## V

See *Guide to Pronunciation*, § 95. *V*, and *U* are varieties of the same character, and were formerly used indiscriminately. The letter *v*, a doubled *v* called "double *u*," is a survival of this use. *V* is from the Latin alphabet, where it was used both as a consonant (about like English *w*) and as a vowel. The Latin derives it from a form [V] of the Greek *T* (see *Y*), this Greek letter being either from the same Semitic letter as the digamma *F* (see *F*), or else added by the Greeks to the alphabet which they took from the Semitic. Etymologically *v* is most nearly related to *u*, *w*, *f*, *b*, *p*; as in *vine, wine*; *avoidupois, habit, have; safe, save*; *trover, troubadour; receive, recipient*. 2. The same object may be, according to the point of view, at once *whole*, **complete**, and **entire**; as, a *whole* bridge may be shipped in parts, but it is not **entire** till the parts are put together, nor **complete** so long as anything remains to be done.

# A PRONOUNCING GLOSSARY OF SCOTTISH WORDS AND PHRASES

THE Scottish dialects, or Scottish language as they are called by some, are forms of the Northumbrian English which was the language of the Angles who had settled along the eastern seaboard, and which up to the 15th century was spoken as well in Yorkshire and Northumberland as in the Scottish Lowlands. Originally the terms "Scot" and "Scottish" were applied to the Celtic people of Ireland and those of western Scotland that came from Ireland and conquered the English of the southeast and the earlier Celtic people of the west and north, but the language of their non-Celtic subjects became the literary language of the land, and is now the language which is meant by "Scotch," "Scottish dialects," or "Scottish language."

Scottish literature practically began in the 14th century, with the works of John Barbour, a contemporary of Chaucer, and of others of his time, — whose writings are in fact Northumbrian English. By the end of the 15th century the language had under various influences, political, racial, etc., developed the general form which it retained during its chief literary period, and down to the time of the union of the kingdoms of England and Scotland in 1707.

The use of Scotch as the general language of literature of the country ceased about the time of the accession of James VI. of Scotland to the English throne, although it still continued to be the common language of the people. Subsequent to that, however, there was a brilliant period of revival in ballad and lyric poetry in which Scotch forms a considerable part, and still more recently the Scottish dialect has been freely used in descriptions of Scottish life and character by Scott, Galt, Macdonald, Black, Barrie, MacLaren, and others up to the present time.

As the works of some of these authors, especially Burns among the poets, and Scott and other more recent authors among the prose writers, are extensively read in England and America, the want of a general glossary of the words and phrases used by them is often felt; and it is to meet this want that this glossary is offered to the public, in the belief that it will be deemed a useful and appropriate addition to an English dictionary.

The Scotch is not one dialect; but there are numerous dialects differing from each other, not only in pronunciation, but also in vocabulary, grammar, and spelling.

The vocabularies of the Scottish dialects vary with the different shires, according as they have felt more or less the influence of the Gaelic, French, or Scandinavian languages, and these differences are noticeable even among the dialects of Lowland Scotch, where the Scandinavian influences are less marked. The body of this glossary is the dialect of Burns, but some words peculiar to other dialects are also given because found in works familiar to English readers.

The orthography of modern Scotch is extremely arbitrary and variable; and the spelling of a word affords no reliable guide to its pronunciation. Of the two principal systems or fashions which prevail, one (seldom used except in connection with an archaic diction) employs the spelling of the writers of the 15th and 16th centuries, regardless of pronunciation. The other, and much the commoner of the two, is based upon the standard English spelling, and conforms the spelling of Scotch words to English where the sounds of the English and Scotch are near to each other; and also where the sounds are different, but the English spelling represents to a Scotchman more or less accurately the Scottish pronunciation. Where a word or form is distinctly Northern or is wanting in the English, the Scottish orthography is followed, as *streek* for *stretch*, *kirk* for *church*, *ee* for *eye*, etc.; but whatever spelling is used, the words when spoken by Scotchmen are given their Scottish sounds.

The result of this is that Lowland Scotch as written or printed is largely the same as common literary English, with some words not found in English and some peculiarities of idiom and grammatical construction, etc.: Thus Burns in the poem "A Man's a Man for a' That" uses in all 115 different words, of which only 18 words do not occur in English. Much modern Scottish literature is therefore

quite intelligible to an English person reading it, which would be mostly unintelligible to him if it were spoken with a Scottish dialect pronunciation.

Because of this lack of any standard of orthography for Scottish words, in works of modern writers they are frequently spelled phonetically to represent the Scottish pronunciation to the English ear, as in other dialect story writing; but these forms have not been recognized in this glossary except in a few exceptional instances.

The vocabulary and the number of definitions in this edition have been much enlarged. In the preparation of the glossary full use has been made of Webster's New International Dictionary, and of special dictionaries, concordances, glossaries, etc., including various works which have become available since the last edition was published. Chief among these are Wright's "English Dialect Dictionary," the Oxford English Dictionary, and the "Scots Dialect Dictionary" by Warrack and Grant.

