THE CORONATION OF KING EDWARD

PROCLAMATION BY THE EARL MARSHAL

Ceremony to Take Place Between 6th and 12th of August—The Procession Cancelled.

London, July 11.—The text of the official announcement concerning the coronation of King Edward was issued from the Earl Marshal's office, and is as follows:

The King's medical advisers state that His Majesty's progress has been more speedy and less complicated than was at first anticipated. His Majesty's excellent constitution has played a conspicuous part in bringing this about.

The details of the programme will be settled by the King himself, who will also decide to what extent the ceremony is to be curtailed, so as to avoid fatigue.

It is now considered practically certain, in view of the announcement made to-night, that King Edward will be crowned on Saturday, August 9th, since the holding of the coronation ceremony on Monday, August 11th, would involve another hasty departure from the city.

When the coping stone of All Saints' church fell yesterday, crushing to death Miss May Strathclyde, the unfortunate lady was walking with Mrs. de Lachere, who was injured. Queen Alexandra sent the following message:

Sir Alfred Jones, of the Elder Dempster Steamship Company, has invited the premiers and Canadian members of parliament who are here with their families to visit Norway on the steamer Lazo Simcoe.

In the absence of Mr. Jos. Chamberlain, who has not yet recovered from his recent accident, the Earl of Onslow, under secretary for the colonies, presided at the Empire coronation banquet.

Quebec, July 11.—The Gwynne-Greene case was again before Judge Caron today, but was again adjourned until Friday next, when a motion will be made to quash the certiorari, on all papers in the proceedings at Montreal.

SEVERAL MINERS RESCUED

Heroic Work of Relief Parties Results in Eighteen Men Being Taken Out Alive.

Johnstown, Pa., July 11.—This has been a day of heroic rescue at the Rolling Mill Mine of the Cambria Steel Company. Thrilling experiences attended the efforts of 40 brave men who went down into the shaft with a very faint hope that their attempts would result in a successful rescue.

Dead and mangled bodies were located, but no efforts were made to bring them out until all energy was put forward to seeing that no living soul would be left in a hopeless state.

A party of officials and miners searched on three miles inside the mine. Occasionally work would come to the surface that suggested the possibility of a dangerous head in the Klondike section of the mine yet to be explored.

At that time three more headings believed to be filled with the dead were unscrambled. Thirty-nine bodies were lying within reach in the main heading. Three were brought out at 4.25 p.m.

The spread of cholera in the Philippines was slightly decreased, possibly on account of the rain. The total since the outbreak is: Manila, 2,181 cases, 1,718 deaths; provinces, 12,476 cases and 8,257 deaths.

It's Impure Blood.

"What is it?" asks the mother as she notices the smooth skin of her child marred by a red or pimply eruption. It is impure blood, and the child needs at once to begin the use of Dr. Pierce's Golden Medical Discovery.

"Dr. Pierce's medicine has not only benefited me greatly, but it has done wonders for my two sons," writes Mrs. M. H. H. of Denmar, Oregon Co., N.Y.

AN UP-TO-DATE PASSENGER BOAT

STEAMER STRATHCONA GREATLY IMPROVED

Vessel Has Been Provided With Every Equipment for the Nanaimo-Sidney Route.

When the steamer Strathcona went out yesterday to resume service between Nanaimo and Sidney, she bore evidences of many important improvements.

The Strathcona will take her regular place on the Nanaimo and Sidney run on Monday. The schedule on which she is to be operated provides that she will leave Nanaimo at 10 a.m. on Monday.

The five foremen killed in the fire at Toronto will receive a public funeral on Sunday to Mount Pleasant cemetery.

KILAUEA RESUMES NORMAL CONDITION VOLCANO NO LONGER POURING FORTH FIRE

Japanese May Resist Attempt of the United States Expedition to Occupy Marcus Island. Honolulu, July 3, via San Francisco, July 12.—The volcano Kilauea is dying down to normal conditions. The steamer Mauna Loa arrived last night from Hawaii with news that the fire had disappeared, though there is still a large column of smoke.

BAPTIST CONVENTION. Annual Meeting Held at Nelson—The President's Address—Election of Officers.

Nelson, July 9.—The annual Baptist convention of British Columbia assembled here this morning. At the morning session the delegates were all duly enrolled, after which the retiring president, Rev. I. G. Matthews, M. A., of New Westminster, delivered his annual presidential address, he took as his theme "The Great Commission."

BAR TENDER'S CRIME. Killed His Wife, His Mother-in-Law and Another Innate of the House.

Portland, Ore., July 12.—A. L. Bolding, a bar tender, has shot and killed his wife, his mother-in-law, and another inmate of the house, and fatally wounded his father-in-law, D. L. McCroskey. Bolding married the daughter of the McCroskeys eight years ago, but has not lived with his wife for some time. He was jealous of Woodward, whom he suspected of being on intimate terms with Mrs. Bolding.

NOVELIST DEAD. London, July 12.—Mrs. Annie Alexander Hector, the novelist, who wrote under the name of plume of Mrs. Alexander, died suddenly in London last Thursday. She was born in Dublin in 1825.

TWELFTH OF JULY. One Hundred Thousand Orangemen Took Part in the Annual Celebration at Belfast.

Belfast, Ireland, July 12.—A hundred thousand Orangemen participated in today's annual celebration. The entire police force was on duty and the military were assigned to their barracks. The proceedings up to the time this dispatch was filed were peaceful.

LORD KITCHENER OF KHARTOUM. The Hero of the South African War, Who Returned to England Today.

LORD KITCHENER BACK IN ENGLAND HE WAS ACCORDED ENTHUSIASTIC WELCOME

Presented With Addresses at Southampton and London—Received by the Prince of Wales. (Associated Press.) Southampton, July 12.—The Pacific Steam Navigation Co.'s steamer Orotava, which left Capetown on June 23rd, arrived here at half-past eight o'clock this morning. Owing to the fact that Major Gordon, who was also a passenger on the steamer, had been stricken with smallpox, Lord Kitchener and his staff only were allowed to land. The Orotava has been placed in quarantine.

