PREFACE.

~~~~~

THIS Dictionary was commenced as an amended edition of that written by M. Ernest Bosc, architect of Paris, and contains the 450 engravings published in the French work, to which about 250 more have been added. Little or nothing, however, of the text of M. Bosc's work has been left standing; his definitions having, in the process of revision under reference to original works, almost entirely disappeared. The whole work, as it now stands, has been drawn from, or carefully corrected by, the best authorities in each of its special branches. Considerable prominence has been given to ARCHITECTURE, from the French original corrected from English writers; to CHRISTIAN ANTIQUITIES from *Martigny*, and the Dictionary of *Dr. Smith and Professor Cheetham*, and other authorities; to MEDIÆVAL ARMOUR, and terms of CHIVALRY, chiefly from *Meyrick's Ancient Armour*; to COSTUME from *Planché* and *Fairholt*; to HERALDRY from *Boutell's* and *Mrs. Bury Palliser's* works; to POTTERY, the substance of the articles on this subject being derived from *M. Jacquemart's* work; to NEEDLEWORK, IVORIES, MUSICAL INSTRUMENTS, GOLDSMITHS' WORK, PAINTERS' MATERIALS AND PROCESSES ANCIENT AND MODERN, COLOUR, &c., with references to the several authorities referred to.

The GREEK AND ROMAN ANTIQUITIES, which are the principal part of M. Bosc's work, have been in this volume reduced to the smallest possible compass: the Dictionaries of Dr. Smith and Rich must be referred to by those who require fuller definitions upon this subject, which would of itself fill ten such books as the present.

A few INDIAN, CHINESE, and JAPANESE TERMS, which have come into ordinary use in art, have been sought out and inserted: in the first-mentioned

*Dr. Birdwood's Handbooks* have been a most useful guide. Finally, it is necessary to state, that many words essential to the completeness of the work would have been in danger of omission, if I had not had before me *Mr. Fairholt's* admirable *Dictionary of Art Terms*, which, occupying a more restricted ground than this, is so thorough and accurate in dealing with all that it professes to include, that the only *raison d'être* of this work is the very much wider and different ground that it covers, and the greater condensation of its definitions. Obviously the substance of every statement in the work is borrowed from some previous writer on the subject, and it is evident that a Dictionary of Reference is not a convenient vehicle for theory or invention.

The appended list of CLASSIFIED CATALOGUES which have been prepared by direction of the authorities of the South Kensington Museum, will have the additional use of referring the reader to the fountain-head at which he can verify and amplify the condensed information that this work supplies.

ILLUSTRATED DICTIONARY OF WORDS

USED IN

ART AND ARCHÆOLOGY.

ABBREVIATIONS—Arch. *Architectural*; Chr. *Christian*; Egyp. *Egyptian*; Fr. *French*; Gr. *Greek*; Her. *Heraldic*; It. *Italian*; Lat. *Latin*; Med. *Mediæval*; O. E. *Old English*; Orient. *Oriental*; R. *Roman*.

Aar or **Aarou**, Egyp. A plain in a supra-terrestrial region, which corresponded, with the Egyptians, to the Elysian Fields of the Greeks and the Asgard of Scandinavian mythology.

Fig. 1. Abaculi used as pavement.

Abaculus, Gr. and R. (a diminutive of *abacus*, q. v.). A small square or cube of glass, or some vitreous composition made to imitate stone or glass of various colours. *Abaculi* were employed for the inlaid-work of pavements, or the incrustations of mosaic.

Abacus, Gr. and R. (ἄβαξ, a slab or board).
1. In general a rectangular slab of stone, marble, or terra-cotta. 2. A board or tray used in arithmetical calculations, and constructed for reckoning by tens. 3. A play-board divided into compartments, a kind of back-gammon in use in antiquity. The same term was also applied to a board used for another game of skill, the *ludus latrunculorum*, which was more like our chess. 4. A side-board on which were displayed, in the *triclinium*, or dining-room, silver plate and other

table utensils. 5. A slab of marble, used for a coating in the decoration of a room or apartment of any kind. 6. A square slab of terra-cotta or wood, placed by the earliest builders at the top of wooden columns, in order to give them a broader head, and so afford a better support to the beams which rested on them. It was this motive that gave rise to the formation of the *abacus* of the capital of a column.

Abaton or **Abatos**, Gr. (α, βάρδς, inaccessible). A term used generally to denote any inaccessible place, such as the *cella* of a temple, an adytum from which the profane were excluded. The term *Abaton* denoted more particularly a building in the city of Rhodes, which contained, together with two statues in bronze, a trophy commemorating a victory gained over the Rhodians. This memorial had been placed in the building by queen Artemisia, who had consecrated it to a divinity. To destroy it would have been a sacrilege, and as no one could be allowed to penetrate into the interior of the *Abaton*, without the defeat of the Rhodians becoming known, all access to it was forbidden.

Abezzo, *Olio di*, It. Strasburg Turpentine (q. v.).

Ablutions, Chr. There were various ablutions: that of the head (*capitilavium*), as a preparation for unction in baptism; that of the hands (*aquamaniæ*), during Mass, &c.; that of the feet (*pedilavium*), including the ceremony of washing the feet of the poor, performed on Maundy Thursday, by the Pope. (Fig. 2.)

Abococke, Med. Cap of estate, worn by kings on their helmets: "a huge cappel of estate. called

Abococke, garnished with two rich crownes ;” 15th century.

Abolla, Gr. and R. (*ἀναβολή*, a throwing back and around). A cloak made of a piece of cloth folded double and fastened round the throat by a brooch. *Abolla major* was the name given to

Fig. 2. Ewer for ablutions (Persian).

the ample blanket in which the Greek philosophers were accustomed to wrap themselves. This cloak was adopted by the philosophers as an instance of their humility, because it was mostly worn by the poorer classes at Rome. Fig. 3 is a representation of one of the lictors, with his fasces on his shoulder, and wearing the *abolla*.

Abraxas, Gr. (a mystical or cabalistic word formed of the Greek letters $\alpha, \beta, \rho, \alpha, \xi, \alpha, \varsigma$). Cut stones or gems of very various shapes, upon which are engraved the words Abraxas, Abrasax. They are also known as *Basilidian* stones or gems, because they constituted the symbols of the gnostic sect of the Basilidians. Certain peoples looked upon them as magic amulets against particular maladies and demoniacal influences. The impressions on these stones are very varied ; cabalistic figures, the signs Λ and Ω , and the word $\text{IA}\Omega$, which designates the Supreme Being. Numerous explanations have been sought for this term *abraxas* ; some philologists assert that it comes from the Persian [or Pehlvi], and that it signifies *Mithra* ; others derive it from the Hebrew, or the Coptic, while others again recognize in it only a numerical sign, the letters of which, added together, would give the number

365, or the number of days that make up the year, and in this case *abraxas* would symbolize the annual revolution of the sun. A figure often found upon Abraxas stones is that of a serpent with a radiated lion's head (*Chnouphis*), which rears itself amid seven stars. The reverse of these stones often bears the inscription ΤΩ ΧΝΟΥΦΙ , "To Chnouphis."

Fig. 3. A Lictor with the fasces, wearing the *abolla*.

Absidole. Diminutive of *apse*, and thus used to denote a small apse terminating a lateral nave, while the apse closes the central or chief nave. (See **ABSIS**.)

Absis or **Apse**, R. (*ἀψίς*, a bow or vault). Any enclosure of semicircular form terminating a room, hall, &c. There was an *absis* in the

Basilica (q.v.), or court of justice, and it was in the semicircular recess thus formed that the judges' seats were placed. Many temples also had an *absis* attached to them, and there is one in particular of this description well known to all archæologists. This is the *absis* of the temple of Venus at Rome, which was built by the emperor architect Hadrian. (See APSE.)

Abutment, Arch. called also **Impost**. The solid part of a pier from which an arch immediately springs.

Abydos, Tablets of, Egypt. Under this term are designated two hieroglyphic inscriptions containing the names of Egyptian kings. These tablets were graven upon the walls of a *cella* in a small temple at Abydos, in Upper Egypt; hence their name. The first tablet, the beginning of which was destroyed at the time of its discovery, contains the names of the kings of the twelfth and eighteenth dynasties; this inscription was discovered in 1817 or 1818 by J. W. Bankes, and drawn by Caillund in 1832; it had been taken down from the wall of the temple by Mimaut, the French consul at Alexandria. It is now at the British Museum. The second tablet, which begins with Menes, who is generally supposed to have been one of the first kings of Egypt, contains a complete list of the two first dynasties, as well as a great number of names belonging to kings of the third, fourth, fifth, sixth, ninth, tenth, and eleventh dynasties. This tablet was discovered in 1864 by M. Mariette. It is reproduced in De Rouge's treatise on the six first dynasties.

Abyssus, Egypt. A Coptic word, read by some archæologists as *NOUN* (q.v.), and which signifies the *abyss*, the immensity of the celestial waters upon which sails the solar bark.

Acacia, R. A term employed by some antiquaries to denote an object held in the hand of the statue of an emperor of the Lower Empire. It usually consists of a piece of cloth, which the emperor unfurled as a signal for the games to commence.

Academies of Italy. Literary societies established during the middle ages. The principal were the *Accesi*, *Affidati*, *Amorevole* of Verona, *Animosi* of Milan, *Arcadi* of Rome, *Ardenti* of Pisa, *Ardenti* of Naples, *Ardenti* of Viterbo, *Catenati* of Macerata, *Chiave* of Pavia, *Crusca* of Florence, *Elevati* of Ferrara, *Eterea* of Padua, *Florimontana* of Anncey, *Granelleschi* of Venice, *Inflammati* of Padua, *Infocati*, *Inscensati* of Perugia, *Intronati* of Siena, *Lincei* of Rome, *Occulti*, *Offuscati*, *Ostinati*, *Rinovati*, *Sonnachiosi* of Bologna, *Trasformati* of Milan, *Travagliati*, *Unanimi*. Their devices are described under the respective headings.

Acæna, Gr. (*ἀκάλνη*), a measuring-rod; ten Greek feet in length.

Acanthus, Gr. and R. (*ἀκὴ*), a point, and

ἄθος, a flower). A plant, the ornamental foliage of which has been largely employed as an architectural decoration by different peoples. The acanthus has been applied to the ornamentation of friezes, cornices, modillions, and

Fig. 4. Architectural acanthus.

various other members of architecture, but in especial to the decoration of modillions (projecting brackets) (Fig. 4) and of Corinthian and composite capitals. There are several varieties of the acanthus; those most in use are the cultivated acanthus, or Brankursine (*Acanthus mollis*), and the spring acanthus (*Acanthus spinosa*), the foliage of which is much less beautiful, and furnished with small

Fig. 5. Bracket decorated with acanthus.

spikes which make the plant resemble a thistle. This last has also often been applied to decoration, in the Romano-Byzantine and lanceolated styles of architecture. An English name for this ornament is the "bear's claw."

Acapna, Gr. (*α*, priv., and *καπνός*, i.e. without smoke). Wood for fuel, which had undergone several operations to hinder it from smoking when put on the fire. One of the methods employed consisted in stripping the bough of the bark, immersing it in water for some days, and then leaving it to dry. In a second method, the surface was rubbed with oil or oil-tees, or else the piece of wood was plunged into the oil for a few moments. A third method consisted in slightly charring the surface of the wood by passing it through the flame. The wood prepared by this last process was also called *cocta* and *coctilia*.

Acatium, Gr. and R. (*ἀκτίον*, dimin. of *ἄκατος*, a light boat). A description of vessel belonging to the class called *actuaria*, i.e. were propelled either by sails or oars. The *acatum* was a fast-sailer much employed by the Greek pirates. The stern was of a rounded concave form (*inflexa*), and the prow was adorned with a beak (*rostrum*). (See also ACTUARIÆ.) The name

acatium was also given to a drinking-vessel which was in the form of a boat. The Roman *scapha* was a similar vessel.

Acca. A word used in the 14th century for a cloth of gold shot with coloured silk, figured with animals: from Acre in Syria.

Accesi, It. (inflamed). One of the Italian Literary Academies. Their device was a fire-cone placed over a fire, with the motto "hinc odor et fructus."

Accetta, Med. Lat. A battle-axe, or hache-d'armes.

Accidental or complementary colour, the prismatic complement of a ray of light: such are *orange to blue, green to red, and purple to yellow.*

Accidental light. An effect of light in a picture independent of the principal light, such as that on the Holy Child in the *Notte* of Correggio, or that of a candle, &c.

Acclamations, Chr. Formulas employed by the first Christians to express their grief on the occurrence of some misfortune, or on the other hand, to testify their joy at some piece of good fortune. These acclamations were imitated from the nations of antiquity [e. g. at *marriages*, "Io Hymen, Hymenæe, Talassio:" at *triumphs*, "Io, triumphe," &c.].

Accollée, Her. (1) placed side by side: (2) entwined about the neck.

Accosted, Her. Side by side.

Accrued, Her. Grown to maturity.

Accubitum, R. (ad and cubitum, an elbow). A bed or rather couch of a peculiar kind, upon which the Romans reclined at meals, and which replaced the *lectus triclinarius*. It was a kind of sofa holding only a single person, while the *lectus triclinarius* held two or three. The act of reclining on this sofa was called *accubitio* or *accubitus*, a term derived from *accubo*, to recline at table.

Acerra or Acerna, R. (prob. from acer, maple). A small square box with a hinged lid; a coffer used to hold the incense for sacrifices; whence its Latin names *arca turalis, arcula turalis, acerra turis custos*. The *acerra* appears on certain bas-reliefs among the sacred utensils. It is to be seen represented on the altar of the small temple of Quirinus, at Pompeii, underneath a garland, and above an augur's wand. It is generally met with, as being carried by the officiating priests, at religious ceremonies. The attendant carried the *acerra* in the left hand and employed the right hand to sprinkle the incense on the flame of the altar; whence the expression *libare acerra*. The term *acerra* was also used to denote a small portable altar placed before the dead, on which incense was burnt during the time the corpse was exposed to view (*collocatio*). The altar was also named, from this circumstance, *ara turicrema*.

Acetabula, R. A kind of bronze cymbals,

attached to the hands and feet, as also to the knees. The same name was also given to silver cymbals which were played by striking them with a stick of hard wood.

Acetabulum, R. (from acetum, vinegar). A cup for vinegar used by the Romans at meals.

The *acetabulum* was also a goblet used by jugglers among the Greeks and Romans to make nutmegs disappear. By the latter these jugglers were called *præstigiatores*, by the former *ψηφοκλέπται* or *ψηφοπαίκται*. Lastly, we find in Pliny the Elder that *acetabulum* was the name given to a dry measure of capacity, equal to the quarter of a *hemina* or the half of the *quartarius*, and equivalent to .1238 of a pint. [The Greek *Oxybaphon*.]

Acha, Achia, Hachia, Lat. A battle-axe.

Achelor, Achlere or Ashlar. (Arch.) Hewn stone.

Achromatic, Gr. (a priv. χρώμος, colour). The effect of an arrangement of lenses by which a coloured ray of light is rendered colourless.

Acicula, Gr. (dimin. of acus, a needle or pin). In particular a bodkin used by the Roman ladies to keep the hair in its place when curled or plaited, and to keep on false hair. The words *acicula* and *acus* are however all but synonymous. The former does not denote a bodkin of smaller size than the *acus*, but an object made of an inferior material; the *acus* being of silver, ivory or gold, while the *acicula* was simply of bone or some hard wood such as box, myrtle, olive, &c.

Fig. 6. Acinaces.

Acinaces, Orient. (ἀκινάκης; orig. a Persian word). A straight poniard resembling a very short Roman sword, used by the Eastern nations of antiquity, especially, the Medes, Persians and Scythians. It was worn by soldiers suspended from a belt round the waist, but the weapon hung either at the right or the left side, according to the nationality and accoutrements of the soldier. When, however, he wore a sword, this was always placed at the left, and the *acinaces* at the right side of the body. The handles of these weapons are generally extremely rich.

Acisculus, R. (Diminutive of ascia, an adze = a small adze). A small pick employed by stone-cutters and masons in early times. Representations of it may be seen pretty frequently on medals, in especial those of the Valerian family. [See ASCIA.]

Acketon, Fr. A quilted leathern jacket, worn under the armour, introduced from the East by the Crusaders.

Aclis or Aclyx, R. A sort of harpoon, con-

sisting of a thick short stock set with spikes. This massive weapon was chiefly employed by foreign nations, but not by the Romans. It was launched against the enemy, and drawn back by means of a cord to which it was attached, to be launched a second time. This weapon bears some resemblance to a particular kind of *angon* (or trident). (See ANTONES.)

Acoustic Vases, R. (Gr. *ἀκουστικὸς*, pertaining to the sense of hearing). Vases of earthenware or more often of bronze, which, in the theatres of antiquity, served the purpose of strengthening the voices of the actors. Vases of this kind would also seem to have been employed for the same purpose during the middle ages, for the architect Oberlin, when repairing the vault of the choir, in the ancient church of the Dominicans at Strasburg, discovered some acoustic vases there.

Fig. 7. Acrotrophum, Roman.

Acrotrophum, Gr. and R. (*ἀκρατο-φόρος*, holding unmixed wine). A table vessel for holding pure wine, while the crater (*κρατήρ*), on the other hand, contained wine mixed with water. These vessels were often dedicated to Bacchus. They were made in earthenware and metal, but those that were dedicated to the gods were of gold and silver, and had their place among the treasures of the temples. Fig. 7 represents a silver acrotrophum found at Hildesheim.

Acrolith, Gr. (*ἄκρον*, end, and *λίθος* stone). A statue covered with garments which in many cases were gilded. The extremities of these statues were of marble or stone—whence their name—more rarely of gold and ivory. The Minerva of Areia, at Plataea in Bœotia, described by Pausanias, was an *acrolith*. This was by Pheidias. The *acrolith* period is the infancy of the Greek plastic art.

Acropodium, Gr. (*ἄκρον*, end or point; and *πόδιον*, a foot). A low square plinth serving for basement to a statue and often forming part of it.

Acropolis, Gr. (*ἀκρό-πολις*, upper or higher city). From its primary meaning the term came to signify a fortified city. They were very numerous, in ancient times, in Italy, Greece

and the colonies of Asia Minor. Most ancient Greek cities were built upon hills, and the citadel on the summit of the hill was called the *acropolis*.

Acrostic, Chr. (*ἄκρον*, end, and *στῖχος*, a row or line). A combination of letters formed out of some word, which is thus made to express a thought differing from its own meaning. For instance, the Greek word *ΙΧΘΥΣ* (ICHTHUS, fish), symbolizes, in the primitive church, the name of Christ. The following is the acrostic of this word: *Ἰησοῦς, Χριστός, Θεοῦ, Υἱός, Σωτὴρ* I, CH, TH, U, S.

Fig. 8. Roman acrostolium.

Acrostolium, Gr. and R. (*ἀκροστῖλιον*, extremity of beak of a ship). An ornament employed by the ancients to decorate the upper extremity of the prows of ships. This ornament often figured among trophies, since it was the custom for the victor in a naval combat to take the *acrostolia* from the captured ships. It is frequently to be met with on the bas-reliefs of triumphal monuments. Fig. 8 shows an *acrostolium* taken from a bas-relief in the Museum of the Capitol. The object seen projecting from the acrostolium is a sounding lead.

Acroterium, Gr. and R. (*ἀκρωτήριον*, the extremity of anything). In a signification more restricted than the primary one, yet generally admitted, the term *acroteria* is applied to the plain socles and pedestals placed at the summit of buildings to support statues, groups, or other crownings. **ACROTEDIUM** was the common name for the *acrostolium*, and the taking of it away as a trophy was called *acroteriazein*.

Actia, Gr., festivals held every fourth year, at Actium, in Epirus, in honour of Apollo.

Actinic (rays of light:) chemically active.

Actuariæ, R. (see Naves). Open boats, built to attain a high degree of speed, propelled by sails and sweeps, and never fitted with less than eighteen oars. Pirates used this class of vessel exclusively.

Actuarii, R. The shorthand writers who took

down speeches in the senate. Also certain officials who answered to our commissariat officers.

Acuminated, Arch. Finishing in a point, like a lofty Gothic roof.

Acus, R. (Gr. ἀκὴ, a point). A bodkin, needle, or pin. The *acus* denoted both a needle for sewing and a pin for fastening anything. When used for the hair it was called *acus crinalis* or *comatoria*. In Christian archæology the word applies to the jewelled pins used as fastenings to papal or archiepiscopal vestments. The Roman *acus* is worn in the hair by the Italian peasant woman of the present day.

Addressed, Her. (1) Back to back; (2) pointing backwards.

Adespotoi, Gr. (ἀ-δέσποτοι, i.e. without masters). A name given to a certain class of freedmen at Sparta.

Adobare, Med. To entrust with arms (to "dub" a knight). Meyrick.

Adobes. Bricks manufactured by the ancient Peruvians.

Adramire, Med. To challenge to a duel or tournament. (Meyrick.)

Fig. 9. Plan of a Roman temple, showing the adytum.

Adytum or **Adyton**, Gr. and R. (ἄδυτον, from *a*, priv., and *δύω*, to enter). An obscure and secret sanctuary in certain temples from which the public was excluded, and into which the priests alone might enter. The little temple of Pompeii possessed an *adytum*, and it was here that was discovered the Portici Diana now in the Naples Museum. There was also an *adytum* in the temple of Delphi, which was burnt down in the first year of the 58th Olym., and rebuilt by the Corinthian Spintharus. The temple of Paphos contained in its *adytum* a representation of the goddess under the form of a column pointed at the top and surrounded by candelabra. The engraving shows the position of the adytum of a small Doric temple, now destroyed, which once stood near the theatre of Marcellus at Rome. The *adytum* was the name given to the *cella* of a temple, in which oracles were given, or the worship was connected with mysteries. See **ABATON** and **CELLA**.

