BUSINESS AT COMMENCEMENT OF 1880 THE commencement of a new year affords an opportunity for a retrospect of the past, and the mind naturally turns to the position of business a year ago. In the present instance, however, this is hardly the best basis to take for a reference. A comparison between affairs now and at the beginning of the twelvemonth is scarcely a real test of how things quently set on one side before ordinary habits of expendi-

the private deposits of the Bank marked an increase of capital seeking employment, which we do not think is the case. There is no reason for believing this, and none why it should occur. The savings of the country from profits during 1878 and 1879 cannot have gone on at the rate they usually do. It may be taken as a rough rule that when the Customs revenue decreases the savings of the country diminish as well. . The decrease in the Excise, especially this quarter, shows a distinct falling off in spending power, and savings are but too freture are relinquished. Many branches of business have yielded but little profit, though no doubt the latter half of the year was, in many directions, one in which a good deal of money has been made through the advance in prices which has taken place.

We must, therefore, be careful not to take the increased balances at the Bank as any proof of the greater supply of available capital being in existence. And there is a very distinct reason why the demands on the existing capital should be larger than before. This will be found in the very great rise of prices spoken of above. The movements in the prices of commodities in the past half-year and in 1879 are referred to in detail further on in this journal, and a large increase is shown to have taken place during the last six months. That a corresponding demand for money will eventually follow is probable.

For the moment, the demand for money has fallen away sharply. The best bank bills, which could not be done under  $2\frac{3}{4}$  on the 30th and 31st December, may be put at  $2\frac{3}{8}$  to-day. The demand at the earlier date was due to the desire, which appears to be an increasing one in business, of showing a large balance to the credit at the close of the year. Banks have long been understood to make arrangements to show a good balance in hand then, and merchants appear to be following in the same direction. An artificial demand at the close of one year is, in consquence, followed by an equally artificial plethora in the early days of the next. There is a probability of an easy money market for the present. Further on the cause just spoken of, the rise in prices of commodities, may be expected to produce its natural effect. It is also quite possible that more gold may be taken for America. While it is difficult to foresee with accuracy the course which that country may take in currency questions, it is quite probable that the habit of employing a gold circulation, once formed, may be continued, and may become more powerful. The United States have never hitherto been a country in which much specie has circulated in proportion to their wealth. For instance, the metallic circulation in France per head, is far larger than in the United States; but circumstances are much altered in the latter country now, and it is quite possible that a gold circulation may grow into a habit, which may increase side by side with a considerable paper circulation. Should the greenbacks be deprived of their quality as legal tender they would probably circulate still largely on the faith of the Government and the banking of gold held against them. A change in the law which now imposes an unduly heavy tax on the national bank note circulation might take place if a reduction were made in the rate of interest on the United States funded debt, and might be followed by an increased issue of the notes of those banks. But with all these expedients, greater wealth will require the use of a large amount of circulating medium in the United States, especially considering the vast rise in prices occurring there, and it is quite possible that gold may be taken from this side in consequence. This is an event, however, the effect of which it would be impossible to predict with certainty, but it is well to bear it in mind among the possible factors influencing our market.

#### THE NEWS FROM CABUL.

THE value of the news from Cabul cannot be exaggerated as regards the deliverance of Sir Frederick Roberts from immediate danger. But it may very easily be exaggerated if it is treated either as an absolution of the Government from the charge of having sent him to Cabul without adequate preparation, or as evidence that the policy of the treaty of Gandamak is still within our reach. The Afghan attack has come to nothing, either through dissensions among the leaders, or through some sudden accession of discouragement in the troops. But in the absence of these influences, what would have been the position of the British force at Shurpur? This is the question that has to be answered before the Government can be acquitted on the score of carelessness. Fortune has for once been on their side ; but it is not the duty of a Government to take this for granted. Before an army is sent to invade Afghanistan in winter, provision ought to be made against every fairly probable contingency.

The argument that because the Afghan resistance has now collapsed for the second time, the Treaty of Gandamak is in a fair way to be carried out, leaves out of sight the object which that treaty professed to have in view. Undoubtedly it is in our power to annex and hold Afghanistan if we are so minded. That is a point upon which, after all our experience of Indian annexation, it would be absurd to feel any uncertainty. The Afghans could probably be converted into British subjects as easily as the Sikhs. The policy embodied in the Treaty of Gandamak is far harder of attainment. Its aim is to go a certain distance in the direction of annexation, in the confidence that, whenever we choose to stop, the Afghans whom we have not annexed will become our very good friends. Nothing that is known of human character justifies such an expectation. When Prince Bismarck annexed Alsace and Lorraine to Germany, he did not profess that one of his objects in so doing was to secure the friendship of France. If he had negotiated in the spirit of Lord Beaconsfield, he would have assigned this as his principal reason for making Metz a German fortress.

If the maintenance of an Afghan alliance is so imperative, what is the meaning of the words "a scientific "frontier?" When the phrase was first coined it was understood to signify the frontier which will best enable us to defend India against aggression on the side of Afghanistan. Has this been secured by the Treaty of Gandamak? If it has been secured, what further need is there to send an Envoy to Cabul? We have got what we wanted, and our true policy is to rest content with it. If it has not been secured, why did the Government disturb the old frontier without giving us a satisfactory new one? The Treaty of Gandamak either did too much or too little; and it is of the first importance that the country should make up its mind in which direction it is to be amended.

#### THE DUKE OF ARGYLL ON THE SIMLA NEGOTIATIONS.

In the letter we printed last Saturday the Duke of Argyll raises a question of some historical importance. The negotiations at Simla in 1873 did not, in his opinion, possess the importance assigned to them in the ECONOMIST of the previous week. Shere Ali, the Duke says, asked for unconditional guarantees against both external enemies and internal disaffection, and for an engagement not to interfere in any way with his policy. "It was " impossible to give him what he asked, and it would not " have been honest to pretend to do so." But a middle course might surely have been found between giving Shere Ali all he asked and giving him next to nothing. Such guarantees and engagements as the Duke of Argyll mentions were, of course, out of the question-the first demands of an Oriental prince usually are. But there were some of Shere Ali's demands which were not of this impracticable character. Though he undoubtedly wanted something more than the general assurance of assistance in case of aggression which the English Government had already given, it does not appear from the published papers that he might not have been satisfied with something very much less than the Duke of Argyll says Indeed, the Cabul envoy distinctly suggested something less. At the interview with the Viceroy on the 30th of July, 1873, he requested that the assurance to be given by England might be strengthened by the introduction of a distinct statement that in the event of any aggression on the Ameer's territory the British Government would consider such aggressor as an enemy, and by the specific mention of the contingency of aggression by Russia. The Viceroy declined both requests, the first on the ground that in diplomatic correspondence such expressions were always avoided, as causing needless irritation; the second because it implied an admission of the probability of such a contingency arising. We are unable to see that either of these suggestions fairly involved "concessions which no "British Government could possibly give." On the contrary, England would probably have been spared a great deal of cost, danger, and suffering if both these concessions had been made. The statement that "it was

" also high time to intimate to Shere Ali that we had "no such fears of Russia as would induce us to " put our relations with himself on the footing contem-"plated in his demands" is important as an explanation of the motives which determined the action of the late Government, but the result has shown that the Ameer's appreciation of Russian policy was more accurate than was then supposed. The theory that there is no evidence that the Ameer was seriously alienated is hardly borne out either by documents or by events. The irony of Shere Ali's letter of the 13th of November, 1873, indicates alienation of a very decided kind; and the British Native Agent, speaking two years later, reports that, in the Ameer's opinion, recent history had proved that the English " were unable " to compel the Russians to adhere to treaties, and were " equally impotent to arrest Russian aggressions." Shere Ali's whole subsequent action is consistent with the view here attributed to him. The Russians, he thought, "were "very pushing in their policy, and feared no one." If the English could be trusted at all, they might be trusted to defend him for their own sakes. Consequently, his best policy would be to ascertain whether there was not more to be gained from the friendship of Russia than from the friendship of England. If Russia proved to be too exacting in her demands he could always, in the last resort, fall back upon the interested support of England. The Conservative Government were right in thinking that this was not a state of things that could safely be left to take its natural course. Unfortunately, they only made matters worse by the manner in which they dealt with them.

#### THE FREYCINET MINISTRY.

WE do not know that any Englishman need regret M. Waddington's fall because it is the fall of M. Waddington. He was on all questions of importance very jealous of England, and very much disposed to resist English policy because it was the policy of England. Like all men who are half Englishmen, and yet view this country from the outside, he was inclined to believe the objects of Great Britain more selfish than they are; while the sensitiveness of his countrymen, suspicious of his English name and English connections, compelled him to seem even more exclusively French than he really was. His resignation, therefore, is no loss to this country in any direct way, but it may, nevertheless, produce injury indirectly. There can be little doubt that a very Radical Government in France would be regarded here with suspicion both on its own account, as likely to be propagandist, and also because it might provoke struggles leading to its overthrow; and the Government of M. de Frevcinet is certainly the most Radical which has yet been accepted by France. The Premier himself is a follower of M. Gambetta, and though personally moderate, like almost all Protestants in France, is a member of the pure Left, while all his followers are Radicals of the most decided type not to be confounded with Revolutionaries. They are nearly all, moreover, in one sense new men, being men outside the group of trained officials, diplomatists, and Parliamentarians who, through all the changes of recent years have, more or less, helped to govern France. They stand pledged to a very extensive dismissal of officials, including judges; to a rigorous execution of the law against the clergy and monarchical generals; and to secure serious modification of the laws which at present enable the upper and middle classes to avoid serving for the usual term as common soldiers. In one or two of these ideas - especially those securing equality of service — they will undoubtedly have the support of the electors; but in others they may be induced to go considerably beyond the opinion of the majority, to which the Senate, by refusing Bills but allowing a dissolution, can at any moment force them to appeal. They have every temptation to show themselves distinctively Radical and uninfluenced by the moderate parties; while they may easily wake up an enthusiasm in the majority of the Chamber which will lead them beyond the measures that France will heartily support, and so produce a dangerous reaction.

It is one of the less noticed but very real dangers of France that the representative Chamber, if Radical at all, tends to be much more Radical than the great body of the

constituency. In England a Radical majority of electors would probably return a moderate House of Commons, because the Radicals, in order to succeed, would be compelled to take eldest sons, great landlords, millionaires, and large employers of labour, who though agreeing with them upon many points, could never be destructives, and would always retain a kindly feeling for the social system under which they had risen, or had been locally respected. The members, as private persons, would live in a society opposed to Radicalism in opinion, and be exposed to influences which tend very definitely to Conservatism; while as legislators they would be obliged to consider at every step the resistance likely to be offered by the Crown, the peers, the permanent services, and the journalists, who though no doubt widely divided, are in England rarely in favour of extreme courses. In France, on the other hand, the tendency of Radical electors is to elect representatives more radical than themselves. The wealthy class does not agree with them, the successful professionals have no time to spare, and small proprietors or peasants are not elected in great numbers. The electors are thus driven to choose either fanatics with means, as happens so often in the great towns, or members of the trading class with very pronounced opinions, or the younger professionals, lawyers, doctors, and engineers who are at heart more radical, especially upon religion, than the body of the peasants. These men, assembled in Paris, find themselves out of favour with "society," live chiefly among each other, or men of like opinions, are egged on by rivalry and the applause of journalists, who, owing to the feeling for logic and epigrammatic statement universal among French litterateurs, tend to extreme advice, and at last support measures so drastic that their constituents grow afraid of them. For example, we take the true feeling among the Radical peasantry of France about the Church to be that the clergy, and more especially the bishops, ought to be kept in their places, and that their places are inside the churches, that they take something too much upon themselves, and that if they are treated as ordinary professionals it will be better for all concerned. The peasants are also somewhat jealous of clerical interference in education, suspicious of Jesuits, and disposed to dislike all monks and all nuns not devoted to works of active and visible benevolence. They wish to secure protection from demands for fees which they think exactions, and which in some communes are subjects of bickering almost as permanent as in the poorer districts of Ireland. They are quite tolerant of a little irreligion, and are by no means annoyed when a prominent priest receives a sharp rebuke either from the authority at Paris or from the local prefect. The representatives of such men are apt, however, to go much further-to dislike the priesthood actively, to be inclined to persecution, to be willing to forbid them to enter schools, and to be ready to abolish the ecclesiastical budget, thus compelling the peasantry to support their own clergy or to do without them. As it is the repre-sentatives, not the electors, who make the laws, the measures actually adopted may easily go beyond public feeling, and so throw into the hands of the clergy weapons of which they would not be slow to avail themselves.

