No. 9200.

RAILWAY MAIL PAY.

STATEMENT OF THE POSTMASTER GENERAL OF THE UNITED STATES.

Comes now the Postmaster General of the United States and presents his statement showing the transportation required of all the railway common carriers and the service connected therewith in the carriage of the mails, as required by section 5 of the act of July 28, 1916, 39 Statutes at Large, 412 (425, 431). Such statement, including the service required, in the manner and under the conditions prescribed by the Postmaster General and the postal laws, regulations, and instructions applicable thereto, constitutes the comprehensive plan for the transportation of the mails on said railways so far as it is now in operation.

I.

THE TRANSPORTATION OF THE MAILS.

The Postmaster General represents that the railway common carriers named in the statement hereinafter set forth as Appendix A are required to transport such mail matter as may be offered for transportation by the United States in the manner, under the conditions, and with the service prescribed by the Postmaster General, the general nature and particulars of which are set forth in this statement. The statement covers the service stated on the space basis of pay and that continued on the weight basis.

The transportation of mails by the several railway common carriers on the railroad mail routes named has been ordered and mail service thereon of the classes, at the rates, and between the points stated has been authorized subject to future orders, to the provisions of section 5 of the act of July 28, 1916, to the Postal Laws and Regulations, and to the customs and practices in relation to railroad mail service when applicable.

For the service stated on the space basis of pay the size of the cars, whether 60 feet or apartments of 30 or 15 feet, authorized and necessary for the transaction of the business, and the units of space authorized and necessary in baggage cars, are set forth. The number required in each case is that which is necessary for the performance of service with the frequency authorized. The data to be secured during the statistical period hereinafter recommended will show this in detail. The character of the trains which carry the mails is that of the passenger train, and the speed of such trains is that which is maintained by the carriers for general purposes and indicated in their published schedules, unless they are otherwise stated or indicated in the statement or shown in the data certified during said statistical period. The construction of full railway post office cars conforms to the plans and specifications prescribed by the Post Office Department, which are set forth in Appendix C. The construction of newly built apartment cars conforms to the plans and specifications prescribed by the department, which are set forth in Appendix C. The data to be secured during the statistical period referred to will show the extent to which such conformation exists.

For the service continued on the weight basis of pay no specific authorization of car space is made, such mails being carried usually in the baggage cars in a manner convenient to the carrying railroad. The statement made hereinbefore as to the character and speed of trains for the service stated on the space basis of pay applies also to the service continued on the weight basis.

The principal laws and regulations, rulings, and instructions governing the transportation of the mail by railroad companies and in accordance with which the service is authorized and required, as herein stated, are set forth hereinafter as Appendix B.

II.

THE SERVICES CONNECTED THEREWITH.

The Postmaster General further represents that in connection with the transportation of the mails the railway common carriers are required to perform all the incidental services in connection therewith and in the manner and under the conditions prescribed by the Postmaster General as are provided by law, the Postal Laws and Regulations, and required by the customs and practices in relation to railroad mail service, including the following:

(1) *Care, safe-keeping, and handling of mails upon the cars and trains.*—Mails carried in full railway post office and apartment cars are in the immediate care and custody of employees of the postal service while therein, although the carrier is held to the responsibility imposed by law with respect to safe transportation. Mails otherwise carried are in the care and custody of the carrier. In general, mails carried in storage cars are handled, piled, and stored by employees of the carrier. Mails carried in baggage cars are handled, piled, and stored by employees of the carrier. The specific provisions of regulations and instructions upon these points are set forth hereinafter (Appendix B).

(2) *Receipt into and delivery from mail cars and trains.*—The carriers are required to load all mails into their cars; they are also required to deliver all mails from their cars, except those mails in the care and custody of the employees of the postal service in cars in which such employees are on duty. The specific requirements of the regulations and instructions on these points are set forth hereinafter (Appendix B).

(3) *Transfer of mails between cars in trains.*—The carriers are required to transfer all mails between cars in the same train where such transfers are necessary and required by the postal officials. The specific requirements of the postal regulations and instructions upon these points are set forth hereinafter (Appendix B).

(4) *Piling and storing mails in cars.*—The carriers are required to pile and store all mails carried in the cars when required so to do, excepting the mails carried in full railway post office and apartment cars. The specific requirements of the postal regulations and instructions upon these points are set forth hereinafter (Appendix B).

(5) *Care and safe-keeping of mails at railroad stations.*—The carriers are required to care for and keep safely all mails at railroad stations received by them for dispatch or held by them for transfer to their trains or railroad stations, or delivery into post offices or postal stations. The specific requirements of the postal regulations and instructions on these points are set forth hereinafter (Appendix B).

(6) *Carriage of mails between railroad stations and post offices and transfer of mails between railroad stations.*—The carriers are required to take the mails from and deliver them into all post offices along their lines and to transfer mails between trains and railroad stations in cases where the postal regulations devolve that duty upon them. Such regulations in force are set forth hereinafter (Appendix B).

(7) *Furnishing of space in stations.*—The carriers are required to furnish adequate space in their railroad stations for the purposes provided by law, which are defined by statute and regulations as set forth hereinafter (Appendix B).

(8) *Switching, lighting, heating and cleaning of mail cars and placing them for advance distribution.*—The carriers are required to switch, light, heat, and clean the mail cars and place them for advance distribution when required so to do, the specific provisions of law and regulations covering which are set forth hereinafter (Appendix B).

(9) *Transportation of persons in charge of mails and duly accredited agents and officers of the department and service.*—Carriers are required to transport without specific charge the persons in charge of the mails and the agents and officers of the Post Office Department and Postal Service, under the conditions prescribed by law and regulations, which are set forth hereinafter (Appendix B).

III.

SPECIFIC REQUIREMENTS SUBJECT TO CHANGE TO MEET THE NECESSITIES OF SERVICE.

The Postmaster General further represents that this statement herein set forth shows the transportation required of all railway common carriers as to each railroad mail route on which the mails are carried, as of

November 1, 1916. Such requirements, however, must necessarily change with the changing conditions and necessities of the service. Changes in authorizations of car units and initial and terminal allowances are made from time to time as such service conditions change and pay is allowed therefor where increases are authorized and deductions are made where decreases are authorized, in accordance with the rates prescribed in the act of July 28, 1916, hereinafter set forth (Appendix B). For the service continued upon the weight basis no specific authorizations of car units are made, the carrier being required to transport all the mails offered and at the compensation allowed by the Postmaster General for the quadrennial term of readjustment. Such rate of compensation is based on the average daily weight of mails carried, ascertained by an actual weighing of the mails on the respective routes and the application of the rates thereto, as provided by the act of 1873 and the amendatory acts hereinafter set forth (Appendix B). The data which may be secured during the weighing and statistical period, as may hereafter be decided upon, will show for such period the service authorized and performed, the weights of mails carried, the sizes of the cars and the car units authorized and operated for the mail service, and all the incidental service connected with the transportation of the mails, the specification of which is more practicable and appropriate at that time than in this statement.

IV.

WEIGHING AND STATISTICAL PERIOD.

The Postmaster General further represents that for the purpose of furnishing the Commission data with respect to the weights of mails carried, the space in cars in which such mails are carried, and information regarding the amount of service performed and facilities furnished as authorized in the transportation of the mails, and the service connected therewith, and certain other data necessary for the determination of the questions to be decided by the Commission, there should be selected a period of five weeks during which a general weighing of all the mails on railroad routes throughout the United States shall be provided for by the Postmaster General, and the collection and certification of the above-indicated data shall be made by the Post Office Department and the railroad carriers, respectively, for the matters specially within their charge. Such period should be fairly representative and should follow as soon as practicable after the filing of this statement. It is believed that a period beginning March 27, 1917, would meet these requirements.

During such period there should be a weighing of all the mails on all the routes throughout the United States for the period named, the weights to be taken in such manner as to permit their tabulation by trains or routes and the ascertainment of their average daily weight and the ton-miles, which when so ascertained by the Postmaster General should be certified to the Commission.

There should be secured and certified to the Commission for the identical period of the weighing the authorized and operated space devoted to the carriage of the mails upon all the routes and the frequency of operation of such service in detail, and statements of the authorized services performed and facilities furnished in connection therewith.

In the event that the Commission deems it desirable to make an estimate of the cost of carrying the mails and express, respectively, and of the performance of service in connection therewith, based upon an allocation of direct and an apportionment of indirect expenses and charges, there should be secured and certified to the Commission the operating expenses and other charges against income of railroad mail carriers, with such allocation of direct expenses and charges and apportionment of the remaining indirect expenses and charges as will enable it to ascertain the estimated cost of passenger-train operation, as a basis for an estimated cost of mail service; and also a segregation of the direct operating expenses to said carriers incurred in the carriage of the mails and express, respectively, and statements of the operation and frequency of such passenger-train service with specification of the space in each train authorized and used for the mail service and the space devoted to the express and passenger services, respectively, in order to enable an allocation of the direct expenses of the several classes of service to be made, and to furnish a ratio of car-foot miles as a basis, with proper modifications, if the same can be so used, for a fair and equitable apportionment of such remaining estimated cost of passenger train operation to the transportation of the mails and of the express in such trains and the performance of the service in connection therewith.

Further, there should be a certification for the same period, or a part thereof, of such data as will enable the ascertainment of the average tons per mile of express traffic, the average carload of the same, and the revenue derived therefrom by the express companies and the proportion thereof received by the railroads. There should also be a certification of the extent and character of service performed by the railway common carriers in the carriage of express.

Further, there should be an ascertainment and certification of the average passenger car-mile revenue, the average express car-mile revenue, and the average mail car-mile revenue to the companies.

V.

SPACE AND WEIGHT BASES OF PAY FOR THE SERVICE.

The Postmaster General further represents that the service authorized and specified on the space basis of pay on the several routes and as set forth in the statement hereinafter (Appendix A), covers that service performed by the railway common carriers in full railway post-office cars, apartment railway post-office cars and storage cars, and storage space in baggage cars, closed-pouch service performed in trains operated over the same roads over which said car service is performed, and certain closed-pouch service performed by trains making continuous runs over distances in part coinciding with the rail distances of trains carrying full or apartment car service and stated on the space basis of pay. This service is that which has been selected by the Postmaster General to the extent he has found it practicable and necessary to place the service upon the space system of pay in the manner and at the rates provided by law, with the consent and approval of the Interstate Commerce Commission, for the purposes of the act of July 28, 1916, above mentioned.

The remaining part of the service continues and is authorized upon the weight basis of pay and existing methods applicable to such service, and is so set forth in the statement hereinafter (Appendix A), for the reason that it is not believed practicable and necessary to place the same upon the space-basis system of pay as provided in said act for the purposes therein named.

The Postmaster General further represents that in the final determination by the Commission of the basis for the ascertainment of the fair and reasonable compensation for the transportation of the mails and for the service connected therewith, the space basis of pay should be adhered to with respect to the service herein stated upon the space basis and that the weight basis should be adhered to with respect to the service herein stated upon the weight basis.

VI.

RATES OF PAY FOR SERVICE AUTHORIZED.

The Postmaster General further represents that the rates of pay at present authorized for service stated on the space basis and as herein set forth are the maximum rates named in the act of July 28, 1916 (Appendix B). Such rates became effective from November 1, 1916, and supersede all rates for the same service theretofore stated upon the weight basis and as adjusted under the law of 1873 and the amending acts. The total of this compensation so stated on the space basis as of November 1, 1916, was \$3,222,405 greater per annum than the total compensation on the weight basis which it has superseded. The Postmaster General represents and believes that this total is excessively large; that the rates provided by the act for the respective units of space and service should in general be reduced by the Commission; and that the rates for the respective units of space and service should not exceed the following, to wit:

For full railway post-office car mail service 20 cents for each mile of service by a 60-foot car, and in addition thereto \$4 as a combined initial and terminal rate for each one-way trip of a 60-foot car.

For apartment railway post-office car mail service 10 cents for each mile of service by a 30-foot apartment car, and 5 cents for each mile of service by a 15-foot apartment car, and in addition thereto \$2 as a combined initial and terminal rate for each one-way trip of a 30-foot apartment car and \$1 as a combined initial and terminal rate for each one-way trip of a 15-foot apartment car.

For storage-car mail service 18 cents for each mile of service by a 60-foot car, and in addition thereto \$4 as a combined initial and terminal rate for each one-way trip of a 60-foot car; and for storage space in units of 3 feet, 7 feet, 15 feet, and 30 feet, both sides of car, in baggage ears at pro rata of same.

For closed-pouch service 1½ cents for each mile of service when a 3-foot unit is authorized and 3 cents for each mile of service when a 7-foot unit is authorized, and in addition thereto 25 cents as a combined initial and terminal rate for each one-way trip of a 3-foot unit of service, and 50 cents as a combined initial and terminal rate for each one-way trip of a 7-foot unit of service.

For service continued on the weight basis of pay the rates allowed should not exceed the rates provided by the act of 1873 and the amending acts as hereinafter set forth (Appendix B), adjusted on the basis of annual weighings.

These rates are tentative and subject to modification upon a full consideration of the facts to be hereafter presented.

The Postmaster General further represents that the maximum rates fixed by the acts relating to railroad mail pay, hereinafter set forth, are intended as compensation for the entire service performed, including transportation and incidental services required in connection therewith, and that the rates hereinbefore suggested as being those which should not be exceeded are also intended as compensation for the entire service performed. It may be desirable, however, in the administration of the service to except from the requirements made upon railroad carriers the carriage of the mails between railroad stations and the post offices, and it is therefore advisable that any rate or rates fixed and determined by the Commission should be in the alternative, first, including all the service required and, second, including such service with the exception of the service next above mentioned.

The Postmaster General further represents that the existing maximum rates fixed by the act of July 28, 1916, hereinbefore mentioned, for service on the space basis are the same as those recommended by the Joint Committee of Congress on Postage on Second-Class Mail Matter and Compensation for the Transportation of Mail, and that such recommendation was made upon a consideration of the average passenger car-mile revenue without crediting the mails with as much reduction in rate for the differences existing between the business of transporting the mails and the business of transporting other commodities and passengers by railroad as he believes they warrant. He further represents that such rates were fixed without allowing any reduction in favor of the Government on account of the relation existing between the railroads as public-service corporations and the Government and without reference to the principle of public utility. He further represents that he did not recommend these rates to the Congress, but did recommend lower ones, and that in adopting the rates included in the said act he believes the Congress did not intend them to be final, but intended that this Commission should revise them in accordance with the justice and equity of the facts.

The Postmaster General further represents that the act of July 28, 1916, above referred to, requires this honorable Commission in fixing and determining fair and reasonable rates for the service to consider the relation existing between the railroads as public-service corporations and the Government and the nature of such service as distinguished, if there be a distinction, from the ordinary transportation business of the railroads; and that in accordance therewith among the elements to which the Commission should give consideration and which justify lower rates for the carriage of the mails than otherwise would be reasonable, are the following:

(1) *The certainty, constancy, and homogeneity of traffic.*—No other class of service is characterized by these elements in as great a degree as the mail service. It is certain and constant and practically always of the same character after it has been established.

(2) *The certainty and regularity of payment.*—Payments are made monthly by warrants on the Treasury. The carriers know with a certainty the approximate amount which they will receive for the service, and when they will receive it, and that it will be paid without expensive methods of bookkeeping and auditing upon the part of the carriers.

(3) *The mails follow the railroad construction and operation.*—Railroads are projected and built not primarily for the carriage of the mails but for the purpose of securing passenger and freight traffic. Their business is

that of common carriers. After the railroad is constructed the mails naturally follow and the companies usually secure that business without solicitation. It is a traffic which offers itself to the companies without solicitation and remains without urging or other consideration except good service.

(4) *The protection of mail trains.*—The carriers receive from the Federal Government protection to their mail trains against unlawful acts in interference with or obstruction of the mails which they carry.

(5) *The relation existing between the railroads as public service corporations and the Government, and the principle of public utility.*—The carriage of the mails by the railroad companies for the Government can not be considered as of the same character of service as that performed by them as common carriers for the general public. The railroads have received certain benefits from the States from which they derive their corporate existence, and their interstate commerce is subject to the regulation of the Federal Government. Some of them have received substantial aid from the Federal Government by grants of lands and otherwise. They are declared by law to be post roads. As mail carriers they are agencies of the Post Office Department, and are performing a governmental function in carrying the mails. The postal business is not carried on by the Government for profit but in furtherance of the constitutional power to establish post offices and post roads, under which it furnishes postal facilities to all of its citizens. The railroads, therefore, may not deal with the Government as they would with a shipper who uses their facilities as a common carrier for profit or for some special individual advantage. They are not only required to act as governmental agencies but should fulfill the obligations of that agency for a consideration not necessarily measured by the strict rules governing commercial business. Furthermore, the principle of public utility, which justifies the railroad carrier in transporting certain commodities at rates lower than rates formed on strict apportionment of cost because their transportation renders possible the development of their property and the industries located along their lines of road, thus contributing largely to the transportation business for which the railroads are primarily constructed, applies with special force to the transportation of the mails which is highly essential to the upbuilding of communities and the increase of the carriers' business, and, therefore, should be classed among those services which minister to the development of the processes of production rather than to the satisfaction of wants through the transportation of the products, and justifies a low rate.

In further compliance with the requirement of the act hereinbefore mentioned that he shall embody therein what he believes to be the reasonable rate or compensation, the Postmaster General will, with the permission of the Commission, submit hereafter his views with reference to the application of the principles which should govern the determination of rates under the facts which shall be developed in the investigation, and, in the meantime, represents:

(a) That, considered with reference to cost, the estimated cost of the service based upon direct expenses and an apportionment of indirect expenses prorated upon a basis of space occupied in the trains or a modification thereof to meet the specific facts, may be appropriate for comparison, but such estimated cost can not be taken as the sole factor upon which to base the rates of pay, and rates fixed materially lower than such theoretical ascertainment could not be condemned as noncompensatory and burdensome to other traffic or as unreasonably low.

(b) That, considered in connection with revenue received by the railroads for their services, and subject to the qualifications of the principles and restrictions applicable to such comparisons, the fair and reasonable rates for the service in question (1) should be lower than rates for the ordinary transportation business of the railroads, such difference being measured by an appraised value of the above-named and other elements which distinguish the nature of the carriage of the mails from other transportation business; (2) should be lower than the average passenger car-mile revenue to the railroad carriers, such difference being measured by the appraised value of the elements distinguishing the nature of the carriage of the mails from the carriage of passengers; and (3) should be as low as or lower than the compensation received by the railroads from express companies for the transportation of express matter and the services performed by the railroads in connection therewith, modified by the appraised value of differences existing between the two classes of service, if any.

Wherefore the Postmaster General prays that the railway common carriers required to transport the mails and render service as herein set forth may be required to make answer, and that after due hearing and investigation the Commission will fix and determine the fair and reasonable rates and compensation for the transportation of mail matter by railway common carriers and the service connected therewith, in accordance with the principles above set forth and at not exceeding the rates recommended, and prescribe the method by space for ascertaining such rates and compensation for the service herein stated upon the space basis of pay and for such other service of a like character as may become necessary in the future and prescribe the method by weight for ascertaining such rates and compensation for the service herein stated upon the weight basis of pay and for such other service of a like character as may become necessary in the future, and for such other orders as may be proper in the premises under the provisions of said act.

JOSEPH STEWART,
Special Assistant to the Attorney General.

A. S. BURLESON,
Postmaster General.

APPENDIX B.

PRINCIPAL LAWS AND REGULATIONS, RULINGS, AND INSTRUCTIONS GOVERNING THE TRANSPORTATION OF THE MAIL BY RAILROAD COMPANIES AND IN ACCORDANCE WITH WHICH THE SERVICE OF THE RESPECTIVE CLASSES IS AUTHORIZED AND REQUIRED, AS HEREIN STATED.

(The section numbers and paragraph numbers are those under which the paragraphs, respectively, appear in the official edition of the Postal Laws and Regulations, edition 1913. Provisions of law are followed, respectively, by citations of the acts of Congress, Statutes at Large, and Revised Statutes.)

POSTAL LAWS AND REGULATIONS.

Sec. 1289. Whoever shall establish any private express for the conveyance of letters or packets, or in any manner cause or provide for the conveyance of the same by regular trips or at stated periods over any post route which is or may be established by law, or from any city, town, or place to any other city, town, or place, between which the mail is regularly carried, or whoever shall aid or assist therein shall be fined not more than \$500 or imprisoned not more than six months, or both: *Provided*, That nothing contained in this section shall be construed as prohibiting any person from receiving and delivering to the nearest post office, postal car, or other authorized depository for mail matter, any mail matter properly stamped. (1909, Mar. 4; 35 Stat., 1123.)

2. Postmasters are not precluded by this section from accepting for mailing letters delivered to them by freight or express in bulk, provided each of such letters bears the return card of a person or firm located within the delivery limits of their offices, and provided further that each of such letters is duly directed and properly sealed and bears the proper postage. Under such conditions the office of mailing is construed to be the office of origin under the postal laws and regulations.

NOTE.—The Congress, under authority of the Constitution (sec. 1), has vested in the Post Office Department an absolute monopoly of the transportation of letters and packets by regular trips or at stated periods over all post routes. The above proviso and section make certain exceptions to the general statute. The term "packet" as used in this and following statutes means a packet of letters; therefore the Government monopoly does not extend to all matter admitted to the mails, but only to letters. Letter-carrier routes are post routes.

Sec. 1290. Nothing in this chapter (Criminal Code, chapter eight, offenses against the Postal Service) shall be construed to prohibit the conveyance or transmission of letters or packets by private hands without compensation, or by special messenger employed for the particular occasion only. (1909, Mar. 4; 35 Stat., 1124.)

Sec. 1291. All letters inclosed in stamped envelopes, if the postage stamp is of a denomination sufficient to cover the postage that would be chargeable thereon if the same were sent by mail, may be sent, conveyed, and delivered otherwise than by mail, provided such envelope shall be duly directed and properly sealed, so that the letter can not be taken therefrom without defacing the envelope, and the date of the letter or of the transmission or receipt thereof shall be written or stamped upon the envelope. But the Postmaster General may suspend the operation of this section upon any mail route where the public interest may require such suspension. (R. S., sec. 3993.)

NOTE.—"Stamped envelopes" means Government stamped envelopes. (See sec. 123.)

Sec. 1292. Whoever, being the owner, driver, conductor, master, or other person having charge of any stagecoach, railway car, steamboat, or other vehicle or vessel, shall knowingly convey or knowingly permit the conveyance of any person acting or employed as a private express for the conveyance of letters or packets, and actually in possession of the same for the purpose of conveying them, contrary to law, shall be fined not more than \$150. (1909, Mar. 4; 35 Stat., 1124.)

Sec. 1293. Whoever shall transmit by private express or other unlawful means, or deliver to any agent thereof, or deposit or cause to be deposited at any appointed place, for the purpose of being so transmitted, any letter or packet, shall be fined not more than \$50. (R. S., sec. 3984; 1909, Mar. 4; 35 Stat., 1124.)

Sec. 1294. Whoever, being the owner, driver, conductor, master, or other person having charge of any stagecoach, railway car, steamboat, or conveyance of any kind which regularly performs trips at stated periods on any post route, or from any city, town, or place to any other city, town, or place between which the mail is regularly carried, and which shall carry, otherwise than in the mail, any letters or packets, except such as relate to some part of the cargo of such steamboat or other vessel, to the current business of the carrier, or to some article carried at the same time by the same stagecoach, railway car, or other vehicle, except as otherwise provided by law, shall be fined not more than \$50. (1909, Mar. 4; 35 Stat., 1124.)

2. A railroad or steamboat company or other common carrier may carry outside of the mails letters written and sent by its officers and agents which relate to its business only, without inclosing the same in stamped envelopes. Such letters may be to other of such carriers' officers and agents, to those of connecting lines, or to anyone else, so long as no other carrier intervenes.

3. Letters of a company or carrier addressed to officers or agents of a connecting line on business relating to such company or carrier and delivered to an agent of the latter at the point of connection may be carried, and such carriage continued by the connecting company or carrier.

4. Letters written by a railroad company and addressed to the manager of an eating house operated by such company, or written by him and addressed to the company, may be carried.

5. No company or carrier, or any officer or employee thereof, may carry letters which are neither written by the company or carrier nor addressed to it. The fact that letters relate to through business over the lines of all companies or carriers transporting the same does not warrant a company in carrying such letters from one of its connecting lines to another.

6. Where companies or corporations operating railroads are united as a system of railways the right to carry letters outside of the mail without payment of postage remains as an appurtenant of the individual companies or corporations composing the system, and does not by reason of the union into a system become the right of the system.

Sec. 1305. The following are established post roads:

* * * * *
All railroads or parts of railroads which are now or hereafter may be in operation.

* * * * *
(R. S., sec. 3964.)

Sec. 1311. When the amount of mail matter to be carried on any mail route is so great as to seriously retard the progress or endanger the security of the letter mail, or materially increase the cost of carriage at the ordinary rate of speed, the Postmaster General may provide for the separate carriage of the letter mail at the usual rate of speed; but the other mail matter shall not be delayed any more than is absolutely necessary, having due regard to the cost of expedition and the means at his disposal for effecting the same. (R. S., sec. 3994.)

Sec. 1314. The Secretary of Agriculture, in cooperation with the Postmaster General, may arrange a plan by which there shall be displayed on all cars and other conveyances used for transporting United States mail suitable flags or other signals to indicate weather forecasts, cold-wave warnings, frost warnings, and so forth, to be furnished by the Chief of the Weather Bureau. (1896, Apr. 25; 29 Stat., 108.)

Sec. 1314½. The Postmaster General is authorized and directed to readjust the compensation to be paid to railroad companies from and after the thirtieth day of June, nineteen hundred and sixteen, or as soon thereafter as may be practicable, for the transportation and handling of the mails and furnishing facilities and services in connection therewith upon the conditions and at the rates hereinafter provided.

The Postmaster General may state railroad mail routes and authorize mail service thereon of the following four classes, namely: Full railway post-office car service, apartment railway post-office car service, storage-car service, and closed-pouch service.

Full railway post-office car mail service shall be service by cars forty feet or more in length, constructed, fitted up, and maintained for the distribution of mails on trains. The authorizations of full railway post-office cars shall be for standard-sized cars sixty feet in length, inside measurement, except as hereinafter provided.

