honses, and they are con ucted in the following manner:-The floors, ilings, and sides are formed with $1 \frac{1}{2}$.in ooved-and-tongued white deal planking, not qceeding 7 in . wide, and well nailed to joists and nods. There is a space of 4 in . hetween the th the fin and planking, which is filled in lids to tbe manholes are of wood, 6 in ck, seooped eut on the top to wood, 6 in ter that may pass through the crevices of the p-doors ahove, with iron handles inserted to hy, let into 6 in. hy 3 in. wood curhs. Ahove tained into the ice-honses Access is also lars, hy two wooden doors in each adjoining other, as seen in the section which we shall te on anotlier occasion. They are formed . thick, wrought and cross-jointed in two okuesses of $l_{2}$-in. grooved - and - tongued
nking, hning to wronght and rebated doornking, hnng to wronght and rebated door-
mes, with extra strong wronght-iron hands 1 gudgeons, and secured wrought-iron hands Braggeons, and secured with wrought swing
sins and platos. A channel is formed B, whith pins and plates. A channel is formed
$?$ whele length of the houses, to drain away berfluous water, which channel is connected serfuous water, which chanmel is connected the sewer, and is particularly well trapped. The roofs are coustructed with wooden backe, med with wrought-iron tio-rods, and cast-iron pes, heads, and struts; the purlims are of pught iron, and secured to wooden hacks; the or smported on cast-iron columas and whole length of the huilding. The roof is ered with glass, where shown, and the re inder with $1 \frac{1}{2}-1 u$, grooved-and-tongued hoardand slates.
The gates and grill-work in all cases aro of pught-iron; tho main entrance-gates are of , amental desirgn.
The whole of the hasement is of fireproof istruction; the arching is covered with halte 1 in. thick, to prevent any water passthrough.
roadway and footpathe are paved with Bugsworth sets, laid npon a proper hed, A run with hot asphalte; the curhs to them nr, as also tho callate; the laid with 3 in rging ; the joints run with hot asphalte.
he tympanums over entrance-gates are filled ting to Sea," aud "Fishermen returning Sea."
The whole of the ground-floor is thoroughly insed every day; tunions are disporsed very Intifully, so that hoso can he attached for the pose. There are also two stone troughs, ere pnre water can he ohtained.
Che carving has heen executed by Mr. Bone.
, of Manchestor; and the wrought-iron work
hy Messrg. Hodkinson, Poynton, \& Lester, of Coventry; the general contractor was Mr

## ART CONGRESSES.

In speaking of the Art Congress which is fixed to he held in Vienna, it mnst not be con sidered the first of its kind. Our older readers may remember that in 1861 snch a congress was held in the city of Antwerp, when representatives of different artistic hodies, to the namber of 1,000 , were invited from many
conntries, and the Corporation, the Academy conntries, and the Corporation, the Academy of Arts, and other cognate societies vied in ings were held the strangers. Tho meetangust. Varions sur resolutions passed, and some account of the proceedinge will he fonnd in our volume for that year.* We have heforo us, as we write, a hronze medal commemorating this Antwerpen Kunstfeest, the like of which was presented to every delegato on leaving. The ohverse shows the city of Antwerp, a draped femnle figure with mural crown, receiving the Gonins of Art, who hears in her right hand the emhlems of painting sculpture, and architectare, and helow is in scribed Weltom. Right royally had the sincerity of this welcome heen mado manifest, and fow Who were present will soon formet that pleasant visit to the land of Ruhens and Vaudyck.

## WELLS AND THE CATHEDRAL

AT the recent meeting of the Somerset Archreological Society, mentioned in our last, Mr. E. A. Freeman said Wells was a city of purely cicsiastical origin, hat they did not know it rigin and history with tho samo clearness as contary and Salishnry in the thirteenth, thonth no douht, it was a town of essentially, though, class. An ecclesinstical foundation the same in the tenth century and most prohl there oighth century Ine fonnded something there the church of secular priests, and that Edward planted his hishopric there when he came from Sherborne. There could he no donht that the ecclesiastical element came their first, the civil second, and the military element was nowhere at all. In Wells the bishop did not find himself place within the walls of the city, because was was no city and no walls; the bishopric was founced at the place, and the other hishopric, and the people grew ap around the tho shadow the people came and lived nnder process of time the Church of St. Andrew. In process of timo a town grew up and received a franchise from the hishop, who was the lord; the first herginninge of the franchises received still enjoyed. There the franchises which it still enjoyed. There was a great centrast grown up hy the hishop granting privileres to the people coming to live on his own lands, and the people at Exeter and other places, where the city had existed with rights of its own, and where the hishop came in at a comparatively late period. He hoped he need not tell any one that Wells had always heen a secular foundation; there never was a monk there hy any chance; it had always heen a foundation of secular priests from the heginning. Wells heing in that way paroly an coclesiastical oity, it so happened that it was the very best example to he found in the whole world of a secular church, with its suhordinate huildings, and there wos other place where they conld see so many of the ancient buidinge remaining, and so many still applied to their own nso. The palace was still tho residence of the hishop; rarions houses of the canons and other dignitaries were applied still remained mainly the property vicars vicars, and was to some extent them. The only forndotion quite sume college of the chantry quite gone was the everything else of the ecclesinstical fors ; nearly of the city contimed-e litle still in a ponderful a a lame perhaps, but pared with other plogree of perfection as complace whe they plas $n$ place where they could see so well what was

Vol. xix, pp. 673, 589, 606, 625, \&c.
great secnlar foundation. The buildings bolonging to the different ecclesiastical persons were all scattered ahout, and were huilt exactly as happened to be convenient, and a great numher of them remained still. Approaching the town on the east side from Shepton Mallet tho Ficw was one which could not he surpassed. they conld see the hest and most heautiful part of the charch, the chapter-house, the cloisters, the palace, the gate, the vicars' close, and other things in that city hesides but they had were immodiately connected with the hishopric and clergy attached to the cathedral. In Wells they had a aingnlarly fine parish church, the parochial history of which was a thing which ought to he thoroughly worked ont, because it had some peculiarities different from any parish which ho had heard of, and the origin of which would like to know. In the parish of St, Cuthhort there were some most curions nsages with respect to the two churchwardens. There was one warden for the in-parish and one for tho ont-parish. The churchyarden for the inparish was not appointed hy the picar, nor olected by the ratepayers, but by the town ouncil, and was paid for his services. He id not know that there was no other churchwarden on the same terms elsewhere, hut the case was cxceedingly rare, and be uever heard of anything like it. There seemed hurch close connexion wotween the parish church and the corporation of the city. That was a point for local antiquarics to work up in detail. In domestic antiquities there were several houses and other huildings to he seen in the city. There was ono ancient huilding in Wolls, which ho bad never seen, and which he hoped to see,-a certain barn. Hc must make is salaam to Mr. Irvine, for there was no one who had more reason to thank him than he (Mr Freeman), for what he bad done that merning What Mr. Irvine stated had somewhat taken the reath out of them all; be had put forth views as to the history of tho cathedral so utterly mlike what had been in the head of anybody else, and any one whe had not his (the speaker's) dvantage of knowing those viows must have beon altogether taken back. He bergan to feel a litlo cock-a-whoop ahout the matter, and Mr arker must feel so too. Mr. Parker and be ome ten jears ago looked over the cathedral nd oame to the conclusion that the weat front was older than the nave; it was very singular hat it should be so, hecanse the style looked nore adranced thau the nave. Then came rofessor Willis, who said that it was not so; Mr. Parker and he fell in with greatest anthority, was pleasing to hear in with his views; hut it was pleasing to hear Mr. Trvine confirm what course, they did not for thomselver, although, of down they did not want Joceline to he pulled city withont monld not talls of the huildings of the city withont monraing the way in which they were perishing. [No cue seemed to care ahout its antiquities. Whers was the prehendal honse in the North Liherty, and what had become of the organist's house? Who pulled it down? and, would anyhody stand up and tell them why he did ine there was the history of the city within the last few years it had heen wiped out hy palling down the wall of partition which had for ages previonsly existed hetween the Close and the city. Pall down the houses hy all means, so that the wall could he seen, and no one wonld havo grudged them, hut an ahsmrd and foolish bole had heen made in tho midde of it for the only reason that wher thoy went ont of the western door of the cathedral they migbt have a view of the Swan Hotel. To go down to tho smallest things, - not far from St. Cuthhert's Chnrch was \& tavern called the City Arms which a few ycars ago had a good dons Arras, window, but they were now gone and some trumpery modern thing was put np in some places. There was a good honse, in their Chamiherlane-street with a lahel over the, in dow. Recently he saw a men with a chisel cntting the label away, and a few a chisel was all gone, and something "spick and span" was put in its place. He spolso those thincs, and did not care for anyh on only wished to see the He thinge, hut they kept people who did such and did not ark stand np and answer lim. Let such people their names. Ho had told them let him know was in the city and what thes now there there was a little time ago, and what there ought to be at present.

## STR JOHN HAWKSHAW.

Ee was horn at Leeds in 1811, and received early education at the Grammar-sehool of it town. On lenving school lis hecame a
jil under Mr. Charles Fowler, who wo fraged in the constraction of turapike-roads in West Riding of Yorkshire, and afterwands wame assistant to Mr. Aloxander Nimmo, who 3 engaged by the Government on public wkehaw proceeded to South America, whore had charge of the Bolivar Copper-mines, and his retarn to England hecame engineer to was afterwards engineer to the Lancoshir, Yorkshire Railway (nearly the whole of ch lino was constructed under his superindence), and to soveral railways in the north other parts of England. Among other rail w's narno is connected, may he mentioned Riga and Dunahurg and the Danaharg and lopsk Railways in Russia, the Penarth Har. Ir and Docks in Cardiff Roads, the London. 1 Bridge in Treland, the District Railway a ropolis, the new docks at Hull, tho great
li.canal from Amsterdam to the North Sca, neew East and West India Docks in London, He was also connected with the Governit railways in the Manritius, and is consult. engineer to the Madras Triiway and the
otern Bengal Railway. Besides his connexion 1 the Government as engineer to the Harbour ofuge at Holybead, he has also been engito the War-Office for the foundation of the
forts at Spithead, and has been consulted he Government in other matters of a proional character. On the failure of the great se at St. Germains, in Norfolk, Mr. Hawh-
7 was requested hy the Commissioners of the 7 was reqnested hy the Commissioners of the
lle Level to talse measures to ons and to remedy the evils caused hy the witer, which be did successfully, and there, he first time, he substitated large syphons Cio fallen sluice. He was nowinated one of City Commissioners of Sewers when that 1. was formed by the Crown; and in 1860
Pappointed tho Royal Commissioner to decide een contending schemes for the water Ely to the city of Duhlin.

A NATIONAL SCHOOL OF ART.
$R_{3}$-Tho assuranee given by Mr. W. Cave soas in the Brilder for September 6th, that wo will only he patient, and grow our art
the very seed and root, we shall in the the very seed and root, we shall in the :o of time have a national school of art in年ery triest sense," will, I feel sure, if it not entirely allay all approhension for the
be, still go far towards checking the de. fing tendencies inherent in our artist-natnre. antional school of art, as England is at int constitnted, is a moral impossibility thon our fondest hopes may be realised in a shat is right " (and Providence will kind"
that bare of the artist), "depend upon it," adds ssomforter, "art will take care of itself." En now ! Nothing can be simpler, clearer, re encouraging than that. Yon have the prohlem, and its possible solution, in the lass of a single sentence; and there are tance:-Firstly, the difficulty its niversal particular quality of "patience" " finding tecome exhansted in the "course of time; " dly, the fact that the national school dm of cultnre has already been on trial for Hitillation of a centnry without producing ation of the hrilliant results predicted ang or maintaining the conditions indicat 1-8sential" to develop a "national act" in -sense contended for. Style! style in ! ! When shall we fully realiso that the is in direct proportion to the isolation, and hrerse proportion to the civil and religious y of the nations? And that if we have no hal style, in the "senso that Grecian and a were national schools of art," it is hethe ready intercourse of modern times has yned national individuality; and all that is forld's common property. bave it on the authority of Mr. Rnskin In science we are beginning to sus.
pect that the too rapid accumulation of facts bas left the astronomer, the chemist, and the baturalist no time to arrange or systematise our knowledgo ; the architect las found an embarrcts de richesses in the number of his newly-acquired materials and appliances, and there is no hope for his art until he has thoroughly mastered their nse, genius, and capahilities. Then, as we call that one man "great" who in history or in science displays the co-relation of isolated facts educes the trath, and brings into unison the chaotic lahours of a thousand minds; so in art we shall recognie the greatness of him who shanl arst grapple successfully with the complex into of modern architecture, and harmonis materials at his command
NOW , with all deferene
opinions would consideration even if entitled to respectfu studied the subiect" to be writing, I fail to find angh he happens national idiosyncrasy or find anything in our temperamient, to render in our professional national ache reader the establishment of a "Sectarichool" or university an impossibility. every hranch of the arts and sciences, in religion and philosophy; not and sciences, in religion and philosophy; nor are we at all in "at-onat of thinking that the absence of an at-one.ment" of opinion is an element of reak. ness in these organisations. The rivalry of schools is, on tho contrary, rather an element of success than of frilure, and is calculated to hring each. Nor can I conceive of anygth there bo in to create the healthy manifestation so likely talent on the one hind manifestation the noxious outgrowth of empiricism, or the servile copyism on the other, than those suggested in sour own article of the 23 rd ult.
The historian is honnd to revise, modify, or oven reverse his judgnent of past events in the light of newly-acquired facts; there is no rest for the philosopher ; and the architect who would be ahreast with tho times must avail himself of all the aids of modern arts and science. When such a one shall arrive be will not seek to disguise in counterfeit and horrowed forms the being materials with which he builds; hut, epeak its own emphatic language, and hy the intelligent and exhaustive utilisation of all the means at his disposal, he will become the founder f a style.
And now is our time to strike! The lenst delay may he fatal to our hopes, and the muoband ever. Let ns then trom us for ever moment he propared to put an effective curh upon the progressive and inventive tendencies of the age; isolate ourselves from foreign influences, making no further exchanges of in duo or information; and that "style" will highest conpentione of national," and the a fair way towards realisation in the minds of in a fair way towards realisation in the minds of a
remote posterity.

## HOPES FOR POOR STUDENTS

Sir Josepf Writworte has been led by the experience of the past competitions for his scholarships to estahlish fresh rules to insure that tho holders of the scholauships shall devote chemselves to the studies and practice necessary or mechanical engineering, during the tenure of the scholarships. These will have to he looked o by candidates.
The numher of scholarehips in the competition chorw will be reanced from ten to six. Fach together with on adited anaual value of 100\%, mined by the results of the paual sum deterthe preceding rear of progress mado in he end of coch zeares ten an exrmination at he end or cach year's tenure of the scholarship, the following payments, in addition to the 1007 . ear's mearoned, will be made among each who dee or hateh of schotars:-To the scholax econd 602 . 10l.; to tho fo the third, 501 ; to the fourth, provided the fifth, 30l.; and to the sixth, 20l. ; press as is satisfactory to the Depach a proScience and Art, whicb will determine if the mmaned or ny metermine if the Then at the expiration of shal beawarced; tenare of the scholarships under these new regulations a further sum of 300 , will he awarded, in sums of 200l. and 1002., to the two scholars of each year's set or batch who bave dome best during their tenure of scholarship; so that it will be possible for the best of the scholars at the end of his period of tenure of the scholarship to have obtained 8001 ., and the otbers in proportion,

## NEXT YEAR'S INTERNATIONAL EXBIBITION,

Sanitary appliances aro to form part of the London International Exhihition of 1874, and the Commissioners are seoking to form a strong committee in order to ohtain as complete a repre when thelist is possible. We will pnhlish the names such of our readers io how they may aid in malin the intorestion and ralu Civil oncineering as possiblo
ontripances and architectural and byilding induetries, and herm one of the lime and the C . the the repless class as complete as Company of Tilers and Bricklation of the them to nominate three of serve on a committee of of their members to the on me class refred to, in conjunction witb the mewhers appointed by her Majesty's Commisaccordingly nominated Mr. Richard Moreland (engineer), Mr. John Young (architect), and
Mr. John Bird (builder). Ir. John Bird (builder),

THE BUILDING OF COUNTY BRIDGES AND THE MIDDLESEX MAGISTRATES.
TaE erection of what are called county hridges, has generally heen thought to rest upon the county authorities, but the Middlesex magisrates appoar to hold different views on the sub-Barking-road Bridge hy a new iron structuent ho existing hridge not heing considered safe, and the Poplar Board of Works bave meme, rialised the Middleser hench of magistratos, asking them to construct the new hriage. It transpired at tho meeting of the Poplar Board, held last week, that at a late meeting of the riddesex magistrates, they refused to eract the bridge, denying their liahility to do so. It cussion on the suiject, admitted the a dishridge was necessary, hat they contend a new the county could not be colled upon tonded that hridges to meet increased traffic to build new erect $n$ wry bride wold ho and that to liahility of the ge woury he to acknowledge the would be highly dangerous matlers, which discussion on daugerous and improper. In a the Poplar Board, the chairme meeting of the Poplar Board, the chairman stated that site view to the Middleser county bench, and were disposed were disposed to admit their liahility, jointly with the Middlesex county authorities, to huild the matter at the that they are to consider bench. The chairman mecting of the Easex
served that he had a very strong opinion as to the liahility of the magistrates, not only as regarded this particular hridge, but others in the connty, and that in the event of any aooident happenige the county would be hable. The Board resolved before taking any further proceediogs against the Middleser bench to compel them to build the new_bridge.

## INJURY TO LEAD BY INSECTS FROM

 DECAYING WOOD.In making some repairs lately, it became necessary to remove some 5 ll . lead flat, whicb had been down ahont thirty-five years: one of the boards was found extensively wormaten and decoyed, also one of the next partially so. Upon examining the lead which oovered tbe decayed wood it was found $f u l l$ of holes, similar to tbose in the wood beneath, tbe other portion who overed the sonnd boards being perfectly sound.
I have shown it to some practical buiders, and they aay they never came across snch thing. Will yon please mention it in your journal, to learn whether such a thing has occurred elsewhere; as, if it is established, will readily account for the pin. boles plumbers find in guttering, or otber leadwork in com
bination with woodwork?

TIE VALUE OF DUST
The value of dust has of late years been steadily decreasing. In the year 1861 it was of such valne as to induce the contractors to pay to the vestry of St. Pancras the sum of 1,810 I. for the privilege of collecting it from the houses in that parish; and now the vestry has to pay 5,000 l. a year to the contractors to have it romoved ; this difference in its value being equal to a $1 \frac{1}{3}$ d. rate. Mr. W. B. Scott, cbief sarveyor to the vestry, acconnts for the decreased value dust from the circumstances that the supply is not equal in quality to what it was and has been in years past, because of the greater proportion of iniand ceal consumed. The conl brought to London, even np to 1864 , was principally coal thas increased, and in, but now the proportion nothing but ashes, -prey flaky ashes (with little or no cinders), by which the quality of the breeze is deteriorated. The more extensive the metropolis becomes, the greater is the oost of collecting the dust, and the greater activity of the sanitary anthorities renders the operations of dealing with the accumulations more ex. pensive.

## HOW SHALL I BUILD?

Sir,-Is it just to lay so grave a charge as the sadly imperfect mazner in which our dwel. lings are bailt to architects or doctors of said by tho best intentioned and most scientific men of the age apon the impare misconsiruction of dwellings? How often have the pages of the Builder ruog out on this suhject? And how many thousand pages of matter lie mnprofitably on the puhlishers' shelves finding no readers?
puhlishers sheives "An Amatenr" looks around London and all other of our large towns, be will find hundreds of houses being bnilt; and who is the architect? Why, the specrlating builder,-who copies some honse somewhere, the size of which will suit his land. Let him ask the aforesaid builder what provisiona he has mado for ventilation, and he will he shown a few perforated bricks between floor and ceiling lincs ; hut in most instances be will be told thero are the doors, windows, and tues. And now let him ask, bow, when windows and doors are closed, and, as is the case in many iostances, a bag of shavings bungs ap the flue iu winter, are the products of animal com bustion to bo got rid of and freeh fuel to snpply the vital spark let in? And what will he his answer eight times ont of ten. Why, -a grin.
Me may as well talk of the componene parts of Cyathia. Or he will be told flatly, "It will not pay; for not one ont of a hundred will give me 5 per cent, more if 1 spend 15 per cent, in
properly rentilating these houses." The fault properly ventilating these houses." The fault lies in the it
general public.
Therefore I say, so far as our conmon dwel. lings are concerned, architects, as a rule, are not to blame. But can they be exonerated in this matter in our large buildings and mansions?
Erom wbat I have seen I donbt it. What is
ventilation? I take it to mean an admission o ufficient pure air for the healthy breathing of the nhabitants of a chamber, and this without aranght and at a proper temperature for the mags to inhale. For you would not cram twenty persons into a dining.room constructed for twelve o hreathe comfortably in, and wbat with tbe beat of their hodies, bot food, fire, and artificial light raise the temperature to $60^{\circ}$, and then admit air at from $30^{\circ}$ to $40^{\circ}$. If you do it must fall to the ground direct, no matter from what part of the room yon admit it; and tho result is, the air we bave exhausted of its purity goes from ns, ascends to the ceiling, becomes of the specific gravity of the atmosphere of the room, and in struggling to get to the flue, its only general exit, we have it to breatbe second-hand, mixed with the products of comhustion from lamps. Did rou ever hear a person, when making no the eligible for a dinuer-party, ask, "Woll, now, how many will our rooms allow to breathe com. fortably in ${ }^{3 \prime}$ The fresh air shonld come into each room gently and at a proper tomperatnre coverned by the heat of the external atmosphere It is wrong to bave your honse at $60^{\circ}$ to $65^{\circ}$, when out of doors it is only $32^{\circ}$. And so far as science has yet made known, we must nse mechanical power to obtain this, and in twenty years' practice and ohservation over many thou. yunds of miles, I hare not seen ony contrivance a cheap simple, and perfect, os that I suggested o cheap, s mple , fower for takine off the msed mee; and I would power hor ask, why lo lating boiler with tank and 3 th flow and return lating boiler with bine the places in the house for bathing, sc., would not he more than from $10 \%$, to 14 ? Even now, as to channel for air, it may be made in brickwork; but, if so, it must he well parged, or it will be but, if so, it must he well parged, or it wis if this is done piecework, it will useless, and if this is done piecework, it will
want well looking after. I do not think iron want well looking after, 1 do not think mon 20 .gauge would cost much more, tuhe made of 20 .gauge would cost mnch more, and the joints can bo mado of a simple india.
rubher flat ring, $\frac{1}{10}$ in. thick and $\frac{5}{8}$ in. wide; by rubher flat ring, $\frac{1}{10}$ in. thick and $\frac{5}{8}$ in. wide ; by
this means yon would obtain a continaal dis. plecement of the air, for tbe tank would retain its heat sufficient for the purpose nntil the fre was relighted. And if there is not a range, small boiler to form back and sides of register stove fire-pot would be all-sulficient.
As to so-called veutilators fixed in walls con nected with flues, \&c., examine the neighhour hood of one after it has heen fixed a few months smell the wall around it, and you will find that the backward or closing action is a fallacy; for set them as carefully as you may, they will allow return dranghts in time, and this is not pleasant when the return current is smoke. Si under a window in which is fised one of the glass or lonvered ventilators, and if the wind is on that side of the honse leave your seat, or stiff.neck or something worse will follow. Thus t appears, to have perfect ventilation, we must have the air brought from an external part of the house, away from all dams and close spaces, or bring it down a descending sbaft, about 20 ft . high, on one side of the building; avd this must oe warmed to be solerated in winter; and to be done so purely, should pase over hot-water pipes or tank. It is an indisputable fact that to pass air over highly. licated dry surfaces, either metal or clay, makes it unfit for human inhalation Nor need this be a weighty matter, for a small contrivance can be made snitable to the meanest class of honses at a very small cost (when you bave educated tho people to feel its neces. sity, and to know how much more healthy and comfortable their homes would he with it)
I do not mean to use any more fuel, for 1 ffirm that one-half of the heating properties of our coal is sent out of our honses to destroy our buildings and poison the atmosphere.
I would suggest in these School Board days, tbat tbey be petitioned to cabse to be hung on he walls a printed card, stating thereon the amonnt of air each adult inhalos at every respication, the quantity in twenty.fonr hours, and the poisonons nature of gases given off; also the approzimate number of pores or cells in the haman borly, and their functions, so that the young mind may be made to see the neces. mized with cleanliness, If "An Amateur mixed with the Plebs, he wonld find gross gnorance in this nutter, and thousnas that never give a thonght as lo what we should hreathe; yea, and thousands That card wonld dramp attention for the pext generation, and draw attention for the next generation, an
conld do no harm to this.

If the hot-water tank is not liked, baild separate clean parged flue between the stov Atues, rnning it at the back of stoves mos used, and take branches into this; but woul this answer at night when all is olosed, an therefore most important? I think not.
If yon perforate your ceilings, and leave tb mpure air to distil itself among the joists o keying of ceilings, yon will find, let the floo above be ever so well laid, that yon only tak it out of one room to distrihute it over otbers;not a very fair process, if you do not occupy the apper ones.
If you nse register grates, have the curve o h coves the right sweep, to reflect the heat tb direct into the room ; and hy adopting the hao flues as I snggested, and keeping your grate flus with the breast, you would find a 9 -in, flue, we broken or curved, answer thoroughly. Th wonld give you $14 \frac{1}{2} \mathrm{in}$. breast, 9 in . flue, $4 \frac{1}{2} \mathrm{i}$ face, and 1 in, for plaster. By using side ore fues to the registers, you will consnme to the heary carbnrets, and thas olla flue. If, and make less smoke or soot for you clean, more heat wonld be reflected, and by th system the contraction of the montb of the flo may begin directly upon the top of the stove. In conclusion, I would ask" An Amatenr to bave an old grate altered, and try it.

Bonet A. Evans.

TEE ROADS AT KING'S CROSS.
$\mathrm{Sin}_{\text {IR, }}$ - Yon noticed in tbe Builder of Angust 1873, the subsidence of arch of the railw bridge at King's Cross. I wish to draw yo attention to the great, and, as it appears to $\bar{\pi}$ nnnecessary thickness of this bridge (about 2 7 in.). Conld not a bridge balf this thicko be made by a girder dividing the road of bridre into a douhle thoroughfare, one for trat east to west, the other traffic west to east ? I advantage of this reduced thickness, by this any other plan, would be that York. ro rould be saved heing raised by 1 ft .3 in ., onsequently the paring next the honses on ast side of York.road might bave beon andisturbed, or nearly so, and channels for wa and mulud or snow on the parement prevent bich may frove annoying and dangerous Finter especially. The gradients over $t$ bridge must be very trying to cattle, and lopes of the pavement very dangerous in wit o all passengers ou foot. Ought not s hridges to be made thinner to save the gradients?

Jxo. Eliderdae,
A Vestryman of St. Pancras

## THE TRADES MOVEMENT

London-On Saturday night an aggreg mceting of builders' labourers was beld in T falgar-square to consider whother they shou strike against a continuance of any rate of $p$ less than 6A. an hour. There was a stro desire on the part of a large number to strike obce, and tbe proposition was snpported several speakers, who, on a show of bauds bel taken on the proposal as an amendme declarod that it was carried unanimons The other proposition, for the adjourament the strike for a week, was pressed, and majority, amid some coufusion, voted in favour. The moeting euded quietly, thought difference of opinion among those present at t mecting, wbo were chielly Irish, seemed at tine likely to have a less agreeahle resuit.
Liverpool.-The operative boase carpente and joiners have at last put an end to the strike by adopting $7 \frac{1}{2} \mathrm{~d}$. an hour as the rate wages for the district. In doing this, hower they have not obtained the standard they sous for, neither have they accepted the offer mittee decid the master builders. conseque of allegations which they say have heen made the effect that certain leaders among them w endeavouring for their own henefit to coerce men and prolong the strike. It was also sta that there are now only ahout 160 men out employment, and that work can he at on obtained for these at the rate of

## the meeting agreed to.

Newcastle.-At a general menting of operative stonemasons of Nervcastle and dise masters six months' notice of the follom alterations in the local code of rules, notice
pire on the first Saturday of March, 1874:1. That the wages be 34 . per week from 1st day of Fobrnary to the 30th day of jvember, both days inclasive; and 31a. per 3ek from the 31st day of Docemher to the
st day of January. 3. That meal hours he st day of January. 3. That moal hours he ner all the year round. 4. That sheds and 3ss-honses be erected for masons on all johs lere found necessary. 5. No overtime to he rked, except in cases of necessity. 6. All work hedone hy day, except huilding houndary walls d dressing blockers, such work to he done by sons only. 7. That employers pay lodgings the rate of 6d. per day or fraction of a day. That omployors commenco paying wagos not or than twelve o'clock on pay-day. 10. The egoing rales to be enforced within three les from the districts, as stated in rale 7.

## A NEW CHURCH IN DULWICH.

 A. New church is ahout to he erected in West Ilwich, near the Norwood Cemotery. Tho site the intended new church, which has been esented by Mr. John Westwood, of the Manor ase, extends from Kamilton-road to Crosted. $d$, and the building will thereforo stand in o parishes, one portion heing in Camberwell1 the other in Lambeth. The principal rance will be from the Croxted-road, and the aroach from the road to the church will he ough an ornamental ground. We understand t no fewer than ninety-five arohiteots are npeting with designs for the huilding, whioh to cost 7,0002. A parsonage, corresponding h the architectural character of tho church, is tructions, with reference to the huilding ro been given to the compoting arohitects. 3 style of architecture is to be Gothic, and edifice is to have a tower and spire. The ge, whose decision is expected to he given in ge, whose decision is expected to he given in
vemher next, and the erection of the building he commenced as soon afterwards as pose, so as to ho ready for opening in the course next summer. Emmanuel Church is ne which has been giveu to the edifice. As neighbourhood in which the intended church situated is, to a great extent, occupied by deners and out-door servants in the employ
the merchants and other wealthy families the merchants and other wealthy families
iding in tho district, one-third of the seats in iding in tho district, on
church are to he free.

E CITY CORPORATION'S EXPENDITURE ON BUILDINGS.
in statement of the receipts and expondituro he City of London Corporation during the last years, which has just been puhlished, shows ved buildings amounts to $921,506 \mathrm{l} .6 \mathrm{~s}, 101 \mathrm{~d}$. le npas follows:-On the Metropolitan Cattle det, $27,442 l$. 6 s . 6 d . ; eroction of a pauper tio Reylum, 59,0186. 183. 3d. ; improvements he Guild hall, $50,183 l .15 s .8 \mathrm{~d}$. ; contributions tion of library and musenm, $44,6892.5 \mathrm{~s} .4 \mathrm{~d}$. roved dwellinge for the lahouring poor, $192.2 \mathrm{~s}, 10 \frac{1}{2}$ d. ; construction of the meat and
itry market, $305,495 l$. 6 s . 6 d . d dinking itry market, $305,495 \mathrm{l}$. 6s. 6d. ; drinking
tain in Smithfield, 1,585l. 5s. 8d. ; conction of the new Foreign Cattle Market, 057 l . $1 \mathrm{~s} \mathrm{~s}, 3 \mathrm{~d}$; oulargement of Billingsgate, 34l. $8 \mathrm{~s} .10 \mathrm{~d} . ;$ and purchase of premises, 07t. 16s. 1d.
a addition to the above expenditure on huildb, the statement gives the following items er the bead of extraordinary paymonts ond the sum of $1,653,4107$. 13 s . 2 d . on ordiexpenditure, and which inoluded, amongst ricoms, $60,9732,15$. for allowances to Lord ors; expenses of the Mansion House, 9 l. ; aud 67,412 2. 10 s. $9 \frac{1}{d} \mathrm{~d}$. for expenses of Guildhall and Law Courts. Deht discharged ccount of the Metropolitan Cattle Market, $000 l$; transfer to resorve fund, $263,853 l$, stments (inoluding a temporary investment of ption of and wedding.onift to the Princess o es, $31,351 \mathrm{l}, 10 \mathrm{~s}, 2 \mathrm{c}$. ; entertainment of the ce and Princess of Wales, 16,6902 . 5 s . 8 d . rtainment of the Sultan and Belvian Volun i in 1867, 30,6832. Os. 10d.; thanksgiving expenses, $9,617 \mathrm{l} .15 \mathrm{~s} .3 \mathrm{~d}$. ; and disharsement cooonat of supply of gas and water to the
citizens, 23,461l. 13s. 7d.; the total expenditare in the ten years heing $3,709,9381$. 10s. $5 \frac{1}{2} \mathrm{~d}$., or an average annuel expenditure of $370,9932,178$ The aggregate reoeipts during the same period amounted to $3,721,3252.13 \mathrm{~s}$. $6 \frac{1}{2} \mathrm{~d}$., showing a yearly income of 372,1327 . Tho rents in the ten years amounted to 987 , $721 l$, ; the market-
tolls, 499,0257 .; hrokers' rents and feos, and
and Mayor's Court fees, 61,143l. Among the extraordinary receipts were $1,658,380 \mathrm{l}$., heing loans raised for puhlic improvements, or resulting from the sale of securities.

KIRKALDY FINE ART ASSOCIATION.
Turs exhibition (the seoond here) has been open for three weeks, and has heen very well attended. The exhibits consist of 257 paint. The chief drawings, and 9 pieces of sculpture. James Cassie, A.R.S.A.; William McTagrart, R.S.A. ; Gourlay Stecll, R.S.A. ; J. C. Wintonr, A.R.S.A.; T. Danhy, R.A. ; Arthur Pengal, R.S.A. ; Erskine Nicol, R.S.A.; Waller H. Paton, R.S.A. ; Alexander Johnstone, R.A. ; Charles Lees, R.S.A.; C. N. Woolnoth ; Ahraham Stork; James Archer, R.S.A.; Wm. Fettes Douglas, R.S.A.; Sir J. Noel Paton; John McWhirter, R.S.A. ; J. Linnell, sen.; Alex. Fraser, R.S.A.; Sam Bough, A.R.S.A.; R. T. Eckford R.A. ; John Smart, A.R.S.A.; Jamee Eckford Lauder, R.S.A.; Alexander Groen Norman Macheth, A.R.S.A. ; Horatio MoCalloch, R.S.A.; Patrick Nagsmith; J. B. Macdonald, A.R.S.A.; Henrietta Ronner, R.A.R.; J. F Herring, sen. ; John Burr; John Ballantyne, R.S.A. ; W. Beattie Brown, A.R.S.A., \&e.

Since tho opening of the exhibition, works to the value of nearly 300 l . have been sold, and it is expected that more will he disposed of hcfore the close.

## SCHOOL BOARDS.

Cardross.-At a meeting of the Cardross School Board, held on Monday last, the plans advertised for, in addition to Renton Puhlic School, were laid before the Board (five in number) from local and Glasgow architects. The design given in by Mr. John McLeod, arohitect, Glasgow, was approved of as the most suitable. The plan of Mr. George Banks, of Duniharton, was the next most favourably considered.

## TECHNOLOGICAL EXAMINATIONS.

Sir,-Permit me to sey, with reference to the notice respecting the Society of Arts technologital examina.
tions, in the Buider of September 6 hh , tht Mr. Thos. F. Mullins, who ohtinined ihe first prize and a studentship of Corl, His hrothar, Mr. M. Mullins, ohtsined the second
Corriage bulling, is a native of prize. Both have heen steady. hardworking pupils at the
evening classes of the Cork school. James Breyln, Head-Master.

## WESTMISTER CLOCK TOWER.

Sin, - Parliament heing prorogued, and the alleged uge
(to indicate to distant members whon the house is sitting) of the lighthouse lanterns placed near the bummit of the clocketower of the Houses of Parliament having ceased, I heg to inquire whether they may not now be
removed, or whether the disigurement of that prominent and eostly erection is to he permanent? puhlic buildings being disfigured for merely fancintul pur poses. The light seems to ns by no moans objection Jhle,
quite the reverse. What is wanted is that it should bo so placed or formed as not to disfigure the huildiug.

THE PATNTERS' MOVEMENT IN LONDON Sis, - In yotur issue of August 30th appears, ander the
abovo heading, a letter by "Decorator, who does not think that "house-painters, as a body, should receive so tools are expenaive, "whereas, the pasinters "have nothing but a putty and chisel knife, at the cost of 2s., to supply'. egitimate painter-firms in tho Weat-end, and I do not legitimate, the master heing a practical painter, or em.
ploping a food practical painter as foreman either plofing a mood practical painter ss foreman, either of lahourer, even if they were "mixed up among forty or
fifty othera": and I do not think they would allow the foreman of the joh to protect them. Ibelong to a society and amwoll sequainted with most other paincers' societies Lhe right of a a master ornture to soreman to that none discharge any mate

KIRKSTALL ABBEY
Str,-The remarks of soimpartial an anthority as Mr. Sharpe, will surely for ever set at rest the Kirkstall Ahbey restoration proposal. Imagine the process applied to all onr Medineval ruins (and if to one, why not to the rest?), and the ren!ts wonld be such that no amonnt of modern design, howerer excellent, could oompensate for. The work of restoration is intensely interesting o the individual restoring, hut to the profession t large, who can no longer study at tbo founain head, the operation is often otherwise.
How much of the interest of these ruins rests their intermixed architecture, and tho many prohlems which are thereby suggested, which for the exercise of imagination are best lef $t$ ansolved!
How interesting, historically, to trace the rise and course of a building in the "mosaic" of ito varied styles-the amhition and the advancing art of each succeeding generation imprinting themselves in durable stone and lime! But of this interestingstudy the restorer would deprive us. There is, however, one plea for restoration hesides that advanced by Mr. Sharpe, and that is, the ruins have unnaturally become snch, the hand of man has reduced them to wreck, and the hand of man should thercfore reinatate them.
The proper answer to this is a practical ques-tion,-Is it worth the outlay ? Restoration wonld be a loss resthetically, archnologically, and architecturally, would it he a gain practically? Will it create a church, which by no other means, and in a no less costly manner, wonld answer the pnrpose of a modern place of wor-

## CHURCH-BUILDING NEWS.

High JFyombe--The proposed restoration of St. Mary's Chnrch, High Wycombe, is meeting with every prospect of success. At a large and influential meeting in the Town hall, the Bishop of Oxford, Archdeacon Biokerstoth, the Dive of Buckingham and Chandos, Lord Carington (in the chair), and other influential gentlemen were present, and passed appropriate resolutions ; and 10, Sureet, the arohitect, sent in an estimate of 10,000 ., whicli was adopted, Upwards of 2,0007 have already heen either contributed or promised. Lord Carington has headed the subscription list a donation of 1,0002
Weston Bampfylde.-The parish chnrch of the Holy Cross, Weston Bampfylde, near Ilchester has lately been reopened after reparation. In plan the churoh consists of a nave without aisles, Before Before the recent works no vestry existed, hut one has now been the north side of the onazel. modation heing for ahout 100. Previonsly to the reparation the interior was coated with white. wash and yellow ochre, and the roofs and ceilings were in an fact, almost dangerons. In the neelings the characteristic Somersetshire type of the old work, i.e., the barrel or crall form, has been retained, though the cornices and ribs are of mnch holder and more snbstantial dimensions, and boarding suhThe for for objectionahle lath and plaster The material is deal, stained and varnished; bnt the caryed bosses to the chancel are of oak. The foors and seating throughout the church are entirely new, the latter having deal framing and solid square moulded oak euds. The chancel is pavod Mith encaustic tiles of Mr. Godwin's manufacture, the patterns arranged hy the architect.

The chancel stalls are of oak，with moulded and shaped cnds and ormamental book－board fronts． The whole of the interior of the chnrch has been cleansed of whitewash，and the natural rough stone shown．Several of the windows（of the Perpendicular period）have been renewed．The porch being dilapidated，and possessing no parti． cular interest（it was built abont 130 years since）， was taken down，and rebuilt from a now design． The roofs are covered with local stone tiling． The curions old floriated cross to tbe oast gable bas been preserved and reset．The ground out． side the church has been lowered，and a stone channel conrse 1 ft .6 in ．wide has been mado． The nicho to the west end formerly blocked up has heen opened out，and also the little lancet windor nndor it，which has been piorced and has been cleaned and refo The Jacobean pulpit Hill stone base．The old font（the bowl of whiel is Norman the stom Late Decorated）has heen most carefully cleaned，and its very defective most carefully cleaned，and its very defective parts renewed．The church is beated by ono of tated the erection of an ornamental chimney． tated the erection of an orramental chimney．
shaft．The steps up to the rood－loft and the shart．The steps up to the rood－lift and tae shonld be mentioned that the tower is not of the normal Somersetshire type，for it is octagoual ahove，and square in the lower stago，a pecnliarity shared by one or two other churches in the immediate neighbourhood．The total cost bas been ahont $700 l$ ．for the restorations．The con tractor was Mr．Alfred Caines，of Sberborne the architect，Mr．Edmand B．Ferrey．
Piercebridge．－The new charcb of St．Mary＇s， in the village of Pieroehridge，has been con－ seerated hy the Bisbop of Durham．Tbe church is a small building in the Early English style， and consists of nave and chancel，with a hell－ turret at the west end．The entire structare is
of Forcett stone，the walls heing of rabble masonry，while the mouldings of the door and windows are of chiselled ashlar．The nave is lighted witb trop mall lancet windows，and a donble sine：s sach side；the east end of the chanceliy also provided with three windows of than the others．The entrance is on the south west side，a space between the outer and inner door eonstituting a small porch．On the south side of the chancel is the vestry．All the doors and windows have hooded mouldings，terminated with carpod finials．The bell－turret，which is arcaded，stands on two projeoting huttresses，and is surmounted with a pyramidal top，decorated with ornamental hands of froestone．The recess hencath the huttresses forms a placo for the bell． ringer．The hell has been brought from the old parish church at Gainford．The roof is covered witb slate，and has a deep pitch．The gable of the chancel is surmounted with a stone Gothic cross．Internally，tho church is seated with accommed of nave and chancel，is wagon－beaded，of Mencl pine．The nave windows are stone－arched．The church is provided with a hot－water warming deeigas of Messrs．Cory \＆Fergusson，architects， Carlisle，and the contractors for the whole of Carnsle，and the contractors for the whole of
tbe work were Messre．R．\＆S．Adamson，Gainford， who executed the masonry；Messra．Wharton， of Darlington，being the sub－contractors for the slating，and Mr．Gent，of Gainford，for the plamhiug．The entirc cost，irrespective of the ground，which is the gift of the Duke of Cleve land，ie estimated at ahout $1,400 \mathrm{~L}$ ．

Ashourm．－Mr．George Frith，of Coventry Ticar，has entered into a contract with the Vicar of Asllbourn，by whioh，in consideration of the sum of 1997 ．10s．Which bo is to receive， he has agreed to take down and remove the spire of the parish church to the top of the spire lights，and to rehuild the spire to the height of， and in the eame line as，the original epire． Repairs are to be done on the lorer part of the West and south aides of the spirc，\＆c．；and a new spindle and copper vane and a new lightning． copairs wher are to fixed．There are other repairs which are needed．Of the 500l．Which
the committee determined to raike，320l．have the committee

Advance of Wages to Metal Workers and Labourers．－Messrs．Cubitt \＆Co．Lave admanced to all their metal workers，numhering over 250 men ，ono halfpenty per honr on their former rate of wages，which makes the wage equal to other porsione of the huilding trades and to tbeir labonrere one farthing per honr．

11. They offored the sum of ten guilders as a rard for the most prettily decorated house, 1 this prizo was eagerly competed for by tho
idents of the laves and alleys as well as by idents of the lanes and alleys as well as by ise of tbe main streets. Every thoroughfare tbe town was planted throughout its whole a tasteful manner with evergreens, the yot heing further heightened hy the aid ious hues. Triumphal arches were raised at more important points, and flags streamed ly in every direction. Tho new docks are opletoly mished. The hasins are capahle of y accommodation and appliances suitable for y accommodation and applances suitable for

Social Science Congress.- The neventcentl hual Congress of the Social Science Associa n will he held at Norwich on October 1st, and reessive days, nuder the presidency of Lord ughton. A great feature of the meeting, as have already mentioned, will be a sanitary
1 educational exhilition, the object of which 1 educational exhihition, the object of which
to bring nuder notice the latest scientific pliances for the improvement of the public alth and the promotion of education. Intend. exhibitors should make early application for
se to the secretary, Mr. James Rohinson, Adam-street, Adelphi. The three special lects for discussion in the Fealth Section, Iton, are:-1. What are tbe most convenient ninistrative areas for sanitary purposes
l what are the hest means of administering I what are the
sanitary laws? 2. Should there he a special loma for nedical officers of health, and, if so, \& shonld it he granted? 3. What provisions required in a general Building Aot so as
ne necessary sanitary arrangements?

Coal-cutting MIachines in the United States.-The efficiency of Brown's Monitor Coal-cutter bas keen practically proved at the man, \& Alexander, near Brazil (Indiana), where for sume time past, they hare been carrying out the nccessary expcriments. It consists of a carried into the mine by means of an iron pipe, terminating in a few feet of rubber hose, which is attached to the steam-chests, and allows of the free motion of the machine. It is the intensoon as the experiments are completed. Colonel Zinamerman estimates that one machine, by being run on the "double shift" "tbat is, night and day-will cut 100 tons of coal in twenty. four hours. Wages amonnt te $\$ 11$ per 100 tons of coal. As it is now, mining costs $\frac{1}{4} 1$ per ton, and in some cases even more. The machine and in some cases even more. $\$ 80$ machine
does not cost more than $\$ 700$ to $\$ 800$. It cats away only $1 \frac{1}{2}$ in. of wasto eacb out, thus saving 10 tons per 100. The machine now in ase is
A. Monument to Iord Nelson, $\rightarrow$ interesting eeremony has taken place at Anglesey, namely, the unveiling of a colossal statue of Lord Nelson. The statue forms leading mark for ships in the new Admiralty chart of the Menai Straits. It was modelled and cxecuted, in twe years, patient lahour hy Admiral Lord Clarence Paget, and it is below his residence in Anglesea that it is placed. Tbe material is a comhination of limestone and Portland cement, and the figure is strengthened by the insertion of a central iron strengthened by the insertion of a central iron tatues can he constructed of a material little inferior to marble in appearance, and probahly more durable, at one.tenth the cost; thns oarrying out a desire of Prince Albert. The statue, ineluding plinth, is 19 ft . in height, and the podestal and basement to wer are 22 ft . bigh,
making a total height of 41 ft . It is intended making a total height of 41 ft . It is intended as a landmark to warn mariners of dangerous rocks on tbe Carnarronshire and Angicsea side
of the straits, and was dedicated hy Lady Claronce Paget "To all Mariners."

Concrete and Beton.-Tbe invention of Mr. Humphrey Chamherlain, of Round Green, Barnsley, consists essentially in the application and use to and in the manufacture of mortar heton, and concrete, of the waste lime irom gas comparatively useless refuse. Ho has found hy experiment that this "gas-lime" produces an equally good or superior mortar to fresh lime. It is simply requisite to grind it up in the usnal mortar-mill, or to mix it, as ordinary lime, with sand, asbes, and such like materials. Tbe said refnse lime is also suitable, as a substitnte for fresb lime, in making concrete or "béton," which may, or may not, as required, be moulded into bricks or hlocks in any well-known manner, and in the event of a very hard suhstance heing required, a portion of Portland cement may he
used in combination with tbe said refuse used in combination with tbe said refuse lime.Mining Journal.
Improved Kiln for Burning Bricks, Tiles' Terra-Cotta, de. - M. Geo Snan Cotta Company (Limited), Coalville, Leicester has patented an inprovement in kilns for burning bricks, tiles, terra-cotta, pottery, pipes, quarries, \&c. The new invention, which is now in operation at Coalville, comhines the advantages of an ordinary kiln for hurning pottery, and the common descending kin used for burning bricks; and we those practically acquainted with the husiness
not point out the great convenience of snch an arrangement. The improvement can be adapted to the kilns now in use at a very reasonable cost. Independently of effecting a very considerable saving in lahour, time, and
fuel, it is asserted that the arrangement will consume nearly all the smoke produced.

## Neglected Property. - A correspondent

 lying between the Edgware.road Cock property lying Mnrylehone-road, which remains enel-street, extraordinary state of neglect nuder which it has suffered for many years. He says justly that a man has not a right to do what he likes witb his own, if it is a nuisance to his neighhours, and the condition of the houses is injurious to part of London it is a puhbic outrace respectahle to he left for years in an unfuisbed, unrepaired, to he left for years in an unfinisbed, unrepaired,and deserted state.

Notting liam Temperance Eall,-The commencement of the erection of a Temperance Mall in Nottingham has been celebrated. The site which bas been purebased for the huilding fronts the Derby-road and Circus-street opposite St. Barnabas's Roman Cathoke Cathedral. The designs have ween prepared by Mr. Fothergill Watson, architect and the contractors are Messrs. G. Bell \& Son, Only the works connected with the foundation are at present contracted for: The building (which is being erected for a limited company) will he of a rectangnlar form 14.1 ft . long hy 66 ft . wide, and will compriso, the hasement floor, lodge-rooms, ante-roome, ond a lecture-room, lome-rome, and the next-room, ahove which, hat is to eay on tiers of galleries, and capable of seating at two 3,000 people. There will ,oo people, There will also wo on this floor a front, full of carced work, and it will have a large central tower.

Windsor Castle,-At the west entrance of St. George's Chapel a pair of wrought-iron gates has been erected at the top of the flight of steps leading from the Horse-shoe Cloisters. As the ancient wooden doors are occasionally left open a great portion of the interior of the nave is and canoms of Wind. The tibrary of the dean Cloisters, recently erected by Messrs. Field Poole, \& Son, of Westminster, is heing fitted with Spanisb or wainscot oak furniture, of which material the bookshelves, panelling, and ornamaterial the bookshelves, paneling, and orna-
mental work are mannfactured. The roof of the library is open, with carved oak tie-heams. The freplace of the library, with its wrougbt-iron dog-irons, hrass rosettes, and Medioval tiles, is in log-irons, The face of the Qucen's lihrary, on the north The face of the Qucen's lihrary, on
terrace of tbe castle, is under repair.

Wills and Records.-The rooms and vaults t Somerset House recently vacated by the Admiralty are going to be handcd over by her Majesty's Commissioners of frorks to the authorities of Doctor's Commons. The spacious vaults beneath the terrace facing the river are purpose the earth and lead, - tbe latter of which purpose the earth and lead,- the latter of which the crowns of tbe arches to admit oî a founda. tion of concrete on which will be laid Claridge's patent asphalte of Seyssel to onsure the vaults being made thoronghly waterproof. It is said the cost of the concrete and asphalte. The works are under the direction of Mr. J. Taylor, architect of the Board of Worls.
A Mace for Bradford. - Tho Mayor of Bradford has employed Messre. Cox \& Sons, of Sonthampton-street, to produce a silver gilt and ebony mace, wbich he will present to the cor. poration of Bradford. It is rather over 4 ft . high, surmounted hy tho orb and oross, carried hy a group of engraved scrolls, shields, and Bradford, being conspicur's head, the crest of Bradford, being conspicuous; the shields are enamelled with tbe royal and manicipal arms. Widway tbere is a knop, and on the foot a circlet and ferule jewelled and gilt in harmony with the upper part : the circlet haars an insoription. Tine stalt 18 of ebony, polished; the orb, knop,
foot are of silver gilt, enamelled and jewelled.
Vienna Exhibition.- We are asked to monion that the Messrs. Milnor ohtained tbe medal of merit in Gronp 7, Vienna Exhibition, for trong holdfast and fire resisting safes, and fire resisting gunpowder magazine. Also that a medal for progress has heen awarded to Messrs. Hayward, Tyler, \& Co., tbe hydraulic engineers, or tbeir patent "Dniversal" Steam Pamp. This is, we are informed, the only medal awarded to direct acting steam-pumping machiueryMessrs. Whitley, partners, have heen awarded
the "medal of merit," for excellence in material and workmansbip, and tbe eniployment of mproved machinery and tools.
Threatened Destruction of Lima by Water.-Despatches received from Lima stato that a serions accident had occurred 60 miles rom that city. A body of earth, estimated at $10,000,000$ cubio yards, fell from a momntain ide into a valley, damming rip a river, the water. of which had risen 109 ft . aboveits usual height. Engineers were of opinion that tbe water would towards Lima, bweeping won would rush towards Lima, sweeping everything before it
and submerging the lower portion of the city.

Pending Sale of Cyfarthfa Ironworks. Negotiations for the sale, by Mr. Hobert Craw. shay, of the Cyfarthfa Ironworks, have heen pending for some months. It is understood that the intending purchasers consist of a number of capitalists, who will, in all prohability, retain the proprietorship of the works in their own bands; and, though forming a limited hability company for the purpose of carrying on the undertaling, will themselves subscrihe the whole of the necessary capital. The price originally asked hy Mr. Crawshay amounted to $1,250,000$ l. The gentlemen referred to offered a million in round figures, which was refused by the Iron King of Sonth Wales. Ten days were given in which to decide.
Destructive Fire at Quebec.-Advices from Quehec state that on the morning of the 19th ult. a fire broke out in a cahinet manufactory employing 400 hands, and that owing to defective pipes the pressure of water was so slight that the flames could not be suhdued, hat spread rapidly to some adjoining buildings and lumberyards. At noon an explosion occurred, and the scattering of the harning timher threatened at one time to cause a calamity of a very serious nature. Two achooners at the wharves were burned, and a district of ten acres was in flames at onoe. Towards evening, however, the fire was got ander. The loss of property was estimated at $\$ 400,000$, of which ahout one.seventh was covered by insurance.
Serious Outbreak of Typhoid Fever at Wolverhampton. - The Corporation of Wolver. bampton have had a long diseussion upon a serions outbreak of typhoid fever there. The medical offioer reported that there had been sixty cases and four deaths. The outbreak is said to have originated in the milk supplied by one dairyman. He found it consisted of three parts milk and one part water. The water was obdained from a well connected with a dwellinghonse in whioh typhoid fever existed. When the use of the offensive water was prohibited, the
mill became pure; but the fever was spreading, ill more recent advices, from which it appears o have abated
Lewes School of Science and Art.-An effort is making to raise this establishment to its proper position, the sum now required beivg only about 600l., private contributions already made and a grant from Government having the G00l. not he forthcoming to sell the building as it stands, and divide the poceeds among the contrihntors. The Lewes School of Science ne Art, it is said, has displayed might contrihnte eren more tho saccessful study of that "technical educa. tion" of which it affords the fochat

Sunderland Improved Dwellings Com. pany.-The annual meeting of this company has been held. The directora reported that, after very considerahle delay the first hlock of houses, laining twenty-two tenements, was fot reedy for occupation at May term last, that the whole of he terements were taken and have continued let at rood rents. The revenue, after deduetions for outroinoss would par a dividend at of ahont 6 per cent. per annom on the capital sabscribed, The directors did on the capital any present division. They propoed reconerd any present division. They proposed to proceed was adopted,

Caba Mahogany.-Messrs. Barnes \& Sons have just discharged a cargo of fresh Cuba mahogany, ex Tenancio, from Cien Fuegos. It is many years since a cargo of this wood was bronght into Bristol, Mr. Williams, the last im. porter, haviag retired in 1867. The wood will be sold by auction on Tharsday, the 18th inat by Messrs. Barnes \& Sons, in Bristol.
New Town-hall for Dunoon.-The founda tion.stone of a new town-hall for Dunoon has recently been laid, with Masonio honours, by Mr. Grieve, M.P.

## nething about St. George's, Ifanover-square.

ITHERTO the ua tions of the world, in their gradual growth, have fol. lowed the prece. dent set them by the sun. History commenced in the East, and will prohably end in the West, and it may bo said of cities, as well as of countrics, that "Wostward the course of empire holds its sway." London is no exccption to this rule, and the prelates and nohles who fled from the smoke of the City to the Strand and the bauks of tho Thames, went forth to meet tho city of Westminster, which at samo time was gradually eularging her udarios. By King Edgar's charter, of the 951, the western boundary of Westminster tbat little River Eye, which, aftor giving its e to Tyhurn (afterwards Mary-le bournc, or
ylebone), passed by New Bond.street through Green Park, hy Buckingham House to the nes, near Vaushall Bridge, and is uow, lika 3 other London streams, a miserable sewer. he west of the boundary was the manor of
which, in Domesday Book, is described as aining teu hides of land. This manor was aded ou the west by another small stream, the Westbourn, on the north hy the road Oxford-street), and ou the south hy the nes. Soon after the date of the Domesday - it was divided into the three manors of , Neyte, and Eybery, the names of two of ico. In course of time these manors included in Westminster, and therehy groat metropolis ras enlarged. Maitlaud, ng nearly 150 years ago, in speaking Lovion, says,-"This ancient city has tphed one city, ono borough, aud forty. pillages,-namely, the city of West. ter, the borough of Southwark, and the jes of Mora, Finshury, Wenlaxbarn, Clerk. [1], Islington, Hoston, Shoreditch, Homer. Norton.folgate, the Spital, Whitechapel, end Now-town, Milile end Old-town, Stepney, ar, Iimehouse, Ratclif, Shadwell, Wapping hey, East Smithfield, the Hermitage, St. Came's, the Minuries, St. Clement Dane's, the Id, Charing, St. James's, Kuightsbridge, St. Giles's-in-the-fields, Bloomshury, Port. Saffron-hill, Holborn, Vauxhall, Lamheth, zoth-marsh, Kensington, Newingtou-hutts, :ondsey, the Grange, Horselydown, and Roithe." Were Maitland living now, he would been able to make large additions to his In the year 1222 the parish of St. Mar. constituted the whole of Westminster; vcry few years afterwards a large portion ibstracted to form the parish of St. Martiu. - ficlds, which, for four or five conturies led nearly all the west of Iondou. The of St. Paul, Covent-garden, was carved in 1678 ; antin's in 1645; that of St. Anne, in 1678 ; and that of St. James in 1685;
hut it was not until 1725, when the parish of lcome from all parts to ohtain some of that odour St. Gcorge, Hanover-square, was constituted, that the extreme west was taken away from the parish of St. Martin.
In 1710 the crying want of charch accommoda. tion in London was recognised, and an Act of Parliament was passed, ordering that "fifty new churches should be orected in or near the populons citics of London and Westminster, or sahurhs thereof." To mect the expeuditare, a duty of two shillings was laid apon every chal. drou or ton of coals hronght into the port of London. The Church of St. George was bailt hy the commissioners appointed under this Act of Queon Anne, npon ground given hy Lieut.general Stowart, and the ceremony of laying the first stone was performed on Tuesday, June 20, 1712, hy Genoral Stewart, assisted hy the clergy and a large number of persons of distinction. After the stono had heon placed in tho east wall, the general struck it several times, and making a libation of wine, prononnced the words, "The Lord God of Hearen preserve the Church of St. George." Nearly $t_{\text {wel vo }}$ years after (on the 23 rd of March, 1724), the ohurch was conse. crated, and in the following ycar the vestry, iu gratitude for General Stewart's gencrosity, desired him to choose any pew in the front of the gallery, and two pows hehind it , so that they might give them to him for his use.
The architect was John James, and the church is a rather handsomo specimen of a style of ecclesiastical architectnre now ont of favonr. The window over the altar is a fine specimen of old sisteenth.century glass, representing the Tree of Jesse, which was given to tho church at its first building. It has since hoen rearranged and altered in form.
The present rector (Rev. Henry Howarth) is the fifth since tho consecration, aud was pre. seuted to tho living in 1815 . His predccessors were the Rev. Andrew Treheek, D.D. (1725); the Rev. Charles Moss, D.D. (1759), who was consecrated Bishop of St. Darid's in 1766, and translated to the seo of Bath and Wells in $17 / 4$; the Rev. LI. Reginald Courtenay, D.D. (1774), who was successively Bishop of Bristol and of Excter; and the Rev. Rohort Hodgson, D.D. (1803). The two first charchwat dens wcre Lord Carpenter and General the Right Hon. William Stewart, and during the period from 1725 to 1870 the office of churchwarden has been held hy sixty-seven noblomen, hesides harouets, members of the Priyy Council, \&c. The list is a remarkahlo one, and many historical names may he found in it. Lord Carpenter was one of the first inhabitants of Hanover-square; and General Stewart, hesides giving the ground upon which the church was huilt, bequeathed the sum of $4,000 \mathrm{l}$. towards erecting and endowing a charity school in the parish.
It is impossible to mention St. George's, Hauover.squaro, without calling up the recol. lection of many fashionable marriages. From the first foondation of the church to the present tinne it has heen recognised as the chicf templo of Hymen in this great city; but perhaps its palmiest days were in tho first quarter of the present ceutury, whon hetweeu 1,100 and 1,200 couples were married in a year. Some years ago it was difficult to get a sitting in the church, which was filled with the crème de ha crème of society, and every official connected, even in a humble way, with so distinguished a place was a person to he looked np to, hecause he had the keys of a "fasbionable hearen." That glory has passed away now, for fashiou has swept on further west, and the Church of St. George has to he contented with a more commonplace con. gregation. Iu spite of all this, however, the charch
still keops up its pre-eminent character still keeps up its pre-eminent character as the place for weddings. Although hahits have changed of late, and a greater number of the nohility and geutry are married at home, in their little country churches, yet candidates for matrimony
of aristocracy which is supposed to cling around the church, and novelists coutime to consider it as the goal $n p$ to which all the tronbles of their heroes and heroines (through three volumes) should ultimately lead.
The registers kept in the vestry form quite a library of thick folios, the entries in which are made with great care and fulness, and are written on vellum with admirahle neatness. Here may he found the names of a large uamber of distinguished persous, and in turning over the leaves many a romanco and many a sad page in domestio history are brought hack to rememhrauce. In reading down the entrics wo feel as if we had suddenly stepped into very high society, for althongh the names of the undistinguished are uaturally the most numerons, yet dnkes and earls areas plenty as hlack. herries: Not only are many of the entries of considerahle interest, but among the siguatures of the witnesses are to be found the names of some of the greatest in the land. The "Iron Duke" was in universal request as giver away of the bride at these grand weddings, and his characteristic signatare "Wellington," with the hold cross to the $t$, frequently attracts our eyo as we rapidly glance over tho registers.
We have noted above that the Rev. Dr. Courtenay was appointed to the rectory in $177 \%$, hut before his appointment a hetter-known mau had tried to obtain it hy means which got him into great trouble. The notorious Dr. Dodd addressed an anonymons letter to the wife of Iord Chaucellor Apsley, offering 3,000 guineas if by her assistance he was appointed to the rectory. On its being discovered that he wrote the letter ho was dismissed with disgrace from his office of chaplain to George 111., and Foote and the newspapers poured ont ridicule and invective upou him, so that he was forced to retire to the Continent for a time.
We will uow pass from the churrh to the square, which was commeuced ahout the year 1718. At this time George I. had not long been upon the throne, and the house of Hanover was in an early stage of its popularity, so that this square which, when it was first planed was to he called Oxford-square, was named instead Han-over-square, and the church was dedicated in bonour of the kiug to St. George the Martyr. The huilding of the sqnare was commenced just at the time of the finaucial panic oansed by the hursting of the "buhbles," and in consegnence did not at first go on very rapidly, so that wo find the place mentioued in 1719 as Hanover square-street. Strype published his edition of "Stow's Survey" ahont the time when theso houses were heing bailt, and he refers to them in the following passage:- "Amoug theso suharban territories on this side, in the way towards Tyhurn, there are certain new and splendid huildiugs, called, in honour of his pre. sent Majesty, Hanover.square, some finished and some erecting, consisting of many compleat and noble honses; one wheroof is taking hy my Lord Cowper, lato Lord High Chancellor of England. And it is reported that the common place of execution of malefactors at Tyharn shall be appointed elsewhere, as somewhere near Kingsland; for the remoring any inconve. aionces or annoyauces that might thereby be occasioned to that square or the honses there. abouts." We have hefore us two very fine views of the square, one dated 1755 , and the other 1787. In the first engraving, tho centre is shown with a wooden railing round it, bat open, and with paths across from each corner, so that any one could walk in it. In tho second, the centre is laid out as a grass plot, and enclosed with railings, but there are no trees or shruhs. Squares, as we understand them, or euclosed gardens, seem to have sprung up in Loudon about 150 years ago, and they are essentially English growth. Other cities have their
enpty open epaces, bnt the squares of Faris are
an importation from Eugland. The Piazza, an importation from Euglavad The Hazza, Corent.gardell, when first hid out, asd long
before the present market was built, was an imibefore the present market was built, was an im-
tation of the foreign place, or piazza, and some of tation of the foreign place, or piazza, and some of the other London squares wore orignally liko it till tbey became the dust-heaps of their respec tive deighbonrboods. The wretched coudition
of the centre of St. James's.square was for years a crying evil, until in 1727 the centre was railed in and beautified by tho inhabitants. In an edition of Ralph's "Critical Review of the Pablic Buililings, Statues, and Ornaments in and about london and Westmiuster," pablished in 1583 , it is remarked that " All the squares in London at present have their areas inclosed by neat iron railing. Wo cannot, therefore, men. tion this circumatance as a matter of merit in
Cavendish.square, tbongh a few years ago it might have beer noticed as such." The excla. sivences of the dwellers in the squares is ofter remarked upon, but it is not clear that it doe harm to any one, for tho public gain the advan tage of a pleasant place to look at, and bave little cause to regret not being allowed to walk in it. Goveroment will not heantify a public place (witness Trafulgar.square) and if the inhabitants subscribe together for the purpose of keeping their eqnarts in order they would seem to hare a right to keep them to themselves When they have succeeded in making them what they wish.
was manter the equare was built a proposal to it and the western parts of London. A state. ment of this proposal exists in manuscript in the library of the British Muscum, from which we learn that the inventor, by observation and St. Alban's, lay as high as the top of the cupola of St. Panl's Chureh, bas formed a design to bring a river from thence and to refurnish that river with springs and small streams from other rivers in Hertfordshire," For this end he ob taiued subscription of partuers, abont 1719 , and procured a Bill to be brought into Parliament; who stived uposed by the New River Company, who stirred up the militers to make a clamour, and in consequence the Bill was dropped. The inventor was not to be daunted, and purchased some sprivgs "to avoid the millers," which he stated to be so strong that thcy would yield as much water as the New River, and, as to height, wonld deliver water 10 ft . higher than Cavendish square. In the new scheme, the inventor states that "no doubt the New River Company will raise all tho clamour they can, because that company would have no water bnt their own
brought to town "; but, on the other side, ho brought to town"; but, on the other side, ho
expected "ihe Middlesex gentlemeu aud frec. holders to petition, bccause it will improve thei land.'
The consideration of the rise and dccay of the different cistricts of a large city is an iuteresting study. Some streets and squares sink utterly and the houses, once inhabited by wealth and fashion, become the home of squalid poverty others remain highly respectable, but fall from fashion to trade. A hotel first obtrudes itself, then a quiet shop, and then the great loave it for ever. This has been the case with Hanover square. The inhabitants in 1720 were Lord Carpenter, Sir Theodure Jansen, Lord Hille borough, Duke of Montrosc, Lord Dnamore, Colonel Fane, Mr. Sbeldon, Earl of Coventry Lord Brook, General Stewart, Dake of Rox borgh, and General Evans. In 1573 an earl and a dowager countess only remain, and the otber tailors, and dentists. Besides the noblemen mentioned abore as the first inbabitants of the square, we can add four more who have left behiud them distinguighed namea. One of tbese was George Granville, Lord Lansdowne, called hy Pope "Granville the Polite," a pleasing versifier, who las been enrolled by the book. sellers among the Britisb poets. He died bere on January 30th, 1731-5. Sir Ricbard Temple, Lord Cobham, to whom Pope addressed the first epistlo of bis Moral Essayis, had a house here. The poet, after referring to the last words of several persons, ends witb the following lines of praise:-

## And Yon, braro Cotharm! to the latest breath Shall feee your ruling passion atrong in death <br> Shall feel your ruling passion atrong in dea Such in those moments as in all the past

Such in those morects, as in all the past,
© sure my conatry, Heasen ! shall be jour last." George, Lord Anson, the great circumnavigntor of the glohe, had a house in the square. the sbarpers in Buth robbed him of his priat
from the Spanish galleons, on which occasion it was remarked that "Lord Anson had been round the world and over the worl, but never in the t bis honse iu the square in 1702 , ten year fter his famons victory over the Frencb Admira Do Grasse. Horace Walpole notes in his MS additions to Pennent's "London," that "Connt hineki, the Imperial Ambassador, resided at th orth-east corner" of the square, and that 'sith hin lodred, while in Evglond, the Duke formine 0 , words Emper by the name of Francis." Ambrose Phillips, tbe pastoral Writer, whom Pope ironically praised for his "eminence in the infantile Etyle," died bere in eminence in square in a pcculiarly unpleasant manner, for he narrowly escaped being sbot by one of his aristocratic neighbours. The celebrated Mrs Hontagu relates the following curious anecdote f the Duke of Tamilton's passion for sbooting. "He las exercised himself witb shooting across Tanorcr-sqnare out of a wind-gun, to the utter lismay of old Lady Westmoreland and Si Thomas Fredericks. A bullet whistled by the ar of the latter as be sat in his dining-room, and lodged in the wainseot; two more penetrated into other parts. Surprised at so dangerous an incident, he ran to the windoss, and there saw the duke, his tis. lue 2rs, at his window, with a gun in his hand. He immediately sallied forth to give his grace a degerved chiding, but during the time, the duke, having luad leisure to charge again, shot dead a favourite dog whioh bore Sir Thomas oompany."
The houses are mostly built plainly, with red brick; but there was some little attempt at an architectural effect according to toe taste of the day. In Lambert's "History of London" (1806) it is observed that "tho hoases, which are bailt in the modern taste, make aa elegant appear. ance, and are inhabited bs persons of the first distinction. The houso in the south.west corner is considered the best piece of brickwork in tho metropolis." Ralph mentions the west side as the only one deserving any attention. Harewood House, on the morth side, at the coruer of Oxford.streot, still makes a noble appearance, as one of the old.fashioned residences that are fast passine away. The equare has amoner its present pconpants hegides tradesmen, two of the most euccessfirl London societies, tro clubs, hospital, and a well-1:nown concert-room Th Rospal
 isse as the 1810 by its present name Daring the thity yeors and presed tbat Daring the thirty years and upwards tbat the sociely has been fork wmonse araoun of work gronn Society power in the country Lte Zoological society mas started in 182 , for the adracent of rology, adi tho tho acolimatisation of the subje tho kingdom. The society opened their gardens in the Regents Park two years aftwar, and in 1819 added a collection of reptiles to tbe exist ing collection of manmals and birds. Hore recontly hish and the lower aqqaic animals bave been added. The Oriental Club, at the oorner of Tenterden.street, was founded in 1824 by sir John Mralcolm, and is composed of uoblemen and gentlemen who have travelted or been connected with the East and our Indian possessions. The rooms of the club are ornamented with portraits of Lord Clive, the Hon. Mountstnart Elphin. stone, Sir Eyre Coote, the Duke of Wellington, and other celebrities. The Queen's Concer Rooms, more generally known as the flanorer square Loome, were built by Sir John Galini, formerly one of the managers of tho Italian Opera at the King' Theatre in the Haymarket, and they still keep up their ancient repute as the chief bome of chamber music in spite of many rivals for pubic faronr. $\dagger$ The bronze statuo of Pitt, by Sir Francis Chantrey, was set the square in the year 1831, and cost 7,0007.
St. George's parish is so larze that we conld
not describe it all within any reasonable limits bnt, in conclnsion, we will jonrney "all round the square" and take note of the streets lead. ios ont it Brool. street takes its name from the Tyburn brook. It is now chiefly inhabited by physicians and surceons, and is forther by pbysicians and surgeons, and is faric
"Doran's "Lady of the Lant Centurr," p. 237 .
t The premise, at present nulet, nt the opposite corner
of HaDover-street, afford such exteosive accommodation
is woald seem to At them for a large ciab or other
formerly called Mivart's and now Claridge? where it bas been said no one nuder a crowne head conld obtain acoommodation. When $t l$ Khedive of Egypt visited England lie was havo stayed here if the Earl of Dudley had nu tepped in and offered him the use of his ma ion in Park-lane. Mr. Harry Emanuel, tbe di nond meronant and jewoller, bnill a house a fe cars ago on the worth side of the strcet, a fe oors from the sqnare, in a very ornate and ove onestyle of architecture, and witb a specially fterwards left the bouse, and it is now inhabite y Messrs. Hart, the well.known Medizval iro vorkers, Handel lived for a time in a house the south side, few doors from Bond.stree Gerard Vandergucbt, the engraver, bad a hou this street, where hesold pictrres, and whe died on March 18th, 1756 red 80. TI reat room the bact of his honse 50 . It reat roon at he Colonrs, ond their first onhibition of drawin was opened bere April 22nd, 1S05.
Tenterden-street is short, and of little impor ance, but it contains the Royal Academy Music an institution founded Westmoreland in 1822. Bochsa, the oompos and harpist, who was musical director King's Theatre before Costa took the baton, w he first organizer and director of tbe Academ The present principal is Sir Sterndale Bennott Harewood-place, which takes its name from t ) darl of Harewood's mansion, is remarkable containing but one house, No. 1, aud that is inh bited by the famous surgeon and mucb esteem man, Sir James Paget, bart. The two corn houses, although their doors are in this plac belong to Hanover-square. Tho two stree eading into Regent.street, viz., Hanover.stre and Xrinces-street, have little to distingui them, except that they contain the shops ever well-nown tradesmeu. We now reta Gcorge-street, wbich has a peculiarity in construction tbat was noticed by Ralph in ritical Review as follows:- There is som whe particular in the manner of George-sur o considerves our attention; it beigg laid Hanover-square that it quite reverses the pe spective, and shows the end of the vista brond than the beginning, whioh was calculated to gi a noble view of the sqnare itself at tho entranc and a better prospect down the street from $t$ other side. Both ways the effect answers otention." In another place Ralph praises th vew from Oxford-street, and says, "in t1 prospeot the sides of the square, the area in t/ middie, tho breaks of the baildings that form th entrance of the vista, the vista itself, but above a the bearatiful projection of the portico of George's Cburch, are all circumstances that nui in beanty and make the sceno perfect. If an? thing is wanting, it is a graced building at the ex of the vista." The sideview of the portico of tl charch is certainly effective, bat the street is a wide enongh for the spectator to obtain a froi iew, and it must alpays bo a source of regn that the tortuosities of Maddox and Grosven" treets have orevented an opening being mac that wonld allow St. George's Cburcb to end th vista from Grosvenor-square. We have a fe celebrated persons to mention as iohabitants George-street. Lady Mary Wortley Montag died Angnst 21st, 1762 , agred 73, in a honk whiob she described as consisting of "tm very decent closets and a cupboard on ead
foor." Lord Chancellor Cowper died at hi honse on tho wost side ( $\mathrm{N}, .13$ ), in 1723. Thi house was intely occupied by the well.known Tame Sas intely occuped By heroig Institute. Auchingham's Brele of Tlomas Pennant, thu historian of London had a house here, and the nephew often lodged with bim. Thomas Phillipg R.A., the portrait.painter, lived for many yea at No. 8, and died there on April 20, 1815. . largo number of celebrities have sat in bi stadio, when their features were abont to $b$ transmitted to oanvas, and two of these were Lor Byron and Thomas Campbell, Herbert Mayc the well.known surgeon, lived at No. 19, i 1829, as did another eminent surgeon, Henr Earle, at No. 28. No. 25 was for a long perio the residence of the painter, John Singleto, Copley, and of his more celebrated son, Sir Joh Copley, solicitor and attorney general, and after wards Lord Cbancellor Ly ndburst. Soonafter the death of the venerable lord, the bouse was banc somely rebuilt with stone. George.street has hee a favourite resort of physicians and surgeons, 80 it still keepe np that charaoter, for several medic: men of the highest eminence are at present nee
onts in it. At tbe corner of George and Con it strcets, is Limmer's, the well-known hotel, bose fame is world.wide. We will just step to Conduit.strcet, in order to mention that the
story connected with this street principally ntres in the cbapel, and in two taperns inity Cliapel had its origin in a timber travel ig church, which James II. bad conroyed out with him in order that mass might be per kmed wherever be was. For a time it was on punslow Heath, but after the Revolution, it is removed to the top of Old Bond-atreet. Ir 91 it was rebuilt, at the instance of Arch. shop Tenison, then vicar of St. Martin's.in.the elds. The Prince of Wales Tavern was formerly o resort of literary men, and in 1772 David Wil. ms suggestod here a fund for the reliof of sary men, which afterwards grew into the yal Literary Fund; and at the Conch and $s$ taken prisoner. No. 9 belonge to $a$ limited mpany of arehitects, who bonght it for the rpose of providing meeting-places for rarious fhitectural and artistio bodies now located re.
an this street, too (No. 59), is the residence o: Henry Leslie, whoso Choir and Concerts ion, and to whom London is indebted for cb wholosome pleasure. cb wholosome pleasure.

