

SQL/XML Dumps

- Used by many groups: researchers, editors, mirror sites, but...
- Intended to be useful for import to a new wiki
- Output formats: sql (mysqldump), xml (MediaWiki maintenance scripts), json (results from api calls, e.g. site, namespace data)
- Compression: gzip, bzip2, 7zip
- Produced twice a month, “fulls” with everything on 1st of the month, “partials” missing revision history on the 20th of the month

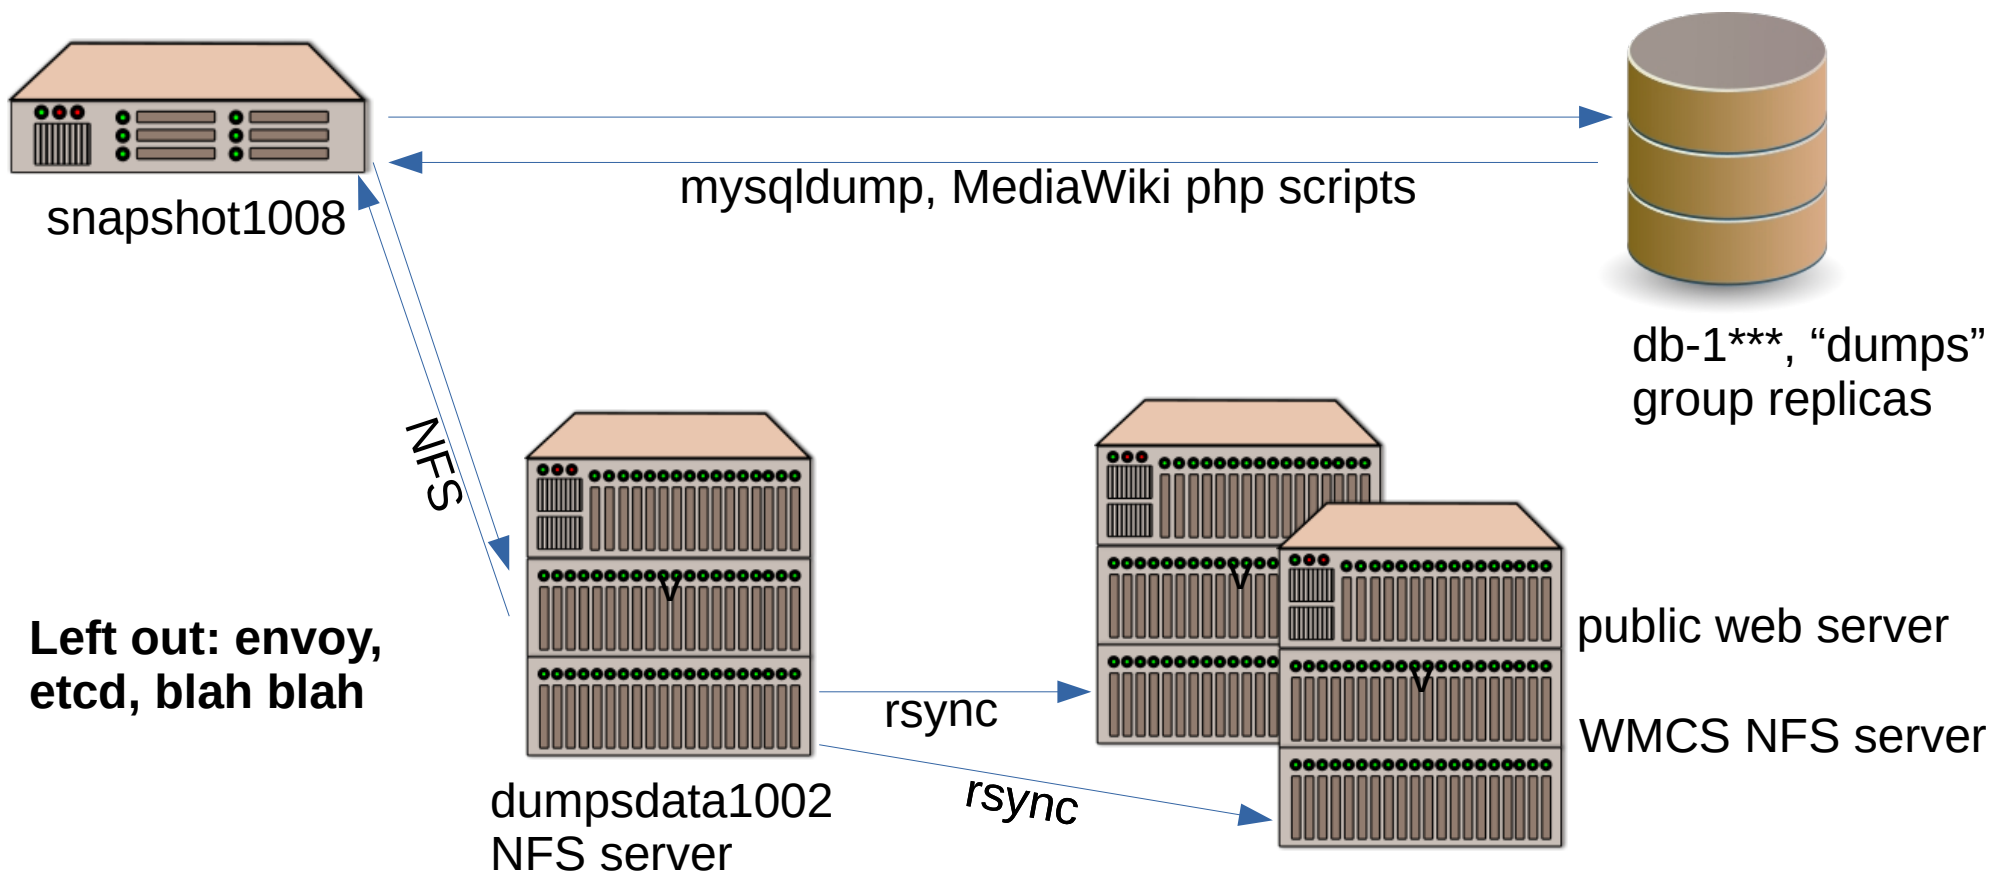

Everything else

- Used by many groups: researchers, input to WDQS, etc.
- NOT intended for import to a wiki
- Output formats: ttl (categories), json (cirrus search), sql (global blocks), txt (shorturls), xml (adds-changes), nt (wikidata)...
- Compression: gzip, bzip2
- Produced once a week via cron, in some cases daily, and in a few cases between 2-3 times a week.