Ædicula, R. (dimin. of *Ædes*, q.v.). A small house, temple, chapel, tabernacle, or even shrine. Thus the name was given to a small wooden

shrine, constructed to imitate the front of a temple, and in which were preserved the ancestors of the family (*imagines majorum*), together with the Lares and tutelar divinities.

Ægicranes, Gr. (ἄγειος, of a goat; κρᾶνον, the skull). A goat's [or ram's] head employed as a decoration by ancient sculptors. It was used chiefly to adorn altars which were dedicated to rural divinities.

Æginetan marbles. Two remarkable groups of very early (archaic) Greek sculpture, in the Glyptothek at Munich—discovered in the temple of Pallas-Athene at Ægina, and arranged by Thorwaldsen. They illustrate "the infancy of art, which lingers round symbolic representation, and has not yet grasped the full meaning and truth of nature." (*Butler's Imitative Art.*) The anatomy of the bodies and limbs at this period is greatly superior to the expression of the heads.

Ægis, Gr. In its primary meaning, a *goat-skin*. The primitive inhabitants of Greece used the skins of goats and other animals for clothing, and defence. At a later period the *Ægis* became a protective mantle; the shield of Minerva, beneath which the goddess sheltered those whom she wished to protect from the enemy's missiles. Later still the *Ægis* denoted the breastplate of a divinity, in especial that of Jupiter or Minerva, as opposed to the *lorica*, which was the breastplate of a mere mortal. The *ægis* bore in its centre the Gorgon's head, of which the serpents were arranged round the border. Minerva is generally represented wearing it, either as a cuirass or a scarf passed over the right shoulder.

Æneator (Lat. *æneus*, brazen). The name given to any musician who played on an instrument of brass (*æneum*); such as the *buccinatores*, *cornicines*, *liticines*, *tubicines*, &c. They formed a college.

Æolipylæ or **Æolipylæ**, Gr. (ἄολος, the wind; and πύλη, an orifice). A metal vase with a narrow orifice, which was filled with water and placed upon the fire, either to make the chimney draw better, or, according to Vitruvius, to show which way the wind blew.

Æolian Harp, Gr. A musical instrument that is played on by the wind passing over its strings.

Ærarium, R. (*æs*, money). The public treasury as distinguished from the private

Fig. 10. Æolipyle.

treasury of the Emperors (*fiscus*). Under the Republic the temple of Saturn served as the public treasury, and here were preserved the produce of the revenue, the public accounts and other public records. The army had a separate treasury of its own called *ærarium militare*, entirely distinct from the *ærarium publicum*. It was established by Augustus to provide for the special expenditure of the army.

Aerial perspective. The realization of the effect of intervening atmosphere in the distances of a landscape.

Æro, R. A basket made of rushes or broom, but still more commonly of osier, and used for conveying sand. It was employed by the Roman soldiery when at work on intrenchments, excavations, or fortifications, as may be seen from bas-reliefs; more particularly some of those which adorn the column of Trajan.

Æruca, R. (*æs*, bronze). A very brilliant green colour artificially made to imitate *verdigris*.

Ærugo, R. *Verdigris*, the same colour as *æruca* (q.v.), but obtained from oxide of bronze. It is difficult to establish a real distinction between the two terms, as Pliny gives the name of *æruco* (the rust of bronze) to what Vitruvius calls *æruca*. It is probable, however, that *æruca* was a kind of verdigris obtained by artificial means, while *æruco* was the natural verdigris. This has given rise to the two terms, which by many archæologists are confused together. *Æruca*, the artificial copper rust, formed by the action of wine refuse upon copper, is an acetate of copper (verdigris): while the genuine copper rust, *Ærugo*, is a carbonate of copper.

Ærumna, R. A kind of fork by which travellers carried their baggage over the shoulder.
2. An instrument of punishment for slaves. (See FURCA.)

Æs. A term used in antiquity to denote brass, copper, bronze, or any alloy of these metals. It also serves, in various connexions, to denote a number of different objects. Such as *æs candidum*, a brass mixed with silver; *æs Corinthum*, a brass mixed with gold; *æs Cyprium*, the ancient name for copper. (See also BRONZE.)

Æs grave, R. A general term current in Rome to denote any bronze money at the period when the *æs* was equal to about a pound in value.

Æs rude, R. The name given to the bronze ingots employed at Rome as ready money in exchanges and other commercial transactions.

Æs thermarum, Gr. and R. A bronze gong or metal bell hung up in the public baths, the sound of which, when struck, gave notice to the public that the baths were sufficiently warm to be ready for use.

Æs ustum. Peroxide of copper, or calcined copper.

Æsthetics, Gr. (*αἰσθάνομαι*, to comprehend).

The science of the instinctive apprehension of the harmonies.

Ætos, Gr. (*ἄετός*). A Greek word signifying *eagle*, and by analogy, a gable, pediment, or higher part of a building generally, so-called from the resemblance which these parts bear to an eagle with outstretched wings. In the same way the Greeks gave the name of *πτερά* (wings), to the outer rows of columns flanking each side of a temple.

Affidati, It. One of the Italian literary academies. Their device was a nautilus, with the motto "tutus per suprema per ima."

Affrontée, Her. Showing the full front.

Agalma, **Agalmata**, Gr. (*ἄγαλμα*, from *ἀγάλλω*, to glorify). The low pillar placed over a tomb, or the statue of a god might be *agalmata*.

Agate. A variety of quartz often employed by the engravers of antiquity. The term is a corruption of the word *Achates*, a river of Sicily, on the banks of which numerous varieties of the stone abound. Among these may be mentioned the *cerachates*, or white wax-like agate; *dendrachates*, or arborescent agate; *hemachates*, or blood-agate, so-called from its blood-like spots; and *leucachates*, or white agate. Agates were often carved into scarabæi by the Egyptians, and Babylonian cylinders have been found, made of the same material. The oriental agate is semi-transparent, the occidental is opaque, of various tints, often *veined* with quartz and jasper; hence its fitness for cutting cameos.

A celebrated *agger* was that of Servius Tullius at Rome. The art of constructing *aggeres* and other fortifications, had been learnt by the Romans from the Greeks, who in their turn had derived it from the East. It was after having penetrated into the heart of Asia under Alexander the Great, that the Greeks learned the use of siege works employed in the attack or defence of strong places, and became acquainted with various kinds of warlike engines such as the ACROBATICON, &c.

Agonalia or **Agonia**, R. A Roman festival, which derived its name from the word *agone* (shall I proceed?) the question asked of the *rex sacrificulus* by the attendant, before he sacrificed the victim. The Quirinal was called *Mons agonus*, from a festival being held there on the 17th or 18th of March, in honour of Mars. The day itself was called *Agonium martiale* or day of the Liberalia. Another explanation of the etymology of the name is that the sacrifice was offered on the Quirinal hill, which was originally called *Agonus*. (Consult Ovid. *Fasti*, i. 319—332, he suggests several explanations.)

The Egyptians used alabaster for making statues, phials, panegyric vases, canopea, small figures, and even sarcophagi; of which last that of Seti I., now in the British Museum, is an example. Alabaster was at one time frequently used for tombs and carved figures, and is now used for pulpits and other ecclesiastical purposes. A more common name, however, for this aureole is *VESICA PISCIS* (q.v.). The term of *mystical almond* was applied to the symbol expressive of the virginity of the Virgin Mary. When this word is used by early writers on art, it probably indicates *red ochre*, the red hæmatite of mineralogists. (Fairholt.)

Amber. There are two varieties of this substance, viz., the grey and the yellow amber, of which the latter only need here be more particularly noticed. Its use may be traced back to a very early antiquity, the purposes to which it was applied being the setting of jewels and furniture. It was employed by the Jews for making amulets. Amber was also used by the Egyptians in the fabrication of necklaces composed of pearls or other delicate materials. By the Romans it was sculptured into vases or statuettes. The name of *vasa electrina* was given to amber vases set with silver, and that of *electrina patera* to pateræ made of amber alone. Amber was largely used by early painters as a *varnish*, and also as a *vehicle*. It is harder than copal, and is said to be the most durable of all varnishes. It requires a long time to fit it for *polishing*. Amber is supposed to be a vegetable fossil; it is washed up by the sea, especially on the shores of the Baltic.

Amethyst, (*ἀμέθυστος*, without intoxication.) A precious stone of a more or less deep violet colour. The engravers of antiquity carved figures upon it, in especial those of Bacchus, since the stone was also used, in preference to any other, for making drinking-cups, from a belief that it possessed the virtue of dispelling intoxication. This was the origin of the Greek term. Among the ancient Jews the amethyst was one of the twelve stones compos-

ing the breastplate of the high priest; it occupied the eighth or ninth row. In Christian symbolism the amethyst (or the colour violet) signifies humility and modesty.

Amiantus, (*ἀμιάντος* [? undefiled]). A fibrous unisflammable mineral substance. It was used by the ancients for making fire-proof clothing. It was known by the name of *asbestos* (*ἄσβεστος*, unisflammable).

Amice. A piece of fine linen in the form of an oblong square, suspended over the shoulders of the clergy. *Pugin* says it is "a white linen napkin or veil worn by all the clergy above the four minor orders." *Duraud* says it is a proper covering for the head, typical of the helmet of salvation alluded to by the apostle; or of the cloth with which the Jews covered the Saviour's face, when they asked him to prophecy who struck him. Milton, in *Paradise Regained*, alludes to it,—

"Morning fair

ing which was at first constructed for the purpose of exhibiting gladiatorial shows to the Roman populace; but later on any kind of spectacle, even to a *naumachia*, or sea-fight, was exhibited there. In the engraving, A shows the

ground-plan of an amphitheatre, and B the plan of the seats.

Amphora, Gr. and R. (*ἀμφι-φορέω*). A large earthenware vessel, having a handle on each side of its neck (whence the name), and terminating in a point. Amphoræ were used for holding various kinds of produce, especially wine; they were placed side by side in an upright position in the cellar, the floor of which was covered with a deep bed of sand. The engravings represent amphoræ from Cnidus, Chio, and Samos. Amphoræ were also made of glass; and a specimen is

A phial or flask with short and narrow neck and spherical body, which was used to hold the oil requisite for bathers (*ampulla olearia*); it could also be used to hold vinegar, wine, and other beverages, and was then called *ampulla potaria*. The ampulla generally took the form of a globe or bladder, but not invariably; a lentil-shaped variety with rounded sides was very common. *Ampulla rubida* was the name given to the leather-covered flasks which were made use of by travellers or sportsmen to carry wine, vinegar, or oil. The vessel or eruet used in Christian churches for the consecrated oil or wine was hence called the AMPUL.

Ampyx, Gr. and R. (*ἀμπτυξ*, from *ἀμπέχω*, to surround). Latin *frontale*. A general term to denote any net composed of strings, bands, or ribbons, which forms a head-band. It thus denotes at once a woman's head-dress, or the ornamental strips of leather which serve as head-band for a horse. The *ampyx* worn by women was in some cases very costly, being made of gold or silver, and adorned with precious stones. The term was also applied, by analogy, to the cover of a vase. Another word for it is *amficter*.

Amulets. Objects of a very heterogeneous description, to which is superstitiously attributed the power of healing certain diseases, or averting them from men and animals. This is the meaning which attaches, in its widest sense, to the term amulet (*amuletum*). Amulets are unquestionably of Eastern origin; by the Egyptians they were looked upon as preservatives against dangers, unlucky days, enemies, &c. The varieties of them were very numerous; among others, were scarabæi, small columns, cartouches, symbolic eyes, interlacing fingers, heads of uræus, &c. A large number of stones were also employed as amulets; those of commonest occurrence are hematite, jasper, lapis lazuli, amethysts, diamonds, heliotropes, &c. Each of these amulets had its special virtue; for instance, the clear crystal worn during prayer rendered the god propitious, and compelled him to give ear to the suppliant. Coral kept every evil influence away from a house; and in Italy it is looked upon, even at the present day, as a preservative against the evil eye. In Christian archæology, the name of amulets, or in some instances, ENCOLPIA (q.v.), was given to relics, or objects of devotion, such as crosses, medals, wood from the true cross, the bones of saints, &c. Amulets were also called *periapta* (*περίαπτα*), i.e. suspended, because they were hung round the neck, and also *pyctacium*, because some amulets were folded in two. The Arabic word amulet means the same as *periapta*, that which is suspended.

Amussis, R. The exact sense of this term is not clearly defined by ancient authors, beyond

the fact that it denotes generally any kind of instrument employed by builders—especially masons—for testing the accuracy, regularity, and evenness of their work. The term is used to denote sometimes the plumb-line, rule, or square; sometimes the level, measuring-line, &c.

Anaclinterium, Gr. (ἀνακλινητήριον). The head-board of a sofa or bed, which served as a support for the bolster and the pillow on which the sleeper's head rested.

Anadem, Gr. (ἀνάδημα). In general a fillet or head-band; but in a more restricted acceptance, an ornamental band, such as was worn by women and youths among the Greeks. It was thus distinguished from the *diadema* and the *vitta*, which were also head-bands, but worn solely as the insignia of honorary, regal, or religious distinctions.

Anaglyph, (ἀνά and γλύφειν, to carve). A general term to denote any work of art that is sculptured, chased, carved, or embossed, such as cameos, bas-reliefs, or other raised work, whether in metal, marble, or ivory. When such sculptures or chasings are incised or sunk, they are called INTAGLIOS or DIAGLYPHS (q.v.). According to St. Clement of Alexandria, anaglyphs were employed by the Egyptians when they wished to hand down a panegyric of any king under the form of a religious myth. Although the words of St. Clement are very obscure, and have furnished materials for countless discussions, it is now admitted that the anaglyphs in question belong to the group of hieroglyphies which may be deciphered on the cartouches of the Pharaohs, and in which we have, in fact, panegyrics of the Egyptian kings veiled in religious myths. The Egyptians also gave the name of anaglyphs to a kind of secret writing, understood only by the initiated; even at the present day it remains undecipherable, owing to our imperfect knowledge of Egyptian mythology. (See CÆLATURA.)

or rest, and more particularly a pier, wall, or buttress. (2) The pedestal of a sun-dial, and so the sun-dial itself.

Anapiesma, Gr. and R. (ἀνα-πίεσμα, that which is pressed back). An appliance used in ancient theatres. It was a kind of trap-door by means of which deities were raised from beneath the stage so as to make them visible to the spectators. The *proscenium* contained a certain number of these trap-doors; one of them, leading from the orchestra to the front of the stage, enabled the Furies to appear; by another, marine deities made their appearance; while that through which passed the shades who ascended Charon's staircase was called *Charon's anapiesma*.

Anchor. In Christian Art, the emblem of Hope. The attribute of S. Clement, the Pope, who was bound to an anchor, and thrown into the sea. (See ANCORA.)

Ancile, R. A shield of the shape of a violin case. It was the sacred shield which, according to tradition, had fallen from heaven into the palace of Numa. It occurs frequently on medals, especially those of Augustus. The two incavations of the shield were more or less deep, and usually semicircular. But Ovid describes it as of an entirely different shape, being cut evenly all round; *Idque ancile vocat, quod ab omni parte recisum est* (Ovid, Fast. iii. 377). The SALII, or twelve priests of Mars Gradivus, had twelve such shields. The form was oval, with the two sides curving evenly inwards, so as to make it broader at the ends than in the middle. They used to beat their shields and dance.

Anclabris, Gr. and R. A small table used instead of an altar at sacrifices; it was slightly concave, so as to adapt it to hold the entrails of the victim for the inspection of the diviners. (See ALTAR.)

various meanings. (1) A small console on each side of a door supporting an ornamental cornice. (2) The arm of a chair or arm-chair. (3) A cramp of wood or metal serving to connect together courses of masonry or blocks of stone. (4) The prongs or forks at the end of the props employed by hunters to hang their nets upon. (5) An earthenware vessel used in Roman taverns for holding wine. According to the etymology of the word which in Greek signifies hollow or elbow, this bottle must have been shaped like a retort. (6) The arms or branches of the square used by carpenters and stone masons, which form an angle similar to that formed by the bent arm.

Ancora, Gr. and R. (ἀγκύρα, from ἄγκος, a bend). An anchor or piece of iron used to stop a ship. Like those now in use, the ancient anchors were generally furnished with two flukes or arms, but sometimes they had only one. In the latter case they were called *terostomos*,

a term corresponding to our modern blind anchor. A bas-relief on the column of Trajan represents an anchor placed at the bow of the vessel. In Christian archæology the anchor is a symbol of hope; an anchor is frequently met with, among Christian symbols, associ-

ated with a fish; the emblem of the Saviour (See ACROSTIC).

Ancorale, Gr. and R. Literally the cable of an anchor, and then the buoy-rope, or even the buoy itself. The ancient anchors had a ring at the end of the shank to which the buoy-rope was attached. The latter served not only to indicate the place where the anchor lay, but also to drag the flukes out of the ground when the anchor was raised.

Angel. A gold coin current in England and France in the 15th and 16th centuries. It derived its name from the figure of an angel stamped upon it. A similar coin, either of gold or silver, was current in France at various periods. From the time of Louis IX. to that of Louis XI., the gold angel was equal in value to a crown of fine gold, or a little more than fourteen francs. It was stamped with a figure of St. Michael, holding in his right hand a sword, and in his left a shield with three fleur-de-lys. Henry VI., king of England, when he was in possession of Paris, had a gold angel struck which was not above seven francs in value. It was stamped with the figure of an angel holding in his hand the shields of France and England. The same king also had a silver angel struck which was only worth about five and a half francs.

Fig. 23. Angel of the reign of Elizabeth.

Angels, (Gr. ἄγγελος, a messenger) in Christian Art are represented in nine degrees, which are divided into three categories. The first consists of Seraphim, Cherubim, and Thrones; the

They are represented as young, to show their continued strength; winged as messengers of speed; barefooted and girt to show their readiness; in robes of white indicative of purity, or in cloth of gold for their glory; the cloth of gold diapered with bands of precious stones; the emerald, emblem of *unfading youth*; the crystal, of *purity*; the sapphire, of *celestial contemplation*; and the ruby, of *divine love*. During the renaissance, Pugin complains, "the edifying and traditional representations of angelic spirits were abandoned, and, in lieu of the albe of purity and golden vests of glory, the artists indulged in pretty cupids sporting in clouds, &c." The proper attributes of the angels are trumpets, for the *voice of God*; flaming swords, for the *wrath of God*; sceptres, for the *power of God*; thuribles or censers for the *prayers of saints*, and musical instruments to emblem their *felicity*.

(Fig. 25.)

The *anulus bigemmis* was a ring set with two precious stones; *anulus velaris* was a curtain ring. A plait of hair arranged in circles round the back of the head was also called *anulus*. They were decorated with masks, leaves, and especially palms painted to imitate nature or in different colours. The Etruscans employed coloured antefixa only; many specimens of these last may be

The Union Jack is also a banner, in which the blazonry of the two nations of England and Scotland are combined, not by "quartering," but by an earlier process of "blending" the cross and the saltire in a single composition. The profusion of banners at tournaments, in feudal times, when each noble planted his own in the lists, was an element of picturesque effect. Christian archæology, *baptistry* was the name given to a building adjoining a basilica, or situated near it, in which baptism was adminis-

tered. Such is the baptistry of St. John Lateran at Rome. One of the most ancient baptisteries in France is that of St. Jean, at

Barba, Gen. The beard, whence the attributive *barbatus*, frequently employed to denote one who wears a beard. Thus *bene barbatus*, a man with a well-trimmed beard; *barbatulus*, a young man whose youthful beard had never been touched with the razor. Among many nations of antiquity the custom prevailed of curling the beard artificially, so as to obtain long curls or ringlets, *cincinnati*. (See CINCINNUS.) The Assyrians, Egyptians, Jews, Persians, Greeks, and Romans may be particularly enumerated. Shaving the beard was introduced into Rome about B.C. 300, and became the regular practice. In the later times of the republic many persons began to wear it trimmed, and the terms *bene barbati* and *barbatuli* were applied to them. Under Hadrian the practice of wearing beards was revived, and the emperors until Constantine wore them. The Romans let the beard grow as a sign of mourning; the Greeks shaved. The beard is an attribute of the prophets, apostles, and evangelists (excepting St. John); and, in ancient art, of Jupiter, Serapis, Neptune, &c. Neptune has a straight beard; Jupiter a curly silky one. The early Britons shaved generally, but always had long moustachios. The Anglo-Saxon beard was neatly trimmed or parted into double locks. The Normans originally shaved

clean, but when settled in England let all their beard grow. Close shaving prevailed among the young men in England in the 14th century; older men wore a forked beard. After sundry changes, clean shaving obtained in the reign of Henry VI., and the beard was rarely cultivated from then until the middle of the 16th century. The most extravagant fashions arose in Elizabeth's reign, and were succeeded by variations too numerous to detail.

(2) The term also denotes an out-work placed in front of a fortified castle or any other military post. In the latter acceptance the term ANTEMURAL (q.v.) is also used. The illustration is taken from the arms of Antoine de Burgundy. In this instance the barbican is a small double tower, or out-post watch-house, and the shutter-like pent-house protection of the unglazed window openings bears a striking resemblance to a modern sun-blind.

Barbitos, Gr. and R. (*βάρβιτος*). A stringed instrument which dates from a very high antiquity; it was much larger than the CITHARA (q.v.). To strike the long thick strings of the *barbitos*, a PLECTRUM (q.v.) was used instead of the fingers. The invention of this instrument is attributed to Terpander; Horace, on the contrary, says it was invented by Alcæus, and Athenæus by Anacreon. It was a kind of lyre with a large body.