RESCUE PARTIES SEARCH WORKINGS. Three of Men Rescued From Pennsylvania Mine Died From Injuries During Night.

Johnstown, Pa., July 12.—One hundred and five are now dead from Thursday's explosion at the Rolling Mill mine, of the Cambria Steel Co. It is improbable that this record will be much increased. In no case is it expected the list will exceed 110 or 115. The mine workings, which it was dangerous to enter yesterday, were thoroughly explored by a searching party during the night.

COQUITLAM WATER WORKS. Minister of Interior Grants Certain Lands to City Council of New Westminster.

Ottawa, July 12.—The minister of the interior has agreed to allow the city council of New Westminster to have certain lands in connection with the Coquitlam water works, as he considers that it will be for the welfare of the town of New Westminster, in that it will preserve their water supply from contamination.

PROPOSED AMALGAMATION. Question of Union With British Organization Will Be Considered at Dock Laborers' Convention.

Chicago, July 12.—Fifty thousand longshoremen from the Great Lakes will be represented at the annual convention of the international convention to be held in Chicago next week. President Daniel J. Keefe and secretary-treasurer Henry C. Barter have arrived from Detroit, a large number of delegates from the sea coast and the south came in last night. The most important work planned is an amalgamation of the association and the National Union of Dock Laborers, in Great Britain and Ireland, with 170,000 members. The British organization was to have been represented by James Sexton, but word has been received that he will not be in Chicago. However, the convention probably will take some steps towards the proposed union.

NOTES FROM THE BLACK DIAMOND CITY. THE WATER SYSTEM HAS BEEN IMPROVED. Twelve-inch Mains Substituted for Smaller Pipes—Preparations for To Day's Celebration.

Namimio, July 12.—A test of the water works last evening resulted most satisfactory to those interested. At a very considerable expense the city has been making radical changes in the water works. This included the replacing of nine-inch and six-inch mains, which were used in conveying the water from the dams to the city by twelve-inch mains. The peculiar feature of the old system was that a twelve-inch main emptied into this nine-inch and six-inch pipe.

CRUISE OF WARSHIPS. (Associated Press.) London, July 12.—The United States battleship Illinois, flagship of Rear-Admiral Arents Crowinshield, commander-in-chief of the European station, and the United States cruiser San Francisco, sailed from Gravesend to-day for Christiania, Norway.

GOOD PROGRESS BEING MADE AT SIDNEY INLET. Dr. Marshall and A. F. Gwin Have Returned From Trip to West Coast.

Dr. Marshall, of Sidney Inlet, and A. F. Gwin, of the Yreka Mining company, returned on the Willapa yesterday from the West Coast. Dr. Gwin accompanied Dr. Marshall to Sidney Inlet to look over the Prince group and Mr. Dewdney's property there. Mr. Gwin has had considerable experience with copper properties. It is interesting to note that he confirms Dr. Marshall's opinion published in the Times, that the mines are situated on the West Coast, which show indications of copper such as the green stain of cuprous oxide and the secondary lower grades of malachite, azurite, and other cuppings of copper leads. Mr. Gwin is also of the opinion that the ore chutes are to be found in the contacts between the granites and the porphyries with the metamorphic rocks.

COMPANY COMPETITION. Fifth Regiment Will Hold On to the Big Guns.

All arrangements have been completed for an interesting competition between the four garrison companies of the Fifth Regiment, in drilling and firing the six, 4.1, guns at Fort Macanlay. It is proposed that each company shall furnish a battery detail on one gun, including gun and D. R. F. detachments, with the company officers acting as battery commander and gun group commander. Marks will be given: 1. For loading, running up and laying on target; 2. For firing a ten-minute series with Morris tube attachment, on a moving target; 3. For firing a ten-minute series with Morris tube attachment, on a moving target.

RETURNS TO THE WHEEL. (Associated Press.) New York, July 12.—"Jimmy" Michael has permanently abandoned horse racing, has cancelled his engagements and begun to train in earnest for bicycle racing, according to a World dispatch from Paris.

TO REDUCE TAXES ON IMPROVEMENTS

ALD. CAMERON GIVES NOTICE OF MOTION

H: Claims That Taxation Should Fall Heaviest on Owners of Unimproved Property.

Ald. Cameron, who is not a believer in taxing improvements in the city, will move at next Monday's meeting of the council to reduce the percentage of improvements assessed for taxation from 50 to 25 per cent. Under the act the council has to assess land and improvements separately, and formerly only 25 per cent of the assessed value of the latter was taxed. Recently, however, the percentage was raised to 50—the limit allowed by the act, and Ald. Cameron's motion is to return to the previous condition of affairs. He points out that the council could exempt improvements altogether from taxation, and while that might be desirable eventually, a reduction in the meantime is likely to prove beneficial.

The alderman is of the opinion that the city ought to encourage the erection of new and better buildings and the easiest way to do this is to reduce the taxes on improvements to the lowest possible point. He instanced the cities of Natal and Johannesburg, South Africa, where improvements are exempt from taxation, and stated that Glasgow was moving in the same direction. The notice on the bulletin board reads as follows: "That at the next meeting of the city council I will move that, in the opinion of this council, it is desirable to encourage the construction of buildings and other improvements; and whereas some 50 per cent of the value of improvements, which rate was increased to 50 per cent in order to meet extra expenditure, the council be invited to a low rate on real property, and whereas the council have shown giving the council larger powers in the levying of rates; therefore be it resolved that the rate on improvements shall be levied on 25 per cent of the assessed value of improvements."

GOOD PROGRESS BEING MADE AT SIDNEY INLET. Dr. Marshall and A. F. Gwin Have Returned From Trip to West Coast.

Dr. Marshall, of Sidney Inlet, and A. F. Gwin, of the Yreka Mining company, returned on the Willapa yesterday from the West Coast. Dr. Gwin accompanied Dr. Marshall to Sidney Inlet to look over the Prince group and Mr. Dewdney's property there. Mr. Gwin has had considerable experience with copper properties. GOLD SHIPMENTS ARRIVE ON AMUR

STEAMER RETURNED TO PORT LAST NIGHT

Empress of China Left Here at Four Yesterday Afternoon Prepared for Fast Trip.