Apartment railway post-office car mail service shall be service by apartments less than forty feet in length in cars constructed, fitted up, and maintained for the distribution of mails on trains. Two standard sizes of apartment railway post-office cars may be authorized and paid for, namely, apartments fifteen feet and thirty feet in length, inside measurement, except as hereinafter provided.

Storage-car mail service shall be service by cars used for the storage and carriage of mails in transit other than by full and apartment railway post-office cars. The authorizations for storage cars shall be for cars sixty feet in length, inside measurement, except as hereinafter provided: *Provided*, That storage space in units of three feet, seven feet, fifteen feet, and thirty feet, both sides of car, may be authorized in baggage cars at not exceeding pro rata of the rates hereinafter named for sixty-foot storage cars.

Service by full and apartment railway post-office cars and storage cars shall include the carriage therein of all mail matter, equipment, and supplies for the mail service and the employees of the Postal Service or Post Office Department, as shall be directed by the Postmaster General to be so carried.

Closed-pouch mail service shall be the transportation and handling by railroad employees of mails on trains on which full or apartment railway post-office cars are not authorized, except as hereinbefore provided. The authorizations for closed-pouch service shall be for units of seven feet and three feet in length, both sides of car.

The rates of payment for the services authorized in accordance with this section shall be as follows, namely For full railway post-office car mail service at not exceeding 21 cents for each mile of service by a sixty-foot car.

In addition thereto he may allow not exceeding \$4.25 as a combined initial and terminal rate for each one-way trip of a sixty-foot car.

For apartment railway post-office car mail service at not exceeding 11 cents for each mile of service by a thirty-foot apartment car and 6 cents for each mile of service by a fifteen-foot apartment car.

In addition thereto he may allow not exceeding \$2.75 as a combined initial and terminal rate for each one-way trip of a thirty-foot apartment car and \$2 as a combined initial and terminal rate for each one-way trip of a fifteen-foot apartment car.

For storage-car mail service at not exceeding 21 cents for each mile of service by a sixty-foot car.

In addition thereto he may allow not exceeding \$4.25 as a combined initial and terminal rate for each one-way trip of a sixty-foot car.

Where authorizations are made for cars of the standard lengths of sixty, thirty, and fifteen feet, as provided by this section, and the railroad company is unable to furnish such cars of the length authorized, but furnishes cars of lesser length than those authorized, but which are determined by the department to be sufficient for the service, the Postmaster General may accept the same and pay only for the actual space furnished and used, the compensation to be not exceeding pro rata of that provided by this section for the standard length so authorized: *Provided*, That the Postmaster General may accept cars and apartments of greater length than those of the standard requested, but no compensation shall be allowed for such excess lengths.

For closed-pouch service, at not exceeding 1½ cents for each mile of service when a three-foot unit is authorized, and 3 cents for each mile of service when a seven-foot unit is authorized.

In addition thereto he may allow not exceeding 25 cents as the combined initial and terminal rate for each one-way trip of a three-foot unit of service and 50 cents as a combined initial and terminal rate for each one-way trip of a seven-foot unit of service.

Railroad companies whose railroads were constructed in whole or in part by a land grant made by Congress, on the condition that the mails should be transported over their roads at such price as Congress should by law direct, shall receive only eighty per centum of the compensation otherwise authorized by this section.

The initial and terminal rates provided for herein shall cover expenses of loading and unloading mails, switching, lighting, heating, cleaning mail cars, and all other expenses incidental to station service and required by the Postmaster General in connection with the mails that are not included in the car-mile rate. The allowance for full railway post-office cars, apartment railway post-office cars, and storage cars may be varied in accordance with the approximate difference in their respective cost of construction and maintenance.

In computing the car miles of the full railway post-office cars and apartment railway post-office cars, the maximum space authorized in either direction of a round-trip car run shall be regarded as the space to be computed in both directions, unless otherwise mutually agreed upon.

In computing the car miles of storage cars, the maximum space authorized in either direction of a round-trip car run shall be regarded as the space to be computed in both directions, unless the car be used by the company in the return movement, or otherwise mutually agreed upon.

New service and additional service may be authorized at not exceeding the rates herein provided, and service may be reduced or discontinued with pro rata reductions in pay, as the needs of the Postal Service may require: *Provided*, That no additional pay shall be allowed for additional service unless specifically authorized by the Postmaster General.

The Postmaster General is authorized to make special contracts with the railroad companies for the transportation of the mails where in his judgment the conditions warrant the application of higher rates than those herein specified, and make report to Congress of all cases where such special contracts are made and the terms and reasons therefor.

All cars or parts of cars used for the Railway Mail Service shall be of such construction, style, length, and character, and furnished in such manner as shall be required by the Postmaster General, and shall be constructed, fitted up, maintained, heated, lighted, and cleaned by and at the expense of the railroad companies. No pay shall be allowed for service by any railway post-office car which is not sound in material and construction and which is not equipped with sanitary drinking-water containers and toilet facilities, nor unless such car is regularly and thoroughly cleaned. No pay shall be allowed for service by any wooden full railway post-office car unless constructed substantially in accordance with the most approved plans and specifications of the Post Office Department for such type of cars, nor for service by any wooden full railway post-office car run in any train between adjoining steel cars, or between the engine and a steel car adjoining. After the first of July, nineteen hundred and seventeen, the Postmaster General shall not approve or allow to be used, or pay for service

by, any full railway post-office car not constructed of steel or steel underframe or equally indestructible material; and all full railway post-office cars accepted for this service and contracted for by the railroad companies hereafter shall be constructed of steel. Until July first, nineteen hundred and seventeen, in cases of emergency and in cases where the necessities of the service require it, the Postmaster General may provide for service by full railway post-office cars of other than steel or steel underframe construction, and fix therefor such rate of compensation within the maximum herein provided as shall give consideration to the inferior character of construction, and the railroad companies shall furnish service by such cars at such rates so fixed.

Service over property owned or controlled by another company or a terminal company shall be considered service of the railroad company using such property and not that of the other or terminal company: *Provided*, That service over land-grant roads shall be paid for as herein provided.

Railroad companies carrying the mails shall furnish all necessary facilities for caring for and handling them while in their custody. They shall furnish all cars or parts of cars used in the transportation and distribution of the mails, except as herein otherwise provided, and place them in stations before the departure of trains at such times and when required to do so. They shall provide station space and room for handling, storing, and transfer of mails in transit, including the separation thereof, by packages for connecting lines, and such distribution of registered mail in transit as may be necessary, and for offices for the employees of the Railway Mail Service engaged in such station work when required by the Postmaster General, in which mail from station boxes may be distributed if it does not require additional space.

If any railroad company carrying the mails shall fail or refuse to provide cars or apartments in cars for distribution purposes when required by the Postmaster General, or shall fail or refuse to construct, fit up, maintain, heat, light, and clean such cars and provide such appliances for use in case of accident as may be required by the Postmaster General, it shall be fined such reasonable sum as may, in the discretion of the Postmaster General, be deemed proper.

The Postmaster General shall in all cases decide upon what trains and in what manner the mails shall be conveyed. Every railroad company carrying the mails shall carry on any train it operates, and with due speed, all mailable matter, equipment, and supplies directed to be carried thereon. If any such railroad company shall fail or refuse to transport the mails, equipment, and supplies when required by the Postmaster General on any train or trains it operates, such company shall be fined such reasonable amount as may, in the discretion of the Postmaster General, be deemed proper.

The Postmaster General may make deductions from the pay of railroad companies carrying the mails under the provisions of this section for reduction in service or in frequency of service where, in his judgment, the importance of the facilities withdrawn or reduced requires it, and impose fines upon them for delinquencies. He may deduct the price of the value of the service in cases where it is not performed, and not exceeding three times its value if the failure be occasioned by the fault of the railroad company.

The provisions of this section shall apply to service operated by railroad companies partly by railroad and partly by steamboats.

The provisions of this section respecting the rates of compensation shall not apply to mails conveyed under special arrangement in freight trains, for which rates not exceeding the usual and just freight rates may be paid, in accordance with the classifications and tariffs approved by the Interstate Commerce Commission.

Railroad companies carrying the mails shall submit, under oath, when and in such form as may be required by the Postmaster General, evidence as to the performance of service.

The Postmaster General shall, from time to time, request information from the Interstate Commerce Commission as to the revenue received by railroad companies from express companies for services rendered in the transportation of express matter, and may, in his discretion, arrange for the transportation of mail matter other than of the first class at rates not exceeding those so ascertained and reported to him, and it shall be the duty of the railroad companies to carry such mail matter at such rates fixed by the Postmaster General.

The Postmaster General is authorized, in his discretion, to petition the Interstate Commerce Commission for the determination of a postal carload or less-than-carload rate for transportation of mail matter of the fourth class and periodicals, and may provide for and authorize such transportation, when practicable, at such rates, and it shall be the duty of the railroad companies to provide and perform such service at such rates and on the conditions prescribed by the Postmaster General.

The Postmaster General may, in his discretion, distinguish between the several classes of mail matter and provide for less frequent dispatches of mail matter of the third and fourth classes and periodicals when lower rates for transportation or other economies may be secured thereby without material detriment to the service.

The Postmaster General is authorized to return to the mails, when practicable for the utilization of car space paid for and not needed for the mails, postal cards, stamped envelopes, newspaper wrappers, empty mail bags, furniture, equipment, and other supplies for the Postal Service.

The Postmaster General, in cases of emergency between October first and April first of any year, may hereafter return to the mails empty mail bags and other equipment theretofore withdrawn therefrom as required by law, and, where such return requires additional authorization of car space under the provisions of this section, to pay for the transportation thereof as provided for herein out of the appropriation for inland transportation by railroad routes.

The Postmaster General may have the weights of mail taken on railroad mail routes and computations of the average loads of the several classes of cars and other computations for statistical and administrative purposes made at such times as he may elect, and pay the expense thereof out of the appropriation for inland transportation by railroad routes.

Pending the decision of the Interstate Commerce Commission, as hereinafter provided for, the existing method and rates of railway mail pay shall remain in effect, except on such routes or systems as the Postmaster General shall select, and to the extent he may find it practicable and necessary to place upon the space system of pay in the manner and at the rates provided in this section, with the consent and approval of the Interstate Commerce Commission, in order to properly present to the Interstate Commerce Commission the matters hereinafter referred thereto: *Provided*, That if the final decision of the Interstate Commerce Commission shall be adverse to the space system, and if the rates established by it under whatever method or system is adopted shall be greater or less than the rates under this section, the Postmaster General shall readjust the compensation of the carriers on such selected routes and systems in accordance therewith, from the dates on which the rates named in this section became effective.

All railway common carriers are hereby required to transport such mail matter as may be offered for transportation by the United States in the manner, under the conditions, and with the service prescribed by the Postmaster General and shall be entitled to receive fair and reasonable compensation for such transportation and for the service connected therewith.

The Interstate Commerce Commission is hereby empowered and directed as soon as practicable to fix and determine from time to time the fair and reasonable rates and compensation for the transportation of such mail matter by railway common carriers and the service connected therewith, prescribing the method or methods by weight, or space, or both, or otherwise, for ascertaining such rate or compensation, and to publish the same, and orders so made and published shall continue in force until changed by the commission after due notice and hearing.

In fixing and determining the fair and reasonable rates for such service the commission shall consider the relation existing between the railroads as public-service corporations and the Government, and the nature of such service as distinguished, if there be a distinction, from the ordinary transportation business of the railroads.

The procedure for the ascertainment of said rates and compensation shall be as follows:

Within three months from and after the approval of this act, or as soon thereafter as may be practicable, the Postmaster General shall file with the commission a statement showing the transportation required of all railway common carriers, including the number, equipment, size, and construction of the cars necessary for the transaction of the business; the character and speed of the trains which are to carry the various kinds of mail; the service, both terminal and en route, which the carriers are to render; and all other information which may be material to the inquiry, but such other information may be filed at any time in the discretion of the commission.

The Postmaster General is authorized to employ such clerical and other assistance as shall be necessary to carry out the provisions of this section, and to rent quarters in Washington, District of Columbia, if necessary, for the clerical force engaged thereon, and to pay for the same out of the appropriation for inland transportation by railroad routes. The Postmaster General shall file with the commission a comprehensive plan for the transportation of the mails on said railways and shall embody therein what he believes to be the reasonable rate or compensation the said railway carriers should receive.

Thereupon the commission shall give notice of not less than thirty days to each carrier so required to transport mail and render service, and upon a day to be fixed by the commission, not later than thirty days after the expiration of the notice herein required, each of said carriers shall make answer and the commission shall proceed with the hearing as now provided by law for other hearings between carriers and shippers or associations.

All the provisions of the law for taking testimony, securing evidence, penalties, and procedure are hereby made applicable.

For the purpose of determining and fixing rates of compensation hereunder the commission is authorized to make such classification of carriers as may be just and reasonable and where just and equitable, fix general rates applicable to all carriers in the same classification.

Pending such hearings, and the final determination of the question, if the Interstate Commerce Commission shall determine that it is necessary or advisable, in order to carry out the provisions of this section, to have

additional and more frequent weighing of the mails for statistical purposes, the Postmaster General, upon request of the commission, shall provide therefor in the manner now prescribed by law, but such weighing need not be for more than thirty days.

At the conclusion of the hearing the commission shall establish by order a fair, reasonable rate or compensation to be received, at such stated times as may be named in the order, for the transportation of mail matter and the service connected therewith, and during the continuance of the order the Postmaster General shall pay the carrier from the appropriation herein made such rate or compensation.

Either the Postmaster General or any such carrier may at any time after the lapse of six months from the entry of the order assailed apply for a reexamination, and thereupon substantially similar proceedings shall be had with respect to the rate or rates for service covered by said application, provided said carrier or carriers have an interest therein.

For the purposes of this section the Interstate Commerce Commission is hereby vested with all the powers which it is now authorized by law to exercise in the investigation and ascertainment of the justness and reasonableness of freight, passenger, and express rates to be paid by private shippers.

The Interstate Commerce Commission shall allow to railroad companies whose railroads were constructed in whole or in part by a land grant made by Congress on condition that the mails should be transported over their roads at such price as Congress should by law direct only eighty per centum of the compensation paid other railroads for transporting the mails and all service by the railroads in connection therewith.

The existing law for the determination of mail pay, except as herein modified, shall continue in effect until the Interstate Commerce Commission under the provisions hereof fixes the fair, reasonable rate or compensation for such transportation and service.

That the appropriations for inland transportation by railroad routes and for railway post-office car service for the fiscal year ending June thirtieth, nineteen hundred and seventeen, are hereby made available for the purposes of this section.

That it shall be unlawful for any railroad company to refuse to perform mail service at the rates or methods of compensation provided by law when required by the Postmaster General to do so, and for such offense shall be fined \$1,000. Each day of refusal shall constitute a separate offense. (1916, July 28; 39 Stat., 425-431.)

NOTE.—In connection with the above, attention is called to the existing regulations relating to the transportation of mails by railroads.

Sec. 1316. The Postmaster General may enter into contracts for carrying the mail, with railway companies, without advertising for bids therefor. (R. S., sec. 3942.)

Sec. 1317. The Postmaster General is authorized and directed to readjust the compensation * * * to be paid for the transportation of mails on railroad routes upon the conditions and at the rates hereinafter mentioned:

First. That the mails shall be conveyed with due frequency and speed; and that sufficient and suitable room, fixtures, and furniture, in a car or apartment properly lighted and warmed, shall be provided for * * * (railway postal clerks) to accompany and distribute the mails.

Second. That the pay per mile per annum shall not exceed the following rates, namely: On routes carrying their whole length an average weight of mails per day of two hundred pounds, \$50; five hundred pounds, \$75; one thousand pounds, \$100; one thousand five hundred pounds, \$125; two thousand pounds, \$150; three thousand five hundred pounds, \$175; five thousand pounds, \$200, and \$25 additional for every additional two thousand pounds, the average weight to be ascertained, in every case, by the actual weighing of the mails for such a number of successive working days, not less than thirty, at such times, after June thirtieth, eighteen hundred and seventy-three, and not less frequently than once in every four years, and the result to be stated and verified in such form and manner as the Postmaster General may direct. (R. S., sec. 4002.)

2. The Postmaster General * * * is hereby authorized and directed to readjust the compensation to be paid from and after the first day of July, eighteen hundred and seventy-six, for transportation of mails on railroad routes by reducing the compensation to all railroad companies for the transportation of mails ten per centum per annum from the rates fixed and allowed by the first section of an act entitled "An act making appropriations for the service of the Post Office Department for the fiscal year ending June thirtieth, eighteen hundred and seventy-four, and for other purposes," approved March third, eighteen hundred and seventy-three (R. S., sec. 4002), for the transportation of mails on the basis of the average weight. (1876, July 12; 19 Stat., 79.)

3. The Postmaster General * * * is hereby authorized and directed to readjust the compensation to be paid from and after the first day of July, eighteen hundred and seventy-eight, for transportation of mails on railroad routes by reducing the compensation to all railroad companies for the transportation of mails five per centum per annum from the rates for the transportation of mails, on the basis of the average weight fixed

and allowed by the first section of an act entitled "An act making appropriations for the service of the Post Office Department for the fiscal year ending June thirtieth, eighteen hundred and seventy-seven, and for other purposes," approved July twelfth, eighteen hundred and seventy-six. (1878, June 17; 20 Stat., 142.)

4. The Postmaster General is hereby authorized and directed to readjust the compensation to be paid from and after the first day of July, nineteen hundred and seven, for the transportation of mail on railroad routes carrying their whole length an average weight of mails per day of upward of five thousand pounds by making the following changes in the present rates per mile per annum for the transportation of mail on such routes, and hereafter the rates on such routes shall be as follows: On routes carrying their whole length an average weight of mail per day of more than five thousand pounds and less than forty-eight thousand pounds the rates shall be five per centum less than the present rates on all weight carried in excess of five thousand pounds; and on routes carrying their whole length an average weight of mail per day of more than forty-eight thousand pounds the rate shall be five per centum less than the present rates on all weight carried in excess of five thousand pounds up to forty-eight thousand pounds, and for each additional two thousand pounds in excess of forty-eight thousand pounds at the rate of \$19.24 upon all roads other than land-grant roads, and upon all land-grant roads the rate shall be \$17.10 for each two thousand pounds carried in excess of said forty-eight thousand pounds. (1907, Mar. 2; 34 Stat., 1212.)

5. The provision of the act of March second, nineteen hundred and seven, * * * fixing the compensation to be paid for transportation of mail on land-grant railroads at the rate of \$17.10 for each two thousand pounds carried in excess of forty-eight thousand pounds, is hereby amended to make such rate of compensation after June thirtieth, nineteen hundred and ten, \$15.39 for each two thousand pounds carried in excess of forty-eight thousand pounds, and the Postmaster General is hereby authorized and directed to readjust the compensation in accordance with this amendment. (1910, May 12; 36 Stat., 362.)

6. * * * (The Postmaster General) is hereby directed to have the mails weighed, as often as now provided by law, by the employees of the Post Office Department, and have the weights stated and verified to him by said employees under such instructions as he may consider just to the Post Office Department and the railroad companies. (1875, Mar. 3; 18 Stat., 341.)

7. Out of the appropriation for inland mail transportation the Postmaster General is authorized hereafter to pay the expenses of taking the weights of mails on railroad routes. (1875, Mar. 3; 18 Stat., 341.)

7½. Out of the appropriation for inland mail transportation the Postmaster General is authorized hereafter to pay rental if necessary in Washington, District of Columbia, and compensation to tabulators and clerks employed in connection with the weighings for assistance in completing computations in connection with the expenses of taking the weights of mails on railroad routes, as provided by law. (1911, Mar. 4; 36 Stat., 1334.)

8. That hereafter before making the readjustment of pay for transportation of mails on railroad routes, the average weight shall be ascertained by the actual weighing of the mails for such a number of successive working days not less than ninety, at such times after June thirtieth, nineteen hundred and five, and not less frequently than once in every four years, and the result to be stated and verified in such form and manner as the Postmaster General may direct. (1905, Mar. 3; 33 Stat., 1088.)

8½. When, during a weighing period, on account of floods or other causes, interruptions in service occur on railroad routes and the weights of mail are decreased below the normal, or where there is an omission to take weights, the Postmaster General, for the purpose of readjusting compensation on such railroad routes as are affected thereby, is hereafter authorized, in his discretion, to add to the weights of mails ascertained on such routes during that part of the weighing period when conditions are shown to have been normal, the estimated weights for that part of the weighing period when conditions are shown to have been not normal, or where there has been an omission to take weights, based upon the average of weights taken during that part of the weighing period during which conditions are shown to have been normal, the actual weights and the estimated weights to form the basis for the average weight per day upon which to readjust the compensation according to law on such railroad routes for the transportation of the mails, notwithstanding the provision of the Act of Congress approved March third, nineteen hundred and five, requiring that the average weight shall be ascertained by the actual weighing of the mails for such a number of successive working days, not less than ninety, as the Postmaster General may direct: * * * (1916, May 18; 39 Stat., 161.)

9. The Postmaster General shall require, when in freightable lots and whenever practicable, the withdrawal from the mails of all postal cards, stamped envelopes, newspaper wrappers, empty mail bags, furniture, equipment, and other supplies for the postal service, except postage stamps, in the respective weighing divisions of the country, immediately preceding the weighing period in said divisions, and thereafter such postal cards, stamped envelopes, newspaper wrappers, empty mail bags, furniture, equipment, and other supplies for the postal service, except postage stamps, shall be transmitted by either freight or express. (1907, Mar. 2; 34 Stat., 1212.)

9½. The Postmaster General, in cases of emergency, between October first and April first of any year, may hereafter return to the mails empty mail bags theretofore withdrawn therefrom as required by law, and for such times may pay for their railroad transportation out of the appropriation for inland transportation by railroad routes at not exceeding the rate per pound per mile as shown by the last adjustment for mail service on the route over which they may be carried, and pay for necessary cartage out of the appropriation for freight or expressage. (1916, May 18; 39 Stat., 160.)

10. When the weight of mail is taken on railroad routes the whole number of days included in the weighing period shall be used as a divisor for obtaining the average weight per day.

Sec. 1318. All railway companies to which the United States have furnished aid by grant of lands, right of way, or otherwise, shall carry the mail at such prices as Congress may by law provide; and, until such price is fixed by law, the Postmaster General may fix the rate of compensation. (R. S., sec. 4001.)

Sec. 1319. Railroad companies whose railroad was constructed in whole or in part by a land grant made by Congress on the condition that the mails should be transported over their road at such price as Congress should by law direct shall receive only eighty per centum of the compensation authorized by this act. (1876, July 12; 19 Stat., 82.)

NOTE.—The maximum compensation for general railroad mail service and for service over land-grant railroads under the provisions of the acts of 1873 (R. S., sec. 4002), 1876, 1878, 1907, and 1910, above set forth, is shown in the following table:

Average weight of mails per day carried over whole length of route.	Pay per mile per annum.			Intermediate weight warranting allowance of \$1 per mile under the law of 1873 and the custom of the department, subject to acts of July 12, 1876, June 17, 1878, and Mar. 2, 1907 (see A).
	Rates allowable under sec. 4002, R. S. (act of Mar. 3, 1873).	Rates allowable under acts of July 12, 1876, June 17, 1878, and Mar. 2, 1907 (see A).	Rates allowable to land-grant railroads under acts of July 12, 1876, June 17, 1878, Mar. 2, 1907, and May 12, 1910 (see A and B).	
200 pounds.....	\$50.00	\$42.75	\$34.20	Pounds. 12
200 to 500 pounds.....	75.00	64.12	51.30	20
500 pounds.....	100.00	85.50	68.40	20
500 to 1,000 pounds.....	125.00	106.87	85.50	20
1,000 pounds.....	150.00	128.25	102.60	60
1,000 to 1,500 pounds.....	175.00	149.62	119.70	60
1,500 pounds.....	200.00	171.00	136.80	30
1,500 to 2,000 pounds.....	25.00	20.30+	16.24+	30
2,000 pounds.....	25.00	19.24	15.39	
2,000 to 3,500 pounds.....				
3,500 pounds.....				
3,500 to 5,000 pounds.....				
5,000 pounds.....				
For each additional 2,000 pounds above 5,000 and less than 48,000 pounds.....				
Above 5,000 and less than 48,000 pounds.....				
For each additional 2,000 pounds in excess of 48,000 pounds.....				

Intermediate weight above 48,000 pounds warranting addition of \$1, net.....	Character of route.	
	Nonland grant.	Land grant.
	Pounds. 103.96	Pounds. 129.96

No allowance is made for weights not justifying the addition of \$1.

- A.—The act of Mar. 2, 1907, affects only routes carrying over 5,000 pounds.
- B.—The act of May 12, 1910, affects only land-grant routes carrying over 48,000 pounds.

Sec. 1321. When, after a weighing of the mails for the purpose of readjusting the compensation for their transportation on a railroad route, mails are diverted therefrom or thereto, the Postmaster General may, in his discretion, ascertain the effect of such diversion by a weighing of such mails for such number of successive working days as he may determine, and have the weights stated and verified to him as in other cases, and readjust the compensation on the routes affected accordingly: *Provided*, That no readjustment shall be made unless the diverted mails equal at least ten per centum of the average daily weight on any of the routes affected: *Provided further*, That readjustment made hereunder shall not take effect before July first, nineteen hundred and twelve, and shall be for diversions occurring after January first, nineteen hundred and twelve. (1912, Aug. 24; 37 Stat., 554.)

2. So much of section four of "An act making appropriations for the service of the Post Office Department for the fiscal year ending June thirtieth, nineteen hundred and thirteen, and for other purposes," approved

August twenty-fourth, nineteen hundred and twelve, as provides that no adjustment shall be made unless the diverted mails equal at least ten per centum of the average daily weight on any of the routes affected, is hereby repealed. (1916, May 18; 39 Stat., 161.)

Sec. 1322. The grants aforesaid (to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, see note) are made upon the condition that said company shall * * * transport mails * * * upon said railroad for the Government, whenever required to do so by any department thereof, and that the Government shall at all times have the preference in the use of the same for all the purposes aforesaid (at fair and reasonable rates of compensation, not to exceed the amounts paid by private parties for the same kind of service). * * * (1862, July 1; 12 Stat., 493.)