Basilica (sc. aula), Gr. and R. (βασιλική, sc. στοά, i. e. royal hall).

Fig. 71. Ground-plan of a Basilica.

This term owes its original meaning to the fact that in Macedonia the kings, and in Greece the archon Basileus dispensed justice in buildings of this description. The Romans, who adopted the basilica from the above-named countries, used it as a court of justice, but besides this it became a branch of the forum, and even when it did not form a part of the latter was constructed near it, as was the case at Pompeii. Fig. 71 represents the ground-plan of this basilica, and Fig. 70 a view of the same building restored. The ground-plan of the basilica is rectangular, the width not more than half nor less than a third of the length. It was divided by two single rows of columns into three naves, or aisles, and the tribunal of the judge was at one end of the centre aisle. In the centre of the tribunal was the *curule chair* of the prætor, and seats for the judices and advocates. Over each of the side aisles there was a gallery, from which shorter columns supported the roofs; these were connected by a parapet wall or balustrade. The central nave was open to the air. Under Constantine the basilicæ were adopted for Christian churches. The early Norman churches were built upon the same plan, and the circular apsis, where the judges originally sat, used for the central altar, was the origin of the apsidal termination of the Gothic cathedrals. The first basilica was built at Rome, B.C. 182. In the Middle Ages structures resembling small churches erected over tombs were called Basilica.

During the Middle Ages the same form of litter was a common means of conveyance in England.

Botcher's first object was to obtain a paste as white and as perfect as that of the COREA; he succeeded at his first trial, and

Bronzes (ancient Chinese) are rarely seen out of the province of Fokien. The lines of metal are small and delicate, and are made to represent flowers, trees, animals of various kinds, and sometimes Chinese characters. Some fine bronzes, inlaid with gold, are met with in this province. As a general rule, Chinese bronzes are more remarkable for their peculiar and certainly not very handsome form than for anything else.

Regarded as a compound of red and black, BISTRE, it is the symbol of all evil deeds and treason. In a monastic costume it signifies renunciation. With the Moors it was emblematic of all evil. Byssus, Gr. and R. (*βύσσος*). The precise meaning of this term is unknown; there is no doubt it was a texture made of some very costly

This opinion would seem to be confirmed by Herodotus and Æschylus. The word comes from the Hebrew *butz*.

Fig. 119. Byzantine Font.

Fig. 120. Byzantine ornament on an English font.

Byzantine Period. Time, about 6th to 12th century A.D. (*Byzantium*, the Latin name of Constantinople.) Byzantine Architecture is noteworthy for a bold development of the plan of Christian places of worship. It introduced the cupola, or dome, which was often sur-

rounded by semi-domes; an almost square ground-plan in place of the long aisles of the Roman church; and piers instead of columns. The apse always formed part of

Byzantine buildings, which were richly decorated, and contained marble in great profusion. St. Sophia, Constantinople (A.D. 532—537), is the finest example of Byzantine architecture. St. Mark's, Venice (A.D. 977), and the Cathedral of Aix-la-Chapelle (A.D. 796—804), are also of pure Byzantine style. Byzantine Painting was that which succeeded the decline of the early Christian Art in the catacombs and basilicas of Rome, and which preceded and foreshadowed the Renaissance of Art in Italy. In style it was based on that of the catacombs, but with a reminiscence of the excellence of ancient Greece; it was, however, restrained and kept within narrow limits by the conventionalities which were imposed upon it by the Church, and which

Fig. 121. Roman-Byzantine Cross at Carew.

almost reduced it to a mechanical art. The mosaics of the 10th and 11th centuries in St. Mark's, Venice, are perhaps the best existing examples of the Byzantine period. Specimens are also to be seen in St. Sophia, Constantinople; and at Ravenna.

Caballerius, Med. Lat. A cavalier or knight.

Cabeiri were the personification of the element of fire. The precise nature attributed to them is unknown. There were two principal branches of their worship, the Pelasgian and the Phœnician. It is probable that this religion originated in Asia Minor, and penetrated to the island of

Samothrace, in remote antiquity; it was very popular throughout Greece in the Pelagic period. The principal temples were at Samothrace, Lemnos, Imbros, Anthedon, and other places.

This was the origin of the caduceus, as we know it; it was always an attribute of Mercury, who thence obtained his name of *Caducifer*, or caduceus-bearer. The caduceus was an emblem of peace.

Cadurcum, R. This term is applied to two distinct things: (1) the fine linen coverlets, and (2) the earthenware vases, manufactured by the Cadurci, or Gauls inhabiting the district now called Cahors.

Cæmenticius, **Cæmenticia** (structura). A kind of masonry formed of rough stones. There were two methods of construction to which this name applied. The first, called *cæmenticia structura incerta*, consisted in embedding stones of more or less irregular shape in mortar, so as to give them any architectural form, and then covering the whole over with cement. The second, called *cæmenticia structura antiqua*, consisted in laying rough stones one on the top of the other, without mortar, the interstices being filled by chippings or smaller stones.

Cæmentum. Unhewn stones employed in the erection of walls or buildings of any kind.

Calamus (*κάλαμος*, a reed or cane). A haulm, reed, or cane. The term was applied to a variety of objects made out of reeds, such as a Pan's pipe, a shepherd's flute (*tibia*), a fishing-rod (*piscatio*), a rod tipped with lime, for fowling, &c. (See ARUNDO.) It was specially used, however, to denote a reed cut into proper shape, and used as a pen for writing.

The same term denoted earthenware or metal vases of various shapes; among others a drinking-cup.

The Egyptians had terriers and greyhounds, wolf-dogs, and others for hunting or watch-dogs. All these breeds are met with on the bas-reliefs of Egyptian monuments. The

The various kinds of carmine are distinguished by numbers, and possess a value corresponding thereto; the difference depending either on the proportion of the *alumina* added, or on the presence of *vermilion* added for the purpose of diluting and increasing the quantity of the colour: the alumina produces a paler tint, and the vermilion a tint different to that of genuine carmine. The amount of adulteration can always be detected by the use of liquor ammoniacæ, which dissolves the whole of the carmine, but leaves the adulterating matter untouched. The process is as follows:—A perfectly smooth plate of copper, having been highly polished, is heated in an oven, and then white wax rubbed over it until the whole surface is covered with a thin layer. A tracing is laid over the wax, with the black-lead lines downwards, which transfers the design to the wax. Then the tracing-paper is removed, and the engraver goes over the lines lightly with a fine steel point, so as just to penetrate the wax, and scratch a delicate outline upon the copper. The wax is then melted off, and the engraving finished with the *graver*, or *burin*, a steel instrument with a peculiar pyramidal point. Should the lines be cut too deeply, a smooth tool, about three inches long, called a *burnisher*, is used to soften them down, and to burnish out scratches in the copper. The *ridges* or *burrs* that rise on each side of the engraved lines are scraped off by a tool about six inches long, called a *scraper*, made of steel, with three sharp edges. This method has for printing purposes been generally superseded by other processes, principally *etching*.

(2) An early manuscript book, such as the Codex of the Greek New Testament and of "Virgil" in the Vatican. (3) The term was also applied to the heavy logs attached to the feet of slaves; these were of various shapes, sometimes even serving the purpose of a seat.

It was the third meal of the day, being preceded by the *jentaculum* (breakfast), and the *merenda* or *prandium* (luncheon or early dinner). The corresponding Greek meal was called *deipnon*, which closed with a libation to Zeus; after which the drinking party that remained was called *Symposium*. (See LAST SUPPER.)

In the plural, *cænacula* denotes the whole suite of rooms on the upper story of a house, and *cænacula meritoria* such apartments let out on hire.

Snow was put into a strainer or a bag, called respectively *collum nivarium*, *saccus nivarius*, through which the wine was allowed to filter, not only to cool it, but because the intense cold cleared the wine, and rendered it sparkling and transparent; it was then called *vinum saccatum*. The Christian Church from the first adopted this instrument in its liturgy; another name for it was *colatorium*. (See **NASSA**.) The colander for wine was made of silver, or bronze, or other metal. The peculiarity of this cloth, as of that of Damascus, was in the pattern. “*To diaper*” is, in heraldry, to cover the field of an escutcheon with devices independent of the armorial bearings. The engraving shows a surcoat diapered, on which are embroidered armorial bearings. (Fig. 248.)

Domus, Gr. and R. (Gr. *δῶμος, οἶκος*). A house, in contradistinction to *insula*, a group of houses. The Greek house is divided into two parts by the central chambers. The external, the ANDRONITIS, contains the men's, and the inner, or GYNÆCONITIS, the women's apartments. The whole building was generally long and narrow, occupying a comparatively small frontage to the street, and the outside wall was plain without windows. Outside the door was often an altar of Apollo Agyieus, or an obelisk, or sometimes a laurel-tree, or a bust of the god Hermes. A few steps, called ANABATHMOI, led up to the house door (*αὐλεία θύρα*), over which there was generally a motto inscribed: the passage (*θυρῳρεῖον, πυλῶν, θυρῶν*) (A B in the plan) had the stables on one side, and the porter's lodge opposite, and led to C, the PERISTYLE or AULA of the men's quarters, a HYPÆTHRAL, or open-air court, surrounded by porticoes called STOIAI, and by the men's apartments, which were large banqueting-rooms (*οἴκοι, ἀνδρῶνες*), smaller sitting-rooms (*ἐξέδραι*), and sleeping-chambers (*δωμάτια, κοιτῶνες, οἰκήματα*). The door to the passage D was called *μέταυλος* or *μέσαυλος* (i. e. the middle of the aulæ), and gave admission to E, the peristyle or aula of the Gynæconitis. The rooms numbered 10 to 17 were the chambers

There was usually an upper story where guests and slaves were lodged (*ὑπερῶνον, διήρες*), the stairs leading to which were outside the house. The roofs were flat, and it was customary to walk upon them. The floors were of stone, in later times ornamental or coloured. The construction and decoration varied with the ages; painted ceilings were a late introduction. Of a Roman house, the principal parts were the VESTIBULUM, or court before the door, open to the street; the OSTIUM, JANUA, or FORES, the entrance; the ATRIUM, CAVUM ÆDIUM, or CAVÆDIUM, with the COMPLUVIUM open over the central tank (termed the IMPLUVIUM); the

ALÆ (wings), TABLINUM, FAUCES, and PERI-STYLIUM : of each of which a notice will be found in its alphabetical place in this work. (See also CUBICULA, TRICLINIA, EXEDRÆ, PINACOTHECA, BIBLIOTHECA, BALNEUM, CULINA, CŒNACULA, DIÆTA, SOLARIA, &c.) The floors of a Roman house were either of the composition called RUDERATIO, and, from the process of beating down *pavita*, were then called PAVIMENTUM, or of stone or marble or mosaics (MUSIVUM OPUS). The inner walls were usually covered with frescoes. The ceilings left the beams visible, which supported the roof, and the hollow or unplanked spaces (LACUNARIA or LAQUEARIA) were often covered with gold and ivory, or with paintings. (See CAMARA.) The principal apartments had no windows, deriving their light from the roof; in the upper stories there were windows either open or latticed, or later filled with mica, and finally glass.

Don Pottery. A name given to the productions of a porcelain manufactory established in 1790 at Swinton on the Don.

Donjon, Mod. The principal tower of a Norman or mediæval castle. It was generally separate from the other parts of the building. The greater number of feudal fortresses originally consisted merely of a donjon erected on an artificial earth-work. This donjon was surrounded by an open space walled, called the Inner Bailey, and another beyond called the Outer Bailey. Beneath were the dungeons. Fig. 264 represents a donjon called the Tower of Loudun. The White tower is the donjon of the Tower of London.

"The Grecian Doric order, at its best period, is one of the most beautiful inventions of architecture—strong and yet elegant, graceful in outline and harmonious in all its forms, imposing when on a great scale, and pleasing equally when reduced

in size, by the exquisite simplicity of its parts." (*Newlands.*) The columns of this order had no

Dorsale, Dossier, Dossier, Chr. (*dorsum*, the back). Pieces of tapestry or hangings put up in the arches or bays surrounding the choir of a church in order to screen the clergy and choristers from draughts of air. Also pieces of tapestry hung upon parapets, the panels of pulpits and stalls, and sometimes the backs of side-boards. It was the custom to hang tapestry, cloth of Arras, or

needlework round the lower half of all the ancient dining-halls to a height of about five feet above the basement.

Dorsualia, R. (*dorsum*). An embroidered saddle-cloth, which was laid across the back of a horse on the occasion of a triumphal entry, or on the backs of victims for sacrifice. Examples of *dorsualia* occur on several monuments, in especial on a bas-relief of the arch of Titus, at Rome.

Doryphorus, Gen. (*δορυφόρος*). Literally, spear-bearer. Fig. 130 represents a Persian spearman. A celebrated statue of Polycleitus (of the Argive school) is called the *Doryphorus*. "Polycleitus advanced his art in several respects, chiefly by fixing a law of proportion, of which his Doryphorus, a youth bearing a spear, was called the CANON (q.v.); and also by his making the weight of the body rest on one foot, in contradistinction to the ancient practice, thereby producing a contrast between the supporting, weight-bearing side of the body, and the supported, freely-resting side." (*Butler's Imitative Art*.) The statue by Polycleitus is lost. The proportions handed down to us by Vitruvius are thus described by Bonomi:—

(1) The length of the horizontally extended arms equals the height of the figure.

(2) The head is an *eighth*, the face a *tenth* of the whole height.

(3) From the top of the scalp to the nipples is *one-fourth*.

(4) From the nipples to horizontal line across the centre of the square—the pubes—is *one-fourth*.

(5) From that line to one just below the knee-cap is *one-fourth*.

(6) From that line to the ground is *one-fourth*.

Doublet, Fr. (1) The term is applied to precious stones, when cemented upon glass. (2) The inside lining of a well-bound book.

Doublet, although deriving its name from the French word *doublee* (lined), is in that language more generally known as "Pourpoint," of which, in fact, it is merely a variety. It first appeared in England in the 14th century made without sleeves, which for convenience were afterwards added; and being universally adopted, it superseded the tunic. The engraving shows a doublet with stuffed sleeves of the time of Elizabeth. They were worn of varied forms till the reign of Charles II. (Fig. 267.)

Doubling, Her. The lining of a mantle or mantling.

Dove. A Christian symbol of frequent occurrence; it expresses candour, gentleness, innocence, faith, and, in especial, the Holy Spirit. It is also a symbol of martyrdom and grief, and

in this signification appears frequently represented on tombs and sarcophagi. With an olive-bough in its mouth it is a symbol of peace, and accordingly the inscription PAX (Peace) is often found accompanying representations of the dove, more particularly in the catacombs.

Fig. 267. Doublet costume, temp. Elizabeth.

With the Assyrians and Babylonians the dove was the symbol of Semiramis, who, according to them, took this shape on leaving earth. The dove was the favourite bird of Venus. As a symbol of conjugal fidelity, the device of two turtle-doves was adopted by Giovanna of Austria on her marriage with Francesco de' Medici. (Fig. 268.)

Dove-tail or Swallow-tail, Gen. A method of joining employed for wood, stone, or iron, and so called because the tenon by which the joint is effected is cut in the shape of a dove-tail or swallow-tail. This tail fits into a notch (Fig. 269). The ancients employed double dove-tails for joining stones together; this method of construction was called *Opus REVINCTUM* (q.v.).

Dove-tail Moulding, Arch. (Norman; called

also TRIANGULAR FRETTE). Decorated with running bands in the form of dove-tails.

form of a dove, a tower, &c., which served as receptacles for the reserved Host; they were hung up in the middle of the CIBORIUM (q. v.). At the Amiens Museum a dove of this kind is to be seen dating from the 12th century, and at the church of St. Nazaire at Milan there is one of silver, gilded within and enamelled without, which is also very ancient.

There were two kinds of *drachmata*, which differed in value: the Attic drachm and the Æginetan. The Attic *drachma* was equal in value to a franc, equal to six *oboloi*. The piece of four drachmas was called a *stater*. As a weight the drachma was the eighth of an *uncia*; about = our modern *drachm*.

Draco, Gen. (1) A dragon; the ensign of the Roman cohort in the time of Trajan, adopted from the Parthians. (2) A fantastic animal of Pagan mythology: the garden of the Hesperides, the Golden Fleece, and the fountain of Castalia were all guarded by dragons. (3) In Christian archæology the dragon symbolizes sin, especially idolatry. (4) The Chinese give to several immortals the figure of a dragon. They distinguish the long dragon of heaven, a being especially sacred; the Kau, dragon of the mountain;

and the Li, dragon of the sea. The dragons are represented as "gigantic saurians, with powerful claws, and terminated by a frightful head, scaly and strongly toothed." There are the scaly dragon, the winged dragon, the horned and the hornless dragons, and the dragon rolled within itself which has not yet taken flight to the upper regions. In their zodiacal system the dragon is the sign for the month of March. (See TCHY.)

Draconarius, R. The standard-bearer who carried the *draco*.

Dracontarium, R. A band for the head, so called because it was twisted in imitation of the *draco* which was used as an ensign.

Dragon, Her. A winged monster having four legs. (See DRACO.)

Dragon. A short carbine (hence "dragoons").

Dravid'ha, Hind. A Hindoo temple constructed on an octagonal plan. (See NAGARAS, VIMANA, VESARA.)

Dresden Porcelain, made at the Royal Manufactory established at Meissen in Saxony in 1709, is most excellent anterior to 1796, since when its ancient perfection has been lost. The mark of the best period is two crossed swords, with a sloped cross or a small circle beneath. The later mark has a star beneath the swords. On rejected pieces the swords were cut across with a line; but the manufactory at the present day counterfeits its old marks. Fig. 271 is a specimen of the best period, later than 1720 and before 1778.

Dressoir or Dressouer (the *buffet* of the 15th century, the *évidence* of the 16th) was the principal object of the dining-room, on which were displayed all the ornamental plate of the owner of the house, costly vases, &c. Kings had often three dressers, one for silver, another for silver-gold, and the third for gold plate. In form they varied; but they were made of the most valuable woods, and enriched with the finest carving. They were sometimes covered over with cloth of gold: the city of Orleans offered one in gold to Charles IV., which was valued at 8000 livres Tournois.

Drilbu, Hind. A bell used in Buddhist worship.

Drinking-cups of Glass are frequently found in the Saxon barrows or graves in England. They are ornamented in various patterns, and

rounded at the bottom. The Anglo-Saxons were also rich in cups of the precious metals.

Fig. 272. Pot-pourri vase, Dresden china.

They used horn cups also, as did the Normans. In the 15th century flat-shaped cups or bowls were used.

The most ancient and probably the largest Celtic or Druidical temple was at Avebury in Wiltshire. *Dr. Stukeley*, who surveyed it in 1720, says that "this may be regarded as the grand national cathedral, while the smaller circles which are met with in other parts of the island may be compared to the parish or village churches."

Dry Point. Direct engraving upon copper with the sharp etching-needle itself, without the plate being covered with etching-ground, or the lines bit in by acid. This method produces very soft and delicate work, but it is not so durable in printing as the etched line.

Dryers. In painting, substances imparted to oils to make them dry quickly. The most general in use is OXIDE of LEAD, but white copperas, oxide of manganese, ground glass, oxide of zinc, calcined bones, chloride of lime, and verdigris have all been used at various times.

Drying Oil. Boiled oil, used in painting as a vehicle and a varnish. It is linsced oil boiled with litharge (or oxide of lead).

have been a dulcimer; the *psalterion* of the Greeks also. A hand organ of the Middle Ages was called a dulcimer.

Dunkirk. A manufactory of modern faience which only existed for a short time in the 18th century, and was closed within a year. The works are therefore very rare. Jacquemart mentions a clock bearing a close resemblance to certain Dutch products, inscribed *Dickhoof* and *A. Duisburg*, and by the latter name identified as Dunkirk work.

Eagle, Her. The eagle (called in heraldry *Alerion*) appears in the earliest English examples of arms, and his appearance often denotes an alliance with German princes. Both the German emperors and Russian czars adopted the eagle for their heraldic ensign in support of their claim to be considered the successors of the

Fig. 274. Eagle—Ensign of France.

Roman Cæsars. The eagle borne as the ensign of Imperial France sits, grasping a thunderbolt, in an attitude of vigilance, having its wings elevated, but the tips of the feathers drooping, as they would be in a living bird. In remote antiquity the eagle was an emblem of the sun, and the double-headed eagle typifies the rising and the setting sun. The eagle was the attribute of Jove as his messenger. The eagle killing a serpent or a hare is an ancient symbol of victory. In Christian art the eagle is the attribute of St. John the Evangelist, the symbol of the highest inspiration. St. John is sometimes represented with human body and eagle head.

The lectern in Christian churches is commonly in the form of an eagle. Elisha the prophet is represented with a two-headed eagle. (See AQUILÆ.)

Earl, Her. (from the Gaelic *iarflath*, "a dependent chief" = *iar*, "after," and *flath*, "lord"; pronounced *iarrl*). Before 1337 the highest, and now the third degree of rank and dignity in the British peerage. An earl's coronet has eight lofty rays of gold rising from the circlet, each of which supports a

large pearl, while between each pair of these rays there is a golden strawberry-leaf. In representation five of the rays and pearls are shown. Elevated clusters of pearls appear in an earl's coronet as early as 1445; but the present form of the coronet may be assigned to the second half of the following century.

Egret (Fr. *aigrette*). A small white heron, marked by a *crest* on his head.