Steamer Amur arrived from the north at 12.30 o'clock last night. On arrival at Vancouver yesterday 14 passengers were aboard, but only one came on to Victoria, he being E. H. Fletcher, principal inspector, who has been to Dawson and Atlin, and in fact at all principal points in the north, making inspection of the mail service, as also opening new offices.

Gold to the value of \$60,000 arrived on the Amur, \$8,000 of which was consigned to Victoria. Included in the total amount was a shipment of \$48,000 sent out from Dawson by a miner there operating on some of the creeks. The shipment was forwarded to the assay office at Vancouver. The Amur had an uneventful trip from Skaguay. On the beach near where the Islander sank a camp is pitched, but this was the only indication of any salvage operations taking place, noticed by the officers of the homeward bound Skaguay liner.

The steamer brings news that the people of Fort Selkirk are making an effort to establish a hospital at that point. It is proposed to make the institution, as far as possible, self-sustaining, but the initial expenses will be such that even the liberal local help already received will be insufficient to meet the expense necessary for the building, equipping and providing of such an institution. That the district is sadly in need of such a hospital has been demonstrated in the past few years. This place is about midway between White Horse and Dawson, a distance of some four hundred miles. Cases of diphtheria, some severe, occur every winter. Other cases of serious illness and accidents not infrequently occur. During the past winter 27 cases of diphtheria have been treated; of these 22 were indigent; all recovered, except three, which resulted fatally. Major A. M. Jarvis, in command of the R. M. S. Empress, started the movement for the erection and the honorary treasurer, D. Ralph Clifton, crown grant timber agent, Selkirk, will receive subscriptions. There are now being solicited from outside cities.

WILLAPA RETURNS.

A number of the sealing fleet have sailed from the coast, not for home as so many have, but for Behring Sea. The Undina, the Cassiopea, Annia E. Point and Anoka are all reported to have left the coast by the steamer Willapa, which returned to port last evening. The Zillah May was at Encheulet, and it is expected that she would secure a crew. The Enterprise was in the same port shipping her canoe. At Clatsop, the Carrie C. W. and Diana were to secure ten and twelve canoes respectively.

The Willapa made a smart run. She brought back as passengers H. Carmichael, provincial mineralogist, from Alberni, accompanied by Mrs. Carmichael, and Constable Wood, of the city police force. Dr. Morris and J. W. Currie, from San Juan; Mr. and Mrs. Graham from Fonthley; Dr. Marshall and A. E. Griffin from Sidney Inlet; E. D. McCarthy, Dickinson; Rev. Mr. Swartout and Wm. Cornick from Bamfield Creek; and Rev. Mr. Stone from Clatsop.

THE CHINA DEPARTS.

Trimmed for the fastest to be obtained out of the ship to make up for nearly four days lost in waiting for the Imperial mail, the R. M. S. Empress of China when she departed from here for the Orient last evening looked a perfect picture of a fleet ocean greyhound. Every provision for a swift trip was made before the start. Everything on deck was washed secured, for on this voyage, above all others, the good ship has to dip her nose to the fray and take the rough water with the land there will be no slackening of speed except under dire circumstances. Netting spread at her foremast, however, will prevent, to a great extent, any flooding of the decks. On the deck of the big white liner a selected 400 tons of coal has been stowed, and in the engine room one and all have their orders. The trip will indeed be exciting, the only thing that will stand

STEAMWINDER MINE.

High Grade Ore Struck at the 200-Foot Level.

The Steamwinder Mine, belonging to the New Fairview Corporation, is developing splendidly. In addition to the immense reserves of low grade ore already developed, a vein of rich stuff has been struck at the 200-foot level, assaying \$90 to the ton. The vein is 18 inches wide, and its strengthening as it is followed up.

The erection of the additional stamps is nearly completed, and the mill will be able to treat the ore on a large scale. The cyanide plant is also being increased, and there are thousands of tons of ore ready for treatment. The cost of mining and milling is exceedingly low, and large profits are now in sight for the corporation.

A cubic foot of newly-fallen snow weighs five and a half pounds, and has twice the bulk of an equal weight of water.

THE V. T. AND S. RAILWAY SLIP AND WHARVES AT SIDNEY.

CECIL RHODES' WILL

Provides for Proper Food for Students.

Cecil Rhodes in his late will left a bequest of \$50,000 for the improvement of the high table for resident Fellows and tutors at Oriel College, Oxford.

"I am rejoiced to find that one millionaire has at last given some thought to the question of dietetics in educational institutions," says Elizabeth Cady Stanton in the New York Journal.

"One of the crying evils in our schools, colleges and universities is the bad system employed in feeding growing boys and girls.

Students, above all other classes, need plenty of good food, well-cooked and a happy state of mind in anticipation of their various meals.

Dyspepsia is one of the common diseases among the literary classes, and the foundation for this prevalent ailment is laid in our colleges and seminaries. Of what avail is a knowledge of art, science, philosophy and government when health is seriously undermined?

All this comes from ignorance as to the kind of food element the body must have to supply the daily loss from brain work. Bacon, meat, potatoes, white bread and coffee absolutely will not keep a hard brain worker well. A food expert perfected a perfect food for brain workers. Not only in the schools but in the home should the food be looked after. The necessity of selecting food to supply proper nutrition to replace the daily waste of tissue of brain and nerves is of the greatest importance.

Grape-Nuts is the ideal food for young and old who use the brain actively; the disease of the grains being perfectly developed and the starch transformed into grape sugar in the most perfect manner.

In this condition, Grape-Nuts is ready to be quickly absorbed into the blood tissue without taxing the intestinal digestive machinery. The phosphate of potash found in the cereals is retained, and this with albumen, supplies the elements required to build the gray matter in brain and nerve centres.

Dr. Max Grossman of New York City recently called the attention of the Board of Education to the fact that "pupils of the defective class are apt to be weak physically. Temporary aberrations are often mistaken for real defects, when they are only symptoms of physical growth, of indigestion or other malady. Indigestion has been responsible for more than one falsehood, and its cure has often been followed by a return to truthfulness."