The same difference exists as regards the army; the Chamber desiring absolute authority, while the officers are unduly sensitive to civilian control and jealous of their right to their posts irrespective of opinions; as regards taxation, the members being better instructed on that subject than the peasants, who detest direct demands; and, above all, as regards foreign politics, upon which the electors are much more conservative and peaceable than any French Chamber, whatever its opinions, will ever be. Upon every one of these questions a Radical Ministry leading and being led by a Radical Chamber may go further than the body of the people, and may give occasion for a reaction which, if it did not restore a Monarchy, might at least disturb public order.

The best guarantee against this danger is the ascendancy of M. Gambetta, who understands well the danger of advancing too fast, and who, except upon clerical questions and possibly some questions of foreign policy, such as the kind of influence to be exerted in Spain and Italy, is probably Conservative. But M. Gambetta's position, it must not be forgotten, is an individual one, and exceptional THE ECONOMIST.

from every point of view. A policy should not depend on one man's life, and M. Gambetta cannot be expected to keep his ascendancy in the Chamber for ever, and yet always abstain from assuming the direct guidance of public affairs. His own nominees may rebel against his dictation, or the majority in the Chamber, while still respecting him, may refuse to follow his guidance unless he descends from his elevation to preside over a Ministry. The Radicals, once released from pressure by the existence of a Radical Ministry and the purgation of the army and the bureaux, may easily outstrip M. Gambetta, and commence a course upon which hitherto French politicians have not found it easy, when once set going, to arrest themselves. We hope better things from the Ministry, which, though not a strong one, has an able chief, intent upon securing or increasing material prosperity; but we are not without misgivings that it may be led too far. If this happened, we should see English sympathy for the French Republic, which has always been dependant upon a good many considerations other than Republicanism, come very rapidly to an end, and be replaced by a sympathy more or less openly expressed with those who desire some kind of counter revolution.

#### MOVEMENTS IN THE PRICES OF COMMODITIES IN THE PAST HALF-YEAR AND IN 1879.

In none of our periodical surveys of the fluctuations in commodities has it been our task to record changes more universally violent than those which have occurred in the past four months. Even on the entire year the variations as regards the majority of articles are not at all less striking than those recorded in such years as 1863, 1866, 1871, or 1878. The year 1863 was, of course, exceptional, owing to the outbreak of the American civil war, and the great rise in cotton and all descriptions of American produce; and by adding together the movements in twenty-two principal articles an average rise in prices of about 20 per cent. was shown. In 1866, the year of the Overend and Gurney panic following the Confederate collapse, the same twenty-two articles marked an average fall in prices of about 15 per cent.; in 1871 these articles rose on the average 10 per cent.; while in 1878 they fell 13 per cent. But our "Commercial History and Review," will show that during the year now closing those same commodities have risen something like 20 per cent. in market value, or by as large a percentage as they did in 1863; the whole of which rise has accrued since the commencement of September. In the bustle of daily life, we scarcely mark how universal this expansion of market values has been, and not a few of the recent reviewers of the year, have regarded the change as far slighter than it really is. The improvement in prices on the Stock Exchange has been insignificant by the side of that in the prices of commodities.

When in July last the results of the first six months of the year were dealt with it was shown that all descriptions of metals and minerals were up to that time actually lower in price than in the previous December, and that the first half of 1879 had further resulted in a fall in the prices of sugar, wool, flax, jute, tallow, and barley. Although wheat, cotton, hemp, and silk, had recovered to some extent, the net result of the half-year's fluctuations had certainly been a fresh fall in the wholesale prices of merchandise generally. But in very few instances had the changes been at all violent, for the rapid depreciation in the closing three months of 1878 apparently left but little room for further yielding on the part of the producer or manufacturer. In very few trades could any profits be realised upon the transactions entered into, in many there were serious losses; and our imports of raw materials were greatly restricted. There had been a slight revival in prices in May, partly, however, resulting from strikes in the coal, cotton, and other industries against fresh heavy reductions in wages; but the third quarter of the year opened with renewed despondency amidst incessant rain, storms, and floods.

The tables which follow record the variations in twentyfive leading articles of merchandise, week by week, throughout the half-year, each table including one month's figures.

If the half-year opened with general stagnation, cer-The prices of wheat tainly grain was an exception. and barley advanced with striking rapidity as the loss of the harvest became first a probability and then Then followed the rise in iron, which a certainty. showed some faint signs of life in August, and revived with an extraordinary bound in September and October. The serious falling off in the tea shipments from the East caused a sharp rise in tea, and the failure of the continental beet-crop put up the price of sugar. Tallow and various other articles of produce gave signs of recovery in September, but the great cotton and woollen industries still remained in a most despondent condition, with numerous manufactories standing idle altogether. and the great bulk of the machinery running only halftime. Then came the rise in English wool, followed quickly by that in colonial wool upon the opening of the November sales; and lastly, the Manchester market, with a comparatively small advance in the raw material, sprang suddenly into activity, and the prices of finished goods hardened so quickly that the margin between the price of raw cotton and that of yarn, which, as the preceding tables indicate, was early in September only  $2\frac{3}{4}$ d per lb, was as much as  $3\frac{3}{4}$ d on the 27th December. During the past three months flax, hemp, and jute have been moving upward; but the first week in December was remarkable for an unparalleled activity in the jute market, it being esti-mated that nearly 200,000 "to arrive" bales changed hands, while the quotations of some descriptions of jute rose fully 30 per cent. in a few days. In this brief summary, no reference has been made to the rise in chemicals, or to that in drugs, spices, oil-seeds, leather, or a host of miscellaneous productions, nor yet to the revival in shipping freights. Even the timber trade has at last begun to put forth signs of reanimation. In the housecoal trade, wholesale prices have hardly varied throughout the six months; but there has been a better demand for steam and manufacturing coal and coke, and consumption is certainly larger, even if prices recover but slowly. The decline in the price of meat is a usual accompaniment of the autumn and winter months, and as compared with December, 1878, prices in this instance show practically

no alteration. Enough, however, has been said to illustrate the fact that the advance in the market values of commodities has been exceptionally rapid and general, the expansion in the final quarter of 1879 much exceeding the contraction in the final quarter of 1878.

The part which the United States have played in this great movement of prices has been most conspicuous. It was, of course, English and continental necessities which enabled American wheat growers to raise their prices so effectually. But the great advance in our iron trade-an advance which has, in a few months, brought back the quotations ruling in first half of 1866-has come wholly from America. Since the passing of the new German tariff there has been a decided restriction of our iron shipments to Germany, a restriction which our exports to no other continental or eastern country, or to our colonies, has been able to counterbalance. But so great has been the demand for iron in America, more especially for railroad iron, that prices have this year advanced until the difference between American and English prices has widened sufficiently to cover-first, the 28s per ton import duty on pig iron and the 32s duty on old rails and scrap iron; next the 35 per cent. import duty on iron rails, and lastly, even the 51 10s per ton charged at the American custom houses upon the import of steel rails. Consequently, steel rails which here sell for about 71 5s per ton, in New York command 131 10s, and American railroad companies are found willing to pay the difference. Not longer ago than July last there would have been some pounds per ton loss. on the import of steel rails into New York, and American steel could then be obtained for about 81 15s per ton. The great rise thus established has certainly caused home orders for iron of all descriptions to be given out with greater freedom, and this serves to keep up the strength of our iron trade, in which the top prices are those at the close of the year. Space will not permit of our following other branches of our trade with America in the same detail; but it was the purchase of English wool by American manufacturers, that in October and November converted the unexampled depression in that commodity into a decided improvement on the year, and the increasing demands of American manufacturers, coupled with forecasts of a short crop, that caused the quick rise in raw cotton in May last. Though the crop has turned out better than was then hoped for, and Indian and Egyptian crops are unusually prolific, the strength of the markets generally has prevented more than a temporary relapse. With these satisfactory supplies in sight it would be remarkable that cotton should be nearly twopence a pound higher on the year, did we not bear in mind that extreme depression followed the failure of the cotton shipping houses, in October, 1878. The United States have been much better customers of our linen and jute manufacturers. The successive advances in tin, in leather, and in chemicals are in no little degree due to the absorption for America ; and of course American cheese, butter, and other descriptions of American produce are in return only obtainable here at higher market values. It is not too much to say that the revival in our industries received its first and main impetus from the United States, though when once the change had set in unmistakably other buyers became anxious to provide themselves against future emergencies.

It remains for us to record the relative movement on the twelve months in these various commodities. First, Manila hemp has risen no less than 62 per cent. in market value since December, 1878. Next, Scotch pig iron has revived to the extent of 50 per cent., and British bars fully 35 per cent. Tin is 38 per cent. higher on the year; raw cotton, 37 per cent. higher and yarn, 26 per cent. higher; tea, 36 per cent. higher; lead, 31 per cent. higher; jute, 27 per cent. higher; tallow, 25 per cent. higher; sugar, 21 per cent. higher; silk, 19 per cent. higher; flax, 18 per cent., and wheat, 18 per cent. higher; copper, 13 per cent. higher; coffee, 13 per cent. higher; and wool, 9 per cent. higher on the year. In some instances these percentages of increase would be yet larger were they calculated upon the past four months. On the other hand, best house coal is some 16 per cent. lower on the London Coal Exchange than it was twelve months ago; and the northern coal-owners have protested against the great margin of profit which the retail merchants in London extort from the consumers, and have held meetings to consider whether any concerted action should be taken to counteract the evil. The position of the steam colliery districts is certainly better than it was twelve months ago.

#### THE CALLS ON THE CITY OF GLASGOW BANK SHAREHOLDERS AND THEIR LESSONS.

THE limitation of liability now taking place among banks renders it a matter of considerable interest to ascertain what the effect of making a heavy call on their shareholders would be. It is obviously entirely impossible to appraise the amount which might be raised by making such a call while a bank is a going concern. The raising new capital by the issue of fresh shares is no criterion of this, as such shares are usually offered at a comparatively low price, and, if not taken up by the old shareholder, are readily sold by him at some profit. Thus it may be the new shareholders and not the old ones who provide the main part of the fresh capital. No one knows how much is supplied by each class. The effect of the calls made by the liquidators of the City of Glasgow Bank give information which may be valuable. Two calls have been made on the shareholders of that bank-the one for 5001, the second for 2,2501, per 1001 stock. It is with the effect of the first call only that we need concern ourselves on this occasion, as a liability of five times the amount of the capital paid up represents quite as large a margin of uncalled capital as exists in the constitution of most limited banks. Thus the working of this first call shows broadly what might be expected to take place should any similar calamity occur to any bank formed on the limited principle. The main results were as follows :- The call of 5001 per share should have produced about 4,200,0001it actually produced 2,100,000l, or half the nominal amount. It fell on more than 1,800 separate individuals, and it ruined about one-third of them. It does not appear that the knowledge that larger calls would have to be made than this first one had any influence on the manner in which the call was met. Hence we may consider its incidence on the shareholders to have been the same as if it had been the final call.

The next question to consider is whether the constitution of the roll of shareholders of the City of Glasgow Bank is as good as the ordinary run of such lists. It

seems very probable that it was. The number of trustees brought in as contributories must have strengthened the list considerably; and they have paid-up no small portion of the whole sum. Out of 1,800 contributories, 269 in all have paid 2,750l in all per 100l stock-a call absolutely unprecedented in magnitude. Hence, since some of the shareholders were not ruined by this heavy drain on their resources, they must have been persons of considerable wealth. There were many reasons why people of wealth should have been connected with that bank. The credit of the bank had remained untouched to the last with the general public. No anxiety respecting the holding of bank shares had arisen for years. So completely had confidence been restored, that the lessons of the Western Bank of Scotland had been generally forgotten. It would appear, therefore, that the shareholders of the City of Glasgow Bank were quite an average representative body as regards solvency. If the precedent shown by this case is a correct one the uncalled capital of the average limited bank may be set down roughly as worth about 10s in the pound, and this, with the proportion of liability to deposits now existing in most cases, may be taken to be an adequate protection. The condition of matters, however, shows conclusively how great a protection both to the shareholder and the depositor the formation of a reserve fund invested in securities beyond the risks of the business to meet the uncalled liability would be. The existence of such a fund would operate in two ways. While it would diminish the amount of calls on each shareholder, it might at the same time be expected to improve the class of shareholders by introducing a more substantial set of men, and hence to increase the product of any call which might be made on them.