Egyptian Architecture and Sculpture can be studied in the monuments remaining from remotest antiquity to about A.D. 300. Great varieties of style occur, which can be easily attributed to their respective periods by the hieroglyphical inscriptions. The three primitive motives of all Egyptian buildings are the *pyramid*, *caves*, and *structures of timber*; all contemporary with the most ancient relics. In sculpture, the most ancient works of all are also those most remarkable for fidelity to nature. The conventionality introduced afterwards with the *canon of proportions* is still combined with a close imitation of Nature in the details. The Grecian or Ptolemaic period begins B.C. 322. [See *Wilkinson's Ancient Egyptians*, *Canina's Egyptian Architecture*; and the works of *Brugsch*, *Marriette*, *Soldi*, *Ebers*, &c.]

Egyptian Blue, the brilliant blue pigment found on the monuments, is found by analysis to consist of the hydrated protoxide of copper, mixed with a minute quantity of iron. The green colour was derived from another oxide of copper; violet from manganese or gold; yellow from silver, or perhaps iron; and red from the protoxide of copper.

Fig. 279. Ovoid bottle. Egyptian.

Egyptian Pottery of great beauty is found in great quantities along with the costly ornaments in the tombs. It is intermediary between porcelain and stoneware, and its colouring demonstrates a high degree of skill,

science, and precision of execution. Among the forms frequently found are the ovoid, long-necked bottles (Fig. 279), lenticular phials

with royal cartouches (Fig. 280), lamps (Fig. 281), &c. (See also Fig. 219.)

Electoral Bonnet, Her. A cap of crimson velvet guarded with ermine, borne over the inescutcheon of the arms of Hanover from 1801 to 1816.

Electrotint. A method of preparing engraved copper plates for the printing-press by the electrotype process. (See *Art Journal*, 1850.)

Electrotype. The process whereby works in relief are produced by the agency of electricity, through which certain metals, such as gold, silver, and copper, are precipitated from their solutions upon moulds in so fine a state of division as to form a coherent mass of pure metal, equal in toughness and flexibility to the hammered metals. (*Fairholt*.) At the present day electrotypes are generally taken from engravings on wood for printing from.

Electrum (*ηλεκτρον*). In Homer and Hesiod this word means *amber*. Pliny says that when gold contains a fifth part of silver, it is called electrum. Its colour was whiter and more luminous than that of gold, and the metal was supposed to betray the presence of poison. Specimens are rare. A beautiful vase of electrum is preserved in the St. Petersburg Museum. Some coins in electrum were struck by the kings of Bosphorus, and by Syracuse and some Greek states.

Elements, Chr. The bread and the wine in the Lord's Supper. In the Eastern liturgies the unconsecrated elements are called "the MYSTERIES," and the bread alone the SEAL (*σφραγίς*), from its being divided by lines in the form of a cross. The interesting subject of the composition and form of the elements in the early churches is fully discussed in the "Dictionary of Christian Antiquities" (Smith and Cheetham).

Elemine. A crystallized resin used to give consistency to the varnish which forms part of the composition of lacquer.

Elenchus, R. (*ελεγχος*). (1) A pear-shaped pearl highly esteemed by the Roman ladies, who wore such pearls mounted as drops or pendants

to brooches and rings. (See the illustration to CROTALIMUM.) (2) An index to a book.

Elephant. In mediæval heraldry this animal is a symbol of piety, from an ancient legend, mentioned by Ælian, Pliny, and others, that it has in religious reverence, with a kind of devotion, not only the stars and planets, but also the sun and moon.

Elephant Paper. Drawing-paper manufactured in sheets, measuring 28 inches by 23. *Double Elephant Paper* measures 40 inches by 26 $\frac{3}{4}$.

Eleusinian Mysteries. The holiest and most venerated of the Greek festivals. The Lesser Eleusinia, held at Agræ in the month Anthes-terion, were a preparation for the Greater, which were celebrated at Athens and Eleusis. The *Mystæ* were the initiated at the Lesser, of which the principal rite was the sacrifice of a sow, previously purified by washing in the Cantharus. The Greater were celebrated every year in the month Boedromion, and lasted nine days. On the first day the *Mystæ* assembled at Athens; on the second they went through a ceremony of purification at the sea coast; the third was a day of fasting; on the fourth there was a procession of a waggon drawn by oxen, followed by women who had small mystic cases in their hands; on the fifth, or torch day, the *Mystæ* went in the evening with torches to the temple of Demeter, where they passed the night; on the sixth, which was the most solemn of all, a statue of Iacchos, the son of Demeter, was borne in procession to Eleusis, and the *Mystæ* were there initiated in the last mysteries during the following night. There was something in the secrets of this part of the ceremony which excited greatly the imagination of the ancient writers, especially Christians, who describe them "in an awful and horrible manner." Each of the initiated was dismissed by the *mystagogus* with the words *κόγξ, ὄμπαξ*. On the next day they returned to Athens, and resting on the bridge of Cephissus engaged in a contest of ridicule with the passers-by: the eighth and ninth days were unimportant.

Eleutheria. A Greek festival in honour of Zeus Eleutherios (the Deliverer).

Elevati of Ferrara. One of the Italian literary academies. Their device was from the fable of Hercules and Antæus, with the motto from Horace, "*Superat tellus, sidera donat*" (Earth conquers us, but gives us Heaven).

Elevation. (1) In Architecture, &c., a perpendicular plan drawn to a scale. (2) In Christian archæology, the *lifting up* of the elements at certain points in the Eucharistic service, universally prescribed in the early Oriental liturgies, and introduced into the Western Church with the doctrine of transubstantiation.

British Museum by Lord Elgin. They are adorned with sculptures in relief; those on the frieze represent the Panathenaic procession in honour of Athena; those on the metopes, chiefly the contests of the Centaurs and Lapithæ. There are also statues and friezes, especially from the temple of the Wingless Victory and the CHORAGIC MONUMENT of Lysicrates. They are admirably described by Mr. Newton in his

“Guide” to these sculptures published by the authorities of the British Museum. (Fig. 282.)

Elizabeth, Queen. The costume and the royal appurtenances of this monarch are well illustrated by the Royal Seal. In the Royal Arms we see the lions and the lilies (*France modern and England quarterly*). On the reverse (Fig. 284) the Tudor Rose, fleur-de-lis, and harp appear separately crowned for England, France, and Ireland. Elizabeth was fond of allegory and devices. In her portrait by Zoffany “the lining of her robe is worked with eyes and ears, and on her left sleeve is embroidered a serpent—all to imply wisdom and vigilance.” In her other hand is a rainbow with the motto, “*Non sine sole iris*” (no rainbow without the sun).

Elizabethan. The style of architecture and decoration gradually developed during the reign of the Tudors in England. Its characteristics are a mixed revival of classical forms with quaint and grotesque relics of the Gothic. Typical examples are Crewe Hall, Speke, in Lancashire, Haddon Hall, Kenilworth Castle, Raglan Castle, &c.

Ellipsis, Ellipse. A figure formed by cutting a cone obliquely across its length; hence—

the commencement of each of the *four seasons* of the year. In the Eastern Church there is no trace of such an observance. (The word has no connexion with *embers* in the sense of ashes.)

Emblazon, Her. (See BLAZON.)

Emblemata, Gr. (*ἐμβάλλω*, to put in). INLAID WORK, or (1) Mosaic made of coloured cubes of glass or vitreous enamel. (See SECTILE, TESSELLATUM, VERMICULATUM.) Fig. 285 represents *emblemata* of different kinds of glass. (2) *Crusts* exquisitely wrought on the surface of vessels or other pieces of furniture; as, for instance, alabaster on marble, gold on silver, silver on bronze. The Romans generally used the term *crustæ* for this kind of work. From EMBLEMATA is derived our word EMBLEM, the true meaning of which is "a symbolical figure or composition which conceals an allegory." Thus an *ape* symbolized malice and lust; a *pelican* piety, and the Redeemer's love for the world, &c. The most important books of Emblems are by Alciati, Paradin, and Sambuco.

Embrasure, Arch. (1) The interval between the COPS of a battlement. (2) An expansion of doorways, windows, &c., given by slanting the sides. (See SPLAY.)

Embroidery is one of the oldest of the ornamental arts. Some specimens of ancient *Egyptian* embroidery are exhibited in the Louvre, and Herodotus mentions the embroidered vestments of the gods in Egypt. The *Israelites* appointed Aholiab, "a cunning workman, and an embroiderer in blue, and purple, and scarlet, and fine linen," to be *chief embroiderer* to the sacred ark. The prophet Ezekiel mentions the embroidery of *Tyre*. It was the principal domestic occupation of ladies in *Greece*, from the days when Penelope embroidered a garment for Ulysses, representing a dog chasing a deer. The *Romans* called embroidery "Phrygium," and imported

it largely from the East. In later times *Byzantium* was celebrated for its embroidered eccle-

siaistical vestments. Pope Paschal, in the 9th century, was the greatest patron of the art. When the Caliph Omar pillaged the *Persian* palace of Khosroes, he found there a carpet of silk and cloth of gold, sixty cubits square, having a garden depicted upon it, and rubies, emeralds, sapphires, beryls, topazes, and pearls arranged with consummate skill to represent trees, fruit and flowers, rivulets, fountains, roses and shrubs. Our English word "embroidery" is derived from the Celtic "brouda," to prick. Anglo-Saxon embroidery was celebrated throughout Europe as *Opus Anglicanum*. The celebrated Bayeux tapestry is attributed to the 12th century. A copy of it may be seen in the South Kensington Museum. The art decayed in England during the Civil War of the 17th century.

Embu. A French term for the *loss of tone* in an oil sketch, caused by the absorption of the oil whilst it is drying. It is easily corrected by a glaze.

Emerald Green. A vivid bright green pigment, prepared from the arseniate of copper, and used both in oil and water-colours; called also *Paul Veronese Green*.

Emissarium, R. (*emitto*, to send forth). A channel, natural or artificial, for letting off stagnant water. Some of these channels are the most wonderful monuments of Roman ingenuity. The lakes of Trasmene, Albano, Nemi, and Fucino were all drained by EMISSARIA. The last is open to inspection, and is described as "a stupendous work of engineering, planned by Julius Cæsar, and completed by the Emperor Claudius."

Empaestic, Gr. *Damascening* (q.v.) or *in crusta* work practised by the ancients, as opposed to TOREUTIC ART (q.v.).

A method of building, originating in Greece and adopted by the Romans, in which a space left in the interior of the wall was filled in with rubble, the whole block of masonry being bound together at intervals by ties (*diatonoi*). Emporium, Gr. and R. (*ἐμπορος*, a passenger in a ship). A place at a sea-port where imported merchandise was warehoused and exposed for sale. The remains of the ancient *emporium* of Rome have been discovered on the banks of the Tiber. The name is sometimes applied to a town, but applies properly only to a certain place in a town.

Enafota or Enafodia, Chr. (Gr. *ἐννεάφωτα*). A corona or chandelier of "nine lights."

Enaluron, Her. (See ENTOIRE.)

Enamel (Fr. *email*; Ital. *smalto*). A glassy substance of many brilliant colours, melted and united to gold, silver, copper, bronze, and other metals in the furnace. Enamel is coloured *white* by oxide of tin, *blue* by oxide of cobalt, *red* by gold, and *green* by copper. Different kinds of enamel are (1) inlaid or incrustated. (2) Transparent, showing designs on the metal under it. (3) Painted as a complete

picture. "Many fine specimens of ancient Chinese enamel were seen in the Exhibition of 1851. They have the enamel on copper, beautifully coloured and enlivened with figures of flowers, birds, and other animals. The colouring is most chaste and effective. The Chinese say that no good specimens of this manufacture have been made for the last six or eight hundred years." (*Fortune*.) Beautiful transparent enamels are made in India. They look like slices of emerald or sapphire laid in beds of gold, having tiny figures of beaten gold let into their surfaces. (See also CLOISONNÉ, CHAMP-LEVÉ, BASSE-TAILLE, &c.) The beautiful example of enamel-work, Fig. 287, is attributed to Benvenuto Cellini. (See Fig. 188.)

Enamel. Painting in enamel is done by means of colours that are vitrifiable, a quality that is communicated to them by combining them with a vitreous base, which is called their flux. These are fused and fixed on the enamel by the action of fire, which produces in the colours applied such changes as the artist has previously learned to calculate. (*Bouvier*.)

Enamelled Glass. (See GLASS.)

Enamelled Wares. (See GLAZED WARE.)

Encænia, Chr. A dedication festival.

Encarpa, Gr. An architectural decoration formed of festoons or garlands of flowers and fruits (*καρποί*), whence its name. Fig. 288 shows an example from the temple of Vesta at Tivoli.

Encaustic, R. (lit. burning in). The art of painting in encaustic. Pliny says, "The colours were applied with wax on marble, and transparent gum on ivory. Coloured wax was applied to the wall in the form of a paste, and in the manner of mosaic or enamels. This was then melted or fused with hot irons (*cauteria*), a small fillet of a different tint being inserted between each flat tint." Fairholt says, "There is no antique painting extant which is properly called ENCAUSTIC; all those supposed to be so have, on closer examina-

tion, proved to be in FRESKO or in TEMPERA."

Etching. In this process the copper plate is covered with an *etching-ground*, which is a preparation of bees'-wax, Burgundy pitch, black pitch, and asphaltum (or other ingredients); and the lines of the design are traced out with *etching-needles*, which remove the etching-ground from the copper wherever they pass, and slightly scratch the surface of the plate. Next, a border of *banking-wax* is put round the sides of the plate, making a trough of it. The *banking-wax* is made of bees'-wax, common pitch, Burgundy pitch, and sweet oil melted in a crucible and poured into cold water. The next operation is to pour in nitrous acid reduced with water to a proper strength (about one part acid to four parts water). When the acid has been on a sufficient time to corrode the fainter parts of the subject, it is to be poured off, the plate washed with water, and left to dry. These fainter parts are then to be varnished with a mixture called *stopping-ground*, made of lamp-black and Venice turpentine, applied with a camel's-hair pencil. This stops the further action of the acid on these parts. When the surface is dry, fresh acid is poured on to *bite in* the bolder parts, and the processes of *stopping* and *biting in* are alternated for every gradation of tint. The wax is removed from the plate by heat, and cleaned away with a rag moistened with olive oil; and the work is then complete, or it may be finished off with the *graver*. *Etching-points* or *needles* resemble common needles, fixed in handles four or five inches long; some are made oval to produce broader lines. The *dry point* is only a very fine-pointed needle for the delicate lines. Imitations of chalk and pencil drawings are sometimes produced by *etching on soft ground*. *Etching on steel* is done in the same way as on copper. For *etching on glass*, a ground of bees'-wax is laid on, and the design traced as above. Sulphuric acid is then poured on, and fluor-spar sprinkled on it, or fluoric acid may be at once used; this is allowed to remain four or five hours, and is then removed with oil of

turpentine. (See also STIPPLE, MEZZOTINTO, AQUATINTA.)

The use of the fan was first introduced into England in the 16th century; they were first made of feathers with long handles of gold, silver, or ivory of elaborate workmanship, and sometimes inlaid with precious stones. Folding fans were first introduced in the 17th century. Inventories of churches and monasteries of the 14th century include ecclesiastical fans or *flabella*. These are still used in the Catholic Church in the East. An illumination at Rouen represents the deacon raising the flabellum, a circular fan with a long handle, over the head of the priest at the altar. There were *wheel-farthingales* and *tub-farthingales*. Farthingales

The fascies were carried by the lictors on their shoulders, as shown in Fig. 305; and when an inferior magistrate met a superior one, the lictors of the former lowered their fascies to him; hence the expression *submittere fascies*, to yield or confess inferiority.

Funarius. (See **FUNALIS**.)

Funda, Sling, Gen. The sling has been employed by most of the peoples of antiquity as a weapon of warfare for hurling stones, chiefly flints or leaden bullets (*glantes*). The slings of the Egyptians were made of leather thongs or plaited cord. The *funaitores*, or slingers, of the Greek and Roman armies carried each a provision of stones in the folds (*sinus*) of his *pallium*, a shield on his left arm, and brandished his sling in the right hand. The most celebrated slingers were the inhabitants of the Balearic Islands, which took their ancient name from this circumstance.

Funeral Ceremonies. 1. Greek. The expressions τὰ δίκαια, νομιζόμενα, or προσήκοντα, the just and lawful rites, are expressive of the Greek idea that the proper burial of the dead was a most sacred duty to them. The first act was to place in the mouth of the corpse an *obolus*, with which the spirit would pay the ferryman in Hades. This coin was then called *danaké*. The body was then washed and anointed, the head crowned with flowers, and the handsomest robes put on. All this was done by the women of the family. By the side of the bed upon which the corpse was then laid (*πρόθεσις*) were placed painted earthen vessels (*lecuthoi*; see **LECYTHUS**), which were afterwards buried with the corpse. (These vases are frequently disinterred in modern excavations.) A honey-cake (*melittouta*) to throw to the dog Cerberus was laid on the bed. Before the door a vessel of water (*ostrakon* or *ardalion*) was set, to be used, like the holy water of Catholic times, by persons leaving the house, for purification. On the third day after death, the *ecphora*, or carrying out for burial, took place in the morning before sunrise. The men walked before the corpse, and the women behind. Hired mourners (*threnodoi*) accompanied the procession, playing mournful tunes on the flute. The bodies were either buried or burned, until cremation gave way to a Christian prejudice. The body was placed for burning on the top of a *pyre* (Gr.

πῦρ, fire); and, in remote ages, animals, prisoners, or slaves were burned with it. Oils and perfumes were thrown into the flames. Finally, the smouldering ashes were quenched with wine, and relatives and friends collected what remained of the bones. The bones were then washed with wine and oil, and placed in urns, often golden.

2. Roman. *Funera justa* conveys the same idea as the Greek *dicaia* of the right and title of the dead to a proper observance. With the Romans, the washing, anointing, &c. of the body was done by slaves (*pollinctores*) of the undertakers, who were called *libitinarii*, because they dwelt near the temple of Venus Libitina, in which all things requisite for funerals were sold and a mortuary register was kept. The coin having been duly placed in the mouth, the body was laid out in the vestibule dressed, of ordinary citizens in a white toga, and of magistrates in their official robes, and the couch was strewn with flowers, and a branch of *cypress* was placed at the door of the house. All funerals were, in ancient times, performed at night, but afterwards only those of the poor. At a great funeral the corpse was carried out on the eighth day, preceded by musicians (*cornicines*, &c.) and mourning women (*præfica*), who chanted a funeral hymn (*nenia*); players and buffoons (*histriones*, *scurræ*) followed, and a procession of the freed slaves wearing the cap of liberty (*pileati*). Images of the deceased and of his ancestors were borne before the corpse, which was carried on a litter (*feretrum*). The common bier of the poor was called *sandapila*, and its bearers *vespillones*, because they bore it forth in the evening (*vespere*). The couches of the rich were of ivory, richly ornamented with gold and purple. The relations walked behind in mourning, sons with the head veiled, and daughters with dishevelled hair. At the forum a funeral oration (*laudatio*) was delivered, and thence the procession went to the place of burial or cremation. Those who were buried (as all were subsequently to the 4th century A.D.) were placed in a coffin (*arca* or *loculus*), often of stone. The Assian stone, from Assos in Troas, was said to consume all the body, with the exception of the teeth, in forty days, whence it was called *sarcophagus* (q.v.). For cremation the pyre, or *rogus*, was built like an altar, and the corpse in its splendid couch being placed on the top, the nearest relation, with averted face, fired a corner of the pile. Perfumes were forbidden by the Twelve Tables. Sometimes animals were slaughtered, and in ancient times, captives and slaves, but afterwards gladiators were hired to fight round the blazing pile. (Compare **BUSTUM**.) When the pyre was burnt down, the embers were soaked with wine, and the bones and ashes collected into

urns. (See URNA.) The solemnities continued for nine days after the funeral, at the end of which time a sacrifice was performed called the *novendiale*. Men wore *black* for mourning, and women white; but at all banquets given in honour of the dead the guests were clothed in white.

Funeral Urns of Indian pottery are found of extremely ancient date. That represented in Fig. 340 is a covered jar, of primitive make, with an inscription in ancient characters; its date is probably from 260 to 240 B.C. (*Jacquemart.*)

Fur. *Strutt* says that "the furs of sables, beavers, foxes, cats, and lambs were used in England before the Conquest; to which were afterwards added those of ermines, squirrels, martens, rabbits, goats, and many other animals." In the Middle Ages the more precious furs, as ermine and sable, were reserved for kings, knights, and the principal nobility of both sexes. Inferior ranks used "vair" and "gris," or gray; while citizens, burgesses, and priests wore the common squirrel and lamb-skins. The peasants wore cat-skins, badger-skins, &c. In after times were added the skins of badgers, bears, beavers, deer, fitches, foxes, foynes (or martens), grays, hares, otters, sables, squirrels, weasels, wolves, &c. The mantles of our kings and peers, and the furred robes of municipal officers are the remains of this fashion, which in the 13th century was almost universal.

Fur, Her. The furs are of comparatively rare appearance in heraldry, and do not appear in the best ages. *Vair* and *ermine* are common. In Fig. 341 is an example of the treatment of ermine from the monument of Edward III.

Fig. 341. Shield with Ermine.

Furca, R. A fork with two teeth (*bidens*), or

two prongs; a hay-fork: *furca carnarii*, a fork used for taking down the meat hung up in the *carnarium*. The term *furca* was further applied to a kind of fork by aid of which a foot-traveller carried his baggage, but the more usual name for this kind of fork was *arumna* (q.v.). Also, a wooden fork placed for punishment across the shoulders of slaves and criminals, to the prongs of which the hands were tied. Reversed it formed a cross upon which criminals were executed, either by scourging or by crucifixion with nailing. The *patibulum* was a similar instrument of punishment formed like the letter H.