In its predigested form, the daily use of Grape-Nuts for the cereal part of the meal, aids digestion, nourishes the body, tones up the nervous system and quickens the mental faculties.

Coffee should also be banished, for it unhealthily stimulates the brain and nerves so that proper nutrition is interfered with and they cannot get sufficient rest to take the food required for the work they must do from day to day. For the morning beverage, Postum, Food Coffee should be used in place of coffee.

Let the daily breakfast, particularly at this time of the year, consist of Grape-Nuts and cream, a little fruit, a cup of Postum Food Coffee, some whole wheat bread and possibly one or two soft-boiled eggs. It is impossible to make one feel here what a wonderful change in health, strength, comfort and ability comes in ten days after quitting wrong food and living on scientifically selected food.

SPORTING

YACHTING.

ONE DESIGN CONTEST.

The Victoria Yacht Club one design boats will race this afternoon. The contest will commence as usual at 3 o'clock from Pearline Rock, and the prizes are the Yacht Club cup and two silk flags.

LACROSSE.

JAMES BAY V. VICTORIA WEST.

There is only one event in lacrosse taking place this afternoon. That is the match at the Caledonia grounds between the inter-collegiate teams James Bay and Victoria West, commencing at the usual time. The match is likely to prove a case of when "creek meets creek" for the teams are very evenly balanced, and both claim to be the superior aggregation. The boys have, whenever they meet so far this season, put up a splendid exhibition of the national game. An admission fee of 25 cents will be charged, but ladies will be admitted to the grounds free. The following are the respective teams:

Victoria West—Dale Crocker, A. Stevens, H. Jacobsen, C. Taylor, C. Searl, P. Dodd, W. Battersby, J. Baker, H. Monagh, H. Stevens, S. Hamley, G. Bishop, W. Sinclair, James Bay—J. Richmond, W. Loveridge, W. Laling, J. Donaldson, W. J. Finlayson, P. Schaeffer, Pike, Lorimer, J. Simpson, C. Whitlaw, Pike and Wench, spare men.

VICTORIA V. WESTMINSTER.

An event which is being looked forward to with considerable interest is the lacrosse match to be played at the Caledonia

DRY-ROYAL Champagne

Is unequalled by any other Sparkling Wine at its price and unsurpassed by many of the fancy brands at double the figure. Try it, place it alongside the "double-price" Champagnes and see for yourself.

MODERN PERPLEXITIES.

We are in the habit in this province of placing responsibility for the servant girl or domestic help problem upon the shoulders of the Mongolian. But that puzzling question is not ours alone.

CONCERNING TONGUES.

Although it is the Chinese language which is spoken by the largest number of people on the face of the earth, it is in English that more than half of all existing newspapers are written.

THE MUSICAL GUANITES.

The Guanites are a musical people; the well-to-do own pianos, and are fair musicians; others have organs, and many, many more possess accordions.

ORNAMENTAL WEDDING RINGS.

The earliest Greek and Roman wedding rings were almost invariably decorated, sometimes significantly enough.

never in the history of the world was a war waged in which there were fewer incidents calculated to leave unpleasant memories or permanent ill-feeling. The Boers who conducted the campaign, who fought such a good fight and who arranged the terms of peace, did nothing to bring dishonor upon their name or on that of the shame and the ignominy remain with the men who precipitated the conflict in order to gratify their personal ambitions, and when the crisis came deserted ignominiously and fled to foreign shores.

HOW CUBA WAS NAMED.

Cuba is the name by which the island was originally known to the Lucayan Indians, who were with Columbus when he discovered it. One of his villages or cities was called by them Canbaracu, and it is reported that from the similarity of sounds Columbus will supposed himself to be on the coast of Asia, imagined that this must be a city of Kubla Khan, the Tartar emperor celebrated by Marco Polo.

A NOTABLE EVENT.

London is to-day celebrating the last great incident of the South African war. It went well over Roberts when he returned after his short, completely and thoroughly planned and brilliantly executed campaign.

RETURNS TO THE SERVICE.

Drainage. Sweat is the sewerage of the system. The foot soles are among its chief outlets, and shoe soles should be its scavenger.

Accumulated sweat is an irritant poison—a sort of caustic which gnaws the foot, and burns the leather. The RESILIA is the only shoe having a drainage system to carry off foot moisture as created.

In it the perspiration passes down through the porous leather insole, to the cross channels or sewers beneath, where it is carried off and dried up by contact with the air. This prevents the concentration of sweat, and with the ventilating device keeps the feet dry, clean, hardy and healthy. Observe cross channels in centre-sole.

KING EDWARD

As His Majesty is Making Satisfactory Progress Bulwarks Will Be Reduced.

London, July 12.—At Buckingham Palace the following bulletin was posted at 10 a.m. to-day: "His Majesty is making excellent progress. On account of His Majesty's satisfactory condition bulletins will be issued on alternate days only."

THE UNIVERSITY AT CAIRO.

A queer university this at Cairo with its 10,000 students. Its central square is open to the sun; about it are separate "rivulets," or porches, for each of the twenty-four recognized nations of Islam in each rivulet, youth from all the Moslem world study to chant the Koran, to write beautiful Arabic script, and in the end to be doctors, lawyers, knits, rulers. Each nation has its own ceremonial way of doing so simple a thing as drinking water. Nor are sect differences a trivial matter.

CONDITIONS IN VENEZUELA.

In the rural districts of Venezuela there is scarcity even of common fruits, greater scarcity of foinant, and real danger to life. This general and now rapid progress toward anarchy has already reached the stage of brigandage in numerous sections, and is liable to manifest itself in any country of the kind. In the cities there is more open violence than at any previous time. Drunkenness, concubinage, is a vile and monstrous and still growing evil. Gambling, lotteries and bullfights—all licensed by the government—abound in the available case of the people. True, the bullfights have recently been suspended, as they demand great outlay; but even the theatre has been started out. Gambling, lotteries and bullfights—all licensed by the government—abound in the available case of the people.