These remarks have been based on the possibility of such calls being made. This is a contingency the effect of which it is desirable to think out; as, whether it is likely to occur or not, the uncalled capital is provided to meet it, and therefore it is only right to examine what the possession of a large uncalled capital really means. The question of the amount of capital which a bank ought to possess has two sides. No doubt large paid up capital gives credit, but it may easily be too large, and that not only on account of the question of dividend, but also because the possession of it may tempt managers and directors to think they can lock up money with impunity. The necessity of paying a large dividend on a great capital is a great danger. Hence the desirability of having uncalled capital to fall back on, as with that resource a smaller paid-up capital suffices, and the working capital can be better proportioned to the business done. A reserve invested beyond the reach of the risks of business seems, as mentioned before, the safest alternative, and the plan really most in the interest both of the shareholder and the depositor. Meanwhile, the provisions of the Banking Act of last session, both as to publication of accounts and audit, may be expected to be of some service. It will be all the better for those concerned when they understand that safety in banking lies not merely in the amount of capital, but also, and far more, in the proper conduct of the business.

#### THE REVENUE.

WE must now, it is to be feared, give up all hope of the Budget estimates for the year being realised. At the close of the third quarter we are 449,000*l* to the bad, and the probability seems to be that in the remaining three months this deficiency, instead of being reduced, will be increased. For, as will be seen from the following comparison with last year of the position of the chief heads of income at the close of each quarter, the falling off has been progressive :—

		nc. or Dec t June 30			nc. or Dec t Sept. 3		Inc. or Dec at Dec. 31		
		£			£			£

increasingly 1		id dim						revenue	

#### THE ECONOMIST.

the falling off during the past quarter having been almost as great as in the previous six months. Discouraging though this is, it is not surprising. As yet the trade revival has not benefited the great mass of the people. Indeed, it has rather straitened them than otherwise, because while wages, as a rule, have not risen the rapid advance of prices in the produce and other markets has made money go a less way in the purchase of commodities. Should the revival continue and spread, the working classes will, of course, come to share fully in its resulting gains. But it will take some time before the prosperity becomes so diffused as to generally augment the spending power of the people, and that all the more because it is to some extent counteracted by the ill effects of our sadly deficient harvest. We can thus hardly hope for much improvement this quarter; and yet it is evident that unless there is a speedy and very marked change for the better, the present shortcoming in the revenue will be added to very largely before the close of the financial year. For any further growth that may take place in stamps and income tax can go but a very little way towards making up the deficiency. In fact, it is quite possible that the gain already realised under the latter head may not be fully maintained, because the new regulations as to the abatement of assessment on farms must diminish the yield of the tax. In all probability, therefore, a con-siderable deficit will have to provided for in April next. In itself that is not a very serious matter, more especially if it be found that the present improvement in trade continues and extends. If business revives, and the increase in the income from the Post and Telegraph Offices shows it is quickening, the revenue of next year is certain to regain its elasticity, and a debit balance of a million or so might be easily overtaken. Unfortunately, however, it is not only with the accruing deficiency of the present year that the Chancellor of the Exchequer must deal. He has, further, to make provision for the  $6\frac{1}{2}$  millions of war expenditure he left uncovered in July last, for the additional cost of the Zulu war, and for the expenditure on the Afghan war.

#### BUSINESS NOTES.

THE RUSSIAN BUDGET FOR 1878 .- The financial statement of the Controller of the Russian empire for the year 1878 has now been published. It shows that the ordinary revenue for the year amounted to about 622 millions sterling (taking the rouble at 2s), being an excess over the estimate of nearly 6,800,0001. On the other hand, the expenditure, which amounted to about 60 millions, fell short of the estimate by about 2,000,000l, and instead of the anticipated deficit of three millions, there was a realised surplus of 22 millions. growth in the revenue arises chiefly under the two heads of "alcoholic liquors" and customs. In the former there is an excess over the estimate of 2,330,000l, the total amount realised being 23,600,000l, or nearly 38 per cent. of the total revenue. Customs have yielded 2,720,0001 more than the estimate, but the growth under this head must be regarded as fictitious. It is the result of the depreciation of the paper money for the duties being levied on gold. Their value, stated in roubles, rises in proportion to the debasement of the note currency. For instance, 100*l* in gold represents very many more roubles when the specie value of it is only 2s than if it were converted at the rate of 2s 9d per rouble. And, indeed, the whole growth of revenue may to some extent be traced to the redundant note issues. The floods of inconvertible paper currency poured out by the Bank have seemed to put everyone into possession of more money than before, and a sort of sham prosperity, such as that which prevailed in the United States when the note depreciation was greatest, has been To this, however, a sharp corrective will be created. applied when the excessive note issues come to be withdrawn, and the present inflation must then be followed by a painful contraction. The increased revenue of 1878, therefore, cannot be regarded with complete satisfaction. The increase in the expenditure is due to the augmentation of the debt charges, which amount to  $14\frac{1}{4}$  millions

and exceed those of 1877 by 22 millions. This growth is due to the increase in the capital of the debt, and also to the increased loss on exchange in consequence of the decline in the value of the rouble. In all the administrativo departments some curtailment of expenditure seems to have been effected. Half a million has been saved in the railway guarantees, and about the same sum has been gained by the increased traffic on the lines. But as this growth arose from the large military traffic, it has been as real saving to the State, which had to meet out of its extraordinary revenues the transit charges. That extraordinary war expenditure amounted in 1878 to 40,800,0001. of which 31,000,0001 was obtained from loans, and 9,800,0007 advanced by the Bank of Russia. The total extraordinary expenditure to the close of 1878 is set down at 88,800,0001, but in the Budget for 1879, issued at the beginning of this year, it was placed at 122,500,0001. Possibly the former sum is the amount actually spent, and the latter the nominal amount of the loans and advances, which were, of course, issued at a discount. But in that case the latter sum is the real burden imposed by the war. as the loans must be redeemed at par, and interest paid upon the full amount.

THE RISE IN CHEMICALS.—The following table taken from the circular of Mr Wm. Simpson, of Glasgow, marks the general and important advance in the prices of chemicals during the past twelve months. The quotations of January last were in very few instances the lowest of the year, but those of December are generally the highest. After the steady fall in prices of these articles since 1873, the change is the more welcome, and in this case also the impetus has come from America.

THE UNITED STATES CURRENCY .- To the Government proposals for a change in the currency legislation of the United States two classes of objections are being urged. Many of the best financial authorities and a large section of the honest money party object to any legislation whatever on the subject. Having secured the resumption of specie payments, they would leave well alone, believing that the continual interference of Congress with the currency arrangements of the country disturbs trade and otherwise works mischief. The contraction of the greenbacks is further opposed on the ground that it is unwise to assume that the present flow of bullion to the States will continue. The circumstances of the present year, the concurrent failure of the European and great abundance of the American crops, are, it is contended, altogether exceptional; and the currency arrangements should not be based on the assumption that the States will in future have such facilities as they have recently possessed for obtaining gold to take the place of paper money. The inflationists also, although on other grounds, object to any curtailment of the currency, and the belief is that this combined opposition will prevent any legislation on the subject this year.

FAILURES IN THE UNITED KINGDOM.—From the valuable statistics annually compiled by Mr Richard Seyd, we learn that the number of failures announced in the

United Kingdom last year was 16,637, of which 2,546 were in the financial, wholesale, and manufacturing branches of trade, and 14,091 in retail trades, builders, publicans, and non-traders. In 1878, the number of failures under these two classifications were 2,643, and 12,416 respectively, making a total of 15,059. The increase in the total number of failures shows how heavy has been the pressure of dull trade, but it is satisfactory to note that a great change for the better took place in the second half of the year. In London there were 215 failures in the last six months of the year, as compared with 315 for the half-year ended June, making a total of 530 for the year, as compared with 566 for 1878, and 456 for 1877. Liverpool shows 29 failures in the December half-year as compared with 55 for the June half; Manchester 48 as against 107; Lancashire 82 as against 110; Yorkshire, not including Middlesborough and Hull, 157 against 263; and the Birmingham and Midland iron district 83 against 120. The total failures in these places amounts for the December half-year to 614 as compared with 970; a decrease of 356 on the six months. The weeding-out of weak firms that has been so long in progress would thus seem to have been pretty fully accomplished, and the revival in trade has come in time to save many traders who, if the depression had continued unabated, would probably have been forced to succamb.

8

SUGAR PROSPECTS.—The following statistics and estimates, extracted from Messrs Littledale and Company's circular, point to a deficiency of some 400,000 tons in the sugar crop for the year 1879-80 :—

The beet crops for the past 5 years have been-

	Tons.
1875-6	1,372,000
1876-7	1,101,000
1877-8.	1,421,000
1878-9.	1,550,000
	1 250 000 to 1 340 000

At the same time the accounts from Cuba indicate a very large decrease, which becomes more important because the Mauritius crop is estimated at 50,000 tons less than last year. The deficiency in Java will probably be covered by an excess in Brazil. The crops of other countries may be about the same, in the aggregate, as last year. On the foregoing assumption we would have to face a deficiency of—

		Tons.		Tons.	
Beet		210,000	to	300,000	
Cuba		70,000	to	80,000	
Mauritius	******	50,000	to	50,000	

#### 330,000 to 430,000

Some writers put the deficiency at even 475,000 tons. It must be borne in mind that the consumption in Europe and America increases at about 90,000 tons a year. In the twelve months ending 31st October last it was 2,530,000 tons;

or,

137,000 t	ons over	1878
327,000	55	1877
261.000	53	1876
368,000	25	1875.
	•	3 7

It is quite clear that consumption must be decreased, or that importation must, from some unusual sources, be increased. China and Calentta at high prices can give us large supplies.

NEW ACTS IN OPERATION .- At the beginning of the present year several new Acts come into operation. Of these the most important is the Public Prosecutors Act, under which Mr Maule, Q.C. has been appointed Public Prosecutor. For the present, the duties of the new official will probably be limited to the conducting of such prosecutions as have hitherto been taken up by the Solicitor to the Treasury, since the regulations under which he is to take action have yet to be drawn up and submitted to Parliament. Ultimately, however, it is to be hoped the powers of the Public Prosecutor will be so extended as virtually to make the State the prosecutor in all criminal cases. That, at any rate, is what all business men must desire, and it is as a step in that direction that the present experiment is being made. Other Acts which came into operation on Thursday are the Summary Jurisdiction Act, which simplifies our legal procedure and enlarges the powers of the magistrates, the Habitual Drunkard's Act and the Act regulating the employment of children in places of public amusement.

LOANS RAISED BY URBAN SANITARY AUTHORITIES. We give below the list, referred to in the Economist of last week, of the places, the indebtedness of which, on account of urban sanitary improvements, exceeded 100,0001 in the year 1878. The ratable value in that year, as well as in 1877, is also given, and the indebtedness of the same places in 1877. The proportion per cent. of loans to ratable value is also shown, so that the growth of indebtedness between the two years can be readily traced. On an average, these places are not in debt much more than 150 per cent. of the ratable value, but individual instances show a much higher proportion. Thus Halifax and Huddersfield have borrowed nearly four times as much as the ratable value of the places is worth for sanitary purposes, while Manchester has only borrowed twice as much, and Birmingham appears as not owing the amount of the ratable value. The figures cited show the advisability of the collection by official authority of the statements of all local indebtedness, and the publication of the amounts in a form which would be accessible to every ratepayer. Consider-ably more than half the sums employed by the urban sanitary authorities in the year 1877-78 were derived from loans, and it is very desirable that the extent to which the credit of any locality is pledged should be readily known.

on prolonged bills .....

corresponding account of 1878, the gross profits in the six months increased from 9,391,914f to 11,104,269f, while the expenses of management only rose from 4,212,389f to 4,307,438f. The Bank of France return for the week ended New Year's Dry shows the following changes :--

INCREASE.	francs.	DECREASE.	francs.
irculation		Government deposits	13,000,000
iscounts		Other deposits	26,000,000
ilver coin	3,000,000	Gold and bullion	25.000,000
The Bank has fixed	ita divida	end for the half year at	55f 67c

(net 54f) per share of 1,000f. The dividend for the whole year is 113f 40c, against 97f 93c for 1878; 97f 93c for 1877; 149f 47c for 1876; 206f 81c for 1875; 293f 80c for 1874; and 360f 81c for 1873.

Little change has to be noted in the discount market. Money is scarce, but not more so than is usual at this period of the year. There has been a better demand for bills as the great companies are generally now prepared for the payment of their January coupons, and in prevision of the money that will be set free in a few days, bankers' paper and the best trade bills are taken at  $2\frac{3}{4}$  to  $\frac{7}{8}$ . The exchange on London is weak at 25f 23c.

- The monthly settlement commenced yesterday with the declaration of options. In most cases the premiums were abandoned to the sellers, and the market did not benefit by the usual buying in when the purchases are made firm. Business has been depressed during the week, and the composition of the new Ministry is not viewed with favour, either from the standpoint of the Ministers individually or of the groups they represent.

