## DEDICATION

TO THE MEN WHO HAVE FOUGHT UNDER GENERAL  
FOCH'S COMMAND. TO ALL OF THEM, IN ALL GRAT-  
ITUDE. BUT IN AN ESPECIAL WAY TO THE MEN  
OF THE 42D DIVISION, THE SPLENDOR OF  
WHOSE CONDUCT ON SEPTEMBER 9, 1914,  
NO PEN WILL EVER BE ABLE ADE-  
QUATELY TO COMMEMORATE.

Quelle que soit la situation à résoudre à la guerre, on ne trouve encore pour éviter l'erreur, la faute, le désastre, pour fixer la tactique à pratiquer un jour donné, qu'une seule ressource - mais elle lui sûre et féconde, - le culte exclusif, entendu dans le sens le plus élevé et le plus précis, de deux abstractions du domaine moral: le Devoir, la discipline.

Chère Mademoiselle Laughlin

J'ai lu avec le plus vif intérêt  
votre essai sur le Maréchal Foch.  
Ce n'est pas encore de l'histoire;  
nous sommes trop près des  
événements pour l'écrire,  
mais c'est déjà l'histoire  
d'un grand Chef dont  
je vous félicite d'avoir  
aussi bien compris le  
caractère.

Chrétien, Français, Soldat,  
Foch sera donné comme  
exemple aux générations  
futures, autant pour sa  
haute valeur morale  
que pour son génie  
militaire.

Il semble qu'en écrivant.

sur lui, le style s'élève  
avec les notes pensées  
qui l'inspirent.

Ainsi avec vous admi-  
rablement exprimé,  
dans le fond comme  
dans la forme, la  
grande leçon qui se  
dégage pour chacun  
de nous de la vie  
du Maréchal Foch.

Veuillez agréer,  
Mademoiselle, l'hommage  
de mes sentiments  
respectueux

L. Colonel E. Réquin

Dear MADEMOISELLE LAUGHLIN :

I have read with the keenest interest your sketch of the life of Marshal Foch. It is not yet history : we are too close to events to write it now, but it is the story of a great leader of men on which I felicitate you because of your real understanding of his character.

Christian, Frenchman, soldier, Foch will be held up as an example for future generations as much for his high moral standard as for his military genius.

It seems that in writing about him the style rises with the noble sentiments which he inspires.

Thus in form of presentation as well as in substance you convey admirably the great lesson which applies to each one of us from the life of Marshal Foch.

Please accept, Mademoiselle, this expression of my respectful regards.

LT. COLONEL E. RÉQUIN.

## CONTENTS

- I. **WHERE HE WAS BORN** . . . . . 17  
Stirring traditions and historic scenes which surrounded him in childhood.
- II. **BOYHOOD SURROUNDINGS** . . . . . 25  
The horsemarkets at Tarbes. The school. Foch at twelve a student of Napoleon.
- III. **A YOUNG SOLDIER OF A LOST CAUSE** . . . . . 32  
What Foch suffered in the defeat of France by the Prussians.
- IV. **PARIS AFTER THE GERMANS LEFT** . . . . . 38  
Foch begins his military studies, determined to be ready when France should again need defense.
- V. **LEARNING TO BE A ROUGH RIDER** . . . . . 46  
Begins to specialize in cavalry training. The school at Saumur.
- VI. **FIRST YEARS IN BRITTANY** . . . . . 53  
Seven years at Rennes as artillery captain and always student of war. Called to Paris for further training.
- VII. **JOFFRE AND FOCH** . . . . . 60  
Parallels in their careers since their school days together.
- VIII. **THE SUPERIOR SCHOOL OF WAR** . . . . . 68  
Where Foch's great work as teacher prepared hundreds of officers for the superb parts they have played in this war.
- IX. **THE GREAT TEACHER** . . . . . 76  
Some of the principles Foch taught. Why he is not only the greatest strategist and tactician of all time, but the ideal leader and coördinator of democracy.

- X. A COLONEL AT FIFTY** . . . . . 83  
 After nearly thirty years of intense application to the study of warfare. Clemenceau's part in bringing Foch to the front.
- XI. FORTIFYING FRANCE WITH GREAT PRINCIPLES** . . . . . 92  
 How the Superior War Council prepared for the inevitable invasion of France; and as part of that preparation put Foch in command at Nancy where, it was expected, the brunt of German attack would fall.
- XII. ON THE EVE OF WAR** . . . . . 100  
 Believing that the best way to defend is to attack, he promptly invaded Germany; but was obliged to retire and defend his own soil.
- XIII. THE BATTLE OF LORRAINE** . . . . . 108  
 How the armies of Lorraine thwarted the German plan to envelop the French fighting forces and enter Paris in triumph. Brilliant generalship there instantly recognized and rewarded by Joffre.
- XIV. THE FIRST VICTORY AT THE MARNE** . . . 116  
 Explanation of what is commonly called "the miracle of the Marne;" how Foch saved the day after the Germans had begun to celebrate their victory.
- XV. SENT NORTH TO SAVE CHANNEL PORTS** . 127  
 Foch's great foresight and diplomacy in dealing with grave crisis in Northern France after battle of the Marne, evidence his genius as a coördinator.
- XVI. THE SUPREME COMMANDER OF THE ALLIED ARMIES** . . . . . 142  
 How Foch stopped the great German drive of 1918. Supreme faith his great support. What manner of man he is who has led us to victory.

## "THEY SHALL NOT PASS!"

Three Spirits stood on the mountain peak  
And gazed on a world of red,—  
Red with the blood of heroes,  
The living and the dead;  
A mighty force of Evil strove  
With freemen, mass on mass.  
Three Spirits stood on the mountain peak  
And cried: "They shall not pass!"

The Spirits of Love and Sacrifice,  
The Spirit of Freedom, too,—  
They called to the men they had dwelt among  
Of the Old World and the New!  
And the men came forth at the trumpet call,  
Yea, every creed and class;  
And they stood with the Spirits who called to them,  
And cried: "They shall not pass!"

Far down the road of the Future Day  
I see the world of Tomorrow;  
Men and women at work and play,  
In the midst of their joy and sorrow.  
And every night by the red firelight,  
When the children gather 'round  
They tell the tale of the men of old,  
These noble ancestors, grim and bold,  
Who bravely held their ground.  
In thrilling accents they often speak  
Of the Spirits Three on the mountain peak.

O Freedom, Love and Sacrifice  
You claimed our men, alas!  
Yet everlasting peace is theirs  
Who cried, "They shall not pass!"

ARTHUR A. PENN.

## FOREWORD

**S**OMEWHERE in France a small, slender man, who but for the strength indicated in his remarkable head would look frail, has been the center of all our hopes. He is sixty-seven years old—three months older than Marshal Joffre—and has been in the thick of the world war's greatest events from its beginning. The victory to which he has led us is the most stupendous and far-reaching in human history. No military commander since time began ever filled a place wherein his ability was of such moment to mankind.

What manner of man is he? Who knows? Scarcely anything has been printed in English about Ferdinand Foch except a few analyses of his victories, beginning with the first battle of the Marne.

Of the man himself and the sixty-three years of preparation which made him ready to save France and her allies, little is known.

I do not believe that this is because Marshal Foch considers his years of growth to be no proper concern of the world.

He is the last man who could conceivably take such a stand. For no one knows so well as he what the intensive study of other commanders has been to him. And no one knows so well as he what his interpretation of history and military biography has been to those students of his who have proved such able lieutenants because of their unity of ideals with their old instructor.

His life prior to August, 1914, is what might be called uneventful; yet it is tremendously significant. There is scarcely a page out of it that does not glow in the light of recent events.

Moreover, it is a life-story whose great animating principles are of superb value to every one of us, no matter what our walk in life nor how remote from battlefields it may be. No one can study the way Marshal Foch came to greatness without bettering his own cam-

paign of life and bringing himself closer to victory.

In due course we shall have many volumes about him: his life, his teachings, his great deeds will be studied in minutest details as long as that civilization endures which he did so much to preserve to mankind. But just now, there is so little accessible to tell us what manner of man he is, that I am venturing to offer American readers this exceedingly modest volume. The hour which it may serve is a great hour—one of the greatest in human history. And I cannot help thinking that to know a little about Foch now should have its value for us—as well as to know a great deal about him later on.

My sources of information are mainly French; and notable among them is a work recently published in Paris: "Foch, His Life, His Principles, His Work, as a Basis for Faith in Victory," by René Puaux, a French soldier-author who has served under the supreme commander in a capacity which enabled him to study the man as well as the general. To M. Puaux I am indebted for those main facts of

General Foch's life on which I base this sketch.

French, English, and some few American periodicals have given me bits of impression and some information. French military writers who have published analyses of this war's campaigns have also helped. And noted war correspondents have contributed graphic fragments. The happy fortune which permitted me to know France, her history and her people, enabled me to "read into" these brief accounts much which does not appear to the reader without that acquaintance.

I am a student of history, of biography, but not (save as we all have become) of war. I have had no first-hand knowledge of the great commander. I re-tell what I have been privileged to read about him, in my own way and with such comments as I might make in talking these things over with a friend.

I offer the little outline simply for what it is, without pretense.

The chapters were written at the instance of Mr. W. A. Curley, who has given me opportunity and warm encouragement to write

much about France and her people. I am glad to acknowledge my gratefulness to him.

M. Puaux's book was brought to me by M. Antonin Barthélemy, French consul at Chicago, the extent and quality of whose helpfulness I shall never be able to describe.

To M. Barthélemy I am indebted for the kind interest in my endeavor taken by Lieutenant Colonel Eduoard Réquin of the French General Staff and now of the French High Commission to the United States. Colonel Réquin was one of the staff officers of the Ninth Army from the day General Foch took command of it; and in the great events that followed, he was almost constantly at General Foch's side or executing his orders. It was, indeed, to Colonel Réquin's knowledge of General Foch, that M. Puaux was indebted for much of the material in his excellent book. So I hold myself extraordinarily fortunate to have had the kind interest of Colonel Réquin in my undertaking. I am deeply grateful to him for a number of most helpful suggestions.

All hail to the military genius who reorganized our armies in the face of a flushed and triumphant foe, and striking with consummate skill, blow after blow, freed the world of its most dangerous exponents of autocracy and militarism, exploded the unholy fallacy that right is simply a synonym of might and brought to pass the dawning of a day of peace that has made the world safe for democracy!

## I

### WHERE HE WAS BORN

**F**ERDINAND FOCH was born at Tarbes on October 2, 1851.

His father, of good old Pyrenean stock and modest fortune, was a provincial official whose office corresponded to that of secretary of state for one of our commonwealths. So the family lived in Tarbes, the capital of the department called the Upper Pyrenees.

The mother of Ferdinand was Sophie Dupré, born at Argelès, twenty miles south of Tarbes, nearer the Spanish border. Her father had been made a chevalier of the empire by Napoleon I for services in the war with Spain, and the great Emperor's memory was piously venerated in Sophie Dupré's new home as it had been in her old one. So her first-born

son may be said to have inherited that passion for Napoleon which has characterized his life and played so great a part in making him what he is.

There was a little sister in the family which welcomed Ferdinand. And in course of time two other boys came.

These four children led the ordinary life of happy young folks in France. But there was much in their surroundings that was richly colorful, romantic. Probably they took it all for granted, the way children (and many who are not children) take their near and intimate world. But even if they did, it must have had its deep effect upon them.

To begin with, there was Tarbes.

Tarbes is a very ancient city. It is twenty-five miles southeast of Pau, where Henry of Navarre made his dramatic entry upon a highly dramatic career, and just half that distance northeast of Lourdes, whose famous pilgrimages began when Ferdinand Foch was a little boy of seven.

He must have heard many soul-stirring tales about little Bernadette, the peasant girl

to whom the grotto's miraculous qualities were revealed by the Virgin, and whose stories were weighed by the Bishop of Tarbes before the Catholic Church sponsored them. The procession of sufferers through Tarbes on their way to Lourdes, and the joyful return of many, must have been part of the background of Ferdinand Foch's young days.

Many important highways converge at Tarbes, which lies in a rich, elevated plain on the left bank of the River Adour.

The town now has some 30,000 inhabitants, but when Ferdinand Foch was a little boy it had fewer than half that many.

For many centuries of eventful history it has consisted principally of one very long street, running east and west over so wide a stretch of territory that the town was called Tarbes-the-Long. Here and there this "main street" is crossed by little streets running north and south and giving glimpses of mountains, green fields and orchards; and many of these are threaded by tiny waterways—small, meandering children of the Adour, which take themselves where they will, like the chickens in

France, and nobody minds having to step over or around them, or building his house to humor their vagaries.

Tarbes was a prominent city of Gaul under the Romans. They, who could always be trusted to make the most of anything of the nature of baths, seem to have been duly appreciative of the hot springs in which that region abounds.

But nothing of stirring importance happened at or near Tarbes until after the battle of Poitiers (732), when the Saracens were falling back after the terrible defeat dealt them by Charles Martel.

Sullen and vengeful, they were pillaging and destroying as they went, and probably none of the communities through which they passed felt able to offer resistance to their depredations—until they got to Tarbes. And there a valiant priest named Missolin hastily assembled some of the men of the vicinity and gave the infidels a good drubbing—killing many and hastening the flight, over the mountains, of the rest.

This encounter took place on a plain a little

to the south of Tarbes which is still called the Heath of the Moors.

When Ferdinand Foch was a little boy, more than eleven hundred years after that battle, it was not uncommon for the spade or plowshare of some husbandman on the heath to uncover bones of Christian or infidel slain in what was probably the last conflict fought on French soil to preserve France against the Saracens. And there may still have been living some old, old men or women who could tell Ferdinand stories of the 24th of May (anniversary of the battle) as it was observed each year until the Revolution of 1789. At the southern extremity of the battlefield there stood for many generations a gigantic equestrian statue, of wood, representing the holy warrior, Missolin, rallying his flock to rout the unbelievers. And in the presence of a great concourse singing songs of grateful praise to Missolin, his statue was crowned with garlands by young maidens wearing the picturesque gala dress of that vicinity.