HER BLACKBERRY GOWN— JET FRUIT TRIMMING DAME FASHION'S LATEST FANCY

Could anything be more daring than the uses to which fashionable modistes are putting the products of orchard and garden? The innovations with which they delight to dazzle us are generally worth mentioning, yet seldom are we permitted to chronicle one quite so unusual as that of to-day.

Last fall the foliage hat, with its brilliant hued berries, paved the way for the later confections massed with luscious-looking cherries and grapes. Even these appeared a bit startling at first, but the idea is tame enough when compared with the latest development in fruit ornamentation, the blackberry gown here portrayed.

Bodily conceived and artistically carried out as it is, the originator of the gown has certainly succeeded in producing a novelty that is as charming as it is striking. Not every day does one see a frock of this kind, having the corsage liberally covered with natural-looking blackberries, and this particular variety of fruit represents the latest fad in gown ornamentation.

It is easy to guess that the unique creation made its debut on the stage, for the stage is responsible for many novelties in costumes, yet few are so worthy of imitation as this particular model. Designed for one of the late spring productions to run just one week, as a sample given to the public to let them know what they might expect next season, the frocks, as well as the play, were thoroughly up-to-date.

This blackberry creation might, therefore, be considered a forerunner of what is to be offered to fair femininity when summer styles are on the wane. While the blackberries are the most striking feature of the gown, the rest of it deserves more than a passing glance.

In style it is a sweeping princess, perfectly cut and showing few seams. Those

which are necessary in order to make the dress at the waist are cleverly concealed by the incrustated lace patterns. Steele cloth, an exquisite and almost indescribable shade, which suggests sparkling champagne, forms the body of the gown.

Lace, put on flat, is used lavishly, and while bright blackberries are used in profusion over the corsage, the skirt is not without its share of fruit trimming. Alternating with the handsome medallions of lace arranged about the foot are large, rich-toned oranges. Around the bottom of the gown is a beautiful pattern wrought in three kinds of lace, and this reaches upward in narrowing points.

Variety of Lace Increases.

We have referred before to this use of several varieties of lace upon one frock, and it is worthy of note that the fad appears on the increase instead of the reverse, notwithstanding the many warnings just out regarding an approach to overtrimming in dress. Of course, it is necessary to handle laces with delicacy and judgment in such models or else the effect will be spoiled.

The blackberry novelty, with its mingling of laces and fruits, certainly does not suggest anything beyond beauty and chic.

The flounce effect, already mentioned as finishing the bottom, is made of flat lace upon which are applied Irish crochet and Escurial laces. The suede cloth is cut out underneath this circular border, and, at intervals, long, graceful sprays taper upward. These are intercepted by exquisite lace medallions, which are repeated around the bottom of the skirt, where they are arranged to alternate with smaller disks made of shaded yellow silk brocade, to represent oranges. An edging of crochet finishes the fruit medallions, as well as those of lace.

At the waist there is no visible break

in lines, and to conceal the darts over the hips are arranged pointed bits of lace extending from a jacket of the same.

The bolero effect is of solid flat mesh, fitting smoothly over the shoulders, and with the upper portion of the sleeves to match. Upon this lace are fastened life-sized blackberries, made of rich jet, and those ornaments are put so close together that the corsage appears studded with them.

Below the bust the plain mesh of the bolero is intercepted by an irregular line of Irish lace, which slopes becomingly toward the front and displays a few stray berries, while below this point and reaching quite to the bottom of the elongated skirt are more incrustations.

A gilet of lace incrustated chiffon about three inches wide reaches from throat to below the waist, where the material blossoms ever so little and then extends in a pointed tab of lace. A flat collar of black moire-androles the standing one of lace and chiffon, and the ends are concealed beneath large jet cabochons. Thick clusters of luscious-looking blackberries and more of the jet disks border the gilet on both sides and emphasize the fruit idea in a very charming way.

Besides the solidly encrusted caps on the sleeves there are bands of lace crossing below these which are prettily ornamented with blackberry-pendants.

Fruit-in-Hat Ornaments.

More fruit appears on the hat, which was designed especially to accompany this unique frock.

In shape the hat is quite flat, with a broad, rolling brim that is immensely becoming to the wearer. Spotted white silk net, laid in tiny folds, covers the entire frame, and over this, as an edging to the brim facing, are fastened sprays wrought of lace and picked out with black velvet.

A wide drapery extends across the back of the hat and falls almost to the

waist in an irregular line. The foundation of this drapery is made of spotted net, which has an effective border of heavier lace artistically touched with black. The lace begins to fall from the wide brim just back of the ears, and its drooping line makes a very graceful continuation of the curving brim.

As for the fruit, it is in evidence, yet contrary to one's first thoughts regarding its use, there is really very little of it upon the hat. Herein the originator displayed her appreciation of balance, and instead of making the blackberries prominent they are quite inconspicuous, a few of them being scattered over the soft lace crown and upper part of the brim.

The effect is lovely and the entire costume possesses just the chic air which stamps it at once as Parisian.

The other gowns depicted are light and summery creations of chiffon and lace. The yellow frock is suited to slender figures, for no other could stand the horizontal rows of cording and shirring. The front of the skirt is made in this fashion, and about the bottom are two tiny puffs headed by large disks, with open centres made of yellow cloth flatly appliqued on the chiffon.

A very deep yoke and sleeve caps are made of Valenciennes patterns, laid upon a ground of flat net, and all around the effects is put on a dilapidated-looking mass of yellow cloth. Between these scrolls large roses are embroidered in white cotton on the lace.

Underneath the lace incrustated sleeve cap the full puff is laid in five shirring. Where this fullness droops at the elbow it is banded by a three-inch piece of flat lace, and the wristband, fitting snugly about the elbow, is made of the same fabric.

The curious Japanese-like model is made of beautiful green figured satin foulard. A petticoat of solid flat lace, extending around the bottom with overlapping folds of pale green chiffon, has an overdress which appears to be a square cut out in the centre to fit about the waist. This is laid in fine plaits and the corners of the square are long enough to reach almost to the bottom of the lace petticoat. Wide black chantilly lace finishes the edge of this handkerchief effect, and the same idea is carried out in the sleeve with an underpart of pale green chiffon and lace.