The year which has just ended has, nevertheless, been throughout favourable to buyers, as will be seen by the subjoined table of the leading French securities on the 31st December, 1878 and 1879; the closing rates were, however, lower than those reached during the speculative mania in October last:—

The formation of the new Minister and the second s

The formation of the new Ministry was generally treated by the Bourse with indifference, the only visible effect being a fall in Five per Cent. Rente on the appointment of M. Wilson as Under-Secretary of State for Finance. A fortnight back I mentioned that he was spoken of as a possible successor of M. Léon Say, and that his accession to office would probably be followed by a conversion of the Five per Cent. Rente. M. Wilson only occupies the subordinate post under M. Magnin, the new Minister; but in more than one department of the new Cabinet, the places of Under-Secretary are filled by men better known in Parliament and public affairs than their chiefs. M. Magnin will be remembered as Minister of Commerce after the 4th Sept., 1870, since which time he has taken no leading part in public business. M. Wilson, on the other hand, has been charged for the last two years with the report on the Budget in the Chamber of Deputies, and in the exercise of that function has had to defend the amendments of the Committee in the debates. He is besides, the author of the famous report of the Committee, in favour of the Government purchase of the Orleans system of railway. There are consequently good reasons for supposing that he will exercise a preponderating influence on the financial policy of the Government. M. Wilson, as may be conjectured from his title of honorary member of the Cobden Club, is a leading member of the Free-trade party in France, a partisan of the treaties of

commerce, and an advocate of reductions of taxation on commodities.

The thaw happily set in on Sunday last, and relieved the population from fears of an aggravation in the scarcity of fuel. On the previous day the price of coal had risen to four shillings per cwt, and as much as five shillings was paid in some districts of Paris. It was stated in a sitting of the Municipal Council that the aggregate stock at the three great railway depôts—La Chapelle, La Villette, and Batignolles was only between 300 and 400 tons. It will be some time before any large supplies can be obtained, for the ice on the rivers and canals has not yet broken up, and there will be heavy demands from the manufacturing districts, where many large works have stopped for want of coal.

Notwithstanding the interruption to trade from the frost, the indirect taxes produced a further surplus of 3,400,000f on the estimates in the first fortnight of December.

The date at which the Egyptian Government was to have redeemed its pledge to the great Paris Syndicate expired yesterday, without either payment of the debt being made, or notice being given to foreclose. The Syndicate, therefore, intends to defer realising its security, and will now be able to do so after the ground has been in a measure cleared by an important operation of the Crédit Foncier during the last month. That establishment has been, in fact, quietly and secretly ridding itself of a large portion of its Egyptian securities. During the month of December it has succeeded, without disturbing the market or depreciating the classes of securities it was selling, in disposing of all its Daira Sanaih, Daira Kassa, and railway bonds for a total sum of 31 millions of francs. Those securities realised five millions more than the value at which they were entered in the last inventory, and the operation has consequently reduced the expected losses of the Crédit Foncier on its Egyptian transac-tions by as much. It now holds only Unified bonds, besides its share in the secured debt of the syndicate, the pledge of which consists of Unified bonds and the Khedive's founders shares of the Suez Canal. The total of the Egyptian securities of the Crédit Foncier is reduced to 119 millions of francs. The operation has been cleverly carried out, and the secret was well kept. The board has considerably strengthened its position before the shareholders, and can now have nothing to fea from the opposition of the management maintained among the proprietors by M. de Soubeyran and his supporters.

Several of the Chambers of Commerce have commenced an agitation against two of the taxes created after the war, which, small in amount, are, nevertheless, exceedingly burdensome in the transactions on which they are levied. The first is the tax of 35 centimes on the carriage letter of parcels. The railway companies carry parcels not exceeding 10 pounds weight up to 100 miles for 85 centimes, but of that sum the State takes 2½ centimes for railway duty, and 35 centimes for the stamp on the carriage letter, leaving only 47½ centimes for the railway and the delivery at destination. The second is the statistical duty of 10 centimes on each article, parcel, or package imported or exported, however small the value. The town of Bordeaux alone pays 600,000f a year for this tax.

No little inconvenience will arise from the termination of the currency of Italian subsidiary silver coin, which takes effect from to-day. That measure is in execution of the convention between France and Italy for returning the Italian silver coin, nearly the whole of which had found its way into France. The Government gave notice some time back that it would cease to be received at all the public offices from the 1st January, 1880, but in the meantime it has circulated as before. To-day it is refused everywhere, and the last holders will have to bear the loss on this worn and depreciated coin. As about one-third of the small silver at the Bank and in circulation consists of Italian pieces, this simultaneous rejection of it will cause some annoyance to the public.

The Crédit Foncier will pay an interim dividend of 17f 50c  $(3\frac{1}{2}$  per cent.) from the 2nd January on the profits of the year.

The Paris Omnibus Company had announced a first dividend of 25f per share of 500f, but in consequence of the heavy losses caused by the interruption in the traffic from the snow, the board have given notice that the dividend will be reduced to 12f 50c.

The Crédit Lyonnais offers a small 3 per cent. loan at  $98\frac{1}{2}$  in 100f bonds with lottery drawings for the conversion of the debt of the City of Lyons.

Five per cent. Brazilian railway bonds of 500f are offered by the Crédit Industriel and Société Générale at 465f. The subscription is for 51,646 bonds, interest and redemption in thirty years' guaranteed by the Brazilian Government.

#### GERMANY AND AUSTRIA. (FROM OUR OWN CORRESPONDENT.)

VIENNA, December 29"

The expansion of business on the Vienna Stock Exchange gathers force, and a general rise in prices is the result of the

THE ECONOMIST.

week. The shares of iron companies have risen more than any other securities. This general buoyancy is due to money here being still very abundant, so that the current rate of interest in the Austrian open market is 31 per cent. as low, or lower, in fact, than it has ever been before. Besides this, the Austrian and Hungarian ironworks, which have for so long a time been wholly without improvement in their business operations, are now likely to sell their products at a higher price. For the orders that are given now in Styrian pig iron, 46.50 florins is paid per ton instead of 42 florins, as was the case a short time back. For wrought iron 10 florins more is paid now. Steel has, however, scarcely risen in price as yet. In Germany the revival of business in the iron and coal indus-tries commenced some time ago. Between the 6th of October and 15th of December the prices of these articles have undergone the following change in Westphalia :- 6th of October, 1879, Forder gas coal, 5 marks per ton; coke, 8 marks per ton; Spiegeleisen 62 marks per ton; Bessemer, 60 marks per ton. 15th of December, 1879, Forder gas coal, 7 marks per ton; coke, 15 marks per ton; Spiegeleisen, 98 marks per ton; Bessemer, 97 marks per ton.

The last returns of the Austro-Hungarian Bank announce that the discounts have slightly improved. The discounts of the German Reichsbank increased 22 million marks in the course of one week.

The abundance of money on the Vienna Exchange is all the more remarkable because both the Government and the joint stock companies are amassing ready money to pay the interest due on the 1st January. On that date the coupons of the State and provincial obligations, mortgage bonds, shares and debentures of guaranteed railways are all due, and will absorb at least 65 million florins, of which 19 millions are to be paid The in gold, 28 millions in silver, and 16 millions in notes. interest of the silver Rente alone amounts to 15 million florins, that of the Hungarian gold Rente 10<sup>1</sup>/<sub>2</sub> millions.

According to the latest information the commercial agreement between Germany and Austria-Hungary must by this time have been concluded, and renewed upon the system of most favoured countries. After all the hopes raised by the alliance there will be no nearer commercial union between the two neighbouring countries than there is with Italy. Of course, this is but a provisional measure, to last until a real treaty shall have been attained. The only changes from the former conditions are that the freedom from duty for raw linen is to cease along the Austrian and Prussian frontier, that the confiscation of railway cars by German creditors is to be once more allowed, and that goods sent across the frontier to be "finished" are to pay a very low duty at first, and more as time wears on. This latter measure is really introduced solely for the benefit of six large Austrian printing establishments, and will damage greatly a large number of weavers. Besides which, it seems likely enough that the printing establishments themselves will reap no profit by it. The dyers and printers of Mühlhausen have already proposed founding large establishments in Austria.

The Servian Government has lately been delaying the arrangement of its railway affairs, because it hoped to obtain from Austria still greater advantages for its commerce. At present, however, the business is progressing, and the Ministry for public works has constituted a new technical office, which includes a number of railway engineers.

A new difficulty has arisen in respect to the question of the Roumanian Government purchasing the Roumanian railways, after everything seemed settled. The Parliament, while voting the Bill, also voted the condition that the seat of the Administration must immediately be transferred to Bucharest, even before the railway had been entirely purchased. In Berlin this condition meets with violent opposition, and no one will hear of the seat of Administration being changed before all the other stipulations involved in this arrangement have been duly carried into effect.

The conversion of the Würtemberg 5 per cent. obligations into 4 per cents. is being carried on successfully, the latter being sold to the creditors at a reasonable price, viz., 974 per cent.

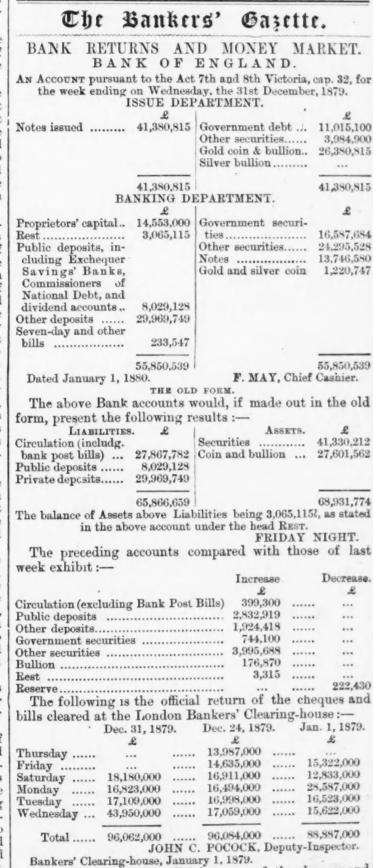

We have already mentioned that hopes had been raised of preserving the commercial relations of the firm Godeffroy and Sons, in the Southern Seas, by handing over the establishment to a new joint stock company. It seems now that this plan will be carried out. The new company is quite ready to be constituted. Nothing is wanting but the vote of the Reichstag guaranteeing the interest promised by the German Government. The capital of the new company is said to amount to 8 or at most 10 million marks. If 10 millions are decided upon, then two millions will be devoted to paying the old company, whose chief managers were the house of Godeffroy. The new company is to take upon itself everything belonging to the old company, at the value settled by arbitrators, and to be paid in cash immediately. The new joint stock company will consist of-the Berlin Discontogesellschaft, the Berlin Handelsgesellschaft, Norddeutsche, Bank in Hamburg, and the firms, Bleichröder, Rothschild, and Delbrück, Leo and Builion in both departments, Banking Deposits, Banking

Co. The Government promises to guarantee 41 per cent. net interest upon the capital for 25 years, but the interest paid by Government must not amount to more than 320,000 marks. The company promises to repay what the Government con-tributed should the course of business improve, and exceed the regular interest. As soon as the contract between the new company and the Imperial Government has been signed, the above-named firms will grant the old company a loan of 1,200,000 marks to cover momentary expenses and floating debts. When the Reichstag has voted the validity of the contract, this sum will be deduced from the price paid to the old company.

the "other" securities, showed in 1869, a deficiency of 1,577,381l; in 1877, an excess of 6,354,466l; in 1878, an excess of 1,553,184l; in 1879, an excess of 1,999,318l. In 1880, there is an excess of 5,674,221l.

In 1870, there was a good demand for money at Bank rate, and an increase in the "other securities" in the week ended December 29 of 1,700,0007. North-Eastern and some other railway stocks were in strong demand owing to greatly improving traffic returns and the revival in the iron trade.

In 1877, the usual temporary demand for short loans at the close of the old year died away after the 4th of the new month. In the stock markets attention was exclusively fixed upon the question of peace or war, the armistice between Turkey having been prolonged, but Turkey refusing the propositions for peace put forward by Russia.

In 1878, the money market was quiet, and best bills could be placed at 3 per cent. In the Bank return, beyond increases of two millions in the other securities and other deposits, the changes were slight.

In 1879, immediately upon the turn of the year, the money market became much easier, and the Bank was at once underbid in the open market to the extent of  $\frac{3}{4}$  per cent. The return of deposits to banks generally was rapid, and they largely increased their balances with the Bank of England, a circumstance marked by the increase in the "other deposits" of over 3,000,000*l*.

The account of the Bank of France for the week ending January 1 shows the following changes :---

	Jan. 1.	Dec. 25.	Increase.	Decrease.

Is 8d; and the franc and peseta at 25 per 1l. American currency is reduced into English money at 4s per dollar.