Some forty-odd years after Missolin's victory, Charlemagne went with his twelve knights

and his great army through Tarbes on his way to Spain to fight the Moors. And when that ill-starred expedition was defeated and its warriors bold were fleeing back to France, Roland—so the story goes—finding no pass in the Pyrenees where he needed one desperately, cleaved one with his sword Durandal.

High up among the clouds (almost 10,000 feet) is that Breach of Roland—200 feet wide, 330 feet deep, and 165 feet long. A good slice-out for a single stroke! And when Roland had cut it, he dashed through it and across the chasm, his horse making a clean jump to the French side of the mountains. That no one might ever doubt this, the horse thoughtfully left the impress of one iron-shod hoof clearly imprinted in the rock just where he cleared it, and where it is still shown to the curious and the stout of wind.

It is a pity to remember that, in spite of such prowess of knight and devotion of beast, Roland perished on his flight from Spain.

But, like all brave warriors, he became mightier in death even than he had been in life, and furnished an ideal of valor which ani-

mated the most chivalrous youth of all Europe, throughout many centuries.

With such traditions is the country round about Tarbes impregnated.

It has been suggested that the name Foch (which, by the way, is pronounced as if it rhymed with "hush") is derived from Foix—a town some sixty miles east of St. Gaudens, near which was the ancestral home of the Foch family.

Whatever the relatives of Ferdinand may have thought of this as a probability, it is certain that Ferdinand was well nurtured in the history of Foix and especially in those phases of it that Froissart relates.

Froissart, the genial gossip who first courted the favor of kings and princes and then was gently entreated by them so that his writing of them might be to their renown, was on his way to Blois when he heard of the magnificence of Gaston Phœbus, Count of Foix. Whereupon the chronicler turned him about and jogged on his way to Foix. Gaston Phœbus was not there, but at Orthez—150 miles west and north—and, nothing daunted,

to Orthez went Froissart, by way of Tarbes, traveling in company with a knight named Espaing de Lyon, who was a graphic and charming raconteur thoroughly acquainted with the country through which they were journeying. A fine, "that-reminds-me" gentleman was Espaing, and every turn of the road brought to his mind some stirring tale or doughty legend.

"Sainte Marie!" Froissart cried. "How pleasant are your tales, and how much do they profit me while you relate them. They shall all be set down in the history I am writing."

So they were! And of all Froissart's incomparable recitals, none are more fascinating than those of the countryside Ferdinand Foch grew up in.

## II

### BOYHOOD SURROUNDINGS

**T**HE country round about Tarbes has long been famed for its horses of an Arabian breed especially suitable for cavalry.

Practically all the farmers of the region raised these fine, fleet animals. There was a great stud-farm on the outskirts of town, and the business of breeding mounts for France's soldiers was one of the first that little Ferdinand Foch heard a great deal about.

He learned to ride, as a matter of course, when he was very young. And all his life he has been an ardent and intrepid horseman.

A community devoted to the raising of fine saddle horses is all but certain to be a community devotedly fond of horse racing.

Love of racing is almost a universal trait

in France; and in Tarbes it was a feature of the town life in which business went hand-in-hand with pleasure.

In an old French book published before Ferdinand Foch was born, I have found the following description of the crowds which flocked into Tarbes on the days of the horse markets and races:

“On these days all the streets and public squares are flooded with streams of curious people come from all corners of the Pyrenees and exhibiting in their infinite variety of type and costume all the races of the southern provinces and the mountains.

“There one sees the folk of Provence, irascible, hot-headed, of vigorous proportions and lusty voice, passionately declaiming about something or other, in the midst of small groups of listeners.

“There are men of the Basque province—small, muscular and proud, agile of movement and with bodies beautifully trained; plain of speech and childlike in deed.

“There are the men of the Béarnais, mostly from towns of size and circumstance—edu-

cated men, of self-command, tempering the southern warmth which burns in their eyes by the calm intelligence born of experience in life and also by a natural languor like that of their Spanish neighbors.

“There are the old Catalonians, whose features are of savage strength under the thick brush of white hair falling about their leather-colored faces; the men of Navarre, with braided hair and other evidences of primitiveness—vigorous of build and handsome of feature, but withal a little subnormal in expression.

“Then, in the midst of all these characteristic types, moving about in a pell-mell fashion, making a constantly changing mosaic of vivid hues, there are the inhabitants of the innumerable valleys around Tarbes itself, each of them with its own peculiarities of costume, manners, speech, which make them easily distinguishable one from another.”

It was a remarkable crowd for a little boy to wander in.

If Ferdinand Foch had been destined to be a painter or a writer, the impressions made

upon his childish mind by that medley of strange folk might have been passed on to us long ago on brilliant canvas or on glowing page.

But that was not the way it served him.

I want you who are interested to comprehend Ferdinand Foch, to think of those old horsefairs and race meets of his Gascony childhood, and the crowds of strange types they brought to Tarbes, when we come to the great days of his life that began in 1914—the days when his comprehension of many types of men, his ability to “get on with” them and harmonize them with one another, meant almost as much to the world as his military genius.

Tarbes had suffered so much in civil and religious wars, for many centuries, that not many of her ancient buildings were left. The old castle, with its associations with the Black Prince and other renowned warriors, was a ramshackle prison in Ferdinand Foch's youth. The old palace of the bishops was used as the prefecture, where Ferdinand's father had his office.

There were two old churches, much restored and of no great beauty, but very dear to the people of Tarbes nevertheless.

Ferdinand and his brothers and sister were very piously reared, and at an early age learned to love the church and to seek it for exaltation and consolation.

Later on in these chapters we shall see that phase of a little French boy's training in its due relation to a *maréchal* of France, directing the greatest army the world has ever seen.

The college of Tarbes, where Ferdinand began his school days, was in a venerable building over whose portal there was, in Latin, an inscription recording the builder's prayer:

"May this house remain standing until the ant has drunk all the waves of the sea and the tortoise has crawled round the world."

Ferdinand was a hard student, serious beyond his years, but not conspicuous except for his earnestness and diligence.

When he was twelve years old, his fervor for Napoleon led him to read Thiers' "History of the Consulate and the Empire." And about

this time his professor of mathematics remarked of him that "he has the stuff of a polytechnician."

The vacations of the Foch children were passed at the home of their paternal grandparents in Valentine, a large village about two miles from the town of St. Gaudens in the foothills of the Pyrenees. There they had the country pleasures of children of good circumstances, in a big, substantial house and a vicinity rich in tranquil beauty and outdoor opportunities. And there, as in the children's own home at Tarbes, one was ashamed not to be a very excellent child, and, so, worthy to be descended from a chevalier of the great Napoleon.

In the mid-sixties the family moved from Tarbes to Rodez—almost two hundred miles northeast of their old locality in which both parents had been born and where their ancestors had long lived.

It was quite an uprooting—due to the father's appointment as paymaster of the treasury at Rodez—and took the Foch family into an atmosphere very different from that

of their old Gascon home, but one which also helped to vivify that history which was Ferdinand's passion.

There Ferdinand continued his studies, as also at Saint-Étienne, near Lyons, whither the family moved in 1867 when the father was appointed tax collector there.

And in 1869 he was sent to Metz, to the Jesuit College of Saint Clément, to which students flocked from all parts of Europe.

He had been there a year and had been given, by unanimous vote of his fellow students, the grand prize for scholarly qualities, when the Franco-Prussian war began.

Immediately Ferdinand Foch enlisted for the duration of the war.

### III

#### A YOUNG SOLDIER OF A LOST CAUSE

**T**HERE is nothing to record of Ferdinand Foch's first soldiering except that from the dépôt of the Fourth Regiment of Infantry, in his home city of Saint-Étienne, he was sent to Chalon-sur-Saône, and there was discharged in January, 1871, after the capitulation of Paris.

He did not distinguish himself in any way. He was just one of a multitude of youths who rushed to the colors when France called, and did what they could in a time of sad confusion, when a weak government had paralyzed the effectiveness of the army—of the nation!

Whatever blows Ferdinand Foch struck in 1870 were without weight in helping to avert France's catastrophe. But he was like hundreds of thousands of other young Frenchmen similarly powerless in this: In the anguish he

suffered because of what he could not do to save France from humiliation were laid the foundations of all that he has contributed to the glory of new France.

At the time when his Fall term should have been beginning at Saint Clément's College, Metz was under siege by the German army, and its garrison and inhabitants were suffering horribly from hunger and disease; Paris was surrounded; the German headquarters were at Versailles; and the imperial standards so dear to young Foch because of the great Napoleon were forever lowered when the white flag was hoisted at Sedan and an Emperor with a whole army passed into captivity.

How much the young soldier-student of the Saône comprehended then of the needlessness of the shame and surrender of those inglorious days we do not know. He cannot have been sufficiently versed in military understanding to realize how much of the defeat France suffered was due to her failure to fight on, at this juncture and that, when a stiffer resistance would have turned the course of events.

But if he did not know then, he certainly

knew later. And as soon as he got where he could impress his convictions upon other soldiers of the new France he began training them in his great maxim: "A battle is lost when you admit defeat."

What his devotion to Saint Clément's College was we may know from the fact of his return there to resume his interrupted studies under the same teachers, but in sadly different circumstances.

He found German troops quartered in parts of the college, and as he went to and from his classes the young man who had just laid off the uniform of a French soldier was obliged to pass and repass men of the victorious army of occupation.

The memory of his shame and suffering on those occasions has never faded. How much France and her allies owe to it we shall never be able to estimate.

For the effect on Foch was one of the first acid tests in which were revealed the quality of his mind and soul. Instead of offering himself a prey to sullen anger and resentment, or of flaring into fury when one time for fury

was past and another had not yet come, he used his sorrow as a goad to study, and bent his energies to the discovery of why France had failed and why Prussia had won. His analysis of those reasons, and his application of what that analysis taught him, is what has put him where he is to-day—and *us* where *we* are!

From Metz, Foch went to Nancy to take his examination for the Polytechnic at Paris.

Just why this should have been deemed necessary I have not seen explained. But it was, like a good many other things of apparent inconsequence in this young man's life, destined to leave in him an impress which had much to do with what he was to perform.

I have seldom, if ever, studied a life in which events "link up" so marvelously and the present is so remarkably an extension of the past.

Nancy had been chosen by General Manteuffel, commander of the First German Army Corps, as headquarters, pending the withdrawal of the victors on the payment of the last sou in the billion-dollar indemnity they exacted of

France along with the ceding of Alsace-Lorraine. (For three years France had to endure the insolent victors upon her soil.)

And with the fine feeling and magnanimity in which the German was then as now peculiarly gifted General Manteuffel delighted in ordering his military bands to play the "Retreat"—to taunt the sad inhabitants with this reminder of their army's shame.

Ferdinand Foch listened and thought and wrote his examinations for the school of war.

Forty-two years later—in August, 1913—a new commandant came to Nancy to take control of the Twentieth Army Corps, whose position there, guarding France's Eastern frontier, was considered one of the most important—if not *the* most important—to the safety of the nation.

The first order he gave was one that brought out the full band strength of six regiments quartered in the town. They were to play the "March Lorraine" and the "Sambre and Meuse." They were to fill Nancy with these stirring sounds. The clarion notes carrying these martial airs were to reach every cranny

of the old town. It was a veritable tidal wave of triumphant sound that he wanted—for it had much to efface.

Nancy will never forget that night! It was Saturday, the 23d of August, 1913. And the new commandant's name was Ferdinand Foch!

Less than a year later he was fighting to save Nancy, and what lay beyond, from the Germans.

And *this* time there was to be a different story! Ferdinand Foch was foremost of those who assured it.

## IV

### PARIS AFTER THE GERMANS LEFT

**F**ERDINAND FOCH entered the Polytechnic School at Paris on the 1st of November, 1871, just after he had completed his twentieth year.

This school, founded in 1794, is for the technical education of military and naval engineers, artillery officers, civil engineers in government employ, and telegraphists—not mere operators, of course, but telegraph engineers and other specialists in electric communication. It is conducted by a general, on military principles, and its students are soldiers on their way to becoming officers.

Its buildings cover a considerable space in the heart of the great school quarter of Paris.

The Sorbonne, with its traditions harking back to St. Louis (more than six centuries) and its swarming thousands of students, is

hard by the Polytechnic. So is the College de France, founded by Francis I. And, indeed, whichever way one turns, there are schools, schools, schools—of fine arts and applied arts; of medicine in all its branches; of mining and engineering; of war; of theology; of languages; of commerce in its higher developments; of pedagogy; and what-not.

Nowhere else in the world is there possible to the young student, come to advance himself in his chosen field of knowledge, quite such a thrill as that which must be his when he matriculates at one of the scores of educational institutions in that quarter of Paris to which the ardent, aspiring youth of all the western world have been directing their eager feet from time immemorial.

Cloistral, scholastic atmosphere, with its grave beauty, as at Oxford and Cambridge, he will not find in the Paris Latin Quarter.

Paris does not segregate her students. Conceiving them to be studying for life, she aids them to do it in the midst of life marvelously abundant. They do not go out of the world—so to speak—to learn to live and work in the

world. They go, rather, into a life of extraordinary variety and fullness, out of which—it is expected—they will discover how to choose whatever is most needful to their success and well-being.

There is no feeling of being shut in to a term of study. There is, rather, the feeling of being “turned loose” in a place of vast opportunity of which one may make as much use as he is able.

To a young man of Ferdinand Foch’s naturally serious mind, deeply impressed by his country’s tragedy, the Latin Quarter of Paris in those Fall days of 1871 was a sober place indeed.

Beautiful Paris, that Napoleon III had done so much to make splendid, was scarred and seared on every hand by the German bombardment and the fury of the communards, who had destroyed nearly two hundred and fifty public and other buildings. The government of France had deserted the capital and moved to Versailles—just evacuated by the Germans.

The blight of defeat lay on everything.

In May, preceding Foch’s advent, the com-

munards—led by a miserable little shoemaker who talked about shooting all the world—took possession of the buildings belonging to the Polytechnic, and were dislodged only after severe fighting by Marshal MacMahon's Versailles troops.