2. The Secretary of the Treasury is directed to withhold all payments to any railroad company and its assigns, on account of freights or transportation over their respective roads of any kind, to the amount of payments made by the United States for interest upon bonds of the United States issued to any such company, and which shall not have been reimbursed, together with the five per centum of net earnings due and unapplied, as provided by law. (R. S., sec. 5260.)

NOTE.—Settlement has been made of all the bonds issued except in the case of the indebtedness covering the railroad between Atchison and Waterville, Kans.

Sec. 1323. Where the main-line train carries onto a spur or lateral line mail matter which has no relationship therewith beyond the fact that the operations of the two are part of one railroad organization or train system, only such of the mails as are directly associated with and are dependent upon such spur or lateral line for advancement or distribution shall be taken account of in computing the average daily weight carried thereon.

Sec. 1324. If the Postmaster General is unable to contract for carrying the mail on any railway route at a compensation not exceeding the maximum rates herein provided, or for what he may deem a reasonable and fair compensation, he may separate the letter mail from the other mail, and contract, either with or without advertising, for carrying such letter mail by horse express or otherwise, at the greatest speed that can reasonably be obtained, and for carrying the other mail in wagons, or otherwise, at a slower rate of speed. (R. S., sec. 3999.)

Sec. 1325. The Post Office Department will not favor the authorization of more than one mail route over the same railroad. Where, however, it becomes necessary to authorize more than one route, the second route shall be at the lap rate, that is, at a rate of compensation per mile per annum equal to the difference between the rate earned by the average daily weight of the first or original route and the rate which would be earned if the average daily weight of the lap route were added thereto.

2. The department will not favor the recognition of lap service originating during the term where such claim arises by reason of a grant or lease of trackage rights to another by a company operating a mail route. In all cases where such relations arise it is expected that the grantor or lessor will stipulate with the grantee or lessee that the former's obligation to carry the mails over the established post route shall be assumed and fulfilled by the latter for said grantor or lessor so far as it becomes desirable to forward mails by trains of the latter.

Sec. 1326. When railroads are extended or trains run beyond the terminus of the route on which the transportation of mails is authorized, the mails shall not be carried beyond such terminus until ordered by the Second Assistant Postmaster General.

Sec. 1327. Before service is placed upon a new railroad or an extension of an existing road the Second Assistant Postmaster General will, where he deems it advisable, require a personal investigation, with report and recommendation, as to the necessity for such service.

2. Arrangements shall not be made for the commencement of service on new or extended routes, either regularly or under waivers, until the same has been authorized by the Second Assistant Postmaster General.

Sec. 1328. When a new railroad route shall be authorized after the regular weighing of mails for the section in which it is located has begun, the compensation for service thereon, until the beginning of the next term for which the succeeding general weighing shall be had for the section in which said route is located, shall be fixed by agreement at such rate, not exceeding \$42.75 per mile per annum, as the importance and character of the service will warrant.

Sec. 1336. The Postmaster General shall, in all cases, decide upon what trains and in what manner the mails shall be conveyed. (1879, Mar. 3; 20 Stat., 358.)

Sec. 1337. Every railway company carrying the mail shall carry on any train which may run over its road, and without extra charge therefor, all mailable matter directed to be carried thereon, with the person in charge of the same. (R. S., sec. 4000.)

NOTE.—This section contemplates the carrying of mails on any train with or without an employee of the Postal Service in charge.

Sec. 1337½. Hereafter every railroad company carrying the mails shall carry on any train it operates and without extra charge therefor the persons in charge of the mails and when on duty and traveling to and from duty, and all duly accredited agents and officers of the Post Office Department and the Railway Mail Service

and post-office inspectors while traveling on official business, upon the exhibition of their credentials. (1916, July 28; 39 Stat., 419.)

Sec. 1338. * * * If any railroad company shall fail or refuse to transport the mails, when required by the Post Office Department, upon the fastest train or trains run upon said road, said company shall have its pay reduced fifty per centum of the amount provided by law. (1884, July 5; 23 Stat., 156)

Sec. 1339. Railroad companies are required to convey upon any train, without specific charge therefor, all mail bags, post-office blanks, stationery and supplies.

Sec. 1340. Whenever a railroad company finds it necessary to transfer at the place of a wreck or wash-out, its officials and employees will be expected to see that the mails and railway postal clerks are promptly transferred, and every possible convenience furnished the clerks for working their mails.

Sec. 1341. The rate of compensation for the transportation of mail on railroads is computed upon the average weight of mail per day carried the whole length of the route. It is essential that the mail be carried with due frequency and speed; also that suitable apartments, equipped with necessary fixtures and furniture, properly lighted and heated, provided with ice water, and built in accordance with plans and specifications furnished by the General Superintendent of Railway Mail Service, shall be provided for railway postal clerks to accompany and distribute the mail when required.

2. Railroad companies, at stations where transfer clerks are employed, shall provide suitable and sufficient rooms for handling and storing the mails, and without specific charge therefor. These rooms shall be lighted, heated, furnished, supplied with ice water, and kept in order by the railroad company.

3. The specific requirements of the service as to due frequency and speed, space required on trains or at stations, fixtures, furniture, etc., shall be determined by the Post Office Department and made known through the General Superintendent of Railway Mail Service.

Sec. 1342. Railroad companies shall require their employees who handle the mails on trains to keep a record of all pouches due to be received or dispatched by them, and to check the pouches at the time they are received or dispatched.

2. Every irregularity in the receipt and dispatch of mail shall be reported by the employee to his superintendent promptly, and if a probable loss of or damage to mail is involved, or if the cause of failure to receive a pouch is not known, the report should be made by wire, and the superintendent shall notify the division superintendent of Railway Mail Service without delay. A copy of the employee's report shall be attached to and become a part of the permanent pouch record.

3. Train pouch records shall be kept on file at the headquarters of division superintendents of railroad companies for at least one year immediately following the date the mail covered by them was handled, and shall be accessible there to post office inspectors and other agents of the Post Office Department.

4. Railroad companies shall require their employees to submit pouch records for examination to post office inspectors and other duly accredited agents of the Post Office Department upon their request and exhibition of credentials to such employees.

Sec. 1343. Railroad companies shall forward time tables to the division superintendents and local officers of Railway Mail Service in time to reach them twenty-four hours before taking effect. If for any reason a train is to be annulled or train service temporarily curtailed or suspended, telegraphic notice shall be immediately given to the division superintendent and other local officers of the Railway Mail Service.

2. At places where railroad companies have agents, such agents shall notify the postmasters as soon as possible after receipt of any notice of change in schedule of mail trains.

NOTE.—Railroad companies should inform division superintendents of Railway Mail Service of any proposed or contemplated changes in the schedules of mail trains.

Sec. 1344. Division superintendents shall promptly notify the proper officers of railroad companies of any changes in the list of closed pouches to be handled by railroad employees.

Sec. 1345. When it appears that the public convenience will be subserved, the General Superintendent of Railway Mail Service may authorize railroad companies to place letter boxes in their depots for the receipt of mail matter other than that for local delivery.

Sec. 1346. Every railroad company is required to take the mails from and deliver them into all terminal post offices, whatever may be the distance between the station and post office, except in cities where other provision for such service is made by the Post Office Department. In all cases where the department has not made other provision, the distance between terminal post office and nearest station is computed in and paid for as part of the route.

2. The railroad company must also take the mails from and deliver them into all intermediate post offices and postal stations located not more than eighty rods from the nearest railroad station at which the company

has an agent or other representative employed, and the company shall not be relieved of such duty on account of the discontinuance of an agency without thirty days' notice to the department.

NOTE.—In analogy with this requirement respecting notice in case of removal of agent, the department requires the company to give a like notice in case of removal of station to a point outside of the 80-rod limit.

3. The department will provide for the carriage of mails to and from intermediate post offices and postal stations located more than eighty rods from the nearest railroad station; and also to and from intermediate post offices and postal stations located eighty rods or less from the railroad station when the railroad company has no agent or other representative employed at such station.

4. In all cases the distance between the railroad station and the post office or postal station shall be measured by the shortest route open to public travel, avoiding angles, from the nearest door of the baggage room to the nearest door of the post-office building where the receipt and delivery of the mails is practicable. In case there is no baggage room or station the measurement shall be made from the middle of the station platform where mails are exchanged. The route need not be a way regularly dedicated to public use; and if it be over private property, no prohibition against the Government will be recognized which shall not also have been made and enforced against the general public.

5. Any person acting for an advantage to himself or another, by authority or consent of the railroad company, and representing in any manner the interests of the company or railroad in its business transactions with the public will be regarded as the company's agent or representative.

Sec. 1347. At connecting points where railroad stations are not over eighty rods apart a company having mails on its trains to be forwarded by a connecting train will be required to transfer such mails and deliver them into the connecting train—first, where the two companies have agents or representatives employed, and, if the connection is not immediate, to deliver them to the agent of the company to be properly dispatched by the trains of said company; and, second, where the company having the mails for dispatch makes transfer of baggage or passengers. Transfers of mail between connecting trains of steam-railroad routes and cars of electric-railway routes will be required to be made by the respective companies operating the routes, where the railroad company employs an agent and its station is adjacent and readily accessible to the tracks of the electric-railway company and the connection is immediate, except in large cities, where other provision for the service may be made by the Post Office Department. Where the tracks of electric-car routes are contiguous, transfers of mail between the cars will be required of the operating companies when practicable and the connection is immediate.

Sec. 1348. At places where railroad companies are required to take the mails from and deliver them into post offices or postal stations or to transfer them to connecting railroads the persons employed to perform such service are agents of the companies and not employees of the Postal Service, and need not be sworn; but such persons shall be more than sixteen years old and of suitable intelligence and character. Postmasters shall promptly report any violation of this requirement.

Sec. 1349. When it is desirable to have mails taken from the post office or postal station to train at a terminal point where the terminal service devolves upon the company, in advance of the regular time of closing mails, the company will be required to make such advance delivery as becomes necessary by the requirements of the service.

Sec. 1350. When a messenger employed by the Post Office Department can not wait for a delayed train without missing other mails the railroad company will be required to take charge of and dispatch the mails for the delayed train and will be responsible for the inward mail until delivered to the messenger or other authorized representative of the department.

NOTE.—It is held that a mail train shall be regarded as "indefinitely late" in any of the following cases:

1. When the company's agent can not or will not give the mail messenger, or other carrier of the mail, definite information as to the time at which the train will arrive.

2. When the train is reported as being more than two hours late.

3. When the train is actually more than two hours late, although reported to arrive within two hours of schedule time.

In the first and second of the above cases the messenger need not wait for the arrival of the train beyond its schedule time of arrival, but should deliver the mail to the company's agent, or other representative, whose duty it will then be to dispatch the same by proper train and to retain custody of the incoming mail, if any, until it is called for by the messenger.

In the third case the messenger should wait for the arrival of the train, but not more than two hours, and if at the expiration of two hours the train has not arrived he should turn the mail over to the agent, whose duty will then be the same as in the other cases.

At any point where there is not a telegraph office, or other means by which the lateness of the train may be ascertained, the messenger may not turn the mail over to the agent until two hours after the train is due to arrive.

In all cases it must be distinctly understood that when a mail is regularly turned over to the company's agent for dispatch the company becomes responsible for its proper handling, and that the messenger must call for and deliver the incoming mail to the post office immediately after the arrival of the train, unless the train arrives at a late hour of night and the post office is closed, when the incoming mail may be disposed of as provided for in section 1351.

Places at which regulation or screen-wagon service is maintained are excepted from the operation of these rules.

The above ruling is not intended to modify section 1350.

Sec. 1351. Whenever the mail on any railroad route arrives at a late hour of the night, or at a time when the Government messenger is not on hand to receive it, the railroad company must retain custody thereof by placing the mail in a secure and safe room or apartment of the depot or station until called for or until the following morning, when it must be delivered at the post office, or to the mail messenger employed by the Post Office Department, at as early an hour as the necessities of the post office may require.

Sec. 1352. When a train departs from a railroad station in the nighttime later than nine o'clock, and it is deemed necessary to have the mail dispatched by such train, the division superintendent of Railway Mail Service shall, where mail is taken from and delivered into the post office by the railroad company, request the company, or where a mail messenger or carrier is employed by the Post Office Department, shall direct him, to take the mail to the railroad station at such time as will best serve the interest of the mail service. Such mail shall be taken in charge by the agent or other representative of the railroad company, who shall be required to keep it in some secure place until the train arrives and then see that it is properly dispatched.

2. The division superintendent of Railway Mail Service shall give reasonable advance notice to the proper officer of the railroad company in order that the agent or representatives of the company may be properly instructed.

Sec. 1353. Railroad companies will be expected to place their mail cars at points accessible to mail messengers or contractors for wagon service. If cars are not so placed the companies will be required to receive the mails from and deliver them to the messengers or contractors at points accessible to the wagon of the messenger or contractor.

NOTE.—At points where a considerable amount of mail is to be handled, the railroad company must furnish the men necessary to handle the mails, to load the same in or take them out of the cars, under the direction of the transfer clerk or the clerk in charge of the car. Mail should never be placed in a postal car unless there is a clerk on duty to receive and care for it.

Conductors and other railroad employees are not allowed to enter railroad post offices except in the discharge of their official duties, and when they have attended to such duties they should immediately leave the car.

Sec. 1354. A mail train must not pull out and leave mails which are in process of being loaded on the car or which the conductor or trainman has information are being trucked from wagons or some part of the station to the cars: *Provided*, That where the holding of a train for the loading of mail from a delayed connection would seriously delay the train, the department may authorize its departure when the letter and daily newspaper mails have been loaded if a subsequent available train is due to depart within a reasonable time: *Provided further*, That at points where trains are held for mail from connections during a weighing period upon the results of which adjustments of pay on the routes are based, the railroad companies will be required to maintain the conditions with respect to holding of trains that obtained during such weighing period.

NOTE.—The provision that where the holding of a train for the loading of the mail from a delayed connection would seriously delay the train, the department may authorize its departure when the letter and daily paper mails have been loaded if a subsequent available train is due to depart within a reasonable time, contemplates that specific authorization for the departure of a train under such circumstances shall be issued by the department. Therefore a company should not permit a train to depart under this provision unless it has received specific authority from the department to do so. The department will consider the facts in the different cases as they arise and issue the necessary authorization for the future departure of a train where under all of the circumstances surrounding the particular case such authorization appears to be proper.

Sec. 1355. At all points at which trains do not stop where the Post Office Department deems the exchange of mails necessary a device for the receipt and delivery of mails satisfactory to the department must be erected and maintained; and pending the erection of such device the speed of trains must be slackened so as to permit the exchange to be made with safety.

2. Where the department deems it necessary to the safe exchange of the mails the railroad company will be required to reduce the speed or stop the train.

3. When night mails are caught from a crane the railroad company shall furnish the lantern or light to be attached to the crane and keep the same in proper condition, regularly placed and lighted; but if the company has no agent or employee at such station, the company shall furnish the light, which shall be cared for and placed by the department's carrier.

4. The engineer of a train shall give timely notice, by whistle or other signal, of its approach to a mail crane.

Sec. 1356. When a postmaster at a post office dependent on a railroad for its mail supply deems temporary mail service necessary because of a failure of the railroad service, he should ascertain the lowest rate at which he can obtain such temporary service and immediately report the facts, by telegraph, if necessary, to the superintendent of Railway Mail Service in whose division the office is located, stating the cause and probable duration of the failure, the point from which temporary service is desired, and the lowest obtainable rate for such service.

2. The Superintendent of Railway Mail Service shall endeavor to have the railroad company resume regular service. If not resumed, he shall report the facts and make such recommendations as they may warrant to the

Second Assistant Postmaster General, who, if he thinks it advisable, will authorize the postmaster to employ temporary service.

3. No temporary service rendered necessary by the failure of railroad service shall be employed by a postmaster until he has first obtained authority therefor from the Second Assistant Postmaster General.

Sec. 1357. The Postmaster General shall request all railroad companies transporting the mails to furnish, under seal, such data relating to the operating, receipts, and expenditures of such roads as may, in his judgment, be deemed necessary to enable him to ascertain the cost of mail transportation and the proper compensation to be paid for the same; and he shall, in his annual report to Congress, make such recommendations, founded on the information obtained under this section, as shall, in his opinion, be just and equitable. (1879, Mar. 3, ch. 180, sec. 6; 20 Stat., 358.)

Sec. 1358. The Postmaster General is authorized to provide for the transportation of official matter of any department of the Government over any railroad or express company whenever he can do so at a saving to the Government and without detriment to the public service: *Provided*, That nothing in this section shall apply to official matter franked by Members of Congress. (1892, July 13, ch. 165, sec. 5; 27 Stat., 145.)

Sec. 1358½. So much of section one of the "Act making appropriations for the service of the Post Office Department for the fiscal year ending June thirtieth, nineteen hundred and thirteen, and for other purposes," approved August twenty-fourth, nineteen hundred and twelve (Thirty-seventh Statutes, page five hundred and forty-seven), which provides that the Post Office Department shall not extend or enlarge its present policy of sending second-class matter by freight trains, is hereby repealed, but no publication shall be sent by freight if such method of transportation results in unfair discrimination.

2. Whenever the owner of any publication required by an order of the Post Office Department to be transmitted by freight believes that he is unfairly discriminated against, he may apply to the Post Office Department for an opportunity to be heard; that upon such application being duly filed in writing, the owner of such publication shall have opportunity for a full and fair hearing before said department, and pending final determination no change shall be made in the method of transportation of such publication as ordered by the department. The testimony in any such hearing or proceedings shall be reduced to writing and filed in the Post Office Department prior to entering an order upon such hearing.

3. That upon such hearing if the Post Office Department decides adversely to the contention of the publisher, such publisher shall have the right within the period of twenty days after the date of the order of the Post Office Department made upon such hearing, to appeal to the United States Court of Appeals of the District of Columbia, for a review of such order by said Court of Appeals, by filing in the court a written petition praying that the order of the Post Office Department be set aside. A copy of such petition shall be forthwith served upon the Post Office Department and thereupon the said department forthwith shall certify and file in the court a transcript of the record and testimony. Upon the filing of such transcript the court shall have jurisdiction to affirm, set aside, or modify the order of the department.

4. The jurisdiction of the Court of Appeals of the District of Columbia to affirm, set aside, or modify such orders of the Post Office Department shall be exclusive.

5. Such proceedings in the Court of Appeals of the District of Columbia shall be given precedence over other cases pending therein and shall be in every way expedited. (1916, July 28; 39 Stat., 424.)

Sec. 1359. All railway companies carrying mail may furnish free transportation on the line of their respective roads to railway mail clerks. (1896, June 9; ch. 386; 29 Stat., 313.)

Sec. 1479. Postmasters at terminal offices on mail routes, and at such other post offices as the Postmaster General may designate as reporting offices, shall report the performance of the service upon the blank forms furnished by the department strictly in accordance with the instructions printed thereon.

2. Standard (railroad) time shall be observed by contractors in performing and used by postmasters in reporting service on all routes.

3. The regular reports above required shall be forwarded by the first mail after the close of each month to the Post Office Department, and a duplicate of each report must be retained by the postmaster and carefully preserved, to be turned over to his successor. Postmasters shall promptly furnish duplicate reports when called for by the department.

Sec. 1484. Railroad companies must furnish monthly, to the division superintendent of Railway Mail Service, statements in the form prescribed by the Post Office Department, and affirmed under the oath of their respective principal transportation officers, showing by routes all failures to operate trains carrying mail, and, similarly, reports showing all failures to operate full railway post-office cars of not less than the dimensions authorized and of the character and in the condition required; also, when called upon to do so, railroad companies will be required to furnish monthly statements, certified as above, of all delays, and their causes, to trains which the department regards as being of special importance as mail trains.

Sec. 1486. The Postmaster General may make deductions from the pay of contractors, for failures to perform service according to contract, and impose fines upon them for other delinquencies. He may deduct the price of the trip in all cases where the trip is not performed; and not exceeding three times the price if the failure be occasioned by the fault of the contractor or carrier. (R. S., sec. 3962.)

Sec. 1488. Deductions in the following services will be made within the limit fixed by law (see sec. 1486), the amount thereof to depend upon the nature or frequency of the failure and the importance of the mail.

2. The compensation for service on each route shall be apportioned, as nearly as practicable, among the several trains carrying mail, according to the average weight of mail carried by each train.

3. Deductions will be made for failure to perform any trip, or a part thereof, on the basis of the mileage and the average weight of the mail carried by the train.

4. A train will be considered as failing to perform service when it becomes twenty-four hours or more late, and will be charged with failure from the point where it became twenty-four hours late to the end of its run, or to the point at which it becomes less than twenty-four hours late.

5. If a train carrying mail is made up, and covers any part of the failing train's run within the twenty-four-hour limit, and is in addition to the regularly scheduled trains performing mail service, such service will be credited in lieu of the train which is twenty-four hours or more late.

6. Unless it is shown to the satisfaction of the Post Office Department that the failure to operate a train or trains was unavoidable, the deduction will be made at pro rata, or one hundred per centum of the amount due to be earned by them between the points of failure. If the failure was unavoidable, the route reopened without unnecessary delay, and the mails not diverted, the mail service being reestablished promptly, fifty per centum of said amount will be deducted. Where, however, there has been a total suspension of mail service over all or any part of a route for a period of six days or more, deduction will be made for the entire period at one hundred per centum of pro rata, without regard to the cause of the failure or diversion of mails.

7. In case of an interruption of sufficient duration to make it necessary for the Post Office Department to forward the mails over other lines, no compensation will be allowed.

* * * * *

11. When a train is detoured a deduction will be made, based upon the estimated value of the local service omitted—that is, the service between the points of detour; but in no case will the deduction be in excess of fifty per centum of the value of the train's service between such points. If, however, satisfactory provision is made for such local service, no deduction will be made.

12. Trains which the department regards as being of special importance as mail trains will be subject to deductions for failure to arrive at junction and terminal points at the time fixed by schedule unless held for mail connections, or unless satisfactory explanation be given in due time.

13. Applications from railroad companies for remission of deductions made from their compensation for carrying mail will not be considered unless filed, with evidence, in the office of the Second Assistant Postmaster General within six months from the date of notice by the Post Office Department to the railroad company that such deduction has been ordered.

* * * * *

Sec. 1489. Fines will be imposed, unless satisfactory excuse be made in due time, for each of the following delinquencies on the part of a contractor, to wit:

(a) Failure to take the mail, or any part of it, from a post office, or to deliver it thereto, or to deliver it immediately upon arrival. (Note exceptions in sec. 578.)

(b) Suffering the mail, or any part of it, to become wet, lost, injured, or destroyed, or conveying or keeping it in a place or manner that exposes it to depredation, loss, or injury.

(c) Refusing, after demand, to transport mail by any coach, car, boat, or other conveyance which the contractor runs or is concerned in running on the route.

(d) Leaving or putting aside the mail, or any part of it, for the accommodation of passengers, baggage, express, freight, or other matter.

(e) Habitual failures to observe schedule.

(f) Other delinquencies or violations of the terms of the contract, or the requirements or regulations of the Post Office Department.

2. The fine will in each case be such sum as the Postmaster General may impose, in view of the gravity of the delinquency, and will be deducted from the contractor's pay for the service on the route on which the delinquency occurred.

Sec. 1490. In addition to the foregoing general causes, fines will be imposed for the following delinquencies in the different classes of service, to wit:

RAILROAD, ELECTRIC, AND CABLE CAR SERVICE.

- (a) Leaving mail which arrives at the station before the departure of the train or car for which it is intended.
- (b) Failure to use the first practical means of forwarding mail which is delayed en route.
- (c) Failure to furnish suitable apartments when required in which to distribute the mail.
- (d) Failure to sound proper signal when approaching mail crane.
- (e) Failure to furnish proper accommodations for the handling, storage, and, if necessary, the distribution of mails in depots.

* * * * *

Sec. 1613. The Postmaster General may provide by order the terms upon which route agents (railway postal clerks) may receive from publishers or any news agents in charge thereof, and deliver the same as directed, if presented and called for at the mail car or steamer, packages of newspapers and other periodicals not received from or intended for delivery at any post office. (R. S., sec. 3889.)

2. Railway postal clerks may receive newspapers and periodicals from publishers and news agents only when accompanied with a certificate from the postmaster at the office of publication that the postage has been paid.

3. Second-class matter marked to be delivered outside the mails shall be so delivered only when addressed to news agents, and should be treated according to instructions upon the package.

4. Publishers shall have printed in bold type on wrapper of mail packages for outside delivery the words, "U. S. mail for outside delivery at publisher's risk."

5. When newsdealer packages are forwarded on trains upon which no railway postal clerk is assigned, the baggageman shall deliver the packages outside of the mail at place shown in the address, and while in his custody they will be considered as mail matter.

6. Baggage men shall not receive second-class mail directly from the publisher on postmasters' certificates unless specially authorized to do so by the department through the division superintendent.

7. Packages for delivery outside of the mail when handled and delivered by railroad baggage men will be duly weighed and credited to the railroad company carrying them, the same as other mail matter.

Sec. 1689. Whoever shall place or cause to be placed any matter in the mails during the regular weighing period, for the purpose of increasing the weight of the mail, with intent to cause an increase in the compensation of the railroad mail carrier over whose route such mail may pass, shall be fined not more than \$20,000, or imprisoned not more than five years, or both. (1898, June 13, ch. 446; 30 Stat., 442. 1909, Mar. 4, ch. 321, sec. 228; 35 Stat., 1134.)

Sec. 1711. It shall be unlawful to paint, print, or in any manner to place upon or attach to any steamboat or other vessel, or any car, stagecoach, vehicle, or other conveyance, not actually used in carrying the mail, the words "United States Mail," or any words, letters, or characters of like import; or to give notice, by publishing in any newspaper or otherwise, that any steamboat or other vessel, or any car, stagecoach, vehicle, or other conveyance, is used in carrying the mail, when the same is not actually so used; and every person who shall violate, and every owner, receiver, lessee, or managing operator thereof, who shall cause, suffer, or permit the violation of any provision of this section, shall be liable, and shall be fined not more than \$1,000 or imprisoned not more than two years, or both. (R. S., sec. 3979. 1909, Mar. 4, ch. 321, sec. 188; 35 Stat., 1124.)

