11. Any problems in labor relations (briefly)

The last trade agreement ~~became~~ was voided as of 15 Oct 49, and new agreement has been under negotiation. Collective negotiation is being repeated but not decided yet. No request brought up by Labor Union now except a weak request for abolishing the divided payment.

Hydrogen gas holder in Okawa-cho plant whose capacity is 50,000 m³ was put in operation since Sept. 50 and it has been contributing much to the production. The production used to be not even before, because the hydrogen gas ^{produced} had to be used for manufacturing Ammonium Sulphate right away. Now the gas tank is used for holding gas produced in day time ~~and~~ when consumption of electricity is limited, and supplying it in mid-night when the limitation of electricity is released. The gas of the full tank is equivalent to 700T's Ammonium Sulphate.

14. Management's recommendations regarding operational difficulties, if any

Ans. Operational difficulties → is allocation of electric power from October 1950. Since this plant was not operated ^{by order of SCAP} at that time last ^{of} according to the present power allocation system, no allocation is to be made to this plant. 550,000 kwh allocation

15. Remarks: is wanted to continue the present refinery operation.

Stockpile of products consists mostly of asphalt amounting to about ¥140,000,000. But asphalt stock is decreasing because it is being used for road, etc.

① The electric power allocation is based on ^{the amount of} the consumption during the same term in previous year. And ~~for~~ this plant had not been operated ^{refining work} except the work for ^{until Feb 1950} by ^{the purchase} directive of SCAP JOSCO (P.D) and ~~that was~~ no allocation of electric

and There was no allocation of electric power until Feb 50

REMARKS.

- ① The capacity of Sulphuric Acid production is inadequate, it is ~~5,500T~~ ^{5,000T} per month. This production equipment is always in full operation. Allocation of pyrite is adequate for the present production now. Ammonium sulphate production has the capacity of 60,000T/year now, and it is being expanded into 80,000T/year. This expense. For this expansion construction, some shops are closed and this is the main reason of the decreasing of production now. The shortage of sulphuric acid will be greater.
- ② Phosphate ore is becoming easier to obtain now, then the production output is almost full now.
- ③ B.G. abolishment of Fertilizer Kodan, the quality of products and the price will have to stand in a severe competition. But in the point of market, this company has a full ^{self-}confidence to obtain a enough market.

REMARKS

- * According to the abolishment of Fertilizer Kodan, the ^{public} price of fertilizer was cancelled and new price is not settled yet. Sales are being made through dealers and ZENKOKOREN (all Japan Agricultural cooperative society Federation) with temporary price. In this trade, according to a mutual consent, payment will be ^{be} cheque at 60 days sight. When Kodan existed, payment was made within 10 days with cash after delivery. Comparing these two condition, a harder financial situation is expected.
- * The seasonal demand for fertilizer comes up in Sept. Oct. Dec for fall fertilizer and Mar. Apr. May for spring fertilizer. This demand is stimulating the production plant, but on the contrary, difficult operation in the "season off" is worried.
- * The shortage of pyrite causes the shortage of sulphuric acid which gives a limitation to the production of Super phosphate of lime.

10. Attitude of management toward the union (briefly) Generally satisfactory

11. Any problems in labor relations (briefly) New Trade agreement is now under discussion (since July 1949). Management feels that several undesirable features in old agreement must be removed. Example: - Union can now call meetings at any time at Company expense.

Ammonium Perchlorate - supply from branch plant at Shibukawa Machi Gunma Prefecture. Use 180 tons per (peak) month to produce 280 tons of carlit. Average production of carlit for past six months was 240 months. Management expects a substantial increase in demand due to metal mines gradually going over to carlit. Carlit is less expensive, less dangerous to store and handle (Dynamite releases hydrogen chloride gas - very irritating to throat, nose and lungs.)

Designed capacity ^{at present} of Shibukawa Plant is 180 tons of ammonium perchlorate per month. Plant has extra facilities in storage to produce an additional 90 tons or 50%. This amount will supply any probable increased demands for carlit in the foreseeable future.

Main materials: ammonium or sodium perchlorate, powdered ferro-silicon, dinitronaphthalene, heavy oil (binder or sawdust), barium or sodium acid or ammonium nitrate.