The cannon of the communards, set on the heights of Père-Lachaise (the great city of the dead where the slumber of so many of earth's most illustrious imposed no respect upon the "Bolsheviki" of that cataclysm) aimed at the Pantheon, shot short and struck the Polytechnic. One shell burst in the midst of an improvised hospital there, gravely wounding a nurse.

At last, on May 24, the Polytechnic was taken from the revolutionists by assault, and many of the communards were seized.

In the days following, the great recreation court of the school was the scene of innumerable executions, as the wretched revolutionists paid the penalty of their crimes before the firing squad. And the students' billiard room was turned into a temporary morgue, filled with bodies of those who had sought to destroy Paris from within.

The number of Parisians slain in those days after the second siege of Paris has been variously estimated at from twenty thousand to thirty-six thousand. And all the while, encamped upon the heights round about Paris, were victorious German troops squatting like Semitic creditors in Russia, refusing to budge till their account was settled to the last farthing of extortion.

The most sacred spot in Paris to young Foch, in all the depression he found there, was undoubtedly the great Dome des Invalides, where, bathed in an unearthly radiance and surrounded by faded battle flags, lies the great porphyry sarcophagus of Napoleon I.

With what bitter reflections must the young man who had been nurtured in the adoration of Bonaparte have returned from that majestic tomb to the Polytechnic School for Warriors—to which, on the day after his coronation as Emperor, Napoleon had given the following motto:

“Science and glory—all for country.”

But, also, what must have been the young southerner's thought as he lifted his gaze on

entering the Polytechnic and read there that self-same wish which was inscribed over the door of his first school in Tarbes:

“May this house remain standing until the ant has drunk all the waves of the sea and the tortoise has crawled round the world.”

The edifice in which part of the Polytechnic was housed was the ancient College of Navarre, and a Navarrias poet of lang syne had given to the Paris school for his countrymen this quaint wish, repeated from the inscription he knew at Tarbes.

France had had twelve different governments in fourscore years when Ferdinand Foch came to study in that old building which had once been the college of Navarre. Houses of cards rather than houses of permanence seemed to characterize her.

Yet she has always had her quota—a larger one, too, than that of any other country—of those who look toward far to-morrows and seek to build substantially and beautifully for them.

That forward-looking prayer of old Navarre, and recollection of the centuries during

which it had prevailed against destroying forces, was undoubtedly an aid and comfort to the heavy-hearted youth who then and there set himself to the study of that art of war wherewith he was to serve France.

Among the two hundred and odd fellow-students of Foch at the Polytechnic was another young man from the south—almost a neighbor of his and his junior by just three months—Jacques Joseph Césaire Joffre, who had entered the school in 1869, interrupted his studies to go to war, and resumed them shortly before Ferdinand Foch entered the Polytechnic.

Joffre graduated from the Polytechnic on September 21, 1872, and went thence to the School of Applied Artillery at Fontainebleau.

Foch left the Polytechnic about six months later, and also went to Fontainebleau for the same special training that Joffre was taking.

Both young men were hard students and tremendously in earnest. Both were heavy-hearted for France. Both hoped the day would come when they might serve her and help to

restore to her that of which she had been despoiled.

But if any one, indulging in the fantastic extravagancies of youth, had ventured to forecast, then, even a tithe of what they have been called to do for France, he would have been set down as madder than March hares know how to be.

## V

### LEARNING TO BE A ROUGH RIDER

**W**HEN Ferdinand Foch graduated, third in his class, from the artillery school at Fontainebleau, instead of seeking to use what influence he might have commanded to get an appointment in some garrison where the town life or social life was gay for young officers, he asked to be sent back to Tarbes.

No one, to my knowledge, has advanced an explanation for this move.

To so earnest and ambitious a student of military art (Foch will not permit us to speak of it as "military science") sentimental reasons alone would never have been allowed to control so important a choice.

That he always ardently loved the Pyrenean country, we know. But to a young officer of

such indomitable purpose as his was, even then, it would have been inconceivable that he should elect to spend his first years out of school in any other place than that one where he saw the maximum opportunity for development.

“Development,” mind you—not just “advancement.” For Foch is, and ever has been, the kind of man who would most abhor being advanced faster than he developed.

He would infinitely rather be prepared for a promotion and fail to get it than get a promotion for which he was not thoroughly prepared.

Nor is he the sort of individual who can comfortably deceive himself about his fitness. He sustains himself by no illusions of the variety: “If I had so-and-so to do, I’d probably get through as well as nine-tenths of commanders would.”

He is much more concerned to satisfy himself that his thoroughness is as complete as he could possibly have made it, than he is to “get by” and satisfy the powers that be!

So we know that it wasn’t any mere longing

for the scenes of his happy childhood which directed his choice of Tarbes garrison when he left the enchanting region of Fontainebleau, with its fairy forest, its delightful old town, and its many memories of Napoleon.

His mind seems to have been fixed upon a course involving more cavalry skill than was his on graduating. And after two years at Tarbes, with much riding of the fine horses of Arabian breed which are the specialty of that region, he went to the Cavalry School at Saumur, on the Loire.

King René of Anjou, whose chronic poverty, does not seem to have interfered with his taste for having innumerable castles, had one at Saumur, and it still dominates the town and lends it an air of medievalism.

Toward the end of the sixteenth century Saumur was one of the chief strongholds of Protestantism in France and the seat of a Protestant university.

But the revocation of the Edict of Nantes granting tolerance to the Huguenots, brought great reverses upon Saumur, whose inhabitants were driven into exile. And thereupon (1685),

the town fell into a decline which was not arrested until Louis XV, in the latter part of his reign, caused this cavalry school to be established there.

It is a large school, with about four hundred soldiers always in training as cavalry officers and army riding masters. And the riding exhibitions which used to be given there in the latter part of August were brilliant affairs, worth going many miles to see.

There Ferdinand Foch studied cavalry tactics, practiced "rough riding" and—by no means least important—learned to know another type of Frenchman, the men of old Anjou.

In our own country of magnificent distances and myriad racial strains we are apt to think of French people as a single race: "French is French."

This is very wide of the truth. French they all are, in sooth, with an intense national unity surpassed nowhere on earth if, indeed, it is anywhere equaled. But almost every one of them is intensely a provincial, too, and very "set" in the ways of his own section of country

—which, usually, has been that of his forbears from time immemorial.

In the description I quoted in the second chapter, showing some of the types from the vicinity of Tarbes which frequent its horse market, one may get some idea of the extraordinary differences in the men of a single small region which is bordered by many little “pockets” wherein people go on and on, age after age, perpetuating their special traits without much admixture of other strains.

Not every part of France has so much variety in such small compass. But every province has its distinctive human qualities. And between the Norman and the Gascon, the Breton and the Provençal, the man of Picardy and the man of Languedoc, there are greater temperamental differences than one can find anywhere else on earth in an equal number of square miles—except in some of our American cities.

To the commander of General Foch’s type (and as we begin to study his principles we shall, I believe, see that they apply to command in civil no less than in military life) knowledge

of different men's minds and the way they work is absolutely fundamental to success.

And his preparation for this mastery was remarkably thorough.

At Saumur he learned not only to direct cavalry operations, but to know the Angevin characteristics.

In each school he attended, beginning with Metz, he had close class association with men from many provinces, men of many types. And this was valuable to him in preparing him to command under-officers in whom a rigorous uniformity of training could not obliterate bred-in-the-bone differences.

Many another young officer bent on "getting on" in the army would have felt that what he learned among his fellow officers of the provincial characteristics was enough.

But not so Ferdinand Foch.

Almost his entire comprehension of war is based upon men and the way they act under certain stress—not the way they might be expected to act, but the way they actually do act, and the way they can be led to act under certain stimulus *of soul*.

For Ferdinand Foch wins victories with men's souls—not just with their flesh and blood, nor even with their brains.

And to command men's souls it is necessary to understand them.

## VI

### FIRST YEARS IN BRITTANY.

UPON leaving the cavalry school at Saumur, in 1878, Ferdinand Foch went, with the rank of captain of the Tenth Regiment of Artillery, to Rennes, the ancient capital of Brittany and the headquarters of France's tenth army corps.

He stayed at Rennes, as an artillery captain, for seven years.

It is not a particularly interesting city from some points of view, but it is a very "livable" one, and for a student like Foch it had many advantages. The library is one of the best in provincial France and has many valuable manuscripts. There is also an archæological museum of antiquities found in that vicinity, many of them relating to prehistoric warfare. Some good scientific collections are also treasured there.

What is now known as the University of Rennes was styled merely the "college" in the days of Foch's residence there. But it did substantially the same work then as now, and among its faculty Foch undoubtedly found many who could give him able aid in his perpetual study of the past.

Rennes especially cherishes the memory of Bertrand du Guesclin, the great constable of France under King Charles V and the victorious adversary of Edward III. This brilliant warrior, who drove the English, with their claims on French sovereignty, out of France, was a native of that vicinity. And we may be sure that whatever special opportunity Rennes afforded of studying documents relating to his campaigns was fully improved by Captain Foch.

In that time, also, Foch had ample occasion to know the Bretons, who are, in some respects, the least French of all French provincials—being much more Celtic still than Gallic, although it is a matter of some fifteen hundred years since their ancestors, driven out of

Britain by the Teutonic invasions, came over and settled "Little Britain," or Brittany.

The Bretons maintained their independence of France for a thousand years, and only became united with it through the marriage of their last sovereign, Duchess Anne, with Charles VIII, in 1491 and—after his death—with his successor, Louis XII.

And even to-day, after more than four centuries of political union, the people of Brittany are French in name and in spirit rather than in speech, customs, or temperament. Many of them do not speak or understand the French language. Few of them, outside of the cities, have conformed appreciably to French customs. Quaint, sturdy, picturesque folk they are—simple, for the most part, superstitious, tenacious of the old, suspicious of the new, and governable only by those who understand them.

Foch must have learned, in those seven years, not only to know the Bretons, but to like them and their rugged country very well. For he has had, these many years past, his

summer home near Morlaix on the north coast of Brittany. It was from there that he was summoned into the great war on July 26, 1914.

In 1885 Captain Foch was called to Paris and entered the Superior School of War.

This institution, wherein he was destined to play in after years a part that profoundly affected the world's destiny, was founded only in 1878 as a training school for officers, connected with the military school which Louis XV established in 1751 to "educate five hundred young gentlemen in all the sciences necessary and useful to an officer."

One of the "young gentlemen" who profited by this instruction was the little Corsican whom Ferdinand Foch so ardently venerated.

The building covers an area of twenty-six acres and faces the vast Champ-de-Mars, which was laid out about 1770 for the military school's use as a field for maneuvers.

This field is eleven hundred yards long and just half that wide. It occupies all the ground between the school buildings and the river.

Across the river is the height called the Trocadero, on which Napoleon hoped to build

a great palace for the little King of Rome; but whereon, many years after he and his son had ceased to need mansions made by hands, the French republic built a magnificent palace for the French people. This vast building, with its majestic gardens, was the principal feature of the French national exhibition of 1878, which, like its predecessor of 1867 and its successors of 1889 and 1900, was held on the Champ-de-Mars.

Facing the Trocadero Palace, on the Champ-de-Mars, is the Eiffel Tower (nearly a thousand feet high) which was erected for the exposition of 1889, and has served, since, then-unimaginable purposes during the stress and strain of war as a wireless station. The "Ferris" wheel put up for the exposition of 1900 is close by. And a stone's throw from the military school are the Hotel des Invalides, Napoleon's tomb, and the magnificent Esplanade des Invalides down which one looks straightway to the glinting Seine and over the superb Alexander III bridge toward the tree-embowered palaces of arts on the Champs-Élysées.

On the other side of the Hotel des Invalides from that occupied by the military school and Champ-de-Mars is the principal diplomatic and departmental district of Paris, with many embassies (not ours, however, nor the British—which are across the river) and many administrative offices of the French nation.

Soldiers and government officials and foreign diplomats dominate the quarter—and homes of the old French aristocracy.

The Hotel des Invalides, founded by Louis XIV and designed to accommodate, as an old soldiers' home, some seven thousand veterans of his unending wars, has latterly served as headquarters for the military governor of Paris, and also—principally—as a war museum.

Here are housed collections of priceless worth and transcendent interest. The museum of artillery contains ten thousand specimens of weapons and armor of all kinds, ancient and modern. The historical museum, across the court of honor, was—in the years when I spent many fascinating hours there—extraordinarily

rich in personal souvenirs of scores of illustrious personages.

What it must be now, after the tragic years of a world war, and what it will become as a treasure house for the years to come, is beyond my imagination.

It was into this enormously rich atmosphere, pregnant with everything that conserves France's most glorious military traditions, that Captain Ferdinand Foch was called in 1885 for two years of intensive training and study.

## VII

### JOFFRE AND FOCH

**A**FTER quitting the School of War in 1887 (he graduated fourth in his class, as he had at Saumur; he was third at Fontainebleau), Ferdinand Foch was sent to Montpellier as a probationer for the position of staff officer.

He remained at Montpellier for four years—first as a probationer and later as a staff officer in the Sixteenth Army Corps, whose headquarters are there.

It is a coincidence—without special significance, but interesting—that Captain Joseph Joffre had spent several years at the School of Engineering in Montpellier; he left there in 1884, after the death of his young wife, to bury himself and his grief in Indo-China; so the two men did not meet in the southern city.\*

\*I have found it interesting to compare the careers of Joffre and Foch from the time they were at school

MARSHAL JOFFRE

GENERAL FOCH

Joffre returned from Indo-China in 1888, while Foch was at Montpellier, and after some time in the military railway service, and a promotion in rank (he was captain for thirteen years), received an appointment as professor of fortifications at Fontainebleau.

Some persons who claim to have known Joffre at Montpellier have manifested surprise at the greatness to which he attained thirty years later; he did not impress them as a man of destiny. That is quite as likely to be their fault as his. And also it is possible that Captain Joseph Joffre had not then begun to develop in himself those qualities which made him ready for greatness when the opportunity came.