Sec. 1712. Whoever shall knowingly and willfully obstruct or retard the passage of the mail, or any carriage, horse, driver, or carrier, or car, steamboat, or other conveyance or vessel carrying the same, shall be fined not more than \$100 or imprisoned not more than six months, or both. (R. S., sec. 3995. 1909, Mar. 4, ch. 321, sec. 201; 35 Stat., 1127.)

Sec. 1714. Whoever, having taken charge of any mail, shall voluntarily quit or desert the same before he has delivered it into the post office at the termination of the route, or to some known mail carrier, messenger, agent, or other employee in the postal service authorized to receive the same, shall be fined not more than \$500 or imprisoned not more than one year, or both. (R. S., sec. 5474. 1909, Mar. 4, ch. 321, sec. 199; 35 Stat., 1126.)

FROM THE BOOK OF INSTRUCTIONS TO CHIEF CLERKS, RAILWAY MAIL SERVICE, EDITION OF 1916.

Sec. 90. TRANSFER TO AND FROM STORAGE AND BAGGAGE CARS.—It is the duty of railroad companies to properly pile the storage mail in the storage cars and to transfer storage mails from one car to another when necessary, but the duty of transferring, while the train is in motion, mail from the storage car to the working car to be distributed or from the working car after distribution to the storage car, devolves upon the railway postal clerks. However, when practicable, such mail shall be transferred at stations at which trains stop a

sufficient length of time for the purpose, and in these cases it is the duty of the railroad company to cause such transfers to be made. Whenever conditions on a line necessitate transfer of mails en route it will be proper for chief clerks to arrange with the officials of the railroad company to make these transfers at certain points, giving due consideration to the convenience of the company, with a view of avoiding unnecessary delay to the movement of trains. If porter service is necessary en route in the handling of storage mails, chief clerks shall not make direct request of the railroad companies for such service, but shall prepare a report setting forth the amount of mail to be transferred, its character, and the number of porters necessary to provide the service, and make recommendation to the division superintendent.

Sec. 107.

3. At points where transfer service is authorized the duties of the employees of the Railway Mail Service will be limited to the supervision of the handling of mails, the physical labor involved to be assumed by the railroad companies. The responsibility for separating the mails is with the railroad company, transfer clerks to act in an advisory and supervisory capacity. The railroad company should be advised fully as to their responsibility, and it should be made clear to them that it is the department's policy and instructions that it is the duty of the company to receive the mails from departmental messengers or others who may be charged with the delivery of same to them; that the separation of such mails for dispatch to outgoing trains and into the different cars in outgoing trains devolves upon the company; that the loading of mail into all cars and the piling of same in storage and baggage cars at initial terminals and local points en route devolves upon the railroad company; and that they must furnish competent labor and supervisory force to insure that this work is promptly and correctly done. Railroad companies should also be advised that the responsibility of unloading mail from storage and baggage cars at local points en route and at outer terminals devolves upon the company, and that the mails put off of trains en route and at terminals shall be properly separated and delivered to mail messenger, post office, or transferred within the limitations of the regulations, as may be necessary.

4. Railway postal clerks shall make all needed separations in postal cars of mails to be put off, and instruct railroad employees about such separations, the keeping of same intact when such mails are put off, and the disposition to be made of same. Where necessary, dispatch lists may be furnished railroad companies for the use of their employees, but the standard schemes issued by the department should not be furnished.

INSTRUCTIONS AND RULINGS WITH REFERENCE TO RAILROAD MAIL SERVICE UNDER THE SPACE SYSTEM OF AUTHORIZATION AND PAYMENT.

OFFICE OF SECOND ASSISTANT POSTMASTER GENERAL,

Washington, January 8, 1917.

The following instructions and rulings with reference to railroad mail service under the space system of authorization and payment are issued for the information of all concerned, and supersede those contained in the printed circular letters addressed to superintendents, Railway Mail Service, of September 27 (not numbered), No. 10 of October 20, No. 15 of October 23, No. 54 of December 7, 1916, and in circular letter of October 24, 1916, not addressed:

GENERAL.

1. *Terminal distances.*—The distance between the railroad station and the post office at terminal post offices of routes will be included in the mileage of the car-run and be paid for at the car-mile rate where the company performs the messenger service, but the distances between station and post office at intermediate points where a train may end its run will not be included in distance paid for.

2. *Closed-pouch space and storage space in baggage cars.*—Units of closed-pouch space and storage space in baggage cars will be stated and paid for in one direction only.

3. *Transfer service.*—The regulations as to transfer service performed by railroad companies in effect previous to November 1, 1916, will be continued.

4. *Side service.*—The regulations governing the performance of side service by railroad companies in effect previous to November 1, 1916, will be continued.

5. *Closed-pouch trains operated partly over space-stated route and partly over route having closed-pouch service only.*—Will be stated on space basis on both routes.

6. *Apartment cars on narrow-gauge routes.*—Full rates will be allowed.

7. *Passageway or part-width apartment cars.*—Pro rata of the full line and terminal rates will be allowed for cars of this character.

8. *Deadhead train crews not permitted to ride in R. P. O. cars.*—Deadhead train crews can not be permitted to ride in R. P. O. cars while in use even though the railroad company may furnish an R. P. O. car larger than the size authorized.

9. *Train crews in discharge of their duties may ride in deadhead storage cars.*—If the railroad company permits the train crew to ride in a deadhead storage car while in the discharge of their duties in the conduct of the train, that would not amount to such use of the car as to prohibit the department from allowing payment for the operation of the return empty storage car.

10. *Basis for determining linear feet of closed-pouch space needed.*—In determining the number of linear feet on both sides of car that are needed for carrying the mails in closed-pouch units of 3 feet and 7 feet in baggage cars, 15 sacks of mail will be considered as equivalent to 1 linear foot, both sides of car, and 3 packages, 3 empty sacks, or 3 registered cases outside of a sack will be considered as equivalent to 1 sack.

11. *Basis for determining linear feet of storage space needed, regular and emergency.*—In ascertaining the number of linear feet on both sides of car that are needed for carrying the mails in regularly authorized storage-space units in baggage cars, the space needed should be determined by actual measurement. In determining the amount of space needed for excess or overflow mails, 15 sacks of mail will be considered as equivalent to 1 linear foot of space, both sides of car, and 3 packages, 3 empty sacks, or 3 registered cases outside of a sack will be considered as equivalent to 1 sack.

12. *Detoured trains.*—Where trains are operated between usual termini, but over lines other than those on which they are regularly authorized to run, through obstructions on the regular line or for other reasons, the department will pay for the service performed in the detoured trains on the basis of the mileage of the line on which the trains are authorized to run. In cases of such interruptions to regular service, where the companies make up and operate special trains over parts of the track on which the regular trains do not operate, they will be expected to carry any mails that can be advanced in delivery by such special trains without additional compensation.

13. *Reports of counts of sacks, etc., made by railroad baggagemen.*—All railroads which require daily reports from their train baggagemen of the total number of sacks, parcel-post, and newsdealers' packages taken on at each point and put off at each point shall furnish the Post Office Department, through the division superintendent, Railway Mail Service, having charge of the respective lines, with a monthly report of the result of such count, sworn to as to its correctness by the principal transportation officer of the railroad. This report is required to be made only by the carriers conducting the count.

AUTHORIZATIONS.

14. *Duration of authorizations.*—The practice heretofore followed in making authorizations of railway post-office cars of not fixing the period of duration will be followed in making authorizations.

15. *Service partly by rail and partly by steamboat.*—Where a railway postal clerk accompanies mail to terminal on a steamboat, the car-mile rate allowable on the rail mileage should apply on steamboat mileage. If clerk does not accompany mails, the mileage over the water part of the route will be stated as closed-pouch service, the unit to be determined by the number of sacks carried.

16. *Authorizations of closed-pouch service where service is not performed over entire run of train.*—In cases where a closed-pouch train carries mails over part of its run and carries no mails over another part, the service and pay will be stated over the mileage where mails are carried, and terminal charges allowed only at the initial and terminal points, where mails are received and delivered.

17. *Continuous runs of cars which may be switched from one train to another, en route, and terminal rates allowable therefor.*—Where car is held over at an intermediate point for the convenience or by order of the Post Office Department, and the company switches the car, loads or unloads mail, or performs all or a material part of the services stated in the law as warranting allowance of terminal rates, the latter may be allowed.

18. *Distribution apartments not partitioned off from remainder of baggage car.*—In cases like that of the apartment on the "Twentieth Century Limited," New York Central Lines, and the "Broadway Limited," on the Pennsylvania Lines, the necessary space unit will be authorized and if that unit be not furnished, payment will be made pro rata for the actual space furnished.

19. *Mails delivered by fast train to be forwarded or returned to a local point on local trains, or vice versa.*—Space will be authorized on the local trains.

20. *Changes of authorizations en route.*—Regular authorizations of space in all classes of service on trains will be changed only at railroad divisional points where the railroad company changes engines or performs switching services in connection with passenger-train service.

21. *Authorization where storage space is needed in one direction only.*—Where a full car or apartment car is needed for distribution purposes on the round trip, and additional space is needed in the baggage car, one way only, the R. P. O. unit for the round trip and the unit of space in the baggage car, in one direction only, will be authorized.

22. *Where larger car than is authorized is operated, and additional storage space is needed, in both directions.*—Where a 15-foot apartment car is sufficient for the distribution needs of the round trip, and 3 feet or 7 feet of

space additional to the 15-foot apartment space is needed in both directions, a 30-foot apartment car will be authorized, and paid for if operated, but if the company desires to run an apartment car over 15 feet, but less than 30 feet, in length, the company will be paid pro rata of the 30-foot car rate. A similar rule will be followed in the case of a 30-foot car.

23. *Change from distribution space to closed-pouch space in a train.*—Where the authorization of a full R. P. O. or apartment car terminates at an intermediate divisional point on a train run, and service is performed as closed-pouch service over the remainder of the run, the mails being carried in other than the apartment car, the terminal rates applicable to the car and to the closed-pouch unit will be allowed at the intermediate point; but if the postal car is operated through to a point beyond where its authorization ceases, and carries the closed-pouch mails, no terminal allowance will be made for the closed-pouch unit.

24. *Where mails for which storage space is authorized are carried in the distributing car operated, which exceeds the car authorized.*—Where there is an authorization for a 15-foot, 30-foot, or 60-foot R. P. O. car and for a unit of storage space in a train, and the mail car operated is in excess of the authorization and provides sufficient space to care for the mail due to be carried in the unit of storage space, the company, if it so desires, will be permitted to carry in the R. P. O. car the mail covered by the storage-space unit, with the understanding that no terminal charge for the storage unit will be allowed.

25. *Where an apartment car smaller than that authorized is furnished and space is needed in addition.*—If an apartment car is authorized and the company furnishes a smaller apartment which is sufficient for the distribution, but will not include all of the storage mail, making it necessary to carry storage mail in the baggage car, the company will be paid pro rata for the smaller apartment, and additionally for the unit of space authorized in the baggage car, including terminal allowance.

26. *Pro rata line and terminal pay for passageway apartment cars.*—Where an apartment car is authorized and the company furnishes a mail apartment of less than the standard length in a passageway car, and additional storage space is needed, the company will be allowed the pro rata of the pay for the standard-sized apartment authorized, to be determined by the number of square feet of space provided in the car furnished as compared with the number of square feet in a standard apartment, and an additional unit of storage space in the baggage car will be authorized, with terminal allowance.

27. *Apartment cars furnished of part width, but exceeding the length of car authorized.*—Under an authorization for a 15-foot apartment, an apartment 20 feet 3 inches in length by 7 feet 2 inches in width was tendered and accepted, the number of square feet furnished by such apartment being slightly in excess of the number of square feet furnished in a 15-foot apartment of standard width.

28. *Terminal allowances where authorization changes en route.*—Where different units of R. P. O. service authorized, respectively, over different parts of the run of a train and the company furnishes cars of the specified unit in each case, the proper terminal charge will be allowed for each unit; but if the company operates a car of the largest unit over the entire run, the terminal rate allowable for the largest unit only will be authorized for the train run.

29. *Mails carried in several baggage cars of train for convenience of company.*—Where a train carries two or more baggage cars from A to B, in each of which mail is piled, and at B the train is divided and the cars diverge to different lines, the storage space from A to B will be stated as one unit.

30. *Allowance of terminal distance when car runs over more than one route.*—Where the run of a car covers more than one route stated on the space basis, the terminal distance will be allowed on cars in and out between post office and station at intermediate terminals of the routes, where the company performs the terminal messenger service.

31. *Terminal allowances for cars operated of less than standard size authorized.*—Where cars of lesser length than the standard size authorized, but which have been accepted for service, are operated, the department is without authority under the law to allow more than pro rata of the terminal rate as well as of the line rate for the operation of the cars that are less than the authorized length.

32. *Mails carried in postal car where authorization is for closed-pouch service.*—Where an apartment car is authorized from A by B to C, the clerks not occupying the car between A and B, but mail is carried in the baggage car between those points, no authorization in the baggage car will be made. The carriage of the mails in the baggage car is considered as in lieu of the apartment-car space. If the company does not agree with this point of view, it may carry the mails in the mail car between A and B and see that they are properly protected and delivered at the terminus.

33. *Cancellation of authorizations by field officers.*—Authorizations for storage cars may be canceled by representatives of the department at the initial point of the run of the car, in cases where the car is not needed, by giving reasonable advance notice to the railroad company to permit of the car being removed from the train; regular authorizations of space for carrying the mails should not be otherwise curtailed.

34. *Use of excess space in 70-foot storage car.*—Where 70-foot storage cars are operated in fulfillment of 60-foot authorizations, and the quantity of mail is such that a 60-foot car will not accommodate it, such additional units of storage space above 60 feet as are necessary to accommodate the excess mails may be authorized and the excess mails may be carried in the excess space in the 70-foot car, with the understanding that no terminal allowance will be made for the additional unit of storage space.

35. *Terminal allowances on deadhead storage cars.*—No terminal allowances will be made for deadhead movements of storage cars returned at the convenience of the company. If such cars are operated in a particular train by order of the Post Office Department, such allowances will be made.

EMERGENCY SPACE.

36. *Mails not to be carried on trains on which no space is authorized.*—It is expected that the regular authorizations will cover all necessary space, and should there be occasion to carry mail in emergencies on trains upon which no service is regularly authorized, a request should be made of the railroad company for the necessary emergency service on the regular blank form provided for that purpose. The railroad companies should not carry mails on trains upon which no space is authorized unless they receive an order requesting such carriage from the proper officer of the Railway Mail Service. This ruling is subject to the instructions herein issued governing emergency service of the several classes.

37. *Additional storage cars.*—When an additional storage car is needed in a certain train to meet an emergency, the transfer clerk or other representative of the department at the point where the car is needed may address a written notice to the railroad company calling for the additional car desired and stating the point to which that car is to be run. Such notice shall be written in duplicate, the original to be delivered to the proper local representative of the railroad company and the duplicate to be forwarded through the usual channel to the division superintendent, Railway Mail Service. The clerk in charge of the train should also be informed of the point to which the additional storage car is to be authorized in order that its use may be discontinued at that point.

38. *Additional space in baggage cars in trains carrying a full R. P. O. or apartment car.*—When a train is authorized to carry a full R. P. O. or an apartment car, which is ordinarily sufficient to carry all of the mail, but owing to the receipt of an extraordinarily large quantity of mail on a certain date it is not possible to carry the excess in the postal car, the transfer clerk at the point where the emergency occurs, or, if no transfer clerk, then the clerk in charge may address a written notice to the railroad company requesting the company to furnish the additional unit of space needed in the baggage car, such notice to be made in duplicate, the original to be delivered to the conductor or baggageman of the train and the duplicate, showing the number of bags involved, to be forwarded through the usual channel to the division superintendent, Railway Mail Service. Similar action should be taken where a R. P. O. car and a unit of space in baggage car are authorized, and the latter is not sufficient to accommodate all the mail to be piled therein.

39. *Additional mails in excess of authorized space for dispatch on closed-pouch trains.*—When it becomes necessary because of the receipt of an unusual quantity of mail for dispatch on a closed-pouch train, to exceed the regularly authorized space in that train, the transfer clerk or other postal representative may address a written notice to the railroad company requesting the company to furnish the additional space needed. Such notice to be made in duplicate, the original to be given to the company and the duplicate, giving full information regarding the necessity for the additional space, with the number of bags involved, to be forwarded through the usual channel to the division superintendent, Railway Mail Service.

40. *Additional mails on special or extra train.*—Where on account of a delayed train or connection a special or extra train is made up to go out either on the time of the regular train or after arrival of the delayed connection, and the mails carried on such special or extra train are those which would have been carried on the regular train had schedules been complied with, the transportation of the mail on the special or extra train will be considered as in lieu of a part of the service required of the regular train, and no additional pay will be allowed for either train unless the quantity of mail carried in both trains is in excess of that which could have been carried in the space regularly authorized.

41. *Mails missing regular connection and falling back upon a following train.*—Where on account of a delayed connection the mail due to go out on one train falls back upon a following train on the same line, the transportation of such mail on the second train will be considered as in lieu of a part of the service required of the first train, and no additional pay will be allowed for either train unless the quantity of mail carried in both trains is in excess of that which could have been carried in the space regularly authorized.

42. *Additional units to be authorized in accordance with needs of service.*—Where in an emergency the regularly authorized space in a train is not sufficient to carry all the mails, the representative of the department will request the railroad company to furnish an additional unit or units sufficient to meet the needs of the service.

Illustrations: (1) A 7-foot unit of closed-pouch service is regularly authorized. On a given date there are mails to be carried which can not be accommodated in the 7-foot unit, but could be accommodated by using an additional 3-foot unit of space. A request should be made of the railroad company to furnish an additional 3-foot unit for the emergency service. (2) A 15-foot car is regularly authorized and excess mails requiring 10 feet of additional space are received. Request should be made for a 7-foot unit and a 3-foot unit.

43. *Additional mails carried in excess space in apartments which exceed the authorized sized car.*—Where the authorization is for an apartment car, or for an apartment car and a unit of storage space, and the company furnishes an apartment or full R. P. O. car in excess of the authorization, and baggage-car mail is carried in the R. P. O. car, if the amount of mail taken into the R. P. O. car exceeds the total authorized space for the train, the clerk should notify the railroad company on Form 5365 of the amount of the emergency space used.

44. *Procedure at points where no postal representative is located.*—When a train which is authorized to carry the mail is tendered more mail than can be accommodated in the authorized space at a junction or intermediate point where there is no representative of the Postal Service, the baggageman on the train shall receive all of the mail and count the bags, the railroad company to report to the division superintendent, Railway Mail Service, the number of bags of excess mail and the points between which they were carried, and, if from a missed connection, whether the mails therefrom are regularly due to be carried by a train of the reporting line. If the unusual quantity of mails is due to the receipt of a missed connection regularly due to another train of the same line, no payment for the additional space will be allowed.

45. *Reports to department.*—In order that the emergency service authorized by division superintendents may be formally authorized by the department for payment, they should make reports promptly after the close of each month of all such service authorized and performed during the month, making separate reports for each route. The report should give complete information with respect to dates, trains, points between which service was performed, number of trips, size of unit authorized, etc. The duplicate copies of notices to companies requesting the emergency space should accompany the reports.

46. *Emergency space requests to be for additional units.*—All requests for and reports of emergency authorizations should be for additional units of space of the size needed to accommodate the excess mails, and should not be made for units "in lieu" of the regularly authorized units in the train. In other words, the authorizations for emergency service should be separate and distinct from the authorizations for regular service, in order that the payments for the two classes of service may not be confused.

47. *Notice to companies of irregular space previously authorized.*—Where space has previously been authorized for use at irregular intervals, as may be required by the division superintendent, written notice as to the date and train on which the space is required should be given to the representative of the railroad company by the transfer clerk or other postal representative authorized to act in the matter, such notice to refer to the space as previously authorized.

48. *Emergency space needs fluctuating on different parts of a train run.*—Emergency authorizations of closed-pouch and storage space in trains in which the regular authorization of space will not accommodate the excess mails should be for an extra unit sufficiently large to take care of the excess mails and for the actual distance they are carried. The units to be authorized in this class of service should correspond to the volume of mails and the distances carried. Examples: (1) Train operated between A and D with an authorization for 15 feet of storage space in the baggage car, or a 15-foot apartment. At B sufficient mail is received to require an additional unit of 7 feet of space, such excess mail being carried through to C. The authorization should be for 7 feet, between B and C, with a terminal allowance for 7 feet. (2) Train operated between A and E with space authorization as above. At B excess mail received requiring 7 feet of space in baggage car. At C a sufficient amount of such mail is unloaded to reduce the need for the excess space to 3 feet, and the residue dispatched at D. The authorization should be for 7 feet, B to C, and 3 feet, C to D, with a terminal allowance for 7 feet.

OPERATION, SANITATION, CLEANING, AND LOADING OF CARS.

49. *Sanitation and cleaning of cars.*—The law provides that no pay shall be allowed for service by any railway post-office car which is not equipped with sanitary drinking-water containers and toilet facilities, nor unless such car is regularly and thoroughly cleaned.

In order to avoid controversies between the railroad company and the department as to whether there have been failures to comply with this law involving a withholding of pay for the car, all clerks in charge are instructed immediately upon entering their car at the beginning of their run to inspect the car to determine whether it is equipped with sanitary drinking-water containers and toilet facilities and is thoroughly cleaned. If the clerk in charge discovers any failure in this respect, he will address a notice of the defect to the railroad company, such notice to be in duplicate, the original to be given to the proper local representative of the company as soon as possible after the defect is discovered, and the duplicate to be forwarded with his trip report.

If the defect is remedied before the departure of the train or at any point on the train run, notation of such fact should be made on the copy sent with trip report and may be made also on the copy given to the railroad company if presented for that purpose.

50. *Old-style apartment cars.*—Where an old-style 30-foot apartment car is furnished which does not provide as much storage room as is provided in a standard 30-foot apartment car, and storage space is necessary because capacity of the old-style car is exceeded, the department will authorize a unit of storage space. However, the company will be required within a reasonable time and not later than July 1, 1917, to substitute a 30-foot apartment car, with standard interior fittings, or in lieu thereof furnish sufficient space in the baggage end of the car to bring the facilities up to those furnished in a standard 30-foot apartment car without additional compensation.

51. *Handling, loading, and unloading of mails in storage cars.*—The regular practices which have heretofore obtained in the Railway Mail Service with reference to the handling, loading, and unloading of mails in and out of storage cars will be continued. In the notice to the railroad companies of the inauguration of service on the space basis, the statement was made that the service would be subject to the provisions of section 5 of the act of July 28, 1916, to the Postal Laws and Regulations, and to the customs and practices in relation to Railway Mail Service. This contemplates that the then existing practices followed in connection with the loading and unloading of mails shall be continued.

52. *Handling of mails carried in deadhead postal or storage cars in lieu of closed-pouch or storage space.*—Railroad companies will be required to handle mail and in out of a full R. P. O., apartment, or storage car which is being hauled as a deadhead movement, the car being used for postal purposes in the opposite direction, and the company paid for the round trip if the companies in such cases find it necessary to handle the mails in the postal or storage car. If the company prefers to handle these mails in the baggage car, the department will have no objection with the understanding that no compensation will be allowed beyond that paid for the deadhead full R. P. O., storage, or apartment car.

53. *Operation of storage cars.*—The department has the right to control the operation of storage cars to the extent of having them returned in trains where needed in an emergency, regardless of the fact that such cars are authorized and usually operated in certain designated trains in the return movement. It is also permissible to split the storage-car authorization, allowing one car to go forward in the regular train and holding the other for a later train to accommodate missed connection.

54. *Loading of storage cars.*—Storage cars loaded at initial terminal and not opened until arrival at destination should be loaded solid. Storage cars through which it is necessary for clerks and trainmen to pass in the discharge of their duties should be piled with aisles approximately 18 inches wide. Doorways not needed en route should be piled with storage mail.

55. *Cars operated in return movement of storage cars.*—Where a 60-foot storage car is authorized for the round trip and used in one direction and returns either deadhead or in use in the opposite direction, it is immaterial whether the car returned is the exact car which was used in the outward-bound movement or some other car.

56. *Use of return storage cars by railroad company.*—Where storage cars are used in one direction, but deadheaded in the opposite direction, the affidavit of the railroad company that the deadhead storage cars were hauled in the return movement without being used by the company should be verified so far as practicable by the Railway Mail Service and such advance reports at point of departure of such cars as may be necessary for such verification as to the cars to be so operated in deadhead movements shall be required of the railroad companies.

57. *Use of extra space in 70-foot cars by railroad company.*—The use by the railroad company of the extra 10 feet of space in 70-foot car operated in a deadhead return movement will preclude payment for such return movement, unless the car be provided with a substantial partition separating the mail space from the other space.

58. *Acceptance of 70-foot cars in 60-foot authorizations.*—The department will not accept 70-foot cars for service in 60-foot authorizations, in which a line has been painted by the company on the inside walls dividing the space into two parts of 60 and 10 feet, respectively, with the intention of using the latter for its own purposes, but will require the carriers to furnish a 60-foot car or as an alternative, if the carrier wishes to run the 70-foot car and use a part of the space for its other traffic, to provide the car with a substantial partition separating the mail space from the other space.

59. *Regular, irregular, and emergency service defined.*—“Regularly authorized service,” “Regular authorizations,” and “Regular service” are synonymous expressions and have reference to service authorized by formal orders issued by the department previous to its being performed. Service included under these expressions may be subdivided into “Regular service,” “Irregular service,” “Period service,” “Summer service,” and “Winter service.”

60. *Regular service.*—"Regular service" is service performed regularly by a train which is scheduled to run on specific days of the week. Illustration: An authorization of 365 one-way trips per annum between A and B by train No. 1 implies that a daily trip of service is to be performed throughout the year by the train.

61. *Irregular service.*—"Irregular service" is service not performed regularly by any particular train or on any specified day. Illustration: An authorization of 500 one-way trips per annum of a 60-foot unit of storage-car space from A to B, without designating the train or the date on which such service is to be performed, implies that, based upon the information before the department, the space authorized will be required during the year for postal purposes, the number of units of the specified class of service that will be used on any one day, and the specific day on which, and the train in which such number of units of space will be used, was not known at the time such service was authorized, and that such number of units of space of the class authorized will be provided by the railroad company in such trains and on such days as may be required by proper representatives of the department.