In the 14th century Chaucer says of his knight,—

A coating of it *sets* black-lead or crayon drawings. This word is also applied to anything exceedingly bitter, especially to the bitter potion which it was customary among the Jews to give to persons suffering death under sentence of the law, for the purpose of rendering them less sensible to pain. ἕξος μετὰ χολῆς, "vinegar to drink mingled with gall." the Garter place K.G. after their names; and these letters take precedence of all other titles, those of royalty alone excepted. The stalls of the knights are in the choir of St. George's Chapel, Windsor Castle, where their garter-plates are fixed and their banners are displayed. The insignia are the garter itself, the badge of the order; the collar, and the Lesser George or jewel. (Fig. 349.) It was this jewel that Charles I., immediately before he suffered, delivered to Archbishop Juxon, with the word

"Remember!" The ribbon of the order is dark blue; it passes over the left shoulder, and the Lesser George hangs from it under the right arm.

King Josiah made it the common receptacle for rubbish and carcases, and a fire was kept constantly burning there; hence the Jews used this term to signify "hell." (Compare HADES.)

Gemellar, R. (*gemellus*, twin). A ease for holding oil; it was called *gemellar* from the fact of its being divided into two compartments.

needle-made. The characteristic of this lae was its design, a kind of barleycorn-shaped pattern, radiating into rosettes from a centre. It was particularly adapted for the large turnover collar of Louis XIII., and was produced by plaiting, and made entirely on the pillow.

These two dukes were

rivals for the imperial throne of Germany.

Greek art, representing the War of the Giants, sons of *Cœlus* and *Terra*, against *Jupiter*. They "heaped *Ossa* on *Pelion*" to scale heaven, and were defeated by *Hercules*. They are represented as of vast stature and strength, having their feet covered with scales. A beautiful cameo in the Naples Museum represents *Jove* in his chariot subduing the giants. In 1875 the German expedition found among the ruins of a temple at *Pergamus* a series of sculptures of almost colossal proportions, representing, as *Pliny* describes them, the Wars of the Giants. These sculptures are now in the Berlin Museum.

Girdled, Girt, Her. Encircled or bound round.

Girdles. These were the most beautiful and costly articles of dress during the Middle Ages. They were frequently made entirely of gold or silver, decorated with cameos, precious stones, &c. Besides the knightly sword; the purse, dagger, rosary, or penner and ink-horn and other objects were suspended from the girdle. From this word the waist was called the *girdlestead*, or place (*sted*) of the girdle. The girdles of ladies were equally splendid, and frequently depended nearly to the ground, as in Fig. 355. The girdle is an attribute of *St. Thomas*, from a legend that the Virgin, pitying his weakness of faith, threw down to him her girdle, after her assumption into heaven.

Girgillus, R. A roller turned by a windlass, for drawing up the bucket of a well. (See JACK.)

Glade (Norman *glette*, a clear spot among clouds). An opening or passage in a wood through which the light may shine.

Gladiators were first exhibited at Rome, B.C. 264, at a funeral. The practice had its origin in that very ancient one of slaughtering slaves and captives on such occasions. Subsequently it became more general. The different classes of gladiators, distinguished by their arms and other circumstances, were: *Andabata*, who wore

helmets without any opening for the eyes, and therefore fought blindfold; *Essedarii*, who

fought from chariots (*ESSEDÆ*); *Hoplomachai*, who wore heavy defensive armour; *Laqueatores*, who carried a sort of lasso or noose; *Meridiani*, who fought in the middle of the day, and were very slightly armed; *Mirmillones*, so called from their having the image of a fish (*mormyr*) on their helmets; *Retiarii*, armed with a trident and a net. Others, as *Samnites*, *Thracæ*, &c., were named from the nation whose fashion of armour they adopted. The fights of gladiators were favourite subjects of Roman art, and it is assumed that in cases where no actual combats took place at a funeral, they were represented

so-called "Dying Gladiator" in the museum of the capitol at Rome, and the Gladiator of the Borghese collection.

Gladiolus. Diminutive of **GLADIUS**, and synonym of **LIGULA**. (See both words.)

Gladius, R. A general term, including all the different kinds of swords or glaives, but denoting more particularly the two-edged swords used by the Greeks, Romans, and Gauls. Fig. 357 represents two Gaulish swords, the form of which may easily be guessed, even though they are in the scabbard; Fig. 356 is a Roman *gladius*.

Fig. 357. Gallic swords.

Glass. The discovery is lost in remote antiquity. Pliny gives a legend which ascribes it to chance. Glass bottles

in Egypt are represented upon monuments of the 4th dynasty (at least 2000 years B.C.). A vase of greenish glass found at Nineveh dates from B.C. 700. Glass is found in the windows at Pompeii; and the Romans stained it, blew it, worked it on lathes, and engraved it. Pliny mentions, as made by the Romans in his time, glass coloured opaque, red, white, black (like *obsidian*), or imitating jacinths, sapphires, and other gems; also *murrhine glass*. This last was either an imitation of fluor spar, or a kind of agate, or fluor spar. The Romans also made *mosaic* or *millefiori*, in which the threads of colour are melted into a rod, so that at every section the whole pattern appears; and *cameo glasses*, in which a paste of one colour is laid over another, and the whole then carved into the required design; *gold leaf* was also worked into the substance or fixed on the surface. A gate at Constantinople took its name from the glass works near it, but

Fig. 358. Venetian Glass Vase, 16th century.

little is known of the Byzantine art, nor of earlier European art than the 13th century. In mediæval times stained glass windows, in leaden frames, were constructed with great success in England, France, and Flanders. In the 13th century they appear in Italy. The Venetian art took its impulse from the capture of Constantinople in 1204. Its peculiar beauty is derived from the curved forms and tenuity of substance obtained in blowing. (Fig. 358.) There are six kinds of Venetian glass. (1) Vessels of colourless or *transparent glass*, or of single colours, generally blue or purple. (2) *Gilt or enamelled glass*. (3) *Crackled glass*, having a surface rough and divided irregularly into ridges. (4) Variegated or *marbled opaque glass*, called *schmeltz*; the most common variety is a mixture of green and purple, sometimes resembling jasper, sometimes

chalcedony; other varieties are imitations of lapis lazuli and tortoise-shell; and *aventurine*, which is obtained by mingling metallic filings or fragments of gold leaf with melted glass. (5) *Millefiori*, or *mosaic glass*, in imitation of the old Roman process. (6) *Reticulated, filigree, or lace glass*. The varieties contain fine threads of glass, generally coloured, but sometimes milk-white, included in their substance. The lightness and strength of the Venetian glass are due to its not containing lead like our modern flint glass. Venetian *mirrors* were for a long period widely celebrated. The oldest example of the German *drinking-cups*, ornamented with paintings in enamel, is of the date of 1553. The designs are commonly armorial bearings. From the beginning of the 17th century the Bohemian manufactories supplied *vases* enriched with ornamental subjects, particularly with portraits engraved upon the glass. The art of *wheel engraving upon glass* flourished in France under Louis XVI. In modern times this kind of ornamentation is produced by the agency of hydrofluoric acid. "Coarse glass-making in England was, in Sussex, of great antiquity." (*Fuller*.) "The first making of Venice glasses in England began in London, about the beginning of the reign of Queen Elizabeth, by one Jacob Vessaline, an Italian." (*Stow*.)

Glass-glazed Wares. (See GLAZED WARES.)

Glaucous (γλαυκός). Of a sea-green colour, or a greyish blue.

Glazed Wares. Almost immediately after the invention of Ceramic manufacture, the application of *glaze* or *coloured enamel* must have improved it. What we term *glacure* is a light varnish which enlivens and harmonizes the porous surface of terra-cotta. In its simple state it is a mixture of silex and lead, and in this state it is transparent, as we find it on *antique vases*; when vitrifiable, and mixed with tin, as in the case of *majolicas*, it is called enamel; and when of vitrifiable and earthen substance, such as can only be melted at the temperature required for the baking of the paste itself, it is known as GLAZE, or *couverte*, and can be identified in the Persian faïences and Flemish stoneware. (Figs. 359, 360.) (See *Burty, Chefs-d'œuvre of the Industrial Arts*.)

Glazing. In oil painting, the application of

thin layer of colour to finally modify the tone. In pottery, a vitreous covering over the surface. (See GLAZED WARES.)

Globe, held in the hand, is the emblem of power.

Globus, R. A military manœuvre employed by a body of Roman soldiers when surrounded by superior forces; it consisted in forming a circle facing in every direction.

Glory, Nimbus or Aureole, the Christian attribute of sanctity, is of pagan origin, common to images of the gods, and Roman, even Christian, emperors. Satan in miniatures of the 9th to 13th century wears a glory. The earliest known Christian example is a gem of St. Martin of the early part of the 6th century. The glory round the head is properly the nimbus or aureole. The oblong glory surrounding the whole person, called in Latin "vesica piscis" (Fig. 361), and in Italian the "mandola" (almond) from its form, is confined to figures of Christ and the

Virgin, or saints who are in the act of ascending into heaven. When used to distinguish one of the

Fig. 360. German enamelled stone-ware Cruche, date first half of the 16th century.

three divine Persons of the Trinity, the glory is often cruciform or triangular: the square nimbus designates a person living at the time the work was executed. In other instances it is circular. Coloured glories are variously symbolical. (*Mrs. Jameson, "The Poetry of Sacred and Legendary Art."*)

Gloves. In the 14th century already gloves were worn, jewelled on the back, as a badge of rank. "They were worn in the hat," says Steevens, "as the favour of a mistress, or the memorial of a friend, and as a mark to be challenged by an enemy." A glove of the 17th century is described "of a light buff leather, beautifully ornamented with spangles and needlework in gold and silver threads, with a gold lace border, and silk opening at the wrist." Gloves were called "cheirothecæ," hand-coverers, by the Greeks and Romans; they were made without separate fingers, the thumb only being free. A legend current at Grenoble affirms that St. Anne, the mother of the Virgin Mary, was a knitter of gloves.

Gluten. In wax painting, the compound with which the pigments are mixed.

Goal. (See META.)

Goat. The

emblem of lasciviousness.

Gobelins. Celebrated Royal French manufactory of tapestry, named from the successors of Jean Gobelin, who brought the art to Paris in the 15th century from Rheims. [See *Burty, Chefs-d'œuvre of Industrial Art.*]

Godenda, O. E. A pole-axe, having a spike at its end; 13th century.

Goderonné, Gouderonné (Needlework). A fluted pattern of embroidery in vogue in the 16th century.

Gold. It is probable that the earliest recorded mark upon units of value was the image of a sheep or an ox; hence money in Latin is called *pecunia*, from *pecus*, cattle, the original form of barbaric wealth, for which gold was the substitute. The wealth of Abraham in silver and gold, as well as in cattle, is mentioned in Genesis. No coins of gold or silver have been found in EGYPT or NINEVEH, although beautiful specimens of the goldsmith's art have been

recovered from the tombs of both countries. The HEBREWS, taught by the Egyptians, made their ark, mercy-seat, altar of incense, seven-branched candlestick, and other golden ornaments, even in the desert of Sinai. The seven-branched candlestick is represented in sculpture on the arch of Titus at Rome. At BABYLON and NINEVEH gold is said to have been lavishly applied in gilding sculpture, and even walls; but it is suggested that an alloy of copper, the *aurichalcum* of the Greeks, was the metal in reality used for this purpose. The heroes of the Greek epic had golden shields and helmets; breastplates and other large pieces of golden armour are among the recent discoveries at Mycenæ; at Kourium in the island of Cyprus also great stores of golden ornaments of a very early age have been discovered. In SCYTHIAN tombs in Russia also, about Kerch, beautiful relics of Grecian work in gold have been found, showing that in the very earliest ages the skill and taste applied to this art were not less than those of later times. The gold jewellery of ancient India also excelled that of modern date, but none, before or since, ever equalled the great age of GREEK art. Pausanias describes a statue of Athene, made by Pheidias, and kept in the Parthenon at Athens, of ivory and gold—*chryselephantine*—delicately worked all over; and a still larger statue of Jupiter, of the

same materials. Native gold alloyed with one-fifth silver was greatly prized by the Greek artists, who gave it the name of *electrum*. Examples of this *electrum* are rare; there is a vase at St. Petersburg. The ROMANS used to pay enormous prices for their household plate; for an example, the bowl of Pytheas, on which were represented Ulysses and Diomed with the pallasium, fetched 10,000 denarii, or about 330*l.* per ounce. Few specimens of Roman art have escaped destruction. (Fig. 7.) Of the age of BYZANTINE splendour we are told that the Emperor Acadius, early in the 5th century, sat on a throne of massive gold, his chariot being also of gold, &c. In the 9th century the throne of Theophilus was overshadowed by a tree of gold, with birds in the branches, and at the foot two lions all gold. The lions roared and the birds piped in the branches. A remarkable wealth of ancient goldsmith's work has been found in IRELAND, consisting principally of personal ornaments. In the 9th and 10th centuries the Irish workmanship was unsurpassed in Europe. It consisted principally of objects for religious use, and is characterized by a filagree of extraordinary richness, akin to the intricate traceries of the Irish illuminated work on MS. of the same date and derivation. In the 10th and 11th centuries there was a great revival of art throughout Europe. In GERMANY, the abbey of Hildesheim, under Bishop Bernward, became the centre of a school of goldsmiths, and some beautiful specimens of hammered gold, by the bishop's hand, are preserved.

Gold, in Christian art. (See YELLOW.)

Gold, Cloth of, is mentioned in the Pentateuch, and was common throughout the East in all ages. It was originally wrought, not in rounded wire but flat, as the Chinese, the Indians, and the Italians (their *lama d'oro*) weave it now. The early Roman kings wore tunics of gold, and the Romans used it as a shroud for burial. King Childeric, A.D. 482, was buried at Tournai in a mantle of golden stuff. It was much favoured in England for church vestments, and by royalty, especially by Edward IV. and Henry VIII. and the nobility of their time. (The different varieties are described in their order. See ACCA, ARESTE, BATUZ, CHRYSO-CLAVUS, CICLATOUN, DORNECK, SAMIT.)

Goldbeater's Skin, prepared from a membrane found in the stomach of the ox, is used to separate leaf-gold in the process of gold-beating.

Golden Fleece. An Order of Knighthood instituted on the 10th of January, 1429, by Philip, Duke of Burgundy. The COLLAR is composed of double steels, interwoven with flint-stones, emitting sparks of fire, at the end whereof hangs on the breast a Golden Fleece. The fusils are joined two and two together, as if they were

double BB's (the cyphers of Burgundy). The *flint-stones* are the ancient arms of the Sovereigns of Burgundy, with the motto "*Ante ferit quam flamma micet.*" (See Fig. 342.) The motto of the Order is "*Pretium non vile laborum.*" There are four great officers, viz. the Chancellor, Treasurer, Register, and a King of Arms, called *Toison d'Or*. The BADGE consists of a Golden Fleece, suspended from a flint-stone, which is surrounded with flames of gold.

Golden Spur. An Order of Knighthood said to have been instituted by Pius IV., at Rome, in 1559. They are sometimes spoken of as the CHEVALIERS PIES or PIORUM, and must be distinguished from those who are created knights on the coronation or marriage days of Emperors and Kings, and who receive at the same time the *Spurs of Honour*. These alone are entitled to the appellation of EQUITES AURATI. [Cf. *Peter de Bellet, Favon, &c.*]

was taken up to heaven.

tale called "The Wise Men of Gotham" appeared in 1840.

Gouache, Fr. This term is applied to the use in water-colour painting of opaque colours more or less mixed and modified with white. The process is extremely ancient, known to the Chinese and Indians of the earliest times, and to the Greeks and Romans. It was the method used by mediæval illuminators. Its result is a velvety reflection of the light.

This was done by taking away the upper tetrachord from the Ambrosian scales, and placing it below the lower tetrachord." (See *Music*, by the Rev. J. R. Hair. The *Assyrian* monarchs are represented with beard elaborately plaited, and hair falling in ringlets on the shoulder, which may have been partly artificial, like that of the Persian monarchs, who, according to Xenophon, wore a wig. Both the hair and beard were dyed, and the eyes blackened with kohl, &c.

(*Layard*.) The *Egyptians* kept the head shaved, and wore wigs and beard-boxes. The *Hebrews* generally wore the hair short, but the horse-guards of King Solomon "daily strewed their heads with gold dust, which glittered in the sun." (*Josephus*.) The ancient *Greeks* wore their hair long. The *Athenians* wore it long in childhood, had it cut short at a solemn ceremony when they became eighteen years of age, and afterwards allowed it to grow, and wore it rolled up in a knot on the crown of the head, fastened with golden clasps (*crobylus*, *corymbus*). Women wore bands or coifs (*sphendone*, *kekryphalus*, *saccus*, *nitra*). Youths and athletes are represented with short hair. The favourite colour was blonde (*xanthus*); black was the most common. The ancient *Romans* also wore long hair; about 300 B.C. the practice of wearing it short came in (*cincinmus*, *cirrus*). The Roman women anciently dressed their hair very plainly, but in the Augustan period adopted some extravagant fashions. Each of the gods is distinguished by his peculiar form of hair: that of Jupiter is long and flowing; Mercury has close curling hair, &c. The *Danes*, *Gauls*, and *Anglo-Saxons* wore long flowing hair, and the shearing of it was a punishment: when Julius Cæsar conquered the Gauls, he cut off their long hair. Among the early *Frankish* kings long hair was the privilege of the blood royal. From the time of *Clovis* the French nobility wore short hair, but as they grew less martial the hair became longer. François I. introduced short hair, which prevailed until the reign of Louis XIII., which was followed by the period of periwigs and perukes of Louis XIV. The variations from the Conquest to the last generation in *England* are so striking and frequent that each reign may be distinguished by its appropriate head-dress. (Consult *Fairholt's Costume in England*, *Planché's Cyclopædia of Costume*, &c.)

Instead of the leopard's head (1) for the king's mark, the lion's head *erased*, introduced in 1697 when the standard was changed, and, 6, a figure of Britannia substituted for the lion *passant* (4) at the same time. Plate with this mark is called *Britannia* plate. The old standard (of 11 oz. 2 dwt. pure gold in the lb.) was restored in 1719. 7. (See the article in *Encycl. Brit.*, 8th edition.)

Harmonium. A musical instrument having a key-board like a pianoforte, and the sounds (which resemble those of organ pipes) produced by the vibration of thin tongues of metal.

Harp. The EGYPTIANS had various kinds of harps, some of which were elegantly shaped and tastefully ornamented. The name of the harp was *buni*. Its frame had no front pillar. The harps represented on the monuments varied in size from 6½ feet high downwards, and had from 4 to 28 strings. A beautiful Egyptian harp, in the Louvre collection, is of triangular shape with 21 strings, but, like all the harps represented on the monuments, it has no fore-pillar. The strings were of catgut. ASSYRIAN sculptures also represent harps. These also had no front pillar, and were about 4 feet high, with ornamental appendages on the lower frame. The upper frame contained the sound-holes and the tuning-pegs in regular order. The strings are supposed to have been of silk. The GREEK harp, called *kinyra*, resembled the Assyrian, and is represented with 13 strings: it is an attribute of Polyhymnia. The ANGLO-SAXONS called the harp the *gleo-beam*, or "glee-wood;" and it was their most popular instrument. King David playing a harp is represented on an A.S. monument of the 11th century. It was the favourite instrument of the GERMAN and CELTIC bards, and of the SCANDINAVIAN skalds. It is represented with 12 strings and 2 sound-holes, and

having a fore-pillar. A curious IRISH harp of the 8th century, or earlier, is represented in Bunting's "Ancient Music of Ireland," having no fore-pillar. The FINNS had a harp (*harpu, kantele*) with a similar frame, devoid of a front pillar. In CHRISTIAN ART a harp is the attribute of King David and of St. Cecilia. St. Dunstan is also occasionally represented with it. In Heraldry the harp is the device and badge of Ireland. The Irish harp of gold with silver strings on a blue field forms the third quarter of the royal arms.

Harpaga, Harpago, Gr. and R. A general term, including any kind of hook for grappling; more particularly a military engine invented by Pericles, and introduced into the Roman navy by Duillius. It consisted of a joist about two yards and a half long, each face of which was coated with iron, and having at one end a harpoon of iron or bronze; the other end was fitted with an iron ring, to which a rope was attached, so as to enable it to be drawn back when it had once grappled a ship or its rigging. *Harpago* or *wolf* was the term applied to a beam armed with a harpoon, which was employed to break down the tops of walls, or widen a breach already made. [A flesh-hook used in cookery to take boiled meat out of the caldron.]

Harpastum, R. A small ball employed for a game in which the players formed two sides. They stationed themselves at some distance from a line traced on the ground or sand where the *harpastum* was placed. At a given signal each player threw himself upon the ball, in order to try and send it beyond the bounds of the opposite party.

Harpies, Gen. ("Ἀρπυιαι, i.e. the Snatchers). Winged monsters, daughters of Neptune and Terra, three in number, viz. *Aëlo* (the tempest), *Ocyptelê* (swift-flying), and *Cëlêno*; representing the storm-winds. They had the faces of old women, a vulture's body, and huge claws; they were the representatives of the Evil Fates, and the rulers of storms and tempests. In Christian iconography the Harpies symbolize the devil and repentance. [In the so-called "Harpy tomb" in the British Museum they are represented carrying off Camiro and Clytia, the daughters of Pandarus of Crete, as a punishment for his complicity with Tantalus in stealing ambrosia and nectar from the table of the gods.]

Harpsichord. A musical instrument intermediate between the *spinnet*, *virginals*, &c., and the *pianoforte*, which supplanted it in the 18th century. It may be described as a horizontal harp enclosed in a sonorous case, the wires being struck with jacks armed with crow-quills, and moved with finger keys.

Hart, Hcr. A stag with attires; the female is a hind.