If, however, any one has ever expressed surprise at Ferdinand Foch's attainment, I have not heard of it. He seems always to have impressed people with whom he came in contact as a man of tremendous energy, application, and thoroughness.

together, and I daresay that others will like to know what steps forward he was taking who is not the subject of these chapters but inseparably bound up with him in many events and forever linked with him in glory.

The opportunities for study at Montpellier are excellent, and the region is one of extraordinary richness for the lover of history. The splendor of the cities of Transalpine Gaul in this vicinity is attested by remains more numerous and in better preservation than Italy affords save in a very few places. And awe-inspiring evidences of medievalism's power flank one at every step and turn. Without doubt, Foch made the most of them.

Needless to remark, the commander-in-chief of the allied armies has not confided to me what were his favorite excursions during these four years at Montpellier. But I am quite sure that Aigues-Mortes was one of them. And I like to think of him, as we know he looked then, pacing those battlements and pondering the warfare of those militant ages when this vast fortress in the wide salt marshes was one of the most formidable in the world. What fullness of detail there must have been in the mental pictures he was able to conjure of St. Louis embarking here on his two crusades! What particularity in his appreciation of those defenses!

The place is, to-day, the very epitome of desolation—much more so than if the fortifications were not so perfectly preserved. For they look as if yesterday they might have been bristling with men-at-arms—whereas not in centuries has their melancholy majesty served any other purpose than that of raising reflections in those to whom the past speaks through her monuments.

From Montpellier, Ferdinand Foch returned to Paris, in February, 1891, as major on the general army staff.

He and Joffre had now the same rank. Joffre became lieutenant colonel in 1894 and colonel in 1897; similar promotions came to Foch in 1896 and 1903. He was six years later than Joffre in attaining a colonelcy, and exactly that much later in becoming a general.

Neither man had a quick rise but Foch's was (as measurable in grades and pay) specially slow.

About the time that Major Joffre went to the Soudan, to superintend the building of a railway in the Sahara desert, Major Foch went

to Vincennes as commander of the mounted group of the Thirteenth Artillery.

Vincennes is on the southeastern skirts of Paris, close by the confluence of the Seine and the Marne; about four miles or so from the Bastille, which was the city's southeastern gate for three hundred years or thereabouts, until the fortified inclosure on that side of the city was enlarged under Louis XIV.

The fort of Vincennes was founded in the twelfth century to guard the approach to Paris from the Marne valley. And on account of its pleasant situation—close to good hunting and also to their capital—the castle of Vincennes was a favorite residence of many early French kings.

It was there that St. Louis is said to have held his famous open-air court of justice, which he established so that his subjects might come direct to him with their troubles and he, besides settling them, might learn at first hand what reforms were needed.

Five Kings of France died there (among them Charles VI, the mad king, and Charles

IX, haunted by the horrors of the massacre on St. Bartholomew's eve), and one King of England, Harry Hotspur. King Charles V was born there.

From the days of Louis XI the castle has been used as a state prison. Henry of Navarre was once a prisoner there, and so was the Grand Condé, and Diderot, and Mirabeau, and it was there that the young Duc d'Enghien was shot by Napoleon's orders and to Napoleon's everlasting regret.

The castle is now (and has been for many years) an arsenal and school of musketry artillery, and other military services. Before its firing squad perish many traitors to France, whose last glimpse of the country they have betrayed is in the courtyard of this ancient castle.

The vicinity is very lovely. The Bois de Vincennes, on the edge of which the castle stands, is scarcely inferior to the Bois de Boulogne in charm. We used to go out there, not infrequently, for luncheon, which we ate in a rustic summerhouse close to the edge of the

lake, with many sociable ducks and swans bearing us company and clamoring for bits of bread.

It would be hard to imagine anything more idyllic, more sylvan, on the edge of a great city—anything more peaceful, restful, anywhere.

Yet the whole locality was, even then, a veritable camp of Mars—forts, barracks, fields for maneuvers and for artillery practice, infantry butts, rifle ranges, school of explosives; and what not.

France knew her need of protection—and none of us can ever be sufficiently grateful that she did!

But she did not obtrude her defensive measures. She seldom made one conscious of her military affairs.

In Germany, for many years before this war, remembrance of the army and reverence to the army was exacted of everyone almost at every breath. Forever and forever and forever you were being made to bow down before the God of War.

In France, on the contrary, it was difficult to think about war—even in the very midst of

a place like Vincennes—unless you were actually engaged in organizing and preparing the country's defenses.

After three years at Vincennes, Ferdinand Foch was recalled to the army staff in Paris. And on the 31st of October, 1895, he was made associate professor of military history, strategy, and applied tactics, at the Superior School of War.

He had then just entered upon his forty-fifth year; and the thoroughness of his training was beginning to make itself felt at military headquarters.

## VIII

### THE SUPERIOR SCHOOL OF WAR

**A**FTER a year's service as associate professor of military history, strategy, and applied tactics at the Superior School of War in Paris, Ferdinand Foch was advanced to head professorship in those branches and at the same time he was made lieutenant colonel. This was in 1896. He was forty-five years old and had been for exactly a quarter of a century a student of the art of warfare.

His old schoolfellow, Joseph Joffre, was then building fortifications in northern Madagascar; and his army rank was the same as that of Foch.

It was just twenty years after Foch entered upon his full-fledged professorship at the Superior School of War that Marshal Joffre, speaking at a dinner assembling the principal

leaders of the government and of the army, declared that without the Superior School of War the victory of the Marne would have been impossible.

All the world knows this now, almost as well as Marshal Joffre knew it then. And all the world knows now as not even Marshal Joffre could have known then, how enormous—far, far beyond the check of barbarism at the first battle of the Marne—is our debt and that of all posterity to the Superior School of War and, chiefly, to Ferdinand Foch.

It cannot have been prescience that called him there. It was just Providence, nothing less!

For that was a time when men like Ferdinand Foch (whose whole heart was in the army, making it such that nothing like the downfall of 1870 could ever again happen to France), were laboring under extreme difficulties. The army was unpopular in France.

This was due, partly to the disclosures of the Dreyfus case; partly to a wave of internationalism and pacifism; partly to jealousy of the army among civil officials.

An unwarranted sense of security was also to blame. France had worked so hard to recoup her fortunes after the disaster of 1870 that her people—delighted with their ability as money makers, blinded by the glitter of great prosperity—grudged the expense of keeping up a large army, grudged the time that compulsory military training took out of a young man's life. And this pre-occupation with success and the arts and pleasures of prosperous peace made them incline their ears to the apostles of "Brotherhood" and "Federation" and "Arbitration instead of Armament."

Little by little legislation went against the army. The period of compulsory service was reduced from three years to two; that cut down the size of the army by one-third. The supreme command of the army was vested not in a general, but in a politician—the Minister of War. The generals in the highest commands not only had to yield precedence to the prefects of the provinces (like our governors of states), but were subject to removal if the prefects did not like their politics and the

Minister of War wished the support of the prefects.

Even the superior war council of the nation might be politically made up, to pay the War Minister's scores rather than to protect the country.

All this can happen to a people lulled by a false sense of security—even to a people which has had to defend itself against the savage rapacity of its neighbors across the Rhine for two thousand years!

It was against these currents of popular opinion and of government opposition that Ferdinand Foch took up his work in the Superior School of War—that work which was to make possible the first victory of the Marne, to save England from invasion by holding Calais, and to do various other things vital to civilization, including the prodigious achievements of the days that have since followed.

Foch foresaw that these things would have to be done and, with absolute consecration to his task, he set himself not only to train officers

for France when she should need them, but to inspire them with a unity of action which has saved the world.

I have various word-pictures of him as he then appeared to, and impressed, his students.

One is by a military writer who uses the pseudonym of "Miles."

"The officers who succeeded one another at the school of war between 1896 and 1901," he says, referring to the first term of Foch as instructor there, "will never forget the impressions made upon them by their professor of strategy and of general tactics. It was this course that was looked forward to with the keenest curiosity as the foundational instruction given by the school. It enjoyed the prestige given it by the eminent authorities who had held it; and the eighty officers who came to the school at each promotion, intensely desirous of developing their skill and judgment, were always impatient to see and hear the man who was to instruct them in these branches.

"Lieutenant Colonel Foch did not disappoint their expectations. Thin, elegant, of distinguished bearing, he at once struck the beholder

with his expression—full of energy, of calm, of rectitude.

“His forehead was high, his nose straight and prominent, his gray-blue eyes looked one full in the face. He spoke without gestures, with an air of authority and conviction; his voice serious, harsh, a little monotonous; amplifying his phrases to press home in every possible way a rigorous reasoning; provoking discussion; always appealing to the logic of his hearers; sometimes difficult to follow, because his discourse was so rich in ideas; but always holding attention by the penetration of his surveys as well as by his tone of sincerity.

“The most profound and the most original of the professors at the school of war, which at that time counted in its teaching corps many very distinguished minds and brilliant lecturers: such Lieutenant Colonel Foch seemed to his students, all eager from the first to give themselves up to the enjoyment of his lessons and the acceptance of his inspiration.”

Colonel E. Réquin of the French general staff, who has fought under Foch in some of the latter's greatest engagements, says:

“Foch has been for forty years the incarnation of the French military spirit.” For forty years! That means ever since he left the cavalry school at Saumur and went, as captain of the Tenth regiment of artillery, to Rennes. “Through his teachings and his example,” Colonel Réquin goes on to say, in a recent number of the *World's Work*, “he was the moral director of the French general staff before becoming the supreme chief of the allied armies. Upon each one of us he has imprinted his strong mark. We owe to him in time of peace that unity of doctrine which was our strength. Since the war we owe to him the highest lessons of intellectual discipline and moral energy.

“As a professor he applied the method which consists in taking as the base of all strategical and tactical instruction the study of history completed by the study of military history—that is to say, field operations, orders given, actions, results, and criticisms to be made and the instructions to be drawn from them. He also used concrete cases—that is to say, prob-

lems laid by the director on the map or on the actual ground.

“By this intellectual training he accustomed the officers to solving all problems, not by giving them ready-made solutions, but by making them find the logical solution to each individual case.

“His mind was trained through so many years of study that no war situation could disturb him. In the most difficult ones, he quickly pointed out the goal to be reached and the means to employ, and each one of us felt that it must be right.”

But best of all the things said about Foch in that period of his life, I like this, by Charles Dawbarn, in the *Fortnightly Review*:

“Such was”—in spite of many disappointments—“his fine confidence in life, that he communicated to others not his grievances, but his secret satisfactions.”

## IX

### THE GREAT TEACHER

**F**OCH made the men who sat under him love their work for the work's sake and not for its rewards. He fired them with an ardor for military art which made them feel that in all the world there is nothing so fascinating, so worth while, as knowing how to defend one's country when she needs defense.

He was able, in peace times when the military spirit was little applauded and much decried, to give his students an enthusiasm for "preparedness" which flamed as high and burned as pure as that which ordinarily is lighted only by a great national rush to arms to save the country from ravage.

It was tremendously, incalculably important for France and for all of us that Ferdinand

Foch was eager and able to impart this enthusiasm for military skill.

But also it is immensely important, today behind the lines and in all days and all walks of life, that there be those who can kindle and keep alight the enthusiasm of their fellows; who can overlook the failure of their own ardor and faithfulness to win its fair reward, and convey to others only the alluring glow of their "secret satisfactions."

In the five years, 1895-1901 (his work at the school was interrupted by politics in 1901), "many hundreds of officers," as René Puaux says, "the very élite of the general staffs of our army, followed his teaching and were imbued with it; and as they practically all, at the beginning of the war, occupied high positions of command, one may estimate as he can the profound and far reaching influence of this one grand spirit."

Let us try to get some idea of the sort of thing that Foch taught those hundreds of French army officers, not only about war but about life.

From all his study, he repeatedly declared,

one dominant conviction has evolved: Force that is not dominated by spirit is vain force.

Victory, in his belief, goes to those who merit it by the greatest strength of will and intelligence.

It was his endeavor, always, to develop in the hundreds of officers who were his students, that dual strength in which it seemed to him that victory could only lie: moral and intellectual ability to perceive what ought to be done, and intellectual and moral ability to do it.

In his mind, it is impossible to be intelligent with the brain alone. The Germans do not comprehend this, and therein, to Ferdinand Foch, lies the key to all their failures.

He believes that each of us must think with our soul's aid—that is to say, with our imagination, our emotions, our aspiration—and employ our intelligence to direct our feeling.

And he asks this combination not from higher officers alone, but from all their men down to the humblest in the ranks.

He believes in the invincibility of men fighting for a principle dearer to them than life—but he knows that ardor without leadership

means a lost cause; that men must know *how* to fight for their ideals, their principles; but that their officers are charged with the sacred responsibility of making the men's ardor and valor count.

At the beginning of his celebrated course of lectures on tactics he always admonished his students thus:

"You will be called on later to be the brain of an army. So I say to you to-day: Learn to think."

By this he was far from meaning that officers were to confine thinking to themselves, but that they were to teach themselves to think so that they might the better hand on intelligence and stimulate their men to obey not blindly but comprehendingly.

It was a maxim of Napoleon's, of which Foch is very fond, that "as a general rule, the commander-in-chief ought only to indicate the direction, determine the ends to be attained; the means of getting there ought to be left to the free choice of the mediums of execution, without whom success is impossible."

This leaves a great responsibility to officers,

but it is the secret of that flexibility which makes the French army so effective.

For Foch carries his belief in individual judgment far beyond the officers commanding units; he carries it to the privates in the ranks.

An able officer, in Foch's opinion, is one who can take a general command to get his men such-and-such a place and accomplish such-and-such a thing, and so interpret that command to his men that each and every one of them will, while acting in strict obedience to orders, use the largest possible amount of personal intelligence in accomplishing the thing he was told to do.

It is said that there was probably never before in history a battle fought in which every man was a general—so to speak—as at the battle of Château Thierry, in July, 1918. That is to say, there was probably never before a battle in which so many men comprehended as clearly as if they had been generals what it was all about, and acted as if they had been generals to attain their objectives.