## THE LEEDS PARK COMPETITION.

 ?robably few large commercial towns, ou average type, possoss greater natural adran es for tho realisation of picturesque pleasuronnds and residences in their immediate irons than are to be found at Leeds. Nor he pieturesqne element, or the possibility of trary, the rise and fall of the ground, and winding lines of the old thoroughfares ich bave been mostly followed in the more lern rebuilding of the streets) furnish, ready a picturesque town; and Briggate, the long e street rising in a tolerably steep incline in centre of the town, still retains some of the irmality of the earlier period, and presents arked contrast to the frigid squareness and 2ess of the neigbbourhood immediately adjaat inaptly responded to in the town- of whil classical and somewhat inexpressive syinry. It is in the ordinary street huildings Leeds is deficient in interest; though we glad to obsorve works in progress in the ggate that seem to promise$t$
$t$ direction, whioh, it is to he hoped, will be ued; for there is here the opportunity for ing, in time, one of the most effective town ts in England,
18 of the finest public parks in England, ever, is already almost ready made, ahout important elements of natural sconery and ation are concerned. The R undhay estate, ill be remembered, was purchased hy the oration of Leeds, and formally opened as a ic park by Prince Artbur, exactly a year
(19th September, 1872). On the 31st of last the corporation advertised for plaus, laying out of the estate in a more suitable ner for the purposes for which it was pur ed, by making now roads, enlarging or fing old ones, placing in the park snitable lings for refreshment, \&c., and for rest for ors; and hy indicating the best way for ring a large proportion of the land as sites and 50 guiness Three premiums of 200 , brought into the field seventeen competi whoso drawings, mostly of considerable oration, have been open to public inspection ag this week at the town-hall.
materials to be dealt with consist of 76 3 of land, 38 acres occnpied by water in two th and south, near the enst side of the estate a smaller lake to the north. Weat of this, and ected with it hy a stream or oanal; an lian" mansion (which it is proposed to cona comal gardenatteohed to it (i.e., a garden
a long pond); a large extent of open
ground, mostly with a gentle slope towards Waterloo lake, occupying the south-western porthon; a considerable amount of wood slirting the lakes and open ground to east and north; natural ravines near the $b$-gd of the lake, or between the two lakes, over which bridges can be made; and last, hnt not least, a rnined castle of modern ercetion, and well covered witb real ivy, which it is proposed to preserve. The instractions to competitors include proFision for two cricket-gruanda, for a floating swimming-bath in the largo lake, a police atntion, and "suitahle buildings" generally, sucb as would be supposcd to conduce to the comfort of a park. The park is to be ontercd town), where lodges and gates were to be provided. The term "suitahle buildings" has of course been read rather largely by aome competitors; but the nature both of the site and of the instructions leads to the inference that bere is an opportunity for trying some thing in the way of picturesque artificial treat ment. Now, however, it appears from what we could gather, that the authorities lean towards a repndiation of all theso pictaresque tendencics in tho way of accessory objects, and are disposed to adjudicate on the consideration, which plan offers the highest return in rentals of villas. It was hardly worth
while, for this purpose only, to hare invited while, for this purpose only, to have invited Mr. Ayrtou's friends, the "gardeners"; but corporations have that way with them. While looking at the plans, therefore, not without a time express considcrations, let us at the same not be spoilod hy cupidity, resulting in over
building, or in huildings of an inforior type.
The plans submitted hy Mr. Adkinson, Bridge-road, Battersea (we take them as they are placed, in alphabetical order, or nearly so), bave apparently been devised in a great degree with special regard to the number of houses to he got on tho ground. The competitors being forming from building on the oper space tion of the estate, and which, as observed, is lanked by wood and water on the north and outside the hilding land consists mainly of a belt sides to a pretty wido area. A triangular extent of land to tho sonth-west of the open, bnilding, and is variously utilised hy different compotitors, either for villas or in laying out in impressive and beautiful entrance to the estate; which latter secms to us by far the most estates ; nse to make of this portion. The honses in this plan are shown extended all round the ontskirts of the estate, not in separate villas but in ciose terraces or semi-detached bonses, with very small Jots of land allotted to them. In sliort, he building lots are a "squecze"; and no doubt this wonld he a romunerative plan (if all tho plots were let), but oertainly not one to ho pound foolish" prinoiple. The best class of honses or of tenants could acarcely be secured in this way, and the gronnd would be hailt up ccomprionately, The architectnral (?) details the entrance Italian," and tho clock-tower (a feature proffered hy several candidutes) seems a oross hetween an old.fashionod kitchen clock-case and an engineer's water-towcr. Estimated outlay on this plan, 78,7812.
The plans of Mr. T. H. Clarke, arcliitect, of Putney (narked B, each at of plans being distinguished by $\AA$ letter), give a larger amount of grounds per honse in laying out the hin ding land, which is almost entirely for detaohed villas; this being tho metbod proposed, in faet, by nearly all the competitors. The estate is distance surrounded by two drives, one at some direct two such drives, one within and one with out tho park boundary, oxcept at one point, where they are to converge into a wide pulalio road; but the competitors differ much in thei mothod of rendering the instruction on this point some placing the drives in close contiguity others at somo distance. We shonld prefer the for special romarit. There is nothing to eal tor special romare in this plan. The architec 53,670 l.
C. - M
C.-Messrs. Coleman \& Ponntney, Bristol, lave a more distinct scheme for the apportioning of
the building land than most, of the compotitorg.

They concentrate the honso property on two comparatively limited areas to south-west and noruh-cast of the estate; the former portion (nearest to the principal entrance from the town) heing laid ont in terraces, with gardens houses ; the latter in more ciosels plated tor races of smaller houses this scheme are that it leares a of open land entirely undistarbed breat quantity inclosinre, dwesnre, and distinctly divides one clnes of object by many of tbose who rent the best houses in much of those who rent the best houses in such situations, however questionable iguity trait thas may be. The closer conconsidered one's neighhours may or may not be is of course thain. The drawback to this scbeme ing to eache ground attaching to eacb house; the private gardens are acrificed to twe puhlic park. It also seoms qusstionable wheluer, as a matter of remuneraivo building, the smaller class of dwellings should not have heen the nearer to the town and to a line of omaibuses, \&c., the occupants of such honses hoing dependent on public conveyances mostly. This question of nccess makes an immense differenco in the letting of middle.class houses. This plan, howerer, evinces and deserves consideration. There is not mucli attempt at effect in the laying out of the grounds. The architectaral details, the police-station, \&e, are woll drawn and of fair aperage merit; the clocktower proposed to be placed to the wcat of the lake would scarcely repay the ontlay, as to appearance. A clock-tower, however, might nental object in a pery usefli as well as ora outlay, 76,0002 .
D. - Mr. Corson, of Leeds, tbe author of this plan, has evidently gone in to wid, and is to be complimented, at least on the fine and claborate set of drawings ho bas got up. He divides all the outlying land, beyoud thio centre belt of wood and wator, into vilha residenoes with lorge plots of gronnd. A very largo proportion of the and is thus occupied, thongh the number of honses put on it is not very largo. The rents whe have to be high in this case to fur wisb an cqual return with some of the other divided The open space west of tho lake is divided into cricket, football, and archery grounds. The triangular portion running down a circular main ontrasco is resorsed for effect a circular arhoretum being placed here, with conntain in the centre. A straight bonlevard oxtends from this down to the entranco and up to the cricket-fields, de. Perhaps the nninterrupted boblovara would have been better here artiticial effects like these aro more properly reserved for tho further portions of the ground than placed in the line of the main entrance. A numher of skotches of varions buildings are given, mostly of the "picturesque" order, of main entront-Louses aco is completely variance with theso in style, in n mixture of French and Italian Renaissance. Triple arches are divided by lodges, the same cornice and balustrading carried throngh, and the lodges marked only by Mansard roofs rising above Thero ought to he a dignified entrance to suoh a park, and the iden of this entrance is good, hat we cannot admire the way it is caried good here The estimated outlay of ihis plan is 81,6002 ,
$\mathbf{E}_{3}$ - by Mr. Goddard, of lidgware, and Mressrs Stewart \& Ruhinson, of London. In this plan being laid ont in nearly symmetrical portiond divided by strainht roads -a treatment which is, advantageous in avoiding awkward and unavailablo angles in the various sites. The building sites are snfficiently utilised without beiog crowded. The entrance consists of simplo iron gates and piers, scarcely important enougb in appearance. The indication here is of Gothic villas, bridges, \&o., every atgle seems to be villas, bridges, \&o., every atgle seems to be
resorted to by turns. The absence of all idea resorted to by tums. The ebbence of all idea case is very marked in most of the plans ; a park case is very marked in most of the plans; a park seems to be regarded as a natural musenm of arehiteenmal styes. Thenarchitoctural drawinge aro all goon, but as dosigns they bave no particular merit. Estimated outlay on the flan, 76,5002.
F,-by Mr. A. G. Mennell, London,-is a beantially got-up set of drawings, but does not after all contain very much that is noticeable in itself, The villa system is adhered to in laying out the butding land, in this case with entire and almost
stadied irregularity. Tbe houses and lots are
large, and in the arrangement of this part of the plan rather resembles Mr. Corson's, hefore mentioned. The entrance is a simple gate and piers; the lodges and other small buildings are got up in stone aud timber in a uniform and
pleasing style. The author volunteers designs pleasing style. The author volunteers designs for residences, one of which is picturesque; but of course these are "not in the hond." The best point in tho laying ont of tho park is the arrangement of the cricket-grounds, whicb form two large ovals immediately contignous, between provided, fiving a view of eithor ground; the cinb offices are placed in the centre. Some of the competitors have separated the required two cricket.grounds, but they are much better at $85,07 \mathrm{c}$ ?

G,-by Messrs. Hormblower \& Son, Liverpool In this plan the hailding-land is laid out for villas, much as in seseral other plans, except that less use is made of the available land towards the southern part of the estate, which is retained rather for effect, a straight drivo ranning from forms the centre of the "recreation ground," the latter a circle of about $2,000 \mathrm{ft}$. diameter surrounded hy a drive. This wonld be effective witbout involving any great outlay. The ontranco, a lurgo Roman arched gateway, forcihly we remember to lave seen, and which was scarcely worth imitating. The drawings of the scarcely worth imitating. The drawings of the remarkable as to design. The fountain proposed remarkable as to design. The fountain proposed
to be placed in one part of the gronnds is good as to idea, but somewhat common-place in detail, and the large stone bridge, of whicb a carefnl drawing is given, looks lamentahly like encineers' druwing is given, looks lamentahly like encineers
architecture. It is singular how little the pos. arcuitecture. It is singular how little the pos.
sibilities of a bridge, as an opportnnity for picturesquo architectural treatment, seem to be realised in these cases. There are many hridges, some of them very carefully and elahorately drawn, among the plans in tbis competition
butwe didnotnotice one wbicb conld bo considered butwe did not notice one wbicb conld be considere to be really an ornanent to the landscape, or any addition to what may be called tbe wathetics of bridge-huilding. The estimated outlay on this plan is 164,9537
H,-by Mr. W. Milne, Belfast,--presents little for comment. The general laying out of the building land is mach as in the last-named plans, but somewhat more formal. The getting np of the plans is somewhat crudo, and the architect
$56,889 l$.
The plan J,-by Mr. E. Milner, of Norwood, covera nearly all the fvailable builcing land with villas, toleralsly closely set, though not with the minimum of land to each wbich some of the plans show. The main entrance opens on a straight arenve leading up to the cricket.ground and pavilion. In other respects effect is not sought so much by the arrangement of the roads of the sit as rardens, \&o.- terraced garden near the "castle", a rock garden elsewhere in an old quarry. The villa gardens are shown as partly planted with trees; hat they aro too close to each other for that to be very advisable. The principal entrance-gate is ornamentally treated in a somewhat commou Renaissanco manner; the cricket parilion is very passahle; the garden "classic" style; the other adjuncts, band pa vilion, \&o., partake of tho tea-garden manner. The floating swimming-bath is well treated and arranged. There is a Gotbio stone bridge carry. ing one of the roads over a ravino; at least, it has pointed arcbes, and is so far Gothic. But in the main this is a gardener's plan, and it wonld probahly be a success chiefly in regard to the probahly of dealing with the ornamental garden. ing. The estimate is 143,850 ?
ing. K, by Messra. Pearse \& Rale Sefton Par Liverpool, occupies rather less than the average space in building land; tbere is no attempt at any definito system of arranging the houses Which are merely scattered abont irregularly, the only point being the provision of a semicircular crescent terrace towards the north-east, facing south. west. The architectural details, though unpretending, have been drawn by a good hand, and show better taste and more snitability of treatment than in most cases; tbo entrance. gates,
altogether admire, are exceedingly well treated altogether admire, are exceedingly well treated;
they have, perhaps, more the appearance of a they have, perhaps, more the appearance of a
private than a public park entranoe. The enprivate than a public park entranoe. The en-
trance to a public parle should not appear so
much confined to one gate, so easily capahle of being elosed, in other words, as a private one. In this respect the best idca for an entrance is that of Mr. Corson's, beforo referred to, though it is capable of being made much more of than as shown in his drawing. The estimate for this plan is 148,9332 .
$\mathrm{L}_{1}$, -by Mr. J. W. Pegge, and Messrs. Usill \& Willcocks, of Westmiuster,-is a plan on wbich much trouble has been expended, and is one of the few which shows a defnite motive in the arrangement of the buifding land. This is nearly oneverse of that shown in plan C. The allthors the northeast of the park, for the best olass of houses, which are comparatively detached; the other ocenpying the lower part of tho western portion, to the left of the main entrance drive, where the smaller class of residences are arranged This, we imagine, will be found a more workable plan than the reverse arrangement in plan C , as it places the two classes of residences more suit.
ind of village may be a source of econom in regard to sewerage, road-making, and so on The question between this and the extended placing of residences is, as we bcfore binted, one etween plcasing the publio who aro to risit the park, or those who are to live in it. By the concentrated arrangement, the residences are ractically, thrown out of the park, and hecom many people would be, perhaps, that it was scarcely wortb while to go so far out of town to live in a street or a square, or to form one in a row of houses, instend of having your own land all round you. For land whicb is to he sold for ho owner's occupation, in fact, the concentra which is to wo rented, or fatal arrangement ; that builder for subletting, or sold to the specnlating onilder for subletting, may answer beteer in this Way; but it depends very much on the social and husiness habits of the neighbourbood. The plan under consideration shows a number of architectural adjuncts; threo bridges, two tone, Gothic, solidiy but not artistically treated snspension-bridge of iron, which would have a goud effect but for the had design of the piers Some of tho half-timhered erections are hetter banqueting-hall is provided, to be availahl also for indoor band performances, \&c. The entrance-gates are well meant, with two large pointcd arches, and a corbelled-ont gate-tower between; but the whole is somewhat too flighty in style, and the arches are deficient, to the eye at least, in abutment. The gate-tower, however is not a had idea for an entrauce of this type, as marking the spot from a distance. Total esti mated outlay, 113,146l.
M,-by Messrs. Perkin \& Son, of Lecds,-is an admirably gotmp set of drawings; but in an evident desire to make the most of the land, the auth have rather overshot the mark, and cut whole of the ground to Besides occupying thortheeast, chiefl destined for building, to its otmost extent, they have cut out also from the western portion of the estate

## huge half-moon, a monstrun cantlo ont,"

o ve applied for the same purpose, as woll as part of the south.oastern portion. The open part is thus considerably reduced, and that gain is divided ont symmetrically by straight parallel bonndaries, into garden, football, cricket and archery gronnds, and a circular botanical garden, a maze (that old-fashioned source of garden amusement), a prospect tower, a camera but in the other such toys are doted ahout ground has all heen cut park propel open with questionable ad expensively, and these things. The residences are laid ont with a certain order on symet in blocks larger and smaller dwcllings; but thero seem to be too many on the land, and some of the ots and the houses are undesirably small. There are a numher of elaborate drawings of architectural objecta, well crawn, but presenting very fittle merit in design. The best tbing of this class is the arrangement of the pavilions and terrace benealh the mansion (the proposed hotel), wbich stands on a bauk high above them, There is a good water-colonr drawing of a very poor elliptical stone bridge below a cascade. The entrance-gate is poorly designed. The ostimate for many parts of the wore is ridien ously below what is possiblo; the total ontlay is stated at $91,239 l$.
$\mathbf{N}$, -by Mr. T. Shelmerdine, of Liverpool,-is a
plan in which a distinct system is followed in the laying out of the building land, and in thi respect it appears to us to be the best, as com ining atility with effect. The residences are arranged as separate villas, in a single helt unning all round the outside of the estate xcept at the south-east portion, and sweeping (also in a single row) round the crickat and arado gronnd, which occupy the south.wester ortion of the estate. The houses are, perhaps little too close, and the frontage of the site too narrow in some parts, but there is nt
crowding, and the extended line of residences witb its hroad road round the park, gives a grea paciousness of effect. The drives are well lai nt, in curves occasionally priting in completel ymmetrical circles of large radins; the ope round in the centre is left comparatively clear only broken by a row of flower-gardens crossin $t$ from west to east below the mansion. Differen nglc-spaces between tho lines of drive are mad vailable for flower.gardens also. This strike is as, on the whole, an exceedingly good plan The anthor has added a great number of archi ectural designs of which the like cannot b aid ; they are carcfolly finished, but essentiall common-place and even vulgar in desirn; a entrance of had Gothic of the pinnaole species a Gothic (f) bridge, whieb might be cited by : Yankeo as a specimen of the "almighty gim rack" stylo; a floating bath in the form of ig canoe; and such gauds. The author ha better have stood
O,-by Mr. Page Spencer, architect, "of Dew pry, - goes on the separate villa plan, giving reat deal of land to each house, but spreadin tho residences very mnch over the sonth-wester portion, encroaching more than most competito pon the park land. Tbe plan shows a want purpose; there is a wide boulevard from th principal entranoe, which, instead of culminatin a any special termination, is turned off ign miniously to one side, and loses itself in rdinary drive; another wide road called "boulevard" wriggles irregalarly among th residences in the northern portion of the estate
A boulevard, properly so called, implies A boulevard, properly so called, implies
certain stateliness of cffect, only to be obtaine certain stateliness of cffect, only to be obtaine

drawn in pen-line, but present no originality drawn in pen.line, but present no originality
feeling for architectural style. The cstimate feeling for archi
outlay is 97,510 ?
outlay is 97,510 .
P,-by Mr. W. Wing, Henley-on.Thames, shows separate villas spread over the land, to th north and northeeast, with a large proportion round to each of tbem. A long, straigh bonlevard runs directly north from the princips entrance, and on the west side a smaller class houses are arranged with roads in strictly sym metrical lines perallel to the boulevard. Thi seems a grod arrangement, so far as the house are concerned. It, of course, robs the entranc of some part of its dignity, by making it, so t speak, "lob-sided"; and this boulevard, again leads to nothince. The cricket-ground is place n a kind of accidental nunner on one side of it the other cricket-ground is placed a great way off, behind tho mansion-house, in a very out of he-way corner. There are a great mamher o small architectural drawings, well executed, and in good tasto, but very destitute of character on interest. Tbo lake front of tho refreshmentoom is the best, and some of the resting.placos are nicely treated. The speciality or this pias the west of the entrance, which bas something to recommend it. Thero is little attempt at effect beyond the rathor inconseguential hoole. effect beyond the rather inconsequential hous vard all
$Q$ is an unfortunate termination to the series which wo may pass with the remark, that if the author has any ideas as to the laying ont of land ho has not acquired the art of expressing then on paper; nor has he mucb idea of the cos In regard to this question of expenditure, we may call the attontion of those most concerned may call the attontion of those most con excee to the fact that three estimates much excee he others in amoun, ana mos by the competitors who have prohaly hos opportanity of acquiring practical knowledge the expense or work of this kind on a scale,-viz., Messrs. Hornblower, wbo first de signed (in conjnnction with M. Andre) Sefton Park, at Liverpool; Messrs. Pearse
Rake, who state that they have since beel
mployed on the completion of the suid park;

 bich only require to he glaucer ations, detaii to to e convicted at once of complete misrepresenta on (we do not say intentional,-" the wish i wor the thought," pretty often, in these e may observe that there are three points of e may observe that there are three points or
iew in which it may be considorod:-first, as a heme for laying out building land in an
sonomical and remunerative way; sooondly, regard to elfeoting this in a pioturesque and leasing manner, so as to add to, rather an detract from, the natural beauty of the on of architectural adjuncts for the erecss elaboration or importance. In reforated that N appears to have hit the medium ary successfully, and to have combined these yo desiderata more equally as far as we oonld dge than any other. The plans marked $\mathbb{C}$, and M, are also worth consideration, as being ontrived npon a definite plan, and with a jout a plan can scarcely be called laying ont te land. As regards the second object only, cturesque elfeot and arrangemont, what is arked G called "landscape gardening," those em also to promise well in regard to scenic feet. As to turohiteotural dotails, we strongly
runsel the authorities to eliminate these from eir consideration, and adjudicate npon the ans and estimates for laying out merely. For designing architecture seldom seems to be mbined in one person; the late Sir C. Barry rtainly oombined both in a very bigh degree, rtainly combined both in a very bigh degree,
d some arohitects of the present generation sy do so for all we know, if they have a chance
showing it; but in general the man who will showing it; but in general the man who will
sign you an ornamental park will put tearden arcbitecture into it, and utterly vulgarise and the most bcaviful grounds may soon be
lgarised by bad, pretentious, or flimsy buildge. The best architects seldom put in for mpetitions of this kind, and it would be muoh tter to get one or two frst-class arcbitects to
osign acb buildings as are wanted afterwards id then to keep rigid restrictions over both the ailding materials and the architectural desion the residences erected on the estate. The
arson who begins to spoil a park generally is e landscape-gardener, when he puts his arbouts ad bridges in it, and the person who completes e work of vulgarisation is the spoculating
iilder. Let both these evils bo avoided in sundhay Park, which is too fine a plaoo to be maged in this way.

## QUERIES AS TO "RESTORATION.'

Ler ns put aside such a case as Kirkstall an side by Mr. Sharpe in the remarles printed yonr number for August 30th. For the sake oonscience, one would, however, interpose a nt that there is probably another side that ay not stay to justify its deeds; bat do them
st, and, if need be, argue of accomplished cts. With some disadvautage, doabtless, oing that any realised work must hare borne tho principle that presided over its eeption; but with considerable, almost over. helming, adcantage as well, in the appeal to tercst and romance, -to the feelings to be pressed by the untrained voices of the "many
onsand visitors and admirers hereafter to innally atiracted to the neighhourhood." Peruss the real love of ruins is a thought less
idely spread than we reckon! One idely spread than we reckon! One cannot,
wever, in any case (leaving that) he unconscious wever, in any case (leaving that) he unconscious sont or meddles with the work of "restors on," in old chnrches and other buildings, may
em fairly agreed; there is apparently found the common creed room for wide difference, r "High" and "Low " Restorationists, -sug. ssting to some the same sort of misgivings as
possible solisms, as do their Church protopes. What ormmon bend is there heyond the cent reverence for what is old and woll
'mised, and the desire not to diminish our pos 88inos in the way of buildings and other gear lat have come down, -from before the middl
of the sixtoenth centnry ? Beyond these articies,-understood as to be liberally con-
strued,-where is the practical accord in any regulating principle useful in actual day-by.day arising needs? Is this accord anything more than nominal ?-when,-

1. The " High Restorationist" aims at bring. ing back every old thing from time to time to What it ought to have been if the original designer had done everything wisely; and
2. The " Low 2. The "Low Restorationist" treats the present form of any work as by preference to be maintained, as long as iron bands, and not too unsightly props, and all tbe care that loving
hands can bestow, will stave off the day of hands can bestow, will stave off the day of
inevitable final disintegration and hopelcss ruin: 一?
When, to ascend to details, 1 will remove later window-tracery from earlier jambs, and (when consistent), if possihle, substitute now high-pitched roofs for the flat roofs aged threo centuries;-put heads and noses on statues that bave lost them, and let in stones and carve afresh the wreathed foliage of a canopy in the way, and therefore thoroughly destroyed on the putting up of a merely uscful gallery four generations ago
When 2 will keep to his Manohester card, leaving the fragmentary scraps of meaningless ill on the stonowors ho has cleaned, and will piece (at times) with material of anotber colour the ruized portions of a screen so that the work of his hour may be readily recognised by the enterprising, otherwise too-heavily-taxed antiquary of 2000:- When, his conscience wrougbt up to extrems sorupnlosity, he will betualsy leave records in inscriptions,-dated when "these fire stones and a cap and base found in a wall" gave the details of the new ft. ground-story; or when the purchase of $4 \mathrm{ft}^{2}$ of sereen from the place to which it had strayed made all complete except tho new door which bears on the lock the record of the whole a mall but fairly logible lettering.
Can we draw the
Can we draw these two extromes together by a tertiunt quid, a "Broad" profossor, - who
shall bo all things to all men, -so long as good shall bo all things to all men, -so long as good
old (or new) work is recognised : who will not destroy (unless very strongly urged to do so by irresistible authority) anytbing at all tolerable hrought into existence before the mystic 1550 ;
will also on occasion direct the cleansind will also on occasion direct the cleansing-ind
maintenance of good (and rich) Jacobean wood. maintonance of good (and rich) Jacobean woodwork; will not put up entirely new work by what has boen aforetime lost or damagedCan such a via media of architectural restoration be trod by tha well-disposed; or does it resolve itself into an unmade road strewn with rocks, full of pitfails and thickets, along which the task of progression would be all too arduous for ordinary way farers, - tempting the traveller to devia tions from time to timo into the roads above and below, till the necessity of not seeming habitually to use them drives bim for a while hack to hid own ground ;-or may we rather call such middle path a smooth seeming railed-road, sure, as of those who, in the hurry of life, allow themselves to be carried along it-?
Mr. Sharpe, in his anxiety to touch a prim iple, and afford wholesome gnidance in real ork, in his address at Newark (riven hy you, oo far as it goes, and has illustrated its practice by examples. Woes, and it be possible for bimetice for one of his discoiples, to overlook the no do eplorable apparance to doub eplorable appearance of unholy wavering that he aspect or the hestorationist world may seem have brought about; and give the practicul help towards the acceptance of a system that
results from the clearing up of a diffeulty, and results from the clearing up of a diticulty, and
from the application of a general principle to ubious cases. As thus :-
3. Wben, say a century ago, the end of church was pulled down, and strange substitu tion made in place of the work of the old time, whose claracter cannot be ascertained, and at the same time cannot bo inferior, or iudeed at all in the same rank with the work that sup-
planted it, -what is tho duty of the "Replanted it,-what is tho duty of the "Re-
storer"? The existing work was not done with any art, and is quite hopeless. Is he "to intro duce and construct fiesh work, for which wo anthority or precedent previously existing in the building oan be al'eged"? These are Mr Sharpe's own words of utter reprehension, and I suppose he would therefore give an indignant negative. Is, then, something already in the
buildiug to be copied?-or, to give a clue to the
architectural type on which a design may be founded as good in itself, and at the same time if harmonious to the old work as may be ? And if this latter, how is the anthonticity of the rest to be seoured? It wonld almost seom that the better the now work (the more like good old work), the worse it would be for the listorical value of the real old work in the building
4. What is to be done wben windows
without tracory present themselves, the wooden frames and larce pences, with made comely and at all architectural? once obviously three-light curvilinear windows, now they are mere broken srobes and mutilated jambs. Will tbey be properly, as usual, fitted (not many remain to bo dealt with after the work of the last twenty years) with carefully adapted copies of the windows of Heckington or Grantham, or of others so care. fully delineated by Mr. Sharpe years agone? May traceries he varied? Where there are no mouldings may they be invented? Or must authenticity exercise soveroign sway? and the attempt be made to produce what may in twenty years with rood luck, bo mistaken for a real window of 1330 ?
5. As to carving and delicate monldings.-An example from Lichfield Cathedral gives us (on the south side of choir) fully-developed Lancet capitals to the piers of one of the Transitional bays. The old ones were disfigured beyond the preserving point amid the smoothness and lavish finish reoently obtained. Is the fact that the capitale thas put in are good of their kind, and -suppose we say for the sake of argument-of finer art type than the old ones, a justification of the substitation? And is the additioual fact that no one will mistako them for the originals in their favonr, or the reverse? Of a trath no light visitation has come on the nnlucky directors of such substitution in other years, What is correct to day?
It will be seen that nono of these questions touch on the point that, among the many sub jects that Mr. Sharpe handles, may at the present time be considered his farourite-
that of tho non-alteration of the sarfaces of old mouldings and carrin of the sarfaces of necessary piece of dulness, with no solid gains, this will probably never find an articulate defender. The oonstruction of a complete copy in one jamb of the fast disappearing forms seen in the other would, however, bave its adrooates in case of oontest. But all that Mr. Sharpo has deduced from the principle of "doing as little as possiale to the masonry of a building," may be accepted and acted upon; and still as 1, 2,3 above, and a hundred other such practioal problens make clear to us, we seem to want something that shall guide without question in the cases still awaiting "restoration," where doing a little seems out of the question; when some. thing more than repair (and still much less than rebuilding) is a necessity. Are wo likely to be able bofore long to put snob a principle hefore students and ontsiders, witb a pretty general agreement that it bas a certain definite mean. agree
ing?

PUBLIC WORKS IN JAPAN
As a rule we do not get much information with regard to the pablic worls of Japan, and therc. fore a little information upon the subject will be acceptable. From several ofticial reports wo learn that puhlio works of various kinds are heing actively carried out in different Japanese ports and cities. Thus, from Hiogo we learn that many publio improvements have been and are beiug effected there. Last year the authorities pablished a new plan of roads for the town, which it was proposed to raake on the slope or a hin behind Kobe, lhe work was oommenced carried on with considerable energy. In the native town of Kobe, moreover, a large number of old bouses have been lately cleared away in order to make room for a new wide atreet, which is to exteud the whole length of the town from east to west. In consequence of these improvoments it is mentioned that a large increaso has aken place in the value of land and honse property. A great number of new houses have also been built of late in the town, and these, heing on an improred principle of construction, are considered quite in the light of an architectural reforination. In Hiogo, too, building operations have been steadily carried on, and the largest warehouses and stores ereoted by The streets, wbich are regular, spacious, and
excellently drained, bave been macadamized; and large wells are being suok in different parts of large wells are being suok in different parts of convenieut water supply for the extingnishment of fires which may occur. Extensive new municipal buildings are also being built in a entral position. Ther will consist of a manicipal hal!, which will contain accommodation for the municipal superiuteudeut and the foreign police, a prison, and permnnent sheds for the ire-engincs. The streets of Hiogo have hitherto beon lighted with keroseno, but for the future arrangements havo heen made to light tbem with gas. This work is in the hands of a company. At Osaka, too, a new municipal hall is now in conrse of construction; wbile the paying and draining of the streets lave been completed, and the pier for ferry-steamers hine been conaiderably extended. In the native tomn old wooden bridges have hithorto been in existence, but these are gradually heing replaced by substantial iron structures of a much improved character. Large additious have boen made to tho Imp $=$ rial Jint buildings for the minting of copper coin, and for the mannfacture of sulphusic acid. These alditional works, howeter, have not as yet been completed. A new railway is in course of construction between Hiogo and Osaka, but its progress is very slow, and it is not expected that it will be finished nntil next year. A new line is also projected botween Osaka and Kioto, and a large quantity of maconstructiou has not yet been issued. Telegraphs in this part of the country have, it is said, provod a very great convenience, and aro mabb appreciated.
From Kanagawa we learn that public works there have been actively carried out. Railwas onstrustion is a feature of these works, and ast jear witnessed the opening of tho first rail. way in Japar. It is meationed appropriately to this, that the cost of railway constrnction in Japan sbonld be cheap, as money is easily pro. curable, material is pleatiful and readily able, and labour cheap. Preliminary outlay, such as parliamentary espenses, should be almost likely to amonnt to mueh. The introduction of likely to amonat to muea. The introduction of gas into Yokobama during the past year also doserves notice. The company is a native one, but the machinery and varions materials were purchased in England. The gasworks are capable of produciug 1,500 cubic metres of pas in twentyfour bours, feeding 2,500 hurners. The consnmption of coal is abont 200 tons a montb. The Firat section of the trank railway intended to conneot Yedo and Yokohama witb Kioto, Osaka, and Hiogo, has boen oponed, and already at tracts more traffic then can conveniently he carried on a single line of rail. Telegrapbic wires bave been stretched froun Yodo to Nacrasaki ; hut tbe lino, which is 830 miles long, is not yet pronounced in working order.
From another Japaneso port (Hakodade), we learn that the local governmont has done a great deal of lato towards improving the streets of the town. A destructive fire lately ocenrred there, and adrantage was taken of this to straighter and widen tbe streets in that district, whicb in some quarters are now lighted with oil-lamps. A now style of buildiag, similar to tho European, has also been adoptect in the construction of honses for the Government offioials, and for a ow custom-house. A new road has been con. tructod from Hakodade towards Sappara ex tonding over ninety miles. This road bas been muoh wanted. A few miles from the port the site for the erection of an agricultural college has been prepared.

WOLVERHAMPON GRAMMLAR SCHOOL COMPETITION.
At a meeting of the Governors of the Wolverhampton Grammar School, beld on the 16 th, the deaigns submitted by four invited arcbitects were considered, and that of Messrs. John
Gough, of Craven-street, was accepted.
Gough, of Craven-street, was accepted. boys, chiefly day scbolars, and has a hoadmaster's residence attached
The estimated cost is 10,0002 ., exclusive of fittings, boundary walls, and other external Forks

India.-Speaking broadly, the total area of Britigh India is $1,000,000$ equare miles, and has a population arerugiag 200 for eacb of those miles.

## LICHFIELD CATHEDRAL.

## A friguent.

One Sabbath evening in the time Of antumn, dull and cold, A. stranger there,-1 chancod to atray Througb Lichfield's city old.

Before me, stretching east and mest, Its grand cathedral lay
On whose high spite the restless vano Waved with its gilded bands again Adieu to dying day.

The bells to prayer from out ita towere Calld soleninly and slow;
While round the pie a misty sbroud, That spread as doth an incense cloud Rose from the moat below.

Witb burrying throngs of worshippers I through the streets was led, Aud sought the portal, but mine eyes Soon stay'd my forward tread
In wouder at the imagery
So quaintly carved o'crhead.
It seem'd as it some artist sageDivinely tauglit-this stony page Inad wrought with purpose to engage The thought on that within; And as one with expectant look Doth scan the preface of a book, So read I, with inquiring mien, Each object of the sculptured sceme Befure $I$ onter'd in.

I enter'd in ; 'twero vain to dare Description of the scene so fair That burst upon my sight. 1 halted as the door swung to, Earaptared at the sudden view And gazed in calm delight. But nought of words, or storied rliyme, Or picturing tale, or song of mine, Could tell the glories of this shrino
Or paint its charms aright.
My fascinated eye, apell-bound, Travell'd the spacions circuit round, From east to wost, from west to east, Elch part a visionary feast,

Eiseli stone induced a thought. The broad arcades, whose massive piers Have horne their load six hundred yoars, Firm-planted there by hands well skill'd Each for a purpose well fulfill'd,
A preguant lesson taught.
Tauglit me that men who labour'd tben This glorious fane to raise, Labonr'd with braiu, oye, heart, and band, In Love and Faith, a willing band, Tbat God mioht own in this fair land A temple for Eis praise.

No mercenary motive theirs,T'be honest pride of Art Inspired each worker as be wrought With careful skill his part.

Proudly tbey watch'd from day to day, Like a pareat doth a child, While the offspring of their hands apace Grew upwards with a stately grace As stoue on stone was piled. nd whon aloft the scancir Round the ascending spires, That each might live until the end Was first in thoir desires.

A blessing on those men of old, Who wronght so well and true And he who plann'd the mighty pile, His name be homomr'd too.* Long may his work adorn the land, Long may this fane all storms witbstand, And youth its age renew. $\dagger$
A sign and gnide of yore and now,
No lovelier gem on Earth's fair brow

## LOCOMOTIVES ON ROADS.

The use of ateam traction and other engine on roads is regulated by two Aots of Parliamer ( $24 \& 25$ Fict., cap. 70,186 L, and $28 \& 29$ Vict ap. 83, 1865), one of which regulates tolls an imits locomotives to 7 ft , in width and 12 ton weight, and enforces a maximum speed of $t$ miles an hour in the country and five miles haured to four miles and two miles respectivel increan the mavimum width of ongines ft . and their weight to 14 tons.
During the log tor
During the last ten years the nse of nel moving engines for nse over ordinary roads h ats cts are insuffioient for the prosent day. T elect commitoo appointod las session to inqui to the subject they recommend various alterations in $t]$ wir to meet the altered state of aftain's. T T vidence given hefore them by engineers, str voyors, and othors, both adrocates and opp nents of steam rond-engines, leads them to 1 commend that two olssses of engines shonld formed: the firat,--the heavy olass,- to incla all locomotives exceeding 6 tons in weight, haring separato carriages attachod to then the second,-the lyght class,-to include ae contained locomotive carriages or engines, n axoeeding 6 tons in weight, making no sou rom the hlast, and consnming their own smok the former should only be permitted to travel spoed not exceoding three milos an hour town and four milos an honr in the countr while the latter should he sumject only to $t$ same regulations as ordinary horse-traffic.
The question of the destraction to poa caused hy steam-engines or their carriages, oue of great importance. Some witnesses we favour of traways heing laid down erdina road, and were of opinion that this course wow be both leas oxponsive and less abstructive ordinary traffic. The committee, however, 1 commend that the width of the wheels of loc motive carriages should be regulated accordi: motive carriages should be regulated accordi: this regulation wonld obriate the dancer breaking up roads:- When the weight on ea wheel does not exceed $\frac{3}{4}$ ton, $4 \mathrm{in}^{\text {. in widt }}$ wheel doos ton and not exceoding I in wh wheel, 6 in. in width; exceeding 1 ton and $n$ ree 1 tin on 8 in in widt exceeding $1 \frac{1}{2}$ on each wbeel, add 1 iu , for eve exceeding ${ }^{\frac{1}{4} \text { ton in weight. }}$
It in to be re
are tbat the use of bea ngives with hroad wheels is rather benefici han injurious to the road, when it is well man and wide; though in tho case of harrow roac roads lhat are slisbly melalle, lo doubt tbat damage is done hy the freque passago of beavy locomotives. "While," $t$ ] damage done to roads to the engine, and otbe to the wagons drawn by it, it is clear tbat, to the wagons drawn instances, tho damage bas really heo came instances, tho damage bas realy hep the merns naed for its transport, and that. the means naed for its transport, and that, portion at least of the injury would
have been caused by the use of horses."
have been caused by the use of horses."
The provisions of the existing Acts, givir power to the surreyor or master of a hridge lose it against a locomotive if he sees fit, a fonnd to be very verations, and they render th wuers of locomotives liable for all drmas directly or indirectly cansed by snch locomotiv The tolls, too, are fixed on an anomalous scal and are prohibitory, and the committee recos mend:-
1st. That no owner of a locomotive engit sball he liable for any damage done to an hridge hy the passage of his engine, provide that tbo weight of sucb engine dises not excee 20 tons, and provided that no notice be affize to the hridge.
2nd. Tbat if such notice be affired, the ornt of a lucom tive shall be liable for damage don by bis engine if the weight of the engin exceeds that ramed in the notice.
3rd. That if the engino exceeds 20 tons th awner shanld he liable, whether notice sba. have been affired or not.
4th. That any person taking an engine more than 20 tons in weight on a publie roa shall be liable for all injury to the road whic an be proved to have heen done hy the passar of such engine.
The provisiou which requires tbat a flag ahal he carried 60 yards in frout of a steam locd motive is found to be uscless in practice ; an
lat which enablea any one with a horse to stop te engine till he has passed by is, no donbt ronld be repealed, and generally are of opinion lat all such minor poiats should he left to the scretion of the driver of the engine. The mmittee say that "the intorests of the owners engines apperr to give the strongest grarantee
rainst accidents, so long as they remain liable rainst accidents, so long as they remai
r tho consequences of suoh accidonts." Commander Do Lousada gives some interesting idence as regards the nse of steam locomotives the streets of Glasgow, where he has been armitted by the looal authority to ran his
grines withont limitation as to speed or time. igines withont limitation as to speed or time racted engines, properly driven, the largost eights are very little obstruokion to the dinary traffic. IFe finds that horses soon tice of it after meeting it two or three times. he committee, considoring the number of agines in use that do not consume their own ast, do not feol justified in making any reoomendation for the compalsory adoption of easures for obvinting the noiso and smoke; it encines of any size that have not adopted ach measares skould be classcd as "heavy," "heary tratto."
An engineer stated that out of 800 rowd locootives built by his firm, np to the date of the quiry, 500 are belioved to be employed in this untry. Another witness informed the com-
itteo that lie had supplied nearly 1,000 selforing engines to British owners, No recommendetions are made as regards the se of steam on ordinary street tramways, foot that the power of eontrol and stoppage is least equal to that possessed on ordinary street amway-cars drawn by horses, while there need no noise greatcr than that produced by the
ovement of the cars. There are two or three ovement of the cars. There are two or three
odels of steam tremway-cars at the Interodels of steam tremway-cars at the Inter-
tional Exhibition, which aro ingeniously contional fixbibition, which aro ingeniously conred so as to reduoe to a $m$
noise, steam, and smoke.
There is bardly any doubt that the use of oam on our common roads is destined to come very zeneral, and it is urgently neceswry that new rcgulations shonld be legrlised : recommendations of the comrnittee appea afford a sound basis for fature enactments.

## SEWAGE FARMing.

The Merthyr Tydfil sewage-filtering and wage-irrisation scheme baving now been ir erk to the Mertbyr Tydtil Local Board o erk to the hertbyr Tydal Local Board of extract from the periodical report of Mr ke, tho medical officer of health for the dia.

The sybtem of seware-farming bas emerged tisfactorily from the contropersy excited by

Mrr. Smea's snggeation that the introduction of typhoid fever into certain parts of London might be traced to the consumption of niik furnished by cows which bad been grazed on fields fertilised with sowage. Mr. Stnee bas howed, though not with the best graoe, to the testimony borne by
Dr. Rees-Phillips, of the Exminster Asylum, and Dr. Rees-Phillips, of the Dxminster Asylum, and
other experienced authorities on the other side. He hasperienced anthorities on the other side.
Hect, admitted that, under certain precautions, the system he bas run foul of may be pratised with excellent results, and another medical anthority has declared that the origin of the typhoid epidemic in London has no conaexion with sewage-farming, and is traceable to the pollation, by typhoidal excretions, of the well attached to the dail'y whence the inilk was supplied. Dr. Carpenter dealt the hardest hlow of all to Mir. Smee's bypothesis. The Doctor, after maintaining that tho typboidal contamination of the water was the real existing cause of the miscbief, defends the system of sewagefarming for the following weighty reasons:-
"1. The dispoand of town sewage by irrigstion is the closet toryns of presenting pollution in our water-couraes. eloset towns of preventing poltution in our water-oourass.
2. It a santary advatage to a dense population to
have in well. conducted sewne farm in close prosimity. 3. It is a means by which the prodnce of the soil raay Ge quadrupled, aod has mall end regetables being
cheapened, muy be brought within the reach of those elasses who now searcely erer get thema.
4. It is highly neesasy for the welfure of our teetuing population ihate our meat-producing power should bo increased; otherwise, in the event of our foreign supply
being cut off, the chsuces of fumine will bo imminent.
A grood case, in short, has been made out so far on bohalf of sewage-farming; on the con dition, of course, that the system is praotised
only under compotent and intelligent oversight, aly under competent and intelligent oversight,
A sub-committee of the Leeds Town Conncil, A sub-committee of the Leeds Town Conncil, appointed to investignte the utilisation of sewage have presented a report, in which they detail the result of six experiments in the onltivation of mrass, onch experiment eondacted with a
different kind of manure, but in all cases of the amo or this six plots of ground were eaplay ace and each plot was dressed with manure to the value of 303 . Street sweepings were valned at 1 s. 8id. per ton, stable manuro at 4s., Poruvian ghano at 15l., native manute (a mixture of at 3l. Euano and nighe soil), at ak., native guano, was all cut at tho same time, and made into hay, and the committee report that "the finest quality of all, as decided hy a competent judge," was that grown on the plot manured with the mative guano. Allowing for the cost of cartage and labour, the value of the hay mannced with Peruvian guazo exceeded the cost hy 17.3 s .9 d Thile that mannred with native guano showed a value of the $9.9 \frac{1}{2} \mathrm{~d}$. above the cost. The excess the native nanuro crop, 14s. 6d; and of the crop from seware mnd, 9s. 2d. The streetweepings showed a loss of 17.9s. 8d., but had propest crop of after-grass. The committee as they now are, without any fresh dressing and as they wo are, withont any lresh dressing, and is exhausted in the first year, but it is claimed for the nativo gilano that the effect will be seen or one year or more afterwards.

## DALTON HALL, NEAR BEVERLEY.

THIS mansion,-a seat of the Right Hon, Lord Hotham, 一after having been untonanted for more than half a century, is at present receiving very considerable alteration and exten. sion, with a view to its becoming an attractive palatial residence.
The old honse consisted of a principal hlock, containing many large and lofty rooms, connected by corridors with wings, the whole ocoupying three sides of a quadrangle. The and extending far back in the rear, westward on to the splendid lawn, the new buildings are rising. These comprise on the one side a dining-room, with all adjuncts, in convenient proximity to the wing in which the sponding block will contain a drawing-room, opening by French casements into a lavge conservatory at the side, and at the end apon a terrace extending the entire length of the west front. A billiard-room and gun-room, with thei special lavatories and some other less importatid ground plan. Ahore and extending rever all the now buildings are to be numerous suites of bed
and dressing rooms, witb their fall complement of bath-rooms and closets. The present en trance-hall, with the staircase removed, will remain as the grund entrance, and a new stair. case-hall and oroad staircase, in Aubigny stone, will be coustructed to the right of the entrance hall. This sthircase will be supplemented hy secondary ones in eaoh of the new blooks, and others in tho wings of the building; and all the corridors and passages will be as nearly fireproof as possible.
Externally, a carriage portico and colonnade of eightean columns will ovcupy the front of the contral block upon the east front, and serve to connect the two new blocks; and in the angles ormed by the projectiag wings two circalar porticoos will mask theapproaches to the luggage entrance on the one hand, and the private entrane to the hilliard and gun rooms and tho steward's coms on the other
Italian style, to have been designed in a plain ing work, the mocorials preciag with the exist ing work, the matcials boio whito brick and Ancaster stone, the latter unsparingly employed also be of clase ceil of the of a class consistent with the importance for the mansion, solid walnut haviog been selectod The park of all the principal rooms.

The park and gardens bave received attention now roads having been opened up, and parterces and terraoes desigued for the wost and south fronts by Mr. Thomas,
In the gardens an extensive range of conser vatories, vineries, and other horticultural houses have been erected by Messengor, of Lough horougb, and at a short distance from these is a sing Itslian cottago residenco for the bead. gardener. Similar in size and design to this wil be the lodges, one of which, a single one, with ron entrance-gatos and stone piers, will be on the Kiplingcotes-road, and the other, a double one, on the road from the village of Dalton Holme. The whole of the architectural works have been designed by Mesara. Piyne \& Talbot; architects, and are beinc executed under their directions by Mr. Joln Briley, of Birmingham, whose contract is to bo completed in rather more than two years from tho present time.

IMPROVED METHOD OF
CONSTRUCTION WITII METALS, GLASS, AND OTHER MATERIALS.
Under this title the "Jonrnal of the Franklin Institute" describes the invention of Mr. William Haggot, which consists in kiving to the material which consurnction a pecahar forn, in virtue of Which the strength and adaptability of the same to civil, military, and marine constructions is olaimed to be much improved.
The process, in general terms, consists in giving to plain plates or sbeets, of nniform thickness, of the various kinds and qualities of metals, glase, tiles, and other substances, compound undulating forms, the undulations erossing each other at right nngles, or obliqnely, or radially
and circnlar. These forms, it is claimed, impart to the plar. These forms, it is claimed, impart and as the great ateral strength and rigidity; directions they afford equal cormpensation for conteraction and expansion in all directions, a desideratum of great practical importance in construction, since, if realized, it makes it practicable to attach the borders of such plates firmly to adjacent unyielding masses.
The process for undulating the plates is varied to snit the character of the material operated npon, some by direct casting in matrices of the desired form, others by being heated and then in all cases it is nellers, stamps, and dies; hnt convex and ooncave parts of the rollers, \&c., actually fit and work with each other.
The following estimate is claimed to represent the strength of the undulated over the plain paniscd - ron and steel, ahont two fiftha; mal brass throe therees. finc sbeel in, hirce-ifths bras, fofth; while glass is nearly donbled in strengtl. In construction of the ordinary kind the plates may bo atached one tonary kiad the plates may bo and he another, wilh some overlap, and then attached simply at the ends. An inecter wall of siminar character is also rectod, and the space between the two filled up with somo non-conductiog material, which shall make the building independent of the external Bricks and
Bricks and tiles of this form are constructed and employed for roofs, sewer and wharf con.
struction, with success; while, applied to glass for skylights, illuninating panels in huildings or conservatories, there are claimed for it the several advantages of increwsed strength,
with no decrease of light, and nearly perfect with no decrease of light, a

OPENING OF THE BIRKENHEAD AND MOYLAKE TRAMYAY.

Br a new company, under the name of the By has been provided for Birkenhoad and Hoylake, at a cost of nearly 20,000 . The line has just been inaugurated. The contractors were Messrs. Henry Tabiner \& Joseph Perrin, of Birkenhead, the rails and other materials being sapplied by the company, and the work executed under the snpervision of Mr. Wade, the resident engineer. The gruge is 4 ft .8 in ., and the width of the double line, including 1 ft . 6 in . on eitber side paved with square sets, 17 ft . The rails aro of a new pattern, with double flange, and dogged at cach side. Tho line is a double one thronghout, except at tbo descent of Hamilton-street, and at Woodside it a,gain forks into a double one to the new ticket.office, just built adjoining the Ferry. buildings, and in closo proximity to the pay. gates. After leaving the Woodside Ferry approaches, the line mounts the brow of the hill approaches, the howe mounts Hamilton-square, hnt tarns off along Canning-street, tbence into Bridge-street, cross. ing the dock line of railway, thence hy Cleve. ing the doek line of railway, theet, Corporation.road, and Beanfort-road, across Mr. Vyner's field to the Docks Station. The route has been selected not only for the The route bas been selected not only for the
connexion with Moylake but as a convenient conncxion with Hoylake but as a convenient means of access to the graving docks and the located at the north end of Birkenhead.

## HEALITH AND COMFORT IN HOUSE. BUILDING.

Str,-I have just read in your issue of the Gth instant the letter of "An Amateur," and I am sorry that tbe paper yon did me the honour to publish has failed to produce in his mind the conviction haped nor, viz, rat houses may he
rendered healthy and com ortable at $n$ compara. rendered healithy and comfortable at a compara.
tively small cost; in frot, I say in my paper that tively small cost, in frot, 1 say in my paper that
the plan reoommended is . uncoostly," and that the plan reoommonded is "uncostly," and that
for tho henefits received "tho outhay is very small indeed."

## small indeed.'

yonr correspondent appears to have mistaken my recommendation. He says "every room in the house is to hare a shaft throngh the ceiling and, to promote suction, these aro to be constantly and permanently heated." My expres
sion is "this should he kept permanently heated' "this," that is the one common abstraction flue not all the fiues separately. Moreover, the beat ing Dr. Drysdale and I recommended costa notbing, because it is dove by the waste lieat of the kitchen fire. Hethen says, "How the warm air to supply all the rooms is to he procured Dr. Hayward does not tell us." Surely he can. not bave read the paper carefully, for I say dis.
tinetly, "Tbe only completo and effectual rewedy is a direct opening fron the outer air into the lobby, only protected by shatters to regulate the snpply according to tho requisements of the house, and by bot-water pipes to regulate the temperature according to the season of the year.' He complains that the plan recommended is "only applicable to noblemen and wealthy pro. "ahstract," and not the "paper" itself; and certainly be cannot hare read the book, of which the paper was only an epitome. If be will let me have his address I will send him the original paper.
In the plan recommended, nearly all that is eessary is to have a hole in the lobby wall, hole through the door, or wall into the romm; hole tbrough the ceiling; and flues left in the walls and kitcben.cbimney whilst huildiner and surely these cannot ind much to the cost of build ing even the most humble dwelling. Of course, they mast cost something; health and comfort annot he proenred for nothing.
In reply to Mr. J. Hicks, who sppears to think the plan more easy to descrihe than to adopt, I wonld say again, as I said in the paper, that it myself; and in both honses it is found compara. tively uncostly, and to act perfeotly; much more
so in both respects than trould the plan he re commends, or mere theoretical grounds only. The same remarks are applicable to the letter of

## INJURY TO LEAD BY INSECTS.

Sir,-In stripping old lead flats yon will often find the whole under-surface mnch oxidised, and where the boards are much decayed the oxida tion is always greatest. I have never found a insect in old lead, nor have I heard or read o one whose disgestive organs were strong enough for so tough a morsel. I have often known mice to gnavy a holo through lead pipe, but you may
always find the shavings under its work. Is it always find the shavings under its work. Is it of the insects, or their excrement, that has destroyed the lead? I once met with a cistern 6 lh lead bottom that had not been used for several years. The water that was left in it had ovaporated long since; and on the bottom were the dried remains of a number of wiroy worms, and these lay in "a perfect bed of oxide of lead, whereas all other parts of the hottom and side were sound.
The pin-holes mentioned in lead valleys, \&c. re cansed by oxidation, either from vegetable or sooty deposit, and sonnetimes from dross flaw in the lead, which are soonest acted upon.

Bonel A. Evans.

## NORTH COURT, FINCHAMPSTEAD,

 BERKS.North Court is a house upna the estate of John Walter, esq., M.P., not far from the lately. constrncted Bearwood, the very fine residence of tbat gentleman. North Court, the huilding hown hy the view, is placed upon one of the noblest eminences of his picturesque property, commanding an extensive view of the country aditions and alterations. The garden.front have heen altered hy enlargements made to the dining and drawing rooms, and an entirely new fice-wing has heen added; the former stable buildings which adjoined have been converted nto domestic offices, and brought into connexion with the additions.
New stahle-buildings, snitahle in size for the enlarged house, and corresponding in style, within thous, also ance next the public road.
The original style of architectnre has heen thowed in the additions and in the new build ings, so as to obtain a general aniform appear. nce. All the buildings are execated with red ricks, made upon the estate, relieved with ands and figures worked in with dark-coloured ricks. The chimney.ghafts are huit with moulded hricks, the caps and hases being formed and monlded verge.boards, with pinnaeles and nendanta verge. boards, with pinnacles and pendants. The roors are con with whang reen slates, hnd are fished whornital dre.crest of red tile. The now stahle-building and gate-lodge are covered with Penmoyle green slates.
The plans for the alterations and additions and for the new buildings wero prepared by Mr. A. Ritchie, architect, Cliester, and the works were carried out under his supervision with the valuable assistance of Mr. Semue Deacon, the resident surveyor npon the Bear wood estate. The huilder employed was Mr ohn J. Collings, of Kingston-upon-Thames, wh performed the work chiefly under contracts.
The first bouse and offices, North Cont, were erected about eighteen year
plans of Mr. Decimus Burton.
The gronnds, thongh not large, are laid ont with taste, and have recently been enlarged by Mr. Walter.

CARVED STAIRCASE, RUE DES NOBLES MORLAIX, BRITTANY.
Few towns in France are so rich in ancient domestic architecture as Morlaix, and although terrifle havoc has been made amongst its inte. resting streets and honses of late jears, never heless so minch remains that it may still clain he north of Furope It is common enongh in all the French cities and towns to find ing ene ing and fom oplendid examples of ancient domestic architectare, hat they are generally
isolated specimens, and give us little idea of tbe exceedingly picturesque effect of a whole stree of snch buildings: but two or threo of the Breton towns have quite retained the ancient charmeter of their streets, and tbis remark refers ospecially to Dinan and Morlaix - perhaps, of specially the two places, the streets at Dinan are tbo ain of ancient domestic buildings are more ain on the other hand, Dinan can
 how nothing for cichness to compare with the an de Noblaix, he two last.named host perfec xamples of chosughy Medieval streets now to e lound ina are rion隹 Rue des Nobles (as its name signinos) was riginally occnpied entirely by memhers of the Breton and French nobility, and tbis accounts or the amonnt of carring and enrichment which decorates the exterior and even the in. erior of most of these bouses. Wo say erven be interior becanse it is so much more rare to and the original iuternal fittings and decorations of a honse still existing than to find the exterior comparatively unaltered, and this is one of the easons why these Morlaix houses are so valcable from an antiquarian and archoological point of view. Examples of ceilings, doors, firelaces, staircases, \&c., aro numerons, and soma of them of the most elahorate and ornate description. The most interesting foatures, nowever, are the staircases, of which there are everal in cxistence, and tbree of thase are very lahorate and beantiful in design. Of these, the hest preserved is the one in tbe housg. o. 1.t, Rue des Nohles, of which wo give an llastration from a drawing made npon the spot. Inis very remarkable staircase is of the best period of the Third Pointed style, and is adorned witb a great dee of carred foliage, and beaut:-fully-designed Flamhoyant traoery. Each "rtage". is marked by a large nicho containing a statue of a saint. Amongst tho saints represented are St. Margaret, St. Catherine, and St. Dominic, And in addition to the large statnes, are small tatnettes sitting under canopies which mark the innction of the staircase with the three galleries. The parapets both of the staircase and gralleries are ornamented with "linen panels," aud small pinnacled huttresses. These "linen panels" are not qual to the rest of the work either in design or execution, as they arc flat and tame. Thel newel is a macs of carriner from the floor to its summit, which is about 50 ft . The spaces not coupi ly the wient are corered with caf Beloy the stairose is a larce loset canopy over it. Tie panelling outside this loset or cupboat is erceedingls rich, the pare loset or cupboard is exceedingly cich, the pane emb ate Laboy ut hat composed of oak, wich has fortuately never iful in real sentlo not able to state positively whether this is or not the case. Wo saw, however, no appearance of its being joined. The galleries which form the approach to the upper chambers from this staircase only run along one side of the hall, but are continued outside it on one side, and are cut
off from it by a partition running the whole off from it by a partition running the whole height, and supported upon a richly carved heam and semi-vanlting on a level with the first-floor. The hall in which this staircase stands is very nearly in its original condition; it is nearly square in plan, and has a good high.pitched roof with arched prinoipals resting npon corbels. The sides aro composed of timber framing filled in between with lath and plaster. A portion of this hall is partitioned off hy a low pan-lled sereen, and is used as a kitchen. This arrange. ment is ancient, and the whole remains pretty much in its original condirion. This hall receive light from a large "saddle. light" in the rook, which does not appear to he original, and it is probable that there was formerly a "Lourre similar to those existing over some of our oid. English dining.halls, and this would aocount for sach a very short roof being strengthened by principals. We cannot commend the prwcice of placing the kitcher in the hall of the house, and alchough it is common in Brittnay, at least in ancient houses, we think it would he dificale to find a worse pnsition for it ; and nothing hut the excssively primitive style of life led hy even he nohility in Brittany before the great revolu. tion, could hare made saoh a state of things endurable.

nortil count, finchampstead, berks : Latw Front, showing Admtions. Mr. A. Ritchie, Architect.

CARVED OAK STAIRCASE, MORLAIX, ERITTANY, FRANCE

## EGLETON CHURCE, RUTLAND.

## Tue parish churoh of Eyloton has been ro-

 opener, after having undergone some muohnoeded repair and ronovation.Tho architecture of the ancient fabrio is of an interesting and valuablo character. A very the jumbs haring shatts and capitals, covered with elahorate archaic ornamentation, and a south door of similar but even more elaborate detail, aro the most ancient portions of the detail, aro the most ancient portions of the
building. The sons h porch and lower part of building. The sol1s h porch and lower part of
the tower helong to tho fourteenth and the rest the thwer helong to tho courtcenth and the rest
of the preformation cifice to the fifteenth century. An aisle, which formerly existed on the north side of the nave, was pulled down apparently at a period not far back, and the Portions of th.
Portions of the old church are now discovered
to have heen used in tho constrent to have heen used in tho construction of this
scroen.wall, amongst thern the bowl of the Normnn font, which has heen cut out, and now awaits restoration, also what appears to be the
baso of toe churchyard cross, baso of the churcliyard cross. In the recont work of renovation tho old
"three-decker" pulpit, with its corresponding pewing, stovo-pipe spanning the aare, and other asnal accompaniments has beon removed. The repaired and funds hat heen cleansed and rebuilding the north aisle, the modern work of tho north wall has been cut eway, so as to expose the bnried columns and arches to the extent of third of their thickness, and the plain surface patterns in colour. Tho plastering has been ont from the wiadow-jamhs, the quoins being of rought stone, and the jambs have been pointed. The doorways to the rood-loft have jeen exposed to viow.
New joinery of oak to tho chancol, and pitchine and deal to the nave, havo heen introdaced. The floor bas heen laid with new stone paring, iles.
The
ors. Hallids engrged in the work were rchitect was Mr \& Cave, of Greetham; and the

A NATIONAL SCHOOL OF ART.
In my letter of the 6th on this subject I nsed he word "school" in its widest art-sense, as we ase it in spenking of the Grecian or Italian school. athe narrower sense we could certainly have a have college of ait: slach a special coltege olumas. It wonld prohally prove the most iseful form of art-institution, as the studenta who would be thus hrought together to pursue tudios, wonld soon bring a keener logical
turi-passu with their general cumen to bear upon art, and the moro frenent conflict of mind with mind would rapidly ead to common-senso conclusions upou al atters connectod with it.
If we study the remains of Grecian and volution of the art-faculty from its infagey to volation of tho art-faculty from its infancy to fards. Art grew with the intellect of Greece nd Italy; and as physica! science has grown in ingladd since wo crst off from tho schools. Bat hilst pursuing an independent conroo with reard to science, we have cluog to precedont, We should recollect that the
Werit the results, not that tho moderns only inerit the results, not the art intelligence, of the ast; and from the absence of any compendium pon, or outcry for art-edacation, we must connd straightfor o know, that they did not establish national - know, that they did not establish national
alleries of old masters or museums of ancient culpture, or organise scienco classes, or in fact ttempt it hy any of tho means we now adopt. is not England alone, hat all Europo, which eadence going wrong in this matter since the ecadence of Italian art. Most of the means ast described have been tried for more than oentury, with confessedly unsatisfactory re. e study of aucient art has not proved the adiest way to rival it.
In reference to the inconsisteucy of opinion revailing on mattess connected with art, what, or instance, can be hoped for when we find men nle, that it has no science, and with the next eploring the absence of art-education in this
country. Tho want of means for teaching that which, according to theirown premiss, cannot b taught We have not yet the courage to apply the same rigorons method of inquiry toart as to scionce, as we shnll wben our system of education shall he improved and deal more with fundamental principles. I bave yet to learn that there can he any sounder and more enduring basis for the greatness of a nation in art or anything else than a truo system of education. Our presout system I believe to be wrong in many respects, hut radically so in putting quantity before quality. "How poor are they who have not patience" is as applicahle to nations as to men. The great epochs of art wore not reached per saltuim, -hy any art." forcing" establishment that eitber has hoen or can pos. sibly be devised. We must placo our art intelligence on a level with ons scientific, bofore we can hope to bave a National School of Art.
IV. Caye Thomas.