Hasta (Gr. ἔγχος).

A spear used as a pike for thrusting, or as a missile for hurling from the hand, or as a bolt from an engine. Homer defines the spear as "a pole heavy with bronze." The *hasta amentata*, for hurling, had a leathern thong for a handle (*amentum*) in the middle; *hasta pura* was a spear without a head, and was a much-valued decoration given to a Roman soldier who had saved a citizen's life; *hasta celibarium* was a spear which, having been thrust into the body of a gladiator as he lay dead in the arena, was afterwards used at marriages to part the hair of the bride. A spear was set up before a place where sales by auction were going on, and an auction-room was hence called **HASTARIUM**. Different kinds of spear were the *lancea* of the Greeks; the *pilum*, peculiar to the Romans; the *veru*, *verutum*, or "spit," of the Roman light infantry; the *gasum*, a Celtic weapon adopted by the Romans; the *sparrus*, our English spar or *spear*, the rudest missile of the whole class; and many others mentioned under their respective headings in this work.

changes in the fashion of hats is given in *Planché's Encyclopædia of Costume*. Our illustration represents a young Venetian noble of the Middle Ages. (See also the illustrations to **POURPOINT**, **BIRETTA**, **BOMBARDS**, **CALASH**, **CAPUCHON**, **CHAPEAU**, **CORONETS**, &c.)

Heart. On numerous Christian tombs hearts may be seen sculptured. Many archæologists have

Fig. 381. Hauriant.

Fig. 382. Inscription, with hearts, found at Alise.

attempted to explain their meaning as symbols, but without entering on an unprofitable discussion of that question, it may be noticed that, in many cases, what archæologists have supposed to be hearts were nothing but ivy-leaves, which served as marks of separation between different words or sentences. Fig. 382 represents an inscription at Alise in which ivy-leaves figure, together with an ornament which some would insist were flames, if they were to take the leaves for hearts. When inscriptions,

however, are defaced, the shape of the leaves is not nearly so distinguishable as in the figure. [One of the most frequent methods in which this emblem is introduced in Christian art is that the Saviour, or the Virgin Mary, is represented opening the breast to display the living heart—the natural symbol of Love, Devotion, or Sorrow. The Heart is an attribute of St. Theresa, St. Augustine, and other saints. The flaming heart is the emblem of charity. The heart pierced by seven daggers symbolizes the "seven sorrows" of Mary.]

Helm, **Helmet**, Her.

Fig. 383. Helm of a Gentleman or Esquire.

Now placed as an accessory above a shield of arms. Modern usage distinguishes helmets according to the rank of the wearer. The term *helm* was applied by both Saxons and Normans, in the 11th century, to the conical steel cap with a nose-guard, which was the common head-piece of the day, and is depicted in contemporary illuminations, sculptures, and tapestries. Afterwards it was restricted to the *casque*, which covered the whole head, and had an aventail or vizor for the face. The use of the *helm* finally ceased in the reign of Henry VIII.

Helmet. The diminutive of **HELM**, first applied to the smaller head-piece which superseded it in the 15th century. (See **GALFA**, **ARMET**, **BASCINET**, **BURGONET**, **CASQUE**, **CHAPELLE LE FER**, &c.)

The office of Earl Marshal, the supreme head of the English heralds, is hereditary in the family of the Duke of Norfolk. There is another herald king styled "Bath," who is specially attached to that order; he is not a member of the college. The institution was imported into England in the Middle Ages from Germany, a corporation of heralds, similar to the *collegium fetialium* of Rome, having been established in England in 1483 by Richard III. (See *Pitiscus*, tom. i., and *Hofmann*, tom. ii.)

Hermæ, Gr. and R. (Ἑρμαί). Hermæ, a

kind of pedestals surmounted only by the head, or, in some cases, the bust of Hermes. Great reverence was felt for these statues. Houses at Athens had one before the doors; they were also placed in front of temples, near tombs, at street corners, or as mile-stones on the high roads. *Hermuli*, or small *Hermæ*, were a common ornament of furniture, as pilasters and supports. The same name is applied to similar statues having a man's head. This statue was probably one of the first attempts of art at plastic representation. The *phallus* and a pointed beard originally were essential parts of the symbol. In place of arms there were projections to hang garlands on. Then a mantle was introduced from the shoulders. Afterwards the whole torso was placed above the pillar; and finally the pillar itself was shaped into a perfect statue. All these gradations of the sculptor's art are traceable in existing monuments.

Hermæa. Festivals of Hermes, celebrated by the boys in the gymnasia, of which Hermes was the tutelary deity.

Hermeneutæ, Chr. (ἑρμηνευταί). Literally, interpreters. In the earliest ages of the Church, these were officials whose duty it was to translate sacred discourses or portions of Holy Scripture.

Herne-pan, O. E. (for *iron-pan*). Skull-cap worn under the helmet.

Heroum, Gr. (ἡρώων, i. e. place of a hero). A kind of ÆDICULA (q.v.), or small temple, which served as a funeral monument. Several representations of Roman HEROA may be seen in the British Museum, representing funeral feasts in a temple, carved on the face of a sarcophagus (in the Towneley collection).

Herring-bone Masonry. Common in late Roman or early Saxon walls, where the ornamental lines take a sloping, parallel, zigzag direction.

Herygoud, O. E. A cloak with hanging sleeves.

Heuk or **Huque**, O. E. (1) Originally a cloak or mantle worn in the Middle Ages; then (2) a tight-fitting dress worn by both sexes. (*Fairholt*; see also *Planché, Encyclopædia*.) There appears to be great uncertainty as to the character of this garment.

Hexaphoron, Gr. and R. (ἑξά-φορον). A litter carried by six porters.

Hexeris, Gr. (ἑξ-ήρης). A vessel with six ranks of oars.

Hiberna or **Hyberna**, R. A winter apartment. The halls in a Roman country house were built to face different ways according to the seasons; *verna* and *autumnalis* looked to the east; *hyberna*, to the west; *æstiva*, to the north.

Hidage, **Hidegild**, A.S. A tax payable to the Saxon kings of England for every *hide* of land. The word is indifferently used to signify exemption from such a tax.

Hidalgo (Span. *hijo d'algo*, son of somebody). An obsolete title of nobility in Spain.

Hieroglyphics, Eyp. (*ιερως*, sacred, and *γλυφω*, to carve). Characters of Egyptian writing, the letters of which are figurative or symbolic. There are three kinds of Egyptian writing, the *hieroglyphic*, the *hieratic*, and the *demotic*. Clement of Alexandria says that in the education of the Egyptians three styles of writing are taught: the first is called the epistolary (*enchorial* or *demotic*); the second the *sacerdotal* (*hieratic*), which the sacred Scribes employ; and the third the *hieroglyphic*. Other nations, as for instance the ancient Mexicans, have likewise employed hieroglyphics.

Hieromancy, Gr. and R. Divination from sacrifices.

Hieron, Gr. (*ιερον*, i. e. holy place). The whole of the sacred enclosure of a temple, which enclosed the woods, the building, and the priests' dwelling-place.

High-warp Tapestry. Made on a loom, in which the warp is arranged on a vertical plane, as the Gobelins. *Low-warp tapestry* is made on a flat loom, as at Aubusson, Beauvais, and other places. It is made more rapidly, and is inferior in beauty to the former.

Hilaria. A great Roman festival in honour of Cybele, celebrated at the vernal equinox. It consisted chiefly of extravagant merry-making to celebrate the advent of spring.

Hippocampus, Gr. and R. A fabulous animal, which had the fore-quarters of a horse ending in the tail of a dolphin. [It is imitated from the little "sea-horse" of the Mediterranean, now common in aquariums; and in mural paintings of Pompeii is represented attached to the chariot of Neptune.]

Hippocentaur. A fabulous animal, composed of a human body and head attached to the shoulders of a horse. (See also **CENTAUR**.)

Hippocratia, Gr. Festivals held in Arcadia in honour of Neptune, who, by striking the earth with his trident, had given birth to the horse.

Hippodromus, Gr. and R. The Greek name

for an arena for horse and chariot races, in contradistinction to the stadium, which served for foot-racing. Fig. 386 represents the hippodrome at Olympia, taken from Gell's *Itinerary of the Morea*. The following is the key to the plan:—1, 2, and 3 are *carceres*; A, the space included between the stalls or *carceres*; B, starting-place for the chariots; C, the colonnade; D, the arena; E, the barrier; F, the goal; G, the

Fig. 386. Ground-plan of a Hippodrome.

space occupied by the spectators. [The word was also applied to the races themselves.] (See also **CIRCUS**.)

Hippogryph. A mythical animal represented as a winged horse with the head of a *gryphon*.

Hippopera, Gr. and R. (*ιππο-πήρα*). A saddle-bag for travellers on horseback. (See **ASCOPERA**.)

Hippotoxotes (*ιππο-τοξότης*). A mounted archer. The Syrians, Persians, Medes, Greeks, and Romans had mounted archers among their light cavalry.

Histrion. An actor. The GREEK dramas were originally represented on the stage by one performer, who represented in succession the different characters. Æschylus introduced a second and a third actor. The actors

were all amateurs, and it was not until a later period that the histrionic profession became a speciality. Sophocles and Æschylus both probably acted their own plays. The ROMAN name for an actor, *histrion*, was formed from the Etruscan *hister*, a dancer. The earliest *histriones* were dancers, and performed to the music of a flute; then Roman youths imitating them introduced jocular dialogue, and this was the origin of the drama. After the organization of the theatres, the *histriones* were subjected to certain disabilities; they were a despised class, and excluded from the rights of citizenship. The greatest of *histriones* in Rome were Roscius and Æsopus, who realized great fortunes by their acting.

Hoblers, A.S. Feudal tenants bound to serve as light horsemen in times of invasion.

Hock-day, **Hoke-day**, or **Hock Tuesday**. A holiday kept to commemorate the expulsion of the Danes. It was held on the second Tuesday after Easter. *Hocking* consisted in stopping the highway with ropes, and taking toll of passers-by.

Holocaust. A sacrifice entirely consumed by fire.

Holosericum (Gr. *ὅλον*, all; *σηρικόν*, silk). A textile *all silk*.

Holy Bread, **Holy Loaf**, or **Eulogia** (Lat. *panis benedictus*). This was not the eucharistic bread (which was used in the wafer form for the Communion), but ordinary leavened bread, blessed by the priest after mass, cut up into small pieces and given to the people.

Holy-bread-skep, O. E. A vessel for containing the holy bread.

Holy Water Pot, Chr. A metal vessel frequently found at the doors of Roman Catholic churches, to contain the consecrated water, which was dispensed with the *aspergillum*.

Fig. 387. Holy Water Stone (Renaissance).

Honeysuckle Pattern. A common Greek ornament, fully described by its name. (See FLEURON.)

Honiton Guipure. Lace was made in Devonshire, as well as in other parts of England, of silk and coarse thread until 1567, when the fine thread now used was introduced, it is said, by Fleinings, who had escaped from the persecutions of the Duke of Alva. (See OLD DEVONSHIRE.) Honiton lace owes its great reputation to the sprigs made separately on a pillow, and afterwards either worked in with the beautiful pillow net or sewn on it. This net was made of the finest thread from Antwerp, the price of which in 1790 was 70*l.* per pound. (See MECHLIN LACE, 18th century.) Heathcoat's invention, however, dealt a fatal blow to the trade of the net-makers, and since then

Fig. 388. Honiton Guipure.

Honiton lace is usually made by uniting the sprigs on a pillow, or joining them with a needle by various stitches, as shown in the engraving.

Honour, Legion of. Instituted 3rd June, 1802, by Napoleon I. as first consul.

Hoodman-blind. Old English for BLINDMAN'S BUFF (q.v.).

Hoods (A.S. *Hod*) were probably introduced by the Normans. They are constantly represented, with great variation of fashion, in illustrations of the 11th to 18th century, as a part of the costume of both sexes. They were finally displaced by caps and bonnets in the reign of George II. (See CHAPERON, COWL.)

Hoops, in ladies' dress, were introduced in the reign of Queen Elizabeth, displacing the

FARTHINGALE; and were finally abandoned in that of George III.

Horatia Pila, R. A pillar erected at the west extremity of the Roman forum to receive the trophy of the spoils of the three Curii brought back by Horatius.

Horns. A portion of a lady's head-dress, mentioned in the 13th century. They appear to have been formed by the foldings of the *gorget* or *wimple*, and a disposition of the hair on each side of the head into the form of rams' horns. For the horned head-dress of the 15th century, see the illustration to CORONET.

Horologium. (1) *Sun-dials* preceded all other instruments for the measurement of time. The *gnomon* or *stochion* of the GREEKS was a perpendicular staff or pillar, the shadow of which fell upon a properly marked ground; the *polos* or *heliotropion* consisted of a perpendicular staff, in a basin in which the twelve parts of the day were marked by lines. (2) The *clepsydra* was a hollow globe, with a short neck, and holes in the bottom; it measured time by the escape of water, and was at first used like an hour-glass to regulate the length of speeches in the Athenian courts. The escape of water was stopped by inserting a stopper in the mouth, when the speaker was interrupted. Smaller *clepsydrata* made of glass and marked with the hours were used in families. A precisely similar history applies to the *horologia* of ROME.

Horreum (dimin. *horreolum*), R. (1) Literally, a place in which ripe fruits were kept; a granary, or storehouse for grain; *horreum publicum* was the public granary. (2) Any storehouse or depôt; *horrea subterranea*, cellars. (3) It was applied to places in which *works of art* were kept, and Seneca calls his library a *horreum*.

Horse. In Christian art, the emblem of courage and generosity; attribute of St. Martin, St. Maurice, St. George, and others. The Chinese have a *sacred horse*, which is affirmed to have appeared from a river to the philosopher Fou-hi, bearing instruction in eight diagrams of the characters proper to express certain abstract ideas.

Horse-shoe, Arch. A form of the stilted arch elevated beyond half the diameter of the curve on which it is described. (See ARCH.)

Hortus (dimin. *hortulus*), R. A pleasure-garden, park, and thence a kitchen garden; *horti pensiles* were hanging gardens. The most striking features of a Roman garden were lines of large trees planted in regular order; alleys or walks (*ambulationes*) formed by closely clipped hedges of box, yew, cypress, and other evergreens; beds of acanthus, rows of fruit-trees especially of vines, with statues, pyramids, fountains, and summer-houses (*diatae*). The

Romans were fond of the art of cutting and twisting trees, especially box, into figures of animals, ships, &c. (*ars topiaria*). The principal garden-flowers seem to have been violets and roses, and they had also the crocus, narcissus, lily, gladiolus, iris, poppy, amaranth, and others. Conservatories and hot-houses are frequently mentioned by Martial. An ornamental garden was also called *viridarium*, and the gardener *topiarius* or *viridarius*. The common name for a gardener is *villicus* or *cultor hortorum*. (Consult *Smith's Dict. of Ant.*)

Hospitium, R. (*hospes*, a guest). A general term to denote any place in which a traveller finds shelter, board, and lodging. [The word had a very wide meaning of *hospitality*, regulated in all its details by the religious and social and politic sentiments of the nations.]

Howsling Bell, O. E. The bell which was rung before the Holy Eucharist, when taken to the sick.

Howve (Saxon, from the old German *hoofd*). A hood. A common phrase quoted by Chaucer, "to set a man's *howve*," is the same as to "set his cap," *cap* him or cheat him.

Humerale. (See ANABOLOGIUM, AMICE.)

Humettée, Her. Cut short at the extremities.

Hunting Flask. M. Jacquemart thinks that that represented in Fig. 389 may be reasonably attributed to Palissy. It is glazed in green, and diapered with little flames of a deeper shade. Upon the body, in relief, is the escutcheon of the celebrated Anne de Montmorency, round it the collar of St. Michael,

and on each side the Constable's sword sup-

Hycsos, Egyp. (lit. impure). A people of unknown origin, nomad tribes, but not savages, as has hitherto been believed, who came from Sinai, Arabia, and Syria. They are

known as *Poimenes* (the Shepherds), *Mention Sati*, *Asian Shepherds*, and even *Scourges*, from their invasion of some part of Eastern Egypt.

Hydra, Gr. (a water-serpent). A hundred-headed monster of Greek mythology, sprung, like the Chimæra, from Typhon and Echidna; he was killed by Hercules. In Heraldry the hydra is represented with only nine heads. The illustration (Fig. 390) is of the device adopted by Curtio Gonzaga, an Italian poet, to symbolize the constancy of his love, with the motto, "If I kill it, more strong it revives."

Fig. 390. Hydra with seven heads.

Hydraletês, Gr. (1) A mill for grinding corn, driven by water. (2) A waterfall or current of water.

Hydraulis, Gr. (*υδρ-αυλις*). A water-organ. The hydraulic organ, invented about B.C. 200, was really a pneumatic organ; the water was only used to force the air through the pipes. It is represented on a coin of Nero in the British Museum. Only ten pipes are given to it, and there is no indication of any key-board. It had eight stops, and consequently eight rows of pipes; these were partly of bronze, and partly of reed. It continued in use so late as the 9th century of our era.

Hydria, Gr. A large, heavy vessel, used principally for holding a store of water. It is represented urn-shaped, with a broad base and a narrow mouth, sometimes with one and sometimes with two handles at the top, and smaller ones on the belly. Fig. 392. Hypæthrum.

any building, especially a temple, the *cella* of which had no roof. On the roofs of Egyptian temples, hypæthral temples are arranged with regard to astronomical observations, by which the calendar was regulated.

Fig. 393. Hypocaust of a Roman villa at Tusculum.

Hypæthrum, Gr. and R. A grating or *claustra* placed over the principal door of a temple for the purpose of admitting light into a part of the *cella*. Fig. 392 shows one of the bronze doors of the Pantheon at Rome, with its *hypæthrum*.

Greek term is a synonym of the Latin CONDITORIUM (q.v.)

Hyporchema, Gr. A lively dance, accompanied by a mimic performance, at the festivals of Apollo among the Dorians. A chorus of singers danced round the altars, and others acted comic or playful scenes.

Hypotrachelium or **Cincture**, Arch. The part of the Doric capital included between the astragal and the lower annulets or fillets.

Hysteria, Gr. (from *ὑς*, a pig). Greek festivals, in which swine were sacrificed in honour of Venus.

I.

Ich Dien. I serve. The popular belief that Edward the Black Prince adopted this motto and the "Prince of Wales's feathers," at the battle of Cressy, from the blind King of Bohemia, is not sustained by investigation. It was at the battle of Poitiers that he first adopted this crest, joining to the family badge the old English word *Ich den* (Theyn), "I serve," in accordance with the words of the Apostle, "The heir, while he is a child, differeth nothing from a servant." (*Mrs. Palliser; Historic Devices.*)

Ichnography. The art of making maps or plans.

Iconic (sc. *statues*), Gr. and R. (εἰκονικά, i.e.) Portrait-statues; especially statues raised in honour of athletes who had been victorious in the contests.

Iconoclasts, Chr. Image-breakers. The name originated in the 8th or 9th century in the Eastern Empire, from which finally Theophilus banished all the painters and statuary in 832. It has been since generally applied to those who, at various outbreaks of fanaticism, have destroyed ecclesiastical objects of art, and is especially applicable to the disciples of Savonarola in 1497, and to the Puritans of Scotland and England during the civil wars.

Iconography (i. e. image-description). The science that deals with statues and images, bas-reliefs, busts, medals, &c. Thus we have an Egyptian, Greek, Roman, mediæval iconography, &c. The best work on this science is "Christian Iconography; or the History of Christian Art in the Middle Ages," by M. Didron. The second volume contains a manual on the subject by a painter of the 12th century.

Iconostasis, Chr. The screen of the chancel in ancient churches, so called because it was there that images (εἰκόνας) were displayed for the adoration of the faithful.

Ideal and Real. "Any work of art which represents, not a material object, but the mental conception of a material object, is in the primary sense of the word *ideal*; that is to say, it

represents an *idea*, not a *thing*. Any work of art which represents or realizes a material object is, in the primary sense of the term, *un-ideal*." (*Modern Painters*, vol. ii. chap. 13.) In a practical sense an *ideal* picture or statue (e. g. the Medici Venus) is not the portrait of an individual model, but the putting together of selected parts from several models. Raphael said, "To paint a beautiful woman I must see several, and I have also recourse to a certain *ideal* in my mind;" and Guido said, "The beautiful and pure *idea* must be in the mind, and then it is no matter what the model is."

Ides, **Idus**, R. One of the monthly divisions in the Roman year; it fell on the 15th in months of thirty-one days, excepting January, August, and December; in months with only twenty-nine or thirty days, the *ides* fell on the 13th. The *kalends* are the first of every month; the *nones* are the 7th of March, May, July, and October, and the 5th of all the other months; and the *ides* always fall eight days later than the *nones*; and the days are reckoned backwards: thus the 13th of January is the *ides* of January, and the 14th of January the 19th day *ante diem* (or before) the February *kalends*. The morrow of the *ides* was looked upon as an unlucky day (*nefas*).

Illapa, Peruv. One of the divisions of the temple of the Sun (*Inti*) among the ancient Peruvians, so called because it was dedicated to the thunder (*Illapa*). (See INTI.)

Illumination. This art originated simply in the application of *minium* (or red lead) as a colour or ink, to decorate a portion of a piece of writing, the general text of which was in black ink. The term was retained long after the original red lead was superseded by the more brilliant *cinnabar*, or vermilion. Ornaments of all kinds were gradually added, and the term includes the practice of every kind of ornamental or ornamented writing. From the 3rd century Greek and Roman specimens exist of golden lettering upon purple or rose-coloured vellum, and the art prevailed wherever monasteries were

founded. Anglo-Saxon and Irish MSS. of the 6th and 7th centuries exhibit a marvellous perfection, characterized by wonderfully minute interlacements of the patterns. Nearly all the best specimens of illumination were destroyed on the dissolution of monasteries. (Consult "*The Art of Illuminating*," by W. R. Timms.)