The corsage presents something of a surplice style, having a vest of white lace and overlapping portions of silk edged with black chantilly. Pale and dark green liberty satin form the wide crush corsaire, which finishes at the back in long sash ends falling from ornaments of brilliants.

The unique feature of the all lace frock is the sleeve, which grows very wide at the elbow and has a broad shaped flounce of Irish lace coming to a point at the outside, where it is caught with fancy white ornaments and tassels. Another fitted band of the lace turns back to suggest a very long cuff, and this, too, displays the same kind of a pendant ornament.

Cotton embroidered roses trim the deep yoke, from the lower edge of which falls a frill of lace.

In style the skirt is very graceful and simple, yet it is very beautiful, on account of the rich lace which heads the applied flounce and also finishes the bottom of this fullness. Embroidered white cotton roses and tassels give a panel effect to the front. Beige satin foulard is the foundation of the double skirt model, which seems to be made entirely in box plaits. Egg shaped medallions of lace are applied on each plait and are arranged to form a yoke to the plaited bolero.

The sleeves, of foulard, are very full, and are slashed up the outside to show a full under portion of beige chiffon.

The two Polix models are creations of lace, embroidery and taffeta.

Pastel silk, cut in deep points, outlined with guipure to give the effect of a ripple skirt, makes a very smart costume. A plisse chiffon flounce finishes the bottom of the slightly trailed skirt all around. Over a blouse of daintily tucked white museline the same arrangement of silk and lace appears on the corsage. The sleeves are very full ones of chiffon, brought in to the wrist and held by a deep cuff of lace. A chon of black velvet is caught at the breast and a narrow ribbon of the same shade marks the waist line.

The gown is very rich and handsome, and with a correspondingly beautiful hat, makes a stunning costume for carriage wear.

The other French creation is of spotted white tulle, edged around the bottom with crochet lace and displaying graduated stripes of embroidery, falling from the waist almost to the hem of the net skirt. Between these bands and reaching upward from the bottom are shorter appliques of the same pattern, ending above the knees in a sharp point, and midway their length they are intercepted by large medallions of Irish lace surrounding a circular bit of pompadour brocaded silk.

The corsage repeats the same idea of vertical bands of trimming, and the soft centre of Liberty satin has its sash ends embroidered in a pompadour design.

Taking the census in Japan is a very original proceeding. Instead of counting the people they count the houses, to each of which they allow five inhabitants. As might be supposed, the result is only to be depended upon for its inaccuracy.

BACK TO THE SEWING OF OUR GRANDMOTHERS.

Just plain sewing—plain, old-fashioned hand-sewing—has come to be the fashion again. Women who once worked mysterious raised wool dogs and parrots on dark canvases, and later crazy patchwork, then Kensington embroidery, and, only last year, renaissance lace, now do fine white sewing, felling, hemming, gathering, finishing off hand embroidery which they do themselves, or with dainty lace whipped on with almost invisible stitches.

Sewing like this our grandmothers did for themselves and their daughters, and in many homes bits of it may be found now, carefully put away in old chests and drawers, the odor of lavender and dead rose leaves still clinging to them.

Machine sewing never has filled the place of such exquisite work as used to be done in those olden days. It is something well worth reviving. Like the arts of the Middle Ages, which survived through the fostering care of the monasteries, this art has all the while been kept up by patient nuns, who have wrought in their solitude all that these recent years could be purchased of hand-made underwear, all that could be bought in the shops, for now and then there has been an old-fashioned mother who saw that her daughters had at least one hand-made piece in their trousseau, and it was always a nightdress of softest stuff, trimmed with real lace and seamed, tucked and finished by her loving hands.

In the days of the grandmothers sewing was a part of every girl's home training. Now it is taught in the public schools here and there, as school boards recognize that they did know a little in those times about the real education of girls.

A dear white-haired old lady tells how, when she was a child, she became so interested in gathering her first ruffle that she went over the "stroking" so many times that she wore the piece to threads before it was ready for the loom.

Soon the little maid was allowed to put together a garment for herself. In an old Southern town there lived until recently a maiden lady representing the past, who was held up as an example to a younger and more perverse female generation, because, as her aged mother

NEW LACE GOWN WITH UNIQUE SLEEVES.

would tell with pride: "When Georgiana was six years old she made a shirt out and out for herself." "Shirt," there, is still among old-fashioned people the term for the essentially feminine garment known as a chemise.

It is significant to note that with the revival of hand sewing the chemise has come to be the fashion again. Once it was put aside with many arguments as to its being a clumsy and unnecessary piece of underwear.

Most of the high class shops, to supply the increased demand, are now showing a large supply of beautiful sets of hand-made underwear. All of it, however, is not done with the fine, small stitches to be expected, but the best of it is ex-

quisite in every particular and as beautiful to look upon as a water-color painting executed by a master.

The truest sign of the revival of hand sewing is not the things seen in the shops, but the fact that women of leisure are making not only finer sheer linen truffles for the neck, but whole garments with no stitch of machine work upon them. These are for themselves, their children or as a gift to a friend.

One wealthy woman made recently an entire petticoat, the ruffles all tacked, and many lace insertions let in by hand. It was designed as a birthday present for a friend, herself a woman of means. Corset covers which they have made with their own delicate fingers are now

OUR YOUNG FOLKS

THE BAXTER'S FOURTH OF JULY.

BY LOUISE KOESTER ATWELL.

Four little Baxters sat under a dilapidated old shed, talking in mournful voices of how they were going to celebrate the Fourth of July.

"Who ever heard," said Leslie, "of a glorious Fourth and no fireworks, no fizz, no bang, no smoke, no nothing but just what folks do any other day?"

"I can't imagine," put in Sissy, "why papa should be so positive about it; we can't have none of those beautiful sky-rockets or even shoot the cannon unless we give up our money for weeks."

"It is too dreadful," wailed Joe, scrapping his toes back and forth in the soft gravel, "making ditches and crossroads."

"Oh, say!" he called, as he hung by his feet from the rafters, "I've got a tremendous idea in my head."