62. *Period, summer, and winter service.*—"Period service," "Summer service," and "Winter service" have reference to service authorized to be performed during a stated period.

63. *Emergency and excess service.*—"Emergency service" and "Excess service" are synonymous expressions, and have reference to all service *not* covered by formal orders issued by the department specifically authorizing such service previous to its being performed; in other words, service which temporarily becomes necessary in a train where there is no unit of space formally authorized or in a train where space is formally authorized, but which is inadequate to accommodate all the mail where there may be an unusual quantity offered for dispatch by a particular trip, and which is performed under special request for additional space made by a representative of the Railway Mail Service on departmental Forms 5365, 5366, or 5368, or by the use of Form 5369 under the initiative action of railroad employees at points where such service becomes necessary and where no representative of the Railway Mail Service is located.

64. *Statements of service by railroad companies.*—Railroad companies may include in the same monthly statement of service performed, both the "Regularly authorized service" and the "Emergency service" performed during any one month. They may submit two statements of service performed, one covering "Regularly authorized service" and the other covering "Emergency service," in which case no part of the "Regularly authorized service" performed should be included in the report of "Emergency service" performed. The submission of separate reports will expedite payments.

65. *Reports of emergency service by Railway Mail Service.*—Representatives of the Railway Mail Service should in all cases report "Emergency service" on Form 2539, the report to be accompanied by the evidence on which it is based, represented by Forms 5365, 5366, 5368, and 5369, and they should not include in this form of report any "Regularly authorized service."

OTTO PRAEGER,
Second Assistant Postmaster General.

APPENDIX C.

PLANS AND SPECIFICATIONS FOR MAIL CARS.

[Post Office Department. Second Assistant Postmaster General. Washington.]

FULL AND APARTMENT RAILWAY POST OFFICE CARS.

Construction, Sanitation, Operation, Etc.

Section 1330, Postal Laws and Regulations of 1913 (act of Mar. 3, 1879, 20 Stat., 358), provides:

All cars or parts of cars used for the Railway Mail Service shall be of such style, length, and character, and furnished in such manner, as shall be required by the Postmaster General, and shall be constructed, fitted up, maintained, heated, and lighted by and at the expense of the railroad companies.

Section 1331, Postal Laws and Regulations of 1913 (act of Mar. 4, 1911, 36 Stat., 1335), provides:

After the first of July, nineteen hundred and eleven, no pay shall be allowed for the use of any wooden full railway post office car unless constructed substantially in accordance with the most approved plans and specifications of the Post Office Department for such type of cars, nor for any wooden full railway post office car run in any train between adjoining steel cars or between the engine and a steel car adjoining, and that hereafter additional cars accepted for this service shall be of steel, or with steel underframe, if used in a train in which a majority of the cars are of like construction: *Provided further*, That after the first of July, nineteen hundred and sixteen, the Postmaster General shall not approve or allow to be used or pay for any full railway post office car not constructed of steel or with steel underframe, if such post office car is used in a train in which a majority of the cars are of steel or of steel underframe construction.

Section 1332, Postal Laws and Regulations of 1913 (acts of Aug. 24, 1912, 37 Stat., 547, and Mar. 4, 1913, 37 Stat., 797), provides:

After the first of July, nineteen hundred and seventeen, the Postmaster General shall not approve or allow to be used or pay for any full railway post-office car not constructed of steel or steel underframe or equally indestructible material, and not less than twenty-five per centum of the railway post office cars of a railroad company not conforming to the provisions of this act shall be replaced with cars constructed of steel annually after June, nineteen hundred and thirteen; and all cars accepted for this service and contracted for by the railroad companies after the passage of this act shall be constructed of steel.

2. No part of this amount shall be paid for the use of any car which is not sound in material and construction, and which is not equipped with sanitary drinking-water containers and toilet facilities, nor unless such car is regularly and thoroughly cleaned.

NOTE.—The word "amount" in paragraph 2 refers to the appropriation for railway post-office car service for the fiscal year ended June 30, 1914. Similar provisions were contained in the appropriation acts for 1912 and subsequent fiscal years.

Under the provisions of the foregoing laws the following rules are issued covering the construction of new, reconstruction of old, inspection, sanitation, care and operation of full and apartment railway post-office cars. These rules supersede any prior instructions inconsistent therewith.

SECTION 1.—NEW CARS.

(a) In all features of construction steel full cars must conform to the standard specifications for such cars approved March 28, 1912, as revised to March 17, 1915. This also applies to steel apartment cars in their entirety, except to alley apartment cars in which the postal apartment is located in the middle of the car, and to combination postal and passenger apartment cars. In cars of these classes, the requirements of section 18, revision of March 17, 1915, construction specifications, which provides that the sum of the section moduli of vertical end members shall not be less than 65, may be considered as applying at passenger end to the vertical end members of the body of the car and main members of the vestibule taken together.

(b) The interior arrangement and fixtures of full and apartment railway post-office cars shall conform in all material respects to the specifications of fixtures for mail cars approved March 28, 1912, as revised to March 17, 1915, and to standard floor plans and drawings redrawn or revised and bearing date of November 30, 1914.

(c) Under the provisions of the act of Congress of August 24, 1912, all new full cars (that is, cars not in existence, or in process of construction, or under contract for construction, at the time of the passage of the Act) shall be constructed of steel. This means all-steel cars, and therefore bars the acceptance of steel underframe full cars except those in service or under contract or construction on or prior to August 24, 1912. (See

sec. 2 (a) relative to placing steel underframes under existing wooden cars for use until not later than June 30, 1917.)

(d) Under existing rulings of the department, apartment mail cars intended for operation in connection with steel or steel underframe cars may be either a steel or steel underframe type. Steel apartment cars shall conform in all features of construction to standard specifications except as stated in paragraph (a) of this section. The underframes of steel underframe apartment cars shall conform in all material features of construction to standard specifications for full steel postal cars before referred to. The superstructure of such cars must either conform to the specifications of August 25, 1914, for the construction of wooden mail apartment cars, reinforced by metal vertical end members, or the framing of the superstructure may be of steel. In both types the section moduli of the metal vertical end members shall not be less than 65, distributed as provided in section 18 of the standard construction specifications, revision of March 17, 1915. New wooden apartment cars intended for operation only with wooden cars should conform substantially to the specifications of August 25, 1914. The provisions of paragraph (a) so far as relating to steel apartment cars also apply to steel underframe apartment cars.

The present rules of the department do not require that new apartment mail cars shall be of steel or steel underframe construction except such as are intended for operation between steel or steel underframe equipment adjoining or in trains in which a majority of the other cars are of such construction. However, the department prefers that new apartment cars, especially those intended for service in fast heavy trains, shall be of steel or steel underframe construction. In view of the fact that the present trend in new passenger equipment is very largely in the direction of steel or steel underframe construction, it would appear to be to the advantage of the companies to have new apartment cars of such construction.

SECTION 2.—RECONSTRUCTION OF FULL AND APARTMENT RAILWAY POST OFFICE CARS.

(a) Full cars may be rebuilt into apartment cars, but no wooden car not accepted for full railway post-office car service prior to the passage of the act of August 24, 1912, may be rebuilt for service as a wooden full car, nor will it be permitted to apply steel underframes to existing wooden full railway post-office cars except as subject to the provisions of a ruling by this office under date of February 5, 1913, as follows:

Recently several railroad companies have made inquiry as to whether the act of August 24, 1912, prohibits the application of steel underframes to existing wooden full railway post-office cars constructed in accordance with plan No. 1.

The companies have been informed that they may apply steel underframes to such cars for use until it becomes necessary under the law, not later than July 1, 1917, to replace them with steel cars, such converted cars being subject to the stipulation that no less than 25 per centum of the railway post-office cars of a railroad company not conforming to the provisions of the act (that is, not constructed of steel or steel underframe or equally indestructible material at the time of its passage) shall be replaced with cars constructed of steel annually after June, 1913.

Wooden cars to which steel underframes are applied under this ruling shall, in addition to conforming to the standard construction specifications so far as relates to under construction, conform to section 18 of the same specifications, revision of March 17, 1915, which provides that the section moduli of the vertical end members shall be not less than 65, distributed as stated in that section.

(b) When it is desired to rebuild wooden railway post-office cars for use as apartment cars for operation in connection with steel or steel underframe cars, the provisions of paragraph (d), section 1, shall apply, and it should be understood that where steel underframes are applied, and the requirements of the paragraph referred to are not fully met, cars so constructed shall be regarded only as reinforced wooden cars and not acceptable for operation with steel or steel underframe cars adjoining or in trains in which a majority of the other cars are of steel or steel underframe construction.

(c) If the floor plans of railway post-office cars to be rebuilt conform substantially to floor plans in use immediately preceding the adoption of present standard plans, and the distributing facilities are substantially the same as provided by present standard plans, changes in interior arrangements will not be required except in case of 25-foot apartment cars. (In 25-foot apartment cars, the location of water container and hopper should be made to conform to the present standard, and the space vacated by change in position of water container utilized for letter-package boxes similar in construction to those shown in present standard drawings.)

Where the floor plan is of an obsolete arrangement, or the distributing facilities provided are materially deficient, as compared with present requirements, such changes should be made as will make cars conform substantially to present standards.

(d) In the reconstruction of wooden apartment cars which are to continue as wooden cars, it is required that they be sound in material and construction and preferably be constructed substantially in accordance

with specifications of August 25, 1914, for wooden cars. They must at least be strengthened by application of antitelescoping features, as set forth therein, except where the rules of paragraph (d), section 5, of this circular apply.

SECTION 3.—INSPECTION OF NEW AND RECONSTRUCTED CARS.

(a) New full and apartment cars should be inspected twice and where possible three times during course of construction.

(b) First inspection should be made when underframe is complete and body framing in place, but before floor is laid or inside sheathing applied.

(c) Second inspection should be made while insulation is being applied and floor is being laid.

(d) Third and final inspection should be made when car is ready for delivery.

(e) Full report covering all inspections should be made on proper forms.

(f) A certificate, Form 5292, from railway companies, is required for all new full and apartment cars and all cars to which steel underframes are applied before such cars can be accepted for service. These certificates are to be sent through division superintendents who will see that they are received and verified before cars are allowed to be put into service.

(g) Railway and car-building companies must keep division superintendents, Railway Mail Service, fully advised as to proposed construction or reconstruction of full and apartment mail cars and the dates when such cars will be ready for inspection, in accordance with the requirements of this section.

(h) Division superintendents in case of rebuilt wooden apartment cars shall inform railway companies as to the extent to which such cars should be reconstructed.

(i) Reconstructed cars should be twice inspected. The first inspection should be made when the framing of the superstructure is exposed, so it can be checked up and conformance with the specifications verified; the second and final inspection to be made when car is ready for delivery.

SECTION 4.—WITHDRAWAL FROM THE FULL RAILWAY POST OFFICE CAR SERVICE BY JULY 1, 1917, OF EXISTING WOODEN FULL CARS.

This has reference to the provisions of paragraph 1 of section 1332, Postal Laws and Regulations of 1913 (Act of Aug. 24, 1912), quoted above.

At the time of the passage of this law there were, and at the present time there are, three classes of full railway post office cars in existence, namely, steel, steel underframe, and wooden cars. The law contemplates that all wooden full railway post office cars in existence at the date of its passage, August 24, 1912, shall be withdrawn and replaced with all-steel cars by July 1, 1917, and that after that date only all-steel cars and such steel underframe cars as were in existence or under contract or construction on August 24, 1912, shall remain in service.

Under a recent opinion of the Assistant Attorney General concerning the withdrawal of the wooden cars and their replacement with all-steel cars by July 1, 1917, the following procedure will fulfill the intent of Congress:

Between July 1, 1913, and June 30, 1914, not less than twenty-five per centum of the wooden cars in service on July 1, 1913, should be replaced with steel cars, so that on July 1, 1914, there shall remain in service not more than seventy-five per centum of the wooden cars which were in service on July 1, 1913. Similar substitutions should be made during the fiscal years ending June 30, 1915 and 1916, so that the number of wooden cars in service on such dates shall be not more than, respectively, fifty per centum and twenty-five per centum. The number of wooden cars thus remaining on hand July 1, 1916, should then be replaced by June 30, 1917, so that on July 1, 1917, all of the wooden cars will have been replaced with all-steel cars, and there shall be in the full railway post office car service only all-steel cars and such steel underframe cars as were in service or under contract or construction on August 24, 1912.

SECTION 5.—OPERATION.

(a) Steel underframe cars may be operated in connection with steel cars.

(b) Wooden full or apartment cars must not be operated between adjoining steel or steel underframe cars, or between such cars adjoining and the engine.

(c) In the full railway post office car service all wooden cars must be constructed substantially in accordance with the department's plan No. 1 for wooden cars. Additional wooden full cars accepted for the service since March 4, 1911, shall not be operated in a train in which a majority of the cars are of steel or steel underframe construction (this has reference to wooden cars which had not been accepted on or prior to Mar. 4, 1911).

(d) In the apartment-car service, in heavy trains operated on fast schedules, it is required that wooden cars be constructed substantially in accordance with the department's plan No. 1 for wooden cars or the speci-

fications of August 25, 1914, for such cars. In no case shall the mail car be of less strength than a majority of the other cars in the train. When a majority of the other cars in the train are of steel or steel underframe construction, the mail apartment car shall be of like construction. Apartment cars having six or eight end posts without steel end reinforcements may be permitted to be operated on side-line trains (not exceeding four cars of about the same strength) on slow schedule (not exceeding an average of 21 miles per hour) so long as they are kept on these branch lines. If these light trains are run partly on branch lines and partly on main lines, or wholly on main lines, they should at least be reinforced on ends by the application of four track rails, as per blue print dated May 8, 1914, revised to April 6, 1915. Apartment cars with four end posts only should be strengthened on ends, even if operated on exclusive branch-line trains. This antitelescoping device is to be applied to cars as they go to the shops for periodical overhauling as contradistinguished from reconstruction and rebuilding.

(e) Mail cars, both full and apartment, whether of steel, steel underframe, or wooden construction, which have the letter case in the end shall not be operated with the letter end next to the tender of the engine where it is practicable to turn the cars so as to run the storage end forward.

SECTION 6.—SANITARY FEATURES AND CONDITIONS.

(a) Hoppers so constructed as to permit the accumulation of matter on their sides will not be acceptable. The hoppers may be either flushing or dry. Where a dry hopper is used, it shall have a double lid, large opening at top and bottom, nearly straight sides, and a chute leading through and extending below floor line. The chute shall have an opening at the bottom of sufficient size, and be so placed, as to provide a straight drop and proper clearance, the bottom to be free from obstruction. In new installations the chute shall be equipped with an air deflector. (See sec. 9, revision of Mar. 17, 1915, specifications for fixtures.) Dry hoppers shall be provided with suitable deodorants and disinfectants. In all cars a supply of toilet paper shall be provided.

(b) Washbasins with tanks for wash water separate from drinking water are desired.

(c) Drinking-water containers must have the water separated from the ice, and must be so constructed as to permit of proper drainage and cleaning. (See sec. 11, revision of Mar. 17, 1915, specification for fixtures.)

(d) The full and apartment cars, including drinking-water containers and hoppers, must be thoroughly cleaned each trip, and where cars are in continuous use more than 24 hours, not more than 24 hours must elapse without their being so cleaned. Under the latter conditions the cleaning en route may be limited to cleaning the hopper (where the construction thereof makes it necessary) and providing fresh water and ice.

SECTION 7.—LIGHTING.

Light failure.—A light failure is defined as the condition where for a period exceeding thirty minutes the primary lighting system fails to give sufficient illumination to permit distribution of mail matter to be continued. Whenever the above condition obtains, it will be reported as a total failure. If such failure is for 30 minutes or less, or if there is such diminution of light for any period that distribution is not necessarily stopped, but is made with difficulty, a partial failure will be reported.

There should at all times be in the cars some means of providing light in the emergency where the regular lights fail. Where the car is not equipped with a secondary lighting system, there should be in the car to meet such emergencies at least a suitable supply of candles and candle holders.

SECTION 8.—“NO ADMISSION” NOTICES.

Two “No Admission” notices, properly framed, must be placed in full cars, and one such notice in apartment cars. These notices should be placed on end of paper boxes or on suitable wall locations near side doors.

JOSEPH STEWART,

Second Assistant Postmaster General.

OCTOBER 17, 1913.

Revised to June 5, 1915.

[Post Office Department.]

SPECIFICATION FOR THE CONSTRUCTION OF STEEL FULL POSTAL CARS.

[Approved Mar. 28, 1912. Revised to Mar. 17, 1915.]

GENERAL.

SECTION 1.—TYPE.

Postal cars may be built according to any of the following types of construction:

- I. Heavy center-sill construction, the center sills acting as the main carrying member.
 - II. Side-carrying construction, the sides of the car acting as the main carrying members, having their support at the bolsters.
 - III. Underframe construction in which the load is carried by all the longitudinal members of the lower frame. The superstructure framing shall be of steel.
 - IV. Combination construction in which the side frames carry a part of the load, transferring same to the center sills at points remote from the center plate for the purpose of utilizing uniform center-sill area.
- Steel castings may be used as parts of the underframe in any of the above types.

SECTION 2.—MATERIALS.

- (a) All rolled-steel plates and shapes used in the car framing shall be made by the open-hearth process.
- (b) The physical and chemical properties of all material used in the car framing shall be in accordance with the latest standard specifications of the American Society for Testing Materials, as follows: The standard specification for structural steel for cars; the standard specification for wrought iron, for iron bars and plates, and the standard specifications for steel castings.

SECTION 3.—WORKMANSHIP.

All workmanship throughout the car shall be first class. The jointing of the car framing shall be made so that the structure as a whole shall be built to dimensions specified, and all joints exposed to the weather shall be made tight against leakage.

SECTION 4.—LIVE LOADS.

- (a) The car body shall be designed to carry the specified live load in addition to its own dead weight under service conditions. Where no live load is specified by the railroad company, the maximum capacity of car, as determined by journal loads given in section 36, shall be used as a basis for calculations.
- (b) For distributing cars the following shall be assumed as the minimum live-load capacity: 40-foot cars, 10,000 pounds; 50-foot cars, 15,000 pounds; 60-foot cars, 20,000 pounds. Where postal cars are used for storage cars or under unusual load conditions, live-load capacity shall be from 40,000 to 50,000 pounds, depending upon the character of the mail to be handled.

SECTION 5.—BUFFING.

The maximum end shock due to buffing shall be assumed as a static load of 400,000 pounds applied horizontally at the resultant line of the forces acting at the center line of the buffing mechanism and at the center line of draft gear, respectively, and shall be assumed to be resisted by all continuous longitudinal underframe members below floor level, provided such members are sufficiently tied together to act in unison. Calculations for resistance to buffing shocks shall be based only on underframe members below floor level. These underframe members may be considered supported against buckling vertically by the superstructure between center plates at cross-bearers to the extent that the strength of superstructure, cross-bearers, and attachments is available for this purpose.

NOTE.—For electric cars operated on lines where electricity is the only motive power and the total weight of trains does not exceed 600,000 pounds, the static load may be assumed to be 200,000 pounds. This does not apply to cars run in electric trains on railroads using both steam and electric power.

SECTION 6.—DETAILS.

- (a) All connections, except those specified for end construction in section 18, shall be designed for the maximum load to which the member connected shall be subject; and secondary stresses in any members caused by eccentric loads shall be combined with the direct stresses in such members. The maximum fiber stresses in any member subject to both direct and secondary stresses may be taken at 20 per cent greater than those given in section 20; but the direct stresses considered alone must not exceed the allowable stresses given in said section.

(b) The distance between centers of rivet holes shall be not less than three diameters of the rivet and not more than 24 times the thickness of the thinnest outside member. The minimum distance between the center of the rivet hole and a sheared edge shall be not less than $1\frac{1}{2}$ times the diameter of the rivet.

(c) Below the floor line, framing connections of floor beams, posts, etc., may be of rolled steel, pressed plate, or cast steel, and above the floor line such connections may also be of malleable iron. Connections for I beams, channels, or tees may also be made by coping the flanges and bending the web to form a knee, and fo angles by coping one leg and bending the other.

(d) The use of fillers in the underframe and superstructure shall be avoided wherever possible.

(e) All holes for rivets or bolts in the underframe, superstructure, or outside finish shall be drilled or punched and reamed to size and fairness. No drifting of holes will be allowed. In deducting rivet or bolt holes to obtain the net area of any section they shall be taken at one-sixteenth inch larger than the diameter of the rivet or bolt. The effective area of a rivet shall be taken as its area before driving.

(f) All rivets, when driven, must completely fill the holes and have full concentric heads or countersunk when required.

SECTION 7.—CENTER SILLS.

The center sills may be built up or composed of rolled or pressed shapes, either with or without cover plates, and cast-steel draft sills or end construction may be used in connection with any of the above types, with suitable riveted connections at splices. Built-up center sills may be either of uniform depth or of the fish-belly shape, and may be composed of rolled shapes, web plates, flange angles, and cover plates. If preferred, the web plates may be flanged and angles omitted. When flange angles are used they shall be connected to the webs with a sufficient number of rivets to transfer the total shear at any point in a distance equal to the depth of the sill at that point. When cover plates are used they must extend at least two rows of rivets at each end beyond their theoretical length.

SECTION 8.—BOLSTERS AND CROSS BEARERS.

The body bolsters and cross bearers may be of either cast-steel or built-up construction, with ample connections at center and side sills to transmit the calculated vertical shear.

SECTION 9.—FLOOR BEAMS.

Transverse floor beams may be of rolled or pressed shapes, with suitable connections at center and side sills.

SECTION 10.—FLOOR SUPPORTS.

Longitudinal floor supports shall be supported at each transverse floor member.

SECTION 11.—END SILLS.

The end sills may be either of rolled or pressed shapes, built-up construction or cast steel, with ample connections at center and side sills. They must be designed for the maximum vertical loads to which they may be subject and also for the assumed horizontal loads transferred from vertical end members as specified in section 18.

SECTION 12.—SIDE FRAME—GENERAL.

In calculating the stresses in the side frame, its effective depth when designed as a truss or girder may be taken either as the distance between centers of gravity of the side plate and side sill or as the distance between centers of gravity of belt rail and side sill. At the side-door openings the bending moment caused by the vertical shear at door posts shall be considered as being resisted by the section above and below door openings, and the sum of the direct stresses and those due to bending at such sections shall not exceed the stresses specified in section 20. A sufficient proportion of any reinforcing members added to these sections shall be extended far enough beyond the door posts at each side that their reaction can be taken care of by the side frame without exceeding the limit specified for stresses.

SECTION 13.—POSTS.

The sum of the section moduli taken at any horizontal section between floor line and top line of windows, of all posts and braces on each side of car located between end posts, shall be not less than 0.30 multiplied by the distance in feet between the centers of end panels, a panel length being considered as the distance between lines of rivets in adjacent vertical posts.

SECTION 14.—SHEATHING.

Outside sheathing plates of steel or iron shall be not less than one-eighth inch in thickness. Additional outer finish may be used.

SECTION 15.—ROOF—GENERAL.

The roof may be of either the clear-story or turtleback type. In the clear-story type, the deck plates shall be in the form of a continuous plate girder or equivalent construction extending from upper-deck eaves to deck sill, and either built up of pressed or rolled shapes or pressed in one piece from steel plates. The carlines may be of either rolled or pressed steel shapes extending in one length across car from side plate to side plate or may extend only across upper deck. In the latter case, the lower-deck carlines may be formed by cantilever extensions of the side posts or by independent members of pressed or rolled shapes. In the turtleback type the carlines may be of either pressed or rolled shapes, extending in one length across car between side plate and side plate or may consist of cantilever extensions of the posts.

SECTION 16.—CARLINES.

The projected area of the portion of roof in square feet supported by carlines divided by the sum of the section moduli of the carlines must not be more than 100.

SECTION 17.—ROOF SHEETS.

Roof sheets, if of steel or iron, shall be of a minimum thickness of 0.05 inch and either riveted or welded at their edges.

END CONSTRUCTION.

SECTION 18.—VERTICAL END MEMBERS.

(a) The sum of the section moduli of all vertical end members at each end shall be not less than 65, and the section moduli of the main members, either forming or adjacent to the doorposts, shall be not less than 75 per cent of this amount. Any excess of section moduli over 65 may be distributed at the discretion of the railroad for whose service the cars are built.

(b) The horizontal reactions of all vertical end members at top shall be calculated from an assumed external horizontal force, applied 18 inches above floor line, to all vertical members in proportion to their respective section moduli, such force being of sufficient amount to cause bending of all vertical members acting together, and top connections of vertical end members shall be designed for these reactions. The bottom connections of the vertical end members shall be sufficient to develop the full horizontal shearing value of such members.

(c) Except where vertical end members shall bear directly against or be attached directly to longitudinal members at either top or bottom, the assumed reactions shall be considered as loads applied to whatever construction is used at end sill or end plate, and both these last-named members shall have section moduli, respectively, sufficient to prevent their failure horizontally before that of the vertical end members.

NOTE.—For electric cars operated on lines where electricity is the only motive power and the total weight of trains does not exceed 600,000 pounds, the sum of the section moduli of the vertical end members shall be not less than 40, and the section moduli of the main members, either forming or adjacent to the doorposts, shall be not less than 75 per cent of this amount. This does not apply to cars run in electric trains on railroads using both steam and electric power.

NOTE 2.—In mail cars having vestibules at one or both ends, similar in form to vestibules of passenger cars, the requirements of the preceding paragraph that "the sum of the section moduli of all vertical end members at each end shall not be less than 65" may be considered as applying to the vertical body end members and the main vertical members of the vestibule taken together. The requirement that "the section moduli of the main members, either forming or adjacent to the doorposts, shall not be less than 75 per cent of this amount (65)" may be considered as complied with if the sum of the section moduli of the main vertical body end members and the main vestibule vertical members is not less than 75 per cent of 65.

SECTION 19.—END PLATE.

The end plate may be a rolled or pressed section or of built-up construction and shall extend across end of car from side plate to side plate, with ample connections at ends, or shall be of other satisfactory construction to withstand the assumed loads given above.

SECTION 20.—STRESSES.