Doubtless there have been many such battles since.

Foch has worked with a free hand to test the worth of his lifelong principles. And the hundreds of men he trained in those principles were ready to carry them out for him.

No wonder his first injunction was: Learn to think!

To him, the leadership of units is not a simple question of organization, of careful plans, of strategic and tactical intelligence, but a problem involving enormous adaptability.

Battles are not won at headquarters, he contends; they are won in the field; and the conditions that may arise in the field cannot be foreseen or forestalled—they must be met when they present themselves. In large part they are made by the behavior of men in unexpected circumstances; therefore, the more a commander knows about human nature and its spiritual depressions and exaltations, the better able he is to change his plans as new conditions arise.

German power in war, Foch taught his students, lies in the great masses of their effective troops and their perfect organization for moving men and supplies. German weakness is in

the absolute autocracy of great headquarters, building its plans as an architect builds a house and unable to modify them if something happens to make a change necessary.

This he deduced from his study of their methods in previous wars, especially in that of 1870.

And with this in mind he labored so that when Germany made her next assault upon France, France might be equipped with hundreds of officers cognizant of Germany's weakness and prepared to turn it to her defeat.

## X

### 'A' COLONEL AT FIFTY

“IT was not,” Napoleon wrote, “the Roman legions which conquered Gaul, but Cæsar. It was not the Carthaginian soldiers who made Rome tremble, but Hannibal. It was not the Macedonian phalanx which penetrated India, but Alexander. It was not the French army which reached the Weser and the Inn, but Turenne. It was not the Prussian soldiers who defended their country for seven years against the three most formidable powers in Europe; it was Frederick the Great.”

And already it has been suggested that historians will write of this war: “It was not the allied armies, struggling hopelessly for four years, that finally drove the Germans across the Rhine, but Ferdinand Foch.”

But I am sure that Foch would not wish

this said of him in the same sense that Napoleon said it of earlier generals.

For Foch has a greater vision of generalship than was possible to any commander of long ago.

His strategy is based upon a close study of theirs; for he says that though the forms of making war evolve, the directing principles do not change, and there is need for every officer to make analyses of Xenophon and Cæsar and Hannibal as close as those he makes of Frederick and Napoleon.

But his conception of military leadership is permeated with the ideals of democracy and justice for which he fights.

One of his great lectures to student-officers was that in which he made them realize what, besides the rout of the Prussians, happened at Valmy in September, 1792.

On his big military map of that region (it is in the obliterated St. Mihiel salient) Foch would show his students how the Prussians, Hessians and some Austrian troops, under the Duke of Brunswick, crossed the French frontier on August 19 and came swag-

gering toward Paris, braggartly announcing their intentions of "celebrating" in Paris in September.

Brunswick and his fellow generals were to banquet with the King of Prussia at the Tuileries. And the soldiers were bent upon the cafés of the Palais Royal.

Foch showed his classes how Dumouriez, who had been training his raw troops of disorganized France at Valenciennes, dashed with them into the Argonne to intercept Brunswick; how this and that happened which I will not repeat here because it is merely technical; and then how the soldiers of the republic, rallied by the cry, "The country is in danger," and thrilled by "The Marseillaise" (written only five months before, but already it had changed the beat of nearly every heart in France), made such a stand that it not only halted Prussia and her allies, but so completely broke their conquering spirit that without firing another shot they took themselves off beyond the Rhine.

"We," Foch used to tell his students, "are the successors of the revolution and the em-

pire, the inheritors of the art, new-born upon the field of Valmy to astonish the old Europe, to surprise in particular the Duke of Brunswick, the pupil of Frederick the Great, and to tear from Goethe, before the immensity of a fresh horizon, this profound cry: 'I tell you, from this place and this day comes a new era in the history of the world!'

It is that new era which Foch typifies—that new era which his adversaries, deaf to Goethe's cry and blind to Goethe's vision, have not yet realized.

It was "the old Europe" against which Foch fought—the old Europe which learned nothing at Valmy and has learned nothing since; the old Europe that fought as Frederick the Great fought and that had not yet seen the dawn of that new day which our nation and the French nation greeted with glad hails much more than a century ago.

In 1792 Prussia measured her military skill and her masses of trained men against France's disorganization—and overlooked "The Marseillaise."

In 1914 she weighed her might against what

she knew of the might of France—and omitted to weigh certain spiritual differences which she could not comprehend, but which she felt at the first battle of the Marne, has been feeling ever since, and before which she had to retire, beaten but still blind.

In 1918 she estimated the probable force of those “raw recruits” whom we were sending overseas—and laughed. She based her calculations on our lack of military tradition, our hastily trained officers, our “soft,” ease-loving men uneducated in those ideals of blood and iron wherein she has reared her youth always. She overlooked that spiritual force which the “new era” develops and which made our men so responsive to the command of Foch at Château Thierry and later.

“The immensity of a fresh horizon” whereon Goethe saw the new era dawning, is still veiled from the vision of his countrymen. But across its roseate reaches unending columns of marching men passed, under the leadership of Ferdinand Foch, to liberate the captives the blind brute has made and to strike down the strongholds of “old Europe” forever.

For nearly six years Foch taught such principles as these and others which I shall recall in connection with great events which they made possible later on.

Then came the anti-clerical wave in French politics, and on its crest a new commandant to the School of War—a man elevated by the anti-clericals and eager to keep his elevation by pleasing those who put him there.

Foch adheres devoutly to the religious practices in which he was reared, and one of his brothers belongs to the Jesuit order.

These conditions made his continuance at the school under its new head impossible. Whether he resigned because he realized this, or was superseded, I do not know. But he left his post and went as lieutenant colonel to the Twenty-ninth artillery, at Laon.

He was there two years and undoubtedly made a thorough study of the country round Laon—which was for more than four years to be the key to the German tenure in that part of France.

Ferdinand Foch, with his brilliant knowl-

edge and high ideals of soldiering, was now past fifty and not yet a colonel.

Strong though his spirit was, sustained by faith in God and rewarded by those "secret satisfactions" which come to the man who loves his work and is conscious of having given it his best, he must have had hours, days, when he drank deep of the cup of bitterness. There are, though, bitters that shrivel and bitters that tone and invigorate. Or perhaps they are the same and the difference is in us.

At any rate, Foch was not poisoned at the cup of disappointment.

And when the armies under his command encircled the great rock whereon Laon is perched high above the surrounding plains I hope Foch was with them—in memory of the days when he was "dumped" there, so to speak, far away from his sphere of influence at the School of War.

In 1903 he was made colonel and sent to the Thirty-fifth artillery at Vannes, in Brittany.

Only two years later he was called to Orleans as chief of staff of the Fifth army corps.

On June 20, 1907, he was made brigadier general and passed to the general staff of the French army at Paris.

Soon afterwards, Georges Clemenceau became Minister of War, and was seeking a new head for the School of War.

Everyone whose advice he sought said, unhesitatingly: Foch.

So the redoubtable old radical and anti-clerical summoned General Foch and said:

"I offer you the command of the School of War."

"I thank you," Foch replied, "but you are doubtless unaware that one of my brothers is a Jesuit."

"I know it very well," was Clemenceau's answer. "But you make good officers, and that is the only thing which counts."

Thus was foreshadowed, in these two great men, that spirit of "all for France" which, under the civil leadership of one and the military leadership of the other, was to save the country and the world.

The interrupted courses of Foch were re-

sumed, and his influence extended throughout the whole school.

After four years came "the white plume" of general of a division and Foch, at 60, took command of the Thirteenth division at Chaumont, just above the source of the Marne.

On December 17, 1912, he was placed at the head of the Eighth army corps, at Bourges.

And on August 23, 1913, he took command of the Twentieth corps at Nancy.

## XI

### FORTIFYING FRANCE WITH GREAT PRINCIPLES

**S**O much has been said about France's unreadiness for the war that it is easy for those who do not know what the real situation was to suppose that the French were something akin to fools. For twenty centuries the Germans had been swarming over the Rhine in preying, ravaging hordes, and France had been beating them back to save her national life. That they would swarm again, more insolent and more rapacious than ever after their triumph of 1870, was not to be doubted. Everyone in France who had the slightest knowledge of the spirit that has animated the Hohenzollern empire knew its envy of France, its cupidity of France's wealth, its hatred of France's attractions for all the world. Everyone who came in contact with the Germans felt the bullet-headed bel-

ligerence of their attitude which they were never at any pains to conceal.

The military men of France knew that Germany had for years been preparing for aggression on a large scale. They knew that she would strike when she felt that she was readiest and her opponents of the Triple Entente were least ready.

The state of mind of the civilians—busy, prosperous, peace-loving, concerned with conversational warfare about a multitude of petty internal affairs—is difficult to describe. But I think it may not be impertinent to say of it that it was something like the state of mind of a congregation, well fed, comfortable, conscious of many pleasant virtues and few corroding sins, before whom a preacher holds up the last judgment. None of them hopes to escape it, none of them can tell at what moment he may be called to his account, none of them would wish to go in just his present state, and yet none of them does anything when he leaves church to put himself more definitely in readiness for that great decision which is to determine where he shall spend eternity.

In 1911 it seemed for a brief while that the irruption from the east was at hand. But Germany did not feel quite ready; she "dickered"; and things went on seemingly as before.

France seemed to forget. But she was not so completely abandoned to hopefulness as was England—England, who turned her deafest ear to Lord Roberts' impassioned pleas for preparedness.

France has an institution called the Superior War Council. It is the supreme organ of military authority and the center of national defense; it consists of eleven members supposed to be the ablest commanding generals in the nation. The president of this council is the Minister of War; the vice president is known as the generalissimo of the French army.

In 1910 General Joseph Joffre became a member of the Superior War Council, and in 1911 he became generalissimo.

It was because the Council felt the imminence of war with Germany that General Pau—to whom the vice presidency should have

gone by right of his priority and also of his eminent fitness—patriotically waived the honor, because in two years he would be sixty-five and would have to retire; he felt that the defense of the country needed a younger man who could remain more years in service. So Joffre was chosen and almost immediately he began to justify the choice.

Joffre and his associates of the council not only foresaw the war, but they quite clearly previsioned its extent and something of its character. In 1912 Joffre declared “the fighting front will extend from four hundred to five hundred miles.” He talked little, but he worked prodigiously; and always his insistence was: “We must be prepared!”

“With whole nations,” he said, “engaged in a mortal combat, disaster is certain for those who in time of peace failed to prepare for war.” And “To be ready means, to-day, to have mustered in advance all the resources of the country, all the intelligence of its citizens, all their moral energy, for the purpose of attaining this one aim—victory. Getting ready is a duty that devolves not only upon the army,

but upon all public officials, upon all organizations, upon all societies, upon all families, upon all citizens.”

This complete readiness was beyond his power to effect. But in his province—the army—he achieved marvels that were almost miracles.

It was France's good fortune (and that of her allies) that in all he undertook for the purification and strengthening of the army Joffre had, from January, 1912, the complete co-operation of the Minister of War, M. Millerand. Together, these two men, brilliantly supported by some of Joffre's colleagues in the Superior Council—notably Pau and Castelnau—achieved results that have been pronounced “unparalleled in the history of the Third Republic.” They freed the army from the worst effects of political influence, made it once more a popular institution, and organized it into an effectiveness which needs, now, no comment.

When Foch was put in command of the Twentieth army corps at Nancy it was in the expectation that Nancy would sustain the first shock of the German invasion when it came.

The opinion prevailed that Nancy could not be held. Whether Joffre was of this opinion or not, I do not know. If he was, he probably felt that Foch would give it up only after harder fighting than any other general. But Foch believed that Nancy could be defended, and so did his immediate superior, the gallant General Castelnau, in command of the Second Army of Lorraine.

For nearly a year following upon his appointment to Nancy, Foch labored mightily to strengthen Nancy against the attack which was impending. He seems never to have doubted that Germany would make her first aggression there, only seventeen miles from her own border, and with Metz and Strassburg to back the invading army.

But that there were other opinions, even at Nancy, I happen to know. For, one day while the war was still new, I chanced in rooting in an old bookstall in Paris, to find a book which was written by an officer of the Twentieth Corps, in 1911.\*

\* The reason I cannot give his name, nor quote directly from his book, is that a fellow-traveler borrowed the book from me and I have never seen it since.

The officer was, if I mistake not, of the artillery, and he wrote this "forecast" to entertain the members of his mess or battery.

He predicted with amazing accuracy the successive events which happened nearly three years later, only he "guessed" the order for mobilization in France to fall on August 14, instead of August 1; and all his subsequent dates were just about two weeks later than the actualities. But he "foresaw" the invasion of Belgium, the resistance at Liège and Namur, the fall of Brussels, the invasion of France by her northeastern portals. Almost—at the time I read this book—it might have served as history instead of prophecy. I would that I had it now! But I clearly remember that it located the final battle of the war in Westphalia, describing the location exactly. And that it said the Emperor would perish in that downfall of his empire. And it cited two prophecies current in Germany—the long-standing one to the effect that Germany's greatest disaster would come to her under an Emperor with a withered arm, and one made in Strassburg in 1870, de-

claring that the new empire would dissolve under its third Emperor.

The book was published in January, 1912, if I remember rightly, and was almost immediately translated into German. And I was told that one hundred thousand copies were sold in Germany in a very short time, and it was made the subject of editorials in nearly every prominent German paper.

Probably Foch read it. He may even have discussed it with the author. But he held to the belief that when the attack came it would come through Nancy.

He was not, however, expecting it when it came.

## XII

### ON THE EVE OF WAR

**I**N the first days of July, 1914, divisional maneuvers were held as usual in Lorraine. Castelnau and Foch reviewed the troops, known throughout the army as "the division of iron."

A young captain, recently assigned from the School of War to a regiment of Hussars forming part of the Twentieth army corps, wrote to his parents on July 5 an account of the maneuvers in which he had just taken part. He said that "the presence of these two eminent men gave a great interest" to the events he described. And the impression made upon him by Foch is so remarkable that his letter is likely to become one of the small classics of the war—endlessly reproduced whenever the story of Foch is told.

