The Hardy Phlox Garden

W. F. SCHMEISKE

Garden—Robinson Street

Address: Hospital Station
Binghamton, New York

INTRODUCTORY

In introducing this list, I want to call your attention to a few facts that are of interest. This being the sixteenth year of my active interest with the phlox, and the beginning was quite small, a matter of about seventy-five varieties to start with. Since that time, a good many have been thrown out and others substituted and now the list is over three hundred sorts. The weeding out of phlox is not only tedious but is also expensive as the worthless cost as much as the good ones; the difference between the two is—the one is valueless while the other will return its value. There is another side in the weeding and that is, a good many are identical, one with another, and often there are three or four running under different names which in turn have to be brought under one head; hence the disappointments.

Please note that this list is made up in a different way than some of my former lists in that the sorts are listed in groups of color rather than alphabetically, which I think may help you to pick your choice easier than before. I would appreciate your opinion in the change.

The shrubs and other supply of flowers are practically gone by the time the phlox make their appearance and for this reason, they make an elegant display, having the field all to themselves and are therefore, more appreciated than if they were to come in bloom earlier in the season.

The bold and varied colors attract the eye at once and in the evening when the sun goes down and the dew begins to fall, the odor of phlox will fill the air. For brilliancy of color they are unsurpassed. The late improvements have brought them up in color and beauty that was not thought possible a few years ago.

Some of the color of phlox will fade during the evening so that the homeliest color will come out the most beautiful blue and in this manner of changing color, they obtain practically two distinct shades during twenty-four hours.

Phlox planted in mass give a very good effect in shrubbery, either mixed or in separate color according to taste. Phlox should not be planted where free circulation of air cannot be had as warm and close corners will breed disease and will not be for the well-doing of the phlox.

BUSINESS TERMS

We are selling as cheap as the cheapest and the stock is as good as the best, hence feel assured you will be pleased.

Our terms are net cash as the margin is so small that we can not carry a book account. Send remittance with order.

Please write your name and address plainly, look over your order after finishing so as to be sure that everything is on the list, also your name and address. It is surprising how many people forget to write the address on the letter.

We charge nothing for packing and delivering to station but if plants are shipped at wholesale prices extra charges for packing will be charged.

Should there be any error in the order, advise me at once and it will be corrected.

We will not substitute, unless requested. If we have not what you want, you will be notified.

Three plants of one variety will be sent at dozen rate but less amount must be paid for at single rate.

I guarantee to send out strong and healthy plants and that customers will receive fresh and live plants and true to name. Beyond that I can not guarantee. Should they not be true to name, I will replace them but can not hold myself responsible if the plants do not grow after planting as I have no control over them after they leave me.

Small orders will be sent by Parcel Post, but anything over 2 dozen should be sent by express.

If plants can reach their destination in 24 hours, an extra charge of 15c should be added per dozen; if longer on the way, the charge will be more according to distance if shipped by Parcel Post.

I do not grow any plants in pots, hence better plants will be shipped.

Tell me how you want your plants shipped. If, however, no statement is made, I will send to the best advantage.

I send out no catalogue except on request.

Remittance:

Send money order, or in small amounts send stamps in 1 or 2 cents, but we carry no book account.

PHLOX

(Paniculata Decussata)

VARIEGATED

		In Flower
95	ASTIR REHU. Violet purple, half of each. Petal lighter. 3 feet.....	July 26
21	CROSS OF HONOUR. Light lavender. Lighter stripes. Very odd. 3 feet.	(25c) July 25
238	DR. S. ANDRAL KILMER. Variegated, red on white ground, some flowers heavy, some lighter, variegated. 1½ feet; flower 1½ inches.....	(25c) July 31
53	LA REVE. White, pink penciled, 3 feet.....	Aug. 1
42	RAYOUNAUT. Variegated, very odd, crimson rose with lavender stripes. Large clusters. 3 feet.....	

DARK MAROON

115	M. WISE. Deep purple. 1½ feet.....	(25c) July 26
117	VON HOCHBERG. Brilliant red. Very dark. 3 feet.....	(25c) July 27
	B. COMTE. Brilliant rich french purple	

DEEP PURPLE

320	GISMONDA. Purplish carmine, white eye.....	
135	Light purple rose. Small flower. 2½ feet.....	Aug. 10
10	LE MAHDI. Deep purple. Changes to deep blue with age. 2½ feet.....	July 10
41	MARIETTA. Purple. Large flower. Light halo.....	July 22

MAUVE

140	DANIEL LESSEUR. White, shaded pale blue. 2½ feet.....	July 28
7	LA VAGUE. Beautiful combination of pink and lavender-eye. Free flowering, good grower. Very showy. 1½ feet.....	July 15
18	PROF. SCHLIEMANN. Light mauve, with crimson carmine eye. Very pretty. 1½ feet.....	July 15
142	SINDBAD. Rosy mauve, carmine eye. Large flower.....	July 20

REDDISH CARMINE

33	ECLAIREUR. Reddish carmine, dark eye. Lighter halo. Very showy. Large flower and cluster. 2 feet.....	Aug. 1
16	HUXLEY. Light carmine rose, deeper center. 3 feet.....	Aug. 7
322	REDAKTEUR FLAMMER. Carmine violet, enormous truss.....	Aug. 1
	GOLIATH. Bright carmine with a deep red center.....	