"Did hanging by your feet send it there?" asked Joe, looking up. "But if it is any good let us have it."

Leslie made no answer, but continued his gymnastic performance, which seemed to increase his new idea. Finally he seated himself on a crossbeam and spoke with much deliberation. "It will take a good deal of planning, lots of things and some trouble, but it is just the thing for a celebration."

"Please tell us," said Sissy, "I am awfully anxious to know."

"Well," continued the elevated speaker, "it just occurred to me that we might have a patriotic party, build forts,

down a valley. To prove that it did a man of science in Switzerland set up a row of stakes on a glacier in a straight line across the top of the ice. In a few days the line of stakes was bent down stream, proving that the solid ice did flow down, and that, like so much water, the middle moved faster than the two sides near the edge of the valley. The top of the glacier is always full of deep and dangerous cracks. Many travellers have lost their lives by falling into the cracks in the ice. The cracks tell us that the ice continually breaks in its slides down the valley and re-congeals again. It is this continual breaking apart and freezing together again that enables the apparently solid and continuous stream of ice to pass around the corners of the valley. Sometimes two glaciers meet and congeal together and form a new, larger and yet solid glacier. The immense weight of ice in a glacier that is a hundred feet deep also helps to press and squeeze the ice around sharp corners. Very great pressure may make the ice appear to be plastic, like soft lead, and yet it may only be the breaking and re-congealing of minute crystals of ice that give it this appearance of flowing water under great pressure. So by little things we learn the meaning of great things."

A NEW RECESS GAME.

The primary object of a game is, of course, to give entertainment, but it is intended in most of those recess games of ours to give a little instruction with the entertainment, and that, we think, makes the game all the better, for the one is never allowed to interfere with the other. Most instructive games are restricted to one subject. For instance, one may be geographical, another historical, another botanical, another arithmetical and so on; but the one here described takes in several subjects, and the variety may be a pleasant change.

Preparation must be made for it a day in advance of the playing, and for that reason someone must be designated as leader, whose duty it is to do this work. You will understand what the work of preparation is as we go on with the description.

When the players are seated the leader stands in front of them and says that he is going to ask them to name certain persons, places and things from the various descriptions he will give, including the number of letters in the names. We will describe an actual game, and that will give you a clear idea of how it is done.

The leader says: "I am thinking of an animal that lives in the woods of the West, and its name has four letters." The first player in the row answers "bear," and is wrong. The second player, to whom the question then goes, answers "pony," and is right.

The next question goes to the third player, and so on, in turn, all down the line and then over again, until all the questions have been answered or missed.

THEY CHARGED ON THE FORT.

"It's all because last year somebody got careless and a whole boxful of fireworks went off at once and lots of people were hurt and one boy got killed."

"Yes, and another reason," corrected Bud, "is that Mrs. Mason is sick in the house on the corner, and the noise hurts her nerves. Course, I am sorry she is sick, but I'd just as soon there wasn't any Fourth of July."

"Oh, I didn't," said Leslie, with emphasis, "you know mother is going to give us a party, and she said we could be just as patriotic as we wanted to, except the fireworks. But it will be pretty hard to be patriotic without something exciting, unless we think of something." The children remained silent for a few minutes, as if pondering the question. Suddenly Leslie climbed up a post that supported the old wheel,

march with guns and swords, have sham battles and capture prisoners, just like the real soldiers do." At this the children's faces lighted up.

"How are you going to manage it?" said Bud.

"I am going to haul sand and rocks on the playground, build forts, dig trenches around different countries, stretch ropes and flags around each and have battles like they did at Manila, Ladysmith and Santiago."

"Oh, that will be splendid!" cried the children, clapping their hands. "Will tomorrow ever come?"

"Can I be commander-in-chief or sentinal?" asked Sissy, who did not know the difference of honor.

"Of course you can," said the older brother; "we are all going to be some-

THE LEADER STANDS IN FRONT.

At the close of the game the player who had answered the most questions correctly is the winner.

The other questions asked by the leader are such as follow:

"I am thinking of a warrior who went because he had no other nation to conquer, and his name has nine letters"—Alexander.

"Of a great city in the United States that was once called New Amsterdam, and its name has seven letters"—New York.

"Of a delicious fruit of Persia and Arabia, that will soon be grown in Southern California, and its name has four letters"—date.

"Of a famous battle fought between American and British soldiers some time after a treaty of peace had been signed, and its name has 10 letters"—New Orleans.

"Of a vegetable that is taking the place of cane in making sugar, and its name has four letters"—beet.

"Of a statesman who said that he had rather be right than be president, and his name has nine letters"—Henry Clay.

"Of an animal that sometimes laughs like a human being, and its name has five letters"—hyena.

"Of a river whose mouth is further from the centre of the earth than its source, which makes some people say that it runs up hill, and its name has eleven letters"—Mississippi.

The length of the largest tiger skin after drying is said to be 12 feet 6 inches, but it must be noted that skins expand considerably in the tanning.

HOW ICE RIVERS ARE MADE.

BY CHARLES BARNARD.

Snow falling on top of a high mountain may accumulate into heavy drifts. More snow continually falling may press upon the old snow and it will gradually turn into ice. In time, as more snow falls, the ice slips down the mountain sides and forms in the valleys great rivers of ice called glaciers. Such a glacier, forced down by the weight of new snow behind it, may fill a valley several miles long, till at last it reaches warmer air in the lowlands and melts as fast as it advances, flowing away in a stream of white ice water.

Get a piece of ice from the refrigerator and examine it. We can break it into irregular fragments having sharp edges. If we try to bend a piece we find it will break, but will not bend. Should we visit a glacier, or look at a good

photograph of a glacier, we would observe that the valley may be very crooked and that the solid river of ice bends and twists about as if it were so much soft dough. How can a river of ice turn a sharp corner when ice is a brittle solid that will not bend?