## A. NUT FOR CIILCHESTER.

Sir, -Will you permit me, as I am well acquainted with chen the subject introduced by "Cew word whose letter, however, I regret to say, I did not whose
see ?

The ground on which the city stands may he described as gently rising from the walls toward the contre of the town, so that the market.cross, which stands there, is on the summit.level. The fall from the cross is not considerahle in any direction, but is greatest towards the wo.t and south. The north street is practically level from the cross to the city wall, after which the road rises for some miles.
The town is built on a gravelly formation, lying in a basin of chalk. The porous gravel
readily allows of the admixture of the coutents of the cesspouls with the water in the wells.
Tho gencral level of the subsoil water is pro bably from 3 ft. to 8 ft . helow the surface.
The four principal strcets, oalled respectively North, South, Fist, and West streets, are, ws "Cicestrensis" says, nnusually wide; aud, since pleasant, botet bas been ets and lanes are by no meaus so good, heing narrow and dirty.
There are three orging evils in Chiohester:-

1. Thero is no water-supply, and the inha bitants, not to put too fine a point upon it drink their own sewage.
2. There is no syatem of sewerage, or suhsoil drainage, and the cosspool abomination is in full orco; and
3. The state of the intermittent hrook, the Lavant, has been for many yoars, and is now, an open shame to those who are in authority in Chichester.
With rerard to water, a supply is abont to ho provided: so nothing forther need he said about it.
As to sewerage, it seems ohvions that a town sitnated as Chichester is, particularly needs a system of sewers, even if water be supplied from last time I was in Cbiolvester, I walked through last of the streets hetween ten and eleven o'clo.k at night, and was struck with the peculiar faint, sickly odour which pervaded overy part of the town. I oould not help saying to myself, " "The whole place is saturated with seware." Nor need this he wondored at, when
we consider the cirenmstances we consider the circnmstances; -an ancient town, surrounded hy wal's, built on a porous
soil, all tho houses havin cesspools (in one cass
竍 by the way corenal ments from come or or far from, the family well.
The cesspools should be filled $n p$, and a proper system of sowers constructed having an outlet a some part of the laud wbich lies convenioutly ronad tbe city. The construction of the sewers
rould be neither difficult nor expensive.
The last evil I lavo mentioned,
Lavant, is, and alvayb was, a thorongh abomine the stream does not como within the city walls, but llowing at the back of the tonses on the zouth side of the road leading from Clichester to Goodwood, receives the drainage of these houses, and thns polluted passes under a suburb F the city just beyond the site of the last gate. Here its pollution is increased, and is continued lso just beyond passes under the South-street again much pollution, some of the waterclosets Lavant is then again over the stream. The
sewer,-hlack, filthy, and atinking. Nor is this the worst, for at times the hrook is nearly or quite dry, and then there is an accumalation of filth, until a flood washes it away
Another small stream flows on the north.west side of the city, and after running under the west street and through a tanyard, joins the Lavent about a mile south-west of Chichester This little stream is, if possihle, more vile than the Lavant, and their nnited stinks may he smelt a long way from the junction.
Tho corporation has been going to deal with the Lavant any time these fifty years, hat the only way in which they have dealt with it is hy
It is a pity th
councils have so want of energy and divided but if Mr but if Mr. Hawksley be the adviser of the corporation, and they will follow his advice, wo may hope for better things. It is unfortunate for Chochester that its supplics of gas and water
should be in the hauds of companies and should be in the hands of companies and strangers, $r$
ratepayers.
C.E.

## THE FIRST SCHOOL BOARD SCHOOL IN

 WAKEFIELD.The corner-stone of the first School Board shool in Wakefield, Yorkshire, was laid on tho Sth inst. by Drr. Edward Green, chairman of the Board. In the conrse of his address Mr. Green said the buildings to be orected would cam prise a mixed school for boys and girls, 63 ft , ong by 20 ft . wide, and a class-room 20 ft . long There wo. wide, acomunodating 164 cbildren. 61 ft . long by 26 ft . wide, and a class room 22 ft , long by 26 ft . wide, accommodating 273 children. Altogether, the two schools would accommodate 437 children. The site, which had concerned the Board very mnch in consequence of the expense, bad cost $1,538 t$., and the build ing was estimated to oust $2,300 \ell$. altocother, $3, \$ 38$ l. The school would be haitt in the Gothic stylo of architecture, of red brick, with stone Piccadilly, There would be two entrances in Piccadilty, and lavatorics and playgrounds boind the school building, with out-offices, \&e. At the east gable facing Piccadilly would be a ell-turret.
Mr. Watson is the architect of the new building, and Mr. Fawcett the contractor for the brickWr. C. Mr. W. Wpeight for the joiner's work, Mr. C. F. Rycroft for the slating, Mr. C. Driver for the plastering, Mr. Leake for tho painting, Mr. Cuthhert for tho plumbilig, and Messers. Heaps \& Robinson (Leed?) will supply the iron. founder's work. $\qquad$
NETV TRAINING COLLEGE, DARLINGTON. The Committee of the Britisb aud Foreign Sobool Society, heing about to erect is new col lege at Darlington for training seventy fivo mis tresses, invited the local arohitects to send desigus in competition, Mr. Beck, of Lontion, the consulting architect to the Society, being pro fessional adjudicator, and an "honorariuan" being preseutcd to each unsuccessful com

Mr. Beck having reported in favonr of the design submitted by Mr. J. P. Pritchett, esti mated to cost $12,000 \mathrm{~L}$, the committee hare awarded the premium to that gentleman, who is to carry out his design, with any alterations recommended by Mr. Beck.

## THE STATUE OF NELSON AT THE MENAI STRAITS.

The statae of Nelson recently nnveiled, as aready mentioned, was execated by Lord is conce Paret, and, together with the base Purtland cement, the latter farnished by Moand Basley White, of Gracechurch-street Lors It is supported within by an iron oore running up the centre of the legs and of the cloak which trails on the ground, thus forming a tripod. These bars, which are 4 in . in thickness, are secured to a plato at the height of the waist, and thence to the head rises a singie bar of iron, which supports the body, and to which is clatuped the left arm and sword, The feet of the strengtbened hy an iron core. foot-plate to an iron foot-plate anderneatls the plinch, and that is tied to the living rock below by four iron
bars. It was first moulded in clay, and thea
cast. The height of the statue, including its plinth, is 19 ft . ; the pedestal is 9 ft ., and the basement 13 ft .; the total height of the struc tare heing 41 ft . from the summit of the rock, which stands ont in a prominent sitnation on the beantiful shores of the Ifenai Straits. The surface of the statue is covered with a silicate, which it is hoped will, to a great extent, resist the effects of the atmosphere.
Lord Clarence Paget mentioned that Messrs. White declined to accopt any paym-nt for the large amount of Portland cement nsed in the work ; and that Mossrs. Emmerson \& Murgatroyd, engineers, Stockport and Liverpool, had been equally generous with regard to the iron work. Of the artistic merits of the work we cannot yet speak.

## WATER. WHEELS.

I tenmer yon a few remarks on the Hertford water.wheel. It resembles in desirn a larger wheel iny father built here (Bedford), seventeen years ago, and which has worn well in these heavier waters. Five years ago I designed an iron wheel, and bonght it of the Coalbrookdale Company, which has worn as well. Both wheels are lighter, and I suspect much cheaper, than that you desoribe.
I have now cast bearings in all my water. wheels, and take them (espeoially large ones) to be invariably preferable to wronght ones, as I have known the latter wear according to the lamina of the metal. I wonld have nothing bat hollow cast shafts from a reliable fonnder, and wrought iron for the entire wheel, exceptivg the maves.

From what I know of water wheels, tbose the simplest construction tell the best tale.

WNLARGEMENT AND DECORATION OF LEICESTER THEATRE ROYAL.
About 3,000l. have been spent in the recon. atruction of tho Theatre Royal at Leicester, adding seat-room for fully 400 more persons than Zitherto, tho dress-circle being calculated to bold 300 ; pit.stalls, 60 ; balcony-stalls, 120 ; upper about 2,000 . Everything has been so provided for that a full viow of the stage may bo had from overy part of the house. The dress-oircle has movable seats, covered with reps. The ceiling has been bronght 6 ft . nearer the stage than prerionsly, and instead of heing flat, as bitherto, is now dome-shaped and panelledhhowing figures of Griffins, finished in arabosque, showing figures of Grifins, finished in arabosque, and in the several panels medallions of Shasspeare, Byron, Dante, Goldsmith, Mazart, Mendelssohn, Beethoven, and Rossini. Ibe medalTions are the work of Mr. Earle, of London. The drop-scene shows a view of the ruins in Bradgate Park. The front of the hoxes is of sunk fret
work, with a blending of warm grey, balmon, work, with a blending of warm grey, salmon,
white and gold colouring. The artists were white and gold colouring. The artists were
Messrs. Artlur Sullivan \& Co., of London and Messrs. Arthur Sullivan © Co., of London and of 190 gas jets in nineteen elusters. The builder employed was Mr. Bland; the gas-fitter, Mr. Lyyons, of the Drary-lane Theatre, London the stage machinists, Mr. Roberts, of Nottiag ham, and Mr. Goodyer, of the Surrey Theatre London; and the fitter, Mr. Lewis. A refresh ment.room has been construoted, in anticipation of a licence.

MEMORTAL WINDOW TO STR WILLIAM WALLACE.
In the Ahbey Charch, Paisley, a window which has been placed there and dedicated to the memory of Scotland's hero, Sir William Wallace, who was horn at Elderslie, near Paisley, has been nnveiled before a large assenhlage of people. Tho window is a gift Sociefy. It is the work of Mr. Jas. Ballantine, of Fidinhnren The wallantine, Samson, represented as, after his conflict, attering his thanks to "the Gind of Battles,"-"Thon hast given this preat deliverance into the hand of Thy servant" (Jndres xv. 18), which is inscribed underneath. The hase of the design contains the shield of Wallace, wreathed with bis time, - all ppon a gronnd sporlo formed of thord St. Andrew's Cross argent, npou an aznre field. St. Andrew's Cross arrent, upon an aznre field.
In the upper arched part of the window,
emblematical of Freedom, is an ascending angel, rending asunder the ohain and shackles of Bondarge. The window bears the following inscription:- "To the memory of the Knigbt of Ellerslie, in this parish. Erected by the Glastow Saint Andrew's Society,"
In a heathen temple, dedicated to Mars, this would bave been a very fitting ornament, would bave been a very filly considering that it must have been a work done con amore by the artist, who is a good poet no less than a good artist, and on this occasion breathed (poetic) fire and fury ugainst he "foreign rule or yoke" of "the vaunting Southrons": we had almost said by mistake the vannting Northrons." On tho unveiling of the window, Mr. Ballantine read an original poem co

When Wallsoo was but seventeen wintera old,
He'd gronn up seemly, strapping, stout, and bold;
Wins with the Bouthrons frequently st strife.
Wis with the Bouthrons frequently at strife,
And sometimes tswined them of their precious
By hewigg down all grew ahove the neck, 一 By hawing down all grew ahove the ne
Then left them welkering in their btood and gore,
The poom, however, forms no part of the nscription on the churel window; and it i better it does not. Mr. Ballantine struck a wrong note.

## THE COAL QUESTION.

The first of a series of district meetings pre. paratory to an aggregate gathering in the Agricultural Hall, Islington, has heen beld at the Victoria Park Hall, Three Colts Tavern, South Hackney,
"to take into consideration the alarming prospect of the
thonsands of innoceat lives that will bo sacrifled this thonsands of innoceat lites that will be sacrificed this
coming winter if sommething is not dune to brenk up the iniquitous coal- r

Mr. Geo. Brooke, of the Metropolitan Meat Harket, who occupied the chair, said the gentlemen with whom the movement had oricrinated, were determined to spare neither tronble nor expense in carrying out the agitation. He was authoritatively informed the outpat of coal this year would be two million tons less than it was in 1872, which meant that instead of the prico the household consumer being 40 s ., it was more likely to be 60 s. a ton. The canse of all this was not the scarcity of the article, but the second shift, and of the coal-owners, who were pocketing millions sterling by the restriction, to pocketing millions sterling by the restriction, to
connive at the ill-advised action of the men. He was told there was coal enough in Fingland to ast a thousand years and more. He had autho rity for stating that Earl Dudley, rather than permit a coal famine to prevail in the metropolis this winter, was prepared to sell 500,000 tons of coal at I8s. a ton at the pit's mouth; and if the morement now heing set on foot were vigorously carried ont, there wonld he no diflculty in bring ing both capital and labour to their senses.
following resolation was carried unanimously, following
"That the report of the Mundella Coal Committeo unsalisfactory, snd does not meet the requirements of the peaple; that the winter is at hand, when warmeth 1 the formation of a league for working a reform in the
supply of cosl to the people at large and the manafac. turing interest."
Nearly seventy memhers of the South Staf: fordshire Institute of Mining Tingineers and the Sonth Midland Institute of Civil and Minium Engineershave paid a visit to Pelsall for the doulit purpose of inspecting one of Messrs. Baird \& Firth's coal.cutting machines at work in the No. 10 pit of the Pelsall Coal and Iron Company, and bidding farewell to Mr. W. Ness, who was about to leave England for the pnrpose of ander. taking the superintendence and development of the Windale Valley coalfield, in the Central Provinces of India, on $b$ half of Gorernment :a coalfield extending over a surface area as minch as 60 miles in leneth, by from 15 to 20 miles in breadth, and in which one senm of coal 52 ft in hickness has heen proved at a depth of 1.49 ft and another seam, 32 ft . in thickness, at a depth of 180 ft . The motive power to the coal. cutting machine is compressed air. The machine was at work in aemm some 5 ft thiok with solid stors a hering, and affording farourablo conditions for tho trial of the invention s somawhat like an oblong box, little oror 5 ft .1 mo by nearly 2 ft . wide, mannted wheels which raise its npper surfiace abont 2 ft . from the ground; and is snpplied with
the controlling handle and wheel are im. mediately under his hand, and with a sort of double pick at the other, not unlike an law law wher bo whis law, or to 10 ft, and or any and or to the ler, and at any englo, arove on bottom of the crach fin first or ing uttin in ar inner half cutting in a distance of 18 in ., under the most fuvour of corch or he prefins big on the work of iss parter in the previons beat to a depth of 36 in. Thus onal, the one being a donble the the onal, the one being just donble the depth of the other. That depth varied, however, from 3 ft ., as stated above, under the most favcurable circumatances, viz, when the machine coud be worked close np to the face, down to 2 ft .5 in ., tbe cnt into the coal being not more than 2 in. in width. The estimate of the capabilities of the machine was stated to he that it would do the work of nine men in bolding, and, in addition, save a very large proportion of slack; but, although arranged to be worked by one man, in this case the want of agreement betweeu the wheels and the rails named abovo rendered the services of a seoond man necessary, and con. sequently, so far showed the invention to a dis advantage. An average of from IS ft. to 20 ft . of work from $2 \frac{1}{2} \mathrm{ft}$, to 3 ft . in depth, per honr, was shown, however, in this trial, after allowing for stoppages; and Mr. Ness, under whose personal direction tho trial was conducted, expressed himself sanguine that an average of 15 ft . could be maintained, being 50 per oent. more than the average be anticipated when he first brought the matter under the notice of the Dadley Institute. Mr. Ness, who speaks after experience of all known machines at work, and whose opinion is therefore of weight, believes that this coal cutter can be worked auder any bat the most exceptional circumstances, and that of all exist. iog maclines it is the most suitable for nse in the shallow coals of South Staffordshite.
In oonsoquence of the high price of coal it has been resolved to stop the Great Work Mines, near Breago, West Cornwall.

## MOTTOES ON MASONRY

Sir. - "I have been yonug and now am old," nd sinco I was a young man I have not opened book on heraldry. Still, if my memory does not deceive me, I recollect reading that the motto, "Furth fortune aud fill the fetters" mentioned in your interesting article "Mrottoes on Masonry "), is the ancient motto of the Marray fumily, of which, I believe, the Dake of Athol is the liead. It wonld be interesting to now if tho coat of arms in connexion with which it is carved is the Murray coat of arms, and also whether or not any nember of that noble Highland family ever occupied the house on which it is carved.
I have seen a suggestion as to its meaning by oo means so moral as yours, i.e., "Go forth, rust to fortune, and fill the fetters with prisoners who will pay ransom." I leave it th your readers to judge which inter'pretation is more consonant with Medimpal usages in the far North. Purhaps some of them can supply the information I have nentioned as interesting.

## ACCIDENTS.

Pimlico.-For some time prst the extensive remery premises of Messrs. Watney \& Co. Morel works. A number of massive mirdere, 50 ft . ong by 10 in . wide, are fixod, connecting th large recoptacles for beor one with another, and along the edges of theso girdere are iron aprights,? projecting 3 in . ahove the snrface of the girdere, which are laid in pairs, each pair being 6 in, apart. Two workmen were carrying a heavy plank along one of these narrow girders, when one of the men either atambled over an upright or missed his footing, the reault beirg chat he fell over the edge of the girder ant dashed headlong to the botton of an empty hin, a distance of 40 ft ? sustaining iujuries which caused doath half au honr aftermards. A coroner's

## dental death " was recorded.

Stonohouse.-Some persons were working rea a wall in Stonehouse, near Plymouth, where sis ouses were recently bnrnt down, when the wal fell upon thom, killing fonr men and three boys

Tbe Local Board determined at the inqnest to show that the owner had notive of tho dangerons condition of the wall, and the coroner has appointed au arcbitnot and builder to examine The Hartlepools or layer was at work on the summit of the chimuey of one of Meesr8. Richardeon'e new blast furnaces when he raissed bis footbold upon the ecaffolding and fell to tbe bottom, a dietance of nearly 80 ft . His thighs were both fractared, one of them in two places, and he was eomewhat seriously injured on the head, but he was not killed, and was takon to the Hartlepool General Hospital. York.-Whilet a stonomaeon was engaged i dressing some stone on a ecaffolding connected with the new churoh now being erected at the North-Riding Aeylnm, near this city, he wae soized with a fit of giddiness and fell a distance of 21 ft . to the ground. Hie legs were paralysed, and one of his arme partially eo: he had also concussion of the spine ; and, being sensihle, he explained that he had felt giddy that morning. and had not been well for two or three days Ho died from the injuries he had received. At an inquest which was held before Mr. J. P Wood, on Tuesday, it was ehown that there was no fault in connexion with the ecaffolding npon death wae purely the reeult of an acoident, aud death wae purely the reeult of an acoident, at
a verdict was therefore returned accordingly.

## SCUOOL BOARDS

South London.-In connexion with the London School Board, a Iarge school in Earper.street, New Kent-road, is rapidly appronching comple. band three othcre havo been coramenced theee, in Johanna-etreot, Lambeth, will accom modate 800 children ; another, in Marlhorough street, New-cut, 1,020; and a third, in Laxtonstreet, Bermondeey, 781 .
Huddersfeld. Tenders for the erection of the Moldgreen School hrre heen accepted, amount ing to hetween 7,000l. and 8,0001 .; also tenders

## DIFFICULTIES AT THE NEW_ALBERT BRIDGE, CHELSEA.

Trr gradient of the foot of the new Albert Bridge, on
the Chelseaside, is giving rise to complaints that may At the last meoting of the Chelsea Ves aid the roat wativg very dangerons indeed particularly of
a nighrotime. The parish road, in Oakley street, would are to ho greatly raised to multe a geatele gradicnt on to dre hridge itself, bat in doing this there would he a bigh

BATTLE BRIDGE ROAD, KING'S CROSS. AT the meeting of the St , Pancras Yestry on Wednes-
day, raport was hrought up from the Highways, Setwers, mod Worke Comraittee, stating, in effect, that the works likely to be beneficial to tho public,
Mr. H. North, ehairmal of the co
the report be epproved. The committee, be said, hared that carefuly considered the mattor, and all who went to vie w oommittee had pussed tho report unsnimonsly. and John Eldridge opposed the approval of the report, week, on the suhjeat.
The apheirman bride ohe had heen Mrit Churchwarden Nodes, said the the powers of an Act of
Parliament, and the plans bad Parliament, and the plans had heen sanctioned by the
Board of Trade, and approvad by the Festry when
Mr. Eldridge was present, and it Diject to them.
The report was then approved.

INCREASED VALUE OE LAND IN THE SUBURBS.
AT an inquiry held on Monday, before two justices of the peace, Messrs. W. P. Bodkin and J. H. Lermitte, at the Gatebouse Hotel, High. gate, to determine the price to be paid by the
parochial off sers of Finobley for 530 loade of of of the Highway Act, from certain lands in the occupation of Mr. Linn, eituated at Whetstone, for the parpose of repairing the highways in the northern parte of the parish of Finchley. It was given ia evidence by Messrs. Leighton, Linn, and othere, that land in the parieh had greatly increased in value. It had been known to be eold within the last twenty-fire reare for 75l. an aore, while lately 800l. an acre had heen offerod for land, and refused, and eome land bad been eold for 1,000 l, and 1,200l, an acre increased value of land in the parieh was attri buted to the increase of popnlation in altre quence of the facilitiee civen hy the rail travelling between Finchley and the metropolis, It was decided that the gravel, for which the It was decided that the gravel, for which the
parieh not long ago paid 9 d . per load, ie now to be paid for at the rato of 1 s .4 d . per load, the question of the compensation to he paid for the iajury done to the land from which the gravel was taken being etill to be determined.

## CHURCH.BDILDING NEWS.

Aspenden.-The ancient parish ohnroh of Aspenden, a villago aboat a mile from Bunting iord, has, after undergoing rectoration and repair, been roopened hy the Biehop of Rochester The partial restoration has oonsieted chiefly of a general repair and refitting of the interior, the funde at disposal being insufficient to defray the the bnilding, which, more espen the exterior of the tower is, whore especially ue regards the tower, ie mucb needed. The gallery, whioh formerly obstracted the west end of the nave, ie taken down, and the whole of the tower arch been remored fiom riew. The organ hae aleo A new window and doe tower to the south aisle A new window and doorway bave heen plaoed dow west wall of the tower. The west win. dow wae formerly entirely blooked up, and was in a very dilapidated condition. A now window Heat Eirly Decorated etyle, by Meeers. Heaton, Butler, \& Bayne, of London, hae beon built in the north wall of the nave. The window is filled with stained glase to the memory of Mr the centre Orerell, of Wakeley, and hie wife. In the centre light is a repreeentation of onr Lord, and on the other side Natbsniel, and Hannah, with the child Sarumel. During the reetoration this window. A recees for a in ty. eater etand wae fonnd in the eouth aisle. In removing the plastering and wood panelling from the chanoel walls, a piscina, with credence-table, and on aumbry, were found ou the eouth eide, and a lancet window in the First Pointed etyle, were also discovered in the oarlier date, Theee are all preeerved and reetored. To oreaee the light in the ohuroh, three clearetory windows have heen inserted eacb eide of the nave. All the masonry throughout the chnroh hae been cleansed from limewash and ceraent, and re reworked; the walle aro replatetered, The chancel has windowe repaired and reglazed. deal with painted and praelled roof of etained from th painted and Chapel, Oembridge chor of Jeane College wois formely with Godmin's enchoust and the floor ie laid the reredoe, which ie ex tiles. The panels of are filled in with variouely ooloured tilee by the eame mannfactnrer. Maw'e Givech plain hlaok and red tiles are laid in the paseages of the neve and aisle. New stalls exocuted in wainecot oak are fised in the chancel. The font is restored and provided with a new cover. The old square high-backed pews no longer disfigure the nave and aiolo, now wood hoors are laid, and the seats gencrally are all repaired and rearranged, and now present a miform appearanoe (with the exocption of the Freman Ohapel, ocenpied by Sir Henry Lashington and his tenauts, which je raised ahove and ecreened off from the other part of the church). The seats in the eouth aisle are new, and accomoodation ie provided for children hy new eoats at the weet end of the nave, and in the tower. Porritt's warm-air stovo has ben introduced for herting the charch. Tbe architect was Mr. Blomfield, of

London, and the work has been carried out by Mr. Gibbone, of Buntingford, at a cost of about 800 l .
Brighouse. - An examination of the tower of St. Martin's Church bas beon made hy Mr. Mcars of the firm of Messrs. Mears \& Stainbank, bell fonvders, as to whether it was capmble of carry ing a peal of eight bells. After thoroughly ivvestigating every park, he came to the con clusion that the tower was capahle of carrying such a peal with safety; to be constructed in two tiers. The project also includes a nevi organ, a mnoh-needed acquisition to the charch It is proposed to call a public meeting of the parishioners, to ascertain their feeling in the matter; and should the project meet their ap. proval, the fnods necessary will be raised, ther being already several large subscriptions

Aghadown, Ross.-The new parish church commenced ahout a year ago, and the first erected in the anited diocese since the Act of Disestahlishment, has heen consecrated by the Bishop of Cork, Cloyno, aud Ross. The church which occupies a commanding and central posi tion on a site granted by Mr. John R. H. Becher of Loncbine, and calcalated to seat 260 persons is in the Early French Gothic style, consisting of nave, transepts, and chancel. It was huilt by Mr. Thomas Pomberton, of Dablin, under the superintendence of Mr. William Hill, diocesan architeet, according to plans supplied by Messer. Heary \& Arthur Hill, of Cork. A stained.glass momorial window adorns the east, and is the gift of The O'Donovan.
Baddesley (Warwickshire).-The oburch here is to be restored, at the cost of Lady Chattertov. The works at present intended are the follow-ing:-The floor to be taken up and levelled, all sound mermorial stones to be relaid, those which are too far gone to be replaced with swall slahs, marking the place of sepulture, with name and date inscribed thereon, and recorting also the recent inscription; the walls to he stripped of all old plaster, and the lime.white washed off; the ruhble walls in the nave it will be imperativo should be replastered; the rest will he repointed, all scraping or tooling the masonry gallery to be removed, and open henches suh. stituted for tbe former; the ends to be worked from an old example existing in the charch, and all such old ones to he reused; the opering of somo good Decorated windows, now blocked up; the repair of the fine Perpendicular roof of the nave; reglazing in cathedral glass all the windows; and arrangements for remedsing darap and warming the church, new pulpit, desk, and Litany-desk comprise the chief points of attention. Messrs. Payno \& Talhot, of Birmingham, are the architects employed. The same gentlemen have recently completed, for Lady Clatterton, the restoration of Sbakspeare Hall, Rowington.

## DISSENTING CHURCH-BUILDING

 NETS.Hereford.-The new edifice replacing the ancient Congregational Chapel at Eign-brook, Horeford, has been opened for divino servico. The building, a parallelogram on plan, consists cases, nave and side aisles, an apsidal organchamher in the rear of a preaching platform, and chwaner with heatinc-chamher under. The a vostry, with heatinc-chaith a panlted stone roof, ancieat in character. The vestibule affords root, ancieat in character. a shelter from the outer poroh on the right and left of it. Communicating therewith are the staircases leading to the gallery. These stairsteps, with spacious landings, so arranged that in steps, with spacions landings, koarranged that in
the event of side galleries heing inserted for the event of side gallerics heing inserve (ror Which provision has been mane by tho archithey may be rendily approached. The nave, in the oentro of the building, is 70 ft . long and 24 ft . wide, 28 ft . higb to the top of the clear. story, and 45 ft . high to the ridge. It is divided on each side into five bays of arcading, with clean cast.iron columns, having undercut
moulded hases, imposte, and caps, the latter moulded hases, imposte, and caps, the latter foliated. These columns support the roof principals, which are of king-post and tie-heam construction, with moulded caps, \&c., filled in with curved trefoil shaped rihs. The spandrels forming the arcading, also curved and perforated, support the clearstory, which is wholly execater in timber, and consists of a series of lancet.
headed lights. The roof is of equilateral pitch,
ceiled to the collar and to tbe ander-side of the rafters. The purlins, plates, and principles are all wrought and exposed to view, with intermediate ribs, which divide the whole into panels. A portion of the olearstory lights are made to open on centres, and these, in addition to iron ating ventilators in contre payels at the ceiled collar, provide means of ventilation. The side. isles are eaoh 56 ft . long and 8 ft . wido, 17 ft . 6 in . high to wall-plates, and 23 ft .6 in . high to intersection with mave immediately uvder tho clearstory. These roofs are of leaz-to coustraction, of third pitch. The principals have curved ribs, and all tho timher is wrought and exposed to view, the space between the rafters being plastered. In the contre of each bay is a twolight casp-headed window, oach fitted witl a hopper ventilating casement. The apse, halfoctagonal in form, in which the organ is placed, and accessible by an onter door; is in rear and on a level with the raised dais, or preaching plat. form ; is 3 ft . ahove the level of the aisles and nave floor, and is screened by an areaded tracory screen of early type. In eacb side of the octagon is a two-light tracery window. The roof is of hexagonal shape, with moulded ribs and prinoipals, and divided ivto hoarded panels. Tho vostry, 12 ft .6 in . by 11 ft ., is approached directly hy a door from the preaching platform, which bas a fireplace, \&e., and an outer catranco. Underneath this is a channber for the heating apparatus, from whence hot and cold air flies are conveyed into chambers formed in the floor, and covered in the passayes of aisles with iron gratings. The whole of the heating appliances have been executed by Messrs
Haden \& Son, of Trowbridgo. The seating is arranged to radinte from the centre of the pulpit. thus enabling each and every person to command an nainterrupted view of the preacber. They are all open benohes, with ample space from front to hack. Tho hacks are sloping, and the ends have cut and shaped elbows. Eich seat has, moreover, a specially-arranged hat rail formed in the for of the aisle passages, whence formed in the foor of the aisle passages, whence all drippings aro roadily conveyed. Ilie foors nnder the seat aro boarded. The passages, ves tiles, of Godwin's manufacture The raised dais, or preabing platform, is a comhination of dais, or preaching platform, is a combination of pulpitaud commanion arrangement. The pulpit is half octagonal, with geometric cracery, panemed
front, onrved ond cut hrackets, and is approached right and left by two flights of steps, each pro. vided with moulded handrail, newels, carsed shafts, and arcaded balustrading. On the lower level, and immediately in front of the pulpit, is a stall, with elbows for the minister. Fronting surrouudng it is the communion-rail, semicir. cular in form, rupported with cut and oarred pprights. The arch of the apso is equilateral, moulded, and supported hy sister responds, having carsed capitals representing "Morning and Evening," and moulded dated hases. This end of the huilding is arched with triangular tracery window over the apse, organeschost oconpy the seats faciog each other on the right and left of the dais. The columns supporting the clenrstory are of castiron work, esecuted by the Coalhrookdale Iron Company. The foon the nave and aisles has a slight incline from the eatrance froat to the palpit. The wails in floated surface, with a comented dado all round at the window-sill level. The walls of the vestihule and the staircases are faced with pressed Broseley white briche, with parti-coloured re leving arches. All the woodwork (except the ontrance-doors, which are of oak) is of pitch ine, relieved with white wood and varnished The windows are glazed with cathedral-tinted luss in lead guarries, geometric patterns heing luss in lod in tracery. A pallery with per forated open front occupies the full width over the entrance end of the fabric, and in depth extends over the first bay of the arcading; this tenll over the so in the hody of the building, and affords accommothe hory or the bulling, and ailords accommodation for ahout 150 pereons. The gromedfomr atoras aco bitin win raking a total of side itroduction of the contemplate 00 . ganeries, building is lighted by gas, with a nine-light corona in the centro of each bay of arcading, nine-light hrackets on each site of apse, sixlight brackets under and aine-light hrackets
over each side of gallery. All these fittings

Were specially manufactured by Messrs. Hart, on, Peard, \& Co., London. The helfry is sur. mounted with corthel-table, cornice, and lofty roof, covered with slates, in bands of two colours. On iron ridge the root is an ornamontal from the surface of the grond is about 80 ft . The whole of the front, the vestibule, and the inside of tho staircases are faced with pressed Broseley white hrick, forming a slight contrast with the dressings, which aro of Bath stooe. The carving throughout was by Mr. John Welsh, of Hereford. The work bas been exeented hy Hessrs. Welsh \& Son, of Hereford, builders, from f , Mesars. Hadon, Brotiers, of Hereiord and Great Malve

## ahout 3,0002.

- The new Congregational church built from the designs of Messrs. Taming \& Son, Exeter street, and has a spire rising to an altitude of street, and has a spire rising to an alditude o $13 \overline{\mathrm{a}} \mathrm{ft}$. The style of the church is Decorated Gothic, and tbe building is erected with its west
end abutting on the street, and immediately in end abutting on the street, and immediately in front of the schools connected with the denomi-
nation, put up in 1863 . The materials used in the exterior are prineipally local walling stone, bat the copings, quoins, and plinthang of granite, and the other dressings of Portland and Bath stones. The church is eatered from Brook street, by three large doors, cach of which is decorated with carving. There is a tower with hronched spire. The windows are glazed with cathedral-tinted glass. The galleries are of pitch pine, avd all the seats are open, and of the same material. The pulpit is also of pitch pine and bears within a contre cinquefoil panel the sacred monorram of I.H.S. The roof timbers are shown, arid are stained and varnished. The church will bo lighted at night from brass and painted metal corono, suspended from the roo The clancel arch, which, together with the internal stonework, is of Bath stone, is a promi nent fenture ; it is moulded, the capitals, corhels oosses, so, hoing caryed, representative o natural foliage. The rose and lily are workei out reapectively in the capitals, and the corhels re carved to represent the tine, passion-fower,

## VARIOROM,

Is a recent notice of "Elementary Principles f Carpentry" (Lockwood), we mentioned an Atlas of Engravings reforred to in the work hut not forwarded. It is now before us, and we car speak well of it. Besides numerous plates from Tredgold, it includes varions valuable detnils from executed works. - The "Househoia Edition" of Little Dorrit, hy Charles Dickens, just now issmed hy Chapman \& Hall, is certainly miracle of cheapness, and that too withon any sacrifice of goodness. 420 large pages u good type, and fifty -eight effective engravings, al for 3 s . And yet we have to pay 6d. for a play oill! This, however, is a pareuthesis. Ther edicion before us will make Little Dorvit ind hors - 4 correspondent of the Gurden snys, the following curious derivation of the name hors chestnut (灰sculus hippocastonum), as well a the fact giving rise to it, may possibly ho a new to your readers as it was to me, parionlar. as veither Loudon in bis Encylopadra, nor an French hook on the subject, tbat I havo see wakes ally mention of it. Oa examin lef by th leaf stalk after its fall, a very distinct impres sion of a horseshoe imhedded in the bar may he ohserved, bearing in rolief sevea dot simulating the heads of as many wails. Th mark assumes much more accurately the shap of the horseshoe on the twigs of last year
growth than on older wood. On "Elcetricity as the Expansive Force of Steam. By G. A
Rowell. Printed for private distrihution by the Rowell. Printed for private distrihution by th
Author, 3, Alfred-street, St. Giles's, Oxford 1873. -This tractate is in the form of "A Lette to the Seoretary of the Smithsonian Institation
Wasbington, soliciting an experimental Invcsti Wasbington, soliciting an experimental Investi
gation of the Theory." The author is an hono gation of the Theory." The author is an hono an assistant in the Oxford Eniversity Mu. Mu. seum. He is an anthor of essays on tho cause
of rain, and other subjects. The theory under notioe is certninly a very important one. A of steam issuing from a boiler is in a negative electinc condition near to tho oritice, where thi
expansive force is greatest. It is ncutral at distance frome it, where the expansive force has beeu, so far at least, expended; and positive at
bister a greater distance, where the steam is returning to its more condensed state. These facts accord with an idea broached occasionally colnmns, that negative electricity is expansive or
radiative, and positive electricity concentrative or contractive. In short, the avalogy between olectricity and beat and cold holds good only while wo analytically regard the nega.
tive electricity as heing analogous to heat, tive electricity as heing analogous to heat,
and tho positive to cold. If this be correct, it is not suflicient theoretically to regard "cleo tricity as the expansive force of steam," hut negative electricity alone as such, the positive
electricity being the contrary. In electricity we clectricity being the contrary. In electricity we
have two forces to deal with, just as we have in heat and cold themselves; and however "nega.
hel tive" we may regard "cold," as the mere absence of heat, it is a powerful force, as every
one knows; hut it is curious that, in the parlence one knows ; hut it is curious that, in the parlance
of science, jt sbould be the 2 adiative or expan. of हcience, it sbould be the radiative or expan-
sive force, as regards heat that is congidered sive force, as regards heat, that is considered to be the positive, and the coutractile tbe negative; while, as regards electricity, it is the radiative or expansive whicb is called the negative, while
it is the positive that is the reverse. The re marks now made rcsult from many years reflection of the subject of the corelations of the physical forces; and they may help Mr Rowell in the establishment of his theory; as also may the theory broached ahout
quarter of a century sinco in the Builder, b quarter of a century sinco in the Builder, by "What is Electricity?" in which the molecular and atomal or organic relationsbips of physical of Salford : Trammays Reports Sorongl of Salford : Tranzways Reports. Salford:
Roborts, printer." This is the report of a
a Parliamentary sub-committee, with the mayor local council to defer the proposed application to Partiament on the subject of tramways for another session beyond the first, and in the mean time to " matine a general system of tramway
for the borongh of Salford and city of Man for the borongh of sulford and city of Manmay be willing to concur"; and they aocordingly advise the coancil to rescind heir resolution of the 5th of February, 1873 , so far as it directs
application to be made in the ensuing session of application to be made in the ensuing session of
Parliament. The report is approved by the council. The committee visited London, Glas gow, and Edinhnrgh, and givo useful informatios the subject in their report.

## Fixing a Weathercock on Ashbourr

 Church Spire.-A new weathercock has heer placed on the spire of Asbbourn Church, Derbyshire, by the vicar, the Rev. EdwardMarsham Moore, M.A. The spire is said to he 12 rsiam Moore, M.A. The spire is said to he
252 ft . in beight, measuring from tower to cap. stone. Tho top, for 30 ft ., had been rehuilt by Mr. George Frith, of Coventry. The work was all done on stages formed by planks screwed togetber round the spire. In fixing the weather.
sock, the vicar asceuded from the roof of the sock, the vicar ascended from the roof of the
church on a small seat suspended by a rope which passed through a pulley fixed at the top of the spire, carrying tbe weatbereock on his back. The sun shining on the gilded hird, proup the the effect of a gigantic insect crawliog ricar placed the weathercock on it, amid the cheers of tbe people, and mnch amusement was cansed at tbe moment by the wbistle of a rail. Way engine at the station close by screeching tion of tbe spire is, we understand, but the cormmencement of the restoration of the whole of this chureb.

Wood.Pulp Mills, near Derby. - Mr. Henry Voelter has invented an ingenious apparatus for making wood-pulp for paper. He accoupplishes peen an easy and expecitious manner, the chemical process. The production of the pulp in this system is brought ahout solely by mechanical agency, and the pulp thus produced from Swedish pine has been found to answer well the purpose for which it is inteaded. Woodpulp mills constructed on Mr. Voelter's plan are already in existence in Germany and Siveden hat at present they have not been adopted in Eugland, except in one instance, on a small scale in Northumberland. A number of gentlemen, however, have purchased the Brook Paper Mills at Little Eaton, ahout three miles from the town of Derby, and there they have had erected on a complete and extensive scale machinery patented by Mr. Voelter for the making of wood-pulp. The company has been ostahlished with a capital i $2,000 \mathrm{c}$., and three large mach erected in the mills. The wood is out into blocks of the requisite length (ahout $1 \frac{1}{} \mathrm{ft}$. long) and then each block is put nnderan iron cleave which splits it instantaneously into the numhe of pieces requisite to prepare it for the grinding mills. The blocks thus broken up are conveged by an elevator into the machine-room. A
cylindrical-shaped machine or hox then defibres cylindrical-shaped machine or hox then defibres under a constant afflux of water, and hy sel ceting acrews. A sorting apparatns exclude the coarse wood splinters, and mixes tho pulp. The refiner cleanses the fibres, and makes them pliable. The pulpattains a rag.like consistency, and is then ready for storing boxcs whero thie water is drained from it, and the pulp is ready or sale to the manufactarers of paper, to mix in proper proportions with rag.pulp. Wood pnlp manufactured by this system may be mixed with ras.pulp in quantities of 15 to 18 per cent. ccording to the quality of the paper, and it bas heen discovered that the company will he ahle from the wood-pulp alone, to manufactare a brown papcr suitable for bosiers and other
New Bank Buildings for Derby.-The hanking premises of Messrs. S. Smith \& Co in the Market-place, are ahout to ho rehuil apon a mucb larger scale, extending over the site of their own premises and those lately oocnpied by Mr. Inott. The principal counting-house will be 18 ft . high, the entrance fronting the Market-place of panelled wainscot, witb tesse. lated tiled Hoor. There are to be partners' private rooms leading out of the counting-bouse, and also a private side entrance, with fire-proof hook-room over. An arrangement of fireproof strong rooms and safes will be bnilt under the floor of the counting bonse, of Staffordshire bricks, with hoop iron interlacod in each joint the brickwork, laid in cement. The strons roms will be approached by a stone staircase and the books and money raised and lowered by are also makers of revolving iron blinds to the bew bank windows. The offee front will be in polished red and grey granite, witb Grecian Doric columns and pilasters, the superstructure of Darley Dale stone, and surmounted hy a carved cornice. The building is to be heated and ventilated by Messrs. Price \& Co., of London The whole of the works are to be carried out hy Messrs. J. \& E. Wood, of Derby, and under the superintendence of Mr. George Risborn, of London alsd Derhy, tbo architect to the firm, fur Messrs. S. Smith \& C o., at Nottingham.

An International Bridge.-It is expected that the great international rail way-bridge, to span the Niagara river between Buffalo and Fort Erie, will be completed and opened some independent compan is the enterprise of an 1870; and its cost will bo something over $1,000,000$ dollars. The superstructure is of iron, supported on stone piers, with tbo necessary draws for the passage of vessels. Tbe length of the main bridge across the river is 1,968 ft. hence across Squavy Island to the west end of the hridge over Black Rock Harbour is about $1,200 \mathrm{ft}$; and the bridge over the barbour to openiness will be 617 ft . Tho "swing" over tb The depth of the water in steam in 50 seconds. bridge crosses is water in the river where the work for the is from 10 fl. 10 ft. The ironwille, near Philadelphia, and the superstruetare is known as the Pratt Truss.

Warrington. - A new congregational church was opened in this town on Thursday, the 4.tb sastanc. Il is situated at the corner of Bewsey an tagernstree, aud is boilding in the Byzantine style. The building is a parallelogram 91 ft . by 61 ft ., with towe at each angle in addition; the ono at the corner of the principal streets being 120 ft . in height; the remaining three towers, 50 ft high, in which the staircases are huilt for communication with the galleries from the several entrances, of which there are six The body of the chapel is separated from the front entravees by twe vestihules. The galieries are large. The orchestra, which is 30 ft . in width, is very lofty. The ceiling in the centre is segmeut-shaped, and fat at the sides, formed in panels with cornices thronghout Under the orchestra, at the back of the ohapel, is a vestry 29 ft . by 16 ft . 6 in ., and four other vestries, eacb 10 ft . by 13 ft . The roof is sup. ported by conpled cast-iron columns. The church is arranced to seat about 1100 persons. The works have heen executed by Mr. William Richardson, builder, of this town The heatin was done by Messrs. Whittaker \& Constantinc, of Bolton. The architeet is Mr. George Woodhouso

## The total cost is about 7,000 .

## Brighton School of Art and Science.

 Che annual distribution of prizes and certificates awarded to the pupils of this Institution have taken place in the Town-hall, the major presiding. The report of the committee congratu lated the suhscribers and the public on the very marized advance which the school bad made under the mastership of Mr. Alexander Fisher. Out of the works selected for national competition, one pupil gained a National being $\Omega$ later awarded to Miss Annie Hambin end the gained Mr. William Bicbell Aldercon, a hility of Brigbton possessing an edifice specially 2hility of Brigbton possessing an edifice specially was particularly dwelt upon by those who spoke after the distrihution had taken place; and tbe mayor offered to give 1002. towards it, if ten mayor offered to give lool. ## Comparative Cest of Gas at South

 Shields.-At tho balr-youly mecting of the South suields Gas Company an interesting document was placed before the shareholdersA Comparative statement of the Cost of work. ing per ton of Coal employed in tho Manufac. ture." In this paper South Shields is compared with the average of the nine London companies. The statement goes to clear up a popular fallacy -taat gas sbould be dcarer in London places than in colliery districts. If coal is bongbt cheaper, the remaining products are sold for less. As regards total results, we find the gross profit is iu favour of the London compapers read by the company's engineer, Mr. Warner, at the annual meetings of the British Association of Gas Managers form, it has been said, almost a series of lecures on gas engineer.A Wayside Pillar.-The Attorney-General bas just erected a wayside pillar to the memory of his cousin and friend the late Bishop Patteson, in the parish of Ottery St. Mary, Devon, at tbe intersection of four ronds. The Standard says:
The deaign is by Mr. Butterfield who has erected The design is by Mr. Butterfield, who has erected an unpretending structure of red brick and stone, the idea of wbich was taken from something of a similar character set np in 1743 by Mir. Denys Rolle, and still standing in excellent condition at the intersection of foar cross-roads between Bicton Honse and Otterton. On the four sides are the names of the places to wbich the foar roads lead, and on eacb face is inscribed a text Ways. Bishop Patteson was formerly incu mbent a district charch close to the spot.
Progress in Egypt.-- In Cairo, gaspipes have heen laid down in all the principal streets, nd these arobe. pipal thoronghfares aro supplied w 3 distribated tbroughzut the city. According opened, and narrow ones widened. An artificial pike a, An ailicial ake has been formed, and snrrounded with iron was formerly tiaversed part of the city, wbich was formerly thaversed by an offensive ditcb Ahout the lake have been placed gravelled walks lower-beds, stands for bands of mnsicians, an canopies for tbeatrical representations.

Artizans at the Graildhall Library.-A large number of artizans visited, hy invitation, the new City Library at the Guildhall, on the new City Library at the Guildhall, on Saturday afternoon. The men were received in the Conncil Chamber, where also Mr. Hodgson Pratt and other gentlemen had assemhled. Tho Lord Mayor was accompanied hy Dr. S. Saunders, the chairman, and some of the mermhers of the fiee library committee. Dr. Saundere made some instrnctive remarks on libraries. He also stated that in the new library there were in March last, 9,394 readers; in April, 10,033; May, 11,543; and Jaly, 10,956 , exclasive of visitors. The visitors numbered ahont as many
as the readers. He then described the now as the readers. He then described the new
library and ite adjuncts, the coet of whicb, he stated, had heen 100,000 ., and the charge ont of private funds of the corporation was 2,000l. per annum, without a rate in aid.

In Memoriam.-A reredoe bas jnst been placed nnderneath the chancel window of St . Stephen's Chnreh, at Winsham, Chard, to the Stephen's Chnrch, at Winsham, Chard, to the
memory of the late vicar, the Rev. G. Ware, memory of the late vicar, the Rev. G. Ware,
M.A. It is composed of polished alahaster, with Plymouth marble facings, and consists, princiPlymouth marble facings, and consists, princi-
pally, of threo arches. In the centro arch is a pally, of threo arches. In the centro arch is a His left band, while two fingers of the right hand point heavenward. Beneath the right arch are figuree of the Apostles St. Peter and St. John, with the prophet Elijah in the centre.
To the left are the Virgin Mary and St. Paul, between wbom is tbe pariarch Ahraham in the suppoesd attitude of sacrificing his son Isaac Sarmonnting tbese groups are cheruhim and seraphim, with harps, tabrets, cymhals, and pipes. The tablet was execated by Mr. Harry Hems, of Exetor, senlptor.
Asphalte.-The Camberwell Vestry bave ro ceived from their surveyor (Mr. Reynolds), the following report:-"It is hat too evident that Company, is of suoh a character the Tramway Company, is of suoh a character as only to h condemned. The necessary repaire which have been going on since it was laid, have been a bource of great annoyanco to the neigbbour. hood, and impediment to the traffic. This work not haring been certified hy me, no payment hae as yet been made by the Vestry, the contract being to tbe effect that it was to he done to my satisfaction. The proposed alteration of the tramways will afford a favonrable opportunity for thie portion of the work to be finally amended. I helievo it will be found necessary wholly to relay it with a bettor material.'
A. New Tramway in Birminglam,-The first tramway in the borongh of Birmingham wae opened last week in the presence of a large con course of spectators, several members of the town council, tho Handsworth Fighway Board, and sarreyors and officers of the town, The and the greatest trafic ie on the route from Monraouth-street to Villa-road; the cars are timed at these stations every ten minutes; and from. Dudley Port and Hill Top to Bir mingham, and, vice verst, every holf-honr. As a single lino only is laid on the Holyheadroad, it is intended at an early date to hare sidings at New Inns and Nineveb-lane, The cars ron daily, from eight o'olock in the morn. ing nntil eleven at night.

Incrustation of Water-pipes.-American fire inenrance companies are calling attention to the oondition of the water pipes in Boston. It seems that the water-supply is greatly diminished by the incrustations formed on the inside of the iron pipes by the action of the water, so that a 3-inch pipe that has been laid 4 in to 3 in 5 in . 0 in., 5 in. and 4 in. The New Fork Times says a pipe wae recently takea np in Howard-street throngb which one conld not see, thongh water flowed slowly; and a pipe of 3 -inch hore was taken up
in Beacon. otreet, filled up with solid rust in Beacon-otreet, filled up with solid rust
Fall of a Church Clock.weiglit.- While the heavy etriking.weight of the illuminated clock in the Vaughan Tower of St. David'e Chnrch, Neath, wae being wound up, the wire rope suddenly hroke. The mass, weighing orer 3 cwt., hroke its way throneh the douhle floors of the belfry and tower, falling on the mwell.hox and pedal pipee of the new organ, and partiall demolished these parts of the instrument, beside injuring the mechacical portion of the "tras ing." Prompt measures were taken by the rector for repairing tbe damage.

Sewage and the Social Science Associa tion,-To meet the anxious desires of many pereons, an alteration has been made in the list fepecial questions for discassion, for the second which the following has heen adopted:What are the hest means, sanitary and conomical, of disposing of the sewage of inland towne?" It is to be hoped that some definite pinion may be arrived at.
New Public ELall for Dovercourt.-The exeavations for the foundation of a new puhlic hall for Dovercourt have been commenced. I will not meet the requirements of Harwich, as might have been the case had the eite selected heen more ceatral. The hall speculation.
Society for Improving the Condition of the Labouring Classes. -This society, so long known in connexion with its object, has been arwarded the Exhibition medal for merit at Vienna. This is the fourth award of the kind the society has received since its first establish. ment in 1844.
A New Town-kall for Oswestry.-The coundation-etones of a new town-hall, assize Earl of Powarkel. of Welshpool, at Oswestry. The estimated cost of the huilding and land is abont 10,000 l.
The New Prison at Wormwood Scrabs Preparatione are now heing made for the erec tion of the new Government prison, on the gronnd purcbased by tho Government, at Worm vood Scrubs, which, it is stated, is to snpersede hat at Millhank.
American Iron in the English Market The Liverpool Daily Post states that 100 tons of American bar iron, guaranteed equal to Stafford hire, have heen sold to a liverpool firm a 11t. 10 e., delivered in Liverpo
selling the English iron market.

VOL XXXI.-No. 1509.

## House Building and the Census.

I our recent ohservations on this subject, we as sumed that tho average value of a house was 250 . Some practical corre spondents aro inclined to think that we have struck the arorage too low. There will possibly be others who will take the opposite view It may, therefore, not bo out of placo if wemention here how wo arrived at tbe above estimate. The ave rage annual rental of a honse was ostimated in 1862 to he $15 l .10 \mathrm{~s}$., and its value was taken at a fgure equal to fifteen years' purchase: This would mako the average valuo of each houso 232l. 108. This was the estimate for the year 1862, and it was hased on tbo data supplied hy the House Census of 1861, and on the Returns of Assessments to the nkabited House Duty. Thore can, however, no doult that the valuo of house property as greatly increased since 1862 . It is a matter ithin every one's experieuce, and though it 1ay he difficult, if not impossiblo, to determine be increase with exactness, yet if wo enly
rorapare the numher of houses of the assessed nuual value of 20l. and npwards in 1862 ad 1871 , we shall find the clearest possihle roof that the increase has heen very considerble. In 1862 there were 519,991 houses ssessed to the inhahited house duty. In the ear 1871 tho numher had rison to $7: 8,719$, -au oreaso of 44 per cent. in this class of houses. f the inhabited houses helow 200. rental there ere in 1802 as many as $3,219,514$, and in 1871 lere were of the same class $3,510,398, \cdots$ an trease of only 0 per cent. Hence, in in increase of 41 per cent. in the hetter ass of bonses, the number of the lower 25s, - those helow 200. rental, - sbows an crease of only 9 per cent., or little more than ne-fifth the rate of increase in tbe class suhject
duty. Tbese figures plainly indicate the pid dovelopment of the resources of this puntry hetweon the last two censinses. They 20l. and upwards in 1862 , we had 144 of the me class in 1871. While of houses paying nder 20t. rental, to overy 100 in 1862 there ere only 109 in 18i1. To show, however, witb athematical nicety the precise increase which is taken place in the value of honse property ould require a series of calculations of too techcal a nature to ho discussed in this place; and ait until the issue of the point the public must ait until the lssue of the final report on the
lisnlts of the last census. But, for the parpose arriving at sonie general idea of the amount money expended in house.building, it will urdly appear extravagant if we assume that isir value had gone np $7 \frac{1}{2}$ per cent. hetwcen
362 and 1871 , and that if a honse cost on the 362 and 1871, and that if a honse cost on the i0l. in 1871.103 . in 1862, it would be worth be an under-estimate, and, since 1871 , house
property and house huilding havo no douht hecome still more costly. We prefer, however, to he within rather thau beyond the mark in our estimate, and for the purposo we have in view in these remarks, we heliere that 2501 . may he taken as a sufficiently near approximation to the average value of houses in this country during the ten years 1861-1871.

We rouglily estimated the number of bouses huilt between those two dates at 958,683 , and tbeir value at 210 millions storling (hy an error in transeribing, this was wrougly given at 220 millions). The more cxact valne of them would ho $247,170,750 t$. We are now prepared to pass to the final question we have proposed to ourselves, and shall endeavour to form somo rough estimate of what the huilding interest may have to look forward to in the immediate future.
In any attempt to estimato the prospccts of the building trades in coming years, thero is one fact which must never be lost sight of, for on it all calcnlations of this nature mast necessarily depend. We mean,-what must he ohvious to every one who has interested himself in this subject,-that the huilding interest, more than any other hranch of industry of similar extent is directly affected by the general state of the commerce and trade of the country. A period of commercial depression is at once felt liy the huilder through bis husiness falling off to a greatcr or smaller extent. In a tiuse of comneercial prosperity, on tho other hand, when new enterprises are started every day, and the general trade and popnlation are on the increase, builders as a body caunot fail to thrive. There are, in fact, few more unfailing signs of the commorcial prosperity or depression of the country, than the prosperity or depression of the huilding interests; and as a rulo wo may say that if huilders are generally thriving, the country on tho whole is in a prosperous con-
dition. dition.
If we want to know, then, how the hnilding interest may expect to fare in, say, the next ten years, it is of the first importnnce to ask what are the prospects of the conntry generally during that period. One great oriterion in judging this question is to be found in the relative extent of our exports and imports in recent years. On referring to the Board of Trade returns* we find that the total value of onr foreign trade increased from $377,117,522 l$. in 1861 to $547,338,0701$. in 1870, heing at the rate of 137 . per head of the population at the former date, and $17 l$. 11 s , at the lattor. Our foreign trade during those ten years was, therefors, increasing on the average at the rato of ahout 98 . per head of the popnla. tion per annum. Now, if we compare the returns for the year 1872 witb those of the year 1871, we shall find that our total imports and exports increased at the rate of 30 s . per head of the population in the year's interval, the asgregate value being $669,282,4587$ in 1872 as against $614,590,1801$. in 1871. Between 1870 and 1871 the inorense was at the rate of 40 s . per head of the population. The average rate of increaso during the past two years has, therefore, heen 35s. per head of the population, which is equal to nearly fonr times the annual rate prevailing between 1861 and 1870, during which period, as shown above, the average annual increase was only 9s. per head.
The result we have so far arrived at, that the commercial prosperity of the country has heen greater in the past two years than it was ever before, is confirmed hy general experience. Never has there becn so general a rise of wages among the wrorking classes. Nevor has capital been invested more abundantly or in a greater variety of ways. But the momentous question comes,-is the nuprecedented prosperity of the past two years likely to continue increasing at
*Statistical Abstract for the U ited Kingdom from 1888
187a. Eyre \& Spottiswoode. 1373 .
the same rate in the future? The question must, we think, he answered in tho negative. The recent returns of the Board of Trade, more especially those just puhlished, sbowv a falling off in some of tho most important hanaches in our home and foreign trade, especially in textile fabrics, coal, and iron manufactures. The returna of the banking clearing-honse, and of the Bank of England also indicate a stationary or diminishing trade. Into the detaila of the question this is no place to enter; bnt it is the opinion of the sonndest commeroial anthorities, that when the returns for 1873 are made up they will show that the trade of the country is in a less prosperons condition than it was last year, and that if there is any increase at all, it will be trifling as compared with the past two years. Respecting the canses of this check in our prosperity, nothing more need be said than that it appoars to be mainly attribntahle to the enhanced cost in the most important of all the agents of production. We refer to the riso in the price of coal and the consequently increased cost of iron and of all machinery; that is, just those articles on which the commercial and industrial pre-eminence of England principally deponds. It must not, however, he forgotten that this cheok in our prosperity, which is now every week more clearly showing itself, is only a check as compared with the two exceptional years 1871 and 1872. As compared with the previous ten years, 1861-1870, the general trade of the country is even now increasing with greater rapidity, and unless some nnforeseen calamity occurs,-unless, for instance, coal, and therefore iron and machinery, hecome dearer instead of chcaper,-or unless we have a great mar, a famine, or a snccession of bad harrests, there appears every reason te anticipate that the prospority of the 'country, and the consequent increase of its populatien, hetween tbe years 1871-1881, will, he at least as great as it was hetiveen 1861-1871.
Assuming, then, that only the minimum of increase will prevail hetween the last and the next censns, our popalation, which in 1871 amounted to $22,712,266$, will in 1881 nambor $25,698,013$, and the building trades will have had by tbat year to provide us with additional dwellings for $2,985,747$ persons, or very nearly three millions of people. The number of persons to each house standing in Eogland and Trales is a fraction over 5 (viz., 5'0201). It follows, thercfore, that if this rate of distrihntion per honse continue, the number of additional dwellings whiol will have to he erected hetween the years 1871 and 1881 will be 594, 222 . In addition to tbese there will be, roughly speaking, at least 10 per cent. of the honses standing in 1871 (viz., $4,520,462$ ) requiring from various causes to be pulled down and rehuilt. Adding the 452,046 that will have to he rebuilt to the 594,722 required by the increased population, and we find that the total number of now honscs that will be crected hetween 1871 and 1881 amounts to $1,0 \pm 6,768$. Adopting 2506.as the approximate average cost ef erecting a house, wo shall find that the amount expended in this country hetween 1871 and 1881 on the hailding of dwelling-houses will he not less than $261,692,0002$. as against $2 \cdot 47,170,7502$. hetween 1861 and 1871. During the ten years now passing we may therefore calculate that capital will he invested, in adding to our honse property, at the rate of not less than $26,000,000$. a year, or half a million sterling a week.
It must he nnderstood that the ahove figures are only effered as a rough estimate, and tbey are given with all reserve, and nnder the conditions above specified. House huilding, after alt, includes but one portion of the work of the building trades. We have left out of consideration the larger portion ef the fold in wbich they have to operate. We have not touched on that large class of structures which are not dwelling.
houses,-we mean churches, cbapels, and school houses, public halls, shops, workshops, and fac tories; nor bave we glauced at the greater enterprises, such as railways, dooks, harbonrs, lridges, and canals, whicle occopy our barge contractors, aud which form the most striking featare of the present age, refrarded from the staudpoint of the bnilder and architect. Wuilder's respect to these thero is only one observation which we feel impelled to make at this mouent. If our population contiaue to increase in the period we bare heen contemplating, even if it be only at the minimum rate of progress on Which we havo based our catculations, den expended unon them caunot be less than what we have estimated ahove. But if our prosperily be greatcr, and our population increase more rapidly, there will be a proportionately greate amount of huilding to bo done, and nore capital will be inreated in this form But the point we woold fiully call attention to is that what we hare just said of dwellinc-bouses applies with equal force to all other species of exections, and all other works included in the buildiug trades. For with crery increase of population there will be an tharease but also of evary kind of nuinhabited building,churches, chapels, workshons, dc., as above sthe-
cified;-and the same may he said of the other cified; -and the same may he stid of the other
class of works which we have meutioned,- the railways, docks, bridges, barbours, and canals.

THE PROPOSED TUNNEL ONDER THE RIVER HUMBER.

## emgireeming eyideyce on sub marine

Dutura the late Parliamentary session one of the most protracted inquiries into private Bills was that in connexion with the proposal to construct a trmnel under the ziver Humber, near Hull, one mile and five-eighths in leugth, upon the pneumatic principle. Tho tunnel was to form a portion of a nemp projected line of rail way, thirty-one miles in length, called the Hull South aud West Junction Railway, promoted mainly by the merchants and trading interests of सull, supported by the corporation, the local marine hoard, and other local authorities. The chief oponents of the project wero the North. Eastery Railsay Compuny, which is the only company at present having a railway and station at Hull. Alter a liard fight, which lasted for upwards of a fortuight, the Bill received the sanction of the Committee of the Mouse of Commons, but was defeated after an equally prolouged and severe straggle befure the Loris' Committee. We understand that the promoters of the measnre intend to renew their application nest session, the construction of the proposed railway and tunnel having already been affirmod by the Hoase of Commons. The inportant engineering evidence already given as to the projected tunnel, which is of an entirely novel special interest, so far as it has reference to suhmarine constructiou and huilding
The sereral engineers who gave cridence on cither side, as to the merits or otherwise of tho projected tumnel, included some of the most eminent in the profession, Mr. John Fowler, the engineer of the proposed line, and the designer of the tunnel; M1. J. J. Bramwell, rice-presiMr. James Ahernethy; Mr. Thomas Hawkeley; president of the Association of Civil Engineers president of the Association of Ciril Engineers
Mr. James Brunlees ; Sir John Hawkshaur ; Mr G. P Bidder Mr , T M G. P. Bidder ; Mr. T. D. Harrison, engineer to the North-Eastern Railway Company ; Mr. John Oixon, mechanical engincer; Mr. Comas Clark, artesian well engincer; \&c. Theso gentlemen
mnst be allowed to tell their own story.
According to statement of Mr. John Fowler, C.E., ho proposes to cross auder the Humber at Hessle, near Hull, the tunnel emerg. ing on the other side of tho river, at Barton, in Lincolnshire. The total length from shore to shore is 2,810 yards, or nearly a mile and threcqnarters in extent. The crown of the tunnel will he ahont 10 ft . helow the bed of the river, and as it will bave to pass entirely through sand, it will not be possible to tunnel by the ordinary process of excarating and mining. I carrying out the works he therefore proposes to adopt the pneumatic process as follows:-Three working vessols are to be provided, the dimensions of each to be 160 ft . in length, by 42 ft . in
widt h , and 23 ft . in depih. The upper half will
consist of pontoons, and tho lower balf of a Werking chambir, or diving-bell. This working ves-el will suffice for the constraction of 160 ft . in length of a douhle tunnel in one section process will be first to moor the working vessel in the river over the site of the tunnel; ; Eecondly, o siulk it to the hed of the river hy the admis. siou of water into the pontoon; thirdly, to cxpe the water from the lower portion or diving-bel oy forcing in air, and this having heen effected, wrorkmen will enter the chamber, and exoavat the ground for the 160 ft . length of tnnne When the working vessel has been sutik throngh ho material of the bed of the river to the dept of the inlet of the proposed tunnel, bricklayer will eater and commence to build tho ennnel. When this portion is complete, the workin ressel will he withdrawn and again sunk at another spot, in the manner already described, when a further length of the tunnel will be proceeded with as before. The joining together the isolated lengths of the tunnel will he efifected as the working vessel is being gradnally with. drawn from the bed of the river. The machinery for snpplying the rennired air, and the pressure to keep the divino-hell portion of the apparatus free of water, will he erected on a dcol or tahle carried a sufficient beight ahove tho working pessel to be ahove the level of high water when the worleing pessel is in its loweot position. The excarations will consist ohielly of sand which will bo remored by sand pums worbed by the compressed sir in the diviur. hell Tho bricks and other materials will be lowered by bricus from the ar aread by ferred to into the working chamber bew, re ferre inner rings of the tunuel will he of buo Sto Fowler adds, that knowing all the conditions of Fowler ads, that snowiag an the contio system of construction, he was confident of being able to make the tumnel percontident of being abo to make the tumbe per-
feotly water-tight and saf. He also states that he has been counceted with the construction of many worls on the puenmatic principle, noze of which have frited, and that the process is a certainty. As far as the work of excavating arid hrick-humdigg is concerned, it is very muct like an ordinary operation in the open aif, eacept that the workmen are artificially supplied with

The cost of making the tunnel he estimates at 313,000 l., which, at 2,810 yards, would be 1201. a yard.