All parts of the car framing shall be so proportioned that the sum of the maximum unit stresses to which any member is subject shall not exceed the following amounts in pounds per square inch, except as modified in sections 6 and 18. These stresses, unless otherwise stated below, are for steel having an ultimate tensile

strength of from 50,000 to 65,000 pounds per square inch. Where other materials are used, they shall bear the same proportion to the ultimate strength of the material used.

Bolsters of rolled steel.—Stress shall not exceed 12,500 pounds per square inch.

Sills and framing of rolled steel.—Stress shall not exceed 16,000 pounds per square inch.

When cast steel is used, the allowable stresses may be the same as for rolled steel, except tension stresses, which must be at least 20 per cent less than those allowed for rolled steel, as specified above.

For members in compression the stresses shall be determined by the following formula:

$$\text{Steel } 16,000 - 70 \frac{L}{R}.$$

In the above formula L equals length in inches.

R equals least radius of gyration in inches.

<i>Rivets (rivet steel).</i>		Pounds per square inch.
Shear, other than buffing.....		10,000
Bearing, other than buffing.....		20,000
Shear, buffing.....		12,000
Bearing, buffing.....		24,000

SECTION 21.—FLOOR.

(a) Subfloor of postal cars to be of iron or steel, flat or corrugated plate, upper or wearing surface to be of matched wooden flooring, maple or rift-sawed yellow pine or fir, laid longitudinally, or composition, preference in order named. If composition is used, the wearing surface between doors and the standing surface in front of letter tables and paper racks shall be of wood, cork, or other suitable material. Proper insulation, including air space, shall be provided. Floor strips for wood upper course shall be secured by bolts or rivets. Composition flooring may be secured by corrugated, keystone, or equivalent style of plate or by wire fastening securely anchored.

(b) Where composition floor is used, wearing surface between doors and standing surface in front of letter tables and paper racks, as stated in above paragraph, is defined as follows:

Wearing surface between doors is the full width of the door opening between side doors. Standing surface in front of paper racks shall extend from center of car to point directly under rod No. 4 on each side. In front of the letter tables, standing surface shall extend at least 2 inches back of a point directly under the front line of table.

Where a single-course main floor is used, the same shall be 1½ inches thick. In cars for service in extremely cold sections or elsewhere, when desired by owners, two courses of not less than three-fourth inch wood flooring, with one course of building paper between, is preferable. Where two courses of main flooring are used, the lower course shall be laid either diagonally or transversely and the upper course longitudinally.

SECTION 22.—INTERIOR FINISH.

Inside, side, and end linings and head lining of postal cars to be of flat or corrugated steel plate, composition board, or wood, properly secured to the car framing.

SECTION 23.—INSULATION.

(a) The car shall be insulated throughout, including floors, sides, ends, and roof (except pier panels), with material of such a nature that it can be securely fastened so as to withstand the vibration incident to railway service. The insulating material must be such that it will not support combustion, will not absorb moisture beyond its own weight, and when wet will not become corrosive.

(b) Side and end wall and roof insulating material shall be securely fastened. Where the nature of the material permits, it shall be cemented and also mechanically clipped, if necessary, for proper support. Floor insulation shall extend the entire distance between side walls either in one full width or in sections fitted between floor supports and be secured in place.

(c) The construction of side and end walls and roof of car shall be such as to avoid or reduce to a minimum continuous metal connection from outside to the inside of the car.

(d) To insure maximum of insulating and sound-deadening efficiency, the construction at the junction of side and end walls and floor shall be such as to prevent the circulation of air through the side and end walls or through the floor or into the car.

(e) The thermal efficiency of the materials in side and end walls, in roof and in floor must be such that a test duplicate section through walls, roof, or floor (duplicate with the exception of framing members, such as posts;

braces, car lines, or stringers, which are to be omitted) will not transmit, when subjected to the test herein-after described, more than the following amount of heat per square foot of surface in 24 hours for each degree Fahrenheit difference in temperature between the inside and outside walls of the section.

For side walls, end walls, and roof.....	B. t. u.
For floor.....	8
	7

The method of testing shall be as follows:

A calorimeter, as illustrated and described in Railway Mail Service drawing sheet 18, shall be used in all tests. It shall be carefully constructed and of the materials indicated and before used must be standardized for its thermal loss factor. The sections to be tested shall truly represent the materials as used and disposed in the car.

The heat must be supplied by direct electric current of constant voltage, measured by standardized instruments. The difference between inside and outside temperatures must be held as nearly 70° F. as possible. Readings of temperature and current shall not be recorded until 48 hours after heat is turned on and test begins, in order to insure thorough heat saturation of calorimeter and test sections. The duration of actual test shall be eight hours, during which time temperature and electric readings shall be made and recorded each hour or more frequently if considered necessary. The average of all readings thus recorded shall be taken as the final result. All differences regarding results which may arise between the Post Office Department and the railroad companies affected shall be referred to the United States Bureau of Standards for decision.

SECTION 24.—DOORS, WINDOWS, AND SKYLIGHTS.

(a) Postal cars shall be equipped with side doors not less than 6 feet in height from floor, end doors, side windows, and skylights as shown on the standard plans of the Railway Mail Service. Storm or double windows shall be provided where required. Doors and windows may be of wood, combination wood and metal, or metal, preference in order named, and when glazed, the glass shall be double strength. Windows shall be made of two sash sections. The upper section shall preferably be divided into approximately two equal portions—the lower half to be fitted with glass and the upper half screened—so suspended that glass or screened section may be used as desired. Where side framing makes this impracticable, equivalent screen application will be allowed. Where storm windows are applied, they shall be hinged or made easily removable to allow cleaning. Doors and windows shall have suitable weather stripping. Trimmings and locks shall be the railway company's standard. Hasp and staple for outside of side doors shall be in accordance with Railway Mail Service details, modified to suit shape of doorpost.

(b) Skylights shall have 5 square feet of glass admitting light, glazed with not less than one-fourth inch rough wire glass or three-eighths inch rough plain glass; fixtures and suitable shades shall be provided. For curtain shades below skylights, 10-ounce duck or good quality of buff or light yellow holland shall be used; spring-roller fixtures shall be provided, or if canvas is used, it may be strung on wires so as to be easily adjusted according to service requirements.

SECTION 25.—LIGHTING.

(a) Lighting of postal cars primarily to be with electricity or gas where feasible; mantles to be used on gaslights where practicable. Provision shall be made for emergency lighting as hereinafter specified. Fixtures, wiring, battery boxes and their equipment, gas piping, and all other accessories in connection with the lighting system shall be railway company's standard practice. Each electrically lighted car equipped for axle generator or head-end system of lighting shall be equipped with storage battery of sufficient capacity to furnish for 12 hours the intensity of illumination specified hereinafter. Each car using gas or straight storage electricity as the primary system of lighting shall be equipped with storage capacity sufficient to furnish light 36 hours at the intensity of the illumination specified hereinafter.

CONSTRUCTION.

Lights are to be located by the railway companies or car builders to produce results called for under the specifications. The Railway Mail Service will not suggest or recommend location of lights. This applies to new or changed installation where the specifications apply.

(b) *Location of light units.*—Body of car. The light units for illuminating the bag-rack and storage portions of the car shall be located on the center line of the car. Direct lighting units in the bag-rack section shall be located at such uniform height that the shadow of the paper boxes is not cast on any bag-rack label, nor higher than approximately 3 inches above the back rod of rack. In no case shall any light unit (except oil lamps, the lowest point of which may be 6 feet 9 inches from the floor) be mounted at a height of less than 7 feet measured from the floor to the lowest point of the light unit. Spacing between adjacent units in the bag-rack

portion of the car shall not exceed 8 feet 6 inches in case of any direct system of lighting, nor 14 feet in case of any indirect system.

(c) *Letter cases.*—Light units for illumination of the letter cases shall be mounted at a uniform height from the floor but not lower than the units in the bag-rack section, and as far from front of the face of the letter case as possible without the body of the distributor throwing any shadow on his work. In standard construction the above distance is 20 inches. Where the car construction does not permit the above distance, a lesser distance, but not less than 16 inches, may be employed. Separation between adjacent letter-case units shall be such as to provide an illumination intensity at all points within the requirements hereinafter specified.

(d) If an indirect lighting system be employed, the provisions of the above paragraph will be waived. In such case the only requirements imposed for location of units at letter cases are those involved in providing for sufficient vertical and horizontal illumination intensities to meet the provisions of these specifications as hereinafter stated, all units in the car burning. For the purpose of these specifications, an indirect system is here defined as any system in which at least 85 per cent of the horizontal illumination on the 46-inch plane of utilization is received, either directly or indirectly, by reflection of the light from the deck of the car.

(e) *Special features of light units.*—In the case of incandescent electric or gas lamps, the design of light unit, except letter-case units, shall be such that no portion of the bare lamp filament or the bare mantle is visible to the eye when the unit is observed at an angle of 70° or greater from the nadir. (In general, light units are preferred which emit no light or only a small amount of light between the angles of 50° and 100° from the nadir.)

(f) The control of the lights in the postal apartment shall be in that apartment and independent of any other lights in the car and the letter-case units shall be controlled independently of any other light units in the postal apartment. Knife and snap switches only shall be placed in mail apartment; all other mechanism to be placed in adjoining apartment.

(g) *Initial illumination values.*—All horizontal illumination values shall be taken on plane 46 inches above floor line. Vertical illumination values shall be taken on the vertical plane on the face of letter case as specified below. New lighting installations shall be such as to give initial illumination values within the following limits:

Location.	Minimum, F. C.	Maximum, F. C.
<i>Bag-rack portion:</i>		
Center of car, horizontal	4.70	10.00
Mouth of bags, illumination measured 18 inches from side of car, horizontal	2.50	10.00
<i>Letter cases:</i>		
Over table, horizontal	4.70	16.00
Face of case, vertical	2.08	16.00
Storage portion, not behind obstructions, horizontal, measured 30 inches from side or end of car	2.50	10.00

(h) Illumination requirements at letter cases, as above specified, shall be entirely fulfilled by letter-case units, other units in the car not burning; but letter-case units may be considered as contributing to the specified illumination values for the body of the car.

(i) If globes or reflectors of opal glass, rough crystal glass, prismatic glass, or aluminumized metal, and those giving similar results (excluding heavy density opal with glazed reflecting surface, mirrored glass, porcelain enameled metal, and those giving similar results), be employed, the minimum values specified in the above table may be reduced 20 per cent and the maximum values increased 20 per cent.

(j) Above illumination values are based on an allowance of 40 per cent for depreciation in service. Less efficient maintenance must be compensated for by increased initial installation.

(k) If an indirect lighting system be employed, the minimum and maximum values in the above table may be respectively decreased and increased 40 per cent in the bag-rack and storage portions of the car and 25 per cent at the letter-case locations specified in above table.

(l) *Emergency lighting.*—An emergency lighting system, consisting of candle lamps, will be required on all cars lighted primarily by electricity or gas. A more adequate system of emergency lighting, as defined hereinafter, may be required. (See floor plans for location of candle-lamp holders.) A candle lamp should be furnished for each holder. Boxes to contain candle lamps when not in service should be located at some convenient and acceptable point in the car. Suggestion is made that such boxes be located in connection with electric-light control boxes when available, either above or below, as may be practicable, or the candle-lamp box may be located in the storage end of the car above the brake wheel, clearing the latter. In 30, 25, 20, and 15 foot apartments, locate box over letter case on partition.

(m) *Electric switches.*—In apartment cars locker containing knife and snap switches controlling current and lights should be located on end of paper boxes when same will not project into doorway lower than 5 feet

8 inches above floor line. Where this would occur, locker should be located as high as possible on the bulkhead next to hopper on hopper side.

OPERATION.

(n) *Service illumination values.*—While the car is in active service the lighting installation shall be maintained at all times to give illumination values not less than the following minimum values:

Location.	Minimum, F. C.
Bag-rack portion:	
Center of car, horizontal.....	2.80
Mouth of bags, illumination measured 18 inches from side of car, horizontal.....	1.50
Letter cases:	
Over table, horizontal.....	2.80
Face of case, vertical.....	1.25
Storage portion, not behind obstructions, horizontal, measured 30 inches from sides or ends of car.....	1.50

(o) Illumination requirements at letter cases as above specified shall be entirely fulfilled by letter-case units, other units in the car not burning; but letter-case units may be considered as contributing to the specified illumination values for the body of the car.

(p) If globes or reflectors of opal glass, rough crystal glass, prismatic glass, aluminumized metal, and those giving similar results (excluding heavy density opal with glazed reflecting surface, mirrored glass, porcelain enameled metal, and those giving similar results) be employed, the minimum values specified in the above table may be reduced 20 per cent.

(q) If an indirect lighting system be employed the minimum value in the above table may be decreased 40 per cent in the bag rack and storage portions of the car, and 25 per cent at the letter-case locations specified in the above table.

(r) *Light failure.*—A light failure is defined as the condition where for a period exceeding 30 minutes the primary lighting system fails to give sufficient illumination to permit distribution of mail matter to be continued. It will be considered that whenever the lamp voltage falls below 80 per cent of the normal operating lamp voltage such a condition of light failure has been reached.

(s) *Car movement.*—A car movement is defined as the use of a postal car by a crew of postal clerks over the length of their run in one direction. Where a car covers more than the run of one crew, each separate run shall be considered a car movement.

(t) *Percentage of failure.*—The percentage of failure of the lighting system is defined as the ratio of the total number of failures to the total number of car movements of each primary system of lighting (gas and electrically lighted cars to be considered separately) on each railway system. The determination of percentage of failure shall be based on the operating performance of each car for the preceding 12-months period. Only such failures as are promptly reported by the Railway Mail Service to the operating railroad shall be considered in computing the percentage of failure.

(u) *Emergency lighting.*—If the percentage of failure of the primary system of electric or gas lighting does not exceed 1 per cent, candle lamps will be accepted as a suitable emergency light.

If the percentage of failure of the primary system of gas or electric lighting exceeds 1 per cent and is not greater than 4 per cent, an emergency system of suitable oil lamps, gas or electric lights, maintained by independent storage capacity, may be required. Such emergency system must provide illumination values not less than 50 per cent of the minimum operating illumination values specified above for the primary system, with the exception of letter cases and center line of car through bag-rack portion where the illumination shall not be less than 60 per cent.

If the percentage of failure of the primary system of electric or gas lighting exceeds 4 per cent, a new installation or a second complete primary system of lighting will be required on cars so failing.

(v) The illumination values herein specified shall be determined by the usual and approved methods. Any differences regarding the same which may arise between the Post Office Department and the railway companies affected shall be referred to the Bureau of Standards for decision.

SECTION 26.—HEATING.

(a) Requirements of the department embody three main points: First, sufficient heat to keep the postal car or apartment comfortably warm; second, proper distribution of heat, particularly throughout that part of the car occupied by letter cases and bag racks (care should be taken not to have excess of heat around letter cases); and third, an arrangement of pipes to avoid interference with distributing facilities.

(b) To obtain the results outlined above, the department will require postal cars and apartments to be equipped with sufficient amount of radiation to make the floor of the car comfortable and to obtain a temper-

ature of 65° between the side doors at a point 5 feet above the floor line and to maintain such temperature under the most adverse weather conditions to which the car is subjected when in service. Sufficient radiation should be provided in the end of the car containing hopper and washstand to maintain a temperature of at least 48° in that location.

(c) Heating of postal cars primarily to be with steam or hot water. Pipes are to have suitable protection guards of wire or perforated metal. Pipes located behind bag-rack sections shall not occupy space exceeding 20 inches in height and 4½ inches from wall of car to outside of guard. All heating-pipe screens, whether of wire netting or perforated metal, should stop 2 or 2½ inches above the floor so as to permit of cleaning. All inlet and trap valves must be accessible when bag racks are hung with sacks or storage stalls are full of mail.

(d) Where perforated metal is used for heating-pipe covering behind bag racks, perforations should extend along the top as well as the side of the guard to permit radiation of heat. Preference is expressed for wire netting for this purpose.

Where feed pipes to these wall radiators extend along the face of door pockets, and the screen over these pipes covers the opening at the back of the pocket, a section of the screen should be detachable so as to make opening accessible for the removal of dirt and snow.

(e) Where bulkhead radiators are used as part of the heating system, the inside line of same shall be not less than 21 inches from center of car, so that a clear aisle space of 42 inches will be provided where two radiators are installed oppositely. All radiators must be screened. Bulkhead radiators should be substantially supported and corresponding stanchions omitted.

(f) Where wall radiators are installed in storage end of cars, wire netting or perforated-metal covering should be reinforced every 18 inches and provision made to hold the screen at least 1 inch from the pipe. Considerable weight will rest against screen, and it should be substantially constructed.

(g) Where service conditions require, an auxiliary coal-burning stove shall be furnished complete with coal box and firing tools, smokejack properly screened, and protection guards. The stove and coal box to be securely attached to floor. Stoves furnished must be of a safety pattern or design, properly guarded by metal casing so as to prevent overheating of closely surrounding objects and damage which might result therefrom. Protection guards should be built to height of stove and wire netting used above that point to permit better radiation of heat. Stove guards should extend toward center of car as far as the front line of stove. Front support of guard should be iron pipe.

(h) All exposed edges of wire netting or screen shall be bound.

(i) The train-pipe steam line to be applied and equipped with end valves, steam hose, and couplings, as per M. C. B. requirements and the railway company's standard. All valves must be located so as to be readily accessible.

SECTION 27.—DECK OF CAR.

(a) Ventilation of postal cars of clear-story design to be accomplished preferably by means of self-acting ventilators, having intake and exhaust working in conjunction. Four such ventilators per side for 70 and 60 foot cars; three per side in 50 and 40 foot cars, and two per side in mail apartments, placed to obtain maximum results. Other deck sash to have clear glass and to be placed in fixed position without screens. Trimmings of deck sash to be railway company's standard.

(b) Postal cars not having clear-story roofs are to have a sufficient equipment of self-acting ventilators in the roof.

(c) Where exhaust ventilators only are used, intake of air should be provided substantially equal to the capacity of the exhaust. If this is accomplished by means of swinging deck sash, they should be limited to the fewest number necessary. Such deck sash should be screened.

(d) As much clear glass surface as possible should be provided in deck of car for the purpose of admitting light, and deck piers should not be wider than necessary.

SECTION 28.—VESTIBULES.

Postal cars are to be equipped with the railway company's standard short vestibule, preferably with outside buffer springs, and with diaphragms when needed for communicating between cars.

SECTION 29.—COUPLERS AND DRAFT GEARS.

The details of the coupler and draft gear to be in accordance with Master Car Builders' and United States safety-appliance requirements and the practice of the railroad for which the cars are built.

SECTION 30.—BUFFING MECHANISM.

The details of the buffing mechanism to be in accordance with the practice of the railroad for which the cars are built.

SECTION 31.—BRAKE AND SIGNAL EQUIPMENT.

(a) Postal cars shall be equipped with automatic air brakes and signal equipment in accordance with railway company's practice. Hand brakes in accordance with United States safety-appliance standards. Brakes shall be applied to all wheels, and, on four-wheel trucks, preferably inside hung or clasp type.

(b) Brake wheels should be installed inside postal cars and apartments only so far as necessary to comply with Interstate Commerce regulations, one brake wheel in each full mail car is sufficient, located in clear storage end of car. One brake wheel in combination cars, to be located in baggage end, is acceptable where there is a creep or other door connecting the apartments.

(c) Suitable cord or attachments shall be furnished for convenient operation of the conductor's valve and train-signal system, which may be hung to safety rod, provided supports are placed at short intervals to prevent cord hanging loosely.

SECTION 32.—STEPS, HANDHOLDS, SIGNAL BRACKETS.

The details of the steps, handholds, and signal brackets to be in accordance with United States safety-appliance and M. C. B. requirements and the practice of the railroad for which the cars are built. Side steps to be full width of door opening where possible. Handholds to be applied to each side-door post. See R. M. S. drawings for detail step construction.

SECTION 33.—STANCHIONS AND SCREENS.

Stanchions in storage ends and at ends of pouch racks, screen frames, and screens to be located as per standard Railway Mail Service plans.

SECTION 34.—SAFETY RODS AND BARS.

Safety rods to be applied in an equivalent manner to that called for in Railway Mail Service interior specifications. Each side door not equipped with catcher arm should be provided with safety bar.

SECTION 35.—INTERIOR EQUIPMENT.

The following equipment shall be furnished. Railway Mail Service drawings should be followed where these details are shown; otherwise details to be as per railway company's standard.

Broom.	Dustbrush.	Paper boxes.	Toilet-paper holder.
Catcher arms.	Dumping tray.	Paper rakes.	Wardrobe.
Chair or stout stool.	Fire buckets.	Portable bins.	Water cooler.
Cinder guards.	Fire extinguishers.	Register cages.	Water tank.
Coffee heater when necessary.	Folding washbasin.	Sack and pouch racks.	Wrecking tools.
Cots when necessary.	Hopper.	Shelf and letter drop.	Wire screens for letter case.
Disinfectants.	Letter cases.	Slip case.	
Distributing tables.	Lock rods.	Stepladder.	
Deck-sash opener.	Mirror.	Torch for lighting gas.	

SECTION 36.—TRUCKS.

(a) Trucks may have either built-up metal or cast-steel frames, and may be either four-wheel or six-wheel type, within the limits of the journal loads given below.

(b) For cars equipped with one cast-iron brake shoe per wheel the effective maximum emergency brake-shoe pressure must not exceed 18,000 pounds per shoe. In this case the maximum weight per journal of loaded car for Master Car Builders' standard axles shall not exceed 10,000 pounds for 4¼ by 8 inch journal, 14,000 pounds for 5 by 9 inch journal, 17,000 pounds for 5½ by 10 inch journal, or 20,000 pounds for 6 by 11 inch journal. Where two brake shoes per wheel are employed the standard Master Car Builders' journal loads may be used.

(c) Wheels shall be either all steel or steel tired. All other truck details, including body and truck center plates and side bearings, shall be in accordance with Master Car Builders' requirements and the practice of the railway for whose service the cars are built.

SECTION 37.—PAINTING.

The painting of car body and trucks shall be in accordance with railway company's specifications for steel cars. Light-color enamel paint shall be used for interior finish above side plate; below that line the car shall be painted a medium shade of darker color, preferably light buff or light brown, with dull finish. The lettering and numbering of postal cars shall conform to Railway Mail Service requirements and the railway company's standards. The inside length and width, the car number, and title of the company owning shall be painted at a convenient place inside the car. End doors and end-door posts must not be sanded.

Approved:

A. H. STEPHENS,
General Superintendent Railway Mail Service.
JOSEPH STEWART,
Second Assistant Postmaster General.
A. S. BURLESON,
Postmaster General.

WASHINGTON, D. C., *March 17, 1915.*

NOTE.—In building steel mail apartment cars this specification should be followed.

[Post Office Department.]

SPECIFICATIONS OF FIXTURES FOR MAIL CARS.

[Approved Mar. 28, 1912. Revised to Mar. 17, 1915.]

SECTION 1.—DISTRIBUTING TABLES UNDER LETTER CASES.

(a) Contour and location are shown on Railway Mail Service floor plans for mail cars. Letter-case tables in 60, 50, and 40 foot full postal cars and 30, 25, 20, and 15 foot apartment cars should be 18 inches wide in clear between front of letter cases and inside of molding at widest part. For width of table in apartments less than 15 feet in length, see Railway Mail Service floor plans.

(b) Tables shall be of cherry, birch, or maple, preference in order named, and when finished shall be 1½ inches thick. Top of table shall be 28 inches from floor. Wooden drawers with hasp for locking shall be installed as indicated on Railway Mail Service floor plans.

(c) Ten inch by 10 inch canceling pads of high-grade elastic rubber, ½ inch thick, shall be installed in letter tables at points indicated on Railway Mail Service floor plans, top surface of pads to be flush with top of tables.

(d) A flat wooden strip, 2½ inches wide, 1 inch thick, quarter round at outer top edge, shall be placed at front edge of letter tables, to project 1 inch above surface of table. Sections shall be cut out at front, flush with surface of table, to provide for the removal of sweepings, ends of strip at opening to be rounded. (See Railway Mail Service floor plans.)

(e) For details, see Railway Mail Service drawings, sheets 1, 2, and 3, sheet 6, figure 2, and sheet 10, figure 3.

SECTION 2.—LETTER CASES.

(a) Location of letter cases, with number and sizes of boxes to be provided, is shown on Railway Mail Service floor plans.

(b) Cases shall be constructed of aluminum or other metal, or wood when over-all dimensions permit. Vertical partitions shall be not less than one thirty-second inch thick (if of aluminum, not less than one-sixteenth inch), devoid of shoulders, and present a rounded front not more than three-sixteenths nor less than three thirty-seconds inch thick. The "Tilley" revolving label holder, a metal holder of equivalent design, or square label holder made of cherry or mahogany, shall be applied in front of horizontal partitions and above top row of boxes of all cases. No label holders are required at bottom of cases. If wood holders are used, corners should be beveled one-sixteenth inch, forming three-eighth inch flat surface, for application of paste labels. The label holders shall be installed so that each face may be turned to the front at will and be held in position by flat springs applied in such manner as to prevent formation of shoulders. Any number of label holders up to seven may be operated by one spring. Top of label holder shall be level with bottom of box at outer edge.

(c) Cases shall be made 12 rows high, the back of bottom row of boxes to rest on letter table. The seven lower rows and top row of boxes shall each be 4 inches high. The eighth, ninth, tenth, and eleventh rows shall be 3½ inches high. Short letter boxes shall be 6¾ inches and long letter boxes 9½ inches deep, front to

back (exclusive of label holders) sloping from the front $1\frac{1}{2}$ inches. Short letter boxes shall be $4\frac{1}{2}$ inches and long letter boxes 5 inches wide. The bottoms shall be of perforated steel not less than one thirty-second inch thick stamped to pattern shown on Railway Mail Service drawings, sheet 4, except lower row of boxes shall have bottoms with perforations at back only, with corresponding openings through letter tables to permit dust to fall through. Bottoms shall be turned at front to meet the one-half inch square label holders in such manner as to prevent formation of shoulders as indicated on drawings. There shall be a strip 1 inch wide underneath cases, immediately in front of holes through tables, fitted snugly between partitions to prevent accumulation of dust under case. Space between bottom of case and top of table shall be closed in by a vertical strip placed flush with face line of case.