DISCOUNT AND MONEY MARKET.-With the turn of the year the money market is always easier for a time, and current discount rates must now be quoted <sup>3</sup>/<sub>8</sub> per cent. over than last week for short paper, and  $\frac{1}{2}$  lower for long b ls, while money from day-to-day is obtainable at about 2 per cent., as compared with  $2\frac{1}{4}$  per cent. before Christmas, and with 3 per cent. on Tuesday and Wednesday. Still, there are reasons against any decided relapse in this money market at the present time, apart altogether from any prospects, which there may be, of a stronger trade inquiry at home. Both for New York and Berlin there is an increasing demand for the means of remittance, and in both those cities there is a stronger inquiry for money. According to the latest return of the New York Associated Banks, given above, the reserve is again down to its legal limit; and the exchanges both in the instances of America and Germany have once more fallen to the gold-moving points. Additional weakness in this money market would cause the exchanges to recede, and any such movement would be attended by a renewal of gold shipments. The coin and bullion in the Bank of England is by no means at so high a level that fresh withdrawals can be viewed with indifference; and the increase of 4,647,000l in the "other securities" during the past fortnight shows that there will be considerable repayments to the Bank when the dividends are distributed on Tuesday next, thus lessening the temporary increased supply usual on those occasions. A large amount, too, is payable in the first three days of this year on recent new issues of capital; and looking forward to the 15th inst., some further heavy disbursements will then be required, including 1,250,000l upon the New Zealand loan. For all these reasons, we should hold it to be very unwise of the banks and discount houses to underbid one another to such an extent as to further depreciate market quotations. For the time, at any rate, they are quite low enough.

Such changes as now appear in the Bank return are the usual accompaniments of the close of the year. Four millions are added to the advances, discounts, &c., but barely two millions to the private deposits, the payments into the Government deposits having been large. This last-named item is swelled to the extent of 2,830,000*l*, and had this been entirely represented by receipts from the national revenue there would have been an increase in the Bank's reserve. But three-quarters of a million, it appears, has been borrowed from the Bank to replenish the Government balance, so that salaries may be covered on the 1st day of the New Year, and there is a considerable sum called in by the Indian Government. Hence, the increase

[Jan. 3, 1880.

#### THE ECONOMIST.

in the securities is larger than that on the debtor side of the account by 222,000*l*, which amount represents the decrease in the banking reserve. In the issue department, the increase of 400,000*l* in the notes outweight that in the coin and bullion by a similar amount of 222,000*l*. The increase in the coin and bullion is partly due to an influx of 60,000*l* from abroad.

The Bankers' Clearing-house returns for the past quarter mark a general expansion of business, even if the discount demand has been slack. In the fourth quarter of 1878 there was a recorded reduction as compared with 1877 of 144,963,000*l*. But now there is shown an increase of 159,380,000*l*, or more than 14 per cent., and the returns of 1877 have been exceeded, as the following figures indicate :—

		the second se				

1,283,178,000 ... 1,123,798,000 ... 1,268,761,000 There has been a rapid expansion in the clearings upon Stock Exchange settling-days.

In the manufacturing districts the principal feature of the week is the renewed buoyancy of the iron trade. Prices have advanced throughout December, and those current on the last day of the year were also the highest of the year. Of course, this buoyancy in a great degree hangs upon the extraordinary inflation of prices in America. Business in the produce markets has been much interfered with by the holidays; and there is for the moment a slight reaction in cotton.

The India Council drafts (40 lacs) allotted on Wednesday realised 1s  $8\frac{1}{8}$ d per rupee as a minimum—the same rate as last week—but the average price of allotment was higher. Silver is steady, in spite of the cheapness of money in India, and the quotation is  $52\frac{2}{8}$ d to  $52\frac{1}{2}$ d per oz. The fluctuations and movements in bullion during the past year are set forth in detail in Messrs Pixley and Abell's circular, reproduced by us at the end of these remarks.

Tenders will be received at the Chief Cashier's office at the Bank of England, on Monday, for Treasury bills to the amount of 1,585,000*l*. The bills will be in amounts of 1,000*l*, 5,000*l*, or 10,000*l*. They will be dated the 9th day of January, and will be payable at three or six months after date. As 515,000*l* of July bills and 1,070,000*l* of October bills fall due on the 9th inst., this will merely amount to a renewal of outstanding liabilities.

The movements in the principal foreign exchanges in the past twelve months may be gathered from the following figures. Quotations are generally less favourable to this country than they were either in January or in July last:—

	Paris. (Par 25.22%) Short.	Ger- many. (Par 20.43) Short.	Bel- gium, (Par 25.22½) Short,	Anstria. Three Months.	St Peters- barg. Three Months.	New York, (Par 4.864) Short,		Shang- hai. 6, then 4 Months.
Jan. 3, '79 April 3 July 1. The last three quotations given are for exchanges on London.

Two Leicestershire banks have recommended to their shareholders the adoption of limited or reserved liability. It would be advisable that a portion of the reserved liability should be paid up, as we have before explained.

It is satisfactory to find that the bulk of the creditors of the City of Glasgow Bank have accepted the offer of the Scotch banks, and have received the balance of their claims, while waiving their right to interest. The liquidators have issued a formal notification upon the subject, to the following effect :---

In terms of an arrangement made between them and the Scotch banks, which has been sanctioned by the Court of Session, all creditors of this bank who desire to receive the balance of their debts in full, without interest, may do so on presenting vouchers for the same to any of the Scotch banks; and that such vouchers will be issued here on the application of any creditor, if made on or before the 15th January.

The Scotch banks having thus practically become the sole creditors of the City of Glasgow Bank, it would be interesting to know what equivalent they are to receive for placing themselves out of pocket to the extent, say, of two or three millions. At any rate, we suppose that the contributories of the Bank will be spared the payment of the first twelve months' interest. The Scotch banks should complete the transaction by taking over the remaining assets, and by making, at the same time, a handsome return to those contributories who had paid their calls in full.

Messrs Baring Brothers and Co. announce that Mr H. Parkman Sturgis has become a partner in their Liverpool house, and that Mr R. Kirkman Hodgson is now authorised to sign for the firm by procuration.

Messrs G. and A. Worms state that owing to Baron George and Baron Henry de Worms being desirous of retiring from business, and Mr Theodore Porges wishing to reside in Paris, they have decided to discontinue the firm, which now will be solely occupied with the liquidation of the current business, after the completion of which the firm will cease to exist.

We are informed that an arrangement has been made between Messrs Gurney and Co. and Messrs Huddleston and Co., of Bury St Edmunds, to unite their business at the latter place.

The International Bank of London (Limited) commenced business on January 1, and arrangements were made with the liquidators of the International Bank of Hamburg and London, Limited, to take over the business of the latter bank from that date.

Owing to effluxion of time, Mr C. Satterthwaite has ceased to be a member of the firm of Messrs Satterthwaite and Co., which will be carried on by Mr C. J. Russell, without any change of the style of the firm.

The report of the Imperial Bank of Germany of 23rd December shows a considerable increase in the demands on the Bank. This was to be expected, but the demand was not so large as to cause any great effect on the Bank reserve. It is worth noting that it is considerably greater than at the same period last year. The bills held have increased 1,127,500*l*; the advances, 118,500*l*; while on the 23rd December, 1878, these two items only increased, collectively, 272,000*l*. On the other hand, State and private deposits were drawn out last year amounting to 843,000*l*; this time only 248,500*l*. The note circulation has risen 643,500*l*; while the cash has fallen 532,000*l*. These changes correspond very nearly with those of last year. The reserve of notes, duty free, has fallen from 9,031,000*l* in the previous week to 8,015,500*l*.

The general meeting of the company of the Oriental railways has been held at the offices of the Vienna Bankverein, under the presidency of Count Franz Salm-Reifferscheid. The following were elected on the council of administration : — Baron Moriz von Hirsch-Gereuth, Count Franz Salm-Reifferscheid, Count Otto Chotek, Adolf Ritter von Schenk, Jules van de Wynckele, Marquis de Piennes, Count Fitz-James, Baron Alexander von Warsberg, and Karl Lang.

The Frankfurter Zeitung states that up to December 13th, 1879, gold money had been coined to the amount of 85,914,429l, taking into account the following sums which have been withdrawn: 11,674l in double kronen; 9,191l in kronen; 97l in half kronen. Besides this, silver coin has been struck to the amount of 21,113,494l in coins of the denomination of marks; and it is estimated that the following sums have been withdrawn: 100l in 5-mark pieces, 118l in 2-mark pieces, 64l in 1-mark pieces, 32l in 50-pfennige pieces, and 250,020l in 20-pfennige pieces. The state revenue from the stamp duty on bills amounted to 25,483l in November, 1879, as compared with 24,906l in November, 1878; 27,786l for 1877; 28,923l for 1876.

The discount quotations current in the chief continental

cities are as under, those current in Germany and Russia showing further recovery :---

14

	Ban	Öpen	Bank Open Bate Market.
	Rate.	Market.	Rate. Market.
Paris	3	25	Amsterdam 3 3
Rorlin	A	35	Brussels $3\frac{1}{2}$ $2\frac{7}{5}$
Frankfort		33	Vienna 4 31 8
Hamburg		31	St Petersburg 0 4
On the 31st	Decen	nber the	Bank of Bengal reduced its
minimum rate	of in	terest a	ad discount from 4 to 3 per

cent. It was lowered from 6 per cent. on November 12, and from 5 per cent. on December 11.

The current allowances for deposits at notice and call are as given below, but it appears likely that the discount houses will announce a reduction at an early date :--

- Private and joint stock banks at notice ... 2 per cent.

fourteen days' notice 21 per cent. We subjoin our usual discount quotations for paper having various periods to run:-

Bank b	ills-	Period	00	Trade bills-	6	
2 &	3 months		23	3 months 2		
4			21	4		
6			28	6 —	1 4	12

THE STOCK MARKETS.—A fresh start has been made in the Stock Exchange, and speculators have exhibited a great desire to effect purchases during the past few days. The settlement completed on Wednesday was a large one for the holiday period, but no difficulties were announced. For the new account prices have sprung up rapidly, and Government stocks, home railways (with the striking exception of North British), and Canadian, American, and other foreign railways have led the advance. Gas property, after being again much lower early in the week, now shows recovery, and the buoyancy of the markets in all departments is very decided. This state of affairs is aided by the renewed ease of the money market, the great strength of the iron trade, and the expansion of railway traffic; in addition to which our latest advices from Afghanistan and South Africa are held in a favourable light.

Bank shares are quiet pending the announcement of the dividends. Those thus far made known compare as follows with those for the second half of 1878:—

Second Half of 1878. Second Ha	a or abres
Surplus, Divi- dend, Surplus, Surplus, Surplus, Di pr Cent. June 30. per Annum. Dec. 31. June 30. p	d, Surplus,

London and Westminster ... 914,813 14  $\begin{array}{c|c} e \\ 975,692 \\ London Joint Stock \\ \hline \\ 15 \\ 992,027 \\ \hline \\ 975,692 \\ 975,692 \\ \hline \\ 1008,564 \\ 15 \\ 1008,000 \\ \hline \\ 593,000 \\$ 

It is announced that from the 1st of January the East Indian Railway passed into Government hands. The ordinary stock of the company, after being nominally increased 25 per cent., has been redistributed among the shareholders as follows :—

- In Annuity, Class A, has been placed ... £7,194,392 5 0
- In Annuity, Class B, with sinking fund 13,873,004 0 0 In Government of India Four per Cent.
  - Stock ...... 5,132,603 15 0

Total ...... 32,750,000 0 0

Class A have chosen a terminable annuity of 4l 10s in respect of each 100l stock having 73 years to run. Class B is a similar annuity, but the Government of India reserve 6s out of each 4l 10s to provide for the repayment of the capital at the end of the 73 years. On the deferred annuity (or new stock) the guaranteed interest is 4 per cent., with an addition of one-fifth of the surplus profits during the next 20 or 50 years at the option of the Government, and then a terminable annuity of 4l 10s during the rest of the term of 73 years; while a smaller number of shareholders have chosen India 4 per Cents.

BRITISH GOVERNMENT SECURITIES.—This week's daily variations in Consols have been between the following limits:—On Saturday, between  $97\frac{1}{4}$  and  $97\frac{5}{8}$ ; on Monday,  $97\frac{1}{2}$  and  $97\frac{3}{4}$ ; on Tuesday,  $97\frac{3}{8}$  and  $97\frac{5}{8}$ ; on Wednesday,  $97\frac{5}{8}$  and  $97\frac{3}{4}$ ; and to-day, between  $97\frac{1}{2}$  and  $97\frac{3}{4}$ . There

was a rise on Saturday and Monday, which has since been barely maintained. Exchequer bills have recovered 3s; and India 4 per Cents. have attracted numerous purchasers. The bulk of this stock is being swollen by the acquisition of the East India Railway and by the conversion of India 5 per Cents. Closing Prices Closing Prices. Inc.