Mr. Frederick Joseph Bramwell, C.EB, said he had crucfully examined Mr. Fowler's plan, and was confident that the tuanel conld he easily aud safely mado according to them, and for tho sum named in his estimatc. He added, "I have considered very carefully the nature of the vessels proposed by Mr. Fowler, and the modo of using them, and I havo rot the slightest douht tbat hy them the tumnel can be snccessfully carried out. There will bo no difficulty in supplying the chambers with air in order to enable the men to work. The thickness of the hrickwork is amply sufficient to resist any pressure that could be possibly bronght either laterally or on the surface. I heliese it would not really crush nnder 900 ft. of pressure. The surfaco of tho bed of the river is so far below high water mark that tho working vessel or pontoon would he floated over any part of it where it is proposed to make the tunnel, excep: quite close o the hanks.
Names Ahernethy, C.E., said that the pneumatic plan which Mr. Fowler proposed tannel whs he thengrpose or manst plan he could adopt, and bo olso thonght it was a plan that involved no risk. There would be no difficulty in joining the lengths of brick in no water. Ho saw no difficulty in forming the jonction. It was a mere question of setting tho bricks in ahout 6 in. of qniescent water. It was a common practico, and done every day. He had underpinned calverts under water. He had also constructed a very largo culvert, 3 ft .6 in . in diameter, where they were condry, but they had no difficulty in making a sub. stantial job of it. In cross-examination hy the stantial job of it. In cross-examination Aber the opponents of the Bill, Mr. Abernethy said that as far as joining the lengths of the proposed tnnnel inder water, it was new and had, he belicred, never heen done before: hut that it conld be done and done easily he was quite confident. He thought the construction of hrickwork within the ar-chamber or diving-bell was quite as easy as constructing brickwork in the open air. He put a little higher price on it, but it was as easy to construct
a tunnel 60 ft . or 70 ft . under $\%$ нater, within an
air chamher, as it was to constrnct it in the Mr. Ja
Mr. James Brnnlees, C.E., said he had had a arge experience in the construction of railwayviaducts and emhaukments, paxticularly in con exion with tidal rivers, and be saw no difficulty carrying out the tunnel as projected hy
Mr. Fowler. He had taken into consideration
He the depth of tbe water, and the passing of the tunnel below the hed of the river, and also the nature of the material forming the hed of the river. Ho had coustructed several tunnels through various strata, and was now engineer for the Mersey tunnel. He was ailoo in consultation with Sir John Hawkshaw, the engineer of the proposed tannel under the Cbaunel from Dover to Calais, and was also joint-engineer with him to that scheme. He did not think there would be any difficulty in bringing the pontoons orer the exact site of the tannel proposed to he constructed. Neither did he think here would be any difliculty in joining the lengths of the tunnel. There woald, no douht, be a little water in the hottom; but it was not at all an unusual thing to lay hricks in water to a certain extent. In cross-examination, he said no work like that had ever been done for a tunnel, but it had been done in foundations. The nearest thing to Mr. Fowler's proposnt that. he knew of was the foundations of a hridge in New York, which was a very good example.
Mr. Denison (counsel for the opponents).You would bardly suggest that the fonndation of a bridge is at all equivalent to a tunnel, which is a pipe, and has to be made in pieces, and joined?
Mr. Branlees. - I तo not apprehend the slightest difficulty. I have not the slightest doubt ahout Mr. Fowler carrying out the tumnel Not the slightest. I have been carefully going through it with him. I have not had any tunnel-construction analogous to this.
tannel under the Mersey is the nearest.
Mr. Thomas Hawksley, C.E., said he has uformed himself of the local conditions under lich it was proposed to construct this tunnel ud had visited Hull on the subject. He hac carefully considered Mr. Fowler's plan for con structing this tannel across tho Homber. Thi pricciple was a common aring of size. He really did not see, after carefully con sidering the subject very attentirely, that the difficalties in making the junctions would hu
considerable. In his opinion it would be casy to considerable. In his opinion it would be casy tc make the junctions hy interposing clay-hag between the ends of the caisson and the stopping wall which was intended to he built up. When a caisson was moved, and had to he resunk, il was the easiest thing in the world to cut througl these clay-hags by the sharp edge of the caisson and so effect the siakiug without allowing the sand to come into the space between the end oi the caisson and the ond of the chamber. Com piete watertight works conld be effeoted unden water. They sometimes performed that opera tion hy means of a pump. They get very fine sifted Portland cement, and sometimes, if they wanted the setting operation to be very rapid they used Roman cement instead of Portland and this fine cement was pumped through a tube so as to he kent out of contact with the water in the neighbourbood. It then went down exactiy into tho place where they wanted it, and the hrick was set hy it at once.
In cross-cxamiuation hy Mr. Bidder, Q.C. (son
the engineer), Mr. Hawksley said, that this eing a new work in some respects, experienca wonld be gained. There would he a good many little accidents and little difficulties
Mr. Bidder.- You admit, then, that thore onld he difficulties to be overcome
Mr. Hasksley.-That is the function of the enginecr. We would be of rery little use if there were no difficulties to overcome.
Mr. Bidider.- You do not deny that the making these junctions in the tunnel would be difficult?
Mr. Hamlsley. - What I say is, that the building in of the junctious would no donht he tronhleosme, hut not difficult.
Mr. Bidder.-You are refining, I am afraid, Mr. Hawksley
Mr . Hawksley.-No; there is a great differnoe hetween troubles and difficulties.
The foregoing was the engineering evidence support of the project for constructing the cunnel. In opposition:-
Mr. T. E. Harrison, C.E., engineer to the North-Eastern Railway, was examined at con siderable length by the connsel for the oppo
nonts of the Bill, and in the course of his evidence lie admitted that the tunnel might be made on the pueumatic principle, as proposed by $M$. Fowler, but that in his opinion the joints
of the tunnel could not be made water-tight of the tunnel could not be made water-tight, which ho regarded as a scrious if not fatal objection to the scheme. He also expressed an opinion to the effect that there wonld be greater
difieulty than Mr. Fowler imagined in placing the pontoons. He thought it wais a matter of atrong doubt whethor Mr. Fowler would be ablo to do it without makiug a proper staging, whioh he (Mr. Harrison) had invariably made whenever he had to pat down eylindors by paeu-
matio prosuure. Sir John Hawkhaw, C.E., said he was Contheir now docks. He had had great experieuce in building under water for many jears. He could seo no difficulty in building within a eaisson or large diving-bell in constructing a
tannel, because it had been done in rarious other places, but he did see very great diffoulties, and places, but he did see very great diffoulties, and
he did not think it wonld be praoticable, to make $a$ seoure connexion betwcen the work built inside a seoure connexion betwcen the work bilt inside
the coisson and the work outside. He might the caisson and the work outside. He might
atate that that was not an opinion arrived at in reference to this case at all. He was now constructing a tunnel throngh the London Docks, and ho thought at ene time of doing it in the way proposed by Mr. Fowler. Ho arrived at the
conclusion that there would not be a diffieulty in conclusion that there would not be a diffioulty in
constracting the tannel in the way proposed hy Mr. Fowler, and by such an apparatus, hut he dared not venture to make the connexion between the work constructed inside and that constructed
outside, and therefere he abandoned that metbod. outside, and therefero he abandoned that method.
He did so boeause it appoared to him that it would be quito impossiblo to secure water.tight joints, and if he did not secure water-tight joints then he did not see any practical way of making them water-tiglitafterwards. Ho was not there to ayy that they oonld not sink a caisson in the Humber, and that they could not within it bnild the portion of work which the caisson was capacious enough to hold, but he did not see how they could make the junction in sach a way that it could ahat out the water from the Mumber. 'Ho had not formed any opinion of what tho proposed tunnel would const, because he did not heheve Mr. Fowler's plan was practicable. Mr. Fowler's estimate was 120l. per yard, whereas his work across the London Docks was let at 209l. per yard, and it was not so deop as Mr. Fowler's tunnel. He would not advise any contraetor to uudertake it at the sum set down by Mr. Fowler, and he would not nndertake it him. self.
Mr. G. P. Bidder, C.E., who was emphatically pronounced in his condemnation of the project, said, in his examination, that he had the same difficulty as Sir John Hawkshaw as to water. tight junotions, or rather watcr-tight closures. He kuew of no instance where it had been effected. As regarded the pontoons in Mr Fowler's plan, ho did not think that they could be kept in their placo considering the cnrrent in the Humber. He did not think that Mr. Fowler's
mode of making the tunnel was one which be mode of making the tannel was one which he
ahould be inclined to adopt. Me certainly would ahould be inclined to adopt. Me certainly would
not be reaponsible for it. In cross-cxamination by Mr. Venables, counsel for the promoters, Mr. Bidder said it was totally impossible to bore under the Humber.
Mr. Yenables.-Then it seems to me, according to your theory, that it is impossiblo to have a tunel under the Humber at all.
Mr. Bidder. -"My belicf is, I am bonnd to tell you, that passing tho preamble of this Bill will have no more practioal cffect in getting a, tunnel under the Humber than if you wore to pass the preamble of a rail way to the moon. There would be no difficulty in getting under the Humber if you found suitable material. If you found clay there would le no difficulty in getting uuder the Humber. I do not know how the water-tight of experience in my railway days, having attended personally to the making of good sound water-tight briokworl under water strata, but I never succeeded to my satisfaction in making sound brickwork pither in coment or anything else. This work possesses so many diffionlties and contingencies to my mind that to attempt anything like a detailed estimate would he a solemn farce." Being asked if, taking the wholo scheme into consideration, he thought it was one which onght to recommend itself for practical adoption, he replied, "It may recommend itself in any shape you like, but there is notbing prac-
tical in it."

Such was the cridence of some of the most distinguished engincers of the day, for and against a project which was twenty-eight days
before the committces of the Lords and Combefore the committces of the Lords and Commons last session, and which is again intended to be fought ont when Parliament meets nex jear.

PROFESSOR WILLIAZISON'S SCIENCE, AND A GLANCE AT ART.
IT will eertainly be impossible for the youthlood of this procent aye to complain in the futuro, - that the question of its education has not been well looked after and thought about by theso who ment through life before it. Not a week, hardly a day, passes hat some notahle man or other is found stepingeniously sometimes, on the all-absorbing and comprehensive suhject of "education." How best and most nsefully to educate the rising generation, 一-that is now the question of questions, both here and pretty nearly everywhere else all the civilised world over. Hach year the British Association for the Advancement of Suience does a little towards this end, and in the present year of grace, Professor Williamthought about it, and with thoronghly scientific thought about it, and with an array of proof The its faverr which evidently cannot be gainsaid The learned and earnest Professor bailds on right solid foundation. "Our very ileas," he
says, "are usoful only so far as they are true and he must, indeed, be blind to intcreat and to duty who could wish to swerve from the path of trath." None will surely dispnte this. Each student of nature, he contends, aud searober after truth, should be placed in such ciroum stances as shall bo most favonrable to efficient activity, and that the desire of snoh students for the acquisition of kuowledge may he experimental chemistry is of those sciences which m(st "enlarge and excreise" the mind of man, and he urges a publio school of chemistry, and an organisation for the finding ont who are most naturally and edncationally fads" It would oost "just three iron ont who year to do this work of the finding ohemista and who are not. We must confine oureclves to fue-art mattors and to architecture, and to those things cdncational which apportain if sucl, what would be said in fime-art circles to find out who they are, at the cost of "three ireu-olads," who best shall manifest an artistic facully of both a contemplative and a practical order. What, we may ask in some curiosity would the Royal Institute say to such an idea as this

Bat does not this proposition of the chemical professor naturally lead one to think a little as coully "education," both scientific and artistic really and truly is; and whence it naturally aprings, and what it naturally and most usefully leads to. In the first place, is not the all pre-
vailing idea of education, whether scientifo or valing idea of education, whether scientifo or venture to affirm that without a finding-out apparatus of any sort or kind, whether expensive or not, that all those who possess any strong find it nut for themselves. It is, indeed, wonderful to witness how threugh hosts of diffoulties aud hindrances some will be found to follow up any certain pursuit. They scem to pick up their knowledge, and practical skill, by a sort of divine instinct; and the very frrst real difficulty they find is,-not, bow or in what way to acquire profitable practice the knowledge they have at so great cost and perseverance acquired.
The learned Professor's idea, be it observed this clever address, is to urge the establishment of what may trinly be called a "rnational syatcm" ef scientific, if not pure chemical instruction, and for the advanoement of science, the scientific education even of children, for the beiter supply of teaohers of it, and thus eventually to lead the way to original research. He does not propose national system suffices him, and the direct ac:ion of Government itsolf: for he contends that the only question to he considered is "eystematised" as to give free play to the natural forces which hare eventually to do the work. It.is really quite curious to read all the

Professor's enthusiastic educational talk, and then to think for a moment how things, really
are, and what a tremendous task it is in real practice what a tremendous tasks it is in real school of any kind, and with pupils of am sort. We have had to do with workmen in this way, and sure we are that none but those who have tried it can know how hard a thing it is. As Cobden once said, nothing is so hard as to help a man. To teach auy one by any sort of compulsiou in any way is simply to throw away the time and capacity and muney. To leare the door open is pretty nearly all you can well
do. It is for the willine and oarnest pupit to learn from the open hooks before him. In our own efforts we never found it arail to compel the student, and hardir -and this is of no sloght aportanes hardy, and this is of no slight ad inherent facultios the natural leanings nd inherent faculties of the student must do practical end in view. The "oonditions," as the Professor puts it, must first of all bo "appreoiated" by the pupil. Nothing can be truer. May we not here, thon, throw out a hint or jew? To our roin an arohitectural point of vew? Io our minds, there can be no greater delusion than to snppose that any one trade, or business, or profossion, can be thoroughly and adequately learned in any school, or academy, or
college, however well it may be managed. It is, a reality only in a shop, or warehouse, or offec that a competent aud practically profiable knowledge of anything can be got at. Let any one consider what time in years it takes of daily routine practice to get a knowledge of architecural drawing, to master details of architecture, and to autain any competent knowledge of oonstructional art to found thom on. Day after day, and year after year, is it required of the arehitectural pupil to got a practical and nse. ul knowledge of "office" work only, to Bay nothing of much that is far higher, hut whiols can alone become nseful by a competent knowledge of the dull foundational work. The funda-
 than is the daily dull routine of the effice to the future practive of the working architect. No amateur working, or method of work, no fancy practice, or playing at architeoture, or huilding; an take the place of the real, and daily, and useful, professional work. It is the same in al hings connected, however remotely, with archieasy learning the art rond roplo 10 dasy learn " teeture in "six lessons. It is really wonderful ruism in his own man will aoknowledge thia
 nost cases, never more than half allow its truth in anything he knows but little or nothing of. One of the most notable thoughts in the Professor's earnest address was on the subject of a bettor supply of teachers of science; and may
wo not add, of art too, for the remarks he made apply as forcibly to the one as to the other? The hing moat needed, he contended, at the present ime for the adrancement of science,-and art, wo add,-is a supply of tenchers devoted to the object, men so earnest after more and moro knowledgo us to be " model students." These are to inspire he younger inventigators, and these again, as be continnes enthnsiastically, will and must in eaoh neceeding age go on improviug, getting more and more learned, and with a deeper insight into he mysteries of the speoiaily each ono may lake to. Their whole lives will be devoted to the extonsion of the domain of trath, and their highest roward the consciousness that their sortions have henefited their fellows, and beon appreoiated by them. What, indeed, can be better, and it is only to he earnestly hoped chat, in the future if not in the present, the nhaic mind gonerally will come to see this both 3 well that none and that it will come ho sec however intense and however earnest, No one can fail to admire these fins and enthusiastic houghts and longings, hut we live in a world of husiness, and while these simple hearted thinas are heing thourlht ont by retirad students, thin ng of rought but their noble worl, it to bo fered that the outer world unlest woll loo for, ter, hat the labourer is always worthy of his hire. hought as well as work is worth the pasing for There are
There are, too, in this address, not a few ahle remarks on the ralue of teaching. No known onditions are so well calculated to give a young investigator the olosest and strongest grasp of
his special suhject as those in which he is placed
when thus engaged in earnestly teaching
college. There is, Professor Williamson college. There is, Professor Williamson con-
tends, nothing like it in its effect in preparing tends, nothing like it in its effect in preparing and fitting the mind for original rescarch this there ran he no doubt; for in tho effort to
make a thing clear to others it becomes clearer make a thing clear to others it becomes clearer
to yourself. But even here wo must not exagnerate or maloo too mnch out of a little. It exagserate or mako too mnch ont of a little. It
is quito certain, as wo take it, that as much, is quito certain, as wo take it, that as much,
if not more, depends ou the student as on the if not more, depends on the student as on the master. A capable pupil gets on almost without
a master's assistance. He learns alrnost uncon. a master's assistance. He learne almost and gets sometimes ahead of his proceptor. No power of teaching on crente faculty in a stupid pupil, or elicit hrightness out of dulness. It points out the road, hut it is the punil who must himsolf get profit hy looking
out before him, and to right and left, as he out before him, and to right and left, as he goes along. Art and science are here on equal terms. No master of a craft can take the hammer out of the student. workman's liand and strike for hinn, for that is to change the
character and authorship of the work, Hecan character and authorship of the work, Hecan $t \mathrm{cucs}$ of encouragement, pointing to other zohle work, aud commending, may be, when a good
and clever hlow is stıuck. Bat the actual work must he the pupil's own, and uothing else.
By way of illustration, and to show how deep is the well of modern kuowledge, though we must not bere grow too scientific or speculative, he may mention there are not a fow items in rouse not a few thourhts as to the ultimate nature of things. We can bot say a word in parenthesis. Art is sometimes, not a little unfuirly as we think, accused of indefnite--coufusion dire itself; hut what cau be more obsoure and hidden from mortal gaze and measurement than atoms? Cltinate indivisible atoms are mysterious enough, that is certain; so poor student to get a notion of, hut still harder for the master, who sees more of the difficulty of it. Whar, then, can be the nature of that mighty influence or "force" which keeps "these together, with so tight a grip, as in the diamond, clear idea of,-uvite as hard and insoluhle get in any difficult prohlem in art, full of contradic. ions, as it no douht is, and of contradic. difficulties. Nothing scems, at first sight and superficial glancing at, to ho more certain and understadahle than these marvels of science, and they seem to have no small advantage over artistic speculations; hut not so, for the deeper we look the more the difficul $y$ y. Where angels car to tread, there, iudeed, it is that the short. ighted go holdly in. Toleration, iudeed, that habit of mind, as the president so well urged, is necessary here. It is, he said, one of the mosi opeful indications of the moral improvement of man in those latter days. ICere all will allow
to be needful, both in science and art.

## THE FACULTT OF SUCCESS

What comfort to give tongue of onr secret griefs to a sympathising or helpful confidaut or confessor,- the burden lighter now the knowledge of it is shared ! Not alien from the pleasure of airing cherished crotchets, or drawing disburdening of apirit,-the sharer therein hein nearest intimato or perfect (i. e. not obviously evil) stranger. Who shall add a fresh word on the topic, -give a freeh turn to a conclusion so thoroughly accepted? True hy all confession, almost to yawning-point, when enunciated; fitter in condensed form for copy-headings or other device for extracting, volatilising, the sapor of a seutiment, than for the well-relished specch of the world. And yet, -the new forms, tho everrenewed youth, the sense of first freshness, the triteness all in the moral and not in the tale. Why should tho drama not ho inexlaustible althongh the passions have heen named and tahulated? Why should not "A Carpenter" write to us from Dumharton (on "The Gain of Techrical Education," p. 751 , ante), and expect and get, nos to understand and he obliged to him nd not unwilling to print his letter? An more than that, shall he not receive from us, and from many a reader too, respect for a hard failures; and, after all, only the particle of adrice that the unangered feel a merit in shorten ing for their well-cholered friends
Should we he perilling too mucb credit for such
goodwill, ranning risk at the same time of heing goodwill, ranning risk at the same time of heing
deemed inditer of essays concerning tho "praise of incompetency," if, drawing on no ill-stored memory, we let our first placid commeut take the form of a hint as to the rarity of omniscience: "A Carpenter," who has given good study to (1) huilding construction, (2) mathematics, (3) applied mechanics, and not neglected to lool ho theoretical mechanics, complains that he has not heen promaced to the rule of men ; tbat striving thereafter, ho has met witb rebuffs that, ss yet, he has not won over the gnarding dragons to admitting him into the happy gardens, where hard hand-work as a task is out of fashion, -whore his useful training
will mako emoother for him the way of life. Who would speak lightly of the instinctive gravitation towards command,-the cnrrent of tendency that leads the efficient miud and spiri to desiro to land its capacities to the work of good governance,-to guide with mind and will, fashioued by nature and hy culture, the loss gifted or less self-mastoring of their fellows? We, least of all, who see how much there goes to the making of the true "kiug of men." Not to speak of the ideal creature,- the perfection of the ruler-who sways not only minds by the force of his own, but rules equally all tho sentiments:we would show reverence also to all his working substitutes who do their endeavour,-who are hearers of serviceahle light, although no nniversegilding sun strikes from them his penctrating beam. Who will not, that has a memory of such wallers, fancy (and, of course, almost every one he in error) that he should know X-, the is $y$ and responsible contractor? and recognise activity, now a little rotund, hut yet full of his grand climacteric a good ten years short of whicb may he seen the shrewduess and decision, veiled hy a wise reticence, that appear in his letters, his acts, his self-justifications, - his maintain them-liis personal visits to distan quarries or hrick-5ards, undertaken seeuingly on the spur of the moment, and as stimelating as if that figure had in sharpest steel materialised itbelf upon his tongue? Cannot memory trace him hack, a good tale of years,-and identify hem with $\mathrm{X}-$, the general forcman ? could testify , Science pretation of dran pretation of drawings not present; setting out, was there nevertheless! His then lithe form rested not, and he know well when men wer well placed and working to advantage. When not time work wait for materials?-and when did not limes fit together happily to keep the staft far his friends that they looked for "a straight a work" as a chnnce to show him that their hands (and feet too) lad not lost the powers they had of yore,-in former struggles under his leadership with time and nature? To arrange with hive a modification of procedure, temporary arrangennent for occupation, to explain a drawing,-albeit, candour requires nue to say that memory was frailer than com

Who, looking in faney or in fact at the $X$ of to-day, can forlear to think a smile in sceing how faintly the acquired phlegm and self-reliance suggest the agitation taat in hose years mad -ou odd desperate occasions-hie hurden of life very heavy? -When the evidence of mistake, or the gloom, projected from coming difficulties, actually almost sncceeded in winning for an Thstant a breaking voice or a noistening eye? The merit of toughness among others was yet good foremen of trades, would one if called on hy some ruthless hy percritic to choose - to say his arde kicked the hearn,-lave parted wit honour to Y of
An intelligent draughtgman, a careful director of workmen, an admirahle interpreter of drawings and instructions,-why did the works under his charge so linger, and the reproofs brought apon him therefor seem to make a fixed scowl a weekly tenant of his naturally good-humoured face? Was his non-success-or incapacity"to push the joh" a merit over which architects might have shonted praise,-for bolding mannscribed worthy but too ofton despised hanne slowly with the logena, good wort would say so.

1s moral implied hy "A Carpenter" wonld -if put into form hy an intelligent prescis. your head, and come to know your trade well, and more things hesid-8, you will have less well. heing in your lot in life. Worst of all, when your faculties have heen sharpened, your skin will grow thinner in the process. Of courso, hy the way, such a writer of precis, being a mere machiue, would not stay to point out the compensating advantages in many an iustance of somo attenuation of that integnment
It has yet to he proved that the tendency unduly to depreciate, is mach more judicions than the hahit uuduly to hepraise, manual lahour as the means of getting a livelibood. It, as we all know, has its drawhacks and its solid advantages. No one can deny that the pursuits that require the agile mind and powerful will call into play finer things than the muscles, -or even than the power of endurance and the moral qua will. Still less would perversity itself deny that the extension of the empire of man over his own life over nature,--the compelling of fate the strife with elemental powers, are in themselves thosternest and at the same time most uscful discinline:that the world in foct is the arena of all others fittea to fircl fier the orco tivities of its owner Also that-in proportion to the congusts-the worlas to he conquered atend; and heoides hy the rules of tho warfee he new acgnirements are divided (it may
be roughly, and after years of waiting it is battle, so shall bis part bo that tarricth by the stuff." And all tbe while that the result of culture, its bright smocess in what seems its ultinate aim - the enriching of human lite, may seem thus to leave lesser labours in gloom, those lahours have their
own vindicution and satisfactions. From Virgil to Carlyle;-of the "too fortunate husbandman," -only ignorant of his happiaess in the sense of not being able to compare with full knowsage of old time;-the worker of any sort who sage of old time;-the worker of any sort who
puts his soul into the effort, realises the pats his soul into the effort, roaliscs the of to-day.

It being always maderstood that the worker is fit for tho work, not the least of the diff. oulties in this world being to secure that he shall bo. Apart from, and, of conrso a little
in adrance of, the plea for oduoation as in aid of polico, comes the plea that it sifts a nation; and-affording aus opportunity to the the largest possible number of valuable men, woll trained and fitted for the diraction of others; -at tho same time making tho directed under. stand the words of command, and the reasons why they should he givea. Parliamoat, even, has not yet succoeded iu getting mueh further
than "polico." It hits the tono of tho assembly, which for the nost part views only the prac-tical,-i.e., the nearest, most obvious,--gains. But we need not all of us imitate the wisdom (or shrowduess) of tbe Commons, and leave entirely unsaid the part usually relogated among the other pleas for aseful and thorough training. The voice of statistics, the questions of expo diency, the argumeats of goveraors in favour of securing the roally ablo ou the side of order and lowed in the thunder, when the strong, manly tonos of Milton sound across aearly halfa score generations,-in all their earliest power,
to those who can interprot their true meaning iato the language of to.day:-"The ond, then, of learniug is to repair the rains of
our first parents by reganing to kuow God aright, and out of that knowledge to love him, to imitate him, to bo like him, as we miy the nearest, hy possessing our souls of true virtue, faith, makes up the lighest perfection." This appeal to oach for himself, --for his own to make in the words of a master, - is to be taken as understood in all our appeals for general and technical cultare. Society,

- to come down agnin to our best. loved - to come down agrin to our best. loved co.operative socioty, which improves in propor-
tion as each partner makes himself more etficient Things would seem in a bad way if we concladod that nobody valued capacity and worth becanso they are at timos not recognised beneath
disfignrements. They would bo in a very way if the majority of people were not ahle to see and value them at all. But things will always be liopeful wbile tho healthful natures, or tho contagion of example, or other suffiviontly potent influences, constrain enough of us "to
labonr-and to wait." Will "A Carpenter" forgive us for beiug led hy him into so long aud strange a homily P Reciting some old sayings that, in moments of pique, or of overstrained patience, he,- like the rest of us for a few instants
at times,- is mortal enonch to dony tbeir usual at times,
influcace.

PICKINGS AT TILE BR\&DFORD MEETING OF TIE BRITISH ASSOCLATION
In the department of Economic Science an Statistics, Mr. W. Morris (Halifax) read a proper
on expital and labour. He oondemned the aggressiveness of trade-mions, and said that the reduction of the hours of labour had been carried too far. Wages had been advanced to a
point whicb mnet bo attended with national loss, point whicb mnot bo attended with national loss, and would react upon each member of the com-
munity. If it went on much further, we should gradually but surely he heaten out of the foreipn markets, aud our export trade would bo gradually destroyed. Tbe interference with piecework by tranle.mnion combination was inflicting an in-
justice upnn the skilled workmen, whilst the unskiller obtained an advantage. Warres would no duubi fall to their natnral level, hnt they might not do so until we bad lost our foreign
rado. Tbo only remedy to arrest the existing ovils brought about by the combination of work. men under the guidance of clever bat ambitious oon short.sighted men, was a ooluater organisa ensive as to completely orerlap trade-nnio comhination.
Mr. Leone Levi noxt read a paper on tho effect of the increase of prices in certain necessaries of life on the cost of living, aud its relation to the rates of wages and salaries. He remarkod that from whatever canse it might bavo arisen, - Whether from the largo addition fears, or from the excess of demand last twenty of the principal articles of food and other neces. saries, - it was a fact heyond question that the cost of living in the United Kingdom had become greater than it used to be, thongh the as many were disposed to ime means so great as many were disposed to imagiue. On tho conomic importaace of ino fase ne en lesa to dwell. An inoreased cost of living reasin wages moant an increasing cost of production, and the latter meant a oorresponding isadvantage in international competition. living of a town artizan or an agricultaral abourer, of a middlo.class or a nobleman family, in consequence of the rise in prices of certain commodities, they must regard the rela. tive position of suoh commodities in the ordinary hadgets of tho rospective parties. It was important, however, to guard against exaggerations respecting the increaso in the cost of liviag The Professor, after speaking of the incroased price of provisions during the last ten years, ffect on the cost of liting in relation to the having regard to the fact that the agricultural classes constituto nlmost one.fourth of the ontire number of the lebouring cless, the actual in. crease of prices, and nothing else, was almost 15 por oent. The increased cost of living arose to a large extent from the demand for mor expensive articles of clothing.
loxury had no hounds, and it was not so easy to ve out of this extravagmat mode of living. ad boen established, that article of expenditure formerly regarded as a luxury beoame a sheer necessity on all sides, though it was found that if the cost of liviug had iacreased, so had the ate of incomes, the geaeral result being a lecrease of parperism and an incrensing amount the deposits of the saviags-hanks.
In the course of the discassion which ensued Lord Houghton expressed the opinion that perbaps the question helonged rather to the ban to this Association. Social Science Congress, anan to this $\Delta$ ssociation. He would say it had already struck him that they talked a deal too much about the contest of cerpital and labonr. He conld not help thinking that when the question it wonld be discovered resolved and understood, il. The essential differene was no contest at ad omplayed regarding accumalation employerand omployed regarding accumalation of wealth was, that the capitalist, having saved money, was enabled to distribute il to the working class. Tho question wis al togother one of distribution, and a man could not spend a great deal of noney for his own personal real gratification without distri. buting working othess clearly understand that there was no differeaco wortb considering betweeu the condition of the capitalist and their own, they would, ho thought, be brought to a very
different onnstruction of the question. Mr. Powell, M.P., referred to the increased prosperity of tbe country, and observer that in a commodity whiob was hronght from tho ends of the earth there was not a corresponding increase in tho price, but where tbey had a commodity pro. duced in this country they had a sensible in actual relief of the poor had increased from $6,077,000$ l. in 1862 to $8,070,000 \mathrm{l}$. in 1872. That had arisen from the increase in the price of food. The President, roforring to the romarks of Lord Houghton, said that one of the great cunses of seientife laws wbich groperned the relations capital and Iabour were furgotiten.
In the Mechanical Science Section, the open. inc address was delivered by Mr. W. H. Barlow, F.R.S. It was occupied with the aature, properties, and application of modern steel, some years ago by tbe Institution of Civil Eugi.
noers, of which Mr. Barlow was a member. The presidont referred to the utility of steel for shipbuilding, boiler-making, guas, crank axies, and bridges, in replacing cast and wrought iron There was a good atteudance of engineers, many of whom were distingnished men, and some of woom spoke on the restrictions placed on the hoped would soon he relaxed. A hopo tras also expresed that the British ssociation wonla 1 se expressed that ine The papers on "Son The papers on the sand Blast Process for cutting hard substauces excited considerable distris. Specmens were handed ronad for extent to which the blast could be used for extent to which the blas
nining aud other purposes.
Professor H. Smith, in the conrse of his open. Scctions, addres to the Mathematical and Physical Scctions, spoke of the value of "original rcfor thir for their own sake, without any reforence to hom comar inal value or immediate usetulness. Euclid and Apollonins, he said, studied the nature of the carves formed when a cone was said carres being known as "conic sections" said carras being known as "conic sections." Mad they heen asked,-" What was the uso of these curves ? they could scaroely have given an answer, as conic scctions had then no ten. dency to solve any sciontific problen, and for , 00 years were of little valuo; yet they after. probs gave splendid results in solving scienticic sections which beset Kepler. Wholl witb. out Kepler no Newton, and without Newton no modern acience as it is at present. He spoke in favour of State aid to sciontific edacation, and of better methods of texching physical soience in schools.
In Saction D, Anthropology, a paper "On an Age of Colossi, was read by Mr. John S a slight sketch of tho theory of the ayes cognised by bronze, and iron, as gencrally reof hriuging forward a feature which, in the anthor's opivion, would at a fature period considerably modify present idens on this sub. whicb, he thonght, could be bardly nnderstood till we wero able to correlate more perfeotly tho antiquities of distant countries. Ho argued tbat, assumiag a wave of emigration from $n$ common centre to bear forward any distinct characteristic, whether of these recognised features or of colossi, or otherwise, such wave might, in pro-historic times, whilo portions of it uptly acar win porco apon desirable spots being attained, travel indefnitely by other sections over an enormons area, evou exodas; the resnlts of which might produce the strango features discovered hy subsequent travellers of a civilised or historic age setting in, eithor from a succeoding wave or some other cause, whicb would reach to tho settlements from which the sub-exodus proceeded, but not follow the offshoots; heaco that in an age highly historic and civilised in a given geographical area, thore might be found people with the same features, traditions, myths, and roots of language in a barbarous or pre.historic age or condition outside tbat geographical area; and that, in consequence, any particular age so identifed might be , or seom to bo, indefinitely long from the retainers of its chnracteristic wanderiag beyond the reach of commuaication. After drawiag attontrou to the inhabitalats of wbat ho termed the three great centres of colossi, and which he desigrated as Eryptian, Mirlayan, aud pre.Mayan or Mexican, ho illustrated by diagrams and drawings the farourito emblems of these creators of oolossi, from which it appeared that on a brond hasis there were both ar arohitectural and omblematic similarity in thoir works, the pyramid, the ohelisk, the monolith, and the elovated platforms hoing prominent features in each, thoworslip of the sunapparently common, and colossal omblems of the bumn fisare, rep tilia, and birdsabounding. Easter Tsland, as repre seating Polyoosia, was included, and the same pliysical features and climatic couditions were found approximating in theso different ceutres. He expressed a belief that a carefal study of the pootio language of the Singhalese would aid and stimalate researohes in the forest-covered cities of Ceylon; and those of tho ancient Mfaya (if possible), and the Quiche peoples unravel the Mexico and Central Amorica. Wbilo these
cities, with their cnlossi, were so buried, we had
mnch to learn of the history of the human mnch to learn of the history of the human family, and the bge in which their colossi were executed. This part of the question whs too extensive for a single praper, and he wonld conto what seomed to bim the resalt of an offsboot to what seemed to bim the result of an olfsboot from snch a proceding wave as he bad sapposed, woich bo considared had laved its gnal bithow that the bighly civilised nations of Greece and that the bighly civilised nations of Greece and
Rome were not originators of colossi, but Rome were norators of tho raw-material ideas of the Egyptians, as shown by thcir exqnisito sym. their gold aud ivory colossi. He then garo a their gold aud ivory colossi. He then gavo a
number of examples of similar accompanying number of examples of similar accompanying
features in Britain, Egypt, Mesico, and Malaya. He found parallels of design in the plans of some Oriental cities and the horse-shoe of Stone. hence, in the circle of Copan and those of Avehary, the Giant's Ring, and others; and finally argised that we bud not only these col. lateral eridences, but actnal colossi avcients in theso lands, in enormous monoliths, in venerated illols, as, amongst others, the celebrated rock, the tralitional goddess Andras, and the enormotrs Filmiugtnn Giant, both in Sassex, and the latter of which is now heing
restored, with the consent of the Drike of Devonshire, and which, he quoted Copsar and Strabo to sbow, agreed identically with the description siven hy those writers of tho vast Coltic deity to which wero sacrificed human viotims, wild beasts, and cattle, and of which Cæsar anys they had many images. A lecture to working mon, dolivered by, Professor siemens, on the sulject of "Fuel," Hall. The subject was dealt at St. George's following heads : - First, "What is Euel?" sceond, "Whence is Fuel rerived?" third, "How should Fiael be used?" fonrth, "The Coal Question of To-day ;" fifth, "Wherein consists the Fuel of the Sun?" Each of these points was elaborated in a popular minner, the one dealing with the ase of coal being of neces. sity the most interesting. It was estimated by carefnl and julicions manner the cousumption might be reduced 50 million tons a year, thourh, of conrse, such an econonty would involre a very considerable expenditure of capital. In 1872 no less than $123,000,000$ tons of coal were got up from the mines of England and Walos as against $\$ 3,500,000$ in 1962 , a frot which led to the con. clusion that unless eoonomy were practised the consmmption thirty years hence wonld bo $250,000,000$ tons per annum, and that therearo promress in eftecting econ as much as possible
A paper on the question of Railsay Amalga. mation was rend at one of the meetings by Mr $r$. B. Jangliton, C.E., of London. Ho pointed ont that objections mere entertaine both to tho wrorking of the railorass by the State and to tho present system of management. Tho first eason was, becalse the work would be too great for any Goverament department, and because it was regarded as unequal to the because it whas regarded as unequal to the demands of the public. As a comproonise betiv, eu both, he recommended an araligama. tion of the existing railway systems into four gromps, of which threo would run north and London; and the froarth, from Land's End to Liverpool, Manchester, and London. He contended that this would produce a smoothness of action $\quad$ pon the railways, and would meet th
ordinary wants of the travelling commnnity. A discrssion followed, in which Mr. Botle 3Lajor-Geueral Syrge, Mr. F. P. Fellows, Mrr. F. Wilson, Mr. Chanwick, Professor Leone Levi and others liaving addressed the section, the
prosident, in hringing the discussion to a conclusion, pointed out that railways ware not entirely the result of unassisted plifato enter grise, hut that thoy never wonld have come int existanco at all but for ,he Government which helper them by giving thonl grent power in forcing people to sell mroperty, and in conferring apon them also a right of way all over th country, which they could not liare obtained atherwise. As to the purchaso of milways hy the State, his own opinion was that the Goverstoent had quite suflicient wrork on their linuds at present, and that such a scheme trould place at their dispnsal patronago which would excite
cousidorable jealousy throughout the country.

NEW ROLLTKG STOCR FOR THE SOCTH. Eastern railffay.

Tue South-Eastern Railway Company are now neraged in the construction of a large and valuable addition to their rolling stork, at their estensive carriage and engine works at Ashford which ocompies an area of upwarls of 12 acres. The new stock now building, consists of apwards of 130 first, second, and third elass carriages, all of them on a novel and much improved principle; and in addition to tbese there are also in ciple; and in addition to tbese there are also in
conrse of constriction several large faraily colloon carriages, which are to be furnished with satoon carriages, wach are to be furnished with lavatories and closets, and fitted with wat tanks, and all necessary appliances, for the com-
fort of travellers. The new stock also includes fort of travelfers. the now sta

The new first-class carriages are forty-fonr in aumber. Thess carriages, whicb are very roomy and handsome, are 27 ft . long, and 8 ft . 4 in, wide, 7 ft . high in the centre, and 6 ft . in the doorway, and each passenger has 21 in . lineal of seat-roon. The seats have one elbow
rest in the centre. There are four compart. monts in each carriage, and cach compartmen is seated for cirht passengers. They are lined with fine blue cloth, and trimmed with blue and white cord and lace, into which the company's monogram is worked in reversed couples. In the constrnction of the new smoking-carriages in this class, Mr. Mansell's improvements have been adopted. In order to obviate the offonsive odour with which the cloth linings of a first. class amoking compartmont becomes satnrated, the compartments of the now carriages set apart for this purpose, are lined with dark hlue moroco lcather, and the compartments are alse fitted with brass spittoons, which have a slope towards the centre, and the contents are dis floors are covered with oit cloth Brass plates, with chequered surfaces, are also fixed in the smoking compartments for striking "vesuvians," and the side lichts have the legend iu frost worls, indicating that they are for smoking. The whole of the onxriages are fitted for tho electrical commonication between passengers electrical eugineer to the company. Over the seats of passengers in the ordinary first.class compartments, there is a sorjes of three printed notices, surrounded by an ornamental gold border. The ceutral notice, illustrated, plains the action of the communication with witb it. This is printed in Enclish, French, and German. The notice on the left announces the prohibition of smoking in tho compart ment, and the penalty. The notice on the right contains a caution agaiust opening the doors, or attempting to alight before tho train is at rest. On each side of these priuted notices there are framed glass mirrors, 2 ft . long by 5 in. wide, very decorative, hnt undosirable in tho event of a collision. In appearavee the three classes of carriages are all very much alike, as to height, colonr, and lake in the lower quarters, and picked out with deep cold, rad fine lined with vermilion.
It would be a great advantage if, on all lines, the frst, secon, and third elass carriagcs were painted diferent colours ; and greater stilif the same three colours were adopted on all lines, so that passengers would every where at once know and luggars vans are large, strong; carringes, and well adapted for the traffic for wlich they are desifned. The guard's compartment is in the contre, which rises aboro the other carriages in the train, and is glazed at tho top to the front and back. The compartntent also projects at the sides, about 10 in ., and is chazed, 80 that the gnard can conmand a complete vicw of the line to front and rear whilo in the open, and in daylifht, and the head and tail lights and siguals after dark. The wholo of the carriages and atock have been designed $h \nabla$, and built under the superintendence of, Mr. Cudworth, the company's locomotive engineer and snperintondent, and Mr. Mausell. It may bere be stated that the whole of the company's rolling stock, including locotaotive eugines, carriages, and wagons, aro now mianufactured at the works at Ashford, which may be regarded as the Crewe of the Londua and North. Western Compruy. Upwards of 1.000 artizuns are permauently employed at the works, which hits given a cousiderable impetus to the trade of Ashford.

BASSENTHWAITE CHURCE, CUMBER LIND; CONPETKTION.

1ebe design selected to be carried ont is by Mr. D. Brade, of Kendal, motto, "Skiddaw." The second promium, 252 ., has heen awarded to design uuder motto Barr, by Mr. J. S. Seymour of Carlisle. Mr. Jas. Fergusson, F.R.S., was the referee consulted by the coramittee.

## HEALTH IN BIRMINGHAJI

Wu understand that in ono of the districts of Birmingham, where an epidemic of typhoid fever prevailed last summer, tho disease bas again brokcn out. The provious ontbreak was investi gated by Dr. Ballard, who censured the local authorities for inattention to drainage. Again typhoid fever has appeared, and, according to statements made in a memorial signed by the residents, the local authorities hrro been guilty of neglect of sanitary precantions. A piece of vecant ground in the midst of a large population has been solected as a dopót for the doposit of night-soil, which is carted thither by the ser vauts of the Board. Two ehses of fever exist in the stroet where this has been going on for ome weeks.
We remember that when thrco or four years ago (dnring the meeting of the Social Science Agsociation the conductor of this journal Fentured to point out the dangerous conditione existing in parts of the town, his statements were met with shonts of derision, and, in some quasters, of abuse, and the towu was prononaced to be the healthiest in Eagland. The anthorities have had several pr

THE SLEEPLNG SALOON ON
THE LOADON AND NORTH-WESTERN RAILWAY.

A sleeprigestroon has bsen built by the London and North-Western Railway Compan at their Wolvarton Works, and will be rnn for the first time between Euston and Perth, on the octace. Some nccount of it will bably interest our renters.
Tho ealoon is 30 ft .6 in . long, 8 ft , wide, and it. 9 in . high at the centre of the roof (all outside dimensions). The entrance is by means a lohby from side to side; the framing of the body is of English oak and mahorany panels, aud the under-frime is also of English oak, the sides of which are plated with $\frac{1}{a}$ in, ancle iron, 8 in. by $4 \frac{1}{2}$ in., aud fitted with three pairs of Mansell's patent wheels and tyre.fastenincs. The lower part of the body outside is painted a purple lake, and the upper part with pnre white, the whole being picked out, lined, and decorated with gold-leaf. The interior of the saloon, which consists of tbreo passenger compartments and two lavatories, one at each end (which includc water-closets), and having a corridor through tho contre, will seat four per. sons in each compartment by day, and sleep the same number at night. The arrangements for the latter are as follows:-The four seats which are made in the frames, in each of the three comphitments, and can easily bo drawn forward so as to meet in the centre, will accommodate two persons at vight, and there are upper borths, covered with a figured critomiv, for other two persons: these during the day are suspended against the roof, and being carried by quadrants or lazy-tops, and halance-weights (anseen), are easily drawn down to is beight of bont 4 ft . from the floor at night. To enable tho passencers to reach these herths with ease, pair of movable folding-steps is carried in each of the compartments, so constructed, by means a movable top, as to form a reading or ot her table daring the day. The interior of the saloon is handsomely fitted up. The roof is lined with sycamore panels, and Hugarian ash monldings. The sides, ends, and lavatories are of walnat, with Hungerian ash mouldings, and surmounted with gold monldings throughout. The trimmings are of a dark blue silk taharet, and the carpets are of crimson pile. The compartmentis throughont, and the lavatories, are fited with mirrors. Sabberton's patent ventilator, round the roof lamp in erach of the compartments, is used as port of the veutilnting arrangement.
The salnon will be ran three times a week, oumely, Monday, Wednesday, and Friday, from London to Scotland, and from Scotland ta London on Tuesday, Thursday, and Satnrday

Ten shillings in addition to tbe first, class fare will be the chargo made to oach passenger fo the accommodation

## ROYAL HORTIOULTURAL SOCIETY.

Soms of the fellows of the Horticnltura Society, especially debenture-holders and compounders, feol a little disquict in respect of the prosent position of alfaira, and want to kno doing it. Since the old council weat ont, making doing poor fioht, by the way, and the now a Fory poor fight, by the way, and the new council or quasi council went in, there has bsen a doad silence boyond the doors of their meetiog-
room. Whispers, or rather cchoes of whispers, room. Whispers, or rather cchoes of whispers,
have, however, reached tho ontor body to the have, however, renched that the new conncil is no conncil at all not haviag been properly appointed, and that not having boen properly appointed, and that the old council could not oren negotiate with them if it were dosived. If this be true, we are not
able ourselycs to assert it, and that a lovsuit to able ourselves to assert it, and that a bovsuit settle the legnlity of the gith the assertion tha
in the distrace, couplod with in the distrace, couplod wich the assertron tha sioners of 1851, to whom the Society owes some 30,0002 ., it is surely time for the Fellows to look into the matter for themselves, and take such steps as may seem necessary. We have heard it said that the Commiseioners wonld probably not object to relcase tbe Soeiety from all their oblign. tions, paz the debentures ( $19,000 \mathrm{l}$.), and take the gardens for the use of the public. But, o oourse, there would be two words as to tha Anghow, something must be doue.

## A PLAN Of parts in relitef.

Try central transept of the Palais de l'Industric, Paris, is at present occupied by a nove exhinition. It is a vast raised plan of "Paris the well. known eogineer officer, Colonel Liónard It is imbedded in the ground-floor of the Palais, and exactly situated with respect to the curreut of the Seine. The scale adopted is of ene millimètre per metre. This proportion, which is sufficiently largo to give an accurate idea of the plane dimensions of the teritory, woull not be so with regard to the beights inतlicated. The visitor's point of sight is inverted: he sees as though from a balloon. The scale has therefore been doubled for the city monnments and the natural elovations of the gronnd. This fiction admitted, it is found that the position of the forts aud batteries of the first and second zone, that of the villares, battlefields, and forcsts, is very accurately described. The plan has been constructed for a strategical purpose, for the instrnction of militnry stndents and offioers. Th is eary to judge from this reproain picturesorue plurase. Every Prussian grn is modelled and and Fontenay-anx-Roses are marked with the number of men who fell there; as are the plaias of Bonrget, Champirny, and Buzenval, finally wrecked. Tho general aspect of the plan is marvellously picturescque. The green powder representing plains and lawns; river and plaster of Paris honses and monn ments, aro all execnted with much artistio tnste and not a little precision. In a few points Col. Liénarl has been led into errors by fol. lowing ton literally the imperfect ordnanco maps distributed by the Ministry of War. The entire mass of Paris buildings is maduly diminished in area. Siveral small villages aro not indicated, and one hamlet appears on the plan which bas no existence whatever in renlity! But with the imperfect materinls at his command Colone Liónard has dono all that could bo espected
The plan, completed and corrected, will be perminetitiy established in a week or wo in the Rne rlo Rivoli. It will thon he surrounded by a Runerama extiending the plan to St . Germain vanorama extending the plan to so. Germailes, in a circuit of abont tbirty niles ronnd Paria, The whole will bo eventially transported to the Invalides, where a fine collection of raised plans already exists.

Now Docks at Wemyss. - A epaoious new dock, hnillt hy Mr. Wemyss, of Wemyss Castle, at a cont of a bout 10, nool, has bsen opened at West Wemyss, a port in Fifeshire.

THE CAStle of Eivlis Harold.
Tae "Castellaria Alaredi Ewias," of Domes. day, was a tract, the particnlars of which are not known, but which no donbt lay among those lines of hill and valley which converge like the
Gingers of a hand upon tho Worm and the Gingers of a hand upon tho Worm and the Monow, between the Golden
Black Monntain, and form the south-western portion of the county of Hereford. The actual crstle, "Cistallum Ewias," stands about sis miles within the brder, and about three miles outsido or west of the presumed line of Offas Dyke at this point. The conntry is billy, but fertile, well worth the defence, for which it affords many natural advantrges. The immediate position is choson with great Elill, though
it required an immense application of human it required an immense application of human againt thake it an almost impreguable fortess whose alienated patrimony it was intonded to grasp. Wbile the Mound of Bailth remains an ovidence of English rule that of Ewias can soarcely bo rogarded as the advanced post, the "Castle Dangerous," upon the British territory; but it must nevertheless at all times have boen a post of very groat danger, and have borne, froquent attacks of the men of South and West Wales upoa Hereford.
In selecting the position adrantage was taken f a tongue of high land, broad towards the west and north, bnt which came rapidly to a narrow and almost abrupt tormination in a point about 300 ft . above and witbin the junction of the two along the northern front of the position and the smaller down a deep valley along its soutbern front. The twe meet a few scoro yards helow the higb gronnd; and upon the left or further bark of tho larger stream, and a short distance above the junction, is the charcli, and attached to it the village, to which the castle and its English lord have given the distingnishing name. It was decided to convert the point or eastern end of the higb ground into the proposed strong place, and to form thus, in the nortleer:a fushion an isolated mound. With this intent a browd and deep ditch was cut across the ridge, curred elevation. At its north ond the ditch was carried straight down the hill-side towards the brook. At its south end it came to rather a shapp conclusion, rauning out upon a natural bank and slope. Here, however, it was in some
sort resnmed at a lower level, and ended in a sort resnmed at a lower level, and ended in a
shallow ditch at the soutbern or principal entranoo to tho cosstle. The part thus isolated by the ditch furmed the circular base of a mound of abont 120 yards diameter and aibout 30 ft . higla. This tho adulition of the soil from the ditch rnised to about 70 ft., and thas gavo it, inth o military sense, a oommand over the adjacent part of the original ridge. On its opposite, or eastcrn the hond anction of tho waters, but at its foot is a east semicircular phatform, which covers its the onter -east, and south-east fronls, anconds a stoep slope towards the water, which is sain suc. ceeded by slopes of a far more gentle charnoter and which are not included in tho military
A fuir goneral ider of this stronghold may bo given by supposing a circular platform of 200 yards diameter to bo hordered on the east and adjacent sides by a steep natural slopo falling from its edge, and on tho west and adjacent sides by a steep artificial slope falling to its edge. Then on the western margin is placed a onout 120 yer di, boter the base which necessarily converts the western slope into tho further side or counterscarp of a ditch, and rednces tho eastern side to an open crescent shaped platform. Such is the original plau of the Crotle of E-rias, and such its uresent appeariuce after the complate removal of the masoury which for about 600 years adorned or Th
The top of the mound is oval, about 31 yard north avd sounh by 10 yaris eart ant weet Upou it has stood a khell keap, either circular o ma', y -sided, ahout 30 yards diameter. Althoug mo masonry remains, the outline of the keep i plainly indicater hy the trench which hen beeu durg while the fonndations were being grutbed ap. The keep seems from this to have stond, not in the centre, but nearer the enstert
margin of the monnl, prubably to allow room margin of the monnf, probibly to allow room
for a couple of exterior towers, or perbap:
gate-honse, whicb seems to linve stood where uov are some circular pits. Towers wonld be well placed on this the weakest side, so as to give a still greater command over the approncli along the ligh ground. Thore is uo trace of any along the ligh ground. Thore is uo trace of any
regular ascent to the keep,-no mark of an original winding path np the monnd, that now in use being evidently very modern. The side is so steep that no wheeled cartiage conld ascond it, and scarcely any hearily-ladon horso. Probably the way up lay by a direct flight of steps, as at Hawarden and Carisbrook

There is no trace of a well. The material of the keep was evidently a bard scbistone bed of the old red sandstonc, fragments of which aro
The outer ward or crescent-shaped platform, below and west of the keep, rans ont to a point towards the sonthern end, hut to the north or north-west it is stoppel at a brearlth of about 42 yards by the prolongation of the keep ditch. The breadth of the ward at its greatest is about 60 yards. Along the north-west front it is strengthenod by large earth-banks thrown up from the contignous diteh, but elsewhere tho natural slope of from 30 ft . to 40 ft ., steeply scarped, needed neitber ditch nor bank. This ward bad a curtain wall along its onter edge, of which the fonndation diggings remain open. The and probably the circuit on the opponito sid was completed in a similar way, so os to mak the mound and kecp, as at Tamworth and Dur ham, a part of the gencral enceinte. A group considerable number of domestio buildings placed in its notth.eastern and eaatorn port near to the curtain wall. At the foot of the mound to the north is a sort of notch in the lin of bank, possibly indicating a postern. The main apoch evidently rose aradunily from the village village bridge, and skirted the foot of tho south end, where it tucned inwards and entered that ward by a roadway or slight cutting
that ward by a roadway or slight cutting.
There is no trace of masonry to be seen within or abont the castlo enceinte; the material seems to have been in request as huilding stone and to lave been everywhere collected anil even grubbed un with moat covetous cara. There is a limekiln on the south side, near tho line of the entrance, no doubt buitt of the materials of the crstle, and a sort of house, now a shed, belwean it and the brook, but tho material shows no marl of the tool and no old mortar
There are some mounds between the castlo and the brooks, possibly thrown up on the ocoasion of same attiack by tae enemy. On the other or high sile there are no ontworks nor any indications either of attack or defence.
There aro no remains of the priory, which was vidently attached to the parish churoh? This is a good-sized building, recently repaired or restored, and in exnollent order. It is composed of a tower, nave, south porch, and chancel. The nave bas boen so completely restored that littlo of old work is to be seen in its walls or roof. It is probably in substanco of Decorated dnte, adging from the buttresses on the south sido. The poroa is netw. The chancel has io the nort: wall a sepulchral recess, of Docornted pattorn, covering the original recumbent firure of a female with her bands in prayer, holding what ooks like a ouverel cup. In the south wall are recessea, and betwen them a late D Pconted window of two lightr, trefiviled, with a plain our-sided opening in the heal. The whole is in round-headed recess. The orch into the nave is new.
The tower is the best part of the chureh. It is of lascre size, egiare, and short for its size, probably having hall anower story. It rests pon a bold plinth, about 5 ft .6 in . higk, at the pp of which is a bold half-round endom, with a bata. The south-went angle is onvered hy the pilaster battresses, of 8 ft .5 in . brearith, and a oot projectinn, which alio into the lower, near the present summit. In this anslo is at well. stair. In the sonth side is an umsually large dror, of 8 ft . opening, with high lanoet arch. In the centre of the llit jamb on each side is a half colımn, 2 ft . dinmeter, with a watc-r-bearing monlding, and a sort of bell-cap, with sereral hands of monlding above it. The arch is plainly chamfered, ind the cordon of the tower is car fed ronnd it 28 a honit. Above thes is a clamsy window fif two lancet lights undpr a pointed heurl rery plain. Abovo this again is a small hroad indow, with a trefoiled head, and above all
a Enrly English windur of three lights,

The Ancient Castle of Ewias Harold.-Ground Plan.
with three-quarter sluafts before each mallion, with hell-caps. In the nooks of each jamh are two similar shafts, seven in all. The head is a drop pointed arch, plainly chamfered. There is a window sinilar to this in the north wall. The church contains nothing earlier than this mixture of the Early English with the was, probably from ita plan, of a late Norman, or transitional date. The earthworks are of the regular Merefordshire type; such are at-
tribotable to the English of the early part of the tenth centary. They resemble geverally, in the possession of a mound, those of Kilpeck and Builth, Caerleon and Cardiff, of Brecon, Abergavenny, and many places in this combty or diss were thrown op when the early Saxon incoads were mado into Wales, and were the strongholds of the iuvarding chiefs.
Ewias Harold certainly does not bear the name of its fouvder, and that founder was probahly as completely forgotten in the cleventh century as now.
There are two places called Ewias in Here. fordshire, distinguished by the names of their eleventh.century ornners, as Ewias Lacy and
Ewias Harold. Both are mentioned in Domes Ewias Harold. Both are mentioned in Domes. day, and both as the seats of atstery, a sort castle. Uuder the lands of the church of Here ford we ave told the " in the manors of Dude. ford, we are told that "in the manors of Dodelegie and stave are ten hydes, all wasue save one in Dodelegie. Of the nine, one part is 'in
castellaria Alaredi Ewias,' and the other in the castellaria Alnredi Eiw
King's enclosed land.
Another entry explains that Alared was Alured de Merleberge or of Marlehorourg, a great terant in chief, especially in Wiltshire. We read, "Alured de M. holis the Castle of Ewias of
William the King. For that king conceded to William the King. For that king conceded to
hirn the lands which William the Earl [Fiteosbern hirn the lands which William the Earl Fitzosbern
of Hereford] had given to him. Who refortifed [refirmaverit] this castle." Of it held seren knights, whose Christiun names are given,
besides other persons, The castle was then valued at 102 . Acnes, tho daughter of Alured, married Turstan of Wigmore.
How or when Alured gave op the castle does not appear ; hut in 1100 it was held by a certain Harold, also a large tenant in Donnesday, though not in Herefordshire. He is called"Heraldus
filins comitis Radulphi," and as such held the castle," of which, 4 Ed. LII., he enfeoffed Sudeley, in Gloucestershiro. Earl Ralph, called John de Cleydon. He died 21 Ed. III. John, the Timid, was the Earl of Hereford who was his eldest son, died before him, and as early as heaten by the Weleh and English forces in 1055,12 Ed. III. he had enfeoffed his grandson, Rager when his son was a mere child. Ralply was a la Warre, and Elizabeth his wife, with Ewias considerahle man by descent, being great grand- Castle and Manor.
son of Fthelred and great nephew to the Confessor. Harold probably ohtained some of his father's possessions when he carne of age, and Lrias may have been port of them. He
and his descendants were liberal donors to St. Peter's, Glouts were liberal donors to the Priory near the Castle of Ewias.
Tho names and order of Marold's sons are preserved in the Gloucester Cartulary, and they correct Dugdale and all other authorities. They rere Robert, Roger, John (to whom his father are Sudeley, and whose issuo were barous), Alexander, and TVilliam. Robert de Ewias, the eldest, is described in the Gesta Stephani as vir stemmutis ingennissimi." According to the Liber Niger, be held in canite npwards of forty-seven fees, the mesno tenants of which Were twenty knights. Dugdale nentions only frwenty.two feca, and confounds him with a elder Robert had by his wife Sybilla, Robert, and Richard de Ewias, who left a daurhter and heiress, Sybilla, who married Philip Speuser, and left issue.
Rohert de Ewias, the third owner of the castle, and the second baron, married Petronilla. Ile was living 1191-6. He also left a Syhilla, daughter and heiress of Ewias. She married, Newmarch, whom ghe married during ber emar 1 was living 11 Joho. Third, Roger do Cifford pas living 11 johw. Third, Roger de C iftord, probably the second brother of William de C. land. Newmarch had no children. Sybilla was dead 20 Nownach leabd 20 Hen. Hr, aba was rover de regoz, slain at eveshan 1205. II of barons who ended about 1105
John de Tregoz died 1300 , leaving two coheirs, Clarice and Spbil. Clarice, who died 29 El . I., married Korer la Warre, and had Tohn, aged 23 , in 1300 ; and Sybil married Sir William de Grandison, ancestor in the fomale line of the St. John's, Viscounts Grandison. In line of the St. John's, Viscounts Grandison. In
the partition, John la Warre had the "body of

Roger la Warre died 415 Ed. IIf., seized of Ewias Inarold, and was ancceeded hy John, his son. 13 Rich. II., Sir John de Montacnte, sen., is seized of Twias Harold, and thrce Wiltshire fees in the Honour of Ewias, and Teffont. Ewias, in Witts, besides other Ewias lands in Herefordshire. 18 Rich. II. these same lands wera held by Marparet, wife of Sir John Montacute, bart.; and 10 Hen. IV., by Thomos do Montacute, Earl
the ature of this alienation is obscure ; for, the midst of it, 22 Ricb. II., Sir John de la Castre and Elizabeth his wife aro seized of the隹 o tha heen an actual and permanent alienation Carl of Sontacutes; for, 7 Hen. V1., Thomas, it passed to vidow of Sir William Beaps, of whom Joan, cony, had the castle, vill, and lordship in 14 Hen. VI. and fually the Beauchamp heir, Edward Nevile, Lord Abergavenny, died soized of the castle, \&c., in Herefordshire, and of Teffont-Ewias, in Wiltshire.

NEI BOSTON, UNITED STATES.
Tre great fire at Chicago two years ago so astonished the world with the vastaess of the destriction ocensioned hy it that the catastrophe Boston which followed shortly afterwards, though in itself almost as disastrous, seemed ittle comment. The rehuildiag of Chicago, to which we have drawn atteotion, has heen carried on with such vigour and energy as to astonish the Americans themselves, so rapid has been the cestoration of the city; and amid tho wonder restoration of the city; and amid tho wonder "capital of the West" has drawn forth, the estoration of its Eastern rival has hoon carried u quietly but surely, almost unheeded, and withont exciting even that curiosity which its destruction cansed.

Less than twelve months ago a large portion of the city of Boston was reduced to aslics ; at
the present moment hardly a trace of the fire remains; the burnt district has boon almost outircly restored. Help in money and materials poured in from all sides; Chicago herself, whioh but a short time previously had been the object of Boston's charity, roturned her gift with interest ; but the people of the stricken city did not sit down to count their losses and ask for help,-they at once set abont repairing the damage their bomes had sulfered, and as soon as tho flames were extinguished braced thempelves to the tnsk of restoring the ruins. Follow. ing the example of her younger sister, Boston was not long in removing the traces of the sudden catastrophe that had overtaken her; and next to the rapidity with whiol the flames wrought their work of destruction, nothing conld exceed the vigour with which the new buildings exceed the vipour with which the new buildings
were erected. Taking those that are already finished as a criterion of the whole, tho now finished as a criterion of the whole, tho now better class than those that they replace. The walls are hoavy and frem, the material is of good eyes, as nearly perfect as the wants of the husiness men who sro to locate there will allow. As a rule, the buildings aro not more than four or live stories high, and every possihle protection that can be practically applied has heen adopted against the rccurrence of another conflagration.
"in a vory short time," says tho Boston Post, "In a vory short time," says tho Boston Post, "it will again be a matter of history that a person could stand at the head of Bronfeldstreet and look out npon the larbour, with its islands and its cormmerce, for the viow is already nigh shut out. Tho whole area of the acres that were so terribly swept orer by the fire now bristles witl stagings, derricks, and hoisting gear, and with tho network of guys and tackle
the taugled state of affairs is almost lowildering, even to those who once thonght they conld successfully shape their conrse across this quartor of the city.
The scene is one of the husiest activity. Almost every lot in the district is in a state of improvement, and large piles of the worthlesslooking material havo disappenred. What ro structures, or carted awny to fill the neighbonring fats. There are, indeed, larco quantities of hrick and stono that look formidahle enongh at first sight, but in many cases the trenches for tho walls bave been opened around them, and the wasement full of bricks is looked upon as so much stock alrcady prid for and ready on the so mut.
Owing to the time when tho street conmis. sioners were able to give builders their lines upon other streets, the greatest progress has naturally heen made apon the old portion of Pearl-street, High-street, and tho sontherly side
of Sammer, the oreater natt of which localities of Summer, the greater part of which localitie
are now covered with buildings finished well advanced. But the question of boundaries is now settled, and civerything moves simultaneously from Washington. street down to
Broad, and from Surmmer to Filby. The army Broad, and from Summer to Kilby. The army of workmen that throngs tho streets leadiog
out of tho district at noon and in the even. ing is large enough to romind one of tho erowds of labourers that fill tho streets of onr large manufocturing cities, and the result of their daily labour it is hard to approximate. The progress that is made is most enconraging, the changes
The greater number of the burnt hilidings have already heen re-erected, most of them in a more solid and imposing menner than before, and building operations are boing carried on so quickly covered with blackened ashes to the extent of hundreds of acros, now and more commodions houses havo sprung up.

As in Chicngo, so in Boston, many of the larger edifioes aro faced with stono; this material is however used to a very limited cxtent, enough only being cmployed to give an appearance of is a sameness of design about the buildings which gives a certain amount of monotony to the long avennes of houses with which Boston long avenues of houses with which baston
abounds. Tho fre, however, cannot he said to have been an unmixed evil; for, though the city was not the mixturo of hats and palaces which conld have been seen at Chicago bofore tho fire at the latter place, yet it possessed many blocks of poor houses whioh will hardly be rehnilt now,
and the work that is going on will certainly
improve itg appearance to a wonderfis] extent The "now" part, indeed, already surpasscs the other portions of the city

## FRANCIS PRICE, HIS PATRONS AND

 HIS BOOK.Theee is a work well known to old building workmen and writers on constructive carpentry and joinery, called "The British Carpenter." The lirst edition of the book dates back to the year 1733, but tho success that attended its first publication led to repeated editions up to ]759, when the fonrth edition, considerably enlarged, was published, illustrated with sixtytwo copperplates. Connected with this book there are one or two matters which are worth notice. As it was oustomary in tho eighteenth century to cast about for noble patrons when an author was about printing his book, Francis Carpenter" is able Algernon, Earl of Hertford, Baron Percy" S.c. As the dedication is short, and characteristic of the period, we quote it here:-"My lord, your natural inclination to encourage arts makes me presume to lay this treatise of carpentering at your lordship's feet, hoping it not nnworthy your patronage, since it is part helonging to never been usefully treated of, I bave endea ponred to explain it so as to render it usefal therefore, nothiug moro is wanting to recommend it to the world, and secure it from malice and envy, but the protection of so noble a patron I no, my loxd, yoar lordship's most obedient and dutiful servant, Francis Price." The above patron was the Algernon who was created Earl
of Northumberland in 1749 . This Algernon of Northumberiand in 1749 . This Algernon was the son of Lady Elizabeth Percy, the Turin in 1670, and in whom the chicf male lime became extinct. Before this Algernon succeede to the title through his mother's blood, his father being Charles Soymonr, Duke of Somerset there was legal warfare carried on for a long time, severa persons claiming to be of the
hlood of the Percies; among the rest, a Dablin trunk-maker. So much en passont about the patron of Price's "British Carpenter." Of more fact that Price's treatise mot the approbation of three other wortbjes, well known to famo. On the emblematical frontispiece to the work, in poars: - "June the 2*th, 1733 , this Treatise of Carpentery, compiled hy Mr. Francis Price, wo think it a very useful and instructive piece, and as such recommend it
of hat kind.
N. Mawisimoor.
Jno. James.
Jno. Ja ues,
Ja. Gibbs.'
The first named was no other than Nicholas Hawksmoor, the papil of Sir Christopher Wren and the last, James Gibbs, the architect of St. Martin's and St. Mary-le-Strand. John James was the architect of the well-known church, St. George's, Hanover-square.

Among tho plates of Price's work is a section of the timber work of the dome of St. Panl's, with part of its plan, showing the cone of brick. work within the dome and a section of the surmounting cupola. The drawing is marked as "taken in 1733. " The whole of the plates in the bonk bear the names of "F. Price, delin.," and "Toms, sculp." and are very well execnted. In connexion with the plates and tho descriptive and more singular still is the fact that the descriptivo latterpress of each plate commences with an engraved initial letter from A to $Z$ consecutively. No matter what letter marked the plate, the opening word of the descriptive letterpress of that plate began with the same letter I being omission being the letter J. The letter $X$ as the initial letter to the letter I includes plates marked X., yet lo was unablo to the $a$ word 0 mencing with that letter the fond answor his purpose, on to that leter that would nienco with another letter of staaller timecommenco with another letter of smaller dimensions Francis Price Francis Price carried ont what be considered a system in this arrangement of his subject, or
whether it may bo put down as a wbim, the reader may judge. There is a "Supplement to the British Carpenter" containing Palladio's Orders of Architecture, with ornaments of doors
and windows, Wc. The work of Francis Price, as
a whole, is still a very usefal one; but while Pain, Nicholson, and others have found a succession of new editors, bringing down their works and making them suitable to present wants, Price bas not been so fortnnate. "The British Carpenter" has, however, been used by many ns a storehonso from 1733 to our day, and those who have been indehted to the work have rarely acknowledged their indebtedness.
The trammel used in huilders' workshops for descrihing an ellipse is called in many parts of the kingdom, "Price's Trammel." Though described in his work, it was in use before his day, if not in form, at least in principle. On the title page of his volume onr author is described as "late snrveyor of the Cathedral Churcb of Salishury, and anthor of a series of observations on that admirable structine." Though we find the bame of "Prico's British Carpenter" mentioned in several directories, we have been unahle to discover any but the most scant particulars of the life and practico of the anthor, who, from his coustructive designs, deserves the title of architect as well as surveyor.

## COLLEGE OF ST. PAUL, KNUTSFORD, CHESHIRE.

THis building, which we illastrate by a general iew, and plan of the ground-floor, and of which the Lord Bishop of Cliester laid the foundation. stone on the 24th instanti, is now in course of ercction on a site well adapted to the purpose, and 40 acres in extent, about two miles from tho quaint old town of Knutsford, and distant sixteen miles from Manchester. The college is intended to afford a first-class education in accordance with the principles of the Church of England, and on the models of the great schools at Winchester, Harrow, \&c., and will acoommo date 500 students and 24 resilent masters Reference to the engravings will show the accommodation afforded in the ground-story. The first floor is mainly devoted to seventy studies of various dimensions; the dormitories for the junior stuctent with a wher hivories each pair of heds, and with lavatories at the ends: and the dining-hall, a noble room, 130 ft . long and the dining-hall, a noble room, 130 ft . long boarded roof. On the second and third floors sleeping accommodation is provided for tho remainder of the students, each having a cubicle with a separate window. The arrancroments for vater.supply, ventilation, hot and cold batbs, are understood to have been well considered. A loister with traceried windows and battresses runs round the quadrangle, and affords easy The central raricus rooms on the ground-floor. The central tower is 24 ft . square at the baso, and is upwards of 170 ft . high, and the lower tory, being open on all sides, will form a handsome entrance to the bailding.
The materials employed aro deep red bricks, uck pointed with black mortar, for the external walls, and for the inside cloister, tower staircases, and the upper portion of intemal walls of dining-ball; the starcases and landings being fire. proof. The lavatortes are lined with glazed tiles, as also the kitchen, larder, and other parts. Tho arcbitectural features of the fronts, including the panelled parapets, are of red brick, together with the labels, strings, and devices. Very little stono is used, and that is of rod colour; and the roofs are to be covered with dun-coloured tiles The whole of this part of the work is from the desirns, and is beince carried out under the super intendence, of Messrs. Peunington \& Bridgen of Manchester, architects.
To Messrs. Goldie \& Child has been entrustca the erection of the chapel, which is connected with the collego hy a cloister, 150 ft . long, and is on the plan of a Latin cross, the head of which forms the sacrarium, the transepts heing for the use of visitors and servants. The belfry of brick and stone, over tho choir-arches, rises o a height of 120 ft .; the choir itself being aulted. At the wost end of the ohapel, and over the ante-chapel, is a lofty triforinm, forming an organ chamber. The internal fittings are to be richly-carved oak, the pavement seate being of richy-carved oak, toe pavcment tesselated, and granite shafts being freely nsed in the arcading and piers of the great arches. The materials, extermally, will be red brick, to accord with the college baildings, with dressings of stone. We may be ahle to illustrate the chapsl, on a future occasion. It is expected that the buildings will o completed by Christmas, 1874. Mr. William Southern, of Manchester, is oontractor for all the works: the contract for the college being
$36,000 l$, and for the chapel, 14,0007 .