The difficulty to be overcome in attempting to give an English or American reader an idea of the correct pronunciation of the Scottish dialect is very great. The aim pursued has been to indicate, as fully as could be done with the English equivalents, the pronunciation of native-born Scotchmen. For this purpose the pronunciations or the entire galley proofs were submitted to various persons of Scotch birth and education, and to them are due many suggestions both as to pronunciation and subject matter.

The Scottish pronunciation has changed comparatively little from what it was three centuries ago when the languages of England and of Scotland were, comparatively, but slightly different. The consonant skeleton of the Scottish dialect is practically the same as that of the English, the only consonant used in the Lowland Scotch and not used in English being the guttural sound of *ch*, *gh*, in *licht*, *bught*, etc., corresponding to the sound of *ch* in German *ich*, *doch*. The letter *r* is strongly trilled; and *wh* and *h* are more strongly aspirated than in English. Some of the combinations of consonants in Lowland Scotch are treated differently from what they are in English; thus in *wr* and *kn* initial the *w* and *k* are audibly pronounced, though the modern tendency is to ignore them; while in *mb*, *pt*, *kt*, *cl*, the *b* and *t* are regularly silent, as in *tumble* (*túm'!*), *except* (*èk-sép'*), *expect* (*èks-pék'*). Final *d* and *g* are dropped in *nd* and *ng*, as *lan(d)*, *mendin(g)*.

The vowel system of the Scottish (as well as the Northern English) dialects, however, is as a whole distinct from the vowel system of ordinary English speech, so that there are few, if any, vowel elements in the Scottish dialects identical with those of the English system. The two have nearly corresponding vowels; but almost every vowel of the Scottish dialect is recognized to differ either in quantity or quality from the corresponding vowel in English; and, although each of these differences may be slight, yet their combined effect, as exaggerated by the peculiar Scotch intonation and syllabic accent, is to give to the Scottish dialect or language as a whole a marked individuality distinct from that of English.

In respelling the words for pronunciation in this glossary the symbols used in the body of the book are employed, those being used which indicate most accurately the sound of the Scotch word to the English ear. The confused and uncertain spelling of Scotch words, and the difference of pronunciation in different localities, add to the difficulty of giving any practical system of rules for pronunciation in the space which is here available. Generally speaking, it may be noted that:

1. The letter *a* is chiefly used with sounds corresponding to those it has in English *arm* (*ä*), *ask* (*à*), and *ace* (*ā*), the peculiar *ä* of English being foreign to the Scottish dialect.
2. The letter *e* before *r* frequently has the sound of *e* in *error* (*è*), when in English it has the sound of *e* in *her* (*ü*).
3. The short *i* after a consonant mostly sounds like the English *è*, as *rig* (*règ*), or, esp. after *w*, as *ü*, as *will* (*wü*l).

4. The initial element of the long *i* is regularly cut shorter than in English.
5. In many words which in English are pronounced with *o*, as *rod, bog, on*, etc., the Scottish pronunciation gives the long *o*, but cut short; and in these cases the sound is indicated by *ö*.
6. The letter *u* in many Scottish words has the sound of the French *u*, which is indicated in the respelling by *ü*.
7. The diphthong *au* regularly represents the sound of English long *a* cut short, and is indicated by *ä*.
8. The diphthong *ei* regularly has the value either of *ë* or *ö* unless often *i*; *ei* is usually equivalent to *i*.
9. The diphthong *oi* is often nearly like English *i*.
10. The letters *oo* are sometimes pronounced like French *eu* in *peur* (represented in this glossary by *ü*), and sometimes like English *oo* in *ooze* (*öö*).
11. The diphthong *ou* is regularly equivalent to English *oo* in *ooze*, and is indicated by *öö*.
12. The diphthong *ow* has both the value of *oo* in English *ooze* (*öö*), and also that of *ou* in English *house* (*ou*).
13. The diphthong *ui* as in *guid, puir*, etc., is nearly the same as the French *ui* in *plume*, and is indicated by *ü*.

14. The digraphs *ch* and *gh*, as in *aneuch* and *aught*, are harsh gutturals equivalent to the German *ch* in *ich* and *doch*, and represented by *k* in the respelling.
  15. The digraph *ng* in the middle of a word has the sound of *ng* in *sing*, but the hard *g* sound is not carried through to the next syllable; e. g., *single* (*sëng'li* not *sëng'g'li*), *hungry* (*hüng'ri* not *hüng'gr'i*).
  16. The letter *l* is usually elided after the vowel *a*, as well as before *k* and *m*; but when final or following *e* or *i* is pronounced.
  17. The letters *lz* and *ly* in such words as *capercailzie, capercailzie, spualzie, spualzie*, etc., represent the older *l3*, which was the symbol for the liquid *l* (older Fr. *ll mouillé*), pronounced like *li* in *William*. The *l* and *z* are now often pronounced with their customary sounds.
  18. The termination *-ed* is regularly changed into *-it*, as *bleared* (*blë'r'it*), *ragged* (*räg'it*).
- The foregoing will serve to give a general idea of the most striking peculiarities of the Scottish pronunciation as distinguished from English, but cannot be taken as a guide for the pronunciation of all Scotch words, there being many exceptions to most of these rules, though not here noted.