If we want to know anything about nature the best plan is to perform an experiment. Get a pail or basket and about a yard of stove wire. Pass the wire through the handle of the pail and twist the ends together to form a loop. Then place two tables of the same height side by side, leaving a space nine inches wide between them. Ask the ice man to cut a block of ice twelve inches long and six inches thick and wide. Rest this on the two tables to form a bridge between them. Now lift one end and slip the wire loop over it, resting it on the middle of the block. The pail, supported by the wire, will now hang under the ice. Place a pan under it to catch the drip from the ice and put a fat iron

THE ICE WILL FORM INTO A SOLID LUMP.

THE HUMBLING OF GEORGE THE KING.

BY JOHN W. HARRINGTON.

George III., King of Bad-boyton, looked at his sister in proud disdain.

"You," exclaimed he, "you, Mirabel Ann Stacey, you're a girl. Don't bother me any more about it. Light firecrackers to-morrow? Of course not! Nobody ever heard of a woman celebrating the Fourth of July. Women didn't fight!"

"They wouldn't bullets," replied Mirabel Ann, "and made doughnuts, pumpkin pies and buckwheat cakes when the soldiers were hungry."

"See here," cried George III., drawing himself up to his full height, "I am a man of few words. That settles it. You shall not fire a cracker."

George III. was eight years old. His grandfather was George Wm. Stacey and his father Jr., and as both of them

"The Hessians!" hissed the Gingerbread Rabbit. "Let them come."

"Whereas," read one of the men from a set of chess, "all men are created free and equal, unless they are kings, bishops and knights, when they are more equal than others. Therefore, be it resolved, that we set forth the reasons why we are opposed to the rule of George III., King of Bad-boyton."

"That we shake off the yoke of George III., King."

"We shall put him to death in a manner fitting to his rank," cried the Tin Musket.

"We might melt him over again," added a lead soldier, "and press him in the Continental army."

"Scruggs will be back with reinforce-

THE LEAD SOLDIERS FORMED A BOUT GEORGE.

were alive he was III. The boys at school nicknamed him Three-Eyed Stacey, and his sister called him the Tyrant.

George III. went to the store kept by Jeremiah Vallowingham Scruggs. He had 50 cents in his pocket with which to buy condensed milk for the Fourth of July. The shop of Mr. Scruggs was crowded by girls. George III. did not approve of girls. There were at least 10 of them buying marsh-mallows and lolly-pop.

He sat down on the only chair and glared at them. They took no notice of him, and at last they went away. George III. started to get up, but to his surprise he could not get up. The Gingerbread Rabbit got down from the shelf. The Ping Pong Bat closed the door and locked it. George III. rubbed his eyes. Everything seemed to have grown larger.

Back on the shelf Mr. Scruggs's alarm clock began to whiz and buzz. Fourteen hundred and forty men jumped out of the face, and hid behind the candy jars, leveled their muskets at the King. One gross of lead soldiers scrambled out of the "Made in Germany" boxes, walked up and down the German silver.

George III. felt the chair tremble beneath him.

"Stop shivering!" roared the Gingerbread Rabbit.

"Therefore be it resolved," said the mounted showman and formed about George III.

of reserve.

"That," replied the General of the minute men, "is his sister, the one whom he has treated with such disdain that he would not permit her to help celebrate the Fourth of July."

"It is mine," said the Gingerbread Rabbit.

"He's cracker," corrected the General. "It is cracker, then," continued the Gingerbread Rabbit, "that his sister should fire the torch of our liberty and blow the tyrant to the four winds."

"Hear! Hear!" cried the minute men. "Please, noble Rabbit," pleaded the King of Bad-boyton, "when next Easter comes I will say that you are fresh baked!"

"Silence!" roared the Gingerbread Rabbit.

"Send for his sister."

"Yes, by all means!" belliowed the Purple Oxen. "Send for his sister."

The door opened and there stood Mirabel Ann.

"I should like a 10-cent box of matches," she said.

"Huzrah," yelled 1,000 matches all at once. "Here is the last of the tyrant. What do we care for a few scratches if liberty be gained?"

George III. tried to put up his hands. "Mirabel! Mirabel!" he cried. "I didn't mean it! Of course, you can help celebrate to-morrow. You can throw torpedoes and light the rockets and hold a whole bunch of crackers in your hand and get your fingers singed just like a boy. Please don't light the matches."

He struggled to get loose from the cord which bound him. He gave a terrible wrench and was free. He was standing in front of Mirabel Ann.

"How funny you look," said Mirabel Ann, "when you are asleep in a chair."

"Hello, youngster!" exclaimed Jeremiah Scruggs. "I just stepped out to the curb to take the Apollone's order for the Fourth. How did you get along keeping store? What can I do for you?"

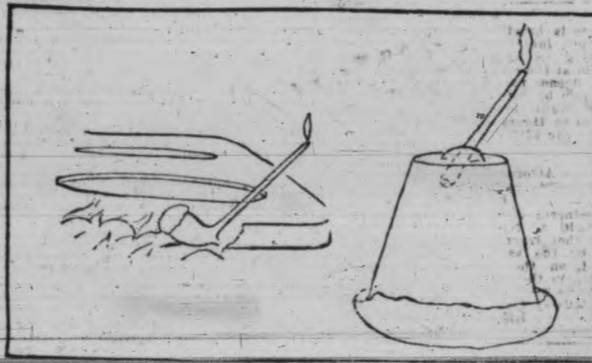

"I got along finely," replied the King with dignity. "My sister and I wish some fireworks."

"Good," replied Jeremiah. "I like to see boys and girls share the pleasures of the Glorious Fourth."

HOW TO MAKE A GAS PLANT.

Take a clay pipe and fill the bowl with small chips of wood—either hard or soft will do—or one can even use nut shells, provided the pieces are small enough.

Next get a few cents' worth of plaster of paris—be sure it is fresh—and mix about a tablespoonful. This is

THE PIPE IN POSITION. THE FLOWER POT PLANT.

quite stiff spread it over the opening or mouth of the bowl of the pipe. When the plaster has hardened thoroughly, which it will do in about half an hour (a little sooner if you put a pinch of salt in it while wet), place the pipe on the hot coals of a stove, allowing the stem to stick up above the lid. You will soon

A marble has relief of considerable merit, just unearthed at Pompeii, is supposed to date four hundred years before the Christian era.