Imagines a vestir, It. Wooden images set up in Italian churches, with the heads and extremities finished, and the bodies covered with real drapery.

Imagines Majorum, R. Portraits of ancestors, or family portraits; they usually consisted of waxen masks, which were kept in the cases of an *armarium* or in an *ædicula*; or small statues which were carried before the corpse in a funeral procession.

Imbrex, R. A ridge-tile of semi-cylindrical form, and thus distinct from the *tegula*, which was a flat tile. It was called *imbrex* from its collecting the rain (*imber*). *Imbrex supinus* was the name given to a channel or gutter formed of ridge-tiles laid on their backs.

Imbrications. Architectural ornaments which take the form of fishes' scales, or of segmental ridge-tiles (*imbricæ*) which overlap; whence the name given to them.

Impannata, It. Oiled paper.

Impasto, It. The thickness of the body of pigment laid on to a painting. Rembrandt, Salvator Rosa, and others used a thick *impasto*; Raphael, Guido, and others, one extremely thin.

Imperial. Anything adapted by its excellence for royal uses, or distinguished in size, is generally so called. (1) O. E. A sort of precious silk, wrought partly with gold, used by royalty and for ecclesiastical purposes, brought to England from Greece in the 12th century. (2) The largest kind of slate for roofing. (3) Paper 27 inches by 23. (4) Sp. The roof of a coach; hence, in English, a trunk made to fit the top of a carriage. (5) Russian. A gold coin of 10 silver roubles.

Fig. 395. Device of Philip and Mary. Arms of Tudor and Aragon Impaled (*Rayonnant*).

Inauguratio, R. Generally the term applies to the ceremony by which the sanction of the gods was invoked upon any decree of man, such as the admission of a new member into a corporation or college, or the choice of the site of a theatre, city, or temple, &c.

Inaures, R. (*auris*, the ear; Gr. *enotion*). Earrings. Among the Greeks and Romans they were worn only by women. (See *EAR-RINGS*.)

Incisura, R. (*incido*, to cut). Hatchings made by means of a brush.

Incitega, R. A kind of tripod or stand for vessels rounded or pointed at the bottom.

Incle, **Inkle**. A sort of tape used as a trimming to a dress.

Incrustation. The word has a general signification, "a coat of one material applied to another." Technically it should be applied to

marble alone; thus a thin slab of marble is *incrusted* upon a body of slate or stone, metals are DAMASCENED, fused pigments are ENAMEL, and woods are VENEERED.

Incubones, R. Genii who were supposed to guard treasure hidden under the earth.

Incunabula. (1) Swaddling-clothes for infants. (2) Ancient specimens of printing are so called.

Incus, R. (*incudo*, to beat on). An anvil.

Fig. 396. Indented.

Indented, Her. One of the dividing and border lines. It resembles the teeth of a saw.

Indian Art. The study of the forms and principles of Indian Art is indispensable to an appreciation of the true principles of ornamental design in general. The excellence of Indian manufactures is due to the system of Guilds rigidly adhered to for ages, which has resulted in the production of a race of hereditary craftsmen unequalled for their skill and taste in execution and design. Their pottery is distinguished above all others for purity and simplicity of form, obvious fitness to purpose, and individual freedom of design. Its origin

Fig. 397. Printed Calico (Indian) illustrating the treatment of flowers.

antedates the Institutes of Manu, and is lost in antiquity. Indian gold and metal work is supposed by Dr. Birdwood to owe its origin to Greek influence, but has acquired in its development a purely Oriental character. The Hindoos exhibit the greatest skill in the Oriental arts of damascening and enamelling, as well as in lacquer work and wood and ivory carving. All their designs are deeply symbolical, and closely interwoven with the primitive religious impulses of humanity. India was probably the first country in which the art of weaving was brought to perfection, and the fame of its cloudy gauzes and its gold and silver brocades is more ancient than the Code of Manu. The art is repeatedly mentioned in the Vedas. The purity of Indian Art is endangered in modern days by the introduction of machine-made goods and European design. (Consult *Dr. Birdwood's Handbook of Indian Art.*)

Indian Ink or Chinese Ink. A black pigment for water-colour painting, made from oil and lamp-black, thickened with some vegetable gum, and scented with musk or camphor. Many cheap and poor imitations of it are made.

Indian Ochre. A red pigment. (See RED OCHRES.)

Indian Paper. A delicate yellowish paper used for proof impressions in engraving. A Japanese paper of a similar quality is now frequently used.

The PEDESTAL is a little taller and more ornamented than the Doric. The BASES used are very various. Ivory Carving. This art, in considerable perfection, was known to prehistoric man at the period of the so-called stone age. Egyptian and Assyrian specimens of the art are of a date at least as early as that of Moses. From the year 1000 B.C. down to the Christian era, there was a constant succession of artists in ivory in the western

Asiatic countries, in Egypt, in Greece, and in Italy. From the time of Augustus, ivory carving shared in the general decline of art. Increasing in number as they come nearer to the Middle Ages, we can refer to carved ivories of every century, preserved in museums in England and abroad. The most important ivories up to the 7th century are the consular *diptychs*, originally a favourite form of presents from newly-appointed consuls to eminent persons; subsequently adapted to

Christian uses, or as wedding presents, &c. In the Middle Ages, from the 8th to the 16th cen-

ture, the use of ivory was adopted for general

purposes. The favourite subjects of the carvings are those drawn from the romances of the Middle Ages—especially the romance of the Rose—and in the 15th century, scenes of domestic life, illustrating the dress, armour, and manners and customs of the day. Combs of every date, from the Roman and Anglo-Saxon period, and earlier, are found in British graves. In short, from the time when the first prehistoric carvings of antediluvian animals were made to the present, every age of human civilization appears to be more or less fully illustrated in carvings upon ivory and bone. (See also CHESSMEN.) The earliest material was found in the tusks of the mammoth: from Iceland we have beautiful carvings of the 7th century in the teeth of the walrus. Fossil tusks of the mammoth are found in great quantities in Siberia, and are almost the only material of the ivory-turner's work in Russia. African and Asiatic elephant ivory are the best, and differ, the former, when newly cut, being of a mellow, warm, transparent tint. Asiatic ivory tends to become yellow by exposure. A fine specimen of carving in ivory is given in Fig. 403 from a MIRROR-CASE of the 15th century. (See also Fig. 185, and illustrations to PYX, TRIPTYCH, &c.)

The most celebrated work on the subject is *Nicholson's Carpenter's Guide, and Carpenter's and Joiner's Assistant*, published in 1792. The *modern art* of joinery properly dates from the introduction of the geometrical staircase, or stair supported by the wall only, the first English example of which is said to have been erected by Sir Christopher Wren in St. Paul's. [See JOINERY in *Ency. Brit.* 8th ed.]

Lithochrome. Another name for CHROMO-LITHOGRAPHY, or colour-printing.

Lithography, or drawing on stone, was invented by Aloys Senefelder of Munich in 1796. Drawings are made on a polished surface of calcareous stone, with ink and chalk of a soapy nature. The *lithographic ink* is made of tallow-soap, pure white wax, lamp-black, and a small quantity of tallow, all boiled together, and, when cool, dissolved in

distilled water; the ingredients for the *lithographic chalk* are the same, with a small quantity of potash added during the boiling. After the drawing on the stone is perfectly dry, a very weak solution of sulphuric acid is poured over it, which takes up the alkali from the ink or chalk, and leaves an insoluble substance behind it, while it lowers in a slight degree the surface of the stone not drawn upon, and prepares it for the free absorption of water. Weak gum-water is next applied to close the pores of the stone, and to keep it moist. The stone is then washed with water, and the printing-ink applied in the ordinary way. It then passes through the press, the washing with water and daubing with ink being repeated after every impression. As many as 70,000 copies have in this way been taken from one stone, the last being nearly as good as the first. Copper-plate and steel engravings can be transferred to stone. (See the article "Lithography" in the *Encyclopædia Britannica*, 8th ed.)

Louis Treize Style (Arch.), a French version of Italian art, prevailed from 1625 to 1650, and produced *Jean le Pautre*, the ornamentist, and the following styles:—

Louis Quatorze, Arch. A style of ornament developed towards the close of the 17th century (1643—1715). It is described as “essentially an *ornamental* style, its chief aim being effect by a brilliant play of light and shade; colour, or mere beauty of form in detail, having no part in it. This style arose in Italy, and the Chiesa del Gesù at Rome is mentioned as its type or model. The great medium of the Louis Quatorze was gilt stucco-work, which, for a while, seems to have almost wholly superseded decorative painting; and this absence of colour in the principal decorations of the period seems to have led to its more striking characteristic,—infinite play of light and shade.” (*Wornum, Analysis of Ornament.*) In this style symmetry was first systematically avoided. In the *Furniture* of the period the characteristic details are the scroll and shell. The classical ornaments and all the elements of the *Cinque-cento*, from which the Louis Quatorze proceeded, are admitted under peculiar treatment, as accessories; the panels are formed by chains of scrolls, or a combination of the scroll and shell. Versailles is the great repertory of the Louis Quatorze (Fig. 433), and the designs of Watteau its finest exemplification.

Louis Quinze, Arch. This style (1715—74) is the exaggeration of the Louis Quatorze, rejecting all symmetry, and introducing the elongation of the foliations of the scroll, mixed up with a species of crimped conventional *coquillage* or shell-work. The style found its

culmination in the bizarre absurdities of the Rococo.

anointed the body with oil, and then strewed it over with sand or dust. The *Lucta* or *Palé* differed from the *Pancratiūm*. In the latter,

Before the 10th century the lute had only four strings, or four pairs producing four tones, each tone having two strings tuned in unison. About the 10th century a string for a fifth tone was added. The strings were made of silk neatly twisted. The neck of the instrument was provided with frets of string, regulated according to the system of seventeen intervals to an octave. The Chinese god of music is represented playing on a lute with four strings. The lute was very popular in England in Elizabeth's time. Originally it had eight catgut strings, arranged in four pairs, each pair being in unison. The number of strings varied from time to time, and in the 17th century they were twenty-

four. The size of the lute also varied; the treble lute was the smallest, and the bass lute the largest. There were also the

Some have three strings, others five, and others six. The two sides of the frames appear to have been made of horns of animals. The Hebrew square-shaped lyre is probably the PSALTERION; the KINNOR, a lyre of triangular shape, the instrument of King David, is named in the Bible as the oldest stringed instrument, the invention of Jubal. The Rabbis record that King David used to suspend his over his pillow at night. On Egyptian monuments, at Beni Hassan, a Hebrew lyre is represented, probably of the date of Joseph, 1700 B.C. The GREEKS had lyres of many kinds, distinguished by different names; LYRA, a generic term, and also the lyre oval at the base, to be held in the lap; KITHARA, with a square base, to be held against the breast; CHELYS, a small lyre with body made of tortoise-shell; PHORMIX, a large lyre, &c. Some lyres have a bridge, others have none; the largest were probably held on or between the knees, or were tied by a band to the left arm. Metallurgy. It was at a comparatively late period of human civilization that the art of working in iron was brought to perfection. The ancient Egyptians, probably aware of its resources, had a superstitious objection to its use; but they hardened bronze to a degree unknown to later ages, and their bronze statuary of the most ancient period is worthy of any age. The bronze-work of Britain and Ireland is as ancient as any; and, in beauty of form and perfection of casting, rivals the best modern work. Of the work in Greece we are told that Athens alone contained 3000 bronze statues in the year 130 B.C., and vast treasures of metallurgy have been discovered in Herculaneum and Pompeii. In mediæval times Ireland was famous for metallurgy, and of its admirable copper-works of the 11th century many splendid relics remain, especially the so-called Bell of St. Patrick. Oriental bronzes, of characteristic design, are plentiful from all ages; especially beautiful and perfect in execution are those of China and Japan. The best period of workmanship in Iron is the Middle Ages; gates and hinges, keys, and especially weapons and defensive armour being the chief objects produced. (Consult *Pugin*, *Digby Wyatt*.) On these generally the Child is seen wrapped in swaddling clothes as the central object, the star appears above, the Virgin on a rude couch, and sometimes St. Joseph rapt in thought, his head resting on his hand; the ox and the ass appear behind, and shepherds with curved staves stand by adoring.

(See *Wilkinson's Ancient Egyptians*, ii. 343.) An illustration of a common form of GREEK necklaces is given under *Crotalium*. The BRITISH women of the earliest ages wore necklaces of jet, ivory, and amber, beads, shells, &c., besides gold links hooked together. (See also *MONILE*, *TORQUE*.) The Anglo-Norman ladies do not appear to have worn necklaces, and no mediæval examples are found earlier than the 15th century. (See Figs. 303, 304, 483.)

a pagan source, of celebrating the birthday of St. John Baptist at the midsummer solstiee (St. John's Eve) by lighting fires, carrying about firebrands, or rolling a burning wheel. The practice is one of many examples of the caution with which the evangelizing ecclesiastics of the Middle Ages refrained from abruptly disturbing the deeply-rooted superstitions of the ancient Germans. [Consult *Grimm's German Mythology*; *Brand, Popular Antiquities*.]

Needle, Arch. An *obelisk* (q.v.).

The engraving is an exquisite specimen of the fine raised needle point.

Nickel-silver. German silver, or white metal, a compound of tin and nickel.

Niello. The art of chasing out lines or forms, and inlaying a black composition called *nigellum* or niello, was probably well known to the Greeks. The Byzantines compounded for this purpose silver, lead, sulphur, and copper, and laid it on the silver in a powder; being then passed through the furnace, it melted and incorporated with the solid metal. After the 8th century living persons were, in Italy, distinguished by a square nimbus, which sometimes assumed the form of a scroll partly unrolled. The nimbus is of heathen origin. Virgil describes Juno as "nimbo succincta." The heads of the statues of the gods, and the Roman emperors, after they began to claim divine honours, were decorated with a crown of rays. On medals of the Christian emperors also the nimbus is found, e.g. Constantine. In illuminated MSS. it is found on Pharaoh, Ahab, and other kings. It

is a familiar symbol of dignity or power in the East, but does not appear as a Christian emblem before the 6th century. [See the article NIMBUS in the *Dict. of Christian Antiquities.*] (See AUREOLE, GLORY, VESICA PISCIS, &c.)

Norman Architecture. It was introduced into England at the Conquest, A.D. 1066, and was superseded in the 12th century by the Early English style. Solid massive masonry, round-headed doors and windows, and low square central tower are (broadly) its characteristics. Among details the zigzag and the billet mouldings are the most noticeable. (Fig. 488.)

Norman Pottery, Mediæval. The illustration is from a pavement of a church of the 12th century. "Nothing," says Jacquemart, "is more curious than the study of these tiles, in which, with rudimentary means, art already begins to manifest its power. There, in a graceful chequer-work, the fleur-de-lis of France heightens at intervals a semé of trefoils and rosettes; scrolls of notched leaves combine in graceful borders; circles divided crossways receive in their sections stars and heraldic suns; here are armour-clad warriors, mounted upon horses richly caparisoned, &c.—all that picturesque fancy assisted by the resources of heraldry could invent to animate the cold compartments of the pavement, and give a meaning to the vast naves trodden every day by the Christian multitude." In consequence of these superstitions, and its sunless aspect, the northern parts of churchyards are

Potter's Clay, found in Dorsetshire and Devonshire, is used for modelling and for pottery; mixed with linseed oil, it is used as a *ground* in painting.

Pottery (**Fayence**, **Terraglia**), as distinct from porcelain, is formed of potter's clay mixed with marl of argillaceous and calcareous nature, and sand, variously proportioned, and may be classed under two divisions: *Soft* (Fayence à pâte tendre), and *Hard* (Fayence à pâte dure), according to the nature of the composition or the degree of heat under which it has been fired in the kiln. What is known generally in England as *earthenware* is soft, while *stone-ware*, *Queen's-ware*, &c., are hard. The characteristics of the soft wares are a paste or body which may be scratched with a knife or file, and fusibility generally at the heat of a porcelain furnace. These soft wares may be again divided into four subdivisions: *unglazed*, *lustrous*, *glazed*, or *enamelled*. Among the three first of these subdivisions may be arranged almost all the ancient pottery of Egypt, Greece, Etruria, and Rome; as also the larger portion of that in general use among all nations during mediæval and modern times. The *glazed wares* may be again divided into *silicious* or *glass-glazed wares*, and *plumbeous* or *lead-glazed*. In these subdivisions the foundation is in all cases the same. The mixed clay or "paste" or "body" is formed by the hand or on the wheel, or impressed into moulds; then slowly dried and baked in a furnace or stove, after which, on cooling, it is in a state to receive the glaze. This is prepared by fusing sand or other silicious material with potash or soda to form a translucent glass, the composition of the glaze upon vitreous or *glass-glazed wares*. The addition of oxide of lead constitutes the glaze of *plumbeous wares*; and the further addition of the oxide of tin produces an enamel of an opaque white of great purity, which is the characteristic glazing of *stanniferous* or *tin-glazed wares*. Most of the principal seats of the manufacture of pottery, and a description of the objects manufactured, and methods used in the manufacture, will be found mentioned under their respective headings.

Retable (Fr.), Chr. (See REREDOS.)

Rete and **Retis**, R. A net.

Retiarius. A gladiator whose only arms were a trident and net; with the latter he tried to embarrass the adversary by casting it over his head, and, having done so, to wound him with the trident; failing in their throw, their only resource was to run round the arena preparing the net for a second attempt. They fought generally with the Mirmillones, and had no helmet nor other protective armour excepting for the left arm. (See GLADIATORS.)

Reticella (Lat. *reticulus*, a little net). This was the first known needle-made lace, produced in all lace-making countries under different names. (See GREEK LACE.) It was made in several ways: the first consisted in arranging a network of threads on a small frame, crossing and interlacing them in various complicated patterns. Beneath this network was gummed a piece of fine cloth, open like canvas, called *quintain* (from the town in Brittany where it was made). Then with a needle the network was sewn to the *quintain* by edging round those parts of the pattern which were to remain thick, then cutting away the superfluous cloth: hence the name of *cutwork* in England. A more simple mode was to make the pattern detached without any linen; the threads radiating at equal distances from one common centre

served as a frame-work to others, which were united to them in geometric forms worked over

Reticulated Porcelain is an Oriental product, of which the outer side is entirely cut out in geometric patterns, honeycomb, circles intercrossed and superposed to a second vase of similar, or of simply cylindrical form. Fig. 582 is a specimen of this style.

Reticulated Work, Arch. (Lat. *reticulata structura*, literally, made like a net). Masonry constructed with diamond-shaped stones, or QUARRELS, shown in Figs. 493 and 583. The

latter shows one of the mouths of the *cloaca* opening on the Tiber. *Reticulata fenestra* was a window grated over with bars of wood or metal crossing in the form of network.

Reticulum, R. Diminutive of *rete*, a net.

Retinaculum, R. (*retineo*, to hold back). A rope used to moor a vessel to the shore.

Retorted, Her. Intertwined.

Retro-choir, Chr. Arch. Chapels behind or about the choir.

Reverse. The back of a medal. In very ancient coins this had no mark except that of the instrument by which it was fixed to receive the stamp of the *obverse*. By degrees this grew into a figure of a dolphin or some other animal. Some ancient Greek reverses are *intaglios* of the stamp in relief of the *obverse*. Complete reverses appear on Greek coins about 500 B.C., and are of exquisite execution. (Cf. *OBVERSE*.)

Revinctum (opus), R. (*revincio*, to bind fast). Dove-tailed masonry. (See Fig. 269.)

Some love-device is wrought on every sword,
And every ribbon bears some mystic word."

(*Granville*.)

Rimenato, It. (See CRUSCA.)

Ring Mail. Flexible armour of iron rings interwoven; introduced from the East by the Crusaders.

Rings. The symbolic use of signet-rings is mentioned in many passages of the Holy Scriptures, especially as a transfer of authority; as Pharaoh to Joseph (Gen. xli. 42), Ahasuerus to Haman, &c. A large collection of Egyptian signet-rings is in the British Museum, many being much too large to be worn on the hand. EGYPTIAN rings were of ivory, porcelain, or stone, but generally of gold. The ETRUSCANS and SABINES wore rings at the foundation of Rome, 753 B.C., those of the former being remarkable for beauty and intrinsic value. The LACEDÆMONIANS wore iron rings. The ROMANS also under the Republic were proud of wearing an iron ring; under the Empire the

privilege of wearing a ring raised the wearer to the equestrian order. GREEK and ROMAN rings were, generally speaking, massive and simple, and

of obvious value in metal and stone, until in the degenerate times of the Empire luxury spread, and the lower classes began to disfigure themselves with cheap jewellery. Solid rings were carved out of rock-crystal in Christian times; and others were made of stone, chiefly of calcedony. Rings of amber, glass, earthenware, and other materials were exhumed at Pompeii. The BRITONS and SAXONS had beautiful jewellery. The former wore the ring on the middle finger; the Anglo-Saxons on the third finger of the right hand, which was thence poetically called the "golden finger." A beautiful specimen of enamelled art is the gold ring of Eihelwulf, king of Wessex (the father of Alfred the Great), now in the medal room of the British Museum. Among the *niello* rings of the Saxon period is one in the British Museum inscribed "Ahlreds owns me, Eanred engraved me." Plain wire rings, or plain bands of metal merely twisted round the finger, are common objects in Saxon tombs; but the most beautiful specimens of this, as of other branches of the goldsmith's art in antiquity, are from IRELAND. In SCANDINAVIA the earliest forms are spiral, and of simple workmanship. RINGS were a part of the official jewellery of kings, bishops, and cardinals; and the *fisherman's ring*, with a representation of St. Peter in a boat fishing, was the papal ring of investiture. A copious literature on this special subject deals with the superstitions, ceremonies, customs, and anecdotes connected with finger-rings, as well as with their exemplification of the history of the development or decadence of art. A collector divides his rings into *Antique*, *Mediæval*, and *Modern*; the former period ending A. D. 800, and classified by nationalities. The later collections are classified as *Official*: ecclesiastical, civil, and military; or *Personal*, viz. signet-rings, love and marriage, mourning, &c.; historical, religious (i. e. devotional, &c.), magic, and simply ornamental.