THE SWIMMING-BATH AT WARWICK. Tife operations connected with the oonstrue
ion of the bathing.place in St. Nicholas.mexdow ion of the bathing-place in St. Nicholas-meadow
re completod. The dimonsions of the bath are are completed. The dimonsions of the bath are hallow end, the depth is 2 ft .6 in ., and at the leep ond 7 ft . Tho bath is inclosed on either ide by embankments, varyiug from 9 ft . to 0 ft . in height, and planted with overgreen hrabs. These effectually prevent bathers from liagonal. On the rifor sido the hath runs arallel; and on the land eide it is also parallel or the groater portion of its extent, but the xtremi ies are narrowed to the sluice. gato and ions of mud and silt. Two flights of brick teps, huilt opposite to each other in the middle teps, huilt opposite to each other in the midde
$f$ the bath, whero tho depth is $1 . \mathrm{ft} .6$ in., serve $t$ ouco for casy ingress and egress, and indicate a notoswimmers the greater and dangerous epth which lies beyond. There aro also two
maller flights of steps on the land side at the maller fights of steps on the land side at the
hallow end; and it is proposed to place a flight hallow end; and steps at the proposed eud. The lloor of ho hath is lined with a thick bod of gravel, and or a considorahle distance from tho shallow end ielding and agreeable foothold to bathers. The ralls of the hath are concrete, aud vary in $t$ the top. Between 500 and 600 cubic yards of onorete hare hoen used in tho coastruction of 10 walls; and in the excavations for the work are heen displaced. The labour account Difficullies with the soil, drains, and wet eather oconrred. For cleansing out the bath a uice is provided at the upper cod of tho bath, 8 a well at the lower end, near the exit, which 8 ft . in width, to allow swimmers to go out
to tho river at specified hours of the day. The holo of the work, from the preparation of awiags to the personal superiuteddence of the orkmen, has been carried out by Mr. E. st, it is expected that the oriminal astimat If be exceeded by about 502 . Towards the 02. required there is a logrey of 200 , loft hy © lato Mr. Richard Greaves ; 50t. added by his
dow ; and 100 , giveu by Mri. Alderman Dale.

## THE SOIL OF ST. GILES'S

Dr. Ross, in his annaal report of the vestry of Giles, Btoonstury, says, "Tho soil on th occasional patches sereral feet doep of clay, im resting upon it. Thogravel commences at ist by an oblique line throngh Woburn.place to unswick-square, whero the London clay crops the sarface. On the sonth it extonds, getting st it runs throngh Marylebone and Ken. gton, where it is mixed with clay, to the murbs. Supposing such a site to bo in its $\rightarrow$ better adapted to promoto the health of sons living upon it. The stratim of grivel, ing all thit surface drainage, palluted thongh
night be by animal excrement and decavine night be by animal excrement and decaying potation, wonld purify it as it percolated
ough; and, by giving it rapid passage to the er stratnm, would prerent the dampness of air, which is cansed by exlualations from th soakod with moisture, and from stagnant ipera. ancs's shonla thus have a dry, pure, and is of Londou which rest upon a cold, wet antive clay soil. Unfortunately these ed. tagos havo heen well. niuh destroyed. In ol has been operlad many feet in depth 'mado'soil consisting of old brick rub. and black earth satiratied with the leaknge in gas-pipes, brich-sewers, and cesspools Which the local surface drainage canno
penetrate. The eewers are namaly to a great depth, and inasmach as it has a tho practice until the last year for the con:tors to cart away the gravel dug ont of the ches, and to fill in with rabubish, the filtration nirh the gravel has been arresterl, and our rtifnl squares, surrounded on all sides by io from retaining an undue quantity of water r board, seeing this evil, has wisely ordered tho contractors shall fill in the trenches it
futnre with gravel." And it is to be hoped that this order will he rigidly adhered to.

## LIGITNING AND LIGHTNING RODS.

A paper on this subject, read heforo the Seteorological section of the Franklin Instituto of Ponnsylvania, is being printed in tho Journal
of the Institute. Wo extract the following from port of it already published :-
The closer rods are applied to the rvalla of a building the hetter; indeed, it is absolitely nccessary to attach the rod directly to the ohject to be protected, to insure safety, for in no other way can we guard against the return stroke, which kills more people and destroys more property than the direct stroke.
The rod must not be placed at a distance from tie object to bo protected, nor pass ovor nor through rings of glass or other insulators. In. sulators are not only useless hit aro positively dangerons hefore rain falls; aftor rain falls they acquire some degree of condhcting power: at best, thicy are entirely useless as a means of safety, make an insecure firstening and allow the rod to rattle sufficiently to disturb sick or nervons people at all seasons of the year. Their use should be discontinued, and some method taken to inducc parties, having rods upon their buildings which are insulated, to remove the glass. It is a plysical impossihility for any object to be injured by lightning if the conditions of safety, known to he denuanded, are fully com. plied with.

NEW REREDOS IN CARLISLE CATHEDRAL.
There is now being ereoted in Carlisle Cathedral a now reredos, from the designs of Mr. Street f.A., in place of the blank wall and screen which
fornorly stood hehind the compunion is huilt on what appears to communion-table. It the old screen or vears to be the foundation of choir one hay west of the east wall of the choir, choir one hay west of the east wall of the choir, south aisles. Tho design of the reredos has hoen of necessity so made as to avoid as mach as possible any interference with the mast window, on which so much of the beanty and effect of the choir depends. It cousists of an arcade of five divisions in the centre ahove the altade of ive divisions in the centre ahove the on each sido. The centro arcade has trefoiled arches, with gahlets above, finished with formed arches, with gahlets above, finished with fgures roosaic. The arcades on each sifle of the centro have their panels flled with inlaid marhle. The crossing of the arches is very much after the aisles. It is the the early arcading in the choir Clispter to is the intention of the Doan and Chapter to erect scrcens of corresponding altaracter on open traceried and south sides of the other arches betweeu these and the choir stalle, and to liy down aew parement in tho choir as well as to crect a new bishop's throme. The

## GLASS GROUND BY STORMS.

Sir,-At tho fishilyr village of Boulmer, on the of thumbrian coast, have just secn an instance Iy atter of wind [sand] to obscure glass. house hero to thas drawn by the occupier of a he pointed to one of his windows, and showed me that some of the panes of glass in it were of the etely obscmred or ground by the action obscurata and samd blown against them. The was broken is so complete, that when a pane ho exclaimed, "I did not know you want gronnd glass, I have only brought it clear." "Newer urind," said my informant, st the wind and sand will soon obscure the new pane" winduw has a south-eastern nspect, house is placed at the edre of tow, and tho basaltic rocky seashore being at their ha The panes presented varions de arees of hases. ion, according to the perid since whithera had been inverted, some others partially "gromad," and others totally so, by the notion of the wiad aud sand.
I should note, that wint little sand there is on basalt ry shore is composed of porphyritic or power of obsoncing glass power of obsouring glass. [The "eand process

Have any of your readers met with any similar
instance of the power of wind to ohscure crlass?

## THE NEW TOFNHALL FOR WELSH-

 POOL.In consequence of frequent complaints being mado by her Majesty's judges of assize, of the very inoflicient accommodation afforded by the courts orected at Weishpool,. in 1835-6, and fer many attempts to remedy the same, plans ool drawn up by Mr. Benjamin Lay, of Welsh maristrantect, and submitted to the co-operation, which was granted, hut on being placed before tho corporation for confirmation, they were rejected. In consequence of further complaints from the borongh justioes in 1873 amended plans were dramn by Mr. Lay, who was requested hy the corporation to act as architect ; these plans were submitted, by the mayor, to the county masistrates, and were approved of; they acreed to assist in the matter; the contract for the building was lot for the sum of 6255 . Mr. Willy, huilder of Welshpool, was anin, Jir. Wiliam Johnes, of worlss, and the new stone has just been laid
portion of tho old building well a oonsiderable portion of tho old building, left undemolished, the Classic style of areh to bo constructed in the Classic style of architecture. The principal artery , the artery of the toms, it is intendod to surmonat With a tower 90 ft . high, having a four-faced clock at an altitude of 70 ft ., to be illuminated at night. Fronting upon Broad.street there will be a corn market, 38 ft . by 37 ft . ; and on the Hall-street side a general market will extend the whole length of the huilding each way, the corn market. The total met de 4,556 superficial foct, besides whioh are the County Prothonotary Offices, with anteroom attached, cells for the prisoners at assizes, with direct communication with the dock, and ample sanitary provision. to the second floor, which is given up to the court and townhall, the apfor wim from the stone staircase erccted altered yetrs baok, the upper portion only heing assize court is to he 10 ft . Wy 5f ft., the grand jury room, 20 ft . by 30 ft ., with a chamher for the petty jury, and a judges retiring-room, 1.8 ft . by 17 ft ., and an assembly-room, 80 ft . by 36 ft ., supplemented by a refreshment-room at no of its ends, measuring 29 ft . by 13 ft . In dddition to the Broad-stroet entrance, admission will be obtainod by other doors in Hall-strcet In the bnsement there will be an aroa of 1,361 superficial feet as vanlts, iugress to which will bo given from Mall-strcet, and on the attic floor are to bo provided a kitchen aud scullere having a lift from the ground-floor for convenience on the occasion of entertaiuments. The remainder of this floor is set apart for the hall keoper's rosidence. The total coss, including overgthing, is estimated to be aboat 10,000 l.

## vitlated alr.

Tris suhject is at preseni exciting specias interest in France and Belginm. Gen. Morine Academy of Sciences paper to the French sary to Professor Professor de pamphlet entitled "On Ventilation and Cabio space; and, somo time before, M. F. Leblane bad raate a series of experiments on the comGosition of confued air. From these two sources Gen. Morins endeavours to deduce some nseful rules for improving the sanitary condition of civil and military buildings. M. de Chaumont remarks that the impression produced by foul air on the organ of smell appears to be in direct proportion to the carhonic acid contained in the fomer; and that this gas ought not to exist in larger quantity than six ten thousandth parts of a given polume of air, to render tho latter fit for broathing, since in that proportion there is no perceptible smell. Now, chomists admit that, in ins natural state, the atmosphere does not contain more of that acid thas the above fration which may even be a thru less. On the other hand, experienca shows that an ordinary man exhales 88 gms . of carhonic acid per bour, which, by converting this weight into volume, answers to two hundredrhs of a cubic mètre. But besides
this gas, aqueons vaponr ia likewise evolved in the proportion of more than a hundredth ; so that at the lowesi, the total quantity of gaseous matter erolved hy a healthy man is three hundredths of a cubic metre. Calculating on this hasis, General Morins finds that, the larger a room, the less will he the air to be renewod, and conversely. A hedroom for one person onght to he five mètres long by four in breadth, and three in hoight ; hut if inhahitod hy more tban one, the canses of infection increase, even when the air is often renewed. Hence the ventilation should he constant, and amount, for the size allnded to, to $540 \mathrm{c} . \mathrm{m}$. per hour.
Some interesting experiments were tried the other, day in the citadel of Namur, under the direction of a detachment of Belgian engineers several mining and civil engineers bcing also presont. The experimenters were fnrmished with reservoirs of air supplied from the outside hy force pamps, and were engaged in work in galleries enabled to work withont ineonvenience while animala placed in the same galleries along with them died of asphyxia

NEW YORK DOCKS 2. LIVERPOOL DOCES.
Tee New Yorl: Nautical Gazette makes a comparison of British with American buildingworkmanship which it is worth while to quote. The editor says:-
"One of the largest steamers afloat once ran against the stonework of the Liverpool docks, and her how was slewed hard-a-starhoard for her pains, Another steamer tried the stonework of those piers, and has never recovered the shock. The piers were unimpaired, which speaks volames in favour of the character of the mason-work performed on these strnctres. Here in New York we have what is termed a Dock Commission, who have on hand the in. portant task or repairing and rehniding our piers, and improving them. They have for some three years been engaged in haldin a stone pier on the North River, near the Battery, which was prorised, when completed, to bo whequalled and so far they have kept their word. There is nothing like it in the world, except, it may be, the adohe or mud houses in Mexico.
On Tresday last a large Transatlantic stenmer, with her anchor onder-foot, and going at the rate of perhaps one mile an honr, took a shy at this impregnable mess of masonry, and the result was the ship was entirely unhurt, while the pier was sent flying in all directions, The large stonee, having little or no coment hotween them, were tumbled over, and about 75 ft . of the face of the pier was canted ju-board, necessitating an expenditure for repairs of 25,000 dolls. at least. Excepting some sand, there was nothing to back up the stone front, or resist a pressure, and a view of the wreck will convince any one at a glance of the miserable character of the mason-work performed by this Commission."

ANOTENT WALL.PATNTTNGS, CIREKCESTER.
AT the recent meeting of the Wiltghire Archwological Association, mentioned elsewhere, Professor Charch gave an acconnt of discoreries recently made in Cirencester, and in the conrse of it said,-"During many recent excarations for building purposes in Cirencester, the interior decorations of walls have heen fonnd in great quantities, - in cartloads, I may say. The colours are still adherent to the plaster and con crete, but the designs are not greatly varied or of particular merit. A morone ground, with white lines and black border, commonly ocenrs; two excellent specimens of jellow leafage orma ment apon a morone ground have been for tanately secnred for the musenm; one of these was fonnd in Cricklade street, the other in the Leauses. An imitation granite pattern is com mon. But the most interesting piece of ooloured plaster-work hears npon it something more than an ordinary design, and I heg that tbis frag ment may he carefnlly inspected in to-morrows excursion. I am more particularly anxious that persous familiar witb similar relicg found in Pompeii and Rome shonld examino this speci men, since its gemnineness has been called in question by one or two gentlemen, whoge thorongh acquaintance with such subjects I have reason to doaht. The object is an inseription in Roman capitals, forming a set of souared words,
to which a much later origin than the fourth century had been assigned hofore the present discovery was made. The best archroological anthorities do not doaht its genuineness, while the mple do not doaht ite genuineness, while the ircumstances of the fud place its authenticity beyond sinspicion : I hog to plave these on record now. During the levelling of a garden in the
Now-road, Cirencester, many coins and Roman Now-road, Cirencestor, many coins and Roman
tiles were daily disinterred. Captain Ahhott watched the operations narrowly; and one day had his attention called to a fragment of wall plaster found in his presence by the ignoran worlman employed there, who saw letters upon it. Captain Abhott washed it and showed it to me, and suhsequently dopasited it in the museum. It must he recollected that it was not sold hy tho labourer, and that no one had any interest in producing a forgery. The letters absolutely agree in form with those of tho graffiti, or wall. scratohings of Rome and Pompeii, and ran thus,-

## 

PROPOSED NEW METROPOLTTAN CEMETERY.
Puans have been prepared for laying out and converting into a public cemetery for tho south and sonth-west districts of London a piece of laud containing ahout - 10 acres, formerly composing the Norbury. hill estate. The site is in the parish of Croydon, but it is close to Streatbam, and adjoins the high road from London to Croydon and Brighton. The soil is loam, and water is found at a depth of 12 ft , hat the land can he drained into the sewerage system of the Croydon district. Sume opposition has been made to the proposal hy residents of thedistric partly on the ground that the distance from the nearest dwelling house is only 30 ft . from the boundary of the site, and a meeting is to be held next week at the Croydon townhall to bear objections.

THE DISCOVERIES ON THE PLATNS of troy
Tre correctness of the statements we published, douhted by a correspondent, is contirmed by the fact that Dr. Schliemann is charged with the Ottoman Govornment, as axcavations with Leront Herald says:-"It is bad enough that the Ottoman Goverument should heve been defrauded of its dne, but it is far worse that. tbat frand should have been practised in the name of science ; for not only will it render name Turkish Government excusably jealons and suspicious of archroologists, and thus close to these latter the very field in which they would most naturally desire to pursuo their researohes, but it casts a slur upon science itself, by making but it casts a slur upon science itself, by making
its name a cloak for deception, and degrading its name a cloak for deception, and degrait to the level of a predatory trafic? its pursuit to the level of a predatory trafic.
We join in no condemnation of Dr. Schliemanna, We join in no condemnation of
as the facts are not before us.

## DEFENCE OF SHAMS.

Sir, - I am no purist, and I have faith in shnms! The statement is, I am aware, a little shocking and abrupt. It wonld, no doubt, have been more politic to have allowed my heterodoxy to be gently evolved from the contest, when perhaps the number of my dissentients might bave been diminished by the cogency of my reasoning. But I have advisedly chosen this initial confidence because I desire to leave myself the fullest freedor of speech hereafter. "I know I ann a villain, and I glory in it," is said to be the first exclamation of the hero of the melorramatic stage; and the frult is now yonrs, my reader, for contioniug to read, not
mine for writigg, if what follows offends your orthodory.
The Vienna awards have bcen made, and the result shows that we have been miserahly
heaten in all matters of taste by France, Ger. heaten in all matters of taste by France, Cer. many, and Austria; that, as a contes twenty. two years of teaching since the Exhihition of $18 \dot{1}$ have not placed ns in the position which schools for the culuare we require." The truth is, the doctrine of the purists in decorative arts
years ago led its disciples into a rogion so
sterile, barren, and mattractivo that they in lespair and disgrast hroke loose from all restraint, despair and diagnest hroke loose from all restraint, has enrolphed them. The whole history is a see-sawy played by ohildren, and the highost purposes of art would seem to have been mistaken or overlooked hy both partios.
Art is Nature's handmaid, and her mission is beantify. In live and war, we are told, all means are fair. Can it he less so in art, since her hichest ohjet is to softon the asperities of every-day life, and to develope thence all possible beautios in tho material, intellectizal, social and moral world
Adam and Ere had for personal adormment neither "pannior," "chignon," nor paint; and their country residouce, we have reason to helicve, was iunocent of "modern improve. ments." They were, says Carlyle, "two hairy, naked, or fig-leaved human figures; uncomfort. ahle dummios, gasping and gesturing with pain. ful pantomime and interjection;" and I urbinsh. ingly confess to the belief that our heaux and belles, their descendants of tho nineteenth century, are more attractive, despite the cunning artifices of modern tsilors, dressmakers, and milliners, in the gilded saloons and art conserva. tories, those shams of our laxurions civilisation, than our first parents, though innocently nnadorued in their primeval grarden of nnso. bisticated nature
The ohjection to the chignon is not that it is false " hair, but that it is a beantiful material wrought into forms ugly in themselves, and a vaciance witb its nataral growth. As an adjune drcss, it is as legitimate as any other orma. nent, and certainly as approprinte for its position ; nor is any greater violence done t ature in adding to her deficiencios than in pruning her exuherauce. The objection to lils powder and ronge is not when they deceive (fo: hat is the end and aim of all personal adornment), but when they do not; not when they add an illusive heauty to the human face, bu when, in the unskilled hand of the novico, then destroy its natural charms, or hring out witi the cmphasis of strong contrast of colour an form the crado foatures they were intended t Teil The doy may come wheu none of thes ids to natnre will any longer he necessary hen universal loveliness will prevail, and ther will be ho her excellence to counterfeit. Th will be no higher excele the he hope erson ersonated idered a irtuo, or "false" to please a vice The objection to lalse jewelry, which hose days is unsurpassed in richness an legance of desco byything in the preciou retala, io not without intrinsic value, but that, heing cheay is worn with so well as dehase gold, and the sin against art ani well as debase gold, and the sin agrinst art an ,ood taste is got the imitacion or saperior each the greatest amonnt of beauty and ntilit of which it is susceptible. Those who, $b$ deceiving the senses, give pleasure to the min and elevate it, are true artists and benefnctor to mankind. If, with a little paint and "Dnte metal," yon can transform my humblo dwellin into tho likeness of a Mayfair mansion, I am s much your dobtor. If my cement looks a well as your stone, lasts longer, and costs onl half the money, I am that much in pocket an can hestow something in charity. If my pape looks as well as your paint, and being varnishe lasts as long, I shall not quarrel with the di ference of cost. If my chromolithographs ar so perfeet in execation that they rival yom paintings in beauty of colour and drawing, need not envy you your possessions, and I ma reasonably rejoice in the knowledge that am encouraging a "sham, which as a chea substitute for paintings wholly outside th reach of thousands, who have neverthal th he knowledge and taste to appreciate and th rime to possess thpm, is destines to migh else, blank walls of many a home, that so depressing gloom, with the spirit-stirring sur shine of pleasant fancies, and to carry th refiuing influence of the highest art into $t$ humblest dwellings. Sinco my houquet of line Howers is so masterly an irvitation of natur her beanties and her blemizhes that the close ohserver will fail to dotect the deception, I a freshness for the fleeting charms of those
pr costly conservatory, and I shall continue to ass the manufacture of these things amongst e most beautiful of the fine arts.
It may not ho vory gratifying to your mil naire to find that the tahles of his butche d his baker "groan" as heavily under electro. ate as his ancestral "hoard" is wont to do ider massive gold and silver, hat the greatest modern shams, the art of gralvanic deposition, to the masses not the less on that account a st amelioration of domestio hife. The fact is glory of modern civilisation is its counterfeit esentments. It is the more general distribuin of God's gifts through the much-reviled ams of art and science that is the humanising duence of the nineteenth century. We have ld in the past the arts of necessity, the arts of wigion, and the arts of commerce; we have iich include them all, and offer a field for the ercise of talents more vast and varied than which has gone before.
C. Henry Whitaker.

## COVERING STEAM PIPES.

A NEW covering for steam pipes, which is pidly coming into use in the Saarhriioken ning district, has heen patented by Herr eiss, civil engineer. The fullowing (according
the $D$. Ind.. Zeit., from which we translate) the D. Ind.. Zoit., from which we translate)
the method of applying it. A coat of in loam wash is first given to the pipes, ving to propare them for a more perlect hesion of tho composition to he applied. e mass used for oovering consists of equal
rts of loam or clay, free from sand, and ck dust, to which calves' hair is added. This, er heing well mixod, is applied to tho pipes
a hot state. For better securing the coating, od splints, 10 in. long, $\frac{1}{3}$ in. hroad, $\frac{2}{6}$ thick, laid along the whole length of tho pipos, A secnred hy thin iron wire. After drying, loam wash is again applied till all the
cks have disnppeared. The mass is then cks have disrppeared. The mass is then
ain put on till the pipes feel quite cool, which 1 bo the case after laying it on to the thick as of from 5 in . to $5 \frac{1}{\mathrm{~h}} \mathrm{in}$. A coat of linsecd and coment is finally given. The method cribed answers at present all requirements, covering being perfectly air-tight, free from
cks, and not hygroscopic, the latter quality ing it especially for pipes in the open air. 3 cost of the covering per foot of 8.in. pipe is , while the expense of the old method fonnted to nearly 8 d .

## THE WLLTSHIRE ARCH FOLOGICAL SOCIETY'S MEETING.

He twentieth annual meeting of the Wilts fireological Sooiety was held on Tuesday, in - week, at the Town-hall, Swindon. Earlier the day, a visit had been arranged to the en o'clock a small party were gaided over fictory by Mr. Carlton. At two o'clock in fictory by Mr. Cariton. At two oclock in
afternoon, the Society assembled at the pon-hall, where a museum of antiquities had n formed.
'he president, Mr.A. L. Goddard, on taking the ir, called upon the secretnry, the Rov. A. C. ith, who read the report for 1873 ; after
ch the president road on inaurural address ch the president road an inaugural address, Richard Jeerics thon read a paper on
indon; its History and Antiqnities; and the A. C. Smith ono on Certain Wiltshire Traons, Charms, and Snperstitions. The meeting in adjonrned to enable members to visit the rohes and quarries, after which the Society fhat at the Goidard Arms Hotel. The meet. then adjonrnod to the Town-hall, where an ning conversnane was held at which the
I. Mr. Plenderhcath read a paper on Parochial ;isters, and Mr. Cunniagton one on Ancient lessments. A paper on thie Geology of Swin. was read by Mr. Moore, of Bath, and the A. C. Smith was called npon to read one ou
tahiro, Wenther tahiro, Weather Proverbs, \&e., hut post. ed it. a the soonnd day, a party of tho Society
"ted from the Goddard Arms 'ted from the Gooddard Arms Hotel about 3 o'olock, and visitod places mentioned in the
udont's invngural addruss. The route was udont's invngural addr-ss. The route was
3lnusdon to Cricklado, Latton, Down Ampney, Maisey Hampton, to Fairford. Here the ous windows, respecting which so more the a said, wero described by the Rev. J, Gerold ce, rector of Strathfieldsaye, and son-in-law
of the Right Hon, and Rev. Lord Dynevor, vicar of F'airford. A picnic dinnor took place in a tent crected in the paddock adjoining the churchyard. On their return, the party jonrncyed by way of Kempsford, Castle Faton Hannington (partaking of Mra and Mra Hnse Freke's hospitality at Hannington Hall), and Stration St. Margaret, to Swindon. The yarious ohjcets of interest were fully descrihed, and the excursion was mach enjoyed
In the evening, the Society assembled at the Town-hall, at cight o'clock, when the Rev. E. A. Fuller, vicar of St. Barnabas, Bristol, and late curate of Cirencester, read a paper on "Tbe First Foundation of the Parish Church of Cirencester."
Profossor Church then road a paper "On ccent Roman Finds at Cirencester," of which we take separate notico; and after a hrief iu. Smith read his paper "On Wiltshire Weather Proverbs and Weather Fallacies."
The members of the Society paid the nnciont Roman city of Corinium a visit on Thursday. Tbe day was fine, and a large party arrived hy the 9.5 train, and Professor Church assumed the conductorship, after a passing glance at the muscnm. Afterwards luncheon was taken in
the King's Hend hotel, where a party of apwards of forty sat down, onder the presidenoy of Mr. A. L. Goddard. On the conclasion of the repast, the prosident said that this was the last occasion on which the Society would meet together for the present yoar, and he said a few words hetoro they paited. An adjonmment was then mado to the Corininm Muscam, where, under Professor Charch, a pleasant hour was spont, and the whole party returned to Swindon, having spent a very agreeable and instructive day at Cirencester.

## DRURY.LANE THEATRE.

On granting a new lease to Mr. Chatterton, tho committec undertook ropairs which had been the suhject of much discussion, and the honse has heen overhauled and renovated. The sanitary appliances have received attention; all the lavatories, sce., have heen taken up and refitted and the drainage throughout has been cleared Old vaults full of "propertios" that had not oloaned ont disinfectants has been freely appliod. The nudi. torium has hecn oleaned, the gilding tonohed up, the boxes have now crimson satin curtains, and are relined with a chintz. The works have been carricd ont by Messrs. Bracher \& Son, hailders, and Mr. Kershav, docorator, nuder the direction of the architect to the committee, Mr. Marsh Nelson.
Cleop Dir. Halliday's version of "Antony and Cleopatra," with which the house opened on Saturday last, some remarkahle scenery and
effects have heen prepared hy Jf. W. Beverly. Cleopatra's harge, feunded on the description given by Shakspeare, is a lovely piece of oolour and nothing hetter of its kind than the naval fight lins ever been done on the stage. Miss Wallis, the representative of the witching queen,
although unahle to realise the character in although unahle to realise the character in all in aspects, has taken at one step a good place
in hession. n her profession.

## THE LETCESTER FLOOD AND SEWERAGE

 SCHEME.The local highway and sewerage committee have reportod that tbey have carefully considered the seven competitive schemes for improving the drainage and dealing with the floeds and sewerage of the town, and are of opision that the schemes submittod by Mr. J. B. Everard and Mr. Gant are the hest considered, and the cominittee suhmitted the two scbemes preminms. They recommended the oouncil to empower them to prrchase (if the commiltee thought proper) one or more of the unsmc cessful schemes.
Finally, the committee recommended the council to authorise them to retain the services, if desirable, of the successful oompetitor for the first premiun, for the purpose of assisting the committee in perfecting a scheme and obtnining the neaessary powers in the ensuing session of Parliament for dealing with the drainage, floods, and sewerage qnestions.
One of the town cotucillers (who were nna.
nimously in favour of Mr. Ererard's scheme) " Wave Lonowing summary
"With regard to the two schemes hefore the Councit, much prore astisfuctorily for the storm watera of the to than that of Mr. Gant. It also provided for an intercepting sewer, which wonld greatyly relieve the present overcharged outfull, And one thing he deemed essential that Mr. Everard provided, and Mr. Gant did not, Was
the purification of the elluent water. If they did not
necomplish accomplish that now, they would have to do it in the fatare, And secing that Mr. Ererard's plan was for
 sideration the valuable sugfeation of Mr. Gant to improve
the river below the town the river below the tomn, because they would thea have
20,000 . they had not dealt with. Therefore he strong alvocate of Mr. Everard's plan; the ho whe a
portont features in which portant foatures in which were the storm, water somer, the intarcepting sewer, sad the purification of the effinent
water. These three were auffoient to give Mr. Everard's
scheme the preferene in
The Borongh Surveyor, Mrr. Stephens, said,
with referenco to Mr. Gant's plan, the Cbairman with referenco to Mr. Gant's plan, the Cbairman of the Committee had not given it sufficient credit. The removal of the Birstall mill wonld improve the outfall 3 ft .6 in ,, and that was a Alderman fllis
Alderman Ellis said Mr. Gant did not propose to carry ont the Borougb Survoyor's sewer. I it were the Borongh Surveyor's scheme, he should go in for the removal of Birstall mill. Mr. Everard's scheme, and awarded in favour of of 1002. in favons of M . 1 . recommondations of the Committeo, and refer ring the mattor hack to them to carry ont successful issno as thoy may think desirahle, and report to next meeting of Conncil.

## THE TRADES MOOEEMENT,

WHILE the irommasters contemplate reducing the warges of the ironworkers, the nail-makcre have put forth a claim for a 10 por cent. advauce. In the crout of the concession not being at once made the men of Eust Worcestershire, to the number of 25,000 , will come ont on strike. At a meeting of operative nail-makers already held at Bromsgrove it has heen resolved to strike at once for an advance of 10 per cent. on present prices, the masters not having conceded the advance of which notice was given. A proposi. oject bito weok berore striking wa rejected by a large majority, It is expected a Dudley district abere the placo in the thatey district. There is also reason to fear trat we shall witness serions dispates in the iron trade before many weeks are over. At the last meetivg of the Wolverhampton ironmasters, a deputation from the Stafiordshire ironmasters anreed that the the conference had unanimonsly greed that the wages of the irouworkers should propesed ant ietober rext. The proposed reduction was approved by the Wolverhampton ironmesters. A similar notification has been made to a mesting of ironmasters at Hiddlesbrongh, who have also approved of it. So far from assenting to a reduction, the ironworkers are anderstood to be considering whether hey ought not to demand a xise in their wages -A lock-ont has taken place in all the shin building yards in Bristol and the Bristol Channel consequent on the refusal of the Shipwrights? Assooiation to withdraw a rule which restricts the work to he done by each member to a given quantity.

## SCHOOL BOARDS.

Newtorm. - At the fortaightly meeting of the Newtown and Llanllwchaiarn United SchooI Boards, the tenders for the erection of the new Board Scbool, on the New.read, were opened and and. They were as follows :-

The estimated cost, according to the original plan of Mr. Lay, the architect, was 1,2501 . That gentleman was requested hy the Board to explain the difference between his estimate and the tenders now sent in. Mr. Lay said this could he acconnted for on the grounds-firet that the designs, as originally sent in, bud been altered and improved, and consequently involved a heavier ontlay. It was, in the second place to be attributed to the increase in the prioe of lahonr, and in the advance of material. His own estimate was that the lowest tender would be about 1,500 l. Witb regard to the disparity

In the amount of the tenders, this was aiways were explainable. He produced instances from the Buitder, in which the difference betweea the lighest and lowest tender was double. After some osplanations, the tender of Mr. Morris, wome oxplanations, the tender of Mrepted, subject to the approval of the Was accepted, subject to the approval of the 10 s , if with a slate roof; if with a tile roof, the 10s., if with a slate roof;
Burton-upon-Trent-It was mnanimously re solved to accept the design of Messrs. Giles \& Brookhouse, schools, and guineas for s and the premium of twenty of Swanse Mr Matthess act with Messrs. Lowe, Warham, and Yeomans as tho Bailding and Sites Committee, who are to carry out tho plan of the proposed schools, subject to such variation in details as may appear necessary, and with the approval of the Board. Tho estimates laid before the Fioance
Committee for building and furnisbing new schools amonnted to 9,160 l., viz., Victoria road schools, 5,625l. ; Bond - cud school, 1,5502, Branstone school, 975l.; and Welliugton-street infants' scbool, 1,0102. The outlay for the
respective schools, Mr. Allsopp said, would be respective schools, Mr. Allsopp said, would be
about 5 l. 10 s. per head for tho accommodation provided.
archlectural colouring." Sin, -Will you kindly do me the justice

The jury returned a
The jury returned a verdict that the deceaged lost his Knight \& Pilling. in not providing proper fencing and light for the safe protection of the public.
The Foreman: That is oar verdict.

PROPOSED NEW LIVERPOOL
WATERWORKS AT WINDERMERE LAKE
AN important new preject bas just boen broached for giving an increased smpply o water to Liverpool from Windermere Lake. It is scarcely twenty years ago that extensive new
whers for the supply of water to the town were constructed at Rivington, about twenty miles from Livorpool, under the superintendence of
Mr. Hawksley, C.E., who designed the works. The water at these works is supplied in large gnantities from the surronnding Rivington hills and impounded in immense reservoirs, which from th-ir large dimensions, have been st.ylen the Rivington Lakes. At the time these work were constructed it was beliered that, with the
existing well supply, they would bo sufficient to
urnisb the inhabitants witb water for an almost indefnite period; but it now appears that in consequence of the great expansion of the dis rict, and the increase of the population, they are inadequate to the reqnired supply; and at a recent meeting of tho water committoe of the corporation (to wbom the works belong) the chairman stated that, taking into consideration the constantly increasing population, it was calculated that an additional $1,000,000$ gallons existiny works conld not possibly supply, and that now sources must therefore be looked to He added that Windermere Lake was looked hpon as tho best locality to which the corvora tion could go; and he described tho proposal for constructing new works there,
The heaviest portion of the proposed works would he a tunnel, commenciug at the edge of the lake on the sonth side. This tunnel would be three miles in length, ard, although a heavy piece of work, would be the only engineering eature of any great consequence in the under. taking. From the lake to Lancaster, a distance of ahont twenty.fipe miles, the water would be conveyed by natural gravitation, tho level at Windermere being much higber tban the line of country botween that point and Lancaster. Commoncing at Lancaster, tbere would be several punping stations between that town and Liserpool. The first pumping station would be at Lancaster, where the water would be pumped to Preston. At Preston tbere would be another pumping station, the water being argain pumped from that town, and also from other purnpingstations, in tho direction of Liverpool nntil reached that locality. There would be several reservoirs on the route between. Windermere and Liverpool. The cost of puraping tbe water from Windermers and along the several inter mediato points to Liverpool is estimated at two pence per thonsand gallons. The distance between Windermere Lake and Liverpool is about eigbty miles.
The ultinate decision of tbe corporation as to the proposed uncertaking is not yet known What, however, seoms to be admitted as a certainty is the fact tbat the existing works aro unequal to tbo water supply required, and secured,

## Thtiscellanea.

The Sanitary Condition of Brentford.At the Brentford police.court on Saturday, Miss Cannon-alley, was summoned for allowing them to remain in a dilapidated condition, with no watcr sapply, and insufficient drainare, the said cottages being uuft for human dwellings. The inspector of nuisanoes stated that on an inspec. tion of the ailey, on the 25th of Angust, be found that there was no drainage but that afforded by an open gutter; that the bouses wero in a very dirty state ; that there wer large accumulations of dust and refise in the yard; that the pump was broken and conld not in such; and that honses ticmser occopa tion. A cesspool was only about 6 ft . from the water supply, and was full. In the cottages were were seven different families, and in six of defendant's fatber, in naswer to the sumnons, said there was an opta space to each cottnge and he considered they wore yery healthy. H bad done all he could to improve them. The inspector said they were very dilapidated, and davgerous to both life and health. The Chair-man:- We shall make an order for abatement of the nuisance in seven days, and if it is not done we shall impose a penalty of 10 s . a duy for the nuisance, and $1 \ell$. a day as long as they are occn G. J. Jenkins, the keeper of the Fox and Honnds, or having on his premises 105 piga, which inspector said the pingurious 10 ft from inspector sand the pirs were only 12 ft . from th treet. The hench ordered the remoral of the iots wh threemothe These cases it an the pigs with bhree montios. These cases, it appars, are only specimens of a state of things for which time a clearance were made, both is pigsties and cottrages.
MLemorial Tablet of Dr. Ame.-A memorin ablet is abont to be placed in the house in the composer of "Rialo Britannia," was born.

Consecration of a new Synagogue at Manchester.- Hew synagogne in South Mancliester has bcen consecrated by the Chie. Rabhi, and the Jewish Chronicle reports the pro ceedings. The building is situated in Sidney. street, Oxford-road. In six weeks a buildingi there was adapted to the purposes of a synarogue. Messrs. I. Holden \& Sons, of Manchester: were the architects, under whose superintendence and from whose plans the conversion of the old baildings (togetber with new erections) has been carriod out. It is not large, yet, owing: to the manner in wiich the space at disposal has been economised, the synagoguc will accommodate abont 200 persons. The ladies' gallery extends round tbree sides of the builaing. The reading.desk is surmounted by ornamented lamps. In front of the steps leading to the ats a pair of three-light candelabra of bronze Thass of llow the ark is formed of colarec only on two sides of the main bailding (except ing above the ark), the windows have been madu of such dimensions as to give light sufficient fo the whole interior. The building is inluminate The cost will amonnt to abont 3,0002 . ; toward this sum 802 . bare been subscribed The con tractors are Messrs. Chay \& Son, and Mr. Mar ${ }^{2}$ roggart, of Manchester.
Carlisle Public Hall. - At a meeting of the bareholders in the Caulisle Public Hall Com pany, held in the town-hall, Mr. Vynne (the hon. sec.) read the report, which stated that after carrying out the purchase of the site in Lowner-sirect, the committee procured plan from ten chferent architects, from wbich they a ouce solected two sets. Oue of the architeot mppied estirnates simply as sucli, the architect chosen (Hessis. Habershon \& Brock) suppla absolutes a thillo 1088 in anount, but with a pleted for a sum not excoeding the total giver and taking npon themselves the responsibilit of completion. The amount of capital at presen subscribed for is something over 3,0002 . Th committee, in conclusion, applied for sanction t fix the nominal capital at 10,000 \%. Mr. A Wheatley moved the adoption of tho report and, in doing EO, mentioned that the large ha was intended to accommodato 1,338 on th ground-floor, and 608 in the gallery. Tender would be advertised for and thrown open to th trade. The estimate was 5,400 l. The repor Was nuanimously adopted, and the nomine capital of the company fired at 10,0001 .

The Southampton Sitrveyorship.-Mac. lifference of opinion appears to prevail amon ampton, as to wbetber their surveyor, Mi Lewon, should be allowed to bave a consultin ractice, or have bis salary iuoreasod by 100 a-year. The matter was not finally settled a he last meeting of tho council, but an increas of 30t. on the salary of the assistant surveyou Mr. Morgan, was agreed to. The proposition of Mr. Lemon, and the reoommendations of th committee to whom the matter was referred were as follows
"Propositions: -1 . The Surveyor to have conalitin prastice out of the borough, the necesghry ataff fi
oflicial work only to be proviled by the Board, 2. T. ficial work only to be provijed by go back to the sume arrangement

Report on Asphalte Pavements. - A ions kinds and of a detailed table on the hin the oity of London, has been prepared by Haywood, engineer and surveyor to the y Sewers Commissioners, and printed by their hority. There are now altogether 25 streets, portions of strcets, in the City, of which the
riage- ways have been paved with asphalte. of ways have been paved with asphalte.
of the pavements has been down 3 years 9 months, 2 for 2 years and 2 months, 18 ler two gears, 4 nncier 1 year, and 5 under ler two years, 4 nncer 1 year, and The under -erous portions have been laid by the Val de ivers Company, but seven other kinds have on tried, and the tabular report, with it
merous notes and remarks, is a valuable and werous notes and remarks, is a raluable and
ortant ono, and should be looked to by all are interested in the subject of roads.
Lestoration of Lambeth Palace.-During last three years the work of repairing and toring the buildiug of Lambeth Palace has n in progress, and will shortly be completed. has been carricd out by Mossrs. Jackson \& iw, at tho cost of the Ecclesinstical Commis. ers. The Lollards Tower was found to be been removed, the flooring renewed, the old -walls refaced with new stone, every stone hrick ascertained to be faulty taken out and laced with sound matcrials, and the whole acture restored. Tho Gate Tower, ereated Cardinal Morton, about 400 yoars ago, has a restored in accordance with the designs of
fonnder. The library, the work of Sir istopher Wren, has heen attended to, tho istopher Wren, has heen attender to, r. A stone on the huilding gives the date its erection as 1685 ; but a leaden pipe
iched to the walls, running from the roof to ched to the walls, running from the roof to
ground, to carry of rainmater, bears the of 1663.

## treet Improvements in Birminglam.

 hin the last six months alterations and rovements in some of the leading thoroughpletion, of such a nature as almost entirely -liange the appearance of well-known locaincrease the somewhat scant architectural sty of the town. It is in the neighbourhood ${ }_{30}$ Birmingham Town-hall where tho greatest rovements are visible. Some two acres of have heen levelled with the ground, and have heen levelled with the ground, andguite of manicipal buildings, which are to nearly 100,0000 ., have heen commenced. 30 will, with the projected new assize ts (to follow in a year or two), form a
orescent to the right of the Town-liall loolsfrom the head of Now-street. A new post. 3 has hecn crected immediately opposite the a-hall.

## Legal Employment of Children in Brick

 s. - At the Manchester County Police heen fined 1l. and costs for employing heen fer eleven years of age on a hrickfield. Whitehead, also of Walkden Moor, was fined wd costs for similarly employiug a girl $r$ thirteen years of age, and a like penaity rs. Benton \& Woodiwiss years of age. in, were ordered to pay a similar sum for n, were ordered to pay a similar sum for'sying a boy under thirteen years of age, ying a boy under thirteen years of age,
, yut having ohtained a certificate of his ( dance at school.

Moumental. - The movement inaugnrated some time ago, at Kidderminster, for a memorial to tho eminent divine, Richard Baxter, appcars to be progressing apace. An influential meeting presided over by the Rev. G. D. Boyle, M.A. viear, has been held in the Guildhall to fnally decide on the sealptor for a statue to his
memory. There were two soulptors competing, -Mr. Thomas Brock, of London, and Mr. F. J. Williamson, of Surrey, -and each supplied tro designs for the guidance of the meeting. After a careful examination of the models, the model supplied hy Mr. Brock was accepted. The
figure will he 10 ft . high, and, with the pedestal igure will he 10 ft. high, and, with the pedestal,
will stand 22 ft . from the ground. The pedestal will stand 22 ft from the ground. The pedestal Will be made of granite, and the statue per se Sicilian marble.—A statue of the late Lord
Dunkellin has becn unveiled in Eyre-square, Dunkellin has becn unveiled in Eyre-square, Galway.-An equestrian statue of "Stonewall" Jackson is to be erectod in front of
Virginia Military Institute, at Lexington.
Gift of Messrs. Pease to Middlesbrough. At a meeting of the committeo of the Mid. dlesbrough High School, for the purpose of considering the desirablenessof ereetingsuitable premises for the High School, Mr. J. W. Pease, M.P., produced plans by Mr. Waterhouse, of London, of a complete scheme for a large school in Mic. dlesbrough, divided into two parts, the first consisting of buildings whioh wonld furnisb the accommodation immedjately required for middle-class school. It was resolved that this portion should he proceeded with at once, and on hchalf of tho Middlesbrough owners Mr. Pease undertook to he responsible for tho cost (at least 7,0002. or 8,0001 .) of its orection. It was further decided that to make the institution thoronghly complete, and to furnish it, a subscription of at least 15,000 . should bo raisod, and towards this Mr. I. Lowthian Bell had each promised 1,0007.
The Town-hall, Brighouse.-This buildin has hecn closed for some weeks, for the purpos of being thoroughly oleaned, painted, and re decorated. The work has been done by Messrs Hirst \& Barraclough, paiuters and decorators. The ceiling and walls of tho large ball are coloured in distemper, the panels in the coiling being in nentral green, with margin and styles in creaw, and a rumning horder in lotus design in dark red to cut of the style from tho panel the cornice running ronnd the room being of a darkish stone colour, with the nuder edge of dark red. The panels on the wall are in light red, the stylcs heing in stone colour. A Grecian key border in dark red is run around oach panel. The seats have heen stained and varnished, and the whole renumbered.

## Working Mren's College, Great Ormond

 street.-The winter sesson of this Colleg will commence on October 6tb. The aim of this college difers considerably from most other crening educational institutions. It proposes to educate working men who desiro culture for the sake of its influence upon their life and associations, and does not atlempt to compete with the many valuable institutions which supply the artizans instruction indispensahle to intelligon teachers. The general meeting of council students and the stadents, to which intending on Thureda the publio are invited, will he hel Canon Kingsley has promised to bo prescnt to address the meeting. Tho principal, Mr. Thomas Hughes, M.P., will preside.
## Accident at St. John's Chapel, Pimlico.

 At the fashionahle chapel of St. John, in connesion with St. Barnabas's Church, Pimlico, a bricklayer in the employ of Mr. Haylock, builder, was on a forty-round ladder repairing the roof, nnforthe lader broke in the midale, and the wards fellow workman flags in tho chapel-yard. A beside him, close by, becamo so frightened that he fell off his ladder, but at a short distance from the ground, and was not much hurt. The other man was carried off to the hospital, appa,rently dead.The Great Landslip in Pertr,-According to the latcst news from Matucama, the waters of tho Rimac were flowing over the top of the dam, and also lenking from underneath. The excitement in Lima bad ahated, and it was supand flow in their former channel after the laps of a short time, as the river had opened itself a
channel having $a$ fall of 1 in 8 .

Proposed Fruit Market, London.-At the discussion took place with a long and animated discussion took place with refercnce to the site
of a new fruit and vegetablo market. It was contended on the one hand that Farringdon Market, if rebuilt, with new approaches, would Market, if rebuilt, with new approaches, would
prove the best site; and, on the other prove the best site; and, on the other hand, that the vacant land adjoining the new Meat
Market was preferablo. It was pointed out that Warket was prcferabio. It was pointed out that
the latter was close to the Metropolitan Railway the latter was close to the Metropolitan Railway,
whilst the promoters of the scheme for utilising Whilst the promoters of the scheme for utilising
the prosent market attributed its failure to its the prosent market attributed its failure to its
inconvenienco. Erentually the old sito was inconvenienco. Erentually the old sito was
chosen by a large majority chosen by a large majority.
Derby Memorial at Preston.-The cere mony of opening day and Sunday schools and a chapel of ease in connexion with St. Mary's, Preston, bas taken place. The huildings (together with a contemplated church) have been erected as a memorial of the late Lord Derby and the site for the whole has been given by the present earl, the value being nearly 4,000 . They are in the Gothic style of architecture, and have been huilt from desigus by Mr. Hih. berts, of Preston. The cost of the work, as fal as at present completed, is $1,900 l$.
Rebuilding of St. Oswald's Hospital Worcester.-The front part of this ancien been decided course of demolition, it having sent dilapidated building, and erect a new sent dulapidated huilding, and erect a new
strncture, with increased convenience for the surncture, with increased convemience for the
inmates. The work is under the superin inmates. The work is under the superin
tendence of Mr. Rowe, architeot, Worcester Tho contractors are Messrs. Collins \& Cullis, of Tewkeshury. It is contemplated to eventually rebuild the entire hospital.
German Sanitary Association.-A sanitary association for all Germany has just bcen formed ference Bun-te- Maine, after two days' conference. Burgomaster Hobrecht, of Borlin, is
chairman. Burgomaster Erhardt, of Munich; chairman. Burgomaster Erhardt, of Munioh; Dratent, of Cologre ; Privy Conncillor, Farren-
trapp, of Frankfort ; Privy Councillor Wiebe, of trapp, of Frankfort; Privy Councillor Wiebe, of
Berlin; and Borgomaster Winter, of Dantzie, aro memhers of the manaring council. The aro mem hers of the manaring council. Tho
Association has for its object the promotion of a sounder sanitary adminisiration throughont the Empiro
Proposed New Church fer Blandford.-A mof money having heen left in 1856 to endow has been resolved erected beiore April, 1878, it the attempt to carry recent mocting, to renew A committeo was appointed, and a site for the proposed church, ur chapel of ease, has been

The Duplex Telegraph.-The American nstituto of New York lias awarded "the Great Medal of Honour " to Joseph B. Stearns for the invention of the duplex telegraph, which has nade a revolution in telegraphy in the United States, and has heen adopted by the Postal Telegraphs in this country.
Claridge's Asphalte.-We are bound by old cquaintanceship to mention that Claridge's Patent Asp balte of Seyssel Company, established inent-street to the Institute of Surveyors, 12, Great George-street, Westminster

Admiralty Director of Works.-Colonel Charles Paslcy, R.E., was on Saturday appointed Director of Engineering and Architecturai Works nnder the Admiralty, in the vacancy caused by the resignation of Colonel Sir Andrew Clarke, . $B$
The Projected Channel Tunnel.--The order for the opening of the enquete on the pro-
posed suhmarine tunnol hetween Dover and Calais has been sent by the French Government to the prefet of the Dopartment of the Pas do Calais, and the inquiry, which must be continued for forty days, will bo opened almost im.

The New Reservoir, Margate. - The memorial stone of the new reservoir of the Mar gate and Broadstairs Waterworks Company has been laid. The reservoir is to meet the require ments of the increasing district of Cliftonville and is calculated to hold some 300,000 gallons.
The Architect for the Louvre Library Recenstruction.-The internal reconstruction of the library at the Louvre, for which the National Assembly voted 700,000 franes, is confided to the saperintendence of M. Lefuel, the fided to the
arohitect.

The Houses of Parliament.- In consequence of the decay of the stone, scaffolding has been erected round the lesser spireb, and material will be introduced.

VOL. XXXI.-No. 1600.

Geins from the Forty-Third Mecting of the British Association for Science.

REAT BRITAIN may well be congratulated on the Meeting of tho British Association for the year 1873 We may recall former occasions the hrilliancy of mecial adresses, or the in terest of particular discoreries, bas commanded the admiration of the world of soience. But it would bo diff. cult to name any year, since the origination of these scientific gatherings, in which there was manifest a more active and successful progress in so many distinct hranches of investigation; or, in military phrase, a more marked victory along the wholo line.

We have already given pickings from the addresses and from a few of the papers brougbt forward at the meeting. We now have to refer more partieularly to some of those special dis. coveries and publications which echo, to a great extent, many an utterance of our own columns. We wish first to call attention to the fact that the stadies of the anatomist, the physiologist, and tho organic chemist, are closely and essentially connected with thosc of the cogineer. The wonderful ecouomy of nature, in such a matter as tho cffective application of the heat liberated by the consumption of a given weight of carhon, is immensoly in advance of the results of our best steam-engines. We have thus a olear indication of the rast improvement which is concoivable in this direction., When we look at tho dovelopment given to what is called the Kinetic theory of beat, and when we compare tho resnits of definite measurements of the exertion and production of power in the organic structure with the results of human nechanisms, we may well helieve that wo are as yet only learning the very rudiments of the mechanical and engineering science of the future.
A striking exemplification as woll of tho wide range as of the minute investigation carried on in each section, with reference to the suljects bronght hefore the Association, occurred in the proceedings of the Chemical section, on the 23rd of September, Mr, Norman Lockyer then read a paper on the physical elements of the snn, a subjeot of research which not only was entirely heyond the grasp of human intclligence hefore the invention of the spectroscope, but which ranks among those that one of the first philosophers of the present age pronounced to de absolutely unattainablo by man, and which therefore it was a loss of time to pursue. From this lofty attempt to extend the bonndaries of physioal astronomy, the attention of the section was straightway called to the Report of the Committee on the Treatment of Sewage, re-appointed at Brighton.

The main outcome of this year's report appears to be an application for more funds, in order to prosecnte further inquiries; the one other point hrought forward being tho ascertainment of a considerable incrcase in the amount of nitrogen and phosphoric acid found in the soil of the sewage.farm that was the snbject of experiment. A special report on Breton's farm at Romford followed, and it was stated that not only was an enrichment of the soil in those elements which
we have just mentioned ascortained to have talcon place, but that the purity of the eflucnt water was rather increased than diminished. I was, however, also shown, that the statements of the Local Board as to the population contrihuting to the sewago wore very incorrect, the actual number heing only ahout 4,000 , instead of hotween 7,000 and 8,000 . The inference was stated that sewage of this town contained from 13 lh. to 14 lb . of nitrogen per head of the population per annum.
Professor Corfield recapitulatod the varions points on which the committee had from time to time reported as settled. Of these the first was the condennation of any form of the per manent cosspool system. 2. The ricommendation of the water-carriage system, inoluding the two main conditions of tho impermeahle nature of the material to he used for sewer building, and of tho carefal ventilation of all sowers. 3. The committee report tho inadequacy of all the processes of precipitation on which they have made cxperiment, including upward filtration and Weare's charcoal process. 4. They point out, as wo hare ourselves long since done, that the downward filtration process practised at Merthyr Tydvil, while available as a strictly sanitary measure, cannot he proparly called a method of ntilisation. Our own argument was economical, and drawn from a comparison of the quantity of sewage absorbed per acre with the amonat of produco returned. The committee havo approaclied the same subject analytically, and find that the affuent water contains all the nitrogen which the sewage itself contained, although it had assumed tho form of nitric acid, instead of that of ammonia and organic nitrogen. 5. Precipitation or clarifying, hy some means, is pointed out as desirable in all cases. On this, our readers will hear in mind, we have oursclves insisted. 6. Tho committee are further at one with us on the subject of agricultural gulsoil drainage. Tbey say, as we have often said, that it is essential that land should he so under-drainced that any sewage applied shonld pass, not over, but throngl, the soil; and that saturation of the soil is indofensible, on either agricultural, chemioal, or sanitary principles. It is of the ntmost importanco that this law should be kept hefore the eyes of all persons dealing with sanitary works, or with the disposal of sewage. The key to the recent controversy as to typhoid fever and sewage farms lies here, as we pointed out a few weeks ago. It is farther urged by
the committon that $a$ special kind of culture is necessary for sewage farms; and that the feeding of cattlc, and thus the production of food in the shape of meat and of milk, is the true object of this species of farming.
The Town Clerk of Bradford then read a paper, which appears to have been in every way worthy of the oocasion, and of a public officer of the town which was the entertainer of the Association. The reports of the committee appointed hy tho Association dealt, as our renders will see, with the sanitary and the agricultural parts of the qucstion. The paper of Mr. MacGowan called attention to the no less essential eloment of the political action neoes. sary for our protection from the pestilentia] results of continued neglect. Mr. MaoGowan gave an abstract of the course of legislativo inquiry and action on the subject, and appeared as the advocate of those local authorities who are, on the one hand, laden witb responsilility by the Government, and, on the other hand, refused scientific advice from the samo sources and occasionally refused by Parliament the powers which thoy scek to make experimental works of their own. Mr. MacGowan pointed out that the Act of $18: 2$ contained summary provisions which were simply impossible as to execution, and that a saving clause lad conse quently to he introduced which tended to render the enactments inoperatiro. It was stated that
fivo manufacturers of Bradford used betwecs them no less than tbree million gallons of water daily, and that the question of pollution of rivers was thns ono intimately connected with the commercial prosperity of towns; so that it is essential to the latter to gire every facility in their power to the manufacturers. Mr. MacGowan pointed out the very limited area, compared with the surface of the country, to which it could be argucd that sewage irrigation was in any way applicable; and insisted on the duty of the Government to promote amicalle oo.operation among the partics intcrested, is preference to legislating recklessly or harshly, or, he might bave added, feehly and idly, "or thrusting down the throats of honest men dogmas which, after enormous expenditure and infinite discom. fort, may prove to be erroneous." Nererthe. less, we mnst not be regarded as giving any encouragoment to the laissez aller' systcm.
In the section on Economic scienco and Statistios, Mr. E. C. T. Bartley read a paper on the Poor-Iaw, and its effect on thrift, wlich was in oomplote harmony with views we have often cound oceasion to express, and which was very vell received hy the section. Mr: Bartley pointed out that the principle that the recipient of relief shonld be destitute before relief was afforded, is ono that it is impossible thoroughly to carry ont, and that its operation was practically to encourage the poor to keep as near the line of destitntion as possible. He might hare urged that if the express purpose of legishation had been to break down the spint of indopendenoe among the poor, and to induce the tottering to fall, rather than to aid them to stand, it could not have bera more effeetually carried out. "Instead," the paper wisely urgel, "of its being to a man's advantage to be thriftless and destitute, as is the oase at present, it should be to his disadvantage." It is quite true that the last threo years have witnessed a marked and happy decrease in the amount of paupcism. By a return of the Local Governmont Board, dated 20 th of Angust, 1573 , it appoars that tho number of paupers, at the end of the Midsum mer quarter of the present year; was 7 Th, 725 , against 833,481 in 1872, and 925,677 in 1871. Whatever he tho cause of this decrease, which amounts to 6.7 per oent. compared with 1872 , and to 16 por cont. compared with 1571 , it is a feature of great promise. But, under the most favourable aspect, the acknowledged exist. ence as a permanent part of the institutions of a free and prosperous conntry, of $800,000 \mathrm{ab}$. solutely helpless, destiture, and unproductive individuals, out of some twenty-three millious (the actanl consus return is $22,709,205$ ), if we take the population of England and Wales alone, is not a fact calculsted to prove the political wisdom of our poor-laws. Side hy side with his roturn we cannot but quote the "Return of deaths from starvation, \&c., in the year 1872," in the $m$ :tropolitan district. The total is nincty. seven. This anmuer is that certified by tho coroners, and is furnishcd by a population of $3,253,370$, out of which 106,712 Nexe " in receipt of relief," in the first week of the month of May. The total relieved in that week, through. out England and Wales, was 805,750. Nore. tnuns bave been called for showing whether the proportion of doaths from absolute starva. tion to the numher of paupers in receipt of re. lief, is the same in the metropolis and in the provinces. But the figures, as they stand, have a terriblo significance. Mr. W. E. Forster, the president of the section, said that he helieved socicty was responsible for tho thriftlessues of the working classes.
Ou the 22 nd of September the attention of the Mechanical. Section was directed to two inven. tions which are likely to exert consideralile inflrence on one of the most urgent questions of the day, the prico of coal. Our readers will remember that on more than one occasion on
whicl. we hare brought this subject under their notice wo kave pointed ont tho in-
portant part whicll mechavical anpliances nilght portant part whicll mechawical appliancees night of the coal. wininer. We ercen ventured to ang gest,
from our accuaintance with the peculiar fertility from our acquaiittance with the peculiar fertility
of the $A$ merician genius in mechanical combinaof the Aucrican genius in mechanical combina-
tion, that tho United States wonld beforv long, if not send coal to Nemenstle, yet teach Nevrcastle colliers how to mino. It is from Massa. chusctes that the first illustration of our anticipation las ben zent. It is tho invention of
par Clarles Burceirht, of that State, and is ealled the Burleigh rock.d.dill. The ohject of this invention is rather stono.cutting, or minning propro, than coal-cuttiog, hut it is in its
aduptability to the latter function, or in the aduptability to the latter function, or in the
liglit that ita performance may throw on tho proper construction of a machine specially iuterest attaclee, at this moment, to tho inven. tion.

## Aion <br> Apropriately associated with the exbibition

 Leeds Burleigh rock-drill, Mr. Willian Firth, of nery.'s The first gnestion with reforence to the appiliuation of mechanical power in coal-mines is sapplies the stored-up heat by the liberation of supphics the stored-up heat by the liberation ofwhich the power neccssary for the drainage of the mine and for the extraction of the mineral the mine and for the extraction of the mineral and feeder of the steam-engine. Without tho great invertion firme the depths now piered practicable to attewpt the depths now pierced punped from the mine, nor coal itself drawn in pumped from the mine, nor coal itself drawn in humau or animal power. But the stean engine, hunaluable at the month of the pit, is not avail. able to supply power at the face of tho miners ${ }^{3}$ able to supply power at the face of tho miners
gallery, $1 n 1761$ an attempt was made to carry rods aud chains down the pit, and by their aid
to commuvicate motion to a mechanical conto communicate motion a mechanical conforth in this hopeless attempt. With the develop. ment that has been given to the steam-engine in the last fivc-and twenty Jears, it bas become casy

the mine or with its safety. The escaping stcam wonld not only fill the mine with damp but soften and bring dowu the roof.
It has long been evident to mechanics who inse studied the subject that the true motive power for underground work is compressed air, -that is to say, compressed air is tho trise link by means of which the force geucrated in the boiler cau alone be adequately applied to the face of the work. We lave called attention to this snbject in former articles, pointing out that was conclusive on this subject. Independently of tho great facility with which compressed air woik a drill or other mechanical appliance at the face of the gallery, there is the rare and im. portaut adrantage, in addition, that the escaping air at ouce ventilates
Accordingly it is by compressed air that both Mr. Burleigh and Mr: Firth propose to drive their excarating mackines. The furmer is described by a slender tripod. It is worked at a pressme of so lb . on the inch. The cutting implement is a drill wbich is made to imitate in its movement the action of the drill of the miner. It gives 300 ther in 18 strokes. It is readily set at any ancle and its action is to pierce a series of holes, which may either be nsed for powder, or otherlarge blocks of stone. luaring already earned the character of a cheap laving already earned the character of a cheap
and effectire appliance ; the decisive experimeuts having been made in West Ardsley, in 1862 , and the apparatus now being in full and successful operation. The economical, as well as the mechanical, resuits wero communicated to the section. The pressure of air emploged is

need to feed the engines at the face. These need to feed the eugines at the face. These
engines are at work at a distance of tro miles from the compressor, without any sensiblo loss of power. The cutting engine in actual opera tion at West Ardsley weighs 15 cmt ., and is 1 ft . long and 2 ft .2 in high, ruuning on wheels, which are coupled, like those of goods engiues on a railway. A double-headed cutter, or pick, is set in motion by the compressed air, which cats a groove of from 36 in , to 40 in . in the coal. The actual cutting point is keyed into the holder, so that it can be removed for grinding, and easily replaced. The action is reciprocating, and the speed attain
With regard to the economical performnnces of the engine it is stated that, on the "loug wall" systom, it can cat 20 yaxds per hour to a depth of 3 ft . Half this rate of progress, however, or 60 yards per shift, is very fair average average men in tho usual mode of worting One man, one youth, and ono boy are anficieni to tend the machine, lay tho roads, and remove the material excavated. Tho equivalent in cost to the results of an average man's work ohtained by this engine is stated to be $3 \frac{1}{2}$ d. The economy by Mr. Firth at 19d per ton, but with the use of the double shift the advantage is greatly increased. Thin, hard seams of coal, that are too nnmanageable to pay for hand labour, are economically workahie by the machine. The safety of the mines aud of the miners will be greatly increased by tho adoption of mechanical exca. vators. Tho noral status of the men will be raised, by relieving them of tbat portion of their work which is of a painful and distressing character; the economy of the anderground frmer and less capricious basis by the change; and the practical outcome, and thus the economic value, of every shaft where mechanical coal. cutting is employed will be augmented, almost at will. On these considerations inr. Firth has offered a roward of 500 z . for the hest coal cutting machine that can he produced.
It must not bo forgotten that all improve. ments of this nature which tond on the ore hand to reduce the current price of conl, lead on the other haud to the moro rapid exhaustion of the mines. On that subject wo need not now enter. pinch, and pinch tightly during the past twelve montlis.
Whilo tho mainspring of our mannfactures coal, is thus regarded as the object of the application of mechanical ingonuity, another series of investigators bave turned their atten. tion to tho more economio application of that heat which is liberated by the combustiou of coal. The combination of heated air with steam is one of the methods adopted for this purpose On this subject a description of the invention of Mr. George Warsop was read by Mr. R. Eaton A stationary engino on the principle in question 1871 ind results of the application of the same invention to the locomoti
Tho mechanism of the plan consists in the addition to the ordinary machinery of the loco. motive of a singlo acting air pump, which is forces a constant stream of air, throngh a coil pipes fixed in the smoke box, into the boilar The air is said to enter the boiler at a tempera. ture of abont $650^{\circ}$ Fabr.
The theoretic action of the air is that of dividing the molecnles of water and of steam, retarding condensation, aiding ebullition, and bove all, preventing incrastation on the nietallic tursial absence of lentage, in the ane an lied with the ongine s口p lied with the apparatus, the repairs of Whic those of others of a similar class. The tubes ow at work in the locomotive described wer inserted in January, 1868
The economical result arrived at is a saving of 6. per cent. in the quantity of coal consumed aecreasion to the increased densibility, and decreased cost of repairs of the engine. We
have said enongh to call attention to a very mportant subject.
space, not matter, fails for further notice. A
called a mensurator, by Mr. W. Marsham Adarns, which ohtained a medal at the Vionna Exhibion, is an instance of a very disterent, but very seful, application of the inventive facnlty. We have said enougll to justify our remarks as to the bright promise of scientific progress which compratulate the town of Bradford on the congratulate the town of Bradford on the
occasion with which its name is thas bappily associated.