(d) Figures in preceding paragraph covering height and width of boxes indicate dimensions in the clear at front.

(e) Portable screens of suitable wire, not to exceed 1-inch mesh, framed to insure rigidity, shall be applied to front of letter cases, as indicated on Railway Mail Service floor plans. Screens shall be suspended from hooks at top line and arranged to lock below bottom line of cases.

(f) Back of letter cases shall be covered with sheet metal or one-sixteenth-inch wire. If the latter is used, mesh shall not exceed one-fourth inch. Triangular space back of wing letter cases in full cars should be left open to accommodate wrecking tools, and fire extinguishers, if desirable.

(g) If metal other than aluminum is used, cases shall be given a heavy coating of dull aluminum paint.

(h) Supports and attachments for portable letter cases shall be proportionate to the weight of the section. Where necessary, additional strap hook to hang from safety bar should be provided on outer edge.

(i) For details, see Railway Mail Service drawings, sheets 1, 2, 3, and 4, and sheet 5, figure 3.

SECTION 3.—RACKS FOR SACKS AND POUCHES.

(a) Only such type of rack as has been approved by the department shall be installed in any car.

(b) Top frame of rack section to consist of four $\frac{3}{4}$ -inch pipes, placed parallel with side of car. The rod nearest wall of car is designated as No. 1; the next, or middle top rod, as No. 2; the outside top rod, nearest center of car, as No. 3. Rods 1 and 2, and 2 and 3, shall be placed in line 13 inches, center to center. Rod No. 4, same size, shall be $2\frac{1}{4}$ inches below and $1\frac{1}{4}$ inches forward of rod No. 3 (measuring center to center). This rod is used to support paper-distributing tables, dumping tray, and bridges. Racks should be made in standard sections, 5 feet long, end to end, outside measurement, clearance at each end to be one-fourth inch when installed, and shall furnish not less than 4 feet $10\frac{1}{4}$ inches clear hanging space between end members. Rack sections of same construction of less length than the above standard shall be installed when required, as shown on Railway Mail Service floor plans.

(c) Racks shall be of such construction as will permit of top frame being raised or lowered at will, that the space may be used for storage purposes.

(d) Two parallel rods of three-fourths inch pipe, equidistant from center line of car, shall be installed to support paper-distributing tables and bridges. Rods shall be placed 4 inches apart, center to center, shall be $30\frac{1}{2}$ inches from floor to center of rods, and be supported at ends and joints by single standards. Rods shall be made in sections to correspond in length with sections of racks and installed in such manner as to be removable in pairs. (See Railway Mail Service floor plans D and F for exceptions.)

(e) Sections of rack as hereinbefore described shall be installed on each side of parallel center rods, $22\frac{1}{4}$ inches from nearest rod to rod No. 4 of said sections (measuring center to center). The intervening space not occupied by distributing tables and dumping tray shall be filled with bridge sections. Such section shall be of three-fourths-inch pipe, and be $22\frac{1}{2}$ inches long and 13 inches wide, with sides elevated 4 inches above ends. Measurements to be made center to center. Rod No. 1 shall be placed $38\frac{1}{2}$ inches from floor to center. This rod will be 2 inches from side wall to center, in cars 9 feet in width, inside measurement, and in wider cars racks shall be similarly located from center line of car, the additional space between wall and rod No. 1 to be taken up by blocking-out brackets. Rod No. 2 shall be $37\frac{1}{2}$ and rod No. 3, $36\frac{1}{2}$ inches from floor to center.

(f) Five aluminum, malleable iron, or brass label holders uniformly spaced shall be placed on rods No. 1 and No. 2, and one in center on each side of bridges. Label holder shall be 7 inches long, $1\frac{1}{4}$ inches wide, and have machine-milled slot one-sixteenth inch deep and fifteen-sixteenths inch wide, enlarged at ends, into which folded paper labels can be inserted. Face opening of slot shall be eleven-sixteenths inch wide. Label holders shall have smooth finish, devoid of cutting edges and sharp points, and be attached to rods at an angle of 60° from horizontal axis through lugs 1 inch from ends at such height as to give five-sixteenths inch clearance between rod and label holder, permitting free movement of hooks. Label holders should be riveted to rod or attached with machine screws, countersunk, heads to be soldered or covered with metal cement to present smooth surface and prevent loosening. (There shall be no label holders on rod No. 3.)

(g) Revolving shank hooks shall be placed on the rods as follows: Rod No. 1 to have 20 hooks, all pointing toward rod No. 2. Rod No. 2 to have 40 hooks, pointing alternately toward rods No. 1 and No. 3. Rod No. 3 to have 20 hooks pointing toward rod No. 2. On rod No. 1 one hook should be placed at each end of each label holder and two under middle part, between lugs. On rod No. 2 two hooks pointing alternately toward rods No. 1 and No. 3 should be placed under each end of each label holder, and four hooks, similarly applied under middle part, between lugs.

(h) Rods and hooks, when painted, should permit free movement.

(i) Hinged wire screens to be provided at end of bag racks, adjoining door openings. Hooks should be provided for securing screen to wall when not in use, and springs or bolts under paper boxes to prevent rattling when in service position.

(j) For details, see Railway Mail Service drawings, sheets 8, 8a, and 14, figure 4.

SECTION 4.—PAPER DISTRIBUTING TABLES AND DUMPING TRAY.

Wood required.—For details, see Railway Mail Service floor plans and drawings, sheet 9.

SECTION 5.—LETTER PACKAGE AND PAPER BOXES IN ALL MAIL CARS, EXCEPT 8, 10, AND 12 FOOT APARTMENTS AND 6, 8, 10, 12, AND 15 FOOT ALLEY APARTMENTS.

(a) Letter package boxes may be of wood or metal construction sufficiently heavy to prevent deformation. Paper boxes shall be of wood with wood or steel roof and back.

(b) Paper boxes shall be 9 and 12 inches wide, respectively, center to center, as shown on Railway Mail Service floor plans. Shall be not less than 25 inches front to back in the clear, bottom sloping 6 inches toward front. Bottom line at front to be 5 feet 3 inches from floor. Boxes should conform at top to contour of deck. If necessary to reinforce bottom to prevent warping, transverse wood strips, about 1 inch thick by 2 inches wide, under every vertical partition should be used, strip, bottom, and partition to be screwed together.

(c) In cars having round roof, paper boxes shall conform to details of measurement and shall have not less than the capacity indicated in paragraph (b).

(d) Paper boxes shall have wooden sliding fronts not less than 8 nor more than 10 inches high, or approximately one-third the height of front of box with $4\frac{1}{2}$ -inch combined label holder and lift at top. Fronts shall have wire or grille latticework centers.

(e) Brass or steel friction springs, to hold sliding fronts in a raised position, shall be placed in slide grooves in vertical partitions.

(f) Double or twin hooks shall be placed under each vertical partition, with points toward side of car, 1 inch back from face line of boxes.

(g) Paper boxes should be numbered consecutively, beginning with box nearest side door next to hopper. (See Railway Mail Service drawings, sheet 7.)

(h) Letter package boxes in apartment cars, and paper boxes in 8, 10, and 12 foot apartments and 6, 8, 10, 12, and 15 foot alley apartments, shall be installed as indicated on Railway Mail Service floor plans. These boxes shall follow same general construction as overhead paper boxes described in preceding paragraphs.

(i) For details, see Railway Mail Service drawings, sheet 5, figures 1 and 2, and sheet 7.

SECTION 6.—SMALL CASES FOR SLIPS.

Small wooden pigeonhole cases for slips and schemes and a small wood box for labels from pouches shall be installed as indicated on Railway Mail Service floor plans. (For details, see Railway Mail Service drawings, sheet 10, figs. 2 and 7.)

SECTION 7.—PORTABLE BINS FOR LETTER PACKAGES.

Portable bins, of substantial light wood construction, approximately $15\frac{1}{2}$ inches wide, $19\frac{1}{2}$ inches front to back, $14\frac{3}{4}$ inches high at back, and $10\frac{3}{4}$ inches high in front, shall be furnished, as follows:

Four for 60-foot cars; two for 50 and 40 foot cars. (See Railway Mail Service drawings, sheet 10, fig. 1.)

SECTION 8.—CAGE FOR REGISTERED MAIL.

A strong wire netting cage shall be installed in all mail cars and apartments. (For details, see Railway Mail Service floor plans and drawings, sheets 2 and 3, also sheet 6, figs. 1, 3, and 4.)

SECTION 9.—HOPPERS.

Flushing or dry hopper, former preferred, shall be installed at location in car indicated on Railway Mail Service floor plans. When dry hopper is used, it shall have double lid, large opening top and bottom, with nearly straight sides, and chute leading through and extending below floor; bottom to be free from obstruction and provided with deflector. (See Railway Mail Service drawings, sheet 10, fig. 6.)

SECTION 10.—LAVATORY.

Lavatory located as indicated on Railway Mail Service floor plans shall be of the folding type, designed to occupy not to exceed $6\frac{1}{2}$ inches front to back when folded; to have basin not less than 12 inches in diameter, $4\frac{1}{2}$ inches deep, and not less than one-half inch splash rim at top. Top of basin, when lowered, to be 30 inches from floor. A steam jet shall be introduced into basin or water system to heat water.

SECTION 11.—WATER TANKS AND DRINKING-WATER CONTAINERS.

(a) Drinking-water container shall be constructed to keep water and ice separate and free from foreign substances when filling, with provisions for draining each compartment at bottom, unless container is constructed in such manner as to permit of easy removal for cleaning. Suitable waste pipe for drippings with large outlet through floor to prevent freezing shall be provided. Only such type of container as has been approved by the department shall be installed in any car. For full cars water cooler having not less than 6 to 8 gallons capacity should be used. Smaller tanks (not less than 4 gallons in capacity) will be acceptable for apartment cars.

(b) Tanks, insulated when service conditions require to prevent freezing, to contain water for lavatory and hopper, cylindrical or shaped to conform to deck of car, shall be located in deck above hopper, with provision for filling through roof or from sill, or both, and shall be securely attached. Minimum capacity of overhead water tanks as follows:

40, 50, and 60 foot full cars, 40 gallons.

30-foot apartments, 25 gallons.

15, 20, and 25 foot apartments, 20 gallons.

8, 10, and 12 foot apartments, 15 gallons.

When dry hoppers are used the above capacity may be reduced 50 per cent.

(c) For typical construction see Railway Mail Service drawings, sheet 16.

SECTION 12.—WARDROBE—MIRROR.

(a) Wardrobe of substantial construction shall be installed as indicated on Railway Mail Service floor plans. Same shall extend from floor to deck of car, be provided with latch and hasp for locking, shelf $5\frac{1}{2}$ feet from floor, and have a row of substantial wardrobe hooks 6 inches apart extending around sides and end under shelf. In wardrobes 12 inches wide or less hooks should be placed on end and side only. Ventilation should be provided through holes or grille plates at bottom and top of door. (For details, see Railway Mail Service drawings, sheet 14, fig. 1.)

(b) A mirror, approximately 12 by 15 inches, should be located at most available point above lavatory.

SECTION 13.—WRECKING TOOLS—FIRE EXTINGUISHERS.

Shall be provided in accordance with existing laws and regulations. Extinguishers may be attached to ends of overhead paper boxes adjacent to side doorways. Wrecking tools may be attached vertically to side wall back of wing letter case in full cars or as shown in Railway Mail Service floor plans.

SECTION 14.—GAS PLATE, STEAM COOKER, OR EQUIVALENT.

Shall be installed when required for use of postal clerks in making coffee and warming lunches, located preferably on bulkhead, as indicated on Railway Mail Service floor plans, approximately 5 feet from floor. Gas plate should be installed in gas-lighted cars. (For details, see Railway Mail Service drawings, sheet 13, figs. 1 and 2.)

SECTION 15.—COTS—STEPLADDERS—STOOL—CHAIR.

(a) Portable cots and stepladder should be furnished in cars where service conditions require their use. Hooks for hanging stepladder to be provided on side of clothes closet where practicable.

(b) A chair or stout stool, 18 inches high, should be placed in all mail cars and apartments.

(c) For details, see Railway Mail Service drawings, sheet 10, figure 5, and sheet 14, figures 2 and 3.

SECTION 16.—DEODORANTS AND DISINFECTANTS—TOILET PAPER.

Toilet paper required in all cases; deodorants and disinfectants where conditions warrant.

SECTION 17.—DOOR FIXTURES.

Suitable outside door fixtures shall be applied on side doors in such manner that door may be opened to full width between posts, and be locked shut with mail or other lock, as a means of safety.

A catch shall be provided to hold sliding doors in an open or closed position as desired.

End doors shall be provided with a locking bar.

Other fixtures, standard. For details, see Railway Mail Service drawings, sheet 11, figures 6, 7, and 8, and sheet 12, figure 5.

SECTION 18.—RAKES FOR PAPER BOXES.

Two steel rakes, having crossheads $6\frac{1}{2}$ inches long with 5 teeth $2\frac{1}{2}$ inches long and handles 24 inches long, shall be furnished for each full railway post-office car, and one such rake for each apartment car.

For details, see Railway Mail Service drawings, sheet 10, figure 4.

SECTION 19.—CATCHER ARMS—SAFETY BARS—CINDER GUARDS—"NO ADMISSION" NOTICES.

(a) Two catcher arms shall be furnished for each car, sockets applied to all side-door posts. Safety bars, to be secured in position by locking device, shall be installed at noncatcher doors in catcher-arm sockets. For details, see Railway Mail Service drawings, sheet 12, figures 3 and 4.

(b) Four cinder guards shall be furnished for each full and two for each apartment car, holding brackets to be applied to all side-door posts and at ends of overhead paper boxes. Wire protection over glass or cinder guards should be curved in front of same and hinged or made removable to permit of cleaning glass.

(c) Two "No Admission" notices, properly framed, must be placed in full cars, and one such notice in apartment cars. These notices should be placed on end of paper boxes or on suitable wall location near side doors.

Printed "No Admission" notices, without frames, are furnished by the Post Office Department.

SECTION 20.—SAFETY RODS—WINDOW-PROTECTION RODS.

(a) Two rods of 1-inch iron pipe shall be suspended 7 feet 3 inches from floor to center of rod and 19 inches from center of car. Rods to extend full length of car, curved to clear lights, and shall be suspended from deck ceiling by hangers not more than 8 feet apart, which shall be securely attached to reinforcement or filling blocks between ceiling and roof at each hanger. Safety rods shall be securely side braced to deck sills at each hanger. A five-eighth-inch hand rod, securely attached to side plate, shall be installed above each side door, extending full width of same.

(b) Five-eighths-inch rods of hardwood—hickory preferred—spaced 3 inches apart in detachable frame, shall be provided as protection for windows on inside. Windows adjacent to side doorways shall be protected by one-half inch iron rods outside if window is located less than 2 feet from door opening. (For details, see Railway Mail Service drawings, sheet 11, figs. 1 and 2, and sheet 12, fig. 1.)

SECTION 21.—LETTER DROPS.

Letter drops shall be installed as indicated on Railway Mail Service floor plans and shall conform in detail of construction to Railway Mail Service drawings, sheet 15, revised.

SECTION 22.—MOVABLE STANCHIONS.

Shall be made of $1\frac{1}{2}$ -inch gas pipe or steel tubing of the same outside diameter. Floor sockets to be located as shown on Railway Mail Service floor plans. Pole next to wall should be 12 and inside pole 29 inches from wall to centers. Where stoves are omitted, one additional set of stanchion sockets in lieu of bulkhead should be provided, except in 40-foot full and 30 and 25 foot apartment cars, where two additional sets of stanchion sockets should be provided, unless wardrobe is of sufficiently substantial construction to allow piling of mail against it. When stoves are omitted, an additional set of poles should be provided in 40-foot full cars, 25-foot, 15-foot, 12-foot, 10-foot, and 8-foot apartments. Springs shall be placed in top brackets to prevent stanchions from rattling. Stanchions shall be provided with label holders when service conditions require.

For details, see Railway Mail Service drawings, sheet 11, figures 3, 4, and 5, and sheet 14, figure 4.

Floor plans and drawings referred to herein bear date of November 30, 1914, redrawn or revised, or December 10, 1914.

Approved:

A. H. STEPHENS,
General Superintendent Railway Mail Service.

JOSEPH STEWART,
Second Assistant Postmaster General.

A. S. BURLESON,
Postmaster General.

[Post Office Department.]

SPECIFICATION FOR THE CONSTRUCTION OF WOODEN MAIL-APARTMENT CARS.

1. The following specifications indicate the minimum in strength of construction, metal reinforcement, and measurements of car body and framing parts that will be acceptable in wooden apartment postal cars. Such cars shall be of uniform construction throughout except cars having passenger instead of baggage apartment. In this class of car, the plating used to reinforce the end posts at passenger end should be increased to offset, as far as practicable, the omission of I beams as main vertical metal end members.

2. All lumber shall be thoroughly seasoned and of the very best quality, and shall be appropriate for the purpose intended. Framing timbers shall be of white oak, fir, long-leaf southern yellow pine, or of other material of equivalent strength and acceptability.

3. *Body measurements.*—Minimum inside width in clear, 9 feet 0 inches; height from floor to top of plate, 6 feet 9½ inches; height from floor to ceiling at center, 9 feet 4¾ inches.

4. *Underframing.*—Composed of eight primary longitudinal sills. Side sills shall each be composed of two pieces; outside piece to be 5 by 8½ inches; inside piece, or subsill, to be 2½ by 7¾ inches, with steel flitch plate, 8 inches by ½ inch, extending from center of car to each end sill with end turned 6 inches on inner face of same; plates to have cover plate 8 inches, ⅜ inch by 12 inches at break, riveted, or held in place by eight ⅝-inch bolts; head and nut of bolts countersunk in sills; outside sill, subsill, and plate to be firmly bolted together with ⅝-inch bolts, staggered, and not more than 18 inches apart; side sills countersunk on outside to receive bolt head and washer; washer under nut on face of 2½-inch sill.

Five-eighth-inch tie-rods from side sill to side sill should be provided. The average spacing of tie-rods should not exceed 3 feet. Center sills to be composed of two pieces, 5 by 7¾ inches, and 1½ by 7¾ inches, with one-half inch by 7½ inches steel flitch plate, extending from center of car to each end sill, with end turned 6 inches on inner face of same; the 1½ by 7¾ inches wood member or subsill to extend from end sill to end sill except when necessary to shorten to clear buffing device. Flitch plate to be connected at break, and center sill members to be built up in same manner as indicated in preceding paragraph covering outside sills.

Two intermediate sills 4 by 7¾ inches each side to be evenly spaced between outside and center sills.

5. *Bridging.*—One and three-fourth inches, full depth of sills, spaced not over 18 inches from center to center, between all longitudinal sills.

6. *Body bolster.*—Cast steel or built-up metal. For cars 60 feet or more in length, double bolsters of not less than the following dimensions will be required:

Top plate, 1 inch by 10 inches; bottom plate, 1½ by 10 inches. Cars less than 60 feet in length may have single bolsters; top plate not less than 1 inch by 12 inches, and bottom plate, 1½ by 12 inches. Where cast-steel bolsters are used they shall be of equivalent strength.

7. *Draft rigging.*—To be modern standard construction, securely attached to framing members.

8. *Buffing device.*—To be modern standard type, installed in such manner as not to interfere with application of main metal vertical end members. See paragraph 15.

9. *Needle beams, crossties.*—I-beam construction preferred. If wood is used, to be not less than 4 by 8 inches, white oak, trussed with two three-fourth-inch rods.

10. *Truss rods.*—Four per car of 1½-inch round iron; two center truss rods upset at ends to 1¾ inches, to extend from end to end of car and connected in center with wrought-iron turnbuckles and to be raised as high on body bolster as floor will permit. Two outside truss rods secured to bolster anchor and connected in center with wrought-iron turnbuckles. Center truss rods which extend from end to end of car preferably to have special wrought-iron nuts, which also act as washers, to have at least 20 square inches bearing surface if bearing against wood.

11. *End sills.*—White oak, thoroughly seasoned, composed of two pieces with 8 inches by three-fourth inch steel flitch plate. Outside piece to be 4½ by 8½ inches; inside piece to be 3½ by 8½ inches; inside piece may be rabbeted to receive lower floor.

12. *Buffer beams.*—Cast-steel or built-up metal buffer beams preferred. Where wood is used they shall be white oak, 7½ by 14 inches, and can be made in two pieces in width, plated on top with three-fourths-inch steel plate conforming to shape of buffer beam, plate to be held in place with countersunk head bolts fitted with check nuts. Wearing surface opposite doors to be corrugated or roughened. Buffer beams to be secured to end sills with at least eight three-fourths-inch bolts and to be thoroughly secured to draft sills.

As an alternative, buffer beam may be composed of one-piece white oak, 7½ by 9 inches, and a malleable-iron or cast-steel buffer-beam extension 5 inches wide, which shall be securely bolted to face of wood member, the entire top surface of the composite beam to be covered by three-fourths-inch cover plate, conforming in shape, and secured to beam in manner indicated in preceding paragraph.

13. *End plates.*—White oak or yellow pine, 3 inches thick, or equivalent, with metal reinforcement on inner side, of sufficient extent and attached to side plates and deck sills, in such manner that the end plate thus reinforced used as top connection of the vertical end members will develop full efficiency of such members to resist telescoping when shock is applied thereto 18 inches above floor line.

14. *End posts.*—Six end posts, 2 by 3½ inches, reinforced with steel plates, three-fourths inch by 3½ inches. These plates to be twisted at right angles at top and bottom and to bear against and be bolted to end plate and extend through between and to be securely bolted to the two sections of end sill.

Subposts 1½ by 3½ inches will be installed to extend over flat surface of plates and gained or mortised to receive ribbing, all to be securely bolted together. Three three-fourths-inch tie rods to pass from corner post to corner post or corner post to door post shall be provided. End posts adjacent to door posts to be plated on each side with three-fourths inch by 3½-inch plates, making not less than 8 plates in all in each end of car.

15. *End reinforcement.*—Two 8-inch I beams, weighing not less than 18 pounds to the foot, or equivalent standard sections, will be applied at each end of the car, forming, or adjacent to, door posts. The top of these beams shall bear directly against and be attached to the end plate. Inside flange to bear against the double plates attached to posts adjacent to door posts. Where practicable, these beams shall be carried down in full section so as to bear directly against the end sill and be attached thereto.

When wood buffer beam is used and it is necessary to cut away front flange and web of I-beam, the front flange should be cut at a point flush with top of buffer-beam plate and the web cut on an angle so as to slope approximately 3 inches toward the back flange, which flange shall extend through the bottom of end sill and buffer beam; each I-beam to be attached to buffer beam and plate by two angles or knee irons of sufficient dimensions and secured by riveting or bolting to such an extent as to develop the full strength of the beams against shearing at floor line.

Buffer beam plate and wood member to be slotted only sufficiently to permit installation of I-beams cut away as indicated in the preceding paragraph.

When built-up or cast-steel buffer beams are used, the bottom connection of the I-beams shall be sufficient to develop the full horizontal shearing value of such beams at floor line.

NOTE A.—On rebuilt cars where 8-inch I-beams or equivalent sections can not be readily used as end reinforcement, four sections of T-rail, weighing not less than 65 pounds to the yard, or equivalent in metal, will be acceptable. Such rail sections must be attached top and bottom so as to develop their full value as required where I-beam sections are used. Where four T-rails are used, as indicated, two shall be located in lieu of I-beams, and the other two between center and corner posts, inside flange bearing against intermediate end posts.

NOTE B.—Cast-steel or built-up metal end framing conforming to the standard specifications for steel postal cars will be accepted in lieu of the built-up end framing described herein.

16. *Side plate.*—Side plate preferably to be of long-leaf yellow pine, thoroughly seasoned, 3 by 5 inches, one splice allowed on each piece, splices not to be opposite.

17. *Side posts.*—To be not less than 2 by 3½ inches, spaced not to exceed 18 inches center to center. First and fourth posts from end of car to have 2 by 2 inches by ¾ inch iron angle fitted to inside corner, with one leg turned top and bottom to form angle against plate and sill and to be suitably attached thereto.

Five-eighth inch tie rods, from side sill to side plate, should be provided, spaced 2 feet 6 inches to 3 feet, according to spacing of posts.

18. *Belt rail.*—Belt rail not less than 1½ by 4 inches, securely gained, glued, and screwed to side posts.

19. *Braces.*—Braces to be 1¾ by 7 inches, gained, glued, and screwed to inside of posts. Three-fourths inch gained from brace and 1 inch from post.

20. *Blocking.*—One and one-half inches on sides and ends filling spaces from side sill to side plate between posts, ribbing, and belt rail. Blocking to be tightly fitted, glued, and toenailed, and preferably rabbeted into posts one-eighth of an inch.

21. *Carlines.*—Wood carlines to be 1½ inches thick, placed about 17 inches center to center. Iron carlines, three-fourths inch by 2 inches, spaced not to exceed 6 feet center to center, or angle carlines may be used.

22. *Roof.*—Roof to be covered with best quality of canvas, or acceptable substitute, excepting hoods, which are to be covered with copper or galvanized iron.

23. *Flooring.*—Two courses: Lower course three-fourths-inch tongue and groove laid diagonally; upper course three-fourths inch maple or rift-sawed yellow pine or fir, tongue and groove, laid longitudinally, with course of sheet asbestos or equivalent between; top boards not to be over 3¼ inches wide and to be securely nailed. There shall be one course of three-fourths inch matched flooring well fitted in between all longitudinal sills, placed crosswise, with space not less than 2 inches between bottom of floor and this course, with not less than 1 inch noninflammable sound-deadening material. One course of three-fourths inch deafening floor to cover the entire bottom of the car or fitted between sills, to be of tongue and groove yellow pine not more than 5¼ inches wide, securely nailed to all sills.

24. *Trucks.*—Cast steel, built-up metal, or wood reinforced. All truck details, including body and truck center plates and side bearings, shall be in accordance with M. C. B. requirements and the practice of the railway for whose service the car is built.

25. *Journal loads.*—Maximum weight per journal of loaded car must not exceed 10,000 pounds for M. C. B. standard axle having $4\frac{1}{4}$ by 8 inch journals, 14,000 pounds for M. C. B. standard axle having 5 by 9 inch journals, or 17,000 pounds for M. C. B. standard axle having $5\frac{1}{2}$ by 10 inch journals.