"General Foch," he reminds his parents, "is a former commander of the School of War, where he played, on account of his great fitness, a very remarkable rôle.

"He is a man still young [he was almost 63!], slender and supple, and rather frail; his powerful head seems like a flower too heavy for a stem too slight.

"What first strikes one about him is his clear gaze, penetrating, intellectual, but above all and in spite of his tremendous energy, luminous. This light in his eyes spiritualizes a countenance which otherwise would be brutal, with its big mustache bristling above a very prominent, dominant jaw.

"When he speaks, pointing lessons from the maneuver, he becomes animated to the extent of impassionedness, but never expressing himself otherwise than with simplicity and purity.

"His speech is sober, direct; he affirms principles, condemns faults, appeals to our energies in a brief but comprehensive style.

"He is a priest, who judges, condemns, and instructs in the name of the faith which illumines him and to which he has consecrated

all the powers of his mind and his heart. General Foch is a prophet whom his God transports."

The young officer who wrote thus to his parents was Captain André Dubarle; and he later laid down his life for his country on the field of honor commanded by General Foch.

The letter seems to me as treasurable for what it conveys to us of the sort of young man Foch found among his officers and soldiers (there were many such!) as for what it tells us of the impression Foch created even in those days before men's souls were set on fire with fervor for France.

On July 18 General Foch asked and obtained a leave of absence for fifteen days, so that he might join the family group gathered at his home near Morlaix in Brittany. His two sons-in-law, Captain Fournier and Captain Becourt, also obtained leave. The former was attached to the general army staff at Paris, and was granted seventeen days. The latter was in command of a company of the Twenty-sixth battalion of Foot Chasseurs at Pont-à-Mousson. He was given twenty-five days' leave.

The wives and children of both were at Morlaix with Madame Foch.

So little expectation of immediate war had France on July 18 that she granted a fortnight's absence to the commander of those troops which were expected to bear the first shock of German aggression when it came.

But I happen to know of a French family reunion held at Nancy on July 14 and the days following, which was incomplete. One of the women of this family was married to a German official at Metz whose job it was to be caretaker for three thousand locomotives belonging to the imperial government and kept at Metz for "emergencies." On July 12 (as it afterwards transpired) he was ordered to have fires lighted and steam got up in those three thousand engines, and to keep them, night and day, ready for use at a moment's notice.

Those smoking iron horses in Metz are a small sample of what was going on all over Germany while France's frontier-defenders were being given permission to visit Brittany.

But for that matter German war-preparations were going on much nearer to Nancy,

than in Metz, while Foch was playing with his grandchildren at Morlaix.

Beginning about July 21 and ending about the 25th, twelve thousand Germans left Nancy for "points east," and six thousand others left the remainder of French Lorraine.

The pretexts they gave were various—vacations, urgent business matters, "cures" at German watering places. They all knew, when they left, that Germany was mobilizing for attack upon France. They had known it for some time before they left.

Since the beginning of July they had been working in Nancy to aid the German attack. They had visited the principal buildings, public and private, and especially the highest ones, with plans for the installation of wireless at the modest price of \$34. "It is so interesting," they said, "to get the exact time, every day, from the Eiffel Tower!"

They had also some amazingly inexpensive contrivances for heating houses, or regulating the heating already installed, or for home refrigeration—things which took them into cellars in Nancy—and before they left to join

their regiments they were exceedingly busy demonstrating those things.

They were all gone when General Foch was recalled, on July 26.

On July 30 German under-officers crossed the frontier.

On August 3 Uhlans and infantrymen on motorcycles were shooting and pillaging on the French side of the border, although it was not until 6:45 P.M. that day that Germany declared war on France.

That which France had been unable to suppose even Germany capable of, happened: The treaty with Belgium became a scrap of paper and the main attack upon France was made by way of the north.

But the expectation that Nancy would be one of the first objectives of the Hun-rampant was not without fulfillment. For the hordes advanced in five armies; and the fifth, the German left wing under Crown Prince Rupprecht of Bavaria, was ordered to swarm into France south of that of the Imperial Crown Prince, spread itself across country behind the French armies facing northward, join with

Von Kluck's right wing somewhere west of Paris, and "bag" the French—armies, capital and all—"on or about" September 1.

It was all perfectly practicable—on paper. The only difficulty was that there were so many things the German staff had omitted from its careful calculations—omitted, perforce, because it had never guessed their existence. And that spoiled their reckoning.

Foch had, for years, been teaching that fighting demands supreme flexibility, adaptability; that war is full of surprises which must be met as they arise; that morale, the spiritual force of an army, is subject to fluctuations caused by dozens of conditions which cannot be foreseen and must be overcome. The phrase oftenest on his lips was: "What have we to do here?" For, as he conceived warfare, officers and even privates must constantly be asking themselves that. One plan goes awry. Very well! we'll find a better.

But Foch had not trained the German general staff. They made war otherwise. And well he knew it! Well he knew what happened

to them when their "blue prints" would not fit unexpected conditions.

He knew that they expected to take Nancy easily, that they were looking for some effort to defend it, but not for a French attack.

They did not know his maxim: "The best means of defense is to attack."

He attacked. His Twentieth corps fought its way through the center of the Bavarian army, into German Lorraine. Then something happened. Just what it was is not clear—but doubtless will be some day. The offensive had to be abandoned and the French troops had to withdraw from German soil to defend their own.

How bitter was the disappointment to Foch we may guess but shall never know. But remaking plans in his genius.

"What have we to do here?" he asked himself.

Then, "in the twinkling of an eye," says one military historian, "General Foch found the solution to the defense problem wherewith he was so suddenly confronted when his offensive failed of support."

### XIII

#### THE BATTLE OF LORRAINE

**W**HAT is known as the battle of Lorraine began at the declaration of war and lasted till August 26—though the major part of it was fought in the last six of those days.

I shall not go into details about it here, except to recall that it was in this fighting that General Castelnau lost his oldest son, stricken almost at the father's side.

A German military telegram intercepted on August 27 said:

“On no account make known to our armies of the west [that is to say, the right wing, in Belgium] the checks sustained by our armies of the east [the left wing, in Lorraine].”

So much depended on those plans which Castelnau and Dubail and Foch—and very particularly Foch!—had frustrated.

Joffre realized what had been achieved. And on August 27 he issued the following "order of the day":

"The First and Second armies are at this moment giving an example of tenacity and of courage which the commander-in-chief is happy to bring to the knowledge of the troops under his orders.

"These two armies undertook a general offensive and met with brilliant success until they hurled themselves at a barrier fortified and defended by very superior forces.

"After a retreat in perfect order, the two armies resumed the offensive and, combining their efforts, retook a great part of the territory they had given up.

"The enemy bent before them and his recoil enabled us to establish undeniably the very serious losses he had suffered.

"These armies have fought for fourteen days without a moment's respite, and with an unshakable confidence in victory as the reward of their tenacity.

"The general-in-chief knows that the other

armies will be moved to follow the example of the First and Second armies."

Now, where were those other armies? And what were they doing?

France had then eight armies in the field, and was soon to have a ninth—commanded by General Foch.

There was the First army, under General Dubail; the Second, under General Castelnau; the Third, under General Sarrail; the Fourth, under General Langle de Cary; the Fifth, under General Franchet d'Espérey; the Sixth, under General Manoury; the Seventh and Eighth armies are not mentioned in the Battle of the Marne, and I have not been able to find out where they were in service.

The First and Second armies, fighting in Lorraine, we know about. They developed, in that battle, more than one great commander of whose abilities Joffre hastened to avail himself. On the day he issued that order commending the First and Second armies, the generalissimo called Manoury from the Lorraine front, where he had shown conspicuous leadership, and put him in command of the newly-

created Sixth army, which was to play the leading part in routing Von Kluck. And on the next day (August 28) Joffre called Foch from Lorraine to head the new Ninth army, which was to hold the center at the Battle of the Marne and deal the smashing, decisive blow.

In two days, while his troops were retreating before an apparently irresistible force, Joffre created two new armies, put at the head of each a man of magnificent leadership, and intrusted to those two armies and their leaders the most vital positions in the great battle he was planning.

The German soldiers facing Joffre were acting on general orders printed for them eight years before, and under specific orders which had been worked out by their high command with the particularity of machine specifications. And all their presumptions were based on the French doing what Teutons would do in the same circumstances. Their extra-suspender-button efficiency and preparedness were pitted against the flexible genius of a man who could assemble his two "shock" armies in two days

and put them under the command of men picked not from the top of his list of available commanders, but practically from the bottom.

The Third, Fourth and Fifth armies of Joffre were those which had sustained the terrific onslaught in the north and had been fighting in retreat, practically since the beginning.

On August 25 Joffre declared: "We have escaped envelopment"—thanks largely to the action in Lorraine, holding back the Bavarians—and, clearly seeing that he could not hope for favorable results from a great battle fought in the north, he gave the order for retreat which meant the abandonment of north-eastern France to the Hunnish hordes.

What anguish that order caused him we shall never know. He realized to the full what the people of that great, prosperous part of France would have to suffer. He was aware what the loss of those resources would mean to the French, and also what their gain would mean to the Germans. He understood the effect of retreat upon the morale of his men. And he must have been aware of the panic his order would create throughout

the yet-uninvaded parts of France where no one could know at what point the invasion would be checked. He knew that the nation's faith in him would be severely shaken, and that even his army's faith in him would be put to a supreme test.

But when a man trains himself to be a commander of men, he trains himself to go through, heroically and at any cost, what he believes must be done. To sacrifice one's self comes comparatively easy—given compelling circumstances and an obedient soul. But to sacrifice others never becomes easy to a man who respects the rights of others. And we shall never begin to comprehend men like Joffre and Foch until we shake ourselves free from any notion we may have that military expediency makes it easy for them to order great mental and physical suffering.

General Foch detached himself, on August 29, from his beloved Twentieth corps and betook himself to the little village of Machault, about twenty miles northeast of Châlons-sur-Marne, where he found assembled for his command an army made up of units from

other armies. They were all more or less strange to one another and to him.

There was the Ninth army corps, from Tours, made up of Angevins (men such as Foch had learned to know when he was at Saumur) and Vendéans (the Bretons' south neighbors). Some of these men had been fighting without respite for nine days as they fell back, with the Fourth army, from the Belgian border. With them, since August 22, had been the remarkable Moroccan division under General Humbert.

Then there was the Eleventh corps of Bretons and Vendéans, which had been through the same terrible retreat.

And—not to enumerate too far—there was that Forty-second division of infantry which was destined to play one of the most dramatic, thrilling, forever-memorable parts in all warfare. It had been in the Ardennes, and had fallen back, fighting fiercely as it came.

To help him command these weary men whose hearts were heavy with forebodings for France, Foch had, as he himself has said, "a general staff of five or six officers, gathered

in haste to start with, little or no working material, our note books and a few maps."

"Those who lived through these tragic hours near him," says René Puaux, "recall the chief questioning the liaison officers who did not know exactly where the different units were, punctuating his questions with: 'You don't know? Very well, then go and find out!'; putting together in his head the mosaic of which there were still so many pieces missing; gradually visioning a plan for bringing them together; calculating his effectives; estimating approximately his reserves of ammunition; discovering his bases of food supply."

And through all this stress he had the personal anguish of being unable to get word of his only son, Germain Foch, or of his son-in-law, Captain Becourt, both of whom had been fighting on the Belgian front.

"It was not, however," M. Puaux says, "the time for personal emotions. The father effaced himself before the soldier. There was nothing to be thought of save the country."

Thus we see Ferdinand Foch, on the eve of the first Battle of the Marne.

## XIV

### THE FIRST VICTORY AT THE MARNE

**I**T was Saturday, August 29, 1914, when General Foch went to Machault to take command of the various units he was to weld into the Ninth army.

On the Tuesday following (September 1) Joffre was quartered with his general staff at the little old town of Bar-sur-Aube, fifty miles south of Châlons, and he had then determined the limits to which he would permit the retreat of his armies.

If a stand could be taken and an offensive launched further north than the Aube River, it should be done; but in no event would the withdrawal go beyond the Seine, the Aube and the region north of Bar-le-Duc.

He then placed his armies in the field in the relation in which he deemed they would be most effective: the First army, under Gen-

## FIRST VICTORY AT THE MARNE 117

eral Dubail, was in the Vosges, and the Second army, under General Castelnau, was round about Nancy; the Third army, under General Sarrail, east and south of the Argonne in a kind of "elbow," joining the Fourth army, under General de Langle de Cary; then the Ninth army, under General Foch; then the Fifth army, under General Franchet d'Espérey; then the little British army of three corps, under General Sir John French; and then the new Sixth army, under General Manoury.

So Foch, on the third day of organizing his new command, received orders—at once terrible and immensely flattering—that he was to occupy the center of Joffre's battle line and to sustain the onslaught of Von Buelow and the famous Prussian Guards.

In the morning of Saturday, September 5, all commanders received from Joffre the now historic message:

"The moment has come for the army to advance at all costs and allow itself to be slain where it stands rather than give way."

The men to whom this order was relayed by their commanders had, five-sixths of them,

been ceaselessly engaged, without one single day's rest of any kind and much of the time without night rest either, for fourteen days, fighting as they fell back, and falling back as they fought; the skin was all worn from the soles of their feet, and what shoes they had left were stuck to their feet with blood.

"They had marched under a torrid sky," says Louis Madelin, "on scorching roads, parched and suffocated with dust. In reality they moved with their hearts rather than with their legs. According to Pierre Lasserre's happy expression, 'Our bodies had beaten a retreat, but not our hearts.' . . . But when, worn out with fatigue, faces black with powder, blinded by the chalk of Champagne, almost dying, they learned Joffre's order announcing the offensive, then the faces of our troops from Paris to Verdun beamed with joy. They fought with tired limbs, and yet no army ever showed such strength, for their hearts were filled with faith and hope."