ST. GILES'S.
The names of two London parishes are coninually used to express the two extremes of the social scale. As St. James's represents royalty and axistocracy, so St . Giles's repre. sents the lowest of the "mobocracy": yet, curiously enough, threo centuries ago the sites of these two parishes were both occupied by azar-houses, and the names of the saints bad long before been given to these hospitals, which rere instituted for the samo purpose of reliesing persons suffering from one of the most loatlisome of diseases. An old inhabitant of London, who Fandered out of the City to the westwara into the country beyond, might have seen at the same timo, had he stood on some slightly-rising rround, two isolated buidinces situated in the midst of damp, marshy land, and he wonld probably have felt great surprise had the future of the two boen prophesied to him, and he had been told that St. Janes'a would soon become the residence of a king, and gradualiy gather round it all the fashiou of the town, but that St. Giles's prould fall lower and lower in social consideration, and become at last a crowded resort of miscry and crime, thus sinking from a plea. nt village to one of the most wretched districts in London. This despised parish has, however, history of the greatest interest,-in fact, it has double history-first, one of rospectability, and next, one of racrabondage.
The hospital was of great antiguity, and as founded by Matilda, daughter of Malcolm, king of Scotlond, and queen of Henry I. of Encland, in the year 1117, for the reception of forty lepers, one chaplain, one clerk, and one acssencer or servant. It was dedicated to a Grecian saint, known as "St. Giles of the Lepers," and was first called officially "tho Hospital of St. Giles without London," bnt fterwerds obtained the name of "St. Giles's in the Fields." Different kings granted various charters to the hospital, and in Henry III.'s ceign Pope Alexander IV. confirmed its privi. leges by a Bull, in which he took it under his holy protection. As centuries passed, the hospital managed to draw to itself much landed roperty, and all went prosperously (wiw the exception of some dissension among tho lepers themselves, cansed by their too great prosperity) antil the heary hand of Henry VIII. fell upon it, n common with other ecclesiastical establiss. ments. Henry kept the hospital and its precincts six jears in his own possession, and in 1515 bestowed it upon Sir John Dudley, Yiscount Lisle, K. G., togrether with Burton St. Lazar, in ciccstershire, a hospital to which the custody of St. Giles's had been granted, in the reign of Edward III. Lord Lislo forthwith fitted ap the principal part of the building as a residence for himsclf, and leased out parious subordinato parts of the structure to different tenants; but appa. ently ho soon tired of bia new acquisition, for wo years afterwards he obtained the king's icence to convey the whole of the premises to fobn Wrmonde Carewe, esq. Tho hospital was situated within walls, which enclosed a triangular space, bounded on the north-east by the High. street; on the south-east by Le Lane, afterwards Moymouth-street, and now Dudley-street ; and on the west by Elde-strate, afterwards Flog.lane, and now Crown-street; the great gate being on the north, opposite the chapel, which afterwards became the parochial church of St. Gilces. The "Capital Pince or Mansion House" which Lord Lisle fitted up was situated a little to the west of the chorch. It was afterwards occupied hy the celebrated Alice Duchess of Dudley, who died in 669 , Sollows:"Lloyd"s Court is divided from Denmark strect Lloyds Court is arided ford cardens which fronts St. Giles's Chnrch."
When this wet, marshy district was diained, and ditches wore made about it, it became a more healthy place; and as early as the year in alls.'s reign it had assumed the appearauce of a scottered country
village, with a few shops and a stone cross, but village, with a fow shops and a stone cross,
it was atill far from hoing what it afterwards became, "the very pleasant village of St. Giles," and early in the fourteenth century the numher of inhahitants did not cxeeed 100 . From the
reign of Edward CII. to that of Honry VIIL., the reign of Edward III. to that of Honry VIll., the
inhabitants seem to have consisted of a few inhabitants seem to have consisted of a few
gentry and peasants, whoso houses and cottages were scabtered ohout, and some tradesmen, who divelt for the most part in the main stroct. The
names of some of these shopkeepers are proserved in the hospital grants, as "Gervaso le Lyngedrap" (linendraper), and "Reginald lo
Tailleur." Among other names mentioned in these grants we find "Robert le Mower," "Rohert le Crieur," "Roger le Fol," "Robert
de Sco Egidio," and "Bartholomer, the erier de Sco Egidio," and "Bartholomew, the orier
of the Conrt of Kiug's Bench." For some time previorasly to the dissolution of the hospital the population seems to havo romained nearly stationary, but shortly afterfwards it increased, and in Qneen Elizabeth's roign, in spito of pro-
clamations prohihiting the building of new clamations prohihiting the building of new honses nnder severe penaltios, a great addition was made to its size. In 1517 the hospital wos suppressed, but mach of the wall that surMolborn had extended. 80 far west as almost to join St. Giles's-street, and shortly afterwards several stroets wore planned and many honses huilt. The rapid growth of London at this time attractcd much attention, and in Thomas Frecman's Epigrams, puhished in 1614, and
entitled "Rub and a Great Casto," are the following ourious lines on "London's Pro grease ${ }^{\prime \prime}$ :

Why, how now, Babell, wilt thou buitd?
Are going to St . Giles' -ing the-Fiveld: St. Katerine, she tatea- Wapping by ihe hivd,
And Hogsdon will to $\mathbf{H} y$-gato ere t be long ; And Hogsdon will to Hy-gato ere the long; think she means to go to lsington, The eity's sure in progresse, I burmise, Vithout the walls, without the libertio
Where she poede feare nor Mayor nor Recorder:
Well, say she do 'twere's pretty, yet tito pity,
The parish of St. Giles was well supplied in old times with places of detention and prnishment, for it had a pound, a cage, a round-houso, a watch-house, a pest-honse, stocks and whipping. fame such as wo may safely say no pound ever had before; it was a landmark, and miles were measured from it, as they were from the Standard in Cornhill, Hickes's Hall, and Hydo Park-corner, and its name found iss way into
songs,-not, hoffever, mneh to the eredit of the neighbonrbood, as,

At Jew gate steps Jock Chance was found,
And bred up vear St. Gilos s Pound."
Thero is no record of the first making of the pound, bnt it was probahly of considerahle antiquity, as the parish, while $\begin{aligned} & \text { village surronnded } \\ & \text { by pastnre-lands, would natnrally require such a }\end{aligned}$ a convenience. It originally stood in tho middle of High-street, but was removed in 1656 to make way for some almshouses, and was then placed on the broad spaco where St. Giles's, High-street, Tottenbam-court road, aud Oxford-street meet. improvoments were made in the neighbourhood. The Cage adjoined the Pound when it stood in the High. street, and was used as a prison. The poor people who were so uufortunate as to find themselves in this place do not appear to have been treatod with munch consideration, for have been treatol with are entries in the parish books of several deaths that took plaoe there. In tho charchwardeus accounts we $164,2 \mathrm{~s}$. were given to a poor woman that
was hrought to bed in the Cago, and shortly after 2s. 6d. was paid for a shrond for a ponr womau, probably the same. On July 9, 1s. 6d. was given to Ann Wyatt, then in the Cage, to relieve her and buy ber a truss of straw ; and shrond for the same Ann Wyatt. The Ronndshrond for the same Ann Wyatt. The Ronnd-
house was prohahly situated near the west end of the charch against the churchyard, as appears of the church against the order in the year 1686 that a gate "be made ont of tho wall of the churohyard near the Round-house," and forther "that caro bo taken to have a wall erectcd at the wost part of tho the old buildings adjoining are taken away," hecause these old hnildings must haso been the remains of the hospital. In 1600 it was pro-
posed to do away with the Ronnd.house, and forr years afterwards it was sucoeeded by the

Vatch-house, which was built by Mr. Rathbone, from whom Rathbone-place takes its name. Although the place was abolished, the title of Rownd-louse hececer was oontinued by the con Rawnd-iouse hecper was onntinued by the con
stable of the parish long into the prosent cenatable of the parish long into the prosent cen-
tury. A Pest-house was built in St. Giles's at tho time of the Great Piague of 1665 , and it was afterwards pullod down and the matorials sold. In the provious visitations of this foarfal infection tho prorish had made use of a general infection tho parish had made use of a general hospital called the London Pest-honse, which
stood near Coldbath-fields. The stocks and whipping-post were oovered hy a shed, and are Hiphosed to have stood in the hroad part of the High-street. In 1683, 7l. 17s. 64. were paid for a new whipping-post, and in 1703 Mr . Pollett received $2 l$. for painting stocks, whipping-post, and shed. The gallows stood at tho north end of the parish ontside the hospital inclosure, where tho Pound was afterwards placed at tho junction of the threo roads. Mere Sir John Oldcastle, Lord Cohham, the Lollard, was executed in the reign of Henry V., and Babington and his a complices in the reign of Queen Elizaboth.
is frequently stated that on the removal of the gallows from the elms in Smithfield in 1413, it was set up in this place, and continued here till case, for transerred to Tyhum; but this is not tho and Sir Nisholns Bro Tyhuru as early as the year 1388 , and thero is no reason to believe that one place of exooution was considered sufficient for the who'e of London. It was, moreover, a favourite practice in times gone hy to carry out the legal sentence against the criminal in a place near which be committed his crime. For many years it was the custom of the hospital to provido a bowl of ale for the criminal as he passed the great gate on his way to Tybnrn. This last refreshment was ealled the "St. Gilos's Bowl," and was commemoratod in tho sign of the "Bowl" public-honse, which formerly stood on the site of Bowl-yard. A whieh gave rise to the proverh that the saddior of Bawtry was hanged for leaving his liquor, for had ho stopped, as was usual, his repriove, which was actually on the road, would have arrived in time to save him. The bospital chapel becarne, as we have before mentioned, tho parochal chnreh when the parish of St. Giles was formed, and the buiding remained until 1623, when it was denolishod. In 1617 orders were given for huilding a sterplo and huying new bells, but when the alterations were made it was dound that some of the walls were so rotuen and deoayed as to be in danger of falling down, In the end it was found nocessary to pull the whole building down, and suhscriptions wer requosted from the parishioners and from other parishos for the purpose of bnilding a new church. Tho sum of 1,0657. 9 s. Was suhscribed by 415 householders, the first donation heing
250 , from the Duchess Dudley and the last two pence by "Mother Parker." Parton, in his "Account of St. Gilos-in-the-Fields," writes : "The total number of sonls in the parish at this period did not exceed, pcrkaps not reach 2,000. The sabscriptions, thorefore, npon an old and exceeded 10s. 6d. n each parish to 40 s of our prescnt money. An example of liberality and munificence rarely equalled." Upwards of near were received from non-parish ono anc of London, irom varions parishat collected from the residents. The new church was consecrated On the 26 th of Jannary, 1630, hy Dr. Laud, Bishop of London, with great pomp and cere-
mony, It was a handsome huilding, of ruhhed brick with stome dressings, and had a square tower snrmonnted hy a turret. It was richly decorated in the interior, hut daring the Com monweatth was much defaced by the Puritans who gare to 6 d to the painter who washed the twelve apostles off the organ-loft, and 119568 to the glazier who took ont the stained glass and replaced it with plain glase, and sold for 40 s the beantifull warred gass, and sold for 40s. the beaudilus the Dachess Dudiey gave to the church. In hinders devotion," was sold, and the organ-loft let as a seat. At the Restoration, the church was as much as possible brought hack to its original state. it nnderwent extensire repairs, in such spite of these it was found in 1715 to be in such a total state of decay that a new clurch was necessary. A proposal was now mode that this should be one of the fifty new churche

Parliament was petitioned on the subject, Nothing was done for some years, but in 1729 on condition that the churchwardens and of St. Giles settled a yearly income of $350 l$. on the rcctor of the recently-erected parish of St. George, Bloomsbury. The petition of the parish was strenuously supported hy the Duke of Newcastle, the Lord Chancellor, and other eminent parishioners who had seats in Parliament, and to whom the thanks of tho parish were voted for 'tho extraordinary pains they had taken in the Archbishop of York and fre bishops, with elcyen tomporal peers, who protested on five grounds, the chief one being that it was a bad precedent to rehnild oul cluurchess out of a fund appropriated for building new ones.
In June, 1731, articles of agreement wero who contracted to take down the old charch and rehaid a new one on the same ground before the end of 1733 . The building las been generally admired, and on its lirst orection was thought to he one of the handsomest clinrches in London. The steeple is described by Ralph as light, airy, and genteel.
In 1686-7 the celebratod "Resur rection Gate" was erected. This was the principal gate into the churelyard, and was ernamented with a curious bas-relief of the Day of Judgment 1800 the vestry from Micholangelo's study. In "and a vestry ordered this gate to be remored the north-west co ner of the churchyard." The wood-carving, however, was afterwards cleaned and refixed, and it still remains, though its posicurions passer-by.
The list of roctors of St. Giles's parish is a goodly one from 1517 to the present time, Jut the only man in Wrat Who meed stadent of all arres uader obligations hy the pablication of his ornifient Polyglot Bible Others wo pell known in their day, and obtained the prizes of their profession, as Dr. Roger Mayn. waring, Bishop of St. David's, Dr. John Sharpe, Archbishop of York, Dr. Willians Baker, Bishop of Norwich, and Dr. Buckner, Bishop of Chi. of Norwich, and Dr. Buckner, Bishop of Chi chester. St. Giles's was originally cut off from the rest of the town by reason of the loathsome. the hospital was founded, but it continued to be the hospital was founded, separatcd cn acconnt of its moral disease. Soon bcoame the rcndezvous of rogues and beggars, bccame the rendezvous of rogues and beggars refago for the ragamuffins of London and West. minste

In Queen Elizabeth's reign the rapid growth of London forced upon the attention of the Government some of those social qutestions which aro still agitating sooicty, and are still
unsolved, and the remedy it proposed was unsolved, and the remedy is proposed was to forbid the further erection of new bnildingrs, and to order "all persons within three miles of any of the gates of the City to forbear from letting, or setting, or suffering any more than one family ouly to bo placed in any one house." In 1585 a proclatmation was issued in which the common evils were recited-" that great multitudes were brought to inhabit in mall rooms, whereof a great part wero scel very poor, yoa such as must live lay begging or worse means, and they heaped togethor in one house or small tenemant; wherefore for offences of this solt, namely of increase or many in wellers, or, as they be commonly oalled nmates or undersitters, which had heen suffered within the last seven years, the proper officers were to see the same redrest." In another proclamation theso vagrants are more fully descrihed:-"that it was found in and about he City of London, and in parts in and abont er Majesty's court, that there did baunt an many a great maltitnde of wandering persons, whom wero also were men from frelan, persons of that nation." St. Giles's and High Holhorn were specially described as "great harbours for suoh misdemeaned persons." In The seventeenth century the Irish continued to arrive, and this parish is still their favoured home, so that from their settlement it obtained he cant appellation of the "Holy Land." It as heen asserted that the colony of Irish in dondon equals in numbers tho population any a Laropean "apital. In 1 , 10 the church inhabitants of St. Giles's are French Protes.
tants ;" and in 1720 Strype describes Stidwellstreet and its neighbourhood as chiofy inhabitod by French "and of the poorer sort," but now the foreign population is more confincd to Soho, and does not extend to the east end of Crown-street.
The Vestry found ont after a timo that they The Vestry found ont after a timo that they
conld not leave tho question of their poor to bo conld not leave tho question of their poor to bo sottlod by the rulers of the State, and in 1637 they ordered, "to prevent the great intlux of poor people into this parish, that tho bedles do present every fortnight, on the Sunday, the names of all new comers, undersitters, inmates, dirided terements, persons that have families in cellars, and other abuses." In 1639 six persons Were appointed to assist the charchwardens "in and rew.comers." Tliese are the earliest mentious of cellars as places of residence, which have since become so noted that the expression the lowest poverty. In tho next centary when Hogarth wished to paint tho vices of the poor he went for inspiration to St. Giles's. Mis Idle Apprentico is taken up for robbery and murder in a right cellar iu this parish; his Gin. "Four charity hay. Fielding, writing in 1751, rofors to "great numbers of houses set apart for tho reception of idle persons and vagabonds, who hare their lodging there for twopenco a night;" rauts Mr. Welch rarels finds less than twonty rauts Mr. Welch rarely finds less than twonty at the latest hours; and that in one of these houses, and that not a large one, he hath num. bered fifty-eight persons of hoth sexes, tho bered fifty-eight persons of hoth sexes, tho
stench of whom was so intolerable that it soon compelled him to quit tho placc." A Middlesox compellod him to quit tho place." A Middesox pars ${ }^{\text {pistrate of oclared in } 1815 \text { tbat " in the oarly }}$ part of my life (I remember almost the time Gileg's, whatever elso they sold, sold gin; the situation of the poople was dreadful. I lived with a relation of mine then, who employed a rast numher of poople, and observed tho lower Sterders, then in a terrible state." Mr. Sampson Sherenson gavo eridence before a comraittee of
the Honse of Coumons, in 1815, on the state of the bergars of St. Giles's, and described them as a society in which the young memhers are infitiated in all kinds of extortion by tho
elder ones. He stated that they could mako 3s. or 4.s. a day each hy selling in Monmouth. street the shoes that they had begged on their rounds. The evenings of these worthless crea. tures were spent in drunkenness and quarrel.
Mr. Sydney Smirke, in his "Snggestions for the Arehitectural Improvement of the Western Part of London" (puhlished in 1831.), describes
the condition of St . Giles's in much the same forms as Fielding used near'y a centary hefore. He writes, "The nutterahle abominations of it can orly he conceived by those who, in the ecercise of charity or in quest of crime, have It is, indeed, the retrent of wretchedness, the nest of disease, and at once the nursery and sinctuary of vice. . . . Ther in any part of it ; so that here, where there is the greatest aconmulation of fith, there is the least provision made for its sat of six or eight smanli rooms, each of which fron contrins six beds; and it is no uncommon circnmatance for sixty persons to be sleeping in one of these loathsome abodeg. For the uso of these wretched beds (if such they may be
termed) fourpence or sixpence is reqnired per it hit; and it is a fact familiar to the parish officers that preat properties have heen, and still are ac, "ume " The wert port prish was the notorions Rookery, which may be described as the triangular space bonnded hy Bxiubridgestreet, George-street, and High. street, St. Giles's. The larger portion of this district was levelled previously to the building of New oxforl-street, which was opened in 1547. acightonring dens were recorged with a the denser crowl, and in 1848 a committee of the conncil of the Statistical Society reported on the state of the inluabitants and their dwellings in state of the inlabitants and their dwellings found them in the most deplorahle condition. Clio etreet was strewed from and to end with night-soil, sweepings of houses, decayed vegetables, ©o, and tho inhahitants were so closely person was calculated at only 175 cuhic feet,
the largest boing 605, and the smallest $5:$ Now 1,000 cubic foct of air are deemed necessary for a single prisoner in England, and So0 Thecommittee a soldier in a barrack in India racter of the inhalitants as follors:-1.st shopseepers, lodging.house keepers, publicans, and some of the undor landlords of the houses, who make considerable profit by letting rooms fur. nished and unfurnished. 2 nd. Street.dealers in dries; sweeps, lamife-grinders, and door.mat makers. 3rd. Jendicants, crossinc-sweepers, stroot-singers, persons who obtain a precarions subsistence, and country tramps. 4tb. Persons thioves, and the occuparts of honses of ill-fame 5 th . Young men and lads of ames varyine from eleven to thirty known as pieknockets and elaven theres of various degrees. Abont one-half of
thicher and tho inhabitants were Irish, chiefly natives of Cork. Mr. Horace Mann showed that, during tho six or seven years since the census of 1811 tho population of Chmroh-lano hal increesed at the rate of about 67 per cent., whioh maat have primoipally heen owing to the so-called "im. provenionts" of the neighbourhood. Mr. Mann also pointed out that many other parts of St Giles's were in as ansatisfactory a condition a we omit reference to the recapitulation need we omit reference to the particulars that have been given, from time to time, in these pages Hear, too, what tho niedical officer of the Hear, too, what tho medical officer of the
district, Dr. Ross, says in lis last report, just now issued:-
"Tramps, wife-desertars, beggars, picle-pockets, snd ref 2,000 of thes live as celebates. They are pevertheless prolific. A cons
giderable arnont of the sickness and mortality of St. Giles's, and a large proportion of the cost for supportiu ho pauperism, are caused by the ocempants of thes
honges. These lodging-houses are moreover the eeethin bot-beds of deprarity and crime, and beingadjaeent to th
habitations of the lowest elusg of our jabouring por babitations of the lorest elass of our Jabouring poor,
 lqbonring poor to satter these people from their haunts."
Only a limited numher of bouses harloonring them should be allowed in each district. By massing those outcasts together, as they are in humauising influences, and their noral corraption We becomes more aggravated.
We will now leavo the consideration of the moral condition of thio parish, and return to its topogriphy. The names of many of the streets hitants, as Whetstone.park, from William Whet stone, a parishioner and vestrymen in the reign of Charles II. :

## Near Holuorn lies a park of great renos <br> For brevity. s sake the name $\mathbf{I}$ shall not tel Because most genteel readers knot it

Wild-street takes its name from Wild or Weld Honse, Drary-lane, which was purchased from the hailder (Sir Eidward Stradling) in 1651, hy Eumphrey Weki, osq., a vestryman in 1669, and ancestor of the Welds of Lalworth Castlo, Dorset. suire. Short's.gardens were built upon the gardens attached to the mansion of Dudley short, an eminent parishioner and vestryman in the reiga of Charles II., and Brownlow-street occnpies the site of Sir Johu Brownlow's honse and gardeus, which were in part demolished abont the year 1682. Lewknor's-lane (or Late-nor's-lane), now called Charles-street, took its old name from Sir Lewis Lowknor, who was vestryman in 1618 , and subseribed towards the bnilding of the chareh in 1623 . If this place ever had a respectable existence it must have notorious for the profligacy of its inhabitants Dyot-street, celebrated in the song of Fusbos ("Bombastes Furioso"), -

## So happy to live mud to nie, In Dyot.street, Bloomsbury*square,

but now reduced to the insignificance of George street, obtained its old name from Philip Dyot who lived for many years at Dyot House.
Monmouth-street was long notorions as the ahode of Jew dealers in left-of wearing apparel and as the street in which the too well. known St. Giles's Cellars" wero chiefly sitnated. year 1845 its namo was changed to Dadley. street in the helief that a new name wonld give it a new start. Its charaoter, howerer, is but
litte altered, and althourh the cellars
now be glept in, the second-hand clothes and boots are esposed to view.* The old aame is generally supposed to have been giren to the street in onour of tie Duso of Monmonth, who lived in aho-square ; but Peter Canningham suggested fter Cares, more prohability that it was called 661, as he and his father had both been distin. aished parisbioners of St. Giles's. Tho present ame was given in honour of the Dpohess Dudley: who died iu the seventeenth centary.

Tt would be impossible within any reasonable iraits to mention all tbe celobrated persons who have beer connected with the parish, and we an, thercfore, merely give a fenv names, -as the Earls of Southampton, the Earls of Chestorfield, the Russell family, Lord Herbert of Cberbury, the Marqnises of Winchester and Worcester, the Dako of Montagu, and a large nnmber of other oblemen, Dr. Andrew Borde, Sir Kenelm Digby, ir Godirey Kneller, Drs. Mead and Radeliffo, Sir Hans Sloane, and Sir Richard Steele. Among he eminent persons buried in the church or churchyard of St. Giles's are the poot Chapman (d. 1631), to whoso momory Inigo Jones erected an altar-tomb at his opy expense; Lord Herhert of Cherhury (d. 16.S); James Shirley, the dramatist (d. 1666) ; Richard, or "Boscobel," Penderell, commonly called "Trusty Riohard (d. 1671), Andrew Marvell (d. 167S); the infamous Countess of Shrewsbury (d. 1702) ; and Sir Hoger Lestrange (d. 1701).
The parish of St. Giles has always been well sapplied with inns and places of ontertainment, and one of the earliest of these appears to have heen the Croche Hose, or Crossed stocking hich was kept by the hospital cook in 1300. Tho sign was a stocking crossed with red and white. The Swan on the Hop was another house of very old date, of the existence of which in the thirty-fourth year of Edward III.'s reion there is documentary evidence. Tbe Wbito Hart was in existence in the reign of Henry VIIL., and m mertioned in Strype's edition of Stow (1720). Dick Torpin and his accomplices met at this house. The Rose is mentioned in a lease dated 1675 , and was then more than 300 years old.
The Vine, which was taken down in 1817, is supposed to have marked the spot where the Fineyard in Holborn mentioned in Domesday Book stood. The parish meetings were held at the Maiderhead in the reign of Charles II., but after a time it decayed into a resort of begrars and desperate characters. The Cock and Pje gave its name to the Cock and Pye-fields, upon Fhich Soven Dials were huitt. The Tangier ramesters, and Cloted haunt of theros ant before he was buried in Corent Gardon Churoh in $\mathbf{1 6 6 9}$. Other inns might be montioned, but they do not merit muoh attention.

At the end of the geventeenth century, an attempt was medo to raise a portion of St . Giles's into a fashionable neighbourhood, and tho person to make this atternpt was the same an who proposed building Clarges-street Piccadilly. Thomas Neale, Groom Porter to the King, obtained a grant from tho Crown of the Cock and Pye Fields, formerly the Marshlands, nd commenced building the streets known as Seven Dials. On the 5th of Octoher, 1691 Evelyn "wert to see the building beginning eere St. Giles's, where seren streets make a tar from a Dorio pillar, placed in the middle of circular area, said to be huilt hy Mr. Neale, atroducer of the late lotteries, in imitation of those at Verice." The name was given to the place from a column in the centre, on the snm. tit or facing each of the streets. This colamn was emoved in July, 1773, and transferred to the park of a country gentleman. Provionsly to the erection of this column, the name was the Seven streots, as it is called in Hatton's "New View of London" (I7U8). Seren Dials hes a litoratnre of its own, and for many years the lorge supply of ballads and dying specchos, hawbed about the streets, has issued from this spot. Jumes Catuach, wbo lived in Monmonth-court, was the reat producer of this literature. He was the arst to use a hetter paper, and to print large editions of trials, aud in consequence he nanaged to amass a considerable sum of mones, large portion of which was said to have beon made during the trial of Queen Caroline. He made over b00., by Wearo murder and Har ell's execution, and not liking to lose so profit.
able a subjact, he brought out a broad sheet, headed, "We ARE alive again," which sold largely, but many did not like the trick put term which has stuck to the issaes of the Seven Dials press. The sale of execution ballads and Dials press. The sale of execution ballads and
last dying speeches and confessions was for last dying speeches and conessions was
merly very large, but the penny newspapers merly vory large, but the circulation of these broadhave now reduced the circulation of Rash's mur-
sides. Of the exeoution ba!lads of der, and of that of the Manaings, $2,500,070$ copies were sold respectively. only 100,000 copies were sold, other sources of information being open to the peoplo in the latter case. Catnach had a great dislike to buy-
ing new type, and he was up to all manner of ing new type, and he was up to all manner of expedients to save himself, such as turning letters upside down, and making $p, d, b, q$, stand the one for tho other. He mado his own woodcuts, or bonght such old ones as he could obtain. Most of Catnach's customers who were cadgers and hawkers, paid him pennies, and he made the journoymen and boys in his employ take their wages in coppers, so that on Saturday night they bad to get their wires and mothers to help them hume with their loed. Mis neighbours, howeror, would not give him silver for his copper, as they feared contagion in his which it had come to him. In consequence ho was obliged for a time to take his pennies largo bags to the Bank of England in a strong docootion of potash and vinegar, which cansed them to look as bright as Whon they came from the Mint. Catnacl of between threo and four thonsand pounds. The business of the Catnach pross has becn carried on by, first, Paul \& Rislo; secondly, A. Ryle \& Co.; and, thirdly, W. S. Fortey, wh more than 900 reams. The anthors of these more than 900 reams. The allthors of these edifying productions obtain hat poor pay, for the ballad have a great salo, the "poet" mny bo rewardod with a tride
no claim to such liberality.

## no claim the contrast is so great

The contrast is so great between tho pleasant village of St. Giles, and the poor parish of St Giles, that it of neoessity points a moral which
he that runs may read. It is sad to find a district given np for conturies to misery of the most clebasing oharacter. In Queen Elizaboth's reign, wo fud the same crils complained of that
exist now, and the miserable condition of the place is scen to he the same when drawn by the pencil of Hogarth, and by the pen of Fielding, in the last century, and those of the Statistica Society and the Builder in the present century. The bistory of St. Giles's exhibits much that is worthy of serinus consideration; but it will two points,-first, the impossibility of arresting Dy small efforts the natural decay of an illreputed district is exhibited in the failure of the attempted creation of a fashionable ncighbourhood at Seven Dials; secondly, the so-called improvement of a bad neighbourhood by driving
a now street throngh its worst parts, withont further arrangements, is often an evil instead of a grood. When at the building of Now Oxfordstrcet a portion of the Rookery was destroyed, was supposed that the neigbbourhood had been improved; but we have secn that the poor were only driven closer apon tbemselves. The olearsidered satisfactory unless some place is preparo for the inhabitants who are turned ont, and we nave urged for years the necessity of doing this Great improvements have been made in St, Giles's of late years by the Local Board of Works has been reduced, hut much more remains to be done. All that bas boen hitherto effected has been brought ahout by gradaal improvement; but really to stamp out tho great evils it is necessary for a large and combined offort to he made. A clean sweep is reguired, hut not to
make wny for a better class of people. Healthmake way for a better class of people. sollings must be huilt on a large soale for the present inbabitants.

Salishury Cathedral. - In the west front of this cathedral, two new statucs, the gift of private munificence, bave just been fixed. One
of them hears the name of St. Remigius, Bishop of Rheims, in the sixtb eentury, who baptized
Clovis.

THE CLEANING AND PRESERYATION OF PICTURES.
THE great master, Nature, creates and then erases his beautifal works. In the full conserve. What he has done he can do apnin Beauty passes through its transient phases looms fades, decays, and dies. Tho lesser rtist man is more soliotous about the pre servation of his works, - the works which hape cost him so much study and labonr,-and, fearing lest such heights of exoellenco shall never more be attained, takes overy means to preserve his "little best," in order that it may be handed down to posterity. Whather the zeal with which he struggles against fate and oblivion be praiseworthy in the eyes of wisdom we shall not the preservation of Society has decided that the preservation of fine pictures is a sacred drity. If it be, we can only say that some piotures have been fortimate in escaping its preserving, restoring, and tender mercies. We have been
behind the scence, and know full well what "pioture cleaning and restoring," in its ordinary picture cleaning and restoring,' in its on,
A picture is a most delicate structure. thing can well be more easily injured. It is to the extreme veneration and caro of an art-loving pople that the preservation of the finest works of the old masters is due. Something of this resbness is perhaps attributable to the nse of simple vehicles aud colours, and to the unhesi. tating mode of execution, hat far more, we belicve, to careful custodianship. Modern pictures are knocked about from dealers to anction marts, from auction marts to dealers, ulfed, 11 calculated to improse either their constitutions or their ontward appearanoc.
The mere washing, with pure water, of recently-painted picture, will, if it is not done with tho greatest possible care, sensibly injure

The final thin glazes and paintings are asily removed if sufficient time has not elapsed for them to become thoroughly dry aud hard. Farnishing at this period is even more destruc. ive, and we have seen the varnishing-hrush logged with the disturbed paint of piotures arnished at too carly a stago of their exiatence. Modern pictures, however, are frequently submitted to this injurious process within a short time after their completion, to give them a glossy appearance, and to prepare them for sale and re-sale, as they come into and pass out of he market again and again. We would comnsel their pictures to be either cleanod or varnisbod, orcept under the advice and anpervision of the painter himself; or, failing this, of some wrist of experience and ability
The works of Sir Jorshua Reynolds would not have been the wrecks they, for the most part, are, had it not been for the reckless cleanings which they have undergone. There is scarcoly one in ten of his pictures which has not been flayed by unskilfu! and unscrapulous hands. His pictures were the morc susceptible of injury, the more vilnorable, from tho fact that be was inconstant in his mothod of painting, and coninually experimenting with pigments, vchicles, and varnishes.
All the pictures of the old masters are by no means equally redoubtable againat the attacks of "eleaners and restorers," as many a cloaner has learned to his cost. We recollect one of tho fraternity, and of very great repute, rest his soul, who lad a very large share of the picturedinging of the country committed to his hands. This worthy man in every respect, save when lot loose upon pictures, would rejoice when he had discovered the discarded sky of an ancient landscape pninter, by removing the Ginal work and decision of the inester. At last, however he was rash enough to apply some of his strong solvents to the thinner painting of Yelasquez, and the consequence was, that a larce and well known picture was half swept from tho canvas, The injury was, however, repaired, hy a skilful painter, and it is now in tho list of our speci mens of undonbted, oririnal, masters. We wonld neither allow the pieture of an old master nor of a modern painter to bo tonched, cleaned, or varaished, without grave deliberation,-without oonsnlting with or en-Picture-cleaning bus advanced, and is hetter nnderstood now than twenty or thirty years careful than they were; still, they frequontly do
too much, and are not suffisiently painters to dispense with artistic direction
We doubtless set too great a storo upon collecting ancient works of art, and aro carrying our collecting mania to a ridioulons exoess. Quatity is of far greater importance than quantity in ond weeded with considerable advantare.
We should advise the contraction of all our National Art Exhibitions to reasonable and symmetrical proportions. We must get rici of our absurd tend nnoy to copy foreign institutions, and tako an indepondent conrse. We must no longer jump to the conclusion that it is right to have colossal exhibitions of works of art, because France, Belginm, Germany, Italy, or Spain has them. Italy may be truly gaid to be one gigantic gallery, and yet moderr Italian art is not in advance of the less favoured nations. Canova's reproach that "we still holds. We are moved in art matters by "loud talk," instead of looking for ourselves and seoking the advice of quiet understanding. It is anfortanate that npon these matters, as upom most others, the ignoramuses more readily listen to or read the ontpourings of a charlatan than the man who thorowghly understands what he is either talking or writing about. This human trait, this English trait, is perhaps moro palpable in qucstions of taste tban in those appertaining to other snbjects. Painters and sculptors, nore than any other class of professional men, are doomed to ho lectured by the ignorant, witbout any qualms upon the part of the lecture that ho is offending against wisdom and good manners.

THE SOCIAL SCIESCE ASBOOIATION IN NORWICE.
The congress has been auspiciously opened and promises in many respects to be especially usefhl, Lord Houghton, as president, grave the inaugural address on Wednesday evening, and travelled critically ovor minoy subjects. We
must confine ourselves to a few passages, commencing with his too brief allusion to

## Sanitary Matlers.

No practical progress, he said, I fear has been made in the vexed question of sanitary reform. fresh disaster and moral diflicilty. The conflict of powers can only be averted by some absolate authority, and even when that anthority is esta blished, it too often refuses to move. There could be no better evidence of the exigencies and eubsrrassments of the present state of things than the story of the Bill which Mr Powell and Sir Charles Adderey introduced during the late session. It was evidently supported by the Government; bat the now arrangement which prevents any fresh matter froun being brought on aftor half. past twelve having delayed the second reading, when it bad passed the next stage the session was too far advanced for any further procedure. The loss of this measure is mach to be regretted; it would, among other useful enactments, have gisen to rural sanitary anthoritics the powers of making bye-laws and of compulsory purchase which are now only possessed hy the urban authorities, and would have enabled the Local Government Board, by order, to supersedo the sanitary arthority in cases of nomperformance or neglect. It will, perhapa, be fomnd necessary iu future legislation on this pressino subject, to givo to a mach smaller proportion of the inha bitants than is 10 reqnired the means of setting the Local Govornment Buard in motion, and awners must have more power to act inde. pendently of their teannts.

## Competitine Examination.

The opening of the public service to general competition has been hailed hy a large portion of the public as a wise and generons enncession on the part of the governing claqses in the surronder of official and private patronage. Per haps if it were more generally understood bow felt to be by public men, and hoss, with the rare exception of being able to satisfy private frierd. ship and promote obseure merit it hriogs with it neither pleasure nor pratitude, they wonld not be surprised to hear that it has heen giren ap be surprised to hear hat has heen given mp aubject will form part of yorr aectional prooeed ings, in which I may bave the opnortunity taking part, I will content myself with the
observation, that we may have too much regarded this innovation in its relation to educa tion, without comprehending its political sig. nificance. Before its establishmont the service in the puhlic offices was performed hy a very diversified hody of men, nominated hy heads of departments, peers, members of Parliament, and other persons who might chance to possess political intuence. They were edncated to their work in their separate offices, and performed it with ereditahle efficiency. One effect of this patronage was the dispersion of theso appointments among all classes of society hnt it was the poor and nnfortunate who, by the interest their position excited, obtained the largest share. Another consequence was, that the pnllic servants formed no cohesive body with common interests and common claims. The Civil Service is tho creature of Competition. Low far it will add to the general content and happiness of British Society remains to ho seen. It may possibly result in the existence of a class ill satisfied with their remuneration, chafing at conscions that they started in lifo with no obligations except to those who supplied the money for their tutorship (and education of this kind is, for the most part, a matter of money), and to for the most part, a matter of money), and to their own faculsies of memory and rapid apprehonsion. Whether they will he especially patriotic and pablic-spirited as becomes the I will not the State, is another question which I will not attempt to answer. Within the last ewp weeks the competition is extended to all the departments of the IHome Office, to all clerkships in the offices of the Commissioner and Receiver of Police, the Inspector of Reformatory and Industrial Sehools, and the Directors of Convict Prisons, as well as to the Junior Sub-Inspectorships of Factories, -services that hitherto have been thought, if not to demand, at any rate to be the better for, some special qualities which examinations cannot test, and some moral characteristics which are not the suhjects of marks and figures. How long the Foreign Office will he allowed to retain its limited nomination I canot tell, if we are to moasure the appreciation of the value of those merits for which it is
eminent by the disregard implied in the indis. eminent by the disregard implied in the indiscriminate opening of other departments which might have been supposed equally to
perfect confidence and high discretion.

Speaking of the development of the principle of cooperation in rural industrics which seems to have taken place in the Western States of America, of such cxtensise proportions as may affect to a great exteut the social relations of vast numbers of those rapidly-increasing populations, Lord Honghton eaid:-They propose to supply the whole agricultural community of the far Western States with overy article of food, machinery, furniture, and dress, withont the intervention of any middle.men whatever; and, if they cannot acquire sufficient power over the present railray system to compel them to submit to any terms they choose to dictate, to establish an exclusive railway system of their own. As long as a combination of this natime is carried on solely hy constructive and even repressive means, there is no ground on which find the teudency of all such schemes to he aggressive, then they require to he watched with archical tyranny has heen gruarded against and pat down in fornier times. The saying that the "despotism of the one is p-eferahle to the despotism of the many" is so far true that the one, or even the ferr, can only nssert and main. tain their anthority throngh the medinm and many the assent of the many; whereas the over the few. From the smallest strike to the vastest democracy, this is the dangerous principle which every lover of human liberty is principle which every lover of human lo coutend against and to modify, if he is nnable to put down. It hes to be adroitly managed, and to he treated with carefui restric. tion as were the governing powers of old, and, in the process of events, it may come to be it he excused, or concouraged. or even elevated into something sacred hy a kind of surreptitious into something sacred hy a kind of surreptitious loyaty, which is just as unreasoning and as ser. vile as the adulation of a bad king or a dissolute oligarchy. Do not palliate its violence, do not evcuse its power; bows to it when yon con do nothing else, with the sense that it is the right of the
strongest, hut do not idolise it into a superior justice or transcendental henevolence. It is thus that a trine Social Scionce will regard the thoughts and hopes of Socialism. If it can work its way hy legitimate influence on the minds of men, if it can divorce them from old associa tions, if it can lay a new foundation of philan thropy, if it can open fresk channels to in telligence and new paths of virtre; it deserve. neither repression nor contempt, nor should it be judged wholly hy its excesses. The horrors of the Paris Commnne are on worso than those of the St. Bartholomew or the Sicilian Vespers, and there have heen plenty of mad resistances in history parallel with those now going on in Spain. The ultimate judgment will depend not on whether such things aro done, but whetre dency to of tho consideration of the merits and virtues of the schemes themselves. A pretension to right society hy destroying society is simply nonsense.

## Land Laws.

There is evidently something ahout property in land which peculiarly affects the imagination of mankind; but there has never hecn in this couutry the hunger for the soil which has occa. sionally maddened foreign peoples; and there has heen a general devolution from the fencal the friend and protector of mastled estates. It is for better historians than I am to inform you how it came ahout that the land of England hecame the property of comparatively few hecame the property of comparatively few France has been divided into an immense num. her of peasant ownerships, not, as is commonly believed, by the violent confiscation of the Creat Revolution, but for centuries before. The Revolution relieved the small owner from the mposts and foroed lahour which he was hound to give to the "seigneur," hat otherwise made tion of small postions of land been with us tion of small poations of land been with us for instance, with the statesmen of our northwestern connties, either in the improvement of the soil, or the socinl clevation of its possessors. Agricultural work for certain wages, and
teuanoies.at. will,-modified by the cnetoms teuanoies.at.will,-modified by the chstoms
of different districts, or by oontracts in the form of leases, - have hitherto well satisfled the wants and views of our population. Bat speculations altogether of another nature havo heen started by a small, though energetic, class of politicians, and have received some considera-
tion from what may he called higher and more competent thinkers. It is not easy to attach any definito idea to the word "nonopoly" in connexion with the possession of land, which is so frequently in the months and writings of
these reformers. There is no compulsory re these reformers. There is no compulsory re striction or legal impediment to the possession of land by any numher of persons, provided there is somehody to sell and somebody to hay and the fewness of the owners clepends entirely on social and financial, not on political canses. The historical and local concentration of a large amount of land in the hands of certain members of the governing class has come about, at least for any period of time which can he seriously Fiolence to intmencing tho question, without injury to the feelings of any portion of the community. It is an investment of capital, like another, mado necessarily hy wealthy men, the retnras being comparatively small and uncertain, Whaterer limitations or peculiar conditions are attached to its possession, are parely voluntary, and affect, no doubt considerahly, certain other persons who stand in family relatious to the possessor, but no one else. Eren these may and will be done away with, as soon as the parties interosted are sufficiently eager for the change to form a distinctive public opinion on the matter forward his Bill for the assimilation of landed and personal property in cases of intestacy, a measure not only nnobjectionable in itself, but eminently useful as the abrogation of the only statute which, though depending itself on voluntary action, somewhat favours the rulgar notion of a compulsory law of simply becanse anourh porsons have not died intestate co mich sense of thing from the oligation - of setting land on person yet nohorn, and which, even in the case
of a son, has no earlier origin than the forensic ubbteties of the sixteenth century, -for the law of England ahhors perpetnities,-will probably be soon suhject to further limitations, quite as much in the personal intercsis of the private ownor as for any projected national advantage. Thore is, however, no greater fallacy than to helieve that improvements of the land are materially cheoked hy our present system of settlement. The capital invested in them is attracted there quito as much by solicitude for descendants as by the hope of present gaic. The material advantage is, in short, very distant and problematical, and if the professor thought of nothing hat his own proit, his interest mould often lie rather in oxhausting the soil than in developing, at a present sacrifice, its future powers of prodnction. This viow is well stated in Lord Salisbnry's able Report of the Committee on the Inprovement of Land in cases of settled estates. The recommendations of that committeo will probably result in a Bill for the extension of the power of trustees to spend trust-money upon the improvement of land on redeemahle mort gage, and eazblo limited owners to lery a charge 10r improvements, redeemable within a certain period exceeding the average expectation of ife suhstitute his or their expectations for his oyn.

## THE DEST DIFFICULTY.

Tex $\{$ t. Pancras Works Department has ostablifiod a very effective mode or ohviatiag the difficulty of getting dust removed from the bouses in the parish. Whenever complaints ar received at the ofice of the non- emoral of dus from any honse, the work of remoring it is at once given to a contractor especially engago work, and the cost of who is nevy to the work, and the cost of remoring the dust (68 each load) is deducted from the amount paic to the parish coutractor.

THE RUINS OP BAZ̈LBEK AND THEIR PRESERVATION.
Sore two or three years have elnpsed since you allowed me to call the attention of youn eaders to tho perilous condition of these grand emains. Almost unrivalled in the magnificence f their original plan, and still to be olassed among the most impressive and picturesque roups of ruins in existence, these temples are rapidly heing lost to the world. Of all tha remains of the great Temple of Baall (now, alas but six splendid colunins), wo may safely predict that the next generatiou will see rothing but the fallen and broken fragments. I caunot assert that it is possible to avert this disaster for many pears to come; but I am now able to give to others, more competent than myself, the oppor tnnity of judging whether it is or is not possible o to do
The comnittoe of the Palestine Exploration Fund sugrested to the oficer commanding theis surveyino party, Lieut. Conder, R.E., that he shoald employ some of the time during which the excessive summer-heat compels a suspension of the out.door survey work, in preparing a carefn] report of the exact state of those portion of the Bazllek ruins which see
That in danger of destruotion.
That report I have the pleasure of for warding therehy be brought to the notice of those hest able to judge of the peril of a monument whose loss they would be the first to deplore.
J. D. Ctace.

Report on the Condition of the Temnle of Jupiter and the "Six Columns" at Baullbelk,

Bludañ, 22 nd August, 1873.
Sre, Having, in accordance with the orders of the committee of the Palestine Exploration fund, risited and examined the ruins ol we eport for their information, aud for that of the Institute of British Architects :-
My attention was directed to tbree principa objects.

1. The condition of the keystone of the great lintel of the Temple of Jupiter.
2. The condition of the peristyle of the same
3. The condition of the six remaining columns of the great Temple.
4. The eastern doorway of the Temple of observe any indications of the present danrer $J$ lipiter is 21 ft . wide and 42 ft , high in the exbept from the jar which the fall of the smaller \&ene. The jambs are hago pilasters, in three stoncs of the cornioe might give. The other denr. The jambs are hugo pilasters, in three
stoncs of the cornioe might ses containing interior staircases. The
blocks of tho lintel appear to be safe. The fall lintel consists of three stones, the central key. of the keystone is probably attribatable to the stone being slightly taperod, as in an arch, and removal of tho metal cramps, nnd to subsequent apparently once held in place by metal clamps The stone is a hard, compact, non-fossiliferous, white límestone I hove taken its specífic Wiavity rouchly at 2.5 , in order to approximate
the various weights, but send hone a specimen

## Plan of the Lesser Temple, or Temple of Jupiter

ro allow of their being more exactly determined, The keystane measures 10 ft . 10 in . in length, of 6 ft . 5 in . It mist, therefore, contain approxi. of 6 f .5 in . It mist, therefore, contain approxi-
gnately 858 cubic feet, which will givo a weight smately 858 cubic feet, which wal
$\times 1340.525 \mathrm{Ib}$, or about 60 tons

Gection of the Great Portal, showing the slipped Heysione.

The above sketch will show the present condition of this stonc. It has slipped down rather more than half its depth from its position, and on the south side only about one quarter of its side bears agrinst the otber block, which is broken away below. A wall of roughly-squared stones, about 1 ft , cube, in mortar, has been built under the keystone by the Turks, and appears to be a suitablo and sufficient support The only objection which can be made to it is the eagle invisible. Should it be proposed to 'raise the lintel to íts former position, the supor. incumbent stones ench weighing about twenty or thirty tons, must first be removed. I did not
from
Following the numbers on the attached plan proceed to describe the north side first
Judging from a fillen column, tho heights are as follow :-

|  | ft . in. |  |
| :---: | :---: | :---: |
| Fírst stone | 295 | Shaft, |

| Baso | 3 b |  |
| Total . | 5710 |  |

The diameter of the base is $5 \mathrm{ft}, 7 \mathrm{in}$, and at the capítal, 5 ft
I may note that the dimensions given in "Murray" for both temple and pillars are too great
Tho intercolumniation is $8 \mathrm{ft}, 10 \mathrm{in}$, and the width of the peristyle, in the clear, the same. The wreight supported by each pillar is that of columans, a length of 14 ft .5 in from centre to centre, and half that of the roofing for centre to leagth These are easily calculated the same leagth. These are 3 the slabs are 3 tt . thick, and allowing for the bear-
ings, 12 ft , wide. This gives approximately 522 1 g s , 12 ft , wide. This gives approximately 522 cnbic feet, or 81562.5 lb . Thus the weight on the pillars is nearly $18 \frac{1}{4}$ tons,

The section of the cornice

## ENTABLATURE

 may, for simplicity, be taken as givíng an area of 86.25 square feot For 14.5 ft run, thís gives $1,2506 \mathrm{cn}$ bío feet, a weight of $19,540 \% \mathrm{lb}$., or about $87 \frac{1}{2}$ tons.Thus each pillar bears a crushing weight of $105 \frac{1}{2}$ tons on an original section of $26 \%-1$ square feet, or 4 tons per square foot The centre of gravity of this weight is casily calcu. lated, and will be found to pass through the centre of the pillar
Column No. 1 (see"sketch), is leaning slightly ont of the perpendicular towards the west. The first stone is slightly shattered, and the material is cut away on the north-east side to the centre half thoss, in such a manner as to leave only cubic contents of the part destiosed which of irregular shape, will be equel to about 4 crbic feet
This column is therefore in a critical condition liable to fall ontwards, and bring down that part of the roof and cornice which it supporta The
excaration has been made on that side on which the weight is greatest, and the pillar docaying from natural causes is weakest. I observed no injury to the higher stones of the shaft

No.2. At the bottom of the lowest stone a piece has been cut out, as shown, not extending quite to the centre, and having a cubio content of about $6 \frac{2}{4}$ cnbic fcet. The remaining stones are safe, and the pillar is sccure from toppling, but a portion equal to a half cylinder of radius, 2 ft .3 in, must be subtracted from the beariner area of the shaft which resists the crushing weight above
No. 3. On tho east side a portion is cut out at the bottom of the first stone, extending inwards 3 ft. , or past the centre of the column ; mean height, $1 \mathrm{ft}, 3 \mathrm{in}$., mean breadth, 1 ft .7 in. cubio contents, nearly 6 cabic feet. It appears as if the weight above were too great for the column, whicla is cracked from the sides of the oxaavation nearly thee-fourths of its circumference. This may be only a superficial injury but does not seem due to weather action alone.

No. 4, The depth of the excavated portion a the bottom of the first stone is very great 3 ft 8 in (with a diameter of $5 \mathrm{ft}, 7 \mathrm{in}$ for the shaft) ; mean height, $1 \mathrm{ft}, 1$ in, ; mean breadtl? 2 ft ; cubio oontouts, uearly 8 cnbic feet
No, 5, Length of excavated part 3 ft, ol greater than the radius; mean breadth, 2 ft . mean height, $1 \mathrm{ft}, 6 \mathrm{in}$, The first stone is als shattered slightly (app, 9 cubic feet)

No, 6. Length of excavation, $2 \mathrm{ft}, 6 \mathrm{in}$, or not equal to radius ; mean breadth, 1 ft, 9 in ; means height, $1 \mathrm{ft}, 8 \mathrm{in}$, ( $7 \frac{1}{2}$ cubic feet). These columns, Nos, $3,4,5,6$, all stand perpendicular, in good line, and their upper stones and capitals are in good pleservation, The shape of the excavation is roughly that of a half cone in ench case, heing the least that was possible for the end intended namely, the extraction of the central metal dowels.

No 7 The excaration at the base is on the east síde, and its cubio contents about equal to a quarter of a sphere 4 ft diameter. Just above the excavation is a horizontal crack extending about half round the cironmference, and no doubt due to unequal pressure (cabic contents of excavation, 1, cubic foot)

No 9
Yos, 8 and 9. A portion of the bottom of the first stone on the north side is exoarated, a larg blook from the roof has fallen jus within the circumference of the anth column, and the excavation thus olosed appears full of rubbish The pillar has cracked close to the excavation in No 9 , on the north side, at the top of the first stone a large flake has been taken out; its area will be about a third of a cone of 2 ft . 2 in radins, and of a height of 5 ft . The condition of thís pillar, weighted only on the srest side, appears to me to be crítical.
The general conclusion arrived at is that the tifo outer columns, bnt especially No. 1, are in a dingerous condition; the next to them are cracked and overloaded; and the remainder, though at present safe, would suffer in the same manner from nnequal loading on the fall of tho outor columns.
The condition of the entahlature is also unsafe the architrave is cracked across between Nos, 3 and 4. The projecting cornice seems, as far as can bo judged from below, not to be bonded into the remainder, and between Nos 9 and 8 it has fallen and is replaced by small masomy in mortar; between 1 and 2 it has also fallen,
and portions are slipping hetveen Nos. 3 and 4 and Nos. 55 and 6 . This cornice consists of of single blocks, from pillar to pillar.
Tho roof on this side is perfect thronghout, except between Nos. 7 and 8 .
On the west side of the temple three colnmns remain, supporting frieze and architrave, but roof and cornice fallen. Nos. 17 and 18 an chipped one-fonrth of their diameter in depth on They may, however, be considered safe. On the sonth side also, though chipped and slightly shattered, the column appears in no immediate danger; the weight, however, of the tower danger; the weight, however, of the tower
inbove this portion is very considerable; nor do I understand how this subsequent addition, not I understant how this subsequent adding into the original design, can he in any entering intu the ortginal design, can he inminy way beneficial. It has been sad to "diminish slight that any thrust to which the columns are slight that any thrust to which the columns are
subjected must be more than counter.balanced sy tho weirht of the entablature.
It would, I think, be well to remove this turret, though a work of some difficulty.

## the six columins.

The diameter of these columns is 7 ft .6 in . the base; the beight, according to Mnrray,* who gives diamcter and entablaturo correctly, is Th ft., including base and capital. The entab. Intnre is exactly similar to that of the former temple, and its centro of gravity is at a distance of 3 ft .3 in . from its north side; thus bringing the greatest weight on the sonth side of the columns. We give an outhine sketch of the group.
The columns are exposed, from their position, to the fall force of northern and westerly gales, and have suffered far more on these sides. They are shattered from top to bottom, and flaking of rapidly; they appear to bave been suhjected to he effects of frost as woll as of rain and wind. instead of a large central one; and there seems ood reason to suppose, from the extreme smooth. ness of the faces of the planes which were in eontact on the upper and lower surfaces of the shaft blocks, that preater security was sought by the adhesion which would result, and make the toppling of any hlock from the one beneath the toppling of
less possible.
No. 1. Commencing from the west. - Two pieces excarated jnst above the base, being each equal in bull: to a quarter sphere of 1 ft . radius (app. 1. ath cobic foot), the greatest depth to Whicl eitrier pcrotrates is 2 fl. 3 in. A llake extend. ing upwards from the lase 10 ft . and giving in about $1 \mathrm{ft.also}$ appears. A large
portion of the base, extend. portion of the loase, extend. ing the whole beight on the north side, is als cracked off. It contains about 70 cubic feet.
The column is apparently in an unsafe con The c
No. 2. An excaration has beeu made 2 ft .6 in . high, 2 ft . deep, and with a mean width 3 ft .2 in . It contains probably about 15 cubic feet. All three of the stones in the shaft are shattered and Haking off on the north side.
Nio. 3. The north-west corner of the baso hlock is rracked off, appareutly by weather action the piece containing 56 cubic feet, 2 ft . hy 4 ft ., and 7 ft . high.

A Bake, reaching to a height of 4 ft .2 in , from the base, is fallen from the lowest blook; a piece varying from 2 ft .2 in , to 1 ft .10 in . at base has heen cut off across the pillar. On the north-east another flake, 10 ft . high, has come off. The second stone is much weathered on the north side; and a flake about 1 ft . thick, extending uver oue-third of the circumference, has been

[^8]peeled off, its height heing nearly three-quarters of that of the block on north.east side.

No 4

No. 4. This pillar is very infirm, large Hakes have fallen off, and the cracks show that more will follow. At tho hottom only about half the diameter is left for bearing.surface; and one of the dowel-holes is visible. Excavations have also been made into it on the north side, and a flake 6 in . deep by 6 ft . high has come off on the south The outline is much as shown in the sketch.
fo. 5 has a piece chipped of the corner the base block, 3 ft .10 in . high, $1 \mathrm{ft}, 6 \mathrm{in}$. doep, of the shaft is ing height, extending 3 ft . inwards, is taken out of the lowest block.

No. 6. No pilar among the six is so shaky as is the last; it is Th
 evidently giving way, and its fall is not unlikely to bring down No. 5. This fall may very pos. storm. Underaeath the base a stone is abstracted, measuring $3 \mathrm{ft}, 6$ in. by 2 ft .8 in . by 4 ft 4 in, appareatly $40 \frac{1}{2}$ cubic feot I in., appareany $40 \frac{5}{2}$ cubic feet cube, the other 2 ft . 4 in. by 2 ft . 4. in. by 2 ft . in height, are cut into the lowest block of the shaft.
The highest stone is cut away
 under the capital for about one. third of the diameter of tho shaft on the west side, where the weight of the entablature presses, A
chip 10 in. deep rans rond the bottom of the lowest block for nearly two-thirds of its circumference, and as slice 2 ft thick fft 4 in by 5 ft is taken off the base on the east side.
More ominons still is an ugly crack in the capital, which is subjected to the orushing weight of the cornice without any support beneath.
The architrave is also in a perilons conditiou; hetween Nos. 1 and 2 it is cracked across, as also hetween 3 and 4 it has a long crack parallel to its length, and is only miujured between 5 and 6 .
There is nothing special to report as to the condition of the wall on which the columns stand.

## Notes on Preservation.

The detailed account of the condition of the roins will be by far more valuable than any suggestions I can offor as to their co

## din notes may bo interest.

blar as pos. sible to use the materials existing on the spot.
Stone may be obtained, in any quantity, within the ruins or in the quarries.
Lime.-The surrounding country consists of a soft chalk, y ielding a fair kind of lime. A large kiln exists near the town. The native mortar consists generally of pure lime.

Wood.-Baalbek is surrounded with gardens of poplar, in great abundance, growing from 30 fc , to 60 ft . in height, and varying from 6 in . to 10 in . diameter at the bntt. The wood is of good quality, nsed for roofing, and resists well a crnshing weight. Scaffolding of this material would be satisfactory. The wood is grown for sale, and grardens might be boaght and feiled some montis before wanted for use. Should the local supply be insufficient, breat quantities can be found in any direction within a few hours march. Price from 2s. to 4 s . per tree.
Iron.-Metal is precious in the eyes of the natives; bat I see no reason why it shonld not be used at the great heights where it is required most. The clamps for the lintel might be painted stone.colour, and would thus be mnnoticed hy wandering depredators, who would want the
means of attaining to the height at which they would be placed.* ${ }^{*}$
Cranes.-Before attempting any thorough restoration, it wonld be well worth while to send ont one of the sraall steam.cranes and travellerg nsed in public huildings in England. Without such power very little wonld be done of permanent use. To send this plant hy sea to Beyrout, and thence along the French road, and up the Bŭkai plain, on a strong-wheeled vehicle, to the very ruins, would be easy, and appears to me indispensable.
Labour.-The Fellahin might, nnder a negro overseer and European director, be very useful their wages should be 10 d . per diem. For exca. vation, the native donkeys, with baskets to hold earth, slung as panniers, wonld be the best tweans of removing the rubbish. Price of a doukey, 10d. per diem.

Lieut. Conder then goes into the question of how best to proceed with preservative work, if snch should be undertaken. He then continues, In concluding my report, I may say a few words on the points of interest noticed in our visit.
The two great vaults, with semicircular arches, which support the platform (rumiag parallel) have many Roman inscriptions on the keystones On. Wa these, Divisio moocyr, is noticed by to faddington, but we were fortunate enongh "Divisio" the other vault the same word date. This ith an illegible name and an obscnre

This indicates that they lead to two separate divisions or quarters of the inclosure in Waddineton, thour persa fitto im in waddin
portance.
tho beautiful wall on the north side, where all the stones (with shallow draft and finepicked faces, as in the best work at Jerusalem) appear ins situ, shows numerous common Greek masons' marks.
The three great stones in the western onter wall rest on two courses of smaller, and on a foundation with a sloping set.back immediatel intervening. This has (somevhat absurdly) been called "The Phoenician bevel," and the blocks supposed of Phcenician oririn.
The tool work, and method nsed in transporta tion, are similar to the rest of the masonry; and I am nnaware of any reason beyond the size for supposing them older. The builders who could poiso the great shafts and entablature of the temple of Baal 75 ft . from the gronnd must have been fully able to place stones 64 ft . long at the lower level they oconny.
In searching together for masons' marks, my attention was directed by the Rev. W. Wright to a stone in the course below one of the huge blocks in question, the face of which was curved. On digging we found that it seemed andoubtedly a columa shaft, flattened on two sides, and built in horizontally. It rests upon another stone beneath the surface. This discovery, whilst militatiog against the notion of Phoenician origiu for the great stones, shows how highly desirable a thorough investigation of Bailbek is to be considered. In the interior there must he from 8 ft , to 10 ft . of rubbish, which cannot faik to hide from us fiue statues fallen from tho count. less niches of temple and conrt, coins, and perhaps sacred treasures, or inscrintions serving to unroll the cloud of mystery which hangs oper the noblest ruins in Syria, perbaps I may say is the world.

Claude R. Coxder, Lit. R.E.
In cominand Survey of Polest ine.

MANCHESTER WHOLESALE FISH MARKFTS.
We add to the illustrations and descriptive particulars of the new markets in Manchester already published,* a transverse section looking towards the natrow end of the bnilding. Besides showing the construction of the roof, this serves to make more clear the arrangement of the cellars and ice-honses, and the position of the upper olfices provided for the larger salesmen.

* Lieut. Conder is too hoperal. The irou could not be kept painted, and the Arab depredators would blow up (or
doma) the whole structure to gain the value of $s$ few gold coins.-J. D. C.

THE ARCHITEOTURAL COURTS, SOUTH KENSINGTON MUSEUM.
tranan column and the portico de la glorla, santlago de compostella
Thene are some impressions that can scarcely ever be effaced. Innumerahle "things o beauty" may be seen in tbe course of a lifetime;
but many of these crowd upon each other, and, but many of these crowd upon each other, and,
competing for remembrance, obliterate rocollection altogether, or only leave impressious that are hazy and indistinct. There are some ex. periences in life, however, in which the objects presenting themselves for observation or con-
templation are so striking, it may be unique tomplation are so striking, it may be unique
also, as to defy competition in the effect they also, as to defy competition in the effect they
produce upon the mind, and the imprcssion they make is indelible. Sucb experiences, for instance, as tbe first sight of the Crystal Palace of I851; the first entrance to Notre Dame, Paris; the first glimpse of Mont Bianc. Notwithstauding the immense distance between the objects we
have named and the new Architectural Courts in the South Kensington Museum, we shall not be far wrong if we place the remombrance of the pressions likely to remain. The boldness of the idea, the height of the apartments, the magnitude of many of the objects with which they are filled, and the beauty of others, all concur to produce long by 60 ft . wide. The height to the spring of long by 60 ft . wide. The height to the spring of
the ceiling is $72 \mathrm{f}, 6$ in., and to the centre of the the celing is 72 ft .6 in , and to the centre of the ceiling 83 ft . The width of the corndor is $1 / \mathrm{ft}$. affinity with that of Rome, but is modified in certain details of bases, capitals, and mouldings. The ceiling is a framework of wood, the timbers being laminated, The sallories are supported The baluatrades are of terra-cotta. The principal lighting is from the roof, and very effective Round the walls, under the galleries, are the names of architects of all periods, and on a border, near the eye, are the names of cities in
which, collcetively, examples of evcry style of arehitecture are to be seen. The architectural scalpture of the great Renaissance masters of France is illustrated by a few bas-reliefs, and there is one example of the illustrious Italian,
Benvenuto Cclini. The conrts were erected Benvenuto Cclini. The coarts were erected from the designs and under the superintendence James Wyld.
Une of the most remarkable and imposing of the casts is the full-sized reproduction of the Trajan column at Rome. The original dates and its sculptures orderod, by tbe Roman senate to illustrate the two Dacian wars, and to receive the ashes of the Emperor Trajan, to whom alone the comans gave tho title of optimus. The
bas-reliefs have been taken from a series reproduced in metal by direction of the late Emperor Napoleon III., and are built round briok cylinders. At the hoight of their position their carefill study is ditticult, but the galleries afford tures not only illustrate the Dacian wars, but tures not only illastrate tbe Dacian wars, but engines, ships, musical instruments, and sacrihicial rites of the Romans. It is such a pictorial representation of mannels and customs as may
be seen on many toinbs and temples of the anciont Egyptians.
The bas-reliefs for the columns are being reproduced in Paris from the casts made by urder of Napoleon III., and only a certain number lave been as yet affixed to the shaft; the pedestal, however, is almost complete. Iu anticipation of the completion of the column, and
of the publication of the special memoir aud of the publication of the special memoir aud
description that is passing throngh the press, description that is passing throngh the press, a
few leading partionlars concernung it may be interesting.
Trajan's colutinn is the work of the architect Apollodorns, of whom, as well as of Trajan, it is a lasting memorial. It is composed of 31 blocks of white marble, 9 of which form the basemeut, 23 the shaft, and 2 the torus and capital. The foundation to the plinth, 18 ft . ; the plinth, 3 ft ; the corus, highly ornamented, 3 ft . 3 in.; from the plinth to the capital, both inclusive, 98 ft .; the pedestal supporting the statue, 16 ft . ; the whole structure, exclnsive of the statue, 132 ft ; nameter at the base, 12 ft .3 in ; and at the
neck
a on one side of the pedestal that admits to a spiral staircase of I8亏 steps, that receive light frum 45 small windows. These steps are hewn
out of the marble which forms the shaft. This The statue of Trajau, of lamonze of the column The statue of Trajau, of laronze gilt, originally golden sepulchial um containing the ashes of goldon sepulchral um containing the ashes of
Trajan. This statue was removed in I589 by Trajan. This statue was removed in I 589 by
Pope Sistits V., and a statue of St. Peter, of the Pope sistits V., and a statue of St. Peter, of the
same material, put in its placo. The architecsure of the columon is mixed, the base and capital being Tuscan, the shaft Doric, and the mouldings of the pedestal Corinthian. Tha dis. tinctive peculiarity of the column lies in the sculpture and carring of the pedestal, and espe cially in the bassw relievi that cover the shaft in a spiral band. As the figures rise and recede from the eyo the width of the baud is increased from 2 ft . high in the lower part to nearly 4 ft . at the summit. The pedestal is covered with bas-reliefs, representing warlike instruments, shielos, helmets, dic., and over the door there is the following inscription, borne by two winged fgures:-"SENatys. Popvivsove Romarvs-Imp. Cessari. Divi Nerves. F. Nehve Trajano. Avg. Gemm. Dachco Ponythe-Mammo Thib. Pot, XVII, Inp. VI. Cos. VI. P.P.-Ad Locys. Tantis opelibus. Sid. Euegtis." The sculptured history told hy these wonderful examples of ancient art relates to the two Dacian wars of Trajan, the first in three campaigns. Amongat other scenos in the serics are, the passage of the Danule hy Trajan's cohorts by a bridgo of boats; possession of Vmina. cium; march of the Koman army by land aud water; council of war; the first sacrifice of the campaign; message des Bures; oration by opy conducted to the Emperor ; pons; Dacian spy conducted to the Emperor ; pontoons con. suructed; advance on the enemy; mêlcé ; sack
ing a village; the army marching in a river bed; ing a village; the army marching in a river bed;
discribution of rewards; Dacian ambassadors distribution of rewards; Dacian ambassadors to Trajan; pursuit of the Dacians; a princess taken captive; Roman camp; attack on a forti-
fication. Sccond campaign, A.D. 102.-Vorage fication. mountain ; Homan camp; another mêdée ; strong fortification; battle; Dacians fight with heroism ambassadors from Décébale; the Dacian princes poisou themselves, and die in horrible convalsions; a large number of Dacians sue for grace and pardou; Roman camp; movement of troops; new camp; a bridge coustrncted; last entrench. ment of the Dacians; assault on the Roman camp; Trajan, from a high tribune, addreases the army; council of native primeos; Dacian ambassadors, with presents, arrive at Traja, camp; death of Décébale; cscorts of Dacian the Dacians.
Trajan, who was tribune for a serenteenth time, did not survivo the Parthian war, or live to see the splendid monument erected to his bas-reliets the Koman Senate and poople. The many of the parts being in an excellent figures, preservation. Considerin an excellent state of the work, the precision in the execution of the varions parts, tbe successful care in grouping and the minuteness of detail, as in horses and men in mail cap-à-pie, are perfectly marvellous.
The shields of the warriors, apparently in species
of repousse work, the fascines and gabions, the armour of various kinds, even the features and hair, as well as the garments of tbe figures, are depicted with extreme minuteness. Many of the groups are, in form, execution, grouping, and the whay fight and shade, very beautiful, and study of military antiquities.
Among the books on tbe subject tbat may bo recommended to stadents is the excelleut and compact work of M. Froehner, illustrated by M. Julos Duvaux.* In his introduction, Mf Froehner gives interesting chapters on the history of the Dacians before the time of Trajan; a short account of Trajan before the wars with Dacians; the account of the wars with the chapter on the life of Trajan; a description, with plan, of Trajan's forum, which leads up to the body of the work; a description of the sculpture on the pedestal; and a description of the bas.reliefs on tbe shaft
Do Rossi's "La Colonna Trajana disegnata" is also well wortl attention. The magnum opus on the subject is probably the great work, in
course of publication, of MM. Froehner and course of publication, of MM. Froehner and Arosint This is certainly a superb work, and
the illustrations are of the highest character, but they suffer fro the manner in which they are presented. The fine old work of Joannes Baptista Piranesius contains numerous plans, sections, and illustrations of the pedestal and other carvings on an eularged cale. It has also the merit of contimuity, in as high a degree as is possible, in the manner in Which tbe bas-relief band and its subjecta are illustrated.
The reproduced Trajan colnmn at Soutb parts.
Contiguous to the Trajan column is a most commanding object, a full-sized cast of "El Portico de la Gloria," from the Cathedral of engrago de Compostella, Spain, shown in our scalptured figeressern acarcely fail to bo of pressed witb a sense of its magnitude and mer nificence, the imposing character of the assem blage of representations of prophets, apostles, and other saintly and sacred personages. The alto-relievo and ondercut work, apart altorether from the design, in this fine example of twelfth century art, cannot fail to command admiration. Iaster Matoo, it appears, was tho architect and finished the work in 1188 . The complete doorway consists of three arches, divided by massive piers, composed of clustered columne The diseugaged from the body of the pier. $f$ in 10 ft. One 7 ft, side arches is 7 ft .10 in ; the other, the sid in. The central arch is semicircular, the side arches are also semicircular, and stilted. The central arch is filled by a solid tym. panum, resting on two long blocks of stone, which are supported by a central pier. The columa that fronts toe central pier, and the nner shafts of the three axches, are carred with siral bands of sculptare, consisting of foliage, animals, knights engaging dragons, \&c.; the ast-named are of marble. The fronts of the wo main piers are faced by engaged columna with shafts 14 in . in diameter; the inner enrved sluafts are 11 in., and the intermediate shafts 10 in. diameter respectively. The sbafterest on bases 12 in . deep, and are supported by cronch ug monsters, as is cominon in the chmrehes of Northern Italy of the Lombard peried The monsters under the pier and side are open-mouthed, to give light to a crypt betow With a like object the montha crypt below. shaft are open; these are bald central wo arms of a man, life are beld nuder the forming this plinth are of verions monsters one has a vulture's beak, swine's enrs character; claws; it is bearded, swine's ears, and lion's lnother is devouring a boar's represents Pride. hat asses' eare. These emblemat, and anothe has asses eare. These emblematio figures are luttony, and other sins. The ignorance, cruelty, base are 5 ft . 10 in ins. The sbafts above this ase are 5 ft .10 in . in height, and are tied to ops 2 ft , conars half-way up. They have manne ith carved in the Romanesque h ling leaves, and animals,

brought out hy the hollows round these parts. The ahaci of the caps serve as pedestals for a series of images, 5 ft .10 in , in height. The figures on the smaller arch to the right are supposed to represent Ezekiel, Baruch, Jeremiah Daniel, Isaiah, and Moses. Scrolls, with legible characters thereon, are in the hands of, or otherthe left pier of the central and the two sides of the left pier of the central and the correspondthe left-hand arch, are, in the place corresponding to that of Moses, the Apostlo Peter; St.
Paul; St. James the Greater, Apostle of Spain; Paul; St. James the Greater, Apostle of Spain;
St. John the Evangelist; St. Andrew; St. St. John the Evangelist; St. Andrew ; St.
Matthew ; St. Philip; and St. James the Less. Matthew ; St. Philip; and St. James the Less. The innermost marhle shafts of each arch pier are carved with representations of oombats of
warriors with monsters, sins, dic. The one under warriors with monsters, sins, ic. The one under
the prophet lsaiah represents the sacrifice of Abraham. This subject, says Mr. Riano, "hegius, aecording to the authors who have treated it, with the figure of Seth attacking idolatry, and ends with the capital representiog the descend. ants of Ahraham hound down hy sin." The cap has an altar draped in the Mediaval manner, the kueeliag figure of Isaac, his head bent hack to receive the sacrificial stroke, angels arresting: the hand of Ahraham, all detailed with precision and effect. The central pier serves as a support to the two lintels, on which the tympanum of the arch rests. The shaft is of coloured marhle. Eleven figures placed in this part, amongst branch aud leaf work, represent the line of descent from David to the Blessed Virgin. These are David, Solomon, Josaphat, Joash, Hezekiah, Josiah, Saluthiel, Zerobahel, Eleazer, St. Anne, and the Blessed Virgin. The capital is carved with a composition representing the Boly Triuity, with four angels offering incense. Above is a grand statue of St. James, or (as has been preferred) John the Baptist, sitting in a curule chair that rests upon two lions. Ahove this
image are sculptired capitals, on the faces of which are represented the temptations of Christ; ou the side caps of the pier are fiends looking on. On the right face of the central capital Satan is holding stones to he made jnto hread, our Lord holding stones to he made into hread, our Lord is hy his side; in the contre a winged figure of the tempter is pointing to the pinnacle of the temple; on the left is the temptation on the comforted by attendant angels. The mouldings comforten by autuan of the arches are richly decorated hy acanthusleaf work. Under the lintels that support the tympanum of the central arch are angle brackets, with crouching figures of angels on their fronts holding scrolis. The mouldings of the great central arch consist of three sqnare steps or members, one recessed inside the other, with mouldiugs like tbose of the smaller arches. Twenty-four tigures, small life size, representing the four-and-twenty elders in the Apocalypse, sit on the central memher. Each, with the por. tions of moulding seen hetween, forms the front of a massive vonssoir of the construction. They radiate from the centre of the arel, and sit on the central member of the roouldings. They sit round the suhject represented in the tympannm as a council of sages round the walls of a circular chapter. hall. They aro crowned and hold musical instruments, some playing, some tuning, some waiting to tahe their parts in the heavenly ooncert.
The great object in the centro tympanum is a colossal image of Christ. He is crowned witb a crossed nimbus behind His head, and sits on a carule throne. The hands and feet are seen pierced; the hands spread in the attitude tradamnation of the wicked and the salvation of the just. Seated aronnd, also on curnle chairs, are the four Evangelists writing. Their appropriate emblems,--the eagle, the ox, the angel, and the
lion, are assigned to each respectively. On either side are four angels in the same scale. Ahove the Christ are forty small figures, representing the saints; some who accompany the final advent, some who are then saved. Adoring angels are in attendauce. The sculptire of the side arches, and a series of figures on the spandrels hetween, on various scales, continue the suhject. The spandrels contain firures of guardian angels with the souls under their care. The emall arch to the right consists of two sets of mouldings similar to those of the centre, hut smaller. In the upper set are ten small sitting
figures. They hold serolls, and acanthus.leaves figures. They hold scrolls, and acanthus-leaves in pairs are folded over botween each, the points meeting in an arch shape between the figures. In the lower division are eleven figures. The one in the centro represents our Lord descend-
ing to limbo; on either side are Adam and Eve.