(The substance of the above is drawn from *Finger-ring Lore*, &c., by W. Jones, Chatto, 1877; and *Antique Gems*, by the Rev. C. W. King. For the significance of rings in connexion with the history of Christianity, see *Smith and Cheetham, Dict. of Christ. Ant.* s. v.)

Rising, Roussant, Her. Said of birds about to take wing.

Rivers, Chr. The four rivers of Paradise are variously represented in primitive Christian art; e. g. the LAMB standing on a mountain, from which they flow; or they are personified, and symbolize the four Evangelists: the Gilon is St. Matthew; Pison, St. John; Tigris, St. Mark; and Euphrates, St. Luke. The following lines in one instance accompany such a representation on an engraved copper plate:—

"Fons paradisiacus per flumina quatuor exit;
Hec quadriga levis te Xpe per omnia vexit."

In CLASSIC art generally, rivers are personified as half-prostrate figures reclining upon an urn, and marked by certain attributes; e. g. of the Nile, a hippopotamus; of the Tiber, a wolf suckling Romulus and Remus; other rivers by the flora or by certain cities of their banks, &c. (Consult *Didron, Iconographie Chrét.; Martigny, &c.*)

Rochet, Chr. (Lat. *rochetum*; Anglo-Saxon *roc*, a loose upper garment). A short surplice without sleeves, open at the sides; imitated from a linen outer garment of the same name, much worn by women in the 14th century. Chaucer says,—

“There is no clothe syttheth bette
On damoselle than doth rokette.”

Rock-crystal. A material much used for carving in China. *Fortune* says, “Fine specimens of rock-crystal, carved into figures, cups, and vases, are met with in the curiosity shops of Foo-chow-foo. Some of these specimens are white, others golden yellow, and others again blue and black. One kind looks as if human hair was thrown in and crystallized. Imitations of this stone are common in Canton, made into snuff-bottles, such as are commonly used by the Chinese.” The GREEK name (*κρύσταλλος*, ice) refers to the belief that it was frozen water; the INDIANS believe it to be the husk of which the *diamond* is the kernel, and call it the *unripe diamond*; in JAPAN it is cut into round balls used for cooling the hands; in CHINA also it is extensively carved; in the MIDDLE AGES it was highly valued throughout EUROPE as a detector of poison. Still more recently crystal balls have been supposed to have magical influence, and used for divination and conjuring.

Roman Architecture is a combination of the *Etruscan* and the *Greek*, principally distinguished from the latter by the circular arch, and the *monopteral* or circular temple unknown to the Greeks, but a favourite form with the tomb-building ancestors of the Etruscans. The orders of Roman architecture were the Doric and Ionic, detrimentally modified; the Corinthian, which they greatly enriched; and the Composite, of which the upper part of the capital was Ionic, and the remainder Corinthian. The distinguishing feature of the Roman architecture is, however, less in the modifications of the orders, than in their application in *composite arcades*, or plain arches of Etruscan design, faced by and supporting a purely ornamental arrangement of a long horizontal entablature on two columns. (Consult *Fergusson, Hist. of Arch.*, vol. i.)

Roman-Doric Order of Architecture. A deteriorated imitation of the Grecian-Doric, adopted, with considerable modifications, by modern Italian architects.

Roman Sepia is *sepia* (q.v.) mixed with red.

Romanesque. A degenerated and hybrid style of architecture and ornament, transitional from the classical Roman to the introduction of the Gothic. In the architecture there is an incongruous combination of the horizontal and arched methods of construction; and in the ornament a similar dissonance of natural and conventional or fanciful objects. *Fairholt* calls it the *classic rococo*. *Fergusson* (*Hist. of Arch.*, vol. i. p. 352) defines the *Romanesque* as "that modification of the classical Roman form, which was introduced between the reigns of Constantine and Justinian, and was avowedly an attempt to adapt classical forms to Christian purposes." He says, "If *Romanesque* is to be applied to our Norman architecture, the Parthenon ought to be called *Egyptianesque*, and the Temple at Ephesus *Assyrianesque*." There seems to be no universally-received definition of this term.

They took their name from the light missiles which they scattered upon the enemy, which were like the drops of rain before a thunder shower. It was their business to begin the attack, and retire behind the *triarii* when pressed. Their skirmishing was a prelude to the charge of the heavy-armed spears (*hastati*).

Rosary, Chr. A string or chaplet of beads for numbering prayers, an Oriental and ante-Christian custom of great antiquity. They are called *tasbih* by the Indian Mohammedans; in Sanscrit *Japanata*, "the muttering chaplet," &c.

life. The ancient Romans were passionately fond of roses, and cultivated them assiduously in their gardens, and introduced them plentifully in their feasts and symposia. In mediæval England roses were the favourite presents on birthdays; and Whitsuntide was called, from the plenty of them, Rose Easter. Sticking a rose in the ear was the boast of an accepted lover.

Lest men should say, Look where three farthings goes."

Rostrum, R. (Gr. *Embolos*). The prow of a ship. The plural *rostra* was used to denote a tribune in the Roman forum, from which orators addressed the people; it was so called because it was decorated with the figure-heads of the ships taken from the Volscians in the Latin War.

Round Towers. There are upwards of a hundred in Ireland, of which about twenty are perfect. Generally the tower is a hollow circular column from 50 to 150 feet high, capped by a short pointed roof of stone. The base, frequently of cyclopean masonry, measures from 40 to 60 feet in circumference, and the form of the whole tower is tapering towards the summit. The single entrance door is always from 8 to 15 feet above the ground; the windows, scattered, light the internal stories or rooms. Innumerable and wild conjectures of the origin and purpose of these towers have been made. The most sober appears to be that they were the earliest form of buildings of a monastic order, adapted to the exigencies of a Christian settlement in the midst of pagans and pirates. (See *Petrie, The Round Towers of Ireland.*)

Roundels. (1) Wooden platters decorated with painting and gilding; 16th century. (2) Small round shields borne by soldiers in the 14th and 15th centuries. (3) Arch. The bead or astragal moulding.

Brahmin traditions speak of the abode of the gods lighted by enormous rubies; and one name of the Kings of Pegu was "Lord of Rubies." In mediæval times the ruby was regarded as an amulet against poison, plague, sadness, evil thoughts, wicked spirits, &c. It also kept the wearer in health, and cheered his mind, and blackened when he incurred danger. (Consult *Emanuel, Diamonds and Precious Stones, &c.*)

Shoes. The shoes worn by the Greeks generally reached to the middle of the leg; the ROMANS had the *calceus* and the *solea* or sandal; the former was worn with the toga on ordinary occasions; the sandal on a journey or at a feast; but it was considered effeminate to appear in public with them. Black shoes were worn by the citizens of ordinary rank (see *ATRAMENTUM*, *CHALCANTHUM*), and white ones (sometimes red) by the women; on ceremonial occasions the magistrates wore red shoes. Patricians and their children wore a crescent shoe-buckle (see *LUNA*). Slaves went barefooted. The Jews had shoes of leather, wood, &c., tied with thongs passed under the soles of the feet; to "untie the latches" of a man's shoes was a sign of deep subservience. They perished in 670 A.U.C., when the Capitol was burnt. Silver. The history of working in silver is identical with that of Goldsmiths' work in general. (See GOLD.) *Pollen* remarks that though Phidias and his contemporaries made great statues of gold, many artists who devoted themselves mainly and altogether to working in the precious metals executed their best work in silver. Silver was also largely used for the surfaces of mirrors, which were hung on the walls of temples. The best collection of antique silver plate was found at Hildesheim, in Germany, in 1869, and is now in the Berlin Museum. The silver stoup (Fig. 615) belonging to the Corporation of Norwich, is of the time of Elizabeth. The illustration (Fig. 614) of the silver dish and ewer at St. John's College (1670), is representative of the change that the goldsmiths' style

underwent about the middle of the 17th century, after which time the light and graceful leaf work gave way to heavier designs. (Consult *Pollen, Gold and Silversmiths' Work*.)

Sirens (Gr. Σειρήνες [probably from σείρα, a *chain*, to signify their attractive power]). These mythical representatives of the evil side of the seductive power of music, are represented in art as lovely women to the waist, and fishes or birds below. Sometimes they have wings, which the Muses are said to have plucked (see MUSES) of their feathers; as Orpheus, by opening their minds to the unattainable higher music, drove them to suicide in the end. In Christian symbolism the sirens typify the three carnal lusts. (See Fig. 455.)

Sispa-sastra, Hind. A Hindoo work, the title of which means literally the science of manual art. It was a kind of encyclopædia, and comprised about thirty treatises on the manual arts, and included a treatise on architecture written by a Hindoo whose name has not come down to us; but a sage or mage called Dupayana compiled, abridged, and edited, about 1500 B.C., the lost treatise of the Hindoo architect. (*Bosc.*)

Sistrum, Egyp. (*σεῖστρον*; *σελω*, to shake). A kind of rattle formed by a certain number of metallic rods which passed through a framework also of metal; this was attached to a short handle ending in a head of Athor. By shaking the instrument by the handle the metallic rods and the movable rings suspended from them were made to give out a sharp rattling sound. The Egyptians made use of the sistrum in the ceremonial worship of Isis and at funerals. Roman coins of Hadrian present a personification of Egypt as a female figure seated with the sacred ibis at her feet, and a *sistrum* in her hand. The instrument is still in use on the Nile.

Soles of the Feet, Egyp. and Chr. On a great number of Christian tombs there occur representations of the soles of the feet. This symbol has been variously explained. In our opinion, one which has never been broached before, it denoted that the dead were in the power of God; for among the Egyptians, whenever a god or powerful king was spoken of, it was said of him that he put his enemies under the sole of his foot. Ezekiel uses the same terms in speaking of Jehovah. Whenever an Egyptian went on a pilgrimage to a distant place, he never left the country without engraving on some stone the impression of his feet, to which he added his name and titles. (*Bosc.*)

The dots may be harmonized with a little hammer, in which case the work is called *opus mallei*. "The most remarkable example of the *tabula* destined for the front of the Altar, is preserved in Westminster Abbey; it is formed of wood, elaborately carved, painted and enriched with a kind of mosaic work of coloured glass, superficially inlaid, a species of decoration of Italian origin." The ATIC talent was of much smaller value, of less than an ounce of gold, and is that generally intended by the word. The silver talent was called *talentum magnum*. The JEWISH talent of silver = about 396*l.*, and of gold = about 5475*l.* From its application as an expression of a man’s available wealth, metaphorically applied in *Scripture* to resources of any kind, as of intellect, position, &c., for the due unselfish administration of which he is responsible.

When they were marked with black dots on each face they were used as dice. The numbers were 1, 3, 4 and 6; 1 being opposite to 6, and 3 opposite to 4; and each number, and each cast, had its appropriate name: 1 was called in Greek *μονάς*, *εἷς*, *κύων*, *Χῖος*; Ionic *οἶνη*; Latin, *unio*, *vulturius*, *canis*; 3 was *τριάς*, and *ternio*; 4, *τετρας*, and *quaternio*; 6, *ἑξάς*, *ἑξίτης*, *Κῶος*, and *senio*. The best throw was that called *Venus* or *jactus Venercus*, in which the four *tali* showed different numbers. By this cast the player became king of the feast or symposium; in the *canis* (dog-throw), on the other hand, all four dice turned up the same number.

A charm worn about the person as a protection from dangers, especially from the effects of magic and the “evil eye.” The *bullæ* worn by children, and the rings of the ladies among the Greeks and Romans frequently contained such charms. Tapestry. The introduction of *tapestry* properly so called dates from the 12th century, when it began to rival the more ancient embroidered stuffs called *Sarrazinois carpets*. Tapestry is woven on looms, i. e. on a *warp* rolled round two cylinders, and stretched out between them either vertically or horizontally, for the insertion of the *woof* between and among the threads. When woven on a vertical warp, it is called high-warp (*haute-lisse*); when horizontal, low-warp (*basse-lisse*). The former produces, for many reasons, incomparably the finest work, and is the method adopted for the Gobelins and Savonnerie tapestries. The progress of the art has followed, especially in Flanders, that of painting, from which its models are derived. It has become less popular than it was during the present century, from the general disuse of hangings in the decoration of houses. Perhaps the best condensed account of this extensive subject is the work of M. Alfred de Champeaux, translated for the South Kensington Museum. (See BAYEUX TAPESTRY.)

Templet. (See **TEMPLATE**.)

Templum, Temple, R. (*τέμνω*, to cut off). A Greek temple was not originally intended for worshippers, but as a shrine for the gods. In the earliest times the Greek temples were made of wood, and the primitive origin of them was probably a hollow tree in which the image was placed as in a niche. The early Greek temples were dark and gloomy, having no windows, but lighted through the door, or by lamps. At a very early stage in history, temples of great grandeur and beauty are mentioned. All temples were built in an oblong or round form, and were mostly adorned with columns; they were classified accordingly as *astyle*, without any columns; *in antis*, with

two columns in front, between the *antæ*; *prostyle*, with four columns in front; or *amphiprostyle*, with four columns at each end; *peripteral*, with columns at each end and along the sides; or *dipteral*, with two ranges of columns all round, one within the other, &c. All the gods cheerfully consented except Terminus. This Terminus, therefore, who refused to yield to Jupiter, was chosen by Erasmus for his haughty device, with the motto *Cedo nulli*. Theatrum, **Theatre**, Gr. and R. (θέατρον, lit. a place for seeing). The construction of the ancient GREEK theatre was similar to that of modern theatres. The seats rose one behind and above the other in concentric half-circles, and the whole space enclosed was called *cavea*, the pit, being in most cases a real excavation from the rock. The central level space within and below the circles for spectators was covered with boards, upon which the *chorus* danced and performed their part. This was the **ORCHESTRA**, the central point of which and of the plan of the whole building was the **THYMELE**, or altar of Dionysus. This altar became a *property* of the piece, doing duty as a funeral monument, an altar, or a pulpit for the leader of the chorus or flute-player, according to the nature of the performance going on, in which it must be remembered that the part assigned to the *chorus* in the orchestra below was quite as important as any other, and in its original intention was in fact the centre of interest, to which the performance on the stage was *accessory*. The whole theatre and orchestra were open to the sky. The *cavea* of the former accommodated about 50,000 spectators. The arrangements of the stage were elaborate and ingenious, and the art of *scene-painting* developed at a very early period. The ROMAN theatre differed from the Greek principally in the absence of an *orchestra*, that space (the modern *pit*) being used for the seats of senators, foreign ambassadors, &c. Remains of ancient theatres still exist in Greece, Italy, and France. The most perfect of these are the Colosseum at Rome, and the amphitheatre at Nismes.

The former has been destroyed; but some metopes and sculptured friezes in high relief remain, of which castings exist in the British Museum. Our illustration represents an

incident of the "Battle of the gods and the giants," and is remarkable for anatomical precision. In these sculptures Greek art has entirely emerged from the *archaic* stage, and they were doubtless the inspiring models for Pheidias and his contemporaries, and the forerunners of the Parthenon sculptures. (See *ELGIN MARBLES*.)

Thesmo-phoria. Greek festivals of women and maidens in honour of Demeter, in commemoration of the traditions of civilized life. Wigs (contraction of Periwigs, from Fr. *peruque*) were brought in from France in the 16th century. They took their greatest proportions in the time of Louis XIV. In the early 18th century also they are described as of immense size, "large enough to have loaded a camel." And of this date is the celebrated wig-maker's sign, in which Absalom was represented hanging by the hair in a tree, and King David weeping beneath, exclaiming,—

"O Absalom! O Absalom!
O Absalom, my son!
If thou hadst worn a *periwig*
Thou hadst not been undone."

Smaller varieties were called *perukes* or travelling-wigs; and the *campaign wig*, which "hath knots or *bobs*, a *dildo* on each side with a curled forehead." These *dildos* or *pole-locks* were the origin of the pigtail. (See HAIR.)

Windows. The earliest of stained glass in Italy were painted by order of Pope Leo III., at Rome, in 795. The windows of some churches were closed with valves or shutters of stone, like those of the Duomo of Torcello, erected in 1008. Others were filled with slabs of transparent talc or alabaster. The earliest painted glass in York Cathedral is of A.D. 1200. The use of glass windows in private houses was not general until the 14th century. During the Middle Ages glass windows were in movable wooden frames, and were taken away by families when they travelled. (Consult *Hallam's Middle Ages*, vol. iii.) Substitutes for glass were thin parchment or linen, painted and varnished, or even paper. (*Le Vieil, de la Peinture sur Verre*.) These paper windows may still be seen in villages in the north of Italy.

Winds (Latin, *Venti*). The impersonations of the *winds* were held in high veneration, especially by the Athenians. The four principal were Eurus or Vulturnus, the east or south-east wind; Auster, the south wind, the Notus of the Greeks, pernicious to plants and men; Zephyrus, the son of Aurora and father of Carpus (fruit), a genial, health-bearing breeze, called also *ζωφῆρος*, life-bearing; and Boreas, the strong north wind, usually represented with the feet of a serpent, his wings dripping with golden

dewdrops, and the train of his garment sweeping along the ground. Inferior *winds* were Solanus, in Greek Apeliotes, answering to the east, and represented as a young man holding fruit in his lap; Africus, south-west, represented with black wings and melancholy countenance; Corus, north-west, drives clouds of snow before him; Aquilo, north-east by north, equally dreadful in appearance, from *aquila*, an eagle, type of swiftness and impetuosity.

Windsor Chairs. A plain kind of strong wooden chairs, so-called.

Wings, from time immemorial, have been the Oriental and Egyptian symbol of power as well as of swiftness; of the spiritual and aerial, in contradistinction to the human and the earthly; also in Chaldaic and Babylonian remains, in the Lycian and Nineveh marbles, and on the gems and other relics of the Gnostics. In Etruscan art all their divinities are winged.

In Christian (especially Spanish) art, an attribute of St. Vincent, in allusion to the legend that wild beasts were driven away from his body after his martyrdom, by a raven.

Wood-carving. One of the most ancient manifestations of the art instinct of humanity is found in the very earliest relics of every nation. Especially in Egypt specimens remarkable for fidelity of representation have been recently disinterred, and stand in the Boulac Museum. Among Christian countries Germany is the most distinguished in this branch of art, but Holland and Belgium closely rival it in excellence and abundance of early specimens. Illustrious English carvers in wood were mostly of Dutch or German extraction. The most famous of them is Grinling Gibbons, employed by Sir Christopher Wren in the decoration of St. Paul's Cathedral. He excelled in carving flowers and foliage.

Wood-engraving or **Xylography**. Box-wood is the only kind that can be used. The blocks when smoothed and polished are prepared for drawing on, by rubbing the polished surface with *bath brick* in very fine powder mixed with water. When this thin coating is dry, it is removed by rubbing the block on the palm of the hand; its only use is to make the surface less slippery. There are four descriptions of cutting tools used in wood-engraving. The *graver* is

not very different from that used for copper-plate, but has the point ground to a peculiar form by rubbing on a *Turkey stone*. Eight or nine *gravers*, of different sizes, are generally re-

quired, commencing with a very fine one, which is called the *outline tool*, and increasing in size or breadth. *Tinting* is cutting series of parallel lines, which, when engraved, form an even and uniform tint. For this process there is a dis-

tinnet set of tools called *tinting tools*. *Gouges* of different sizes are used for scooping out the wood towards the centre of the block, and flat tools or *chisels* for cutting it away towards the edges. The earliest known wood-engraving, "The Virgin surrounded by four Saints," is dated 1418. A print of it is in the Brussels Museum.

Wreaths have at all times been prominent among symbolical personal ornaments; always with an honourable or pleasant signification; wreaths of ivy distinguished the votaries of *Bacchus*; appropriate wreaths were invented for sacrifices at the altar for heroic or priestly or literary distinction. (See *ORLE*, *CREST*, *WREATH*, &c.)

Pausanias tells us that this part of the stadium received its name from the fact that Hercules used every day to clear out the palæstra at Elis in order to inure himself to toil, and that he tore up many weeds by scraping (*ξύω*, to scrape, *ξυστός*). The baths and thermæ at Rome were furnished with large xysti, in which young men went through a number of exercises. The term *xystus* was also generally applied by the Romans to the beds of rare flowers and shrubs in the centre of the peristyle; it also denoted a garden walk perfectly straight, and planted in a regular style; and lastly, an open walk or terrace in a garden attached to any building.

Y.

The letter **Y** is called the letter of Pythagoras because that philosopher made it the symbol of life. The foot of the letter, he said, represented infancy, and as man gradually rises to the age of reason, he finds two paths set before him, the one leading to good, the other to evil, portrayed by two forks of the letter. The illustration is the device of Jean de Morvilliers (+ 1577), Chancellor of France; the harrow tied to the Pythagorean **Y**, a *rebus* on his name *Mort-vie-liers*—"Death and life united." The harrow is the symbol of Death, which makes all things equal. (Fig. 701.)

sphere which extends to eight degrees on either side of the ecliptic. The Egyptians had representations of it in their temples, the most celebrated being that of *Denderah*, a cast of which is at the Louvre.