At daybreak on Sunday, the 6th, Foch pitched his headquarters in a modern château near the little village of Pleurs, which you

probably will not find on any map except a military one, but it is some six miles southeast of Sézanne. And the front assigned to Foch ran from Sézanne to the Camp de Mailly, twenty-five miles east by a little south. The Marne was twenty-five miles to north of him. Between him and its south bank were many towns and villages; the clay pocket (ten miles long) called the Marshes of St. Gond, but far from marshy in that parching heat; and north of that the forest of Epernay. His vanguards were north of the marshes. But as that Sunday wore on, the Prussian Guards drove Foch's Angevins and Vendéans of the Ninth Corps back and occupied the marshes. The Bretons on the east of Foch's line were obliged to dislodge, and the Moroccans and Forty-second Division had to yield on Foch's left.

Thus, at nightfall of the first day's fighting, Foch's new army had given ground practically everywhere.

The next day the German attack became fiercer, and it seemed that more ground must be yielded.

That was the day when Foch made his memorable deduction: "They are trying to throw us back with such fury I am sure that means things are going badly for them elsewhere and they are seeking compensation."

He was right! Von Kluck was retiring in a northeasterly direction under Manoury's blows; and even Von Buelow (whom Foch faced) was withdrawing parts of his troops from the line at Foch's left.

But the attempt to break through the center Foch held, waxed fiercer as the Germans realized the strength opposing them on their right.

And on Tuesday, the 8th, Foch was unable to hold—save at certain points—and had to move his headquarters eleven miles south, to Plancy.

He had now reached the Aube, beyond which Joffre had decreed that he must not retire. On its north bank his gallant army must, if it could not do otherwise, "allow itself to be slain where it stands rather than give way."

On that evening he sent Major Réquin to the Forty-second Division with orders for the morrow. The most incredible orders!

## FIRST VICTORY AT THE MARNE 121

The enemy had found his point of least resistance—on his right wing. He ought to strengthen that wing, but he could not. All the reserves were engaged—and the enemy knew it as well as he did. And it is a fixed principle of war not to withdraw active troops from one part of the line to strengthen another.

Only one part of his army had had any success that day: Toward evening the Forty-second Division and the Moroccans had made an irresistible lunge forward and driven the enemy to the north edge of the marshes.

They were weary—those splendid troops—but they were exalted; they had advanced!

Foch believes in the power of the spirit. He appealed to the Forty-second to do an extraordinary thing—to march, weary as it was, from left to right of his long line and brace the weak spot. And to cover up the gap their withdrawal would make he asked General Franchet d'Espérey to stretch out the front covered by his right wing and adjoining Foch's left.

In a letter to me, Lieutenant Colonel (then

Major) Réquin gives some graphic bits descriptive of that historic errand. He was a sort of liaison officer between General Grossetti, commanding the Forty-second Division, and the latter's chief, General Foch, his special duty being to carry General Foch's orders to General Grossetti and to keep the army chief informed, each evening, how his commands were being carried out.

"It was 10 P.M.," he writes, "when I roused General Grossetti from his sleep in the straw, in the miserable little shell-riddled farm of Chapton.

"The order astonished him; but like a disciplined leader, he started to execute it with all the energy of which this legendary soldier was capable."

The Forty-second came! While they were marching to the rescue the Prussian Guard in a colossal effort smashed through Foch's right. They were wild with joy. The French line was pierced. They at once began celebrating, at La Fère-Champenoise.

When this was announced to Foch he telegraphed to general headquarters:

## FIRST VICTORY AT THE MARNE 123

"My center gives way, my right recedes; the situation is excellent. I shall attack."

For this, we must remember, is the man who says: "A battle won is a battle in which one is not able to believe one's self vanquished."

He gave the order to attack. Everything that he cared about in this world was at stake. This desperate maneuver would save it all—or it would not. He gave the order to attack—and then he went for a walk on the outskirts of the little village of Plancy. His companion was one of his staff officers, Lieutenant Ferasson of the artillery; and as they walked they discussed metallurgy and economics.

There could be nothing more typically French or more diametrically opposed to the conceptions of French character which prevailed in other countries before this war. And I hope that if Lieutenant Ferasson survives, he will accurately designate (if he can) exactly where Foch walked on that Wednesday afternoon, September 9, when, his center having given way, his right wing receded, he pronounced the "situation excellent," gave the

order for attack, and went out to discuss metallurgy.

Toward six o'clock on that evening the Germans, celebrating their certain victory, saw themselves confronted by a "new" French army pouring into the gap they had thought their road to Paris.

The Forty-second Division (more than half dead of fatigue, but their eyes blazing with such immensity and intensity of purpose it has been said the Germans fled, as before spirits, when they saw these men) had not only blocked the roundabout road to Paris; they had broken the morale of Von Buelow's crack troops. Without this brilliant maneuver and superb execution the successes of all the other armies must have gone for naught.

"To be victorious," said Napoleon, "it is necessary only to be stronger than your enemy at a given point and at a given moment."

Foch's preferred way to take advantage of that given point and moment is with reserves, which he called the reservoirs of force. "The art of war consists in having them when the enemy has none."

But as there were no reserves available at that first Battle of the Marne, he exemplified his other principle that conditions must be met as they arise.

"I still seem," says René Puaux, "to hear General Foch telling us, one evening after dinner at Cassel several months later, about that maneuver of September 9.

"He had put matches on the tablecloth"—some red matches which Colonel Réquin treasures as a souvenir—"and he illustrated with them the disposition of the troops engaged. For the Forty-second Division he had only half a match, which he moved here and there with his quick, deft fingers as he talked.

"The match representing the Twelfth German Corps (which with the Prussian Guard was cutting the gap in Foch's weak spot) was about to make a half-turn which would bring it in the rear of the French armies.

"The general, laying down the half-match that was the Forty-second Division, made an eloquent gesture with his hand, indicating the move that the Forty-second made.

"'It might succeed,' he said, laconically, 'or

it might fail. It succeeded. Those men were exhausted; they won, nevertheless.' ”

At nine o'clock the next morning (September 10) the Forty-second entered La Fère-Champenoise, where they found officers of the Prussian Guard lying, dead drunk, on the floors in the cantonments, surrounded by innumerable bottles of stolen champagne where-with they had been celebrating their victory.

Two days later Foch was at Châlons, to direct in person the crossing of the Marne by his army in pursuit of the fleeing enemy.

“The cavalry, the artillery, the unending lines of supply wagons,” says Colonel Réquin, “the infantry in two columns on either side of the road; all this in close formation descending like a torrent to resume its place of battle above the passage on the other side of the river; was an unforgettable sight and one that gave all who witnessed it an impression of the tremendous energy General Foch has for the command of enormous material difficulties.”

## XV

### SENT NORTH TO SAVE THE CHANNEL PORTS

**G**ERMANY'S plan to enter France by the east gate, in Lorraine, was frustrated with the aid of Foch.

Her plan to smash through the center of the armies on the Marne was frustrated, with the very special aid of Foch.

Blocked in both these moves, there was just one other for Germany to make, then, on the western front.

And on September 14, Joffre, instead of celebrating the victory on the Marne, was deep in plans to forestall an advance upon the Channel ports, and began issuing orders for the transfer of his main fighting bodies to the north.

All this, of course, had to be done so as to

leave no vulnerable spot in all that long battle line from Belfort to Calais.

Joffre had clearly foreseen the length of that line. He predicted it, as we have seen, in 1912. Doubtless he had foreseen also that it would be too long a line to direct from one viewpoint, from one general headquarters. What he was too wise to try to foresee before the war began was, which one of France's trained fighting men he would call to his aid as his second in command. He waited, and watched, before deciding that.

And late in the afternoon of October 4 he telegraphed to General Foch at Châlons, telling him that he was appointed first in command under the generalissimo, and asking him to leave at once for the north, there to coordinate the French, English and Belgian forces that were opposing the German march to the sea.

Five weeks previously Foch had been called to the vicinity of Châlons to assemble an army just coming into existence. Now he was called to leave Châlons and that army he had come to know—that army of which he must have

been so very, very proud—and go far away to another task of unknown factors.

But in a few hours he had his affairs in order and was ready to leave.

It was ten o'clock that Sunday night when he got into his automobile to be whirled from the Marne to the Somme.

At four in the morning he was at Breteuil, where General Castelnau had the headquarters of his new army, created on September 20 and designated to service on Manoury's left. General Castelnau had not yet heard of the generalissimo's new order. He was sound asleep when the big gray car came to a stop at the door of his headquarters after its one-hundred-and-fifty-mile dash through silent towns and dark, war-invested country.

Six weeks ago Foch had been his subordinate. Then they became equals in command. Now the magnificent hero of Lorraine who, before the war, had done so much on the Superior War Council to aid Joffre in reorganizing the army, rose from his bed in the chill of a fall morning not yet dawned, to greet his superior officer.

Some black coffee was heated for them, and for two hours they discussed the problems of this new front—Castelnau as eager to serve under Foch, for France, as, eight weeks ago, Foch had been to serve under Castelnau. If the sublime unselfishness of such men could have communicated itself to some of the minor figures of this war, how much more inspiring might be the stories of these civilian commanders!

At six o'clock Foch was under way again—to Amiens, Doullens, St. Pol, and then, at nine, to Aubigny, where General Maud'huy had the headquarters of his army, holding the line north of Castelnau's.

The difficulties of Foch's new undertaking were not military alone, but diplomatic. He had to take account of the English and Belgian armies, each under independent command, and each small. It was the fitness of Foch for the diplomacy needed here, as well as his fitness for the great military task of barring the enemy from the Channel ports, that determined Joffre in nominating him to the place.

In 1912 General Foch had been the head

of the French military commission sent to witness the British army maneuvers at Cambridge.

He speaks no English; and not many British generals at that time spoke much French. Yet he somehow managed to get on, with the aid of interpreters, so that his relations with the British officers were not only cordial, in a superficial social way, but important in their results of deepened understanding on his part and of respect on theirs.

His study of what seemed to him the military strength and weakness of France's great neighbor and ally was minute and comprehensive.

In his opinion, the soldiers of Britain were excellent; but he was fearful that their commanders lacked seasoned skill to direct them effectively. This lack he laid to that apparent inability to believe in the imminence of war, which was even more prevalent in Britain, with her centuries of inviolate security, than in France.

Two years before the long-suspended sword fell, Foch foresaw clearly what would be the difficulties in the way of England when she

should gird herself for land conflict. Doubtless he had resolved in his mind plans for helping her to meet and to overcome them.

Now he was placed where he could render aid—where he *must* render aid.

After the Battle of the Marne Sir John French wanted his army moved up north, nearer to its channel communications—that is to say, to its source of supplies. And on October 1 Joffre began to facilitate this movement. It was just well under way when Foch arrived in the north.

And on October 9 the gallant Belgian army withdrew from Antwerp and made its way to the Yser under cover of French and British troops.

Foch soon saw that an allied offensive would not be possible then; that the most they could hope to do was to hold back the invading forces.

Until October 24 he remained at Doullens, twenty miles north of Amiens. Then he removed his headquarters to the ancient town of Cassel, about eighteen miles west and a little south of Ypres.

## TO SAVE THE CHANNEL PORTS 133

From there he was able to reach in a few hours' time any strategic part of the north front and from this actual watch-tower (Cassel is on an isolated hill more than 500 feet high, and commands views of portions of France, Belgium, and even—on a clear day—of the chalky cliffs of England; St. Omer, Dunkirk, Ypres, and Ostend are all visible from its heights), he was to direct movements affecting the destinies of all three nations.

The Belgians, whose sublime stand had thwarted Germany's murderous plan against an unready world, were a sad little army when they reached the Yser about mid October. It was not what they had endured that contributed most to break their spirit; but what they had been unable to prevent.

To those heroic men who had left their beautiful country to the arch-fiends of destruction, their parents and wives and children to savages who befoul the name of beasts; who no longer had any possessions, nor munitions wherewith to make another stand on Belgian soil; to them Foch took fresh inspiration with his calm and tremendous personality; to them

he sent his splendid Forty-second Division to swell their ranks so frightfully depleted in Honor's cause; to them he gave the suggestion of opening their sluices and drowning out of their last little corner of Belgium the enemy, they could not otherwise dislodge.

This done, the next problem of Foch was to establish relations with Sir John French whereby the most cordial and complete co-öperation might be insured between the British Field Marshal and the French commander of the armies in the north.

There are several graphic accounts of interviews which took place between these generals.

It was on October 28 that Foch saw the success of the opened sluices and the consequent salvation to the heroic Belgians of a corner of their own earth whereon to maintain their sovereignty.

On the 30th the English suffered severe reverses in spite of the aid lent them by eight battalions of French soldiers and artillery reinforcements. In consequence, they had had to cede considerable ground, their line was

pierced, and the flank of General Dubois' army, adjoining theirs, was menaced.

When word of this disaster reached Foch that night he at once set out from Cassel for French's headquarters at Saint Omer.

It was 1 A.M. when he arrived. Marshal French was asleep. He was waked to receive his visitor.

"Marshal," said Foch, "your line is cracked?"

"Yes."

"Have you any resources?"

"I have none."

"Then I give you mine; the gap must be stopped at once; if we allow our lines to be pierced at a single point we are lost, because of the masses our enemy has to pour through it. I have eight battalions of the Thirty-second Division that General Joffre has sent me. Take them and go forward!"

The offer was most gratefully received. At two o'clock the orders were given; the gap was stopped.

Nevertheless, the British despaired of their

ability to hold. Marshal French had no reserves, and decided to fall back.

A liaison officer hastened to notify General Dubois that the British were about to retire, and General Dubois betook himself in all speed to Vlamertinghe, the Belgian headquarters, to notify their commanding general. Foch happened to be with the Belgian general. And while these three were conferring, the liaison officer (Jamet) saw the automobile of Marshal French pass by.

Realizing the importance of the British commander's presence at that interview, Jamet ventured to stop him and suggest his attendance.

Foch implored French to prevent retreat. French declared there was nothing else for him to do—his men were exhausted, he had no reserves. Foch pointed out to him the incalculable consequences of yielding.

"It is necessary to hold in spite of everything!" he cried; "to hold until death. What you propose would mean a catastrophe. Hold on! I'll help you."