COLONIAL GOVERNMENT DEBENTURES.—Canadian 4 per Cents. are  $\frac{1}{2}$  higher; and New Zealand Consolidated,  $\frac{1}{2}$ ; while Straits Settlements Loan have declined 1; and Victoria 4 per Cents.,  $\frac{1}{2}$ .

FOREIGN GOVERNMENT SECURITIES.—Some extensive changes are here apparent—all on the favourable side. The quick advance in Egyptian is due to a combination of circumstances. The most powerful is contained in the following telegram, dated Cairo, Dec. 27 :—

following telegram, dated Cairo, Dec. 27 :--Messrs Baring and de Bligniéres are actively engaged in completing the scheme for the settlement of the Egyptian financial situation. The following points are understood to have thus far been decided upon :--A minimum interest on the Unified Debt of 4 per cent. is to be guaranteed, with eventual resumption of the higher rate of interest. The abolition of the Moukabalah tax, as already proposed by the report of the Committee of Inquiry. In compensation for the rapid amortisation of the short loans based upon the Moukabalah, these loans will be exchanged at the price of 80 against bonds of the Unified Debt at their current market value. The holders of the Floating Debt will receive from 30 to 35 per cent. in cash, and the balance probably in Treasury bonds redeemable at an early date. The rate of interest on the Railway Preference Stock remains undisturbed.

We must await the official confirmation of these statements before commenting upon them and their effect upon the "short loans." It also appears that another Committee of Inquiry has been appointed to consider questions of taxation and to decide thereon. The December collections of revenue paid into the Treasury of the Public Debt were as follows :—

	In hand. Nov. 30.		December.		Total. Dec. 31.	
	£		£		£	
Preference Stock	147,000	*****		*****	245,000	
Unified Debt	137,020		168,000		305,000	

Mr Sherman, in a letter to Senator Morrill, refers to the manifest impossibility of paying off in 1881 the bonds maturing in that year, and he suggests the refunding of bonds bearing high interest while the state of trade is favourable. Mr Sherman expresses the opinion that the passing of the Bill for funding into  $3\frac{1}{2}$  per Cent. bonds would be fatal to the funding operations, and he thinks the with the general advancing prosperity it is not at all certain that he will be able to borrow at 4 per cent. in 1881. He thinks the present an exceptionally favourable time for refunding in 4 per Cents.

HOME RAILWAYS.—Amidst the general buoyancy of the home railway market, consequent upon the hopes indulged in respecting the prospects of 1880, and the surprisingly good traffic returns in the last week of the old half-year, North British stock has fallen 13 per cent. By the fall of the Tay Bridge on Sunday last, the company is not only involved in a further serious expenditure of capital, but it is for years deprived of its great competing route northward, a route which has since its opening withdrawn much traffic from the Caledonian. Further than this, it is apparent that any reconstruction must involve the erection of a much more massive work, and at the same time doubts are cast upon the design of the Forth bridge, subscriptions for which great have recently been invited. This work would be The comparatively useless without the Tay Bridge. Forth Bridge is in the main designed to consist of two giant spans of 530 yards each, suspended from towers nearly 600 feet high, and what the effect of Sunday's gale would have been upon such a structure the investing public, at any rate, have no means of forming even a conjecture. To-night North British Stock fell another 4 per cent. upon a report that the Forth Bridge scheme had been abandoned; but we have been unable to find any confirmation for this Stock Exchange rumour. Should it prove correct, however, and could the North British thereby be induced to enter into an agreement for the division of competing traffic with the Caledonian, the abandonment of both bridges might in the end prove a gain to North British shareholders. Caledonian Stock has risen 5 per cent. this week.

The following shows the principal changes for the week in the quotations of ordinary stocks, comparing the latest unofficial prices :--

FOREIGN RAILWAYS.—Bolivar shares have risen  $\frac{3}{4}$ ; Buenos Ayres Great Southern 1; Copiapo, 1; Royal Sardinian,  $\frac{1}{4}$ ; Sambre and Meuse,  $\frac{1}{2}$ ; Moscow-Jaroslaw Obligations, 1; and South Italian ditto,  $\frac{1}{8}$ . West Flanders shares have fallen,  $\frac{1}{2}$ ; and Bergslagernas Obligations, 1.

AMERICAN RAILEOAD SECURITIES.—The chief advance this week has been in Atlantic and Great Western Mortgages—the first mortgage rising \$6; and in Philadelphia and Reading shares, which are  $\$2\frac{1}{2}$  (or 5 per cent.) higher. Erie and Pennsylvania shares have likewise improved \$1; and a number of mortgages are higher. JOINT STOCK BANKS.—Egyptian Banks have shown

JOINT STOCK BANKS.—Egyptian Banks have shown material improvement: Anglo-Egyptian are about  $1\frac{1}{2}$ better; Bank of Egypt, 6; and London Chartered of Australia,  $\frac{1}{2}$ . Agra have fallen,  $\frac{1}{2}$ ; National Provincial, 1; and Union of London,  $\frac{1}{2}$ .

**TELEGRAPHS.**—Anglo-American have risen about  $\frac{3}{4}$ ; Direct United States,  $\frac{1}{4}$ ; German Union,  $\frac{1}{2}$ ; Globe,  $\frac{1}{8}$ ; Great Northern,  $\frac{1}{4}$ ; and Western and Brazilian A Debentures,  $\frac{1}{2}$ . Cuba have fallen  $\frac{1}{2}$ ; and Direct Spanish,  $\frac{1}{4}$ .

MINES.—Devon Great Consols are  $\frac{1}{2}$  better; Great Laxey,  $\frac{1}{2}$ ; Cape Copper, 1; Rio Tinto shares, 1; and St John del Rey, 10.

MISCELLANEOUS.—Gas undertakings have continued to fluctuate, Brentford having fallen 3; Commercial, 8; London, 1; and Phœnix Maximum and South Metropolitan A, 5. But Gas Light and Coke have risen 3. General Credit have risen  $\frac{7}{8}$ ; Union Steam,  $\frac{1}{2}$ ; and Crystal Palace Debenture Stock, 1.

BULLION.—The following is taken from the circular of Messrs Pixley and Abell, dated January 1:—

Gold .- A few small orders for America have absorbed part of the late arrivals, but there has been no general demand for export ; consequently 135,000l, in bars and coin, have been sent in to the Withdrawals of bars and sovereigns, to the value of Bank. 120,000l, have taken place since our Circular of the 23rd ulto.; they have been sent to America, Egpyt, and Buenos Ayres. The only arrival to report is 43,000*l*, per Don, from the West Indies. The Peninsular and Oriental steamer, leaving to-day, takes 25,0006 to the East, and the Guadiana has taken 160,500l to Buenos Ayres. For the first six months of 1879 there was not much demand for gold for export, and we estimate that about half of the arrivals during that time were sent in to the Bank, the balance being taken for Germany, South America, and the Cape; but in the last half of the year a heavy drain existed for Dars America, and the greater part of the arrivals, together with large withdrawals from the Bank, and considerable sums received from France, have been sent to the United States. The following statement of the imports and exports during the past five years may be of interest :-

	1875.	1876.	1877.	1878.	1879.

Silver.—The changes in value during the past year have been very numerous. The lowest price of 48¼d per oz was touched in March, and the highest, 53¼d per oz in November, the average being 51¼d per oz standard. At the beginning of the year therate was very low, and for some time there was but little business doing with India; the Austrian demand helped to support prices somewhat; the quotation, however, continued gradually to decline until the middle of March, when an active Indian inquiry set in, and prices steadily rose till May, when the German Government entirely withdrew from the market as a seller, and a rapid advance took place to 52¼d per oz. Speculative purchases kept up this rate for a few days, but re-sales caused the price to decline gradually to 51¼d in July. A demand for India then arose; orders could not be filled here, and large amounts were sold in Vienna for shipment at Venice; about 500,000*l* in bars and florins having been placed at prices varying from 53¼d to 53¼d per oz. This somewhat unexpected supply coming on a rather sensitive market caused a decline in values to 52½d; at this quotation Austria could sell no more. The supplies have been from America, the Pacific, and Germany, but from the last-named the imports have been only about 750,000*l*, and nothing has been received since May. The shipments of silver, *A.c.*, during the past year from San Francisco to China and Japan amount to 1,665,030*l*, as against 2,243,000*l* in 1878, and 3,383,000*l* in 1877. The imports and exports of silver during the past five years have been :—

Mexican dollars were at their lowest,  $47\frac{1}{3}d$  per oz, in March. The highest price reached was 53d per oz in June, and the average value for 1879 was 50\star{s}d per oz, or 43.58d per \\$. The coin has kept pretty closely to its relative value as compared with bar silver during the past year, with the exception of the months of May and June, when a good demand for China, coupled with exceptional orders for Porto Rico, raised the price to 53d per oz. Silver was then only 52\\$d per oz standard. The bulk of imports for 1879 have, however, been taken for refining purposes. The arrivals since our last are 21,000l per Chilian from Tampico, 59,000l from New York, 156,000l from West Indies—total, 236,000l. The price, which at the middle of last week was 51d per oz, has now improved to 51\\$d per oz, owing to the receipt of higher exchanges from China.

Exchange on India for bank drafts at 60 days' sight is  $18 S_{13}^{*3}d$ per rupee. Tenders were received yesterday for 40 lakhs of rupees of India Council bills. The allotments were—to Calcutta, 28,94,000 rs, average rate 1s 8175d; Bombay, 11,06,000 rs, average rate 1s 8181d. Applications at 1s 8kd per rupee receive about 2k per cent.; above that rate, in full. 40 lakhs of rupees of these bilks are advertised for 7th instant. The latest quotations of exchange from the East for bank bills at 4 months' sight, are from Bombay and Calcutta, 1s 9kd per rupee; from Hong Kong, 3s 10kd per dollar; and from Shanghai, 5s 3kd per tael. We also farnish a statement of the amounts, rates, and allotments of the India Council drafts for the last six months of 1879, with the concurrent prices of bar silver. On 10th July last, we published details for the first six months of 1879. The fluctuations during the year have been very marked. On 1st January the India Council bills realised only 1s 6kd per rupee, and yesterday they were sold at 1s 8kd. The total amount drawn last year was 17,91,44,912 rs, realising 14,705,7001 16s 10d.

Quotations for Bullion.—Gold—Bar gold, fine, 77s 9½d per oz standard; ditto, refinable. 77s 11d per oz standard; Spanish doubloons, 73s 9d per oz; South American doubloons, 73s 8½d per oz; United States gold coin, 76s 3½d per oz; German gold coin, 76s 3¼d per oz.

Silver.--Bar silver, fine,  $52\frac{1}{16}$ d per oz standard; bar silver, containing 5 grains gold,  $52\frac{1}{16}$ d per oz standard; cake silver,  $56\frac{9}{16}$ d per oz; Mexican dollars,  $51\frac{1}{8}$ d per oz. Quicksilver, 6l 10s; discount, 3 per cent.

#### NOTICES AND REPORTS.

#### STOCKS.

Egyptian (Viceroy's) Mortgage Loan, 1865-6.—The Anglo-Egyptian Banking Company are prepared to pay the coupons and bonds drawn for redemption on 8th January.

Imperial Turkish Loan, 1854.—Messrs Dent, Palmer, and Co. notify that they have received the necessary funds to pay the halfyearly dividend, due 10th October last, on the outstanding bonds stamped with the notice of the agreement of Sept. 17, 1877; also the bonds drawn for redemption.

#### RAILWAY COMPANIES.

Dutch Rhenish.—The directors announce a provisional dividend of 15s per 20l paid share, 6s per Sl paid share, and 2s 3d per 3l paid share.

Great Luxembourg.—1,173 obligations and 26 privileged shares were drawn at Brussels on the 18th Dec. for repayment on 2nd January.

Windsor and Annapolis.—At the meeting the report was adopted and it was stated that there is good ground for anticipating a speedy settlement of the company's claims upon the Dominion Government.

#### BANKS.

Birmingham Banking.—The directors have decided to pay an interim dividend for the past half-year at the rate of 15 per cent. per annum, and a bonus of 5 per cent. per annum, free of income tax.

Chesterfield and North Derbyshire Banking Company.—Creditors must send in their claims by January 31, to Mr T. Witt, of 40 Chancery lane, the liquidator.

Land Mortgage Bank of India.—At the meeting, it was stated that the season had been an unfavourable one.

Leicestershire Banking Company.—The directors will recommend the proprietors, at their annual meeting, to register as a bank with limited liability.

Pares's Leicestershire Banking Company.—The directors recommend the proprietors to register the bank with limited and reserved liability under the new Act.