26. *Brakes.*—To conform to M. C. B. requirements for U. S. safety standards.

27. *Painting.*—The painting of car body and trucks shall be in accordance with the railway company's specifications. For interior finish see specifications for steel full cars.

28. Specifications for fixtures for postal cars and standard floor plans and drawings of interior fixtures shall be followed.

29. In the matter of heating, lighting, ventilation, steps, doors, windows, safety rods, screens, stanchions, sanitary and toilet facilities, and other details not specifically covered, the specifications for steel full postal cars, approved March 28, 1912, and amendments thereto, shall apply as far as practicable.

30. If mail cars are run in trains where passage between cars is necessary, they shall be provided with suitable vestibules.

Approved.

A. H. STEPHENS,
General Superintendent Railway Mail Service.
 JOSEPH STEWART,
Second Assistant Postmaster General.
 A. S. BURLESON,
Postmaster General.

WASHINGTON, D. C., August 25, 1914.

[Post Office Department.]

MODIFICATIONS OF STANDARD SPECIFICATION FOR THE CONSTRUCTION OF MAIL CARS PERMISSIBLE FOR NARROW-GAUGE CARS WHERE THE INSIDE LENGTH DOES NOT EXCEED 45 FEET.

1. The modifications indicated herein will be the minimum in strength of construction and measurements of car body, framing parts, and trucks that will be accepted for narrow-gauge postal cars or narrow-gauge cars with postal apartments.

2. For cars longer than 45 feet inside, the framing members and stresses must be increased proportionately.

3. Narrow-gauge cars are to be not less than 7 feet 3 inches wide inside of lining, and not less than 6 feet 2 inches from floor to top of side plate, or equivalent, and not less than 8 feet 2 inches from floor to ceiling, in the clear, at center line of car.

4. *Steel cars.*—The "Specification for the Construction of Steel Full Postal Cars," approved March 28, 1912, revised to March 17, 1915, is to be followed for construction except as follows:

(a) Buffing shocks (sec. 5) may be reduced from 400,000 to 250,000 pounds.

(b) Section moduli of vertical end members (sec. 18) may be reduced from minimum of 65 to minimum of 40.

5. *Narrow-gauge wooden cars with steel underframes.*—The underframes of steel underframe postal or mail apartment narrow-gauge cars shall conform in all material features of construction to the specification for steel narrow gauge-postal or apartment cars given above. This also covers the strength of the end construction reinforcement.

6. *Wooden cars.*—The "Specification for the Construction of Wooden Mail Apartment Cars," approved August 25, 1914 (standard gauge), is to be followed for the construction of narrow-gauge cars except on parts where the minimum may be reduced to sizes given below:

(a) Cars to have not less than six longitudinal sills.

(b) Side sills to be not less than $4\frac{1}{2}$ by $7\frac{1}{2}$ inches, with subsill 2 by $6\frac{3}{4}$ inches and steel flitch plate 7 by one-half inch.

(c) Center sills to be not less than $4\frac{1}{2}$ by $6\frac{3}{4}$ inches, with subsill $1\frac{1}{2}$ by $6\frac{3}{4}$ inches, and steel flitch plate 6 by $\frac{1}{2}$ inch.

(d) Intermediate sills to be not less than $4\frac{1}{2}$ by $6\frac{3}{4}$ inches, one on each side of center sills.

NOTE.—In place of the $\frac{1}{2}$ -inch steel flitch plates there may be used a rolled-steel channel 6 inches deep, weighing 8 pounds per foot, or its equivalent.

- (e) Side plates to be not less than 2 by 4½ inches.
- (f) Belt rail to be not less than 1½ by 3½ inches.
- (g) End sills to be not less than 7 inches deep.
- (h) Buffer beams to be not less than 7 by 12 inches, with ⅝ or ¾ inch top plate.
- (i) Not less than two truss rods of 1½ inches diameter.
- (j) If single bolsters are used, top plate to be not less than 8 inches by ¾ inch and bottom plate 8 inches by 1 inch.

7. *Trucks*.—(a) Trucks may have either built-up metal, cast-steel, or wood steel reinforced frames. (Sec. 36, par. a.)

(b) Maximum weight per journal for master car builders' standard axle should not exceed 7,000 pounds for 3¼ by 7 inch journal. (Sec. 36, par. b.)

(c) Wheels shall be either of steel, steel tired, or cast iron.

8. *Interior equipment*.—The "Specifications of Fixtures for Mail Cars," approved March 28, 1912, revised to March 17, 1915, are to be followed except where modified by floor plans and necessary changes due to smaller car bodies.

When oil-lamp chandeliers are used, the height from floor to lowest point of chandelier may not be less than 6 feet 6 inches.

Approved:

JOE P. JOHNSTON,
General Superintendent Railway Mail Service.
OTTO PRAEGER,
Second Assistant Postmaster General.
A. S. BURLESON,
Postmaster General.

WASHINGTON, D. C., May 31, 1916.

POST OFFICE DEPARTMENT,
SECOND ASSISTANT POSTMASTER GENERAL,
Washington, November 23, 1916.

Circular Covering. Additions to and Modifications of the Specification for the Construction of Steel Postal Cars, Specification for the Construction of Wooden Mail Apartment Cars, Specifications of Fixtures for Mail Cars, Floor Plans and Drawings, and Circular of the Second Assistant Postmaster General Regarding the Construction, Sanitation, Operation, etc., of Full and Apartment Railway Post Office Cars.

**SPECIFICATION FOR THE CONSTRUCTION OF STEEL FULL POSTAL CARS, APPROVED MARCH 28, 1912,
REVISED TO MARCH 17, 1915.**

SECTION 5—BUFFING.—Replace "Note" by the following "Note" and "Note 2" :

"Note.—For electric cars operated on lines where electricity is the only motive power and the total weight of trains does not exceed 600,000 pounds, the static load may be assumed to be 200,000 pounds.

"Note 2.—For self-propelled cars, where the weight of the operating unit, consisting of the power car and one or more trailers, does not exceed 200,000 pounds, the static load may be assumed to be 100,000 pounds."

SECTION 18—END CONSTRUCTION.—Change Note 2 to Note 3, and insert new Note 2, as follows:

"Note 2.—For self-propelled cars, where the weight of the operating unit, consisting of the power car and one or more trailers, does not exceed 200,000 pounds, the sum of the section moduli of the vertical side and end framing members in the wedge or parabola and convex-shaped portion shall be not less than 20 each end. All vertical members in the wedge, parabola, or convex portion—in other words, forward or rearward of the rectangular part of the car—may be considered together for the purpose of meeting this requirement. If either end be flat or rectangular in shape the provisions of Note 1, fixing factors of strength, shall apply."

SECTION 24—DOORS, WINDOWS AND SKYLIGHTS.—Paragraph (b), first line:

Change "¼ inch" to "not less than ½ inch rough wire glass or rough plain glass of equal strength."

SECTION 26—HEATING.—Add to paragraph (e):

"Leave sufficient clearance to avoid injury to hand when opening door. If necessary, pipe guard on bulk-head radiator should be bent back or cut away."

SPECIFICATIONS OF FIXTURES FOR MAIL CARS, APPROVED MARCH 28, 1912, REVISED TO MARCH 17, 1915.

[These are bound with "Specification for the Construction of Steel Full Postal Cars."]

SECTION 2—LETTER CASES.—Paragraph (h):

Change this to read, "Supports and attachments for portable letter case shall be proportionate to the weight of the case. A cross bar shall be provided between safety bars to permit strap hook to be installed to support outer end of case."

SECTION 5—LETTER PACKAGE AND PAPER BOXES IN ALL MAIL CARS, EXCEPT 8, 10, AND 12 FOOT APARTMENTS AND 6, 8, 10, 12, AND 15 FOOT ALLEY APARTMENTS.—Add as final sentences to paragraph (b):

"When the deck of a mail car is of such width that the top of paper boxes projects more than 5 inches into the deck opening, the top of that portion of the boxes projecting into the opening shall be covered with wire screen of not less than $\frac{1}{2}$ inch mesh.

"When the boxes project less than 5 inches, the fronts of the boxes at the top are to be beveled sufficiently to prevent the obstruction of light and to avoid a shelf upon which dust can accumulate. Beveled strip may be of wood or metal."

SECTION 12—WARDROBE.—After "same shall extend from floor to deck of car," add, "or may have sloping top, to prevent accumulation of dust."

SECTION 17—DOOR FIXTURES.—After second sentence insert, "Door guard should be cut away so as to avoid injury to the hand when door is opened to full position."

SECTION 19—CATCHER ARMS, SAFETY BARS, ETC.—Add to paragraph (a):

"Carbon content of round rods used in catcher arm construction must not be less than .40 and not more than .60."

Add to paragraph (b): "Locate cinder-guard brackets on side doors, so that when guards are in position, center of glass will be 5 feet from floor."

SPECIFICATION FOR THE CONSTRUCTION OF WOODEN MAIL APARTMENT CARS, DATED AUGUST 25, 1914.

SECTION 22—ROOF.—Add, "Metal hoods will not be required on mail cars operated exclusively on lines where oil is used as fuel."

FLOOR PLANS AND DRAWINGS, REVISION OF NOVEMBER 30, 1914.

ALL PLANS AND DRAWINGS.—Cancelling pads in letter tables in all cars should be located equidistant between face of letter case and inside of table moulding, and not less than 6 inches from wing case to edge of pad.

SHEETS F AND G.—Note B should read: "Package boxes three rows high, occupying same height as letter cases, to slope 3 inches back to front, and have 5-inch slide fronts with wire or grille centers and 4-inch label holders."

SHEET 6, FIGURE 1.—Construction should be such that the doors can be opened and secured independently of each other. Handle or knob should be placed on each door. Shelves shall be made of wire mesh, using not less than No. 14 wire, with $\frac{1}{2}$ inch mesh.

DRAWINGS OF REGISTER CAGE AND LETTER CASE TABLE DRAWERS.—Filler strips, either metal or wood should be added at back as well as at sides and front of register cages, and chests of drawers that extend to the floor, to prevent mail getting under cages or drawers.

SHEET 7, CROSS SECTION AA, FIGURE 1.—The dimension, 6 15-16 inches, is intended to indicate visible portion of wire grille front of paper boxes.

SHEET 7, FIGURES 1 AND 2.—Note addition to paragraph (b), Section 5, Fixture Specification, as follows:

"When the deck of a mail car is of such width that the top of paper boxes projects more than 5 inches into the deck opening, the top of that portion of the boxes projecting into the opening shall be covered with wire screen of not less than $\frac{1}{2}$ inch mesh.

"When the boxes project less than 5 inches, the fronts of the boxes at the top are to be beveled sufficiently to prevent the obstruction of light, and to avoid a shelf upon which dust can accumulate. Beveled strip may be of wood or metal."

SHEET 12, FIGURE 3.—Arrow indicating angle of 25 degrees should extend only to center line of rod. Arrow indicating radius of $2\frac{3}{4}$ inches at goose neck should extend to inner side of arm. Open hearth steel to have carbon content, not less than .40 and not more than .60.

SHEET 13, FIGURE 2.—Over all dimensions, $11\frac{1}{2}$ inches; body, $9\frac{1}{2}$ inches.

SHEET 14, FIGURE 1.—Wardrobe shall extend from floor to deck of car, or have sloping top to prevent accumulation of dust.

SHEET 15, LETTER DROP.—The top of letter drop chute illustrated on R. M. S. Sheet 15, Figure 1, to be omitted, making the chute trough-shape, without top, the chute being secured to the outside casing (figure 4) by two countersunk rivets or bolts through bottom or sides of the trough. (This change is necessitated through numerous instances of delay to mail matter due to its sticking in casting or entrance to the chute and impossibility of discovery through present construction.)

CIRCULAR OF SECOND ASSISTANT POSTMASTER GENERAL DATED OCTOBER 17, 1913, REVISED TO JUNE 5, 1915.

SECTION 2—RECONSTRUCTION OF FULL AND APARTMENT RAILWAY POST OFFICE CARS.—Paragraph (b), substitute the following:

“Steel underframe, conforming to standard specifications for steel postal cars (revised to March 17, 1915), with end construction meeting requirements set forth in Section 18, may be applied to plan No. 1, wooden full mail cars, which are converted into apartment cars, or used in lieu thereof, or to wooden apartment cars built substantially to Plan No. 1, or in accordance with the specification of August 25, 1914, and be operated in association with steel or steel underframe cars.

“Wooden cars, either full or apartment, not built substantially to Plan No. 1, or the specifications of August 25, 1914, for wooden apartment cars, must have side sill plating equivalent to the metal reinforcement for side sills required in the specifications referred to; or have side sills, which may be in the form of Z-bars, angles, or equivalent, as part of the steel underframe, which will meet above requirements.

“Cars not blocked, to which steel underframes are applied, may be reinforced on sides, in lieu thereof, by application of metal plates not less than 1 inch by 6 inches, extending diagonally from ends of end plates to outside sills, securely connected to plate and sill, together with bolting to side posts to prevent buckling. (If during rebuilding inside sheathing is removed, diagonal plates shall be rabbeted into side posts.) The bottom connection should preferably be made as far from end of car as location of side doors will permit, but in no case shall be less than 3 feet from the corner posts of the car.

“It should be understood that where steel underframes are applied to any cars, and the requirements set forth are not fully met, such cars shall be regarded only as reinforced wooden cars, not acceptable for operation with steel or steel underframe cars adjoining, or in trains in which the majority of the other cars are of steel or steel underframe construction.”

Add new paragraph (e):

“Creep doors shall be installed between mail and baggage, or mail and passenger apartments, in all cars not now so equipped, when those cars are next shopped for general overhauling.”

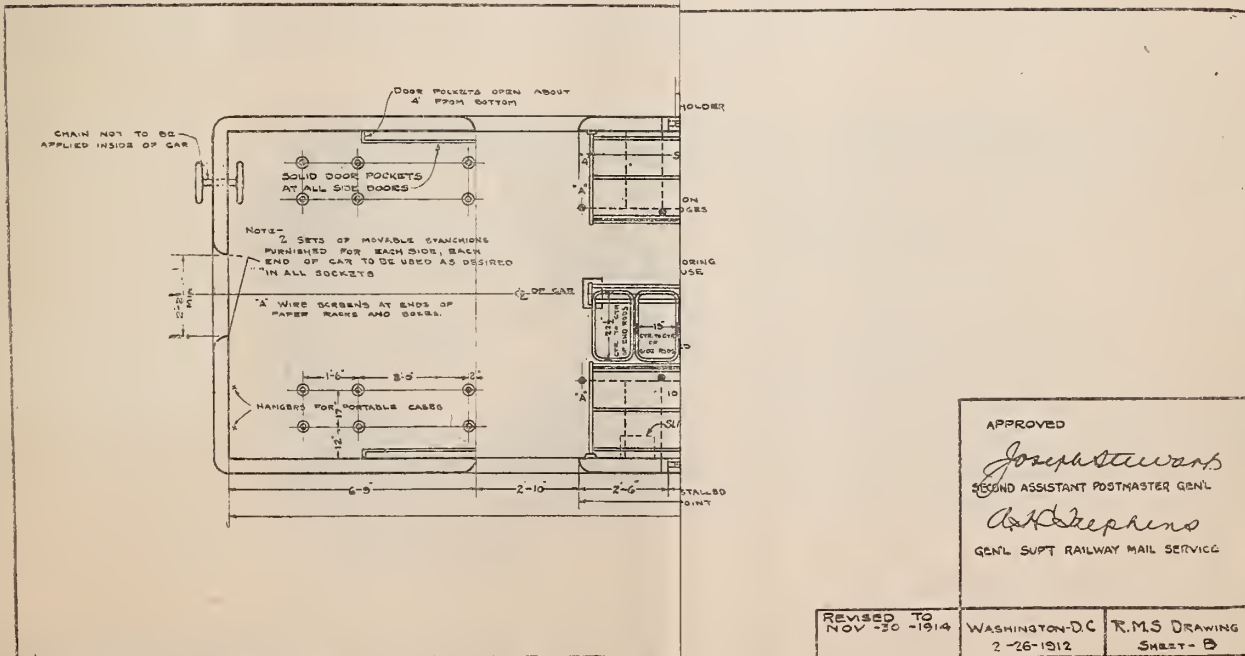

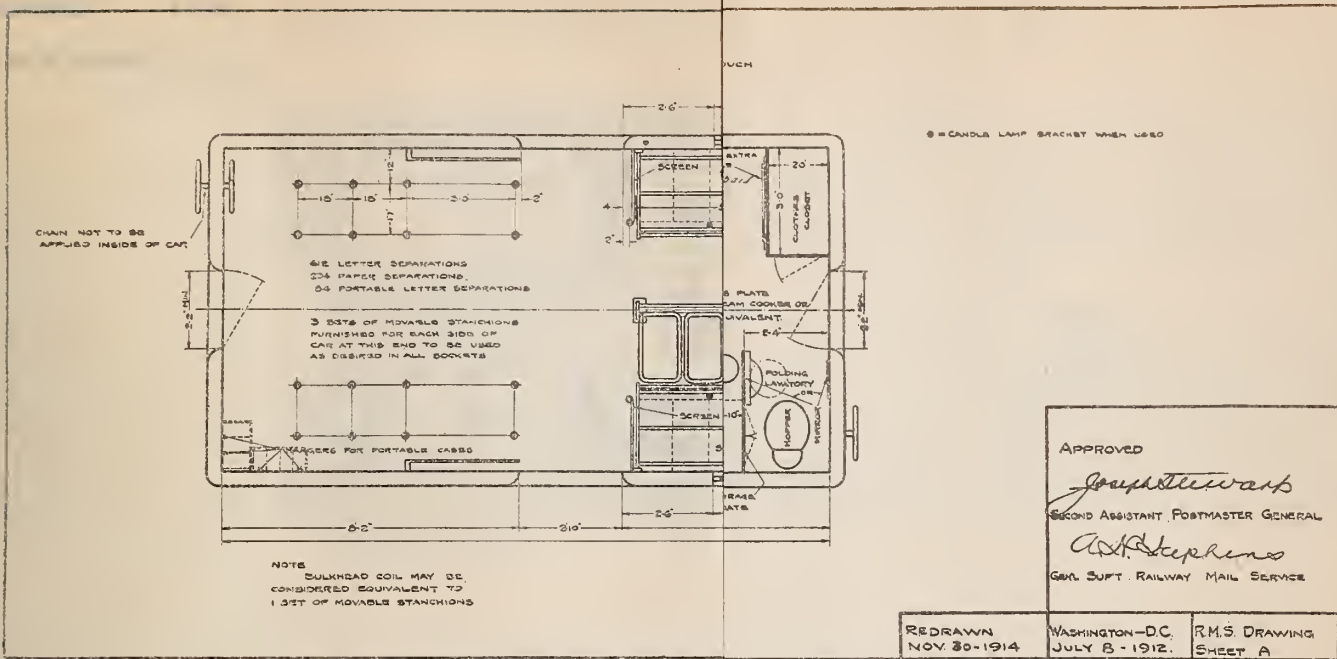

SECTION 5—OPERATION.—Paragraph (d):

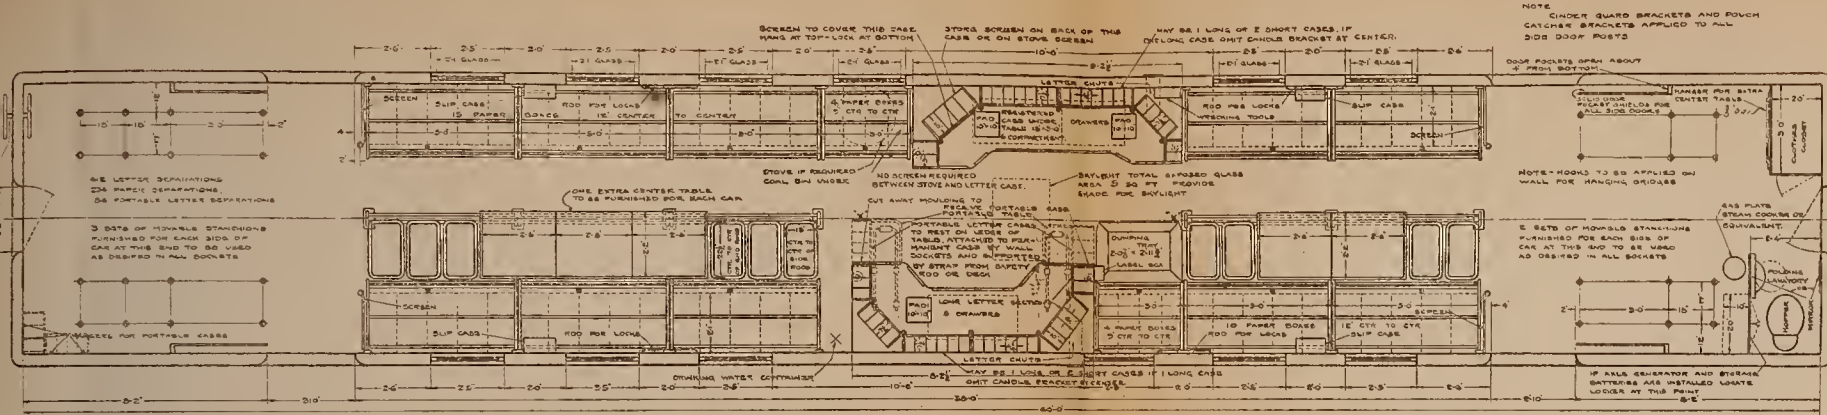

After the sentence reading, “If these light trains are run partly on branch lines and partly on main lines,” etc., add a sentence reading: “If these light trains are run wholly on side lines and the average speed exceeds 21 miles an hour, but does not exceed 27 miles an hour, the mail cars, to be acceptable for operation in such trains, should have the four-track rail reinforcement applied at least to the mail end of the car.”

SECTION 6—SANITARY FEATURES AND CONDITIONS.—Add new paragraph (e):

“Stoves installed in full or apartment mail cars shall be of a safety type approved by the Department. The safety features include automatic fastening for stove-door (double doors preferred, in which case the inner door should have automatic or spring fastening); baffle plate, to prevent fire or live coals escaping through the smoke flue opening, and metal casing to prevent overheating of closely surrounding objects. Stoves now in service and not so equipped will be made acceptable by the addition of these features. Sketches showing details should be submitted to the Department for approval.”

OTTO PRAEGER,
Second Assistant Postmaster General.

REVISED TO NOV 70 1914	WASHINGTON-DC JULY 8, 1912	RMS DRAWING SHEET - 17
---------------------------	-------------------------------	---------------------------

CONNECTED TO TWO 6 CELL - 8 VOLT - 240 AMP HOUR STORAGE BATTERIES CONNECTED IN SERIES FOR 16 VOLT.

MADE BY THE WESTON ELECTRICAL INSTRUMENT CO NEWARK N.Y.
OTHER EQUALLY GOOD APPARATUS MAY BE USED

BASE MADE OF POPLAR

HAIR FELT MADE OF 5 LAYERS OF REGULAR HAIR FELT INSULATION WEIGHT - 7 oz. PER SQ. FT.
WEIGHT OF ONE SIDE INCL. BOARDS AND REINFORCING STRIPS - 25 (lbs)

SECTION THROUGH CENTER

TOTAL WEIGHT OF COMPLETE APPARATUS 105 LBS.

THERMAL LOSS FACTOR.

PLACE THE TWO BLANKS IN POSITION, ANY CRACKS OR OPENINGS AROUND EDGES TO BE CAULKED WITH COTTON CORD. HEAT FOR 48 HOURS, AND THEN ADJUST CURRENT TO MAINTAIN APPROXIMATELY 70° F PLUS ROOM TEMPERATURE, ON INSIDE OF CALORIMETER. (AN INSIDE STILL AIR ROOM FOR TEST IS RECOMMENDED, TO INSURE MORE EVEN TEMPERATURE.) AFTER FLOW OF HEAT BECOMES CONSTANT, TAKE HOURLY READINGS FOR EIGHT (8) HOURS AND AVERAGE THE READINGS. THE CONDUCTIVITY OF THE APPARATUS UNDER THESE CONDITIONS SHOULD BE FOUND TO BE CLOSE TO 0.10 BTU. PER SQUARE FOOT PER HOUR FOR EACH DEGREE F. DIFFERENCE BETWEEN INSIDE AND OUTSIDE TEMPERATURE. AS THE ANNULAR SPACE IS 5" WIDE AND TWO FEET SQUARE, RESULTING IN TWO SQUARE FEET OF SURFACE THE THERMAL LOSS FACTOR THROUGH THIS SURFACE SHOULD BE APPROXIMATELY 2 x 0.10 BTU OR 0.20 BTU. WATT HOURS SHOULD BE REDUCED TO BTU BY THE FACTOR 3.42. THE FORMULA FOR THERMAL LOSS FACTOR THEN BECOMES

$$f = \frac{V \times C \times 3.42}{8 D} \text{ OR } \frac{0.342 V C}{D}$$

- f = THERMAL LOSS FACTOR = BTU LOSS PER SQUARE FOOT OF CALORIMETER PER HOUR PER DEGREE DIFFERENCE BETWEEN INSIDE AND OUTSIDE TEMPERATURE
- V = VOLTAGE
- C = AMPERES
- D = TOTAL ASCERTAINED DEGREES F. DIFFERENCE BETWEEN INSIDE AND OUTSIDE TEMPERATURE BY THE TEST.

HAVING DETERMINED f, THE CALORIMETER IS READY FOR TESTING CAR SECTIONS, WHEN THE FORMULA BECOMES

$$x = 24 \times \left(\frac{V \times C \times 3.42 - 8f \times D}{8 D} \right) \text{ OR } 3 \left(\frac{3.42 V C - 8f D}{D} \right)$$

- x = BTU. PER SQUARE FOOT PER DEGREE F. DIFFERENCE BETWEEN INSIDE AND OUTSIDE TEMPERATURE IN 24 HOURS
- V = VOLTAGE
- C = AMPERES
- D = TOTAL ASCERTAINED DEGREES F. DIFFERENCE BETWEEN INSIDE AND OUTSIDE TEMPERATURE BY THE TEST
- f = THERMAL LOSS FACTOR OF CALORIMETER