And as he talked he wrote his suggestions

## TO SAVE THE CHANNEL PORTS 137

on a piece of paper he found on the table before him, and passed it to the British commander.

Marshal French read what was written, at once added to it, "execute the order of General Foch," signed it, and gave it to one of his staff officers.

And the Channel ports were saved.

But a greater thing even than that was foreshadowed: Foch had begun to demonstrate what was in him before which not only the men of his command must bow but the generals of other nations also.

One of the staff officers of General Foch who was closely associated with him there in the north in that time of great anxiety, has given us a pen-picture of the chief as his aides often saw him then. Doubtless it is a good picture also, except for differences in trifling details, of the great commander as he has been on many and many a night since, while the destinies of millions hung in the balance of his decisions.

"All is silence. The little town of Cassel is early asleep. On the rough pavement of the

Grande Place, occasional footsteps break the stillness. Now they are those of a staff officer on his way to his billet. Now it is the sentry moving about to warm himself up a bit. Then silence again.

“In a little office of the Hotel de Ville, a man is seated at a table. His elbows are on a big military map. A telephone is at his hand. He waits—to hear the results of orders he has given. And while he waits he chews an unlighted cigar and divides his attention between the map and the clock—an old Louis XVI timepiece with marble columns, which ticks off the minutes almost soundlessly. How slowly its hands go round! How interminable seems the wait for news!

“Someone knocks, and Colonel Weygand, chief of staff, enters; he has a paper in his hand: ‘Telephoned from the Ninth army at 1.15 A.M.’ . . .

“The general has raised his head; his eyes are shining.

“‘Good! good!’

“His plans are working out successfully; the reinforcements he sent for have arrived in

time. There is nothing more he can do now; so he will go to bed.

"A last look at the map. Then his eyeglasses, at the end of their string, are tucked away in the upper pocket of his coat. The general puts on his black topcoat and his cap.

"In the hall, the gendarme on guard duty gets up, quickly, from the chair wherein he is dozing.

"The general salutes him with a brisk gesture, but with it he seems to say: 'Sleep on, my good fellow; I'm sorry to have disturbed you.'

"At the foot of the grand staircase, the sentry presents arms; and one of the staff officers joins the commander, to accompany him to the house of the notary who is extending him hospitality.

"A few hours later, very early in the morning, the general is back again at his office."

Thus he was at Cassel, as he directed those operations on the Yser by which he checked the German attempt to reach Calais and Dunkirk, and revealed to the military world a new strategist of the first order.

By November 15 (six weeks after arriving in the north) Foch had the high command of the German army as completely thwarted in its design as it had been at the Marne. It had fallen to Foch to defeat the German plan on the east (Lorraine), in the center (Marne), and on the west (Ypres). And the consequences of this frustration that he dealt them in Flanders were calculated to be "at least equal to the victory of the Marne." Colonel Réquin calls that Battle of the Yser "like a preface to the great victory of 1918."

In the spring of 1915 Foch left Cassel and took up headquarters at Frévent, between Amiens and Doullens, whence he directed those engagements in Artois which demonstrated that though trench warfare was not the warfare he had studied and prepared for, and nearly all its problems were new, he was master of it not less than he would have been of a cavalry warfare.

In the autumn of 1915, Foch moved nearer to Amiens—to the village of Dury in the immediate outskirts of the ancient capital of Picardy. For the next chapter in his history was to be the campaign of the Somme includ-

ing the first great offensive of France in the war, which, together with the Verdun defense, forced the Germans not only again to re-make their calculations, but to withdraw to the Hindenburg line.

On September 30, 1916 (just before his sixty-fifth birthday, on which his retirement from active service was due), he was "retained without age limit" in the first section of the general staff of the French army.

Honors were beginning to crowd upon him as the debt of France and of her allies to his genius began to be realized. Responsibility vested in him became heavier and heavier as he demonstrated his ability to bear it. But always, say those who were nearest him, "a great, religious serenity pervaded and illumined his soul."

This is a serenity not of physical calm. Foch is intensely nervous, almost ceaselessly active. His body is frail, racked with suffering, worn down by the enormous strains imposed upon it. But the self-mastery *within* is always apparent; and it inspires confidence, and renewed effort, in all who come in contact with him.

## XVI

### THE SUPREME COMMANDER OF THE ALLIED ARMIES

**A**FTER his position in the first section of the General Staff had been made independent of age limits, General Foch was relieved (for the autumn and winter at least, during which time no operations of importance were expected) of active command of a group of armies; and at once began the organization of a bureau devoted to the study of great military questions affecting not the French lines alone but those of France's allies.

At first the headquarters of this bureau were at Senlis, near Paris. Then they were moved close to France's eastern border where Foch and his associates studied ways and means of meeting a possible attack through Switzerland—if Germany resolved to add that

GENERAL PÉTAÏN—MARSHAL HAIG—GENERAL FOCH—  
GENERAL PERSHING

crime to her category—or across northern Italy.

So clearly had Foch foreseen what would happen in the Venetian plain, that he had his plan of French reinforcement perfected long in advance, even to the schedule for dispatching troop trains to the Piave front.

In January, 1917, Marshal Joffre reached the age of retirement (65). He was venerated and loved throughout France as few men have ever been. Gratitude for his great gifts and great character filled every heart to overflowing. His country had no honor great enough to express its sense of his service to France. Yet it was felt that for the operations of the future, the interests of France and of her allies would be best furthered with another strategist in command of the armies in the field. Joffre's retirement was therefore effected.

Joffre is an engineer, a master-builder of fortifications, a great defense soldier. But defense would not end the war. France must look to her greatest offensive strategist.

There could be no question who that strategist was. No one knew it quite so well as

Marshal Joffre. And one of the most splendid things about that mighty and noble man is the spirit in which he concurred in (if, indeed, he did not suggest) the change which meant that another should lead the armies of France to victory.

The appointment of General Foch as head of the General Staff was made on May 15, 1917, while Marshal Joffre was in the United States to confer with our officials regarding our part in the war. On the same date General Philippe Pétain, the heroic defender of Verdun, who had been Chief of Staff for a month, was appointed Commander-in-Chief of all French armies operating on the French front.

General Foch installed himself at the Invalides, and addressed himself to the study of all the allies' fronts, the assembling American army, and to another task for which he was signally fitted: that of coördinating the plans and purposes of the Generalissimo and the government.

Wherever General Foch goes, one finds him creating harmony and, through harmony, doubling everyone's strength.

He "gets on" with everybody, but not in the way that sort of thing is too generally done—not by methods which have come to be called diplomatic and which involve a great deal of surface affability, of wordy beating about the bush and concealing one's real purposes from persons who see his hand and wonder if they are bluffing him about theirs.

Foch has no stomach for this sort of thing. His whole bent is toward discovering the right thing to do and then making it so plain to others that it is the right thing that they adopt it gladly and coöperate in it with ardor.

In council he is still the great teacher striving always not merely to make his principles remembered, but to have them shared.

The eminent French painter, Lucien Jonas, who has served in Artois, at Verdun, on the Somme and in Italy, and has been appointed painter of the Army Museum at Des Invalides, was commissioned to make a picture of General Foch holding an allies' council of war at Versailles.

It was, of course, impossible for Jonas to be actually present at a council meeting. But

it was arranged that he should sit outside a glass door through which he could see all, but hear nothing.

"General Foch," he tells us, "held his auditors in a sort of fascination. One felt that in his explanations there was not a flaw, not a hesitancy. All seemed clear, plain, irresistible."

This power was his in great degree in the years before the war. But now men who listen to him know that his perceptions are not merely logical—they are workable. His performances prove the worth of his theories.

On March 21, 1918, Ludendorff launched his great offensive against the British army. The line bent; it cracked. Amiens seemed doomed; the British in France were threatened with severance from their allies—with envelopment!

After four days of onrushing disaster a conference was called to meet at Doullens—a conference of representatives of the allied governments. Something must be done to coördinate the various "fronts," to put them under a supreme command.

Foch was hastily empowered to order whatever he deemed advisable to prevent the separation of the English and French armies. It is apparent that the wide powers thus hurriedly given to him were bestowed with the approval of every member of the conference. In October, 1918, however, in responding to a note of greeting from Lloyd-George on the occasion of his sixty-seventh birthday, Foch recognized the weight of the British Prime Minister's influence at the conference:

"I am greatly touched," he replied, "by your congratulations and thank you sincerely.

"I do not forget that it was to your insistence that I owe the position which I occupy to-day."

Foch's new responsibilities were laid upon him on March 26. By evening of the 28th he had the situation so well in hand that he was able to hold in check the German onslaught without even employing all the troops he had brought up for that purpose. He had averted what threatened to be the worst disaster of the war, and he had reserves in readi-

gaged in the greatest and most glorious battle in history."

It would not be possible for Marshal Foch to make any statement or give any special evidence, now, revealing what he thinks of any of the allied commanders fighting with him. Doubtless he has high respect and regard for them all. But I cannot help hazarding a guess that he finds General Pershing peculiarly to his liking and admiration, and that they comprehend each other almost without need of explanations.

We do know, however, what the French people think of Pershing's action in putting himself and all that he commands under the directing will of Foch. Their word for his behavior is "superb."

And that there will be any difference of opinion between Foch and Pershing over the essentials of victory seems quite beyond the probabilities.

I have tried to give some slight impression of the manner of man he is to whose broad statesmanship, great generalship and high moral perceptions we have so gladly, con-

fidently intrusted decisions affecting not only our destiny alone, but that of generations yet unborn.

I might, in these last paragraphs, essay a summary of what I have felt about Foch during the period I have been exclusively occupied with reading about him, thinking about him, writing about him.

But it seems to me much more fitting to give the impressions of some of those who have been in personal contact with him.

On April 5, a week after his appointment to the supreme command was announced, he granted an interview to a group of war correspondents. Their various accounts differ very slightly. Instead of quoting any one I will make a digest of them.

They found the general installed in a provincial mansion, place not named. The room he occupied was nearly bare; an old table, an armchair, a telephone, a huge war map, no profusion of papers, no "air of importance."

Foch was writing in a notebook. He rose, when he had finished his entry among those epoch-making memoranda, and received his

visitors. He had but a few minutes to give, yet he realized the importance of the occasion and treated it accordingly. These men were to send to millions of people in the great democracies of France, Britain and America their pen pictures of the man just invested with the greatest military responsibility any man in the world's history has ever borne. Battles must be fought, but also those people had a right to such a sense of participation as only their press could give them; it was their issue; their attitude toward it was the foundation of their nation's morale. Foch has neither time nor taste for talk about himself, but he is no war autocrat; he is, as he constantly reiterates, a son of France, defending human liberties. He might not have much time to give journalists, but it is not in him to minimize their place in a world where the will of the majority prevails and the press does much to shape that will.

His manner on that occasion was calm, unhurried, but very direct, to the point.

"Well, gentlemen," said he, "our affairs are not going badly; are they? The boche has

been halted since March 27. He has, doubtless, encountered some obstacle. We have stopped him. Now we shall endeavor to do better. I do not see that there is anything more to say.

“But as to yourselves, keep at your task. It is a time when everyone ought to work steadfastly. Work with your pens. We will go on working with our arms.”

“I regret,” wrote Lieutenant d’Entraygues in the Paris *Temps*, “only one thing: that all the people of France were not able to see and hear this soldier as he spoke to us. They would know why it is not possible to doubt our victory.”

That the work did go on, that Marshal Foch and all under his command kept at their task until the glorious consummation was reached, all the world has acclaimed.

As an editorial writer in the *New York Evening Sun* says: “We do not know what the judgments of military critics will be when they have carefully studied and sifted the evidence, but to a layman it looks as if Foch was not merely a very great general but one

of the greatest generals of all recorded history . . . as great a general as Napoleon or Cæsar or Hannibal or Alexander.”

All honor to Foch the man, a Frenchman of great gifts and great ideals but as modest as he is capable and conscientious.

We may not be privileged to meet our hero face to face, but we may in these momentous times think of him as René Puaux describes him:

“No man is more modest, more simple. Above the indomitable energy which characterizes him there is a sad tenderness, a grand melancholy.

“I seem again to see him going, alone, to the church at Cassel, when it was deserted, there to meditate on his task and to seek comfort for the great grief of which he never spoke.

“At times his eyes seemed to say: ‘Young men, you do not know what a father suffers when mourning has entered his home to bide there forever. My only son is taken, and one of my daughters is widowed. I shall find in my home, which I left in the joyousness of

a midsummer Sunday, little orphans who have never even known their fathers.

“I approach the twilight of my life with the consciousness of a good servant who will rest in the peace of his Lord. Faith in eternal life, in a good and merciful God, has sustained me in the hardest hours. Prayer has illumined my soul.

“Our France has been torn and murdered. There are thousands and thousands of old fathers who, like me, have lost all they loved best, all the hope of their race. I am one with them at heart. I know what they suffer.

“But we have no right, now, to think about ourselves. The cause of our country is greater.

“Over there, among the enemy, emperors and bedizened princes—all well shielded from danger—prance about and make great political capital of sending their subjects to be massacred.

“We, here, are humble sons of the soil of France, who defend our liberties. Each one does his best. I know that we shall have the victory. It will be complete, and our dead will be avenged. But it is necessary to work,

to fight on, to meet, with all the resources of French spirit, the shocks of the barbarian masses. Spirit will conquer matter.

“‘Without a high ideal, without a spiritual conception of life, it is not possible to rise above feebleness and discouragement. Great sacrifices are demanded of you, young men, they will be demanded of you to the end. Accept them as I have accepted mine. Not only our France but all humanity is at stake. Liberty must triumph first. Afterward we may weep in our silent homes over which float the standards of victory.’”

It is thus I would help you to think of him: mighty in spirit, strong in faith, supreme in strategy, immensely broad in understanding—a very great man; but too great a man to be a “superman”; and withal, a tender, heart-broken old father to whom the laying down of arms means not the leisure to wear laurels, but the right to sit again by his hearth, now desolate, and think back on happy days and forward to a reassembled group in the house not made with hands.