At the spriuging of the arch to the right, is an antel blowing a trumpet, and on the opposite aide archangels holdiug saved soals. The left haud arch contiunes the same suhject. From to Hearen One holds a small female figure, representing the sonl of a daughter; both are carried hy a guardian augel. The keystone is sculptured with a bearded head with crossed rimhus, and holow it an angel's head. The small figures on the left half of the moulding represent the damned tormented hy fiends, serpents, dragons, and monsters. The subject is contiuued on the shaft on the outside of the doorway. Ou the left hand of the arch, where it springs from the pier, is an angel hlowiug a rumpet, correspondiag with the angel iu the right.hand arch. The whole of the figures of his doorway, as well os the other sculptared ornamentation, were originally painted in hril. iant colonrs, some traces of which are still remaining.
Notices of other fine examples of Spanish and Spanish moresque, and of Old English, Flemish, French, German, Indian, and Arah work, to be seen in the archit
another occasion.

## THE ROADS AT KING'S.CROSS

SIR,-Referming to the letter under this heading in your issue of the 13 th of September, I ask your permission to offer a few remarks.
Very few of your readers can have surmised that "the roads at King's-cross" or that " the Eubsidence of arch of the railway bridge at king s-cross" refers to a new street in course of cormation ahont $1,100 \mathrm{ft}$. (nearly a quarter of a opportunity of directing the attertion of the puhlic to the fact that the Vestry of St. Pancras has succeeded hy negotiations that have extended over a series of (seren or eight) years in acquiring for the use of the public a new thorough. fare that will be of great service to the pnhlic, and relieve to a very great extent the traffic at King's-cross, now one of the most dangerous crossings in the metropolis.

This new thoroughfare extends from Pancras. road, opposite the cnd of Phœenix-street, to York-road, opposite tho end of Wharfdale-road and will provide the only direct line of east and west communication for the districts,-now separated by the Great Northern Railway Stations, -lying north of the "New-road" between King's.cross and St. Paul's-road,-St. Panl's road heing just one mile from kinc s-cross. It crosses over the Great Northern Raiway Station hy means of a viad.
The works have been carried ont at the cost of the Great Northern Railway Company, in compliance with the provisions of Acts of Parliament, wherein clauses were introduced at the iestance of the Vestry of St. Pancras, and in the interests of the pahlic at large.
Considerable difficulties have been encountered in carrying out these works to completion consequent upon the relative levels of the rails of the Great Northern Railway Station, of the roadway and footrays of Yorkrond, and of tho flnor.
road.

Iou will understand this when I tell yon that the footway on the west side of York-road, at a distance of 53 ft . from the nearest rail of the station, was only 10 ft .5 in . above the level of he ran, and that the door.cills of the houses on 125 ft . from the nearest rail of the station, were rly 12 ft .8 in. ahove the level of this rail which happeus to he the highest rail in the station, and one which of course could not be stawered.

The surface of the roadway on the viadnet when completed, will he only 16 ft .6 in . above the level of this rail, so that even then the cill f the houses on the east side of York-road will be 3 ft .10 in . helow the anrface of the roadway隹 radient of the roadway from the viaduct acroso Yore-road into warfalo.roa is ahout in so and the footways are
Yonr correspondent, Mr. John Eldridge, thinks
"the gradients over this hridge must he very trying to cattle," but the gradientavonld have been much more trying (hecanse it would have heen steeper) if the expedient of "cha
the pavement" had not heen adopted.
To ohtain the gradient of 1 in 30 from th
viaduct into Wbarfdale-road, it was, of conrse, aecessary to raise the level of York.road itself (the footway of which on the east side, you will have noticed, beiug only 10 ft . 4 . in. above the station-rail, and 6 ft .2 in , below the surface of the roadway on the viadnet), and the raising of the roadway has heeu gradually effented from King's-cross so as to make the ascent as casy ac possible, the steepest gradieat in the lengtl of $1,100 \mathrm{ft}$ being 1 in 6.
The raising of the roadway has also been effected where practicahle hetween Whardaleroad and the Regent's Canal Bridge, the grarlient the bridge.approach heiug improved from improved to the ereatest practicable extent

If, as rour correspondent suggests, the tbick. ess of the hridre could have been reduced th half the thickness hy his "or any other plan" (as he says) the gradient from the viaduct tn Wharfdale-road wonld not have been improver unless the "channels on the parement" har been retained, and oren then from fromale-road to the Canal York-road from Wharfdale-road to

Bit I am informed that the cross-girders of the bridge could not have heen reduced in depth, and therefore the hridge conld not be reduced in thickness. The engineers who designed the bridge have gone to the extreme limit justifiable for the very parpose of saving depth in the cross. girders.
The suggestion of dividing the bridge into $n$ double thoroughfare, even if it could ever have been entertained, comes too late.
The railway company was to provide a thoroughfare (inclading footways) 40 ft . in width, and an agreemont was enter that effect years ago.
That you may be in possession of the views of the Vestry on tho snhject, I her to append to this an extract from the proceedings vestry of the 17 th instant:-
"At a Vestry Mectine held on Wednesday, the 17 th of September, 1873 , the following report from the
Sewers, sigh Publio Works Committee was read, viz.:That in pursyance of reference by the Vestry of the
30th of July last your Committee have skiea into con-1 sideration the qnestions comprised in the Festry's resnhntion of that date on the subject of the lev
in Battje Bringe.road, and of the roadw
 Yar

'Golicitor's Office, 21 st August, 1873. Voticitor's Office, 2 bot Aa

## My dear Sir,-I have duly considered this reference, an

 1. That the mode of constractiog the bringe is suhjec pany must construct it in the direction and of the width sny must construct it in the direction and ore the widt an the Vestry have no control over the level. Which ia neces-earily govorned by the heald romm required hy the enfines,
2. That the compsay mat always maintain it at thein expense, the parish will not incur any costs in reference
3. That the to the repairs.
4. That Mr. Scott's view, as expressed in the memoran
dum sapplied to the chairman, appears to me to be quite correct. (Signed) Wm. Derrant Coofbr.
Chas. Worrell, Esq
Resolved, that the report be approved.
Chairman of the Highways, Sewers, and Public Works Committee.

Archeological Discoveries at St. Bai tholemew Chapel, Rochester.- In clearin way the old houses adjoining St. Bartholomew chapel in the High.street, the site of the ancient haspital for lepers, founded hy Bishop. Gandose the southern side of the existiug chapel. Close解 ore for the beds occupied hy the leperapel wall conjectured to have heen made to allow of the patients hearing the service in the chapel, in which they would not be permitted to take part The arched recesses had heen converted intc freplaces. A portion of the original plasterin of the onter wall has been brought to light, with colons still to he traced on the pla is is known whas the case soon fter the Yormar congrest.

PROGRESS IN EDINBURGE.
Buridivg operations have not been active in
this city during tho past season, still somothing this city during tho past season, still somothing has heen done towards adding to the architec-
ture of the city a few features which go to mako up alditional picturesque effects rathcr than anything remarkable
less orandeur of effect
The elovations of St. Giles.strect are now completed and form a marked feature in the
outline of the old town as seon from Princes. street. The Scottish domestio stylo has in this instance been trcatod with more simplicity than in other recent cxamples hicre. The great height of the buildings, and the grouping of gables, dormers, aud chimney-shafts produce an effeo-
tive sky-liuo, and the elevations of the differcat tive sky-ino, and the elevations of the differcnt
blocks are sufficiently varied to avoid monotony withont a too ouvions effort at variety.
The site of tho old city poorhouse is now fully in St. Giles.street, but with varying rosults.
ind The most conspicuous object in the group is the Odd Fellows' hall, and odd it mindoubtedly is. It
cannot be said to be of any particular style, but cannot be said to be of any particular style, but
is a mixture of several ; oulblematical sculpture and horaldic devices are profusely scattered
over the wall surfaces in sucla 2 manner as to over the wall surfaces in such a manner as to
maise it a work sui generis, and far from being tame or commonplace-in short, it is ofld, and so appropriate to its purposo.
The mason's work of the medical portion of the new infirmary is nearly completed-one of the
pavilions wholly so. When the wholo is finisbed pavilions wholly so. When the wholo is finizbed, aud cha circular towers flanking the ends of the
several pavilions, are crowned by their conical roofs, which will be seen overtopping tho trees of the Meadow Park, a noteworthy group will bo formed.
The City Improvement Trust proceed very slowly, the result probably of tho officials being romunerated by salaries, which cease with the completion of the works. The Mechanics' Instiwato stands alone in Chambers-strect; the road
way is still in a state of chaos, and no othe bnilding has been commenced. A commoncement has been made at the sonthern extremity of Jeffrey-strect; the samo pencil is traceable
in tho desims os in St. Mary-street, but the detail is slightly varied.
In the now town we observe that the two partially demolished, and arc being tinkered in a rough manner, with the apparent object of cement decorations being used; the Preparations are being und as a hotel. square for the reception of the Alhert memorial The scalptor, in this instance, appears to be of The schiptor, in this instance, appears to be of
somewhat the same character as his brother somewhat the same character as his brother
artist, to whom has heen entrusted the Welling. artist, to whom has heen ent
ton monument in St. Panl's.
At the west end new streets and terraces are in progress; the only attompt to vary the pre vailing monotony in that quarter which has
come under our notice, is the introduction of come under our notice, is the introdaction of
semicircular-headod windows on the first floor. semicircular-headod windows on the first floor.
Workmon are busy excavating for the fondations of the new catliedral. Wo undcrstand that
the the estimates for the erection of the work con. siderably exceed those of the architect, and that it has been resolved not to proceed with the
erection of the towers in the meantime. Within a erection of the towers in the meantime. Within a
stono's throw of the oathedral site preparations stono's throw of the oathedral site preparations
aro in progress for the erection of a Presbyterian Church of considerable dimensions, whioh is to be Classical in atyle. The new Free Church at Morningside is being roofed in. It is a small Cothic edifice, and in its present aspect appears
thin and ineffective. A spire is being added to thin and ineffective. A spire is being added to the Libberton Free Church, which, from its
elevated position, will be seen to a considorable distance.
At Cross Causeway a small church is to be built for the Reangelical Uuion.
On the Libberton-road an asylum for blind womer is to be erected. It is not to be a mero at without incurrin omental effect is
The new barracks on the Castle Hill stand unalterod in all their hidcous deformity; something is, however, to be done to make thom more attractive; but really satisfactory they never can be.

## TECHAICAL EDUCATION.

Trit passage of Macanlay's which tells us that "the travellor from New Zealand shall one dar stand upon a broken arch of London Bridge to stand upon a broken arch of London Bridge to
sketch tho ruins of St. Paul's" is frequently quoted uowadays, both by forcigners who would like to see England bumbled to the dust, and native alarmers of every shado of politios and native alarmers of every shado of politios and
every degree of education. The former perevery degree of education, The former per-
ccivo the beginning of her downfall in every coivo the beginumg of her downfall in every resemhlanco to a slight, and overy Transatlantic Wlustering hoast, which, after all, is but the "bark that's worse than the bite." Some of the latter see the approaches of her decay in the ral-dal fineries and startling head-drossos of her daughters, and others in the frequency of strikes
and demonstrations of the dornocratio element and demonstrations of the domocratic element, which is said to be growing so powerful. Until
the New Zealander comes with bis pencil and The Now Zealander comes with his pencil and Ssetch.book we must remain in doubt ooncerning the prophecy quotod abovo; and, while we leave Continental and Trausathantic matters to diplomatic statesmen, let us smile in passing at those who cannot warm to a womnn in any dress, and view as best we can tho relation which the last reenark bears to the present sulject.
"A little learning is a dangcrous thing," says Pope, and the calm impartinl student of passing events cannot fail to sco that in tho halfdigested ideas and orude arguments of many democratic leaders lies England's greatest earning hate is the remedy? Nake the lithe Since the application of steam as a motive power for tho production of almost every commodity required by man, everything soems to be wanted in a hurry, and for smart, intelligent workmen of overy craft a continual increasing demand is plaiuly observablo. But in nearly saerificed to the impatience of customers, saeniled to the impatience of customers, and we secm to become the more pressing the quicker we are servec. The consequence is, that the mechanical arts are cut up into branches,
and the artizan who should know all about his business is mado a mero expert at one particular part. Whatever a workman is quickest at, like a machine, that he is kept to; and as long as he earns a living by that onething it is ten to one if ho cver seeks to know any more. Were he compolied to turn his hand to other parts of his unsiness, he would have to occupy his mind in a useful way, in order to qualify himself for the
performance of the task by which he earned his performance of the task oy which he earned his
daily brcad. But this being secured to him without much brain-work, he is the more easil led into idle pastimes, in which bo often indulgea to excess. His comparative prosperity makes picks up at low music-halls and other lindre places of ampsement and and other kinured from cheap literaturo and newspaper-read com panions, firo his imagination, foed his vanity, and make him the easy-persuaded tool of duplicity. His kuowledge is so scant he cannot see through the shallowness of the notions of thoso with whom, principally on account of his superficial attainmoats, he is forcod to assoate. Had this "one-branch hand," -this trade.-bece expert at one particular part of his would have more to occupy his mind, and consequently less time to squandor in taps and gaming-honses. If he were made to feel that on the completeness of his abilities dependod the bread which he is in the habit of earning by the repetition of a mere tuechanical performanoe, which through constant practice heoomes new stimulant with each different job, and study would be the result.
Being thus compelled to seek for information, his mind would be led into the paths of true knowledge in the search, and, once fairly started on that road, he would not he long antil he could discern sound argument from bombast. There tion the at present about technical educaany fruit, the systom of parcelling it will hear changed. When a boy is arcelling ont must be tailoring trade, if hoy is apprenticed to the tailoring trade, if ho prove any way smart at making a vest, be will never get the cbance of
making trousers; and if he be quick making trousers ; and if he be quick at the latter, he will never be asked to put a stitch in
a cont. What is the use of teaching the theory of any trade in the use of teaching the theory existence.

In the building trade, we have masons or stone-cutters who are not expected to set the rches, picllayers who jwess or set naru no and hnndreds who could not or sat no stones, net handreds who conld not oend a dranwing or get out a mould by which to work. Amongst make sore care comers, we havo men who make sashes they could not hang, aud who never saw a "mouse " in their lives. We bave "fixers" "from as a rule, make nothing they put up, and framers" who would not be able to perceive the saine angle in troo different positions. Wo havo "staircase hands" who affect to despise everything elso connceted with the construction a builang, and who, as a rale, look upon them. selves as gods of wood, althongh they never made a circular-headed sasb in the whole course of their existence. Well-planned hoases suffer in their ercotion through this practice; for the beuch hand" who hiss beeu kept for a number of years at what he can do quiekest is often necessitated to tarn in with a crowd of "fixere" and scrape away as best ho can.
Considering tho prescat system, it wonld appear that with most builders profit alone is the alpha and omega of every uudertaking. It stands or falls after it has been built, and the gains coanted into the bauls, Vory few bare any consideration for the welfare of those whom they employ, and consequently thero is littie or no reciprocation. The workshop, which ought to be conducted on the principlo of a school where technical instruction is imparted as well as for the fabrication of an article which brings a profit, is vory often superintended hy a for his iuformation capahio of imporing is seldom that a max in such of itionting the haws is met with charge positions, and the generality of men in guage, instead of heing linit int their langs to instead of heing kind and considerate. as to recoiving instruction, men are left very
much to themselves to pick up that which they much to themselves to pick up that which they
would sooner and better understand if explained by a man competent to do so. The language usted by the generality of foremen too is very often tho most abusive and sometimes revolting, such as no min aspring to a respectable position in society should be heard giving atterance
to. Thie snsceptiblo dull youth of twenty is sneered at if he chance to ask tho foroman a quostion concerning his work, and mulcted out of money, or wheedled into paying for beer, for the information which he reccives from nis onder fellow. Capitalists should look ne orese practices, and apply a remedy, for thought hours prefatory instruction or fore. Those who saves a great amount of lahour. ime groping their wee before them lose loss is to the employer. I have often heard it said that the workers are not expected to bo thinkers. In fact, I have many timcs heard the remark, "You are paid for working, sir, not for thinking," addressod as a reprimand to thoso who gave such a reasou for heing canght, as the man in charge might suppose, wasting his employer's time. This, too, withont the least inquiry conoerning the truth of the assertion. The result of this systom is that mea who would otherwiso seek to become intelligent and useful in a geueral sense lay down their minds to become expert at ono or two thinge, and in many cases sharp alone at Hat is callod "shaping," that is by their busting about and wielding their tools $\mathbf{j}$ agglev fashion, make pooplo believe they are qualified or anything. To be sure this kind of tact shows knowledge of human naturo on the part of the person who employs it, and the presont system is he chief cause that leads many t also shows the weakness, superficialness, pertrath of this I will ask if the veader For the with ono who could get on well by flattering those in power-often better by this means thaus those in power-
real usefuluess?
If it were the practice that the foreman wers bound to call his apprertices and men together half an hour at a time, and for an hour, or everu during wors ang lecture ject, I am sure hundreds would be very thankful nd willing to subscribe to the oxpense. After working hours very many mon do not like attend ing lecture-halls for snch a purpose, and the oula be more at home in a class got up specian for'themselves, and particularly when it wonld sary for demonstration was close at hand. sary sor demonstration was close at hand. I
will smpport this suggestion by calling attention
to the fact that in hundreds of instances men's ntellects do not begin to develop properly until they!are well into the caros of a family, so that such a practice would be to thnse of the greatest assistance. It would stir them up aud awaken their curiosity, and besides if advancement were to he had by attending the class all would he ambitious to learn. It would, furthermore, have the effect of bringing to the surface many men of retiring manners, though still morthy and competent to fill a leading position. The great fanlt of the present system is employers do no ${ }^{2}$ trust their mon enough. They do not go frequeatly amongst them with an encouraging word, and that friendly and paterual feeling which suits well the bearing of an extensivo contractor Recognition even in a small way goes far to encourage a humble man, and an exprissariably satisfaction from one s employer causes invariably zuuch gratification. He who is in the hahit or expressing hinsolc so !great, is bard hundreds who could
There is littlo or no friendly feeling existing chere is antor hating between man of mand ond and present system say a fow words on this subject from a national saint of riew, hut knowing that long-wiuded compositions weary most readers I shall reserve them for a future paper.

TECHNICAL EDLCATION AND THE ARTIZAN.
Sin, - Yonr correspondent of Septembor 20th signing himself a "Carpenter," puts me in mind of a wayward child, who, hecailse be oannot do as he wonld like, commences crying or ahusing hose that correct him. Ho also appears rather conceited, aad one of those troublesome individnals I have sometimes met with in the workshop and elsewhere, who fancy there is no one as clever as themselves, and every one else is wrong.
Ho says he is a marked man hecause he is bettor educated than his follow-prorkmen; but prohably he is continnally running ahont the shop expounding those theories apon which he seems to lay so much stress, at his master's expense, and getting up discussions
heories instead of minding his work.
I do not find fault with him for endeavouring to improve his fellow-workmon; hat there is a time for everything, and if "Carpenter" feels so anxions to instruct them I should thank he might find time in the evenings to do so. And if the offer was made to them in a pro
He also gtates that he had once the courage He also for a situation as clerk of works, hot to apply for a situation as clerk of works, hat his eervices were rejected bench. Probably the architect to whom he applied had some experience of bench liand before; for "Carpenter" shonld know that man competent to act as clerk of works shonla and it is from the waut of this general knowledge that we meet with so many incompetent clerks of works.

I may here state that I am a student under the Science and Art Department, and hare obtained two first-class certificates and Queen's prizes, but I have endearoured to apply the knowledge which I have gained to my own advancoment, as well as for the bencfit of my fellow-workmen. I havo also fonnd that that knowledge has grined for mo the respect of my fellows.

I hope yon will excase the length of thi letter, but I conld not rofrain from answering "Carpenter's" letter, as I think it might have a tendenoy to deter others from joining the Scienee classes, and therehy lose ono thing most essential to an artizan, "a teehuical education."
I wonld urge upon my fellow. workmen the importance of a technical knowledge of their varions trades, as it will make them superior as artizans and respected as men.

Frank Caessell, Joiner.

Society of Engineers.-The first meetin of this Society for the session 1873-4 will he held on Monday, the 6th of October, when a paper will bo read on "Recent Improvements in Davey

THE OLD "ANGEL" INN AT ST, GILES'S. A mearortal of ancient London is ahout to pass away-a memorial which is as illustrious as the "Tahard" Inn in Southwark, though that was famous for the grace of its poetical associations, and this notorions from the odium of its infamy. We alludo to the hostelry which has long hcen known as the" half.way house oll the road to syara-ihe house at which Jack Ketch and the criminal who was ahout to expiate his offeuces on the scaffold were wont to stop on their way to the gallows, for a" last glass." Here Jack Sheppard halted, as has been recorded hy Earrison Ainsworth in his life of the celehrated scoundrel, and taking a gup of his parting wine cup "smiled," and cried, Wille the remaiuder to Jonathent proprietor of the premiscs, has, at the reqnest of several eminent archæologists, heen provailed upon to stay the work of demolition for a while, so that those who desire to see the veritable remains of the old "Angel" Tnn as it stood when St. Giles was roally in the fields-when old "Holhonrne" was nothing hut a conntry lano- and when the "fast coaches" of that time started from the "Angel" on their several days' journey to the north-may have an opportunity of looking upon, cre they are consigned to the ruhbishcart, the quaint old galleries at the back of the premises, and the remains of the ancient "tap" from which the most notahle criminal of yore ordered his "parting enp," and drank perdition to all thief-catchers.

ST, MATTHEW'S CHURCH, LIGHTCLIFFE

## accident at stone-layivg.

Tue corner stone of St. Matthew's Church Lighteliffe, near Halifax, has heen laid. A gad accident occurred at the ceremony, by which eight people were injured. The stome itself had been raised in order that the mortar might he the same moment the crane heeled over, and fell mongst the people. The weight of the stono had caused the cast iron to which the heam was axed to snap. The iron was abont $\frac{3}{4} \mathrm{in}$. thick The crane was calculated to ralse a con and a half, whilst the corner-stone weighed only aliout hree-quarters of a ton. It had raised the stome hree or fonr times hefore. The falling of the beam cansed great consternation, and three persons were unable to get from beneath it antil it had heen rassed. It was found that eight persons had been hurt, some of them serionsly. After the lapse of half an hour the stono was hurriedly laid by Mrs. Foster, and the proceedinge were hrought to a close as quickly as possihle
Major Foster, of Clife.hill, generonsly made n offer to huild the church at his own cost, leaving to his fellow-churchmen the duty and privilege of providing the organ, hells, \&c. The site was at-once chosen. It is in a corner of Halifax and Wakefield turnpikeroad, abont a quarter of a mile from Lightcliffo Station, heing
considerably wearer to the hulk of the population of Lightolife and Hipperholme than the present church. Mr. W. S. Barher, of Malifax, is the architeet. The church will he in the Perpendicular style, and the ground-plan will give the naro, aislos, chancel, with side-aisles and organ-chapel, and sacristies on the north, baptistery opening from the second hay on the south, and north-west tower. The nave, in five hays, is to he 71 ft . $3 \mathrm{in} . \operatorname{long}$, and 23 ft .9 in . Wide; wiath of aisle, The tow.; and the tower, wich is 10 . square, leight of $4 . \mathrm{Fl}$, and has it four stages, the its north-west cor. It in four stages, the furst having a two-light which has a richly-carved. niche over it) on the north face. The belfry anche over it) on the each face. It is to hold a peal of eight heavy bach face. It bells. The great west mindow is to he a four light one, with tracory in har chony win the style. The sonth front will have a range of clearstory-lights (fivo coupled two-lights). The windows to the aisles are three-light and wo light ones. On the south side the haptistery is to he 13 ft . by 8 ft ., and lighted hy two-light windows. The chancel, which is three steps higher than the navo, bas choir-stalls and clergy-seats on either side. Three other steps finish the east ond, and form the altar footpace, The east window is in five lights, with head tracery. All the floors will be laid in encanstic tile-work. The roofs are open-timhered, that to the chancel having a carved cormice. The shafts to the nave-arches are octagonal, with flowers carved on the capitals.
Tho contracts for the building were lot some months ago, and considerahle progress has already beon made with the work. The masons are Messrs. L. \& W. Crowther, of Rastrick; carpenter and foiner, Mr. J. Christy, of Hnd dersfield; plumber and glazier, Mr. Ru. P. Stafford, of Hulifax; slaters and plasterers Messrs, A. Bancroft \& Son, Halifas. The carving will be executed by Mr. Charles Manver and the whole work carried out under the super vision of Mr. Ridgway, of London, who acted a clerk of the works in the erection of St. Mary's Church, Luddenden Foot.

## HEALTHY HOMES.

Sis -I thank you for permitting the question of cheap ventilation to be discussed in you valuahle aud useful paper.
Cheap and dear are relative terms, and no easily settled by diacussion in any paper. My object has been to press upon the notice o cientific and praotioal men the grave impor ance of affording to poor families, huddle ogether night and day in single apartment and continuously breathing a contaminated an poisoned atmosphere, some ready and cheap expedient by which their very existence mign be ameliorated, and the present amount of sick ncss, expecially amongst women and chidren Who are the greatest snfferers, diminished For myself, 1 thank your correspondents whr have been good enough to offer me suggestion and I heg now to inform them that, if any on will send me an estimate for thoroughly venti latigg iny two buldings at a moderate cost, will gladly give them a fair trial.
Any commnuication to my agont, Mrs. Deller , Willow-terrace, White Horse-road, Croydon will be acknowledged.

SCHOOLS OF SCIENCE AND OF ART.

## TIE DRALNAGE OF MARGATE.

 Te observo with satisfaction that the Council borough of Margate bave at lengtb irection of drainge serious progress in direotion of draining their healthy andactire town. Plans and estimates for this pose are called for, and premiums amountto 300l. are to bo offered to those competiWhose plans are approred. It has been
Ired to invite engincers of experience in particular department who are willing to a limited competition to send in their es to the town olock, and from the list of es suhmitted, the council propose to select competitors, to whom the above premiums
be offered. We shall have furthor observais to make on the matter; meantime, those y to be interested are refersed to our artisement columns.

## OPENING OF LONDON SCHOOL.

 BOARD SCEOOLS.
## DEPTPORD.

nsterday (Friday) afternoon, two new
ols, the first built hy the Board for the fuction of the olildren of Deptford, were iely opened by an interesting ceremonial. se schools, concerning which some particulars ; given in the Builder a few weeks since, ere uted, oue in Creek-road, and the other in an-road, and are each designed to acoom1 as boys, girls, infants, and babies. mony yesterday consisted mainly of massing ehildren that are to occupy the two new liugs, and marching them from Creekroad ford, and New Cros way of High-street, The children hered at the end of the procession aboat ), these bcing made up of the three divisions however, to take part in the prera not all agents of infants and babies being in some
instances taken up in course of the route, and others joining at Clifton-road, The proceedings excited vory lively interest in the locality. The grand gathering was in the Infnnt School-room of the Clifton-road-buildings, M1. T. W. Marof Iadies and gresiding. There was a large attendance of ladies and gentlemen interested in popular odncation, including the Grcenwich members of tho London School Board, the members of Divisional Committee, and other well-known althougb unofficial persons. The children sang a namber of simple pieces with pleasing effect, and very
well together, considering that combined rewell together, considering that combined re The Creal haen impossible,
The Creek-road Schools, the first huilt from the designs of Mr. E. R. Robson, the Board's architect, come out well now that thoy are finished. The principal schoolrooms are very commodious, the boys and girls having each principal rooms 56 ft . by 22 ft ., and two class.rooms 24 ft .6 in . by 22 ft , and 22 ft . by 18 ft .6 in . The infants ${ }^{2}$ school $1 s 40 \mathrm{ft}$. by 26 ft .6 in ; ; infents' class-room, 26 ft . 6 in. square; the babies' room is 30 ft . by 26 ft . 6 in. The playgrounds, corered and open, are admirably arranged, the infants and babjes having a spacious square with as much of the iroa corered as open. The corering is by ligh playgrounds are foored with asphalte, and The of tho divisions has abundant ncoommodation in lavatories, olosets, \&c. The passages and stail cases of the principal building are caated witb silicate paint. The dado in theschoolrooms is of Keene's coment, which furnishes an excellent smooth hard surface. The walls over the bold distemper surmounts the dado are coloned in distemper upon the unplastored brickwork. The
fireplaces are fitted with offective stoves, designed by Mr. Robson, that are likely to prove very effient for warming and rentilation. posing is external appeorn, although more imposing in external appearance, do not compare
favourably with the buildings in the Creak-road. The principal. school-rooms for hoys and road. are each 38 ft . 5 in . 21 ft . 6 in girls division having also tro olass-rooms, 37 ft .3 in . by 20 ft ., and 27 ft .3 in . by 20 ft . The infants have hery fine room with open-timbered roof and hoarded ceiling, stained and varnished. This
fine hall is 60 ft . by 38 ft ., and hes gallery across the end, the intended uses of which arc not quite apparent intended uses of 28 ft , by 18 ft the infants have a class room, 28 ft . by 18 ft . The bahies have also a room, 28 ft . by 18 ft ., and in these huildings the anomnly comes out of floor-space of 365 square yards being devoted to infants and habies, and only 231 square yards to boys and girls respectively. The new building is not eqnal to the receivinct instur of thogs that are even now oconpied by the School Board The temporary premises will continue to be partially ocoupied hy the Board until the new sohools at Hatcham aro completed, which will aecommodate a number of the boys now attending the New-eross Board School. Notwithstanding this prospeotive relief, we thirk it is to be deplored that more liberal spaco was not taken for the accommodation of hoys and girls in the new schools, and the more that the ground available for bailding purposes was prectically unlimited.
The dado of the Clifton-road rooms is of deal, he upper portion of the internal walls being the brickwork in distemper. The rooms are fitted With Mr. Robson's heating-stoves. The under
portions of the windows are fitted with frames filled with perforated zinc, and the upper portion with a binged hopper arrangement, by wbich they may be opened without the possibinity of down-draught. The work in all dopartmonts throughont is of the best character.

## holioway

An addition has been made to the educational resources of the metropolis in the Finslonry division of the London School Board. The new Holloway, and are adan in the Cottenham-road Holloway, and are adapted for the aocommoda. nd 320 infants. The site, 360 boys, 240 girls, nd 320 infants. The sito, which covers three. quarters of an nore, was purchased by the and the total cost of the building, site included has been 7,100l. There are two entrances, one or the boys and the other for the girls and infants, and the extensive space hetween the brilding and the road has been utilised as playgronnds for the olildren, being pared with asphalte, and that devoted to the infants bein partially covered in, as a protection from the
rain. The infant sobools are sitnated at the base of the building, the boys' sohool being on the first-floor, and the girls at the top, and hy an arrangement of sliding screens the olasses are separated eacb from the other, so that the noise attendant on the instruction of one does not interfere with the conduct of those in its neigh. bourhood, while glass panels enable tbe bead. tcachers to supervise their assistants. The scbools are fitted throughont with every conexpence, but, at tbe same time, no nnmecessary standitare has been iucnured. The building stands a little back from the rond, the play gronnds being in front, whiob will prevent the studios of the children from being interrupted arohitecture of the passing traffic. The style of was Mr. L. Ridere, mided Gothic. The architect Scrivener \& Whe, and the builders were Messrs,

THE MAUSOLEUM AT SALTAIRE.
The sculptor, Mr. John Adams Acton, who Salt ween working on the statue of Sir Titus ball, Bradford, is now superintending the erec tion of throe murol monuments in the family mausolearn at Saltaire. The principal monument is of large dimensions, and executed in the most costly marbles. The pediment, frieze, pilasters, and hase are worked in the best quality of Sicilian. In the centre of the pediment is the Sicilian In the centre of the pediment is the descending with the olive the form of a dove duced in the whitest Carrara, and favourably contrasts witb the bluish tint of the ficharably On the frieze the bluish tint of the Sicilian. On the frieze are cut, in relief, from the solid marble, the words, "Blessed are the dead whicb die in the Lord." Tbe pilasters aro worked entwiuing togother from the bass to the capi. entwiuing togother from the bass to the capi. tals, which are enriched with foliage surronnding
the flowers. The centre of the monnment con tise flowers. The centre of the monnment consists of a somi-colossal figure, in bold relief, representing the Angel of the Resurrection stauding with the trompet in the left hand, as awaiting the command to call forth the world to judgment. This figure is merely at present a representation in plaster of the model whiob is now being executed in the artist's stadio in London, in the Cinest Carrara marble. The base for the future inscription is worked in Sicilian and Russo Antico. The idea of the artist has hoen to illnstrate Life, Death, and Immortality The side tablets are in commemoration of the deceasod members of the family. These tablets, like the large one, are of the finest Italian marbles. The arms of Sir Titus Salt are scnlptured on each saroophagus.

## THE WARWICK WATER SUPPLY

The Haseley water-snpply scheme has at longth passed throngh the stage of inquiry and discussion. It has been subjeoted to a protracted and laborious scratiny. During this process all the material faots on wbich it is hased have undergone a searching examination, hoth friendly and hostile. The information by Messrs. Rammell \& Lister wonld seem to confirm the opinion arrived at, after much care and labour, by Mr. Pritchard, C.E., the borough aur veyor, and enclorsed by Messrs. Casvley \& Newton When the scheme was first propounded, opinions wero confidently expressed that the ampply of water obtainable from Haseley would not suffice for the requirementa of the inhabitants. To determiue this question Mr. Pritchard was instracted to institute a series of gangings The results, as reported to the town oouncil, from timo to time, during the last two sears appear to justify the council in adopting Mr Pritchard's conclasion respecting the adequacy of the supply which the Haseley brook will be ahle to furnish. With a catchment area of 1,500 acres a minimum flow of 150,000 gallons per diem, and storage room for $23,000,000$ put there is every reason, it seems, to beliere that the required 25 gallons per head for a population of 11,000 will be secured, even in the driest casons.
The evidence wbich has been obtained re. specting the quality of the Haseley water is qually sarisfactory. Analysed bave been Dr. Kill, of Birmingham, and Lister, and hy agree in pronouncing it admirbly gontomen domestio purposes $g$ suited for that the nufiltered Haseley water submitted to his examination was abont of the same quality
as the filtered water then supplied to the torn of Birmingham, and considerabl
As regards the question of cost, there is room to hope that little if any rudditional yearly expo hope titure will have to be defrayed. In a report penditure will have to the council in Jarch last by Mr. Prit. niade to ther as engineer, the entire cost of tbe works, chard, allowing for the valne of pipes and old after allowing for materis to be dispensed with, but not ineluding materials to be dispenscd witi, or an entire annual cost (at $3 \frac{1}{2}$ per cent. for fifty years) of 770l, inoluding repayment of principal and interest, payment and repairs it and also tbe working exp.

MANCHESTER AND SALFORD BUILDING TRADES INSTITUTE.
The annual meeting of the Manchester aud Salford Building 'Trades' Institute for Tcechnical Education has been held in the Free Schoo, Jackson's.row, Deansgrate. Mr. J. Murgatroyd prosident, occupied the cbait good attendance of members.
Mr. James Maclean read the fifth annual report, whicb congratulated the members and friends on the continned prosperity of the Tnstitute, as evidenced not merely by the number of students who had attended the classes, but by the results of the examinations of the Government Science and Art Dopartment, and by tho competitions for tho prizes presented by the Hanchester Society of Architects. The number of students on the booke for the year ending June, 1872 , was ninety- eight, and the marks of distinction earned by them were twenty-three, wher of stndents was eighty.eight, and the marks caroed by them forty-seven. The balance sheet of tho Institute showed that the income hal been suff. cient to mect the expenses. A considerabio portion of the teacher's income, howover, was derived from the science and anded to master builders the ultimate advartage that monst result to the building trade by the mental training to the rising generation of workmen by tbe Institute and requested them to follow the example set by and recuested their apprentices, and pay thei fees. They also threw out the sugrestion that foes. Andrantage in point of wares might bene some advantage in point of wases might of the ficially attend the successfal passing of the the other prizes offered for competition. Tbe report and balance.sheet were adopted.

FAILURE IN PORTLAND CEMENT. Sir, - Can you or any of your readers iuforsm me as to
the cause of the failure in the Portland cement work that hes been exeented this year externally? Is it the fault of
the manufacture or in the rorkmanship? If the latiter, the manufacture or in the rorkmanship? If the latter,
the remedy; if the former, Fho is reeponsible for the
re-instatement of the work ? Yours, obediently, * *Thefailure, in numerons cases, is certain; and we shall be glad to hare some explapation.

## THE WALLACE MEMORIAL.

 Srs, - I cannot sufficiently express my gratitude to youfor the kindpess with whiek, duriug many years, you have for the kindpess with which, during many years, you have noticed my various rorks in plasspainting, as also the notice
I find in the number of the Builder for 8 ept 20 of the
memorial window to Sir William Wallace, of Elderslee. memorial window to Sir William Wallace, of Elderslee
executed by mo for the Glasgow St. Andrew's Club, and executed by mo for the Glastow St. Andren's Club, and

that, in adderting to some versea recited ly me on the that, in adverting to some verses recited ly me on the
occasion of the presentation of the memorial, youn quoted
 Dinstrel, who livect No years ago, You will see by a
copy of the verses enclosed that the one is given within
iaverted comman, and the minstrel's uame quoted at
bottom. Itrust, therefore, you sill put me right with bottom. Itrust, therefore, you will put me right with Your readere, either by giving the poem entire, or stating
ihe mistake that hns unintentionatly been made. Ms
admiration for Wallace ts as a hero vho fonght sud died admiration for Wallace is as a hero who fonght and died
for his country's freedom. At Blind Harry's time the feads and bitternesses betreen the North and Sonth were endless,-
changed.
"The mistake was not ourg; in the report sent ut
(Gituryore Meruld, Sept. 12th) there was no note, and nu
toinstrel's name given besides Mr. Buliantine's own.

Clapham Junction.-Mr. F. D. Banister, the engineer to the Brightan Railway Company, has planned extensive works to be carried out almost immediately at Clapham Junction. Prorision imade for new offices, waiting-rooms, gallery foot-bridge, and the contracts are about to b issued.

## CHURCEBUILDING NEWS.

Hoxton.-The new church, dedicated to St. Sary, in Britanuiar-street, Hoxton, has been consecrated by the Bishop of Loudon. It stands in the midst of a poor and densely-populated neighbourhood, in which there bas hitherto been a sad dearth of clurch acoommodatio. The total cost of the building has becn between
7,000 . and 8,0001 . The chnceh was built by
the Ecclesinstical Commissioners, the cost being the Ecclesinstical Commissioners, the cost being defrayed out of the proceeds of the sale of on of the City oburches. It is built principally of red brick, in a modification of the Italian style, and is capable of accommodating about 400 sitters. With the exception of the ceiling of the apse, on which a good deal of coloning and gilding has boon lavished, the church is alnost lestitnte of decoration, and the red brick walle of the interior do not present a very attractive appearance. It is, bowever, well lighted by means of large side windows, an east wincow, and eiglt windows in the apse, and can be The architeter by means of hot-air Chistian, of Whitohall-place; and the builders were Messrs. Manly \& Rogers, of Regent's Park.
Sidford.-St. Pater's Church, Sidford, has becn completed for opening. Sidford is a hamlet between Sidbury and Sidmouth. The sdifice stands in the centre of the villarge, on the oad to Lyme Regis. On the plan, the extreme ength of the cburcb is 108 ft ., the width being 56 ft . It consists of nare, 70 ft . in the clear by 22 ft . wide ; and north and sonth lean-to aistes of similar length, and 12 ft . wide respectively. On the east end of the aisle are the restry and organ chamber, 18 ft . by 10 ft ; and on the corresponding side is a small bell-chamber, 8 ft . by 6 ft . The chaucel is 40 ft . by 21 ft . in the an arcading of five hays. The clurch is entered an aroadiog of ive bas. by a nor thand sonch porch, ana there is a priest bell-chamber is entered. The height of the nave to the ridge is exactly 50 ft ., aul that of the to thancel 42 ft . The bell-turret, standing imme diately over the chancel arch, rises to an altitude of 72 ft . Tho style of the building may be termed Fhorid Early English, somewbat freely treated, perhaps. Esternally, the walls are of brick, relieved by bands of Bath stone, and the dressings of the witudows, of the doors, the copings, \&c., are all of this lattor material. The treatment of the walls, or faces, is of atcerate
brick and stone; the arcades, the chancel arch, brick and stone; the arcades, the chancel arch,
sc., are of deeply-moulded Bath stone, and the dreasings throughout are of Bath stone also. The roof is open, and springs from bold corbels in the nave, and from sculptured ones in the chancel. Those roofs are of pitch pine, stained and var. nished. The side roofs are simpler tban are those of the nave and chancel, and thereby noreaso not a hittle the majesty and importance of the central avenue. The seating throughont the nave and aisles is open. The windows light. ing the body of the church bave coloured glass freely introduced into tbem. They are the make of various firms, principally Messrs. Hardman, Wailes, and O'Connor. Religions emblems are worked into each. The east window, by Clayton \& Bell, of London, has been erceted by Mr. Bailey, of Cotford, in memory of two decensed sons. It represents the Ascension. The reredos is mainly composed of Bcor stone, but Derm. shire marble is largely introduced, all tho panels, columns, \&c., being of several varietios of that material. Except the stained glass and the tiles, the whole of the work has been carried out by oxecuted the mason. Wrork and Mr. Solway, of Ottery St. Mary, the soft stone.work. Mr Daniels, of Sidfori, did the carpentering, and the marbles are mostly from the neighbourbood of Toraqay The senlpture and the stone carving were done by Mr. Harry Hems, Exeter, and his assistants. The cost of the whole buildine has been about 5,0002 ., due to the liberality of the Rer. G. T. Comyns.

RoMan Catholic cherce buildiva NETVS.
Newcastle-upon. Tynue. - The olnnrch of the order of Dominicans, which has been built at the Red Barnes, Newaistle, bas been opened North-Eastern Railway, and the building forms conspicuous abiect in them of worm a conspicuous
river. The foundation.stone was laid by Bisho Chadwick on the 1 ith Septembor, 1869. Th cost is about 9,000., irrespective of the site an djoining grounds, which were obtaized fo about 4,000 . The edifice contains 1,000 siting and it is noteworthy that, before the buildin was commenced more than one-half of the cos and been subscribed in pence by the members the St. Andrew's oongregation, nearly all c whom are of the labouring elasses. Man ours in dirging hours in digging the foundations, cc. Are desigu or the chure, which is by Ar. Are bald Dunn, of the firm of Dunn \& Laneon of Newcastle, may be described as sem Rornawerle, style of Gothic architecture There is absence tracery elaborate ornamentation, and moulding but a solenn effect has boen produced by ma sive coustruction and breadth of treatment. T church consista of nove, aisles, transepts, at chancel. The chapels of the Rosary and Joseph are in the transepts. The total interi length is 170 ft ., and tho widh 67 ft . The na and chancel are of the same width, 30 ft ., are separated by a lofty chancel-arch, 50 ft . height. The light is obtained mainly from clearstory windows, which are placed very hig and form a continnous rauge round the nave chancel. The internat heige of ie have The lower portion of the roof is panelled; constructive timbers are ailowed to sho thro the darkened space up to the ridgc. The It ver the chancel is divided by atched ribs ic anels. The sacristies are arranged as a lan mbatiatory round the semicircular apse or hurcb. The centre portion is projected bey he rest, and contaius the cope chost and esting-alkar. At one end they are con at ith the cloisters of too monastery, and aty oinint the cburca. Anse of the chorist nd the whols Corms a thoroughly counected range of buildin In treating the iuterior of the church, the us paster has been avoided; the archistect featores are carried out in stonc, and the $\begin{gathered}\text { s }\end{gathered}$ saces are lined with a fine quality of w pricks, pointed with red joints. The effect luced is that of the decorations mado use the thirteenth centary. Only a limited amo of deoration bas been introduced into the sa tuary where the same simple treatment has b carried ont the ornamentation being stenci and on the pine 5 ft , high. The benc with are of with amount of carrince gents of choristers areplaced in front of th seats 1 the alla is isolated, and stanas in the altar is a figh Built in the the eupositorinm which (as steps to reach the as apse, and will be an claborate picce of ste carviug, 25 ft . in height. From each end of expositorinm the reredos will encircle the wo ciroumference of the apse-wall, and consi twenty.four nichee, containing fignrce, ne lifesive, fthe saints of the Dominican or The nave and nisle floors are laid with polis York landings, with margins of red stoue, small squares of blue slates inserted. north window of the west aisle is fillod stained glass, by Mr. Barnett, of Newa The esterior of the church is of the stone o district, built throughout in regular con with large mortar joints. Tbe roots are con with red Broseley tiles. A massive to situated at the north.west corner, and deta from the main building of the chmreh, is ear at present to a height of 50 ft . The total he will be 175 ft ., and it will bo gabled on faccs, and fivished with the low pyramidal peculiar to those towers. The most no feature of the exterior is the composition on west-end gable, which is 80 ft . in height. P? high is a large rose-window, filled with maller circles, each supported on a shaft, carved capitals. In the centre of the wi is carved a dove,-the symbolical represen of the Holy Ghost,-descending on the hea the twelve apostles, who are ranged in a of niches immediately nuderneath. Belo figure of onr Lord, in the in the centre ; the chief apostles, St. Peter and St. Paul. occupy n'ches upon buctresses at each The general contractors have been $\mathbb{M r}$. $t$ Madrid，and the painting itself is a copy of he pieture of Murillo which is in the Polais of he Louvre at Paris，and is valued at 10,0002 ． The picturo in the new chrreh of St．Dominic， Newcastle，is valued at 2,0002 ．When the onvents in Spain were closed，it became the roperty of the chaplain of the late King of pain，Ferdinand V1I．，and it has been in the ossession of his relatives until it was purchased －ir．Pelegrin，\＆Spanish gentloman，who has ad by whom it has now been presented to the hurch of St．Dominic．The ohurch at present ontains one organ，the choir－orgen，which is laced in the gallery in the wost transept． i，however，intended to have a chapeloorgan，to a placed in a gallery which will he erected for an purpose at the north cnd，and for which funds uilt by Messrs．J．Nicholson \＆Son，Nowcastle．

## Wratis ancriber．

 Clark，Stroud，Clouccstershire， 1873. YI are glad to find that we slall have an anglish version of M．Le Duc＇s lectares，and we er Mr．Bucknall good wishes for the success Nenty lectures，in two volumes，largely illus－ ated．The first ten lectures treat of the atare and origin of art，and describe the early rowth of architecture；and the last ten show ucient principles to meet modern requirements． ot up，and has four page illustrations．When wo work is furtber advancod wo shall look at i riously．

## VARIORUN．

Mr．Wyld has issued a map of tho British ossessions on the Gold Coast，aud the terri． ories of Ashanteo and Fantee．There is reason fear that it will be nseful to have it by one
resently．Mr．Alfred Smeo has printed，in a amphlot form，his recent letters on＂Milk， yphoid Fever，and Sewage＂（Collingridge， dersgato－stroet．）－The Garden says， ir．Toner，of Washington，adrocates the esta－ lishment of＂free pakrs and camping－grounds， sanitariums for the siek and debilitated
aildren of the poor of crowded cities during te summer months．＂＂Sueh parks，＂say 1r．Toner，＂should be free to all who have ck or debilitated children，and porsons while nere should be permitted to live in tents or istes justify，so long as they do not violate the 4 Fs of bealth or incommode their neighbours，－ re main purpose of the institution being to cure hy a healthy rural residence the restora－ ou the children of tho poor，suffering from，or nreatened by，diseases incident to，and aggra ated hy，the excessive beat of summer in cities．＂ he plan seems worthy of serions consideration， ealtliy high gronnds uncultivated．

New Pier at Ostencl．－The Commmal ouncil of Ostend has accepted the tender of lr．Fendry，of London，for the construction or new pier．

## 筑えscelianca．

Opening of Wandsworth Bridge．－This aew bridge has been formally opened for public traffic．The sito on the Wandsworth side is immediately between the Old Wandsworth Pien and the Distillery，where there is a commuoica tion with York－road．On the opposite or Fulham side of the river the bridge stands between Hurlingham Honso and Chelsea Meadows，not far from the Imperial Gasworks，and leade out towards Walham green．The bridge is con－ structed of iron，and consists in the first place of one continuous girder resting on cylinders filled with concrete，and buried deep in the river＇s bod．It in divided into five spans，one at each end of 113 ft .6 in ．，and three in the stream wrought iren，in，each．The cylinders aro them form a pier．The abutment piers on either side of the rifer are of brickwork and masonry The elcration of the structnre affords a clear headmay of 20 ft ．above Trinity high－water evel at tho centre．The cylinders have been sunk to $n$ depth of $1.1, \mathrm{ft}$ ，into the London clay， them bave a thick bed of concrete laid unde the lattice main gixders of the bridge are of proper has pattern， 12 ft ．deep．The bridgo proper has been erected at the cost of between
11,0002 ．and 15,0002 ．，but when the approaches， \＆c．，are included the figures run up to from 35,0002 ．to 40,0002 ．The bridge has been erected from the designs of its engineer，Mr．J．H Tolme，hy Messrs．De Bergne \＆Co．，as con． ractorg，under tho superintendence of their ongineer，Mr．Mullalien；the contractors for the approaches being Messrs．Bull \＆Sons，of
Southampton，
Carpenters and their Pay．－On Thursday Messrs．Jackson \＆Shaw，the contractors and builders of Earl－street，Westminster，were sum－ moned to Westminster Pulice－court by Edward Batler，a carpenter，for not paying him at the rato of 9d．per hour for work done，he being a akilled opcrative．－Mir．Armold gave judgmeut． He said the complainant entered the servico on Saturday，claiming to bo paid 9d．per hour，but the defendants paid him 612d．，and he sued for the differcnce．There was no contract，but he says，＂I，as a skilled workmen，am entitled to 9a．per hour．＂The defendants did not disputo that complainnen were entitled to 9i．，bat alleged only worth G⿺𠃊⿳亠二口丿，d．per hour．The complainant relied for his case on the fact that he had duly served his time to a master in the country，and had worked for two London firms and received full pay，and be understood that unless there was a special coutract he woald be entitled to fill money，and if he were incompetent thoy should at once have discharged him，and not him to skilled lahonr．On the other hand，the defondant said that it was the costom in large firms to take a man without any stipulation，and at tho ond of tho wrel pay him what lee was examination，was found to he worth $6!d$ ．In this case the question was the value of the work， and how it was ascertained．The question was one of fuct，and parely so．Had the complainant established that his work was wortb the higher
rato of wares？Under all the circumstances he（Mr，Armold），being of opinion that he had not done so，dismissed the summons．

## Clarge against a Sheffield Mastex Builder．－At the town－hall，ou Wednesday，be

 ore the stipendiary magistrate，a charge of a erious character wos preferred acainst Mr ． John Holliwell，of Monmouth．street，niastor wilder．Mr．Chambers nopeared to prosecute N．r．Clegg was prosent on hehalf of the de fendant．The information stated that the de fendant had malicionsly and unlawfally com mitted damage to cortain real property，belong． ing to Mr．Henry Egginton，hy pulling down several stoves and ten doors，in some houses erected by the defondont four hion，and house doing injury to the extent of 206 ．It appeared that Mr．Egginton made a written oontract with the defendant to huild certain houses in Mush room．lane，for $315 l$ ．Of this，Mr．Frgeinton paid him 2837．on account．－Evidence was given in support of tho charge，and eventually the stipen． diary decided to adjourn the case for a few days， in order that the evidonce might be completed； in $100 \%$ ．，and two bonds of $50 \%$ be bound over again to answer the charge．How to Store Fruit．－Some of our readers will bo glad to learn tho instructions given by the Gardener＇s Mragazine on this point：－An oxpensive structure is not required，for the fruit may be kept exceedingly well in a dark room in which it will not he exposed to sudden changes of temperature．A collar is a capital place，pro－ vided it is perfectly dry and dark；bat，as usually constructed，cellars aro too damp and place is built exp 1 for it shat in dry eoil be exply dr＇y soils，be partly below the general level，with soil it lor soiss it may be bailt upon the level and a bank of soil made against the walls．The roof must thatch，whicb cover waterinlly good thickness of thatch，whicb will materinlly assist in maintain－ ing an equable temperatare．The fruit shonld be kopt in perfect darkness；but，to facilitate the examination of the stores，windows provided
with ehatters shoald be fixed at intereals in the with ehuttors should be fixed at intervals in the roof or elsewhere，according to the stylo of the house．The fruitroom should be in a shady pesition，for a very considerable number of soft fluits ripening in strmmer are materially im． proved by being placed in a cool room for a few days，and in some cases the season of a par． ticular fruit may be prolonged considerably by a portion of the crop heing gathered，and then placed iu a cool dry place or a dry cellar．TVith regard to the internal fittings，it will suffice to say that slaallow shelves or drawers of open lattice－work are preferable for laying the fruit wom
Window in Westminster Abbey to George Fierbert and William Cowper．－The Denn of Westminster proposes to place in the Abbey，in Wordsworth，a memorial of the two posts Georgerts， George Herbert and Willian Cowper，both edn－ cated at Wostminster Scbool．It was the in tention of the Dean to iuclude a third name， minster minster boy，but this is now superseded by the The Leisure Hour，near that of Isaao Watts， The Leisure Hour says，before any public an－ friends likely to take interest in tbe proposal． One of these circulars having come into th hauds of an American，Mr．G．W．Cbilds，the proprietor of the Philadelphia Ledger，Mr．Childs asked the privilgge of bearing the whole cost of the proposed memorial．Dean Stanley re－ sponded to the generous offer in the same spirit in which it was made．It is a happy incident of international conrtesy，in regard to names which are held in grateful remembrance in both coun tries．As an Americau，Francis Boott，of Boston，had the honour of placing the monument to Honry Kirke White at Camhridge，so the neme of another American，George Williani Childs，of Philadelphia，will be associated with the Weat． minster inemorial to Herbert and Cowper．

A New Hospital．－The business portion of tho new premises of the Western General Disponsary lins been opened for the treatmen of patients．Tho new premises aro sitnated at the corner of Maryleboneroad and Stafford－ atrect，close to the Edgware－rond Station of the Metropolitan Railway．The huilding is in the Gothic style，Mr．Saville heing the architect，and Blesars．Jackson \＆Shaw the contractors．Thero are about thirty rooms，two of which aro wait－
ing－rooms，three surgoons＇rooms，and three physicians＇rooms．The dosign of the olarity which was fonnded at the old premises in 1830 is to give medical and surgical aid to the sick poor，and to visit at thir own homes sach as are unable to attend at the dispensary，provided that they reside within one mile of the insti－ tution．
New Hoe Perfecting Machine．－The regular sale of Lloyd＇s Nevs has renched nearly 600,000 copies every weok，and Messrs．Hoe \＆ Co．（who now carry on a very large engineering estahlishment in London）have invented a new machine that will print two entire copies of Tiloyd＇s News on a sheet，and complete over 20,000 papers every hour．The paper is printed from a roll，each one being abont $2 \frac{1}{2} \mathrm{ft}$ ．in miles and a four miles and a half，equal to 10,000 papers．The machine occupies a space of about 20 ft ．long， 6 ft ．wide，and 7 ft ．high．The great improve－ ments that havo boen introduced into the process of stereotyping during recent years，enahle the printers to cast any number of plates very
rapidly，so that many machines can be started， and the editions printed in the shortest possihle space of time．

The Maidstone Mauseunn. - The public opening of the Brenchley gardens, togethor with
the new wing of the Cuarles Museum, Jaidstone, bave taken place. The area of the garden i somewhat over five acres, and the ground has been laid out in lawns and terrace.walks hy Mr. Mackenzie, landseape gardener to the Metro. politan Boerd of Works. At the entrance of the gardens is the head gardener's residence, wbile no ond of the grounds is ornamented by the band-stand, aud in the centre is placed some marble statuary (Acis and Galater), the gift of Mr. H. A. Brassey, Mr.P. The new wing, which is red brick, on a stone foundation, consists of two halls, one considerahly larger than the other. tion of turvtu, statuettes in hronze, terra.cotta ornanuents, \&co, and a marhle bust of the donor: The smaller contains a raluable collection of birds from all parts of the prorld. These birds were obtained at great expense and trouhle by Mr. Brenchley, in liis lengtby wanderings over the face of the globe. This room also contains a few specimens of the amaller foreign animals, and a goodly number of butter flies, moths, \&c.
New Church of St. Gabriel, Newington. The fomdation stone of the new chnreh of S Gabriel, Newington, has been laid by the rector, the Rer. W. D. M'Lagan. Tbe chareh is built on a portion of the graveyard adjoining the parisb cburch, which is shortly to be removed in order to widen the roadway at Newington-butts. St. Gabriel's is intended to be only a mission church, as tbe parish churoh will he replaced a finer edifice, to be erected in Kennington Park. road. Tho mission chareh will be a plain struc. ture in the Gothic style, and will be huilt almost entirely of red brick. The length from end to end is 119 ft ., tbe nave heing 76 ft . long and 25 ft . wide, aud the width of the aisles 11 ft . each. The church will accommodate 600 people, and will cost 4,000 ., for whicb the rector has made himself reerponsible.
New Masonic Temple at Philadelphia. A new Masonic Temple has been in course of erection for the past five years in Philadelphia. The bailding oxtends 250 ft . east and west, wbilst its breadth is 150 ft . The cost of the gronnd was 156,793 dols. The huilding is now nearly completed. The total cost is $1,455,000$ dols. inclnding cost of ground, the money having been raised chiefly by a Masonio loan made under authority of an Act of the Legislatnre. The building is practically two atories in height, with a grand central tower 280 fl . higlis, and several smaller towers and turrets at prominent parts of the structure. The new temple was Kecently thrown open Grand Lodges, and brilliantly illuminated.

A Substitute for Coal.-Among the ano. malies of the fuel question, the most striking consists in tho fact that the supply of petroleuns from tbe Pennsylvania wells is now ats a rate which has reduced its value to 1d. per gallon, and tbat yet no metbods lave been hrought into general use to ntilise this product, elther influence the price or domestic purposes, prosent yield of the region is estimated at 30,000 barrela a day, and new discoveries are constantly made An impression is becoming general that tbe existence of this fuel is as extensive as that of coal itself, and its utility is finding recognition in China and Japan, whither considerable sbipmonts are now in progress.
Herne Ray and Canterbury.-A meeting bas been beld in Cauterbury to promote a scheme for the formation of a railvay from Canterhury to Herae Bay. It was stated that the line could
be formed for 45,0001 , three-fourthe of which a be formed for $45,000 \mathrm{l}$, three-fourt the of which a
contractor had offered to take in shares, leaving contractor had offered to take in shares, leaving
only 10,000 . to be subscribed for by the only 10,000 . to he subscribed for by the public A resolution was agreed to affroming that the railway in question would be of material benefit to Canterbury and Herne Bay, and pledging the meeting to uso its utmost endeavours to carry out the project. The inhalitants and owners in botb places shonld do their best to promote the undertaking.

Proposed Halls for School Board Schools. mongst the anljects which on Weduesciay came hefore the London Scbool Board was a motion by Mr. Smitbies, that in all schools to be erected in futnre there ghould be provided a central hall, all the scbolars. On a division, however the previous question was oarried by a considerahle maiority. It is said these balls wonld cost a quarter of a million sterling.

Welsh Workmen and the University College for Wales.-A Festiniog scbolarship of 20., tenable for two years hy an imhabitant of the district, and a Commercial Travellers scholarship of the same amount, are to he com. peted for at the opening of the University College for Wales, at Aberystwyth, on October 8tb. The Festiriog scholarship has been estah. lished by the inhabitants of the diatrict, cbiefly quarrymen, and is a remarkahlo illustration of the wide-spread belief in edncation which exists among all classes in the principalitr. The other scholarship is one of several wbich are being founded by the commercial travellers of North and South Wales.-Cambrian News.

Discovery at St. Margaret's Church, I.ynni. - An interesting discovery has been made in clearing out the last few inches of earth from the nare, to lower it about oft. A mass of
stone was struck apon, and it proved to he a hrge part of the Early Enclish spiro, which in the eightenth oentruy, foll from the south-west the eighteenolishiy, fort south-west which led to ita being wholly pulled down and which led to being when pufled down and
 is lying where it fell, - towards the north.east,
and it includes a largo quantity of carved and it includes a largo quantity of carved monidings, gargoyles, and pianacie worl, from might easily be made. The "hanqueting. hall" might easily be made. The "hanqueting. ball
plaster work ceiling of the nave has been pulled plaster

Godalning.-Thero is no doubt that the erection of the Charterhouse scbools has already been the causo of considerable mood to the town and trade of Godalming, and tbero can also be no doubt that in the fucure it will have a very wids effect upon the vicinity. It is supposed that in tho course, any of a quarter of a century quite a littlo city of villas will have spruug up in the neighbourbood of the achools. This vien soems to be a highly feasible oue, for at the present moment, within 300 hundred yards of the scbools four buildings are in progress wbich give employment to ahout 500 workmen; the respective contractors being Messrs. Bull \& Son Southanıpton; Mr. Harris, TVoking; Mr. Putney Dorking; and Mr. King, Loudon.
Extension of the District Railway.-The operations nnder the "Harsmersmith Estension Railway Act, 1873," if not actually begun, are about to begin with as little delay as possible Mesars. Barlow, Wollaston, Pym, and Vignolles, are the originators and proprietora of tho new undertaking, which is the construction of a line of railway 1 milo 7 chains and 10 links in length, commencing by a junction with the District Railway at West Brompton, in the parish of St Mary Abbott, Kensington, and terminating at the Broadway, Hammersmitb. The capital of tbe new company is fixed at $211,4-4412$., to be issued as stock, and the same, when issaed and subsoribed for, is to be paid up in full.
Opening of a Working Men's Club at Cariton.-A club of this description has been opened at Cariton, near Nottingham, hy the Earl of Carnaryon, who, in his address, commented npon the advantages which the building afforded, statiug that it contained a lecture-han and rooms for reading, writing, refreshments, and smoking. There were sorne people who riewed the amusements provided with distrust, but he did not. Ho heartily concurred in them. Having descanted on the importance of sohriety, his lordship went on to say that be valued nd clubs because they brought about a kinses with eacb other

Association of Mrumicipal and Sanitary Engineers and surveyors.-A meeting or the district committee for the Midands will he beld at tbe towa-ball, Leamington, on the 18th of October, when it is proposed to make an inspection of the sewage works and Sewage Irrigation at Leamington; after which to drive orer to Warwick and inspect the scwage works and farm helongiug to that town, returning to tbe town-hall, when, if time will permit, short papers may be read by members; selecting for such paper any of the "examples of subjects" suggested by the president in July of this year

Death of Mr. Robert Rdgar, Architect.On the eve of going to press, we regret to have of Mr. Robert Edmar of the London School Board, from apoplexy

Opening of Elswick-park, Newcastl upon-Tyne.- Inis new west. ond park for Ne castle mirs been opened. It is proposed, also, have a park for the east.end. Neweastle singularly disficiont in open spaces and recre tion-gromads. A charge of one penny for adm tance is made at present; monthly tickets i 2 s , or family tickets for 10 s.

## VOL. XXXI.-No. 1601.

" 4 National School of Att." N artiele in our pages* under the Eabove titlo has clicited some discnssion whioh we have been glad to receive. The subject is a large and important one; nono more so, we believe, to the best interests of art in England at the presort time, which cannot be readily exhausted or disposed of, and whieh would have admitted of a fir ampler exposition than we were able to give it. Thongh we may, perhaps, claim with our correspondents
have somewbat "iatently studied the subject," we feel that no such vantage. ground has yet been reached in art-matters in England as entitles any to speak with mach sease of certainty or authority ${ }^{-}$; and we are, therefore, quito conscions that all which ean be advanced must be regarded as tentative and suggestive, and the expression of individual opiniou only.

Certain objections have been urged agaiust the conclusions arrived at in tbo article reforred to, which it may be serviceable briefly to notice, though in the course of that and proceding articles to which it was the scquel on the recent controversies conceruing the stato of Enclish Architeettre which have appeared in some seo. tions of the pross, they have been more or loss anticipated.
Referring our readers to these articles for the review and examination we gave to the whole question, it will be sufficient here to state that, while onr reference thronghont was primarily to architectnre, yet our statement and application of principles was purposely made discursive enough to embrace the issnes of all art, and it is apparently in this wider sense that our correspondents have aocepted it. From this point of view our meaning, perhaps, would hare been clearer had we adiered to the formula, "An Art University," whieh would have savod any misconception arising from the ase of the more restricted roords "National " and "School;" thongl it must be borne in mind that it was to the history and development of our Dodern Architecture, its prosent status, and the conditions by which it has become surrouuded, that our argument had the largest application.
It would only be needlessly to repent ourselves to go over the ground in regard to the history of our modern art, and tho adrerse ilfluences against which it has had to contend, which induced ns to express tho conviction that what was now really needed was a more definite orga. nisation of art for all the purposes we set forth, not as anything new, but as accordant with felt needs whioh were increasingly finding expres-
sion in all quarters of the art-world. In adopting the University in relation to other learning, as the type of what we believed to be roquired for art, we distinctly meant a Seat of Art-learning a Central Home of Art, where its study and pursuit could be carried on and sustained in con tinuous growth from age to age in a manner now unknown to us.
In saying that it wonld be an immense gain to Euglish Ast to endeavour thus to aggregate all tho existent art-faculty of the country worth cultivating; that in the combina. tion of original, creative capacity with combined exhaustive study of all the technigue of ant and the subtle problems in which its successful ex. pression was involved lay all the possibilities of the art at our command; that to afford a tri bunal of judgment which would give a ready recognition to merit alone, and before which genius could win its true status, honour, and reward, while mediocrity would wither,-we scarcely expeoted to meet with much dispute or argument ; but objections havs been urged which, havever, seem very much confirmatory of the positions advanced by us
The objeation of "impossibility" to such a scheme as that so barely outlined by us, from "the sectarian conditions" of English education and colture, more especially in art ciroles, the hostile camps, the divisions, jealousies, \&c., seems a strange one, inasmuch as the hope of such a scbeme would be that by raising art to a higher level freed from the causes in which theso influences have their rise, they wonld become healed and cease; art would be followed chiefly for its own sake and adrancoment, and not under the immediate pressure of "getting a living," "securing popularity," \&c., which now necessarily beget the joalonay, tho isolation, rivalry, and shoor individualism, in the sense of personal distinction whioh form the atmosphere in which art, whether architectural or otherwise, now too much exists And further the objection of "impossibility" would le against all attempts at organising any system of study on a similar basis, and could only be tested by an actual attempt at realisation. Experience in all departments of learning and seience invariably proves that at a certain stage of culture the means now adrocated bave always been fonnd desirable and successful.
The ohjection that we have abundant agencies and existing machinery for the cultivation of art wbich neither cure tho evils complained of, nor compass the ends in view, is a pointless one, in asmuch as these difforing very largely from the remody contemplated, their comparative failure proves nothing against a scheme with which the analogy is so slight.