#### ASSURANCE COMPANIES.

English and Scottish Law Life.—A half-yearly dividend of 6s per share has been declared.

Equity and Law Life Assurance.—The society notify the payment of a dividend for the year of 14s per share.

#### THE ECONOMIST.

#### MISCELLANEOUS COMPANIES.

Aronside Engine, Limited.—The liquidators, in making their final report, state that, with the call of 1*l* per share made on July 15, their estimate as to the proceeds will be more than realised. The liquidators obtained from the debenture-holders a postponement of the maturity of their bonds, and a satisfactory arrangement was come to; and the Master of the Rolls has made an order to enable the liquidation to be closed, and re-establishing the management in the hands of the directors. All admitted claims have been paid, with the exception of the cost of the liqui-dation, and all good debts collected, and there remain only the repudiated claim of Mr Wilson, the late manager, and the realisation of the Irish engines to be dealt with by the liquidators. Subject only to the charge of the debenture-holders the property is now restored to the shareholders, together with a surplus for working capital which, it is hoped, will eventually equal, or nearly so, the amount realised by the last call.

Canada Company .- At the meeting, the chairman said they had now available assets to the extent of 11,1231. There are liabilities of 146l to meet, and a dividend at the rate of 1l per share for the half-year absorbs 8,915l, leaving 2,062l. The collections for the past half-year have decreased about 12,0007, and the sales, leases, and conversions have also fallen off.

City of Montreal Loan, 1874 .- The numbers are published of bonds which have been drawn for payment at par on 1st May at the Bank of Montreal.

Eastern and South African Telegraph.—The cable to the Cape of Good Hope has been completed throughout, and is now open for traffic; thus placing the South African Colonies and Zanzibar in communication with this country and other parts of the world.

Italian Irrigation Canal .- The particulars are announced of 1,050 bonds, which were drawn in Rome on 16th December for redemption at Messrs C. J. Hambro and Son's.

Municipal Building Society .- The society have declared an interim dividend at the rate of 5 per cent. per annum. National Steamship.—The company will pay a dividend of 5 per

cent. for the year ending 31st December.

Pavy's Patent Felted Fabric, Limited .- Sir Richard Malins has authorised the payment of a second dividend of 6d in the pound to the creditors, making 7s in all. Several creditors, it appears, have not yet applied for their first dividend.

Russian 51 per Cent. Land Mortgage Bonds .- Messrs Thomson, Bonar, and Co. announce the numbers of 28 drawn bonds of the second series, which will be paid off on February 13.

Tramways Union. - The directors have declared an interim dividend of 1s 3d per share, free of income tax, being at the rate of 5

per cent. per annum, for the quarter ended 31st December. Western and Brazilian Telegraph.—At a meeting, it was decided to issue consolidated debentures to an amount not exceeding 450,0001, to provide for the redemption of all or any portion of the "A," "B," or "C," debentures,

#### MINING COMPANIES.

West Prussian Mining.—The directors have declared the usual quarterly dividend on the preference shares at the rate of 8 per cent., also an interim dividend on the A shares at the rate of 4 per cent.

NEW COMPANIES AND CAPITAL. Grand National Opera, Limited.— Capital, 160,000l in 100l shares. The undertaking is formed to complete the new Opera House on the Thames Embankment. The property is to be acquired for 44,100l, of which the vendors take 25,000l in shares. The capital is to be raised by way of tontine, the persons nominated to be under the age of sixty, and the last survivor to take the whole of the company's property.

Grosvenor Library, Limited.-Capital, 100,000l, in 5l shares. It is proposed to add to the Grosvenor Restaurant and Gallery a spacious lending library, reading and writing rooms, &c.

17

The market is unchanged, although as usual at the close of the year there has been little business doing. Quotations all round have remained firm, but owing to apprehended difficulties in connection with the wages question, producers appear somewhat reluctant about accepting forward contracts. Export yarns have sold in moderate quantities, principally for China and Japan ; some inquiry is also reported in mule twist for Calcutta. Home trade yarns have been neglected. Cloth has experienced only a limited sale. India and China shirtings keep in fair request, but makers decline orders except at extreme rates. Printing cloths have been less called for, and buyers can operate on slightly easier terms than was possible a week ago. In other goods the demand has been exceedingly small from all quarters. To-day (New Year's Day) is generally being observed as a holiday.

#### THE WOOL TRADE.

Not much business is doing this week in English wool on account of the holiday season. Prices, however, are firm, and a hopeful feeling pervades the trade.

Colonial wools are firm. Messrs Jacomb, Son, and Co., furnish the following statistics in their report dated December 31 :-- "The total import of colonial wool for this year has been 1,003,635 bales, as against 951,185 bales last year-the increase being from New South Wales and Queensland 13,000 bales, Victoria 7,000 bales, Tasmania 3,000 bales, South Australia 7,000 bales, New Zealand 7,000 bales, Cape and Natal 16,000 bales, whilst the shipments from West Australia show little difference from 1878. 1,024,866 bales have this year passed the hammer here in the four series of sales, viz .: -1st series, 18th February to 26th March, 262,061 bales; 2nd series, 6th May to 20th June, 307,062 bales ; 3rd series, 12th August to 26th September, 324,939 bales; 4th series, 18th November to 6th December, 130,804 bales. About 564,000 bales were taken for France, Germany, Belgium, U.S.A., Austria, Italy, Switzerland, Russia, &c., &c., in competition with the home trade, who have thus taken some 460,000 of the total quantity. For the first time for three years our market is now left almost bare of old stock, which is a matter of much congratulation; and, should trade improve and matters politically become more settled, we look for a maintenance of the present prices.

In the Bradford wool market the new year opens strong, but not very busily. Holders of wool are standing out for full prices, and some few of them are even asking a slight advance, which, however, has not been paid. Consumers are not operating at all largely, although they purchase pretty freely such small lots as they require for current needs. Wools having plenty of quality, both hogs and wethers, are most in request, the stronger-stapled descriptions being far less inquired for. Christmas festivities, as well as stocktaking, are interfering with the supply of letters received from abroad, and merchants have consequently only very limited quantities of yarn offering. But the attitude of spinners is remarkably firm, and in twofolds especially it is impossible to buy except at extreme prices. Most of the inquiry is still for twofolds. What little offers in the single yarn trade is chiefly for demis on the tubs and for coloured sorts. In the home trade spinners keep busy, mainly upon Botany and other soft yarns. As regards pieces, manufacturers begin the year with cleared stocks and a few contracts on their books. They are, therefore, able to stand out firmly for late quotations. There is not very much buying, but merchants, noting the continued firmness of values generally, are making some inquiries, and there is promise of a little business ere long.

Mr C. O. Shepard, the United States Consol, shows the exports from the Bradford Consular District to the United States during December, 1879, were 166,316*l*, as compared with 45,093*l* in the same month of 1878.

According to a telegram received by Messrs Helmuth, Schwartze, and Co., dated Melbourne 31st Dec., the shipments of Australian wool since the beginning of the season compare as follows :---

#### IRON AND COAL TRADES.

Though business in Scotch pig iron cannot be considered to have been resumed with activity, makers are very firm, and at the quotation of 67s to 68s per ton prices mark a fresh rise of 3s to 3s 6d on the week. Telegraphic advices from New York show hardening prices and a good demand for Scotch iron.

In the Cleveland district, Tuesday was the last market day of the year, and the meeting proved to be of a very congratulatory character, and it was stated that something like twenty-five more blast furnaces would be blown in during the coming three months. "No. 3" pig iron was quoted as high as 55s for delivery three months hence, as compared with 52s for present absorption. It is reported that in spite of some accumulations in store, makers are well supplied with orders for some time to come. The figures for manufactured iron are also higher. Common bars are 71 7s 6d; angles, 71 12s 6d; ship plates, 81 5s to 81 10s less 21 per cent

for manufactured from are also higher. Common bars are 71 78 6d; angles, 71 128 6d; ship plates, 8l 5s to 8l 108 less  $2\frac{1}{2}$  per cent. The year's make of Cleveland pig is stated at 1,776,000 tons considerably less than in 1878. The scheme for the reconstruction of five large companies which succumbed to the protracted depression is stated to be rapidly approaching completion. At the

beginning of the year the manufacture of steel from Cleveland ore did not enter into manufacturers' calculations; but now Bolckow, Vaughan, and Co., have turned out thousands of tons of Cleveland steel rails. The Darlington Iron Company have just erected several large Bessemer converters. The Roseberry Works are making steel by Siemens-Martin process, at Messrs Hill and Ward's Wire Works Cleveland steel is being drawn into wire. Engineering and shipbuilding prospects are again better. Manufacturing coal and coke are to a corresponding extent in request.

At Barrow the demand for hematite pig iron is well maintained, and makers have sold most of the metal they will produce for several months. Prices have gone up to 110s per ton for best Bessemer qualities delivered at local ports; best forge is 105s, and inferior hematite pigs 100s per ton.

Wolverhampton prices are fully 9*l* for marked bars, and 8*l* for unmarked. A fair quality of common sheets cannot be got for less than 10*l* 10s for singles, and nailrods are 8*l*. Ironstone and pig iron is very firm, and coal is in demand.

In and around Birmingham manufacturers are well supplied with orders, and the year is closing very hopefully.

On Wednesday the marked bar iron manufacturers of South Staffordshire met at Wolverhampton, and decided to advance the prices 20s per ton. This makes the new basis 9*l* per ton, with 12s 6d extra for Lord Dudley's Round Oak iron. With the advance the ironworkers will get another 1s per ton for puddling, and 10 per cent. on millmen's wages. Thick coal was advanced 1s per ton on January 1, and Cannock Chase sorts also go up at the same time by 2s for best coals, 1s 6d for seconds, and 6d on fine slack. Lord Dudley's limestone advanced 6d per ton, fixing blast-furnace stone at 4s 6d, and masonry stone at 3s 9d per ton, short weight.

Business is brisk in Sheffield, and in some trades extra time is being worked. The "heavy" trades are well employed, and cutlery and edge tool makers are doing well. There is great activity in Bessemer steel, and some firms have orders to keep them busy for the next six months.

South Wales advices are to the effect that there is an active inquiry for nearly all descriptions of iron at the full current rates, and if makers were disposed to accept contracts in advance they could book largely. Steel rails command an increasing inquiry, and the various steel establishments are in full employ. The Blaenavon works are about to change hands. A fortnight ago a slight lull occurred in the demand for tin plates, but since then renewed inquiries have opened in, and the market shows great firmness. In the coal trade there is little change to quote. House qualities are in good request, and quotations well maintained. Steam coal proprietors will not enter into contracts except at advanced prices; but it is with difficulty that higher quotations are obtained for current business.

The following information has reached the Frankfurter Zeitung from the Dortmunde district under date 22nd December: - "The price of iron is going up so rapidly that the reporter is hardly able to keep pace with it; the price of one day is out of date the next. Pig iron of all kinds is becoming dearer every day, and the price of bar iron and iron plates, as well as of castings and wire, has undergone the same change. Bar iron has risen 10s in price, and has been already quoted at 7l 10s, that is to say, 2l higher than it was a few weeks ago; boiler plate has risen 1l 10s at a bound, and stands at 5l 10s to 6l, that is to say, 3l 10s or 4l dearer than it was six or eight weeks ago. Cautious business men look upon this rapid rise as an unhealthy sign, while they do not see how this large demand for bar iron and iron plates, etc., can be met all at once, and even when all these large orders have been executed where buyers will be found. They fear there will be a fall, a little later, when the iron which has been ordered on speculation is sold." On the 29th it was further reported that bar iron had risen from 71 10s to 81 10s-and at some works to 91-the 1,000 kilos. The rolling mills will now only take contracts for a short time forward.

#### NEW YORK, December 20.

The demand for all grades of American pig iron is very active, and the demand for all grades of American pig iron is very active, and the difficulty experienced in securing supplies, even at revived prices, adds to the probability of still higher cost to consumers next year. In some few quarters a quotation of the basis of \$30 for No. 1, at furnace, deliveries early in 1880, is made, but cases are wholly exceptional where the companies will book orders on other terms than "prices current at time of delivery." The general report from producers is that their product for some time to come has been secured. Sector price continues to show an adto come has been secured. Scotch pig continues to show an ad-vancing tendency despite free arrivals, the higher cost abroad and favourable prospects for heavy demand giving the principal holders a degree of confidence, causing them to store most that arrives in preference to selling at all freely at the best average bids. Prices are \$26.50 to \$27.50 for Glengarrock, \$25.0 to \$26.0 for Eglinton, \$26.50 to \$27 for Gartsherrie, \$26 to \$26.50 for Summerlee, and \$27 to \$28 for Coltness. English pig has found fairly active sale, and at higher prices. Sales reported embrace 11,000 tons Middlesborough No. 3, besides gray forge and English Bessemer. Scrap iron on the spot seems to rule a little uncertain in value, owing to extensive supply of foreign; but for lots to arrive next year higher figures than what are named for spot parcels are insisted upon. No. 1 wrought can fairly be quoted at \$32.50 to \$33, as to position, and for good grades of cast \$24.00 to \$25.00 are the lowest figures. In rails, American steel have realised \$65, and iron, \$57.50, while sales of foreign rails continue. Old rails have advanced. Quotations range from \$33.50 to \$34.50 for T's, to \$34.50 to \$35.50 for double-heads. In manufactured iron there is now a stronger feeling than has prevailed for some time past. The tin plate market has ruled steady, at the improvement noted early in the week.