PINK PHLOX

72	ATALA. Clear dark pink. Lighter center. 2 feet.....	Aug. 10
28	ATHIS. Deep pink, overlaid salmon. Crimson eye.....	July 29
15	ALHAMBRA. Pink; white halo; very effective. 1½ feet.....	July 30
68	BOUNTAIN. Deep rose. Deeper center. Free flowering. 2½ feet.....	July 26
97	AURORA BOREALIS. Salmon pink, white halo, dark center, petals and dark red eye.....	(25c) July 28
164	A. MICHAXUX. Flowers large, deep tender rose with carmine eye. 1½ feet.....	Aug. 7

25c EACH, \$2.50 PER DOZEN

EARLY PHLOX (*Suffruticosa*)

	In flower
137 EMPRESS. Similar to Indian chief but larger flowers.....	
MISS LINGARD. White, delicate pink center. Beautiful flower. Good truss. 3 feet.....	June 20
98 DR. HORNBY. White overlaid with pink. Crimson center. Good. 1½ to 2 feet.....	June 20
309 INDIAN CHIEF. Deep magenta.....	June 20
307 ROSE GEM. Pink lavender.....	July 1
311 DIVARICATA CANADENSIS. An early flowering native. Species with lavender flowers. Blooming from early May until the Summer.....	June 15

ABOVE 25c EACH, \$2.50 PER DOZEN

These early Phlox ought to have a place in every collection. The clusters are good, large heads, and flower the season through without let-up. The foliage is shiny green, very showy.

We can supply seeds of Phlox in the fall which should be sown as soon as received; it will come up the following spring. From general collection at \$1.00 per ounce; from choice seedings, \$2.00 per ounce.

LATEST INTRODUCTIONS

W. C. EGAN. One of the finest Phloxes yet introduced, and while the individual flowers, according to color chart, are of a delicate lilac, illuminated by a large bright solferino eye, the color effect as a whole is a pleasing shade of soft pink. In habit of growth it is strong and vigorous, producing immense panicles of flowers nine inches high by seven across and the individual flowers frequently measure 1¾ inches in diameter.

MANZELBRUNNER. One of the white center sorts.

- 172 White overlaid with pink, lilac center, 1 foot, flower 1½ inches.

HARDY PHLOXES MY
SPECIALTY

OVER 300 VARIETIES
SEND FOR LIST

United States Department Of Agrá:
Federal Horticultural Board.
Washington D.C.

Gentleman.

On your request I send you a list of my Phlox on hand but in some instance I am very low of some of the sorts but I believe I send you a list some time ago you see I do not issue a list every year as there is not much in Phlox new from one year to the other Should there be anythink els I can do for you will be glad to do it

Sincerely Yours

WFS:OS.

W.F.Schmeiske:

P.S. The latest introduction on page 6,7,8 are of my own except the two first ones, which I expect to name as soon as I can:

DIRECTION AND INSTRUCTION

When plants are received from the nursery, unpack them at once and see in what condition the roots are in. I would say regardless of what condition the roots are in, put them in a pail of water for an hour.

Planting: This should be done in the evening although this is not absolutely necessary for the best well-doing. Plant plants 16 inches in the row and two or three feet between the rows; plant them two or three inches deeper than they were in the nursery, spread out the roots so they will do service and give the plant a good start; tramp the roots down hard with your feet, this will not be too much. After the ground starts to freeze, cover it over with a litter of horse manure, leaves or anything else of a similar material and the plants will come through all right and start to growing in the Spring and give abundant flowers during the following Summer.

Culture: If the Summer should be dry, water should be supplied as on the lawn or the garden in order to keep them growing. In the wet season, mildew is apt to make its appearance and should this occur, dust powdered sulphur on the leaves in the morning when they are wet; in doing this, the sulphur will stick. When a lengthy, dry season sets in, red spiders are apt to make their appearance—they only appear in dry weather. Soap-suds sprayed on the underside of the leaves will curb them; clean water can be used but in that case the force of the water will have to knock them off. If soapsuds are used, it is well to spray with clear water after to wash off the suds. In order to detect mildew, a white mold will make its appearance on the top of the leaves and draw them together so that they cannot do their function.

The red spider is a small spider not readily detected with the natural eye but can be detected by a rusty yellow appearing along the ribs and the deeper parts of the leaves, usually on the under side. Keep the soil stirred and plants growing and the above will not bother you.

In closing, I wish to thank my patrons and friends for their patience and cooperation and hope we may work with the same zeal in the future.

Assuring you always to work with the best effort to do all in my power for your advantage, I am,

Sincerely yours,

W. F. SCHMEISKE.