A further objection is that we want no "forcing - system" fur art. Here wo think the mistake is direct. Nothing conld be further from all thought of "forcing" than the calm, measured, perfocted cultivation of art, and the registry of its progress and best results which would be the outcomo of tho endeavour we suggest, in the plave of the feverish compe. tition and restless striving after novelty which are the inevitable characteristics of our art minde present unhealthy infuences and conditions.
The last objection wo have to note is that the art which we have is scarcely wortll cultivating at all, inasmuch as we have been "grafting Where we should have been growing," and that it is in consequence "hybrid," and "uasatisfaotory to an advanced culture," This may be very true, but as we are only just beginning to find it out, it is difficult to say what other course could have been pursned on the sudden awakcning to the fact,-scarcely a contury ago,that we had no native art at all, than a resort to the first style of art which offered itsolf We have continned in a course of "revi vals" and imitations, not without much snccess, and original treatment, proclaiming no lack of native art.facnlty, but the very reverse,
yet it mast be confessed, without much definit progress, or the discovery of such fixed principles in art as should be the nuclei of further adyance and more original development. But when wo are tald that we are and hare been all going wrong, that we must "grow our art from the right seed," must have a tabula rusa, in fact, and begin ab originc, we feel that we have reached an optimist point of view, and fail to rasp what is intonded, and we anriously ask "How is all this to be brought about?"
In the mean time we have to deal with the actual condition of things, with the art of the England of to-day, which has reached anextroordinary and exuherant growth, and which cannot be iguored or swept away, but which certainly needs checking, pruning, and carefully cultivatiug upon a very different systom than has hitherto prevailed. This is a practical issue which will not conflict with any endcavours to "sow the rimht seed and grow a true national art"; on the contrury looking at the fact that among the Moder Enclish art is not a spontaneous growth, -not a felt need of our general national life, -that it has been and must be coltivated amongst us more or less as an exotic-that the taste for art must grow by that which it feeds upon;-it seems to ws that the only "possibility " for true art is its cultivation in a recognised centre of influence from which a permeative effect would go forth gradually through the land, and that the hope of sowing broadeast the seeds of art, "to grow with the growth of the national intellect," \&c., is a dream of very doubtful realisation, and opposed to all we know of art-development, ancient or modern, which wo still contend was the product of dis tinct genius in harmony with the most seiontific and teohuioal cultivation inuposed by laws in optics, \&c., which must be discopered and observed if art is to be anything but the aimless, imperfect thing, scattered as to its principles and progress, which we now seo. The very elements of artistio expression are still, as to their soientific definition, groped after by us almost in vain. The laws of form and proportion by which the eye is satisfied and rests in the sense of a realised beanty, what do we definitely know of them as fixed principles in architocture, ornamentation, \&c., and, though happily now with less nucertainty, the same may be said of the harmonic relations of colour, of the perspeotivo relationship, of the varying aspects of a building and the influences of light and shade, as the great factors in effect, whether of archi. ecture or scalpture.
It may be also perfectly time that art was "a growth of centuries" in Ancient Greece and Ledieval Europe; but there is $n 0$ analogy between the conditions of its cultivation and excellenoe in thase cpochs and our own. Among the Greeks it became an instinct of the natioual life, producing fruits which have efor been tho wonder and envy of the cultured world, but by what methods we know not. In Italy excep. tional conditions prevailed, and so on thronghout other periods when art has culminated in surpassing efforts. We of to-day inherit some of these results, which overshadow and overave our own weaker strivings; and whether to aiscard all the past-which it seems we can only distantly imitate, witb no hope of rivalling -and strike out a course of our own, is just the problem with which we have hitherto been too timid to grapple.
But, after all the cousideration we have heen ble to give to the subject, we retain the belief that living art in any nation only co-exists with that peculiar innate faculty wo call genius, which finds in art its power of expression, and that in the oombincd operation of this as its source and directing cause alone lies the possi. bility of a National Art.
We might find eudless practical illustrations of the adyantages to be derived from making art its
own jndge and the master of its own honours and rewards, instead of offering itsolf, as now to all the fortnitons influences of public appre-
ciation) criticism, and natronage, which caunot, ciation, criticicm, and patronage, which caunot, for vely snbstantial reasons, be despised, hut
wlicil arc yet, too often, defrading iniluences; wlicich arc yet, too often, degrading inimences;
and we are still of the belice that under all tbe circumstances now effecting the status of art in Eogland, and more especially in regard to architec. ture, that the canses we have indicated in former at ticles as at the hottom of past misdirectcd efforts, undenialle failures, and ahnormal results,
nee mantionly true within their range, and are practioally true within their range, and
would find effectual removal by the scheme we hare suggested of such $a$ National School of Art, or Cniversity, as should, hy the extent and
thiorongluess of its cultivation, its examinations, degreess, scholarships, exhibibitions, compctitions, as far as possible, such art.products as the conntry was capable of. An ample foundation avd generous endowment, witb the determina. possibilities," but to sink all these in the high pim of adrancing axt to an hitherto unachiercd dignity of position and success, seem to he the grand $r$ equisites for an experiment which we benere the history and development of modern
Eullish art show to be its one necessity, and Euglish art show to be its one necessity, and and important results than we can now possibly anticipate.

## A FEW TORDS TO NORWICI: $\triangle$ PPPL.

 Cable to some other places At the workmen's meeting in Norwich, orga. scien ustal duling the congress of the Nocial f some 2000 ncrsons, the sheriff presiding Mr . Godrin, whose name was the laot on the Jis of appuinted epenkers,* said, we have hcard some thing of rarious parts of the world from the dif forent speakers th io have eloquently addressed Jon, but I propose to confine mjself to a few sentences conceruing Norwiel. At starting, how ever, I think it necessary to say, in no spirit of erotism, but because I want jour confidence,becauce I want jou to believe that I am not dealing with a Enhject with which I am unacquainted, -that I havo for many years made it my duty to examine seriously into the condition of our the view of assisting in obtaining remedies $f^{2}$ the sad state of things fonnd to exist. I am not speaking for the sake of speaking, but in earnest nope tlat some good may come of it. An un intercsting city, and visiting its cathedral, the noble result of the piety and ekill of yonr ances. tors, which shows the haudwriting of 800 years, and tells a story of great interest to those who lave learnt the language in which it is written might be excused if, noting the open spaces With which the place is dotted, and the ap-pearance of the principal streets; and bearing pearance of the principal streets; and bearing eevers ind other works, he came to the con. clusion that little more was required to be done to protect the health of its inhalitants. If he stopped there, homever, he would make a great mistake. Let him extend his walk; let bim go to the courts in St. Stepbeu's Back-street (Pipe Buruer's.jard, Unicorn-yard, and others), bud ho wrotid broken paring, full of reeking offal, rooms scarcely bigh enongh to stand apright in, without any openings at the back for ventilation aud filled with pcople existing without any of the conditions necessary for healthful, vigorous, and happy life. In the last-named yard he would find one "closet" doing duty for eight louses full of people. As to paremente, one
word in parenthesis. Some will recollect how Coleridge describes Cologne, that "town of monks and boues," as laving-
milder pavement in the worst parts of Norrich, end should he remembered that this is more than question of comfort. It is not merely that suc paremeuts trear out shoes nnd tempers, but the retain filth dangerous in decomposition, and productive of most cril consequenecs. Then Jct Corgate-street and Pockthorpe, -let him go into

Cook's-jard, Queen's.jard, Ship-yard, or Dial yard, 1 had almost said "Die all yard" The tate of things there is abominable and terrible These courts are full of filthy smells. In one of the yards, which it is nnvecessary to specify, becanse I am unwilling to annoy owners or the corporation more than is necessary, the pump which supplie eight or ten familics stands cloce to a wretched cesspool, called an accommodation for fous een families,--a cesspool with a stick across the top of it. In another of the jards a moma old me that no one could drinz of the water of the pump without being ill, and therefore no on did drink of it, and they were obliged to heg horrow, or steal water as they could. I was not surprised to hear that, or to hear that whe small-pox visited the city these yards were decimated. So they would be again should an epidemic at any time break out. In another court there is an open midden within 5 ft . of the door of a room occupied by a woman and four children. This woman said, "The children are sick, sir, every day." Little wonder; for 1 of the morning, and went away with a sor thioat. Fortunately, people are nowaday punished for adulterating food; they onght also o be punished for compelling their fellow reatures to live in adulterated air, or to drink adulterated water. What we want are clean air, clean food, and olean water, which at present the in bahitants of none of these courts or yards can get. I repeat, it is not my desire to anno the authorities, bat they must not be allowed to uppose that health and life are not being sacribed in this city. Life and health are wort and money into opposite scales, and money and money into opposite scales, and mone rust to the chance that both may be retaine that we hesitate to spend one to sectro the other The corporation has done a reat al all rie corpora risure of the be in no a frilure in constraction and water $f$ mone It is 10 a bis he bea the will hey have adopted, becanse $x$ thorghiy bcicr the best plan for the disposal of sewnge is by irrigation. pess umen the me from going on. The infant mortality of the district, for example, is terribly great. I hare not returns from Norfwich itee, hat a bue woo asued by the Lords of the Privy Couucil, an Which, like most Blue hooks, remains unopened, shows that in seven districts ronnd the Wash, Gaking in part of Norfolk, ahout 23 infants in every 100 die, Norfolk being the highest in the ist. I should like to say a word or two, also as to the cultivation of the Beautiful, in respec of health, the value of scientific and artistic nowledge : not merely a money value, althoug that is considerable, hut as opening the mind, affording means of delight, and contrihuting to make existence happy. Innocent recreation is no small thing. The cry of the Roman people was Bread and the Circus, and this has been the cry of human nature ever since, and every where wise statesmen will ad in providin recreation of an innocent and elevating character There is a higher life than the mere bread and-cheese life: let us all strive for it with Encelsior for a warcery. Only one word more. Do not expect to have things done for you: try to do them for yourselves : and when you are callcd upon to elect municipal officers, do not roto for those who inerely promise to save your money by opposing all improvements and ameliorations: rather belp those who have shown by their previous acts that they will strive, under Providence, to protect yonr health, advance jour happinces, and save jour lives.

Permanent Art Gallery for Warrington. local paper states that "a permanent art gallery for Warrington is a matter of something more than speculation. It bas heen some time nown that Colorel Wileon-Patten, with bis accustomed liberality, bas offered land for an extension of the Museum buildings, whicb extenson would afford room for the growing wants of display be siven for the propes With the rid orow of the town it is erident that the present Nusenm buildincs will soon be inadtunate to the ruse of the Treum its olf and certainl to the quate for those extensions of its scope and purposes the times are calling for."

SANITARY AND EDECATIONAL EXHIBI TION AT NORWICH.
THe new feature of the Social Science Congress, an exhibition of sanitary and educational appliances, first adopted at Leeds, two years ago, is considerably devcloped at Norwich, and bids fair to become of importance. The collection in the Drill Hall, at Norwich, comprises 120 exhihits, including ventilation arrancemeuts mproved stoves and ranges, filters, school fit. tings, drainage appliances, models of schoole, nd prisons, and other cornate matters. It was opened hy the Sheriff, Dr. Bateman, with an excellent address, as a free exhibition, but the attendance soon became so large that it was found necessary to make a small charge during certain hours of the day, in order to lessen tbo pressure for those who really desired to examine the articles carefully, and witb a purpose. A cer. tain number of adjudicators bave heen appointed by the council, whose duty is to report on tho various objects exhibited and advise as to the bestowal of certificates of approval in certain cases. Of the wisdom of this wo are not quite certain.
Prominent in the Exbibition are Messrs. Donlton \& Co., who have a goodly show of drain. pipes, traps, sinks, olosets, and such like, for sanitary purposes, both in stoneware and carth. enware. Their system of irrigation is worthy the attention of those intercsted iu such thinge. They provide a main carriel of either the ordnary drain-pipe or as an open channel, the capacity of the latter being increased at pleasure hy the addition of copings of the same material on cach side. Theso communicate with the distributors by means of a sluice-valve, which may be regulated at pleasure. The sgraffito jugs cspecial of shape and decoration. The painted tiles show considerahle merit, and a great improrement is effected hy the use of a particular body of clay, which avoids the harsh and crude appcarance often siven to works of this kind, howezcr meritorious, when execnted on purely white glazed tilcs. This is cspecially noticeable in a desigu for nural decoration exhibited. Nor will we omit to dras attention to somo bosses or diacs in salt-glazed stoncware, the colours of which are very ffectize. The introduction of such a material and in such a form, which is absolutely imper. rious to the action of any atmosphere, or eren to acids and which admits of varied treatment, ornot but prove an acquisit:on to rchitects desirous of B . desirous of nising colour external weil monest those who scnd beating arrangements. They hose who scnd leating and show in of warming scho s, In their system small pipes are used so as to require hut little room, helind skirtings for example, and means are adopted to obviate the ohjections that have been made to the use of the close boiler. The cost of tho plant and arrangements fur heating an arerage house is put at $120 l$., and the ann
ahout $5 l, 10 \mathrm{~s}$. for the winter.
Messrs. Rosser \& Rnssell are large exhibitors of warming apparatus and improved rauges aud stovee, iucluding a reversible fire-grate, by means of which tho fresh coal is placed at the bottom consumed. Their diagrams include illustrations of the mode they adopted in warming and rentilating Guy's Hospital.

Mr. Pritchett, architect, sends three leng ths of Doulton's 21-inch trhular drain-pipes, put together with compressed cenient so strongly as to admit of their being connected before they are lowered into the trenches, and lo withstand pressure so as to substitute them for iron pipes and save money.
Varions other applications of the use of stoncwaro are shown: Blackmore's glazed earthenware cisterns; Kemp's improved chim. trying); and others.
The indefatigable George Jennings is, of course, represented, sending his valve closet and trap in one piece of earthenware, fitted with autornatic disinfector for the prrification of the air, to disinfect all foecal matters on the instant, the neatralisation of all sewer gases, and the disinfection of house drains and sewers by the liheration of tho waters used. We wero glad to he able to notice the right appreciation shown at doing.

Amongst the various traps exbibited we notice
the "Redcliffe Sanitary and Ventilating Trap," patented by Mr. McNeil Greig, the incrator, which is of stoneware, glazed inside and out, well arranged to check the entry of sewer gas to tho building, and not expensive. T'bere are many otber interesting and useful matters, to whicb we would refer, but space fails us. Let oally good will bo not merely looked at, but made use of.

## ON SOME CRITICAL VIENS OE

 ST. PaUli's Cathedral.A FEW weeks sinco we notieed at some length the historic information in regard to the present St. Paul's Cathedral and its Gothic predecessors, Mr. Longman's work recently published. The Mr. Longraau"s work recently published. The St. Paal in London," supplemented the historical details given in his book by some coraments on the architectural merits of the building, as well as by tbe reprint, wholly or in part, of several critical judgments on Wren's design, from various quarters. These, while they illnstrate the exercised npon the architectural design of St. Panl's Cathedral, gerve also to indlicato how strong an interest the beilding bas possessed for the different classes of critics, who havo taken so mucb trouble in attacking or defending the weak points of tbe design.
Popular opiciou, for the most part so favourable, oven to the oxtent of enthusiasm, to St. Paul's, has had its fluctuatioes on tbis head, nevertheless. The earlier days of tho Medioval revival, for instance, brought obloquy to the hitherto "Pagan;" and tbore were not wanting sterner (or more crazed) fanatics who openly arerred that tbey would rejoice to see it burnt Tbese were, however, exceptional extravagances ; and at the present moment we fied evon Gothic architecture speak with respect and admiration of Wren's work, as regards its general design, at all events; the vials of tbeir wrath being roserved for the dotails. That Wreu was a gifted architect, working in a bad and artificial style; that the general gronping and outlino are very noble, but some of the details commonplace, ard that these frults were those of his day rather tban of the arohitect himself; - this
is, just new, about the sum of the professional erdiot even of those who are most opposed to the Renaissance style; and this qualifiod judg. ment has largely permented the non-professional mind. Previously, however, to the rude disturbance of their faith by Medirevalisers, the British puhlio regardod St. Paul's as the central and culminatieg point of our native architectare, the perfection of which ne right-minded or properly educated man would thisk of questioning. Mr. Longran, in his own comments on the cathodral, exhibits a revival of this old-fashioned worship, in all its fervour and simplicity. He thas commences his descriptive chapter of the oathe-dral:- "The knowledge of the most accemplished architect, combined with the descriptive powors of the most eloquent writer, wonld be required to do justice to the grandenr and magnificence approaoh to the first, and without it, had I the graphic pen of a Macaulay, it would be hardly practicable to paint in words a building the vast oxtent and noble proportions of which stand in the way of its appreciation by uninstrncted minds" (p. 163). The author goes on to say that he has availed himself of the writings of acoomplisbed scholars" in his description, has been said in the way of chault-finding by architectural critics of any standing.
The first page of the description touches on a point of difference between oritics, viz., as to the introduction of the north and south chapels and their effect on the oxterior design. Mr. Lougman quotes from Mr. Wirhtwich's paper on "the genius and architecture of Sir Cbristopher May 30,1859 ) some remarks entirely in cons May 30, 1809 ) some remarks entirely in con-
demnation of these "excrescences," as they are there termed, especially in rogard to the longitudinal faces of the design. Without entering into the question how far their cxistence is entirely owing, as is stated, to the interference entirely owing, as is stated, to the interference of the then Duke of building prepared for the re-establishment of the building prepared for the re-establishment of the
on the wholc, this additional mass of huilding in connexion with the west end of the structure is not an advantago when seen in perspective, though when drawn in flank elevation, it bears
out Mr. Wightwick's remarks, in se far as "de stroying the yertical emphasis of the towers.' A Gothic architect conld have dealt very well witb such an addition, and have made it a maniwas that his principle of design compelled him to carry up these suhordinate chapels to the full height of the main structure aud carry all the architestaral "scenery" of the upper portion round them, so that they became anduly max. nilied in importance. But it may be a questio Whether the towers, if left free to the ground o in mises, would not have becn " vertical em phasis,", aftor all, is not what we most look for in a Classical design. Internully, the gain in architcctural effect from the chapels will scarcely architcctural effect from th.
be questioned by any one.
The dome, according to Mr. Longman, "is by far the most magnificent and clegant featnre in the building, and rises from the body of the church in great majesty," Without qnestioning it be ration like a sentence from a young lady's school essay), it may be observed that one becomes more impressed with the merits of the existing dome ou comparing it with the design which Wren originally made as the final ono for this central feature, and which is reproduced at p. 113, with the facsimile of the signature of Cbarles I1,, authorising it as "very artificial" (i.e., artistic), "proper, and nseful," whioh at all
events is more than could be said for his most sacred majesty himself. No ening conld be most signi majesty himself. Aothing conld bo more to the architectural dcrelopment of the bnilding than the fact that Wren earried ont the dome as it stands, apparently without opposition, though he had pledged himself to a design utterly different, and from which he had been formally forbidden to deviate, except in matters of detail. Architecturally considered, it is somewhat difioult to credit the two dosigns to the same person, so exceedingly inforior is the signed one haunted with the idea that something in the shape of a spire would be expected, and must ho providod, to replace the spire of the old eathedral. Accordingly, ho shows a segment of a rather flat domo rising from the crossing, upon wbioh is placed a lofty cupola, with its own nearly three-fourth of rather elevated pitch), which, thouch it certainly could have been safely constructed by treating tho intrados the lower dome as ane or looks painfully inscoure extornally standing upon the flat curyo of the lowor dome The upper done terminates in a toll areme. Tbe in ser ame dimisibing teloscene foshion in stages, diminisbing teloscope fashion, and looking a cod daal like a Chince ; on tho whole, drawing lends some colour, it must be admitted, to doubts which have sometimos been raised es to how far tho design of the oxisting dome really is Fren's original idea, or what proof we have that it is; the last authentic drawing boing so greatly infcrior. Perhaps the resemblance in type between the "Kensington model" dome and che present one may he a suffioient get off
against this; at all events, it is little short of a national boon that the desiga approved by the Royal signature was so signally deviated from In one respect the dome of the "Kensington model is superior to the prescat one, in that the buttresses at the base of the dome are openly shown and treated as buttresses, instead of bing masked, and form, with tbeir curved outline, a very happy instance of an essentially Gothic feature being adapted to a Classic design. As an instance of the correct arohitectural expression of censtruction, this is superior to anything in the existing cathedral. And as te the plan of the Kensington model, it must be regarden, on the other hand, as a national loss that this plan was not carried out. Its capabilities in recrard to interaal effect would have been splendid, and it would bave afforded a with a congregational plan.*

A A "Protestant" plan, it has been sometimes called; ciently opposed to the other ideal of a ppectuculuar rituant;
and to speale of one method of and to speak of one meth od of architectural de design a
more "Prolestant" than tuother, incolves

In extcrnal effect we cannot regard the Kensingtor model, considered as a whole, as equal to the prescat cathedral; hut lio defect hes chieny in the weak and somewhat poincless treatment and composition of the pronuos portion. Tho nain part of the edifice would have heon susceptible of a grander effect than the prosent cathedral prosents, with some modifications in detail ; the nse of the four great horizontal curves ou plan, formiug abutments to the dome, is a grand instance of the comaninatiou of struclaral and architectnral design. Bat it would heve required a broader and bolder treatment in regard to the lesser aromitectaral feathres, and wa may ooncar partially in Mr. Fergusson's udyment (quoted at p. 112 of Mr. Longman's book) that this design is materially iujured by tbe "clumsy attio, and by tho artitrary and purposeless variety in the size, position, and number of tho windoss and openiags. If an opportunity should ever occur, however, it wou:d an arcbitect of ability and good taste, wbo cuuld make tbs most of the idea left to us hy Wren. The bettles of the critics have beon fought ame-the plan below and the roofing above The springing of the drum from an outare. the spi of $a$ blag ented as a merit and as a defect; the principal adverso critic urging that in such a treatment he arches on the cardinal faces nust uecessarily appear too small in proportion to the height ant area included in the dome, especially when iewed from the further side, across the this in the case of St. Paul's, aud incline rather to the opinion that in building on a large scale to the opinion that in building on a large scale
the immense void left on each face by the four great arches wheu the square plan is adopted, is ather anarehitectural disadvantage, destroying cale, aud giving a sense of insccurity. Wren's ctagon plan affords evident and ample hasis for the dome, besides getting rid of the immense verhanging mass of the pendeutive, which has been a structaral and architectural bugbear in he buildings of all nations by whom the dome as been largely employed. The octagon arrangement of the piers, too, when well treated, gives cope for more variety of perspective effect than the our angle piers afford. That tho intermedate aces of the octagon were not happily treated by Wren is a point on which there is at the resent day no difterenco of opinion; and, though suggestions have been made, we douht whether it would be possible now toimprove the offect without strnotural alterations at the angles of the crossing, which it would not be advisable to attompt. The covering of tho dons has elioited von more admiration and criticism than the planning; admiration, of the most nnanimous description, in rogard to the constructive treataent, and criticisms and replies in regard to the hloged architectural falsity iuvolved in the two citod by Mr. Longman on page 196, shows how Wren was supposed by his grandson to havo regarded this, and that he considered the leadon dome in the same light as the leader roof over the lower vanlting; an outer covering for proservation; which is the argument used by its modern defenders. The "Parcntalia" hints also, however, at the iufluence of the popular foling in favour of something lofty, to remind hem of the old spire; tbe same feelieg which prompted the spire in the signed design hefore luded to. If this be the case, Mr. Longman is right in the view he seems to take (p. 199) in egarding the inner dome as tbe primary olject tbe mind of the architect, and finisb put apon it for extcral effect. That the outer domo is very beautiful in regard to compoarguments may be used in defence of the treatrgumenta ment auopted, whenever we begin to look at the axternal dome worecoveriog, and remember that is now ho (begging pardon of Mr. Longman and his mutborikes) hot to feel a centain dissatisfaction uatural iu contemplating a thing which is not quite what it profcesces to be, and is not in keeping with the monumental chatacter of the ower part of the structure. The arrangement may be ingenious and elegant, hut we feel that it is not the hest possible,-it is an expedient ny. ructiong opinions on other parts of the xiii.) of inclued in Mr. Longman's chapter ) cricisms, form a somewhat edifying t. Paul's from the neighbouring hills would
immediately discorn that the design was deimmediately discorn that the design was de-
fective, in having no eastern turrets to matcl fective, in having no eastern turrets to matche
tho west ones, and in not having the dome the west ones, and in not having the dome planted exactly in the centre. His remark abrat the want of projection of the columns or the portico is somewhat more to the purpose. In the main, however, the "doctors difior" less abont the west frout than about any other part. It has received general admiration; though Mre. Fergusson's carefully-worded approval is apparently by no means exuberant enongh to satisfy the optimist critic of Paternoster-row. The fact that the front stands obliquely to Lud. gate. hill (though it was Wren's wish to have had it directly fronting the street) is in some respects an advantage. We get a far more pioturesque grouping of the dome and the west turrets than if the buildiug had faced the approach centrally and symmetrically. The two orders, one over the other, on the exterior, form a fine field for the critics. One objects that the building shows oxternally no suggestion of two stories, or two aisles of different heights; another complains that two stories are snggested which do not exist. Wren's original intention had heen to nse one large order and an attic, as seen in the Kensington model. This wonld have been more logically defensible, no doubt; but, as a matter of fact, it wonld have diminished the appareat the whole. The ane-order scheme was abandoned, from the difficnlty of finding stone large enough for the great pilasters. Perhaps tho most whimsical objection which critiral pedantry has directed a cainst the building is that which sees an nnpardonable sin in the conpled columns in the west front, a point on which the purists agreo with almost the proverbial namimity of critics. It might have been supposed that any one with the slimhtest eye for architectnral cffeet mnst see columns in such a situation, to the compara. tively lean and meagre appearance which single colnmas wond have presented, yet all this connis wande on it, merely because the Romans did nnt employ columns in this way.
In regard to another fault laid against Wron, however, judyment must go forth. We do not see (arain begging pardon of Mr. Longman and his witnesses) that anything can possibly jnstify or excuse, on grounds of architectnral art or of common sense, the fact that nearly the whole of the upper external story of the cathedral is ona gigantic sham,-a screen-wail to hide the real of St. Paul's, probably not one in fifty reflects what is che conturnon betweed if extral atd internal design. But if the said spectators were nnce nude to understand that aearly half of what they see of the height of the exteritsis
morely bo much walling, standing np by itself, quito independent of the real building, a kind of ompty box of mnsonry, probably there is not one in fifty wbo would not exclaim, "How nhsurd!" The expenso of this "scenery", as
it may be termed, must hare been very great, and it remaius a standing monument and warn. ing of the absurdities into whicb a gifted architoct may be betrayed when he follows fashion instead of truth in the form of his structures. We reoommend amatenr readers, while drinking in our author's eloquent exposition of this "sublime strnctnre," not to small diarram given from Gwilt (on page 156), showing the section of the cathedral, and if they do not understand its significance, to get an architeot to explain it to them. It may give them a new idea of the distinction between real asd sham arehitecture.
of the interior many of the details are, jodged by motern lights, open to much criticism; and tile impression of the whole rather than of parts must be louked to for satisfaction. The springing of the transperse arches of the vaulting from an aftic is a total contradiction of the motive and oricin of the attic; and the carrying of the crown of the nave-arches abore the line of the architmare which is superimposed on the nain architrave which is superimposed olumsy effect. There are difficulties, it may bo said, forced npon the architect by his working in the trannnpon the arclitect by his working in the trani-
unels of an artificial style; still, if that artificial meis of an artificial style; still, ifl, it should be arenitectre is carried out acordance with logical rules and prin. done iu accordance with logical rules and prin. ciples, or confnsion worse confounded is the
result. Mr. Fergnsson's strictares (quoted, pace 93) against the domical raulting, are somepase 93) amainst the domical raulting, are someand commonplace wreath oruament which snrand commonphace wreath oruament which snrof detail; the domical arrangement of the
ceiling generally is effective and suitable enongh, and we cannot see ground for so condemnatory verdict upon it.
The history of "the adornment of St. Paul's," rather of the ideas and notions which have been atioat as to its adornnent, forms, of course, be conter in Mr. Longman's book, and he is to vord "a dornment" is the right ne to nse bere and not "complotion," of whioh we heard t first,-an expression which at onco assumed the very point at issue. The most notervorthy item in the history of the schemos for adornment is tho proposal of Sir Joshua Reynolds, mented warmly by the then dean and cbapter, that cartain of the Royal Acadomicians should undertake the painting of pictures in the cathenral but in what medinm, whether fresco or oil, there is nothing to show. If mural paintings vere intended, we may well share the "shudder" of Dean Milman at the idea of the walls being adorned with the works of Cipriani, West, Dance, and Angelica Kanfmann, who, with Reyuolds and Barry, were the artists selected. Even Barry, with a cortain power, showcd an innereal vrlgarity of manner in his work, "Newton on
the Prophecies" was the dean mander whom this attack on the edifice was threatened ; but the Arohbishop of Canterlury and the Bishop of Londen, trusteres of the oathedral, put a stop to t from motives of we wathedral, pith whioh it was to have been oarried ont. The history of the recent movement in favour of a grand scheme of decoration need not be recapitulated; but we may call attention to the moderate and sensible ideas on the subject put forth by Dean Milman, who wished for such decorations as might give some spleadour while they would not disturb tbo solemnity or the harmonions simplicity of the edifice." More recent talk on the subject has gone far heyond this, and has threatened an almost theatrioal splendour whicb would inevitably detraot from the effect of the whole. We are glad to observe that Mr. Longman, as a member of the cornmittee, is opposed to any further employment of Munich stained glass, to which we were willing origh and delicate diapertreatment for the windows has already been made in our own colnmns, and clsewhere, and in the event of figure subjects in mosaic forning part of the decoration, is the only way of treating the widdows, chromatically, which will not injure the effect of the other decorations. In St. Paul's," concluding chapter on "ans in regard to tho contemplated decoration, which may be wise or not according to the meaning attached to them, for they are somewhat vague. The genoral armument is in fapour of ooloured decoration by means of material, but if this is to mean chromy, we con only soy that this would lead chromy, we can ouly shy hal cuttino to piecos of the interior quito unwarrantable, and for which the public will certainly not subscribe which if pach
 a scbeme meas. Struchral ped out from the farge builang must bo carisa from the first, and can only bo and an expenso quite coproporions the result, and after a series of operations which practically amount to making a new building of the interior. Gilding and mosaic may be .80 treated as to with a new marble pavement. After making his protest in favonr of coloured matorial, Mr. Lougmas adds,-
"The terrifying spectro of 'eprawling sainta" and
emblematic figures tbug entirely vanisbes: for it is obviou that, as a general rule, it is only in zossics that figures

 roor for extraragance
wortbip or doctrine.,
If Mr . Longman penned this sentence in good faith, we can ouly say that he knows less than we do of tbe nature of the propositions tbat have been put forth, or fails to appre ciate their significance. We have no dread of "sprawling saints," certainly, for we never knew any modern Mediæval saints do anything so life -like as "sprawling" would indicate ; but it is a fact that a scheme was laid before the committee, including the execation in imporishable mosaio of a whole hicrarcby of saints, of many of whom the very names are soarcely known, all witb their proper symbols (raked np by a search among monkish archives), and with their names written under them." To ask for
national aid to such a scheme of decoration would bo absurd, as it represents only the fancies of a small school of decorators and amatours, which the majority of educated men and women would still, we hope, regard as childish and utterly unsuitable. The portrayal of saints in the Midale-age windows, and other decorative designs, has its interest, because it was the offspring of a genvine feeling; but there is nothing in the modern arts connected with architecture more offensive and contemptible tban the species of "gaint-manufacture" which bas been de veloped as a part of modern ecclesiastical deco ration, and the lind of dilettante ritualism which revives thin garded merels as so much decorator's furnitnre. Our tural type of an intllectnal revival nurt at ony mat preserved from this taint of intruded sum sham to the or trelo form part of the decoration If it is to be national wist let ris bo a portions subjects lhat appeal or humanily al $f$, hibboth of a developmea ecclesiasticism and soodlod ecosiogical art Otherwise, the work propised, whatever the this, nor a satisfaction to future, generations.

ON DEFECTS IN THE METROPOLITAN BUILDING ACT.
In the Health Department (Social Science Association), Mr. H. H. Collins, architect, read paper relating to the question, entitled "A few gger to some of tiv derects ? the Metropolitan Ballug Act (18 \& 19 , Vict., cap. (2J) is appla said (adopting our statememts and oncinlations) that in the tea years, from 1001 to $18 \%$, more than erection of nearly a milion dwellings. Assuming that the population would increase in the same proportion in the current ten years, it had been calculated that nearly $1,00,000$ hanses wonld have to be erected at a cost of $261,692,000$.,
requiring an expenditure of $26,000,0002$, por requiring an expenditure of $26,000,000$, per annum. A laxge portion of this stupendoua expenditure would nndoubtedly fall to the lot of the metropolis, and how prolifio of good or fruitful of eril it might become! In considering the restrictive conditions under whioh this wor's should be permitted to be executod in the metropolis, he directed attention to some omis sions in and the defective provisions of the Motropolitan Building det, occasionally refering to the sth if Juh Yot., cap. 81, which he sai certainly possessed a far higher appreciation of sanitary requirements than the one by whicb it was ropealed. Sanitary legislation, from its commencement to the present time, had been but a series of spasmodic measures; consequeutly its administration was difficut, its clauses were confased and ambiguous, and its objects often ill-defined. Its authorities were diajointed, and aotine without oo-operation or harnony, the decisions of judges or magistrates conflicting or antithetical, and its legal proceedings cumbersome and expensive. A digest ozly of the statutes relating to public health occupied 260 ctavo pares. There were also about twenty fundamental Acts. The remedy for this confused state of things lay in the codifioation and consolidation of the laws as relating to public health. Mr. Collins divided sanitary legislation nto two heads, whicb he ramed extra mural and intra maral. By the former, ho meant all the enactments applying exteriorly to dwelling-bonses, and under the jurisdiction of he local highway anthoritios. By the latter he meant all enactments applying to a dwelliog honse per se, tbe line of demaroation heing drawn the limits or confines of the public highway, Confining his attention to intramural conditions, which ahonld be clearly provided for in a Metro. politan Building Act, he dealt with those incon. istencies which were desiguated exemptions nd which pormitted of immunities prejndioial o public welfare. After showing tbe necessity or special snpervision for exempted places, , Collins said intramural legislation must divide iself into the following considerations, -sta bility of construction, hygicnic oonstrnetion, and phlogistio constrnction,-all happily dependent and incorporated with each other. As regarded stability of construction, a clear and
unambiguous definition should be insisted on for the word foundation. All damp, loose, or made ground should be romored, and tbe excervation continued antil a firm, solid bottom on the layer of concrete of certain specified thicknesses layer of concrete be insisted on whero essential land-drains should be recuired to he laid in. As to walling the present Act demanded footings for their the present Act demanded footings for ther and few memhers of the profession but support, and few memhers of the profession in as disregarded this regulation, and put be enacted that all walls and footings shonld be erectod of certain specified dimensions, varying according to the parposes for which tho building was intonded. They should be composed of good bricks, or stone or other material, which should he new, and combined with a proper defined mortar or cement. The nse of old niatorial was to he deprecated. Between footing of walls thus buirt there should be imbedded an impervious stone, should be permitted to be laid which did not allow of at least 12 in . between themselves and the bighest part of such footing. The walls should, as far as fire was concerned, be bomogencous in their nature-if of stone, built should be covered at their termination with a material impervious to wet. There was a defect in the present Act as regarded thickness of certain walls of buildings of the dwelling.house class, which allowed of the upper story being erected of brickwork of 9 in. thick. In this humidity and cold witb such a thickness, more partioularly with the absorbent nature of the partioularly with the absorbent nature of the mostly inhabited by children, were especially most snbject to driving rains. Walls should no bs of a less thickness thas 14 in . Unaer the second beal of sanitary constrnction, the internal sewerage of a house was the inst consideration. The closet apparatus, sinks, and water supply
should be under supervision ; and eaoh house aocording to its purposes and number of inmates should be provided with a certain number of conveniences, and with a certain cisternage, all to be defined. It should be compulsery to carry all soil pipes up to roofs, disoharging away from windows and chimney stacks; not to permit rain water pipes to become waste-pipes, and that eacb waste-pipe from sinks should turn on Into open areas with open ends, so as to admit of being easily cleaned ont. No works should bo permitted to proceed nnless a perfeot system of drainage was arranged. Mr. Collins also suggested improvements in ventilation, sucb as a garden area at the backs of houses, firoplaces in each room, and the prevention of over-orowding. Light and ventilation could not be too
well considered and provided for. The subject of ingress to and egress from buildings also required attention, with a viow to affording escape in the event of fire. Stone was not a fre-proof material. There shonld be more outlets from pablic buildings. It should be made oompnisory to construct such exits in acoor area made proportionate to the dimensions and exi gencies of the special class of buildings to which they migbt be attached. All corridors, stairs, and approaches should have fire-mains continnally on, Every individual was supposed to know the laws of his conntry, and none should be permitted to plead ignorance thereof.

## A NETY CLUB HOUSE IN LIVERPOOL.

A rarge mansion in Mount Pleazmat, Liver pool, bolonging to Mr. William Rathbone, M.P., wbich that gentleman has placed at the dis. posal of a committee for the purposes of a club for clerks and others, has just been undergoing extensive internal alterations, in order to adapt it to its intended purpose; and in addition to these alterations, a large billiard-room to hold six billiard-tables has been erocted. This room is altorether lighted from windows abore. The alterations in the interior of the building include the re-construction of the whole of the apart. the hailding, which has been connected witb the newly erected billiard-room, will be used as a smoking-room. A room on the same floor, and overlooking a fine garden to the rear of the house, has been fitted np as the dining and luncheon room. On the first floor a large room, also overlooking the garden, has been fitted up as a reading-room, whilst an adjoining room on
the same floor will be devoted to chess, draughts, and other games. The committee have decided that heer and spirits shall bo provided for the members in order to prevent them frequenting the ordinary public-honse, and for this parpose a bar at the left of the building has been fitted up witb beer-engines, and other necessary appa ratus for carrying ou the work of the bar. Com modious kitchens with modern ranges, have also been fitted up at the rear of the bar. The walls of all the rooms in the building have been hand whilst the hall, lohbies, and staircases have heen painted a stone colour. A large garden to the rear of the hoase is to be converted into a howl. ing-green, for the use of the members. There are already upwards of 100 members enrolled and the inauguration of the cluh is to tak o plaoe auring the present month, with considerabl ceremony.

ARRANGEJIENT AND CONSTRUOTION OF LABOURERS' COTTAGES.
IN the Economic Department (Social Science), Sir W. Jones read a paper "On the best Plan of Constructing and Arranging an Agricultural Labourer's Cottage." He said, labourets' cottages in the raral districts ought to face the south, and they shonld be bnilt in pairs. Tbe walls ought to be 14 in. thick, and have two windows, largo to the south, and smal on the north side. The large windows, to let in tbe san, need be ne additional expense, as wood and glass are as cheap as wall. The small windows on the north side
keep out tbe cold. The walls ought to go up to keep out tbe cold. The walls ought to go up to
the ceiling of the mpper-floor rooms; and no the ceiling of the upper-floor rooms; and no nvolving gatters, and thereby expenss of con. struction nind repairs, ought to be allewed. The cbimney.shafts shonld all be in tie partition. wall, so that any fire burning will tend to warm botb houses. The cottages should have each kiteben and wash-honse. If the third bedroom is got by subdividing the space over one of the gronnd-lloor rooms, the two bedrooms so obtainod are always too small for healtb and confort, the smaller of the two being generally not more than 6 ft . in its narrowest measurement. In prize, over sixty plans sent in for Mr. Protical. tural Society, thrce-quarters of those sent in had this defective arrangement, and wero at onco disqnalified in consequence. Tho third bedroom must therefore he external to the shell of the honse, and the question is where it can best be build an external shed er wash-house, and carry it up to the first-floor, with a hedroom over; or, secondly, to pat the hedroom on tbe gronnd floor. The plan seleoted for the prize had the bed. room on the groand-floor. At tbe end of eacb cottago a lean-to was constructed, divided hy a partition.wall into two portions. Of tbis, the balf facing south was tbe bedroom, tbo other half the shed for fuel, tools, and other articles, a necessary adjunct to every cottago. The adrantages of this plan are great. The bedroom, which has large soath window and a boarded floor, is comfortahle little apartment, opening into the sitting-room, It is manifestly valuable in caso of illness, or of a woman lying in, the fire in sitting np at the fireside being in the person sitting np at the fireside being in immediate commuuication with the bedroom, without having to carry things up and down stairs. When not wanted by an invalid, the grennd-floor bedroom is convenient for the hoys of the family; and, lastly, wheu not wanted by the family, the
gronnd-floor bedroom enahles a lodger to be taken gronnd-floor bedroom enahles a lodger to be taken
withont injary to the privacy of the house. This withont injary to the privacy of the house. This consideration for the morality and decency of families, lodgers are prohibited in many cottages. This resnlts in yonng men being compelled, when they loare their family lodge at a puhlic-honse. The wretched discom. fort of the drives decent vonng men into matrimony when hardly out of tbeir teens, and hefore they have saved any money to begin life with. If they conld ns lodgers help family, and expenses of some respectabo sisance and injury to their hosts, the benefit in every way would be great; and this, the third bed. room on the gronnd-floor makes practicable The staircase in such cottages should be along. side of the fircplace it the front sitting-room
hence the only access to the back bedroom, where the danghtcrs of tho family are supposed to sleep, would be through the bedroom of the master and mistress of the honso. Under these circmastances, any evil result from taking a odger seems to be effectnally provided against. have long felt the great value of the groundtbe plan exhibited have becu brilt in years pest on the Cranmer Estate. Erperience has jnstified the higb opinion I bave formed of the plan. If the third bedroom be obtained hy building an external shed, and errrying np the walls to the top of the cottage, the advantages I have shown to helong to the gronnd.foor bedroom are lost; Thile the oxpenses of canstruction, owing to the extra joists for the floor and the increased cost of a high-pitched roof, is considerahly greatcr. The increased expenditure of such an arrangement was calculated hy Mr. Boardman, the able Wal experienced architect who assisted Lord Walsingham and myself in deoiding ppon the hest among the many plans sent in to compete for Mr. Pratt's prize, as at least 20 l , Tbe cost
of these prize cottages we could not exactly of these prize cottages we could not exactly
state in the present ransettled cost of lahour and state in the present musettled cost of lahour and they ougbt not to exceed from $230 l$, to $250 l$. the pair, tborongbly well built with brick or con crete, or claylump faced witb brick walls. The two latter description of walls are warmer and dryer than brick, owing to the porous nature of Norfolk brick, which even in a 14-in, wall lets throngh a good deal of damp on tho east and west gable ends. The ohject of this paper is to lay before the section what seemed to me to be of the prablem, cottage with three bedrooms.

## THE ASSOCIATION OF

mUNICIPAL AND SANITARY ENGINEERS AND SURVEYORS.
On Saturday last the second meeting of the Lancashire and Cheshire diatrict committee the presidency of Mr. Iynde, C.E. city sur veyor. The meeting was attended hy the sur veyors of all the principal towns in the noinh bourhood, including Mancliester, Salford, Bolto Blackhum, Birkenhead Barrow - in - Furness Stockport, Warrington, \&O.

The unanimous thanks of the meeting was voted to the Mayor of Manchester for his kindness in placing a room at the Town-bell at the ness in placing 2 room
disposal of the meeting.
After a short discussion on matters of professional interest, the members drove to the works of the Salford new intercepting sewer now being constructed from the designs of Mr. Fowler, C.E , Salforl, by whom the plans and details were explained. nnder the guidance of Mr. Lynde, they visited the rean the abitary, and whosale meat mnrkets; the sanitary
where upwards of 250 horses ; and stayed by where upwards of 250 horses eniployed by
the various departments of the corporation the vario
are kept.
The new townhall was then visited, and finally the central fire station and police courte, It is almost nnnecessary to any that the members pre. sent were highly pleased with their visit, no pains had been spared hy Messrs. Lynde \& Fowler, to ensuro the pleasure and convenience of tbeir visitors; and in addition the visit to the central fre station, apportunely occured at a moment when an alarin of fre was raised, and the visitors had the satisfaction of seeing two engines turn out with a full complement of firo men, and with two horses to each, all ready for duty, within one minute and a half after the alarm signal : of course Mr. Tozer, and bis well trained assistants, were complimented on their promptitude.
In the evening the members of the AssociaHon dined together at the Queen's Hotel, when and For hanks was passed to Mesers. Lynde Therler, for their exertions during the day. Tho Association of Mubiopal Saryeyors is paratively a new institution, and is gaining good position amongst sister societies. Oar medts havo often henrd of it through the meinu of our colnmns. Attempts have previously been made to establisb snch a socicty, when, thanks to the example of the town-clerks and medical officers of hea'th, this association has been formed.
It has hoen found conrenient to form tlrongh -
out the conntry committees of local sarveyors within a convenient distance of each other, and with this intention the counties of Lancaster and Cbester have heen grouped together; upwards of thirty survcyors of tbe chief towns in both counties are members of the association of whom npwards of twenty were present at the meeting in Manchester.
We understand from Mr. R. Vawser, C.E., Warrington, who acts as hon. sec. to the committee, that the next meeting will be held early in January, in Liverpool, when papers relating in sanitary, ind iverpool, when papers relating

## THE LATE MR. ROBERT EDGAR

## ARCHITECT

Mr. Edgar, whose sudden and quite mner. pected deatb wo mentioned in our last, was, after years of struggling toil, just upon the moment of turning the corner on the road to professional advancement. He was on the eve of starting for the United States, upon an engrgement containing every promise of professional success.
Mr. Edgar leavos a wife and seven children,the eldest, a girl, only tbirteen years of age, -to mourn their loss. This large infant family is entirely unprovided for.
To aid him in the competition which elected bim one of the architects of the London School Board, Sir G. Gilhert Scott thus spoke of him:${ }^{6}$ Mr. Edgar was for twelve years with me, and had proviously heen thoronghly tiained as an architect, and held, when I first knew him, a very responsible position. He is a man of very great taste and artistic skill, with a thoronghly practical and artistic knowledge hoth of Classic, Renaissance, and Medizeval, with very considerable skill in designing in either of these styles. He has a thoroughly practical knowledge of bailding, and the various practical arts and know, from his having taken a very leading position in the direction of the works at the new Foreion Office, and of the external portions of the India Office, under me."
For the Wedgwood Memorial Institute, Mr. Edgar obtained the first premium in the competition of desigus, and subsequently carried out the work.
The deceased gentleman was a native of the Lowlands of Scotland, and it was an expression Lowlands of scolland, and was an expression of pride with him that his family had bcen tevants on the same estate for the long period can be at present ascertained, he was in the 36 th year of his age.

THE PROPOSED NETV VEGETABLE MARKET.
AT the last meeting of the court of Common Council of the City of London, the Markets Committee bronght upareport recommending that the committee should be authorised to advertise for plans and estimates for the construction of a new fruit and vegetable market, pursuant to the order of the court of the 18 th of September last.
Mr. Radkin moved the adoption of this recommendation.
Mr. Deputy H. L. Taylor suggested that the committee should advertise for designs, giving premiams of 300 l . 200 z ., and $100 \%$. for the first, second, and third designs respectively, as in the case of the construction of the New Meat Market at Smithfield.
Mr. Rudkin adopted the suggestion, and the report was adopted, the conrt not pledging itself to entrust the work to the anthor of any design
sent iu.

## ARCHITECTURE AT LONDON UNIVERSITY.

The first of a conrse of lectnres on "Architecture as an Art" was delivered by Protessor Hayter Lewis at the University College, Gowerstreet, on Tuosday last. After giving the stndents some practical suggestions as to the host method of taking notes of his lectares, the Professor said that architectore conld he dia. tinguished hy its mouldings, carvings, and masonry, by which the approximate date of its constrnction, and the poople by whom it was constructed, conld be ascertainod, just as geolo. gists are onabled to tell the age of the varions
strata of the earth by ccrtain distinctive appearances in them. Greek, Roman, Norman, and other styles of architecture are as dis. tinguishable as are the fossils of the earth. There were no complete cbains of progress in architecture. Each country had a style, with a feeling and expression peculiarly its own. Wherever the people of a country went, they constmoted their buildings after their own fashion; and although they might horrow some of the ideas from another nation, they were always altered. Though there is no complete gradual change, tbere is a succession of steps, as it were, one form succeeding anotber, and to will be found, as political power advanced, so also did architecture, and in reading the changes of architectural forms one is partially reading the history of the world. The progress of architecture, like civilisation, has been from sonth describing to west aud north. A writer, in tion, says tbat men originally met together in huts, and by their fires, ligbted by the rabbing of dried branclies, they conversed together, and gave each other ideas: and from the copying of the nests of birds and the caves of beasts, they gradually became builders, and constracted harbours, \&c. As thero are differences in opinion in the rise of cirilisation, so also are there in the rise of arohitecture.

Referring to the pre-historic remains of architecture, the lecturer said that their traces might be seen in all lands, and from their varioty they were classified. One class was called menhirs thoy were long stoncs, erect and isolated, like obelisks, one of the largest of which is in Kar nak, Brittany, 63 ft . by 14 ft . diamater. Cleopatra's Needle is also an example, 67 ft . hy only ft . diameter. Another class was called cromleches hy the English, and dolmens by the French.
They consist of two or more npright stones, They consist of two or more npright stones, supporting a cross one at the top: there is a
specimen at Kits Cotty House, near Maidstone, specimen at kitgest stone of which is $12 \mathrm{ft}$. hy $9 \mathrm{ft}$.3 in , and 2 ft . thick; at Lockmariaker, Brittany, witb a stone 18 ft . by 12 ft . by 4 ft . $;$ at Bargnieux, with a stone 2 ift . by 14 in . hy 2 ft .9 in ; and one at L'Angresse, Guerusey, in which was a sepulchral urn, \&c. In India and the east side of Jordan, many were also to be found. The third class are carcles of stone, which are to be seen in Brittany, the Orkney lslands, and Stonehenge. The greatest of an is at Stonchenge, which consists of four circles. Palsgrave, who trivelled into the interior of Arahia, where but few Earopean travellers have heen, says tbat ho came to a circle, formed of trilithons, which was precisely the same as at Stonehenge.
He (Mr. Palsgrave), to givo au idea of the He (Mr. Palsgrave), to givo au idea of the height of the stones, stood np in the stirraps of the horse he was riding, and was just able to reach the cross stone. He was told that there were two other similar cireles to the one he desoribed. Othors have heen recently discovered near Mount Sinai. Pre-historic traces may he seen in Phœenix Park, Duhlin, Guernsey, Etruria, the Holy Land, Algiers, Brittany, and other places. What, then, was the object of their construction? There are an enormous number of them, and they are to be found in places
where their existence won'd not be thonght probable. The dolmens have heen considered the remains of altara, and their form suggests that idca. Another view is taken hy some persons, who say that they are simply the entrances to honses, that they form a doorway, and wood, which having been destroyed, the skeletons, the doors, remain. It might have been so in some cases; bnt in other instances it wonld be ahsurd to say it was so, for there is idea is that they were made to surround the tumuli; another is that they were built for places of assembly; another for temples, which idea is supported by Inigo Jones; a more recent suggestion, however, is that of Mr. Fergnsson, that they were the spots marking the position of congnering armics in the time of King Alfred. He helieves that many of these stone monu. ments are of comparatively recint date, and in this view is snpported by Mr. Knight. In snpport of this idea it is said that no mention is made hy Cxesar of the existence of these edifices ; that support is, however, soon cut away by the fact that they are not mentioned hy Bede. There are only a few marks upor them, and no inscription, so it is impossible to fix the date of heir construction "The lecturor said ho would um up in the elegant words of Palsgrave, who,
speaking of the great circles found in Arabia, said wherever they were found they were grand old monuments, and all record of "their speeckless past is goue for ever."

HEALTII AND LEGISLATION
In the address to the Social Science Associntion, made by the president of the Health Scotion, Capt. Douglas Galton, F.R.S., the speaker said, a brief allusion to some of our sanitary shortcomings at home forms an almost necessary prolude to the question of thesanitary provisions required in tho General Building Acts. Mr. Simon, the head of the medical department of the Local Goverament Board, stated recently that the deaths which occur in Great Britain are fully one-third more numerous than they would be if our existing knowledge of the chief causes of disease were reasonably well applied throughoutthe country. We learn that there is a yearly average of 120,000 deaths from causes which. may be termed preventable; and when wo consider that the larger proportion of individual attacked by these preventable diseases ricover and that a small proportion only die, it is and that a small proportion only die, it is oppressive to think of the enormous amount of human suffering and waste of human life which. of residence in towns has been frequently brourht of residence in towns has been frequently brourght before tho public hy this Association. The lation of $8,250,000$ persons living on $2,150,000$ lation of $8,250,000$ persons living on $2,150,000$ acres showed an average death.rate of 25 por
1,000 ; whilst a rural population of $9,750,000$ living on $350,000,000$ acros showed an averace death-rato of only 17 per 1,000 . The nnmher of
diver the population which inhabits towns is largely the population which inhabits towns is largely increasing. At the beginning of the century the population of the metropolis was 958,863 ; no other town contained more than 100,000 inhabitants, and only five of the principal towue exceeded 50,000 in population; but such has been the increase in the town populations that 1871 tho population of London had reached $3,266,987$, and there were ahovo 4.0 towns with a population exceeding 50,000 inhabitants, of which 17 exceeded 100,000 inhabitants. Dr Morgan, in his able paper on the deterioration of races in great cities, shows that of the aduls popnlation of London 53 per cent., of that of Birmingham 49 per cent., of that of Manchester 50 per cent., and of that of Liverpool 62 por cent. Were immigrants from the country settled in the town, and that the majority of the in-comers were men and women in the prime of life. The mortality in these four towns averaged 26 per 1,000 against 19 por 1,000 in the country districts; the mortality of persons under the age of 15 being 40.7 per 1,000 in these towns, against 22 per 1,000 in the conntry districts. The marriages in the city population were fous times as numerous as in the agricultural counties, hat the births in the town population only exceeded those in the agricultural population by one-sixth. In an inquiry not connected with sanitary questions, Mr. Franois Galton made a careful statistical analysis of the details of 1,000 town families and 1,000 conntry families selected from the town of Coventry and the adjacen agricultural population. The resnle shows that a town popolation suppries to the next generation only three-quarters of the namber of adults supplied hy an equally numerous country popalation, and that in two generations the adult, grandchildren of artizen townsfolk aro little more than half as numerous as those of lahouring. people who lire in healthy country districts. In large closely huilt centres of population the ratio would probahly be considerahly inereased against the town population. For purposes of comparison, the health of the country populabut may be quoted as superior to that on ty districts is far lower than it shonld he. Much, no doukt, has been done; for instance, arue, which was so common near London that Jomes I. and Cromwell both died of that disease in London, is now 'almost unknown in that locality, and is of manch rarer occarrence thronghout England generally in consequence of improved drainage and agriculture. Vast sams have been spent in the water supply of tomns, and great efforts are heing made to deal with the seware. But the fact still remains that with a lare expenditure in these directions, there is scarcely a town which doos not contain numerous foci of disease. There is scarcely a villare which is not overdowing with sanitary defocts. The Report of the Royal Commission on Agrionltural Employ.
ment ohserves:-"The majority of cottages which exist in rural parishes are deficient in himost every requisite that should constitnte a home for a Christian iamily in a civilised comin our rural communities, and endeavour to approximate the health of our towns to that improximate the health standard. But were all measures of healthy construction and healtly conservancy healthy construction and healthy conservancy adopted in honses and workshops in towns, there would yet remain atmospheric impurity as an important source of deterioration to the health of inmates of towns; and from this cause a town population enjoying equalls perfect sanitary arrangements. Unfortunately, whilst we are ready to admit the desirableness of sanitary improvements, we are very averse to pay for
them. Tho municipalities of most towns possess sufficient powers for levying rates for sanitary improvements; hut in many towns the local authorities neglect either to put existing powors into operation, or to ohtain necessary now powers. Many private proprietors leave the sanitary defects of their houses and cottages compara. tively uncared for. The principal requirements are:-First, the immediate removal of organic matter from places where, hy putrefaction, it sccondly, the supply of pure water; thirdly, the sulficiency of breathing.space allowed to each individual. In places where many dwellings are congregated together, these requirements may be classcd under two heads,-viz, first, as the supply of good water, the removal of fonl water, and the removal of refose-matter; and, secondly tbose which immediately concern the individual householder. Every step in sanitary improvernent means the expenap Each town or village is surject local conditions which influence the choice of the process to he
adopted. I would ouly observe that where the adopted. I would ouly observo that whens admit of sewage irrigation, its application forms the most effectual means of purifying sewage and of obtaining from it all its
fertilising properties; hut sewage should be applied to land rapidly after its formation, and never allowed to stagnate on or in the land Legislation cannot fix a precise mode of clarifying sewage for universal adoption. But there is now
no want of knowledge of how to dispose of sewage. The law lays down the principle that the proceedings of one individual slati not be come a nuisance to his neighbour ; and if in the
case of pollution of streams the coarts of law invariably inflicted severe penalties, the pollution of streams by sewage would soon cease exist. Pare water is an essential element the prevention of disease. Each town or village is subject to its own special conditions, and no down, Well-water, fit for drinking, contains more or less of mineral or other matters derired from the soil. All river.water should he filered should he kept covered after filtration. But if pure water is not otherwise procurable hy the should he the duty of the local anthorities to provide it. After referring at length to the all plans of new houses to the local surveyor, the speaker continued:-It will he seen how very little the law can directly do to remove or pre. vent practical sanitary defects. The most effectual methods of inducing the people of this knowledge would be, to select as medical officers of union districts and hoards of health men of sound sanitary educatiou, not given to theories, to whom should be intrusted the prevention as well as the cure of aisease. They should con. eequently be sufficiently well paid to make the service attractive to good men, and to be euabled
to commit a large portion of the mere drudgery -of tho office to duly-qualified assistants. To insure the necessary knowledge, a special education is required. This might be afforded by the establishment in universities or hospitals of
chairs or professorships of practical lygriene; and chairs or professorships of practical liyriene; and the possessor, wber acting as a medical officer of a saditary area, to receive a defined snm from the Local Government Board out of Parliamentary votes, of such an amount as materially to im . had thus qualified themselves. The conclusious which I would desire to impress upon yon areexista in this conatry we must not delnde our.
selves with the idea that we have done more han tonch the horders of sanitary improvement imhue the owners and occupiers of houses and cottages with a knowledge of the laws of health. 3. That to assist in disseminating this knowledge the position and emoluments of the medical officers of prions shonld he improved, 80 as to onable them more usefully to watch over the prevention of disease. 4. That in every town and villare, or congregation of houses, rates levied on the owners or occupiers should he employed to provido - I. A supply of pure drinking.water within the reach of all the inhahitants. 2. Drainage, 80 as to insure that all fouled water would he removed rapidy, and not allowed to stagnate on the sarface, or to 3. The immediate removal of all refuse from tho immediate vicinity of dwellings. 4. That the plans of all new hahitahle houses and important alterations of existing houses over the whole country should he suhject to a gevera Building Act, containing provisions such as I have enumerated ahove, enforced hy the local anthorities. 5. That whenever the local medical oficer has reason to suspect that a cause of there should he a power to enter and inspect the premises, and to reqnire the renoval, at the expense of the owner or occupier, of any canse Parliament cannot of themselves do what is required. Legislative measures are no douht necessary to assist sanitary progress and to enforce savitary discipline; hut for real prac. ical progress we must look to our own exertions. aws can do but little unlcss aided hy the ear nest, the strennous co-operation of every ind Hiuan memerorof tue eminnity

THE WORKS AT THE HOLBORN VIADUCT EXTENSION RAILWAY. - OPENING OF THE NEW CITY TERMINUS STATION.
A. FEW weeks will suffice to see the opeuing of another large and important metropolitan rail. vay terminus, situated in ono of the husiest City thorourhfares, and equal in extent to those at Charing.cross, Cannon-street, and other portions of the metropolis. The exteusive works Hill Sen the Holborn Viadnot and the Ludgate Hill Station which have for more than two years been in progress by the London, Chatham, and Dover Railpay Company, with tho view of
having a first-class Cityterminus on the Viaduct, are now very rapidly approachiug completion, and are so far advalucod that the opening of the extension line to Holhoru has heen definitely fixed for the 1st of Decemher at the latest, opened ahout the middle of Novemher. Every effort is now heing made to accomplish this object, and we understand the contractors hare eonfidence in being ahle to have the works ready for traffic by the earlier-named period.
The extension line commences near Dessrs. Cassell \& Co.'s printing works, where the junction with the existing line is effected, and is there carried forward in the direction of Holborn, massive iron girders. The brick arches are huilt hoth upon the east and west sides of the present line, which descends hy a rapid gradient from Ludgate until it arrives at a low level under Holborn, and the iron cirders are carried over and across the old low.level line carredicer being arched hetween exch other, the larce new being arched heing form station area heing ther ofer the railway below covered in by the iron girders and arches just deserihed. Close to the point of jnnetion near Ludgate six lines of rails radiate richt and left from the existing line, and aro carried forward into the new station at Holborn. There are thus threo douhle lines of rails within the station, between which there are four spacions
platforms, 445 ft . in length. The central plat. platforms, 445 ft . in length. The central plat. west platforms 144 ft . In addition to the sis lines of rails already named, there is also another line on tho extreme east side in connexion with an engine-shed, and a large tank, which has just heals erected, and also another line on the west side for the shunting of trains, making eigh lines altogether. A new signal.house, consider ably above the level of the new line, has jus heen erected near the pointr of junction, midwa between Ludgate and ITolborn, commanding
structare, standing upon six iron columne, 15 ft . in height, with iron cross.girders. The soveral platforms within the station, which are faced with asphalte, have been laid down, and the ballastiog of the line, and the laying down of the metals hetween Ludgate and Holhorn is now in progress.
The roof of the station is also nearly com pleted. This structure, which is 325 ft . in length, s. 1.10 F , in width, consists of three hays. the supported on the east side hy restiog on also y twelve iron columns, running along each of he central platforms, with an equal numher of ron columns on the west side of the station ight iron segmental arcbes and cross girder rest apon the eapitals of the iron columns, and he roof is cosered in partly hy class, and partly ywool The inon colum supporting the roct y wor ft in heigh to the copitals, and the ex reme height of the roof is 35 ft . The whole of the herior is of eno The colume are painted in cream colonr, whilst The columns are painted in cream colour, whilst the capitals, as pas as hlue and red, the wood. in white, and rafters in a dolicate yellow or rimrose colour
Large and commodious parcel-offices have heen rected on the west side of the station, upon arches or pillars carried up to the ruilway level. These offices, which have a frontage of 150 ft . in longth, aro three stories in height, and contain large number of apartments and eonveniences for cerrying on this department of the corspany's husiness. There is a spacious area in front of the entrance to the parcel-offices, the whole of wbich, together with the space runniog the entire length of the western platform, will he set apart as a cah.rank. There are three large entrances into the parcol-offices inside the station, immediately on the west side of the cah.rank, and the appronch to hoth the latter and the offices will be in Farringdon-street cuitous incline forming a portion of the works which have been erected, and hy which the rail. way level leading to the parcel-offices, and also to the cab-rank, is arrived at. The outlet for tho cahs, when leaving the station either with or without passengers, will he onder an archway on the Viadnct This archway will be erected at the west side of the station buildings and offices the west side of the stakion buiauge
In addition to the four platforms ranning north and sonth, to which we have already north and sonth, to which we have already
alluded, there will also be a main cross platform alluded, there will also be a main cross platform the Charing-cross station, and reached through the Holhorn Yiadne frontage, which architecturally will he the main feature in the works. The elevation of this frontage, which includes a fiue hotel, will he 235 ft . in length from the east to tho west, and 70 ft , in depth to the main cross platform. The whole of the around.floor is intended to be exclusively set apart for the honking-offices, waitingrooms, and othor apartments for the purposes of the company, together with spacious restaurant and refreshment-rooms at the east end of the huilding, which will he con ducted hy Messrs. Spiers \& Pond. The hooking offices and hotel will extend to the entire width of the station, and the west end of the stracture will he bnitt on strong and massive aron girden carried over the prosent old low-level line. The restanrant and refresliment.rooms will occupy a width of 53 ft . at the east end of the elevation, the rest of the ground-floor of the huilding forming the hooking.oftices, waiting-rooms, and he rest of the company's offices. The works a this point are of an unusually heavy ehas hase pent having occupied a considerable amount of ime and labour. In that portion at the east end hioh is intended for the restallent ond refresh hent-rooms there is hoth a hnsement and sub mequent The hem a husement and a suh depth, is arched over, and the groundl.floor of the booking.offices immediately ahove is snpported ooking-otfices immediately ahove is snpporte y gircers and collo mell 11 be ore poin rirders over the present lon:level line. The hooking.offices, which will be approached hy two entrances in the centre of the elevation, will he 55 ft . in width and 35 ft . in depth, and the ground.floor of the building will contain, in addition, on either side, one first-class gentle nen's waiting.room, 25 ft , hy 20 ft , and a ladie first.class waiting-room of the same dimensions,
besides several second.class waiting.rooms, and
other apartments, including a large cloak-room station-master's office, booking-clerks' rooms telegraph.office, lavatories, \&c. The ground. Hoor portion of tbe elevation, forming, as we have already stated, the company's offices and the restaurant, with the exception of the wostern portion, has been carried up almost to its intended beight. The material used in this part
of tbo intended building is Portland stome, rusti. of the intended building is Portlajd stome, rusti.
cated. Tbe windows are 5 ft . in widtb, and 9 ft . cated. Tbe windows are 5 ft . in widtb, and 9 ft .

stones. The entrances are bold. On each side tbere are piers of large size, and the extreme width to tbe outside of the piers is 9 ft ., whilst tbe width of the doorways is 5 ft . There are fluted pilasters with elaborately-carved capitnls
on ench side of the entrances. Immediately abovo the ground.foor, running tbe entire length of the elevation, is a balustrade.
The botel, which is intended to be erected in continuation of the ground.floor of tho Viaduct elevation, bus not yet heen comnienced, but is
shortly to he proceeded with. Tn the meantime shortly to he proceeded with. Tn the meantime it may be atated that the building is not to be erected at the expense of the railway company, but is the undertaking of a distinct body of proprietors. Mr. Tsaacs, of Verulam - buildings, Gray'g-inn, is tbe architect, and a sketch of the
intended structure may ho interesting. The huilding will he of large proportions. The style of architecture partakes of the Italian. It will extend the cative lengtly of the pround.floor from the - 235 ft, - and will whilst at the east and west augles there will be towers or turrets, harmonising with the general architcetaral character of the strocture, and rising to a height of 100 ft . above the Viaduct The building will bave four lofty floors above the railway company's offices, in addition to dormers, whilst abovo theso again in the roof of the building is a floor consisting of servants' dor. mitories, with oircular windows. The halustrade matories, with oircular windows. The halastrade above the conipany's offices is immediately at The windows of the several stories at oach end of the olevation are secment. and pediment. headed. There are fluted pilaster and capitals between oach window. There are also similar pilasters, with carved capitals, carried up from the first floor to the top of the third.floor win. dows, and there surmounted by a bold projecting cornice. Immediately ahovo the first - floor windows a band, in ornamental terra-cotta work, is carried across the building, whilst in front of the fuot of the second-story windows there is an irou balcony. The dormers above the fourth story are uniform with the windows in eeveral other portions of the elevation, heing pedimentheaded, and in the centre there is a large triplet window, surmonated hy a large sculp. tured figure. Between each of the dormers there is a balustrade. The entrance to the lotel will be at the west end of the huilding.
The works in progress, in addition to those already described, include the erection of another new station on the north side of tho Fiaduct, opposite to the intended station and hotel. It is to be called the Snow-hill Station, and is intendod to give increasod accommodation to the inbabitants of that immediate district trarelling between Ludgate, Farringdon, King'scross, and also for the accommodation generally Northern Companies, whose traias run iu cor nexion with the London, Cbatban, and Dover Company. The station will he orocted on a levol with the Viaduct, standing upon four strong iron girders tbrown across the low. level line between Holborn and Farringdon. There will he four entrances to it from the Fiaduct, and also from the Snow.hill side, the new rail. way platform bolow being reachod hy a staircase will also be connected with the above. It station on tbo opposite side of the Viaduct hy a second strircase conmmuicating with the latter. The line has heen widoned to the extent of 150 ft . in length on tho north. West sido of the Viaduct, so as to edmit of the construction of the new platform in connexion witb the station. The four givders upon which the new station next week, when expected to be in their places next week, when the erection of the superstracture will he proceeded with.
The whole of these extensive works (the hotol excepted) have been designed by Mr. Mills, the chief engineer to the Chatham and Dover Com. pong, and are being carried out nnder the per-
sonal superintendence of Mr. Jones, the com.
paty's assistant engineer, and MIr. Rowell, the general manager in charge. Mr. Web

## ST. PAUL'S CATHEDRAL WEST AREA IMPROVEMENTS.

AFTER a considerable number of preliminary commnnications had passed between the Corpora St. Pon London and the Dean and Chapter of back the railings for the purpose of improving back tho railings for the purpose of improving
the roadway in front of the cathedral and at the top of Ludgate.hill, a definite proposal was made by the City in 1867, and the survoyor to the fabric was desired to report apon it to tho Dean and Cbapter and the trustees of the fabric fund. After due deliberation, and with the concurrence of soveral artistic and professional friends, he reported that simply to throw back the railinge pronld, in his opinion, so much confine the space as to be inadmissible; but if the whole area to the west of the cathedral could be thrown open great improvement would be effected.
This recommendation took the furm that if the City would pay a snitable price for sucb land as Chap tirew into the roadway, the Dean and Chapter should madertake the works roquired would involve a the area, which it was obvious was favourably received hy Dean Milman and the Chapter, and by the trustees of the fabric fund; and the question then turned upon the and the land to be siven up to the roadway paid by the Corporntion The proposal, how ever, seemed to lio dormant for about two years when it was re-opened by a letter from Mr, Hayward (who had never lost sight of it) to the inatter being settled, and the works which are shown in onr ongravings being carried out.