[Jan. 3, 1880.

#### THE ECONOMIST.

#### THE CORN TRADE.

#### MARK LANE, FRIDAY EVENING.

The trade has been in some degree interrupted by the holidays during the week, and, as usual on such occasions, when no exciting influence occurs, a very quiet time has prevailed, with scarcely any movement of importance. In all kinds of grain the transactions show a very meagre aggregate, and the variations in prices are triffing. The weather has been very mild for the time of year, and as a consequence some of the sources of foreign supplies mostly closed at this period are now open. At these points, however, there is little going on. The prevalence of wet has been against the condition of English wheat on offer, and supplies have continued upon the same restricted scale as of late. From alroad the arrivals have increased. The shipments from the Eastern seaboard of America, as well as from California to the United Kingdom, appear by the last weekly return to have fallen off, but there was an increase in those to the continent. The quantity of wheat in view at points of collection in the United States does not show any material change from the preceding week. Prices in New York, as well as in the principal continental markets, continue above those current here. Nevertheless, the trade at the moment is without animation, especially at Mark Lane, at the moment is without animation, especially at fails failed, where prices remain nearly the same as they closed prior to the holidays. English runs of white range up to 51s; selected, 53s; runs of red, 48s; selected, 50s; New Zealand, 56s to 59s; Aus-tralian, 57s to 60s; Dantzic new white, 55s to 61s; red, 57s to 58s; Lower Baltic red, 57s to 58s; Saxonka, 54s to 55s; Kubanka, 54s to 55s; Southern Russian, 52s to 54s ; American red winter, 58s to 58s 6d. Off coast there has been an occasional inquiry on continental account, but very little for the United Kingdom, the sales being confined chiefly to red winter, American at 56s 9d to 58s, closing to-day at 57s 6d for No. 2; No. 2 spring at 55s, closing at 54s to 54s 6d; Ghirka at 55s, closing at 53s to 54s for the most handy and best cargoes, down to 52s to 52s 6d for others. On passage and for shipment Odessa Ghirka sold at 54s 6d, and American red winter 55s rently offering. Malting barley continues fairly firm, and meets a steady inquiry. Danish, 37s to 45s; French, 33s to 45s; grinding sorts dull of sale. Off coast Canadian malting has sold at 29s 6d; Kertch grinding, 24s. Beans meet a fair sale on the spot; Egyptian off coast sold 38s for United Kingdom. Oats opened dull this week with full supplies, but these having since worked down a good deal, and few fresh arrivals occurring, the market closed firmer. Maize has been very quiet throughout and finishes rather weaker; flat, 27s 6d ex ship; round 31s to 32s ex granary. Off coast last sales 28s to 28s 3d; but 27s 6d to 27s 9d nearest rates to-day. In agricultural seeds there has been little doing.

#### NEW YORK, December 19.

Trade in flour has been dull, and yet prices show no important reductions, and current values are already below cost. Western millers are restricting their operations for the purpose of bringing wheat down or flour up. But we have reached a season of the year in which business is generally dull, and not much movement is expected till after the holidays. Wheat has had a slow sale in the regular way, whether for export or home milling, but the speculation has been moderately active, and prices have not given way much. Receipts at the Western markets continue considerably smaller than last year—kept back, it is said, by the bad roads. Indian corn has favoured buyers. The offerings have been much more liberal from store, and the receipts of new corn by rail have considerably increased. Rye has sold pretty freely. Barley has been quiet, and irregular parcels arriving by rail have sold at figures 2 to 3 cents under cargo prices, somewhat unsettling quotations. Oats have materially declined under a subsidence of specu-

lative demand. Buckwheat flour was firmer early in the week, but to-day declined.

COLONIAL AND FOREIGN PRODUCE MARKETS. Mincing Lane, Friday.

SUGAR.—There have not been any sales effected this week, and the market is steady. The lowest prices reached last year were 13s 3d to 13s 6d for speculative qualities of brown sugar : the highest for these 19s to 20s in October. The advance since partly lost. West India refining, which showed a far greater recovery, is now 3s to 4s per cwt down from the top prices. Imports of sugar into the United Kingdom will probably show an excess of about 135,000 tons compared with 1879, leaving the surplus stock at the close about 55,000 tons. The London deliveries have not increased. Estimates of this season's Cuba crop have been reduced. Beet sugar is firmer. Austrian 88 sold at 24s 9d per cwt. No change can be reported in refined, but French loaves are lower.

SUGAR.-100 tons Palmyra Jaggery sold on the stot at 17s 9d. Business recently done for arrival. Also some Java cargoes; prices not given.

IMPORTS and DELIVERIES of SUGAR into LONDON during the last Five Years with STOCKS on hand and PRICES at the close.

deliveries have been far in excess of the previous years, and, notwithstanding the very large imports, the stock is only a few hundred tons more at the close of 1878. The market last year was most depressed at the latter end of June, when good ordinary Java sold at 39 to 39½ cents, and here middling plantation Ceylon at 84s to 88s. About that time good ordinary native Ceylon was quoted 66s to 68s per cwt. The next Dutch sale will be held on the 25th inst. The Caylon ergon estimates are further reduced.

inst. The Ceylon crop estimates are further reduced. IMPORTS and DELIVERIES of COFFEE into London during the last Six Years, with STOCKS on hand at the close.

Ceylon \_\_\_\_\_\_per cwt 70 @ 72 62 @ 64 82 @ 84 90 90 @ 92 84 @ 85 TEA.—The statistics for the United Kingdom have not yet been made up. Since Christmas a good business has been done, partly speculative, in common to fair grades of congou, at rather higher rates. The former quoted 11d up to 11\$\$ d for good common. Medium to fine are firmer. Bather large public sales of Indian are declared for next week. During the past year common congou sold as low as 7\$\$ d. Late in the autumn 1s 1d to 1s 1\$\$ dpr lb attained. Import into London last year 184,077,064 lbs, against 201,707 in 1878. Delivered, 198,440,717 lbs, against 197,499,000 lbs. Stock 31st Dec., 95,348,465 lbs, against 107,153,000 lbs. The imports of Indian show 2,376,000 lbs increase; deliveries a decrease of 1,523,000 lbs. Stock 31st Dec., 17,817,882 lbs, against 14,324,000 lbs in 1878.

RICE.—A quiet tone pervades the market. No further business done in new Burmah for spring shipment. Cargoes off the coast have sold at easier rates. These now meet rather more inquiry. Rice on the spot sells slowly. During the past fortnight the following cargoes sold :—One of 1,592 tons Rangoon, August, at 98 6d; one of 783 tons, off coast, at 98 6d, open charter; one of 2,053 tons, August, at 98 6d, London, ex ship terms; one of 7,59 tons, off coast, at 98 6d, London, ex ship terms; one of 1,894 tons Moulmein, off coast, at 98 3åd, open charter; one of 1,756 tons Bassein, off coast, at 98 3åd, London, ex ship terms; one of 1,067 tons Necrancie, off coast, at 98 3åd, open charter; one of 1,226 Rangoon off coast, at 98 6åd open charter. Cleaned in moderate demand. Shipments of Burmah rice to Europe to 14th Nov. 591,500 tons, against 548,300 and 488,100 tons in the two previous years respectively. THE ECONOMIST.

SPICES.—Black pepper continues firm at the late advance, and prices close at the highest point of the year, with stock very moderate, also the supplies afloat. The deliveries of white show a marked increase. Prices tend upwards and there is a good demand. Singapore to arrive, 6<sup>3</sup>/<sub>4</sub> to 6<sup>3</sup>/<sub>4</sub>. Penang is relatively cheap, 40 tons sold for arrival at 516d to 6d per lb. Bold nutmegs continue in demand.

SMELLAC.-Several sales are reported at 2s 6d to 5s, and the market is expected to rule dearer from the reasons already stated. During the past year D C orange advanced from about 41 7s 6d to During the past yerr D C orange advanced from about 19 75 of eo 10/5s, and other kinds also showed a very large rise. This week A C garnet has sold at 7/15s to 8l; fine orange, 10/ to 10/5s per cwt. Stock, 35,026 chests, against 43,350 last year; 39,670 in 1877; and 26,900 chests in 1876 at same date. DRUGS.—Aloes quiet, but firm. Star anniseed scarce. Balsam

Peru dearer. Camphor Japan, last week business reported at 110s, but now no more buyers at this figure. Cardamons, new arrival landing. Castor oil, late prices not any longer obtainable. Ipecacuanha, jalap, musk, and rhubarb steady. Oil of anniseed, sellers at 9s. Oil of Cassia very firm, at 4s 9d per lb. CHEMICALS.—Since the holidays the market has become firmer,

especially for the heavier chemicals, such as soda ash, caustic, and bleaching-powder, with large American orders for some. Citric-acid has rallied about 2d per lb. METALS.—The chief feature in the market has been the further

advance upon Scotch pig iron to 68s 3d per ton cash. Shipments in 1879 will probably reach 560,000 tons, a very large increase on former years. Tin at one period declined, but since became firmer at the quotations. The stock here is reduced to 8,125 tons, but the visible supply here and in Holland continues large. Chili copper is rather lower. Quicksilver as before.

TALLOW .- There have been large imports of Australian. At the public sales to-day 1,272 casks were offered, and 900 casks sold at full to rather higher rates. Fine beef quoted 37s; fine mutton up to 40s. During the week, quotations of Russian have been nominal. The importers do not press sales, and the stock keeps relatively small, viz., 5,523 casks. Petersburg new, 45s, or 10s per cwt above

the lowest point of last year. TOBACCO.—The market has not yet opened, and there is no transactions to report. The year closed quietly with retail sales in all growths.

#### ADDITIONAL NOTICES.

DRY FRUIT .- A large trade continues to be done in currants at advancing rates. The chief buyers are exporters and speculators. In Valencias a better feeling exists, and prices are looking up.

Muscatels, sultanas, and Turkey reds are dull. SILK.—The market continues very firm, Japan silk is higher and is selling freely.

LEATHER AND HIDES .- No market was held on Tuesday, and since our last report the warehouses have been closed for three days during the Christmas holidays; still a fair business has been done, and full prices have been realised. The supplies of fresh leather have come forward very slowly, chiefly in consequence of the severe frost, which has prevented drying operations; light English butts, light dressing hides, calf-skins of all weights, English and foreign bellies, and English shoulders continue scarce and are wanted.

and are wanted. METALS.—Copper has been inactive, as usual, at this season, but a steady tone of market has prevailed. The business done has been chiefly in Chili bars at 651 10s and at 651 15s, cash, up to 671 forward. Iron has gained further strength, and Scotch pigs are now 67s 9d, cash. Tin has fluctuated slightly, but closes rather dearer than the opening of the week. Spelter is firm at late improvements. Lead is, if anything, rather dearer. Tin plates have further strengthened in price by 1s per box.

#### METROPOLITAN CATTLE MARKET.

MONDAY, December 29 .- The total imports of foreign stock into the port of London last week amounted to 3,891 head. In the corresponding period of last year we received 7,144; in 1877, 3,536; 1876, 1,990; in 1875, 4,229; and in 1874, 2,140. At Liverpool only 443 head of cattle, and 289 pigs were received from American ports.

Beasts

123 Bishopsgate street Within, E.C.

123 Bishopsgate street Within, E.C. NOTICE TO PREVENT MISTAKES.—An application was made to His Lordship Vice.Chancellor Malins on the 4th inst., to restrain a new Company, founded on the 14th November last, styling itself "The Australian and New Zealand Mortgage Company, Limited," from carrying on business under that name, upon the ground that the similarity was likely to create con-fusion. The Vice-Chancellor, however "although stating "that he was by no means prepared to say," that the similarity in the names of the two Com-panies might "not lead to some inconvenience and possible confusion,") was of opinion that that simi-larity was not so calculated to deceive, as to justify the interference of the Court. The Directors, therefore, can only call the attention of the public to the fact, and remind them that in all advertisements and notices of this Company, the words "Incorporated in the year 1863" are added to the name, and that its Offices are at 123 Bishopsgate street Within, E.C.
